It is possible that India may have these compensations, or some of these; it is equally possible that she may have none at all, and it is this latter possibility which appears to worry the Indian Government so much at present. In fact, when Mr. Thorneycroft came to New Delhi, the Indian Ministers and officials with whom he held consultations impressed upon him the danger which a sudden abolition of the U.K. preferences would pose to India's export trade. Mr. Desai has disclosed that Mr. Thorneycroft was in full agreement with the Indian view and the latter too was fully sympathetic to India's case for a general lowering of Common Market tariffs and the abolition of the quantitative restrictions which the "Six" at present impose on this country's exports. It is necessary to point out that the British Government is not expected to do anything which will damage India's interests, and Mr. Macmillan has already reaffirmed the assurance that whatever the U.K. can do to further Commonwealth interests in her negotiations with the European Common Market, she will certainly do. But circumstances have their own logic, and the most unexpected can happen in spite of the British Government's good intentions. India will considerably strengthen the U.K.'s hands and will do her a lot of good if she sets about from now in right earnest to increase the competitive capacity of her exports. The traditional sheltered market which she has been enjoying in the U.K. for as much as 30 percent of her exports, has indirectly bred a spirit of complacency in New Delhi as well as inefficiency in this country's exporting industries. She must now wake up to the realities of a fast changing world, and look for the opportunities which the enlarged European Common Market may provide for her.

Coming back to the trade statistics under discussion, it is gratifying to note that India has

regained a good deal of her ground in tea exports to the U.K. During the first half of 1961, she exported about £5 million worth more tea at a total value of £28 million, compared with the same period last year. A proportionately large increase has occurred in the exports of miscellaneous animal and vegetable crude materials and miscellaneous textile manufactures. A sizable fall is noticed in the case of leather, leather manufactures and dressed furs; oilseed cake and meal excluding husk meal; and cotton yarns and woven fabrics. The exports of animal and vegetable oils, fats, greases and derivatives have also fallen sharply. Yet overall, there is an increase of over £5 million in the value of her exports during this half year. As for U.K. exports to this country, there are declines in all the principal items, barring a minor rise in scientific instruments, photographic and optical goods; watches and clocks. Machinery exports as a whole are over £2 million down at £29 million, although a few

items show increases. Of these, boilers and boiler-house plant exports are sharply up from a mere £400,000 to over £1.4 million, aircraft engines and complete parts move up slightly to £2.6 million and machine tools excluding portable power tools rise from £1.8 million to £2.4 million. The net position is, however, one of decline. The fall is serious in road vehicles and aircraft, and that in electric machinery, apparatus and appliances, iron and steel and metal manufactures is not inconsiderable. This decline in U.K. exports to India may be largely due to the latter's payments difficulties, but it would not be wrong to say that this also reflects the fact that the Commonwealth market for U.K. exports is not expanding. At any rate, it is not large enough to provide the incentive which is necessary to spur British industry to higher efficiency and productivity. And this, of course, taken over the Commonwealth as a whole is the reason Britain is being forced to join the Common Market.

Current News and Comment

India Forge and Drop Stampings

The India Forge and Drop Stampings Ltd proposes to set up a factory at Padi, Madras, for producing steel forgings and stampings. These products will be produced on a large scale in order to meet commercial requirements of the motor-car, motor-cycle and bicycle industries and of the railways. The demand for these products is expected to increase to more than 100,000 tons a year at the end of 1968. A major portion of current requirements are met from imports. So, the directors think India Forge and Drop Stampings has good prospects. Production is expected to begin in 1962 and further expansion will be undertaken in due course. The directors expect to pay reasonable dividends in the course of time.

The subscribed capital of India Forge and Drop Stampings is Rs. 15 lakhs divided into ordinary shares of Rs. 10 each. It is proposed to issue a further 250,000 ordinary shares of Rs. 10 each and 10,000 redeemable cumulative preference shares carrying a dividend of 9.286 percent free of company tax, but subject to the usual deduction of tax at source. The Life Insurance Corporation has agreed to underwrite and subscribe for ordinary shares and preference shares of Rs. 5 lakhs each. The remaining 200,000 ordinary shares and 5,000 preference shares are being offered for public subscription at par—the lists open on 24th August (further details have been published on another page in this week's Capital).

The estimated installed capacity is 3,000 tons a year on a single-shift basis. Technical collaboration has been arranged with Messrs B. and S. Massey Ltd of the U.K. The Industrial Credit and Investment Corporation of India is expected to contribute nearly Rs. 27 lakhs in the form of a foreign exchange loan.

No Bonus from Indian Copper

The price of Indian Copper Corporation shares has declined to Rs. 5.10 in the Calcutta stock market and the outlook is being assessed cautiously. Addressing the annual general meeting of the Company held in Calcutta last week, Mr. Patrick E. G. W. Parish said (a full text of the speech is printed elsewhere in this week's Capital) that there is no intention of issuing bonus shares by capitalising reserves at the present time. He sees no justification in frittering away the resources by paying the present bonus share tax of 12½ percent. If bonus shares are issued out of taxed reserves, there is no justification for maintaining a tax on these shares. Besides, the Company now requires funds for improvements and extensions. Mr. Parish, therefore, thinks that it is far better for the Company to use the resources for the extensions and improvements which are expected to improve the profitability of the Company. Unless there is an improvement in the profit, little gain could be achieved by merely increasing the share capital in the form of bonus shares. As for the issue of rights shares, he points out that there is no need for such an issue, at least for the time being, in view of the Company's comfortable cash position. If further funds are required in the future, the question of a rights share issue will be considered then. The work on the electrolytic project is making progress and the entire scheme is expected to be completed on schedule.

During the year ended December 1960, the Indian Copper Corporation did well. The profit improved from £1,202,259 in 1959 to £1,307,982 in 1960 and an ordinary dividend of 27 percent, taxable, has been maintained. The good results were due to two factors. Firstly, production increased by 1,216

tons to 8,769 tons. Secondly, the price of copper was maintained at a remunerative level throughout 1960. Bearing in mind that the price of copper produced by the Indian Copper Corporation is governed to a great extent by the international trend, the prospects during the current year depends on what the international price is likely to be during the rest of the year. Although world production of the metal could very easily exceed world consumption, the existing balance between supply and demand has been maintained largely by the voluntary production cutbacks made by many manufacturers. The working of many mines has also been interrupted by strikes.

The Indian Copper Corporation also rolls brass and yellow metal sheets and circles. This line of production requires a mixture of copper and zinc—the latter metal has to be imported. The supplies of zinc have been adversely affected during the current year by the foreign exchange shortage. It is feared there may not be any worthwhile relief in this direction in the near future. Steps have been taken to increase the exports of kyanite. The appeal to the Supreme Court concerning these mines is still pending, but attempts are being made to arrive at a compromise settlement. Prospecting, meanwhile, is going ahead and the new small mine at Surda is contributing to the increased output. Ore reserves increased by 88,695 tons to 4.3 million tons at the end of December 1960. Mr. Parish mentioned the growing shortages of electric power, coal supplies and transport. Expenses have also increased, partly as a result of higher labour costs and partly because of mining at greater depths.

Interest Rates and Electric Supply

The adverse effects of the Electricity (Supply) Act on investment in the industry have been outlined by Mr. A. N. Haksar in his chairman's address at the annual general meeting of the Bombay Suburban Electric Supply Ltd held in Bombay last week. (A full text of the speech is printed on a later page in this week's Capital.) Under the statute, the industry is permitted an unremunerative return which is equal to 2 percent over the Reserve Bank rate of 4 percent. The official Bank rate has been pegged down to an unrealistic level of 4 percent, while the actual lending rate of the Reserve Bank is much higher under a three-tier interest rate system. Under it, the Reserve Bank's lending rate is nearly as high as 5 percent on an average. By keeping the official Bank rate at an artificially low level, the electric supply industry has been deprived of the benefit of a rise in its return following the changes in the pattern of interest rates. Considering that this industry is a capital-intensive one, it is time its return was upgraded suitably in line with market conditions. This apart, the tax relief offered by the latest Finance Act has not gone to the benefit of investors as far as the electric supply industry is concerned. Mr. Haksar thinks that appropriate modifications should be made in the Electricity (Supply) Act in order to increase the return to the industry. Present indications are that proposals to amend the Electricity (Supply) Act may be brought into effect from 1st April, 1962.

Bombay Suburban Electric Supply has produced satisfactory results during the year ended March 1961. Sales of energy rose considerably and further increases are foreseen during the current year, provided bulk power in sufficient quantities becomes available. Commenting on the prospects, Mr. Haksar points out that the demand for power in the regions served by Bombay Suburban Electric may rise to 200 MW in 1976.

In order to meet the increased demand, the Company has taken steps to formulate a 15-year development plan. The expansion plans will proceed on the assumption that sufficient bulk power will be released in due course. By the time the Electricity (Supply) Act has been modified in order to give greater incentives for investment, the directors of Bombay Suburban Electric Supply may be in a better position to formulate the necessary financial proposals for expansion.

Less Profit for Kumardhubi

Commenting on prospects in their report for the year ended November 1960, the directors of the Kumardhubi Engineering Works Ltd take a moderately optimistic view. The demand for the Company's products has increased under the stimulus of the third plan developments. Sales of castings and structural steel work have so far been good. The benefits of the expansion schemes are being reflected. The output of the foundry has increased considerably. This has resulted in a full recovery of overheads in spite of the fact that substantial tonnages of castings have had to be sold at or below production costs. The production of the foundry increased by 20.45 percent in 1959-60, compared with 1958-59. The output of the structural steel work rose by 51.34 percent. The working of this section has been hampered by shortages of matching steel, but supplies have improved since then.

The profit of Kumardhubi Engineering Works has declined from Rs. 9.28 lakhs in 1958-59 to Rs. 8.38 lakhs in 1959-60. The ordinary taxable dividend has been maintained at 30pP a share. It is covered two-and-a-half times and offers a yield of 5 percent at the present price of Rs. 6.06 a share. General reserve receives Rs. 50,000, debenture redemption reserve Rs. 1 lakh (against the same), statutory development rebate reserve Rs. 62,500 (against Rs. 2.12 lakhs) and taxation Rs. 2.64 lakhs (against Rs. 3.22 lakhs). The profit figure has been arrived at after providing Rs. 5.10 lakhs (against Rs. 4.43 lakhs) for depreciation. The carry-forward is Rs. 37,543, against Rs. 31,233 brought in.

Bengal Chemical Expanding

The working of the Bengal Chemical and Pharmaceutical Works Ltd for the year ended March 1961 is encouraging, and the directors hope to report better results next year provided other conditions remain unchanged. The Company's productive operations, especially in Panhati, were hampered to a considerable extent by the shortage of some raw materials. Speaking at the annual general meeting in Calcutta last week, Dr. B. N. Ghose, chairman, said that during the early part of the year, Bengal Chemical had to face a crisis in producing alum because the railways were unable to allot wagons for moving bauxite from the Ranchi area. (A fuller version of the speech appears on a later page in this week's issue of Capital.) Although the transport position eased later as a result of strong representations to the railway administration, it is a matter of great concern to the Company that it has failed over a long period to secure even modest supplies of crude coal tar from the steel projects and the Durgapur coke oven authorities, so its tar distillation unit is running far short of the installed capacity. Dr. Ghose said that the authorities concerned are not generally unhelpful in granting licences for the import of raw materials for manufacturing purposes. But the Company has not yet succeeded in getting licences for importing some replacement items of machinery, and this is impeding production in some plants, including the plant for manufacturing surgical dressings and the one for producing printing, rotary and offset inks. In spite of the good prospects for earning foreign exchange the manufacture of surgical cotton has been hampered due to the non-availability of import licences for certain items for replacement and other component parts. The licensing authorities, the chairman said, are unwilling to grant licences to the Company in sufficient quantities for importing carbon black—an essential ingredient for manufacturing printing inks.

After long and sustained efforts, Bengal Chemical has been able to secure import licences covering the requirements of plant and equipment to be obtained from abroad in connection with its projects for doubling the existing capacity of its alum plant and the installation of an additional sulphuric acid plant producing 50 tons a day. Some minor formalities still remain to be completed, and the Company hopes that both projects will be successfully launched within a reasonable period of time. Referring to the alum plant in Panhati, Dr. Ghose said that "the percentage of foreign equipment required for the proposed alum plant and the installation of 50 T.P.D. sulphuric acid plant is only 25 of the total cost involved." The rest will be fabricated locally. Foundations

for plant and equipment are complete. Arrangements for placing indents for foreign machinery are being made, and all possible steps are being taken to complete the scheme as early as possible. When the scheme is completed, the capacity of the plant will increase from 30 tons to 60 tons a day. The Company's branches in Bombay and Kanpur, the chairman said, have shown a better turnover during the year. The Kanpur factory has been modernised, and steps are being taken to undertake there the large-scale manufacture of various pharmaceutical products.

Bengal Chemical's profit for the year, after providing for depreciation, bad debts and all other charges, is Rs. 18.06 lakhs to which has been added Rs. 30,774 brought forward from the previous year. The distribution of profits and usual transfers to various reserves leaves a sum of Rs. 1.21 lakhs which has been carried forward as undistributed profits. The rate of dividend on all classes of ordinary shares has been maintained, but the dividends on tax-free cumulative preference shares have been grossed up in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960. This has resulted in the payment of dividends on tax-free preference shares at rates less than those stipulated in the Company's articles of association. The directors are, however, considering giving the preference shareholders the additional dividends to make up the deficiency for the deduction of tax at source after all necessary formalities in this connection are complied with, and after getting the approval of the shareholders in an extraordinary general meeting at a later date.

T.I.S.C.O. Results Disappoint

Last week's sharp decline in the shares of the Tata Iron and Steel Company from Rs. 157.50 to Rs. 152 reflects the market's disappointment over the Company's working for the year ended March 1961, particularly because the chairman's statement, which has been released along with the directors' report, contains little promise of better results in the current and next few years. The sales in 1960-61 rose by Rs. 5.64 crores from Rs. 73.47 crores to Rs. 79.11 crores, and the expenditure increased by about Rs. 10.63 crores from Rs. 70.78 crores to Rs. 81.41 crores. The gross operating surplus increased from Rs. 14.15 crores in 1959-60 to Rs. 19.59 crores in 1960-61, but the figure for 1960-61 includes a sum of Rs. 4.71 crores representing the adjustments in steel retention prices for the five-year period 1955-56 to 1959-60. After providing Rs. 13.92 crores (against Rs. 8.47 crores) for depreciation, the net surplus, before deducting the allocation to plant rehabilitation and development rebate reserve and the loss resulting from the revaluation of the deutschmarks and the Netherlands guilders, amounts to Rs. 5.67 crores, against Rs. 5.68 crores in 1959-60. The directors have set aside Rs. 6.44 crores (against Rs. 4.14 crores) for plant rehabilitation and development rebate reserve and the loss on the revaluation of deutschmarks and guilders accounts for another Rs. 58 lakhs, leaving a balance of Rs. 34,084, against Rs. 8.47 lakhs in the previous year. The directors have transferred Rs. 4.65 crores (against Rs. 3.76 crores) from general reserve No. 1, made up of taxed profits of previous years from which they recommended the payment of proposed dividends. The net operating surplus as a percentage of sales works out to 7.17 percent, against 7.73 percent in the preceding year. The net surplus as a percentage of total assets works out to 3.46 percent, against 3.34 percent. The gross block has increased by Rs. 7.6 crores to Rs. 185.52 crores. The net block is down from Rs. 122.95 crores to Rs. 116.76 crores. Borrowings are down from Rs. 67.07 crores to Rs. 59.04 crores.

The Company's production performance is far from encouraging: the output of saleable steel totalled 1,263,000 tons, against 1,237,000 tons in 1959-60. It has already completed two years of operation of the modernised and expanded plant, but it has not yet attained more than 80 percent of capacity. This is a poor showing. But even more disappointing is the chairman's statement that "we are not yet in sight of the full production of 2 million tons of ingots or 1.5 million tons of finished steel and are not likely to be for the next two years. The simple and inescapable fact is that, as things are today, we cannot get the required production of coke, pig iron and steel until we are able to feed the required quantities of improved raw materials in the plant." The main obstacle affecting the operation of the steel plants, the chairman says, is the high ash content of coal. With every 1 percent increase in the ash content, the production of iron at the blast furnaces declines by 5 percent or more while the consumption of coke and limestone increases by 5 percent. Operations are thus doubly penalised. The problem will be solved only when the washery which the Government is building in Bhojudih to wash coal supplied to the Company from outside collieries is completed and is in full production. Mr. Tata says that although the full 2-million-ton out-

put will take longer to materialise than the Company had originally hoped, there is no doubt that it will be achieved when the present handicaps have been removed with the completion of the Government's washery, improvement in railway transport, provision of ore beneficiation and blending facilities and the addition of oxygen to the furnaces of steel melting shop No. 3. The chairman regrets that the Government has refused to sanction a very satisfactory arrangement T.I.S.C.O. had concluded with the Indian Oxygen Company for the setting up of an oxygen plant. This leaves the Company no alternative but to install a tonnage plant for oxygen of its own at an estimated additional expenditure of over Rs. 1 crore.

But production is by no means T.I.S.C.O.'s only problem, for its profit-earning capacity and prospects are largely dependent on the retention prices fixed by the Government. Mr. Tata wants the Tariff Commission to adopt a more flexible approach to the problem of fixing retention prices than has hitherto been done. He says that with five major steel plants now in operation instead of two, the old system of fixing prices on the basis of meticulous estimates of output, "product-mix", cost and overheads applicable to a period of years is no longer a workable one. The chairman says that the Company will urge the Government that "if an all-embracing system of control over production, distribution and prices is to remain in force, prices should at least be fixed on the basis of broad principles and assumptions with reasonable margins built into them." With the production performance unsatisfactory and the profit-earning capacity and prospects depending largely on retention prices, it is no wonder that steel shares are losing their popularity with investors.

Outlook for Bombay Oxygen

The chairman of the Bombay Oxygen Corporation Ltd, Mr. Madanmohan R. Ruia, assured the shareholders at the statutory meeting last week that the Company's oxygen plants would go into production by March 1962. Two oxygen plants have already been shipped from abroad and the other two are likely to be shipped during the next few days. All the four plants would be at the factory site by September. The erection of these plants is expected to be undertaken by German engineers by the end of the year when the acetylene plant will also have arrived. The directors have decided to locate the two plants at different places under expert advice from foreign technicians. The Government of Maharashtra has given possession to Bombay Oxygen of about 8 acres of land between Bhandup and Mulund, and the Company is negotiating another plot of about 24 acres near Mulund railway station. Plans for factory buildings are ready and construction work is expected to be taken up after the monsoon. The chairman stated that negotiations are also in progress with the oil refineries to obtain regular supplies of liquid petroleum gas which can be suitably and profitably used with oxygen gas to feed the engineering industries. Replying to shareholders' questions, Mr. Madanmohan said that no decision had yet been taken on the issue of a call and that no call would be made at least in the very near future. He assured the shareholders that the plants ordered by the Company are better than those of British make. The Rs. 50-paid shares of the Company are quoted around Rs. 59.

Premier Automobiles Sales Up

The shares of Premier Automobiles Ltd, which touched a high of Rs. 186.50 in March and were gradually drifting lower since then, were sold down last week to Rs. 155.75—a new low point for the year. The shares have been the weakest among all the motor-car shares. This is attributable to the large volume of floating stocks due to substantial selling by a big institutional investor. The corporate news has never been unencouraging. The Company fared well during the year ended June 1960 and the performance in 1960-61 is expected to be distinctly better. The preliminary figures about the sales and turnover for the year ended June 1961 indicate a steady progress. Sales which increased from Rs. 17.42 crores in 1958-59 to Rs. 20.94 crores in 1959-60, are reported to have risen further to Rs. 22.72 crores. Thus during the past three years, sales have risen by over Rs. 5 crores. The sale of motor-cars has more than doubled during the same period. In 1960-61, the Company is reported to have sold 6,913 motor-cars and 6,073 lorries, against 5,729 and 5,797, respectively, in the previous year. In 1959-60, Premier Automobiles made a gross profit of Rs. 1.53 crores, which was reduced to a net profit of Rs. 42.18 lakhs after making various provisions. In view of a larger turnover, the profit for 1960-61 is expected to show appreciable improvement over the previous year's performance. But it does not follow that the Company will be able to raise the dividend from the 9 percent paid for 1959-60 because of the additional capital of Rs. 1.84 crores issued by it in

February 1960 which will be entitled to a proportionate dividend on the amount of the call paid. Besides, the outstanding convertible debentures of the value of Rs. 7.43 lakhs as on 30th June, 1960, will have been converted during 1960-61, and they will be entitled to a dividend for the year. The dividend of 9 percent for 1959-60 absorbed Rs. 30.97 lakhs, but on the increased capital of Rs. 4.70 crores, the Company will require a sum of Rs. 42.30 lakhs for maintaining the dividend. Premier Automobiles is planning to expand its production of motor-cars and lorries to about three times the present level and is setting up a new factory on a 300-acre plot near Kalyan where construction is expected to start after the monsoon. The Kalyan unit will be an independent one in addition to the Kurla plant. With the addition of the Kalyan unit, the total production capacity is expected to be about 15,000 to 20,000 Fiat motor-cars and 15,000 to 18,000 Dodge and Fargo lorries.

Scrap Prices and Exports

Melting scrap forms a most important source of raw material for the steel industry. Statistics relating to scrap are scanty. While scrap consumers complain that they have been experiencing considerable difficulty in getting good quality scrap, exporters maintain that the country has a substantial exportable surplus, estimated around 800,000 tons to 900,000 tons. In a memorandum submitted to the Scrap Committee, which has been appointed by the Government of India to examine the various problems connected with iron and steel scrap, the Steel Furnace Owners Association has pleaded for a ban on exports of heavy melting No. 1 sheet cuttings, steel turnings and borings, re-rollable, and industrial scrap as they are said to be in short supply. The Association says that exports of No. 2, 2a and 3 sheet cuttings, cast iron turnings and borings, skull and the like may be permitted with adequate safeguards to ensure sufficient supplies to indigenous steel manufacturers. It estimates the arisings of scrap for 1961 and 1965 at 1,125,000 tons and 1,725,000 tons, respectively, and requirements are estimated at 745,000 tons for 1961 and 1,520,000 tons for 1965, leaving a surplus of 380,000 tons and 205,000 tons. Steel furnace owners have suggested that price control on scrap will need to be continued till such time as finished steel prices can be de-controlled, but they have pleaded for a fair price to be paid to scrap collectors in order to maximise effective arisings while restraining inflationary tendencies within the economy. This price, it is suggested, should be objectively related to the actual cost of collection without reference to the prices obtainable in export markets. Scrap exporters do not view price control on scrap with favour; they maintain that there exists a substantial exportable surplus and that steel producers obtain other grades of scrap at controlled rates from which they make skull and sell it in the open market at prices higher by about Rs. 150 a ton. Both the associations—steel furnace owners' and scrap traders' and exporters' associations—agree that the distribution system should be streamlined and rationalised by bringing within its purview all available sources of scrap and reducing to the minimum the burden on the heavily strained transport system of the country.

In a separate memorandum to the Scrap Committee, the Mukund Iron and Steel Works Ltd, Bombay, has stated that its requirements of scrap will increase sharply from 25,000 tons a year in 1961 to 83,000 tons by 1963 after the 20-ton furnace is commissioned. It has suggested that the time lag between arisings of scrap and its use should be minimised, and the controlled sources should be required to offer arisings as soon as they occur to melters within the region. Plants technically capable of using lower grades of scrap may be required to do so and the units of Hindustan Steel Ltd may be directed to consume scrap grades 2 and 2a. The other suggestions made by Mukund Iron are in line with those made by the Steel Furnace Owners Association.

Jijaeero Cotton Fares Well

The working of the Jijaeero Cotton Mills Ltd for the year ended March 1961, shows a substantial improvement over the previous year's performance. Sales are up by about 35 percent from Rs. 6.30 crores to Rs. 8.51 crores, and the gross profit has increased by about 42 percent from Rs. 78.61 lakhs to Rs. 1.11 crores. The ratio of the gross profit to sales works out to 13 percent against 12.5 percent in 1959-60. Allocations include depreciation Rs. 57.19 lakhs (against Rs. 30.85 lakhs), taxation Rs. 13.25 lakhs (against nil), development rebate Rs. 3.73 lakhs (against Rs. 71.68 lakhs) and provision for contingencies Rs. 1 lakh (against Rs. 40,000). After making these appropriations, there remains a surplus of Rs. 30.87 lakhs, against a loss of Rs. 29.44 lakhs in 1959-60. The surplus has been used to wipe out the loss of Rs. 26.86 lakhs brought in from

the previous year. The remaining balance is insufficient to pay even the preference dividend amounting to Rs. 8.45 lakhs. The directors have transferred Rs. 18.50 lakhs from dividend equalisation reserve to pay the proposed dividend of 3 percent, taxable, which absorbs Rs. 13.91 lakhs. The improved working in 1960-61 is attributed chiefly to the better results from the textile section. The working of the chemical plant in Porbandar showed some improvement, but production could not be maintained at the rated capacity due to the irregular supply of power, steam and sea water. Production was also affected by an accident in the lime kiln section. The Company is said to have been assured of the uninterrupted supply of power. It has received permission to install 3,000 spindles, against 9,211 spindles asked for in order to balance its production. The installation of these spindles is in progress. The Company has spent Rs. 32 lakhs for the expansion, renewal and modernisation of the textile and chemical units. It has a paid-up capital of Rs. 5.71 crores and its reserves and surplus amount to Rs. 3.55 crores, of which capital reserves created as a result of the revaluation of assets account for Rs. 1.64 crores. The fixed assets total Rs. 8.69 crores, and these have been written down to Rs. 4.40 crores. The Rs. 10-paid share of the Company is quoted around Rs. 12, offering a gross yield of 2.57 percent.

Rajapalayam Mills Pay More

The working of Rajapalayam Mills for the year ended March 1961 clearly shows that the proposed increase in the dividend from 9 percent to 16 percent, both taxable, is more than justified. The sales of finished goods rose by about 19.5 percent from Rs. 98.56 lakhs in 1959-60 to Rs. 1.18 crores in 1960-61 while the gross profit recorded an impressive rise of 37.8 percent from Rs. 14.99 lakhs to Rs. 20.66 lakhs. After providing Rs. 4.52 lakhs (against Rs. 4.63 lakhs) for depreciation and Rs. 5.76 lakhs (against Rs. 1.60 lakhs) for taxation, the net profit amounts to Rs. 9.37 lakhs, against Rs. 7.60 lakhs in 1959-60. From the net profit, the directors have set aside Rs. 25,000 for donations and another Rs. 2.29 lakhs for bonus for 1960. The provision for development rebate has been pruned from Rs. 4.83 lakhs to Rs. 27,081, but general reserve and machinery replacement reserve get Rs. 1.97 lakhs and Rs. 2 lakhs, respectively, against nil in each case in the previous year. The proposed dividend absorbs Rs. 2.58 lakhs, against Rs. 1.45 lakhs in 1959-60. The directors state that the Company did not suffer from any power cut during the year. Both the old and new mills worked for 304 days on a double-shift basis. The old unit, spinning counts up to 40s, made good profit whereas the earning of the new unit, spinning fine counts, was not so satisfactory on account of the payment of heavy premiums for imported cotton and the generally easier market conditions for fine counts. During the current year, the Company will commission the fully automatic ringers bloom-room in the old mills. It is also replacing five old ring frames with four new Texmaco ring frames to improve production. The directors propose to equip the mills with an up-to-date quality control laboratory. The Rs. 100-paid share of the Company is quoted around Rs. 155, offering a gross yield of about 10.4 percent.

Expansion Programme for T.E.L.C.O.

The shares of the Tata Engineering and Locomotive Co. Ltd, which were bid up to Rs. 389.50 on 10th August were sold down to Rs. 354 the next day and still further down to Rs. 345 on 12th August. The sharp decline in the shares merely reflected the unsettled tone of the Bombay stock market; it had little to do with the Company's annual general meeting on 10th August. Shareholders praised the management because of T.E.L.C.O.'s excellent performance during the year ended March 1961, and the chairman's statement, circulated with the directors' report, contained the promise of still better results in the current and coming years as the Company has embarked on a huge expansion programme. Shareholders' questions at the annual general meeting were aimed mainly at eliciting further information about the details of the expansion scheme, and the reply to the issue of convertible debentures to meet T.E.L.C.O.'s capital needs. The chairman, Mr. J. R. D. Tata, assured the shareholders that while it was too late to change the recently issued debentures worth Rs. 5 crores into convertible ones, their suggestion would be given due consideration in future. Shareholders contended that the necessity of paying a heavy premium on the equity capital. But Mr. Tata expressed doubts as to whether the Government would allow conversion *par*. The chairman said that the expansion programme envisaging an increase in the output of the automobile division from 1,000 diesel vehicles

to 2,000 vehicles a month would be completed within three and a half years, and during this period the indigenous content will increase from the present 78.8 percent to 90 percent. The expansion programme will cost Rs. 18 crores, of which Rs. 15 crores will be spent on plant and equipment. A portion of these funds will come out of the retained earnings and the balance will be mainly met from a long-term credit from the U.S. Development Loan Fund. The terms of the D.L.F. loan and its duration are still being negotiated. Nearly 80 percent of the plant and equipment would be imported from the U.S.A. Certain essential items would have to be imported from West Germany costing nearly Rs. 2.50 crores. Mr. Tata admitted that the U.S. prices were about 30 percent to 40 percent higher than those in other countries, but the U.S. equipment was more durable. The chairman said that in spite of increased production T.E.L.C.O.'s order-books are full and there are 15,000 lorries to be delivered. The price of Tata-Mercedes-Benz at Rs. 26,000, including tax amounting to Rs. 6,000, is 11 percent more than the price of the Mercedes-Benz vehicle in West Germany. The price of the lorry had been raised by Rs. 650 as a result of the revaluation of the deutschmark and the increase in Customs duty on parts and components.

The chairman said that the scheme for manufacturing P and H excavators had made satisfactory progress and the first unit would be ready for delivery at the end of the current year. Thereafter, production would be at the rate of four or five units a month. The selling price of the excavator will be around Rs. 4.5 lakhs a unit. Although the international market is highly competitive, Mr. Tata expressed the hope that it would be possible to export about 10 percent of the production of industrial shunters, castings and forgings as well as excavators, lorries and bus chassis to such neighbouring countries as Ceylon, Burma and Malaya. Some shareholders suggested that the locomotive division should be scrapped as it was not very remunerative. The chairman said that it would be unwise to "give up" this division which had provided the very base on which the whole T.E.L.C.O. organisation had been built up. The Government had lent timely and valuable support to the locomotive division. Besides, the Company is now making a profit of 5 percent to 6 percent on the capital employed. Asked about the power shortage, Mr. Tata said that although the Company—along with other units in Jamshedpur—is faced with the problem of power shortage, arrangements are being made to get additional power supply, so T.E.L.C.O.'s plans would not be affected in any way. The chairman informed the shareholders that the Life Insurance Corporation held 16,336 shares of the Company—an increase of 100 shares over the previous year. He announced that the payment of dividend to the shareholders would be delayed by a few weeks because the income tax authorities had not so far intimated the Company about the extent of relief under Section 15 (C).

Report on Commodity Exchanges

The latest annual report of the Forward Markets Commission for 1960 will be read with interest, not because of the various measures it took to strengthen its hold on commodity futures markets but because of the valuable information it contains about the volume of trading, open positions and deliveries against hedge contracts in the various regulated commodities in 1960. At the end of the year, there were 26 associations recognised under the Forward Contracts (Regulation) Act for conducting trading in 15 different commodities. Of these, only ten were recognised on a permanent basis, while the rest were on trial. The total volume of business in all the forward markets recorded a fall of about 14 percent from 65 million metric tons in 1959 to 56 million metric tons in 1960. Although the decline was shared by most commodities under regulation, it was especially noticeable in cotton (71.4 percent), pepper (66.6 percent), cottonseed (48.7 percent), groundnut kernel (31.5 percent) and coconut oil (31.1 percent). On the other hand, the volume of trading recorded an increase of 179.4 percent in turmeric, 146.4 percent in *gur*, 16 percent in linseed and 8 percent in castorseed. The large increase in the turnover in turmeric and *gur* was mainly due to the closure of trading in these commodities for some time in 1959. The total turnover in raw jute was down by 20 percent from the previous year, partly due to heavy margins throughout the year and partly to the closure of the market during the last quarter.

The volume of business was by far the highest in castorseed in absolute terms as well as in relation to the output. The aggregate market activity in castor futures was nearly a fifth of the total turnover in all commodities. B Twills ranked next to castor in attracting the market's interest. The total turnover of 9,361,000 metric tons in B Twills was over 17 times its production during

the year. The turnover in cotton was three and a half times the size of the crop; in groundnuts it was more than three times its output. The volume of trading in rapeseed-mustardseed was nearly seven times its crop, in turmeric it was six times, in hessian more than three and a half times and in cottonseed it was twice the size of the crop. The turnover was relatively small in raw jute and linseed, being only one and a three-quarter times their respective outputs, in pepper it was one and a half times the output and in *gur* also it was about one and a half times the production. The annual average of the total month-end net open position in all markets declined from 239,000 metric tons in 1959 to a little over 200,000 metric tons in 1960. The actual fall in the annual average net open position for individual commodities ranged between 15 percent and 49 percent, depending on the regulatory measures adopted in the case of different commodities. It was the lowest at 15 percent for *gur* and the highest at 49 percent for raw jute. The net open position had declined by nearly 47 percent in cotton, 37 percent in hessian and 34 percent in pepper. B Twills, groundnut oil, cottonseed and coconut oil, each recorded a fall of about 40 percent. Net open positions recorded notable increases in castorseed (18 percent), linseed (30 percent) and turmeric (40 percent), in which regulation was a little mild. As in the case of volume of trading, the net open position in castorseed was the highest among all the regulated commodities; its annual average of 42,800 metric tons was more than a fifth of the combined total net position for all the commodities. The aggregate tenders issued against the futures contracts in all regulated commodities amounted to a little over 57,000 metric tons, against 67,000 metric tons in 1959 and formed only 0.1 percent of total transactions during the year. Apart from scarcity conditions prevailing in most commodities, severe margins and other regulations which kept futures prices of many commodities below their ready prices also discouraged large tenders. Tenders were relatively highest in pepper and coconut oil where they formed 1.82 percent and 1.74 percent, respectively, of the total volume of trading.

The Commission might claim that the 14 percent fall in the volume of business in regulated forward markets is an indication of the success of the various measures it has taken to check excessive speculation and at the same time preserve the utility of the markets to genuine trade interests. The regulatory measures consisted of effective reporting of market information, uniform hours of trading in many commodities, stiffer margins, fixing of maximum prices, limits for daily fluctuations in prices, prohibition of fresh business and even temporary closure of markets. But the price trends in most commodities indicated that the fall in turnover had very little effect on prices. Cotton prices remained above the ceiling most of the time last year and groundnut prices rose substantially above the ceiling rate of Rs. 220 a 250 kilos set by the Commission for futures trading. The Commission's decision to do away with arbitrary ceilings and special margins in relation to trading in 1961-62 contracts suggests that it has belatedly realised that measures which tend to restrict turnover do not necessarily act as a check on the rising trend in prices. Referring to the Forward Contracts (Regulation) Amendment Act, 1960, the report says that the existing legislation was inadequate to curb speculative excesses and other malpractices and it was necessary to amend the Act with a view to plugging the loopholes. The Act has vested the Commission with additional powers including those of a civil court.

Manufacture of Textile Machinery

The indigenous textile machinery manufacturing industry has made remarkable progress in recent years. There are at present some 13 manufacturing units spread over in Maharashtra, Gujarat, Madhya Pradesh, Madras and West Bengal which cater to the extent of about 60 percent of the requirements of textile mills. The value of textile machinery manufactured in India last year is estimated at more than Rs. 14 crores; the target set for the second plan has been exceeded. The third plan target for the industry has been set at Rs. 16 crores worth of preparatory, spinning and weaving machinery and Rs. 5 crores worth of processing machinery. In his speech at the recent annual general meeting of the Textile Machinery Manufacturers Association in Bombay last week, the chairman, Mr. Prabhu V. Mehta, expressed confidence in the industry's ability to achieve the plan targets a year ahead provided it was assured of adequate supply of raw materials and components. Schemes for manufacturing new items of machinery are being implemented, and the industry would be in a position to meet about 80 percent of the textile mills' requirements by the end of the plan period. Mr. Mehta referred to the various difficulties which are impeding the progress of the industry. The delay in issuing

import licences often came in the way of planned production. The chairman complained about the procedure for issuing licences and essentiality certificates which cause considerable avoidable delay. When licences are presented for revalidation, they are refused or delayed beyond a reasonable time. Mr. Mehta said that the delay in using licences for the import of components is often due to the anxiety of importers to select the right type of components in the context of the specialised needs of the industry. He suggested that textile machinery manufacturers should be allowed to hold six months' stocks of their requirements in view of the long deliveries quoted by manufacturers of components abroad. This will enable the industry to tide over unforeseen contingencies and to continue uninterrupted production.

Inaugurating the meeting, the Central Minister for Industry, Mr. Manubhai Shah, commended the progress made by the industry and urged the manufacturers to see to it that at least 75 percent of the bill of structural goods is met within the country in order to save foreign exchange. He assured them that the Government would be prepared to give maximum help provided the producers prepared well in advance their bill of inventories of structural goods and did not seek import licences when the project was half way through. He also assured the Association that the Government would be prepared to grant financial aid to the extent of 50 percent if it formed a co-operative research institute in collaboration with other associations like the Indian Cotton Mills Federation. Mr. Shah emphasised the need for greater co-ordination among the cotton, rayon, nylon and jute textile machinery manufacturers. Expressing surprise at the absence of any reference to exports in the chairman's speech, the Central Industry Minister said that "each one of us will have to export goods to finance imports of vital necessity." He emphasised the need to produce quality goods and suggested that manufacturers should set up institutions like inspection houses and quality control organisations for improving the products.

Oilseeds Prices and Production

In his presidential speech at the recent annual general meeting of the Central Organisation for Oil Industry and Trade in Bombay last week, Mr. Ratilal M. Gandhi urged that the system of the deferred freight rebate should be abolished either by persuasion or even by suitable legislation by the Government. This view is shared by all sections of the trade because regular shipping and freight facilities at reasonable and competitive rates on a long range and stable basis are the essential pre-requisites for the smooth functioning of the export trade. But freight is by no means the only or the most important problem. The more fundamental problem facing the oilseeds export trade, as also other commodities, is that of prices. Excluding castorseed, the exportable surplus in oilseeds is of a marginal nature if an exportable surplus exists at all. Production is unable to keep pace with the growing demand and domestic influences tend to keep internal prices substantially above world parity. Export promotion measures can have only a limited value when export surpluses simply do not exist. The increased production alone can keep internal prices on the low side and also create an exportable surplus. The third plan has set the target for oilseeds production at 9.8 million tons. But whether this will meet the country's internal requirements and leave a surplus for export is difficult to say. But the problem is how to achieve the target, for the performance in recent years has been far from encouraging. The second plan had set the target for five major oilseeds at 7.55 million tons, of which groundnut accounted for 5.07 million tons. Production has continued to lag behind the targets; and between 1958-59 and 1960-61, the groundnut output actually declined from 4.81 million tons to 4.35 million tons. Between 1959-60 and 1960-61, production fell in spite of the increase in acreage. There is, however, little scope for increasing the acreage now. Production can, therefore, be raised only by increasing the yield through intensive cultivation.

Referring to the compounded levy of excise duty, Mr. Gandhi suggested that the compulsory levy for all power-driven oil mills seemed to be the best solution of the problem. He urged the Central Excise Reorganisation Committee and the Central Board of Revenue to consider his suggestion carefully. The Government itself has conceded that the compounded levy scheme is not perfect and there is scope for further improvement. The compounded levy should be fixed on a judicious and rational basis, and the rate of duty must be related to the crushing capacity of the equipment. Mr. Gandhi said that the oilseed crushing industry had developed in a haphazard manner. The hectic growth of the extraction industry has created a serious problem, although the industry is of very recent origin. The entry

of the U.K. in the European Common Market would adversely affect the oilseeds export trade because India, which is now enjoying preferential treatment in the U.K., is likely to be placed against other producers enjoying special advantages of untapped resources, protective tariffs, subsidy, devaluation and operational efficiency. Mr. Gandhi urged the Government to seek adequate safeguards for the country's export trade from the U.K. Government during its negotiations with the European Common Market Council. He also criticised the reported decision to allow the State Trading Corporation to import copra during the April-September licensing period when the established channels like the crushing and oil-based industries are not getting enough raw materials.

Collapse of Rapti Bridge

For the time being at any rate, it would appear that the four-man committee of experts headed by Mr. G. Pandey, Vice-Chancellor of the Roorkee University, has failed to come to any conclusions about the causes of the collapse on 15th July of the 150 feet span of the bridge across the Rapti under construction. According to Mr. Pandey, the committee would have to visit Gorakhpore and the site of the mishap again in October when the flood waters have receded to see those ends of the span now under water. It is not known if the hanging parts are cut apart or are still joined together, although a diver who went down the bed of the Rapti has reported that they are still joined. It will be recalled that the 1,300 feet long bridge was started by the U.P. Government in January 1959, and it was due to be completed before the onset of the 1962 monsoon. While still under construction, its collapse has naturally given rise to public apprehension, so the expert committee was appointed by the State Government to probe some of the allegations.

The engineers in charge of the construction said earlier that the Rapti bridge has the longest span length in Asia. But when it was pointed out that similar or even longer span-lengths are not uncommon even in India itself, the engineers have had recourse even to strange theories of sabotage and earthquakes. Although it is never safe to accept all allegations by laymen at their face value, it is worth mentioning that even last year rumours had gained currency that cracks had developed in one or more piers. At a recent Press conference addressed by the District Magistrate and the engineer-in-charge, these doubts were officially set at rest. Only a fortnight before the tragedy on 15th July, the construction work was allegedly subjected to a ten-day scrutiny by higher authorities, and everything was declared to be proceeding on sound lines and according to plan! Charges of widespread corruption in the Public Works Department, which has made possible the use of inferior materials and sub-standard work, have been made in a section of the Press. But public confidence is not likely to be restored until the true causes for the collapse of the bridge are ascertained and the responsibilities fixed.

Artist not a Workman

Holding that Mr. Yashpal Sharma, an artist employed by the British India Corporation Ltd., Kanpur, was not a workman within the meaning of the U.P. Industrial Disputes Act of 1947, the Allahabad High Court has quashed an award of the Labour Court in Kanpur that the employee was entitled to be reinstated with continuity of service. In 1958, when the B.I.C. reorganised its publicity department, Mr. Sharma, who was drawing Rs. 900 a month was found surplus, so his post was abolished. During his employment, he was not a member of the Begg and Sutherland Employees Union which is the trade union of all workmen of the Company. The Labour Court, however, held that he was a workman within the definition of the U.P. Industrial Disputes Act. He was a member of the Shops and Commercial Workers Union which was affiliated to the Indian National Trade Union Congress and, accordingly, the dispute was an industrial dispute. The B.I.C. had appealed to the High Court against the Labour Court's award. Delivering the judgement, Mr. Justice B. Dayal said that the Labour Court had erred in assuming that Mr. Sharma was a workman. "If a subordinate officer was asked to go and take instructions from a senior officer concerning his duties, it could not lead to the conclusion that the subordinate officer was a mere clerk or technician, and was not entrusted with managerial duties.....Mr. Sharma was making drawings for labels and cartoons and for other paintings to be used by the Company. He was, therefore, an artist who had to make designs. His officer merely gave him vague ideas of the paintings or designs to be prepared, and it was Mr. Sharma who applied his faculty and brought out a design which was ultimately to be copied in pamphlets, cartoons, etcetera. This work was certainly that of an artist and not of a technician.

The technical part of this work would come in when this design would be reproduced in the pamphlets or cartoons."

U.P. Finance Corporation

The U.P. Finance Corporation, at its third meeting of the year held early this month, sanctioned loans amounting to Rs. 14 lakhs to two parties for setting up an electric meter factory and a vegetable oil plant in the State. This raises the total amount of sanctioned loans to Rs. 27 lakhs since the beginning of the financial year. Both units have been licensed by the Central Government. The electric meter factory will be producing 60,000 units of big and small meters a year. The annual report on the working of the Corporation for the year 1959-60, which was laid before the State Legislature this month, says that disbursement would have been much better had the parties to whom loans were sanctioned during the year lifted the loans, who did not do so for various reasons "such as discontinuance of the proposed expansion or decisions to collaborate with foreign firms or arrangement of finance with their bankers." During the period, the Corporation received 34 applications excluding 22 applications pending on 31st March, 1959. Out of this, 18 applications totalling Rs. 57,15,000 were sanctioned, 12 were rejected, seven were treated as lapsed and 19 were pending on 31st March, 1960. Out of the sanctioned loans, totalling Rs. 1,94,37,000 since the inception of the Corporation a sum of Rs. 61,27,000 had to be cancelled at the request of the parties and only Rs. 97,69,500 were disbursed. The State Government has guaranteed the payment of an annual dividend at a minimum rate of 3½ percent on the share capital of the Corporation. The paid-up capital of the Corporation is Rs. 1 crore. The total amount of dividend payable for the year comes to Rs. 3,50,000. It is proposed to use an amount of Rs. 2,38,826 towards the payment of dividend and to request the Government to give subvention for the balance of Rs. 1,11,173, to make up the guaranteed dividend for 1959-60. At the time of issuing bonds in 1958-59 the Corporation made a commitment to purchase each year 5 percent of the total issue outstanding, but no purchases were made during the year as no seller came forward. The rate of interest on loans advanced by the Corporation remained constant at 6½ percent, with a rebate of ½ percent for punctual payment of instalments of the principal and interest due.

Sales Tax on Commission Agents

The U.P. Legislative Assembly has amended the State's Sales Tax Act to impose sales tax on transactions carried out by commission agents and others on behalf of their principals. According to the Finance Minister, Mr. Hargobind Singh, a large number of commission agents were creating false evidence by getting certain forms printed in order to show that they had no authority to buy or sell goods on behalf of their principals and that they were mere brokers, bringing the buyer and the seller together. They were thus successfully evading their liability to the tax. Besides defrauding the exchequer of revenue, the Finance Minister said, other sections of traders were also aggrieved by the activities of these people. The amended Act now makes all commission agents and other mercantile agents who carry on the business of buying or selling goods on behalf of their principals liable to sales tax. It is laid down that no amount by way of sales tax or in lieu of it under any other name or colour, should be recovered by any dealer from any person other than the person to whom the goods have been sold. It is also made clear that where any tax is payable by a commission agent on any turnover he might realise it from the person to whom the goods have been sold by him on his behalf or on behalf of others. By another amending Bill, the State Legislature has sought to remove the constitutional difficulties in Section 3 (2) (e) of the Indian Electricity Act, 1910, which reserves to the State Government the power to grant more than one licence within the same area of supply. The amending clause says that notwithstanding the sanction for engaging in the business of supplying energy to consumers in an area has been given to any person, the State Government may give direct supply or authorise the State Electricity Board to give direct supply in the same area.

Repayment of U.P. Loan

A Press communiqué issued by the Finance Ministry of the U.P. Government says: "The whole of the outstanding balance of the 2½ percent United Provinces Loan, 1961, issued in terms of the Government of Uttar Pradesh Finance Department notification dated 27th August, 1946, will be repaid at par on 1st September, 1961, with all interest up to and including 31st August, 1961. In

Uttar Pradesh and in Calcutta and New Delhi, where 1st September, 1961, is a public holiday, repayment will be effected on 31st August, 1961. At other places, however, the payment will be effected on 1st September, 1961. No interest will accrue on the loan from and after 1st September, 1961, with the exception mentioned below. The U.P. Government would be announcing shortly the terms of a new open market loan to be issued this year. This will be a medium-dated loan and holders of the 2½ percent U.P. Loan, 1961, will be given the option of converting their holdings into the new loan at par. They will also be entitled to receive interest on their holdings from 1st September, 1961, to the day immediately preceding the date of flotation at the rate of interest which will be fixed for the new loan according to the market conditions and which is expected to be higher than the rate on the expiring loan. Holders who wish to avail themselves of this facility should not, therefore, tender their securities for repayment at this stage."

Plan Resources for Private Sector

Commenting on the third five year plan, the final version of which was presented to the Lok Sabha last week, Lala Karam Chand Thapar, president of the Federation of Indian Chambers of Commerce and Industry, says in a statement to the Press that the size of the plan is more or less the same as proposed by the Federation, and the allocation of resources between private and public sectors and between different fields of production is broadly similar. There is, however, a difference in approach between the planners and the Federation concerning the methods to be used for mobilising resources. A discussion of this difference, says Mr. Thapar, is important because the public and private sectors have to draw on a common pool, and "the methods of financing adopted in the former cannot but affect the level of resources available to the latter". More than half of the investment in the public sector, it is visualised, will be financed from public savings, of which more than 60 percent will be secured through taxation. This will dry up an important source of finance to organised private enterprise. Even the Planning Commission admits that there is likely to be a shortfall of Rs. 100 crores in the investment target fixed for the private sector. This gap is not restricted to domestic resources alone. The private sector would require Rs. 530 crores of foreign exchange for implementing its programme of development, whereas not more than Rs. 300 crores is likely to be available. Mr. Thapar wants it to be appreciated that if the private industrial sector fails to reach the target of investment, the co-ordination between different economic activities on which the success of the plan depends will be impaired and lead to a lack of balance in the economy. The level of planned investment in the private sector has, therefore, to be regarded as the minimum effort, especially in view of the need to expand employment opportunities for the country's rapidly growing labour force and the need to maximise exports for balance of payments reasons. Mr. Thapar adds that on the basis of the 1961 population census, it would appear that the increase in the labour force in the next five years might be of the order of 17 million, as against the additional employment of 14 million visualised in the plan. The arrears of unemployment will thus increase to 12 million at the end of the current plan compared with 9 million at the end of the previous one.

Progress of Pakistani Insurance Body

The Pakistan Insurance Corporation is the first Government undertaking in south east Asia to adopt the system of compulsory cession. From a modest beginning, it now absorbs 30 percent of the general insurance business of the insurers operating in that country. The system is based on straight-forward quota sharing, with the result that the insurers operating in Pakistan have not the option even partly as in India for fire insurance, to cede the surplus emanating from the trading activities of the companies. The economics of Insurance Corporation is aware that by the compulsory seizure of 30 percent, it is forcibly taking away a large part of the premiums which the companies in their own account could have retained. The system also runs counter to the sound principle that the legitimate share of reinsurers should emanate from the surplus and that compulsory acquisition of a certain percentage hinders the growth of an integrated general insurance market. Arguments were advanced in India at the time the Insurance Amendment Act was being pushed through the Lok Sabha in support of this principle, but the governments of south east Asian countries, for one reason or the other, consider compulsory cession a good measure to augment the general revenues, although it may affect the growth of direct-writing companies. The welfare of a reinsurer depends on the pro-

motion and progress of direct-writing companies, but paradoxically, the penny-wise policy finds favour with Government circles in Pakistan as well as in other south east Asian countries. In its eighth annual report the Pakistan Insurance Corporation records good progress. The gross premium, which was a little over Rs. 2 crores in 1958 and Rs. 2.5 crores in 1959, rose to Rs. 3.31 crores during 1960. Taking 1958 as the base year, the percentage of increase in 1959 was 20.63 and in 1960 59.68. The increase in premium in 1960 in relation to 1959 is 32.37 percent. The chairman reports that all the three classes of business, particularly marine and miscellaneous, have contributed to the remarkable increase in the premium income. The claims experience, on the other hand, has been normal. The Pakistan Insurance Corporation has begun giving larger retrocessions with effect from 1st January, 1960, to assist, it is claimed, the growth of the direct-writing companies which, as has been stated, has been hindered by compulsory acquisition. The net profit for 1960 stands at Rs. 16.94 lakhs, compared with Rs. 15.92 lakhs in 1959. Satisfactory profits have enabled the Corporation to build up financial and technical reserves further. A sum of Rs. 10,50,000 has been set aside for the tax-free exceptional loss reserve which combined with the previous balances of Rs. 9,00,000, now stands at Rs. 19,50,000. Another sum of Rs. 3,00,000 has been transferred to general reserve, which combined with the previous balance of Rs. 9,07,000, makes a total general reserve of Rs. 12,00,000. The total financial and taxation reserve of the Corporation stands at Rs. 36,00,000, at the end of 1960, against Rs. 28,71,488 at the end of 1959. The technical reserves have also been augmented by Rs. 5.34 lakhs.

The trend of insurance in Pakistan as a whole has been given. The premium income and the loss ratio of the country from 1954 onwards is interesting. In 1954, the fire premium income was Rs. 222,11,000, of which the loss ratio was 24 percent. In 1960, the premium income has gone up to Rs. 325,18,000, but the loss ratio is 27.5 percent only. Likewise, in marine, the premium income was Rs. 140,00,000 in 1954, against Rs. 310,14,000 in 1960, but the loss ratio has not remarkably varied from 50.41 percent since 1954. For 1960, the loss ratio is 52.02 percent—a remarkable achievement if the worldwide marine results are reviewed. In the accident department, the premium income has gone up from Rs. 64,35,000 in 1954 to Rs. 166,56,000 in 1960, but the loss ratio, which was 26.7 percent in 1954, reached an all-time high in 1959, when it was 110.72 percent. In the year 1960, the position seems to have stabilised again and the loss ratio has gone down to 33.15 percent.

Profit for United Electrical

The working of United Electrical Industries Ltd for the year ended December 1960, has resulted in a profit of Rs. 1,41,694.17, compared with a loss of Rs. 38,030.17, during the previous year. The year's profit is arrived at after providing for depreciation, development rebate reserve, doubtful debts and contingencies. The profit of the current year is adjusted against the loss brought forward from the previous years, and the balance of net loss is Rs. 2,06,432.89. During the year, the Company produced 65,500 single phase meters, against 44,841 in the previous one. This increase in production was mainly due to the introduction of a scheme of incentive bonus. The meters were sold to the Kerala Electricity Board, other State Governments and electrical undertakings in India. It is stated in the directors' report that enquiries have been received from the Central Government about the possibilities of exporting the Company's meters. It is said that there is a great demand for the meters due to rural electrification schemes under the five year plans. In view of this, the Company has to accelerate its production programme to meet the demand. Further, the directors state that licences have been granted by the Central Government for starting six new units in India to meet the demand, and the directors feel that unless the Company immediately increases its production, it may be forced out of business. A scheme for the expansion of production was submitted to the Kerala Government in August 1960, suggesting various means to raise the required capital. The Company has also applied to the Central Government for licensing additional capacity for production to the extent of about 150,000 meters a shift. While this is pending, the directors are hopeful of working a complete double shift so that production can be increased gradually even with the existing facilities.

Prospects for Southern Industrial

During the year ended 31st December, 1960, the Southern Industrial Corporation Ltd has earned a net profit of Rs. 44,761, after providing Rs. 1,65,439 for depreciation. The previous year's net profit amounted to Rs. 2,60,912, after providing Rs. 1,15,486 for depreciation. With the amount of

Rs. 1,21,611 brought forward from the previous year, the total surplus comes to Rs. 1,66,372. From this, the directors have transferred Rs. 11,844 (against Rs. 32,969) to development rebate reserve. Out of the profits, the directors have capitalised Rs. 70,000 by the issue of bonus shares. The interim dividend of 10 percent on the share capital of Rs. 500,000, has absorbed Rs. 50,000. The final dividend now declared, at the rate of 3 percent, subject to deduction of tax on the increased capital of Rs. 10,50,000, absorbs Rs. 31,500. The balance of Rs. 3,028 is carried forward to next year.

Due to the expansion of business and the development of industrial activities, more capital was required by the Company. The board of directors, therefore, decided to issue equity shares to the value of Rs. 9 lakhs. A public issue of 90,000 equity shares of Rs. 10 each was made on 10th February, 1961. The directors state that the issue had been fully subscribed and 50 percent of it has been called up and paid up. The main machinery for the production of flexible shaft bearings has been received, and production is expected to start soon. The directors visualise bright prospects for the Company on account of increased manufacturing activities next year.

Cochin State Power Repeats

During the year ended 31st March, 1961, the Cochin State Power and Light Corporation has earned a net profit of Rs. 1,04,821, after providing Rs. 1,23,598 (against Rs. 1,11,303), for depreciation, and Rs. 1,28,000 (against Rs. 1,12,000) for taxation. The previous year's net profit was Rs. 95,586. After adding to the year's profit, the sum of Rs. 41,084 brought forward from the previous year, Rs. 7,218 being the excess provision for taxes in 1959-60 Rs. 2,619.07 being the refund from Kerala Financial Corporation, Rs. 15,101 being the transfer from statutory reserves and Rs. 5,622 from general reserve, the total comes to Rs. 1,76,466.34. From this, Rs. 13,947 is appropriated to statutory reserves. Adjustments concerning the amount due from the Government of Kerala in relation to the share of profit come to Rs. 352 and the appropriation to special reserve under Electricity Act amounts to Rs. 627. A dividend of 12½ percent has been declared, subject to deduction of tax, which is same as last year. This will absorb Rs. 1,25,000. The balance of Rs. 36,539 is carried forward to next year.

The directors say that after the end of the second World War, the demand for electricity has been shooting up year after year. In 1948, the Government of India enacted the Electricity (Supply) Act, 1948, to provide for rationalisation of production and supply of electricity and "generally for taking measures conducive to electrical development." The directors state that as far as the private licencees are concerned, the Act has "put them in a straight-jacket on financial matters" and the return from the industry has been restricted. It is mentioned in the report that the Kerala Electricity Board has taken great strides in power development and very shortly it may have a surplus of power which could be offered to the neighbouring States.

Chembra Peak Earns More

A substantially higher profit, reaching a new high with an impressive coffee crop and a rise in the tea crop are the highlights of the balance sheet of Chembra Peak Estates for the year ended 31st March, 1961. After providing Rs. 1.21 lakhs (against Rs. 78,909) for depreciation, the net profit for the year amounts to Rs. 11.08 lakhs, against Rs. 6.5 lakhs in the previous year. Out of this the directors have transferred Rs. 2.17 lakhs, against Rs. 1 lakh to general reserve, dividend equalisation reserve gets Rs. 100,000 (against nil) and development rebate reserve Rs. 6,054 (against Rs. 6,876). The taxation provision amounts to Rs. 6,00,800 (against Rs. 300,000). The proposed dividend of 20 percent (against 13½ percent), subject to deduction of tax, will absorb Rs. 2,80,020. The balance of Rs. 43,653 is carried forward to the next year. As for depreciation,

P.O. Box 1931 Bombay 1

the directors state that since 1958, it has been calculated on the statutory basis, that is, on written-down values. It has been realised, however, that this basis does not result in assets being fully depreciated by the end of their useful life. It has, therefore, been considered prudent to calculate depreciation on the percentage of original costs as was done prior to 1956 and that basis has been reintroduced now. About the sales tax, the report says that tea sales at the Cochin auctions during the years 1952-53 to 1955-56 have been assessed under the Travancore-Cochin sales tax rules by the Kerala sales tax authorities. The total amount demanded is Rs. 34,129. The assessments have been contested in the court and are now before the Appellate Tribunal for its decision. The liability has, therefore, been brought into this year's accounts.

The total tea crop for the year amounted to 1,817,668 lbs, compared with 1,549,547 lbs in the previous year. Although the all-in cost was higher at Rs 1.52 a lb, against Rs. 1.45 a lb in the previous year, the average price realised was higher at Rs 2 a lb, against Rs. 1.88 a lb. For the 1960-61 season, the Company was allotted 512,577 kilograms as the export quota. A crop of 225 tonnes of coffee was harvested during the year, against 61,481 tonnes in the previous year. The total points awarded amounted to 241,875 (estimated), against 66,077 in the previous year. The curing of 1960-61 coffee has not been completed, and the Coffee Board's point valuation has not been received; the quantity and the points taken for the purpose of the year's accounts are, therefore, only estimates. The crop has been valued at Rs. 1.90 a point which is equivalent to Rs. 2,042.50 a tonne. This is considered a fair valuation in the light of current marketing conditions. The estimated tea crop for 1961-62 is placed at 771,000 kilograms and the coffee crop at 300 tonnes.

South Madras Electric Profit Up

The working of the South Madras Electric Supply Corporation Ltd for the year ended 31st March, 1961, has resulted in a net profit of Rs. 21,05,283, after providing Rs. 8,39,989 for depreciation. The previous year's net profit was Rs. 16,69,430, after providing Rs. 8,19,620 for depreciation. With the amount of Rs. 3,023 brought forward from the previous year, the total surplus amounts to Rs. 21,08,306. Out of this, taxation provision comes to Rs. 8,70,000, (against Rs. 6,80,000). Contingency reserve gets Rs. 53,864 (against Rs. 49,345). Staff gratuity reserve gets Rs. 100,000 and transfer to special reserves amounts to Rs. 1,26,000. The interim dividend of 4½ percent, subject to tax, on the ordinary shares has absorbed Rs. 3,14,986. The interim dividend on preference shares at 2½ percent plus 20 percent, subject to tax, has absorbed Rs. 99,000. The final dividend on the preference shares, including the additional dividend due according to the provisions of the Preference Shares (Regulation of Dividend) Act, amounts to Rs. 1,29,600. A final dividend of 4½ percent, subject to tax, has now been declared on the ordinary shares, making a total of 9 percent, which is the same as last year. This will absorb Rs. 3,14,993. After making various adjustments, the balance of Rs. 11,885 is carried forward to next year.

Mysore Stoneware Cuts Dividend

The working of the Mysore Stoneware Pipes and Potteries Ltd for the year ended March 1961 has resulted in a profit of Rs. 79,380, after providing Rs. 1,15,095 towards depreciation and development rebate, compared with the previous year's profit of Rs. 1,10,054, after providing Rs. 51,507 for depreciation and development rebate. The directors have transferred Rs. 12,000 to contingencies reserve (against nil). They have recommended a dividend of 12 percent, subject to tax, against 14-2/7 percent in the previous year, and this dividend will absorb Rs. 72,000. The balance of Rs. 2,656 is carried forward.

Vigour of the U.S. Recovery

The continuing vigour of the U.S. upswing has both surprised and heartened business leaders, who now look with confidence towards the autumn. The storm clouds over Berlin have created uneasiness, but President Kennedy's moves to meet the situation will further increase the demands on the economy and, for the short run at least, will add to the supporting influences, says the First National City Bank in its latest monthly letter. Meanwhile, the recovery news has been better than expected. Gross national product rose dramatically to a new record rate of \$515,000 million in the second quarter, a gain of almost 3 percent from the low last winter. Industrial production has virtually regained its recession losses.

Home and highway building continues to climb. Both employment and factory hours have increased. The gain in personal incomes since March has been among the best in peacetime since the second world war. While the nation relaxes during the summer vacation season, production and trade are holding up well. Official figures now available not only confirm that the recession was the mildest since the war, but that the recovery has been the fastest. Within one year of the start of the recession, gross national product—the most comprehensive measure of economic activity—has risen to a point \$9,000 million higher than the previous peak. The industrial production index, only four months after the upturn got under way, has regained eight of the nine points lost in the recession; even in the V-shaped recession of 1958, the lost ground was not made up until ten months after the turn. While all this has been encouraging, business men recognise that many problems remain to be solved if the upturn is to be turned into an extended period of healthy expansion. The recovery to date has been powered largely by completion of inventory liquidation which has brought needs to produce as much as the people have been consuming, and by increased government payments. From here on, the upswing normally will hold its momentum under influences of increased consumer spending, stimulation of business capital expenditures and, perhaps, some tendency towards inventory building consistent with enlarged business volumes. Consumers have shown some signs of breaking out of their recession-bred caution as incomes rise and job security increases. A moderate but steady pick-up in retail sales has been under way since May. A real recovery in capital expenditure, however, hinges on a healthy recovery of profits. As explained in the following article, markets are acutely competitive and profit margins, though improving are still less than satisfactory. Looking for some respite from rising costs, business men are keeping a watchful eye on the motor-vehicle industry wage negotiations. At the same time, hopes have begun to fade for a start on the kind of broad tax reforms needed to create a better environment for economic growth. The President in his speech a week ago, pointed out that the improved business outlook means improved revenues. Nevertheless, he said, should an increase in taxes be needed to cover enlarged defence spending and get a balanced budget for fiscal 1953, "those increased taxes will be requested in January." On the other hand, the proposed tax credit for capital spending, modified to meet business men's objections, has been tentatively approved by the House Ways and Means Committee. It would give a flat 8 percent credit for investment in new equipment (excluding buildings and most public utilities) up to 50 percent of tax liability. Following the fast rebound in April and May, industrial activity rose more moderately in June. But even so, the Federal Reserve production index seasonally adjusted (1957 equals 100) gained 1.7 points to reach 110, only 1 point below the record high reached in January 1960 and slightly better than the May 1960 level immediately before the downturn started.

Sri Krishnarajendra Repeats

For the year ended March 1961, Sri Krishnarajendra Mills of Mysore, has earned a profit of Rs. 10,38,593, after providing Rs. 4,53,363 for depreciation, compared with the previous year's figure of Rs. 4,53,397, which was arrived at after providing Rs. 5,35,500 for depreciation. Adding to the profit of the year, the sum of Rs. 30,822 brought forward, Rs. 66,784 being the sundry balances written back, Rs. 1,633 being the premium received on the surrender of the cotton import quota, and also a sum of Rs. 2,50,000 transferred from dividend equalisation reserve, the total in the profit and loss appropriation account comes to Rs. 13,87,832. Out of this, the provision for taxation comes to Rs. 1,45,000, (against Rs. 1,05,000). A sum of Rs. 8,24,168 is transferred to reserve for development rebate (against Rs. 55,224). The proposed dividend of 11 percent taxable, against same, will absorb Rs. 4,03,667. After other adjustments, the balance of Rs. 14,497 is carried forward. In order to maintain the dividend of 11 percent, the directors had to draw Rs. 2,50,000 from the dividend equalisation reserve, since the net profit, after meeting the heavy development rebate reserve, was not adequate. Considering the steep rise in the prices of cotton, stores, spare parts and chemicals and increased labour costs on one hand, and appreciable reduction in the prices of finished products on the other, the working results of the year are considered satisfactory. At the Company's Chitradurga Mills, 10,080 spindles out of a total of 12,180, were installed and put into production during March 1961. The erection of the entire plant and machinery has been completed, and the Company is now settling down to normal production after overcoming all the initial troubles. The total capital cost of this unit is Rs. 38,50,000 including the building. At the Company's Mysore Mills, a winding and warping unit of Barber

Colman equipment, imported from the U.S.A., has been installed. Also an additional 48 automatic looms have been installed and put into production, thus making a total of 96 automatic looms. The directors have a scheme for the progressive replacement of old spindles in these mills.

Miamallay Tea Pays Less

The working of the Miamallay Tea Estates Ltd for the year ended March 1961, has resulted in a profit of Rs. 64,821.08 after providing Rs. 49,000 for taxation, and after meeting all charges and depreciation. This profit is lower than the previous year's profit of Rs. 71,369. With the amount of Rs. 1,418.50 brought forward from the previous year, and an amount of Rs. 5,856 transferred from the dividend equalisation fund, the total available for appropriation comes to Rs. 72,095.51. Out of this, the 7½ percent preference dividend, subject to tax, amounts to Rs. 25,384. The additional dividend on 7½ percent preference shares for 1959-60, amounts to Rs. 2,972. The proposed ordinary dividend of 14 percent will absorb Rs. 42,000, the balance of Rs. 1,739.59 is carried forward to the next year. The crop harvested during the year amounted to 185,784 kilograms and the all-in cost of production was Rs. 3.3 a kilogram. The average price realised was Rs. 3.90 a kilogram. The estimated crop for the year ended 31st March, 1962, is 215,455 kilograms to be harvested at an all-in cost of Rs. 3.32 a kilogram. The ordinary dividend this year is cut by 1 percent to 14 percent, against the previous year's 15 percent.

Mysore Paper Rights Issue

Mysore Paper has now announced the issue of 1,000,000 equity shares of Rs. 10 each at a premium of Rs 2 a share to holders as on 31st August, 1961, at four shares for every one held. Application and allotment money of Rs. 2.50 and a premium of 50p a share will be payable on or before 16th October, 1961. The balance of Rs. 9 a share (Rs. 7.50 for share money and Rs. 1.50 for share premium) will be payable on calls that will be made later. The new shares will rank proportionately for dividend with the existing shares to the extent of paid-up amounts and only for the proportionate period. The sanction of the Government has already been obtained for the issue.

Industrial Activity Index

Corrected for seasonal fluctuations, Capital's Index of Industrial Activity decreased by 1.9 points during December 1960. There were declines in tea, tyres and bicycles, but sugar, jute, yarn, cloth, cement, coal, pig iron, finished steel, paper, motor-cars and electricity rose.

BANKING IN INDIA

MR. David Yule's address on the occasion of the last half-yearly meeting of that exceedingly successful and well-managed institution, the Bank of Calcutta, Ltd., is full of interest, not only as touching briefly, but comprehensively on the leading commercial topics of the day, but also in adding the weight of his opinion to the consideration of what has for some years been frequently urged by the undersigned, the need for the extension of banking beyond the limits of the Presidency and a few large mofussil towns. The shareholders and many others who have taken an interest in the circulars issued by the Commercial Bank of India, Limited, during the last two years will not need to be reminded that this spreading of the banking net has been strongly and constantly recommended and that there is little fear for many years to come, if the casts are skillfully thrown, lest enterprising Banks, seeking new waters, should toil all day and catch nothing. It is satisfactory also to have Mr. Yule's confirmation of an assertion confidently and frequently put forward by the undersigned, that the natives of this country only require to have ready access to joint Stock Banks and be told what conveniences they afford, to yield a willing preference to this system over their own. Mr. Yule apparently assumes too much in stating that "it is only in the Presidency towns that Indian merchants become acquainted with the principles of English banking," but it is distinctly a move in the right direction to extend such banking facilities to the native quarters of Presidency towns. The advantage of opening a new branch of a bank is seldom discernible at first from the returns of the branch itself, and its value necessarily depends on two principal factors. First, the local trade within the area of the new branch and the additional trade which the operations within that area may bring to the head office of other branches of the bank. It may, therefore, be quite possible that a new branch, while showing a loss on its own working, may improve the general profits of the bank.

A Ditcher's Diary

WEDNESDAY MORNING BROUGHT NO NEWSPAPERS to my doorstep, or anyone else's. Was it a great deprivation, or a matter of some relief? A bit of both, I suppose, or so I reflected as I walked back to bed after the reflex ritual of collecting the paper. My first thought should have been, I know, of Independence's 14th anniversary, which was the occasion for half a day off in a profession with few holidays. And our politicians certainly did their best to let none of us forget the event. On Tuesday they lectured luxuriantly all over the place. What did the occasion mean to the politicians themselves? With Mr. Pratap Singh Kairon it meant mainly Master Tara Singh I am sure. For Mr. Bijoyananda Patnaik it must have been another occasion to remind his people that he had saved the State from a disastrous flood. The more I hear of the flood the less I think of the stunt, somebody called it a hoax, played by Mr. Patnaik. The flood was probably nothing serious; and the Chief Minister's vigil round the clock and his row with the experts were pure Madison Avenue. For Mr. Nehru Independence Day meant national integration and the third plan, whatever these two objects themselves may or may not mean. Mr. Nehru was perfectly right in claiming that in attempting to create an Indian society, instead of a Hindu or Muslim or Sikh society, the Indian people were trying to do something entirely new. And so it is—in the context of Indian history. It is premature, therefore, to announce the experiment's success; and Mr. Nehru must be painfully conscious of the difficulties in his way. Some of secularism's most determined enemies are around him. As for the third plan, Mr. Nehru's other constant theme, we have heard and read (if not written) so much that, on Wednesday morning, the thoroughly anti-social thought occurred to me that there might have been more enthusiasm in the Independence Day celebrations if by a Presidential ordinance it had been made culpable on that day even to mention the third plan. For the rest of the year life in India today is dull enough—solemn, if you like. Why not let the people enjoy themselves on 15th August?

THE AKALI CASE FOR A PUNJABI SURA IS NOT AT all impressive, although one can certainly see the point of intensifying the agitation just at this moment. A general election will be along in a few months, and the Akali Party, no doubt, has to do something dramatic at the right moment to hold on to what it has. What does surprise me, however, is the manner in which New Delhi—I mean Mr. Nehru—is handling the situation. The merits of the case apart, if the Nagas can have a State of their own, then why not the Sikhs? Such things are the fashion these days and it seems unfair to draw the line here. That is unless this marks the final limit beyond which the Government is determined never to go in granting separatist demands, and that is an idea I find difficult to accept. The point is that everybody knows that when a hunger strike is threatened the Government comes rapidly to heel whatever its previous attitude. I dislike these methods of political coercion and blackmail as heartily as Mr. Nehru, but then this has been the tradition of Indian politics

for a long time and will go on being so for as long as it brings the desired results. One does not have to look very far back into India's history to find a precedent for a new State being conceded under almost exactly similar circumstances. I am referring to Andhra Pradesh and its patron saint, Mr. Potti Sriramulu. Mr. Nehru first allowed Mr. Sriramulu to die and then threw away the justification by conceding the demand. When the end is as inevitable as this, why should Master Tara Singh be allowed to martyr himself, unless Mr. Nehru considers that a few days without food will do wonders for the Master's waistline? It all boils down to whether or not the weapon of fast is to remain the arbiter of India's destinies or whether the Government should be. I only hope the latest move by Mr. Nehru will dissuade the Akali leader from pursuing the extreme course to which he is now so firmly committed. I believe with tact and understanding on both sides a compromise solution can be found, and I know I have no need to emphasise that it will not be in India's interests to have a discontented minority on her frontier. One of the first steps towards reconciliation, I suggest, should be the revocation of that idiotic order of the East Punjab Government which forbids all local newspapers from publishing any news connected with Master Tara Singh's threatened fast, even if it be a communication from the Prime Minister himself. When tensions run so high nothing can be more self-defeating than a ban of this kind.

BERLIN IS NOT WORTH FIGHTING FOR; AND BERLIN cannot be defended militarily anyway. The chorus has already begun in Europe, and not in Europe alone. For men of my generation this has a familiar ring. Have we not heard it all before? Czechoslovakia was then the "far away country" with which the British had little to do; and nobody seriously believed that Poland could be defended by the Allies. As for the first question, will someone tell me what is worth fighting for—I mean being vapourised for—granted that Berlin is not? It is an excruciating problem; and I know the answer no more than Mr. Macmillan and Mr. Kennedy seem to. Perhaps Mr. Khrushchev is not very sure of his answer either. On the face of it I do not see why the Russians have not the right to sign a peace treaty with East Germany; the West has done this with West Germany; and the Japanese peace treaty was accomplished in face of serious opposition from the Soviet Union. But where do we go from there? Not even Dr. Adenauer can seriously believe that Germany will be united again in the foreseeable future; and there are many who think a divided Germany is better than a united one. There is something to be said for the West formally recognising the reality of a communist East Germany. On the other hand, is there any reason at all to imagine that, once Herr Ulbricht's Government has been made respectable, there will be no German problem and all East-West differences will vanish? I do not believe it. What, then, does the West gain by conceding the Russian demand for an East German peace treaty? If you have to stand up to communist ambitions one day, which possibility is far from theoretical,

you lose by surrendering the positions you at present occupy—however precarious the hold may be. Sudden miscalculations apart, which we will not be here to tabulate after the event, it seems to me that the Berlin crisis may well be less ugly than it looks. Herr Willy Brandt is not strictly truthful when he says that West Berlin is not being used to undermine the Ulbricht régime: the very existence of glittering West Berlin is an affront to drab East Germany. Only a politically neutral West Berlin had a chance of being tolerated by the communists. Crises around the city will, therefore, recur; and it is not true that the Russians are the only ones to blame for making the city's neutrality look highly improbable.

THE AMERICANS HAVE ALWAYS BEEN SENSITIVE about the impression of their country created abroad by the works of that institution we all know rather loosely as "Hollywood". I should have thought they were not without good reason, but it seems I might be wrong. A friend in the United States has sent me a booklet containing the results of a survey on the attitude of Indian college students towards that country. The survey is based on the answers to various questions given by 800 students in 25 colleges; it was conducted by Dr. P. M. Balasundaram. Of the 800 posed with the question whether or not they had seen any Hollywood films in the past year, 80 percent said yes. When asked what kind of impression about the United States they had gained through seeing such films, no less than 63 percent replied "favourable" and 21 percent "very favourable". Only 12 percent stated that they gave an "unfavourable" impression and 3 percent a "very unfavourable" impression. Perhaps one has to be of college-going age to be influenced this way, but the result is remarkable all the same. Those who consider that envy is at the root of U.S. unpopularity abroad might be interested in the results of the questions asked about the reasons for favourable impressions held by this group of students. At the top of the list of reasons was "high standard of living", and this had 26 percent of the voting. Economic assistance I note, although it ranked second on the list, got only half that percentage. Moral: How to make friends and influence more people is to stop foreign aid and give the money to Hollywood. But I doubt if it is as simple as all that. I noticed that the main reason for the unfavourable impressions of the U.S.A. was "foreign policy", closely followed by "attitude towards nuclear weapons". The same questions had been asked about the Soviet Union and Britain. At the top of the list of reasons for favourable impressions of the Soviet Union was "launching of satellite" (there was only one when the survey was taken). Of the reasons for unfavourable impressions the most important was "regimented domestic policy"; "ruthless foreign policy" came fourth on the list, which is interesting because the main reason for unfavourable impressions of Britain was "colonial policy". This is just another instance of the remarkable success the Soviet Union, now the world's largest imperial power, has had in concealing the true nature of her empire abroad. Second among the reasons for unfavourable impressions of Britain, I was amused to find, was "love of pomp and pageantry". For a nation as fond of such things as India, this is a remarkable judgement indeed. At the head of the reasons for favourable impressions of Britain was "discipline". Odd that.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus together with the documents specified therein has been duly filed with the Registrar of Companies, Madras for registration as required by Section 40 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order of which a copy is open for inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed in regard to them.

A licence bearing No. L/A-3(88)/M.E.I./61 dated 18-1-1961 has been obtained from the Central Government for the establishment of this new industrial undertaking a copy of which is open for inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed in regard to them.

THE SUBSCRIPTION LISTS WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 24-8-1961 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 31-8-1961 OR EARLIER AS SOON AS SUBSCRIPTIONS APPROXIMATING TO THE AMOUNTS ISSUED TO THE PUBLIC HAVE BEEN RECEIVED, BUT NOT EARLIER THAN THE CLOSE OF BANKING HOURS ON 28-8-1961.

Applications will be made to the Madras & Calcutta Stock Exchanges for permission to deal in and for an official quotation for the shares of the Company.

UNDERWRITING COMMISSION AND BROKERAGE

The Underwriters are entitled to an underwriting commission of 2½% on the Capital underwritten by them.

Brokerage at the rate of ten Naye Paise per Equity share and Re. 1/- per Preference share will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised Broker including the Underwriters and Brokers to the issue.

OBJECTS

To start and work an up-to-date commercial Forge Shop and Drop Stamping Works near the city of Madras for mass production of commercial steel and non-ferrous Forgings and Stampings for supply to automobile and internal combustion engine industry, railways, motor cycle and cycle industry, defence and aircraft industry, electrical industry and all other allied industries and carry out the business or iron and steel foundries, mechanical engineers, wagon and coach builders, tool and die makers, etc.

PROSPECTS

The Steel Forging industry is one of the basic industries which supplies the raw materials essential to a number of industries viz., Automobile, Internal Combustion Engine, Defence and Aircraft, Motor cycle and Cycle, Railways and Rail Roads, Tractors and Heavy Earth Moving Equipment, Agricultural Machinery, Electrical and General Engineering Industries, etc. The requirements of the automobile and allied industry alone are expected to be in the neighbourhood of 1,00,000 tons per annum at the end of the Third Five Year Plan. The majority of the manufacturers of engineering products, the automobile industry and others, are importing the bulk of their requirements of steel forgings and stampings from abroad. The proposed unit at Madras will be the first, for mass production of commercial steel forgings and Drop Stampings similar to the units established in Europe and other industrially advanced countries.

FOREIGN EXCHANGE LOAN

The Industrial Credit and Investment Corporation of India Ltd., Bombay have agreed in principle, subject to the consent of the International Bank of Reconstruction and Development, to grant to the Company a loan in Foreign Exchange, to the extent of U.S. \$70,000 (equivalent to Rs. 27 lakhs approximately) and repayable by a first mortgage of the Company's assets from November 1963 and ending in November 1970, as the loan or any part thereof is outstanding. So long as the loan or any part thereof is outstanding, the Industrial Credit and Investment Corporation of India Ltd. shall be entitled to appoint a Director on the Board of the Company who shall not be liable to retire by rotation nor shall be required to hold qualification shares.

TECHNICAL COLLABORATION AGREEMENT

The Company with the approval of the Government of India proposes to enter into a Consultants and Technical Collaboration Agreement with Messrs. B. & S. Massey Ltd., Manchester, England, for a period of three years covering the design, erection and start-up of the plant and also for providing the technical know-how with regard to the design and manufacture of Drop Stamping Dies. Messrs. B. & S. Massey Ltd., will provide the Company with various services besides acting as the Company's Consultants and Technical Advisers in connection with the design and manufacture of Drop Forging Dies for use with Massey Stamps and instructing and training the personnel of the Company at their works in Manchester, England.

Messrs. B. & S. Massey have a wide experience in the design and manufacture of Drop Stamping Dies of various types and produce in their own Works at Manchester approximately 7,000 tons of Drop Stampings per annum.

SITE, RAW MATERIALS, POWER AND WATER SUPPLY

Application has been made to the Government of Madras for acquiring the necessary land in Padi and Madras-Avadi Road. Acquisition proceedings are in progress.

Plain Carbon steel and medium carbon steel billets in the next few years. Adequate supply of these is also being required and will have to be imported until such time as the proposed Tool and Alloy Steel plants go into production in the Third Five Year Plan.

The sanction for supply of 150 KVA electric power has already been obtained from the Madras Electricity System who have also promised to give 500 KVA by the end of 1961.

Adequate water is available at the site.

PRODUCTION AND PROFITABILITY

Production is expected to commence in 1962. The Directors have indications that the consumer demand will absorb the entire output of the proposed plant.

Adequate provision has been made in the plant lay-out to take care of future expansion. The esti-

BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LIMITED

CHAIRMAN, DR. B. N. GHOSE'S ADDRESS

Speech delivered by Dr. B. N. Ghose, M.B., F.R.F.S. (Glas) Chairman, Board of Directors, Bengal Chemical & Pharmaceutical Works Ltd. at the Annual General Meeting of the Company held on 10th August, 1961.

It gives me great pleasure to extend a hearty welcome to you all to this 61st Annual General Meeting of your Company. The Directors' Report and the Audited Accounts of the Company for the year ended March 31, 1961 have been with you for some time and, with your permission I take them as read.

The Company's working results and appropriation of profits of the year have been adequately explained in the Directors' Report. I may assure you that the results of the year under review are quite encouraging, and your Directors hope to report better results next year provided other conditions remain as before. The increase in sales by nearly Rs. 12 lacs over the previous year's figure could not bring in proportionate profits as compared to last year for various reasons. The rate of dividend on all classes of Ordinary Shares has been maintained, but the dividends on Tax-free Cumulative Preference Shares have been grossed up in accordance with the provisions of Preference Shares (Regulation of Dividends) Act, 1960 which have resulted in the payment of dividends on Income Tax-free Preference Shares at rates less than those stipulated in the Company's Articles of Association. Your Directors are, however, considering to give the Preference Shareholders the additional dividends to make up the deficiency for deduction of tax at source as aforesaid after all necessary formalities in this connection are duly complied with and after getting the approval of the shareholders in an Extraordinary General Meeting at a later date.

Gentlemen, as you all know this year is the centenary birth anniversary of Acharya P. C. Ray, the founder of your Company. You may well remember that your considered opinion was invited last year regarding the amount to be donated for the purpose to celebrate the occasion in a befitting manner. To perpetuate the memory of our revered Acharya Prafulla Chandra Ray it has been decided at the initiative of Indian Chemical Manufacturers Association of which Acharya P. C. Ray was the Founder President to establish a Laboratory in Calcutta at a Capital cost of Rs. 20 lacs. Your Directors propose to contribute a sum of Rs. 50,000/- to this institution. I hope you would gladly accord your sanction to it. Besides this, your Board of Directors has also recommended payment of half month's basic salary as bonus to all the permanent employees of the Company who have served the Company for at least one year and are still on the rolls of this Company. This bonus is being given as a gesture of goodwill on this happy occasion. Of course, this is in addition to any other Bonus that the Directors of your Company may be pleased to sanction after the Annual General Meeting.

The management has all along been keen not only to modernise the plant and machinery but also to expand the different productive units of your Company. But the import restrictions and the licensing policy of the Govt. is standing in the way.

Shortage of Raw Materials

Our productive operations specially at Panihati were hampered to a considerable extent due to shortage of some raw materials. In the early part of the year under review we had to face a crisis in the production of Alum because of the failure of other part of the Railways to allot wagons for moving bauxite from the Ranchi area. Strong representations were made by us to the Railway administration and the Deputy Minister for Railways as a result of which, we are glad to say, the transport problem was eased for the time being. It is a matter of great concern to us that the time being, for a long period to secure even modest supplies of Crude Oil, Tar from the Steel Projects and Durgapur Coke Oven authorities and in consequence our tar distillation unit is running far short of its installed capacity.

The acute shortage of wagons for moving coal in our area is known to all and so far the problem has baffled us. The major portion of our requirements of coal has to be transported from the coal fields by

lorries at a premium of about 20% which amounts to an unwarranted levy on our industries. The present state of affairs is a sad reflection on the efficiency of the Railways and the Ministry of Steel, Fuels and Mines.

In the matter of Import Licences, the authorities concerned are not in general unhelpful so far as the grant of licences for the import of raw materials for manufacturing purposes is concerned. But we have not yet succeeded in getting licences for the import of some replacement items of machinery which is impeding production in some plants including the Plant for the manufacture of Surgical Dressings and the one for the manufacture of Printing, Rotary and Offset Inks. Despite a good export potentiality and the consequential Foreign Exchange earnings thereby, the manufacture of the competitive market for the non-availability of Import Licence for certain items for replacement and other component parts. The Licensing authorities are further unwilling to grant us licences in sufficient quantities for the import of Carbon Black, an essential ingredient for the manufacture of Printing Inks.

We can at this point strike a more cheerful note regarding the future of some of our productive units. After long and sustained efforts we have been able to secure import licences covering the requirements of plants and equipment to be obtained abroad in connection with our projects for doubling the existing capacity of our Alum Plant and the installation of an additional Sulphuric Acid Plant producing 50 tons per day. Certain minor formalities still remain to be completed and we hope that both the projects will be successfully launched within a reasonable period of time. Incidentally we may mention that Import Licences for Alum and Sulphuric Acid Plants were received after about a year of filing applications for the same.

New Central Excise Duties

The year under review is marked by the imposition of new Central Excise duties on some categories of goods which came into effect from 1.3.61 i.e. (in the last month of the year) and which embrace within their sweep a very wide range of our products creating difficult problems for us in various directions. New Excise duties which have affected us most in the year are those on patent and proprietary medicines not containing alcohol and on Cosmetics and Toilet preparations levied at the rates of 10% & 25% ad valorem respectively. Excise duties have been imposed among other items on glass containers, cellophane paper, etc. The incidence of Excise duty on our products amounts, in fact, to much more than the ad valorem rates prescribed, for patent and proprietary medicines, etc. because in calculating the assessable value, the Excise authorities do not allow any deductions on account of deferred discounts, rebates, etc. to which wholesale buyers of our products are entitled at the end of year nor for freight and other charges when these are included in our net selling prices. We have to pay Excise duty once at the time of buying our requirements of glass containers and packing materials, such as wrapping paper, straw boards, corrugated boards, Duplex boards, etc. and again on the value of these articles which forms a part in the selling prices of our finished products. As a result of the new Excise levies, we had to add the new excise duties to the selling prices of our numerous products and we have encountered a certain degree of consumer resistance which makes us rather apprehensive about the future. It is a sore point with us that samples supplied free of charge to private medical practitioners for clinical trial have not been exempted from the Excise levy and thus we have to pay a considerable amount of Excise duty which cannot be passed on to consumers. In addition to Excise duties, there has been substantial enhancement of Customs duty on a number of items for which we have to depend wholly or partially on overseas supplies. For instance Customs duty has been increased on Natural & Synthetic Oils from 50% to 75% ad valorem, on Sulphur from 5% to 10% and on power-operated machines and parts thereof from 10% to 15%.

There has been a set-back in our business in Singapore in the year (1960-61) as the Chinese products, specially Absorbent Cotton Wool, are being

sold there at competitive rates. Our exports to Kuala Lumpur have however improved to a certain extent. It is expected that the business in this market will be further developed in future.

Business in Burma is not upto our expectation. The Burma Govt. have set up "Burma Pharmaceutical Industry Ltd." which have been manufacturing Pharmaceutical Drugs and Medicines conforming to recognised standards. The Union Government of Burma issue permits for a selected number of items only.

Shipping Difficulties

Since 1959 we have been experiencing difficulties in shipping our products to Colombo and there has not been any improvement in this regard as yet. Recently a consignment containing 36 cases of medicines was lying packed in our godown for about three months. After protracted correspondence with the authorities concerned it was possible to effect its shipment with the help of the State Trading Corporation. As a result of irregular shipments our business in this area could not be improved.

Some amount of business was made in East Pakistan but owing to strict import policy business could not be increased. The position has not improved as yet.

With planned Industrial Development in our country, demand for Fine Chemicals is growing rapidly.

The rigid control over the quality of Fine Chemicals manufactured by us helps consumers to manufacture better products and maintain their standard. This has resulted in an increased demand for our Fine Chemicals.

To reorient our production programme, equipment especially made to order several lakhs of rupees has been installed in the Chemical Department Manikata Factory to improve the existing ones. This fact was reported to you last year.

A separate unit has now been installed to produce Reagent Grade Chemicals of the highest degree of purity.

Our Analytical Laboratory has been provided with requisite apparatus to have strict control over the quality of our products.

We have been so long supplying our fine chemicals, reagent quality chemicals and pharmaceutical chemicals to Colleges, Public Institutions, Govt. Laboratories, etc. but very soon we will be in a position to meet the entire demands of the country.

Alum Plant at Panihati Factory

As I have mentioned before expansion work at Panihati for Alum Plant could not progress as per schedule due to delay in getting the import licence for foreign equipment from Government of India. It may be noted here that the percentage of foreign equipment required for the proposed Alum Plant and the installation of 50 TPD Sulphuric Acid Plant is only 25% of the total cost involved. The rest will be fabricated locally. Foundations for Plants and Equipment are complete. Arrangement for placing indents for foreign machinery are being made and all possible steps are being taken to complete the scheme as early as possible.

On completion of the scheme, capacity of the plant will increase from 30 to 60 tons a day.

Apart from Sulphuric Acid, the other raw material for manufacture of Alum is Bauxite, annual consumption of which will increase to 9000 tons. Substantial progress has been made during Second Plan period in establishing different Hydro-Electric Projects and more Power Stations will be coming into existence in the Third Plan. This has increased the value of Bauxite as a potential reserve for Aluminium Industry and it has already attracted the interest of other Industrialists. It may be necessary on our part to try to secure prospecting licence for Bauxite Deposits from the State Governments in case good workable mines are available.

Road Tar and Non-availability of Crude Tar

Our Road Tar Industry is one of the oldest in the country. Its future is very uncertain. With more Steel Plants in the Public and Private Sectors going into production it was expected that enough Crude Tar would be available but instead Crude Coal Tar is being burnt as a fuel as it comes from Coke Ovens. In our factories of course it is burnt after recovery of Naphthalene, etc. All our efforts to procure adequate quantity of Tar have so far proved fruitless. The Committee on By-products of Coal Carbonisation, before whom a representation was made last year by I.C.M.A. has not yet submitted any report for safe-

INDIA FORGE & DROP STAMPINGS LTD.—Cont'd.

mates of profit margins are such as to ensure a reasonable return on the equity capital.

PRELIMINARY EXPENSES AND EXPENSES OF ISSUE

The Preliminary expenses incurred by the Promoters in respect of the Registration of Company, procurement of Industrial licence, etc., etc. have amounted to Rs. 33,230/- which amount has been reimbursed by the Company.

The estimated amount of expenses of this Issue including underwriting commission and brokerage is Rs. 2,00,000/- and will be borne by the Company.

RIGHT OF PREFERENCE SHARES

The Preference Shares will confer upon the holders thereof the right to a fixed cumulative preferential dividend of 9.286% (free of Company's tax, but subject to deduction of tax at source at the prescribed rates) on the capital for the time being paid up. The said shares are redeemable at par at Company's option at any time after 10 years but not later than 15-6-1972. Any further issue of preference shares ranking pari passu with this issue shall be made only with the consent of the holders of not less than three-fourths of the value of Preference Shares outstanding.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 25,00,000/-. Subscription of the amount is assured as the entire public issue has been underwritten. The total capital required to reach a capacity (on single shift basis) of 3,000 tons per annum of Steel Forgings and Drop Stampings is estimated to be as follows:

	Rs.
(a) Lands, Buildings and other facilities	6,80,000
(b) Plant and machinery including cost of erection	47,30,000
(c) Pre-operation expenses from the date of its incorporation until commencement of production	6,90,000
(d) Underwriting Commission, brokerage and other expenses of this issue	2,00,000
(e) Working capital	25,00,000
Total	88,00,000

SOURCE OF FUNDS

- Equity shares 40,00,000
- Preference shares 10,00,000
- Loan from Industrial Credit and Investment Corporation of India Ltd. 27,00,000

It is intended that the balance of Rs. 11,00,000/- and any increase in the actual cost over estimated cost, including provision for working capital will be raised by loans from the Company's Bankers or other sources.

APPLICATION FOR SHARES

Application for equity shares must be for 50 and for preference shares for 5 or multiples thereof. Applications together with cheques/drafts must be delivered before the closing of the subscription list to the Registered Office of the Company, or the Office of the underwriters or brokers to the issue or to any of the bankers at their offices mentioned below: Ahmedabad, Bangalore, Bombay, Calcutta, Cochin, Hyderabad, Kanpur, Mangalore, Nagpur, New Delhi, Surat, Trichy.

guarding the existing industry. It is our earnest desire that the Government will give its due consideration and allow this industry in the private sector to exist and thrive.

Cotton

Demand for Surgical Cotton has increased both for internal consumption as well as for Export. But production has become almost static as Import control has almost stopped granting licences for maintenance as well as for replacement of old machinery so vital for manufacturing quality products. This item has also got export potentialities and Government's attention is particularly drawn to the fact of changing their import policy and to grant import licences at least equivalent to the value of the goods which have been exported. Incidentally the policy of the Government for exporting raw Cotton creates an artificial sellers' market and increases the price of the raw cotton in the internal market. Already the industry is facing the competition from the other countries and unless a revision is made, the export trade of Surgical Cotton may have a set-back.

Coal

Panihati Branch requires a large quantity of coal but quota has been fixed at only 36 wagons per month. Two years back the major portion of this coal was of "B" Grade quality. Now the entire quantity has been lowered to Grade No. II, which has more ash. Moreover, Chemical Industry has been placed in the 8th place as regards supply of wagon for coal. We had to keep our factory going depending on Transport of Coal by road. More consideration of the authorities concerned should be shown to keep this important basic industry going.

Electricity

Everybody is aware of restricted supply of electrical energy for the last few months. Industry had to make a sacrifice to avert national calamity.

Charges of electricity due to increased price of coal has been enhanced.

Transport

Movement of finished goods from Panihati Factory has become difficult due to short supply of wagons. Almost in all cases priority sanction is required to get allotment of wagons. Development of different industries in Panihati area has exceeded the capacity of the Sodopore Railway Station to accommodate the allotted number of wagons. As situation stands, although we are one of the oldest firms carrying on business at Sodopore Station, we have recently been forced to extend our activities to Titagarh Station at a greater expense.

Cement

During the year under review, position of availability of cement has again become scarce. Even for maintenance job, cement from normal market is not available and time required for procuring a permit is rather indefinite, causing inordinate delay in our day to day work.

Consideration of Profit & Loss Account & Balance Sheet for the year ended 31st March, 1961

I now pass on to review the Annual Accounts.

Profit & Loss A/c—The Profit for the year after providing for Depreciation, Bad Debts and all other charges is Rs. 18,08,053.31 to which has been added Rs. 30,774.45 brought forward from previous year's account. The distribution of profits and usual transfers to various Reserves leaves Rs. 1,21,106.24 which has been carried forward in the Balance Sheet as undistributed profits. Your Directors have recommended a dividend of 10% on all classes of Ordinary Shares subject to deduction of tax @ 30%, 9.75% on 7½% Cum. Preference Shares and 5.82% on 4½% Cum. Int. Preference Shares subject to deduction of tax in accordance with the provisions of the Preference Shares (Regulation of Dividend) Act 1960. I hope this will receive your approval.

Gentlemen, last year I told you that a scheme to manufacture some important basic chemicals by utilising the by-products of Durgapur Coke Oven Plants was under active consideration of the State Govt. I have now pleasure in informing you that Industrial Licence for implementing the project has already been obtained by the Govt. of W. Bengal. You will be glad to learn that Sri N. Adhikari representing your Company had recently been to Paris to negotiate the deal with the French Collaborators along with Dr. B. C. Roy, the Chief Minister of W. Bengal, and Sri A. B. Ganguli, I.C.S., Administrator, Durgapur Project.

In this connection I may add that implementation of the Proposed Scheme at Durgapur having been delayed for reasons beyond our control, application for consent of Controller of Capital Issues, Govt. of India, to increase the Share Capital of the Company in terms of the Special Resolutions passed at the last Extraordinary General Meeting has not been possible. Let me assure you that attempts will duly be made in this direction as soon as our proposed scheme at Durgapur crystallises to a well-defined shape.

The year under review has shown a better turnover in respect of the Company's branches at Bombay and Kanpur. The sales figures of both these branches have increased to a considerable extent. The factory at Kanpur has been modernised and steps are being taken to undertake the large scale manufacture of various pharmaceutical products.

The extension of City Office Building of the Company by addition of four more floors on the existing structure which was reported to you last year is progressing. As you all know scarcity in the supply of cement has been recently affecting the constructional work adversely. Anyway, we hope the building will be complete by the end of the current financial year.

Lastly, I feel it my duty to express my grateful thanks to my colleagues for their ungrudging help and mature guidance. I must also recognise the unstinted co-operation that I received from all members of the staff and workers, and above all our stockists and distributors, patrons and customers without which the excellent results would not have been possible.

(This does not purport to be a record of the proceedings of the Annual General Meeting.)

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD.

CHAIRMAN, MR. A. N. HAKSAR'S REVIEW

The following speech was delivered by the Chairman, Mr. A. N. Haksar to Shareholders of Bombay Suburban Electric Supply Ltd., at its Annual General Meeting held on 9th August, 1961, in Bombay.

The Report and Accounts already before you reflect a satisfactory record of operations during the year ended 31st March, 1961. Increase in sales energy has kept up the trend of the past average of 20%. The pace of increase in the coming year should, if anything, be steeper; this is, of course, assuming that bulk power in sufficient quantity will be available to meet the needs in the Company's area of supply.

From a preliminary study of the power requirements in the Company's System, it is estimated that the demand by 1976 would be in the region of 200 MW. In this context studies are, therefore, now under way to formulate a 15-year development plan. This involves appraisal, both technical and financial, of the future design of the whole system. Substantial progress in the study of the problem is expected to be made during the current year.

All these future developments involve considerable investment; but investment in the Electric Supply Industry is being impeded by the financial regulations governing it. The fact that the return at present prescribed by the Electricity (Supply) Act, namely 2% over the Reserve Bank rate of 4%, which again is subject to deduction of tax, is definitely inadequate, has been obvious for some time, and persistent efforts are being made to obtain a measure of relief. This involves important amendments to the Electricity (Supply) Act.

Indications at present are that the proposals to amend the Electricity (Supply) Act may be brought into effect from 1st April, 1962, and I earnestly hope that this expectation will materialise. In the meantime, in some of the States, including Maharashtra, the State Governments have permitted undertakings, as a special appropriation, the tax saving represented by the difference between the pre-1959 tax rate of 5½% and the new rate of 4½% based on the Finance Act of 1959. This interim relief, is, I think, an earnest of the authorities' acceptance of the Industry's case for a fair deal.

Two Primary Factors

I would now like to make some comments on the extent of relief required to rehabilitate the industry, and enable it to raise capital for development. Two primary factors have tended to depress equity values in the Electric Supply Industry. These, in broad terms, are—

1. The change in the tax pattern introduced by the Finance Act, 1959, whereby the grossing up of dividends in the hands of shareholders was abolished, and in addition the law provided for deduction of tax at source at the prescribed rate (currently 30%). While this is a common feature of the industry at large, the Electric Supply Industry is placed in a position of not being able to take advantage of the tax relief offered by the Finance Act in other directions, in that whereas in other industries this relief has accrued to the benefit of the investor, in the case of the Electric Supply Industry this has not been so. This certainly is not in conformity with the scheme of the Electricity (Supply) Act. One would have thought that with the Electricity (Supply) Act providing for all taxes on income and profits being charged up to the consumer's account, taxation in all forms on the Electric Supply Industry would have automatically become the consumer's liability. As things have shaped this position has not been achieved. The priority from the industry's point of view, therefore is the need for such changes in the Electricity (Supply) Act as would make the return free of all tax liability, be it to the undertaking or to the investor.

2. The second issue has directly arisen out of the official Bank Rate (to which is linked the return permitted to the investor in the industry) lagging behind the realistic interest rates. In a capital intensive industry like Electric Supply, greater reliance has to be placed on long term finance as the industry's requirements for development finance are large and insatiable. Consequently the return fixed from time to time should be at such level as would firstly arrest disinvestment and secondly continue to attract capital for expansion. The recent change in the Reserve Bank's lending rate to Scheduled Banks as an instrument of the credit squeeze involves three-tier interest rates, first Rs. 50 lakhs at 4%, follow on Rs. 50 lakhs at 5% and the balance at 6%, producing a resulting average lending rate of about 5%. This, by itself, has put the official Bank Rate out of focus in relation to money market conditions. Another aspect which has significant relevance is that inflation has had its effect in diluting the limited return permitted to the investor in the industry. In the light of these considerations it is only proper that the permissible return should be upgraded suitably.

Power Supply

I have in my opening remarks referred to your Company's expansion being dependent on the quantum of bulk power which would be available in the years to come. For the present the power supply position is far from easy, and releases of power to consumers is subject to control under the Bombay Electricity (Special Powers) Act. A measure of decentralisation is, however, in existence in that the Licensees in the area have been empowered to connect up small demands up to 20 kW for industries and domestic connections are permitted freely up to 5 kW. These decentral measures provide a degree

of normal growth. To what extent relief will be available after the commissioning of the first set of the Koyna Hydro Electric Project early next year is too early to say. At one stage it was thought that the bulk of the power from the Koyna Project would be available for use in Bombay/Poona area, but currently there are indications that a sizeable portion of the Koyna power will be reserved for use in Western Maharashtra. This has led to the possibility of the Tata Hydro Companies being permitted to extend their Trombay Thermal Station and, in addition, the Maharashtra Electricity Board considering installation of a new thermal station. This trend emphasises that the power needs of the Bombay/Poona area on which base area must perform depend industrial development elsewhere in the State, will be met. Your Company's plans for expansion should therefore proceed on the basis that it, along with other Licensees in the region, will be able to obtain sufficient bulk power releases.

From this premise will arise the question: How best the Company can finance its future development? For the present development has been sustained by Bank finance and before the current financial year is out the need for raising further finance will arise in all serious degrees. By that time the proposals to modify the Electricity (Supply) Act will, we hope, have reached finality and I hope will produce a measure of incentive to the investor in the industry. Your Board will then be in a better position to consider this matter further.

Massive Investment

The large scale development in the Company's power system, involving massive investment in the coming years, will pose the problem as to whether the rates for supply now in force will produce a sufficiency of earnings to service adequately the capital employed, and meet in addition the enlarged operational expenses inherent in development. While there is no doubt that the enlarged scope of operations will tend to spread overhead costs, one must reckon with the inflationary factor. One way to hold the price line in electric supply is to diversify the sale so as to obtain a higher load factor, that is, secure the beneficial utilisation of the power facilities more fully. There are, of course, limitations in this direction, as consumer choice is not a thing which can be rigidly endorsed. A strict watch on expenditure is yet another remedy to control operational costs, but here again there are limits beyond which a public utility cannot go. For example, in a basic service like electric supply, continuity of supply overshadows all other considerations, and no undertaking can risk diluting its service facilities for economic considerations which are marginal. The need to supply power at the lowest economic cost must therefore be circumscribed by the greater need to maintain reliability and continuity of supply. This assumes greater importance in your Company's area of supply which has to contend with rigorous monsoon weather and unfavourable atmospheric conditions. A higher standard of maintenance of the Company's supply system is, therefore, necessary.

Bulk Supply Rate

In the immediate years ahead the distributing Licensees in the Bombay/Poona area may have to face an increase in the bulk supply rate consequent to the injection of the Koyna power into the system. There is also the likelihood of higher fuel costs applicable to bulk power supply which might tend to curtail net earnings as the Company's rates for supply do not contain an escalator clause to take care of adjustments in fuel prices. This has been so because until recently bulk supply in the area has been from hydro sources, but this situation has been altered by the coming into being of a larger thermal component than existed before. To what extent the overall earnings is too early to visualise at this stage. The second cause is the more immediate one to be reckoned with, and your management are now considering how best the situation can be met. It is possible that your Company may have to consider introducing a fuel adjustment clause to ensure supply will automatically be on account of the consumer.

Dealing with the Accounts, I would like to clarify the Reserve created to augment production facilities, and the appropriations so far made to that Reserve. The first instalment of appropriation to this Reserve was made in the year 1959-60 consequent to the Maharashtra Government permitting the Company, along with other Licensees in the State, a special appropriation of 64% of the tax saving about which reference has been made earlier. When the accounts for 1959-60 were finalised, it was not certain as to what form the relief available would take. It was then thought that the amount permitted as special shareholders, but as events developed the scope of the sanction was limited to ploughing back the sum into the business without deduction from the Capital Base. It was in this context that the sum of Rs. 1,01,656 was taken into the Dividend Equalisation Reserve in the Accounts for 1959-60 and which amount has since been transferred to a Reserve to augment production facilities in the light of the subsequent Government sanction. This Reserve now stands at Rs. 2,06,130 taking into account the sum of Rs. 1,04,474 appropriated for the year under review, for which the sanction of the State Government is yet to be secured. Although the amount standing in this Reserve is not available for distribution, the benefit which will be derived by the shareholders is not slight, as the assets acquired will remain the property of the Company and the return on the amount ploughed back will also be available for the benefit of the shareholders.

Note: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

NDIAN COPPER CORPORATION LTD.

CHAIRMAN, MR. PATRICK E. G. W. PARISH'S

REVIEW

Address delivered by Mr. Patrick E. G. W. Parish, B.E., Chairman of Indian Copper Corporation Ltd., at the Annual General Meeting of the Company for the year ended 31st December, 1960, held on the 9th August, 1961.

entlemen,

The Report of your Directors and the Accounts for the year ended 31st December, 1960 have been in our hands for several weeks. This meeting gives a suitable opportunity to give you some more details of the progress which your Company has made during the year, a review of Copper prices and, perhaps, an indication of what lies ahead.

General Review

As I have explained before on similar occasions, the prices at which our products are sold must inevitably follow the trend of prices of Copper in the world markets. During 1960 the world price opened at about £253 per ton, rose to £279 in February, fluctuated rather sharply between £279 and £237, then an average of about £250 from March to August, hereafter it fell to about £220/230 for the remainder of the year. So far this year world prices have remained steadily around £220/240, with an average of about £228 as compared to £266.6 for the whole of 1960. In comparison with some years, these fluctuations have been relatively small.

World production of Copper could very easily exceed world consumption, but during the year there have been a number of strikes in producing countries and some of the major producers have at times voluntarily reduced output in order to avoid flooding the market. These factors have had a stabilising effect on the price which consumers would pay.

After a year of relatively stable prices but in an unstable world it is impossible to predict what evenfalls may occur to influence prices during the next few months. The world price at the end of last month stood at about £230 per ton.

Working Review

Production of Copper in 1960 was 8,769.30 long tons, which is a record for the Company and 1,216 long tons higher than last year. This satisfactory figure is partly due to the fact that the annual shutdown at the Works for overhaul was postponed until January, 1961 so that more days were worked in 1960.

Besides mining, producing and rolling Copper, our Company rolls Brass and Yellow Metal Sheets and Circles. This requires a mixture of Copper and Zinc, of which the latter metal has to be imported. During 1960 sufficient import licences were issued by Government to maintain supplies of our requirements, but I must tell you that in 1961, owing to the serious foreign exchange position, we have not been able to obtain our full quota of Zinc with the result that output has been adversely affected in recent months and there are little prospects of any improvement at present.

Active prospecting throughout the property has continued during the year and although no startling discoveries have been made, your new small mine at Urda is contributing towards our efforts to increase production. Prospecting, as you well know, is a very expensive business, but it is essential for the future of the Company and is vital if we are to increase production of this metal with a view to reducing the amount of Copper which has to be imported and thus save valuable foreign exchange.

Our reserves increased by 38,695 short tons and at the end of the year stood at 4,292,242 short tons, which is a sound and satisfactory position for a Company mining deep copper ore deposits.

Although during 1960 we suffered no ill effects from Electric Power shortage, this is a matter which, since the power cuts in the early months of this year, is causing us some anxiety; but it is hoped that the substantially increasing off-take we shall need in future will be available.

Coal supplies, partly utilised for augmenting electric power requirements, have in recent months, owing to transport difficulties, been erratic, which has resulted in stocks at times falling below a safe working level.

Despatches of finished products, which have a direct relationship to profits, were maintained at a satisfactory level in 1960, but this year, owing to transport difficulties, heavy stocks have accumulated at the Works. However, provided the required number of wagons from the Railway are forthcoming, the shortfall in despatches can be made good.

The satisfactory financial result for 1960 is due to higher output and a reasonable and stable World Copper price level. Expenses, however, continue to rise partly as a result of increased labour costs and partly because we are now mining at greater depths. I think, however, you will agree that the Company has had a successful year in 1960.

Last year I outlined the additional plant and machinery that will be required during the next few years for the processing of the expected increased output of ore from the Mine. Although investigations concerning the most suitable and up-to-date equipment have not as yet been finalised, I am pleased to report that a start has been made by the completion of modifications to the Aerial Ropeway to carry the anticipated output from the Mine to the Works.

It is pleasing to report that on the whole relations with labour have been satisfactory. In November 1960 a settlement was reached with the Joint Mines and Works Unions increasing basic pay and Dearness Allowance, which has been favourably received.

Kyanite

Although we cannot assist in the country's export drive so far as our Copper is concerned, our efforts do help to conserve considerable sums of foreign exchange which would otherwise have to be spent on

importing copper. On the other hand, the export of Kyanite is a useful foreign exchange earner and we are doing our best to increase sales abroad. Despatches abroad during 1960 amounted to 21,242 long tons. I must mention, however, that our efforts are frequently thwarted for lack of railway wagons from the Mine to Calcutta docks.

The appeal in the Supreme Court still remains pending, but attempts are being made to arrive at a compromise settlement.

Electrolytic Project

Work has now started on the foundations of the new buildings and satisfactory progress made on the ordering of equipment. At the moment we are delayed by the shortage of cement, which is chronic throughout the country, but it is hoped that this will not prevent completion of the Project on schedule.

Accounts

The Profit for the year before providing for Taxation, Depreciation and Reserves amounts to £1,307,982 as compared with a profit in 1959 of £1,202,259. Income Tax and Super Tax on profits amount to £500,477. Your Directors have decided to place £175,000 to Depreciation and £200,000 to General Reserve. £50,625 goes to Development Rebate Reserve.

There is a balance available of £489,001 and your Directors are recommending that the same Dividend as last year, i.e. 27% subject to tax, be maintained, absorbing £370,251, leaving £118,750 to be carried forward.

Bonus Share Issue

A number of Shareholders have written to us suggesting that the Company should issue Bonus Shares and there have been rumours in the market from time to time that your Directors were about to make such an issue. We have, of course, considered this matter, but our opinion is that for the present there is no advantage in so doing. On the contrary,

it would involve the Company in paying tax of 12½% on the Bonus Shares, which we do not think is justified as we require all the money we have got for the various expansion plans which lie before us. It is true that in this year's Budget the tax on Bonus Shares was reduced from 30% to 12½%, but even this tax is, in our opinion, unreasonable when Reserves, which have been built up out of taxed profits, are converted into Bonus Shares. Let us rather conserve our funds for improvements and extensions which will earn increased profits in the future.

The matter of a Rights Issue has also been discussed by your Directors, but the Company has sufficient cash for its immediate plans. In due course if further funds are required the question of making a Rights Issue will again be considered.

I am fully aware of the reasons which prompt Shareholders to hope for a Bonus Issue, but unless profits are increased there can be no benefit of a better yield and, as I have said, to pay out 12½% in tax when the money can be profitably used in extension projects seems to us unjustifiable.

Staff

It remains for me to thank the General manager, Mr. N. A. B. Hill, and the staff both at the Mines and at the Works, and the workers. I am sure that I speak on your behalf in expressing our appreciation of their work which has led to another year's successful results.

(This does not purport to be a record of the proceedings of the Annual General Meeting.)

General Manager.

Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

CALTEX (INDIA) LIMITED Bombay • New Delhi • Calcutta • Madras

As you need two hands to clap, so the country needs the combined efforts of man and machine to bring about industrial growth and prosperity.

Today, through the Five-Year Plans, the country is striving to create such a unity of effort where all will have enough.

It is our privilege to participate in this historic adventure of building a new India.

Money

THE CALCUTTA MONEY MARKET FEWER EXCHANGE BILLS

Wednesday, 16th August.

ONCE again there has been a slight overall decline in advances outstanding in the Calcutta money market during the past week. The requirements of the sugar mills and call for accommodation against foodgrains and seeds storage have both fallen. The needs of the cotton industry are about the same. The only moderate increases in demand have been on account of the jute mills and the engineering and iron and steel industries. In the interbank market, conditions have become somewhat fluid, and the call rate is fluctuating rapidly in the neighbourhood of 3 to 3 1/2 percent.

There has been a sharp fall in the activity of the exchange market, with very few tea or gunny bills coming to hand. Demand for remittance has been very poor. Spot sterling stabilised itself at slightly above parity with the U.S. dollar in the London money market during the early part of the week. Towards the close, however, the pound suffered a setback and the closing quotations showed fractional losses against all major currencies.

BULLION WAS QUIETLY STEADY IN THE PAST WEEK. Prices fluctuated narrowly in restricted trading. Upcountry centres showed little interest. Silver closed at Rs. 237.10. The price was quoted at 80 1/2 d in London and at 91.375 cents in New York.

Gold realised at Rs. 142.87.

DURING THE WEEK ENDED 11TH AUGUST, GOVERNMENT of India Treasury bills for Rs. 66,87,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 14th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.400 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 21st August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 16th August to 19th August at Rs. 99.416 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 9th August to 12th August amounted to Rs. 69 lakhs.

A RISE OF RS. 9.29 CRORES TO RS. 1,913.27 CRORES in active notes was an important feature of the return of the Reserve Bank of India during the week ended 11th August, 1961. The total note issue was fractionally lower by Rs. 6 lakhs to Rs. 1,920.80 crores. Notes held in the Banking Department consequently fell by Rs. 9.35 crores to Rs. 7.53 crores. Deposits of the Government of India rose by Rs. 7.43 crores to Rs. 60.69 crores, but other Government accounts declined by Rs. 4.94 crores to Rs. 13.69 crores. Balances of commercial banks at Rs. 80.04 crores showed a decline of Rs. 1.40 crores. Balances held abroad dropped by Rs. 3.85 crores to Rs. 31.96 crores. Investments at Rs. 289.47 crores showed a small decline of Rs. 3 lakhs. Other loans and advances rose from Rs. 115.53 crores to Rs. 117.38 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.80 crores (Rs. 75.50 lakhs). Ways and means advances stood at Rs. 47.59 crores, against Rs. 42.09 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 4th August, 1961, shows a rise of Rs. 1.82 crores to Rs. 529.31 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 14.66 crores and Rs. 6 lakhs to Rs. 251.41 crores and Rs. 9.41 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 2.63 crores to Rs. 248.06 crores. Cash and balances are, in consequence, shown at Rs. 26.87 crores, or Rs. 45 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 4th August, 1961, shows Demand and Time liabilities at Rs. 838.11 crores (Rs. 28.66 crores on account of borrowings from banks) and Rs. 1,143.91 crores (Rs. 20.48 crores), compared with Rs. 832.56 crores (Rs. 21.35 crores) and Rs. 1,142.69 crores (Rs. 18.79 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.82 crores and Rs. 1.62 crores to Rs. 45.99 crores and Rs. 78.88 crores, respectively. There is a rise of Rs. 13.48 crores to Rs. 591.50 crores in investments. Advances and bills discounted at Rs. 1,243.97 crores show an increase of Rs. 3.16 crores. The ratios to total liabilities of cash and balances, and of advances

Banking
Increases National Wealth

P. N. B.
Serves the Nation's Industry, Agriculture and Commerce.

BANKING SERVICE OF EVERY DESCRIPTION OFFERED.

Established 1895

Head Office: New Delhi.

THE PUNJAB NATIONAL BANK LTD.

MR. AL FOIL WRAPS CONFECTIONS TO PERFECTION

"Why not say it 'sweetly' Sir," said Mr. Foil helping out the worried gentleman. "Delicious chocolates and toffees to tempt sweet sixteen, soft candies to please Grand-Ma and ice-cream or biscuits to delight the kids at home... your choice in sweet presents is wide. Only be sure that they are all foil wrapped. Confectionery protected by aluminium foil looks attractive and tastes wonderful as only fresh sweetmeats do... because foil packing keeps in the tasty goodness while keeping out dirt, damp and dangerous contamination."

Long and extensive experience as Manufacturers of Aluminium Foils for packing goods in Cigarette, Pharmaceutical, Confectionery, Tea and many other industries.

VENESTA FOILS LTD.

KAMARATI, 24 PARGANAS, WEST BENGAL.

Branches at: BOMBAY, CALCUTTA, MADRAS, NEW DELHI

Selling Agents for Tea Chest Linings: WILLIAMSON, MAGOR & CO. LTD., Calcutta.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Industrial Activity (Base: 1953) has now been brought up to December 1960. Compared with the preceding month, there were decreases in tea 90.81 points, tyres 3.28 points and

bicycles 19.54 points, while increases occurred in sugar 230.39 points, jute 6.63 points, yarn 8.14 points, cloth 5.87 points, cement 28.55 points, coal 15.44 points, pig iron 8.51 points, finished steel 15.71 points, paper 12.94 points, motor-cars 20.86 points

and electricity 25.44 points. The railway ton-miles remained unchanged at 177.28 points. Combining all the factors, the Capital Index of Indian Industrial Activity fell by 1.9 points during December 1960.

New Doors

The profit made by the New Doors Company Ltd has increased from Rs. 6.52 lakhs to Rs. 9.75 lakhs for the year ended December 1960, after setting aside Rs. 1.54 lakhs (against Rs. 1.04 lakhs) for depreciation. A taxable ordinary dividend of 35 percent has been declared, against 32½ percent, taxable, in the previous year. Taxation absorbs Rs. 4.10 lakhs (against Rs. 3.60 lakhs). General reserve receives Rs. 50,000 (against same). After making other adjustments, there is a carry-forward of Rs. 59,842, against 52,126 brought in. A crop of 8,122 quintals was secured, against 7,275 quintals. The average sale price was Rs. 5.28 (against Rs. 5.11) a kilogram. Estimates for the current season have been framed for a crop of 7,620 quintals.

General Investment and Trust

An ordinary dividend of 5 percent, subject to tax, has been maintained by the General Investment and Trust Co. Ltd for the year ended February 1961. The profit has risen from Rs. 29,184 to Rs. 37,475. Taxation absorbs Rs. 17,312, against Rs. 12,261. After making necessary adjustments, there remains a balance of Rs. 5,151 to be carried forward, against Rs. 8,066 brought in.

Investment and Finance

A taxable ordinary dividend of 7½ percent has been maintained by the Investment and Finance Co. Ltd for the year ended February 1961. The profit has improved from Rs. 93,173 to Rs. 1,15,721. Taxation is allocated Rs. 52,901 (against Rs. 38,371). With other adjustments, there is a carry-forward of Rs. 25,831, against Rs. 24,168 brought in.

Bombay Market

STEEL SHARES LEAD IN GENERAL PRICE FALL

T.E.L.CO. TOUCH NEW
LOW

Wednesday Noon.

THE Bombay stock market closed the past week in a subdued mood and share prices declined further on a heavy selling pressure. There was evidence of nervous selling on reports of payment difficulties in Lyons Range. The weakness was accentuated by fears of the adverse impact due to the possible entry of the U.K. into the Common Market. Talk of further restrictions on credit in order to restrain inflation disturbed sentiment.

Steel shares bore the brunt of the pressure on an authoritative report that the Tata Iron and Steel Company might not achieve an annual target of 2 million tons during the next couple of years, in view of the unsatisfactory supplies of raw materials, such as coal and limestone. Tata Steel declined to Rs. 153 and Indian Iron to Rs. 25.85 on pressure from Lyons Range. In the engineering section, Tata Locomotive touched a new low of Rs. 348 following the chairman's statement that the Company will not issue any rights share for the time being. Premier Construction were lowered to Rs. 186, as were Alcock Ashdown to Rs. 273. Mukand Iron lost at Rs. 25.90 and Larsen and Toubro were sold down to Rs. 37. In motor shares, Hindustan Motors lost substantially, although the closing price at Rs. 20.76 showed a small recovery. Premier Automobiles were depressed at Rs. 157.50 on talk that the Company might issue rights shares at a premium.

Prices of cotton mill shares were lower all round at the close, after a short-lived rally earlier. Century were sold down to Rs. 676 and Bombay Dyeing were quoted lower at Rs. 67. Scattered

interest was taken in Kohinoor at the lower price of Rs. 288. Svadeshi came to hand at Rs. 251 and Tata Mills lost at Rs. 63. Simplex were sold down to Rs. 190 and Khatau were available at Rs. 557.50. Standard were dealt in at Rs. 1,355 and Morarji were taken at Rs. 409. India United Ordinaries weakened to Rs. 15.08 and sellers predominated in Apollo at Rs. 1.92.

In the miscellaneous section, sugar shares were quiet, and Belapur were quoted lower at Rs. 252. Phalton declined to Rs. 130, as did Walchandnagar Industries to Rs. 164. Mining shares were quietly steady, and business passed in Shivrajpur Syndicate at Rs. 93.50. Cement shares were quiet, and Associated Cement were transacted at Rs. 159.50. Digvijay came to hand at Rs. 165. Steamship company shares were sold freely on lower prices. Scindia Steam were dealt in at Rs. 13.64 and Great Eastern Shipping were sold down to Rs. 13.60. Chemical shares lost all round, and Tata Chemical weakened to Rs. 17.44. Polychem were sold down to Rs. 203.75 and Indian Dyestuff were dealt in at Rs. 465. Rayon shares reacted on a broad front, and National Rayon were quoted lower at Rs. 534 on pressure. Baroda Rayon were available at Rs. 140 and Gwalior Rayon declined to Rs. 48.25. Bombay Burmah reacted to Rs. 589. Scattered interest was taken in Voltas at Rs. 286.50 and in Tata Oil at Rs. 75. Ceat Tyre were steady at Rs. 211.25, but Premier Tyre lost at Rs. 124. Synthetics and Chemicals lost fractionally at Rs. 190. Business passed in Hindustan Lever at Rs. 47.50. Anil Hardboard were indicated at Rs. 230.

Bank shares were steady and improved fractionally. Business was done in Central Bank at Rs. 63.30 and in Bank of India at Rs. 131.50. Dena Bank rose to Rs. 62 and Bank of Baroda were transacted at Rs. 104.50. Insurance shares were quiet, and New India Assurance reacted to Rs. 56.50. Vulcan were available at Rs. 16.50.

There was evidence of some support in electric company shares. Bombay Suburban were bought up to Rs. 98.50 on prospects of expansion. Ahmedabad Electric were placed at Rs. 90 and Tata Hydro were done at Rs. 108.

Madras Market

QUIETER TREND FOLLOWS EARLIER STEADINESS

TEXTILE SHARES IN FAIR
DEMAND

Wednesday Noon.

THE Madras stock market has been steady during the past week, but turnover was restrained at the close on easier advices from the Calcutta and Bombay stock markets. Support was induced by the prospect of further developments in the corporate sector under the stimulus of the plan outlays. Textile shares were fancied in the hope that production would be encouraged in order to meet the cloth shortage. In the planting section, tea shares were bought on encouraging auction advices. Rubber shares were favoured selectively on prospects of expansion. Coffee shares were subdued and sellers predominated because of the uncertain marketing outlook. Bank shares hardened on good corporate news. Miscellaneous shares were taken selectively on reports of expansion of activities.

Government securities were steady, but attention was diverted to the forthcoming State Government loans. In public utilities, South Madras were indicated at Rs. 10.12 and Ellore were placed at Rs. 20. Business was done in Vellore at Rs. 13.35 and West Coast came to hand at Rs. 14.90. In the banking group, Canara were taken at Rs. 80. This Rs. 50 each at a premium of Rs. 15 a share. Of these, 40,000 shares will be offered to the existing for every five held. Punjab National were transacted at Rs. 24 and Indian Overseas were done at Rs. 188.50.

Sugar shares were quiet, and Deccan declined to Rs. 13.30; E.I.D. were available at Rs. 39.50, but Mysore were quietly steady at Rs. 57.75. Business was done in United Breweries at Rs. 103.50 and in Travancore at Rs. 10.35. India came to hand at Rs. 12.10 and Kothari were offered freely at Rs. 8.90.

In the planting group, Blue Mountain came to hand at Rs. 3.70 and Cochín Malabar were dealt in at Rs. 7.40. Coffee Lands weakened to Rs. 17.90, as did Consolidated Coffee to Rs. 21.25. Malankara were taken at Rs. 18 on paying a taxable ordinary dividend of 16 percent. Oosoor were dealt in at Rs. 2.78 on declaring a final ordinary dividend of 10 percent, taxable. Oucherlony were indicated at Rs. 3.70 and Periakaramalai were done at Rs. 3.93. Sangameswar were transacted at Rs. 2.06 on declaring a taxable ordinary dividend of 6 percent. United Nilgiri were steady at Rs. 26.40 on a hope that the dividend would be higher. Peermade were quoted at Rs. 22.90 and Kil Kotagiri were taken at Rs. 4.68. Nilgiri were steady at Rs. 8.90 and Rajagiri were available at Rs. 18.75.

In the textile section, Lakshmi hardened to Rs. 170, as did Madura to Rs. 37.30. Travancore Rayon were done at Rs. 38.90 and South India Viscose were steady at Rs. 185. Bangalore Woollen improved to Rs. 212 and Buckingham to Rs. 245. Kasthuri were bought up to Rs. 25 on paying a 12½

able ordinary dividend of 9 percent. Vijayakumar weakened to Rs. 105 on passing the dividend. Mettur were quoted at Rs. 382 and Kothari were in demand up to Rs. 12.60. Coimbatore Spinning were sold down to Rs. 56.50, but Kadri were bought up to Rs. 114. Anglo-French were supported at Rs. 125 and Asher were placed at Rs. 204.05.

Among miscellaneous shares, Aluminium Industries were done at Rs. 23 and Ashok Leyland at Rs. 8.85. India Cement were steady at Rs. 6.55 and Indian Steel Rolling made Rs. 10.87 on declaring a final ordinary dividend of 7½ percent, taxable. Mysore Chemical Fertiliser were taken at Rs. 11.60 on declaring a taxable ordinary dividend of 10 percent. T. Stanes came to hand at Rs. 32.50 on the payment of a taxable ordinary dividend of 15 percent. United India Fire were quoted at Rs. 8.35 on the decision to issue 66,666 shares of Rs. 10 each to the existing shareholders at par. In the ratio of one new share for every two held. Seshasayee Paper improved to Rs. 8.77 on replacement buying and Spencer were indicated at Rs. 23.25. Business was done in Standard Motors at Rs. 16.12 and Tube Investment were steady at Rs. 259. F.A.C.T. were in demand at Rs. 9.85 and Textool were placed at Rs. 181.

THE WEEK'S TRANSACTIONS

London Market

STOCK MARKET HIT BY ADVERSE NEWS WIDESPREAD LOSSES IN EQUITIES

London, 16th August.

THERE has been almost a complete absence of buying incentive in the stock market during the past week and sentiment has been influenced by the all too many adverse factors. Some companies are meeting the Government's wishes for dividend restraint, and most leading companies which have announced dividends since the request was made, have held payments at the previous year's levels. The Berlin cloud which has overshadowed the market for some time has been a growing adverse factor. But while equities have steadily fallen away, the gilt-edged appear to have come into their own. Current prices are now some 2 points above the all-time low levels recorded in the previous week. Foreign bonds and rails have been quiet and although Wall Street reached a new all-time high, dollar stocks have not always reflected the advance. Losses in equities are widespread and in many cases sharp, sometimes running into several shillings. Selling has never been heavy, but with buyers almost non-existent it has taken little stock to come out for jobbers to mark prices lower. The leaders have been no exemption to the rule; in fact, they have proved somewhat vulnerable with their low yields, and shares like I.C.I. Marks and Spencers, Woolworths, Guest, Keen and Tute Investment have fallen away. After the half-year statement, Unilevers staged a moderate recovery. Bank and insurance shares have weakened generally. With business in gold shares still restricted, prices have moved narrowly and irregularly. The new trouble in Rhodesia overshadowed coppers, but tins have made some headway after moving erratically. Leading oils have given way and teas have lost some ground, but rubbers have held up quite well.

New Delhi

FINANCE MINISTER OPPOSES EXPENDITURE ON ALL NON-THIRD PLAN PROJECTS

FOREIGN AID GRANTED FOR SPECIFIC SCHEMES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Finance Minister, Mr. Morarji Desai, made two statements in the Lok Sabha during the past week; one, on India's foreign exchange position and the other, on the U.K.'s decision to negotiate for joining the European Common Market. Side by side, he has addressed a communication to the Planning Commission expressing his strong disapproval of some Ministries to come up with proposals which are outside the third plan. The Finance Minister has candidly pointed out that resources, both internal and external, in sight are hardly adequate to finance even all the projects included in the present plan. He has characterised the proposals for expenditure on non-plan projects as not only unrealistic, but also pointed out that these are bound to divert public attention from the more important problems on hand.

Five years ago, Mr. M. V. Rangachari submitted a well-reasoned paper, giving the correct position of finances which could be made available to finance the second five year plan. Mr. Rangachari was ruled out on the easy plea that service men have an ivory-tower mentality. But his forecast has since been borne out by the experience of the last five years. The same story is repeated now. The Ministry of Finance presented a correct appraisal of the finances which could be available to finance the third plan. It was over-ruled because of the massive foreign aid which is being provided by the western nations, particularly the U.S.A.

Schemes Outside the Plan

The Finance Minister has told the Planning Commission that the aid-giving countries have promised funds on a definite blueprint, which should not be jumped over by the inclusion of projects not included in the plan. The Ministry of Finance, and more particularly the Finance Minister, did not exercise the same vigilance over non-plan projects during the second plan period. It is these non-plan projects which have largely increased India's import bill and are responsible for the balance of payments difficulties. Hardly the ink was dry on the signatures to the third plan when the Planning Commission approved of three non-plan projects. One of them provides for the expansion of Hindustan Antibiotics Ltd in Pimpri at a cost of Rs. 60 lakhs. The second will set up a Rs. 93-lakh Central Design Institute for machine tools and the third seeks the expansion of Hindustan Cables Ltd, Rupnarainpur, at a cost of Rs. 14 lakhs. The total expenditure on these three projects in the week during which the third plan was signed comes to Rs. 1.67 crores. In addition, the heavy compressors and pumps project, the low-cost car project, the public sector aluminium plant project, the State naphtha cracker project, the salt works project, the slag cement plants at the three steel plants project, the electrical steel sheets project in Bourkela, the alloy steel and stainless steels project in Bhadravati, Mysore, the caustic soda plant project at the adjunct of the N.E.F.A. newsprint mills and the phosphorus plant project, are all on the tapis, awaiting political pressure for inclusion in the plan.

Need to Maximise Exports

In both the statements, the Finance Minister emphasised the imperative need for increasing exports. It is being examined here statutorily to fix a certain percentage of production in selected industries, especially engineering industries, for export. It is also being considered to make it obligatory for new industries which are dependent on the import of raw materials to pay for their imports through exports within a specified period. The views of the Export Promotion Advisory Council, meeting here next month, may be invited on the issue.

There has been a good deal of speculation here about the Industry Minister, Mr. Manubhai Shah, who, it is reported, is going to become the Minister for Foreign Trade. If the Prime Minister is anxious to step up exports, he should, side by side, appoint Mr. Gulzarilal Nanda as the Minister for Commerce and Industry. Mr. Nanda will only be able to realise what his labour policy has done to the export trade of India. This is by no means a plea for denying labour its fair wage, but wages should bear some relation to productivity, as they do in Russia and China, much less to that of countries like West Germany. By a stroke of pen, Delhi has been classified as an "A" class city, increasing the pay bill by Rs. 4.5 crores a year, irrespective of the consideration whether this is accompanied by "A" class work. For an answer, one could visit the Reserve Bank building on Parliament Street, once a show-piece of New Delhi, but now developing into a new variety of slums, peculiar to New Delhi.

Another case is pertinent to recall here. Mr. S. K. Patil, for example, can compel the Indian consumer to pay through his nose for his sugar.

but a foreigner cannot be similarly compelled. India's exports can only be stepped up when the prices and quality of Indian products are competitive. Even Russia has refused to take sub-quality shoes. It should be a matter for some concern that Mr. Nanda, as the Minister for Planning, should urge the Government to step up exports and as the Minister for Labour, should make his maximum contribution towards raising labour costs, which are reflected in the export prices of goods. He also makes a point to set up wage boards for industries, which have either an export potential, or which contribute to industrial costs. The awards of wage boards on textiles, sugar and cement have already been implemented. Wage boards for tea, coffee, rubber, jute and iron and steel, have either been set up, or are being set up. Side by side, a technical committee for paper, cigarettes, electrical or general engineering products and iron and steel, has recommended that the employer's share to the provident fund could be increased from 6½ percent to 8½ percent. Side by side again, a bonus commission has been set up and, according to lobbies, Mr. Nanda is being strongly supported by Mr. Krishna Menon, presumably because Defence Industries are not covered by its terms of reference. It will be thus seen that much more is needed for increasing exports than a mere Ministerial change. Before exports could be stepped up, a great deal of administrative and mental overhaul would be necessary. The Ministry of Commerce will have to be given a dominating voice in determining the cost structure of exportable commodities.

French Institute to Collaborate in Oil Search

The Oil Minister, if not oil, is always in the news. He told Parliament during last week that an understanding has been reached, under which the State-owned French Petroleum Institute would collaborate with the Indian State-owned Oil and Natural Gas Commission in search for oil, initially for three years, in the Jaisalmer area of Rajasthan. The representatives of the French Petroleum Institute, for all practical purposes, will be the employees of the Oil and Natural Gas Commission, which will bear the entire risk. About \$8.04 million, out of the \$30 million offered by France, will be earmarked for the project. This should shut out Standard-Vacuum, which has been unsuccessfully negotiating for oil exploration in this area.

The Ministry of Finance, it is learnt, has given its clearance to the Oil Minister's credit deal with the Italian State-controlled E.N.I.-A.G.I.P. As reported on 23rd July, the Italians have offered a credit of \$120 million consisting of \$100 million for equipment and technical assistance and \$20 million for oil exploration in the Kutch area, as agents of the State-owned Oil and Natural Gas Commission. Of the \$100 million, \$13 million is to be paid on the delivery of equipment and the balance, including \$20 million, is to be repaid after 12 years; the loan carries interest at the rate of 6 percent.

The Ministry of Finance, it appears, objected to the payment of \$13 million, cash down, primarily because India has no money to meet this bill. Ultimately, it has agreed to the payment of \$4.8 million cash down on the delivery of equipment. How this \$4.8 million in foreign exchange is to be found, is still not quite clear. There is yet another snag. Under the Italian law, even E.N.I. cannot extend credit for more than six years. It should be presumed that the agreement will be for credit for a six-year period, with the understanding that it will be extended for a further period of six years. In any case, there will be no payment beyond \$4.8 million during the third plan period and there may be no payment at all before the next general elections.

Private Refineries Asked to Curtail Output

The third item of oil news comes from Caltex, which owns and operates an oil refinery in Visakhapatnam. In order to save foreign exchange, the Central Ministry of Mines and Fuels last year directed all the three refineries in the private sector to maximise their production. This policy has since been reversed and the oil companies, generally, have been directed to peg down the import of their crude to the 1960 level. Caltex, for example, could have refined 80,000 tons more crude during April-September than it has been permitted to do.

Action and reaction are equal and opposite to each other. It is a well-known law. As a result of the Oil Ministry's action, the Caltex has informed the Government of India that it will be unable to supply naphtha required for a fertiliser factory of 80,000 tons capacity, recently sanctioned to be installed in Visakhapatnam in the private sector in collaboration with the U.S. firm of California Chemicals Ltd. Three possibilities are visualised. First, the plan to set up a fertiliser

plant may be abandoned. Secondly, the firm which has been licensed to set up the fertiliser plant may be permitted to import naphtha from abroad, for which foreign exchange will have to be provided. Third, Caltex may be permitted to import crude, as it was given to understand, it would, when it expanded the refinery. The Ministry of Oil has tried to divide the oil companies by supplying some of them with as much crude as they wanted.

World Bank Loan for Coal Industry

The World Bank has made a loan equivalent to \$35 million to India to assist the private collieries to expand their production, according to a Press release of the Bank. To meet the industrial goals of the third five year plan, India's annual production of coal will need to be increased by some 80 percent above the present output—from 54.6 million tons to 97 million tons in 1966, the last year of the plan period. As their part of the programme, the private companies intend to expand existing facilities and open new mines to increase their annual production of coal from 44 million tons to 61 million tons. The loan will make available the foreign exchange required to import equipment for this expansion.

Four private banks are participating in the loan without the World Bank's guarantee to the extent of \$8,75,000, representing the portion of the first maturity which falls due in the May 1966 period. The participating banks are the Bank of America National Trust and Savings Association, the Irving Trust Company, the Wells Fargo Bank American Trust Company and the New York agency of the Hongkong and Shanghai Banking Corporation. The loan is for a term of 15 years and bears interest at the rate of 5½ percent a year, including the 1 percent commission which is allocated to the Bank's special reserve. Amortisation will begin in May 1966. The total cost of the programme to be carried out by the private coal industry during the five year plan is estimated at the equivalent of \$116 million. It is expected that the private companies will be able themselves to provide the rupee finance for this expansion, but they will need to have foreign exchange for the imported equipment. The Bank loan will provide \$30 million for imported spare parts, replacements and equipment required during the first two years of the plan period for the expansion of existing mines, and \$5 million for the opening of certain new mines which should take about four years to complete.

In view of the importance of the private sector of the coal industry to the attainment of this goal, the Government has taken a number of measures to enable the private companies to expand production, including a system of subsidies for mines with difficult operating conditions, permission to open new mines and an assurance of policies favourable to continued production by private companies.

New Companies with U.S. Collaboration

During the period 1st April, 1956 to 31st March, 1961, consents have been given to 24 new issues of capital in which the participation by U.S. companies is proposed. These, however, did not include cases of technical collaboration between U.S. and Indian companies approved by the Central Government. The activities of these new companies started with U.S. capital participation cover a wide field including the manufacture of motor-vehicle ancillaries, surgical and pharmaceutical products, pulp and paper, ferro-manganese and other alloys, aluminium, cement, synthetic rubber, tyres and tubes, artificial silk or rayon, forge shop, carbon black, antibiotics, electrical equipment, etcetera. The structure of capital participation between the U.S. and Indian interests varies from company to company, but generally U.S. participation has been on a minority shareholding basis. However, only in very few out of the 24 cases mentioned earlier, the U.S. firms hold majority shares. The Government has not invested in any of these joint collaboration firms.

I.D.A. Loan for Road Scheme

The International Development Association, which is an affiliate of the World Bank, has agreed to give a credit of Rs. 12.69 crores for the development of the Calcutta-Cuttack road. The credit will broadly cover the following works: (a) the four-lane road from Vivekanand bridge (near Calcutta) to Joypurbeel; (b) the two-lane road from Joypurbeel in West Bengal to Subernrekha bridge on the Bihar-Orissa border including the construction of bridges over the Rupnarain and Kangsabati rivers; (c) the single-lane road from Subernrekha bridge to Cuttack including the construction of bridges over the Mahanadi, Birupa, Brahmani, Kharswan, Baitarni, Selandi, Nuni-jhari and Budabalong rivers.

Small Industries in Bourkela

The report on small industry potentialities in Bourkela (Orissa) has been revised and finalised. The main conclusions and recommendations in the report suggest that the following industries can be started and operated profitably: ancillary industries: (i) industrial fasteners, (ii) mild steel washers, (iii) foundry, (iv) drum and barrels, (v) pipe fittings, (vi) leather footwear, (vii) paper bags, (viii) industrial brushes, (ix) industrial hand gloves, (x) mining implements and (xi) polished steel furniture, (xii) builders' hardware, (xiii) washing soap, (xiv) bakery and confectionery, (xv) bicycle parts, (xvi) mechanical tools, (xvii) motor tyre retreading and vulcanising, (xviii) motor tyre retreading and vulcanising, (xix) motor tyre retreading and vulcanising, (xx) motor tyre retreading and vulcanising.

THE ISAAC HOLDENS MILL AT JAGATDAL, WEST BENGAL

LIGHTING BY PHILIPS

At Jagatdal, near Calcutta, the Isaac Holdens Wool Combing Mill—the first and only one of its kind in the country—stands out as an important landmark covering 114,000 sq. ft. ... twice the size of a hockey field. Workers here are engaged in wool selection, washing, breaking and combing—operations that require a high and even level of illumination.

Naturally, the mill management specified Philips lighting.

Philips' modern, streamlined fittings provide the right amount of illumination and thereby contribute

towards the overall efficiency and high productivity achieved in this mill.

Philips' exclusive lighting—consisting of lamps, fittings and accessories—ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of research and development aimed to meet the ever-growing demand for better lighting. And hand-in-hand with Philips' unrivalled quality comes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

PHILIPS INDIA LIMITED

An industrial estate has been constructed in Rourkela for the location of small-scale industries using the end-products and by-products of the steel plant and working as ancillary units for the supply of the requirements of the steel plant and other large-scale units coming up there. An industrial extension centre for engineering industries has also been provided at the industrial estate in Rourkela.

Coalmining Machinery Plant

The coalmining machinery plant in Durgapur will go into production by the end of 1963. It is designed to manufacture centrifugal pumps, sand pumps, direct haulages, endless haulages, main axial fans, booster fans, scraper chain conveyors and belt conveyors. Winding engines, it is expected, will be manufactured in 1965.

S.T.C. to Import Automatic Looms

The State Trading Corporation has negotiated a barter agreement with a Swiss firm for the import of automatic looms against the export of cotton textiles and other Indian products over a period of two years.

Japanese Purchase of Iron Ore

As a result of negotiations between the State Trading Corporation and the Japanese steel mills, the latter have agreed to purchase 6 million tons of the 65-62 grade iron ore during the period 1961-63. The terms and conditions, it is expected, will be finalised shortly. Negotiations for the sale of the 65-65 and 62-60 grade iron ore are still in progress.

Tractors from Poland

The import of tractors from Poland will be approximately 450 units with spares, etcetera, and will cost about Rs 40 lakhs. The total cost of tractors imported from all sources during the second five year plan period is Rs. 33.46 crores.

Making Sodium Carboxy Methyl Cellulose

Sardesai Brothers Ltd, Ahmedabad and Cellulose Products of India Ltd, Ahmedabad, have been licensed under the Industries Act to manufacture sodium carboxy methyl cellulose, with a capacity of 1,200 tons and 1,500 tons a year, respectively.

Sardesai Brothers Ltd is the first firm to produce carboxy methyl cellulose in the country.

Working Results of S.T.C.

The fourth annual report of the State Trading Corporation covers the period of nine months only, that is, from 1st July, 1959 to 31st March, 1960. The total turnover of direct sales increased to Rs. 42.82 crores, compared with Rs. 35.95 crores during the 12 months of the previous year. As in the previous years, mineral ores constituted the bulk of the Corporation's business in exports. The total turnover of mineral ores increased from Rs. 18.26 crores during 1958-59 to Rs. 18.83 crores in the nine months of 1959-60. There was also a substantial increase in the exports of low-grade iron ore and chrome ore. Other items in which exports registered an increase were jute bags, shoes and mica. New items on the export list were bauxite, pig iron, coking coal and cotton yarn. On the import side, the Corporation handled a wide variety of products essential for the country's industrial and other needs. Non-ferrous metals, soda ash, raw silk, ammonium sulphate and skimmed milk powder accounted for the major portion of the increase in imports. New items on the import list were flourspar, rayon grade caustic soda and rock phosphate. Another import of significance during this year was that of giant tyres, tubes and flaps to bridge the gap between the demand and indigenous production, and 26,000 sets of tyres valued at Rs. 66.5 lakhs, were imported. The financial results of the working of the Corporation during the period, compared with that of the previous year, are given below:

(Figures in Rs. crores)

	1958-59	1959-60
		(Nine months)
Paid-up capital	2.00	2.00
Direct trade	35.95	42.82
Indirect trade (value of export and import through the S.T.C.)	21.37	13.47
Gross profit	3.69	3.13
Net profit	1.28	1.40

Out of the surplus accrued in the cement agency account up to June 1959, a sum of Rs. 2.40 crores was paid to the Government. The accretion to this account during the period was much less due to the increase in the incidence of freight and packing charges. The surplus on 31st March, 1960, held on behalf of the Government, was Rs. 1.40 crores.

Freight Charges of Joint Steamer Companies

Prior to 1958-59, the Central Government did not give any grant to the Joint Steamer Companies, operating in Bengal-Assam. During the last three years from 1958-59, the following grants have been sanctioned: in 1958-59 Rs. 5,00,000, in 1959-60 Rs. 8,74,324 and in 1960-61 Rs. 6,40,472. In addition, the Companies receive annually a sum of Rs. 5,000 and Rs. 9,500 from the State Governments of Assam and West Bengal, respectively. These grants are intended to reimburse a part of the expenditure incurred by the Joint Steamer Companies on river conservancy work in Assam, the Sunderbans and Cachar areas. The net trading results of the Joint Steamer Companies during the years 1956 to 1960 were as follows:

1956	Loss	Rs. 55.0 lakhs
1957	Loss	Rs. 14.16 lakhs
1958	Profit	Rs. 27.88 lakhs
1959	Loss	Rs. 4.98 lakhs
1960	Loss	Rs. 43.14 lakhs

It is not necessary for the Joint Steamer Companies to obtain the prior sanction of the Government for increasing their fares. They increased the freight rates by 10 percent with effect from 15th March, 1961, for all goods other than tea from Cachar and foodgrains. The Assam Government feels this increase is unjustified and has urged the Central Government to ensure that it is at least scaled down. Following discussions, the Companies have agreed to reduce the amount of the increase by 4 percent, namely, from 10 percent to 6 percent from 22nd April, 1961 to 30th June, 1961 pending a review of the reasonableness or otherwise of their freight structure by a committee. Such a review was conducted, as a result of which the increase has been limited to 5 percent over the rates prevailing in 1960 with effect from 1st July, 1961.

World Bank Loan for Calcutta Port

The World Bank has agreed to grant a loan in various foreign currencies equivalent to \$21 million (Rs. 10 crores) to the Calcutta Port Commissioners. The agreement is now in the process of being executed by the two parties. The loan will be for a period of 25 years, including five years of grace period. A commitment charge at the rate of 3 percent will be payable with effect from 60 days after the date of the agreement, on the loan amount not drawn on by the Port Commissioners. On the amount actually drawn, interest is payable at the rate of 5 1/2 percent a year. The loan is repayable in 41 semi-annual instalments beginning from 15th May, 1966, and ending on 15th May, 1986. The last date for the withdrawal of the loan is 30th September, 1965. The loan will be given by the World Bank to the Calcutta Port Commissioners and the Indian Government will be the guarantor for it.

London

REPRESENTATIVES OF T.U.C. AND INDUSTRY INVITED TO EXPLORATORY TALKS

GOVERNMENT POLICY ON WAGE INCREASES CLARIFIED

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer, Mr. Selwyn Lloyd, has invited representatives of industry and the Trades Union Congress to exploratory talks later this month on planning the economy. He is meeting them separately to start with, the T.U.C. on 22nd August and employers' organisations the day after, but these meetings could be the first steps towards the long-term changes the Government considers necessary to bring about a greater economic stability. It is believed the U.K. Chancellor will propose that both sides of industry should share with the Government the task of relating future plans to likely available resources. This would involve a joint examination of the economic prospects of Britain for at least five years ahead, the likely rate of economic expansion, and the distribution of resources between investment, consumption and Government expenditure. Such wide terms of reference would bring under review the supply of labour and capital, balance of payments, imports and exports, and the growth of incomes. The general policy of the Government is to work out methods of securing a sensible relationship between the increase in incomes and the rise in productivity. Ministers have been considering the salary and wage negotiating machinery for Government and other public service employees. They aim to make sure that negotiators and arbitrators know in advance the maximum pay increases the U.K. economy can afford.

As for wage increases, Mr. Selwyn Lloyd has lost no time in making his intentions quite clear. He has just followed up the tough line taken concerning the teachers' pay claim by informing the leaders of the Civil Service unions that no further claims apart from commitments already agreed to will be accepted. These unions recently sent a strongly worded protest to the head of the Civil Service arguing that they should not be singled out for special treatment and that the Government must not abandon the principle of "fair comparisons" laid down in the report of the Royal Commission on the Civil Service. Their worst fears of just how tough Mr. Selwyn Lloyd means to be were confirmed when he also made it clear that the Government would no longer be guided by the decisions of the Civil Service Arbitration Tribunal concerning the dates for pay rises.

Steel Output and Stocks Fall

Steel production in July, affected by holidays, was at an average rate of 380,000 tons a week, compared with 447,500 tons a week in June, according to the latest returns of the U.K. Iron and Steel Board. The output for the month was 3 percent less than in July 1960. Pig iron production was at an average rate of 276,600 tons a week, compared with 297,400 tons a week in June and 288,900 tons a week in July last year.

Steel stocks held by users and merchants fell, it is estimated, by about 80,000 tons, or nearly 2 percent during the second quarter. There was a further substantial fall in stocks of sheet and those of tinplate also fell. But there was a rise in stocks of plate. Stocks of other types of steel fell by about the average of 2 percent over the whole field. The Board records "considerable changes in the pattern of industrial demand." A slight decline in deliveries to building and structural steel work in the second quarter suggests that the industrial building boom has passed its peak. Deliveries to the motor-car industry have been well below those of last year.

Support for Reserves from I.M.F.

The support action by the International Monetary Fund turns out to be an immediate drawing of \$1,500 million and a standby arrangement for a further \$500 million valid for 12 months. The drawing will be made in nine convertible currencies, and it will raise the sterling area's reserves from \$276 million at the end of July to \$1,411 million. Counting the automatic drawing rights of \$1,589 million. But about £200 million of the month or two to repay the balance of short-term advances made by European central banks under the Basle arrangements.

The I.M.F. announcement makes it clear that this support action for sterling—like the previous one in December 1956—was approved only after the British Government had announced measures designed to restore a strong balance of payments position. Taking note of the policies the British Government has adopted, the Fund states that they are designed to restore balance "at the existing exchange rate and without imposing restrictions on trade and current payments." The support is given to provide time "while the new policies are taking effect." The drawing is repayable within an outside limit of three to five years. While the statement is not exactly put out as a condition of support, it does effectively prevent Britain

cent higher than at the beginning of the year and 33 percent more than a year earlier.

Hire-purchase Debt Rising

The hire-purchase debt has been steadily rising again in the last few months. In June, it increased by another £8 million to £957 million, which is slightly above the figure for June 1960, and near the peak of £971 million reached in July of last year. After that the hire-purchase business was hit by restrictions. The level of new hire-purchase business in June was, however, little changed from May. A decline in the new business of finance houses (mostly for motor-cars) was due to normal seasonal influences, and a slight fall in credit sales by household goods shops was slightly less than usual at this season. However, credit sales were higher than in June 1960, by 16 percent in furniture and furnishings, shops selling hardware, radio and electrical goods, bicycles, and prams.

I.C.I. Profit-sharing Scheme

A bonus of more than £84 million is to be shared by some 92,000 employees of the Imperial Chemical Industries' group. After income tax, this represents an average of £68 17s 6d for each worker. The net bonus, £6,344,000, will be handed over to trustees and used to buy new I.C.I. ordinary shares. This profit-sharing scheme was started in 1954 and stock is registered in the names of employees either every second year or when they are entitled to 40 shares.

The amount of the bonus is 22 percent of the total of all dividends and the fixed loan interest paid by the Company. Stock with a nominal value of £2,615,000, but now valued at more than £9.3 million, will go to 63,000 employees in October under the scheme.

Textiles and the Common Market

A statement on the Government's decision to seek membership of the European Economic Community has just been issued by the U.K. Textile Manufacturers Association, which represents the weavers of cotton and man-made fibre fabrics. This points out that if the project becomes a reality, very much will depend on the conditions of participation. The cotton and man-made fibre manufacturing industry has no illusions about the strength and vigour of the competition which would have to be met at home and in Europe from other industries in the Common Market, but it will be prepared to accept the challenge provided it is assured that competition is on a genuinely fair and equal basis and that the declared intention about "harmonisation of taxation, social charges, and working conditions" is realised.

In particular, however, references to the possibility of special provisions for Commonwealth trade as a condition of Britain's entry into the Common Market, the statement says, are causing uneasiness. Certain special provisions might have to be sought by the British Government.

Progress is not achieved in a day. It is the result of Forethoughts, Sweat, Toils and Tears and when one plan is executed you have to think ahead of future plans so that progress could be continuous.

J.K. visualises the Country's need in years ahead and are continuously planning to fulfil the needs as they arise.

CALCUTTA TEA AUCTIONS IN JULY

PRICES EASE TOWARDS CLOSE

FIVE sales were held in July, and 142,800 packages were auctioned. A strong general demand prevailed during the month which only eased slightly in Sale No. 9, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. Orthodox descriptions were keenly competed for with broken grades, the stylish whole leaf and tippy teas being a strong feature. Fannings grades were a little irregular. During the last sale of the month, an easier tendency prevailed for the plainer sorts following the news of heavy cropping in all districts during the month. C. T. C. descriptions sold readily but during the first half of the month, the poorer and medium kinds generally sold at firm to dearer rates in each sale, with buying of the best limited to a few buyers who were willing to divide freely to reduce competition. In the last sale, teas in the best category tended easier but where quality was falling or fibre was present, prices declined more sharply. Legg-cut teas were well supported, and when free from fibre were often dearer; the remainder were irregular. Best Darjeelings met with a strong enquiry, and those with fine flavour sold at appreciably dearer rates. The bulk of the offerings from the district were from medium and lower elevations, and these sold at progressively easier rates in each sale.

The leaf appearance of Darjeeling teas was generally satisfactory, and a number of useful tippy G.F.O.P.s and F.B.O.P.s were auctioned. A few invoices of "fine" teas sold at attractive prices but the majority of second flush teas from the district were of below average quality and prices, in consequence, were generally less than in recent years. A good standard of orthodox leaf appearance of Assam teas was maintained with a number of attractive tippy grades on offer. C. T. C.s were also well made and generally free from fibre. An increased number of off-grades were auctioned. Liquors showed a seasonal improvement in quality with a number of attractive second flush invoices being sold. Leaf appearance of Doorgas and Terai teas was of a fair standard. Legg-cut teas were only of a fair standard, being generally rather brownish with fibre present. The few C. T. C.s from the district were generally well made and free from fibre. Liquors showed a seasonal improvement in quality but a number of invoices were of below average standard as a result of poor weather conditions. A useful average standard in both leaf and liquor of teas from Cachar and Tripura was maintained.

There was a good demand for the 205 packages of internal leaf teas on offer in the four sales. Four dust sales were held during the month, and offerings totalled 44,845 packages. There was a strong and active demand in the opening sale, and this trend continued till the last auction. C. T. C. varieties opened on a strong note and were readily taken up at considerably enhanced rates. In the second auction, however, they were irregular with the brighter sorts declining by up to 20nP, although the poorer kinds were generally dearer. In the third sale, the opening prices for this category were irregular but before the close they improved in value by up to 40nP. In the last auction, C.T.C.s were rather irregular with the brighter lines selling well. Demand for dusts of orthodox manufacture was strong in the first three sales, and prices were generally dearer particularly for the brighter lines. In the closing sale, however, a slight weakening was evident and prices declined by up to 10nP, although the bright liquoring Assam descriptions were often dearer. Non-wither legg-cut dusts were a strong feature and sold well throughout the month except for the few thin liquoring descriptions which were irregular.

Export sales up to and including Sale No. 8 totalled 204,078 chests at an average price of Rs. 5.90, compared with 159,667 chests at an average price of Rs. 6.04 for the same period of the previous season. Internal sales at 422 chests of leaf and 65,673 chests of dusts (average prices Rs. 4.69 and Rs. 5.01) go against 693 chests and 45,927 chests, respectively (against Rs. 4.26 and Rs. 5) of the corresponding period of the previous season.

The estimated north Indian crop up to the end of June 1961 was 53.66 million kilograms (118.30 million lbs), compared with 46.13 million kilograms (101.69 million lbs) up to the same date of last year. The average figure at this date for the three years 1958-60 was 49.05 million kilograms (108.13 million lbs).

The export quota market opened at 24nP at which rate some business was done until 14th July when it fell to 24nP, although the sellers were still quoting 24nP a kilo. On 20th July, the sellers' quotation fell to 24nP, and on 25th July the price of the export quota fell further to 24nP a kilo, which was the sellers' quotation after 28th July. The market closed at these rates.

Arrivals (in chests) in Calcutta warehouses during the period 1st July to 31st July, 1961, with the corresponding figures of the previous year in parentheses, were: by steamer 313,593 (226,454), by rail 94,593 (124,475), by road 37,192 (11,713), and by air 11,499 (11,947), making a total of 456,877 (374,589) chests. From the beginning of the season 1st April, 1961 to 31st July, 1961, arrivals have been: by steamer 454,232 (349,061), by rail 278,040 (208,444), by road 106,436 (57,660), by air 29,903 (29,784), making a total of 868,611 (644,969) chests.

COCHIN TEA SALES

At Dust Sale 32, 215,000 kilograms of tea were on offer. There was a strong demand. Good mediums were fully firm while others were about steady. Poorer sorts were a little easier but high-grown were fully firm to dearer.

At Sale No. 33, 460,000 kilograms of tea were on offer. There was a good general demand. Plain and low medium broken were 10nP to 15nP easier while similar fannings were about steady. Mediums were 10nP to 15nP lower. High-grown broken were fully firm to dearer, depending on quality. Similar fannings were considerably dearer.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 1.2 percent to 129.4 during the week ended 15th July, compared with 127.9 (revised) for the previous week. The index was higher by 2.6 percent and 3.4 percent, respectively, when compared with the corresponding week of the earlier month and that of a year ago.

FAIR DEMAND AT TEA EXPORT SALE

LOWER TREND IN PRICES

AT Sale No. 11, held on 14th August, there were 65,723 chests on offer at the Export auction, and quality for all descriptions generally showed a decline. There was a fair demand at lower rates. Plain orthodox broken were generally 10nP to 20nP easier, while similar Fannings showed a decline of up to 10nP. Medium and better orthodox descriptions sold at easier rates, while tippy teas and higher-priced Darjeelings showed a marked decline in prices. There was only a fair support for the remaining Darjeelings and many of the medium and poorer descriptions were withdrawn without a bid. C.T.C.s were very irregular with buyers following quality closely. Medium and better sorts were generally 30nP to 60nP easier, and sometimes more, while the poorer kinds declined by up to 30nP. Legg-cut teas were irregular and tended easier. Clean plain Pekoes were up to 20nP easier, while more stylish leaf grades were a weak feature of the sale.

Best Assam C.T.C. Fgs.	6.70 to 7.20	12.00 to 13.00	

(Quotations are inclusive of excise duty.)

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks were less than in the previous week.

Bazaar Sales

(Between 7th August and 14th August, 1961)
Cowhides: Wet salted (Slaughtered) 26,100 pcs. on the basis of Rs. 8.50 to Rs. 16.50 and Rs. 19 to Rs. 29.

Goatskins: Wet salted (Patna, Daissee, Kustia) 49,800 pcs. on the basis of Rs. 200 to Rs. 225, Rs. 280 to Rs. 300 and Rs. 375 to Rs. 400; wet salted (he-killed) on the basis of Rs. 4.00 and (she-killed) on the basis of Rs. 3.75 a piece; Assam-Dinajpur 7,000 pcs. on the basis of Rs. 280 to Rs. 305; Kurbani 1,700 pcs. on the basis of Rs. 400 to Rs. 430.

Bazaar Stocks

(14th August, 1961)
Cowhides: Wet salted 93,800 pcs.
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 24,000 pcs.; Assam-Dinajpur 69,000 pcs.; Mazaffarpore-Patna-Pakur-Purneah-Kissen-ganj 134,000 pcs.

Jute

MORE MILLS CUT PRODUCTION TO CONSERVE RAW MATERIAL STOCKS

FIBRE PRICES FALL BUT SELLERS RESERVED

IT has been said that the ferocity of a revolution is proportionate to the severity of the régime it overthrows. Similar things might be said of the raw jute and gunny markets in Calcutta. How often has one seen violent movements in one direction followed by equally extreme ones in the opposite direction. Yet few appear to benefit from the lesson. A good example is to be seen in the market trends over the past few months. The reopening of the futures markets was followed by a rocket-like rise in prices, and the speculative element—which was large and very active—seemed to think that there was no limit to the heights which could be reached. When the inevitable check came, the downward movement was equally rapid. What then caused the markets to soar, and what halted their wild career upwards? The upward movement in jute was mainly the result of the late monsoon last year and the estimates of a short crop. The mills bought steadily to make their near positions in jute supplies as safe as possible. Along with that, there was heavy speculative buying by merchants and others keen to secure a quick profit. Their operations undoubtedly carried prices to higher levels than would have been reached had buying been confined to the mills. At the same time as this upward movement in jute was going on, the gunny market was also careering upwards. There was, however, a big difference, as in the gunny market, the greater bulk of the buying was speculative. Overseas buyers bought cautiously and in limited quantities at the higher prices, but the U.S.A. remained practically entirely out of the market and dug deeply into her stocks, prices having passed beyond the level acceptable to her. Eventually, lack of support from this market, which is probably bigger than all the others combined, produced a tendency among speculators here to pause.

Buyers Become Sellers

As a result of the heavy local buying, many holders and shippers found that they had already bought more than they could probably export. They were, therefore, eliminated as buyers and might even have become sellers. The bazaar also was overbought and they soon realised that they would not be able to sell to shippers and would have to take up and finance the holding of the purchases themselves. A desire to unload developed and produced a collapse of which advantage was taken by bears to accentuate the downward move. During all the period of rising prices, the relationship between the raw jute and finished goods prices—except in specialties—was such that the mills could not manufacture goods at a profit. When the downward movement began, the disparity between fibre and finished goods widened and the losses on manufactures increased. This kept the mills out of the market for raw jute except where it was necessary to keep machinery running. The lack of overseas demand for goods and the increasing shortage of raw jute to supply the mills in spite of their reduced buying policy brought about the curtailing of production, and the introduction of a quota system for raw jute and the gradually reduced maximum prices. The continued reluctance of the mills to buy raw jute, and their eagerness to curtail production further because of the lack of overseas demand and high manufacturing costs, created nervousness among raw jute holders and an almost panicky desire to liquidate followed soon after the new crop started to arrive on the market bringing prices down with a run. These are the circumstances which have brought us to the present position. What are the pointers to the future?

The trend in the gunny market depends largely on what the U.S.A. will do. Her consumption of jute goods over the past few months has been well below average, and her stocks are at an extremely low level. Will the lower price levels ruling today induce her to enter the market, or will she be content to carry on with the many substitutes which must have been introduced? In raw jute, the physical supply would appear to be the dominating factor. The general belief in the trade is that supplies of old crop jute are becoming nearly exhausted. However, in times of scarcity, there is a tendency to exaggerate the scarcity and supplies keep dribbling in long after the zero hour. New crop jute is now appearing in larger quantities, but has created an anomaly which has again caused ill feeling in the trade. While Calcutta quotations are dropping to levels round the Rs. 40 mark, business is being conducted on a fairly large scale in Cossipore at anything from Rs. 2 to Rs. 5 a maund above these rates by mill agents and sellers who are covering in against higher-priced contracts. Thus although there are plenty of bills of lading in sellers' hands, they are not being offered to the market but are being allowed to come right through to their destination where the holders are assured of a higher rate. Government circles and trade union officials appear to be disappointed at the slow rate of mill purchase. This shows a lack of appreciation of the present circumstances. The high prices of jute have placed the mills under a

heavy financial strain, and in most cases, in planning the financing of their purchases, the major portion of their resources must be used for jute for early deliveries to ensure that the mills are kept running rather than to finance shipping documents for jute to arrive a month or two later. But how is this to be done if there is such a wide discrepancy between the prices quoted to the mills in Calcutta and the prices at which business is being done in Cossipore?

The prices of manufactured goods are still not remunerative, and the mills have faced such staggering losses over the past year that they are now placed in the unfortunate position of having to decide whether the loss on manufacturing or the loss on keeping machinery idle is the greater. Taking all these diverse factors into consideration, it would appear to be certain that scarcity conditions for raw jute will continue until new crop jute reaches Calcutta in volume in September. The effect of a larger crop, which is unanimously predicted, cannot possibly be felt until later in the year and has little relationship to present conditions. Whether the mills are justified in curtailing production still further is still a controversial matter. From a neutral corner it would appear that cases must be decided on their individual merits, but a lesson may be learnt from the fact that those mills which took up each quota as and when it was issued—irrespective of the price factor—now appear to be much better off than those which built up a stock of unused quotas instead of jute. From the management-employee relationship point of view, it would also have given an indication of willingness if the industry had given some hint of when it thought it might be in a position to increase production. This is a most important matter to the local interests concerned with the mills, as well as to all overseas customers. During the week, several mills sealed some looms or reduced working hours in an effort to conserve jute. Meanwhile, it is understood that another mill group south of Calcutta, two of whose mills are already on strike against the working of double looms, have closed down the other two mills for three days due to the shortage of jute.

THE JUTE MARKETS

Manufactured Goods: The goods market was quiet at the opening due to the lack of overseas enquires, the easier fibre markets, and the heavy speculative pressure. Local business was small and the prospects of further cuts in production made operators in all sections pause. Opening quotations were based on August B Twills at Rs. 149, which was a premium of nearly Rs. 14 over the October-December position. Hessians were quoted at Rs. 50.75 for August 40in. 10oz., this being Rs. 4 higher than forward shipment. The easiness in the raw jute section continued to spread its influence to gunnies and over the next two days, prices continued to fall. By the week-end, B Twills had dropped to Rs. 146.75 in the near section, and Hessians to Rs. 50. Heavy speculative activity at this stage forced prices down rapidly and on Monday morning, sacking goods had lost a further Rs. 2.75, and Hessians 75nP. The markets were closed on Tuesday for Independence Day. Opening quotations on Wednesday morning were as follows:

	August	September	Oct.-Dec.	Jan.-March
40in. 7½oz.	38.75	37.50	36.00	35.00
40in. 8oz.	41.75	40.25	36.50	35.25
40in. 10oz.	49.00	46.65	45.40	44.00
B Twills	143.00	140.00	120.75	124.50
Heavy Ceers (Plain)	143.00	140.00	120.75	124.50
A Twills	170.00	172.00	161.00	155.00
Liverpools	167.00	163.00	149.00	142.00
Cornsacks	146.50	145.00	133.00	127.00

Raw Jute: The market was very quiet at the opening last Thursday, and prices continued to decline. New crop Assam Bottoms were quoted at Rs. 44 for 15 days' shipment, but ready prices in the Cossipore market were considerably higher than this. Only small mill business was reported. Sellers were offering freely, but on Friday when quotations dropped to Rs. 42.50, many bills of lading were withdrawn as sellers preferred to benefit from the higher prices in Cossipore by letting the goods go through to their destination. A fair amount of business continued to be done in Cossipore and this tended to keep prices stable up to the week-end. On Monday, however, Calcutta rates were reduced a further Rs. 1.50 and it was very difficult to get any substantial offers at these rates, most of the sellers having withdrawn. No business was reported on contract, but Cossipore transactions continued to thrive at higher rates. Tuesday was a general holiday for Independence Day

and all markets were closed. Opening quotations on Wednesday morning were as follows:

Landed at Mills Basis Bottoms			
	Rs. a 100 kilos	Rs. a md.	Shipment
Assam	105.75	39.50	15 days
Northern	109.75	41.00	"
Purnea Desal	107.25	40.00	"
Assam Tossa	118.00	44.00	"
Old Crop Mesta:			
Assam-Northern	109.75	41.00	"
Desal	109.75	41.00	"
Daissee	109.75	41.00	"
Pakistani Cuttings	150.00 a bale		Aug.-Sept.

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of jute goods for July as follows:

Description	Quantity	
	(000 metric tons and 07,000 yds.)	(000 metric tons and tons)
1. Gunny bags (a) Hessian	4,599 metric tons (4,528 tons)	12,900 thousand metres (14,112 lakh yds.)
(b) Sacking	29,554 metric tons (29,028 tons)	6,180 thousand metres (6,767 lakh yds.)
2. Gunny cloth (a) Hessian	17,915 metric tons (17,632 tons)	6,10,25 thousand metres (6,674 lakh yds.)
(b) Sacking	551 metric tons (542 tons)	11,21 thousand metres (12.3 lakh yds.)
3. Other manufactures	11,810 metric tons (11,624 tons)	
4. Total production (All kinds)	64,379 metric tons (63,362 tons)	

Summary						
	July 1961	June 1961	July 1960	July 1961	June 1961	July 1960
Hessian	7,39.25	8,13.87	11,67.43	22.5	24.7	34.9
(8,08)	(8,90)	(12,77)	(22.2)	(24.3)	(31.5)	
Sacking	6,30.01	6,56.76	9,02.73	30.1	31.2	43.1
(6.89)	(7.18)	(9.87)	(29.6)	(30.7)	(42.4)	
Others				11.8	11.4	10.3
				(11.6)	(11.2)	(10.1)
Grand total				64.4	67.3	88.3
				(63.4)	(66.2)	(66.8)
Hours worked				136.0	144.5	200.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gogabai with estimates for two non-member mills. The figures in brackets are in British units.

THE FOREIGN JUTE MARKETS

FIBRE RATES FIRM ON LATE CROP REPORTS

(FROM OUR DUNDEE CORRESPONDENT)

SPINNERS and manufacturers have resumed working after the fortnight's break for holidays, during which time a fair amount of business was done. As raw jute prices in Pakistan were easier for a spell, the rates for yarns and cloth in Dundee were reduced by about £10 a ton from 29th July, but the firmer tone of the fibre market quickly brought values back again to where they were from 5th August.

Members of the jute trade in Dundee just cannot understand how the position has been made so difficult so soon after all the encouraging reports concerning the prospects of having a record crop of good quality jute during this season in both Pakistan and India. It is not easy to convince people that flooding as well as the lack of steeping water have been responsible for a later crop than was expected. Fibre dealers were selling for early shipment, and they have been unable to implement their contracts. It has also to be borne in mind that the Pakistani mills have steadily expanded their raw jute consumption, and they have been taking any jute available, as they—like almost every other consuming centres—have been running short of fibre.

The market is most irregular, and different rates are being quoted for the various positions of shipment of raw jute. Mill Lightnings are offered

ECONOMIC RESEARCH

- is an essential part of modern commerce But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan It offers the industrialist and business
- house its experience in
 - consumer market surveys
 - industrial prospecting
 - readership analysis
 - economic indices
 - business research.

P.O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India.

at from £145. Mill Hearts from £130 and Grade Hearts from £120 for August shipment, £142, £126 and £144, respectively, for August-September and £135, £122 and £112 for September-October, with Grade Tossa-4 at £130 and Continental Tossa-2 from £124, September-October and £128 and £123, respectively. October-November, all c.i.f. U.K.-Continent. Recently, the E.P.C. prices in Pakistan have been reduced by £2 a ton for all qualities and all positions, but they are a few pounds a ton more than the above rates. Dealers think that prices will decline in the not-too-distant future.

Yarn and cloth prices are firm, but not much business is being transacted now. An unchanged position prevails compared with July, after the prices were recently reduced by £10 a ton, although they recovered later. Calcutta goods are quoted at 76s 9d for 40in. 10oz. and 61s 6d for 74oz. August 76s 3d and 59s September, and 70s 9d and 53s October-December, with B Twills 227s 3d, 223s 3d and 205s 3d, respectively, f.o.b. Calcutta.

THE PAKISTANI JUTE MARKETS

FIBRE CONTINUES TO FALL
(FROM OUR EAST PAKISTAN CORRESPONDENT)

AFTER the recent steadiness which was to some extent reflected overseas, the jute market has quietened, the bearish factors coming mostly from overseas. The local market is resisting any fall, although it is coming down slowly. It cannot long withstand a complete lack of interest from foreign buyers and the intensive discounting by balers who, buying heavily to cover their Export Firsts short, find themselves long at the high prices of Export Lightnings and Export Hearts in a fundamentally weak market. Intensive widespread rains for over a week, combined with rising levels of the Brahmaputra and Gumti rivers, will encourage extensive harvesting of the midland crop, which will also help bring the local market down. In the loose market, therefore, there has been a fall in arrivals and because of the factors mentioned above, a slackening of enquiry, which has brought the prices down by a few pounds. Indications are that balers are forcing the prices down even more and growers are restricting arrivals.

The mills continue quietly to buy whatever they can get, and in order to avoid entering the market are allowing the sellers to send jute to them unsold, the price to be settled on arrival at mill premises. This system, of course, suits the mills and is accepted by the balers since it is practically the only way in which they can get rid of their lower grades. In the Narayanganj pucca bales market, prices ruling are rather higher than overseas, but no business transactions are reported except for cuttings, mainly by speculators with an eye to the Indian market. Even in cuttings, the market is quieter by about £7 a ton. There are many keen buyers of Export Firsts at prices ranging from £152 to £158 a ton, but no sellers for the ready position and very few for October at, of course, proportionately lower prices.

In fact, earlier purchases of Export Firsts are not being delivered in full. In the overseas market, some reflection of the lack of interests is seen by the recent reduction of E.P.C.s by £2 in all grades. Reports keep coming in of very cheap sales by balers, especially to Japan which buys lower grades. Export Hearts are reported sold at an equivalent of £109 c.i.f. Continent for shipment during the first week of September.

The rise in river levels which, combined with heavy rains, should last for at least three weeks, will be of considerable help in the harvesting of the midland crop, and it is possible that there will be sufficient water long enough for harvesting to be retted without undue damage from dirty water. This, unfortunately, will only be reflected in the quality of Export Lightnings and Export Hearts and will only slightly improve the outturn of Export Firsts since the midland crop has been left standing too long in most areas, and is inclined to be too mature for good Export Firsts, and certainly for Mill Firsts. Dundee Hearts this season will be a museum piece.

River Levels

It is impossible to forecast whether the river levels will be maintained by the melting snows, but an intelligent guess is that they will not be. The reason for this is the reports of light snow falls this year on the Himalayas and, of course, the extraordinary low levels at this time of year. Normally, the river levels are high in July and are only maintained through August and early September by heavy monsoon rainfall. They slowly fall after that. This season, there have been disastrous fluctuations in the river levels ranging from flooding in some places to near drought in others. This produces heavy cuttings, mossy roots and hard centres. In many places, the lowland, midland, and occasionally the highland crop, have been subject to branching due to the peculiar water conditions.

The tossa crop is coming in in small quantities. Early arrivals, being partly third weedings, gave an impression of high quality, and this appears to have induced balers to believe that the tossa crop will have a higher percentage of the better grades than the white crop. This is apparent from the fact that already Dundee 4s are being discounted below Export Firsts. It is felt, however, that partly because of the lack of steeping water and partly because of the unfavourable growing conditions and also because the tossa crop in proportion to the white is smaller this year, there will be just as great a scarcity of higher tossa grades as of white. Certainly Dundee 4s will be much more rare than normal, which should produce a premium for the hard district qualities.

There is now a glut of Export Hearts in the market, and practically every baler is finding difficulty in selling this mark. With the perversity of the jute market, it is almost certain that shortly Export Hearts will be very much in demand and hard to find. Similarly, in spite of the fact that every market factor is bearish, there might well be a revival of interest this month when the European mills have completed their holidays and decide to take advantage of ready shipments of cheap offers. Also locally, when the end of the month purchases start and balers start worrying about covering their August requirements, particularly of better quality jute for the Dundee steamer, the same might happen. If, as is expected by some, Export Hearts continue to be difficult to sell and cuttings eventually come down, the Pakistani mills will find it a profitable season, at least in their sacking qualities. This will, of course, give them a larger margin to discount in competition, making it very difficult for the Continental mills to compete with imported bags. It would be unfortunate for the trade if the European mills, who are the biggest jute buyers, have another bad season. Despite the shortage of Export Firsts, the Pakistani mills report that even in their sales of hessians, they are making a decent profit.

COMPANY AND PUBLIC NOTICES

MARSHALL SONS & CO. (INDIA) LIMITED
NOTICE is hereby given that the Fortythird Annual General Meeting of the members of MARSHALL SONS AND COMPANY (INDIA) LIMITED will be held on Wednesday the 6th day of September, 1961 at 11 a.m. at the Registered Office of the Company, No. 33/1, Netaji Subhas Road, Calcutta, to transact the following business:

1. To receive and adopt the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1960.
2. To appoint Auditors for the current year and to fix their remuneration.
3. As Special Business, to consider and if thought fit, to pass the following ordinary resolutions:

(a) "That with reference to Clause 95 of the Articles of Association of the Company, each Director shall henceforth be paid out of the funds of the Company by way of remuneration for his services the sum of Rs. 100/- for each Meeting of the Board attended by him subject to a maximum remuneration of Rs. 1,200/- in respect of each financial year of the Company."

(b) "That with reference to the provisions of Section 228 of the Companies Act, 1956, the undernoted firms of Chartered Accountants be and are hereby appointed to audit the accounts of the undernoted Branch Offices of the Company at such remuneration respectively as shall be fixed by the Board of Directors of the Company:

Chartered Accountants	Branch Office
M/s. A. F. Ferguson & Company	... Bombay City
-do-	... New Delhi
M/s. Fraser & Ross	... Madras City
M/s. Ford, Rhodes Thornton & Co.	... Colombo

(c) "That the powers given to the Directors to borrow moneys on behalf of the Company by Resolution No. 4 passed at an Extraordinary General Meeting of the Company held on the 31st May, 1956 be limited to the sum of Rs. 1 crore."

The Share Transfer Books of the Company will remain closed from 23rd August, 1961 to 6th September, 1961, both days inclusive.

By Order of the Board,
D. P. DUNDERDALE,
Director.

33/1, Netaji Subhas Road,
Calcutta, 12th August, 1961.

Note:—A member entitled to attend and vote at this Meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Resolution 3 (a)—In view of sub-section (2) of Section 309 of the Companies Act, 1956, the remuneration of the Directors by means of a monthly fee of Rs. 100/- per Director as at present provided by Clause 95 of the Articles of Association of the Company is no longer permissible. According to sub-section (2) aforesaid, the remuneration of each Director must now be fixed on the basis of a fee for each Meeting of the Board attended by him. The maximum of Rs. 1,200/- for each Director for any financial year of the Company is necessary in order to ensure that the amount received by each Director in respect of each such year shall not exceed his present maximum annual remuneration. If the revised remuneration might exceed that figure, the approval of the Central Government would be necessary. On the basis of the resolution now proposed, such approval need not be obtained.

Resolution 3 (b)—It has hitherto been the practice of the Company for the accounts of its various Branch Offices to be audited by the firms of Chartered Accountants mentioned in the Resolution. In order to ensure the continuance of this practice, it is necessary having regard to the provisions of Section 228 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, for this resolution to be passed.

Resolution 3 (c)—By a resolution passed at an Extraordinary General Meeting of the Company held on the 31st May, 1956, consent was given to the Board of Directors to borrow moneys on behalf of the Company in excess of the paid-up capital of the Company and its free reserves but no limit was specified in the resolution as to the total amount up to which moneys could be borrowed by the Directors. Explanation I to Section 293 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, provides that every resolution passed by the Company in General Meeting relating to the exercise of the powers to borrow shall specify the total amount up to which moneys may be borrowed by the Board of Directors. It is, therefore, necessary, in order to comply with the provisions of that Section as now amended, that the extent to which the Directors

may borrow on behalf of the Company should be specified in the resolution and this necessitates placing the resolution before the Meeting.

To the Shareholders of Marshall, Sons & Co. (India) Limited and in particular to:—

Mr. Mark Burton (decd), Mr. L. F. Warren (decd), Mr. Jerbbai Hormusji, Miss M. Reid, Mr. M. C. Dubash (decd), Mr. P. J. D'Souza, Mr. F. C. Nelson, Mr. Shantishekharwar Ray, Mr. W. S. Beech, Mrs. M. UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO. LTD.

NOTICE

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Thursday, the 7th September, 1961, at 11-20 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1961, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.

In this connection a Special Notice, as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Mr. S. K. Banerjee, a retiring Director, who has attained the age of 65 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 31st August, 1961 to the 7th September, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Secretaries & Treasurers.

12, Mission Row,
Calcutta-1.

14th August, 1961.

Note: An Explanatory Statement is annexed to the convening notice issued to the members of the Company.

The company meetings and dividends table appears on page 262

THE GANGES ROPE COMPANY LIMITED

NOTICE is hereby given that the Board of Directors of this Company has recommended payment of a Dividend of 20% (subject to deduction of tax) on the Share Capital of the Company in respect of the year ended 31st March, 1961.

Payment of any dividend declared will be made on and from 29th August, 1961 to those Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions. The Register of Members will be closed from 22nd to 29th August, 1961, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. N. MITRA,
Deputy Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta-1, 9th August, 1961.

BENARES ELECTRIC LIGHT & POWER CO. LTD.

NOTICE

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Thursday, the 7th September, 1961, at 11 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1961, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.

In this connection a Special Notice, as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Mr. S. K. Banerjee, a retiring Director, who has attained the age of 65 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

4. To appoint Auditors and fix their remuneration.

As special business to consider, and if thought fit, to pass the following resolution, namely:—

"That the draft Agreement (Supplemental to the existing Managing Agency Agreement dated the 13th August, 1960) submitted to this Meeting and for the purpose of identification signed by the Chairman thereof be and the same is hereby approved".

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 31st August, 1961 to the 7th September, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

CASH AND LIQUIDITY RATIOS OF BANKS

THE importance of strengthening the Indian banking system so as to be better able to cope with the increased demands that will be made upon it during the third five year plan, has been emphasised by experience in 1960. Whether the Reserve Bank's proposals relating to cash and liquidity ratios of commercial banks, will in fact help towards the attainment of this admirable aim is by no means certain. It could be that in this, as in so many other cases, the means adopted may lead to ends the very opposite of those hoped for. India's planners and policy makers must have learned by now that a road paved only with good intentions can often lead to very unpleasant places. It is proposed that legal minimum cash reserves should be set at a uniform 5 percent of deposits from the public instead of the present proportions of 5 percent of demand liabilities and 2 percent of time liabilities; that variation of the reserve ratio by the Reserve Bank should be permitted up to 15 percent of deposits, instead of 20 percent of demand liabilities and 8 percent of time liabilities; and that the impounding of a portion of the increase in deposits, by calling for additional reserves against additional deposits, should be possible, provided total reserves do not exceed 15 percent of deposits.

Abolition of the distinction between demand and time deposits for determining the legal cash ratio is welcome. The present differential ratios are probably of little or no significance for the overall liquidity positions of banks, but involve the inconvenience of having to ensure that cash reserves follow every change in the relative proportions of demand and time deposits. What is more serious is that the proposed change amounts to a substantial increase in the legal reserve requirements. On the basis of present magnitudes of the two categories of liabilities, and allowing for the fact that the proposed 5 percent cash ratio is related to deposits from the public and not to total demand and time liabilities, cash reserves required by law would increase from about 3.8 percent to 5 percent, an increase of about 33 percent. Locking up so much of their resources in non-interest bearing deposits with the Reserve Bank must adversely affect the profitability of banks' working. It can hardly be contended that this further sterilisation of funds is necessary to ensure the stability and soundness of banks. The system of legal regulation of cash reserves in the interests of liquidity is open to the charge that it defeats its own purpose. This is because the reserves that have to be held in order to observe the law cannot be drawn upon in times of need, and banks, in practice, have to hold additional cash reserves for actual use. Conditions in India, admittedly, do not justify the abolition of legal cash reserves and their replacement by conventional ratios such as prevail in Britain. But the proposed increase appears harsh, particularly in view of the fact that a simultaneous increase is contemplated in the legal proportion of liquid assets to deposits. So long as an adequate liquidity ratio can be ensured, the level of the cash ratio becomes less important.

The proposals relating to the liquidity ratio as distinct from the cash ratio, would, if adopted, further increase the hardships that banks have to work under. The ratio of all liquid assets, or as till money) gold and unencumbered securities, is sought to be raised from the present 20 percent of demand and time liabilities, to 27.5 percent of deposits from the public. The prevailing ratio of 20 percent of total liabilities works so the increase contemplated is 5 percent. In other words, the funds that banks will be required to hold in liquid assets will be about 22.5 percent higher than now. Their profitability will, to that extent, be reduced. It is true that the liquidity

that the legal requirements relating to the two ratios should be separated. Thus the 27.5 percent ratio of liquid assets to deposits will consist of two parts. One will be the 5 percent of deposits which scheduled banks will be required to hold as an interest-free deposit with the Reserve Bank. The other part, 22.5 percent, will be made up of cash in hand, excess reserves, if any, with the Reserve Bank, gold and unencumbered securities. These two ratios will be independent of each other, in the sense that, if the Reserve Bank uses its power to increase the minimum cash reserve ratio or calls for additional cash reserves against additional deposits, as it did in 1960, the cash resources to meet the increased reserve requirements cannot be obtained, as they can at present, by reducing the holding of other liquid assets, that is by selling securities. The only way to comply with the increased cash ratio would then be to curtail bank credit by reducing advances on bills.

The underlying purpose of the proposals thus becomes evident. The idea is not so much to strengthen the banking system by compelling banks to hold adequate cash reserves and liquid assets against their deposit liabilities. More important than this is the desire to make the variable reserve ratio a more potent instrument of credit control than it is at present. For the first time in 1960, the Reserve Bank experimented with the power vested in it since 1956 to vary the reserve requirements of scheduled banks. It found then that this method of credit restriction was not quite effective because banks could simply liquidate their holdings of securities to the extent

THE PROBLEMS OF STEEL MAKERS

THE price of Indian Iron shares has become sluggish around Rs. 25.30 during the past couple of days, mainly due to a decline in the selling pressure. There is as yet little evidence of support because Lyons Range can hardly derive much inspiration from the statement which has just been circulated to the shareholders of the Indian Iron and Steel Co. by Sir Biren Mookerjee, chairman. The prospects, at least in the near-term, are anything but encouraging. (Sir Biren's statement is published in full on another page of this issue of Capital). He points out how the various difficulties have made it impossible for the Company to work permanently at capacity output under a planned programme. Shortages of raw materials and transport are being felt acutely. If these difficulties continue—and it is feared they will persist at least for some time—not only will the newly-integrated and expanded plant fail to produce up to expectations, but it is also unlikely to maintain production even at the 1960-61 level. During the past year, output has improved all round and the beneficial effects have been duly reflected in the higher profitability.

Sir Biren has listed a number of difficulties. The supplies of metallurgical coal contain a high percentage of ash which hampers production to a considerable extent. The malady has been accentuated by erratic supplies due to an unsatisfactory transport situation. As a result, the management is unable to blend the coal properly in order to ensure consistency in working conditions. In addition to the unsatisfactory coal supplies, supplies of limestone have also deteriorated considerably. Referring to shortages of coal and transport, Sir Biren fears that further deterioration could take place because the pressure of demand on raw materials and transport will increase when three more blast furnaces are brought into operation in the public sector steel plants.

Commenting on the unsatisfactory transport situation he mentions how the shortage of railway

necessary to comply with the increased reserve requirements, while maintaining the volume of credit unchanged. Apart from defeating the purpose of contracting credit, this would lead to an embarrassing weakness of government security prices and a rise in the cost of Government borrowing. By the simple device of separating the cash ratio from the liquidity ratio and making different legal provisions for each, this loophole will be effectively plugged. The impact of varying reserve requirements will fall where they are intended to fall, on the volume of credit. At the same time, pressure on the gilt-edged market will be avoided. In fact, the increase in the liquidity ratio will compel banks to enlarge their security holdings and thus provide, at least from the Government's point of view, a much needed extension of the market for securities and a prop to gilt-edged prices.

It seems a fair charge against the Reserve Bank and the Government that while they are perhaps over-ready to clamp down rigorously on what appears to them an unhealthy expansion of credit to the private sector, they are conspicuously reluctant to apply the same logic to Government borrowing. The novel innovation last October of the three-tier Bank rate evidently had its source in the same anxiety to keep interest rates high for private industry and trade, but low for Government borrowing. This seems to be the latest refinement in the technique of selective credit control with which India has been experimenting for some years. It would perhaps be considered the appropriate monetary policy for building a socialist society. The health of the banking system, its capacity to meet the continuously mounting credit requirements of a vigorous and enterprising private sector, and the right of shareholders of banks to a reasonable return on their capital, are evidently subordinate to the necessity of ensuring that Government loans can be floated relatively cheaply and that Government securities can be assured of buyers.

gramme of working. The transport shortage has been aggravated by irregularities in the supplies of specified types of wagons. As a result, the mechanical equipment for handling coal and ore cannot be employed fully. This factor has not only hampered efficiency but production costs have also been boosted by the forced employment of more manual labour. It is unfortunate that the wagon shortage has occurred at a time when the various wagon-building shops are being forced to work below their output capacities due to short supplies of matching steel and steel castings. It is time the Government took active measures to ensure adequate supplies of the necessary raw materials to the wagon-builders so that a maximum number of wagons are produced.

An inadequate supply of washed coal to the steel companies is a major disturbing factor. The Indian Iron and Steel Co. appears to have suffered particularly because it is allocated an unduly low percentage of washed coal in comparison with other steel producers. In the circumstances, it is necessary that vigorous steps be taken soon for setting up the additional washeries as planned. As far as limestone supplies are concerned, there are shortages as well as a serious deterioration in the quality. The competition for the limited supplies of limestone has increased to such an extent that the suppliers of this raw material do not care very much for the quality of their products. These besides, the public sector has bought limestone in competition with the private steel producers by paying much more than the market price. This kind of unhealthy competition among buyers is not likely to be of help in holding down cost inflation.

Sir Biren's observations about the prospect for exporting Indian steel are timely. He thinks that the present time offers a golden opportunity for securing a foothold in the various export markets. The demand for steel has increased to a great extent in Africa and in countries east of Suez.

markets without much difficulty because the producers here enjoy the advantage of cheap raw materials. Unfortunately, such an advantage has been obscured by inflating the production costs of Indian steel in many ways. The various Government levies have contributed to increased costs. Labour costs have been boosted by divorcing output from emoluments. The benefits of the various mechanisation schemes have been lost by forcing producers to employ more men than are necessary. As a result, Indian steel has been priced out of foreign markets. Except for U.S. steel, the price of the Indian product is higher than that of steel from most other producers including the U.K., Germany, Japan and Belgium. Sir Biren thinks that India has a surplus capacity for the production of structural and bars. He does not find any reason why in these categories of goods, India should not build up export markets as from now. In fact, this country should try to export steel even by cutting supplies to the domestic market, if necessary. Unless export markets are nursed from now onwards, Indian producers will find difficulty in selling their products later when the domestic production is in excess of demand.

Steps should therefore be taken to encourage exports by giving special incentives.

However uninspiring the short-term outlook may appear on the assessment of so many difficulties, the merit of Indian iron shares as growth stocks must not be ignored. A strong point is that the newly integrated plant has been built according to expectations. It has already been proved that the factory is capable of producing the performance as expected provided the necessary raw materials are available. An important factor to bear in mind is that the Tariff Commission is now investigating the cost structures of the steel producers. It is hoped that on the basis of the Commission's recommendations, the Government will soon announce new steel retention prices which are expected to compensate fully for increased production costs. The higher profit Indian Iron and Steel has made during the year ended March 1961, has been arrived at after taking credit for only the provisional increase given in the retention prices. The final retention prices, when they are fixed, are likely to be much higher than the interim increases permitted so far.

STERLING IN THE COMMON MARKET

FOR the financial institution of the City of London, Britain's application to join the Common Market does not involve any such "agonising reappraisal" as many British industrial companies must experience. The frontiers of finance are more fluid than the frontiers of politics or trade, and much financial business will be done between London and the Continent whether Britain joins or she remains apart from the Community. But for sterling as a currency, and for the sterling area as a system, the proposal to join carries important implications. It may be thought that the Community has enough problems without the peculiarly complex difficulties of integrating the sterling system into its financial structure; or that enough concessions are required of Britain without the implicit demand that she should disintegrate the sterling system. However, finance is the servant, not the master, of "high policy", and if necessary it will be adapted.

The negotiators cannot at this stage attempt to solve problems which the "Six" themselves have so far discussed only tentatively, such as a common reserve system and a common currency; but Britain must recognise that the implications of a

common European monetary system, in this sense, are more profound for her than for the other members of the Community, because she operates an international currency that could not survive as an entity in such a system. Of more practical interest at the present stage is harmonisation of monetary policies. The revaluation of the German and Dutch currencies in March was not a good example of the "co-ordination" that is written into the Treaty of Rome, but it must be assumed that in due time all such matters as exchange rates, surpluses or deficits in international payments, and methods of correcting disequilibria, will be settled in common. If the British Treasury and the Bank of England are thereby relieved of responsibility for policy making (or of the obligation to accept the policy of the International Monetary Fund), Britain will perhaps benefit from more dynamic ideas than have governed her affairs in the past decade.

The immediate changes involved in joining the Community would not be dramatic. Most obviously, Britain would be required to relax restrictions on movements of capital, so that approximately the same freedom would exist between Britain and

the rest of the Community as exists at present between Britain and the rest of the sterling area. This requirement could immediately involve the complicated problem of the sterling area. Short-term capital would present no difficulty, for it is already free to move in to and out of London; and control of investment in securities would not require drastic modification to bring it into line with the present practice of the Community; but if British long-term capital could be freely invested in the Community, it might be impossible to fulfil commitments with the Commonwealth. It is no secret that British thinking inclines to the idea that more European capital could be made available to the Commonwealth. As an international capital market (as distinct from an international monetary centre) London has anyway lost much of its former importance. Its financial services have more recently been challenged, and one reason why the City, as a whole, is favourably disposed towards the idea of joining the Community is that it might be possible thereby to counter the challenge more effectively. The experience and technical skill of London's financial institutions are still widely respected, and these institutions can usually offer more liberal facilities than are available elsewhere; but it is not denied that they have serious rivals in Amsterdam and Paris—and, of course, outside the Community, in Zürich and New York.

London's functions are periodically (as at present) inhibited by scarcity of credit and high interest rates. These difficulties might be lessened if Britain joined the Community; and in that position, presumably, London would attract some financial business connected with the Community's trade that would otherwise be done on the Continent. How much additional business in insurance, shipping, commodities, would come to London is debatable: London's services are already widely used—and in any case continental competition will increase. London cannot ignore the possibility that, in most financial and related activities, this competition will increase whether Britain joins the Community or not. London's geographical position on the periphery of Europe was no serious disadvantage while London was unquestionably pre-eminent in matters of finance and commerce, but even in the age of the telephone and the aeroplane those miles of water are a psychological deterrent to communication when more or less comparable facilities are available on the mainland.

London is, moreover, traditionally, not "Europe-conscious" but "world-conscious", and its ideas and techniques are not all strictly relevant to the new Europe of the Common Market. The intention, of course, is to adapt these ideas and techniques and to establish London as the financial centre of the Community. But this policy is not assured of success, and there is a risk that by joining the Community London would weaken its financial relations outside Europe and (as a financial centre) gain little recompense from Europe. The contrary idea is that Britain isolated from Europe would not be strong enough to maintain an international financial centre because she would not be strong enough to maintain an international currency. The precarious state of the pound in recent years has certainly been unhelpful; but it has not seriously impaired the functions of London's financial institutions. Some weakening of London's financial influence is probably inevitable anyway, whether Britain is in the Community or out of it; for competing services are already being established in the sterling area as they were established previously in Europe.

THE CRISIS IN JUTE

THE present "crisis" in the jute goods industry is attracting a good deal of public attention, not all of it well informed. This fact is obvious from the criticism which is being levelled against the mills for acting in the only possible way left open to them by the circumstances of the raw jute situation. It is probably inevitable these days that popular opinion should range itself on the side of the cultivators and the mills' labour, without of course, taking full regard of where the true interests of these groups lie. But this is a mistake which the Government cannot afford to make. If which the Government cannot afford to make. If the Calcutta jute industry is to survive its current difficulties in anything like its present form, the interests of all sections, including the nation's need to maintain exports, will have to be reconciled to successfully within the next few weeks. And for those concerned could not do better than to note the comments made at yesterday's annual general meeting of the Howrah Mills Company Limited, by the chairman, Sir John Brown. Sir John's statement is published on another page of this issue of Capital.

Answering criticism of the mills' action in cutting production to conserve raw jute stocks, Sir John points to the fact that no jute company would be foolish enough to incur the consequent increase

in unit costs unless this were absolutely necessary. Nobody knows better than the manufacturers that high prices for jute goods mean loss of markets to substitutes and competitors. Deliberately to create a situation where jute goods are priced out of world markets is the equivalent of commercial suicide and not to be indulged in by any management concerned with its own interests. Sir John sums up the facts of the raw jute situation in the figures he gives of fibre available with the mills on 30th June, 1961. This amounted to 448,000 bales, compared with 1,246,000 on the same date in 1960 and 1,670,000 on the same date in 1959. This stock was not enough to see the industry through until the new crop becomes available in September; hence the block closures, and the individual cuts in production made by the mills when further block closures were opposed by the Central and West Bengal Governments.

The criticism that the mills have acted in defiance of the interests of their labour ignores the fact that they have had no alternative; it also, according to Sir John, forgets the instances during the past year when the mills have deliberately faced cost increases on a falling market in order to protect their workers. Those who are clamouring that labour's interests should be safeguarded at any price might do well to reflect what those interests really are. Sir John's point about the foreign buyer of jute goods being the ultimate arbiter of the industry's affairs is a telling one. The national interest, too, requires to be looked at in the long term. If the jute industry, India's largest foreign exchange earner, is ultimately ruined by high costs, it will be no consolation to the

country to know that it went down paying uneconomic wages, employing more workers than it needed to, and buying its raw jute at prices decided more for political reasons than economic ones.

As Sir John points out, the future of the industry is now seen, quite clearly, to depend on the prices it will have to pay for its raw jute during the coming season. Although sufficient new crop jute is not yet available for full working, the time is fast approaching when arrivals will be sufficient in quantity to meet the mills' requirements. Whether or not they will then be able to rebuild their positions depends on what they must pay for their jute. It now seems likely that this price will be fixed at negotiations scheduled to take place in New Delhi this week-end. While supporting the theory of minimum prices so as to protect the cultivator, the industry is understandably concerned that no considerations other than strictly economic ones should be allowed to influence the matter. These demand that the minimum prices be as low as possible: Sir John indicates that ultimately the income of the growers can only be expanded, given that the mills must survive, by increasing the yield of jute per acre. The industry's goodwill towards the cultivators has been expressed in its willingness to take steps to prevent the recurrence of the price collapses of past years. But this does not mean that it can afford to pay at unrealistic levels for its raw jute if it is to meet competition, especially from the fortunately-placed Pakistani mills.

Those critics who are at present attacking the industry should note Sir John's comments on the losses the mills are sustaining in the current crisis. These cannot go on indefinitely.

new shares for every existing five held some time in November 1962. In both instances the new shares will be issued at par.

Fraser and Co. has not paid any dividend during the past three years and during the year ended March 1960—the last date for which an audited balance-sheet is available—there was a debit balance of Rs. 5.63 lakhs. The working of this Company has shown a small profit during the past year. An early resumption of the dividend payment is not foreseen in view of the substantial debit balance. The directors, nevertheless, think that when the proposed amalgamation takes place, the working of Fraser and Co. will improve so much that it will be possible to resume the payment of dividend after one complete year's working with the amalgamated fleet. It is hoped that a regular dividend of 6 percent will be paid.

Mettur Chemical Does Well

The Mettur Chemical and Industrial Corporation Ltd has reported satisfactory results for the year ended March 1961. Sales are up by 14.2 percent from Rs. 1.17 crores to Rs. 1.34 crores, and the gross profit is also up by about 14.4 percent from Rs. 26.07 lakhs to Rs. 29.83 lakhs. The gross profit as a percentage of sales works out to around 22 percent. After providing Rs. 9.47 lakhs (against Rs. 6.95 lakhs) for depreciation and Rs. 6.60 lakhs (against Rs. 4.75 lakhs) for taxation, the net profit amounts to Rs. 12.19 lakhs, against Rs. 12.31 lakhs in 1959-60. The directors have set aside Rs. 1 lakh (against Rs. 80,000) for general reserve and the allocation to development rebate reserve has been reduced from Rs. 2.70 lakhs to Rs. 2.50 lakhs. The directors have recommended a final dividend of 6½ percent, making a total of 12½ percent, taxable, which is the same as in the previous year. The proposed dividends absorb Rs. 9.97 lakhs, against Rs. 7.88 lakhs in 1959-60. New equity shares issued last year ranked for dividend from 30th November, 1960. The directors have had to withdraw Rs. 1.29 lakhs from taxation provision made in previous years and Rs. 1.50 lakhs from deferred taxation reserve. The directors state in their report that the production of main chemicals was maintained at a satisfactory level. The caustic soda output rose from 5,066 tons to 5,760 tons, bleaching powder from 4,480 tons to 5,535 tons and that of liquid chlorine from 1,142 tons to 1,207 tons. The second stable bleaching powder plant was operated at full capacity, but the old plant worked only intermittently due to heavy wear and tear. Towards the end of the year, the demand for bleaching powder outpaced production and is still growing. The selling prices of main chemicals continued to be controlled by the Government. The working of the bleaching powder plant for the previous eight months was at an uneconomic level. But due to the commencement of production of potassium chlorate and satisfactory returns from lime and vegetable oil products, the Company was able to make up for the shortfall in the working of the stable bleaching powder section. The expansion plant to raise the production of caustic soda from 20 tons to 40 tons has been making good progress, and it is expected to complete the erection of the plant and start higher rated production by October this year. The directors have decided to raise the output of caustic soda to 100 tons a day and to commence the production of organic chemicals based on chlorine like methyl chloride, methylene dichloride, chloroform, ethylene dichloride, bromine, carbon tetrachloride and pentachlorophenol. The additional production of caustic soda will be of rayon-grade quality. Mettur Chemical has already secured the licence to increase the production of caustic soda to 100 tons a day and also to

Current News and Comment

Bad Year for Marshall, Sons & Co.

There has been a decline from Rs. 4.56 to Rs. 3.75 in the ordinary shares of Marshall, Sons and Co. (India) Ltd during the past fortnight or so on disappointing results produced during the year ended June 1960, due to restricted imports. The future outlook depends on the extent to which the Company succeeds in establishing its business turnover on the basis of domestic products. Active steps are being taken in this direction. This apart, transport shortages have also interfered with the expeditious despatch of goods. Although the current losses will be covered as much as possible out of reserve funds built in earlier years, the directors hope to improve the position in the near future by taking necessary remedial measures. There is a loss of Rs. 9.35 lakhs during 1959-60. After providing Rs. 1 lakh for depreciation, bringing in Rs. 8.513 and making other adjustments, a debit balance of Rs. 8.26 lakhs has been carried forward. The dividends have been passed.

Good Results for Ganges Rope

The Ganges Rope Co. Ltd has produced satisfactory results during the year ended March 1961, in spite of various difficulties concerning supplies of essential raw materials. Due to bigger imports of manila and sisal fibres, the working has improved. It is hoped that the Government will permit more freely the import of the necessary equipment in order to replace the old machinery. The profit has increased from Rs. 8.26 lakhs in 1959-60 to Rs. 9.58 lakhs in 1960-61, due to bigger sales at Rs. 88.94 lakhs (against Rs. 79.56 lakhs). The ordinary taxable dividend has been increased from 17½ percent to 20 percent. It is covered more than three times and offers a yield of 8.5 percent at a price of Rs. 236.50 a share. Taxation is allocated Rs. 4.45 lakhs (against Rs. 3.85 lakhs). General reserve receives Rs. 2.32 lakhs (against Rs. 2 lakhs) and the carry-forward is Rs. 70,927, against Rs. 70,652 brought in.

More Profit for Central India Coal

The working of the Central India Coal-Fields Ltd has shown an improvement during the year ended March 1961, and the current working is believed to be continuing on the same lines. Working is now being hampered by the accumulation of stocks at pitheads due to wagon shortages. At the Orient colliery, the construction of the railway siding has been completed, but the working of the Pure Chirimiri colliery has become difficult due to bad road conditions. The reserves of coal at this colliery are likely to be exhausted soon, so the directors are considering how to replace the output of this colliery. A quarry has been opened at the Khas Badina colliery. The profit has increased from Rs. 11.10 lakhs in 1959-60 to Rs. 13.94 lakhs in 1960-61, after providing

Two Boat Fleets to Merge

The ordinary shares of Fraser and Co. Ltd are being quoted at a par value of Rs. 10. The Company has decided to issue rights ordinary shares in order to finance the expansion of its fleet. It is a subsidiary of Macneill and Barry Ltd which owns nearly 70 percent of the issued share capital. Macneill and Barry operates a harbour fleet of boats in the port of Calcutta and Fraser and Co. also operates a similar fleet. The directors of the two Companies think that amalgamation of the two fleets would be of great help in the interest of more economical working. It has therefore been decided that Fraser and Co. will buy the fleet of Macneill and Barry at a price of Rs. 17.36 lakhs. This being the income tax written down value of the said fleet on 31st March, 1961. Fraser and Co. has decided to finance the purchase of the Macneill and Barry fleet by issuing rights ordinary shares in the proportion of three new shares for every two held in October 1961. Later it will issue further rights ordinary shares in the ratio of three

HOLDEN & HUNT

RESISTANCE WELDERS

POWER TOOLS & APPLIANCES CO.
2, DALHOUSIE SQUARE EAST, CALCUTTA-1

BRANCHES AT BOMBAY • DELHI • MADRAS

H. & H. Productions include Spot Welders, operated by Foot, Motor or Air, Auto Wire Butt Welders, Flash Butt Welders, Rivet Heaters, Projection Welders and Chain Making Plants. Essentially modern machines, designed for stability and simplicity in use, avoiding unnecessary complications.

AUTO WIRE BUTT WELDERS

ELECTRIC RESISTANCE RIVET HEATERS

ELECTRIC FLASH BUTT WELDERS

UNIVERSAL SPOT WELDERS

manufacture other chemicals. These schemes will entail additional capital expenditure of about Rs. 2.50 crores. The directors feel that it is necessary to seek foreign collaboration for "know-how" of these organic chemicals and also to obtain capital participation from foreign collaborators with a view to covering the foreign exchange needs of the project. The directors state that in the near future, a part of the capital will have to be raised by the issue of shares—equity and/or preference—besides loan capital. The Rs. 10-paid share of the Company is currently quoted around Rs. 14.35.

Tata Hydro-electric Group Prospects

The preliminary figures about the working of the Tata group of hydro-electric Companies—Tata Power, Tata Hydro and Andhra Valley—released along with the announcement of dividends showed that they had done reasonably well during the year ended March 1961. The revenue from power sales of Tata Power increased by 18.94 percent and the rise in the case of Andhra Valley and Tata Hydro was of the order of 17.5 percent and 11 percent, respectively. In his statement to the shareholders, the chairman, Mr. J. D. Choksi, says that the year's operations recorded a substantial growth in load demands and supplies, the figures being approximately 10 percent over those of the previous year. The clear profits of the group have exceeded the reasonable return by about 11.5 percent. The "overall system efficiency" of the group is around 90 percent, that is to say, 90 percent of the energy generated is sold. Transmission and transformation losses are 10 percent. This is good by any standards. The average annual load factor of the group last year was 68 percent, the highest for a month being 71.6 percent. The major work of constructing a new water tunnel about three miles long, connecting Mulshi lake to the generating plant in Bhira, commenced early in 1960, has made steady progress. By the end of July 1961, more than half the length of the tunnel was "bored to full section." Estimated to cost about Rs. 2 crores, the project is expected to be completed before the 1963 monsoon.

Mr. Choksi says that with the commissioning of the third unit in Trombay, the Companies' programme of expansion of the capacity has been completed, and they look to Koyana for power to meet additional load requirements. The State Electricity Board has informed them that commencing with 40 megawatts in December 1961, they will receive in progressive stages by December 1962 a total of 115 megawatts of power, bringing the firm capacity of the system to 580 megawatts. This will enable the Companies to meet the growth in load demands up to 1963. But Mr. Choksi warns that unless new generating sources are created in 1964, the situation would become difficult. In order to overcome the anticipated power shortage in 1965, the Tata group of hydro-electric Companies have proposed the setting up of a new unit of 125 megawatts in Trombay, and the State Government has permitted them to go ahead with the project. A preliminary estimate indicates that the latter will cost about Rs. 12 crores, of which roughly 70 percent will be required in foreign exchange. The Companies are faced with the problem of raising further capital in view of the limit placed by law on the return of capital base at 6 percent, Bank rate plus 2 percent. It is also difficult to secure long-term loans because the "assured life" of the Tata group of electric Companies is not long as licences are valid only up to 1975. Following discussions with the State Government, they have been informed that the Government may consider a short extension of their licences. The Companies propose to apply for a loan from the U.S. Development Loan Fund to finance the foreign exchange component of the cost of the project. Mr. Choksi says that it will be possible to get such a loan at satisfactory terms. The Government of India is being asked to sponsor the application. The group's aim is to bring the unit in Trombay into operation before the end of 1964. As for internal resources, Mr. Choksi says: "We are not without hope, too, that an amendment of the Electricity (Supply) Act will come about, improving the return to utilities such as ours." Till such amendments are finally passed, there cannot be any support from the shareholders for raising additional equity capital.

Outlook for Dhrangadhra Chemical

The preliminary figures about the working of Dhrangadhra Chemical Works for the year ended March 1961, released along with the announcement of the 6 percent taxable dividend, indicated that the Company fared well last year. The directors' report holds out the promise of still better results in the current year because of the expected increase in production—particularly of the caustic soda unit—higher selling prices and the improved market conditions. The directors state in their report that the production of caustic soda in 1960-61—the first full year of operation of the plant in

Sahapuram—was satisfactory and that production would have been slightly higher but for intermittent power "shut-offs." The net realisation for caustic soda was lower during the year, since special rebate had to be given to clear off the stocks which had accumulated as a result of excessive imports and unco-ordinated releases in the market by the State Trading Corporation. These stocks have now been cleared and the normalcy has returned. The price of caustic soda has been increased by Rs. 30 a ton from 1st February, 1961. The production of soda ash in 1960-61 increased by about 12 percent over the previous year's output, which was itself 8 percent higher than in the preceding year. The advantage of increased production was, however, offset by the rise in the cost of packing, higher depreciation, repair and maintenance, consumable stores and amenities to staff and labour. The selling price of soda ash was increased by Rs. 10 a ton from 1st April, 1961; this increase is considered small, compared with the rise in production cost. The directors state that the Company was carrying at the end of the year about two months' production as stocks, but they hope to clear off the accumulated stocks in the near future. The extension programme of the caustic soda unit has been taken in hand, and all the necessary arrangements have been made with a view to having the delivery schedule of plant and machinery so regulated that the enhanced production of caustic soda starts by December 1961 and is completed by next year. After its completion, the Company's earnings would be further augmented and its position strengthened. Dhrangadhra Chemical has obtained a licence to set up a new industrial undertaking for manufacturing poly vinyl chloride with an installed capacity of 12,000 tons a year. The Company will soon be applying for an industrial licence for manufacturing calcium carbide which is the main raw material for P.V.C. It also proposes to manufacture liquid chlorine and will soon be applying for an industrial licence for this purpose. Since all these schemes would involve foreign collaboration for finance as well as for technical know-how, a new Company will be formed to undertake the projects. The new enterprise will be closely associated with the Dhrangadhra Chemical Works.

The sales of Dhrangadhra Chemical in 1960-61 rose by about 78 percent from Rs. 1.64 crores to Rs. 2.91 crores and closing stocks were up from Rs. 67.80 lakhs to Rs. 90.17 lakhs. The gross profit at Rs. 51.82 lakhs showed a rise of about 29 percent over the previous year's figure of Rs. 40.14 lakhs. The provision for depreciation, which has been raised from Rs. 23.06 lakhs to Rs. 53.10 lakhs, has more than wiped out the year's gross profit. The directors state that under the amended Companies Act, 1956, it has become obligatory to provide depreciation in the balance-sheet itself at the rate of 15 percent for plant and machinery, compared with 10 percent of normal depreciation which was the requirement till last year. While the depreciation has been provided at the rate of 15 percent for the caustic soda unit, the provision in relation to the soda ash plant has been at the rate of 10 percent due to the inadequacy of profits in the unit. After allowing for depreciation, the year's working shows a loss of Rs. 1.20 lakhs, against a profit of Rs. 17.08 lakhs in 1959-60. The dividends are proposed to be paid out of the transfer from general reserve of Rs. 5.30 lakhs and last year's surplus of Rs. 2.40,310. The preference and ordinary dividends absorb Rs. 7.40 lakhs. The Company has a paid-up capital of Rs. 1.54 crores, of which equity capital consists of Rs. 1.07 crores. Its reserves and surplus total Rs. 60.35 lakhs. The Rs. 100-paid share of the Company, which rose from Rs. 112 to Rs. 136, has recently eased to around Rs. 123, at which price it offers a gross yield of about 4.65 percent.

Lakshmi, Vishnu Cotton Merger

Plans are now ready for the merger of Lakshmi Cotton Manufacturing Company with the Vishnu Cotton Mills Ltd. Subject to the approval of the shareholders and the sanction of the Controller of Capital Issues, the directors of Vishnu Cotton propose to offer 4.5 ordinary shares of Rs. 100 each of Vishnu Cotton for every one of Rs. 250 each of Lakshmi Cotton. It is also proposed to issue to the preference shareholders of Lakshmi Cotton 51 percent first cumulative preference shares of Rs. 250 each on the basis of 1:1. After conversion, the 5 percent cumulative preference shares of Lakshmi Cotton will rank as first cumulative preference shares. The proposals are in accordance with the recommendations of the auditors of both Companies. In order to accommodate the additional shares of Vishnu Cotton, the directors propose to increase the authorised capital of the Company from Rs. 48 lakhs—made up of 3,200 7 percent cumulative preference shares of Rs. 500 each and 32,000 equity shares of Rs. 100 each—to Rs. 2 crores divided into 6,400 51 percent first cumulative preference shares of Rs. 250 each, 3,200 7 percent second cumulative preference shares of Rs. 500 each and 168,000 equity shares of Rs. 100 each. The proposal will be placed before the shareholders

at the extraordinary general meeting on 11th September. The current market quotations for Lakshmi and Vishnu Cotton are placed around Rs. 600 and Rs. 140. On the basis of the proposed terms of merger, the shareholders of Lakshmi Cotton will derive a benefit of about Rs. 30 a share. The merger will be completed after the High Court's sanction. The entire procedure is expected to be completed within the next six months. The merger of the two Companies is expected to lead to considerable economies and prove beneficial to the shareholders. The current working of both Companies is said to be better than in the previous year and prospects are expected to improve with the completion of the modernisation and renovation programme of the mills.

Good Prospects for Colour-Chem

Colour-Chem did well during the year ended March 1961—the first year of its full working. It made a gross profit of Rs. 46.54 lakhs, against only Rs. 11.61 lakhs in the previous year. The shareholders have been rewarded with a maiden dividend of Rs. 8 a share (Rs. 100 paid) and the dividend is free of tax. The outlook for the current year seems much better than last year. The chairman, Mr. Ramniwas R. Ruia, said at the annual meeting last week that on the basis of the Company's working for the first four months, the results for the current year are likely to show considerable improvement over the previous year's performance. Production is proceeding smoothly and sales are increasing. Profits are, therefore, likely to be larger. The Company is likely to suffer from the shortage of raw materials in the near future due to the cut in imports during the past two licensing periods. But the directors are planning to start the manufacture of some main raw materials which will enable Colour-Chem not only to maintain but expand its production within the present quota of foreign exchange. Mr. Ruia said that the Company had started implementing the scheme for the manufacture of phthalocyanine blue and had applied to the Government for the licence for importing machinery which did not involve any foreign exchange. Plans for the extension of the factory buildings have been finalised, and the construction work is expected to start after the monsoon. The present installed capacity of the Company consists of 250 tons of pigment powders, 800 tons of pigment emulsions and 2,000 tons of emulsions a year. Actual production is only a little below the capacity. The Rs. 100-paid share of the Company is quoted around Rs. 336, and it continues to be popular with investors as a growth share.

Bombay Gas Results

The working of the Bombay Gas Co. Ltd for the year ended December 1960 shows a gross profit of Rs. 8.39 lakhs, against Rs. 8.27 lakhs in 1959, but the 1960 profit includes income from investment amounting to Rs. 2.40 lakhs. After providing Rs. 3.62 lakhs (against Rs. 3.79 lakhs) for depreciation, Rs. 26,707 (against Rs. 32,267) for development rebate reserve and Rs. 1.90 lakhs (against Rs. 2.50 lakhs) for taxation, the net profit amounts to Rs. 2.60 lakhs, against Rs. 1.66 lakhs in 1959. But if the income from investment is excluded, the net profit from the main operation—production and distribution of gas—in 1960 amounts to only Rs. 20,694. Along with the previous year's carry-forward of Rs. 48,173, the disposable income amounts to Rs. 3,08,707. The directors have proposed a gross dividend of 6.5 percent which absorbs Rs. 2.60 lakhs, leaving Rs. 48,707 to be carried forward. They attribute the decline in the profit to the rising cost of raw materials and labour. Since the close of the accounts on 31st December, the cost of diesel oil has gone up by Rs. 24.01 a kilolitre. The excise duty on coal has risen from Re. 1 to Rs. 4 a ton, as a result of the passing of the Coal Mines (Conservation and Safety) Amendment Act; this measure would cost the Company an additional Rs. 3 lakhs a year. The directors state that in spite of strenuous efforts, Bombay Gas has not succeeded so far in securing an increase in the price of gas to cover the increased cost of production and distribution. The Company has obtained a licence for importing a storage holder for replacing the one which failed in July 1960, resulting in the gas storage capacity of the Company.

Davangere Mills Profit Up

The Davangere Cotton Mills Ltd has reported excellent results for the year ended March 1961. The sales of cloth, yarn and waste have set a new record at Rs. 1.68 crores, which is 19 percent higher than the previous year's figure of Rs. 1.41 crores. The gross profit has shot up by 74.5 percent from Rs. 21.24 lakhs in 1959-60 to Rs. 37.07 lakhs in 1960-61. The ratio of the gross profit to sales shows a marked improvement from 14.8 percent to 22 percent. The directors have maintained the divi-

dend at 12 percent, taxable, but they have declared a silver jubilee bonus of 5 percent. The Company's silver jubilee comes off in November this year. After providing Rs. 10.78 lakhs (against Rs. 7.27 lakhs) for depreciation and Rs. 12.50 lakhs (against Rs. 4.60 lakhs) for taxation, the net profit amounts to Rs. 10.88 lakhs, against Rs. 7.80 lakhs in 1959-60. The allocation to development rebate reserve has been reduced from Rs. 1.65 lakhs to Rs. 95,000, but general reserve gets Rs. 2.15 lakhs, against Rs. 9,664. In addition, a sum of Rs. 1.50 lakhs has been set aside as the provision for the silver jubilee cash bonus to shareholders. The transfer to reserve for repayment of mortgage loan has been maintained at Rs. 2.50 lakhs. The directors state in their report that in spite of the reduction in cloth prices to the August 1959 level, there was no material change in prices because the Company had always taken care to maintain the rates at fair levels. It has purchased in court auction the erstwhile Narayandas Chunilal Mills in Gadag at a cost of Rs. 7 lakhs. The mill has 12,000 spindles and 218 looms. The waste spinning plant was commissioned from July 1961. A single process blow-room machinery received at the mills in July will go into production by the end of September, and orders have been placed to convert all the ring-frames of 1938 to GX 2 drafting system. At the same time, other ring frames will also be converted. Against its issued capital of Rs. 21.99 lakhs, Davangere Cotton Mills' reserves and surplus total Rs. 34.43 lakhs. The Rs. 100 paid share of the Company is nominally quoted around Rs. 117.

Coorla Spinning Repeats

The working of the Coorla Spinning and Weaving Co. Ltd for the year ended March 1961 shows a marked improvement over the previous year's performance. The sales have increased by 12.5 percent from Rs. 1.60 crores to Rs. 1.80 crores, and the gross profit has recorded a sharp rise of about 78 percent from Rs. 11.50 lakhs to Rs. 20.52 lakhs. The ratio of the gross profit to sales works out to 11.4 percent, against 7.2 percent in 1959-60. The reorganisation and modernisation of the mills is apparently beginning to yield results. After providing Rs. 5.92 lakhs (against Rs. 5.55 lakhs) for depreciation, Rs. 2.57 lakhs (against Rs. 10,000) for development rebate reserve and Rs. 4.75 lakhs (against Rs. 2.40 lakhs) for taxation, the net profit amounts to Rs. 5.83 lakhs, against Rs. 2.91 lakhs in 1959-60. General reserve and dividend reserve, which received nothing in the previous year, get Rs. 1.65 lakhs and Rs. 1.76 lakhs, respectively. In spite of encouraging results, the directors have decided to maintain the dividend at 11 percent, subject to tax. The proposed dividend absorbs Rs. 2.86 lakhs, leaving Rs. 34,762 to be carried forward, against Rs. 75,815 brought in. The directors state that during the year further progress was made in the reorganisation and modernisation of the mill, and a sum of Rs. 14.01 lakhs was spent on machinery and other fixed assets. The Rs. 100-paid share of the Company, which has a book value of over Rs. 215, is quoted nominally around Rs. 135.

Ruia Group Mills Results

Of the three textile mills in the Ruia group, Bradbury and Phoenix show a satisfactory improvement in the sales and profit for the year ended March 1961. This has enabled the directors to propose a higher dividend. For Dawn Mills, the turnover is slightly better, but the profit has suffered a modest setback, and the dividend has been maintained at the previous year's level. Bradbury Mills' performance is about the best. The dividend has been raised from Rs. 5 to Rs. 12.50 a share (Rs. 50 paid), both taxable. The turnover is up by a little over 22 percent from Rs. 1.58 crores in 1959-60 to Rs. 1.93 crores in 1960-61. The gross profit has nearly doubled itself from Rs. 8.93 lakhs to Rs. 17.31 lakhs. After providing Rs. 5 lakhs (against nil) for taxation and Rs. 5.21 lakhs (against Rs. 6.23 lakhs) for depreciation, the net profit amounts to Rs. 5.89 lakhs, against Rs. 2.19 lakhs in the previous year. From this the directors have transferred Rs. 1 lakh to dividend equalisation reserve, against nil in the previous year. The ordinary dividend absorbs Rs. 2.50 lakhs, against Rs. 1 lakh in 1959-60. The Rs. 50-paid share of the Company, which had risen from Rs. 113.75 to Rs. 150, is currently quoted around Rs. 140, offering a tax-free yield of about 6.7 percent. At the end of 31st March, 1960, the Company had reserves and surplus of Rs. 34.06 lakhs, against its equity capital of Rs. 10 lakhs.

The turnover of Phoenix Mills has risen by 5.66 percent from Rs. 3.03 crores to Rs. 3.20 crores. The gross profit at Rs. 36.62 lakhs shows an increase of Rs. 5.35 lakhs over the previous year's figure of Rs. 31.27 lakhs. The dividend has been raised from Rs. 15 to Rs. 20, taxable, a share of Rs. 100. After providing Rs. 8.09 lakhs (against Rs. 8.48 lakhs) for depreciation and Rs. 12 lakhs (against Rs. 10.50

lakhs) for taxation, the net profit amounts to Rs. 13.78 lakhs, against Rs. 9.66 lakhs in 1959-60. A sum of Rs. 3 lakhs (against nil) has been transferred to dividend equalisation reserve. The proposed dividend absorbs Rs. 9.60 lakhs, against Rs. 7.20 lakhs in the previous year. The Rs. 100-paid share of the Company, which was available around Rs. 126 early in the year, was marked up to Rs. 167 a few days ago and is now quoted around Rs. 163, at which price it offers a tax-free yield of 9.3 percent.

The Dawn Mills has not done well, for in spite of an increase in its turnover from Rs. 1.85 crores to Rs. 1.90 crores, the gross profit is slightly down from Rs. 32.56 lakhs to Rs. 31.29 lakhs. The provision for depreciation has been raised from Rs. 5.72 lakhs to Rs. 5.90 lakhs. A sum of Rs. 11.50 lakhs has been provided to meet the tax liability for 1960-61, against Rs. 12 lakhs in the previous year. But the directors have also set aside another Rs. 4.50 lakhs for taxation for the previous years. The dividend which is proposed to be maintained at Rs. 15 a share (Rs. 50 paid) absorbs Rs. 8.40 lakhs. The share of the Company, which improved gradually from Rs. 111 to Rs. 138.50, is now quoted around Rs. 134, at which price it offers a tax-free yield of 8.5 percent. The ordinary share capital of the Dawn Mills at the end of March 1960 was Rs. 28 lakhs. This was supported by reserves and surplus amounting to Rs. 31.51 lakhs.

Rights Issue from Chase Bright

The directors of Chase Bright Steel have decided to issue rights shares at par to the existing shareholders in the proportion of two ordinary shares for every three held. The proposed issue will raise the paid-up capital of the Company from Rs. 30 lakhs to Rs. 50 lakhs. Knowledgeable sources believe that Chase Bright Steel might also issue some preference shares in due course. Fresh capital is being issued to finance the expansion programme estimated to cost about Rs. 30 lakhs. It is understood that the Company has a proposal to take over another running concern in Bombay which will substantially increase its production capacity without having to import machinery from abroad. The Rs. 10-paid share of the Company, which was marked up to around Rs. 15 in March, is now quoted around Rs. 12. In 1960, the share touched a high of Rs. 20.24.

Extra Spindles for Textile Mills

The Central Minister of Commerce and Industry, Mr. K. C. Reddy, it is reported, has told the Informal Consultative Committee of Parliament on 17th August that it is proposed to license new spinning capacity for textile mills to the extent of two million spindles on a regional basis, and another one million spindles for making the existing spinning units to come up to an economic size and also to provide for a balance between the spinning capacity and the weaving capacity. The third plan target for cloth has been set at 9,300 million yards, of which the share of the organised mill sector will be 5,800 million yards. In order to produce 9,300 million yards of cloth, the requirement of yarn will be around 2,250 million lbs. This will necessitate a substantial increase of spindleage. The official note placed before the Consultative Committee states that in determining the allocation for each State, careful consideration has been given to all relevant factors such as the current production of yarn and cloth, the existing distribution of spindleage, the concentration of hand-loom and the overall needs of the decentralised sector. Wherever licences previously granted have been revoked, steps are being taken to re-allot such revoked capacity in the same State.

Referring to the problem of closure of mills, the official note says that out of the 480 mills in the country only 17 mills are closed at present. Of these six are only fit for scrapping, according to technical experts. Out of the remaining 11, the affairs of two mills are in the hands of the court and as such, the Government cannot interfere in the matter. Three mills have been already investigated under the Industries Act and the question of reopening these mills is being examined by the Central Government in consultation with the State Governments concerned. This leaves only six mills. It is expected that these mills will also start functioning before long either with the financial assistance from the National Industrial Development Corporation or from other sources. The problem of the closure of mills is thus being resolved to a very large extent. It is proposed to set up a small representative committee to keep under constant review the causes of closures and the timely steps to be taken to enable marginal mills to tide over their temporary difficulties. While conceding that the provision of Rs. 10 crores for modernising the textile industry in the third plan is not adequate, Mr. K. C. Reddy, it is reported, has urged the industry at the Consultative Committee's meeting to plough more of its profits

for this purpose instead of going in for new lines of investment such as cement, vegetable oils and paints.

New Policies from E.R.I.C.

The Export Risks Insurance Corporation has announced that it proposes to issue new types of policies to cover "non-recoupment expenses" incurred on market surveys, stock holdings, publicity and other measures for the promotion of exports. This decision follows the Central Government's acceptance of the recommendations of the Export Credit Guarantee Committee. The Corporation will be issuing these policies as the agent of the Government. The first type of new policy to be issued is the "market survey policy". This provides that if expenses incurred on getting the market survey done by an export agency approved by the Corporation are not recouped by the sale of a pre-determined volume of goods, the insured will be paid 50 percent of the expenses not so recouped. The second type of policy is the "advertisement and/or sale promotion policy", which provides that if expenses incurred on advertisement and/or other sales promotion measures in accordance with the plan approved by the Corporation are not recouped by sale of a pre-determined volume of goods, the insured will be paid 50 percent of the expenses not so recouped. The third type of policy is the "stocks policy". This provides that if for the promotion of exports, it is necessary to maintain the stocks of goods in a foreign market and the expenses involved in exporting the goods, maintaining these and incidental and consequential outgo are not recouped by the sale of a predetermined volume of goods, then the insured will be paid 50 percent of the expenses not so recouped. The sale of goods under these policies means goods sold from stocks abroad or sales of goods to agents and buyers in the foreign market, and the sale of goods to parties in India for export to that market. In the initial stages, these policies will be issued only for those goods which have patents, licences, trade marks or trade names and for which the manufacturer has exclusive rights, and for those markets which are not developed or are under-developed. The Export Risks Insurance Corporation will work in co-operation with the export promotion councils and commodity boards, which have been requested to make their recommendations concerning the types of goods and the markets to which the new policies may be made applicable. The final decision concerning the types of goods and countries will be made on the basis of these recommendations and after obtaining the Government's approval. Manufacturers who are interested in the development of particular markets have been advised by the Corporation to contact the export promotion council or commodity board concerned. If, however, there was any type of goods for which there was no export promotion council or commodity board, the manufacturers could approach the Corporation directly. The need for some protection against losses incurred in trying to develop new markets has long been felt. The new policies which have now been introduced by the Export Risks Insurance Corporation should go a long way in assisting the opening of new markets for non-traditional commodities, which seem to offer considerable scope.

Arbitration for Kanpur Mills

An agreement has been signed between the managements of the Kanpur textile mills and the labour unions accepting the arbitration of Dr. Sampurnanand, the former U.P. Chief Minister, on the question of rationalisation. Rationalisation of the mills in Kanpur had been hanging fire for the last 24 years—the last attempt to solve it was through the Bind Basni Prasad Committee which published its report in 1956. Due to the appointment of a wage board for the textile industry, the State Government did not enforce the recommendations of the Committee. After the enforcement of the wage board's recommendations, the situation has substantially changed and the State Government feels that the time is now appropriate for a review of the problem. The question of wages for rationalised working is the most important of the many matters referred to arbitration. The fifteenth session of the Indian Labour Conference had agreed that equitable sharing of the gains between the community, the employers and the workers was an essential condition of rationalisation. The workers in the textile mills of Kanpur had until recently been getting the minimum basic wage of Rs. 30 recommended by the Nimbkar Committee. An increase of Rs. 6 was given recently following the recommendations of the wage board. It is for the arbitrator to decide now the rates of wages (including fall-back wages) for various categories of workers for working on a rationalised basis.

Another important question referred to arbitration is the evolution of the standards of

physical, operational and mechanical working conditions for rationalisation. The Bind Basni Prasad Committee had expressed the view that before any rationalisation was introduced, certain prerequisites as to the working conditions must be ensured so that the measure did not, in any manner, imperil the health and comfort of the workers. The lay-out, temperature, relative humidity and air changes, as well as illumination of the workplace, had to be determined in the interest of the health of the workers. The arbitrator will have to decide whether the standards fixed by him should be introduced entirely before work on rationalised basis was started or any phasing would be practicable or permissible. The arbitrator will also decide about the absorption of labour rendered surplus by rationalisation. Where the mills are working on a two-shift basis, some of the workers could be absorbed by starting the third shift. Other questions referred to the arbitrator are: Should the personal wage admissible to the textile workers of Kanpur be adjusted against the wages fixed for rationalised working and the wage increase recommended by the Textile Wage Board? Should the *ad hoc* increase in wages given to workmen in terms of the wage board's recommendations and the merger of 75 percent of the dearness allowance in the basic wage be taken into account in fixing piece rates. What should be the scheme of gratuity applicable to workmen on their retirement or termination of service in other ways?

Credit Guarantee to Small Units

Kanpur and Agra in Uttar Pradesh have been selected for trying out the scheme of the Central Government for extending credit guarantees to the small industries. The scheme which is on an experimental basis for two years will be operated in 20 more districts in other parts of India. The object is to enlarge the supply of institutional credit to small units by ensuring a degree of protection to lending institutions against possible losses. The scheme provides for the sharing of such losses between the lending institutions and the Government of India. The maximum amount recoverable against the guarantee issued under the scheme for any one advance will be Rs 1

lakh. For the present, the advances made to small-scale units by 95 selected credit institutions in the country will be eligible for the guarantee. Other banks and credit institutions may also avail themselves of the facility provided a selected credit institution participates in such advances to the extent of 25 percent. For the purpose of the scheme, a small-scale industrial unit has been defined as one whose investment of a capital nature, including the value of rented premises but excluding the amounts spent on housing and amenities for workers, is not in excess of Rs. 5 lakhs and whose principal place of manufacturing, processing and other operations is located in one of the selected districts. The advances eligible for the guarantee are those repayable on demand or on the expiry of a fixed period not exceeding seven years. The total duration of the guarantee for which application may be made before or after sanctioning an advance will also not exceed seven years. The charge for providing the guarantee cover will be at the rate of 1/4 percent a year on the maximum amount of advance for the period for which the cover is sought.

Goods Traffic on N. E. Railway

The Chief Operating Superintendent of the North Eastern Railway, reviewing the operating position from January to July 1961, has claimed that goods traffic has registered an increase of 9.6 percent in the current year. A new loading record was created in February when a daily average loading of 3,531.6 wagons was achieved. The peak loading of 4,053 wagons was achieved on 3rd March. According to him, the movement of goods was easy and traffic was being cleared as offered except for destinations on the N. F. Railway and to a lesser extent, stations on the broad gauge. In the case of the N. F. Railway, the requirement of Assam and Bengal was being met in full as represented by the programmes drawn up by these two Governments. The quota for other public traffic was extremely limited and registrations continued to be heavy against the limited quotas imposed by the N. F. Railway and the Deputy Director, Rail Movements, Calcutta. The Chief Operating Superintendent also disclosed that 12.6 percent more traffic had been transhipped

from broad to metre gauge at the various transhipment points during the current year, while the traffic in the reverse direction, namely, from metre to broad gauge, was cut about the same level as it was last year. Referring to certain selected commodities, he said that during this season the loading of sugarcane was the highest, totalling to 219,913 wagons. Loading of jute had also recorded an increase of 32.9 percent. Quick transit services were now operating between 38 pairs of stations and movements of goods in wagon-load and smalls had been accelerated. During the period under review, a sample survey showed that 89.7 percent of the "smalls" consignments reached their destinations within the prescribed time-limits as against 81.54 percent last year. The seasonal traffic like vegetables, fruit and fish was being cleared as offered.

Water Cooler from Railways

An electric water cooler has been manufactured at the Gorakhpore workshops of the N. E. Railway. Claimed to be the first water cooler to be made in any railway workshop in India, it is a 2½-ton capacity open-type unit consisting of a twin cylinder reciprocating compressor driven by V-belt off a 3 horse-power electric motor. Out of 64 various sub-assemblies, 50 were manufactured in the workshop, while the remaining 14, including the driving motor and a few of the automatic control devices were purchased from the trade.

Insurance Malpractices: Causes and Cures

At the time life insurance was nationalised, Mr. C. D. Deshmukh, then Finance Minister, took pains to explain why general insurance should be in the private sector. He, however, made no secret of the Government's intention to examine the question afresh should the usual trade malpractices increase. The public statements that constantly come forward at the annual meetings of the general insurance companies or of associations, always make a point to emphasise the so-called malpractices, presumably with a view to offering well intended solutions, but playing unwittingly into the hands of the Government. The latest address of Mr. T. M. Telang, chairman of the Indian Insurance Companies Association, Bombay, plays on this oft-repeated theme. He said that although some improvement was noticeable, wasteful competition, heavy procurement costs, deflection of business from one company to another and such other unhealthy practices still continued, and controls and official regulations had not succeeded appreciably in achieving the desired objective. His counsel for fresh thinking is again an oft-repeated one—a pragmatic approach, on the part of the authorities and a determined effort on the part of the insurers to set their house in order in the larger interests of the insurance industry as a whole. He considered the scheme of non-diversion and mutual assistance recently sponsored by some leading insurance companies a panacea to conduct the general insurance business on sound and healthy lines. Even Mr. A. D. Shroff, chairman of the New India Assurance Company, at the recent annual general meeting, while pleading the case for non-diversion and mutual assistance scheme, made a damaging statement that the scheme "is designed to help big insurers to switch over their business from higher commission terms to normal." The indictment against those who participate in the mutual assistance and non-diversion scheme should be obvious.

In his speech Mr. Telang covered no new grounds, but he made a significant remark while reviewing the progress of general insurance in the country. He suggested that it should be developed into a well-organised and integrated market, composed of financially sound, viable and healthy units, operating in a proper atmosphere, where every unit has an opportunity to expand. This, he said, calls for a radical rationalisation of the working of the industry in its various aspects and suitable changes in the present set-up of controls and regulations governing the industry. He has not elaborated what type of control he thinks are necessary, but it is strange logic that the industry should be wanting controls and regulations when it has been pleading that the trade should be allowed freely to develop in accordance with its own talents. Along with others, he deplored the rules for measuring the expenses of management and observed that by restricting the ratio to direct business, the provision has led to a scramble for direct business resulting in indiscriminate underwriting by companies and heavy acquisition costs. If this is the reason which leads to the so-called malpractices he should have urged in categorical terms for its abolition. Instead, he is content to leave the matter in the hands of the Executive Committee which appointed sub-committees in the past to go into the question and evolve an agreed formula. The issue is still new in the hands of one of the sub-committees. Another important point made by Mr. Telang is that concerning the

taxation of reserves. The Taxation Enquiry Commission recommended certain facilities for the general insurance companies in India to build up adequate reserves. The problems of underwriting capacity and reserve-building are so interlinked that the strength of reserves is of paramount importance for the companies' progress not only in the home market but also overseas. He pointed out that in many foreign countries, insurers have been able to build up such reserves not only because of their age but because of the concessions granted by their respective Governments. Insurance business in India, he said, had a late start compared with its counterpart in other more advanced countries and he appealed to the authorities to take the appropriate action on the recommendations of the Taxation Enquiry Commission without further delay.

Canara Bank Share Offer

The Rs. 50-paid shares of Canara Bank Ltd are in demand at Rs 88.50. The bank has now announced its proposal to issue 50,000 equity shares of Rs. 50 each at a premium of Rs 15 a share. Out of this, 40,000 equity shares will be offered to the existing shareholders as on 15th November, 1961, at the rate of two shares for every five held, irrespective of the class of shares. Six thousand shares will be offered to the employees of the bank, 2,000 shares to the shareholders of Trivandrum Permanent Bank Ltd which is being taken over by the Canara Bank, and 2,000 shares are reserved for offer to the shareholders of other banks taken over by Canara Bank. The mode of payment of the share money and the premium money is fixed conveniently to suit the average small investor. Ten rupees a share towards share money and Rs 3 towards premium will be payable on application. Rs 20 towards share money and Rs 6 towards premium will be payable on or before 29th May 1962, and the balance of Rs 20 towards share money and Rs 6 towards premium will be payable on or before 1st August, 1962. The last date for receipt of application is 5th January, 1962.

Mysore Electrical Cuts Dividend

The net profit of the Mysore Electrical Industries Ltd for the year ended March 1961, amounts to Rs 4,58,728, after providing Rs 4,91,207 for taxation, against last year's Rs 3,96,712, after providing Rs 4,40,000 for depreciation. With the amount of Rs 4,324 brought in, the total comes to Rs 4,63,052. Out of this, a sum of Rs. 80,000 is transferred to loan redemption fund, and Rs. 65,000 to rehabilitation fund. A dividend of 20 percent, subject to tax, is recommended on 14,050 old shares, and this will absorb Rs. 2,81,000. A dividend of 10 percent (Rs. 10 a share) is recommended on 3,450 new shares (subject to tax), and this will absorb Rs. 34,500. The balance of Rs. 2,552 is carried forward. The last year's dividend was 24 percent. The demand for all the types of the Company's products has been increasing, it is stated. The directors say that the Company is making every effort to meet the rising demand in spite of difficulties in obtaining some of the essential raw materials and delay in receiving component parts from sub-contractors. In view of increasing competition, steps have been taken to improve the facilities in the manufacturing process and also to diversify output. It is reported that negotiations have been finalised for the production of heavy duty type contactors, automatic motor controllers, air break circuit breakers, low voltage capacitors and various types of relays in technical collaboration with French and West German firms. For some of them, Government approval has already been obtained and for others approval is being awaited. In view of the expansion and diversification programme of the Company, the directors have thought it prudent to conserve resources, and have, therefore, recommended a dividend of 20 percent, against 24 percent last year. It is now proposed to increase the authorised capital from Rs. 20 lakhs to Rs 50 lakhs, in order to make new issues in the future when necessary.

CORRESPONDENCE

DELAYS IN JUTE SHIPMENT

(TO THE EDITOR OF "CAPITAL")

Sir,

Attention has been drawn to certain comments appearing in an article on jute on page 95 of your issue dated 20th July, wherein it is stated that "the time gap between the shipping of jute from the main centres and its arrival at the mills, seems to be lengthening, and it is a common occurrence for jute to take as long as six to eight weeks to arrive at the mill after the date of the bill of

DRINKING HABIT IN CALCUTTA

THE law punishes crime in order to protect the general public, but it only punishes the drunkard when he is riotous or vagrant, notwithstanding that the latter, without creating a breach of the peace, is often more aggressively offensive than punishable criminals. What the law or any form of compulsion cannot do is to make a man honest or sober. Religious influence, when discreetly applied, can do and has done much to heal susceptible characters who are already not too far steeped in crime and debauchery; but there is only one thing which can rescue a far gone criminal or drunkard and that is self-respect. When a man has got beyond certain stage, especially in the matter of self-indulgence, which is the subject matter of this short article, it means that in his dual nature, the bestial has got the better of his intellectual senses, that he has fed the former and starved the latter, that he has given rein to the gratification of his grosser appetites and has thus weakened his intellectual powers. There is nothing more evident in drunkenness than the loss of self-respect, and when a man loses his self-respect he is only fit to be classed with the brute creation and only with the lower forms of that. It is no doubt extremely difficult to rescue a confirmed drunkard when the itch of gratification has seized him and rendered his senses subservient to intoxicants, but it can be done, it is only by extracting his intellectual nature from the gutter into which it has been drained and by trying to revive a sense of self-respect. This at any rate should be sufficient to preserve those who are still conscious that they are giving way to ever-indulgence from yielding further. Submission to over-indulgence of animal appetite, no matter in what form, is never unconscious. No man is to be pitied because he has given way, he is only to be despised, and he knows it perfectly well. As long as consciousness remains there is some hope for him but when his whole nature is absorbed by the bestial, he has no better place among humanity or even in his own being than road sweepings. These remarks are called for by reports which have become current that the habit of excessive drinking has lately increased in Calcutta, and that the health and prospects of many young men have been seriously impaired and in some cases completely shattered by over-indulgence in alcoholic drinks. Hitherto Calcutta has, and it is to be hoped may still have the reputation of being one of the most sober ports in the East. It is a reputation to be proud of and worth preserving. As a body we may respect ourselves and may even boast that we are not as other ports are. But it would be foolish to rest content with that. What we have chiefly to keep before us is that every individual is beset by two warring influences—self-respect and self-indulgence.

A Ditcher's Diary

I AM NOT A GREAT BELIEVER IN GOOD MANNERS IN political debate; and I am by no means incon-solable that Mr. Bhupesh Gupta should have raised the question of the President's term of office at a time when the present incumbent is ill. Nor do I believe that the Prime Minister altogether regretted the opportunity he got of making his views on the subject known once again. I think it would be a good idea for Dr. Rajendra Prasad to step down next year. This is not to say that Mr. Nehru has a right to insist on anybody's retirement. He has indeed thought aloud more than once on his own desire to leave office. Without necessarily taking him seriously, I did not favour the idea. The country will need Mr. Nehru's services as long as it can have them; and that is that. And if a majority of the new Parliament next year wants Dr. Rajendra Prasad to be President again, a possibility I would not rule out, it is difficult to see what Mr. Nehru can do about it except perhaps threaten to resign—which will not be strictly democratic and may well be politically hazardous for the Prime Minister. Leaving aside the question of personalities, which are involved more deeply than anybody may care to admit, Dr. Prasad and Mr. Nehru represent two sharply divided political and social outlooks. Reading *A Bunch of Old Letters* the other day I found Dr. Prasad writing in this vein as long ago as 19th December, 1935. He wrote to Mr. Nehru: "The chances are that you will be elected President of the next Congress. I know that there is a certain difference between your outlook and that of men like Vallabhbhai, Jinnah and myself and it is even of a fundamental character." In recent years the political arteries of both have perhaps hardened; and it seems to me remarkable that the two men have got on as well as in fact they have done. The personal popularity of Mr. Nehru is still immense; and I hope it remains so. Yet, I reflect with no rejoicing at all that, in most fundamental matters, Dr. Prasad's thinking is perhaps more in tune with that of the country at large than Mr. Nehru's. This is essentially a conservative country in which men like Mr. Nehru introduced alien ideas, which sometimes, at least if they are economic ones, suffer from the added difficulty of being basically unsound. It is by no means obvious to me that these ideas can, except superficially, triumph over the people's built-in orthodoxy.

Nobody can complain that Dr. B. C. Roy of West Bengal is ever lacking in ideas. If anything, he has too many of them. Result: few are translated into action. An agreeable trip round half the world, as both doctor and patient, finds the Chief Minister expatiating again on grandiose schemes for Calcutta and its environs. If cynics suggest that there is no more to such schemes than that Dr. Roy was only opening his election campaign, the Chief Minister has only himself to blame. He will raise more coal in West Bengal with Polish help. Are there enough railway wagons to transport the coal now being raised? No. But such details never deter imaginative minds. Will it cost about Rs. 1.5 crores a mile for an underground railway in Calcutta, of which the State Government cannot contribute even a crore and a half of naya paise? Never mind. Foreign experts must come

hither again and examine the feasibility of the scheme. What happened to deep sea fishing? One must not ask such embarrassing questions, especially in an election year. Slums must be cleared, even if lots of people do not even have slums to live in. Water and sewage; if the Board has been formed, I have somehow missed the news. And the Board will be useless in any case unless the Corporation of Calcutta and the other municipal bodies around are not put in their place for the duration. Apart from occasional protestations of municipal democracy I see no evidence of any determination to deal with our civic politicians. Dr. Roy found in the United States much lively interest and some concern about the grave problems of Calcutta. It has already been suggested that some people nearer home, in New Delhi for instance, should display similar interest. I would go further and submit that Writers Buildings' own concern is only intermittent, and then inhibited by political hesitation. This is the more regrettable because Dr. Roy has a stature independent of the Congress Party—or he had; and it remains a fact that in West Bengal today there is no substitute for him. He is perhaps among the best Chief Ministers in India. And if he cannot do anything about Calcutta, who can? A not uncritical admirer of Dr. Roy tells me that if the sick man of India is West Bengal the sick man of West Bengal is Dr. Roy. This is going too far; and I am inclined to amend Francois Bondy's aphorism on Europe and suggest that the sick man of West Bengal is West Bengal.

MUCH AS I WELCOME THE STATE GOVERNMENT'S latest measures to improve housing for the lower income groups in this sprawling city, I still cannot believe that without generous Central financial assistance and even keener interest on the part of the West Bengal Government, a solution to this most pressing of Calcutta's problems is possible in the immediate future. It is the State Government's indifference, of course, which has aggravated the housing difficulties of the middle classes. These are now acute, thanks to the rack-renting practices of landlords on the one hand and the acute shortage of any kind of accommodation on the other. There are people, I know, who blame the companies for raising rent by their practice of offering long-term leases to landlords for accommodation for their senior executives. But this has helped the problem rather than added to it because it has given the necessary incentive to the construction of new flats and houses of modern type. The shortage of building material notwithstanding, some new houses have been built recently, although I suspect they would have been more numerous if the State Government had promoted housing co-operatives and offered low-interest loans to intending builders. There has, I admit, been some liberalisation recently of the rules governing house-building loans to Government employees, but I doubt if this will provide a solution to the problem for these people because so many of them are reluctant, understandably, to build their own houses due to the ever-present possibility of transfer. I cannot imagine how much more squalid and congested Calcutta would have been had not private enterprise come forward to develop areas in the south and north of the city for house-building purposes,

although these have obviously proved insufficient to accommodate the entire expansion of the population. A friend who has grown tired of hunting for a flat in south Calcutta, tells me that mushroom brokers' offices have sprung up in all parts of the city and that these, like many landlords, are also fleeing the unfortunate people who are searching for flats. The rate at which rents are rising in Calcutta will, I feel, soon compel middle-class people to seek accommodation in the suburbs. This might be no bad thing, if only the transport were available to bring them quickly and easily to their work. Dr. Roy's underground railway project might come in useful here if—forgive the expression—it ever sees the light of day.

WHAT DOES FOREIGN AID REALLY ACCOMPLISH? This is a question I have often asked myself because I have never been able to subscribe wholeheartedly to what Professor Galbraith might term the "conventional wisdom" on this subject. Certainly aid now enjoys an honoured place in the West's policy towards the under-developed countries, and spokesmen like Mr. Nehru and President Ayub Khan, for obvious reasons of their own, work hard to ensure that it continues to do so by constantly emphasising the "moral duty" of the richer countries towards the poorer. But does it in fact achieve what the West fondly hopes it will? Does it, for instance, impede the spread of communism? I have always been sceptical on this point because I am apt to credit the Soviet Union with more sense than to compete in furthering a process which is supposedly against its own interests. Now I see my view is supported, and with one excellent example, by Mr. Max Ways, writing on the futilities of current U.S. foreign policy in the July issue of *Fortune*. Mr. Ways's point is that material progress does not automatically produce political stability. He quotes the following example: "The U.S. decides to improve as rapidly as possible the economic conditions of a certain very poor little nation called Cinderella, just emerging from colonial rule. Let us say that the U.S. immediately eradicates a dread disease that is killing off the Cinderellans, aids in the construction of an excellent railroad and communication system, and generally opens opportunities for industrialisation and higher living standards. Cinderella's population quadruples, and it prospers. Industrialisation and urbanisation grow rapidly until less than half its workers are on the land. Business men, doctors, engineers, lawyers and other white-collar groups, many of their members educated in the U.S., increase rapidly in numbers and in social influence. Cinderella's per capita income approaches \$400 a year, which happens to be about equal to that of the European country of which it was once a colony." According to the accepted canons of current U.S. foreign policy Cinderella's prosperity should produce a stable democracy, staunchly anti-communist and steadfastly allied to its benefactor. But does it? The answer is "No", because Cinderella in this example is none other than Cuba, and we all know what has happened there. So what is to be done? The chief consolation of foreign aid so far as the donor is concerned, or so I have always felt, is the increased trade from which everybody benefits. It is doubtful whether even the humanitarian aspects can be quoted in favour if all aid achieves is an increase in population, the destruction of freedom through socialist tyranny, and yet another risk to world peace.

symbol of security!

Bank vaults are always made of steel
because steel is so dependable!

Through the years steel has come to be considered the symbol of security... not merely physical security, but economic security as well! The larger the amount of steel a country produces, the higher the rung she occupies on the ladder of economically stable countries... the greater her credit in the international market. And that is why India today is striving so hard to raise her output of steel—steel that will endorse her claim to economic stability... steel that she can hold up to the world as a symbol of her security.

THE UNITED STEEL COS.
(INDIA) PRIVATE LTD.
Bombay • Calcutta • Madras

THE INDIAN IRON & STEEL COMPANY LIMITED

CHAIRMAN, SIR BIREN MOOKERJEE'S STATEMENT

The following statement by Sir Biren Mookerjee, Chairman of the Indian Iron & Steel Company Ltd., dealing with Company's working for the year ended 31st March, 1961, has been issued to shareholders. The Annual General Meeting of the Company will be held on Tuesday, the 5th September, 1961, at 3 p.m. at the Royal Exchange Hall of the Bengal Chamber of Commerce & Industry, 6, Netaji Subhas Road, Calcutta-1.

Production of iron for the year at 1,160,576 tonnes and of steel ingots at 914,159 tonnes showed an improvement over the previous year and constituted a fresh record for the Company. As will be seen from the Report of your Directors, there are however no grounds for complacency for with the serious deterioration in the quality of raw materials there can under existing conditions be no possibility of achieving the output envisaged at the expansion of the plant was planned, and in fact serious difficulties are foreseen even in maintaining production at the 1960/61 level.

Accounts

In a consideration of the financial accounts for the year under review it should be borne in mind that the results disclosed are based on provisional steel sales realisation figures which are subject to revision according to the decision of Government on the pending enquiry by the Tariff Commission as to the steel retention prices to apply from the 1st April, 1960. To obviate hardship while the matter is under reference, Government have granted a provisional price increase as from the 1st April, 1960, but the true results for the year can naturally not be known until the final revised steel retention prices have been determined.

Nor can too much be built on any comparison of the provisional profit for the year with the profit of the previous year for previous sales figures, and in consequence previous profits, were distorted by the method adopted under the five-year price fixation that expired at the 31st March 1960 of compensating the limited items of cost increases for which the Company under its agreement with Government could claim adjustment. Under this method, with the exception of the increase of the steel excise duty, compensation for an increase of cost was effected not by increasing correspondingly the retention prices from the date of such increase, but by averaging the incidence of the increase over the whole five-year period with retrospective effect. The result was accordingly that while in total full compensation was effected, a part of the compensation was in fact assigned to a period before the increase in cost took place with corresponding reduction of the benefit to the subsequent period. The tendency was therefore to increase the profits of the earlier years and decrease those of the later years, the effect being of course most marked in the last year of the price fixation period, namely the year 1959-60.

It will also be appreciated that while giving a correct result in total, the effect of averaging the price increases over the five years was that the adjusted retention prices current from time to time during the period did not reflect the full amount of the cost increases, the shortfall gradually increasing over the period to a maximum in 1959/60. The new retention prices to be fixed from the 1st April, 1960, must naturally include the full amount of the cost increases and from that date there must therefore on this account alone be a considerable apparent increase in the retention prices which in fact represents no additional benefit to the Company. Viewed against this background it will be seen that so far as the Company is concerned the provisional price increase granted by Government pending enquiry by the Tariff Commission represents an effective increase falling far short of the amount by which the retention prices have actually been raised. In the opinion of your Directors a larger increase is warranted by the circumstances of the case and the matter will be fully represented to the Tariff Commission in the course of its enquiry.

Production Difficulties

In view of my opening remarks regarding the present impossibility of achieving the iron and steel output envisaged under our expansion programmes and the difficulties of maintaining production even at the 1960/61 level, I should perhaps explain in as simple terms as possible what in fact are these difficulties with which we have to contend.

The main difficulty is the extremely high and varying ash content in presently available metallurgical coal coupled with erratic supplies and the fact that owing to the transport position our stock of coal is diminishing so severely that unless the position rapidly improves, we shall be forced to curtail the production of iron. Even given adequate quantity of coal in total, regularity of supply and transport from the no less than twenty three different collieries over which our requirements have now been compulsorily spread is a further essential without which we are unable to blend the coal to effect some measure of consistency in working conditions. The consequence is that not only is the ash content of our coke ridiculously high but that this ash content varies widely from day to day with inevitable prejudicial effect on production. Under normal circumstances we would select our coal supplies to give the lowest ash content consistent with the desired volatile content to suit the designed operation of our coke ovens. Conditions are such however that we have been forced in large measure to disregard volatile content and to concentrate on ash content, having regard to blast furnace practice. This position is most unsatisfactory as regards the operation of our coke ovens and is necessarily a cause of considerable concern on this account.

A high ash content in the coke means increased consumption of coke to attain the blast furnace operating temperature and in consequence a larger volume of slag produced. Since the cubic capacity of a blast furnace is constant a larger volume of slag means in turn a reduced volume of iron produced. This

high ash content makes additionally for very difficult operational conditions, and I think I may claim that in the history of blast furnace operation we have the doubtful honour of being pioneers for never before to my knowledge has such high and fluctuating ash coke been charged to blast furnaces as is at present the case at Burnpur.

The plea of our operational executives is that if the quality of sector materials must be bad, then at least let it be regularly bad, for in that case whatever the difficulties, some measure of consistency of operation could be achieved. This however, the erratic transport position effectively precludes and with the daily fluctuations it becomes impossible to produce a standard grade of iron, a position which is still further prejudiced by the present severe deterioration in the quality of limestone supplies, the percentage of free lime varying between 42% and 24%.

The tale then moves to the Melting Shop where consistency of quality of steelmaking iron is an essential for efficient working. With this consistency lacking, with some inevitable carry over of slag from the blast furnaces and with excessive impurities, in particular sulphur, in the hot metal, production difficulties become acute. Furnace time per melt is increased with consequent loss of production and operational temperature has to be increased leading to burning out of refractories and a consequent increase in the time the furnaces are out of commission for re-bricking. The excessive sulphur content of the hot metal is a source of serious difficulty in the Melting Shop practice. This perhaps could, at a price, be overcome by adoption of the expensive soda ash refining process but the position is that adequate supplies of soda ash are not locally available.

Until therefore the raw materials position improves, which I fear cannot be for some years to come, operation must perforce be carried on under extremely difficult and restrictive conditions. In fact, it would seem that before improvement takes place, the position must yet further deteriorate, for there remain still three more blast furnaces to be brought into operation in the public sector and this impeding further demand in relation to the existing shortage of coal and transport.

I would make it clear that we have abundantly proved that given the conditions in any way approaching those assumed at the time the extensions were planned, our plant, as now expanded, possesses the full designed output potential. This has been conclusively demonstrated on those unfortunately rare occasions when a combination of fortuitous circumstances has enabled us to operate temporarily under reasonably normal conditions.

Export of Steel

India, at present, stands on the threshold of a golden opportunity to secure a place for herself in the world market for steel. It is now for the Government advantageously to utilise this position and thereby tap a vast source for earning the foreign exchange which is so vital to the progress of the country. I shall therefore attempt briefly to describe the difficulties to be surmounted in marketing Indian steel even in the nearest neighbouring countries, for unless adequate measures are taken immediately there is, in my opinion, grave danger of allowing this opportunity to escape.

In most of the under-developed or developing countries there is almost a greater hunger for iron and steel, judging by the policy of their leaders, than for food and many other necessities of life. East of Suez and in most parts of Africa, there is a vast and growing demand for iron and steel at present India is in an enviable position to meet these requirements being basically one of the cheapest producers of iron and steel in the world, having been abundantly endowed by nature with practically all the essential raw materials and the manpower. This position is however obscured by the inflation of production costs by the large contributions which directly or indirectly are levied on the industry for the benefit of Governmental revenues.

Our iron ore resources are noted as being not only practically exhaustless but also of the highest quality. Yet for the reason I have mentioned we find ourselves in the unfortunate position of being outpriced in so far as our competitive position is concerned vis-a-vis the other exporting countries of the world except, perhaps, the U.S.A. I will illustrate my remarks with facts for your information so that it may be judged how we stand in regard to export. Taking two of the common categories which India can immediately afford to export, namely, 'Light Bars' and 'Structurals', the build-up of the approximate landed cost of these materials at Karachi, Colombo or Singapore from various sources is as follows:

	Rs. per metric ton				
	U.K.	Germany	Belgium	U.S.A.	Japan
Light Bars	520	507	513	709	470
Structurals	502	515	521	686	518

Prices 1 to 4 are based on the (U.K.) Iron & Steel Board's Annual Report, 1960, published on 20th June, 1961. Japan's price is based on Metal Bulletin, March 30, 1961.

	U.K.	Germany	Belgium	U.S.A.	Japan
1. U.K.	£4.5	= Rs. 60/-	Per tonne		
2. U.S.A.	\$20	= Rs. 96/-			
3. Japan		= Rs. 70/-			
4. India		= Rs. 60/-			

TABLE NO. 3
Indian Steel Prices effective from April 1960
Rs. per metric ton for tested quality

	Light Bars Structural	
	Rs./M. Ton	Rs./M. Ton
1. Selling Price to consumers at all railheads in India	636	645
2. Government surcharge including freight equalisation amount	100	126
3. Retention price allowed to Main Producers (1-2)	536	519
4. Freight including adjustment for the equalisation fund, from Works to Docks	40	40
5. Incidental charges	5	5
6. Approximate freight from Calcutta to Colombo, Singapore, Karachi	60	60
7. Landed cost at Karachi, Colombo or Singapore	641	624
8. Rebate of Excise Duty allowed to main producers in prices for export	53	53
9. Landed cost less rebate allowed at present	588	571

* Shipping & Hoisting charges, river dues and other Port Commissioners' charges are not included.

	Rs. per metric ton				
	U.K.	Germany	Belgium	U.S.A.	Japan
1. Light Bars	580	567	573	805	540
					641 (unre-bated)
2. Structural	562	575	581	782	588
					624 (unre-bated)
					571 (re-bated)

In this comparison Retention Prices have been used for Indian steel as these prices are realisable and reflect the minimum prices at which producers can afford to export. Additionally, remuneration has to be allowed for agents and/or producers' representatives or branch offices to cover the expenses, if they are to handle the business. Furthermore the retention prices quoted in the above comparisons are current provisional prices only which must be increased on finalisation due to increased cost of production and overheads. It will thus be seen that even after deducting the rebate of Excise Duty of Rs. 53/- per metric ton allowed to the exporters in India, they are not at all happily placed in comparison with the U. K., Germany, Japan and Belgium. It is therefore very important that the gravity of the situation should be realised and that suitable steps should be taken by Government to stabilize conditions to create and increase competitive power so that it will be possible and practicable for the producers of steel in India to export. We must aim to enter the export market before our competitors have time to monopolise it and it may be that the country should, if necessary, starve itself temporarily and export rather than wait for the not far distant time when surplus production is available. Opportunity may not knock at our door again in future.

Incentive for Export

The Government at present allows an export rebate of approximately Rs. 53/- per metric ton of finished steel equivalent to the Excise Duty levied on the steel ingot. From the figures quoted above, it will be seen that even after taking advantage of the rebate so allowed by Government, the Indian producer cannot compete with the prominent steel exporting countries, namely the U. K., Japan, Belgium and Germany. To strengthen the position of the Indian producer I feel that Government should give serious consideration to the adoption of measures which will enable the producers to reduce their production cost as much as possible under present working conditions. These measures would include improvement of transport facilities, establishing of coal washeries, stabilisation of labour costs and regularisation of supply of raw materials and fluxes—matters which I will refer to in more detail at a later stage. Further incentives might be offered by way of rebate in the railway freight, remission of certain levies and taxes imposed by the State and Central Governments and reduction in the Port Commissioners' charges. The Government Inspectorate (D.G.S. & D.) might also be required to inspect the materials for export expeditiously and at nominal cost. The exporters should be allowed to retain any additional money they are able to realise over and above the incentives offered by the Government by virtue of their business acumen. This would enable the producers to establish and maintain their offices abroad or to appoint agents. It must be borne in mind that for every ton of steel that is exported, foreign exchange, which is needed so badly, would be earned to the extent of £40 to £45. It is not with any motive for profit that I am suggesting increase in the incentives. The effective incentives will provide a cushion against the possibility of intensified competition by our foreign rivals. I would add that since regularity of supply would be pre-requisite to the building up of an export market there should be no limitation to the export of certain categories of steel for which India has established adequate and probably surplus capacity, namely structurals and bars.

Labour

I referred last year to the persistent rise in our Works cost despite the increase in our production. Much of this increased cost is due to the severe Governmental revenue imposts inflicted on industry in the shape of excise duties, increased customs duties, cesses, sales tax and the like, which either directly or indirectly increase the cost of production. Outside these items, however, perhaps the most serious single factor is the persistent and inflationary rise in labour costs.

again reflects directly or indirectly on our cost of production.

Labour in the Indian steel industry is better off by and large than similar labour employed in other industries in the private sector and in all industries in the public sector. As I pointed out in my Statement last year, we in India suffer from a malignant disease which thwarts our efforts even for the stabilisation much less the reduction of labour costs, namely the system of automatic annual increments as opposed to an assigned pay for each job, and of enforced increases in the rates of wages, allowances and incentive bonus. It must be remembered that any increase in basic wages is not confined to the amount of such increase for the effect snowballs by reason of consequential increase in overtime, incentive bonus, Provident Fund bonus, retiring gratuity, State Insurance contributions etc. If the Government fails to stabilise labour costs at this juncture, it will perhaps be impossible for the country even to be in a position to export any sizable quantity of steel.

Coupled with and directly bearing on the pay to be assigned to a job is the question of manning. In our own case we are at present compelled to employ at least twice as many men as are necessary having regard to the almost complete mechanisation of our plant, and to keep them in employment irrespective of our needs or of our costs.

I would make it clear that I do not for one moment suggest the imposition of a ceiling on the income of any workman. What I do suggest, however, is in effect a ceiling on the labour cost per ton of output, which is a vastly different matter. If industry is to continue to suffer from over-manning and low productive effort, then wages cannot be increased without inflation and loss of competitive power in world markets. Given the opportunity the Indian workman can hold his own with the workman of any other country and with reasonable manning and a link of improvement in individual earning power. Without this link however, chaos only can result and yet it would appear that this essential has up to now been overlooked and that industrial labour which forms only a fractional part of the population of the country has been singled out for the conferment on it of benefit after benefit irrespective of productive effort or economic manning.

Transport

The present shortage of transport is one of the most serious causes standing in the way of achievement of the planned targets for industry, impairing productive efficiency and raising all production costs. It is the primary duty of Government to develop as expeditiously as possible the availability of transport. Heavy industries, particularly the iron and steel industry, have to follow a continuous process of manufacture. Any shortage, interruption, irregularity or disorder in the transportation and delivery to the Works of the necessary materials in proper sequence leads to heavy loss of production. It is our bitter experience that raw materials are not received at the Works as scheduled programme because of the shortage of rail rolling stock. Deficit of wagon placements builds up at the Works by a sudden inflow congesting the internal traffic arrangements of the Works and taxing our unloading facilities to the utmost. The position is at all times aggravated by the number of wagons of unsuitable type that are allotted. Although our mechanised coal handling plant was, with the concurrence of the Railway Board, laid down on the understanding that at least 90% of our coal supply be received in 4-wheeler wagons, we now receive approximately 50% of our open wagons and the balance in covered wagons, with the result that our mechanised equipment stands partly idle and we have to revert to the outdated method of handling coal by manual labour. By giving us more covered wagons than we can handle each day, the Railways create a periodic congestion in the Exchange Yard and advantage is taken of this congestion as an excuse to apply for cut in further allotments. It is clear that there is a very grave shortage of open wagons in the transport system.

Similarly, when iron ore should be brought in BOBS wagons we are forced to accept BOX wagons which disrupts the internal handling and transport arrangements in our Works and increases our cost of handling. BOBS wagons were designed for bringing iron ore to our Works and our mechanised handling equipment in Burn was, again with the approval of the Railway Board, designed to handle these wagons only. There are instances when only 6% of our requirements of BOBS wagons have been met in a month and we have had manually to unload and load to and from stock extremely heavy quantities of iron ore, putting a tremendous strain on our labour resources. It is essential that immediate steps be taken by the Railways to increase the number of BOBS wagons in service.

The railway staff have a very difficult task to perform and I willingly acknowledge that they have been doing their best to endeavour that supplies to the steel works do not suffer. But what can they do when the wagons are physically not there? Pressure on carrying capacity is so great that it appears that in an endeavour to meet requirements large numbers of condemned wagons are being retained in service for we ourselves receive many with mechanical defects and in a general state of repair, with the result that either we are unable to utilise these wagons for outward traffic or can only so utilise them after effecting emergency repairs ourselves.

It is for Government to take suitable and immediate measures to make good the shortage of wagons in general and in particular of wagons of the right type for the steel industry. In this connection I understand that some of the wagon manufacturing concerns are working only to 40% of their capacity due to shortage of matching steel and some bought out steel casting such as axle boxes. This is a position which in the national interest should obviously be corrected so that the indigenous wagon building capacity may be utilised to the fullest extent to meet the emergency.

The magnitude of the transport problem can be easily visualised in so far as the iron and steel industry is concerned, if it is kept in mind that under present day conditions the total quantity of raw materials to be transported to each works in order to produce one ton of ingot steel is in the neighbourhood of 5 tons. Taking six million tons of iron and steel

estimated present installed annual production capacity of the main producers, this means that 30 million tons of raw materials are to be transported annually to their works. To this must be added the transport requirement for the production of 1 million tons of foundry iron, say an additional five million tons of raw materials per annum. In addition there will be about 4.5 million tons of semis and finished steel together with 1 million tons of pig iron to distribute all over the country. I have not taken into account the transport required for movement of food grains and other consumable items and stores, bricks, cement and sand which are all essential for those persons dwelling in the surroundings of the steel works, who constitute a large and fast growing population.

Coal

So many complaints have been made by the consumers of coal and so many unfulfilled promises have been made by the Government to meet such complaints that it is not necessary for me now to repeat them in this Statement. All I say is that before launching on such a vast scale development of the iron and steel industry and the inclusion of some State cokeries, steps should have been taken to see that sufficient coking coal would be available to meet the requirements of these plants.

Simultaneously with the shortage of the quantity of coal there has also been a continuous deterioration in its quality, the ash content sometimes reaching as high as 27%. This has on the one hand considerably increased the cost of iron by larger consumption of the consequently inferior coke per ton of iron, and on the other has retarded the productivity of the Blast Furnaces and thereby reduced the available productive capacity of iron and steel in this country.

I gratefully acknowledge the assistance that has at all times been afforded by the Coal Controller who has been doing his utmost to help the industry in the face of a series of adverse circumstances over which he has but little control. The inadequate supply of wagons to the Collieries by the Railways, the Collieries not supplying the proper grade of coal they are expected to, the inadequacy of sufficient washed coal to meet the requirements of the Steel Works, are some of the problems which confront the industry. A further review by Government of these problems and also of the over-all development of the coal resources of the country is essential if the Steel Works both now and under the Third Five Year Plan are to have normal facilities to enable them to achieve their planned production capacities.

In this connection, I have to emphasize that there has been a lamentable delay in the provision of the coal washeries so necessary for reducing the quantity of ash and otherwise improving the quality of coking coal. We ourselves are particularly adversely placed in regard to supply of washed coal as the washed coal received by us at present constitutes only 7% of our total requirements of coking coal, whereas, it is understood, the programmed figures for other producers are as follows:—

TISCO	55%	of total requirements of coking coal
Durgapur	37%	"
Rourkela	37%	"
Bhilai	34%	"

The programmed quantity in our case is only 10% compared to the other Steel Works. By and large, even the unwashed coal received by the other Steel Works is by fortuitous circumstances of a better quality than that which we receive despite the co-operative assistance of the Coal Controller. The importance of establishing additional washeries of adequate capacity cannot, therefore, be over-emphasized.

Fluxing Materials

It is regrettable that competition has recently developed for supplies of limestone for fluxing pur-

poses brought about by the lack of planning on the part of the Public Sector. Steel Plants which has created a position of scarcity for this material. Due to these circumstances, even inferior grade material with a high percentage of insolubles, which normally would not have been acceptable by the Steel Works, has perforce had to be consumed. Difficulties are intensified partly due to the Railways not providing adequate transport to the regular suppliers and partly because of the indifferent attitude of the suppliers to meet their commitments. There are ample reserves of good quality fluxing materials in India though away from present railheads and if steps had been taken by the Government to develop these sources and instal the necessary transport facilities the position would not have deteriorated to the present extent. Recently, there was a case in which the Public Sector entered into competition with the Private Sector for the purchase of limestone and agreed to pay a price much higher than that being paid by the Private Sector. This naturally resulted in the producers of limestone asking the latter for a corresponding increase. Unthoughtful actions of this nature on the part of the Public Sector can lead only to a spiralling of prices of raw materials and intensification of inflationary trends.

Acknowledgments

In conclusion I would express on behalf of your Directors our appreciation of the services rendered by the General Manager, Mr. J. McCracken, and his executive staff throughout the year. The production achieved in the face of the constant operational difficulties I have outlined is itself testimony to these services and while it is perhaps invidious to make distinction where so much depends on team-work, I feel I should make a special mention of the Blast Furnace and Steel Melting Shop supervisory staff who have so ably faced up to the problems with which they have been, and continue to be, confronted in the maintenance of production under existing conditions.

The above statement is not a document purporting to be a report of the proceedings of the Annual General Meeting.

HOWRAH MILLS COMPANY, LIMITED

CHAIRMAN, SIR JOHN BROWN'S STATEMENT

Statement of the Chairman, Sir John Brown, to the 136th Annual General Meeting held at 4, Clive Row, Calcutta, at 12 o'clock noon on Wednesday, 23rd August, 1961.

Gentlemen,

Before I move the first resolution I feel it is appropriate in the circumstances facing the Mills to-day that I should supplement the information regarding the Company's working contained in the Report of the Directors dated the 7th July, which has been in your hands for some time.

From the Report you will have seen that from May, 1960 there have been successive reductions either in working hours or in the number of looms being worked. In view of statements which have been made from many quarters and which have recently received a wide currency in the daily press, I should make it clear that every cut in production means an increased cost of production to mill owners on account of increased overheads per ton and therefore either a smaller profit or a larger loss. It is difficult in the circumstances to understand the criticism which is directed at mill owners as it must be obvious that no one will willingly increase his cost of production of an article which to a very great extent has to be disposed of in the World's markets in competition not only with the jute industries of other countries but also with substitute packaging materials. What then is the reason which has forced the member mills of the Indian Jute Mills Association to restrict production? For two successive years the jute crop both in India and Pakistan has been a short one with the result that supplies of raw material reaching the mills in Calcutta have dwindled and naturally have increased in price in accordance with the ordinary laws of supply and demand. As a matter of fact, the total stocks of raw jute with mills at the 30th June in each of the last five years were as follows:—

1957	10.96 lacs bales
1958	10.95 " "
1959	16.70 " "
1960	12.46 " "
1961	4.48 " "

Supplies at 30th June, 1961 represented barely 4 weeks' consumption on the basis of working then in force. Our own stocks were the equivalent of 3½ weeks' consumption and when I tell you that we normally regard 8 weeks' stock actually in the mill as a safe working minimum you will get some idea of the extent of the deficiency and the practical difficulties facing the staff and our operatives. Since the end of June the new season's crop has started to reach up-country markets and also Calcutta but as yet supplies are restricted and even now they do not match consumption. This situation was foreseen by the Committee of the Indian Jute Mills Association and in agreement with the Central and State Government authorities arrangements were made for a block closure of the mills for one week in each of the months of June and July. While there is no doubt that this action was instrumental in avoiding a scramble for material which was in hopelessly short supply, and resulted in spreading the burden of the loss involved over the workers as a whole and the mill companies, it is unfortunate that more recently an acute controversy has developed in regard to the necessity or otherwise for a further cut in production between the beginning of August and the time when the mills can reasonably expect to start to replenish short stocks from arrivals.

Two Criticisms

Criticism of the mills is mainly on two counts; namely, that they are using coercive measures to inflict loss and suffering on the workers engaged in the industry with a view to influencing the decisions of the Wage Board which is now considering the wage structure of the industry, and secondly, that they are attempting by refraining from purchasing jute to depress its price and thereby inflict loss on the cultivators. The mills are also accused of a failure to have regard to what is described as the national interest in this matter.

Let me say rightaway that speaking for the Board and management of your Company, and I am sure for the managements of all the other Mills in the membership of the Indian Jute Mills Association, the first criticism, namely that we are trying to harass and cause loss to our workers, is totally unfounded. The losses suffered by our operatives are much to be deplored, but they are only a small part of the loss suffered by the industry as a whole in recent months. I read recently a criticism that the wages in this industry were low. It is true that they are by no means the highest wages paid in this State, but any criticism on this score should take account of the fact that ours is an industry which has to dispose of its output largely in foreign markets and we have to accept the price which the foreign buyer is prepared to pay; and he is not obliged to buy our goods unless it suits his convenience. We read a great deal these days, both in the daily press and in the financial journals, of India's need to increase her exports in order to meet the country's mounting foreign exchange liabilities and the increasing demands of her expanding industry. We in this trade and industry have a long experience of the economics of export and we are therefore, I believe, in a position to express a responsible opinion on this subject. The export trade requires a very considerable attention to detail on the part of those engaged in it but its two outstanding requirements are, firstly, to produce in article which the overseas buyer wants and secondly, to produce it at a price which he is prepared to pay. Looking at the Indian scene to-day I think there are many who would agree with me that we

are more likely to succeed in the first of these objectives than in the second. The price at which a manufacturer can afford to sell his goods is determined by his costs and the need to service his capital. In the jute mill industry the two largest single items of cost are raw material and labour and I have seen it suggested in some of the many press reports on meetings concerning the present situation in the industry that will owners, instead of allegedly adopting oppressive tactics against their labour and the cultivators, should reduce the expenses of management. In industry the battle to reduce costs is a constant one and I can assure you that so far as this Company is concerned it is not confined to reducing labour costs and the price at which we buy jute, which is in any case determined by supply and demand in the market. Those responsible for the comment to which I have just referred are almost certainly not aware of the fact that, for many mills engaged in the production of standard constructions of cloth and bags, in the past three months losses have been incurred even if management and overhead expenses including depreciation had been eliminated altogether: in other words, the cost of the raw material plus the labour cost alone exceeded the price at which the goods produced could be sold. It will be appreciated that this is a state of affairs which clearly cannot last for long if the industry is to survive at all and continue to contribute any significant part of India's foreign exchange earnings.

Unwarranted Suggestion

The suggestion that mill owners are attempting to oppress the cultivator by withholding purchases and thereby artificially depressing the price of raw jute is equally unwarranted. Such figures as are available indicate that arrivals of raw jute in Calcutta at the present time do not match consumption even on the basis of present restricted working. It would be a simple matter no doubt for one or two of the bigger groups to enter the market and buy up all the jute that was offering and thereby leave all other groups without any source of raw material. I cannot see, however, how that would in any way improve the situation from the point of view of the production of the industry as a whole and therefore of its workers. What the mills have done is to attempt to regulate their working to the amount of the raw material of the qualities required which is in hand or in sight in the immediate future and to avoid as far as possible the total closure of individual units which, I suggest, would entail far greater hardship to the workers involved. In the case of this Company we have had to seal temporarily a further 322 looms, representing 15% of our registered complement. It is indeed unfortunate that notwithstanding the efforts of management certain mills were forced to close completely last week due to a shortage of raw material. I do not think that it can be seriously seen any advantage in bringing ruin to cultivators, as some of the more exaggerated press reports suggest is their object, and thereby jeopardising their future supplies of raw jute, leading in turn inevitably to further price increases.

Jute goods are not a luxury but an essential packaging or process material used in many other industries and, from the buyer's point of view, while naturally he would wish to get his goods as cheaply as possible, most buyers whom I have met and with whom I have discussed this matter agree that stability of price is very nearly just as important as the actual price level. The question then is: at what level is stability to be determined? I have seen it suggested recently that the Central or the State Government should somehow or other lay down a minimum price of Rs. 50/- per maund for jute. This may sound fantastic last week it was to me to read it; but it does serve to indicate how far away from reality are some of the present critics of our industry. I have already referred to the necessity for us to compete with the jute mill industries of other countries and in to-day's terms that means particularly Pakistan. On the day on which I drafted this statement the difference between the price of raw jute in the Calcutta market and the price in the Narayanganj market was as much as Rs. 10 per maund: in other words, the Pakistan mills were getting their raw material at a price which was 24% less than the Indian mills had to pay for a fibre of what is generally admitted to be inferior quality. From the mill owner's point of view it is indeed immaterial what price he pays for his raw material as long as he can sell his goods at a price which covers his costs and leaves him some margin of profit to put back into his business after paying a modest dividend to the shareholders. Other things being equal, it is in his interest to see that the grower is well rewarded for his efforts as this will ensure an adequate supply of raw material for the future. We inevitably get back, however, to the question of how much the buyer abroad is prepared to pay, since we do not live in a protected internal market where demand price for jute has to be considered in relation to the price at which our production can be sold. Although it is admittedly not easy, I am sure that it is not beyond the wit of all the interests involved to devise a system of minimum price fixation which takes all these considerations into account and ensures that the positions of the mills on the one hand and the cultivator on the other are equitably regarded. Such a system might well be linked with a scheme for the setting up of a buffer stock of raw jute in the mutual interests of mills and growers. This is a matter which I understand is currently engaging the attention of the Indian Jute Mills Association and the Central and State Governments and I am sure we must all hope

that a speedy solution acceptable to both the cultivators and the mills will be found.

Exporting at a Loss

Among the many exhortations to industry generally these days is an appeal to be prepared to export, even at a loss. This is exactly what the jute mill industry has been doing for some time and it is not just a loss incurred in respect of simply a small portion of its production which can be absorbed in the higher profits which are obtainable in many other industries on the internal market. Nevertheless, if we are to survive and keep our mills running, we have to be prepared to incur such losses as indeed we have not infrequently had to do from time to time in the past. I would, however, suggest that it would be not unreasonable to expect that in these circumstances we should be entitled to at least some sympathy instead of being pilloried by sectional interests in the raw jute trade as well as by labour leaders generally. It appears to have been overlooked in recent controversies that as far back as December last year the mills agreed to reduce working hours rather than to seal more looms in order to lessen the impact of the slumps in the market and this has resulted in addition to the losses during the intervening months, thus aggravating the already difficult position arising from the disparity between raw jute and manufactured goods prices. The only reason for which is the high price of jute caused by a physical shortage of fibre.

I have already referred to criticism of mills and their managements for an alleged failure to consider the national interest in this matter of adjustment of production in line with available supplies of raw material. Such criticism, I feel, is greatly to be interpreted in a variety of ways but to me a factor which must always find a place in any consideration of its meaning is the contribution which the particular policy which is advocated is going to make to the future of this country, the building up of its industry and an increase in the standard of living of its people. Who is it who is looking to the national interest in considering the solution of the present difficulties of our industry? Is it those who are clamouring for a jute price of Rs. 45 per maund or even Rs. 50 per maund when our competitors in foreign markets can buy their raw material at Rs. 32 per maund at present with a prospect of a substantial further fall? Is it those who claim to be representing our workers and who demand higher wages without any change in work loads and without any reduction in the numbers presently employed? Or is it those who look ahead of ten years and who on the basis of the history of the past thirty or forty years realise that while the world's consumption of packaging materials has gone up enormously, consumption of jute goods has not risen proportionately and furthermore that a major jute industry is being built up right on our doorstep so that international competition can only be intensified, leading to keener and keener prices efficiency at all levels if the future of the Indian cultivator, the mill worker and the shareholder are to be safeguarded? It is no use blaming the foreign buyer and complaining that he should pay more for his goods. The remedy is to be found much nearer home. It is in the hands of all those who have an interest in this industry, whether as growers of the raw material, as workers in the mills, as managements or as shareholders, not forgetting the Central and State Governments whose overall interest is to see that a broad equity is maintained between all those engaged in the industry while particularly so in that the Central Government is concerned, ensuring exchange for the country is not impaired in the long term by sectional interests.

Heavy Capital Expenditure

Criticism of the mills, particularly by raw jute and labour interests seems to overlook the fact that as a class shareholders in jute mill companies have not only not yet benefited in terms of income from the heavy capital expenditure which has been incurred on modernisation but, practically alone among equity holders have also seen a substantial decline in the value of their investment, not only since the partition of the country in 1947 but even since 1952-53 on which year the Reserve Bank of India's indices are based. This is indeed a poor reward to those who have provided the financial sinews of what was last year once again the country's leading export industry in terms of foreign exchange earnings.

If this industry is to continue to occupy the place in the country's economy which it has made for itself, and if it is to expand its production to anywhere near the limit of the present installed capacity, it is absolutely essential that all of those who are concerned in it, whether they represent capital, management, labour or the Central or State Governments, should examine closely the probable trend of events over the next ten years or so. I am one who believes that the outlook is not nearly so grim as it is sometimes painted: but my belief is subject to one important reservation and that is that our costs of production are reduced, and reduced very substantially. Nothing will be gained I am sure, from evading this issue. The cultivator will have to get his reward from an increased return per acre; in other words with the aid of fertilisers and improved seeds he will have to produce more jute without having to himself employ more labour, either his own or his neighbours'. It is unthinkable that labour wages can be reduced, and therefore if a solution satisfactory in the long term is to be found to this question of wage rates it must be by the employment of improved mechanical methods as a result of which higher wages can be paid to a reduced number of workers. From the point of view of the mills, the majority of them are still endeavouring to amortise the heavy capital expenditure incurred in recent years in modernising the preparing and spinning departments. Technological advances indicate that a stage will shortly be reached when, in order to compete in the world's markets, the mills will have to face further heavy capital expenditure on the modernisation of their weaving departments. While some companies are relatively well found financially I fear that the financial burden involved in this further expenditure may be beyond the capacity of the majority of companies, at least immediately.

Money

THE CALCUTTA MONEY MARKET INTERBANK RATE FALLS

Wednesday, 23rd August.

THERE has been a further decline in advances in the Calcutta money market. In the past week there have been falls in demand for credit from the jute and sugar mills, and on a more moderate scale from the engineering and iron and steel industries. The requirements of the cotton mills have remained about the same, but there has been a slight increase in call for accommodation against grains and seeds storage. In the inter-bank market, conditions have become extremely slack due to the volume of floating funds released in order to take up the State loans. The call rate is nominal at 2 percent.

It has been an extremely slack week in the exchange market, with few bills of any kind in evidence. Demand for remittance has been moderate. In the London money market, the pound has maintained a firm trend following the publication of the U.K. trade figures for July. At the close, gains were recorded against the U.S. dollar and all important Continental currencies.

BULLION WAS STEADY IN THE PAST WEEK DUE to fresh support. Silver advanced from the previous week's level of Rs. 236.50 to Rs. 238, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 204.12. The London and New York prices were 80½d and 91.375 cents.

Gold improved in sympathy with silver and the price rose from Rs. 144.50 to Rs. 145.50. The sovereign at Rs. 95.50 showed a gain of 25nP.

DURING THE WEEK ENDED 18TH AUGUST, Government of India Treasury bills for Rs. 2,86,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 22nd August. The total amount offered was Rs. 2 crores only. Tenders at Rs. 99.400 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 28th August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY Bills will be sold from 23rd August to 26th August at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 16th August to 19th August amounted to Rs. 2,55,00,000.

DECLINES OF Rs. 13.41 CRORES TO Rs. 1,899.86 crores in active notes and of Rs. 8.70 crores to Rs. 1,912.10 crores in the total note issue were notable features of the return of the Reserve Bank of India during the week ended 18th August, 1961. The currency contraction was covered by reducing rupee securities of the paper currency reserve by Rs. 9.93 crores to Rs. 1,553.49 crores. This was reflected in the Banking department in which investments declined by Rs. 14.90 crores to Rs. 274.57 crores. Deposits of the Government of India rose by Rs. 22.34 crores to Rs. 83.03 crores, presumably due to the transfer of the profit of the Bank to the Government account. Hence other deposits declined by Rs. 42.72 crores to Rs. 159.61 crores. Other Government accounts were Rs. 72 lakhs lower at Rs. 13.17 crores. Balances of commercial

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 23-8-61.			
Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

CLEARING HOUSE RETURNS

Week ended	Calcutta Rs (thousands)	Bombay Rs (thousands)
18-8-61	75,05.00	77,47.89
11-8-61	75,05.00	97,18.49
4-8-61	79,30.00	95,14.68
28-7-61	75,72.00	1,04,78.85

banks rose by Rs. 7.89 crores to Rs. 87.93 crores. Balances held abroad declined by Rs. 2.44 crores to Rs. 29.52 crores. Other loans and advances fell from Rs. 117.38 crores to Rs. 116.87 crores, of which advances to scheduled banks against usance bills amounted to Rs. 51 lakhs (Rs. 1.80 crores). Ways and means advances stood at Rs. 52.40 crores, against Rs. 47.59 crores.

crores to Rs. 582.52 crores in investments. Advances and bills discounted at Rs. 1,241.86 crores show a drop of Rs. 2.11 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.1 percent and 62.3 percent, against 6.3 percent and 62.8 percent.

HOWRAH MILLS COMPANY, LIMITED

(Continued from page 288)

suggest, however, that the true national interest demands that means be found to enable mills to shoulder the further liabilities to which I have referred. This can only be done if the cost structure of the industry is such that it can operate efficiently at such a profit as will enable it to amortise not only existing debt but also the fresh debt which it will have to incur. In the case of your own Company, since the date of the Directors' Report, the Board has sanctioned further capital expenditure in the factory and it will be our policy to continue to do so as far as we can within the resources at our disposal. I cannot, however, conclude this statement without making it clear that the Company has suffered very severe losses since the month of May and this setback will undoubtedly result in a slowing down of the modernisation process. I and my colleagues, however, feel that this is not a time to stand still and with faith in our ultimate future we intend to equip ourselves to be as competitive as we can in the years ahead.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting referred to.

MR. TUBOPHILE GOES WATER DIVINING IN TUBELESS TIMES

"It's here, it's here", screamed the Water Diviner, all excitement, "oceans of fresh water underground... enough to cultivate this land for ever and a day. In fact," continued the Water Diviner, when he had got his breath back, "there's water, water everywhere"... "All right, all right, but meanwhile there's not a drop to drink, and I am dying of thirst in the middle of this tubeless land," retorted Mr. Tubophile, really irritated. "Look here, chum, I've had enough of your tubeless mumbo jumbo. I ask for running 'hot and cold' and you take me to a dirty water hole! Then I ask for a drink of water and you suggest I burrow underground like a rodent. The truth, Sir, is simple. No tubes, no water! In fact, life without tubes is apt to be life without water and that's no life at all."

The Indian Tube Company (1953) Ltd.
A Tata-Stewarts & Lloyds Enterprise

PROUD ACHIEVEMENT

The J. K. Organisation can legitimately be proud of the fact that it has been the first in various fields of industrial activity in India.

FIRST to manufacture Colico Prints in India—J. K. Cotton Spinning & Weaving Mills Co. Ltd., Kanpur.

FIRST to install Electric Furnace for manufacturing steel in Northern India—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to produce Baling Hoops for use by the Jute and Cotton Textile Industries in India—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to manufacture hydraulically operated modern cane crushing mill for small-scale Khandari sugar units—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to produce Aluminium virgin metal from Indian Bauxite in India—Aluminium Corporation of India Ltd., Jaykynagar.

FIRST to produce Engineers' Files in India—J. K. Engineers' Files, Bombay.

FIRST to establish Plastic Industry in Northern India—Plastic Products Ltd., Kanpur.

FIRST to produce Heavy Chemicals in Western India—Eastern Chemical Co., (India) Bombay.

FIRST in the world to produce on a commercial scale Hydrosulphite of Soda by Sodium Amalgam Process—J. K. Chemicals Ltd., Thana.

FIRST Continuous process Rayon Plant in India to produce Viscose Rayon and the first such factory in India to be built up in record time—J. K. Rayon, Kanpur.

FIRST Nylon Plant in India—Jaykaylon (under construction), Kara.

FIRST to manufacture Portable Typewriters in India—Blackwoods India Ltd., Calcutta.

FIRST Woollen mill in India to export woollen goods to Norway and Sweden—The Raymond Woollen Mills Ltd., Thana.

LARGEST Jute Mill in Northern India—J. K. Jute Mills Co. Ltd., Kanpur.

J. K. ORGANISATION KANPUR • CALCUTTA • BOMBAY
India's Great Industrial & Commercial Combine

WEST BENGAL LOAN, 1972

INTEREST AT 4½ PER CENT

ISSUE PRICE RS. 99.75

Opens on the 4th September, 1961

The loan will be closed without notice as soon as the total subscriptions amount approximately to Rs. 7 crores and in any case not later than the close of business on 9th September, 1961.

The loan will be issued in the form of—

(1) Stock, the applicants for which will be given Stock Certificates, or

(2) Promissory notes, which will be in denominations of Rs. 100, Rs. 500, Rs. 1,000, Rs. 5,000, Rs. 10,000, Rs. 25,000, Rs. 50,000, and Rs. 1,00,000.

Applications for the loan must be for Rs. 100, or for a multiple of that sum and will be received at:

- (a) The offices of the Reserve Bank of India, at Calcutta, Bombay, New Delhi, Madras and Bangalore; and
- (b) The branches of the State Bank of India within the State of West Bengal except at Calcutta.

Full particulars and application forms are available from any of the offices mentioned above.

Stocks and Shares

DOWNWARD PRICE TREND SLOWED BY SELLING MARGINS

NO CHANGE IN DESPONDENT MOOD

Wednesday Evening.

THE stock market has closed the past week in an uncertain mood. The pressure has abated due to the imposition of heavy margins on selling in four speculative shares—Indian Iron, Burrakur, Hindustan Motors and Rohtas. The stock market authorities have decided that sellers in Indian Iron shares will have to pay a margin of Rs. 2 a share, and sellers in Burrakur, Rohtas and Hindustan Motors a margin of Rs. 1.50 a share. Although the move appears to have succeeded partially in arresting the downward slide in Lyons Range, the beneficial effects have been obscured by the fact that short-sellers have been able to hammer prices down further by selling freely in other stock markets. It is clear, therefore, that any measure of this kind cannot fulfil its object fully unless all the stock markets act together in applying correctives.

In spite of the brake put on selling, support has been virtually negligible. As a result, trading has become thin and fluctuations narrow. Lyons Range is disturbed by the fact that the prospects for Indian Iron shares—which constitute the barometer of the market—are uncertain, at least in the near-term. The working of the steel companies is being hampered by shortages of raw materials and transport. Indications are that these difficulties are unlikely to be relieved in the near future. So, profitability could suffer during the current year. To what extent compensation will be obtained in the form of higher steel retention prices, due to be re-fixed soon, it is difficult to foresee at the present stage.

At a time like the present when sentiment is subdued, generally bad news makes its influence felt, while good news fails to impress. Investors have become cautious and are inclined to act slowly in spite of the fact that prices of many good shares have probably declined sufficiently to become attractive on considerations of yield and growth. But support is lacking in the light of a drift towards dearer money. If money rates are permitted to move higher under official directives, the yield idea will be correspondingly rated at higher levels. Against such a background, the prices of equity shares are likely to consolidate at lower levels.

The stock market is worried about the prospect for obtaining increased credit facilities from banks. In spite of the return of substantial funds into the banking system following the beginning of the slack season, there is little evidence of increased institutional support for stocks and shares. In fact, rumour has it that some banks have been forced to sell shares in order to correct the margin positions of their clients. As long as these floating stocks are not properly absorbed, the tendency will continue to be sensitive. Considering that the State Government loans will be offered at the beginning of next month, there could be a further squeeze on funds in the not-distant future.

The price of Indian Iron shares has closed around Rs. 24.96. Engineering shares are subdued on reports of shortages of raw materials, electric power and transport. Texmaco have touched a new low on selling pressure. Guest, Keen, Williams, J. K. Steel, Jay Engineering and Braithwaite have declined.

Coal shares are neglected, but selling pressure in good scrip has not been heavy. Investors are examining carefully the implications of the World Bank loan to the industry for expansion. The World Bank will give a loan of nearly Rs. 17 crores to the Government of India which will use it for meeting the foreign exchange requirements of the coal companies. Hence, companies which have substantial internal resources of their own in order to match their requirements for foreign exchange, stand to benefit from the World Bank money. In the circumstances, buying is expected to be more discriminating than before. Quiet support has been forthcoming for Bengal, Burrakur, New Beerbhoom and Amalgamated.

Miscellaneous shares have produced mixed trends. Support is discernible in Associated Battery, Goodyear India, Metal Box, Britannia Biscuits and British Paints have attracted interest. Alkali Chemical, Indian Cables, Union Carbide, Isaac Holdens, Dr. Paul Lohmann and Hindustan Twyford are steady at lower levels. A short-lived rally in Hindustan Motors had not been maintained at the close, but the scrip are believed to have enjoyed influential support. Rohtas and Indian Aluminium are weaker. Cement shares are neglected and no worthwhile change is likely until the new price for the commodity is published. Electric being transacted in Calcutta Electric. Managing agency shares have lacked interest. Martin Burn, Shaw Wallace and Balmer Lawrie have declined. Tobacco scrip are quiet and losses have been recorded in Imperial Tobacco and National Tobacco shares. National Insulated Cable and Hindustan Aluminium have reacted on profit-taking. Silsilk

have lost further ground on pressure. India Steamships are being sold freely at lower prices because the Company has passed the ordinary dividend. Paper shares are quiet but prices have recovered slightly at the close. Titagurh are steady on paying a dividend which is considered satisfactory under the circumstances. Seshasayee Paper have improved on reports of progress in the installation of the factory. Sirpur have weakened further but Orient have recovered on replacement buying.

Sellers predominate in jute shares because of the uncertain outlook for the working of mills. Although bigger arrivals of fibre have been reported, there is a great deal of uncertainty concerning the fixing of a minimum price for raw jute. New Central, Howrah, Birla, Anglo-India and Ganges have lost on balance.

Except for Bowreah, which has been steady on influential buying, cotton mill shares have generally reacted. Kesoram, J. K. Rayon and Bharat Commerce are quoted at lower prices.

There is virtually no interest in sugar shares because there is little evidence that the huge accumulation of stocks at factories can be relieved in the near future. Carew, Belsund and Ramnugger Cane have declined further.

The softer trend at the Calcutta tea auctions held during the week, combined with a bigger production in north India, has induced caution. Scattered interest is being taken in selected Assam and Dooars gardens. The good results of the Gillanders group of Assam gardens indicate how selected estates can make good profits under present circumstances. Basmatia, Betjan, Bishnauth, Jutbari and Tezpor are in demand.

Government securities are steady but business has been restrained in view of the forthcoming State Government loans. In spite of good demand for medium and short-dated stocks, business is restricted due to the shortage of sellers. The 3

Glass makes a distinct difference

Any home can be modernised—with glass. And not in appearance alone. Glass seals out moisture, noise and irritating dust and, fitted cleverly, filters through healthy, natural light. Glass is easily cleaned, too!

Versatile—glass has numerous other uses in the office, factory, school, hospital and store.

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

percent conversion loan 1986 is being quoted around Rs. 72.60.

Chamong Tea

The profit of the Chamong Tea Co. Ltd has amounted to Rs. 75,808 for the year ended December 1960. The dividend has been passed. Making all adjustments, there is a carry-forward of Rs. 47,950, against Rs. 18,735 brought in. The crop manufactured was 82,007 kilograms (against 63,605 kilograms) and the average sale price realised was Rs. 7.75 (against Rs. 8.09) a kilogram. Estimates for the current year provided for a crop of 82,210 kilograms of tea at a cost of Rs. 6.97 a kilogram.

Dufflaghur Tea

A taxable ordinary dividend of 25 percent, including an interim of 10 percent, has been declared by the Dufflaghur Tea Co. Ltd for the year ended December 1960, against 35 percent, year ended December 1959, against 35 percent, subject to tax in the previous year. The profit has decreased from Rs. 5,07 lakhs to Rs. 3.81 lakhs, after providing Rs. 73,193 (against Rs. 63,649) for depreciation. Taxation absorbs Rs. 1.50 lakhs (against Rs. 2.20 lakhs). Building reserve gets Rs. 50,000 (against Rs. 1.50 lakhs) and repairs and renewals reserve receives Rs. 50,000 (against same). With other adjustments, there is a carry-forward of Rs. 3,48,515, against Rs. 3,83,571 brought in. The crop amounted to 388,343 kilograms (against 421,110 kilograms) and the average sale price was Rs. 6.18 (against Rs. 5.97) a kilogram. The estimate for 1961 provides for a crop of 420,000 kilograms at a cost of Rs. 4.48 a kilogram.

Gohpur Tea

The Gohpur Tea Co. Ltd has shown a profit of Rs. 72,408 for the year ended December 1960, against a profit of Rs. 2,06 lakhs in the previous year, after allocating Rs. 65,642 (against Rs. 58,327) for depreciation. Dividend has been passed, against 10 percent, subject to tax. After making all necessary adjustments, there remains a balance of Rs. 1,49,350, which is to be carried forward, against Rs. 1,31,256 brought in. The crop totalled 220,227 kilograms (against 266,072 kilograms). The average sale price was Rs. 6.19 (against Rs. 5.75) a kilogram. Estimates for 1961 provide for a crop of 268,070 kilograms of tea at a cost of Rs. 4.67 a kilogram.

Bombay Market

STEADIER CONDITIONS FOLLOW REPLACEMENT BUYING

OPERATORS REMAIN CAUTIOUS

Wednesday Noon.

THE Bombay stock market has been quietly steady during the past week. There was a small recovery in share prices and at the close it looked as if the gains were being consolidated. Replacement buying was induced by the belief that the shake-out had been overdone and current prices discount all adverse factors more than fully. Operators were nevertheless inclined to move cautiously in view of the long week-end holidays. The decision of the Bank of England to ask all British companies to repatriate the profits of their foreign subsidiaries to the utmost possible extent disturbed sentiment. It was feared that such an eventuality could accentuate India's foreign exchange difficulties. Concern was felt about the rising production costs of industry. Engineering shares were subdued on reports of shortages of raw materials. Cotton mill shares were dealt in cautiously in view of the increased competition in foreign markets.

Tata Steel recovered to Rs. 152.25 on a report that the Company has been permitted to produce some special types of steel. Indian Iron were subdued at Rs. 25.25 on pressure from Lyons Range. Tata Locomotive were depressed at the beginning on the prospect that there would be no rights share issue, but later the scrip recovered on replacement buying. Larsen and Toubro were quoted at Rs. 36 and Premier Construction were available at Rs. 182. Mukand Iron realised Rs. 25 and Alcock Ashdown were sold freely down to Rs. 276. Motor shares were quietly steady, and Premier Automobiles were done at Rs. 157 on talk of foreign loans for expansion. Hindustan Motors were quoted at Rs. 19.60.

Cotton mill shares recovered slightly from their levels touched earlier. Century were dealt in at Rs. 673 and Bombay Dyeing realised Rs. 65.80. Kohinoor were taken at Rs. 285 and Simplex came to hand at Rs. 193. Svadeshi were taken at Rs. 250 and Tata Mills were quoted at Rs. 62.70. Morarji declined to Rs. 408, but Khatau were steady at Rs. 521.25. Standard reacted to Rs. 1328 on profit-taking. India United Ordinaries were sold at Rs. 15.12 and Apollo were freely offered down to Rs. 188.

Prices of miscellaneous shares moved down in pattern with the general trend. Sugar shares were quiet, and Belapur lost at Rs. 255. Phalton were

sold at Rs. 130. Walchandnagar Industries were offered at Rs. 164 on the prospect of a debenture issue, but Maharashtra Sugar attracted support at Rs. 190 on talk of a bonus share issue in the proportion of two new shares for every five held. Cement shares were quiet, and Associated Cement were available at Rs. 158.50. Digvijay declined to Rs. 165.50. Mining shares reacted, and Shivrajpur Syndicate were quoted at Rs. 93.70. Steamship company shares were depressed, and Scindia Steam touched a new bottom of Rs. 12.64. Sellers predominated in Great Eastern Shipping at Rs. 13.48. National Rayon lost at Rs. 533.50 and Baroda Rayon were sold at a lower price of Rs. 139. Gwalior Rayon were transacted at Rs. 48.75. Bombay Burmah declined to Rs. 587 on pressure. Anil Hardboard lost at Rs. 257.50, but Ceat Tyre were steady at Rs. 212.50. Synthetics and Chemicals declined to Rs. 184. Voltas were in demand at Rs. 284, as were Tata Oil at Rs. 69. Hindustan Lever met with scattered interest at Rs. 47.75.

Bank shares were steady and fluctuations narrow. Central Bank came to hand at Rs. 62 and Bank of India were done at Rs. 131.50. Dena Bank were transacted at Rs. 62 and Bank of Baroda were placed at Rs. 104.75. Insurance shares were quiet, and New India Assurance declined to Rs. 56.80. British India General were indicated at Rs. 11.24.

There was scattered support for electric company shares on good results produced by the Tata Hydro group of Companies. Tata Power were placed at Rs. 1,087.50 and business was done in Ahmedabad at Rs. 90.50. Bombay Suburban were dealt in at Rs. 95.30.

Madras Market

EASIER CONDITIONS FOLLOW EARLY STEADINESS

INVESTORS TAKE CHEERFUL VIEW

Tuesday Evening.

AFTER remaining steady earlier in the past week, the Madras stock market turned cautious at the close due to lower advices from the Calcutta and Bombay stock markets. Although turnover declined to a great extent, fluctuations were narrow. Investors were inclined to take a fairly encouraging view about the future outlook. Bank shares were supported on the prospect of an expansion of activities. Public utilities were bought on yield considerations. In the planting group, interest was taken in good tea and rubber shares. Coffee shares were selectively bought on the view that the floods have not done much damage to the estates. Cotton mill shares were supported on the prospect of expansion. In the miscellaneous section, shares were taken selectively on good corporate news. Business was thin in Government securities because attention was diverted to the forthcoming State Government loans.

In the banking group, Andhra were done at Rs. 100 and Canara Banking were transacted at Rs. 89. Indian came to hand at Rs. 176 and Indian Overseas were dealt in at Rs. 188.50. Punjab National were taken at Rs. 24.25. In public utilities, business was done at West Coast at Rs. 14.90 and Vellore made Rs. 13.35. South Madras were placed at Rs. 10.12 and Elore were transacted at Rs. 20.

Sugar shares were quiet, and Deccan declined to Rs. 13. E.I.D. were sold down to Rs. 38.75. Mysore were placed at Rs. 57.75 and United Breweries were quiet at Rs. 101.50.

In the planting section, Blue Mountain were steady at Rs. 3.10 as were Cochín Malabar at Rs. 7.22. Consolidated Coffee were taken at Rs. 21.25 and Coffee Lands were done at Rs. 17.65. Badra were placed at Rs. 3.60 and Kadur were done at Rs. 2.85 on a report that the two Companies will be amalgamated. Business was done in Oucherlony at Rs. 3.72 and in Periakaramalai at Rs. 3.86. Kil Kotagiri were quoted at Rs. 4.65 and Midland were done at Rs. 11.65. Nilgiri were placed at Rs. 8.90 and Ossoor were done at Rs. 23.25 and Swinton were offered at Rs. 3. Twyford were indicated at Rs. 11.45 and Waterfall were done at Rs. 2.96.

Among textile shares, Buckingham were steady at Rs. 249 and Bangalore Woollen improved to Rs. 215. Lakshmi were placed at Rs. 168 and Madura were bought up to Rs. 36.90. Travancore Rayon realised Rs. 38.45 and South India Viscose were dealt in at Rs. 182. Anglo-French were quoted at Rs. 125 and Kothari were done at Rs. 12.45. Coimbatore Spinning were taken at Rs. 56.25 and Ramakrishna were in demand up to Rs. 207.90. Vijayakumar were taken at Rs. 104 and Rangavilas were transacted at Rs. 45.25.

In the miscellaneous group, business passed in Aluminium Industries at Rs. 22.80 and Ashok Leyland weakened to Rs. 3.70. India Cement were steady at Rs. 6.54 and Madras Cement came to hand at Rs. 91. F.A.C.T. were done at Rs. 9.75 and Enfield were bought up to Rs. 12.37. Mysore Paper were steady at Rs. 20.62 and Seshasayee Paper improved to Rs. 8.50. Parry's Confectionery were steady at Rs. 5.06 and Spencer were placed at Rs. 23.40. Standard Motors were dealt in at Rs. 16 and Textool were done at Rs. 178. Travancore

Cement were sold down to Rs. 7.50, but Tube Investment were supported up to Rs. 260.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. THERE was no relief in the past week

What was once a dream...

Over four years ago, when the Prime Minister of India visited Bhilai, the groundwork for the foundation of the steelworks was being made. "What was once a dream," he wrote in the Visitors' Book, "begins to take shape and come true—a symbol and a portent of the India of the future."

On his second visit to Bhilai in October last year to inaugurate the Rail and Structural Mill, he saw the dream come true. The one-million-ton steelworks is virtually complete and what was a blueprint only a few years ago is now an impressive network of towering structures on a waste-land of yesterday.

Bhilai has been the largest supplier of pig iron to the nation's foundries for quite sometime and one of the largest suppliers of billets to the re-rolling mills. And now, the products of the Rail and Structural Mill are feeding another vital section of our country's economy—the railways and engineering industries. On an average, two train loads of iron and steel have been leaving Bhilai every day and a part of its products has even been exported.

RECOMMENDATIONS OF OIL PRICE COMMITTEE MAY BE SHELVED

PRIVATE REFINERIES NOT PERMITTED TO EXPAND UNDER EXISTING AGREEMENTS

(FROM OUR NEW DELHI CORRESPONDENT)

OIL has again been in the news during the past week. Replying to various questions, the Minister for Oil, Mr. H. D. Malaviya, reiterated his earlier statement in the Lok Sabha that the Government is not prepared to consider the expansion of refining capacity in the three private sector refineries "under their existing agreements." The obvious inference should be that expansion would be permitted if the agreements were revised. It is true that the oil companies have been talking aloud about revising the terms of the agreements without committing themselves in writing. But it is also true that, as indicated repeatedly by the Oil Minister himself, the Government has no intention of permitting the expansion of the refining capacity in the private sector.

Since April 1959, there have been ad hoc agreements between the Government of India and the three western oil companies on the pricing of major petroleum products. With a view to placing the price structure of major petroleum products on a scientific footing, a committee was set up, nearly six months ago, with Mr. Damle, a former chairman of the Tariff Commission, as its chairman and a High Court judge and a cost accountant of all-India reputation, as its members. This committee has made its report, which is now being examined by the Ministry of Oil. Meanwhile, messages are being published that the Ministry has been very disappointed with the report. As the report is still a "top secret" document, the reactions of the oil companies concerned are not yet available. It may, however, be assumed that the public mind is being prepared to accept the rejection of the report by the Government. The Prime Minister's directive, in a different context, should provide a guiding principle. Speaking in Parliament last week on the Privilege Committee's report, the Prime Minister rightly said that Parliament having appointed a committee, had no escape from accepting its report.

The Central Ministry of Oil, it will be recalled, was asked to refer the case of fixing petroleum product prices to the Tariff Commission, as is the general practice in the Government of India. It did not do so, but appointed its own committee, the personnel of which was selected by itself. This committee has produced a unanimous report. This would not be the first time that reports of committees appointed by this Ministry had been discarded and decisions different from their findings announced. The case of various committees appointed on Assam Oil refineries provides an example. It would save a great deal of public money if the Ministry wrote its own report and got someone to sign it. In case of the Damle Committee's report, the Ministry will not find it easy to throw it into the wastepaper basket. Mr. Damle enjoys an all-India reputation for dealing with problems akin to the one entrusted to his committee, he having been the chairman of the Tariff Commission. The other two members of the committee were likewise persons of some standing, one with a judicial background and the other a cost accountant. On the basis of the material placed before this committee, it has reached certain conclusions. It would be wrong to appoint another committee, as is being suggested in some quarters; and it would be grossly unfair to reject the recommendations of the Damle Committee.

New Post for Mr. K. B. Lall

The Central Government is taking effective steps to promote India's export trade, following the decision of the U. K. to join the European Common Market on certain terms. As a first step, it has decided to transfer the offices of the Commissioner-General for Economic Affairs from London to Brussels. Mr. K. B. Lall, until recently the Secretary for Export Promotion, will take over the Commissionership from Mr. T. Swaminathan, who is returning to India and may succeed Mr. Lall as the Additional Secretary for Industries, in the Ministry of Commerce and Industry. Mr. K. B. Lall will be joining the Ministry of Finance, in the Department of Economic Affairs, by the end of this month, and, it is expected, will take over his new assignment by the end of October next. Mr. Lall, it will be generally admitted, is being given a very difficult task. He can promote the export trade of India provided the price and quality of Indian products are competitive. Figures, published during last week, show that the rise in the price level in India was the highest in the world. With 1953 as the base, the wholesale price index in India for June 1961 was 121, compared with 116 for the U. K., 108 for the U. S. A. and West Germany, and 105 for Canada and Japan. As far as quality is concerned, earlier in this year Russia rejected a large number of India-made shoes for their poor quality. The reasons for the phenomenal rise in the price level and the fall in standards is well known and need not be commented upon with this exception that remedy does not lie in beautifully printed essays produced by the Planning Commission or occasional speeches

by the Ministers. It lies in the unpleasant duty of enforcing decisions.

Maintenance Imports

The Committee on Maintenance Imports, set up by the Central Government, has reported that the provision of Rs. 3,650 crores to meet maintenance requirements in the third plan will be exceeded by about Rs. 200 crores. The Committee has accordingly suggested various measures of economy to keep maintenance expenditure within the prescribed ceiling. It has stated that in the field of durable consumer goods, such as bicycles, refrigerators, air-conditioning equipment, and household electrical appliances, it would be desirable to follow a policy of tight import allocations. Supplementary allocations may, however, be made on the basis of export earnings. Foreign exchange on the basis of export of those categories of steel for which there is surplus capacity should equal the expenditure on the imports of deficit categories (other than alloy and tool steels) even if this involves raising domestic prices for the latter varieties. The supply of steel for purposes of construction and the manufacture of durable consumer goods should be reduced to the absolute minimum. There could be a cut in the supplies of galvanised sheets. The provision made for the import of non-ferrous metals for other than electrical purposes could be reduced further. The Committee has estimated a 10 percent growth in the demand for aluminium utensils and one of 6 percent in the case of copper and brass utensils. It has suggested that consumption should be restricted until indigenous supplies of aluminium are available, although this may result in price increases.

In the field of motor-vehicle and allied industries, the Committee says it would be possible to reduce the provision for motor-cars, thus securing a foreign exchange saving. It may be possible to recoup part of the foreign exchange allotment for scooters by linking the import allotment to export earnings. Scooters are in any event a good item from the export point of view, as costs would be economic if there is production on an adequate scale. Further capacity for drugs and dyes manufacture should be established on the basis of indigenous intermediates.

In the event of a shortfall in the production of vegetable oils, the Committee has recommended that facilities should be provided for the export of groundnut oil and the import of copra and palm oil, to take advantage of differences in the relative prices of these products in India and abroad, subject to the net foreign exchange outlay not exceeding whatever amount can be allocated. This would secure the best value for the foreign exchange expended. In the field of textiles, the Committee says that there is no justification for any import whatsoever of cotton cloth. It has suggested that since raw silk is imported, the export of silk fabrics should be undertaken even at a loss. As for synthetic fibres, it is of the view that import should be confined to the requirements for the manufacture of yarn or filament in the country rather than of finished silk yarn. A number of plastic products enter into relatively non-essential consumption. The Committee recognises that it will be difficult to secure supplies for essential purposes unless the overall supplies are adequate. It has, however, recommended that any substantial import of finished product or processing on the basis of imported intermediates should be avoided. Adequate production from indigenous sources should be ensured before expanding consumption in this line. While the import of newsprint and of cheap paper for text books, etcetera, is of high priority, the Committee feels that some of the imports of finer quality papers could be dispensed with.

As for small-scale industries, the Committee is of the view that control for items allowed to be imported is not as strict as it might be, although the total amount involved is not yet large. It says that every incentive should be given to the growth of small-scale industries, but it would be wrong to encourage development in less essential lines on the basis of imported raw materials. In the case of petroleum products, the Committee feels there is scope for savings particularly in the import of kerosene, if suitable fiscal measures are adopted. Most imports of non-essential consumer goods such as spices and dates are on the basis that the trading partners will purchase from India goods which she cannot otherwise export. The Committee has recommended that profits arising from the imports of such high profit items should be used to promote export earnings.

In many instances, industrial units are permitted to retain stocks to cover well above six months' requirements. A reason why firms try to build up large stocks is the delay in obtaining import licences. The Committee has, therefore, re-

commended that a procedure of automatic issue of licences early in the licensing period to cover a portion of requirements be adopted and that at the same time, the allowance for stocks be reduced wherever possible. This would minimise the rise in levels of stocks that must accompany increases in consumption. The Committee's report says that the estimates for export earnings in the plan take credit also for earnings from the rupee payment area, and there is no justification for permitting imports of relatively low priority from these countries. What is needed is to make an intensive effort to secure the really essential requirements on a rupee payment basis. This may mean that commitments need to be entered into well in advance, as these countries undertake production only on the basis of long-term plans. The Committee has recommended that a concerted effort should be made to arrange such imports, licences being granted with a sufficiently long validity period. The countries concerned should be encouraged to provide full information and advice to intending purchasers in this country, and Indian technicians and business men should be enabled to visit these countries.

Using Japanese Credit

Discussions were held in Tokyo at the Ministry of Foreign Affairs from 3rd August, 1961, between the representatives of the Japanese Government and of the Government of India concerning Japan's \$(U.S.) 80 million credit to India for the first two years of India's third five year plan, which was announced by the Japanese Government at the consortium meeting held in Washington on 31st May, 1961. As a result of these discussions, an understanding has been reached to the effect that the 28,800 million yen (Rs. 38.57 crores) credit will be made available for the first two years of India's third plan by the Export-Import Bank of Japan together with private Japanese banks to the Indian Government to assist in the financing of purchases from Japan.

The credit will be used for such projects which may be agreed upon by the two Governments from time to time as well as for the purchase from Japan of plant, machinery and equipment, of the same category of capital goods as was financed under the 18,000 million yen credit extended to India for her second five year plan. The credit of 28,800 million yen is repayable in 15 years including a period of grace of five years. Details of the procedures have been discussed and agreed on and

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

a loan agreement has been signed between the Government of India and the Export-Import Bank of Japan on behalf of itself and the Japanese banks concerned.

New U.S. Loan Agreements

The Governments of India and of the United States signed agreements, during last week, covering U.S. loans totalling \$62.9 million (Rs. 30 crores) for three major power projects which will together generate over 750,000 kilowatts. These loans are from the U.S. Development Loan Fund to meet the foreign exchange costs of the projects. Local currency (rupee) costs, totalling Rs. 32.3 crores, are intended to be covered by separate agreements for loans from the sale proceeds of agricultural commodities supplied to India under U.S. Public Law 480. Like other loans given to India by the U.S. Development Loan Fund, these credits are repayable in rupees. These rupee payments are not earmarked to pay for the export of goods from India and will not be a charge against India's balance of payments. The second stage of the Sharavathy hydro-electric project (Mysore State), and two thermal power stations in Talcher (Orissa) and Amlai in Birsinghpur district (Madhya Pradesh) are the undertakings concerned in these agreements. The Sharavathy project is one of the biggest hydro-electric projects in Asia. The second stage of the dam, now under construction, will generate 445,000 kilowatts. U.S. loans helped in financing the partial cost of the first stage which provides for the generation of 180,000 kilowatts. From the standpoint of cost of an installed kilowatt, Sharavathy is one of the most economical hydro-electric projects in the world. The 250,000 kilowatt thermal power station to be established in Talcher will supply urgently needed power to

use Orissa's vast industrial potential. The other thermal plant, to be erected in Amlai in Birsinghpur district, has a generating capacity of 60,000 kilowatts and will make possible the exploitation of the abundant natural resources of the north-eastern region of Madhya Pradesh. Power produced here will be supplied to cement, pulp and paper, coal-mining, diamond-mining and aluminium enterprises. A part of the power production will also be used to electrify railways.

I.D.A. Aid for Highways

The following projects, it is proposed, will be financed from the \$60 million development credit advanced by the International Development Association for the improvement of national highways in India:

West Bengal:

National highways No. 2—

(1) bypass from Vivekanand bridge (near Calcutta) to Saptagram via Baidyabati: four-lane road from Vivekanand bridge to Joypurbeel; and two-lane road from Joypurbeel to Saptagram.

National highway No. 6—

(2) two-lane road from Joypurbeel to West Bengal-Bihar border; (3) bridge over the river Rupnarayan and (4) bridge over the river Kangsabati.

Bihar:

National highway No. 2—

(5) two-lane road from Chichara on West Bengal-Bihar border to Subarnarekha bridge on Bihar-Orissa border.

National highway No. 6—

(6) Bridge over the river Sone.

National highway No. 33—

(7) two-lane road—Ranchi-Jamshedpur-Baharagora.

National highway No. 31—

(8) single-lane road from Barauni to Phulberia; (9) bridge over the river Mahananda at Dingh-raghat; (10) bridge over the Kosi at Kursela; and (11) bridge over the Burhi Gandak.

National highway No. 28—

(12) single-lane road from Barauni to Muzzafarpur.

Orissa:

National highway No. 5—

(13) Subarnarekha bridge on the Bihar-Orissa border to Cuttack—single lane, (14) bridge over the river Mahanadi, (15) bridge over the river Birupa, (16) bridge over the river Brahmani, (17) bridge over the river Kharswan, (18) bridge over the river Baitarni, (19) bridge over the river Salandi, (20) bridge over the river Nuniarjari and (21) bridge over the Budabalong river.

Maharashtra:

(22) Eastern expressway in Bombay (four-lane divided highway).

National highway No. 8—

(23) Ghodbunder-Manor section (two-lane); (24) bridge over the Bassein creek; (25) bridge over the river Tons; (26) bridge over the river Vaitarna; (27) bridge over the river Vandri; and (28) bridge over the Kuman creek. In addition, the credit also includes a provision (\$300,000) for a traffic study of the Bombay city.

Output of Rail Wagons

The production of rail wagons suffered because of the short supply of power and steel required for their manufacture.

In March 1961, the monthly production of wagons had reached 1,341 (four-wheelers). Since then it slumped down to 1,033 (four-wheelers) in April 1961. From May 1961 onwards, the position has improved as detailed below: May 1961 1,128 (four-wheelers); June 1961 1,262 (four-wheelers); and July 1961 1,511 (four-wheelers).

Fertiliser Plant in Gujarat

The Central Government has agreed in principle to the proposal of the Gujarat Government to establish a fertiliser factory in that State. Details are being worked out by the State Government and will be examined in due course when an application for licence is received.

U.S. Firm Withdraws from New Venture

Allis Chalmers International, U.S.A., has informed the Controller of Capital Issues that for the present, its application for the issue of capital for the setting up of a factory for heavy earth-moving equipment in Madras may be rejected. The U.S. firm has, however, stated that it remains interested in a licence to manufacture products of its design to a private group capable of undertaking such a project.

U.S. Consultant Firm for Copper Project

An agreement has been entered into by the National Mineral Development Corporation, on 23rd May, 1961, with Messrs Western Machinery Company, a corporation of the State of Utah, U.S.A., by and through their Division, namely, Messrs Western Knapp Engineering Company, having its registered office at 5th Street, San Francisco, California, for consultancy services for the Khetri copper project. The main terms and conditions of the agreement are as follows: (i) the project should be established preferably within a period of 36 months from the date of commencement of the agreement. The annual minimum output of electrolytic copper, as contemplated at the time of the agreement, is 10,000 tons. (ii) The consultants will supply the services under three phases.

Sulphur from Pyrites

Some preliminary tests were conducted at the works of Messrs Orkla of Norway with Amjhore pyrites for the manufacture of sulphur. The Orkla's report on these tests has indicated the need for more extensive plant scale tests before any definite conclusions could be reached. The question of sending a larger quantity of pyrite ores for further tests is being considered. If these further tests prove satisfactory, a detailed project report will be commissioned, and an extensive exploitation of the pyrite deposits in Amjhore in Shahbad district will be undertaken for the production of Sulphur in the country.

Durgapur Chemical Plant

The Durgapur chemical plant will be a State Government project in which the West Bengal Government will hold 51 percent of the share capital. The State Government proposes to associate two Indian firms and the public in the equity capital. It also intends negotiating with a French firm to cover the entire foreign exchange required for the capital equipment and technical know-how. The plant will use the by-products of the Durgapur coke oven and by-products plant to produce synthetic phenol, phthalic anhydride, pentachlore phenol, caustic soda and chlorine. The factory is likely to be installed by the end of 1963.

Capital of State Concerns

The Government has decided that the scheme concerning the public participation in the capital of State undertakings need not be pursued at present.

London

U.K. BANKS AGREE TO RESTRICT CREDIT

COMPANIES HEED DIVIDENDS STANDSTILL APPEAL

(FROM OUR LONDON CORRESPONDENT)

CITY opinion is beginning to be impressed with the success the U.K. Chancellor of the Exchequer is having in his attempt to restrict incomes and credit. The banks have responded promptly to the threat of tighter money. New overdrafts are being refused wholesale and agreed loan limits are beginning to be reduced wherever possible. The hire-purchase finance companies have had a strong request from the Bank of England not to run after outside deposits to offset the coming reduction in bank finance. The appeal for a standstill in dividends has already been acted upon by some important company boards and seems likely to be widely accepted because profits are harder to earn than they were. The insurance companies seem to be falling in with the request made to them by the Governor of the Bank to go slow in financing new property developments, and a statement on their behalf is likely to be made shortly.

All these steps could be largely frustrated if the money so withheld from the economy were to be put back by a welter of wage increases. The key to the success of Mr. Lloyd's policy lies in his statement on wages. It is the strong line he has taken concerning the wage and salary increases for 1.5 million civil servants and Government industrial workers. This has given an opportunity to the City to have second thoughts about the Chancellor. The wages "pause" has now been extended to over 3.5 million workers in a host of private industries whose pay and conditions are governed by wages councils. The latter have been warned by Mr. Hare, U.K. Minister of Labour, that they must keep the "pause" in mind in dealing with claims and when making their recommendations. Mr. Lloyd certainly gives the impression that he is determined to enforce his policies. If that is the case, and he carries the support of the Cabinet, there will probably be a period of serious labour disputes culminating most likely in a railway strike around Christmas. No one can be certain that the U.K. Government has the stamina for a showdown, but the possibility can no longer be excluded.

External Investments

Further evidence of Mr. Lloyd's determination to give effect to his July measures is obvious from the fact that over the last month, the U.K. Treasury has tightened its scrutiny of investments outside the sterling area. The Bank of England has already examined the accounts of companies with important interests overseas and has approached them with a view to persuading them to remit more of the profit earned abroad to the U.K. The object is to improve the balance of payments. Companies are being formally requested to fall in with the Government's wishes and they are hardly in a position to refuse. The Government has the power under the Exchange Control Act to compel all profit earned abroad to be sent back to Britain. For sound practical reasons, it would not want to resort to outright directives, but its power to do so puts a "request" in a different category. In 1959—the latest year for which figures are available—U.K. companies made profits abroad of £222 million, of which £130 million were sent home and £92 million left overseas. In calling for more profits to be remitted, the Government is going against its previous policy which has been to encourage companies, through tax concessions, to reinvest profits abroad.

The other course the Bank of England is pursuing is to examine critically proposals for the investment by the United Kingdom in countries outside the sterling area. The test by which each plan is judged is whether it will produce "clear and commensurate benefits to U.K. export earnings and to the balance of payments." The U.K. Treasury has made it abundantly clear that no general prohibition on overseas investment projects had suddenly been ordered, merely that in accordance with Mr. Lloyd's speech, scrutiny is now much closer. The Bank of England, in fact, is prepared to let go through only those schemes which will bring some direct benefit to Britain within a period of about 18 months. The overseas projects, for which exchange control approval in principle has been given, will not be stopped, although the Bank of England, if it thinks fit, will ask that a part or all of a project be postponed until the country seems to be out of the wood.

Trade Gap Smaller

Good news of overseas trade and industrial production has caused a strong upturn in sterling and some improvement in stocks. In July, exports were £308.6 million, re-exports £14.4 million, and imports £350.8 million, making the monthly trade gap just under £28 million—much the lowest for some time. Exports fell by £7 million compared with June, but the import bill dropped even more sharply by as much as £20 million. The trade gap in June was £41 million and in May as high as £52 million. The improvement is brought out more clearly in the figures as adjusted for

seasonal variations. These show that the monthly gap has steadily narrowed since last autumn when imports began to fall. In the fourth quarter, the average monthly gap was as high as £83 million. In the first quarter of the current year, it was down to £64 million; and in the second quarter dropped further to £43 million, while in July it fell to £31 million. Exports (after seasonal adjustment) have remained roughly steady since the beginning of this year at a level of 4 percent more than the average for 1960. Imports, on the other hand, have been 2½ percent less so far this year than the average for last year. Meanwhile, industrial production is at last beginning to show some modest increase. The production index prepared by the Central Statistical Office (1954 equals 100) is estimated provisionally at 126 for June, compared with 122 for May. The second quarter, as a whole, was 1½ percent above the first quarter and above the second quarter of 1960.

Big Rise in July Retail Trade

Shoppers' efforts to anticipate purchase tax increases before Mr. Selwyn Lloyd's "little Budget" caused a big rise in retail trading in July. The provisional U.K. Board of Trade estimates show that the index of the value of sales increased to between 118 and 119 from 114 in June. Shops selling "consumer durables", washing machines, refrigerators and similar domestic equipment, did particularly well during the month. The increased trading, however, was not confined to these outlets. Altogether, the value of July's retail trade was about 5 percent up on July last year, compared with only a 2-percent increase in June. This may represent a true rise of 2½ percent on the year. Higher prices must account for about half of the increase.

Bigger Profit for Lloyds

Lloyd's underwriters have again succeeded in raising their profits. The 1958 account closed in 1960 (complete accounts at Lloyd's relate to periods of three years) shows a profit on all classes of business of £14.1 million, which includes £2 million of interest earned on underwriting funds. The profit for the previous account (1957 closed in 1959) was 9.7 million, including £1.7 million in interest, and for the 1956 account £5.7 million (£1.6 million in interest). Lloyd's has, in fact, had its best account since the 1953 account when profits verged on £25 million.

The volume of business was greater in the latest completed account than in its predecessor—total premiums were £301.5 million, against £276 million—but more significant is the improvement in margins. The pressure of rising claims reduced the margin of profit to premium income in the 1956 account to 2.2 percent. In the 1957 account, it widened to 3.5 percent and in the 1958 account it is 4.7 percent of premiums. This is a creditable performance, although helped by such things as the increase in motor-car insurance premiums which occurred in 1957-58. The profit on the motor business has risen from £1,392,027 to £1,659,008, but the most striking improvement is in the underwriting of marine and aviation risks. Here the profit has gone up from £3,776,566 to £6,286,680, helped materially by less unrewarding aviation

underwriting. Close behind is the principal non-marine account (mainly fire and accident insurance) which shows a favourable balance of £6,171,318, against £4,510,197 in the 1957 account.

It looks as if the 1959 account, which will be closed next year, will yield a higher profit than the 1958 account, although the difference is unlikely to be as much as between the last two completed accounts. Judged by the ratio of claims to premiums, the 1959 account at the end of its second year is going better in terms of the marine and motor-car insurance business, but not quite as well in aviation and about the same in fire and accident. The first year of the 1960 account, compared with the first year of the 1959 account, shows a much improved aviation business.

Trade Links with Russia and China

The argument that Britain would do better in the long run to develop trade with China and the Russian bloc as a member of the Commonwealth than to sink herself in the European Common Market is put forward in a newsletter just published by the British Council for the Promotion of International Trade, whose president is Lord Boyd Orr. The newsletter suggests that the relative buoyancy of the west European economies is unlikely to last, and adds: "Those who believe that a lead to maximise the trade of the Commonwealth and its potential commercial partners would offer a better long-term prospect than absorption in the European Economic Community foresee a time when India, for example, will be a rapidly expanding market while western Europe is stationary. Beyond India stands China. In terms of the speed of industrialisation and diversification of foreign trade, China is, in fact, more immediately relevant to such a forward-looking assessment."

Between 1949 and 1959, China, it is said, expanded her industrial production by 1,100 percent, her agricultural production by 150 percent, and her foreign trade by 300 percent. Economic growth has been retarded by recent heavy crop losses, but according to the newsletter, there is no doubt that expansion will be resumed. The weakness of purely European trade groupings, it states, is that they are too homogeneous. The Commonwealth, on the other hand, contains economically complementary areas, and there is both an economic and geographical basis for links with China and the Russian bloc.

Deal on Tanks for India

India is likely to conclude soon a deal with the weapons division of Vickers-Armstrongs for the building under licence of a number of light-medium tanks, probably well over 200. It is understood that the Vickers-Armstrongs tank concerned will weigh about 35 tons and carry the same Leyland engine as is used in Britain's latest tank—the Chieftain. This will be a private venture.

Negotiations have been going on for some time, and there is no official comment from Whitehall. But the U.K. Ministry of Defence played a part in bringing the Government of India and Vickers-Armstrongs together. The same Vickers-Armstrongs tank was offered to France and West Germany but not accepted. Other countries, including West Germany and Japan, have been trying to sell their products to India.

Ralli Banking Plans

Ralli Brothers are developing their merchant banking activities in association with the Discount Bank (Overseas) of Geneva, and will acquire 50 percent interest in Anglo-Federal Banking Corporation, in which Discount Bank (Overseas) hold the balance of the capital. The name of Anglo-Federal Banking has been changed to Ralli Brothers (Bankers). The bank has an authorised capital of £3 million, of which £2 million is issued and paid up.

"4½% MAHARASHTRA STATE DEVELOPMENT LOAN 1972"

ISSUE PRICE AT PAR

Open on the 4th September 1961.

The loan will be closed as soon as total of approximately Rs. 10 crores has been subscribed and in any case not later than the close of business on the 9th September, 1961.

The applications for the loan will be received at—

- the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Banga'ore.
- the branches of the State Bank of India within the State of Maharashtra, except at Bombay and Nagpur and at places mentioned in (C) below,
- the branches and Treasury Pay Offices of the State Bank of Hyderabad within the State of Maharashtra, except at Bombay.
- the Government treasuries and sub-treasuries in the State of Maharashtra at places where there is no branch or Treasury Pay Office of the aforesaid Bank.

Full particulars can be obtained at any of the offices mentioned above.

All aboard for big business

The Economic Times means business with a flying start! It equips you fully with business information so vital for success. Indispensable to all who aspire for business advancement, The Economic Times gives comprehensive information on economic conditions in India and the world.

THE ECONOMIC TIMES

A SURVEY OF THE INDIAN ECONOMY 1960-61

FURTHER RISE IN PRICES

THE Reserve Bank of India's Report on Currency and Finance for the financial year 1960-61, presents a review of the trends and developments in the Indian economy during 1960-61—the final year of the second five year plan—against the background of a brief survey of the world economic situation. The contents may be briefly summarised as follows: A striking advance in industrial production, an improvement in agricultural output, especially of foodgrains which was expected to surpass the previous record attained in 1958-59, and a rise in aggregate investment were the highlights of the Indian economy during 1960-61. National income which rose by less than 1 percent in 1959-60, it is expected, will show a substantial increase in 1960-61.

On the other hand, there was a further deterioration in the price level and the balance of payments. The continuing insufficiency of resources relatively to demand by way of investment and consumption underlined the paramount need for an all-out effort aimed at ensuring further sustained increases in production and savings as well as in exports. In the monetary sphere, there was a further sharp rise in both money supply and bank credit, the pressure of which resulted in a further rise in prices. Boom conditions were witnessed in the stock and capital markets and activity in the new issue market was on an unusual scale. It became clear as the year progressed that the credit restraint measures, including the impounding of reserves initiated in March 1960 and reinforced in May, were inadequate to moderate the credit expansion, and accordingly, the Bank introduced in September 1960 a new set of credit measures including slab rates to discourage banks' easy access to Reserve Bank credit and a directive to banks to increase their lending rates so as to ensure that the higher cost of borrowing from the Reserve Bank was transmitted to the ultimate borrower.

Monetary Policy Abroad

Abroad, in the monetary sphere, except notably in the U.S.A., the policy of credit restraint in operation since the latter part of 1959 was generally continued by a majority of the leading countries during the greater part of the year, aiming mainly at restraining their booming economies in case of industrial countries and at correcting their adverse balance of payments position in the case of primary producing countries. The U.S.A., however, faced with a domestic business recession and a continued balance of payments deficit, shifted from a policy of positive restraint to one of ease, allowing its gold stocks to absorb the strains on its balance of payments. The pursuance of these divergent monetary policies by the U.S.A. and west European countries, which increased the

interest rate differential, contributed to a large-scale short-term capital movement from the U.S.A. to western Europe and presented a major problem to the monetary authorities. Towards the close of the year, with a view to reducing the strain on the international payments position caused by the flow of short-term funds, both the U.K. and West Germany reduced their interest rates. In the fiscal sphere, policies adopted were generally in tune with the monetary policies pursued in different countries and fiscal policies were designed to achieve surplus budgets or reduced deficits.

In India, the year witnessed a further impressive rise in industrial production, the rate of growth being as high as 12.1 percent during 1960, compared with a rise of 8.7 percent in 1959. For the second plan period as a whole, the general index recorded a rise of 38.1 percent. Agricultural production, which had touched an all-time high in 1958-59, showed a decline during 1959-60; the index of agricultural production (base: 1949-50=100) moved down from 132.3 to 127.2—a decline of 3.9 percent. Production of foodgrains in 1960-61, it is expected, will be appreciably higher than even the record production of 75.5 million tons in 1958-59. Production of commercial crops, too, with the exception of jute, is estimated to have recorded gains over the preceding year's levels.

Worsening Price Situation

The price situation showed a further deterioration during the year, the general index of wholesale prices (1952-53=100) registering a net rise of 7.2 percent. The two groups, namely, industrial raw materials and manufactures, which, for the first time since 1950-51 had emerged in 1959-60 as important contributing groups to the rise in the general price level, continued to dominate, while the part played by food articles which had tended to be less important in 1959-60 was negligible in 1960-61. Over the second plan period, the general price level recorded a rise of 30 percent. The deterioration in the price situation during the year reflected mainly the significant shortfall in the output of certain raw materials in 1959-60, and the inadequacy of aggregate output in relation to the pressure of monetary demand, which necessitated a further reinforcement of the official policy to hold the price line through appropriate measures both in the monetary and non-monetary spheres. Endeavour was also made to secure larger imports of foodgrains and raw materials in short supply. Action was also taken to keep the price rise within limits through efforts directed towards the control of speculative tendencies in the various commodity markets.

In the monetary sphere, the net expansion in bank credit in 1960-61 was nearly double that in 1959-60. The expansion in money supply was

about the same as in 1959-60. As in the preceding year, the slack season contraction in both bank credit and money supply was considerably smaller. On the other hand, the 1960-61 busy season witnessed a sharp rise in bank credit which surpassed even the record expansion of the 1959-60 busy season; the expansion in money supply was as large as in the busy season of 1959-60. Over the year 1960-61, scheduled banks' deposits showed a small decline, while their investments and cash reserves suffered a sharp fall. The trends in deposits and investments were, however, obscured by the changes in the arrangement for the holding of P.L. 480 funds. Exclusive of P.L. 480 funds, total deposits showed a rise, but there was a considerable slowing down in the rate of growth.

Credit Restrictions

It is against the background of increasing pressure of demand for credit in the face of limited resources available with banks, that the Reserve Bank had to reorient its credit policy during the year with a view to restraining excessive credit expansion while making available credit for essential purposes. The instrument of variable reserve requirements, which was employed for the first time towards the close of the last financial year along with other credit restraint measures, was tightened in early May 1960. General credit controls were intensified in September by a system of slab rates for banks' borrowings from the Reserve Bank and banks were also directed to increase their lending rates. With the advent of the busy season and with a view to easing the pressure of seasonal stringency, the provisions relating to additional reserve requirements were relaxed in November 1960 and later completely revoked in January 1961. Selective credit controls were also operated in a flexible manner in the light of the supply and demand position of the commodities concerned; they were extended (as in the case of raw jute and jute goods) or relaxed (as in the case of foodgrains and sugar).

Apart from these regulatory measures, the Bank continued to give close attention to its developmental and promotional functions through measures designed further to strengthen the institutional machinery for credit to agriculture and industry as well as to consolidate and strengthen the banking system. In the field of banking legislation, the Banking Companies Act was amended to facilitate, among other things (i) expeditious payments to the depositors of banks in liquidation and (ii) reconstruction or amalgamation of weaker banks with other units. Another important development in the field of banking was the decision of the Central Government to set up an autonomous corporation for insuring bank deposits.

Aid to Industry

In the field of industrial finance, legislation was enacted to enlarge and diversify the assistance provided by the Industrial Finance Corporation, while the scheme of refinancing of the Refinance Corporation was liberalised concerning the scope as well as the terms and conditions governing the scheme. As for financing small-scale industries, the Central Government's scheme for the guarantee of advances to them initiated in July 1960 was extended to four additional districts in January 1961 and 26 additional districts in June 1961. As for Government finances, a noteworthy feature in recent years has been the progressive decline in the combined overall deficits of the Centre and the States, in spite of the growth in plan outlays. For 1961-62, the first year of the third plan, an overall budgetary deficit of Rs. 1.94 crores (on the basis of existing taxation) is visualised, of which Rs. 125 crores will be on account of the Centre and Rs. 69 crores on account of the States. Taking into account the effect of Budget proposals by the Centre and the States, the deficit would be reduced to Rs. 122 crores.

Net market borrowings of the Centre and the States were somewhat lower at Rs. 134 crores in 1960-61, compared with Rs. 175 crores in 1959-60 and Rs. 227 crores in 1958-59. The performance of small savings, however, was encouraging, net collections in 1960-61 totalling Rs. 107 crores, compared with (i) the Budget target of Rs. 100 crores, (ii) net collections of Rs. 83 crores in 1959-60 and (iii) the annual average target of Rs. 100 crores fixed for the second plan period.

India's external payments position showed a further deterioration during the year, due to larger import payments as well as smaller invisible receipts, reflecting broadly the growing impact of the developmental process. With export earnings rising only marginally, the current account deficit grew to Rs. 365 crores which was the largest since 1957-58 and double that in 1959-60 (Rs. 183 crores). The country's foreign exchange reserves declined by Rs. 59 crores during 1960-61, compared with a drop of Rs. 16 crores in the previous year, in spite of the substantial inflow of external assistance (Rs. 400 crores). With a low level of foreign exchange reserves and the none-too-happy position of exports, the rapidly declining invisible receipts, and increased imports, India in 1960-61 had to negotiate for a much larger volume of assistance than in the previous year. Loans and P. L. 480 credits for which authorisations were secured during the year amounted to Rs. 970 crores or over Rs. 500 crores more than in 1959-60, while grants accounted for Rs. 34 crores. This raised the total foreign aid authorisations in 1956-61 (including aid earmarked for third plan projects) to Rs. 2,569 crores. With a carryover of Rs. 193 Rs. 2,457 crores. The amount of the aid used during the second plan period, it is estimated, totalled Rs. 1,497 crores, leaving a carryover of Rs. 1,295 crores for use after March 1961.

GUNNIES DECLINE ON POOR DEMAND: FIBRE SLUMPS

I. J. M. A. ASKS MEMBER MILLS TO RESTORE PRODUCTION CUTS

IT is doubtful if the jute industry has ever experienced such a period of concentrated consultations and conferences as have taken place recently. Meetings within the industry, and delegations to Government authorities have become commonplace, and representatives of various interests have endeavoured to formulate schemes which it was hoped would solve the many problems. But still no solution to the present malaise has presented itself. Unfortunately, there is little unanimity in the various sections of the raw jute trade. All the suggestions put forward were met by objections from some one or other that they left loopholes for those who did not want any scheme to work. The chief talking point during the week centred round the fixing of a floor price for raw jute, and many and varied were the levels at which the different interests expressed opinions on just where the minimum price should be. This appears to have pushed other thoughts to the background, but meantime, the stark reality of a shortage of jute is still with the industry. Drastic measures have been adopted and the Association dropped its policy of "one stop—all stop" and resorted to individual closures. There are few mills who have not resorted to some sort of production curtailment. Many thought that by this time the crisis would have resolved itself, but in the absence of any strong lead, the trade has drifted into its present condition of the mills not wishing to buy as they are still lower prices, and very little jute is being offered to the mills anyway, as sellers are taking advantage of the higher prices available in the mofussil and Cossipore markets.

This is, however, no time for recrimination. What is needed is to get something done and to get it done quickly. The whole trade and industry is now at what is probably the gravest crisis in its history. Decision to be taken now may affect its working for all time to come. It is, therefore, necessary that the implications of all proposals should be thoroughly investigated. At the same time, sectional antagonism and political insinuations must be eliminated while all sections are accorded the protection to which they are entitled. As was pointed out in these columns last week, the lack of any willingness on the part of the industry to increase production was a matter of concern to all. This has now been rectified by a circular issued by the I.J.M.A. to all its members calling on them to give up restrictions in production as early as possible, so that in the near future, the industry as a whole reverts to the previous level of output. It is obvious that this cannot be done immediately as the raw jute stock position, particularly of some of the smaller mills, is very low indeed. In spite of the lower price levels ruling, however, the mills have not been induced to step up their purchases under contract, and this in turn has caused still lower prices. For the mills, old customs die hard, and even in these precarious times, it goes against the grain to buy more than their immediate requirements on a falling market. Even if they did want to buy jute, there has been very little on offer at the Calcutta-quoted contract prices, as these are, in many cases, as much as Rs. 3 to Rs. 5 below the levels at which mill representatives are purchasing in their own agencies and in Cossipore. Naturally, sellers preferred to sell at the higher rates, and the mills found difficulty in buying even the smallest quantity under contract for near delivery. Forward shipment jute was another story. All sellers were keen to get some forward sales on their books, but mills did not appear to be anxious to buy shipment jute with the prospect of still lower prices in the future.

Arrivals Increase

Arrivals of raw jute in all Indian agencies and in Cossipore have shown a welcome increase recently, and this has been another major factor for the continuous and rapid decline in raw jute prices. Many think that the industry may be in a position to make a token increase in production in September. During the month of July, raw jute arrivals in Calcutta and mill stations amounted to 197,950 bales, consisting of 7,850 bales from Pakistan, and 190,100 bales from India. This is about 12,000 bales more than during the month of June, and also over 20,000 bales more than during the corresponding month of last year. Latest reports from upcountry indicate that all-India arrivals are in the region of 60,000 maunds a day. About 40 percent of this is being taken up directly by mill agencies, so only about half this quantity is being despatched to Calcutta. Arrivals in Cossipore increased rapidly towards the end of the week, and wagon arrivals numbered about 380, compared with 345 in the previous week. In the jute goods market, overseas buyers continue to sit out, and apart from small interest in October-December and January-March, there was very little business. Calcutta mills, however, have begun to take an interest in the near positions. Over the past two or three days, heavy mill selling

pressure has taken place, as for the first time for many months, simultaneous business on current ready and near delivery fibre and gunny prices shows a profit. There has not been a great deal of response to this, however, and prices have again tended to fall.

THE JUTE MARKETS

Manufactured Goods: There has been a moderate amount of enquiry for both hessian and sacking for the forward positions, but the prices offered have not been attractive to the mills and it has been difficult to put through business. Prices have fluctuated somewhat violently in the speculative markets, and at one stage, it looked as if they may stage a recovery, but the undertone in general was weak. Opening quotations dropped Re. 1 in sacking and 50nP in Hessians. This made ready B Twills Rs. 142 and 40in. 10oz. Hessians Rs. 48.50. The premium over forward shipment in B Twills was Rs. 19 and in 11 porter Hessians Rs. 5. Over the next few days, sacking prices dropped Rs. 6, but Hessians were comparatively steady on some overseas enquiries and only dropped 50nP. Conditions after the week-end followed a similar pattern, and sacking came down a further Rs. 6, while Hessians fell only Re. 1. Towards the close, the mills came out as sellers for the near position, but there were very few buyers. Opening quotations on Wednesday morning were as follows:

	August	September	October	Oct.-Dec.
40in. 7oz.	35.75	34.75	33.75	33.45
40in. 8oz.	38.75	37.25	36.25	35.40
40in. 10oz.	45.65	45.50	44.75	44.10
B Twills	127.25	126.25	123.50	121.50
Heavy Cees (Plain)	128.00	127.75	124.50	122.50
A Twills	158.00	157.00	153.00	150.50
Liverpools	150.50	148.25	143.00	140.00
Cornacks	128.00	128.50	126.50	124.50

Raw Jute: Although the majority of sellers were very keen for business during the week, and were prepared to meet the mills' counter bids, the quantities on offer for quick or near delivery, i.e., before 15th September—were very small indeed. For September or October-December shipment, there were unlimited quantities on offer, as buyers found when small indications were given out for this period. During the week, prices declined rapidly, and from an opening of Rs. 39 for Assam Bottoms for 15 days shipment, prices dropped to Rs. 38 by the week-end. After the week-end, however, price reductions were drastic and losses of Rs. 2 to Rs. 3 a day were recorded. Sellers became nervous and were prepared to sell at almost any rate, in spite of the fact that all their business so far this season must have involved them in heavy losses. Opening quotations on Wednesday morning were as follows:

	Landed at Mills Basis Bottoms Rs. a 100 kilos	Rs. a md.	Shipment
Assam	88.50	33.00	7th Sept.
Northern	91.00	34.00	"
Purnea Desal	88.50	33.00	"
Daissee White	91.00	34.00	"
Assam Tossa	96.50	36.00	15th Sept.
Selected Daissee	97.75	36.50	"
Old Crop Mesta:

THE FOREIGN JUTE MARKETS

IRREGULAR TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE Dundee raw jute market is irregular, and it is difficult to predict anything definite about the future. The dealers, however, expect that prices will decline and that the market will see a reasonable level ruling in the course of another month or two. The decline may be slow in comparison with the advance which took place in the early months of the current year, when it became pretty obvious that there would be a real shortage of fibre before the end of the season. Meanwhile, the market is unable to understand as to what has happened to good jute expected from the current crop as well as the record output. Surely, the crop cannot be all that bad, although

Whether it's a clock or a watch that needs repair—bring it to Anglo-Swiss for reliable service at moderate charges.

Phone: 44-5833 (3 Lines).

no jute above the grade of Mill Lightnings is being offered to the Dundee market. There are many shippers who are quoting Mill Lightnings, but Mill Hearts are quite freely offered daily at a good reduction on Lightnings, and Grade Hearts are also obtainable easily at many pounds a ton under Mill Hearts.

Quotations for Mill Lightnings are around £139 a ton, Mill Hearts £118 and Grade Hearts £107 for August shipment, £130, £114 and £102, respectively, for August-September and £128, £113 and £101 for September-October, c.i.f. U.K.-Continent. Dark jute is also lower at £140 for Grade Tossa-2/3, £127 for fours and £117 for Continental Tossa-2/3 for August-September and £137, £124 and £115 for September-October, c.i.f. U.K.-Continent. Spinners in Dundee and on the Continent are buying very little, but sales have been reported at £116 and £115 for Mill Hearts for August-September shipment, c.i.f. It is reported that bids at £110 have been turned down.

Calcutta goods were easier during the past week. Hessians are quoted at 72s 9d for 40in. 100z.

and 57s for 72oz. August, 72s and 55s September, 67s 3d and 51s October-December, and 65s 6d and 49s 6d January-March, with B Twills at 210s 6d, 206s 9d 183s and 184s 6d for the respective positions of shipment, all f.o.b. Calcutta.

Prices for jute yarns and cloth in the U.K. have been reduced by £5 a ton on 11th August and also on 16th August, bringing 8 lbs C.H.W. cops to 20.02d a lb and 8 lbs J.C.H. warp to 21.16d, with 40in. 100z. hessians at 16.77d and 8oz. to 14.12d a yard.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption continued to be below normal in July. For the last four months, the overall consumption has averaged only 57 million yards. Compared with last year, bag cut-up declined 4.9 million yards, while piecemeal deliveries increased 2 million yards. U.S. burlap stocks at the end of last month were at the lowest level since October 1954.

At 207 million yards, 112 million yards were spots and 95 million yards were afloat. Appearing below are two tables which include the July figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE PAKISTANI JUTE MARKETS RAPID FALL IN FIBRE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE third week in August has seen the lowest prices paid this season in every part of the market. In loose sector, prices have tumbled from Rs. 40 to Rs. 20 a maund, or a difference of some £60 a ton. In the pucca bale market, as in the overseas market, there has been absolutely no activity worth mentioning, and generally, the market has been lifeless. The shortage of finance has become quite acute. In some cases, balers had bought excessively and may even have reached the limits of their facilities with banks. Other balers, who had not reached the limit, were unable to draw further because they had no E.P.C.s to register. Most banks do not advance money even within the limit of facilities given unless the withdrawal is backed by an E.P.C. These factors obviously have contributed to a weak market, since these buyers have sat out, possibly reluctantly, while other buyers have withdrawn waiting for cheaper prices.

The mills for the last seven days have been right out of the market, not even operating through their friends and have only accepted jute on a c.o.d. basis. It is reported that some of the mills are even down to one week's stock only. The complete withdrawal of overseas buyers has discouraged purchasing in the loose market. The rise of the rivers and the general improvement in the steeping water have also encouraged further harvesting and retting, improving the volume of arrivals, which is also a weakening factor. All these together have contributed to bring the market down at such a speed that one must expect a reaction.

In the pucca bales market in Narayanang, the loose market weakness has discouraged operators. Very few transactions are reported, except for some operations in cuttings, probably by parties who feel that the bottom of the market has been reached. These transactions are reported on a level of about £73 for ready delivery. Tossa Cuttings are reported done at £59 for October deliveries. Overseas markets have been stagnant. First of all, the annual holidays closed the market effectively. Even in certain countries, 14th and 15th August were holidays and finally, the overseas buyers have wisely decided to sit out expecting lower prices since they know very well that most balers could buy in Pakistan at some £15 a ton below the E.P.C. levels. On 15th August, E.P.C. levels came down £15 a ton on long jute and £10 a ton on cuttings, S.M.R., etcetera. Overseas buyers have not yet reacted, but it is reasonable to expect that after waiting to see if prices come down further, they will begin to buy at least for the ready position. Whether they buy or not, registrations in fair quantities during the second half of August may certainly be expected.

NORTH INDIAN TEA OUTPUT RISING

SHARP INCREASE IN RUSSIAN PRODUCTION EXPECTED

(BY A SPECIAL CORRESPONDENT)

DURING the 1908-09 tea season, the monsoon finished in Sylhet in early October and manufacture was completed, as usual, before Christmas. But Christmas and New Year passed without the normal showers. The dry spell continued through February and March, and that year the nor'westers were confined to wind and dust. As usual, they hit Dacca, Chittagong and Goalundo but gave no rain. By the end of March, the weather was hot and tanks were dry, and the local streams were running low. The tea bushes showed no sign of coming up again.

The fortnightly company reports to the head office in London stated that bushes were dying out. The estate in question was the usual type in Sylhet—a mixture of small hills and flats: the tap roots on the hilly sections, of course, went very deep. Nevertheless, the bushes looked lifeless with no signs of new leaf, and the twigs were dry and brittle and easy to snap off as dead wood. In answer to anxious enquiries from the head office, a careful estimate was made of the damage done to the estate during that period. The report sent to London stated that on the hilly sections about 30 percent of the planted area looked dead; on the flats, conditions were not much better.

Monsoon in Assam

Generally speaking, although the tea areas are to the north of Calcutta, the monsoon breaks in Assam earlier than in this part of India due to course, to the hills, forests and general configuration of the land. But that year, there was roughly a period of eight months without rain: then early in June, the monsoon broke gently but persistently. It soaked the earth but did not cause flood as it frequently does. After a week, the nights were wet and the days fine. The bushes not only came to life but started flushing well, so the season finished with the largest crop output in that decade.

The above comments are interesting in the context of last year's drought in the tea districts of north India. It is common knowledge that the exceptionally dry spell in 1960 caused a fall in production of about 34 million lbs. But in the long run, the bushes appear to profit from a period of "sleep" as the following production figures show:

North Indian crop up to 31st July, 1961		(In million lbs.)
This year	...	214
In 1960	...	174
The 1958-60 average	...	205

Fifteenth August is usually reckoned as the mid-season for north-east India, but it will be seen that production is already well up on past years and unless some very exceptional climatic conditions arise, the final output figures are going to beat all records. One cannot be dogmatic about the reason but in natural circumstances, a tea bush would grow into a forest tree and in order to survive against the endless plucking and pruning, it is forced to go deep into the ground with its tap root, thereby maintaining its life through dry spells. As is generally the case with all living things, they profit from a rest. The crop figures shown above seem to prove that point.

Prospects for Tea Companies

What is the immediate future for tea companies? The full weight of rains teas remains to come into the market. Pakistan is going ahead while Ceylon and Africa are also producing freely. The price of the commodity may, therefore, fall further, so will the costs of production due to larger crops. Cheap teas may increase the consumption of the commodity in such countries as India and Pakistan, and with a more intensive propaganda campaign, lower prices may help increase consumption in overseas markets. Meanwhile, the outlook for common tea producers remains uncertain, but this year the percentage of good teas has been rather low, and there has been useful enquiry for quality grades. A few of the high quality lots were taken by Continental buyers. Is this a foretaste of things to come when Britain joins the European Common Market?

Production in Russia

Carritt Morans' report for July contains some interesting figures relating to tea production in Russia. It is stated that there are now 60,000 hectares under tea in Georgia or rather less than 150,000 acres. The crop is expected to amount to 200,000 tons by the end of the present seven year plan, that is about 450 million lbs or around 37 maunds an acre. This looks phenomenal!

COCHIN TEA SALES

At Sale No. 34, 487,000 kilograms of tea were on offer. There was a fair demand. Plain and low medium broken were 10nP to 15nP easier while similar fannings were about 5nP lower. Better mediums were steady but fannings were 10nP to 15nP easier. High-grown were irregular, and the best grades were dearer.

BIRDS
are
stepping
up
it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of those vital raw materials.

How to get
the most out of
your Bank

Do not regard your bank merely as a convenience for depositing and withdrawing money. There are extra services available to you.

When you have a current account with State Bank, you can ask that commercial bills and pay or pension bills be collected and credited to your account; you can also instruct the Bank to pay periodically on your behalf house rent, school fees, club subscriptions, insurance premia, etc. and thus save yourself a lot of bother.

A savings bank account enables you to earn interest. It permits the facility of withdrawal once a week; the system of withdrawal by cheque is in force at all our branches.

For full particulars of these and many other facilities State Bank provides, please consult or write to the nearest office.

The State Bank with its background of years of sound banking traditions is waiting to solve your problems. Why not have them solved for you?

GOOD DEMAND AT TEA EXPORT SALE
LESS BUYING IN DUSTS

AT Sale No. 12, held on 21st and 23rd August, there were 58,984 chests on offer at the Export auction which met with a good demand, although prices were generally easier. Plain and Medium orthodox B.P.'s were 5nP to 10nP easier, while similar Fannings generally declined by up to 15nP. Stylish Dooars B.O.P.'s sold well at a drop of 20nP while prices for the better Assam B.O.P.'s were generally easier by up to Re. 1 except for a few invoices with good quality. C.T.C.'s were very irregular, those with any quality selling around last rates, but the remainder declined by up to 50nP. Secondary grades showed the least decline, but were generally up to 20nP easier. Legg-cut teas were in demand at prices up to 10nP below last. Darjeelings met with fair support at easier rates. Stylish whole leaf grades were a weak feature, while plain descriptions were up to 20nP easier. Tip again declined as a result of selective buying.

Quotations	1961	1960
Clean Plain Pekoe	Rs. a kilo 4.70 to 4.80	5.20 to 5.50
Plain B.P.	4.55 to 4.65	4.30 to 4.45
Plain Fannings	4.30 to 4.40	4.20 to 4.60
Medium Assam C.T.C. B.P.	5.30 to 5.50	4.90 to 5.20
Medium Assam C.T.C. Fgs.	5.40 to 5.60	5.00 to 5.30
Best Assam C.T.C. B.P.	5.90 to 6.10	9.50 to 10.50
Best Assam C.T.C. Fgs.	6.00 to 6.50	11.00 to 12.00

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a less general demand than in recent weeks for the 25,748

packages on offer. C.T.C.'s were absorbed at irregular but generally much lower rates except for the few bright lines which sold well. Plain orthodox descriptions met with a good market, particularly the small powdery types, but prices were up to 10nP easier. Leafy Assam Dusts, however, were virtually neglected and except for the small bright teas were much easier to buy. Legg-cut Dusts were irregular and generally easier, the few bright lines realised satisfactory prices.

Quotations	1961	1960
Plain Orthodox Dust	Rs. a kilo 4.30 to 4.55	4.40 to 4.60
Medium Assam Dust	4.80 to 5.40	4.45 to 5.00
Legg-cut Dust	4.75 to 5.45	
Medium Assam C.T.C. Dust	6.10 to 6.40	5.50 to 5.90
Good Assam C.T.C. Dust	6.50 to 7.00	5.90 to 5.30

(Quotations are inclusive of excise duty.)

The 131 packages of internal leaf on offer met with a good demand.

CHARTERING RATES STEADY IN FREIGHT MARKETS

CHARTERING rates were steady in the freight markets during the past week with a few notable improvements in the Pacific Coast where foodgrain vessels were accepted for Japan at \$(U.S.)6.30. On the Atlantic Coast of the U.S.A., Liberty vessels with scrap to Japan received \$(U.S.)142,500, which is \$(U.S.)35,000 more than last paid. Burmese rice shippers paid 63s 6d f.i.o. and stowed for 9,500 tons 5 percent rice in bags one to two ports Burma to one to two ports Cuba with 2s extra for two ports load or discharge. Rice in bags, Burma to Ceylon paid 42s f.i.o. and stowed. Fixtures of ore loaders from India were reported from Visakhapatnam to Antwerp at 45s f.i.o. and owners trimming when Visakhapatnam to one port Yawata-Kamaishi range paid 46s f.i.o. and trimmed. The first bulk sugar loader from Calcutta to the U.S.A. is now in port and is loading an average of 1,500 tons daily. The latest fixture of a 10,000 tons 5 percent sugar in bags from Calcutta to Northern Range or Gulf is concluded at \$(U.S.)7 f.i.o. and stowed. Growing congestion in major ports in Japan is creating serious dangers to shipping in the coming typhoon season. Last month, about 63 ships were awaiting discharging berths in Kobe, Osaka, Yokohama and Tokyo and presently the number of ships awaiting is increased to 107. The major cause of such congestion, it is believed, is that stevedores labour are attached to higher paid inland shore jobs. In Indonesian main ports also, there is a congestion for discharging berths. Madras port has not yet recovered from the bunching up of steamers and vessels are awaiting five to seven days for berths. On 4th August, the Hooghly river draft forecast was reduced by 9 inches, but from 21st August, 6 inches have been restored.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.3 percent to 129.9 during the week ended 22nd July, compared with 129.5 (revised) for the earlier week. The index was higher by 2.1 percent and 3.8 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago.

COMPANY AND PUBLIC NOTICES

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that the Fifteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday September 28, 1961, at 11 a.m. for the following purposes:—

- To receive and consider the Audited Accounts for the year ended 31st March, 1961, the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors thereon.
- To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.
- To appoint a Director in place of one retiring and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956 has been received by the Company, viz:—

"That pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Asoka Kumar Roy, who has attained the age of 75 years and who retires from the Board by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed by Section 280 of the said Act shall not apply to him and that he be remunerated by way of a fee of Rs. 600/- for each meeting of the Board attended subject to a maximum in the aggregate of Rs. 6,000/- per annum."

- To appoint Auditors and to fix their remuneration.
- (As a special resolution): To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution, viz:—

"That approval be accorded to the execution of an agreement between the Company and Mr. John Valentine Jardine Paterson, one of the Managing Directors of the Company, such agreement being supplemental to the agreement dated the 24th day of September, 1959, a copy of which draft supplemental agreement has been submitted to this meeting and which for the purposes of identification has been signed by the Chairman thereof, the effect of such supplemental agreement being to increase the maximum limit of commission payable to Mr. J. V. Jardine Paterson, for the year April 1, 1961 to March 31, 1962, from the existing maximum limit of Rs. 16,000/- to Rs. 25,000/-, the terms and conditions of the agreement dated the 24th day of September, 1959, remaining unaltered in all other respects."

Notice is also given that the Transfer Books of the Ordinary Shares of the Company will be closed from the 14th September to the 28th September, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
D. FORDWOOD,
Secretary.

August 11, 1961.

4, Clive Row, Calcutta-1.

Note:—An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

THE DUFFLAGHUR TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of The Dufflaghur Tea Co. Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 11 A.M., in the forenoon of the 7th day of September, 1961, for the following purposes:—

- To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1960, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
- To declare a Final Dividend.
- To appoint a Director in place of Mr. H. Mackay Tallack who retires by rotation and who being eligible offers himself for re-election.
- To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS.

(1) As Ordinary Resolution:

To consider and if thought fit, to pass with or without modification the following Resolution which will be proposed as an Ordinary Resolution:—

"That Mr. D. K. Basu be and is hereby appointed a Director whose period of office shall be liable to determination by retirement of Directors in rotation."

(2) As Special Resolution:

To consider and if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution:—

"That the arrangement sanctioned by Special Resolution of the Company in General Meeting on 28th December, 1956, whereby Messrs. Geo. Williamson & Co. continued to act as Agents for the sale at London Tea Auctions of the teas produced by the Company be and is hereby renewed for a further period of five years with effect from 1st April, 1961, on the same terms namely, that they shall be paid a remuneration by way of commission at the rate of up to two percent on the sale prices obtained, and that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such Agent as aforesaid; and that this appointment may be terminated by either party giving to the other not less than one

month's previous notice in writing of intention so to do."

(3) As Special Resolution:

To consider and if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution:—

"That subject to the approval of the Central Government the following Article be and is hereby substituted for Article 111 of the Articles of Association of the Company."

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services the sum of Rs. 25/- for each meeting of the Board or a Committee thereof attended by him."

The Share Transfer Books and Register of Members of the Company will be closed from the 30th August, 1961, to the 7th September, 1961, both days inclusive.

By Order of the Board,

THE DUFFLAGHUR TEA COMPANY, LIMITED
WILLIAMSON MAGOR & CO., LTD.,

V. S. VIJI,

THE SIGNS OF THE TIMES

All over India signs like these are springing up—signs showing the surge of development that has been sweeping over the country in these 14 years of freedom.

The LIC is contributing vitally to this development, by channelling the premiums of its policyholders towards national undertakings—undertakings which result in more schools, more hospitals, more roads, more bridges, more railway lines, more industries and more of everything that would ensure a good standard of living for its citizens. Thus, besides guaranteeing the financial security of an individual policyholder, the LIC is helping to erect signs of progress on the road to a better life.

Life Insurance Corporation of India

THE INDIAN CABLE COMPANY LIMITED NOTICE

NOTICE is hereby given that the Forty-second Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Wednesday, 27th September 1961 at 11 O'clock in the forenoon for the following purposes:

- (2) To declare Dividends.
- (3) To re-appoint a Director who retires by rotation.
- (4) To re-appoint the firm of Messrs Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

As Special Business

- (5) To consider resolutions in relation to the following matters and things:
 - (a) In pursuance of Section 228(1) of the Companies Act, 1956 to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Factory at Tatanagar and the Branch Offices of the Company at Bombay, Ahmedabad, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad, and to fix their remuneration.
 - (b) In pursuance of Section 228(1) of the Companies Act, 1956 to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing

the accounts of the Branch Offices of the Company at Madras, Bangalore and Coimbatore, and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 12th September, 1961 to 27th September, 1961, both days inclusive.

Dividends, if any, declared at this meeting will be payable on or after 30th October, 1961 to Shareholders entered on the Company's Books on the 27th September, 1961 or to their mandatees.

On behalf of the Board,
J. D. K. BROWN,
Chairman.

9, Hare Street,
Calcutta, 27th July, 1961.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

KESORAM COTTON MILLS LTD. NOTICE

The Directors of KESORAM COTTON MILLS LIMITED, 8, India Exchange Place, Calcutta-1, have decided to fix 9th September, 1961 instead of 31st August, 1961 as the last date for receiving applications of right shares to be issued to those holders of equity shares whose names appear on the Register of Members as on 23rd July, 1961 in proportion to one right share for four existing ordinary shares.

By Order of the Board,
M. L. BAGRODIA,
Secretary.

Calcutta, 18th August, 1961.

THE INDIAN CABLE COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Members of the Company will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Wednesday, the 27th day of September, 1961, at 10-45 a.m. to consider and, if thought fit, to pass, with or without modification, the following resolution which will be proposed as a special resolution:—

"RESOLVED that subject to the sanction of the Central Government under the provisions of the Companies Act, 1956, being received, the Articles of Association of the Company be altered in the manner following:—

- (1) The word 'seven' in Article 88 be substituted by the word 'nine'.
- (2) After Article 90 the following Article numbered 90A be inserted:

"90A. So long as any moneys borrowed by the Company from the Industrial Credit and Investment Corporation of India Limited shall remain outstanding, the Industrial Credit and Investment Corporation of India Limited shall be entitled to appoint one director acceptable to the Company to the Board of Directors of the Company and to remove any director so appointed and appoint another in his place or in the place of a director so appointed who resigns or otherwise vacates his office. Such director shall be an ex-officio director within the meaning of these Articles and shall not be required to hold any qualification shares."

- (3) The following proviso be added to the first paragraph of Article 95:

"Provided that the director appointed by the Industrial Credit and Investment Corporation of India Limited shall not be entitled to participate in any commission hereinafter mentioned."

By Order of the Board,
P. S. SHAVAKSHA,
Managing Director.

Registered Office:
9, Hare Street,
Calcutta, 18th August, 1961.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

Vol. CXXXVII No. 3675

THE FUND-BANK MEETS IN VIENNA

HAVING played host to the World Bank and Fund when they held their annual meeting in Delhi three years ago, we in India know how the world's monetary parliament works. We are less inclined, therefore, to credit extravagant rumours of heroic decisions to be taken this September in Vienna when the Bank and Fund meet again. To be sure, important things can be decided at these meetings—as when the resources of the I.M.F. were increased by 50 percent—but only on condition that they have been carefully prepared beforehand. Complicated and ambitious schemes for revolutionising the Fund cannot be presented suddenly to half the world's finance ministers, many of whom are nationalist politicians to whom the details of international finance are unfathomable mysteries. Extensive reform must be sponsored by the two powers whose influence dominates in the I.M.F., the U.S.A. and Britain, and canvassed for months in the various capitals, so that a favourable vote at the annual meeting is a foregone conclusion. Nothing of that sort has been undertaken this year in support of the sundry proposals for extension of the Fund's powers, either along the lines suggested by Professor Triffin or in the sense outlined by Mr. Bernstein. So we may take it that the I.M.F. will not emerge transformed from the Vienna meeting.

All such proposals will, however, be discussed, if not in formal sessions then in the wings of the conference, and it is always possible that a formal motion may be passed directing further serious study of one or several of them; that would be the first cautious step towards reform of the I.M.F. It is even thinkable that a majority opinion may emerge in favour of the calling of an international monetary conference, like the one held in 1922 which inaugurated the gold-exchange standard. The date of such a conference would necessarily have to be set eight or 12 months ahead, for it would require elaborate preparation. In sum, the Vienna meeting will see discussion of numerous plans for monetary reform, but it can scarcely decide anything more than to discuss them further.

Yet there are more substantial reasons than this for thinking that the I.M.F. is not today on the verge of a profound transformation: namely, that most responsible financial experts, ministers and bankers are opposed to vast schemes of monetary reform such as have been keenly debated in the past two years. If the Vienna meeting publicly confirms this opposition, then it will be an extremely important event. Paradoxically, by refusing to take up any of the schemes put forward, the finance ministers will be opting for a quite definite line of action: collaboration, outside the framework of the I.M.F., between the U.S.A. and the owners of big dollar balances with a view to improving the working of the international payments system. The explanation of the paradox is this. The authors of the various monetary proposals are claiming that the present payments system is defective at its very roots, and that its defects are inconveniencing everybody. For example, they claim that it has no safe way of increasing the total of international liquidities; if this were true, that would indeed be the business of every trading nation. Therefore, they conclude, these radical I.M.F. which every member would have to approve. The only question then is to choose between the Triffin, the limited ones (such as Bernstein's) and the quite moderate ones (e.g. the Stamp proposal).

Now, if the assembled financial genius of the free world declines to take up any of these ideas, it must be because it largely rejects the diagnosis of radical defect or doubts the wisdom of undertaking revolutionary, global remedies. Yet, since the world payments system is quite obviously passing through a crisis whose gravity no one can deny, the finance ministers would then be saying by implication that the root of the trouble is in the for-

tunes of certain key moneys, and thus the remedy lies in collaboration between the owners of those moneys. The key moneys, plainly, are the two master-currencies of our system, the dollar and sterling, and those currencies whose recent hardness has been making life difficult for the master-currencies—the deutschemark, the florin, the lira, the franc and one or two others. Thus, by dismissing projects for reform of the I.M.F., they will be asking for closer co-operation between the U.S.A., Britain and the Common Market in the monetary sphere. Such co-operation would require no change in the statutes of the I.M.F., and would in fact take place either in other institutions that already exist (such as the O.E.C.D.) or in some new forum yet to be invented for the purpose.

So an apparently negative decision that would disappoint the financial visionaries and the authors of comprehensive projects would in reality constitute a vote for a specific policy—monetary collaboration between the six or eight major trading nations. This moderate prescription for the world's monetary ills will get the support of most western financial opinion, and of most bankers whether in the West or elsewhere. Firstly, it will suit the U.S.A. and Britain, because it will leave them in the rôle of the "world's bankers"—though bankers temporarily obliged to consult with their biggest clients—whereas all proposals for making the I.M.F. a genuine world bank would dispossess them of that rôle. If the I.M.F. were authorised to issue a "money of international settlements", then the nations would cease holding dollar balances and sterling balances and hold I.M.F. paper instead, especially gladly if that paper bore interest (as their present balances do) and was guaranteed in gold (as their present balances are not). Thereupon, the U.S.A. and Britain would no longer dispose of other nations' surpluses, as every banker disposes of his clients' deposits; their payments deficits would no longer flow back to the New York and London money markets in the shape of foreign balances, except in so far as the I.M.F., in its wisdom, decided to invest in those markets. Moreover, their payments deficits would no longer be owed to several dozen different creditors, but to one: the I.M.F., and as every debtor knows, a single big creditor is liable to take a much closer interest in one's affairs than a score of smaller creditors.

Secondly, the method of seeking monetary remedies outside the I.M.F. will suit the West German, French, Italian and other owners of big dollar and sterling balances. They are chronically suspi-

cious of the I.M.F., established in days when they lay prostrate after the war and therefore allowing, in their view, a disproportionate influence to the Anglo-Americans. They would prefer to meet the "Anglo-Saxons", as President de Gaulle calls them rather summarily, on different grounds; a new organisation created for the purpose would better reflect, they feel, the present strength of their currencies even if the New York and London money markets are left with the profits and the dangers of acting as world bankers. Their suspicion is heightened by one of the plans put forward for reform of the I.M.F., that of the American Mr. Bernstein which is understood to have the favour of the British Government. This calls for an increase of the I.M.F.'s resources, but a selective increase that would be financed mainly by "countries that score substantial payments surpluses". In present circumstances, this could only mean that the Common Market countries would be required to put more money into the I.M.F., an institution that they claim to be controlled from Washington and London. They make a good debating point when they recall that at Bretton Woods, the U.S.A.—which was then "scoring substantial payments surpluses"—successfully fought against such a clause being written into the I.M.F.'s constitution.

Finally, bankers in general will welcome transfer of the debate away from the global question of "international liquidities" to the specific issue of harmonising credit policies in those countries whose credit policies impinge on the world money market. The pragmatic approach of extending present collaboration gradually, rather than resorting to spectacular innovations, appeals to the prudence of most bankers whether central or private. More than that, they remain unconvinced after several years of agitation that there really exists any problem of insufficient international liquidity. The general proposition that as the value of world trade increases, so must the volume of settlement counters increase has all the simple clarity of a popular fallacy. Obviously, the quantity of settlement money (central bank reserves, for example) would not need to increase at all if payments were nearly balanced at the higher level of trade. Reserves, if they are genuinely reserves, do not finance trade but are reserved for settling differences. If differences tend to get bigger, that must be because of a lack of balance (e.g. the dollar shortage, or its reverse, the current U.S. payments deficit), and lack of balance can be rectified without increasing the volume of settlement money. Increasing the note circulation in order to make it easier to pay debts (settle differences) is called inflation when it is practised at home, and to do it on a world scale could produce a world-wide inflation. As for the financing of day-to-day trade, American deficits of recent years have put ample dollars into circulation for that purpose, especially now that convertibility makes dollar balances re-

tate more quickly. Bankers would be content to see the American deficit stopped, the British deficit reversed, steps taken to ensure against massive payments surpluses and deficits in future, something done to reassure present holders of dollar and sterling balances, and some harmonisation of interest-rate policies to prevent tides of hot money. Co-operation between the U.S.A., Britain and the Common Market would suffice for that, without revolutionising the I.M.F.

Those who might be inclined to regret seeing the international institution cold-shouldered for a restricted club of American and European financiers should recall that exactly the same thing happened after the war. The World Bank and Fund were born in epic travail at Bretton Woods—and were promptly put into the incubator and forgotten about for at least a decade. The world's post-war

monetary problems were solved by the U.S.A. lending directly to Britain and France, and then to West Germany. Throughout that crucial period, the Bank and Fund were quite effaced, and if one looks back through the files of this or any other financial paper one will find sad or ironical editorials on their premature senility. Yet, once world money markets were back on their feet, the Bank and Fund came back into the picture and displayed their present utility. So it may well be today. The next vital step forward will be taken by the handful of nations who inevitably dominate world money markets, and when they have set their affairs in order the Bank and Fund will find that their scope and usefulness have been multiplied more securely than could be attained by revolutionising the constitution of the world's monetary parliament.

PROGRESS OF THE ECONOMY

THE Reserve Bank's *Report on Currency and Finance* for the year 1960-61, published recently, produces as usual a mass of statistical data concerning Indian economic developments, leaving it to the reader to judge for himself whether the economy has made real progress in the strict sense of the term. The report errs in exaggerating the ebullience of the economy in certain sectors without pin-pointing the weaknesses in proportionate terms. Many favourable developments which occurred during 1960-61 now appear to have been reversed. It is suggested, therefore, that an authoritative report—such as the *Report on Currency and Finance* certainly is—could serve its purpose better if it were to interpret past developments in such a manner that their long-term impact could be assessed with greater clarity.

There is no doubt that impressive rises took place in industrial production during 1960-61. The rate of growth was as high as 12.1 percent during 1960, compared with a rise of 8.7 percent in 1959. The index of production moved up by only 1.7 percent in 1958 and by 3.5 percent in 1957. The capital goods and intermediate products industries contributed significantly to the rise in industrial output during 1960; the consumer goods industries showed increases of much smaller dimensions. The consumption of electric energy rose by 14 percent in 1960-61. The report states that the increased output was facilitated by the high priority given to imports of essential raw materials, which enabled a fuller utilisation of the existing capacity in a number of units.

So far so good, but the more important factor is that industrial production has taken a turn for the worse since the middle of 1961. The working of various industries has been interrupted by acute shortages of raw materials, electric power and transport. In fact, many industrial units are being forced not only to work below their output capacities, but to sustain a serious deterioration in operational efficiency and the quality of their products, due to the supplies of inferior raw materials.

The latest reports of the Tata Iron and Steel Company and the Indian Iron and Steel Company show how working has been hampered by supplies of inferior coal and limestone. Transport shortages have also been felt. The jute industry has enforced production cuts due to fibre shortages. Various engineering industries are running much below their output capacities due to shortages of raw materials, electric power and transport. As a result of output cutbacks, overhead costs have seriously increased. This factor itself has contributed to the price inflation about which the report expresses a great deal of concern. The price

situation deteriorated considerably during 1960-61. The general index of wholesale prices (1952-53 is equal to 100) showed a net rise of 7.2 percent during 1960-61 on top of increases of 5.8 percent in 1959-60 and of 6.6 percent in 1958-59. The general price level would have been higher but for the stability which was maintained in respect of foodgrains prices following larger imports and prospects for bigger crops. The production of foodgrains amounted to only 71.7 million tons in 1959-60 but it is expected to be much higher in 1960-61. Unfortunately, the production of cash crops such as cotton and jute, showed sharp declines. The cotton crop was lowered from 4.7 million bales in 1958-59 to 3.8 million bales in 1959-60 and the jute crop from 5.1 million bales to 4.6 million bales.

Inflation does not appear to have received the attention it deserves. It is time the serious implications of bigger outlays during the third plan period were realised fully and necessary remedial measures adopted in time. It is not denied that the growth of capital goods and intermediate products industries has a vital place in economic development but the importance of consumer industries must not be ignored, especially in a country like India in which the majority of the people are forced to live at subsistence level. Although the report reveals how production is inadequate in relation to the pressure of monetary demand, the anti-inflationary moves have so far been concentrated in the monetary field only. Considering that inflation has occurred in this

country mainly as a result of excessive money supplies in proportion to the availability of goods, no tangible relief is likely to be obtained unless corrective measures are adopted simultaneously on monetary and production fronts. This is why elaborate monetary measures, combined with general and selective credit controls enforced by the Reserve Bank, have not succeeded in arresting inflation according to expectations. If prices are to be restrained, attention must be directed towards increasing production all round. Bigger efforts should be made to increase the supplies of consumer goods. Unless prices of these goods are held down, costs of living will be boosted, causing fresh demands for wage increases.

India's external payments position deteriorated considerably during 1960-61 in spite of a substantial increase in foreign financial assistance. This country's foreign exchange reserves declined by Rs. 59 crores during 1960-61, compared with a fall of Rs. 16 crores in 1959-60. There has been a further deterioration thereafter. Bigger imports, combined with very little improvement in exports, have contributed to the unsatisfactory payments situation. Considering that imports have now been cut to the bone, no worthwhile improvement is expected unless exports are increased substantially. Exhortations about promoting exports will be of little use unless the prices of Indian goods are made competitive in world markets. It is, therefore, necessary that active steps be taken from now in order to reduce the production costs of Indian industries by encouraging modernisation and by improved labour productivity. It is thought that exports of many commodities can be promoted provided the Government removes a portion of the taxation industry is forced to bear.

It is refreshing to observe the rapid developments in the private sector during the second plan period. Investments in this sector are believed to have increased from Rs. 1,800 crores in the first plan to Rs. 3,100 crores in the second plan. There is no doubt that the expansion during 1960-61 was largely due to the hectic support investors extended to industrial development. The new issue market was very active, as was corroborated by the spate of new floatations. Many new issues were subscribed at substantial premiums. Optimism about the ebullience of the capital market could be misleading under present circumstances. During the past month or so, there has been a sharp decline in the prices of all shares. Even at current low prices, support is lacking. Unless confidence returns to the stock markets in the near future, the prospect for obtaining resources from the public is far from encouraging.

PATTERNS OF GROWTH

THE British Government's desire to get Britain into the European Common Market may be primarily political, but most arguments in favour of the move are based on an economic fact, that the economies of the Common Market countries have been growing faster than Britain's. Britons are now more than ever growth-conscious, because growth that was already too slow is being retarded by a deflationary policy. The President of the United States is also growth-conscious; and his critics fear that he is leading his country into a new era of inflation. Economists never tire of writing about growth; but they have not been able to agree to a formula to combine growth with financial stability. The whole subject requires more study than has yet been devoted to it. The National Institute of Economic and Social Research (an independent British body that reports periodically on the economic situation) must therefore be commended for a study of growth in some of the major countries over the past 100 years. Such a study cannot reach firm conclusions, but it can help us to assess the factors that promote growth—or retard it.

Concluding its survey the Institute comments: "It is possible to say that some countries have always grown slowly and others have always grown fast; countries which have grown relatively slowly since 1950 have all had much faster rates of growth in earlier years." This conclusion is significant; for it suggests that when a country has reached a certain stage of development it loses momentum. But how does one account for the exceptional performance of Japan. That country's economy has grown consistently faster than other countries', and its rate of growth has been accelerated in the latest period reviewed, 1954-59. The survey shows annual percentage increases in national product per man. Japan's growth-rate, so reckoned, was 6.1 in 1950-59, 7.6 in 1954-59. Only one other country, Sweden, increased its growth-rate in the later period, from 2.8 to 3.0. That of the United States was maintained, at 2.2. All the others covered by the survey declined: Italy's from 4.7 to 3.8, Germany's from 4.5 to 3.6, France's from 3.6 to 3.3, the Netherlands' from 3.4 to 2.9, the United Kingdom's from 1.7 to 1.6.

It will be observed that the lowest figures are those of the United Kingdom and the United States, two of the most mature countries. It is difficult to avoid the conclusion that relative stagnation is associated with maturity. On the other hand, these are also the two countries with the main international "reserve currencies", involving special responsibilities. (President Kennedy's efforts to accelerate growth seem to be succeeding—but they are being watched somewhat apprehensively in the foreign-exchange markets.) The Common Market is in a very dynamic phase at present, and observers agree that it is likely to continue so for at least some years. But some Britons are troubled by the thought that their country will be integrated with the Continent when the Continent's main dynamic phase is nearly ended and will loosen its associations with the Commonwealth when the main dynamic phase of the major Commonwealth countries is only beginning.

The Institute's survey shows that growth-rates in excess of 3 percent a year are abnormal, having been associated in the past with such special factors as political integration or recovery from war. Parts of Europe have in the past developed rapidly as a consequence of political integration; large areas of Europe have until recently been economically stimulated by recovery from war; now political integration is again a dynamic force in western Europe. But the historical record suggests that such special factors lose their force within a decade. The long-term growth-rates calculated by the Institute are nearly all considerably less than the growth-rates of the last decade. The figures for the different countries are not precisely comparable, as the starting years are different, but they show the trends. Japan's long-term rate (from 1880), 2.9 percent increase per man-year, is much the highest, but still much lower than that country's recent performance. Only the United States (from 1871) shows a long-term rate, 2.0 percent, that is near the recent performance. Besides Japan, only Sweden (from 1863) shows a higher long-term rate than the U.S.A.'s 2.1 percent. And only the Netherlands

long-term rate (from 1900), 1.1 percent, is, lower than the U.K.'s (from 1857), 1.2 percent.

The U.K.'s long-term growth-rate is depressed by a comparatively unfavourable performance throughout the present century. Britain matured, in a comparative sense, in the 19th century. Thereafter her growth-rate was slow, while the U.S.A.'s, Germany's, Japan's, and other industrialising countries', were faster. This process of relative change seems natural. Why then, has it caused so much anxiety in Britain and (more recently) in the United States? It is, indeed, relevant to ask why countries that are already well developed feel a need to continue increasing production as fast as previously, or as fast as less-developed countries in the present. The Institute suggests that in an advanced country the transfer of resources from goods to services is one explanation of the comparative lethargy of production.

As it is characteristic of a comparatively high standard of living, it is not in itself a reason for anxiety. The fact remains that Britain is unable to fulfil her commitments without strain, that she needs more production in order to increase her exports. Her economic policies are not adapted to her circumstances. Japanese investigators have explained their country's progress in the last decade by reference to a change in industrial policy, which was previously based on abundant labour and has more recently been based on mechanisation. Britain, not lacking in industrial technology but seemingly reluctant to apply it, can learn from the Japanese example. She can learn, too, from those countries—including some in western Europe—that are purposefully planning growth.

dividend yield is 7.7 percent at the present price of Rs 39 a share. Taxation receives Rs 262 lakhs (against Rs. 97,596) and general reserve Rs 25,000 (against the same). There is a carry-forward of Rs 81,331, against Rs. 51,110 brought in. The crop rose from 412,630 kgs to 506,565 kgs and the average sale price increased from Rs. 5.62 a kg to Rs. 6.52.

The Anada-Bag Tea Co Ltd has increased the taxable ordinary dividend from 17½ percent to 30 percent, absorbing Rs. 2,10 lakhs. This offers a yield of 11.3 percent at a price of Rs. 26.50 a share. The profit has increased from Rs. 2,79 lakhs to Rs. 4.88 lakhs and taxation receives Rs. 225 lakhs (against Rs. 1.59 lakhs). General reserve is allocated the same amount of Rs. 50,000. The carry-forward is Rs. 84,181, against Rs. 54,204 brought in. The production increased from 300,738 kgs to 321,178 kgs and the average sale price from Rs. 5.91 a kg to Rs. 6.85.

The directors of all the companies state that the prospects at present are favourable to producers, but any substantial increase in world crops could depress prices seriously, especially of common teas, unless the demand increases proportionately.

Current News and Comment

Competition in General Insurance

In his chairman's statement at the annual general meeting of the General Assurance Society Ltd held in Calcutta last Monday Mr B. L. Jalan mentioned (a full text of the speech is printed elsewhere in this week's *Capital*) the voluntary move among general insurance companies to restrain unhealthy competition. Although it is agreed in principle that companies should not divert business from one another, it is appropriate that small companies be permitted to retain as much new business as they can. This is necessary because many small companies are not yet self-supporting.

Commenting on economic developments, Mr. Jalan stresses the importance of attracting foreign capital by improving the investment climate. If the Indian Companies Act and the Indian income tax laws are simplified, a great deal of relief is likely to be obtained. Referring to the recent move for regulating banking capital and deposits, Mr. Jalan thinks that nothing should be done if it restrains credit supplies further. In view of the prospect for introducing deposit insurance at an early date, unnecessary measures for safeguarding depositors should be avoided. Mr. Jalan thinks that production and exports can be promoted by means of various incentives.

Camphor and Allied Products Offer

Camphor and Allied Products Ltd proposes to set up a factory—claimed to be the first of its kind in India—for manufacturing synthetic camphor. The Company has been licensed to manufacture 900 tons of synthetic camphor and 30 tons of thymol a year. The factory will be located in Clutterbuckganj near Bareilly (Uttar Pradesh) where it can easily secure an adequate supply of turpentine—the main raw material—from the State Government's turpentine and rosin factory. The supply can be supplemented without much difficulty from Punjab, Himachal Pradesh and Kashmir distilleries. The factory is expected to go into production by the end of 1962. Camphor and Allied Products is obtaining the technical know-how and process designs for the plant from the U.S. firm of E.I. Du Pont de Nemours and Company. American Hydrotherm Corporation of New York has been given the contract to supply and erect the plant and machinery. The entire project is estimated to cost Rs. 1.30 crores, of which Rs. 96 lakhs will be spent on land, buildings plant and machinery, and equipment. Working capital requirements are estimated around Rs. 27 lakhs. The Company has been sanctioned, in principle, a loan of Rs. 24 lakhs payable in foreign currency and one of Rs. 6 lakhs in Indian currency by the Industrial Credit and Investment Corporation of India. The Industrial Financial Corporation of India has also sanctioned a loan of Rs. 18 lakhs for meeting the payment for indigenous equipment. The proposed capital issue will bring Rs. 60 lakhs and the balance of Rs. 22 lakhs is to be raised through bank borrowings. (Fuller details appear on other page in this week's issue of *Capital*.)

The Company has an authorised capital of Rs. 1 crore, made up of 50,000 equity shares of Rs. 100 each and 10,000 9.23 percent cumulative redeemable preference shares of Rs. 100 each and 40,000 unclassified shares of Rs. 100 each. The issued capital consists of 50,000 equity shares and 10,000 preference shares. Out of this, promoters, directors and their friends will be taking up equity shares of the value of Rs. 19.52 lakhs. American Hydrotherm Corporation has agreed to subscribe for equity shares worth Rs. 1.92 lakhs. The Life Insurance Corporation has agreed to take up equity shares of Rs. 1.92 lakhs. The balance of 23,580 equity shares

and 5,000 cumulative preference shares is now being offered for public subscription at par. The lists will open on 4th September and close on 12th September or earlier but not earlier than 7th September. The success of the public issue, which has been completely underwritten, is a foregone conclusion as the scrip are unofficially commanding a substantial premium of about Rs. 20 a share. Since the country's camphor needs are at present being met by imports, the market for the Company's product is assured. The demand is expected to grow with the increasing use of camphor in the pharmaceutical and chemical industries. The directors think that on the basis of existing prices and market conditions and in the absence of any unforeseen circumstances, the Company should be in a position to make sufficient profits in order to pay reasonable dividends on the invested capital.

Good Year for Gillanders' Gardens

Investors have become cautious of tea shares in the belief that the price of the commodity might turn softer as the weight of bigger crops are felt in the coming months. The north Indian crop has increased from 173.7 million lbs up to the end of July 1960 to 213.8 million lbs up to the end of July 1961. All districts have participated in the rise. The crop has increased from 93.5 million lbs to 116.3 million lbs in Cachar, from 11.5 million lbs to 12.0 million lbs in Darjeeling, from 51.0 million lbs to 58.8 million lbs in Dooars, from 5.6 million lbs to 7.1 million lbs in Terai, and from 2.5 million lbs to 3.1 million lbs in other places. It is possible that bigger supplies would cause a decline in prices, but no serious depression is foreseen in view of the fact that supply and demand were nearly balanced in 1960. Although the average sale price at the export auctions held in Calcutta to-date has declined from Rs. 6.03 a kg, a year ago to Rs. 5.92, it does not necessarily follow that the profitability of gardens has correspondingly declined, because it remains to be seen to what extent the decline in the price is compensated for by a rise in production.

The results of the Gillanders group of Assam gardens for the year ended December 1960, just published, show how good tea estates make profits in spite of the various difficulties facing the industry. Not only has the production of all gardens increased, but dividends have been raised all round. The profit of the Betjan Tea Co. Ltd has increased from Rs. 4.93 lakhs in 1959 to Rs. 7.33 lakhs during the year ended December 1960. The taxable ordinary dividend has been increased from 25 percent to 40 percent, absorbing Rs. 2.56 lakhs. This works out to a yield of 11.3 percent at the present price of Rs. 35.50 a share. Taxation receives Rs. 2.44 lakhs and general reserve Rs. 33,000 (against Rs. 50,000). The carry-forward is Rs. 74,551 against Rs. 37,706 brought in. The crop increased from 378,815 kgs to 415,786 kgs and the average sale price from Rs. 6.15 to Rs. 6.82 a kg.

The Pengpani Tea Co. Ltd has increased the ordinary taxable dividend from 17½ percent to 30 percent, absorbing Rs. 2.40 lakhs. This works out to a yield of 7.9 percent at a price of Rs. 38 a share. The profit has increased from Rs. 3.14 lakhs to Rs. 5.02 lakhs and taxation is allocated Rs. 2.16 lakhs (against Rs. 1.59 lakhs). General reserve receives Rs. 30,000 (against Rs. 25,000), leaving a carry-forward of Rs. 48,105, against Rs. 64,646 brought in. The crop was 339,133 kgs against 312,979 kgs and the average sale price improved from Rs. 5.93 a kg to Rs. 6.86.

The profit of the Jutilbari Tea Co. has risen from Rs. 2.40 lakhs to Rs. 7.30 lakhs and the taxable ordinary dividend has been increased from 10 percent to 30 percent, absorbing Rs. 2.90 lakhs. The

Considerable progress has been made in setting up the forging and press shop. In the near future all forging, drop stampings and pressings are likely to be made in Raymon's own factory. The capacity of the forge and press shop is estimated at 600 tons a month. In addition to meeting its own requirements, Raymons expects to satisfy outside orders. Progress has been made in the steel structural division. The factory is now engaged in steel fabrication, including points and crossings. The welding shop is making good progress and all kinds of normal gas and electric welding are being made.

Transport and Production

Efficiency in production depends on the adequacy of transport facilities. The cost which has had to be paid during the second plan for the inability of the planners to grasp this essential fact has been so heavy that the same mistakes should never be allowed to be repeated during the third quinquennium. Speaking in this vein from the chair at the annual general meeting of the Calcutta Branch of the Indian Roads and Transport Development Association, last week in Calcutta, Sir L. P. Misra stressed the danger that nothing could dislocate more effectively the planned targets of production than lack of facilities for carrying what is being produced. He further pointed out it would not be safe to assume that once the targets had been fixed and foreign and local resources found, full implementation would follow in due course, "for, unless facilities were provided from day to day for the transport of raw materials, finished and semi-finished products to their destinations, not only would production suffer and targets decrease but the cost of production would inevitably increase." The traffic by the end of the third plan, it is expected, will be around 320 million tons, whereas the railways have planned to lift about 250 million tons of this volume. The balance will obviously have to be carried by road as other alternative means of transport—inland waterways or aviation—are not capable of taking much more than 20 million tons in addition to what they are carrying at present. The crux of the transport problem, said Sir L. P. Misra, would, therefore, be how to permit roads to take over the additional lift of about 50 million tons. The following principal steps are suggested by him in this connection: (a) the mileage of roads to open up new and neglected tracts now developing should be increased; (b) the capacity of the existing roads should be improved by better surfacing, and the gaps which are preventing their full use should be bridged; (c) the weak bridges which are reducing the loads to be carried in vehicles should be strengthened; (d) the use of trailers should be increased; (e) quicker disposal of applications for the registration of new commercial vehicles.

should be ensured; and (f) the production of existing motor-vehicle factories should be increased. Taking these steps, Sir L. P. Mishra said, would obviously require a good deal more money than had been provided in the plan, but when the only alternative would be to curtail transport facilities for 50 million tons of goods, "which would inevitably force reductions or revisions in targets," every effort should be made to find the necessary funds. Sir L. P. Mishra believes that in such a large programme of development as the third five year plan, involving an investment outlay of about Rs. 11,000 crores, the provision for transport could be adequately raised by a suitable adjustment in the plan budget.

No Policy for Steel Exports

As the domestic production of steel increases, thoughts naturally turn to export possibilities for Indian steel products. Although in a small way, India has already entered this field. She exported 50,000 tons of iron and steel in 1960, and in 1960-61, the figure went up to 115,000 tons. But these exports were made as certain quantities of iron and steel were rendered surplus due to the delayed commissioning of the necessary finishing mills. If this country is to be a steel exporter of any consequence, she must first of all have a clear and long-term policy for her exporters to explore markets with confidence. In his address from the chair at the latest annual general meeting of the Steel Importers Association of India, held last week in Calcutta, Mr. P. L. Master stressed this necessity and urged the Government to formulate a policy as early as possible. In the absence of one, there is at present much delay in the issue of licences. This helps the exporter the least, and does not induce the foreign buyer to enter into export commitments. The licensing procedure also needs to be simplified. Two measures which could immediately help the export trade are permission to exporters to sell from current stocks, and where export orders are concerned, priority by the producers "side by side with core projects." Steel exporters have particularly been at a disadvantage in the matter of their sales on a barter basis. These exports are subject to a 15 percent bond which is forfeited if the exporter fails to fulfil his commitment. Some of India's billet exports are now released through this channel, but while exporters have already booked orders, the Hindustan Steel authorities have suddenly suspended the supply of billets to them on the ground that the needs of the local re-rollers have to be met first. The total quantity covered by such export contracts already concluded is about 25,000 tons, "which is barely 1 percent of the annual billet requirements of the re-rollers. This is an insignificant figure and the country's prestige should not be sacrificed for the same," Mr. Master said. A question to which he drew pointed attention is that of prices. Indian steel prices at their present statutorily-fixed level, are uncompetitive even in such markets as Ceylon and Pakistan. Mr. Master urged that if the prices cannot be brought down by any other measures, an export subsidy from the Price Equalisation Fund should be given.

Chaos in Coal Transport

The inefficient handling of the Coal Control machinery as well as certain unrealistic schemes of the Central Ministry for Steel, Mines and Fuel have directly affected the coal merchants and indirectly the entire public. The Indian Coal Merchants Association has, therefore, urged the Government in a memorandum to review its policies with a view to avoiding any dislocation in the coal trade. The present transport shortage, Sardar Swaran Singh said in Calcutta in July, is due to an "unexpectedly big industrial development", so the shortage, although it is causing inconvenience, is a matter for gratification for the nation. But it was the task of the Planning Commission to measure correctly the anticipated rate of development. It was also the business of the Coal Controller to keep the Commission informed about the demand for coal so that neither the Commission nor the railways would be caught napping. For more than a year, the Coal Controller's office has been busy making new experiments. The Association says that any impartial enquiry by a body of competent men will reveal that each of these experiments has only made the situation "a little worse than before," and this in its turn has called for a fresh experiment. Such an enquiry would also lead one to conclude that the system of allotment, which has been in vogue for the last 18 years, has been a flexible one and most suitable for an industry like coal, which is subject to many unpredictable hazards. "More wagons and increased line capacity are, of course, the prime needs which no bureaucratic jugglery can ever by-pass. But even with the present shortage of transport, if the Coal Controller's Office and the Allotment Office of the railways worked with honesty and sincerity and earnestly collaborated

with each other for the general good of the country, a good deal of improvement might be made under the old system", the Association says.

In February, the Coal Controller came out with a scheme, supposedly with the approval of the Ministry, according to which coal would henceforth be carried in block rakes to a minimum number of stations in every State. It would be dumped in these places, from where the consumers of the State would get their supplies. Permits would no longer be issued in the name of individual consumers. There would be one permit for one dump, which would be managed by one coal merchant nominated by the State Government. The Association protested against the scheme, and the producers and a large number of organised bodies of consumers from all over India supported the coal merchants. It was pointed out that the scheme would deprive the consumers of their choice of colliery, deprive thousands of coal merchants and their employees of their livelihood, concentrate the coal trade in the hands of a few monopolists and expand the scope of corrupt practices in many ways. But the Government paid no heed to these appeals. Before, however, the scheme was half implemented, all the evils of which the Government had been forewarned became evident. The transport position has not improved, as was only to be expected. According to the Coal Controller's own estimate, 7,100 wagons are daily required for the Bengal and Bihar coalfields. The railways offer only 4,700, and sometimes even less. The Coal Controller's idea, presumably shared by the Ministry also, is that the coal merchants deliberately delay the turnaround of wagons. But nobody in the Government cares to believe that the interests of the coal merchants are better served if the wagons move and not if they stand idle.

In less than three months since the implementation of the bulk movement scheme, consumers are complaining of sub-standard loadings, collieries are clamouring about distress sales while a large number of coal merchants have been ruined and their employees have been thrown out of employment. As for allotment, it is now being done under what is called consumer-wise monthly bulk allotment which has given rise to a lot of anomalies. In spite of these, the Coal Controller is now thinking of creating a Central Marketing Concern to be sponsored by the Government of India. This means that the latter would function like a giant middleman, purchasing all the coal from producers and selling it to consumers. If this idea is implemented, the coal merchants would be totally eliminated from the trade, the Association says.

Indian Dyestuff Expansion Plans

The chairman of the Indian Dyestuff Industries Ltd, Mr. Arvind N. Mafatlal, told the shareholders at the recent annual general meeting that the Company had decided to implement the expansion programme which proposes to manufacture 500 tons of vat dyes and 750 tons of intermediates in a single phase. The original intention was to implement the programme in three stages. The Company is expected to attain full production by the end of 1962. The integrated expansion scheme is estimated to cost Rs. 4.5 crores to Rs. 5 crores. Mr. Mafatlal ruled out the possibility of issuing rights shares to finance the expansion scheme because, apart from the question of premium, it would be difficult to ensure a reasonable return on the increased capital. He said that Indian Dyestuff would be able to meet the bulk of the cost of expansion from its own resources and that any shortfall would be met by borrowing from banks. But he held out the hope that if everything went well, the Company would consider the issue of bonus shares in due course. Mr. Mafatlal admitted that Indian Dyestuff had not been able to use fully the capital raised last year by the issue of rights shares in the ratio of nine shares for every one held, but that was due to reasons beyond the Company's control. He added that the latter had placed orders during the current year for the bulk of the plant and machinery and that some items had already been received. The Company expects unit No. 2 to go into production by August 1962. With the completion of the expansion programme, the total turnover might well exceed Rs. 6 crores. Mr. Mafatlal said. He admitted that the 30 percent cut in the import quota, with the prospect of a further reduction, would affect the supply of raw materials and the Company's profits. But he assured the shareholders that it would try to make it up by higher realisations through improved productivity. The import of raw materials under the export incentive scheme has not proved profitable in view of the heavy premiums on them. The chairman said that Indian Dyestuff proposes to manufacture basic raw materials and that the management is in correspondence with the Government on this subject. The progress in relation to the sulphuric acid plant has been slow, since the Company has not yet received the licence for importing capital goods. Certain firms have offered to fabricate the plant in India, but the

management has still to make up its mind on the issue, Mr. Mafatlal said. The share of the Company (Rs. 100-paid), which rose from Rs. 407.50 to Rs. 570 earlier in the year, is now quoted around Rs. 435, at which price it offers a gross yield of only 1.38 percent.

Anil Hardboard Pays More

The working of Anil Hardboard Ltd for the year ended March 1961 belies the expectations raised by the directors' decision to raise the dividend from 6 percent to 9 percent, both free of tax. Although the sales have recorded an appreciable improvement from Rs. 37.96 lakhs to Rs. 52.96 lakhs, the gross profit, after providing for the managing agency commission, is substantially lower at Rs. 13.35 lakhs, against Rs. 20.96 lakhs in 1959-60. This is attributed to the cut in hardboard prices. Out of the gross profit, the directors have allocated Rs. 9.09 lakhs (against Rs. 9.93 lakhs) to depreciation, and the provision for development rebate reserve has been reduced from Rs. 4.67 lakhs to only Rs. 63,830. No provision has been made for taxation which absorbed Rs. 14,000 in the previous year. The net profit amounts to Rs. 3.62 lakhs, against Rs. 6.26 lakhs in 1959-60. The entire balance has been transferred to the 15(C) profit reserve from which the proposed dividends are being paid. The ordinary dividend takes Rs. 2.70 lakhs and the preference dividend Rs. 80,000, making a total distribution of Rs. 3.50 lakhs. The directors state that the Company's factory worked to full capacity during the year and that substantial orders were received from Government departments. The demand for hardboard from the Government and other consumers is expected to increase further in future. The plant and machinery for manufacturing insulation boards has been installed and trial runs are being carried out. The insulation board mill will go into production early in September, and this is expected to improve Anil Hardboard's prospects appreciably. It also proposes to enter into new lines. Orders have been placed for machinery to manufacture acoustic tiles and lacquering and for the printing of hardboards. The Rs. 100-paid share of the Company, which rose from Rs. 225 to Rs. 257.50 on higher dividend prospects, are now quoted around Rs. 250.

Bajaj Auto Profit Rises: Dividend Up

The directors of Bajaj Auto Ltd have recommended a dividend of Rs. 45 a share, less tax, on the 9,900 old shares (Rs. 100-paid) for the year ended March 1961, against Rs. 20 a share, taxable, in 1959-60. The dividend, it is understood, has been proposed in compliance with Section 23A of the Income Tax Act since the Company was a private limited one for a part of the year under review. Bajaj Auto was made a public limited Company in October 1960, and its capital was raised from Rs. 9.9 lakhs to Rs. 70 lakhs by issuing additional capital for Rs. 60.10 lakhs, out of which Rs. 34.36 lakhs were offered to the public. No dividend is recommended for the new shares for 1960-61. The preliminary figures about the Company's working during the year indicate that the gross profit—after providing for depreciation but before taxation—has risen nearly five-fold from Rs. 2.68 lakhs to Rs. 12.89 lakhs. The provision for taxation is substantially higher at Rs. 5.20 lakhs, against Rs. 1.22 lakhs in the previous year. General reserve and statutory development reserve, which received nothing in 1959-60, have been allocated Rs. 1.25 lakhs and Rs. 65,000, respectively. Capital issue expenses amount to Rs. 1,06,948, against nil. The proposed dividend absorbs Rs. 4,45,500, leaving Rs. 23,933 to be carried forward, against Rs. 11,133 brought in.

Bajaj Auto asked for the Government's permission to increase the production of scooters to 18,000 units a year and that of three-wheelers to 6,000 units a year. It started the production of scooters in June 1960, and it has now commenced the manufacture of three-wheelers. It has acquired 250 acres of land at the Pimpri-Chinchwad industrial area. The construction work is expected to be completed by the end of the current year, and the factory which is now in Bombay is likely to be shifted to the new site by the end of 1961. The Company has received an import licence for machinery worth Rs. 28.73 lakhs. Machinery has started arriving, and the bulk should reach the factory by October. The new shares of the Company (Rs. 50-paid) shot up from Rs. 51 to Rs. 58.50 following the announcement of a higher dividend.

Orissa Cement Earns Record Profit

The working of Orissa Cement Ltd for 1960 justifies the proposed increase in the dividend from Rs. 1.10 to Rs. 1.50 a share (Rs. 10-paid). The sales are up by about 58 percent from Rs. 2.70 crores to Rs. 4.26 crores, and the gross profit of over Rs. 1.16 crores, which is an all-time record, shows an increase of about 45 percent over the previous year's

figure of Rs. 80.32 lakhs. The ratio of the gross profit to sales is, however, down from 29.6 percent to 27.2 percent because of the all-round increase in manufacturing expenses. The improved results in 1960 are attributed mainly to the substantial increase in production and despatches of cement and refractories. The cement output rose sharply from 263,000 tons to 357,000 tons, although the Company has not yet been able to attain the rated capacity because of the excessive dust formation in the kilns and the peculiar nature of raw materials available in the area. The performance of the fireclay bricks section was not, however, satisfactory due to the lack of sufficient orders. The cost of raw materials consumed increased from Rs. 48.90 lakhs to Rs. 74.81 lakhs, the wage bill from Rs. 48.97 lakhs to Rs. 64.79 lakhs, stores and spares from Rs. 46.13 lakhs to Rs. 74.10 lakhs and power and fuel from Rs. 45.77 lakhs to Rs. 59.3 lakhs. After providing Rs. 38.65 lakhs (against Rs. 37.69 lakhs) for depreciation and Rs. 28.50 lakhs (against Rs. 9.85 lakhs) for taxation, the net profit amounts to Rs. 42.39 lakhs, against Rs. 27.72 lakhs in 1959. Appropriations include development rebate reserve Rs. 3.42 lakhs (against Rs. 10.42 lakhs), general reserve Rs. 10 lakhs (against nil) and gratuity reserve Rs. 59,000 (against Rs. 14,000). The proposed dividends absorb Rs. 36.63 lakhs, against Rs. 26.55 lakhs, leaving Rs. 52,158 to be carried forward. The surplus brought in from the previous year amounted to Rs. 8.23 lakhs. The Company's paid-up capital amounts to Rs. 2.65 crores, and it is supported by surplus and reserves aggregating Rs. 77.87 lakhs. The gross block of Rs. 5.64 crores has been written down to Rs. 3.40 crores.

The directors state that substantial improvements have been brought about in the working of the silica and basic sections of the refractory plant with the help of the designers of the kilns and German collaborators, and the rejections are being minimised. The production of fireclay refractory, however, has had to be regulated depending on the flow of orders, and it is feared that if the off-take continues to be at the present unsatisfactory level, the refractory section cannot be worked to full capacity. Orissa Cement has a large expansion programme, and it is estimated to cost about Rs. 80 lakhs which would be financed from internal resources and borrowings. The Company has been granted a licence for doubling the capacity of the refractory plant for manufacturing burnt basic refractories from 19,000 tons to 38,000 tons a year. Besides, it has been licensed to manufacture 10,000 tons of chemically-bonded basic refractories a year. The Company has made an agreement with an American specialist for technical assistance and for collaboration on a royalty basis for manufacturing special types of chemically bonded and special steel-clad refractories. The expanded basic refractory section is expected to be ready by the middle of 1962. It is stated that Rs. 16.13 lakhs or 23.9 percent of the Company's profit for 1960 will be exempt from tax under Section 15(C) of the Income Tax Act. Out of the proposed dividend of Rs. 1.50 a share, 35.8p will be exempt from tax. The directors have, however, proposed that 35p a share will be considered as not taxable. The Rs. 10-paid share of the Company is quoted around Rs. 14.62.

Lederle Antibiotic Plant

The Rs. 1 crore fermentation plant of the Lederle Laboratories (India) Private Ltd will go into production by the end of the current year. The plant, situated in Bulsar in Gujarat, will manufacture antibiotics such as tetracycline, chlorotetracycline and de-methyl chlor-tetracycline. The plant has a production capacity of 10 tons of aureomycin and achromycin a year. The entire manufacture of aureomycin and achromycin will be used as raw materials for the Company's pharmaceuticals. De-methyl chlor-tetracycline is said to be the result of the latest research in antibiotics and is expected to reduce appreciably the cost of production of these drugs. The American Cyanamid Company of New York—the principals of the Lederle Laboratories—have designed and constructed the plant. Atul Products is providing the Indian share in the capital amounting to Rs. 24 lakhs.

Madras Machine Tools Share Offer

The Abhoi Machine Tools Private Ltd, which has been engaged in manufacturing lathes of various sizes since its inception in 1958, is being converted into a public limited Company to be known as Madras Machine Tool Manufacturers Ltd for effecting a substantial expansion of its existing plant in Singanailur, near Coimbatore. The sanction of the Central Government has already been received. The new Company will have an authorised capital of Rs. 50 lakhs in equity shares of Rs. 100 each. Out of this, 25,000 shares are to be issued at present. Apart from their existing investments, the shareholders of Abhoi Machine Tools are taking up shares worth Rs. 3 lakhs. The

balance of Rs. 22 lakhs is to be offered for public subscription in the near future. The entire issue has been underwritten by the Madras Industries Investment Corporation (Rs. 10 lakhs), Bank of India (Rs. 5 lakhs), the Life Insurance Corporation (Rs. 3 lakhs) and others (Rs. 4 lakhs). The proposed increase in capital will enable the Company to start such new lines of production as geared lathes, precision drilling machines, shaping machines and planning machines. The Company will specialise in the manufacture of small cutting tools and grinding tools. There remains a large unsatisfied demand for machine tools in spite of the appreciable progress made by Hindustan Machine Tools and a number of other units in the private sector. The demand is bound to grow with the increasing tempo of industrial development. The country has still a long way to go in fulfilling its needs.

Project for Synthetic Resins

Chowgale and Company of Bombay is setting up a plant in Thana for manufacturing synthetic resins. The factory which is expected to go into production by the end of the current year has been licensed to produce 1,100 tons of synthetic resins a year. This capacity is expected to be doubled in a year's time. Chemische Werke Albert of West Germany, the well-known manufacturers of synthetic resins, is providing the technical know-how and plant and machinery, in lieu of which the foreign firm is being allotted equity and preference shares worth Rs. 7.38 lakhs. The entire project is estimated to cost Rs. 30 lakhs.

Baroda Meters to Raise Capital

Baroda Electric Meters Ltd proposes to set up a plant in Vallabh Vidya Nagar, near Anand (Gujarat) for manufacturing electric meters in collaboration with the well-known West German firm of Deutsche Zahler-Gesellschaft. The project envisages the manufacture of 60,000 single-phase A.C. meters and 24,000 poly-phase A.C. meters a year. These meters, it is stated, will have automatic adjustments for temperature. The market for the Company's product is assured, for the present domestic production by the existing units is estimated around 600,000 meters, against the demand for about 1.2 million meters. The demand for meters is expected to rise to around 2.1 million units a year in the third plan period. The total cost of the project is estimated around Rs. 45 lakhs, including Rs. 21.33 lakhs for plant, machinery and know-how fees. The equity issue will provide Rs. 40 lakhs and the Industrial Credit and Investment Corporation of India has sanctioned a foreign exchange loan of Rs. 5 lakhs to cover the cost of imported equipment. Baroda Electric's plant in Anand will have a modern tool room, and it hopes to produce about 89 percent of the components for meters in the third year of its production. The Company has an authorised capital of Rs. 1 crore, made up of 75,000 equity shares and 25,000 unclassified shares, both of Rs. 100 each. Of this, 40,000 equity shares are to be issued at present. The directors and their friends have agreed to take up 12,500 shares and the Life Insurance Corporation is subscribing for 5,000 shares. The balance of 22,500 equity shares is to be offered to the public. The entire public issue has been underwritten. The subscription list will open on 6th September and will close on 19th September or earlier, but not before 9th September.

No Bonus or Rights from Calico

Last week's sharp break in the shares of Calico Mills from Rs. 1,087 to Rs. 1,011 reflected mainly the market's disappointment over the chairman, Mr. Gautam Sarabhai's statement at the shareholders' annual general meeting that the Company would not issue any bonus or rights shares in the near future. The Company has decided to finance the expansion programme from internal resources and by borrowings from banks. The chairman asked the shareholders not to press for bonus or rights issues as these were of no particular advantage to them in the long run. He said that since 1940, Calico Mills had raised the number of shares from 16,000 to 165,000 by issuing bonus shares. Referring to the expansion schemes, Mr. Sarabhai said that the Company has received a licence for doubling the capacity of the recently commissioned P.V.C. plant, but the expansion scheme would be taken up after watching the working of the existing plant. It has also secured a licence for trebling its capacity for manufacturing caustic soda and chlorine from 3,300 tons to 10,800 tons. The expansion of the caustic soda plant is estimated to cost Rs. 1.45 crores. Orders have been placed for machinery, and the expansion plan will be completed by the end of 1962. The Company has obtained another licence for producing P.V.A. used in the manufacture of dyes. This plant will have an annual production capacity of 2,000 tons. It also proposes to install trichlor ethylene plant

with a capacity of 1,920 tons a year. The Company believes in entering new fields instead of going in for existing lines, the chairman said. He added that the Government had approved the Company's plan for collaboration with the world famous textile finishers of Switzerland, Heberlein and Company, for the exclusive use in India of their entire range of special processes. The new varieties of Calico cloth will soon be available to consumers in the country. The Company's performance during the year ended March 1961 was good, with sales establishing a new record around Rs. 11 crores. The prospects for the current year are said to be satisfactory.

Rights and Bonus from Indian Tool

The directors of Indian Tool Manufacturers Ltd have decided to issue 5,000 new equity shares of Rs. 100 each in the ratio of one for every two held by shareholders whose names were on the register on 14th August. It is also proposed to issue bonus shares, subject to the consent of the Controller of Capital Issues, by capitalising Rs. 5 lakhs from general reserve. Additional capital is being raised in order to finance the Company's expansion programme. Indian Tool has received a licence for manufacturing micrometers, and efforts are being made to implement the scheme as early as possible. Machinery for the project has already been ordered. The Company also proposes to install additional machinery for replacement and expansion of the existing plant and machinery.

The working of the Company for the year ended March 1961, is quite satisfactory. The sales are up from Rs. 74.86 lakhs in 1959-60 to Rs. 86.04 lakhs in 1960-61. The gross profit has increased from Rs. 21.61 lakhs to Rs. 23.09 lakhs. While both sales and profit are higher, the ratio of the gross profit to sales is down from 28.8 percent to 26.8 percent. After providing Rs. 5.04 lakhs (against Rs. 4.25 lakhs) for depreciation, Rs. 7.50 lakhs (against Rs. 7.85 lakhs) for taxation, the net profit amounts to Rs. 10.55 lakhs, against Rs. 9.52 lakhs in the previous year. From this, the directors have allocated Rs. 2.40 lakhs (against Rs. 95,270) for development reserve, Rs. 80,000 (against Rs. 32,488) for development rebate reserve and Rs. 6.20 lakhs (against Rs. 6.80 lakhs) for general reserve. The dividend has been maintained at Rs. 14.50 a share, taxable, and it absorbs Rs. 1.45 lakhs. A sum of Rs. 23,819 is being carried forward, against Rs. 3,206 brought in.

The directors state that during the year, the Company made a fresh capital expenditure of Rs. 21 lakhs, including Rs. 13 lakhs on the new project for manufacturing cemented carbide tips and tools which was commissioned during the latter half of the year. The full benefit of the working of the new plant will be reflected in the current year's results. The balance-sheet shows a sound financial position. Against the paid-up capital of Rs. 10 lakhs, all in equity shares, the Company has reserves and surplus amounting to Rs. 39.79 lakhs, of which general reserve alone accounts for Rs. 31 lakhs. The gross block of Rs. 70.63 lakhs has been written down to Rs. 41.51 lakhs. The Rs. 100-paid share of the Company has advanced from Rs. 140 to Rs. 201 over the past few weeks. The book value of the share works out to over Rs. 400.

Surat Electricity Prospects

The annual general meeting of the Surat Electricity Company, held in Bombay last week, had to be adjourned *sine die* without adopting the directors' report and the audited statement of accounts for the year ended 31st March, 1961, since some shareholders insisted on an impartial enquiry into the Company's accounts which had been submitted by the managing agents. Shareholders maintained that the accounts contained some irregularities. For instance, it was alleged that money belonging to the Ahmedabad Electricity Company was used for the Surat Electricity Company. One shareholder pointed out that it was not right that Mr. N. C. Jhaveri, who had been appointed as director on 28th June, 1961, should sign the accounts for the year ended March 1961. Another shareholder said that over 120 shareholders had submitted an application to the Government requesting that two Government nominees should be appointed on the board of directors of Killick Industries Ltd to look after the interests of the minority group of shareholders. One shareholder hinted at the possibility of the Central Government ordering special audit for the Killick group of Companies including Surat Electricity. The chairman, Mr. A. N. Haksar, accepted the shareholders' plea for scrutinising the accounts and said that the shareholders would be notified about the meeting which is to be held again.

Referring to the affairs of the Company, Mr. Haksar said that the improvement in the working for 1960-61 was due mainly to the introduction of a fuel adjustment clause from 1st December,

1960, for consumers taking supplies of power at low tension. This enabled the Company to achieve a clear profit equal to the reasonable return and, in addition, take advantage of the appropriation which has accrued to development reserve. The fuel adjustment clause will be in operation for the whole year in 1961-62 and will, therefore, be of substantial benefit to the Company. But the chairman expressed concern over the Gujarat Electricity Board's decision to increase the billing demand for bulk power from 50 percent to 95 percent of the contract demand, since it would adversely affect the Company's earning capacity. At present, it is allowed to draw power from the Board to the extent of 13,000 kVA firm and 1,000kVA on a contingent basis. This meant that the demand charge was applicable on the 13,000 kVA of the firm demand. As long as the Company's offtake remained very near the contract demand, the impact of the proposed modification would not be serious. But in view of the fluctuating nature of energy sales in Surat and the existing control on distribution, it would be difficult for the Company to register the maximum demand at a level of 95 percent of the contract demand on the Board so as to avoid being penalised by the proposed change in the billing demand. Mr. Haksar added that the Company has made representation to the Surat Electricity Board in an endeavour to maintain the *status quo* in the matter and he hoped that some relief would follow.

The chairman stated that the Company's second receiving station with a capacity of 10,000 kVA was commissioned on 28th February, 1961. Surat Electricity has also received the permission to develop load to the extent of 2,900 kW during the next two years from the diesel stations. This will enable the Company to mitigate the load freeze which is now in force as part of the electricity control measures imposed in north and south Gujarat. Further power releases to the Company by the Board for essential loads will depend on the commissioning of the new 200 MW thermal-station near Cambay. The scope for large-scale expansion was limited as new industrial areas which were springing up happened to be wholly outside the Company's area of supply. However, industrial development visualised outside will provide scope for sizeable supplementary development in the Company's area. Mr. Haksar said that the Company would need finance to meet additional capital expenditure during the third plan. How best this could be raised would largely depend on the extent of relief which the proposals to amend the Electricity Supply Act, now under consideration by the Government, will provide to the investor. With power development rightly continuing to receive high priority, it is the Government's intention that all impediments in the way of raising the necessary capital should be removed.

Cotton Consumption and Exports

While hardly 2,500 bales are reported to have been sold out of the 30,000-bale export quota for cotton stapling $\frac{1}{2}$ inch and below other than Bengal Deshi, the ceiling for the Bengal Deshi quota for a like quantity was reached within 15 days of the acceptance of shipping bills from 2nd August. The sales are said to have been divided almost equally among the U.S.A., Japan and the Continent. Surprising as it might seem, the prices of Bengal Deshi cotton have declined by about Rs. 150 a candy of 784 lbs since the announcement of the export quota on 27th July in spite of the sale of 28,550 bales which had been fixed as the shippers' share. It is said that the bulk of export sales has been in the nature of distress selling; business was put through not because it was remunerative, but because exporters stood to lose less by selling abroad than by disposing of their stocks within the country. This vindicates the trade's stand that there existed a substantial exportable surplus. It maintains that there still remains a sizeable surplus in spite of the recent sales. Accordingly, it had recently urged the East India Cotton Association to ask the authorities to allow the export of Bengal Deshi under the quota for $\frac{3}{4}$ inch cotton which is extremely difficult to sell. Since the export quota for $\frac{3}{4}$ inch cotton had been issued mainly to help stabilise the prices of Gujarat cotton, the E.I.C.A. has not accepted the trade's suggestion, and it has requested the authorities to release a further export quota of 25,000 bales of Bengal Deshi. In view of the encouraging outlook for the new Deshi cotton crop and a satisfactory carryover, the Government will not be running any risk in accepting the trade's plea for an additional export quota. Apart from the fact that this will earn the much-needed foreign exchange for the country, it will also help stabilise the prices of Deshi cotton. The prices of new crop Deshi are reported to be below the lowest rates recorded in the 1960-61 season. The trade has been critical of the Government's cotton export policy in the 1960-61 season; and there is little doubt that piecemeal and untimely announcement of export quotas has caused heavy avoidable losses of foreign exchange to the country. Bengal Deshi of the extra

superfine quality, which has been recently sold around 18d a lb, fetched as much as 27d in December when the first export quota was released. The fact that the supply position of Bengal Deshi was distinctly comfortable was well known even by the end of December. Yet the authorities failed to release sufficient export quotas at the right time.

Foreign cotton licensed for import since the beginning of the season on 1st September, 1960 to 5th August, 1961, amounts to 1,102,929 bales, of which the sterling area cotton accounts for 326,344 bales. The rest is U.S. cotton, of which 718,637 bales are being imported under P.L. 480 and 57,948 bales are under barter arrangements. Of the 776,585 bales of U.S. cotton, 640,313 bales consist of cotton stapling $\frac{1}{2}$ inch and below, which is an all-time record. In fact, seldom has India imported short-staple cotton in the past: it was the partial failure of the 1959-60 Indian crop which compelled the Government to arrange for the import of short-staple cotton. The break-up figures of cotton licensed for import from the sterling area are: East African 116,665 bales, Sudan 83,221, Egyptian 82,208 and others 44,250 bales. Actual arrivals up to 8th August total 927,310 bales, comprising 340,692 bales of sterling area cotton and 586,618 bales of U.S. cotton. During the 1959-60 season, the total quantity of foreign cotton licensed for import was 1,176,169 bales, of which the U.S. cotton accounted for 462,765 bales. Actual imports during the season totalled 905,214 bales, comprising 350,450 bales of American cotton and 554,764 bales of sterling area cotton.

Mill consumption of indigenous cotton in June is placed at 378,000 bales, against 361,000 bales in May and 338,000 bales in June 1960. The June figure, which is the highest for any month in the 1960-61 season, brings the total for the first ten months of the current season to 3,456,000 bales, against 3,734,000 bales in the corresponding period of the last season. The consumption of foreign cotton in June amounted to 85,000 bales, against 83,000 bales in the previous month and 64,000 bales in June 1960. The total consumption of foreign cotton during the September-June period amounts to 951,000 bales, against 491,000 bales in the corresponding period of the last season. Stocks of cotton held by mills at the end of June consisted of 1,576,000 bales of Indian cotton and 394,000 bales of foreign cotton. The corresponding figures for June 1960 were 1,111,000 bales and 342,000 bales.

Amalgamated Electricity Does Well

Although the directors of Amalgamated Electricity Company have reduced the dividend for the year ended March 1961 from 10 percent to 9 percent, both taxable, by doing away with the bonus paid in the previous year, the working of the Company shows a satisfactory improvement over the previous year's performance. The sales of energy have risen from Rs. 95.94 lakhs in 1959-60 to Rs. 1.06 crores in 1960-61, and the gross profit is up from Rs. 25.16 lakhs to Rs. 28.88 lakhs. After providing Rs. 9.16 lakhs (against Rs. 7.98 lakhs) for depreciation and Rs. 1.93 lakhs (against Rs. 1.37 lakhs) for taxation, the net profit amounts to Rs. 14.09 lakhs, against Rs. 12.52 lakhs in 1959-60. Appropriations include development rebate reserve Rs. 1.92 lakhs (against Rs. 33.873), contingency reserve Rs. 67.121 (against Rs. 67.475), tariff and dividend control reserve Rs. 33.198 (against Rs. 42.470), employees' gratuity reserve Rs. 1.89,767 (against Rs. 88,714), arrears of depreciation Rs. 9,186 (against Rs. 9,317), miscellaneous expenses written off Rs. 27,142 (against Rs. 43,108) and tax relief reserve Rs. 18,958 (against Rs. 5,855). The ordinary and preference dividends absorb Rs. 11.09 lakhs. After bringing in the previous year's surplus of Rs. 15.69 lakhs and allowing for various appropriations, there remains a surplus of Rs. 13.53 lakhs to be carried forward. The directors state that there has been a pressing demand for power in Ajmer, Belgaum, Malegaon and Bulsar stations. The Company has completed negotiations for purchasing three generating sets of 1,800 B.H.P. each and one of 600 B.H.P. and import licence for these is awaited. The total cost of the three sets and auxiliaries is estimated at Rs. 15 lakhs. Amalgamated Electricity has also placed order for the solvent extraction plant. This project is estimated to cost Rs. 20 lakhs. The Company has received the consent of the Controller of Capital Issues for issuing 286,300 equity shares of Rs. 10 each at par to the existing shareholders. The additional finance is needed for the development schemes. The Rs. 10-paid share of the Company is quoted around Rs. 10.20 cum-dividend.

L. I. C. Business Targets

According to Mr. S. D. Srinivasan, managing director of the Life Insurance Corporation, the Corporation has completed about 25 percent of its programme of Rs. 600 crores of new business for 1961 by the end of July this year. He also says

that proposals pending amount to about Rs. 100 crores. Even so, taking a very optimistic view, the Life Insurance Corporation can at most claim to have new business worth Rs. 250 crores by the end of July 1961, leaving a gap of Rs. 350 crores to be made up in about five months time. It is difficult, therefore, to share the optimism of Mr. Srinivasan that the L.I.C. can reach the target by the end of the current year. To all accounts, the L.I.C.'s new business trend this year has been slow. The Calcutta zone, at any rate, is far behind and the record of other zones is not encouraging. In the circumstances, there is little hope of it completing its programme by 1961 or reaching Rs. 1,000 crores by the end of 1963 in terms of its phased five-year programme. The reasons for this shortfall, or rather the retarded growth, of the Corporation are many and various. One of them, undoubtedly, is inadequate servicing. Frustration of field workers, agents and office personnel, largely due to poor and inefficient office administration, and the lack of supervision and servicing of the requirements of the agents and field workers have greatly hindered the growth of new business. The insuring public, again, is unhappy. It has perforce to go to the L.I.C. because there are no alternatives. But it might have invested more of its savings had the servicing been more desirable and had the agents and field-workers been able to show the necessary initiative and drive in persuading prospective clients. Again the L.I.C. is wedded to orthodox trading. Its actuarial manpower has not as yet suggested stimulating schemes to attract the varied class of wage earners now becoming a potential source of its business.

The issue of bonus is well known. Although the L.I.C. is reported to have prepared the outline of a new scheme for the payment of bonus to policyholders, there is no evidence as yet to suggest that the bonus due to them resulting from the valuation on 31st December 1957, will attach to their policies, and if so, when. That has been all through a sore point with the policyholders and it is rather strange that the announced bonus is taking a long time to materialise. To complete the quota for 1960, the L.I.C. carried forward its closings until the end of February and March 1961. This was the unwelcome practice which some of the erstwhile companies carried on. There is no good reason why the L.I.C. should have followed their practice, but once this procedure for late closing is adopted, inevitably it will result in the same thing being done over and over again. Even then, there is no great likelihood of the L.I.C. reaching the Rs. 600-crore mark of effective new business. It will be more straightforward and, therefore, better if the L.I.C. admits that the 1961 figures are a bit high to aim at and closes the book in due time.

Flood Havoc in U.P.

According to a recent statement made in the U.P. Vidhan Sabha, the number of deaths in the various flood-affected areas in the State had gone up to 129. The total area submerged is about 1.70 million acres, including about 9,000 villages. Floods have occurred in many parts of the country during the year, and no precise estimates are available of the extent of damage which must be considerable. It is distressing that floods should continue to occur in spite of the fact that India has no less than 13 State Flood Control Boards, four Inter-State River Commissions and a Central Flood Control Board. The Central Minister for Irrigation and Power has denied that there has been any increase in floods in recent years. According to him, what has happened is that due to the increase in population more and more people have been settling down on flood plains. This does not seem to be a convincing explanation, but his further statement about encroachments made by irrigation and power schemes shows that the fault really lies elsewhere. Mr. Ibrahim said: "We are examining whether in the future designing and construction of dams, greater cushion should not be provided for flood absorption and also that steps are taken to see that where such a cushion is provided, it is not encroached upon for purposes of irrigation and power generation."

Although flood control is given nominal priority in most multi-purpose river projects, in actual practice precedence goes to power generation and then to irrigation. Four dams considered necessary for flood control in the D.V.C., for instance, have not been taken up at all. Under the circumstances, it is perhaps premature for the third five year plan to speak of educating the people on the benefits of flood control so that they may be prepared for the subsequent levy of a flood cess. Andhra, Assam, Bihar, Jammu and Kashmir and Kerala have already enacted legislation for the purpose, but the enforcement will not be easy in the face of the continued havoc wrought by floods. Even the demand for a betterment levy for irrigation has in many places, been opposed because of the damage caused by water-logging, which is to be directly traced to the failure of

irrigation projects to provide for drainage works as well.

Hard Case and Bad Law

Dismissing a writ petition filed by an assessee against the orders of the Appellate Assistant Commissioner and the Income Tax Appellate Tribunal, Mr. Justice B. L. Gupta of Allahabad High Court said that it was a "very hard case" and that the "matter might be brought to the notice of Parliament." The Income Tax Officer had imposed a penalty of Rs. 50,000 on the petitioner for being in default of payment of income tax for a certain assessment year. The assessment order passed on 26th March, 1952, created a huge income tax amount against the petitioner, namely, Rs. 1,77,450 for the assessment year 1947-48. The petitioner went up in appeal to the Appellate Assistant Commissioner who, by an order dated 12th August, 1952, modified the assessment and knocked off a considerable amount of the original demand. The petitioner went up in second appeal to the Income Tax Appellate Tribunal who, by an order dated 26th November, 1953, modified the tax demand further. The result of the Tribunal's order was, in fact, that instead of the petitioner being liable to pay any amount, he became entitled to the refund of a certain amount from the Income Tax Department. Meanwhile, as a result of the demand created by the assessment order of 1952, the petitioner was called upon to pay the income tax and in June 1952, the impugned penalty was imposed upon him. An appeal was filed against the imposition of penalty before the Appellate Assistant Commissioner but it was rejected on the ground that the appeal was filed without the income tax having been deposited first. This order was also upheld by the Income Tax Appellate Tribunal in the second appeal. The High Court has held that the petitioner has not been able to show that there was any error of law which vitiated the orders of the Tribunal and the Commissioner. Having regard to the dates which were material, there was default on the part of the petitioner to pay income tax and the penalty was correctly levied. But, Mr. Justice B. L. Gupta said, having regard to the ultimate fate of the assessment proceedings, it was apparent that the law in this matter was very harsh. He said that on an issue like this, there might have been a provision in the Income Tax Act that, subject to the ultimate result of the assessment proceedings, the order on penalty would be suitably or correspondingly modified.

Pullongode Rubber Pays More

The Pullongode Rubber and Produce Co. Ltd reports a higher net profit for the year ended March 1961 at Rs. 91,799, compared with Rs. 59,887 for the previous year. The increase was due mainly to a higher crop. The net profit is arrived at after providing Rs. 1,50,000 for taxation, against Rs. 55,900 in the previous year. It may be noted that the higher profit for the year has enabled the Company to pay a slightly improved dividend of 6 percent, against 5 percent for the previous year. Including the carried-forward balance of Rs. 17,795, the total available for distribution is Rs. 1,08,994. The dividend at the rate of 6.131 percent, taxable, on preference shares, accounts for Rs. 9,197. The proposed ordinary dividend of 6 percent, subject to tax, will absorb Rs. 99,000. There is a balance of Rs. 797 which is carried forward. The rubber crop harvested during the year amounted to 3,13,433 kilograms, against 261,973 kilograms for the previous year. The all-in cost of production was lower at 334.09nP a kilogram, against 336.03nP a kilogram in the previous year. But the average sale price was slightly lower at 344.77nP a kilogram, against 345.11nP a kilogram, in the previous year. The 1960-61 crop was a record for the Company. That for 1961-62 is put at 294,835 kilograms of rubber.

More from Western India Plywoods

For the year ended March 1961, the Western India Plywoods Ltd reports a substantially higher profit, compared with that of the previous year. It amounts to Rs. 9,50,690, against Rs. 3,06,634, and is arrived at after providing Rs. 9,65,875 for depreciation (against Rs. 1,81,913), and Rs. 35,520 for development rebate (against Rs. 11,00,000). With surplus comes to Rs. 9,56,976. Out of this Rs. 3,75,000 (against nil), a sum of Rs. 1,50,000 is transferred to reserve for the Industrial Finance Corporation of India (against nil). The dividend of 7.8 percent, subject to tax on the cumulative preference shares, accounts for Rs. 4,81,65. The proposed dividend of 12 percent, subject to tax, on the ordinary shares (against 10 percent for the previous year), will absorb Rs. 3,76,977. The balance of Rs. 6,834 is carried forward. The directors state that both the plywood and hardboard are finding

increased sales in the market. The total sales amounted to Rs. 67,86,935, against Rs. 58,00,616 in the previous year. The closing stock of finished goods stands at Rs. 12,23,791, against the opening stock of finished goods at Rs. 2,73,116.

Vijayakumar Mills Lose Again

The working of the Vijayakumar Mills Ltd for the period ended 6th March, 1961, has resulted in a loss of Rs. 7,11,972, after writing off depreciation to the extent of Rs. 3,96,766. Adding to the year's loss in working, and that for 1958, the total loss comes to Rs. 8,61,786, which is reduced to Rs. 8,55,804 after deducting Rs. 5,982 being the surplus for the year ended December 1959. The rate of cotton yarn production was only 71.2 percent, and the rate of staple fibre yarn production was 94.8 percent. The directors attribute several reasons for the adverse working results.

Travancore Electro-Chemical Loses

The audited accounts of the Travancore Electro-Chemical Industries Ltd for the year ended December 1960, show a loss of Rs. 59,516.66. In addition to 5,000 equity shares of Rs. 100 each of the Company subscribed by the Kerala Government and 1,912 forfeited shares of Rs. 100 each resold at par, the Company has allotted 9,055 equity shares of Rs. 100 each and raised a further capital of Rs. 9,05,500. Thus, the total issued and subscribed capital now stands at Rs. 24,25,500. The Company has now placed orders for the new plant with Messrs D. I. A. Invest Export, Berlin. The suppliers are expected to start giving delivery of the machinery in the last quarter of this year. The complete equipment will be delivered by June 1962. In the meanwhile, the Company is making arrangements for putting up additional buildings to locate the new furnace and plant. The foreign experts, it is expected, will arrive in India by April 1962 for erecting the plant and putting it into operation. The directors expect that the plant will go into commercial production before the end of 1962. The Accountant General of Kerala State has informed the Company that it has ceased to be a Government company within the meaning of Section 619 (4) of the Companies Act as a result of the resale of the 1,912 forfeited shares.

Enfield India Maintains

The working of the Enfield India Ltd for the year ended December 1960, has resulted in a net profit of Rs. 3,29,981, after providing Rs. 5,19,112 for depreciation, compared with the previous year's Rs. 3,35,186, which was arrived at after providing Rs. 3,63,601 for depreciation. With the amount of Rs. 4,810 brought in, the total comes to Rs. 3,34,791. Out of this, development rebate reserve gets Rs. 1,34,605 (against Rs. 1,52,718). The supplemental dividend at 2.10 percent on 7 percent tax-free redeemable cumulative preference shares in accordance with the Preference Shares Regulation Act for 1959 accounts for Rs. 19,021. The dividend at 9.10 percent for the year 1960 on 7 percent preference shares of Rs. 100 each accounts for Rs. 91,000. The proposed dividend of 5 percent for the year 1960 on equity shares (against 5 percent) will absorb Rs. 86,050. The balance of Rs. 4,115 is carried forward.

The production and sales of the Company's products increased during the year. Higher productivity and efficiency in the manufacturing operations were achieved as a result of the work study and the incentive scheme, and these have greatly offset the increase in the cost. Necessary steps were and are being taken to expedite the Company's expansion programme for the manufacture of scooters. During the year, 100,000 equity shares of Rs. 10 each were issued which were subscribed in full. In order to provide funds to finance the purchase of the balance of the fixed assets for the motor-cycle scheme, a further loan of Rs. 900,000 was obtained from the Industrial Finance Corporation of India. Most of the remaining plant and machinery for the scheme was received and put into operation. As a result, a further increase in the indigenous content of the motor-cycles was achieved and by the middle of 1961, the phased programme as originally submitted to the Government, has been fulfilled. The Company is, therefore, in a position now to concentrate on accelerating the production of its vehicles. In April 1961, it issued 233,300 equity shares of Rs. 10 each of the total face value of Rs. 23,33 lakhs. Out of this, 33,300 equity shares of Rs. 10 each of the face value of Rs. 3.33 lakhs are reserved for allotment to the Villiers Engineering Co. Ltd, U.K., against the supply of plant and machinery, and the remaining 200,000 equity shares of the face value of Rs. 20,00,000 were offered for subscription to the existing members. This issue was fully subscribed. A technical collaboration agreement has been concluded, subject to the

approval of the Government, with the Villiers Engineering Co. Ltd, U.K., for the manufacture of their engines for industrial and agricultural applications. The Company has submitted an application to the Government for a licence under the Industries (Development and Regulation) Act, for undertaking this project by a subsidiary of the Company to be formed.

Velimalai Rubber Pays More

The net profit of the Velimalai Rubber Co. Ltd for the year ended February 1961, amounts to Rs. 1,85,337.15 after allowing for all charges, depreciation and debenture interest, but before providing for taxation. The previous year's figure was Rs. 2,08,870.58. With the amount of Rs. 10,652.94 brought in, the total available surplus for appropriation comes to Rs. 1,95,990.09. Out of this, the directors have provided Rs. 55,000 for taxation (against Rs. 75,000), Rs. 40,000 is transferred to debenture redemption reserve (against Rs. 40,000) and a sum of Rs. 21,500 is transferred to rubber replanting reserve (against nil). The 7 percent dividend on the preference shares, subject to tax, amounts to Rs. 17,500. The proposed dividend of 10 percent on the ordinary shares, taxable (against 12 percent), will absorb Rs. 60,000, leaving a balance of Rs. 1,990.09, which is carried forward to next year. A rubber crop of 415,291 lbs was harvested at a cost of 100.12nP a lb, against 401,452 lbs at a cost of 94.97nP a lb for the previous year. The tea crop harvested was 53,525 lbs at a cost of 125.47nP a lb, against 49,305 lbs at a cost of 140.10nP a lb for the previous year. The net average sale price was 158.50nP a lb for rubber, against 159.01nP a lb in the previous year. The average sale price for tea was 183.03nP a lb, against 168.56nP a lb in the previous year. The estimated rubber crop for the current year is put at 415,000 lbs, at a cost of 99.46nP a lb, and the estimated tea crop is 55,000 lbs at a cost of 113.06nP a lb.

More from Malabar Industrial

For the year ended February 1961, the Malabar Industrial Co. Ltd has earned a net profit of Rs. 45,747.22, against the previous year's Rs. 26,483. With the amount of Rs. 889.51 brought in, the total comes to Rs. 46,636.73. The proposed dividend of 9 percent (against 6 percent) will absorb Rs. 40,500. The balance of Rs. 6,136.73 is carried forward. The total rubber crop amounted to 304,375 lbs. The estimated crop for the year 1961-62 is 300,000 lbs. The total tea crop for the year amounted to 113,593 lbs, and the average selling price was Rs. 1.56 a lb. The estimated tea crop for 1961-62 is estimated at 100,000 lbs.

Higher Profit for Mysore Machinery

The net profit of the Mysore Machinery Manufacturers Ltd for the year ended December 1960, amounts to Rs. 1,69,921, after providing Rs. 1,39,280 for taxation, compared with the previous year's profit of Rs. 1,32,779, which was arrived at after providing Rs. 1,29,902 for taxation. With the amount of Rs. 4,790 brought in, the total comes to Rs. 1,74,711. The proposed dividend of 14 percent, subject to tax (against 12 percent), will absorb Rs. 1,25,325. A sum of Rs. 45,000 is transferred to general reserve (against nil). The balance of Rs. 4,386 is carried forward. The directors state that the Company experienced very good demand for power-looms during the year.

SOME COTTON MILL RESULTS

LAST Wednesday afternoon was occupied by Messrs Greaves Cotton & Co., Bombay, in noidig meetings of shareholders of the Cotton Mills under their control, all of which appear to have worked at a serious loss. Thus the Empress Spinning and Weaving Co. show a loss on the mill working for the past year of Rs. 1,31,117; the James Greaves Mills of Rs. 37,795; the Cornaught Mills of Rs. 48,482; the Howard and Bulough Mills of Rs. 59,487; the Leopold Spinning and Bleaching Co. of Rs. 30,839; and the Imperial Cotton Mills of Rs. 94,238. It thus appears that these six mills have dropped in hard cash Rs. 4,21,978 as the result of their working. The paid-up capital of these mills is roundly 45 lakhs of rupees, and though the Reserve Funds total 564 lakhs with the exception of the Leopold Mills all the shares are at a discount. The Damodhar Lakhmids Mill, another concern with a capital of 94 lakhs, has lost Rs. 61,719, and its shares of Rs. 1,000 are quoted at Rs. 250. Out of 41 spinning and weaving mills with a total capital of 441 lakhs, the shares of only four concerns with a capital of 634 lakhs are at a premium. Taken as a whole, the shares are at an average of 45 percent discount.

STEEL

For India's Growing Economy

Durgapur Steelworks have begun to produce the 1,000,000 tons of ingot steel a year to provide materials for the expanding heavy engineering industries.

The contribution of Davy-United* to this completely integrated iron and steelworks is backed by over 100 years experience in building steelworks plant. Behind this engineering enterprise is an international organisation which has built many types of large industrial plants in India and other continents.

*As members of ISCON, Davy-United are responsible for the rolling mills, central engineering and maintenance shops, iron and steel foundry and the wheel and axle plant. Co-ordination of this part of the project has been undertaken by the construction division of Davy-United.

A Ditcher's Diary

SO MANY RED HERRINGS (ALAS) HAVE BEEN DRAWN across the trail of the current argument on who is responsible for depriving the Bengali of his fish that I simply do not know what is what. One hears of rings, of a succession of rigged auctions, of the failure of Dr. Roy's deep-sea scheme—until now fish prices are quite beyond the reach of the middle classes in Calcutta. In this part of the country food habits are usually stubborn. During the 1943 famine only a few Bengalis were persuaded to give up rice and switch over to wheat and other things. And I am equally certain that, despite the much publicised consumer resistance in the fish markets of Calcutta, the Bengali will insist on his fish. It is with many reservations, however, that others should advise the Bengali to give up what he likes; and Dr. Roy's statement that he had given up fish for the time being would perhaps have offended me if I were a middle-class Bengali. The flexibility of food habits that so many well-to-do people talk about entails additional expenditure; and I have not seen it argued that this particular class enjoys that margin in its income. From Kerala and elsewhere now come quite good tinned fish and clams, among other things. A bachelor going to get those tins is all right; it is a very different proposition when an ordinary householder is asked to feed his even medium-sized family on tinned stuff. Much too expensive. What then is the answer? Some of the ideas currently hawked are to be ruled out straight away. Smash the wholesalers' ring, say some. Easier said than done, especially with the general election impending. The Government dares not interfere with the profiteers, for they contribute most to Party funds. More trawlers for deep-sea fishing is perhaps Dr. Roy's answer. His Government's record of performance in this department is so dismal that scepticism must be the reaction of everyone. Popular boycotts are temporary; and so are their effects. No. I do not know the answer, at least not one which would cost the tax-payer less money than Dr. Roy's so-called answer. Meanwhile I read that supplies of fish to jails, among other places, are being maintained. The clue for fish-eaters hardly needs elaboration.

ALL THE MORE RELIABLE EYE-WITNESS REPORTS OF last week's Lok Sabha debate on the third plan seem to agree on two points: the House showed little interest and the Prime Minister did not have his heart in what he was saying. I can readily understand both phenomena. Comment on the Government's economic plans these days is apt to run into a brick wall of Ministerial—especially Prime Ministerial—contradictions and obfuscation. The planners' minds seem completely closed to new ideas, so what is the use of taking any further interest? I myself experienced much the same reaction from the people I questioned concerning their feelings about the plan. Most of them shrugged their shoulders in a helpless sort of way: some commented that it was much as they had expected. But what was completely lacking was any sign of general approval and enthusiasm. And that I thought was odd, seeing that quite a number of the people I spoke to must have been doing rather well out of the inflation the plans are generating. Mr. Nehru too seems to share the general lack of

conviction. His words were stirring enough, although he cannot possibly have expected all of them to be taken seriously; what Mr. G. L. Nanda said about full employment by the end of the fourth plan should, of course, be a strong contender for this year's perfect gaffe. One conclusion I have drawn from this Ministerial indifference is that it is now widely accepted that the plan is really an election manifesto and not meant for attaching much importance to at all. When the Government is safely back in power the targets can be scaled down and some of the strains relieved, as happened last time. Conversely, it might now be dawning on New Delhi that the trend towards socialism—or State capitalism really—is having its inevitable repercussions in alienating the enthusiasm of the masses. I have often wondered how the Government could ever have expected to work a Soviet-type plan without using Soviet methods of coercion. Inevitably processes of development which presuppose the aid of force stumble on the rock of public indifference when they fail to use it. I am wondering what the Government's reaction will be when it is finally obliged to face the fact that present policies are not achieving the rate of progress which this country needs. Is it going to be towards more Soviet methods or to more liberal ones? If the former then the ordinary Indian has cause to worry because he will have to work harder and accept less for it. Not necessarily the industrialist however: he will be paid twice as much, will have no taxes to find and no labour problems to keep him awake at nights. I often wonder why it is always the worker who votes communist.

IT IS A VERY RELUCTANT MR. NEHRU WHO WILL BE sitting at the neutralists' conference at Belgrade tomorrow; and there is not much for anyone to enthuse over. It is no secret that the meeting is being held for no better reason than that Messrs Tito, Nasser, Soekarno and Nkrumah wanted it. No two leaders foregathered in Belgrade expect the same things from the proceedings; but it is possible to spell out the real objectives of the enthusiasts. Marshal Tito, the only European there, has still to make his peace with the Kremlin; and Peking daily pours contempt on him. But it is unlikely that Mr. Nehru will go the whole hog with the Marshal in denouncing China. President Nasser is slowly consolidating his position in the Arab world; and Belgrade may help. Here too Mr. Nehru does not quite fit in: he clearly has his misgivings about what Mr. Nasser means by his Arabism. Mr. Nkrumah's African personality means himself; but even in Ghana everything is not going in his favour, and an economic crisis may not be far off. Dr. Soekarno, I suspect, simply wants to stay away from his country as long as he can; and a neutralists' summit is as good an excuse as any. Mr. Nehru's job in Belgrade will be to come away from it with the least possible embarrassment—and commitment. The extremists will demand all sorts of things. With Mr. Ferhat Abbas out, the F.L.N. delegation promises to be the most persistently extremist, although keen competition in the matter must be expected from Cuba and some others. Berlin must be pretty high on the agenda; and Moscow, which does not much care

for summits like Belgrade's, may well expect some support from the neutralists—judging by Mr. Nehru's recent statement in Parliament, which needed to be "clarified" to more than one western Power. Looking through the list of delegates at the Belgrade conference I cannot see one who is likely to present the western case on Berlin—and there is a good one. The danger of following too closely Moscow's line in this matter is that it might encourage Mr. Khrushchev to overplay his hand under the impression that he has neutralist opinion behind him. It is then unlikely to be any consolation to the neutralists to find that although they have had the satisfaction of twisting the West's tail, they have helped plunge the world into war. The West could not, by definition, be present at Belgrade, as the East cannot either. But time and again I have seen that in most such parleys there is always someone to say a word for the communists. The contradiction with neutralism is perhaps clearer to me than to those now in Belgrade.

THE WRITINGS OF MR. IAIN COLQUHOUN HAVE always been enjoyable for their solid and instructive quality, whether they appeared in the columns of the now defunct *News Chronicle*, of which he was deputy editor, or elsewhere. His analysis of the fortunes of the Press in the U.K., a Hobart Paper entitled *A Prosperous Press*, published under the auspices of that excellent institution, the Institute of Economic Affairs, arrived on my desk a few days ago and was immediately marked for compulsory reading. Mr. Colquhoun deals only with the British Press, whose financial affairs are now the subject of a probe by a Royal Commission. But lest the title should give a misleading impression about the actual economic condition of the U.K. newspaper industry, let me make it clear straight away that the theme is not that the British Press is at the moment prosperous, but that there are certain essential conditions for keeping it in proper health, vigour and funds. Here most of the author's suggestions could be applied with profit to the Indian Press as well. His prescriptions are several, but I can deal with only the main ones. First, Mr. Colquhoun's point that a free Press should on no account compromise its independence by accepting patronage from the State is a wholesome principle to be respected in any democracy, and I could not agree more with the proposition that a healthy relationship between journalists and politicians should be one of suspicion and even hostility. How often have I felt that authority in this country would have been a damned sight more efficient and more responsive to public criticism had the Press as a whole been a little more critical. Second, the author insists that the problem of costs is not only the responsibility of employers, but is one about which employees too must be concerned in their own long-term interests. In the U.K. there are signs that the unions are beginning to realise this, although it has come too late to save a number of national newspapers from extinction. In the absence of accurate data, I am in no position to judge whether the cost problem is beginning to worry managements here, but from my own knowledge of this paper I do know how easily costs can get out of hand. I admit, of course, that the character of the Indian market is different and that the circulation potential could be infinitely greater than what it is in the U.K. But in India, thanks to the ridiculous system of automatic annual increments, cost inflation is an inherent feature of business management.

LIFE INSURANCE CORPORATION OF INDIA

CHAIRMAN, MR. P. A. GOPALKRISHNAN'S STATEMENT

"In a world of ever increasing commodity prices, life insurance policies in India cost less today than at any time during the last fifteen years or so", says L. I. C. Chairman, Mr. P. A. Gopalkrishnan, ICS, at the 64th Meeting of the Life Insurance Corporation of India, held in Bombay on 28th August, 1961 to discuss Annual Report and Audited Accounts for the year 1960.

Gentlemen,

I have great pleasure in welcoming you all to this fifth anniversary meeting of the Corporation. We have assembled here today to consider the draft of the Annual Report and Audited Accounts of the Corporation to be submitted to Government under Section 27 of the Life Insurance Corporation Act. These have already been circulated to all the Members.

New Business

The Corporation is now five years old. During this period, the second Five Year Plan of the country has come to a close and considerable progress has been made in all fields of economic activity. The national income at current prices has risen from Rs. 9,980 crores in 1955-56 to Rs. 12,840 crores in 1959-60. On the other hand, the general price level has also increased hitting middle-class with fixed incomes. These classes form the bulk of our policyholders and we have been finding it extremely hard to get business from them. To add to our difficulty, there were in 1960 widespread floods in Punjab, Uttar Pradesh, Bihar and Orissa, drought in Mysore and Andhra Pradesh and linguistic disturbances in Assam. Our business in these areas was adversely affected by these factors. We had also to contend with rival demands made by the various forms of savings propagated by banks and the Government.

In spite of all the above factors, our new business last year was Rs. 498 crores covering 1.26 million policies as compared with Rs. 429 crores in 1959 covering 1.15 million policies. The premium income increased from Rs. 84 crores in 1959 to Rs. 97 crores in 1960 and the total income exclusive of refund of tax from Rs. 105 crores to Rs. 122 crores. In 1955, the year immediately preceding nationalisation of life insurance, the premium income of all the companies was only Rs. 58 crores and the total income Rs. 74 crores.

Rural Development

We have been able to achieve these results and hope to improve upon them during the current year owing to our policy of systematically expanding business in the rural area. Field Officers have been allotted exclusive rural territories in which they are building up a net-work of agency force. In some States, we have been utilising the agency of Panchayats and Co-operative Societies for securing rural business. Rural publicity has been intensified and life insurance literature is now distributed through Community Development Blocks and village panchayats, in addition to our normal channel of distribution through our own branch and sub-offices. Jeeps have been supplied to all divisions and a mobile publicity van equipped with projector and films has been provided to each zone as an experimental measure. These vans visited over 3,400 centres in 1960 and secured spot business of about Rs. 37 lakhs. Approximately, 26 lakhs of people attended the meetings convened by the officers-in-charge of these vans. Saving the future prospects for rural business revealed by this mobile van publicity, we have supplied an additional van to each Zone during the current year. The spot business secured by these vans during the first half of 1961 is as much as Rs. 61 lakhs. In the Southern Zone, we have gone a step further by converting the mobile publicity van into a mobile insurance office. This Office underwrites business and issues policies on the spot. The experiment has been recently extended to the Northern Zone also and will be extended to other areas if it proves a success.

Non-medical Business

Another significant step that we have taken in the current year is to extend non-medical business, i.e., insurance without medical examination, to all those within certain age groups whose total insurance does not exceed Rs. 2,000. This will help us to secure more and more business from the rural areas. Non-medical business to special categories of persons in civil employment has been increased upto a limit of Rs. 5,000 and to category A-I of the Commissioned Officers in the Armed Forces upto a limit of Rs. 10,000.

Foreign Business

In the foreign countries, where we operate, conditions were not quite favourable for life insurance business in 1960. Political uncertainty in East Africa led to a flight of capital and fall in the business secured from the Indian community. In 1960, however, we started insuring African lives and we got a certain amount of business from this source. There was considerable damage in Mauritius by a cyclone and in Fiji Islands by a prolonged strike of cane growers. Nevertheless, we completed in all Rs. 9.7 crores of new business during the year as against Rs. 9.47 crores in the previous year.

Foreign Exchange Earnings

Although our foreign business is very small compared to the business that we are doing in India, it is very important from the point of view of foreign exchange. Our net earnings of foreign exchange per year amount approximately to Rs. 2.5 crores.

Business in Force

The total business in force at the end of 1960 was Rs. 2,285 crores covering 7.7 million policies as compared with Rs. 1,958 crores covering 6.9 million

policies at the end of 1959. These figures include the business outside India which increased from Rs. 103 crores in December 1959 to Rs. 109 crores at the end of 1960. In this connection, I would like to refer to the phenomenal growth of life insurance in India during the last ten years and, particularly, after nationalisation of the industry five years ago. The life business in force in India has almost trebled during this period. To this remarkable increase, the contribution made by the private sector companies during 1950-55 was Rs. 380 crores. During the following five years, the increase has been as much as Rs. 1,048 crores. Expressed as a percentage of the national income, life business in force has increased in the country from about 11% in 1955 to 17% at the end of 1960. As these figures do not include the comparatively small amounts of business on the books of the Postal Department and a few State Governments, the percentage of business in force at the end of 1960 should be more than 17.

Yield from Investments

The income from interest, dividends and rents before deduction of income-tax rose to Rs. 23.96 crores from Rs. 20.98 crores in 1959. During the five years from 1955 to 1960, the income from this source has more than doubled. The gross interest yield on the Life Fund was 4.58% as compared with 4.54% in 1959 and 4.52% in 1958. This steady increase in the yield on our investments has been brought about mainly by the judicious manner in which we are making investments from year to year.

Life Fund and Assets

The Corporation's Life Fund has registered a significant increase from Rs. 495 crores in 1959 to Rs. 560 crores in 1960. The total assets have similarly increased from Rs. 554 crores in 1959 to Rs. 622 crores in 1960. Net investments of all kinds made in 1960 amounted to Rs. 33.62 crores as compared with Rs. 35.04 crores in the previous year. The total Stock Exchange investments at 31st December 1960 had a book value of Rs. 471 crores. Their market value on the same date was higher by nearly a crore of rupees. There is, moreover, a reserve of Rs. 13.41 crores to offset any future fall in the market value of these investments and it is proposed to keep this reserve in tact for the present.

Housing

Owing to the acute housing shortage in the country, the Corporation decided to build its own staff and officers' quarters at different places and step up housing loans to State Governments, Co-operative housing Finance Societies and other institutions. Besides, in granting mortgage loans against the security of buildings, the Corporation shows special consideration to applicants wanting loans for constructing or completing residential buildings for their own use. From the commencement of these schemes within the last two years up to March of this year, the total housing loans sanctioned by the Corporation amount to Rs. 23.05 crores. These loans have not yet been fully utilised by the agencies which received them. According to information available with us, the State Governments have so far sanctioned loans for the construction of 3,859 middle class houses and 4,238 State employees' houses. The Co-operative Housing Finance Societies and other institutions have disbursed loans for the construction of 2,795 houses and the Corporation itself has constructed 264 quarters in India besides sanctioning loans to its employees' Co-operatives for building 118 houses. The number of houses, for whose construction or completion mortgage loans have been sanctioned is, 95. Thus, the total number of houses constructed or under construction in the country with the aid of L.I.C. funds is 11,367. The Corporation has also indirectly helped the relief of housing shortage by putting up or completing office buildings worth Rs. 3.91 crores during the last five years.

Expenses of Management

Turning to expenses of management, 1960 was a difficult year. The cost of administration has been going up owing to various reasons such as increase in the prices of stationery and printing, and of conveyances and their maintenance. Higher rates of conveyance and travelling allowances had to be sanctioned for certain categories of touring officers. The penetration of the rural area and organization of publicity in villages are costing more than the all, we had to sanction from 1st April 1960 an ad-hoc increase of Rs. 15/- in the dearness allowance paid to all our officers and staff drawing upto a salary of Rs. 500/- per month. This alone increased our expenditure in 1960 by Rs. 46.44 lakhs. However, by effecting economies wherever possible, and keeping a strict control on recruitment of staff, it has been possible for us to keep down our expenses of management. The overall expense ratio of the Corporation fell from 28.7% in 1959 to 28.4% in 1960 but the renewal expense ratio, which is the real indicator of economy of management, remained practically constant at 12.9%. Had it not been for the factors mentioned above, the renewal expense ratio might have been nearer 12% than 13%.

Claims Paid

Maturity benefits to owners of policies amounted during the year to Rs. 23 crores and death benefits

to Rs. 8 crores. The total claims during the year thus amounted to Rs. 31 crores as compared with Rs. 28 crores during 1959. During the four years and four months ending with December 1960, the total benefits to our policyholders and their beneficiaries by way of claims amounted to Rs. 113 crores.

Premium Rates

There has been a suggestion in certain quarters that since competition has been eliminated after nationalisation of life insurance and overheads have been reduced, the Corporation should examine the possibility of reduction in premium rates. I would like to point out in this connection that the premium rates charged by us are much lower than those charged in the past by Indian companies. For example, the rates charged by the Oriental Government Security Life Assurance Co. Ltd. from 1947 to 1953 under main insurance plans were 5% to 35% higher than the Corporation's rates. In 1954, there was a drastic reduction in premium rates by all the Indian companies, including "Oriental" and these reduced rates continued upto the date of nationalisation. In spite of this drastic reduction, the "Oriental" reduced rates were higher than the Corporation's rates by Rupee 1 per thousand sum assured or anything from 1% to 5% under various plans. Thus, while the price of every other commodity has been increasing, life insurance policies cost less today than at any time during the last fifteen years or more. It is true that our mortality experience has been showing steady improvement and death claims have been going down as compared with the volume of business in force. While these factors should enable the premium rates to be reduced, inflation and the resultant increase in the cost of administration and the higher cost involved in the expansion of rural business work in the opposite direction. All these problems are constantly under study in our Actuarial Department and if and when we find it possible, we shall certainly consider further reduction of premium rates.

Lapse Ratio

During the Second Plan Period, the general price level is estimated to have increased by 30% and the working class cost of living index by 24%. Inflationary pressures thus generated have begun to be reflected in the net lapse ratio of the Corporation. The lapse ratio which was 9.1% in 1956 came down to 6.4% in 1957 and to 5.1% in 1958. In 1959, it rose to 6.4% and in 1960 to 6.6%. The abnormal drop in the ratio of 1958 is partly accounted for by a necessary alteration in our system of granting policies as lapses. Even so, it is clear that the net lapse ratio, which gradually fell after nationalisation, has begun to rise again. There are also certain other disquieting signs which show that some policyholders who fixed incomes and increasing commitments are finding it difficult to save enough and keep their policies alive. Loans to policyholders, which used to increase by roughly Rs. 1 crore per year till 1959, increased by Rs. 3 crores in 1960. Outstanding premiums, which similarly used to increase by Rs. 1 crore per year, have increased in 1960 by Rs. 2.5 crores. If inflationary pressures increase during the period of the Third Five Year Plan, it is bound to accentuate the tendencies and make it extremely difficult for the Corporation to keep down its lapse ratio. The only gratifying fact is that the 1960 lapse ratio of 6.6% is still well below the lapse ratio of 7.6% in the last year of life insurance management by the private sector companies.

Administrative Efficiency

The efficiency of our administrative offices has been steadily improving as a result of our training programmes and better supervision and control by the officers-in-charge. Practically, every Divisional Office has one or more instructors to train newly recruited assistants and also existing assistants who need training. Our Officers' Training College at Nagpur has already trained 536 officers and supervisory personnel. As more and more of our administrative staff are trained at these institutions, further improvement of the efficiency of our offices may be expected to take place. The improvement that has already resulted is evident from the big drop in the number of complaints received and also from the increase in the average output of our offices. In 1959, the monthly average of the number of complaints received in our various Divisional Offices and major I.H.O. Units was 3,274. In 1960, the number fell to 2,171 representing a fall of 33.7% despite the increase in the number of policies. Similarly, the increased output of our offices will be evident from the fact that, while between 1957 and 1960, the number of new policies increased by 55% and the total number of policies on our books increased by 36%, the total staff of the Corporation increased only by 30%. Further steps are being taken to improve our systems and procedures for more expeditious despatch of business and also to assess the minimum staff requirements of each office on a more scientific basis than hitherto. These steps are bound to bear fruit in future years.

Field Efficiency

The Development Training Centres which we have started in all the Zones have been systematically training our field officers and agents. The number of persons trained so far is 5,214 field officers and 4,844 agents. This training as well as the experience gained by the field officers during the last five years have enabled them to increase their average output of new business from year to year. The average output in 1957 was Rs. 4.9 lakhs and it has increased by 60% to Rs. 7.8 lakhs in 1960. The average output of an active agent has increased by 55% from about Rs. 31,000/- in 1957 to about Rs. 47,900 in 1960. This improvement in average output is only partly accounted for by a 14% increase in the average size of a policy issued between 1957 and 1960.

Income-tax

The Corporation pays tax to Government just as the life insurance companies in the private sector used to pay in the past. Assessments upto the year 1958 have been completed and the tax assessed amount to Rs. 4.38 crores. During 1959 and 1960 tax deducted at source amounted to Rs. 10.19 crore which will be adjusted against future tax assessments.

Dividend to Government

The capital invested by Government in the Corporation is Rs. 5 crores and, under Section 28 of the Life Insurance Corporation Act, upto 5% of the surplus plus that emerges at each valuation may be utilized

for such purposes and in such manner as the Government may determine. The Government have indicated that in respect of 1957 and 1959 Valuations the entire 5% should be credited to them. At the 1957 Valuation, the share of Government was Rs. 1.45 crores. Deducting from this figure an amount of Rs. 71.5 lakhs which Government have agreed to contribute in respect of the policies of deficit companies taken over by the Corporation, the return to Government amounts to 11% per annum on their capital. In respect of the 1959 Valuation it is estimated that the Government's share of the surplus would give them a dividend of 13% for each of the years 1958 and 1959.

Bonus Announcement

Our policyholders have been making anxious enquiries about the bonuses that would attach to their policies as a result of the 1957 and 1959 Valuations. Our field officers and agents have also been experiencing difficulty in securing with-profit proposals

since bonuses have not yet been declared by the Corporation. I had hoped that it would have been possible for us to declare bonuses on the different groups of policies on our books by the middle of this year. The work involved took a slightly longer time, but everything was finalised sometime back and the regulations framed in this respect were submitted to Government for their approval. As soon as the approval is received, it will be possible for the Corporation to make its bonus announcement.

Five years is too short a period in the life of a new institution but we can be justifiably proud of what we have achieved during this period. We are aware of our deficiencies and are constantly trying to overcome them. If we persist in our endeavour in a spirit of dedication, a day will soon come, much sooner than we expect, when we will be able to announce that we are much nearer the goals promised at the time of nationalisation than we are today. All that I can say is that we must hope and strive.

Before I close this statement, I sincerely thank all the Members of the Board and of the Investment Committee for their unstinting cooperation during the last three years and more that I have been Chairman of this organization. My thanks are also due to a Chief Executive of the Corporation to all the senior officers who have loyally cooperated with me and performed their duties. Above all, I am indebted to the thousands and thousands of our field officers and agents, without whose unrelenting efforts, the Corporation would not have been able to show such remarkable results during the last five years. Last but not the least, I am grateful to all those steady workers in the Corporation's offices who have not only kept up but improved upon the efficiency of the Corporation.

N.B. This does not purport to be a record of the proceedings of the Fifth Anniversary Meeting of the Corporation.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

Applications are invited on the basis of the Prospectus, copies whereof are available from the Company's Bankers Underwriters and Brokers mentioned herein.

A copy of the Prospectus together with the documents required to be attached thereto has been duly filed with the Registrar of Companies Bombay for registration. Consent of the Central Government has been obtained to this issue. An Industrial Licence has been obtained from the Central Government for the establishment of this new industrial undertaking. An application will be made to the Bombay Stock Exchange for permission to deal in and for quotations of the Shares of the Company.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON THE 4TH SEPTEMBER 1961 AND WILL CLOSE ON THE 12TH SEPTEMBER, 1961 OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON 7TH SEPTEMBER, 1961.

CAMPHOR & ALLIED PRODUCTS LIMITED

(Incorporated on the 29th March, 1961 under the Companies Act, 1956)

AUTHORISED CAPITAL:

1,00,000 Shares of Rs. 100/- each as under:

50,000 Equity Shares of Rs. 100/- each

10,000 Cumulative Redeemable Preference Shares of Rs. 100/- each carrying a dividend of 9.23% per annum free of Company's income-tax but subject to deduction of taxes at source and at the prescribed rates as applicable

40,000 Unclassified Shares of Rs. 100/- each

ISSUED SHARE CAPITAL:

(1) 50,000 Equity Shares of Rs. 100/- each

(2) 10,000 Cumulative Redeemable Preference Shares of Rs. 100/- each carrying a dividend of 9.23% per annum free of Company's income tax but subject to deduction of taxes at source and at the prescribed rates as applicable

OUT OF THIS ISSUE:

(1) Promoters, Directors, their Associates, friends and nominees have already subscribed and/or agreed to subscribe 19,520 Equity Shares of Rs. 100/- each

(2) Messrs. American Hydrotherm Corporation, New York, have agreed to subscribe 1,920 Equity Shares of Rs. 100/- each subject to necessary sanction from the Government of India

(3) The Company has agreed to the firm allotment to the Life Insurance Corporation of India, Bombay, against underwriting arrangements with them of

(i) 5,000 Equity Shares of Rs. 100/- each of the nominal value of

(ii) 5,000 Cumulative Redeemable Preference shares of Rs. 100/- each of the nominal value of

(4) NOW OFFERED FOR PUBLIC SUBSCRIPTION AT PAR FOR CASH IN TERMS OF THE PROSPECTUS

23,560 Equity Shares of Rs. 100/- each

5,000 Cumulative Redeemable Preference Shares of Rs. 100/- each, carrying a dividend of 9.23% per annum free of Company's income-tax but subject to deduction of taxes at source and at the prescribed rates as applicable

factory for the manufacture of Synthetic Camphor with an annual capacity of 900 tons

SCOPE AND PROSPECTS

The proposed factory of the Company will be the first of its kind in India to manufacture Synthetic Camphor. The Directors are, therefore, of the opinion that on the basis of the existing prices and market conditions and in the absence of any unforeseen circumstances, the Company should be in a position to make sufficient profits so as to pay reasonable dividends on the invested capital.

IMPORT LICENCE AND RAW MATERIALS

The Company has received the Import Licence for the import of machinery and equipment of the value of Rs. 32.1 lakhs

The main raw material required for the manufacture of Synthetic Camphor is Turpentine from oleo-resin gums of pine trees. The Company's main need will be supplied from the Turpentine produced by the U. P. State Government Turpentine & Rosin Factory.

TECHNICAL COLLABORATION

The Company is obtaining the technical know-how and process designs for the plant from the well-known "DU PONT" (Messrs. E. I. Du Pont de Nemours & Company), Wilmington, Delaware, U.S.A. Messrs. Du Pont are one of the leading manufacturers in the world in the field of chemicals. The terms of payment to Messrs. Du Pont have been approved by the Central Government and the Reserve Bank of India.

One of the senior-most Chemists with Messrs. E. I. DU PONT DE NEMOURS & CO., Dr. Gastao Etzel, who is considered as one of the world's leading experts in the production of Camphor, is to retire in the year 1962 and the Company has secured his services for a period of two years.

SITE OF THE FACTORY

The Factory will be located at Clutterbuckganj, near Bareilly in Uttar Pradesh.

COMMENCEMENT OF BUSINESS

The factory is expected to go into production by the end of 1962.

LOANS FROM I.C.I.C.I. & I.F.C.

The Company has been sanctioned, in principle, a loan of Rs. 30 lakhs by I.C.I.C.I. and a loan of Rs. 18 lakhs by the I.F.C.

CAPITAL OUTLAY AND WORKING CAPITAL

1. Land, buildings, plant, machinery and equipments, etc., etc	Rs. 96,00,000
2. Preliminary and issue expenses	Rs. 3,00,000
3. Pre-operative expenses	Rs. 4,00,000
4. Working Capital	Rs. 27,00,000
Total	Rs. 1,30,00,000

SOURCES OF INCOME

1. SHARE CAPITAL:	
(a) 50,000 Equity shares of Rs. 100/- each	Rs. 50,00,000
(b) 10,000 Cumulative Redeemable Preference shares of Rs. 100/- each	Rs. 10,00,000
2. Loans from I.C.I.C.I. and I.F.C.	Rs. 48,00,000
3. Deposit and/or customary loan from banks	Rs. 22,00,000

THE GENERAL ASSURANCE SOCIETY LIMITED

FOUNDATIONS OF GROWTH WELL-LAID, SAYS MR. B. L. JALAN

Extracts from Chairman's Speech of Mr. B. L. Jalan to the Annual General Meeting of the General Assurance Society Limited on the 28th August, 1961.

The proposed entry of the U.K. into the European Common Market, when seen in the background of the economic power enjoyed by Great Britain during the 18th and 19th centuries, seems to be a rather curious, amazing, development. We may recall that only last year, the U.S. gold-dollar had assumed an alarming proportion and the dollar had become so weak that its devaluation was considered imminent. In the course of the last few months, the things have changed a lot. The U.S. economy has staged a recovery and the sterling has become weaker than ever before. The situation has been temporarily saved by the IMF loan of the order of 2000 million dollars to the U.K.

Nevertheless, these events are not isolated problems and the repercussions which they produce on the economies of other countries have also to be reckoned with. Thus, while it has, perhaps, become necessary for the U.K. to join the European Common Market, it will have very adverse effects on the Commonwealth trade, and in particular on our exports of tea, cotton textiles, and others. The U.K. continues to be by far the largest single supplier of our imports and consumer of our exports. The withdrawal of the preferential treatment, if not properly phased and counterbalanced, will be a set-back to our exports, foreign exchange earnings and eventually development programmes. This may be viewed in the light of the very encouraging foreign assistance exceeding \$2 billion promised by the Aid-India Consortium led by the U.S.A. Foreign exchange was perhaps the most important impediment in our scheme of resources for the Third Plan. The promised aid has largely solved the problem in one sweep so that the bold, although essential, goals set by the Planners for the next five years, appear to be within reach. Any deterrent which might jeopardise this position has to be avoided.

Epoch-making Experiment

As you are aware, we have, in last March, completed ten years of our planned growth. Meanwhile, the Third Plan has commenced functioning. The rates of progress achieved during the last ten years and the pointers of the future show that India has been successful in launching a new epoch-making experiment in economic growth. An accelerated rate of growth has been achieved under democratic framework.

During the first two Plans, the National Income of the country increased by 42 per cent. The rate of growth in the United States, in real terms, was also of the same order during the same period. While it should be realised that the rate of growth in the U.S.A. is bound to be slow as she has already attained a high degree of maturity and the progress is measured from a very high level of economic advancement, the low standards of living, consumption and savings prevailing in India have also to be reckoned with. This does not, however, overlook the fact that other countries like Germany, Japan, France, Turkey, secured a higher rate of growth during the last decade.

It is not merely a question of quantitative increases in productivity and gross or net product. Revolutionary transformation has been brought about in the institutional framework while adhering, as far as possible, to democratic methods. The regulated economic operations have left some indelible marks on the basic structure of our economy. While the economy is still vulnerable to severe operational jolts, it is well geared to an accelerated growth rate.

These results have brought the country to the threshold of a new era of self-sustaining economy which we should be able to achieve by the end of the Fourth Plan. It might take another decade to achieve a fair degree of maturity. We might say, in other

words, that over a perspective of 30 years, we will have passed through three stages of economic growth—laying the foundation for a growth economy, organisation of a self-sustaining economy, and attainment of a degree of maturity. In the context of our population growth at a rate of 2 per cent per annum, this would be an accomplishment of which the country and its leaders could be well proud. The projection, no doubt, of the past into the next two decades, is dependent on an assumption that the country will continue to be committed to hard work and austerity.

Financial Resources

The paramount problem is of finding enough capital resources. The problem, again, is not one of the availability of total quantum as that of the means to be employed to raise such resources. The capital market, having manifested a few new bullish features during the last two years or so led to a misleading impression about its vitality and intrinsic strength. What is ignored is that it witnessed equally alarming periods, as at present, of bearish tendencies. There is no doubt about an increasing interest being taken by the foreign investors specially from the U.S.A. in new industrial ventures in India. It is left to us either to make the best use of the opportunity or to frighten them away once again. Many new features of our Indian Companies Act and the remodelled Indian Income Tax Bill need modification when seen from this perspective. In our zeal for orderly growth, the objective of rapid industrialisation should not be sacrificed. If we need regulatory devices it is in respect of price movements such as those witnessed by the jute industry and in food grains. The prices in jute industry can be very well regulated by operating buffer stocks through the mills by encouraging buying of raw jute by means of reduction in bank margins.

There have also been some other disquieting features affecting the new confidence which has been built up. Recently, the Reserve Bank, following certain bank failures, has been considering measures by which the capital base of banks is sought to be raised and advance-deposit ratio reduced appreciably. Considering the rate at which deposits are growing and, therefore, also the requirements of industries, this will further restrict bank credit and facilities available to industry. The measures may not be necessary in view of the deposit insurance being very rightly sponsored by the Reserve Bank and the Government.

Incentive-based Regulated Growth

The history of industrially advanced economies has a lesson for us. We might even look at the spectacular advances made by countries like Western Germany after the War. What is desired is a policy of "incentive-based regulated growth". It is possible, perhaps, to work out mathematically by means of forecasting and projections that a given amount of incentives such as relief in taxation, subsidisation of exports, and similar other measures would be more than off-set by a higher rate of national product and thus not only not reduce the total revenues to the national exchequer but in fact raise it. Planning does not simply mean a diversion of resources to more economic uses; may be from consumption—by means of indirect taxation—to productive channels on the basis of a catalogue of programmes and projects. It is something more. This additional function of planning is to contemplate and provide for conditions of more rapid and more balanced economic development. A lot has been achieved by means of diversion of resources—say from the private to the State sector. A lot also has been achieved by instituting a system of regulated development by a scientific cataloguing of plans and projects. But, we are constrained to believe, a lot remains to be achieved by deliberate and purposive creation of incentives consistent with

and leading to a higher rate of national productivity and prosperity at the least cost possible.

Assuming the public sector investment as 100 units, the investment in the private sector in First Plan was 111 units, in the Second 85 units and will be only 65 units in the Third. What is more important is the fact that the change is more spectacular in the industrial sector with the result that while the Government is taking a larger and larger share in programmes which could well be taken care of by private industry, development of basic sinews of progress in the form of economic overheads does not receive the attention it deserves. I believe there is a unanimity of opinion that our progress would have been faster and smoother if transport bottlenecks were avoided, supply of cheap power was more adequate and the governmental machinery for regulation of economic activities was more efficient and speedier.

Stability

Another objective to be gained by means of planning is a kind of stable, steady, system of economic operations. One serious aspect which is generally ignored about the rise in prices is the fact that as and when such rises outstrip the international price movements, the international value of rupee is undermined which in turn affects export and foreign exchange earnings. Exports in fact, have not kept pace with the growth in the economy. Thus, while the National Income increased by 42 per cent and industrial production by 94 per cent, exports remained constant. Many industrial proposals had to be or are being abandoned since the same could not satisfy certain assumed foreign exchange criteria. You are aware that not long ago it was necessary to justify import of capital equipment to obtain some kind of deferred credit arrangements. Later on five years credit arrangements were insisted on. This period was gradually lengthened. Today, not deferred credits, but direct capital participation by foreign parties is considered imperative. Foreign exchange regulations and requirements of our industrial policy have thus become one of the principal impediments to our industrial expansion.

It is necessary, I would believe, to have now an independent Commission to review the progress, assess the achievements and suggest ways and means to rectify and regulate unbridled trends in our economic operations. While this has to be independent of both the Planning Commission and the Government, this would function in close collaboration with both. This Commission will become the watchdog of our planned progress.

General Insurance

Coming to our own General Insurance industry, in my address to you in September last, I had made a plea for the appointment of a high-powered Commission of Inquiry to assess the results of the Code of Conduct and to suggest new ways and means to curb the inter-company competition. I reiterate that the need of such a Commission is greater today than ever before. In elaborating the suggestion I had also pointed out the need for doing away with the irksome controls and to initiate effective ways for mutual cooperation and understanding. I am glad to say that the industry in Bombay has initiated such a move in the form of an agreement for non-diversion of business. I believe that this is a welcome move which the industry needed for a long time. If the move is implemented in the right spirit, it will usher in an era of prosperity for the industry. However, it is necessary that all companies operating in India, whether Indian or foreign, should be made to join the consortium. The agreement perhaps needs certain revisions and modifications. Thus the provision for surrendering all business in excess of 20 per cent of the previous year's business to a common pool will be harsh for those companies which have not caught up a self-sustaining level of business from the point of view of cost. So long as such companies do not attain an economic level of business, they should not be required to cede business secured by them even in excess of 20 per cent of the previous year's business. I hope that amendments like these will be made and all companies will join the agreement and will demonstrate that the industry left to its own, could, by means of self-government, introduce means of healthy regulation and growth. The one big malady which has afflicted the industry is cut-throat competition.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET BAD WEEK FOR BILLS

Wednesday, 30th August.

ADVANCES have continued to fall in the Calcutta money market during the past week. Most of the main sources of demand have reduced their requirements slightly, including the cotton, jute and sugar industries. There has, however, been a slight increase in call for accommodation against grains and seeds storage. The requirements of the engineering and iron and steel industries have remained about the same. In the inter-bank market, the call rate has fallen to 1½ percent, at which money is reported to be almost unobtainable. The reason for the plentiful supply of funds is still the liquidity caused by the approaching date for the issue of the State loans.

Once again it has been an extremely slack week in the exchange market, with very few bills of any kind coming to hand. Remittance demand has been keen. In the London money market, sterling continued to show its firm tendency and closing quotations for the pound showed gains against all major currencies.

BULLION WAS STEADY IN THE PAST WEEK DUE TO the increased bull support. Silver advanced from the previous week's level of Rs. 238 to Rs. 239.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 204.50. The London and New York prices were 80-5/8d and 91.75 cents.

Gold was steady in sympathy with silver, and the price rose from Rs. 145.50 to Rs. 146. The sovereign at Rs. 95.62 showed a gain of 12nP.

DURING THE WEEK ENDED 25TH AUGUST, GOVERNMENT of India Treasury bills for Rs. 18,45,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 29th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.400 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 11th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 30th August to 9th September at Rs. 99.416 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 23rd August to 26th August amounted to Rs. 1,28,75,000.

THERE WERE DECLINES OF Rs. 22.47 CRORES TO Rs. 1,877.39 crores in active notes and of Rs. 18.14 crores to Rs. 1,893.96 crores in the total note issue, according to the return of the Reserve Bank of India during the week ended 25th August, 1961. The contraction of currency was covered by reducing rupee securities of the paper currency reserve by Rs. 19.94 crores to Rs. 1,533.55 crores. This was presumably done by a transfer of securities to the Banking Department in which investments rose by Rs. 9.94 crores to Rs. 2,84.51 crores. Deposits of the Government of India declined by Rs. 18.43 crores to Rs. 64.60 crores, but other Government accounts rose by Rs. 6.76 crores to Rs. 19.93 crores. Balances of commercial banks at Rs. 102.96 crores showed a rise of Rs. 15.03 crores. Balances held abroad declined by Rs. 2.91 crores to Rs. 26.61 crores. Other loans and advances fell from Rs. 116.87 crores to Rs. 115.71 crores, of which advances to scheduled banks against usance bills amounted to Rs. 11 lakhs (Rs. 51 lakhs) Ways and means advances stood at Rs. 48.75 crores, against Rs. 52.40 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 18th August, shows a rise of Rs. 48 lakhs to Rs. 524.99 crores in total deposits. Investments in Government securities are up by Rs. 19 lakhs to Rs. 241.28 crores, while other authorised investments are down by Rs. 6 lakhs to Rs. 9.37 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 4 crores to Rs. 244.99 crores. Cash and balances are, in consequence shown at Rs. 25.66 crores or Rs. 3.25 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 18th August, shows Demand and Time liabilities at Rs. 839.47 crores (Rs. 24.11 crores on account of borrowings from banks) and Rs. 1,146.46 crores (Rs. 18.57 crores), compared with Rs. 833.72 crores (Rs. 25.61 crores) and Rs. 1,147.48 crores (Rs. 19.80 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by 1.89 crores and Rs. 4.73 crores to Rs. 46.77 crores and Rs. 80.53 crores, respectively. There is a rise of Rs. 3.33

crores to Rs. 585.85 crores in investments. Advances and bills discounted at Rs. 1,238.21 crores show a decline of Rs. 3.65 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.4 percent and 62.4 percent, against 6.1 percent and 62.3 percent.

TREASURY BILL MATURITIES			
Details of 91 days bills outstanding with the public on 31-8-61.			
Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

and Bangalore.

CONSTIPATION AND PILES

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

4½ PER CENT. STATE GOVERNMENT LOANS 1972.

Name of State	Amount	Issue price per cent.
(1) Andhra Pradesh ...	Rs. 10 crores	Rs. 99.75
(2) Bihar ...	Rs. 3 crores	Rs. 99.50
(3) Gujarat ...	Rs. 6 crores	Rs. 100.00
(4) Kerala ...	Rs. 4 crores	Rs. 99.50
(5) Madhya Pradesh ...	Rs. 5 crores	Rs. 99.50
(6) Madras ...	Rs. 10 crores	Rs. 99.75
(7) Maharashtra ...	Rs. 10 crores	Rs. 100.00
(8) Mysore ...	Rs. 7 crores	Rs. 99.75
(9) Orissa ...	Rs. 5 crores	Rs. 99.50
(10) Punjab ...	Rs. 3 crores	Rs. 99.50
(11) Rajasthan ...	Rs. 4 crores	Rs. 99.50
(12) Uttar Pradesh ...	Rs. 6 crores	Rs. 99.75
(13) West Bengal ...	Rs. 7 crores	Rs. 99.75

All the State Governments reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 4th September 1972.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 4TH SEPTEMBER 1961 AND CLOSE ON 9TH SEPTEMBER 1961 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 4th September 1961.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

Securities of 3% Tapi Irrigation Development Loan 1961 and 3½% Cochin Loan 1956-61 will be accepted AT PAR for conversion into the new loans of the Governments of Maharashtra and Kerala respectively. Securities of Mysore Government 3% Loan 1956-61, Madras Government 2½% Loan 1961 and 2½% Uttar Pradesh Loan 1961 will also be accepted for conversion AT PAR into the new loans of the respective State Governments.

Interest due on the securities of the loans tendered for conversion will be paid as under:

Name of Loan	Rate of Interest per cent. per annum
(1) 3% Tapi Irrigation Development Loan 1961 ...	@3% upto and including 30th April 1961 and @ 4½% from 1st May 1961 to 3rd September 1961 inclusive.
(2) 3½% Cochin Loan 1956-61 ...	@3½% upto and including 31st May 1961 and @ 4½% from 1st June 1961 to 3rd September 1961 inclusive.
(3) Mysore Government 3% Loan 1956-61 ...	@3% upto and including 19th April 1961 and @ 4½% from 20th April 1961 to 3rd September 1961 inclusive.
(4) Madras Government 2½% Loan 1961 ...	@2½% upto and including 31st August 1961 and @ 4½% from 1st September 1961 to 3rd September 1961 inclusive.
(5) 2½% Uttar Pradesh Loan 1961 ...	@2½% upto and including 31st August 1961 and @ 4½% from 1st September 1961 to 3rd September 1961 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:-

- At the office of the Reserve Bank of India at Nagpur in the case of Maharashtra Loan.
- At the branches of the State Bank of India and at treasuries and sub-treasuries in the case of Andhra Pradesh, Bihar, Gujarat, Kerala, Madhya Pradesh, Madras, Maharashtra, Orissa, Punjab, Rajasthan and Uttar Pradesh Loans.
- At the branches of the State Bank of India in the case of West Bengal Loan.
- At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Maharashtra State Loans.
- At the branches and treasury pay offices of the State Bank of Mysore (except at Bangalore, Mangalore and Gulbarga), the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in Mysore State in the case of Mysore State Loan.
- In the case of Gujarat Loan the State Bank of Saurashtra at Bhavnagar and its branches in the State of Gujarat will collect applications and forward them to the nearest receiving office.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering their applications at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras and New Delhi will, in the event of over-subscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans which may not be fully subscribed by that time. To avail of this facility, the persons tendering their applications should complete the SPECIAL OPTION FORM copies of which are available on application from any of the abovementioned offices of the Reserve Bank of India.

Stocks and Shares

PRICES STEADIER BUT GENERAL SUPPORT STILL LACKING

SELLING MARGINS HELP CHECK DOWNWARD TREND

Wednesday Evening.
THE stock market has closed the past week in a steadier mood. There has been a modest recovery in share prices due mainly to short-covering. The selling pressure appears to have been restrained by the imposition of heavy margins on the selling of Indian Iron, Burrakur, Hindustan Motor and Rohtas shares. The stock market first decided that sellers in Indian Iron shares would pay a margin of Rs. 2 a share and sellers in Burrakur, Rohtas and Hindustan Motor a margin of Rs. 1.50 a share. Later, the margin was increased to Rs. 3.50 a share in the case of Rohtas while a margin of Rs. 4 a share was imposed on the selling of Dunlop Rubber. Although selling has been discouraged, there is little evidence of support as yet. The recovery which has taken place so far is mainly due to technical considerations. An interim clearing was enforced earlier in the week. There has been a great deal of short-covering at today's settlement. Moderate carry-forward charges are understandable in view of the heavy over-sold position.

The trend is still indecisive because fears about payment difficulties have not yet been removed. A report concerning the default of a member caused a great deal of nervousness. Lyons Range hopes that payments will be made next week without any difficulty. Until that time, trading could take place only on a small scale. In view of the sharp decline in share values during the past month or so, investors wonder whether the time has arrived for making fresh purchases. There is little doubt that many good shares have become attractive at present prices, but he would be a bold prophet who could say he thought the worst was over.

The investment outlook is not free from dark clouds. Apart from the explosive international situation due to the Berlin crisis, political developments in the Punjab need to be watched carefully. As far as the flow of fresh funds into stocks and shares is concerned, it is difficult to get a clear picture, at least for the time being. Whether the Life Insurance Corporation will start buying ordinary shares at current low prices remains to be seen. Anyway, it does not look as if any institutional support will be extended until the new State Government loans are subscribed next week. Substantial funds are returning to the banking system, but it is doubtful whether banks will increase their credit supplies to the stock markets because the expanding requirements of trade and industry will more than absorb their resources in the coming months. This besides, the drift towards a dearer money policy might make credit too expensive for investment in stocks and shares.

At the same time, the prospect for equity investment under the present circumstances cannot be ignored. Many industries are expected to extend their activities in order to meet rising domestic requirements. Although it is not possible to hazard a forecast that bottom prices have already been reached, the more confident investors may not hesitate to pick up good shares on considerations of yield and growth.

The price of Indian Irons has improved to Rs. 25.00. Engineering shares have lacked interest. Texmaco, Jessop, Guest, Keen, Williams and Indian Oxygen are being neglected. Britannia Engineering have met with scattered interest from knowledgeable quarters. Marshalls are being sold on an unsatisfactory report.

The prices of selected miscellaneous shares have recovered from their lowest levels touched earlier. Interest is being taken in Dunlop Rubbers, Indian Aluminium, Indian Coppers and Hindustan Motor at lower prices. Indian Cable have recovered on producing a good report. National Insulated Cable have been sold on the disappointment caused by its latest report, of a further increase in the share capital. India Steamship are being freely offered without attracting support. Hindustan British Paints are in demand. Electric company shares are quiet and business has passed in Cactus Electric and Benares Electric. Cement shares are subdued and Jaipur Udyog have lost further ground. Managing agency shares are quiet. Martin Burn, Balmer Lawrie and Shaw Hindustan Aluminium, Electric Construction and Siroilk.

Paper shares recovered at the close. Orient Seshasayee Paper are steady.

Business has declined in coal shares and prices are lower all round. Attention has been concentrated mainly on Burrakur, Bengal, New Beerboom, Central India and East Indian. The latter Company has declared a higher ordinary dividend. Fute shares have weakened on fears of the substantial losses made in the past.

the current year. New Central, Birla, Anglo-India, Agarpara, Ganges and Howrah have been sold at lower prices. Fort William have attracted scattered support on prospects of diversification of activities.

In the cotton mill group, J. K. Rayon and Bharat Commerce have rallied on short-covering. Profit-taking has reduced Bowreah. Elgin are being fancied at the present low price.

Sugar shares are being sold freely on uncertain export prospects. Carew, Belsund and S.K.G. have lost further ground, but Ramnugger Cane are steady on influential buying.

Except for Hasimara which have improved on rumours of a bonus share issue, tea shares have turned softer due to the decline in auction prices. Huldibari have, nevertheless, gained on hopes of a higher dividend. Bishnauth, Baghmari and Hantapara have declined.

Government securities are steady and the 3 percent Conversion loan 1986 has improved to Rs. 72.65 on replacement buying. Business is restricted due to the preoccupation of institutions with the forthcoming State Government loans.

Bareilly Electricity

A taxable dividend of 11 percent has been maintained by Bareilly Electricity Supply Co. Ltd for the year ended March 1961. The profit has dropped from Rs. 1.88 lakhs to Rs. 1.73 lakhs, after providing Rs. 1.93 lakhs, against Rs. 1.81 lakhs for depreciation. Notable allocations include Rs. 47,450 for taxation (against Rs. 18,000), Rs. 34,332 for redemption of debentures (against Rs. 34,332) and

e. 20,000 for general reserve (against Rs. 17,000). e carry-forward is Rs. 24,136, compared with 23,611 brought in. Units of electricity sold allied 14,302,321, against 14,224,244.

nares Electric

The profit of Benares Electric Light and Power Company Ltd has declined from Rs. 4.80 lakhs to Rs. 2.47 crores for the year ended March 1961, after locating Rs. 4.14 lakhs, against Rs. 3.85 lakhs for appreciation. A dividend of 11 percent, subject tax, has been maintained absorbing Rs. 1.87 khs. General reserve is allocated Rs. 2 lakhs against Rs. 1.25 lakhs. After making all necessary adjustments, there is a carry-forward of Rs. 46,844 against Rs. 45,563 brought in. Units sold mounted to 45,726,522, against 43,254,359.

Bombay Market

MODEST RECOVERY FOLLOWS EARLY DECLINE

CORPORATE NEWS DISAPPOINTS

Tuesday Evening.

THERE was a modest recovery in the Bombay stock market at the close of the past week after an earlier sharp decline. At the beginning, sentiment was subdued by the heavy selling pressure induced by reports of defaults. The selling from Lyons Range accentuated weakness further. Political developments in Punjab caused a great deal of concern. Operators feared that credit would become more expensive in the near future. Corporate news also disappointed the stock market occasionally because some companies which were expected to increase their share capital have now decided not to do so, at least for the time being.

At the close, sentiment improved mainly due to short-covering induced by the prospect of the long holiday on account of Pateh. It was also complacently believed that the Investment Committee of the Life Insurance Corporation, which will hold a meeting shortly, might decide to buy shares. Meanwhile, the removal of the making-up prices in the case of many shares was considered a helpful factor, but the authorities have not yet imposed any margin on selling shares in line with the Calcutta stock market. This factor itself was probably responsible for the pressure in Indian Irons and Hindustan Motors which are also transacted simultaneously in Lyons Range. The imposition of margins on the sale of these scrip in the Calcutta stock market appears to have diverted the pressure to Dalal Street.

Tata Steel recovered to Rs. 151 and Indian Iron were quoted higher at Rs. 25. Engineering shares declined all round. In spite of the prospect for diversification of activities, Mukand Iron lost at Rs. 25.50. Tired bull liquidation reduced Tata Locomotive to Rs. 330.50, but Premier Construction met with scattered interest at a lower level of Rs. 181. Larsen and Toubro lost at Rs. 347.5 and Alcock Ashdown were offered at Rs. 287. Motor shares were quiet, and Hindustan Motors were quoted at Rs. 19.08. Premier Automobiles were traded cautiously around Rs. 153.50 on the fear that the Company might increase the share capital.

Cotton mill shares showed losses on a broad front. Century were subdued at Rs. 653, as were Bombay Dyeing at Rs. 65.40. Morarji declined to Rs. 380 because no announcement has been made as yet about the issue of rights ordinary shares. Business was done in Kohinoor at Rs. 282.50 and in Simplex at Rs. 191. Svadeshi came to hand at Rs. 247 and Finlay were at Rs. 311. Gokak were sold down to Rs. 185 and India United Ordinaries declined to Rs. 15.28. Apollo were freely offered down to Rs. 1.82.

Prices of miscellaneous shares moved down in sympathy with the general trend. In the sugar group, Belapur lost at Rs. 272, as did Phalton at Rs. 132. Maharashtra Sugar met with occasional support around Rs. 190. Mining shares were quiet, and business was done in Shivrajpur Syndicate at Rs. 89. Cement shares weakened further, and Associated Cement were sold at Rs. 157. Digvijay were quoted lower at Rs. 163.50. Sellers predominated in steamship company shares, and Scindia Steam touched a new bottom of Rs. 12.32. Great Eastern Shipping were offered freely down to Rs. 13 without attracting any support. Chemical shares were quiet, and Tata Chemical declined to Rs. 16.40. Indian Dyestuff lost at Rs. 412.25 because the Company does not propose to issue any rights share for the time being. Colour-Chem were available at Rs. 333.75. Synthetics and Chemicals reacted to Rs. 177 on profit-taking, but Ceat Tyre were quietly steady at Rs. 200. Bombay Burnals reacted to Rs. 579 on pressure. Nervous liquidation reduced Voltas to Rs. 276 and Tata Oil to Rs. 68. Rayon shares were quiet, and National Rayon lost at Rs. 524. Gwalior Rayon declined to Rs. 49 and Baroda Rayon were quoted at Rs. 135.50.

Banking shares were quietly steady, but turnover was limited. Central Bank came to hand at Rs. 62 and Bank of Baroda were done at Rs. 102.50. Bank of India were transacted at Rs. 132. In the insurance group, New India Assurance recovered to Rs. 57.50 and Vulcan were transacted at Rs. 16.25.

Fluctuations were narrow in electric company shares. Ahmedabad Electric were placed at

Rs. 88.70 and Tata Power were quoted at Rs. 1,090. Business passed in Bombay Suburban at Rs. 97.

Madras Market

WEAKER TREND FOLLOWS EARLY STEADINESS

PRICES FALL IN ABSENCE OF SUPPORT

Tuesday Evening.

AFTER remaining steady earlier in the past week the Madras stock market weakened towards the close on easier advices from the Calcutta and Bombay stock markets. Prices generally declined due more to the absence of support than to selling pressure. Professional operators and investors were disinclined to extend commitments until confidence returned in Lyons Range and Dalal Street.

Business in Government securities was limited in view of the forthcoming State Government loans. Selected State loans were in demand. Public utilities were maintained on yield considerations. Bank shares were steady, but turnover was restricted. Sugar shares turned softer on uncertainties concerning the future outlook. In the planting group, tea shares weakened on lower advices from the Cochin auctions. Sellers predominated in coffee shares, but rubber shares attracted scattered support on good crop reports. Textile shares declined due to the absence of support. Except for cement shares, which were maintained on prospects of expansion, miscellaneous shares reacted.

In the banking group, Punjab National came to hand at Rs. 24 and Indian Overseas were done at Rs. 187. Indian were steady at Rs. 176 and Canara Banking came to hand at Rs. 80.50. In public utilities, Cochin were taken at Rs. 13.37 on paying a taxable ordinary dividend of 12½ percent. Negapatam were steady at Rs. 10.50 on declaring a taxable ordinary dividend of 12 percent. Vellore were transacted at Rs. 13.25 on paying a taxable ordinary dividend of 14.29 percent. West Coast were supported at Rs. 14.90 on declaring a taxable ordinary dividend of 14.29 percent.

In the sugar group, Deccan reacted to Rs. 13 and E.I.D. lost at Rs. 38.25. United Breweries weakened to Rs. 101.50, but Mysore were steady at Rs. 57.75. Travancore were done at Rs. 10.45 and K.C.P. came to hand at Rs. 24.50.

In the planting section, Blue Mountain softened to Rs. 3.05 and Cochin Malabar to Rs. 7.20. Coffee Lands were sold down to Rs. 17.65, but Consolidated Coffee were in demand up to Rs. 21.10. Conoor were taken at Rs. 28.12 on paying an interim ordinary dividend of 7½ percent, taxable. Business passed in Cottanad at Rs. 10.65 on the declaration of a taxable ordinary dividend of 10 percent. Ouchterlony were done at Rs. 3.72 and Periakaramalai were transacted at Rs. 3.65. Mysore Coffee were bought at Rs. 5.50 on paying a taxable ordinary dividend of 15 percent. Rajendra were dealt in at Rs. 12.12 on declaring a taxable ordinary dividend of 25 percent. Talayar were placed at Rs. 1.90 on the payment of a taxable ordinary dividend of 10 percent. Kil Kotagiri were steady at Rs. 4.65 and Nilgiri were quoted at Rs. 8.80. Non-such came to hand at Rs. 25.50 and Peermade were in demand up to Rs. 23.25.

In the textile group, Buckingham were steady at Rs. 249 and Bangalore Woollen improved to Rs. 216. Lakshmi reacted to Rs. 157 and Madura to Rs. 36.70 on profit-taking. Palamalai Ranganathar were sold down to Rs. 93 on passing the dividend. Travancore Rayon lost at Rs. 37.90, as did South India Viscose at Rs. 176. Kothari were quietly steady at Rs. 12.45 and Mettur changed hands at Rs. 384. Premier were quoted at Rs. 272 and Vasanta were done at Rs. 267. Adoni came to hand at Rs. 12.35 and Cauvery Spinning were quoted at Rs. 14.13.

In the miscellaneous group, Aluminium Industries were placed at Rs. 22.75 and Binny were done at Rs. 230 on declaring an interim ordinary dividend of 8 percent, taxable. Ashok Leyland declined to Rs. 8.45, but India Cement were steady at Rs. 6.45. Mysore Chemical Mfs. met with support up to Rs. 23.85 on paying a taxable ordinary dividend of 20 percent. Seshasayee Paper recovered to Rs. 8.40 on replacement buying and Spencer were indicated at Rs. 23.50. Textool were steady at Rs. 175, as were Tube Investment at Rs. 258. Standard Motors were dealt in at Rs. 16 and Enfield were quoted at Rs. 12.25. F.A.C.T. were done at Rs. 9.75 and Madras Aluminium were steady at Rs. 25. Madras Rubber were placed at Rs. 15.50 and Madras Cement were done at Rs. 91.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to July 1961. As compared with June, the July indices for Government securities and preference shares show declines of 1.1 points and 0.1 point, respectively.

There were decreases in cottons 17.8 points, coals 11.2 points, jutes 4.3 points, minings and oils 0.3 points, cements 3.3 points, engineering 3.4 points, sugars 4.7 points and miscellaneous 2.6 points, while increases occurred in banks 1.8 points, teas 2.9 points and papers 33.1 points.

Correlating all the factors, the Capital variable yield securities index fell by 3.5 points during July 1961.

		Index of Govt. Securities	Index of Preference Shares	Variable Yield Securities											Combined Index
				Banks	Cotton Mills	Coals	Jute Mills	Mining and Oil	Cement, Lime, etc.	Eng. and Metal Works	Tea Shares	Paper Mills	Sugar Shares	Others

New Delhi

INDIA ASKS FOR OBSERVER AT U.K.-COMMON MARKET TALKS

NEW DELHI CONSIDERING SCHEME WITH I.J.M.A. SUPPORT TO FIX FLOOR RAW JUTE PRICES

(FROM OUR NEW DELHI CORRESPONDENT)

INDIA has asked for and it is expected, will be given a seat as an observer at the forthcoming U.K.-European Common Market negotiations. It is expected that until the arrangements for the transfer of the headquarters of the Commissioner-General from London to Brussels is completed, the present Commissioner-General, Mr. T. Swaminathan, will continue to represent India as an observer. As already reported the Additional Secretary, Ministry of Commerce and Industry, Mr. K. B. Lall, will replace Mr. Swaminathan in due course as India's permanent representative at the European Common Market headquarters. He will have the rank of an ambassador. India has also enquired of the British Government the latter's plans for setting up the consultative machinery in connection with the negotiations. She would, for example, like to know the manner, method and venue of such consultations. It is, however, expected that as a first step there will be consultations between the Government of India and the U.K. High Commission in New Delhi. The Commonwealth Finance Ministers' Conference it is expected, will also be mainly preoccupied with the issue of the U.K. entering the European Common Market.

Protest Against Enhancing Freight Rates

The Government of India as well as the Indian mercantile community are greatly agitated over the proposed freight rate increase by the European Shipping Conference. The Central Transport Secretary, Mr. Ayyar, told the Consultative Committee of Shipping Interests that the reported announcement by the India-U.K.-Continent Conference of a general 10 percent increase in freight rates on east-bound cargo would seriously affect India's exports and increase her import bill. The issue has to be judged dispassionately. When the Joint Steamer Companies operating in Bengal and Assam enhanced their freight rates, there was immediately a protest by the Assam Government, leading to a committee of enquiry, which finally agreed to increase the freight rates by 5 percent. The case of the carriage of rice from Burma to Kerala and of coal to south India by the Indian shipping lines is well known. The Government of India had to enhance the cess on coal in order to subsidise its movement by sea. The question of bringing additional ships to this trade by acquisition or chartering is also being considered. The shipping industry of India was, so far, carrying 1 million tons of coal a year. It has flatly refused to carry another million tons without a subsidy or increase in freight rates. It is true that an increase by 10 percent in the freight rates would seriously hamper India's competitive position in Europe and would also increase her import bill. How can India object to any increase in freight rates by foreign shipping companies, purely on the merit of the case, when her own shipping companies found it financially impossible to feed the coal-starving industries of the south with coal or the hungry mouths of Kerala with rice? Then again, is there any consideration of the export trade, when the cost structure is stepped up, say, by a coal award, or a rise in railway freight? As was reported earlier in these columns, the Indian Government works in water-tight compartments, giving little consideration to the cost structure in general and the export trade of India in particular. There is a talk of legislation to regulate the freight rates. Such legislation can be enforced only within the country. India can adopt the U.S. mechanism of enforcing the carriage of goods in Indian bottoms. Two prerequisites are necessary for such a measure. First, there should be adequate tonnage on the Indian Register to carry all the merchandise entering into India's trade. Secondly, Indian shippers should also play ball. Meanwhile, the Government of India has had its protest against the increase in freight rates conveyed to the quarters concerned.

India pays, on average, Rs. 160 crores in sea freight, 50 percent of which is carried by Conference Lines. The Indian shipping companies, being members of Conference Lines, are co-sharers in the carriage of the freight. The issue is whether the Indian shipping companies on patriotic grounds have assured the Government of India that they would not enhance freight rates by 10 percent on east-bound goods, operative with effect from 1st October. It may be argued that they being members of the Conference Lines have to abide by its decision. Nothing, however, prevents them from refunding the additional charge to their countrymen, if they want to do so.

Stepping up Coal Output from N.C.D.C. Mines

As already reported, the Government has accepted the offers of the following foreign governments for their collaboration with the National

Coal Development Corporation for stepping up coal production during the third plan period:

Name of country	Number of experts assigned	Purpose of assignment
United Kingdom	3	For preparing a project report for opening up and for developing the abandoned Jarangdin mine.
France	2	For technical advice on depollaring steeply inclined thick seams in Karanpura coalfields and providing training facilities to Indian technical personnel in France.
U.S.A.	5	For developing Ramgarh mines in Hazaribagh, Bihar.
West Germany	2	For layouts and the management of workshops and coal preparation installations.

Two experts from France, two from West Germany and one from the U.S.A. have already arrived in India and are visiting the N.C.D.C.'s collieries. The proposed period of stay of the experts varies from one month to three years.

Foreign Exchange Needs of Private Collieries

The estimated requirements of foreign exchange for the coal industry in the private sector for 1951-62 are placed at Rs. 3.48 crores; Rs. 1.98 crores for the first half of the year and Rs. 1.50 crores for the remaining six months. An allocation of Rs. 30 lakhs, together with a likely commitment of Rs. 20 lakhs, has already been made under the India-Poland agreement for the import of coal-mining machinery and equipment. The World Bank has also made a loan of \$35 million (Rs. 16.67 crores) to the private sector of the coal industry for the first two years of the plan ending March 1963.

Jute Looms to be Unsealed

The Indian Jute Mills Association has now agreed to unseal the additional 9 percent of looms sealed in last August, it is learnt here. This decision will be enforced from the first week of September. A two-member I.J.M.A. delegation had discussions here with Mr. D. S. Joshi, Additional Secretary, and senior officials of the Commerce and Industry Ministry, on stabilising the raw jute prices. The I.J.M.A. delegation will urge all member mills to step up raw jute purchases with a view to steadying the market. The Association has also agreed to do away with the quota system hitherto in force, so that there will be no limitation of what each member mill may buy. The Jute Commissioner will check the rate of buying by the mills in order to ensure that adequate purchases are made. It is hoped that these measures will help stabilise raw jute prices.

It was emphasised on behalf of the Government that a reasonable price of jute should be assured to all growers, in order to maintain and develop jute and mesta production in the country. The Government is considering a scheme for market operations to prevent the falling of raw jute prices below economic levels. The Indian Jute Mills Association has promised its full support in operating the scheme.

Free Retail Trading in Sugar

Restrictions on the retail sale of sugar have been removed in most of the States, the Food and Agriculture Minister has told the Informal Consultative Committee concerned. This followed the Central Government's advice to the States to relax control on the distribution of sugar to the maximum extent possible. The Governments of U.P. and Bihar have allowed wholesalers to sell in the free market such sugar as is not lifted by authorised retailers within a specified period. Similarly, the Government is considering a scheme for permitted wholesalers to sell such sugar in the free market as is surplus or is not required for distribution through controlled channels. The Government of Rajasthan has similarly withdrawn restrictions on sales at the wholesale stage.

In reply to a question about the possibility of higher allocations for free sale within India, the Food Minister pointed out that whereas the Central Government is releasing sugar at the rate of 2.4 million tons every year, the States are lifting only a little over 2 million tons. The Minister said that there were no restrictions at present on sugarcane cultivation. At the beginning of the second five year plan, the area under sugarcane was about 4.5 million acres. In the last year of the plan, it rose to 5.7 million acres. This year's

sowings showed that the area would go up by another 400,000 acres. If sowings had been restricted to the land under cultivation and intensive methods employed, the production of gur and sugar might not have risen so much. What had actually happened was that land was diverted to sugarcane production from wheat, rice and other crops.

In the absence of any explanation by the Minister of the regular fall in intake of 350,000 tons of sugar a year by the States, the presumption should be that the consumer's resistance has set in. That the sugar prices have become uncompetitive was admitted by the Minister himself, when he said that the acreage under sug

should be revised with emphasis on 'in-plant training'.

N.C.D.C. Agreement with Polish Organisation

Under the Indo-Polish agreement on economic co-operation, the National Coal Development Corporation has entered into two agreements with C.E.K.O.P. of Poland—one for the preparation of the project reports for the development of a deep-shaft mine and an incline mine in Sudamdih in Jharia coalfield and the other for the supply of shaft-sinking machinery. The cost of the project report will be Rs. 3.80 lakhs, plus Rs. 60,000 for the designs and data for starting the sinking of the shafts. According to the second agreement, the machinery and equipment will be delivered up to 31st March, 1962, excepting a few items, which will be delivered by 31st August 1962. The machinery to be purchased will cost about Rs. 36 lakhs.

Orissa Mining Corporation

The Orissa Government has indicated that it would like the Orissa Mining Corporation to be fully State Government-owned and operated concern. The Central Government has agreed to allow the State Government to acquire the interests of the Centre. Action is being taken to give effect to this decision. The Corporation is at present working three mines for iron ore, namely, Maharajpur and Khandadera in Mayurbhanj district and Sakradih in Keonjhar district. The Corporation

has secured mining leases and prospecting licences over additional areas for iron ore, manganese and chromite. A programme of development by the Corporation during the third plan period has been drawn up involving a capital investment of Rs. 86 lakhs and visualising a production of 800,000 tons of iron ore, 25,000 tons of chromite and 20,000 tons of manganese by the end of the third plan. There are also possibilities of acquiring more leases and raising the target of production. The State Government has also formulated a scheme to develop iron ore mines through the Corporation, in the Sukinda area to export 2 million tons of iron ore by 1964-65.

Expenditure on Rural Electrification

A provision of about Rs. 105 crores for rural electrification has been included in the third five year plan. The tentative State-wise break-up of this provision is given below:

Name of State	(Rs. crores)
Andhra Pradesh	9.45
Assam	0.25
Bihar	3.00
Gujarat	7.00
Jammu and Kashmir	1.86
Kerala	4.00
Madhya Pradesh	6.75
Madras	30.00
Maharashtra	8.33
Mysore	4.25

Orissa	1.50
Punjab	7.00
Rajasthan	1.11
Uttar Pradesh	13.90
West Bengal	0.40
Union Territories	5.88

Total: 104.68

STATEMENT SHOWING THE COMMODITIES EXPORTED BY THE STATE TRADING CORPORATION FROM DECEMBER 1960 TO JULY 1961 AND THE EARNINGS ACCRUED FROM SUCH EXPORTS COUNTRY-WISE

Commodity	Country	Earnings accrued (Sale value in Rs.)
Iron ore	Japan	4,97,00,000

U.K. CHANCELLOR PROPOSES LONG-TERM ECONOMIC MEASURES

EMPLOYERS SUPPORT IDEA OF NEW PLANNING BODY

(FROM OUR LONDON CORRESPONDENT)

A MIXED reception was accorded last week to the U.K. Chancellor of the Exchequer's ideas for long-term economic planning as a means of obviating the crises to which one appears to have become accustomed every few years. As far as the Trades Union Congress representatives were concerned, their approach was overshadowed by the "wage pause" decision—to which they were unequivocally opposed—with the result that they could offer no more co-operation on the long-term proposal than that they would consider it as a preliminary to a further meeting in September. There was blunt talk on the wages question and not a little annoyance as well, and it was not a good augury for the future that the union spokesmen harped on the theme that none of these steps would now have been necessary if their advice in the past on economic matters had been accepted and acted upon.

On the other hand, there was later warm support for the U.K. Chancellor's idea for a National Economic Council which would engage in long-term planning for economic growth from the representatives of employers' organisations. Mr. Lloyd had alternative suggestions on the form the Planning Council should take. It would either be an independent advisory body or a two-tier organisation. The latter proposal, which is likely to receive wider acceptance, would consist of a top-tier council of employers' representatives, trade union leaders, representatives of nationalised industries and possibly some outsiders, presided over by the U.K. Chancellor and responsible, through him, to Parliament. The lower tier would consist of an "office" which would be semi-independent of the Government and staffed by experts, with the task of providing the Council with collated information. The whole organisation would be called the National Economic Council. Mr. Lloyd's next move—now that he has sounded out both the T.U.C. and the employers—will be to draw up more detailed proposals for discussion at a joint meeting with both sides of industry next month.

E.E.C. Developments

Mr. Heath, Lord Privy Seal, has been put in charge of British negotiations with the European Economic Community, better known as the "Six." Where and when these will be is now up to the members of the Community, but earlier discussions in Brussels and with Common Market officials during the next few weeks. Mr. Heath has been closely associated with the U.K. Government's European policy since he was brought into the Cabinet. He is also to carry on with his ordinary duties.

Meantime, the Government is understood to have formally invited a number of Commonwealth Governments to send officials or Ministers to represent them at these talks. India has been the first to respond. It was recently announced in New Delhi that Mr. L. K. Jha, Secretary of the Economic Affairs Department of the Finance Ministry, would leave for London on 28th August. Australia, Canada, New Zealand and a number of African members of the Commonwealth are also likely to send representatives. The British delegation is expected to include about 30 officials.

Sterling Area Markets

The inroads other exporting countries are making in the sterling area markets which British industry traditionally regards as its own are a negative argument for Britain joining the European Economic Community. It is idle to pretend that the United Kingdom could maintain the large share of overseas sterling area imports it has had in the past. The very size of the share makes it vulnerable, and the path of competing countries is made easier by the whittling away of preferences. Figures published in a recent issue of the Board of Trade Journal illustrate the process. During the first quarter, 12 sterling area countries imported goods worth £1,075.8 million, an increase of 5 per cent, compared with the same quarter of 1960. The main industrial countries accounted for £759.4 million and as this represents an increase of 11 per cent, they have made more progress than other exporters.

In absolute terms, the United Kingdom still has by far the largest share, with north America second and the European Common Market countries third. West Germany accounting for more than half the Common Market portion. But compared with a year before, West Germany has increased her exports by 19 per cent, north America by 16 per cent, Japan by 15 per cent, and the U.K. by only 8 per cent. The Common Market countries together show a rise of 11 per cent. This is the overall pattern: for individual countries the pattern varies. U.K. exports to six of the 12 rose by at least the average for all imports.

Special Deposits

Joint-stock banks completed the first part of the Chancellor's call for more special deposits by

placing another £23.3 million with the Bank of England during the week ended 23rd August. This represents half the total due, which amounts to another 1 per cent from British banks and 1 per cent from Scottish banks. Special deposits appear in the Bank of England's return for the week ended 16th August at £195 million, against 171.7 million a week ago and against about £155 million before the new call was made. This call has thus involved about £40 million, with another £40 million due by 20th September. Apart from month-to-month changes in bank assets, which affect the deposit ratios, special deposits at the Bank of England will reach £235 million in a month from now.

Machinery Exports Rising

New orders for the engineering industries have been well maintained in recent months. Seasonally adjusted figures are not published, but the slightly upward trend is shown by the fact that new orders in June were 9 per cent higher than in June 1960, compared with year-to-year gains of 7 per cent in the second quarter of 1961 and 5 per cent in the first quarter. Encouragingly, the main boost to export ordering in June came from overseas, but till then new business owed more to home bookings than to the export demand. In the first three months of this year, net new orders from home industry were 6 per cent above the corresponding 1960 level, against a rise of only 2 per cent on the export side while in the second quarter the year-to-year rise was 8 per cent on the home side and 4 per cent from overseas. In May and June, there was some fall in orders on hand for the home market.

The output in the engineering and electrical goods industries as a whole was 8 per cent above the previous year's level in May and June, considerably more than the gain of 3 per cent over the 1960 rate recorded in the first quarter. Production of goods for export has also continued its upward trend, and in the second quarter was 15 per cent higher by volume than in the same month of 1960.

Panel to Assist Exporters

A panel of 14 experienced exporters has been set up in the north Midlands to help beginners in the export business or small firms who wish to expand their existing export business. It has been organised by the North Midlands Regional Council of the Federation of British Industries in conjunction with the Nottingham Chamber of Commerce, the east Midlands branch of the National Union of Manufacturers, and four hosiery firms as a result of views expressed at a meeting of the Council that many potential exporters were perhaps being deterred by the apparent complexity of export work.

Mr. Ian Kelsall, secretary of the Council, said: "It was felt that there was a definite need for practical and personal help for such firms, which could perhaps best be provided by a panel of experienced exporters, each of whom was prepared to give initial advice to new exporters." The 14 panel members cover the main industries of the region, including engineering, furniture, plastics, leather, shoes, hosiery, and knitwear. It is emphasised that they will not deal with the more usual type of export enquiry, such as the appointment of overseas agents and tariff queries, which are already covered in other ways.

Self-contained Contracts

Hawker Siddeley Industries has announced the formation of a new division, Hawker Siddeley Engineering. The new division will undertake the design and construction of comprehensive engineering schemes such as electrical power schemes, harbour installations, radio-telescopes, sewage plant, automatic railway control equipment, automatic warehousing, automated manufacturing plant, and telemetry applications. Because of the wide range of the group's products, it will be able to offer self-contained contracts, including equipment from diesel engines, steam and gas turbines, generators and electric motors, transformers, control and switchgear, water purification plant, industrial buildings, agricultural machinery, electronic equipment, precision instruments, and hydraulic mechanisms.

Commenting on the formation of the new division, Sir Roy Dobson, vice-chairman and managing director of the group, said: "By integrating the latest aviation techniques with our traditional heavy engineering skills, we can offer a new kind of industrial packaged deal, centrally planned, and controlled by a single contractor. Some 70 per cent of our industrial output already goes overseas, and we are confident that the new division will create opportunities for further expansion in the export market." Administration and general direction of

the new Company will be the responsibility of Mr. R. G. McCoy, assisted by Mr. I. Blick.

Mechanised Banking

The code line on cheques and other vouchers for electronic sorting and processing has now been agreed by the clearing banks. It will be in magnetic ink at the foot of the documents. The code line will include the serial number, by which the customer will identify the transaction in his statement, the bank and branch code number, the customer's account number, a transaction code number, and amount.

Experiments have been made into the type of paper most suited to automatic handling at high speeds. Cheques in a new paper texture have been passing through commercial accounting systems and the clearing house. In general, the new type of cheque will be at least 6½ in. long, although it can be 6 in. New stocks of cheques will be printed to meet the needs of the system. It may be a year or two before all cheques are dealt with in this way. At some local banks where the machinery is already available, however, it may be possible to start the system in a few weeks' time.

B.E.A. Makes a Profit

British European Airways has declared its seventh consecutive profit. The annual report and accounts submitted by the chairman, Lord Douglas of Kirtleside, showed a profit of £1,543,321—slightly less than the preceding year. The report said that this represents "a reasonable financial return in a year in which the airline industry generally throughout the world experienced poor financial results." B.E.A. does not seem to have faced the slump in air travel on its main routes which most major airlines—and especially those flying the Atlantic—have had to face. The total number of air passengers between both Britain and the Continent and inside Britain has gone up by 27 per cent. Of those between Britain and the Continent however, B.E.A. obtained only 18 per cent, reducing its proportion of passengers on these routes from 49 per cent to 46 per cent. The report says that this is a reflection of the increasing number of new scheduled routes which British independent airlines have been licensed to operate in recent years. As with the B.O.A.C. annual report, there is a fairly strong suggestion that orders for the new British jets might have to be cut if the independents were given what they are asking.

The report shows that in passenger traffic, the best increases on international services have been shown from provincial cities direct to the Continent. These have gone up by more than a half, a figure which is matched only by the growth of U.K. flights to Dublin. The big rise on domestic services was on flights between London and Manchester, which were increased from 31 a week in the summer of 1959 to 50 in 1960 and 67 in 1961. London-Scotland services increased once more by a third. The report shows a rise in revenue from £36.5 million to £42.3 million and in expenditure from £34.4 million to £40.7 million, compared with the previous year. Lord Douglas said that it might be difficult to show a profit in the present year. He criticised the Government for increasing landing fees and other charges which, with a higher Bank rate and the possibility of a payroll tax, might cost B.E.A. £1 million in a year.

Brevities

The official index of retail prices on 18th July remained unchanged from mid-June at 115 (January 1956 equals 100), according to the U.K. Ministry of Labour. Even calculated to one decimal, the index was unaltered at 114.6. In July 1960, it was 111.

Report and account of the Moabund Tea Company will be delayed for 1960 but the directors say that no equity dividend will be paid as losses have been incurred, following the severe drought. Considerable improvement has been experienced as a result of favourable weather in the current season.

In discussions with the Government of India about the renewal of mining leases, the board of Central Provinces Manganese Ore is unable to report any definite agreement. Certain broad principles have, however, emerged from the talks, which the board considers would be acceptable as a basis for an agreed solution. The Government's formal approval to the basis has not yet been received, as other authorities have to be consulted. Until a further and more definite stage in the negotiations has been reached, it is not possible to finalise the accounts for 1960.

The directors of Doom Dooma Tea are opposed to the bid from Brooke Bond. In a letter to shareholders, they say that they are unable to recommend the offer of 45s a share. As a result, Brooke Bond is making a direct offer to shareholders.

ARGENTINE BUYING LIFTS HESSIAN: SACKING FLUCTUATES NARROWLY

OFFICIAL INDECISION ON FLOOR PRICES
FOR FIBRE DISAPPOINTS OPERATORS

THE jute industry has of late come in for much attention from the legislators. Nearly every day it has figured on the agenda of the Lok Sabha, and the West Bengal Government appears to be over-preoccupied with it. Criticism by both Congress and Opposition members, and strong language used against the I.J.M.A. appear to be so much hot air, although there is an insistent demand by many sections of the community for fixing floor prices for raw jute. It is recognised that decisions of this nature are of immense consequence for the future of the industry, and cannot, therefore, be made lightly. Yet the lack of any definite lead or statement on the revision of policy has created an air of uncertainty. The industry itself has given a lead by agreeing to re-open some of the looms sealed during the recent raw jute shortage, and also to modify the quota system for the purchase of fibre, but the Government is yet to come out with any definite decision in the matter. Consequently, the raw jute and manufactured goods markets have been hesitant over the past week. The consumers of jute and manufacturers will naturally delay purchases as long as possible in order to get the advantage of falling prices, but there is a limit to the time they can wait, and if reports concerning stocks are true, it is a very near limit. They are certainly not in a strong position, and they must continue to buy raw material to keep their machinery running.

There has been ample evidence also of nervousness on the side of growers. According to them, the levels at which it is suggested the floor price of jute should be fixed leaves very little scope for profit, in spite of the "fair-price" tag attached to the suggestions. Consequently, there has been no stocking of jute in the mofussil as nearly all imports or purchases over the past few weeks have shown a heavy loss right from the outset. Prices in the mofussil, and in Cossipore, have fallen rapidly over the past week, and whereas they were ruling anything up to Rs. 5 a maund over Calcutta-quoted rates, they are now very nearly at par.

Everyone in the trade and industry has greeted the check to the upward trend with a feeling of relief. The almost universal belief is that prices were forced up too high. On a near view, these high prices constitute a grave danger because of the amount of speculative trading which goes on. From the long-term point of view, they are a menace to the future of the industry, because they encourage the development and use of substitutes. There may be some dislocation until readjustments take place, but the reversal of high prices is healthy and is generally welcomed as putting India's major dollar earner on a competitive footing once again.

Relaxation of Credit Restrictions

Some relief has been given to the industry by the recent announcement by the Reserve Bank of the withdrawal with immediate effect of the existing margin requirements on advances by scheduled banks against raw jute and the ceiling limits on advances against jute goods. This is a big step in the chain of events that lead up to the speedier movement of jute to the mills, and to provide finance against shipping documents. It is not generally realised that when the upcountry merchants despatch jute to Calcutta mills, they normally draw on their brokers for the value of the jute against documents long before the mills ever see the material. When the restriction on bank credit was in force, this meant that brokers could only advance a portion of the amount which they previously normally advanced, which in turn hampered the seller from making any further purchases. This fact did not appear to be fully appreciated by those who presumed to interfere with the trade, and in many cases, the have been speeded up if it had not been for the lack of finance due to credit restrictions. The argument put forward to banks in the directive announcing the withdrawal of the credit curb does not appear to be consistent with the facts of the trade. Admittedly, more money will be required to finance the movement of jute now that the season is in full swing in spite of the fall in rates, but the necessity was even greater when raw jute prices were more than double their present levels, and only small purchases entailed heavy financial commitments.

All markets tended to decline in the early part of the week, but activity from the Argentine caused a pause, and some business was put place, and the size of the business concluded in the absence of confirmed overseas enquiries, made it fairly obvious that buying was against hitherto undisclosed business, and that shippers had a fairly comfortable margin in hand. This caused a general steadying of the markets towards the close. Mills also showed a greater tendency to sell goods on transactions based on the current

price of jute continue to show a profit. On the whole, however, business has been generally dull in all sections. Prices of manufactured goods have fluctuated within narrow limits and raw jute prices have declined. There have been some enquiries, but little business has resulted for the near positions in fibre. Sellers are pressing for forward sales, but the mills being more concerned in establishing their near positions are not very interested in forward shipments.

THE JUTE MARKETS

Manufactured Goods: Hessians have been in fairly good demand throughout the week due to increasing interest from the Argentine. While sacking fluctuated erratically, 11 porter and 9 porter hessians remained fairly steady and prices advanced. Opening quotations for 40in. 10oz. were based on Rs. 45.25 for August shipment and Rs. 43 for January-March. From then on, apart from a slight setback immediately prior to the week-end, prices moved up slowly and by Tuesday morning, were quoted at Rs. 46.25 and Rs. 43.75, respectively, for the near and forward positions. There was less activity in sacking, and any price movements were mainly influenced by speculative activity. At the opening B Twill rates dropped heavily as August shipment was quoted at Rs. 124.00 with January-March at Rs. 119.85. Speculation concerning the outcome of trade meetings in Delhi, and reports of overseas interest, caused prices to jump shortly after the opening, but in the absence of any momentous decisions and the extent of overseas business being exaggerated, prices fell back to opening quotations over the next few days. Towards the close, conditions again firmed up. Opening quotations on Wednesday morning were as follows:

	August	September	October	Oct.-Dec.
40in. 7oz.	36.50	35.50	34.75	34.00
40in. 8oz.	30.00	30.00	37.25	36.25
40in. 10oz.	46.50	46.50	45.60	45.00
B Twills	129.00	127.00	124.00	122.35
Heavy Cees				
(Plain)	129.00	128.50	125.00	123.25
A Twills	156.00	155.50	153.00	150.50
Liverpools	150.00	149.50	144.50	140.50
Cornsacks	128.50	129.00	126.50	125.50

Raw Jute: In the early part of the week, there was no interest in the fibre markets. Buyers, expecting an announcement from the Government concerning the minimum prices for jute, showed no interest, and although sellers offered at lowering prices, only limited business was reported. Quotations were based on Rs. 32 for Assam Bottoms, but with agency and Cossipore prices falling, business was possible below those rates. After the week-end, indications dropped to Rs. 31 and below, but still no business was reported, and there was a certain amount of disappointment in the market that the Government had not made any move to fix floor prices for fibre. Mills indicated that over the next few weeks, looms would be gradually unsealed, and this news had a steady influence. Tuesday, the market firmed up as mills covered in against sales, and heavy speculative activity eventually succeeded in pushing the price of Assam jute back to Rs. 32.50. Small business was again reported and the market closed fully steady. Wagon arrivals in Cossipore showed a welcome rise and during the week, a total of 530 wagons were reported. This was 150 wagons more than during the previous week. Opening quotations on Wednesday morning were as follows:

	Landed at Mills Basis Bottoms		Shipment
	Rs. a 100 kilos	Rs. a md.	
Assam	87.00	32.50	Sept.
Northern	87.00	32.50	"

Assam-Northern	84.50	31.50	"
Desal	84.50	31.50	"
Daissee	84.50	31.50	"
Pakistani Cuttings	115.00 a bale		

THE FOREIGN JUTE MARKETS

SPINNERS EXPECT STEADY
FALL IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices have become very irregular, but there is little doubt about the weakness which prevailed in the market during the past two weeks or so. Although there was a steadier

undertone in the latter part of last week, after a phase of distinct fall, spinners are still under the belief that values will steadily decline in future. Mill Firsts are not being quoted in the Dundee market, although why nobody seems to know. It is rather strange that, in a crop which bids fair to be a record one, there should be so little good quality fibre. Maybe, shippers are getting better prices elsewhere, so they are not offering to Dundee where, for some seasons past, Mill Firsts have not been used to anything like the same extent as formerly. Even for Mill Lightnings there are not many offers.

Mill Lightnings are offered at from £121 for September shipment and £119 for October, and Mill Hearts from £103 and £102 for the respective shipments Grade Hearts from £91 and £90, Grade Tossa-2/3 £126 and £125 and fours £116 and £114, with Continental Tossa-2/3 from £106 and £104, respectively all c.i.f. U.K.-Continent. The spinners in Dundee have shown little interest, and nobody can blame them for not buying when there is a steady fall in quotations. This has had its effect on the ruling prices for jute yarn and cloth. There have been four reductions in the rates in August, on the 11th, 16th, 19th and 24th—three of £5 a ton each and one of £10. Both sellers and buyers are glad to see the prices falling, because one can now expect more reasonable rates for various manufactures, with buyers purchasing more freely.

Hessian yarns have fallen to 18.30d a lb. for 8 lbs C.H.W. cops and to 19.45d for 8 lbs J.C.H. warp, on spools, with 3 ply 8 lbs twist at 21.37d a lb. and 24 lbs sacking weft at 14.83d, while Rove is now at £130.15s for 48 lbs and £99 for 200 lbs a ton. Cloth prices are now at 15.63d for 40in. 10oz. and 13.21d for 8oz a yard. Both yarn and cloth prices are subject to a discount of 3 percent for prompt cash.

Calcutta goods showed a slight weakness, but steadied up a little later to 68s 9d for 40in. 10oz. and 53s 9d for 74oz. August, 68s 9d and 52s September, 66s 9d and 50s 6d October-December and 65s 6d and 49s 6d January-March, with B Twills at 192s 3d, 189s 3d, 184s 6d and 180s for the respective positions of shipment, all f.o.b., Calcutta.

THE PAKISTANI JUTE MARKETS

FOREIGN BUYERS RESERVED

(FROM OUR EAST PAKISTAN CORRESPONDENT)

ALTHOUGH prices in the loose jute market have weakened during the past few days, there is now a pause with the undertone slightly steadier. This is mainly a reaction, as expected, to the very fast drop in prices and is, of course, accompanied by a very marked falling off in arrivals. In the pucca bale market, little or no business is reported. There are many buyers and no sellers for Export Firsts and there are many sellers and no buyers for Export Hearts. The E.P.C. prices have dropped by £7 for long jute and £10 for Cuttings, but foreign purchasers are still sitting out, waiting for lower prices, although some interest is reported at discount prices.

In the mofussil stations, imports have considerably fallen off and although prices quoted are still in the region of about £88 c.i.f. for Export Hearts and £105 c.i.f. for Lightnings, there is very little jute available and much higher prices are being paid for any jute containing even 10 percent of Export Firsts. This Export First, when available, costs something in the region of £135, but is actually more expensive than this because in buying this, one gets a percentage of Export Lightnings at about £116.

The Narayanganj market is slightly steadier. Very shortly the full weight of the midland crop will be felt. In the jat areas, they will probably have a maximum of 1 percent Export Firsts, possibly 55 percent Export Lightnings and 44 percent Export Hearts. In the district and northern areas, however, it is estimated that something like 40 percent Export Lightnings and 60 percent Export Hearts will be received. Since up to now there have been practically no buyers of Export Hearts, this is going to make the balers' position extremely awkward. Balers now covering their sales at about £130 for Export Lightnings are losing because of the large percentage of Export Hearts, with which they find themselves saddled and which they cannot sell. It is particularly strange to notice that in spite of the tremendous shortage of Export Firsts in East Pakistan, it is reported that in the overseas market, transactions in this mark are still taking place at prices around the E.P.C. level. Already, the time is at a premium, and in fact, some balers are offering these grades only subject to an equal quantity of Export Hearts being bought. Others are thinking of selling one Export Lightning, if the purchase also includes two Export Hearts. The logical conclusion is that if this shortage of Export Firsts and the premium of Export Lightnings continue, as it well might, the price of Dundee Tossa 4s and Dacca Tossa 6s will increase in relation to white jute since some buyers will substitute tossa for white. If, as has been suggested, the market of Export Lightnings goes down to a minimum, which it may do only for a short period, then the situation may arise when Export

Hearts will not only be sold below E.P.C.s, but also below the minimum.

In this connection, it is worth while noting that although the new minimum price has been set for Export Firsts, other grades at present have no minimum prices. It is understood that the minima for the other grades will be shortly set. The mills at present are continuing to buy on a c.o.d. basis and those who have agencies, are restricting the quantity of their purchases. The market in Cuttings has come down considerably and although the ready market is quoted at about £72, there are no buyers. The price for September at which some business is reported, is approximately £58. Taking this as Rs. 100 a bale, this is roughly Rs. 19 a maund. In north Bengal, X Bottoms are available at Rs. 18 a maund, which accounts for the lack of interest by the mills in Cuttings and makes one think that since X Bottoms or Export Hearts are not likely to rise, Cuttings must go down even further except for the odd occasion when India buys.

ECONOMIC PLANNING: PROBLEMS AND SOLUTIONS

Spotlight on Indian Economic Problems. By Nabagopal Das. (Published by A. Mukherjee and Co. Private Ltd., 2 Bankim Chatterjee Street, Calcutta 12. Price Rs. 4, pages 132.)

The author who is now the Director-General of the Employers Federation of India is a well-known writer on economic problems and gained much reputation even during the days when he was a member of the Indian Civil Service. Dr. Das's book is a collection of 20 articles, some of which had appeared in newspapers and journals including *Capital*, but they have now been revised and brought up-to-date. The articles mainly deal with different aspects of the third five year plan—its contradictions and weaknesses and the problems which India will face in implementing it. In the article entitled "thoughts on the third five year plan," Dr. Das concedes that the plan is the best that could be devised by the Government, although it is over-ambitious. He concludes that the realities of the situation might inevitably force the Government to prune its programme because economic laws do not respect ethical or ideological aspirations. In the article on "employment policy in the third five year plan," he emphasises that the unemployment problem should not be viewed as a residual one to be tackled after other problems have been solved, but as a primary

problem. In the same strain, he passes on breezily over such important subjects as "battle of wages", "case for industrial partnership", "problem of industrialisation", "concentration of economic power" and "pattern of socialism". But the article on "affluent society" (an expression borrowed from Professor Galbraith) is not strictly relevant to India. "India", Dr. Das says, "is still far removed from the stage of economic growth in which the problems of the affluent society appear. Nonetheless, certain issues raised will merit study even by societies afflicted by poverty, inequality and insecurity."

With his keen insight on economic problems, the author has been able to bring in a freshness of approach which makes most of his studies immensely readable, although there has been a lot of discussion on them in recent months. The author's objectivity in dealing with India's economic problems is commendable, but his book shows a slight bias for the point of view he represents.

FOREIGN INVESTMENT PROSPECTS

Investing in India: An Introductory Survey. (Compiled and published by the Associated Chambers of Commerce of India, Royal Exchange, Calcutta. Pages 33.)

The Associated Chambers of Commerce of India has to be complimented for bringing out a useful pamphlet on the prospects for foreign investment in this country. The overseas investors and foreign visitors are often eager to learn about the economic and business conditions here and the facilities the Government is willing to offer in setting up new industries. The literature on the subject is admittedly poor, and the required information is not always available within the compass of a single publication. The Assocham's pamphlet lucidly discusses the factors which retard, and those which favour, the flow of foreign investment in India, although the present reviewer feels that in assessing the climate for foreign investment, the compilers of the booklet have generally been optimistic and may have underrated some of the adverse factors which often discourage the potential investor. For a fair assessment of the situation, it was necessary to discuss the steady encroachment of the public sector over the private, the activities of the monolithic State Trading Corporation and the numerous items of labour legislation which have made an employer not even a master in his own house. But these questions of controversy apart, the compilers have discussed fairly adequately the problems connected with foreign investment and have rightly stressed India's desperate shortage of foreign exchange and the consequent need to attract capital as well as technical know-how from abroad. The booklet will undoubtedly prove to be a useful and informative guide to potential foreign investors and will stimulate interest among overseas business men to make more detailed investigations about the prospects for foreign investment in India.

Commodity Markets

BRITISH TEXTILE REVIEW

RESHAPING POLICIES

THE Wool Textile Delegation of the U.K. circulated last month a statement on the Common Market that expressed the feelings not only of the wool industry, but of a wide section of British business generally. The delegation would be satisfied if the two groups of western Europe could be harmonised, but Britain avoided the complications involved in joining the European Economic Community. If that solution is impossible, participation in the Community in some form should, the delegation agrees, be discussed; but the industry should be particularly concerned with the proposed level of the Community's external tariff, and with its plans to regulate disruptive imports from outside. In no circumstances, the delegation feels, should the British Government commit itself to formal negotiations until informal discussions have shown that the wider problems, and those concerned with exports to the Commonwealth, can be satisfactorily solved.

The delegation has urged that constituent organisations begin immediately to study how their sections of the trade would be affected by the proposed association with the Common Market. In fact, no responsible organisation or unit in the textile industry can ignore the change in the Government's policy, and its possible implications. As the implications of last month's international agreement in Geneva have to be worked out simultaneously, this is a busy period for policy-making. However, the Geneva agreement (assuming that it is allowed to work) eases Lancashire's problems in so far as it averts the risk of a restrictive policy in the U.S.A. that would increase the pressure of cheap exports on other markets, and in so far as it provides for a considerable increase in cheap imports into the Common Market, particularly France.

Lancashire's enthusiasm for this agreement is moderated by the thought that Hongkong will evidently try to "upgrade" its textiles, in both quality and price, and may thus compete more strongly in Lancashire's categories of goods. The absorption of more cheap goods into the Common Market was much desired here, but its effect on Lancashire's export trade with Europe could be adverse. At the same time, the plan diminishes one attraction of the Common Market as a trading partner, that it would tend to unify international policies on cheap imports—those policies having been to some extent unified already.

New Opportunities

At an exhibition in Manchester recently of fabrics woven from British Celanese yarns, Mr. J. C. Smith, a director of Courtaulds (which owns British Celanese), mentioned the opportunities for expanding exports of acetate rayon to Europe. The U.K. is the only major producer in Europe of this kind of rayon—modest quantities of it are produced in the Common Market countries (particularly West Germany, Italy and the Netherlands), but none at all in the continental countries of the Free Trade Association. Fashion, which for some time past has inclined towards silk-soft textures, has favoured acetate rayon, and the European markets need to import it in considerable quantities. The trade with E.F.T.A. is already benefiting from the reduction of tariffs, and the trade with the Common Market would, of course, benefit likewise if Britain joined the Market. On the other hand, this is not a case where British export has difficulty in competing with similar goods in Europe—simply because production of similar goods in Europe is comparatively small. In any case, the British industry is not at present in a position to satisfy a much-increased demand. In his annual statement to Courtaulds' stockholders

last month, Sir John Hanbury-Williams, chairman, outlined the relations between the different types of man-made fibres and between man-made and natural fibres. Between 1950 and 1960, he pointed out, world production of man-made fibres had almost doubled to 7,300 million lbs, so that present production was more than twice that of wool and about a third of that of cotton. In that decade, output of the new synthetic fibres (Courtaulds itself is interested particularly in nylon and Courteille) increased their share of the total from 4 percent to 21 percent; but in terms of weight viscose and acetate increased by half as much again as the new synthetic fibres. Viscose "is still the dominating fibre", accounting in 1960 for nearly 70 percent of the world total; but acetate "continues to be an important fibre".

Tariffs and Costs

Whatever new opportunities may present themselves in Europe, in the various categories of textile trade, it is not surprising that much of the British industry is still "Commonwealth-conscious", and the possibility that the benefits of preferential tariffs will be lost is never overlooked. How serious foreign tariffs can be was implicitly observed in the statement submitted by the National Wool Textile Export Corporation of the U.K. to the Office of Civil and Defence Mobilisation of the U.S.A. at the end of July, putting the British case in the Office's enquiry into the state of the U.S. industry.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended May 1953=100) fell by 0.9 percent to 127.5 during the week ended 12th August, compared with 128.6 (revised) for the previous week. The index was lower by 1.5 percent when compared with the corresponding week of the earlier month, but was higher by 1.8 percent than that of a year ago.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

The Middle Class Cost of Living Index, by groups, have now been brought up to July 1961. As compared with June, the July Indices for Food, and Fuel and Lighting show increases of 11 points and 2 points, while those for Clothing and

Miscellaneous remain unchanged at 581 and 308 points, respectively. Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 6 points during July 1961.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

GOOD DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 13, held on 28th and 30th August, 77,950 chests were on offer at the Export auction. There was a good demand but at easier rates. Plain Broken was 10nP to 15nP easier, and Plain Fannings declined by from 15nP to 25nP and sometimes more. Other orthodox descriptions shared in the decline and better Assam B.O.F.s were often up to Re. 1 easier and sometimes more. C.T.C. teas were irregular but easier by 70nP and sometimes more. Buyers were discriminating against any teas containing fibre. Towards the close of the sale, the demand for C.T.C.s weakened further, and there were many withdrawals. Leg-cut teas were up to 20nP easier. There was a fair demand for Darjeelings at easier rates. Plain Pekoes were 20nP easier while stylish leaf grades were weak. Tippy-teas were again easier.

At the Internal Sale, the demand was less general than in recent weeks for the 27,287 packages of Dusts on offer. C.T.C. varieties met with fair support but they were easier by 60nP to 80nP and sometimes more. The small and powdery descriptions, however, realised better prices. Plain orthodox Dusts were absorbed at a discount of 20nP to 30nP while the Assams were a weak feature of the sale and much easier to buy. Leg-cut teas followed the general trend of the market and were easier by up to 40nP.

Quotations

	1961	1960
Rs. a kilo	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	4.10 to 4.40	4.70 to 5.00
Medium Assam Dust	4.40 to 5.00	4.90 to 5.40
Leg-cut Dust	4.30 to 5.20	
Medium Assam C.T.C. Dust	5.00 to 6.00	5.80 to 6.15
Good Assam C.T.C. Dust	6.40 to 6.70	6.30 to 6.60

(Quotations are inclusive of excise duty.)

The 219 packages of internal Leaf teas on offer met with quite a good demand but at prices which were much lower.

FOODGRAIN RATES RISE IN FREIGHT MARKETS

ON the Pacific Coast, rates to Japan for food-grain were for a considerable time not more than \$ (U.S.) 5.75, but these now have jumped to \$ (U.S.) 7.30. Another good feature on the Pacific Coast in the past week was the Baltic Exchange Chartering Committee paying 62s 6d for a vessel from British Columbia-North Pacific to East Coast India. In the Far East, from Australia to India, foodgrains vessels were accepted at 52s 6d against last paid 50s. The most active Far East market was Visakhapatnam where bookings to Japan paid unchanged 46s f.i.o. and trimmed, and to Antwerp at 45s 6d f.i.o. and trimmed, when Madras to Constanza and Cuddalore-West Italy paid 42s f.i.o. and trimmed. The time charter market was slow. Due to heavy monsoon rains, there is congestion at Rangoon, Chittagong and Chalna. In Madras, vessels have to wait from five to nine days at the outer anchorage for berths. At Visakhapatnam, ore loaders are having to wait for two to three days for a loading berth.

LINSEED DULL

The market was featureless during the past week. A small reaction seemed to have set in and prices were a little easier in sympathy with other oil markets. Arrivals from upcountry were very small. Millers bought daily for ready and forward delivery seeds, but sellers did not show any interest at lower prices. The oil market was quiet. Small local business was done for ready delivery, but millers were not interested to sell forward at current prices. The oilseed market was sluggish, and prices showed little change. Stocks were low. The latest quotation is as follows: August-September delivery Rs. 29.75 a maund.

HIDES AND SKINS STEADY

The market was quietly steady. Stocks of hides were higher, but those of skins were less than in the previous week.

Bazaar Sales

(Between 22nd August and 28th August, 1961)

Cowhides: Wet salted (Ord.) 25,000 pcs. on the basis of Rs. 8.25 to Rs. 12.25; Wet salted (Slaughtered) 23,800 pcs. on the basis of Rs. 7 to Rs. 16.50 and Rs. 19 to Rs. 28.

Goatskins: Wet salted (Patna, Daissee, Kustia) 53,100 pcs. on the basis of Rs. 200 to Rs. 225, Rs. 280 to Rs. 300 and Rs. 375 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 3.87 and (she-killed) on the basis of Rs. 3.62 a piece; Assam-Dinaipur 24,000 pcs. on the basis of Rs. 250 to Rs. 260, Rs. 290 to Rs. 320 and Rs. 345 to Rs. 350.

Bazaar Stocks

(28th August, 1961)

Cowhides: Wet salted 78,900 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 22,100 pcs.; Assam-Dinaipur 58,000 pcs.; Muzafferpore-Patna-Pakur-Purneah - Kissanganj 146,000 pcs.

MEDICINE MAN MR. AL FOIL F.G.S.P.P. ...

"... Fellow of the Grand Society for the Protection of Pills" said Mr. Foil, greatly impressing the awed Chemist who had never heard of the degree before. "That is just one of many honours conferred on me", continued Mr. Foil modestly, "by Pharmacists for having rendered valuable packaging service to the medicine manufacturing industry. Whatever the pharmaceutical product, be it pills or potions, aluminium foil wrapping safely seals in the prophylactic and curative properties for long periods and effectively protects them from contamination, moisture and dirt ... And that," finished Mr. Foil, "is just what the doctor ordered."

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries

VENESTA FOILS LTD.

KAMARHATI, 74 PARGANAS, WEST BENGAL

Branches at: BOMBAY, CALCUTTA, MADRAS, NEW DELHI

MUNICIPAL LOANS

24% U.P. Zemindary Abolition Compensation Bond (per Rs 38/25*)

*Ex eight instalments but inclusive of accrued interest.

MUNICIPAL LOANS

These notes refer to the Debentures on the next page.

Option to repay at par on 5 months notice—

(a) Option to extend the redemption period for further 10 years

(b) at any time after.

(c) on or after 1-1-61.

(d) option to redeem at 2 1/2% Prem after 14-6-64 and before 15-6-69

Option to repay on 6 months notice—

(e) at any time after 30-6-61 at 10 1/2%.

(f) at 10 1/2% between 1-1-61 & 31-12-64.

(g) at 10 1/2% after 30-6-64 on or before 30-6-64.

(h) at any time after 30-6-64 at 10 1/2%.

Option to repay on 3 months notice—

(i) at any time at 3% Premium.

(j) at 1% Prem after 1-3-64 but before 1-3-67 and 1% Prem on or after 1-3-67.

(k) at any time at par.

(l) at any time after 31-3-62 at the rate of 1% Premium.

(m) redeemable at 100% on 31-12-64 with option to redeem at any interest rate at same premium after 30-6-66.

(n) at any time at 2% premium after 30-6-66.

(o) at any time at 2% premium after 30-6-66.

(p) at any time at 2% premium after 30-6-66.

(q) at any time at 2% premium after 30-6-66.

(r) at any time at 2% premium after 30-6-66.

(s) at any time at 2% premium after 30-6-66.

(t) at any time at 2% premium after 30-6-66.

(u) at any time at 2% premium after 30-6-66.

(v) at any time at 2% premium after 30-6-66.

(w) at any time at 2% premium after 30-6-66.

(x) at any time at 2% premium after 30-6-66.

(y) at any time at 2% premium after 30-6-66.

(z) at any time at 2% premium after 30-6-66.

(aa) at any time at 2% premium after 30-6-66.

(ab) at any time at 2% premium after 30-6-66.

(ac) at any time at 2% premium after 30-6-66.

73rd YEAR OF ISSUE

CALCUTTA, 7th SEPTEMBER, 1961.

Vol. CXXXVII No. 3676

WANTED: A MASTER PLAN FOR CALCUTTA

SENTIMENTALISTS may have done the cause of Calcutta considerable harm. Ten years ago Mr. Nirad C. Chaudhuri wrote in his brilliant *Autobiography*: "...and to belong to Calcutta is not to be just anybody. It was the City of Palaces, the Second City of the British Empire, the birthplace and centre of modern Indian culture, and a very impressive place in its looks and spirit. After the outbreak of the war of 1914-18 a prominent English (or he may have been Scotch) business man of Calcutta hit off what every Calcutta man felt, by subscribing himself in a letter to the Press as 'A Citizen of No Mean City'." The cultural achievements of Calcutta are indeed considerable; and the artistic sensibilities of its people can be missed only by the unfeeling and the unobservant. It can be argued still that endless and exclusive iteration of these aspects of the city and its people has obscured the other, in a sense more important, activities of Calcutta. It is not wholly uncharitable to maintain that Kipling's notorious dislike of Bengal and the Bengalis has today been inherited by men, those in power in New Delhi, to whom the very name of that poet is odious.

The business of Calcutta is business. This was so even at the peak of the city's cultural regeneration under the impact of western learning; and culture was not an obsession with the people until business began to decline for an infinite variety of reasons. Today the city is dying on its feet and the rest of the country has little reason to rejoice over the corpse. It remains, however, a severe criticism of those who wield power in India today that attention to the implications of what is happening to Calcutta has had to be drawn by a group of foreign observers: it was a World Bank mission that told the Government of India that the disintegration taking place in Calcutta was a challenge to the political common sense of those who rule India. It is a serious indictment of New Delhi that free India has found money for expensive architectural luxuries and fantasies like Chandigarh and Bhubaneswar while allowing Calcutta to decay. The human aspects of the problem that is Calcutta have been painted often enough—five and a half million people living in slums, if not on pavements, without the most elementary civic amenities. In 30 years there will be 14 million to take care of—or neglect, as now. Words drenched in emotion and horrifying photographs of the naked and the dead in Calcutta have not succeeded in moving the heart (such as it is) of New Delhi. The political dangers inherent in the purling, but a big Congress victory in the next general election—a victory in the districts, Delhi sleep again over the political significance of Calcutta's decay. But since New Delhi affects to be single-mindedly dedicated to the third plan, let us quote the words of the World Bank report: the problem of Calcutta is described as one of the "dangerous weaknesses of the third plan".

How dangerous should need little elaboration. An inept, corrupt and Congress-ruled Corporation has sat on the proposals for an alternative water main for years; and in large areas of the city the water supply is already pitiful. The city's sewage system stinks more than the civic body, if that be possible. The Hooghly will in the foreseeable future cease to be navigable for ships of any size; and that will be the beginning of the death of Calcutta—and the vast hinterland fed by the Port of Calcutta will not in consequence prosper. Thanks to the short-sightedness of the Government of West Bengal and its over-estimation of its own capacity to produce electricity, Calcutta and its industrial suburbs have already been subjected to frequent power shortages; and there is little evidence that the supply of power during the third plan will be anywhere near the profitable demand. The list could be lengthened

almost indefinitely. The Calcutta-based jute industry is again the country's largest single foreign exchange earner; and the crucial rôle of foreign exchange in implementing the third plan can hardly be over-emphasised. Tea, another big export item, passes mostly through Calcutta. Although many financial institutions controlled by the Government have in recent years been given headquarters away from Calcutta, the economic primacy of the city has only been challenged—it has not disappeared. In the name of over-concentration, several industries which should have been set up in or around Calcutta if economics were the only decisive criterion, have been established elsewhere; and strident regional claims will probably see to it that Calcutta's importance diminishes steadily. But all this will be at the expense of the country as a whole and not of Calcutta alone.

To put it bluntly, the third plan does not make sense without a master plan to redevelop Calcutta and its environs. The World Bank, the World Health Organisation, the International Development Association and other similar bodies, have for some time shown a very lively interest in the city's future, which is more than can be said for New Delhi. Dr. B. C. Roy, the State's Chief Minister, is a known enthusiast for a plan for Calcutta. He has often banded about astronomical figures of the money needed; but there are enough indications that finance may no longer be the chief hurdle. To invest in the city of Calcutta, as it is being increasingly realised in interested countries, is to invest in the Indian economy. International experts are available to spell out the most pressing needs, which are in fact generally known. The legal status of the proposed Calcutta Metropolitan Board is not wholly clear; but its Secretary has been abroad for consultations with intending benefactors. The stage can be said to have been set for a courageous beginning to be made before long.

But who are the actors? Have they been told the meaning of the play? Here all is vague. And if foreign planners and Dr. Roy think that Calcutta can be cured as in an air-conditioned operating theatre, they are gravely in error. It has been suggested—and that is all we know because Dr. Roy, perhaps apprehending political difficulties, has chosen to remain virtually silent on details—that Calcutta's civic problem be taken out of politics. The city's politics are indeed vicious; and municipal democracy has been manipulated by the

unscrupulous in a manner that does credit to nobody involved. It may still be unrealistic to consider Calcutta apolitically. Dr. Roy must have been told quite plainly by his own Party that it has no intention of giving up its hold on the Corporation and 32 other municipalities around. These have funds to play with; the area of patronage is considerable. Nor are the other political Parties obviously interested in a moratorium on politics. The much-maligned public of Calcutta, of which only a small fraction have votes in civic elections, may yet be actively associated with the master plan. If the Congress is serious about Calcutta, and this is where Mr. Nehru comes in too, it can hold a referendum on the master plan on the basis of adult franchise; and once that popular sanction has been obtained, international organisations can go ahead with their purely technical work without further reference to phoney elected bodies. It is this supreme will for once to rise above Party considerations which is lacking in the Congress; and it is unfair to blame the public for Calcutta's ills. It is the country's political leadership that has failed and as yet shows little inclination to succeed. Brandishing master plans will take the city nowhere.

And nowhere is where Calcutta is going—fast. Enough is known about urban planning from experience in other countries; and it is not knowledge of policy or detail that is in short supply. As an engineering problem, it is no great feat today to set up a water main or build a monorail; and citizens of Calcutta are sick of the sort of experiments Dr. Roy is fond of indulging in at great cost to tax-payers. What Calcutta needs is a simple plan that can be executed in the next five years—the third plan period, in fact. What is needed is a sense of urgency in New Delhi and a little political wisdom in the State. There is sadly little evidence of either forthcoming in the near future; and the rate of the city's decay is accelerating daily. The Prime Minister is fond of the expression "war footing". And only he can impart to all concerned the required awareness of an emergency in Calcutta. Unfortunately, he has developed a kind of allergy towards this city. It is for the Bengali leadership to direct the people's energies into economic endeavours, which need not be unworthy of one of the most cultured peoples in the world. But a psychological transformation is often brought about by physical treatment. The creation of greater economic opportunities in Calcutta, which it is within the power of the third plan to effect, will work rapid changes in the Bengali ethos; and Calcutta's place in the Indian economy makes it imperative for the rest of the country to ensure that the city flourishes. An unhappy Calcutta—and its people have a great deal to be unhappy about—will sorely try the developing (however slowly) economy of the country; and it is this economic argument that should be decisive. Alas, it is not—yet.

FIFTH YEAR OF THE L.I.C.

THE review of the business of the Life Insurance Corporation of India, given by the chairman, Mr. P. A. Gopalakrishnan, at the fifth anniversary meeting in Bombay last week, was both an apology and a commentary on the progress or otherwise of the Corporation in the various facets of its business during 1960 (a more detailed version of Mr. Gopalakrishnan's speech was published in last week's issue of *Capital*). The Corporation could not reach the target of Rs. 525 crores; it did reach one of Rs. 498 crores, covering 1.26 million policies in the year. This is a substantial improvement on the figure of Rs. 429 crores for 1959, and although the chairman has suggested natural calamities such as floods, etcetera—which, however, are a common feature in India's economic life—in justification of the shortfall, he did not mention that even to reach Rs. 498 crores it was necessary to carry forward the closings till February-March 1961. This ill-advised step has sullied the good name of the Corporation and was entirely unnecessary. The Corporation has no competitors and it matters little whether a target is reached or not. Yet despite this, the target of Rs. 525 crores could not be reached. The Corporation's endeavours in rural

development are, however, impressive. By using the agencies of the *panchayats* and co-operative societies for securing rural business, and by an intensive drive by the zonal managers, considerable headway has been made in that sector, although exact figures have not been appended. An outstanding feature is the mobile publicity vans which, according to the chairman, secured spot business of about Rs. 37 lakhs. This is a novel approach, and if the L.I.C. can maintain the renewals, this could be heralded as a departure from the orthodox method of trading and could be a good augury for business improvement in future.

Foreign business, however, has not been of any moment for the L.I.C. since its inception. In all the Corporation completed Rs. 9.7 crores of new business during the year as against Rs. 9.47 crores in the previous year. The life fund has gone up from Rs. 495 crores in 1959 to Rs. 560 crores in 1960. Total assets have similarly increased from Rs. 554 crores in 1959 to Rs. 622 crores. The total stock exchange investments as at 31st December, 1960, had a book value of Rs. 471 crores. Their market value on the same date was reportedly higher.

nearly Rs. 1 crore. Moreover, there is a reserve of Rs. 13.41 crores to offset any future fall in the market value of these investments, and it is proposed to keep this reserve intact for the present.

As a nationalised undertaking, the Corporation is an institution dedicated to the welfare of the community, and one of the measuring rods towards achieving that end is the progress of its housing programme. It appears the Corporation has sanctioned housing loans to the extent of Rs. 23.05 crores. These loans have not, however, been fully utilised by the agencies, but a beginning has been made by the State Governments and co-operative housing finance societies towards relieving the housing shortage in India with the aid of the Corporation's funds. The total number of houses constructed in the country using the L.I.C.'s funds is 11,367. To this figure must be added office buildings, which the Corporation itself is completing, valued at Rs. 3.91 crores.

The record of management expenses for the year 1960 is not, however, satisfactory. After going into the traditional arguments about inflation and increase in the cost of management, the renewal expense ratio, which is the real indicator of economy of management, remained practically constant at 12.9 percent. The overall expense ratio, however, fell from 28.7 percent in 1959 to 28.4 percent in 1960. Likewise, the lapse ratio of the Corporation, which was 9.1 percent in 1956, came down to 6.4 percent in 1957 and to 5.1 percent in 1958. In 1959 it again rose to 6 percent and in 1960 to 6.6 percent. This rise in the lapse ratio is a disquiet-

ing sign and shows that the policy-holders with fixed incomes and increasing commitments are finding it difficult to save enough to keep their policies alive. An indicator of this is the item, loan to policy-holders, which used to increase by roughly Rs. 1 crore a year till 1959 but went up to Rs. 3 crores in 1960. Likewise, outstanding premiums, which also used to increase by Rs. 1 crore a year, grew during 1960 by Rs. 2.5 crores. If inflationary pressures increase during the period of the third five year plan, it is bound to accentuate these tendencies and make it extremely difficult for the Corporation to keep its lapse ratio down.

On the issue of bonus, the chairman said that a new scheme for bonuses has been submitted to the Government for its approval, and as soon as this is received it will be possible for the Corporation to make its bonus announcement. He was, however, well aware of the embarrassment that the field officers and agents experience when securing with-profit proposals since bonuses have not yet been declared by the Corporation. No business house these days enjoys a particularly happy climate for progress. Nor does the L.I.C., but one of the roots for its difficulties lies in its structure of monopoly. Monopoly cuts across competition, but competition stimulates rivalry and that again stimulates results. The authorities of the L.I.C. might well examine the question whether or not it would be worth while having a few more corporations in the country to engender a feeling of rivalry and competition which would stimulate business and ensure better service.

STABLE COMMODITIES

TRENDS of industrial production and of domestic and international trade can be charted with reasonable precision, but an index of commodity prices conceals more conflicting tendencies. We find political troubles in Cuba affecting sugar, labour troubles in Chile affecting copper, drought in China affecting edible oils, a price-regulating scheme affecting tin, and so on. Even so, a broad trend is generally discernible, and for the current year it shows a rise in world commodity prices in the first four months and thereafter a relapse. It seems that early in the year consumers of commodities, and also speculators in the commodity markets, were over-optimistic, and that the relapse was caused not by a change in the relation between supply and consumption but by a reluctance to hold commodities in excess of foreseeable requirements. In some cases stocks had been accumulated in anticipation of scarcity, and when it became apparent that supplies would be sufficient the surplus stocks were used. Speculators bought commodities because they expected a rapid increase in consumption, and when they saw that the increase in consumption would be slow they lost interest in the markets.

Operators cannot easily adapt themselves to the idea that consumption of commodities does not increase commensurately with the rise in the standard of living. This is the essential fact that must be understood if production of commodities is to be planned rationally and trade in them is to be orderly. As the income of individuals rises—therefore, as the income of the community rises—the proportion of income spent on services increases and, correspondingly, the proportion of income spent on goods diminishes. The crude idea that doubling the standard of living, or doubling the level of economic development, means doubling the consumption of commodities must be finally abandoned. Estimation of trends is further complicated by transfer of demand from one commodity to another, simultaneously with the transfer of demand from goods to services. As their living standard rises people tend to consume less

bread and more meat, less vegetable oils and more butter, perhaps less cotton and more wool. And all the time substitutes are being developed, plastics replace metals, synthetic rubber replaces natural rubber, synthetic fibres replace natural fibres, and so on.

As if there were not complications enough on the side of demand, production of most natural commodities is erratic. Annual crops are affected by weather and disease. The products of plantations and mines cannot be made to flow continuously like the products of modern factories. Commodities are mostly produced in territories that are evolving politically and are therefore unsettled. It is easy to understand that unregulated commodity prices are mostly erratic. This characteristic is inconvenient to both producers and consumers. Synthetic materials are often preferred not because they are cheaper but because their prices are stable. The well-known problems of primary-producing countries arise not only because commodity prices are relatively low but also because they are variable and unpredictable.

Schemes for stabilising commodity prices have often been criticised because they tend to stabilise at a relatively high level, and so promote development of substitutes. Some critics object to such schemes in principle because they interfere with the price mechanism, which should, over a period, equate supply and demand at a "natural" level. But the political implications of instability are now widely understood, and the principle of stabilising prices is now widely accepted. Most significantly, the Administration of President Kennedy has turned towards this idea. It is already apparent, however, that progress in this direction will be slower than the optimists imagined some months ago. Last March, in his special message to Congress on Latin America, President Kennedy emphasised the need for stability of prices of the major commodities; and in March-April, at the Lead and Zinc Study Group in Mexico City and at the Cocoa Study Group in Accra, official U.S. statements favoured international stabilising schemes. But when Mr. Douglas Dillon, U.S. Secretary of the Treasury, told the Inter-American Economic Conference at Punta del Este this month that his country was willing to join a new International Coffee Agreement and the existing International Tin Agreement (which has recently been renewed) some of his audience felt that he was adapting his statement to the mood of the meeting rather than making constructive proposals.

Particularly disappointing was Mr. Dillon's reluctance to discuss the most important question concerning tin—whether substantial releases from the U.S. strategic stockpile could be expected. The International Tin Agreement has provided valuable information on the working of commodity schemes, as much by its errors as by its achievements. When the tin market was weak the buffer stock had not enough money to support it by buying the required quantity of tin; when the market was strong the buffer stock had not enough tin to keep the price down by selling. Now, it seems, the only effective means of stabilising the price at a reasonable level is to release tin from the very ample stockpile. There is no hope of effective commodity-regulating agreements unless the United States participates in them. Hitherto this principal consumer of nearly all commodities and

important producer of many of them has stood aloof from such agreements. But Mr. John McEwen, Australian Minister of Trade, is not alone in believing that unless the U.S. works positively and actively with European countries, to induce fundamental changes in policies affecting trade in primary products, the proposed merging of Britain with western Europe may "cause the whole economic structure of the free world to totter".

GENEVA AGREEMENT ON COTTON TEXTILES

THE major cotton textile importing and exporting countries have agreed on plans for orderly development of the trade with "reasonable safeguards" for the importing nations. That was the outcome of the 16-nation textiles conference held in Geneva last month. The conference, organised by G.A.T.T. (General Agreement on Tariffs and Trade), has submitted proposals for the approval of the individual countries. These are designed to increase significantly access to markets where imports are at present restricted; to maintain orderly access to unrestricted markets; and to secure where necessary some restraint in export policies to avoid disruptive effects in import markets. Accordingly, the participating countries would agree to adopt the following short-term arrangement for the 12-month period beginning 1st October, 1961: If unrestricted imports of cotton textiles are causing or threatening to cause disruption in the domestic market of any participating country, that country may request any other party to the agreement to restrain its exports to a certain level, which shall not be lower than that prevailing for the 12-month period ended 30th June, 1961. If the exporting country refuses, then the requesting country may decline to accept imports at a level higher than the one specified. Participating countries which at present have quantitative restrictions on cotton textile imports will from 1st January, 1962, "significantly increase access to their markets by countries, imports from which are now restricted. A specific statement of the new access will be forthcoming," the document said.

The provisions for increasing access to markets by countries whose imports have quantitative restrictions will come into force not later than 1st January, 1962. It disclosed that this short-term arrangement would be valid for a period of 12 months beginning on 1st October, 1961. Under the long-term arrangement, the participating countries agreed to set up a "provisional cotton textile committee." This committee would work out a long-term solution, collect all useful data for this purpose, and make recommendations for a long-term solution before 30th April, 1962. The committee will meet on 9th October next to begin its work, but the document did not say where.

The document contains two appendices, one of which gives a list of 64 cotton textile categories covered by the agreement. It has apparently been recognised that there are two aspects of the problem of Asian exports. For some importing countries a limitation of the trade has become an urgent necessity, and the short-term arrangement is intended to deal with these instances. It should be noted that the short-term proposals are in the form of a framework under which bilateral arrangements can be worked out when imports are causing or threatening disruption to the domestic industry. A number of countries have promised significant relaxation of their restrictions on cotton textiles in 1962. So far as the United Kingdom is concerned it was accepted that, in view of her present substantial imports of cotton textiles, there are limits to what she could do next year. The British representative at the conference made it clear that the U.K. is about to engage in negotiations with Japan on the whole range of trade subject to restrictions, and that he could not say in advance of those negotiations how individual categories of goods would be affected.

A great many different categories of cotton textiles have been enumerated so that restrictions can be applied to the types of goods which are causing most disturbance in the market concerned. It is provided that, if a requesting country determines that a shift in the pattern of imports within any category is producing undue concentration of imports of any particular item and that such concentration is causing or threatening disruption, the requesting country may request the producing country to restrain its total exports of the item concerned during the 12 months beginning on 1st October, 1961, to a prescribed level not lower than that which prevailed during the year ended 30th June, 1961. Another important provision is that the participants agree to take action to prevent circumvention or frustration of the short-term arrangement by non-participants, or by transshipments, or by substitution of directly competitive textiles. In particular, if the purposes of the arrangement are being frustrated or are in danger of being frustrated through the substitution of

directly competitive textiles, action may be taken against these goods to the extent necessary to prevent such frustration.

Clearly something more than a short-term arrangement is needed, and a long-term solution acceptable to both importing and exporting countries could not have been reached at a conference lasting only five days. For the drafting of the long-term proposals, a G.A.T.T. cotton textile committee is to be established. This will hold its first meeting in October, and it is to make recommendations not later than 30th April next year.

Current News and Comment

American Refrigerator's Offer

The American Refrigerator Co. Ltd was formed as a private company in 1960. It has recently been converted into a public company. The issued capital is Rs. 7.95 lakhs divided into ordinary shares of Rs. 10 each. It now proposes to have a further share issue to the extent of Rs. 17.05 lakhs divided into ordinary shares of Rs. 10 each. The directors and their friends have agreed to subscribe for 48,030 shares and the remaining 122,500 shares are being offered for public subscription at par. The list opens next Monday (Fuller details of the issue are printed on another page of this week's Capital).

The American Refrigerator Company now produces various refrigeration products worth Rs. 5 lakhs a month, but this is less than half the licensed capacity of the Company. The directors propose to extend production so that the annual turnover is raised to nearly Rs. 1.32 crores. In addition, the engineering and service departments will have a turnover of a further Rs. 60 lakhs. It has a plant for manufacturing refrigeration coils required by the refrigeration and air-conditioning industries.

The Company has an arrangement with the Bush Manufacturing Co. Inc. ("Bush") of the U.S.A. for technical collaboration dating as far back as 20th May, 1955. This agreement authorises the Indian Company to manufacture Bush coils and guarantees full technical assistance from the American Company. This agreement expired in 1960 but a fresh one has been made with Dunham-Bush Inc. ("Dunham-Bush") of the U.S.A. for a period of five years. Under it Dunham-Bush will act as technical advisers of American Refrigerator Company.

The Company's factory is situated in Hide Road, near Calcutta. The cost of the expansion scheme is estimated at Rs. 34 lakhs, to which the West Bengal State Financial Corporation may contribute a loan of Rs. 1.75 lakhs. The prospect may be considered satisfactory in view of the increased demand for refrigeration products. The directors hope to make fair profits and pay reasonable dividends in due course.

Indian Cable to Expand

The ordinary shares of the Indian Cable Co. have been steady around Rs. 36.12 since the publication of satisfactory results for the year ended March 1961. The decision of the Company to go in for further expansion has had a good effect. The completion of the 1953-58 expansion programmes is being reflected in current working. It has been decided to extend further the production of paper insulated power cables, plastic insulated cables and flexibles, enamelled copper wires, and cotton and paper-covered wires and strips. The necessary industrial licences have been obtained from the Government of India. The estimated cost of the project is Rs. 1.32 crores and the additional working capital may amount to Rs. 70 lakhs. The Industrial Credit and Investment Corporation may give a foreign exchange loan of Rs. 35 lakhs. Negotiations are in progress with the Commonwealth Development Finance Co. Ltd. for a similar loan. The working capital will be found from the internal resources of Indian Cable, so the directors do not for the time being propose to obtain any finance by increasing the share capital.

The future prospect is being assessed with sober confidence. In spite of the increased competition in cable lines due to the establishment of many new factories, Indian Cable does not foresee any difficulty in selling all its products in view of the increased demand for cable goods in the coming years. If electrical development takes place as much as expected, there should be a substantial improvement in the demand for cables. Meanwhile, Indian Cable has taken steps not only to expand output, but to implement a reorganisation scheme as well. Until the reorganisation and expansion schemes are completed, there could to

some extent be an interruption in working. But the longer-term outlook is certainly very encouraging.

By that date the short-term arrangement will be half-way through the first year of its operation, so that the committee will have the benefit of some experience of its working, while there will also be plenty of time for the participating countries to study and express their opinions on the long-term proposals. It is emphasised that the Geneva proposals are not intended to prevent the negotiation of bilateral arrangements on terms other than those which they provide, and the British Government's proposal to the Hongkong industry for an extension of its undertaking has not become a dead letter.

in this week's Capital) at the annual general meeting of the Company held in Calcutta last week, Mr. B. M. Birla mentioned the disappointing outlook for marine insurance business. Unrestricted competition has depressed cargo rates. In view of the difficulties in fixing tariff rates for the overseas transit business, Mr. Birla thinks that a comprehensive tariff for internal transit will be of great help.

Commenting on the progress of Ruby General Insurance, he mentioned how the net premium income has increased from Rs. 66.36 lakhs in 1950 to Rs. 1.73 crores in 1960. Total funds have risen from Rs. 79.50 lakhs to Rs. 1.47 crores. Ruby General has now completed 25 years of successful working. In order to encourage the growth of insurance, Mr. B. M. Birla claims that the Government should distribute its own insurance business fairly among all Indian insurance companies instead of diverting a major portion of it to the L.I.C. subsidiaries.

More Profit for Imperial Tobacco

There has been a rise of Rs. 65 lakhs to Rs. 3.59 crores in the profit of the Imperial Tobacco Co. of India Ltd. during the year ended March 1961. Sales have improved from Rs. 36.88 crores in 1959-60 to Rs. 42.18 crores in 1960-61. The ordinary taxable dividend has been increased from 8 percent to 9 percent, including interim dividends of 5 percent. It is covered more than twice and works out to a yield of 7.5 percent at the present price of Rs. 12 a share. The profit has been arrived at after providing Rs. 44.05 lakhs (against Rs. 44.81 lakhs) for depreciation. Taxation is allocated Rs. 1.71 crores (against Rs. 1.52 crores). Development rebate reserve receives Rs. 2.62 lakhs (against Rs. 5.07 lakhs) and fixed assets and stock replacement reserve Rs. 48 lakhs (against Rs. 14.50 lakhs). There is a carry-forward of Rs. 26,96,288, compared with Rs. 24,77,765 brought in.

Imperial Tobacco has invested Rs. 4.42 lakhs in Molins of India Ltd, which has been formed for producing spare parts for cigarette-making machinery. The ordinary share capital of Imperial Tobacco is Rs. 15.16 crores divided into shares of Rs. 10 each. Reserves are more than Rs. 10.02 crores. Fixed assets amount to Rs. 8.30 crores and current assets, loans and advances to Rs. 18.87 crores.

National Insulated Cable Profits Up

The National Insulated Cable Co. of India Ltd. made a higher profit of Rs. 82.94 lakhs during the year ended March 1961 against Rs. 70.74 lakhs in 1959-60, after providing Rs. 6.42 lakhs (against Rs. 4.28 lakhs) for depreciation. The taxable ordinary dividend has been maintained at 25 percent. It is covered more than three-and-a-half times and works out to a yield of 6.7 percent at the present price of Rs. 37.19 a share. Taxation is allocated Rs. 36.50 lakhs (against Rs. 29.03 lakhs), general reserve Rs. 10 lakhs (against Rs. 6.50 lakhs), dividend equalisation reserve Rs. 5.50 lakhs (against Rs. 6.50 lakhs), expansion and modernisation schemes reserve Rs. 6 lakhs and development rebate reserve Rs. 2.80 lakhs (against Rs. 3.88 lakhs). The carry-forward is Rs. 50,820, compared with Rs. 86,389 brought in.

The production of the copper and the plastic insulated cable sections has increased considerably. The winding wire section is being worked to full capacity. In some departments, output has declined because of the official policy of substituting copper by aluminium. The full capacity for A.C.S.R.

HINDUSTHAN MERCANTILE BANK LTD.

Head Office:

10, Clive Row, Calcutta-1.
Chairman:- Shri M. L. Jalan
CAPITAL

Authorised ... Rs. 2 crores
Issued & Subscribed ... Rs. 1 crore
Paid up ... Rs. 50 lakhs

Interest allowed on Savings Bank Accounts at 3 per cent per annum.

All types of Banking business transacted. Branches and Agencies throughout India. Loans granted on approved securities. Terms on application.

could not be utilised due to shortages of raw materials. The non-ferrous hot rod rolling mill is working satisfactorily. As the Company's requirements cannot engage this mill for even a single shift, there is abundant spare capacity left for rolling copper or aluminium for other cable manufacturing units. The Company has ordered the necessary plant for the production of armoured cables which are in demand for railway signalling and other special purposes. The plant for drawing aluminium wires for cable sizes has also been ordered. These new items of manufacture may be produced in early 1962. The directors foresee increased competition in the cable business due to the starting in production of many new cable manufacturers.

India Steamship Disappoints

The India Steamship Co. Ltd. has produced disappointing results during the year ended March 1961 and the ordinary dividend has been passed. The price of the ordinary shares has, therefore, declined to Rs. 7.36. In spite of a rise in freight earnings from Rs. 8.39 crores during 1959-60 to Rs. 8.63 crores in 1960-61, the Company incurred a loss of Rs. 41.05 lakhs in 1960-61 against Rs. 42.85 lakhs the year before, after increasing depreciation from Rs. 91.29 lakhs to Rs. 1.19 crores. The adverse results are mainly due to increased operating costs. In addition to the depression in the freight market, vessels are being detained in various ports, Indian and foreign, for unduly long periods. Considering that the daily expenses of a ship of India Steamship is nearly Rs. 10,000, the Company has sustained substantial losses on this account alone. All losses have nevertheless been set off by transferring sums from general reserve.

The directors report that a money pool has been agreed upon by all the various Conference lines operating on the route from India to the U.K. and the Continent in order to surmount the present difficult situation. This arrangement has been finalised for a period of 10 years from 1st January, 1961. According to it, the Indian lines will obtain a 29½ percent share of the gross earnings less Conference rebate in so far as the U.K. and Eire are concerned. The percentage to be carried by the Indian lines will automatically increase by 1 percent each year over a period of 10 years. As far as the Continental trade is concerned, the Indian lines will get 39 percent of the gross earnings less Conference rebate. It is expected that the pooling arrangement will put an effective stop to the unhealthy competition among the participating lines. The outcome of the arrangement, it is hoped, will have beneficial effects on the trading results of India Steamship.

U.P.A.S.I. Annual Conference

The United Planters Association of Southern India, which is one of the largest producers' organisations in this country, will hold its 68th annual conference from 11th September at "Glenview", Coonoor. The Central Minister for Food and Agriculture, Mr. S. K. Patil, will inaugurate it. The president of the year is Mr. H. C. Kothari. The Association, or U.P.A.S.I. as it is called for short, was formed as far back as 1893, as the central organisation of the planting interests in south India. Since then it has been representing these interests most effectively. Activities concerning the conference are usually spread over a week, and include sports, social functions and business meetings. Leading planters including the representatives of the north Indian tea associations, particularly of the Indian Tea Association, the Federation of Indian Chambers of Commerce and Industry, of the Associated Chambers of Commerce and chairmen of the statutory boards are, as usual, expected to attend this year's conference. There will also be the usual exhibition, which has been an inseparable feature of the conference week for the past 13 years. The conference and exhibition provide a useful occasion for the suppliers of goods and services required by the industry to meet their customers at one place and at one time.

Soda Ash Tariff Enquiry

The soda ash industry has been enjoying protection for over a decade. It has made considerable progress during this period. In 1950, there were only two units; now there are four, namely, Tata Chemicals, Dhrangadhra Chemicals, Saurashtra Chemicals, and Sahu Chemicals and Fertilisers. A fifth unit, Khan Bahadur H.M.D.H. Bhiwandiwall and Company, has not yet gone into production, but expects to complete its collaboration terms soon and be commissioned by October 1963. In the ten years, the annual installed capacity of the industry has grown from 46,800 metric tons to 268,000 metric tons. The four established units have schemes of substantial expansion on hand. Indigenous production which was only 30,759

metric tons before the grant of protection in 1950 amounted to 79,000 tonnes at the end of the first five year plan. In 1960, the output rose to 145,012 tonnes and the figure for January-June 1961 is placed at 90,386 tonnes. Consumers and their associations have, by and large, expressed satisfaction with the quality of soda ash. The output at present is almost exclusively of light soda ash. Only one of the units has begun the production of heavy soda ash from April 1961, but the output is still small. Capacity for the heavy soda ash is mentioned around 67,000 tonnes for two producers. The actual production target for soda ash, both light and heavy, for the third plan is placed at 450,000 tonnes. Estimates of the country's total requirements of soda ash from the Development Wing, producers and other interests range from 226,000 tonnes to 260,000 tonnes for the current year. The Development Wing expects the annual demand to rise from 260,000 tonnes in 1961 to 450,000 tonnes in 1965.

Producers of soda ash have pleaded for the continuance of protection for a period of three to four years beyond 31st December, 1961, as well as for the regulation of imports. They expect that by that time, domestic indigenous production will expand sufficiently to meet a substantial portion of the country's requirements and that the industry will have been established on a sound footing. Besides continuance of protection, the manufacturers have asked for various other forms of assistance such as higher selling prices of soda ash, reduction in railway freight on raw materials, particularly limestone and salt, reorientation of the methods employed by the railways for the movement of soda ash, loose and in bulk, allocation of a sufficient number of wagons for the movement of coke and coal under high priority and the supply of the right type of coke. Opening the public enquiry into the question of the continuance of protection to the soda ash industry beyond December 1961, the chairman of the Tariff Commission, Mr. K. R. P. Aiyangar, emphasised that it is of vital importance for industrial progress that an industrial raw material like soda ash should be made available at as low a price as possible. But this cannot be achieved at the cost of other commercialised services. Mr. Aiyangar called on the industry to raise output to capacity, increase the efficiency and reduce its cost of manufacture. He pointed out that while manufacturers were aware of the general difficulties concerning coal supplies and rail transport they had given no indications of concrete steps they had taken to surmount these difficulties and improve operational efficiency and production. With the expansion of consuming industries as visualised in the third plan, the soda ash industry will have to cater to a ready and expanding domestic market. In view of the tight foreign exchange position, Mr. Aiyangar reminded the industry of its heavy responsibility not only to step up its production, but also to undertake the manufacture of heavy soda ash as expeditiously as possible in order to reduce the country's dependence on imports.

New Cotton Policy Welcomed

New Delhi's cotton policy for the 1961-62 season, beginning with 1st September, will be widely welcomed because it incorporates most of the suggestions made by various trade organisations, agricultural associations and organisations representing the industry and State Governments. The floor prices of all varieties of cotton have been increased in line with the rise in the floor price of Jarilla fine ½" from Rs. 139 to Rs. 168.57 a quintal (that is, from Rs. 495 to Rs. 600 a candy of 784 lbs), announced on 17th June. Appropriate changes have been made in the grouping of certain varieties and in the differentials. The basic ceiling prices of Kalyan and Westerns have been adjusted upward. A uniform premium of Rs. 14 a quintal (about Rs. 50 a candy) has been provided for certain cottons which are certified to have been grown in areas reserved by the Agricultural Department for the purpose of securing pure seed for sowing and if the crop has been duly rogued by removing off type plants. The fixing of minimum prices of the exportable varieties of cotton and an increase of Rs. 9 a quintal in the price of saw-ginned Bengal Deshi are the other outstanding features of the new policy. The compulsory survey has been done away with, but distribution control has been retained for the time being. No floor prices had so far been fixed for exportable cottons, namely, Dholeras, Pratap, C.P., and C.P. 2, Central India, Bengal Deshi, Oomra Deshi, Mathias and Mangari. Floor prices for these varieties have been fixed for the first time in order to rectify the anomaly of certain varieties of cotton without any floors. Oomra Deshi, C.P. 1 and C.P. 2 and Central India, which had hitherto been classified separately, have now been grouped in one category. Vidarbha and Madhya Pradesh 197/3 are also placed in one group. The basic grade for Bengal Deshi has been changed from fully good to fine and the basic staple for Karunganni has been raised from 26/32" to 27/32" and the ceiling

has been fixed at Rs. 975 a candy. The name of Vijay has been substituted by Digvijay and Ankleshwar has been abolished. The division of Laxmi, Jaydhar and Gaorani into A and B have been done away with. Punjab L.S.S. has been included in Punjab American 320 F. The ceiling prices for Digvijay B and Cambodia B have been revised upward. Adjustments in prices have been such as will enable better grade cotton to realise higher premiums. The increase in the prices of saw-ginned Bengal Deshi, it is felt, will encourage the maintenance of a higher quality of cotton which will help widen the scope for the export of this grade. Gujarat cotton interests are pleased with the upward adjustment in the basic ceiling prices of Kalyan and Westerns. The cotton trade is particularly happy over the end of the system of compulsory survey because it has no useful purpose to serve when cotton prices keep well below the ceiling rates. With the carry-over at the end of August quite normal and the outlook for the new crop fairly encouraging, it would be reasonable to expect prices to keep below the ceiling rates unless the authorities drastically cut down imports. There is a strong case for abolishing the control over distribution when the supply position is quite comfortable, but the trade might not have much to complain if the Government releases a large quota very early in the season. The only uncertainty which the trade has to face now is over the export policy for the new season. One would expect the Government to have grown wiser by the experience in the 1960-61 season when the authorities made a complete mess of exports. An early announcement of a sufficiently large export quota of Bengal Deshi cotton is necessary both for earning the badly needed foreign exchange and also for ensuring regular supplies to India's traditional customers. The announcement of cotton policy for the 1961-62 season has induced a firm tendency in futures.

Kirloskar Pneumatic Prospects

Kirloskar Pneumatic Co. Ltd. did well in the year ended 31st March, 1961. Sales rose from a mere Rs. 22 lakhs in 1959-60 to Rs. 1.21 crores in 1960-61, and the manufacturing profit of Rs. 19.24 lakhs represented a margin of 15.9 percent on net sales. Improved working results have enabled the Company to declare a maiden dividend of 12½ percent, subject to tax, for which some relief is expected under Section 15(C). The directors state that a large part of the year's business was accounted for by portable diesel driven rotary compressors of 120 cfm. and 210 cfm. capacity and of these, over 600 are operating at various altitudes in different parts of the country. The Company has also started building small reciprocating stationary compressors of N.A. and N3 types. Their production was, however, hampered by the shortage of raw materials of the right quality. The manufacture of rock drills was restricted on account of dependence on the imports of certain forgings. The directors state that the Company has been granted a licence for a substantial expansion of the undertaking with a view to increasing the production of air compressors and rock drills and to manufacture pneumatic tools and sump pumps. The Company is already engaged in developing a wide range of E.H. type reciprocating stationary compressors ranging from 100 cfm. to 600 cfm. capacity and portable rotary diesel driven machines of 325 cfm. output and these are expected to be in the market in the latter half of the current year. The Company has received another licence for the manufacture of refrigeration compressors and still another licence for the manufacture of air-conditioning units. Negotiations are at an advanced stage for a technical assistance agreement with two eminent foreign manufacturers and the proposed agreements are expected to be concluded in the next few months. The ordinary share of the Company (Rs. 100 paid) which was shot up from Rs. 150 to Rs. 255 following the announcement of the maiden dividend continues to hold firm around Rs. 250 in spite of the pronounced weakness in the stock market. This underlines investors' confidence in the growth potentialities of the Company. The Company's equity capital of Rs. 15 lakhs is supported by reserves and a surplus of Rs. 4.60 lakhs. The Company is only three years old; its gross block of Rs. 25.19 lakhs has been depreciated to Rs. 18.14 lakhs.

Ahmedabad Electricity Results

The Ahmedabad Electricity Company reports satisfactory results for the year ended March 1961. Sales of energy increased by 8.2 percent to 755.5 million units and earnings therefrom recorded a rise of Rs. 49 lakhs from Rs. 4.93 crores to Rs. 5.42 crores. The gross profit, however, recorded an increase of only Rs. 5.27 lakhs from Rs. 134.90 lakhs to Rs. 140.17 lakhs due to higher expenses. Depreciation has been stepped up from Rs. 48.52 lakhs to Rs. 49.68 lakhs and managing agents' commission amounts to Rs. 8.46 lakhs, against Rs. 7.95 lakhs in

the previous year. Of the balance of Rs. 82.03 lakhs (Rs. 78.43 lakhs), the proposed dividend, which has been maintained at 7 percent, absorbs Rs. 61.23 lakhs. Allocations include development reserve Rs. 6.22 lakhs (Rs. 6.50 lakhs), contingency reserve Rs. 4.65 lakhs (Rs. 3.80 lakhs), special reserve Rs. 4.48 lakhs (Rs. 4.71 lakhs) and dividend equalisation reserve Rs. 4.37 lakhs (Rs. 1 lakh). The directors state that 11,574 new connections were provided during the year bringing the total to 83,557. This includes 123 large tension consumers and the North Gujarat Grid. In order to confine the demand within the limits of plant capacity, certain controls have been introduced under the directions of the Gujarat Government. The supply position, it is expected, will ease considerably with the commissioning of the 30 MW set under the Company's C-2 extension in March 1962 and the second 30 MW set under the C-3 extensions in March 1963. The foreign exchange component of the first set is covered by a D.L.F. loan of \$3.9 million. The import licence for the second set has been issued by the Central Government on a cash payment basis. During the year, the Company's gross block increased by Rs. 83.53 lakhs to Rs. 16.04 crores. The ordinary share of (Rs. 100-paid) is quoted around Rs. 89 cum dividend, offering a tax-free yield of about 5.7 percent. The book value of the share works out to around Rs. 116.

Hindustan Electric in Good Shape

Hindustan Electric Co. Ltd. reports encouraging results for the year ended April 1961. Besides clearing the arrears of preference dividend for 1959-60, the directors have recommended a taxable dividend of 4 percent on ordinary shares for 1960-61. The Company passed the dividend in the preceding year, and it paid a 10 percent taxable dividend in 1958-59. After providing Rs. 2.85 lakhs (against Rs. 3.58 lakhs) for depreciation, Rs. 8.417 (against Rs. 12.432) for development rebate reserve, and Rs. 1 lakh (nil) for taxation, the Company has made a net profit of Rs. 4.68 lakhs in 1960-61, against a loss of Rs. 4.08 lakhs in the previous year. The previous year's loss was reduced to Rs. 50.817 by transferring Rs. 3 lakhs from general reserve and adding Rs. 57.385 brought forward from 1958-59. This loss has now been wiped out. The directors have transferred back Rs. 4.18 lakhs, being the excess provision for taxation no longer required, and have added Rs. 3.25 lakhs to general reserve. Preference dividends take up Rs. 3.12 lakhs and the ordinary dividend absorbs Rs. 1.60 lakhs, leaving a sum of Rs. 38,756 to be carried forward. The directors state that the production at the Howrah works, which was restarted last October, has recorded steady improvement. The non-ferrous rolling in Faridabad for which electric power has been sanctioned, it is expected, will begin production in September. The Baroda works is also assured necessary power which will enable it to make economic production of transformers, and later, of motor control gears. The Company has many expansion schemes on hand. It has received a licence for the manufacture of A.C.S.R. and all aluminium conductors near Rihand with an annual capacity of 5,000 tons. It has obtained another licence for manufacturing transformers of all types with an annual capacity of 30,000 on a single shift basis. The Company has also been permitted to manufacture in Faridabad A.C.S.R. and all aluminium conductor-accessories with an annual capacity of 240 tons on a single shift basis. Production at the Rihand works is expected to start by March 1962. The ordinary share of the Company (Rs. 100-paid) is quoted around Rs. 105 cum dividend, offering a gross yield of 3.98 percent.

Indian Steel Rolling Results

The Indian Steel Rolling Mills has reported encouraging results for the 15 months ended March 1961. It has earned a gross profit of Rs. 11.76 lakhs during this period, compared with Rs. 4.28 lakhs for the year ended December 1959. The production of bars and rods recorded a rise while that of hoods was down. But the wire mills' output was slightly better. After providing Rs. 3.06 lakhs (against Rs. 97,000) for depreciation, Rs. 60,000 (against Rs. 9,000) for development rebate and Rs. 4 lakhs (against Rs. 1.08 lakhs) for taxation, the net profit amounts to Rs. 4.10 lakhs, against Rs. 2.14 lakhs. The results are not comparable since the figures for 1960-61 relate to a period of 15 months while the previous year's figures are for 12 months. The directors have transferred Rs. 60,000 to general reserve. With the 7½ percent final dividend, the total for the period comes to 12½ percent, against 7 percent paid in 1959. The proposed dividends, both preference and ordinary, absorb Rs. 3.41 lakhs, leaving Rs. 10,662 to be carried forward, against Rs. 2,977 brought in. The Company's share of the gross pro-

fit from the Tata Iron and Steel Company showed a marked increase from Rs. 3.50 lakhs to Rs. 10.42 lakhs.

Indian Steel Rolling's agreement with the Tata Iron and Steel Company came to an end on 1st April, 1961. But the latter will continue to render all possible assistance to the former and provide technical assistance. It is stated that 50 percent of the profit, which was hitherto being paid to T.I.S.C.O., is no longer payable to it and only 10 percent of the net profit of the Company will be paid for providing technical assistance and advice. It is expected that the increase in the profit will enable the Company not only to carry out a modernisation and expansion programme but to maintain the dividend. Indian Steel Rolling has already placed orders for a new billet reheating furnace of a larger capacity, which on installation will increase the output appreciably. Proposals have also been received from Demag of West Germany for modernisation and improvement of the existing mills. These proposals have been submitted to the Government for approval and if foreign exchange is available, the Company will go ahead with the programme. The mills are over 25 years' old, so they require considerable improvement. The Central Government has not granted licences for importing wire drawing machines from Germany and other west European countries. Negotiations are now in progress with manufacturers in the U.S.A. for importing these machines under the D.L.F. programme. The Rs. 10-paid ordinary share of the Company is quoted around Rs. 10.50, offering a gross return of about 10 percent. The Company issued 250,000 ordinary shares of Rs. 10 each at par on 9th March, 1961. These shares will participate in the dividend for the current year.

Tariff Values Revised

The Government of India has made substantial changes in the Custom (import) duties of a number of items through the revision of tariff valuations with effect from 1st September. The schedule of revised tariff values covers 93 commodities and their varieties. The tariff values are adjusted every year in accordance with the market prices to reflect the changes in market values. The Custom levies on commodities attracting *ad valorem* duties are charged on the respective tariff value, whatever be the invoice price or the current market quotation. An increase in the tariff value means a rise in import duty. Since tariff values of many commodities have been revised upwards, they have resulted in raising their duties. The tariff value of cloves has been raised from Rs. 1,181 to Rs. 1,500 a quintal, of cassia from Rs. 787.50 to Rs. 1,500 a quintal, of cumineed from Rs. 413.50 to Rs. 475 and of copra from Rs. 125 to Rs. 140 a quintal. The tariff value of different items of unmanufactured ivory has been raised by 20 percent to 50 percent. Other items whose tariff values have been raised include transformer oil from Rs. 963 to Rs. 1,000 a kilolitre, diesel oil from Rs. 175 to Rs. 180 a tonne and furnace oil from Rs. 88 to Rs. 90 a tonne, lubricating grease from Rs. 1.55 to Rs. 1.70 a kilogram. The import duties of a number of items such as almonds, dates, apricot, figs and certain other dry fruits also stand raised as a result of the revised tariff values. There are, however, quite a few commodities for which tariff values have been revised downwards, thereby resulting in lower import duties. These items include pistachio nuts, gums, chinnikabala, cubebs, acetic acid, caustic soda, alazrine dry and borax glass powder. Tariff values of some of the commodities have been kept unchanged, and these include coconut oil, petroleum jelly, ammonium carbonate, ammonium bicarbonate, copper sulphate, sodium sulphide, sodium hydrosulphite, ammonia gas, boric acid, cuttle fish bone, aniline oil, aniline salts, vats, solubised vats, congo red, metanil yellow and sulphur black. The prices of a number of commodities have developed a hardening tendency following the upward revision of tariff values. Cloves, for instance, have risen from Rs. 360 to Rs. 385 and cinnamon from Rs. 325 to Rs. 370 a ten kilos. Ivory, mace, nutmegs, gums and long pepper have firmed up considerably over the past few days.

Zandu Pharmaceutical Profit Up

Zandu Pharmaceutical Works Ltd. has reported satisfactory results for the year ended March 1961. Although sales were up by less than 2 percent from Rs. 72.18 lakhs to Rs. 73.43 lakhs, the gross profit at Rs. 5.51 lakhs showed a rise of 29.6 percent over the previous year's figure of Rs. 4.25 lakhs. After providing Rs. 1.32 lakhs (against Rs. 91,000) for depreciation, Rs. 12,000 (against Rs. 10,000) for development rebate reserve and Rs. 1.74 lakhs (against Rs. 1.30 lakhs) for taxation, the net profit amounts to Rs. 1.89 lakhs, against Rs. 1.59 lakhs in the previous year. From this, the directors have allocated Rs. 5,000 (against

Rs. 25,000) to general reserve. The ordinary dividend, which has been maintained at 10 percent, taxable, absorbs Rs. 1.50 lakhs. The preference dividend accounts for Rs. 29,300. A sum of Rs. 4,738 is being carried forward. In the previous year, the directors had transferred Rs. 50,000 from the dividend equalisation fund. It is stated in the report that the Company has placed several new products in the market, and their sales have been encouraging. The research laboratory has been placed under the charge of a foreign qualified doctor and its scope is being expanded. Mr. Jaysinh Vithaldas, chairman, has however expressed the fear in his statement to the shareholders that the Company may face difficulties in securing raw materials in the coming year. This may adversely affect its turnover. Zandu Pharmaceutical made additions to its fixed assets worth Rs. 1.41 lakhs in 1960-61, raising the gross block to Rs. 28.94 lakhs. Out of a paid-up capital of Rs. 20 lakhs, ordinary shares account for Rs. 15 lakhs and free reserves total Rs. 9.31 lakhs. The Rs. 100-paid share of the Company is quoted nominally around Rs. 111, offering a gross yield of 9.9 percent. The book value of the share works out to around Rs. 162.

Mysore Chemicals Profit Down

In spite of the record production and sales during the year ended March 1961, Mysore Chemicals and Fertilisers Ltd. has made a substantially lower profit because of the all-round increase in costs. Production in 1960-61 is said to be the highest since the inception of the factory. The sales improved from Rs. 47.55 lakhs in 1959-60 to a record high of Rs. 50.52 lakhs in 1960-61. But the gross profit at Rs. 8.49 lakhs showed a decline of about 20 percent from the previous year's figure of Rs. 10.67 lakhs. Several factors contributed to the fall in the profit margin. The Company had to pay more for the electricity consumed, and the prices of chemicals used also recorded a steep rise. The wagon shortage led to the payment of heavy clearing charges in Madras and Cochin. Besides, the selling prices of superphosphate were reduced. Depreciation provision has been reduced from Rs. 3.62 lakhs to Rs. 2.81 lakhs and that for taxation from Rs. 3.61 lakhs to Rs. 2.64 lakhs. The net profit amounts to Rs. 3.04 lakhs, against Rs. 3.44 lakhs in the previous year. Adding to the year's profit a sum of Rs. 11,452 brought forward from the previous year, the available surplus amounts to Rs. 3.15 lakhs. The directors have transferred Rs. 1,850 (against Rs. 14,053) to development rebate reserve, Rs. 21,773 (against Rs. 47,000) to the reserve fund, Rs. 15,000 (against the same) to employees' gratuity and Rs. 20,000 (against the same) to the dividend equalisation fund. The dividend which has been maintained at 10 percent, taxable, absorbs Rs. 2.48 lakhs, leaving Rs. 8,514 to be carried forward.

The directors state that the Mysore Government has enhanced the tax on electricity from 0.7n p to 1.5n p a unit with effect from 1st April, 1961, which will further raise the cost of energy consumed by Mysore Chemicals. The Company is making a representation to the Government for securing a reduction in the power charges. It has placed orders for a sulphuric acid plant with a production capacity of 50 tons a day. The delivery is expected to be completed by the end of 1961 and production is likely to start by the end of March 1962. Mysore Chemicals has received a licence for setting up a fully mechanised superphosphate plant to raise the output to 35,000 tons a year. The ordinary share of the Company (Rs. 10-paid) is quoted around Rs. 11.60, offering a gross yield of a little over 9 percent.

New India Fisheries Does Well

New India Fisheries has reported encouraging results for the year ended March 1961. The number of voyages rose from 42 to 61 and the catch was up from 3,137 tons to 4,313 tons. The sales recorded a rise of about 42 percent from Rs. 20.81 lakhs in 1959-60 to Rs. 29.70 lakhs in 1960-61, and the gross profit doubled itself from Rs. 4.77 lakhs to Rs. 9.94 lakhs. After providing Rs. 1.07 lakhs (against Rs. 1.03 lakhs) for depreciation and Rs. 3.20 lakhs (against nil) for taxation, the net profit amounts to Rs. 4.94 lakhs, against Rs. 3.39 lakhs in the previous year. With Rs. 2.85 lakhs brought in from the previous year, the disposable profit comes to Rs. 7.79 lakhs. Out of this, the directors have used Rs. 2.72 lakhs for writing off investments in the shares of the subsidiary Company and Rs. 22,000 has been set aside for development rebate reserve. The allocation to reserves has been raised from Rs. 30,000 to Rs. 310 lakhs. The dividend has been increased from 10 percent to 12 percent, both taxable. The dividends on preference, ordinary and deferred ordinary shares absorb Rs. 1.71 lakhs, against Rs. 1.35 lakhs, leaving Rs. 4,707 to be carried forward. The directors state that the problem of ice-supplies and cold

storage space was solved by purchasing Bombay Coastal Refrigeration Co. Private Ltd which has been amalgamated with New India Fisheries from 1st April, 1960.

In his statement to the shareholders, the chairman, Mr. K. R. P. Shroff, says that the Company's progress in 1960-61 can be considered encouraging as it represents the performance of only four small trawlers which had to be withdrawn on occasions for repairs. The results would have been better had the vessels been able to enter and leave the dock irrespective of the tide. The fishing industry has been facing considerable difficulties in disposing of fish at the congested market in Bombay. But it is hoped that the present plans for efficient landing and marketing will be implemented by the Government without delay so that the industry may be able to play a bigger rôle in the distribution of fish. Mr. Shroff adds that the extension of the Company's operations to Cochin will yield satisfactory results in view of the promising conditions at the port. For implementing its scheme in Cochin, the Company has acquired a site on the sea front. This would enable its vessels to operate without hindrance. The building on the site will be useful for processing the prawn hauls and manufacturing shark liver oil and fish meal. The Rs. 100-paid share of New India Fisheries is quoted nominally around Rs. 105.

Outlook for Machinery Manufacturers

The working of Machinery Manufacturers Corporation for the year ended March 1961 indicates that it has turned the corner. The shareholders who have had to go without any return on their investment since the inception of the Company in 1946 can confidently look forward to a maiden dividend if it can repeat its performance during the current year. The encouraging results for 1960-61 have enabled the Company to wipe out all the accumulated losses and to clear the arrears of preference dividend. The sales have trebled from Rs. 37.03 lakhs in 1959-60 to Rs. 1.13 crores in 1960-61 and other income has also risen appreciably from Rs. 7.88 lakhs to Rs. 19.03 lakhs. The gross profit amounts to Rs. 34.41 lakhs, against a loss of Rs. 4.97 lakhs in the previous year. The Company has cleared the arrears of depreciation amounting to Rs. 15.78 lakhs and has also provided Rs. 8.95 lakhs for 1960-61. A sum of Rs. 2.20 lakhs has been provided for development rebate reserve. The managing agents' remuneration amounts to Rs. 1.32 lakhs, and the accumulated loss of Rs. 24.39 lakhs has been reduced to Rs. 7.33 lakhs by writing off Rs. 22.11 lakhs under the capital reorganisation scheme and by transferring Rs. 5.05 lakhs to "compromise or arrangement account". The balance of the loss of Rs. 7.33 lakhs has also been wiped out from the available profit and by the transfer of Rs. 1.39 lakhs from the capital reserve account. After making the necessary adjustments, a sum of Rs. 21,749 is being carried forward.

The directors state that the Company's factory in Sonai did not suffer any interruption during the year. The production and despatch of cards were at the highest at 777 and 789, respectively. During the first three months of the current year, the average figures of production and despatches have been maintained at the previous year's level. Orders for 203 cards have been booked in the first quarter, against 928 in the whole of last year. The directors add that the substantial sales of Whitin's machinery recorded in 1960-61 are not expected to be maintained in the current year. The Company holds a manufacturing licence for prototype speed frame for the textile industry, but production is unlikely to commence till next year due to the delay in obtaining import licences. It will undertake the manufacture of diesel engine components from the third quarter of the current year. The subscribed capital of Machinery Manufacturers has been reduced from Rs. 80.78 lakhs to Rs. 58.66 lakhs, out of which the ordinary share capital amounts to Rs. 19.07 lakhs. Reserves and surplus amount to Rs. 2.89 lakhs.

Greaves Cotton Expanding

The current quotation for the ordinary shares of Greaves Cotton around Rs. 185.50 is only slightly below the year's high of Rs. 187 in spite of the all-round weakness in the stock market. This underlines the investors' satisfaction with the 2 percent increase in the dividend from 11 percent to 13 percent and their confidence in the Company's growth potential. The turnover of Greaves Cotton increased from Rs. 4.95 crores in 1959-60 to a record level of Rs. 6.61 crores during the year ended March 1961. This was achieved in spite of import restrictions and severe competition. The manufacturing profit was, however, slightly down from Rs. 32.75 lakhs to Rs. 32.14 lakhs. The directors state that a substantial expansion in the marketing and sales organisation and a considerable increase in the technical sales and service

staff, which has resulted in a rise in establishment expenses, is necessary to secure marketing and servicing of the new range of manufactures being undertaken by subsidiary and associated companies. They feel that full benefits of this policy will be reflected in future profits. The directors add that trading during the current year, both in imported and indigenously manufactured lines, continues to show progress. As a result of the delays in the issue of import licences for capital goods for new projects and the failure to receive cement in time impeded some of the projects which were expected to be in production by now. The early implementation of these projects is, however, receiving high priority, and the directors hope that before the end of 1961 effective production from these new lines will contribute materially towards the current year's results.

The present position of the order-book indicates that the Company's cone and tube plants can work to capacity during the current year. Renewed efforts are being made to secure licences to import additional machinery to expand the production capacity of the plant in view of the increasing demand. The subsidiary and associated companies generally reported satisfactory working. It is expected that Ruston and Hornsby (India) Ltd—a subsidiary of the Company—will be in a position to supply air-cooled and water-cooled multi-cylinder verticle engines before the end of the year. The demand for these engines continues to increase, and the directors are confident that when "production of these engines is established" during 1962, it will contribute materially to the Company's turnover and profit. Greaves Cotton has concluded an agreement with the British technical collaborators to enable the subsidiary Company to extend the range of small verticle engines during the coming year. The Mather Greaves Co. Ltd, another subsidiary, commenced production of calender bowls in March 1961 and, in spite of the difficulties in getting raw materials, the directors hope that the Company will be in a position to meet the demand from the textile industry for calender bowls. With the completion of the building and the receipt of imported plant by October 1961, David Brown Greaves Private Ltd is expected to undertake effective production of jigs and tools before the end of the year. The Company has concluded a technical collaboration agreement with the Australian firm of Mindrill Ltd for manufacturing diamond drilling bits, and the project is now being implemented.

Bright Prospects for Mukand Iron

The shares of Mukand Iron, which rose from Rs. 23.12 to Rs. 33.50 between January and June, were sold down to Rs. 24.24 in the last week of August. The sharp decline was due partly to disappointment over the bare maintenance of the dividend at 12 percent, taxable, for the year ended March 1961 and partly to the despondent mood of the market. The preliminary figures about the Company's working, released along with the dividend announcement, indicated that it had done well in 1960-61. The directors' full report shows that the results are really gratifying. Production of steel castings increased by 31 percent from 4,284 metric tons to 5,624 metric tons and that of rolled products by 50 percent from 46,299 metric tons to 69,552 metric tons. Sales of steel castings rose by 55 percent from Rs. 1.15 crores to Rs. 1.78 crores and those of rolled products by 50 percent from Rs. 3.07 crores to Rs. 4.59 crores. While sales are up by about 51 percent, the gross profit has increased by about 69.7 percent from Rs. 40.43 lakhs to Rs. 68.63 lakhs. The ratio of the gross profit to sales works out to 10.76 percent, against 9.57 percent in 1959-60. After providing Rs. 9.73 lakhs (against Rs. 5.30 lakhs) for depreciation and Rs. 25 lakhs (against Rs. 13.25 lakhs) for taxation, the net profit amounts to Rs. 28.18 lakhs, against Rs. 18.25 lakhs in 1959-60. Appropriations include general reserve Rs. 10 lakhs (against Rs. 8 lakhs), gratuity reserve Rs. 6.50 lakhs (against nil) and development rebate reserve Rs. 1.10 lakhs (against Rs. 2.50 lakhs). The proposed dividend absorbs Rs. 10.39 lakhs, against Rs. 7.98 lakhs in the previous year.

The directors state that the supply of billets was easy during the year. This enabled Mukand Iron to show improved results. It could have even rolled half as much more had supplies been better. The directors hope that the present difficult supply position for billets may improve, following the Government's assurance to the re-rolling industry that billets will be allocated during the current year on the basis of its performance during 1960-61. The Company commenced regular supplies of centre buffer couplers to the railways. There has also been good progress in the production of roller bearing axle-boxes, motor-car components and castings for sugar machinery manufacturers. Bookings of order for steel castings are said to be quite satisfactory.

The directors add that Mukand Iron's expansion programme was delayed because of a legal dis-

pute concerning the acquisition of land in Kalwe (Thana). The dispute has been finally resolved and preliminary work has already commenced on site. The Company has decided to specialise in the production of wire rods of various qualities, and the Government's approval has been obtained. The new wire rod mill will be in addition to the originally planned installation of equipment for increasing the steel-melting capacity substantially. A three-year expansion programme for the foundry at the Kuria works has been planned. In the first stage, which will be spread over two years, the production capacity will be increased to 750 tonnes and in the second stage to 1,000 tonnes a month. The Company's financial position is sound. The paid-up capital, which has been reduced from Rs. 71.43 lakhs to Rs. 61.43 lakhs by the redemption of the entire preference capital, is supplemented by reserves and surplus amounting to Rs. 57 lakhs. The gross block which has increased during the year from Rs. 1.21 crores to Rs. 1.38 crores has been written down to Rs. 87.71 lakhs. The directors' report has impressed the market, and the quotation for Mukand Iron shares has improved from Rs. 24.24 to Rs. 26.10.

Kanpur Tannery Agreement

A settlement has been reached in the dispute between the tannery owners in Jaimau, Kanpur, and their workers, following a reference to the Assistant Labour Commissioner for conciliation proceedings. Under the agreement, 50 percent of the workers are to be taken back in employment on their expressing regret for having gone on strike without notice and the remaining 50 percent will be paid retrenchment compensation according to rules. There is to be an increase in the minimum wages of workmen from Rs. 45 to Rs. 50 a month with effect from 1st September. The proportion of permanent workmen to the total strength of workers will not be less than 60 percent. This is to be further raised to 65 percent in the course of one year. The minimum wages of workmen in permanent vacancies will be Rs. 53.50 a month. The various tanneries will give bonus to their workmen for the period 1960-61 at rates varying from one anna a rupee to two annas on the basic wage. The workmen will be allowed 21 festival holidays in a year. The facilities concerning the supply of bakka and quarters would continue to be provided by the employers who will also supply uniforms for summer and winter to their watch and ward staff.

INCOME TAX IN BENGAL

THE net revenue from Income Tax in Bengal in 1900-1901 was Rs. 46,147 less than the year previous. The decrease is all in profits of companies, and is mainly attributed by the Board of Revenue, "to slackness in the Jute trade, stagnation in the Cotton industry, and to the reduced profits of the Darjeeling Railway Company and the Woodlands Hotel Company, owing to the landslide disaster of September 1899." The italics are ours, and the Board of Revenue must really have no sense of proportion or the ridiculous when they thus drag in a little hotel as an excuse for the falling off in Income Tax receipts.

So far as we can make out the Tax has been made up thus:—

	1900-01	1899-1900
Government Servants	Rs. 5,05,488	Rs. 4,95,326
Local Authority Servants	62,946	62,067
Salaries, etc., paid by Firms, Companies, etc.	6,09,041	5,82,141
Profits of Companies	4,32,077	4,83,576
Interest on Securities	89,926	92,711
Other Sources of Income	34,06,835	33,33,546
Total	51,06,313	50,49,367

So far as we can gather there is only one official drawing a salary of over a lakh; he paid Rs. 5,230. Three drew between Rs. 50,000 and one lakh. Only one person in private employ appears to draw over Rs. 50,000, and only one, of over one lakh. Forty-six companies made profits of one lakh and upwards, and sixty-three private individuals, the number of persons and companies paying on a lakh and upwards in Bengal being only 111. The number of persons, firms and companies assessed for the Tax was 124,937, of which 107,708 drew incomes below Rs. 2,000 per annum, and 16,222 of incomes above Rs. 2,000 but below Rs. 20,000 per annum; the remainder were made up as under:

Income of Rs.	No.	Tax levied Rs.
20,000 and over	406	2,48,516
30,000	193	1,64,001
40,000	101	1,15,110
50,000	156	2,78,816
1,00,000 and over	111	6,82,172

A Ditcher's Diary

THE RUSSIANS HAVE APPARENTLY DECIDED THAT THEY have no further use for the propaganda advantage they once derived from their avid wooing of the uncommitted and the non-aligned. These latter, I hope, will at long last realise that propaganda advantage is all the Russians ever wanted from their relations with the new countries of Asia and Africa. The recent bang in the resumed nuclear tests by Russia was certainly one in the eye for Belgrade; even Mr. Nehru was for the first time stung into condemning spontaneously a Russian action without his usual ifs and buts and neverthe- lesses. I am glad that President Kennedy took his time ordering the resumption of American tests following the Russian, and has deferred to the interests of humanity by promising that none of them will be in the atmosphere. But there my gladness ends. It is, of course, obvious that the Russians could not have had the test the other day if their scientists had not been preparing for it all the time that their men in Geneva were talking of peace. (Indeed, it is suspected they never in fact stopped testing, underground.) It is equally certain that American scientists—and the British and the French too—have been similarly engaged. The rest is cant. Both Mr. Khrushchev and Mr. Kennedy must long have been under great pressure from their respective science and defence staffs for resuming nuclear tests. Simulation has made great progress; but there is no substitute yet for actual tests for finding out for certain just how murderous a weapon you have devised. It seems to me quite possible that Mr. Khrushchev was not even consulted; observe, incidentally, the fact that he was on holiday at the time of the announcement. This bit of speculation apart, Mr. Kennedy has now found it impossible to resist the Pentagon's requests for resuming tests. Soon perhaps Britain will follow, while France has gone on testing her own bombs with supreme indifference to everyone. How long will it be before China too makes her own nuclear bomb? It has been said that India could make an atom bomb if she wanted to; and there was some claim recently about missiles. So it is a wonderful world we are living in. What a future we are building for our children! The air full of Strontium-90, the armouries bursting with nuclear weapons; and assembly lines turning out tanks, rockets and bombing planes. It is no use blaming this individual or that. The extremest folly seems inherent in man's fate. Mr. Khrushchev's contribution is that he, a proclaimed "scientific communist", is making fatalists of us all.

IT WAS ONE OF HIS BIRTHDAYS WHEN I FIRST saw Abanindranath Tagore in his Calcutta residence some years ago. The famous painter sat on a divan receiving greetings from the numerous admirers who came in a steady stream that morning. That was a visible demonstration to me of the esteem in which the people of Bengal held their Silpacharya, and I am happy to note that popular regard for him has increased since his death. Calcutta has just celebrated his 91st birthday in the appropriate manner by holding an exhibition of his paintings and some cultural shows including the staging of one of the plays of his great cousin Rabindranath Tagore. The lyrical and poetical qualities of the works of this painter of

genius appeal to me personally a great deal, but the controversy over his philosophy I have always felt to be less fortunate. The school of painting started by him—it is called the Bengal School, I think—and which has as its disciples many outstanding artists including Nandalal Bose, is often described by the critics as essentially a revivalist movement in art, apparently for no better reason than that it draws exclusively on Indian traditional styles and themes for its inspiration. I remember one of Abanindranath's disciples defending it on the grounds that it is essential to know the artistic heritage of one's own country fully before one can attempt to understand that of any other nation. Abanindranath Tagore painted at a time when this country's struggle for freedom was at its height, and that fact may have shaped his outlook to some extent. Nevertheless, taken by itself his philosophy seems sound enough to me. I believe that no painter worth the name can wholly cut himself off from his roots, just as I would deprecate all parochial or insular approaches in matters of art. Of all I have seen and heard of Abanindranath Tagore, there is no evidence that he fell into any of these errors.

ONCE I REMEMBER DISCUSSING WITH AN AUSTRALIAN why the proportion of good singing voices in his country should be so high. He seemed to think it had something to do with the dry atmosphere. That may be correct, although if accepted it would mean having to find a different explanation altogether for the same phenomenon in, say, Wales. But good singing voices the Australians often have, and one of the best in recent years is certainly that of Joan Hammond. I see that this great lyric-dramatic soprano will be singing in Calcutta at the New Empire theatre on 27th September. Her choice, to be sung with the Calcutta Symphony Orchestra, includes the Letter Scene from Tchaikovsky's Eugene Onegin and Puccini arias. I am sure she will not fail to impress at the New Empire. She might well do the same at the "Royal" if she finds her way down there because I see from a biographical sketch I have of her here that she was a golf champion in Australia before taking up singing professionally.

IT IS A PITY THAT, WHEN UPHOLDING A PRINCIPLE, one is so often confronted with an utterly indefensible example. To follow what all the fuss was about—which Mr. Karanjia must have immensely enjoyed—I had a look at two or three issues of Blitz. Let me say at once, this is not my kind of paper. The piece on Acharya Kripalani is a perfect example of how politicians should never be reported or commented upon. It was plain filth; and Mr. Karanjia's invocation of Tilak, patriotism and principles was just nauseating. Having said as much, I think I am entitled to submit to the honourable legislatures in India that they are getting a little too touchy for their own good. (As a colleague once wrote: parliamentary democracy is not exactly operating in a sellers' market in Asia.) Legislatures certainly need privileges and protection to have effective debates; but the ordinary citizen should have some rights too. For our M.P.s, M.L.A.s and M.L.C.s to make

it appear that they constitute a superior caste, apart and above, is politically unwise, and I wish I could say I have never encountered a touch of arrogance in some of those gentlemen. A Government official once told me that he had directives to see M.P.s as soon as they called, no matter how long other callers might have been waiting. I have heard of M.P.s exercising their "privilege" in the matter of reservations on railways and airlines—to the disadvantage of ordinary customers. I once asked a British M.P., a very well-known one and once a Cabinet Minister, what his privileges were outside the House of Commons. He thought long and then said, "Yes, I remember. Our majority was very small; and the division bell was ringing. The cop at the corner let me ignore the traffic signal so that I could reach the House in time." Did he have any priority on air passages? He said B.E.A. would tell him where he got off if he were so foolish as to throw his weight about with them. It is all very different here. Several judges in India have held that the Press has no privileges and that journalists are ordinary citizens in the eye of the law. Perhaps in the U.K. too that is the legal position. But not many men or institutions there would dare treat the Press as it is frequently treated here—often by men who swear by democracy.

CALCUTTA'S TAXI OWNERS, I SEE, ARE DEMANDING a 25 percent increase in fares and the immediate withdrawal of the provision in the Motor Vehicles Act under which permits are liable to be cancelled when the driver is really to blame. I can see their point of view; taxi fares have remained remarkably stable in this city over the past few years of rising prices, while nobody likes to suffer for somebody else's misdeeds. But I predict that the State Government will get full public support in resisting these demands, if only because everybody feels that there is probably no other way of impressing on the owners just how unpopular they are with taxi users these days. When he can spare a moment from his schemes for a public-sector coal industry in West Bengal, Dr. Roy will be performing a public duty if he is able to devise some method of persuading taxi owners to face up to their legal and moral responsibilities. Taxis are supposed to render an essential public service in this metropolis, but too often they are run for the benefit of everybody but those they are supposed to benefit. But if Dr. Roy's performance in the fish crisis is anything to go by his approach to this problem will be to advise people not to use taxis at all. It is interesting to speculate on where exactly this policy could eventually lead; no further than protesting against the pollution of the drinking water I suspect. No, such an approach has its limitations, and its main achievement at the moment is to persuade the public that the West Bengal Government is simply reluctant to face up to the problems of this city. Dr. Roy might reply that taxis are not used by the man in the street. But if that is so why have they all along been accepted legally as a public service? Besides, among other things they are essential these days for transporting the sick to hospital— heaven knows the ambulance services are wholly inadequate. Is there anything in the Motor Vehicles Act about drivers having to be properly trained by the way? If there is not, then there ought to be.

OBJECTS OF THE COMPANY

On the 2nd April, 1960 the present Company was incorporated as a private company to take over the businesses of the sole proprietary firm of Mr. B. S. Dua under the name "American Refrigerator Company" and the business of the partnership firm at Bombay. The Company is authorised by its Memorandum of Association (inter alia) to carry on the businesses of manufacturing and selling air-conditioners, water coolers, refrigerators, and other products relating to the refrigeration industry and to undertake engineering and servicing work in connection thereto.

By Special Resolution of the Company passed at an Extraordinary General Meeting held on 28th August, 1961 the Company was converted into a public company.

HISTORY OF THE COMPANY AND PROSPECTS

Mr. Dua commenced business under the firm name of "American Refrigerator Company" in December 1940 at Calcutta. This concern was then engaged in selling the products of certain United States manufacturers such as General Motors Corporation, Trane Inc., etc. In early 1957 the business was expanded into manufacturing and assembling of various refrigeration products on a progressive scale and by 1959 the turnover of the business was about Rs. 3,50,000/- per month which reached a turnover of Rs. 5,00,000/- per month at the time it was taken over by the Company.

The present production of the Company (an approximate monthly turnover of Rs. 5,00,000/-) represents less than half the licensed capacity of the Company. Considering the ever increasing demand, the Directors have planned a policy of expansion to its full licensed capacity and when the expansion scheme is fully implemented the annual turnover is estimated to be 132 crores for the equipment to be manufactured and another 60 lakhs from Engineering and Service Departments.

BUSH COILS: The Company has the largest plant in India manufacturing refrigeration coils required by the refrigeration and air-conditioning engineering industries. Till the Company's plant went into production all such coils were imported. These coils are not only used for refrigeration (food preservation and processing) and air-conditioning but also for various industrial applications of heat transfer in the textile mills, rayon mills, tea industry and chemical processing plants.

An indication of the growth in the demand for refrigeration products may be gauged by reference to the estimates prepared by the Central Advisory Council of Industries on the demand for air-conditioners and water coolers in India which is as shown below:

	AIR-CONDITIONERS	WATER COOLERS
Estimated Demand	Nos.	Nos.
	in Rupees	in Rupees
1960-61	25,000	6,50,00,000
1965-66	50,000	13,00,00,000
		20,000
		4,00,00,000

TECHNICAL COLLABORATION FOR MANUFACTURE OF BUSH COILS, ETC.

The Firm of American Refrigerator Company had made arrangements with Bush Manufacturing Company Inc. ("Bush") of the U.S.A. for technical collaboration as far back as the 20th May, 1955 which authorised the Firm to manufacture Bush Coils under Licence from Bush and with all technical assistance from that Company. This agreement expired in 1960 but by mutual agreement the Company has entered into a further agreement on the 20th May, 1960 with Dunham-Bush Inc. ("Dunham-Bush") of the U.S.A., which was the Company formed by the merger of Bush and Dunham Inc. for a further period of 5 years under which Dunham-Bush act as the technical advisers of the Company.

This agreement covers products in the refrigeration and air-conditioning heat transfer fields which are currently manufactured by Dunham-Bush except for the "Brunner" line of products and the cast aluminium heat transfer products of Heat-X Inc. of New York (hereinafter referred to as "the said products"). The Company is given the exclusive licence to manufacture the said products in India and to sell the same throughout India with a non-exclusive licence to sell them throughout the World except in certain countries. Dunham-Bush is to provide designs, drawings, technical know-how and other technical data required by the Company for the manufacture of the said products and other technical assistance as provided in the Agreement including information relating to improvements and new inventions.

The Central Government has approved the terms on which the technical collaboration is to continue for another five years.

FACTORY SITE, WATER AND POWER SUPPLY

The Company's Factory is situated at Hide Road, Calcutta with an area of 1,23,328 sq. ft. approximately, which is on lease from the Commissioners for the Port of Calcutta. There is an adequate supply of electric power and water available at the Factory and the Company has convenient access to railway sidings.

RAW MATERIALS

The Principal raw materials, namely, steel, copper, aluminium are partly available from indigenous sources. Other materials, namely, components like compressors, controls, etc. have to be imported for import licences.

The Company also has yearly import licences for raw material for the manufacture of their products.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE

The minimum subscription in respect of the present issue on which the Directors will proceed to allotment is Rs. 12,25,000/- being the whole of the Equity Share Capital now offered for subscription to the public.

The Capital required for the Company's expansion will be as follows:—

Land & Building	Rs. 7,50,000
Imported Machinery	Rs. 6,00,000
Indigenous Machinery & Installation Charges	Rs. 4,00,000
Expenses of this issue (including brokerage and underwriting commission)	Rs. 75,000
Working Capital	Rs. 15,75,000
	Rs. 34,00,000

SOURCES OF FINANCE

Present Issue	Rs. 17,05,300
Loans from Banks to meet part of the working Capital as and when required in the usual course of business	Rs. 16,94,700
	Rs. 34,00,000

(Note: The West Bengal State Finance Corporation has agreed to grant a loan of Rs. 1.75 lakhs to the Company to be secured by the mortgage of existing and future fixed assets of the Company, at an interest of 6½%, and repayable within a period of 12 years. If the Company agrees to take up this loan it will reduce the borrowings from the Bank to that extent.)

AMERICAN REFRIGERATOR COMPANY LIMITED—Cont'd.

ESTIMATED PROFITABILITY

The Directors have estimated the cost of production of the Company's products on a conservative basis according to data currently available to them. After careful scrutiny of cost of raw materials, establishment and other direct expenses and on the basis of a fair estimate of sales the Directors think that the Company may reasonably expect sufficient profit to pay reasonable dividends on the equity capital.

MANUFACTURING LICENCES

The Government of India has issued under the Industries (Development & Regulation) Act, 1951. Licences for the manufacture of air-conditioners, water coolers, deep freezers, etc. and Bush Coils, packaged type air-conditioners, etc., copies of which are available for inspection.

SELLING AGENTS FOR ARCO-BUSH PRODUCTS

The Company has appointed Refrigeration Accessories Private Ltd. of Calcutta to be its sole selling agents for ARCO-BUSH PRODUCTS manufactured by the Company within the territory of India. The terms of the agency are contained in the Agreement of the 1st June, 1960. The agency will remain in force for a period of five years from the 1st May, 1960 with an option to the Company to extend its term.

BROKERAGE AND UNDERWRITING COMMISSION

Brokerage will be paid to Brokers and Banks at 10 p.p. per equity share of Rs. 10/- but no brokerage will be paid to the underwriters in respect of the 48,030 Equity Shares of Rs. 10/- each to be subscribed by Directors and their friends not being part of the issue to the public. The total amount of brokerage payable by the Company is estimated at Rs. 12,250/-.

The underwriters will be paid an underwriting commission of 2½%. The total amount of underwriting commission payable by the Company is estimated at Rs. 30,625/-.

DIVIDEND AND CAPITAL

The Company in general meeting may declare a dividend to be paid to the members according to their rights and interest in the profits of the Company and may subject to the provisions of Section 207 of the Companies Act, 1956 fix the time for payment.

No dividend shall be payable except out of the profits and no dividend shall carry interest as against the Company.

MATERIAL CONTRACTS

The following contracts not being contracts in the ordinary course of business which are or may be material have been or proposed to have been entered into by the Company.

CORRIGENDUM IN THE PROSPECTUS: On page 6 under the heading "Brokerage" second line read "All Recognised Brokers and Bankers" instead of "Company's Brokers and Bankers."

1. Agreements between the Company and Mr. B. S. Dua for taking over the business in Calcutta and Delhi, including Goodwill, Plant and Machinery.
2. Agreement between the Company and Messrs. B. S. Dua and H. D. Batliwalla for taking over Bombay partnership business.
3. Agreement with the Managing Director.
4. Agreement of Sole Selling Agency for ARCO-BUSH Products.
5. Agreement with Dunham-Bush for technical collaboration.
6. Agreement for distribution of their products with General Motors (Frigidaire and Delco Division) for Eastern India, Trane S.A. and Trion A.G. for the whole of India.

INSPECTION OF DOCUMENTS

The following documents and those otherwise referred to in the Prospectus may be inspected at the Registered Office of the Company at any time on working days during the usual office hours for a period of 14 days from the date of publication of the Prospectus.

1. Print copy of the Memorandum and Articles of Association.
2. Order of the Controller of Capital Issues.
3. Industrial Licences issued by the Government of India.
4. Import Licences.
5. Copies of Material Contracts.
6. Report of Auditors of the Company.
7. Consents of Bankers, Solicitors, Brokers and Auditors.

APPLICATION FOR SHARES AND ALLOTMENT

Application for Equity Shares must be for a minimum of 50 Shares or multiples of 50 shares. Applications for Equity Shares must be made on the form accompanying the Prospectus which can be had from the Company's Bankers or Brokers to the issue. All application forms duly completed must be lodged together with the amount of Rs. 5/- per share in respect of Equity Shares with any of the following Banks, namely:—

1. First National City Bank of New York, Calcutta or with their Branch Office in Bombay.
2. Netherlands Trading Society, Calcutta or with their Branch Office in Bombay.
3. National and Grindlays Bank Limited, Calcutta or with any of their Branch Offices at Calcutta, Amritsar, Bangalore, Bombay, Cochin, Darjeeling, Delhi, Kanpur, Madras, New Delhi, Simla, Srinagar and Tuticorin.
4. United Commercial Bank Limited, Calcutta or with any of their Branch Offices at Calcutta, Ahmedabad, Amritsar, Bangalore, Bombay, Baroda, Delhi, Hyderabad, Jaipur, Kanpur, Madras, Patna, Ranchi, Rajkot and Surat.

Cheques or drafts should be drawn in favour of one of the Bankers to the Issue "A/c American Refrigerator Company Limited—Equity Issue" and should be crossed "A/c payee only". A separate cheque or draft must accompany each application and such cheque or draft must be payable at the particular centre in which the application is lodged.

Cheques MUST be drawn on a Branch of any Bank in the City where the application is tendered. Outstation cheques will not be accepted.

If payment is made by Bank draft it MUST be drawn on a Branch of a Bank in the City in which the application is tendered.

Drafts or cheques drawn otherwise than in accordance with the above will not be accepted and the relevant application will be rejected.

EXTRACT FROM AUDITORS' REPORT

Income	For the period ended 30.4.61
Sales (including sales of services)	Rs. 61,76,180
Miscellaneous Income	24,439
	62,00,619
Net Profit before Taxation	3,64,371
Less TAXATION	1,60,000
Profit after Taxation but before appropriation to Reserve	2,04,371
Taxation has been calculated for the above period at the rate prevailing in the current Finance Act.	
Net Assets as at 30th April, 1961	9,08,070
Represented by	
7,94,700 Equity Shares of Rs. 100 each fully paid up	7,94,700
Development Reserve (including Rs. 32,000 transferred from the vendors for which the Company is contingently liable to them)	41,922

No dividend has been paid by the Company to-date but in respect of the period ended 30th April, 1961 the dividend recommended by the Directors of your Company on its Paid-up Capital out of profits is 15% (Subject to deduction of Income-tax) on the Equity Shares.

SIEMENS
INDIA

POWER FOR PROGRESS

The Siemens Organisation makes significant contributions to every aspect of the electrical industry.

Siemens offer a wide range of equipment to generate, convert and convey electric power—to scale power down into the microwatt range and to step it up to the megawatt range.

All these Siemens products are backed by over a century's experience in all spheres of electrical engineering.

Equipment manufactured in India in collaboration with independent Indian Enterprises, under Licence Siemens Germany, includes Motors, Transformers, PVC Wires and Cables, Paper Insulated Cables, Switchgear, Meters, etc.

THE TITAGHUR PAPER MILLS COMPANY LTD.

STATEMENT BY THE CHAIRMAN, SIR WALTER MICHELMORE

The following statement has been circulated to Shareholders of the Titaghur Paper Mills Company Ltd., by the Chairman, Sir Walter Michelmores.

It gives me pleasure once more to review the Company's affairs and to comment on the state of the Paper Industry.

The results for the year ended 31st March, 1961 have been somewhat disappointing and the fall in profit has resulted from a combination of lower selling prices, increases in the cost of chemicals and coal and a loss sustained at No. 3 Mill. Your Directors have, therefore, decided to declare a final dividend of one rupee on the ordinary shares, making a total of two rupees for the year. To do so it has been necessary to transfer to the credit of the profit and loss account the sum of Rs. 7 lacs from Dividend Equalisation Reserve.

Your company has this year felt the full force of the cuts in selling prices recommended by the Tariff Commission which has resulted in a drop of 3.8% in the value of sales. The prices of our raw materials, chemicals and coal, however, show no signs of going down and since my last statement your company has had to suffer an excise duty on caustic soda of Rs. 40/- per tonne, an increase in the cost of coal of 78.7 nP per tonne, an increase in the cost of power supplied by the Calcutta Electric Supply Corporation arising out of the higher coal price and, as I write, there is a probability that the Company's contributions to the Employees' Provident Fund will be increased from 6½% to 8½%. Your Directors are alive to the necessity of making economies to offset

the slow but steady rise in costs, and some success has been achieved. I trust, nevertheless, that Government will show some sympathy with the predicament in which the Industry at present finds itself and give due consideration to the modification of paper selling prices where it is clear that they are too low.

Teething Troubles

The results at No. 3 Mill during the year have been disappointing, as the teething troubles inescapable in a project of this size and complexity have not been overcome as quickly as had been hoped, and a loss has again been incurred. The Mill was started up with a single machine and it was considered advisable not to hurry the transfer of the second machine from No. 2 Mill until the workers at No. 3 Mill, most of whom were recruited locally and were, therefore, unskilled in the operation of a Paper Mill, had become reasonably proficient. Since the Mill was designed to produce 1000 tonnes per month, one-machine operation could not be economic. Your Managing Agents felt, however, that this disability should be accepted in the initial stages and the second machine used to the best possible advantage at No. 2 Mill during the intervening period. This was done, and therefore part of the profit at No. 2 Mill can be considered in a manner of speaking to be attributable to No. 3 Mill. Trade Unionism is well developed in Orissa, even in its infant industries, and it was not long before inter-union rivalry developed at No. 3 Mill. This has unsettled the workers and has greatly affected the efficiency of the Mill. Despite this disability, however, it was

considered that the transfer of the second machine could no longer be delayed; this is, therefore, now well in hand and the machine should be in operation shortly, after which we anticipate that before long the Mill will be on a profit-making basis.

The Mills in West Bengal ran satisfactorily in the year under review and continue to do so in the current year. At one stage stocks of both bamboo and coal were dangerously low and it was necessary to supplement bamboo by using paddy straw and bagasse and to bring in coal by lorry which is extremely expensive. The Railways, still contending with major transport difficulties, have done their best to help us and have staved off any serious closure due to lack of supplies.

Coal Supply

A special reference is necessary to the problem of the supply of coal to the Mills. We have not, during the period under review, experienced any major shut-down in the Mills in West Bengal owing to shortage of coal. But it must be realised that this has been achieved solely by the extremely costly expedient of moving to the Mills by road coal which it is the duty of the Railway to have been able to move by rail. A new and remarkable feature of this failure by the Railways to implement their obligations is the imposition by the Central Government of a cess of 80 naye paise per ton on all despatches of coal to all consumers wherever situated. The purpose of this cess is that for coal consumers in Southern and Western India to whom the Railways cannot convey their coal by rail the "difference between the actual freight by the rail-cum-sea route and the freight by the all-rail route will be made good to the consumer in the form of a subsidy." (My quotation is from a recent answer by a Union Minister to a question in the Lok Sabha). So we have the position in our Company that on the one hand we are paying as much as Rs. 100,000/- per month extra in transport charges for coal brought to the Mills by road and at the same time we are now paying something like Rs. 16,000/- per month extra cess on all our coal receipts, the benefit of which goes entirely to other companies—including no doubt some of our own competitors—located in South and West India. This gross discrimination seems to require much more attention than it has yet received from the Industrialists and indeed the Governments concerned, in North East India.

Another point I should like to make is on the subject of the excise duties. The correct purpose of these duties is to spread the taxation net more widely among the teeming millions of the country and to bring into it some of those who escape the very limited numerical scope of corporate and personal taxation. I therefore do not quarrel with the excise duty on paper, provided it is kept at a reasonable rate and within the capacity of the consumer to pay. Excise should not however be used to increase the already high cost of manufacturing industries. A case in point is the excise duty on caustic soda to which I have already referred and which is a heavy burden on your company. Basic materials such as caustic soda, whose sole use is as a raw material in other industries, are not, I suggest, a suitable subject for excise duty as their imposition serves only to increase manufacturing costs which are already high.

In view of the vital importance of economies and operational efficiency, Messrs. Urwick Orr & Partners, as I mentioned in my last statement, made a survey of the organisation of the company and of the costing system, and their recommendations are in process of being implemented.

Third Plan Target

The Paper Industry is now at the commencement of the Third Plan period, having victoriously achieved the targets set for the First and Second Plans. The target for the Third Plan is a production of 700,000 tons, double the present output, and this is supposed to be achieved by the creation of additional Mills or expansion of existing units to bring the total capacity to 900,000 tons. Against this the total capacity licensed or approved by Government is just over 1,200,000 tons. This very high figure seems to indicate the expectation that not much more than half the new schemes will reach completion.

With the output of paper having doubled during the Second Five Year Plan, there are indications that the supply position has eased considerably. It seems to me doubtful that demand will continue to double each five years and, as I said last year, there may well be an excess of supply over demand by 1965. While in general the supply position has eased beyond anything thought possible two years ago, our Mills remain heavily committed. A consistent policy of quality and service in good times and bad, is undoubtedly responsible for our full order books. The severe shortage of railway wagons has seriously hampered despatches, but all possible steps have been taken to deliver supplies in time for various seasonal requirements. I have no doubt that in the light of recent experience, our Mills will be able to improve their performance still further. Our Sales force is being strengthened and expanded solely with a view to improving liaison between the Mills and our customers.

Although a reference to the efforts of the staff generally closes a Chairman's statement, this does not mean they are last in importance and I am sure you will wish me to thank them for the very hard and constructive work they continue to do on your behalf, often under circumstances of considerable difficulty. I should like to mention in particular the staff of the bamboo forest organisation who are responsible for the cutting and extraction of bamboo from an area covering large tracts of jungle in Orissa, Bihar and Assam. This is a lonely and exacting task carried out in conditions never easy and often of extreme discomfort, if not danger, and you will agree with me that their efforts on your behalf are highly valued.

The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on the 29th September, 1961.

Money

THE CALCUTTA MONEY MARKET CALL RATE INCREASES

Wednesday, 6th September.

THERE has been another moderate fall in advances in the Calcutta money market during the past week. None of the main sources of demand shows much change. The requirements of the cotton and sugar mills are about the same. Demand from the jute industry and call for accommodation against grains and seeds storage are both slightly down. The only sources of demand showing any appreciable increase are the engineering and iron and steel industries. In the interbank market, the call rate has moved up to the nominal level of 3½ percent to 4 percent, but at this level there are no lenders.

There has been an improvement in the supply of both tea and gunny bills in the exchange market. Demand for remittance has been fair. In the London money market, the pound further consolidated its firm position and the closing quotations showed marked gains against all important currencies.

BULLION WAS STEADY IN THE PAST WEEK DUE TO fresh support. Reports of seizures of contraband metal helped sentiment. Silver closed at Rs. 235.90. The price was quoted at 80.5/8d in London and at 91.375 cents in New York.

Gold finished at Rs. 143.12.

DURING THE WEEK ENDED 1ST SEPTEMBER, Government of India Treasury bills for Rs. 21,89,00,000 were sold in favour of the Reserve Bank.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills sold from 30th August to 2nd September amounted to Rs. 71,00,000.

A DECLINE OF Rs. 4.77 CRORES TO Rs. 1,872.62 crores in active notes was a notable feature of the return of the Reserve Bank of India during the week ended 1st September, but the total note issue was Rs. 47 lakhs higher at Rs. 1,894.43 crores. Notes held in the Banking Department consequently rose by Rs. 5.24 crores to Rs. 21.81 crores. Deposits of the Government of India declined by Rs. 12.09 crores to Rs. 52.51 crores and those of other Governments by Rs. 10 lakhs to Rs. 101.25 crores. Balances of commercial banks at Rs. 101.25 crores showed a decline of Rs. 1.71 crores. Balances held abroad again dropped by Rs. 6.02 crores to Rs. 19.59 crores. Investments declined by Rs. 9.08 crores to Rs. 275.43 crores. Other loans and advances rose from Rs. 115.71 crores to Rs. 116.78 crores, of which advances to scheduled banks against usance bills amounted to Rs. 36 lakhs (Rs. 11 lakhs). Ways and means advances stood at Rs. 53.32 crores, against Rs. 48.75 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 25th August, 1961, shows a rise of Rs. 525.18 crores in total deposits. Investments in Government securities are up by Rs. 11 crores to Rs. 252.28 crores, while other authorised investments remain unchanged at Rs. 9.37 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 6.54 crores to Rs. 238.45 crores. Cash and balances are, in consequence, shown at Rs. 30.61 crores, or Rs. 4.95 crores higher.

RUBY GENERAL INSURANCE CO. LTD.

CHAIRMAN, MR. B. M. BIRLA'S REVIEW

Summary of the Chairman's speech of Ruby General Insurance Co. Ltd., delivered by its Chairman Mr. B. M. Birla on 30th August, 1961.

Gentlemen,

It gives me great pleasure to welcome you to the Twenty-fifth Annual General Meeting of the Company. The occasion is of special significance as it marks the completion of 25 years of the Company's foundation. I convey to you all my warmest greetings on this occasion.

The notable progress which your Company has made during the short span of its existence is due to the excellent support and co-operation it has received from its patrons and is a matter of satisfaction and pride for all of us.

The figures given below depict the remarkable growth of your Company during the past decade:

	1950	1955	1960
Net Premium	Rupees 21,17,345	Rupees 36,66,678	Rupees 70,50,917
Fire	34,79,055	45,41,216	87,38,252
Misc. Accident	10,39,455	15,76,162	14,76,333
Marine	66,35,855	97,84,056	1,72,65,502
Capital & Funds	79,50,003	92,21,200	1,46,73,639

Fire Department

The Fire Business of the Company has again yielded good results despite the reduction in the Fire rates which came into effect from 1st January, 1960. The net profit in this Department is Rs. 4,99,375/- and Reserves have increased by Rs. 7,68,896/-.

I would like to draw your attention to the huge national loss due to the recurrence of a large number of fires every year in the country. The paramount

need today is for nation-wide vigilance for avoiding Fire wastage.

Motor and Miscellaneous Department

The net premium in this Department has increased from Rs. 57,13,473/- in 1959 to Rs. 87,38,252/- in the year under review and the Reserves increased from Rs. 27,71,034/- to Rs. 43,69,126/-. The large number of road accidents resulting not only to heavy damages to the vehicles but loss of valuable lives is a constant cause of anxiety to the Underwriters not only in India but all over the world.

Marine Department

The net premium in this Department amounted to Rs. 14,76,333/- as compared to Rs. 20,03,826/- in the previous year. The fall in the premium has been due to reduction in the Overseas Hull business which had been showing disappointing results. The Department has shown a profit after many years.

The unrestricted competition has brought cargo rates down to an uneconomic level. A comprehensive tariff for internal transit will no doubt help to improve the situation. Careful handling of cargo at the Ports and by the carriers is essential.

The insurance business has a very important role to play in the development of country's economy in keeping with the programme of rapid industrialisation. The Government should lend its support to all the Indian Insurance Companies in an equitable way so that the Insurance Industry as a whole can develop on a sound and healthy basis. The industry is passing through a period of transition and the public are still not insurance-minded. As compared to other countries, premium income in India is very small.

Your Company enjoys a very strong financial position which has been further strengthened during the year under review because of the large increase in Reserves. The Capital and Funds at the end of the year stand at Rs. 1,46,73,639/- as against Rs. 1,27,80,763/- at end of 1959.

N.B. This does not purport to be a record of the proceedings of the above Annual General Meeting.

TOP MANAGEMENT FINDS OUT

HOW TO STOP LOSS THROUGH ORGANIZED LUBRICATION

Alert leaders of industry are fast realising that organized lubrication can increase production, extend machine life and reduce down time... vital factors that make for increased production and profits.

The new Caltex booklet "STOP LOSS through ORGANIZED LUBRICATION" discusses specific benefits of organized lubrication and shows how Caltex Lubrication Engineers can help you effect real savings in your maintenance costs.

Stocks and Shares

PRICES FALL ON RENEWED PRESSURE AFTER BRIGHTER START

I. I. S. C. O. CHAIRMAN'S SPEECH TAKEN BEARISHLY

Wednesday Evening.

THE recovery in the stock market, which took place earlier in the past week, has proved short-lived. On a complacent view of the improvement the authorities removed the margins imposed on selling five clearing shares—Indian Iron, Burrakur, Dunlop Rubber, Rohtas and Hindustan Motors. Considering that these margins helped abate the earlier selling pressure, the removal appears to have been made too hastily. Incidentally, it may be mentioned that such margins would have been more effective if all the stock markets had enforced them simultaneously. When the Calcutta Stock Exchange imposed the margins, operators merely diverted selling to other markets in which the shares concerned were transacted freely.

The reaction at the close on Wednesday was not unexpected because the earlier recovery was due more to the absence of selling pressure and short-covering than to support. As soon as the margins were removed, sellers again appeared with full vigour.

Bears started their assault in right earnest as soon as Tuesday's annual general meeting of the Indian Iron and Steel Company was over. Those who attended the meeting could report little cheering news. It looks as if the prospect of a further share issue, especially by capitalising reserves, is likely to be a long-term affair as far as Indian Iron is concerned. The management is doing right in concentrating attention on repaying the indebtedness of the Company before frittering away resources by paying the tax on bonus shares. This besides, the outlook for steel companies is not very encouraging, at least in the near-term. The working is being hampered by shortages of raw materials, electric power and transport and by poor and short supplies of coal.

The general news background, too, has been of little help in ensuring steadiness. Political developments in Punjab continue to disturb sentiment. The Berlin situation could easily take an ugly turn.

Although funds meant for investment in Government securities are not usually used for buying industrial shares, the warm response to the State Government loans—lists of which opened last Monday—could be a restraining factor. If an amount of Rs. 80 crores is mopped up by these loans as expected, money conditions could become tighter. Not only would bank credit become more difficult to obtain, but institutional support, especially from the Life Insurance Corporation, could be delayed. The Life Insurance Corporation and other institutions are believed to have subscribed for the new State loans in a very enthusiastic manner.

Corporate news has not been encouraging either. The latest reports of some good companies such as Indian Cable and Titagur Paper show how profitability has been held down by increased production costs, combined with cuts in the prices of the commodities concerned. The paper industry in particular has been heavily affected by the reduction in the price of the commodity. In view of the increases in prices of raw materials and spare parts, current prices of many manufactured goods have generally become unrealistic.

The price of Indian Iron shares has closed at a low figure of Rs. 24.85. Sellers predominate in engineering shares and their prices have declined all round. Texmaco, Guest, Keen, Williams, Jessop and Britannia Engineering have been sold at lower prices. Indian Steel and Wire Products have been neglected in spite of a good report.

The prices of miscellaneous shares have declined on balance. Pressure has reduced Rohtas, Indian Cable, Indian Aluminium, Indian Copper, Hindustan Motors and Dunlop Rubber. Scattered support is forthcoming for Goodyear India and Britannia Biscuit at current prices. Interested buyers have helped Isaac Holdens and Phillips Carbon. Hindustan Twyford and Dr. Paul Lohmann are steady. India Steamship have declined on producing disappointing results and passing the ordinary dividend. Imperial Tobacco are steady on paying a higher dividend. Orissa Minerals and Alkali Chemicals have been taken at lower prices. Cement shares are quiet because investors are inclined to await the publication of the new price of the commodity.

Interest is lacking in sugar shares because the decision of the Government to improve domestic consumption by liberalising the distribution system is being watched carefully. Ramnagar Cane have been bought by knowledgeable quarters.

Except for scattered support for New Central, being offered freely at lower prices, investors are worried about the possibility of big mill losses during the current year. Fort William are being bought on the prospect of diversification of acti-

vities. The Company may issue rights shares in due course in order to finance the new business.

Turnover is restricted in coal shares and attention has been concentrated on Bengal for paying a satisfactory interim dividend. Burrakur have fluctuated narrowly. East Indian are being taken on paying a higher dividend.

Cotton mill shares have become steadier at lower levels. Bharat Commerce, Kesoram, Bowreah and J. K. Rayon are in demand on the view that the demand for cloth will improve in the coming months.

A further decline in the price of the commodity at the auctions held in Calcutta earlier in the week has induced more sellers than buyers in tea shares. Hasimara have reacted on profit-taking. Bishnauth are being sold because the dividend has fallen below market expectations. Hantapara have lost further ground on pressure. Huldibari have, nevertheless, been steady on hopes of a higher dividend. Dibrugarh have been maintained on paying a satisfactory dividend.

Government securities are steady but business is restricted because attention has been concentrated on the new State Government loans. Five State loans amounting to Rs. 31 crores closed soon after they were opened on Monday. The loans of the Maharashtra, West Bengal and Bihar Governments were fully subscribed and those of Orissa and Uttar Pradesh were over-subscribed. The market thinks that all the loans will be subscribed fully before Saturday.

Gairkhata Tea

After providing Rs. 60,589 (against Rs. 59,633) for depreciation, the profit of Gairkhata Tea Co. Ltd. has risen from Rs. 2.67 lakhs to Rs. 4.78 lakhs for the year ended December 1960. A taxable

Reduce handling costs, speed up work with

YALE Heavy Duty Electric Tractors

You can save as much as 50% in costs by mechanising handling and movement of materials with YALE 'Worksaver' Tractors in factories, warehouses, railways... in fact, in any place where materials are required to be moved.

This lightweight, manoeuvrable electric tractor can draw a train of loaded trailers over any distance... promote a smooth flow of goods... release workers for more productive jobs. The savings effected in time alone will more than pay for your YALE Electric Tractor.

VOLTAS, Sole Distributors for the complete line of YALE Industrial Lift Trucks and Hoists, will be glad to offer expert advice on your materials handling problems.

dividend of 25 percent has been declared, against 12½ percent, taxable. After making necessary adjustments, there is a carry-forward of Rs. 1,25,994, against Rs. 39,367 brought in. The crop harvested was 523,656 kilograms, compared with 520,590 kilograms. The average sale price was Rs. 5.03, against Rs. 4.61 a kilogram.

Upper Jumna Valley Electricity

The profit of Upper Jumna Valley Electricity Supply Co. Ltd has decreased from Rs. 1.47 lakhs to Rs. 85,489 for the year ended March 1961. A dividend of 13½ percent, subject to tax, has been maintained. General reserve gets Rs. 14,000 (against Rs. 18,714). With other adjustments, there remains a balance of Rs. 36,125 to be carried forward, against Rs. 36,698 brought in. Units of electricity sold amounted to 26,170,318, against 22,674,747.

Bombay Market

CLOSING PRICES REACT AFTER EARLIER IMPROVEMENT

STEEL SHARE PROSPECTS DISCOURAGE

Trading has been interspersed with holidays in the Bombay stock market during the past week. Share prices reacted towards the close after an earlier improvement. At the beginning, operators were encouraged by good corporate news. Century declared an interim ordinary dividend of Rs. 12 a share, taxable, against Rs. 10 a share, taxable. There was evidence of a great deal of short-covering. A report that the Life Insurance Corporation bought steel shares helped sentiment temporarily.

At the close, share prices declined on a broad front due to nervous liquidation, combined with

short-selling. The prospect for steel shares was considered discouraging in view of many difficulties. It was thought that subscriptions to the new State Government loans would make money dearer. Concern was felt about the disturbing developments in Punjab. Support was conspicuous by its absence and there was no inclination on the part of bulls to extend commitments in the absence of some favourable developments.

Tata Steel declined to Rs. 149.50, as did Indian Iron to Rs. 24.76 on pressure from Lyons Range. Engineering shares generally declined, and Tata Locomotive were sold down to Rs. 329. Premier Construction met with scattered support at Rs. 180. Mukand Iron were bought at Rs. 26.25 on expansion prospects, but Alcock Ashdown were freely offered down to Rs. 290. Larsen and Toubro lost at Rs. 37, as did Mahindra and Mahindra at Rs. 18.48. Motor shares were quiet, and Hindustan Motors declined to Rs. 18.04 on pressure. Premier Automobiles lost at Rs. 154.50 on the fear that the Company might issue rights shares for financing the expansion programme.

Except for Century, which were steady at Rs. 672 on paying a higher interim dividend, cotton mill shares lost all round. Bombay Dyeing were dealt in at Rs. 64.90 and Kohinoor at Rs. 280. Simplex came to hand at Rs. 193 and Svadeshi were taken at Rs. 245. Morarji declined to Rs. 394 and Khatau reacted to Rs. 482.50. Tata Mills were sold down to Rs. 64.70 and Finlay were available at Rs. 318. India United Ordinaries were placed at Rs. 15.32 and Apollo were sold at Rs. 184.

Miscellaneous shares moved down in sympathy with the general trend. In the sugar group, Belapur softened to Rs. 277, as did Phalton to Rs. 139.50. Maharashtra Sugar met with scattered support at Rs. 190.50. Walchandnagar Industries, Associated Cement were available at Rs. 157.50 and Digvijay came to hand at Rs. 168. Mining shares reacted, and Shivrajpur Syndicate changed hands at Rs. 91. Steamship company shares were neglected and prices declined further. Sellers predominated in Scindia Steam at Rs. 1212 and Great Eastern Shipping were indicated at Rs. 1312. Rayon shares were quiet, and National Rayon declined to Rs. 512 on pressure. Baroda Rayon were done at Rs. 140 and Gwalior Rayon were available at Rs. 49.50. Bombay Buralah reacted to Rs. 574. Chemical shares lacked interest, and sellers predominated in Tata Chemical at Rs. 16.56. Indian Dyestuff lost at Rs. 442.50 and Colour-Chem were placed at Rs. 340. Scattered interest was taken in Voltas at Rs. 275 and in Tata Oil at Rs. 68.50. Synthetics and Chemicals were quiet at Rs. 185 and Coat Tyre reacted further to Rs. 205.

Bank shares were steady, but business was restricted. Bank of India were taken at Rs. 132.50 and Central Bank came to hand at Rs. 61.70. Bank of Baroda were done at Rs. 102.50. Insurance shares were dull and routine business was transacted in New India Assurance at Rs. 57.80.

Electric company shares were quietly steady, and Ahmedabad Electric changed hands at Rs. 89.80. Bombay Suburban were placed at Rs. 97 and Tata Hydro were bought up to Rs. 108.25.

Madras Market

TURNOVER FALLS IN DULL TRADING

INTEREST DIVERTED TO NEW STATE LOANS

Dull conditions have prevailed in the Madras stock market during the past week. Turnover was small because operators were reluctant to extend commitments either way. Investors were worried about the sharp decline in share prices in the Calcutta and Bombay stock markets. There was a modest improvement outside in the week, but support, especially from outside centres, soon petered out and prices slipped back.

Interest was diverted to the new State Government loans which opened last Monday. As a result, business in the existing securities was routine in character. Bank shares shown in public utilities due to yield considerations. Sugar shares were not favoured because investors were disturbed by reports of excessive accumulation of stocks at factories. In the planting group, tea shares reacted due to lower advances from the Cochin auctions. Rubber shares were quietly steady, but coffee shares turned hesitant in view of the decision of the Government of India to join the International Coffee Agreement. Cotton mill shares fluctuated narrowly, while cement shares were sold freely in the miscellaneous section.

In the banking group, Indian Overseas were steady at Rs. 187 as was Indian at Rs. 173. Punjab National reacted to Rs. 23.80 and Canara were sold at Rs. 89.

Among public utilities, Salem Erode were bought at Rs. 13.25 on paying a taxable ordinary dividend of 12 percent. Timex-Tutorin came to hand at Rs. 11.80 on declaring a taxable ordinary dividend of 12 percent. Business passed in Ellore at Rs. 20.50 and West Coast came to hand at Rs. 14.90.

In the sugar group, Deccan declined to Rs. 12.95, as did E.I.D. to Rs. 38.10. United Breweries improved fractionally to Rs. 102.50 on declaring a

final ordinary dividend of 35 percent, taxable, for 1961 and an interim ordinary dividend of 25 percent, taxable, for 1962. The Company has also issued 50,000 ordinary shares of Rs. 10 each at par to the existing shareholders. Mysore were steady at Rs. 57.75, but Kothari reacted to Rs. 8.80.

Among planting shares, Blue Mountain were done at Rs. 3.10 and Cochin Malabar changed hands at Rs. 7.30. Coffee Lands were transacted at Rs. 17.65 and Consolidated Coffee were dealt in at Rs. 20.95. Be Be were in demand up to Rs. 2.50 on paying a taxable ordinary dividend of 5 percent. Emerald Valley reacted to Rs. 5.20 on passing the dividend, but Kurchermal were bought at Rs. 5 on declaring a taxable ordinary dividend of 4 percent. Business was done in Oucherlony at Rs. 3.78 and in Periakaramalai at Rs. 3.63. Kil Kotagiri were steady at Rs. 4.65 and Nilgiri were bought at Rs. 9 on paying a taxable ordinary dividend of 10 percent. Vayitri were sold at Rs. 1.33 on declaring a taxable ordinary dividend of 9 percent and Waterfall came to hand at Rs. 3.

In the textile section, Buckingham were steady at Rs. 250 on declaring an interim ordinary dividend of 6 percent, taxable. Bangalore Woollen were steady at Rs. 216 and Cauvery Spinning were dealt in at Rs. 4.30. Lakshmi declined to Rs. 155, as did Madura to Rs. 37. Mettur were taken at Rs. 384 and Radhakrishna were done at Rs. 32.37. Travancore Rayon reacted to Rs. 38.65 and South India Viscose were sold at Rs. 181. Loyal were placed at Rs. 45 and Premier were done at Rs. 272.20.

In the miscellaneous section, Aluminium Industries lost at Rs. 22.90 and Ashok Leyland were quoted lower at Rs. 8.47. General Papers were bought up to Rs. 10.20 on declaring a taxable ordinary dividend of 12½ percent. India Cement were quiet at Rs. 6.50 and Madras Aluminium were placed at Rs. 24.75. Madras Rubber were steady at Rs. 15.50, but Mandya National Paper reacted to Rs. 8.85. Mysore Lamp were in demand up to Rs. 27.25 on declaring a taxable ordinary dividend of 25 percent. Rane came to hand at Rs. 6.35 on paying a taxable ordinary dividend of 14 percent. Business was done in Standard Motors at Rs. 16 and in Spencer at Rs. 23.50. Textool were indicated at Rs. 175 and Tube Investment were placed at Rs. 258.

DESIGN... for finest performance

Of all aspects of industrial endeavour the most intriguing is thermodynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story...a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is tailor-made to give optimum performance under varying local conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities of waste material in the form of bagasse for fuel; again, in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will tailor-make not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

London Market

STOCK MARKET REMAINS QUIET

INDUSTRIALS RECEIVE SELECTIVE SUPPORT

London, 6th September.

WITH the level of business down to the lowest of the year, conditions in the London Stock Exchange were extremely quiet during the past week. Little selling developed, however, and with a modest amount of selective buying in progress, the general undertone was satisfactory. The gravity of the Berlin situation and the generally obscure economic outlook and holiday influences contributed to the quiet conditions. Company news provided some discouraging items, but these were not really unexpected. On the credit side, the end-August gold reserve figures made a favourable impression and had a distinctly encouraging effect on sentiment. The growing confidence in the U.S. business outlook was also a helpful influence, and there seems little doubt that if the international situation took a turn for the better, the markets would improve. A feature of the week was the renewed buying of gilt-edged securities, some of it reported to be by the institutions and some by overseas investors. Useful gains were recorded in places. Foreign bonds were neglected. The absence of anything more than routine selling of industrial equities enabled the small selective buying to make an appreciable impression on prices. There was a distinct and further improvement in the tone of the market after the gold reserve figures became known, and fairly widespread and sometimes appreciable gains were scored. Shares provided some of the best features. Banking and insurance shares tended higher, but hire-purchase finance shares were not favoured. Gold shares maintained a satisfactory tone in idle conditions. Coppers and tins fluctuated narrowly. Oils and rubbers attracted little attention, but Indian tea shares moved up sharply in places—a movement touched off by the latest developments in the Brooke Bond bid for Doom Dooma.

New Delhi

WASTEFUL EXPENDITURE ON KHADI AND PROHIBITION

GOVERNMENT CONSIDERING COMMITTEE REPORT ON MOVING COAL BY ROAD

(FROM OUR NEW DELHI CORRESPONDENT)

THE deputy chairman of the Planning Commission recently indicated to the States that the Centre would be willing to meet to the extent of 50 percent of the loss on prohibition. This decision, it is stated, has "Mr. Morarji Desai's approval and support." According to rough calculations, the Finance Minister's approval and support would cost the Central Government Rs. 75 crores in five years. The third plan has allocated Rs. 92 crores for the development of khadi and village industries, against Rs. 82 crores in the second plan. While there was cloth scarcity in India, khadi was being sold at a rebate, because it costs twice as much to the consumer as the mill-made cloth. The wages of khadi weavers and spinners are low, yet the Central Ministry of Labour, for reasons still undisclosed, has not extended the textile wage award to the khadi wing of the industry so far.

In 1877, the Honourable F. A. Stanley, M.P. (later 16th Earl of Derby) was appointed Financial Secretary to the British Treasury. This is how Mr. Gladstone commented on the appointment in a letter to Sir Algernon West: "Stanley is clever, but can a heir to the Earldom of Derby descend to saving of candle-ends, which is very much the measure of a good Secretary to the Treasury? Saving of candle-ends embodies the attitude of extreme frugality, which has led to the reputation of cheese-paring that Treasury has long enjoyed." The well-known financial journalist, Mr. Paul Einzig in his book *The Control of the Purse* says: "It is the natural and legitimate ambition of every minister to spend as much on his Department as possible to be able to produce the best possible results. The sum total of satisfying their ambitions, however, would be advanced inflation. The Treasury is one of the safeguards against it." In India, this qualification of "saving the candle-ends" is practically discarded when the Finance Minister becomes a party to an entirely avoidable wasteful expenditure.

Prohibition and Drinking Habit

As far as prohibition is concerned, the Planning Commission has not yet given out the percentage of people who drink and who are drink-addicts. By and large, people in India do not drink but, thanks to prohibition, the habit is creeping to the rural areas in general, and among the minors in particular. Had statistics been collected along with the last census, it would have been found that the drinking habit was largely confined to the urban areas and that the percentage of the drinking population was below 10 and those of addicts below two. Impartial enquiries would also have shown the unpleasant fact that the percentage of people who drink has gone up since prohibition was enforced in India.

India-E.N.I. Oil Agreement

A small error has crept into the report about India-E.N.I. agreement, last week. It relates to the mode of repayment of the credit offered. The correct position is that India will have to pay 5 percent of the cost of a project at the time of the signing of the agreement, 3 percent 12 months after the date of the signature, and the balance in 20 equal half-yearly instalments, starting from two years after the signing of each agreement. The Government of India will be required to pay only 50 percent of the amount of the first four instalments, the remaining 50 percent being added proportionately to the other 16 instalments. An illustration should clear up the position. The estimated cost of the lubricating plant is, say, 8,000 million Italian lire. Under the agreement, E.N.I. will prepare its project report, after which an agreement concerning this project will be signed. The Government then will be called on to pay to E.N.I. 4 million Italian lire and 2.4 million Italian lire 12 months after the signing of the agreement. The remaining 7.36 billion lire will be paid in 20 equal half-yearly instalments, commencing after two years of the signing of the agreement. This comes to 3.68 million lire every six months. It is further laid down that for the first four instalments, the Government could pay only 50 percent of the instalments or 1.84 million lire, the balance due to be added proportionately to the other 16 instalments.

The chief value of the agreement lies in the fact that neither the Italians would be called on to provide the full amount of credit at once, nor India would be liable to make repayments in a lump-sum. Agreement for each project will be negotiated and signed separately and its repayment would fall due after it had been signed. The projects indicated by India include a refinery, coupled with a lubricating oils plant. It will be taken up if the Italians can show that a refinery would be more economical if grouped with a lubricants plant.

Main Negotiators

Two persons have played a leading rôle in bringing about the India-E.N.I. agreement. They

are the Secretary to the Central Ministry of Mines and Fuel, Mr. S. S. Khara, and the Italian Ambassador to India, Dr. Justo Giusti Del Giardino. Mr. Khara, it will be recalled, had visited Italy, France, England and the U.S.A. earlier this year. This visit has resulted in the India-Burmah Oil Company agreement for oil exploration in Assam, India-French Institute of Petroleum agreement for exploration of oil in Jaisalmer, Rajasthan and for exploration of oil in Kathach. The possibility of an agreement with a U.S. oil company is not ruled out. Although Standard-Vacuum is out as far as Jaisalmer oil exploration is concerned, the Government is seriously examining its proposal for a lubricating oils plant on an equal share in the equity capital basis. It will be seen Mr. Khara has been able to negotiate these agreements successfully in line with the Industrial Policy Resolution. Both the French Petroleum Institute and the E.N.I. will do oil exploration as agents of the State-owned Oil and Natural Gas Commission. The Italian Ambassador has taken personal interest all along the negotiations and paid several visits to Italy to persuade his Government, and the E.N.I. in particular, to recognise the peculiar position of India by extending financial and technical aid for the development of the oil industry.

Changing Trade Pattern

The pattern of India's trade is changing in the wake of the revised policy of "trade follows aid". The U.K., for example, has been supplying India with machinery for paper and plastic industry. According to information, a Company with U.S. assistance has been set up in Britain to cater to the requirements of the Commonwealth countries in these categories of machinery. Indian importers have now been intimated to meet their requirements from the U.S.A. Similarly, power units below 15,000 kW are being imported from the rupee payment countries.

Financial Aid by N.I.D.C.

The financial assistance rendered by the National Industrial Development Corporation to the textile industry is both in the form of long-term as well as short-term loans on a comparatively low rate of interest, namely 6 percent. The long-term loans are repayable in 15 equal annual instalments and are secured against the fixed assets of the borrowers. Up to 1st July, 1961, the Corporation has sanctioned long-term loans of the total value of Rs. 14.52 crores to 53 applicants. The amount actually drawn by the applicants from the Corporation was about Rs. 2.76 crores. Under the short-term loan scheme, the Corporation helps the installation of indigenous machinery by financing the purchase. The machinery supplied under this scheme is on a hire-purchase basis and the value of the machinery together with interest is repayable in a period of five years. This scheme has been introduced to give a fillip to the modernisation programme by the implementation of smaller schemes of rehabilitation and modernisation. Under this scheme, the Corporation has so far sanctioned loans of the total value of Rs. 35 lakhs to seven applicants.

New Reserve Bank Governor

It has been decided that Mr. P. C. Bhattacharyya, at present chairman of the State Bank of India, will be appointed Governor of the Reserve Bank with effect from 1st March, 1962, on the expiry of the term of appointment of Mr. H. V. R. Iengar. Mr. S. Ranganathan, at present Secretary to the Government of India, Ministry of Commerce and Industry, will be appointed as chairman of the State Bank.

Making Scooter Engines

Enfield India Ltd has entered into an agreement with the Villiers Engineering Company of Wolverhampton, U.K., to manufacture scooter engines. The Villiers engines will be manufactured in the existing factory of the firm where motor-cycles are already being manufactured. In addition, Royal Enfield scooters will also be manufactured in the same factory.

Cycle Equipment (Private) Ltd of Okhla, Delhi, has also been permitted to produce Villiers' free-wheel in collaboration with the same British firm. Enfield India Ltd will have a capacity of 9,600 Villiers engines a year, while the capacity of Cycle Equipment (Private) Ltd, Okhla, is 500,000 free-wheels a year.

Rubber Replanting in Kerala

The Kerala Government's schemes concerning the new planting of rubber was examined by the Planning Commission in consultation with the

representatives of that Government and the following programme was considered realistic:

	Acreage	Estimated cost (Rs. lakhs)
(i) Planting by Government Company	20,000	250.00
(ii) Small holders (Unit of ten acres)	75,000	380.00
(iii) Landless and poor peasants (unit of seven acres)	10,000	60.00
Total	105,000	690.00

Import Duty on Raw Jute Goes

After taking into account the supply position of raw jute, and in order to promote the exports of jute manufactures, the Central Government has decided to remove the existing import duty of 35 percent on raw jute with effect from 1st September, 1961. This measure will enable the Indian jute mills to obtain the supplies of raw jute from abroad at competitive prices.

Lending Terms to Shipping Companies

The Government of India has laid down that loans advanced to Indian shipping companies would carry a stipulation that each loanee will have to purchase, at least, one ship from the Hindustan Shipyard.

Aid for Ship Repair Firms

It is observed from the replies received from the various ship repair firms, who were addressed about their plans of expansion or modernisation, that they are reluctant to undertake any expansion or modernisation schemes. A few firms have indicated that they could consider schemes of development if they were assured of assistance by the Government in providing adequate ship repair work and also granted financial assistance. While the Government is unable to give any assurance to the industry for providing adequate ship-repair work, requests for financial assistance would have to be considered on their own merits. The Government also proposes to set up local advisory committees in Calcutta and Bombay to deal with matters concerning general improvements in repair facilities, repair berth and dry dock programmes, availability or shortage of ship repair materials, etcetera. It is hoped that when these committees are set up, they might make recommendations for assistance to the ship repair industry for undertaking development or modernisation of their works. If any such recommendations are received, it would be considered whether any general scheme for the grant of financial assistance to the ship repair industry is needed.

Ship Buying from Yugoslavia

Indian shipping companies have been negotiating with the Yugoslavs for the construction on a rupee payment basis of three to four ships under the credit offered by that country. It is understood that although the specifications for the type of vessels to be ordered in Yugoslavia have been settled, no settlement has so far been reached concerning the construction price of the ships.

Carrying Coal by Lorries

The question of using lorries for carrying coal is receiving the Government's attention. For the present, it has been decided that the free movement of coal of Grade II and below should be allowed from the Kharanpura region to the consumers in north Bihar and Uttar Pradesh. The scope for using road transport in other coal-producing areas and steps to facilitate the movement of coal by road to industries located not far away from the coalfields, particularly in the Bengal-Bihar region, were considered by the Committee on Transportation set up by the Ministry of Steel, Mines and Fuel. This Committee has recommended that rail movement within short distances should be completely prohibited except for the steel plants and the railways. The Committee has also placed the volume of road transport of coal for all coalfields at 6 million tons. This recommendation is being examined by the Ministry of Steel, Mines and Fuel.

Rails from Poland and Czechoslovakia

India has placed the following order for importing rail from Poland and Czechoslovakia:

	F.o.b. value in Rs. lakhs
Poland	436.414
Czechoslovakia	200.788

Rourkela Hot Strip and Cold Rolling Mills

Hindustan Steel has entered into a contract with the American Consulting Corporation for providing 19 experts for a period of two years for the operation of the hot strip and cold rolling mills of the Rourkela steel works, on a payment of Rs. 62 lakhs. This was done because operating personnel with sufficient experience were not available either in India or in West Germany. The American concern is a firm of specialists in the running of rolling mills and it is expected that it will get production to rated capacities in these mills during the period of their contract.

Advisory Council of Industries

The Central Advisory Council of Industries will meet here on 28th October, 1961. Besides reviewing the general economic situation in the country, the Council will discuss the industrial development programme of the third plan, with particular reference to export promotion. The progress achieved in the field of machine manufacturing industry, including machine tools, will be examined. The Council will consider the annual reports of the development councils.

London

ACCRA CONFERENCE TO DISCUSS COMMONWEALTH TRADE AS BRITAIN JOINS E.C.M.

PROPERTY COMPANIES CUT FEES: BANKS FEEL THE CREDIT SQUEEZE

(FROM OUR LONDON CORRESPONDENT)

THE first opportunity for collective discussion of Commonwealth problems involved in Britain's decision to join the European Common Market will occur in Accra on 12th September. The occasion is a full ministerial meeting of the Commonwealth Economic Consultative Council. The main purpose of the three-day meeting—is to prepare the ground for the annual meeting of the Governors of the I.M.F. and International Bank, which will be held in Vienna from 18th September to 22nd September. The major topic in Accra will obviously be the world economic situation. But it was confirmed in London last week that the effects on Commonwealth trade of British participation in the European Common Market will also be discussed, "particularly in the lobbies."

All the Commonwealth countries will be represented by their Finance and Economic Ministers. They will present the impressions their Governments have formed after the recent visits paid by the British Cabinet "missionaries," Messrs Sandys, Thorneycroft and Hare. It is emphasised, however, that the Accra discussions will not preclude a subsequent Commonwealth conference on the European Common Market, probably at a Prime Ministers' level. The British team at the Accra conference will be led by Mr. Selwyn Lloyd, U.K. Chancellor of the Exchequer, with Mr. Maudling, President of the Board of Trade, the Earl of Perth, Minister of State for Colonial Affairs and the Duke of Devonshire, Under-Secretary for Commonwealth Relations.

Views on Measures of Restraint

It is believed in Whitehall that the U.K. Chancellor's restraining measures are beginning to put an effective damper on demand. New stress is, therefore, being laid on the short-term nature of the steps recently taken. If the evidence in the next few months should show that the gap between production and income (and that between exports and imports) is rapidly narrowing, the policy may well be looked at again. But no relaxation is likely before the economic upshot of the calendar year 1961 can be reviewed, which may be around February. The possibility that some of the measures may be revised or repealed before the next Budget—or perhaps replaced by something else—is not excluded from the official mind. Much will depend on the course of production and exports in the final months of the year. While the prospects for any further rise in production are none too good, there is some slight evidence that export prospects are improving.

As far as industry's response to the U.K. Chancellor's appeals is concerned, labour is getting ready to fight against the wages "pause" proposal in every way possible, and although Ministers are hoping for the best, they are also prepared for the worst. Nor has there been a great deal of restraint so far in connection with dividends, although here it is felt that companies will soon be subject to growing pressure on profits so that the temptation to raise dividends will quickly disappear. It was all the more encouraging to learn last week that the directors of three substantial

property companies have decided to cut their fees by 10 percent as "a small contribution to the solution of the country's difficulties". Sir Cyril Black, who is chairman of all three companies, hoped that other directors might consider following this lead.

Credit Squeeze

From the latest figures issued by the 11 London clearing banks, it is evident that the U.K. Chancellor's decision to make credit dearer and scarcer is already yielding results. Between 19th July and 16th August, bank advances dropped by £98.1 million to £3,577 million. At this level, the loan total was still over £265 million higher than in August last year, but the fall on the month reverses a steadily rising trend. As bank loans to the nationalised industries increased by £3.5 million to £74.8 million, it is clear that advances to the private sector of the economy were reduced by £101.6 million. This fall is much steeper than can be explained on seasonal grounds and has been spread over a wide range of borrowing. Although it reflects the efforts which the banks, on their own initiative, have been making since the beginning of the year to tighten the squeeze, it has also been accelerated by the hoisting of Bank rate to 7 percent on 26th July and the U.K. Chancellor's other measures.

Another feature of the banks' August statements is that average liquidity ratios have improved from 32.86 percent in July to 32.94 percent in spite of the transfer of £38 million to the Bank of England to meet the first half of the latest call for additional special deposits. Holdings of gilt-edged securities between 19th July and 16th August show a reduction of £1.8 million to £1,047 million—a trifling and insignificant fall.

The total of the joint-stock banks' special deposits with the Bank of England exceeds £200 million for the first time. The latter's return for the week ended 23rd August shows that the banks contributed another £11.1 million, raising total special deposits to £206.1 million. July's call by the Chancellor for another 1 percent from English banks and ½ percent from Scottish banks was expected to raise total special deposits to about £230 million, from £155 million. Of this extra £75 million, half was paid by 16th August and the remainder is due by 20th September.

Better Terms of Trade

After remaining steady for the preceding three months, Britain's terms of trade, measured by the relation between import and export prices, improved in July. With the export price index (1954=100) unchanged at 112 for the seventh successive month, a drop in the import price index from 98 to 97 was reflected in a fall in the terms of trade index from 88 to 86. On the import side, the dominating factor was a three-point drop in the price index covering food, beverages and tobacco from 95 to 92. This more than offset small rises in prices in the basic materials and fuel groups. The unchanged price index for exports masked two divergent movements. One was a rise in the metals price index from 116 to 118. The other offsetting influence was a fall from 108

to 105 in the index of textile export prices. The export price index for engineering products was unchanged at 121.

Labour Situation Eases

For the first time this year, unemployment has increased. On 14th August, 304,976 people were registered as unemployed, compared with 258,500 in mid-July, a rise of 46,476. The unemployment rate, for some months at its lowest level for the time of year since 1957, rose from 1.2 percent to 1.4 percent. This is the same rate as in August 1960. Even excluding school-leavers, who swell the unemployed in August, the number out of work rose by 20,457. The normal seasonal increase is about 5,000. Unfilled vacancies fell, also for the first time this year, by 36,020 to 359,499. The normal seasonal decrease between July and August is about 14,000.

Export Forms and Purchase Tax

A scheme is expected to be placed before the U.K. Treasury by the British Shippers' Council soon to enable forms needed for exports to be excluded from the 25 percent purchase tax (27.5 with the new surcharge) imposed on all stationery. Unofficial consultations have already been held at the U.K. Treasury at what is described as a high level and there is every hope that the proposed system, which is based on identification of export documents and the paper used in their manufacture, will be given an official examination by the U.K. Treasury in consultation with the Board of Trade.

The problem has engaged the attention of the Shippers' Council for some time. One of the major difficulties has been to devise a system which will cover the great range of export documents and yet separate them from the "home trade" documents with which they are at present intermingled for tax purposes. The Council's experts now believe they have the answer. According to some estimates, if the export forms are excluded from purchase tax, it will cost the Government about £20,000 in a full year. The paper trade itself has made frequent protests to the Customs and Excise authorities over the tax being imposed on essential forms, the latest appeal for something to be done coming from Mr. H. M. Scott, of the Chatsworth Press and Paper Company, of London. "We think the time has come for some definite action to be taken in view of the Government's demand for more and more exports," he said.

Trade Minister to Visit South-east Asia

The Minister of State of the U.K. Board of Trade, Mr. Erroll, is to fly to south-east Asia shortly to explore opportunities for increasing British trade with the area. He has a special responsibility for promoting the export drive. Discussing the trip, Mr. Erroll said: "Reports from our overseas posts give me the impression that there are great opportunities in this area for British goods. I am going to see for myself." When he returns, he will pass on the information to theducers when he tours the country to "preach the export gospel." From 6th September to 11th October, he will visit Burma, Singapore, Malaya, Indonesia, Siam, Cambodia, South Vietnam and Hong Kong. Mr. Erroll, who will be accompanied by his wife, will meet business men, trade organisations and officials. Exports from Britain to the countries he will visit totalled about £159 million last year. Imports to the U.K. from the area stood at about £129 million. The main exports included motor vehicles and aircraft, rubber products, machinery medicines and drugs, and metal goods.

Doom Dooma Bid Moves

Shareholders in Doom Dooma Tea have now received direct formal details of Brooke Bond's cash offer, handled by Lazard Brothers, which the Doom Dooma board has said it is unable to recommend. Brooke Bond is offering £1.19 million in 45s for each of Doom Dooma's 530,000 £1 shares. Key attraction lies in relative market price, for Doom Dooma ordinaries have never been higher than 34s 3d since 1955. Against this, assets are worth 80s a share, but overproduction of tea and political uncertainties are keeping the market price down. Even at 45s, Doom Dooma shares would yield 11 percent gross on the 15 percent net dividend. For Brooke Bond the attraction of the deal presumably lies in the acquisition of some 6,000 planted acres of tea estates. Financing the bid should prove no problem.

Features of the Doom Dooma Tea board's criticism of Brooke Bond's offer are that assets are worth 80s and that Brooke Bond is gaining tea estates for a fraction of their new cost. But apart from the report of a larger tea crop, the board's circular suffers from a major weakness in that it contains nothing to help the market price. It is believed that Mr. W. K. Warren and his fellow directors have decided against a distribution based, say, on the sale of part of the estates. They are unable to recommend the offer because it is equivalent to only £121 an acre for the Company's planted area. This, they claim, falls very short of actual prices paid for estates in Assam in recent years. It compares with a balance-sheet value of £277 10s an acre under tea, and the point is made that a new estate complete with modern machinery, factory and ancillary buildings would cost about £600 an acre. The crop to the end of August is estimated at 3,952,000 lbs compared with 3,594,000 lbs for the same period of last year.

Shareholders are being advised to wait: the offer does not expire until 19th September and seems unlikely to be withdrawn before then. The directors will not accept the offer for their own holdings.

Jute

MILL BUYING LIFTS READY FIBRE RATES

SPECULATIVE RISE IN GUNNIES

THE uncertainties which beset the jute industry at present continue to impede a business revival. The long and anxiously awaited statement on the jute crisis by Dr. B. C. Roy, Chief Minister of West Bengal, came rather as an anticlimax following weeks of protracted negotiations. He said nothing that had not been said before—and said many times—not only over this crisis, but about many that preceded it in the past. His counsel and advice are always eagerly sought, but it is a pity that this time a stronger lead has not been given. It would appear that in spite of all that has been said about it, the Government is not in favour of fixing minimum prices for raw jute. Perhaps politics and economics do not go hand in hand at the moment as an election is round the corner. It is an established fact that propagandists from various political parties have been exceedingly active in the mofussil areas among the cultivators, although their advice has not always been in the grower's best interests.

For years this paper has advocated that cultivators should persevere not only to produce a greater average yield from each acre, but what is equally, if not more important, a larger proportion of green fibre a plant. If concentration is placed on the latter, the former will automatically follow. It seems strange then that anyone should suggest a solution to the jute crisis, which in no way can help the current crop. Assistance to the cultivator has, for many years, been provided in the form of improved seeds, communal use of farm implements, fertilisers and, most important, advice from experts on line sowing, etcetera, and how to achieve the best results from his land. Unfortunately, in many cases no attempt was made to carry out the advice, and often, fertilisers supplied free of charge or at subsidised rates were resold almost immediately at a considerable profit. It would seem, therefore, that apart from providing individual supervision to each and every farmer, which, of course, is out of the question, the Government in many cases is fighting for a lost cause.

As for a fair price to the cultivator for his crop, perhaps the recent revival in fibre rates has pushed thoughts on this subject to the background, although it is common knowledge that the industry in general considers that the current rates are still too high in spite of the fact that most fabrics are now showing a profit on simultaneous business. At one time the attitude in the jute trade in Calcutta could be summed up in these words: "The world needs jute goods and it has jolly well got to pay for them." But with the increasing competition from Pakistan, which can underquote India at every turn, and the encouragement given to substitutes by the previous attitude, the main concern of the industry now is lower, and competitive goods prices, and this could only be possible with lower fibre rates.

Fixing Floor Prices

Although the fixing of floor prices would be designed primarily to help the cultivator, the prescription of rates in Calcutta does not necessarily fix prices in the mofussil, and there are no real means by which the Government can prevent lower prices being paid. It may broadcast advice by radio, it may send round officials to give instructions in the villages or it may issue ordinances, but nothing will prevent any particular person from selling jute at the best obtainable price when he needs money.

Over the past few weeks, there has been a big fall in raw jute prices—nearly Rs. 20 a maund in August alone—but during the past week, the fall has been arrested, and current rates are now about Rs. 3 above those ruling at this time last week. One of the main reasons for this was the increased buying interest shown by the mills in order to cover their increased production. Most mills have agreed gradually to unseal looms or increase working hours, and as a result, there has been an increasing resistance from sellers to lower prices. Goods prices have increased in step with fibre, and many in the trade feel that the bottom of the market has been seen for the time being. News from Pakistan indicates that most of the mills there are fully sold for the next six months; therefore, buyers who still have to buy for this period—and there are many—will have to turn to India for much of their requirements. This has caused a certain amount of speculative covering, and once again wide fluctuations have taken place, often within a very short period. These conditions are not conducive to further business, and there is a fear that speculators will once again ruin the market unless their activities are curbed. It is not, however, meant to advocate the closure of the futures market, as a well-regulated one is essential to a trade such as this, but activities which can cause undesirable price movements must be stopped in the long-term interests of the industry.

During the past week the Government announced the complete withdrawal of the 35 percent duty on raw jute imports into India from overseas. This will considerably help the Siamese jute trade which was mainly affected by the duty. However, the current Siamese rates, even with the duty off, are well above the rates in India and

Pakistan, so there is little likelihood of any business until the former becomes competitive. When the price of the Indian jute was high, many mills bought Siamese jute which at that time was an attractive proposition. The mills had to pay the duty, but a refund of it was allowed at a later date. It is understood that a meeting was convened during the week by parties concerned and the Customs authorities to try and speed up the machinery for the "draw-back" on Siamese jute. Now of course any jute purchased after 1st September from overseas will not be subject to any import duty.

THE JUTE MARKETS

Manufactured Goods: There has been an undertone of firmness in the goods section, partly in sympathy with the fibre markets. Although there has been no great volume of business with overseas parties during the week, the prevailing sentiment is bullish. Speculators have been instrumental in causing heavy fluctuations, and big buying in anticipation of a further rise has taken place. There has been little support from consuming markets abroad, but many Calcutta mills sold fair quantities. It is reported that shipments were good last month, and there may be a further reduction in mill stocks. Any demand has been mainly for near delivery goods, and premium for this has gone up to Rs. 3 or Rs. 4, compared with Re. 1 last week. Opening quotations last Thursday were based on Rs. 131 for September B Twills, and Rs. 48 for September 40in. 100z. hessians. The premium of sacking over the January-March position was about Rs. 9, and in hessians about Rs. 3. Up to the week-end, the market ruled steady, and 11-porter fabrics advanced Re. 1. From then on, a change came over the market, and speculative influences forced B Twills up to Rs. 133, 40in. 100z. to Rs. 49.55. The undertone was very steady at the close.

Opening quotations on Wednesday morning were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
40in. 70z.	38.00	36.50	36.50	34.25
40in. 80z.	40.75	39.00	38.00	36.50
40in. 100z.	49.55	48.00	47.00	45.50
B Twills	133.00	130.50	127.50	123.00
Heavy Cees				
(Plain)	134.00	132.00	128.50	123.00
A Twills	161.50	150.00	156.00	151.00
Liverpools	154.00	150.50	146.00	140.00
Cornsacks	136.00	133.50	130.00	125.50

Raw Jute: There has been a fair amount of activity in the fibre section during the past week, although towards the close, buyers tended to withdraw on account of higher prices. Purchases were mainly confined to near delivery jute as the mills tried to build up stocks at the lower rates in accordance with their promises to resume normal buying and increase production. Sellers began to resist lower prices, and with imports in the mofussil showing signs of falling off, prices upcountry improved. Arrivals in Cossipore showed a reduction from the previous week and only 400 wagons were reported. Opening quotations last Thursday were based on Assam Bottoms at Rs. 34 a maund, and this price remained stable until the week-end. After that, prices rose by Re. 1 to Rs. 1.50 and sellers were reluctant to offer for the near position, although there was a certain amount of keenness

to sell forward. The mills, however, were more interested in quick delivery jute.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills Basis Bottoms	Rs a 100 kilos	Rs a md.	Shipment
Assam	95.00	35.50		Sept.-Oct.
Northern	96.50	36.00		"
Purnea Desal	92.50	34.50		"
Daissee White	93.75	35.00		"
Assam Tossa	99.25	37.00		"
Selected Daissee	104.50	39.00		"
Old Crop Mesta				"
Assam-Northern	92.50	34.50		"
Desal	92.50	34.50		"
Daissee	92.50	34.50		"
Pakistani Cuttings	125.00 a bale			Sept.

THE FOREIGN JUTE MARKETS

SHORTAGE OF GOOD QUALITY FIBRE FEARED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market has become uncertain again, and some shippers are trying to raise prices. But as there are many sellers of lower grades who are anxious to do business at the reduced rates, buyers cannot, and will not, believe that prices for good quality fibre should be dearer.

The total yield from the current jute crop is expected to be around 7.4 million bales in Pakistan, but sellers are circulating the report that there is to be a great scarcity of decent quality jute in spite of a large crop. Supplies are reported to be ample for Mill Hearts and Cuttings, but Mill Lightnings and better grades are said to be scarce. Apart from a spell when there was a scarcity of steeping water, the weather conditions under which the crop was grown this year have been quite favourable. Besides, there are now no adverse circumstances which shippers can offer as an excuse to impress buyers that all is not well with the jute crop and that purchases should be made before values become dearer. It is even questionable if the wide difference which now exists between the various grades is not already too large.

Mill Lightnings are quoted lowest at £120 for September and £118 for October, Mill Hearts from £103 and £100 for the respective positions and Grade Hearts £90 and £87, Grade Tossa 2/3 £124 and £123, fours at £115 and £114 and Continental Tossa 2/3 £105 and £101, all c.i.f. U.K.-Continent. Sellers are finding it difficult to persuade spinners to buy on a large scale. Continental spinners bought a little more during the past week, but buying has not yet become general. Prices are being considered to be too high during this season.

Calcutta goods have firmed up, because, it is said, prices for Indian jute have become dearer. It has always been understood that there will be an ample supply of jute to satisfy the requirements of the Indian jute mills during this season.

Hessians have gone up to 73s for 40in. 100z. and 55s 6d for 70z. September, 70s and 54s 3d October-December and 68s 6d and 53s 3d January-March.

For a nominal charge, "Capital's" Statistical Department can provide you with a certificate of share prices.

THE PAKISTANI JUTE MARKETS

LITTLE ACTIVITY IN FIBRE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

DURING the past week, the market has been more or less unchanged. The undertone was, however, weaker. Arrivals of loose jute have not improved except to a certain degree in the northern area. The middle men who have lost much money are afraid to bring in more jute and sellers, who bring in jute to the big markets, are limited in number. For the past three weeks, the middle men with whom most business is done, have been buying jute in the interior markets at a certain price and by the time the jute arrived at the market for them to sell it, prices have gone down so much that there is a big loss. The jute which is available at present is costing something like £105 a ton c.i.f. Continent for Export Lightnings and about £85 for Export Hearts. Although these prices are below the E.P.C. level, they are, nevertheless, higher than the current market values on

the Continent. Prices quoted above refer, of course, only to normal lots of jute, which, unfortunately, means jute containing no Export Firsts, some 60 percent Export Lightnings and 40 percent Export Hearts. Any jute containing about 10 or 15 percent Export Firsts, is considerably more expensive. The tossa crop is just beginning to come in, and gives every indication of being a good and healthy crop. Certainly, it looks as if it will produce a much better percentage of higher quality jute than the white. In the local market, there has been some slight activity in Export Lightnings at prices above the E.P.C. level, but interest has slackened. The Cuttings market, after steadying up a little, has considerably eased and even at £48 for October, there are few buyers. Overseas markets, after a short period of buying in the region of £103 for Lightnings, have lost interest, and there are reports of offers as low as £95 being refused for October shipment. Reports indicate that all balers have a fairly healthy short position for September, and there is no doubt that practically every mill is very short of jute. If the mills find that the scarcity of imports is going to make them run out of jute, they may well come into the market, which will probably steady prices locally for some time, but it is unlikely that there will be much reaction from overseas unless the local steadiness is maintained for an adequate period.

Plantation Topics

TALKS ON PLANTATION WAGES END IN FAILURE

EMPLOYERS FAVOUR INTERIM SETTLEMENT

(FROM OUR SOUTH INDIAN CORRESPONDENT)

NEITHER the planters nor the workers seem to be disappointed over the failure of the inter-State tripartite conference on plantations held last week in Trivandrum. This bid to get an out-of-court agreement on wages was too late, for the concerned interests took up their stands long before the idea of the conference was mooted. At the Trivandrum conference, the representatives of both labour unions and employers' organisations were unwilling to commit themselves in advance about the recommendations of the Wage Board appointed by the Central Government. Only the Estate Staff Union of South India showed willingness to enter into a negotiated settlement on a long-term basis irrespective of the recommendations of the Wage Board. Employers wanted more time to consider the offer.

The conference was attended by the representatives of employers and employees of the plantation industry and the spokesmen of the Governments of Madras, Mysore and Kerala, including the Labour Ministers of these States. The outcome of the discussions was summed up by Mr. R. Venkataraman, Labour Minister of Madras, as follows: "Except concerning the staff, there seemed to be no consensus of opinion in favour of any negotiated settlement". Representatives of the Governments met the spokesmen of labour and planters separately to ascertain their views on the matter. While the I.N.T.U.C. representatives from Madras and Kerala had no objection to a negotiated settlement if it is "fair and reasonable and linked to the cost of living index", the A.I.T.U.C. representatives were prepared to accept an interim agreement for a period of two or three years pending the recommendations of the Wage Board. The labour representatives of Mysore were willing to arrive at a negotiated settlement. The employers were of the view that their efforts would not be fruitful unless they were given an assurance that a negotiated settlement would be accepted by the Labour Ministry and the Wage Board. They were not in favour of any interim settlement. Mr. Vaikunta Baliga, Mysore Minister for Labour, expressed the hope that the door would still be open for further negotiations.

Negotiated Settlement

As for the staff who were in favour of a negotiated settlement, Mr. Venkataraman said: "Both sides could attempt to negotiate a final settlement by which they will abide by the period of settlement, irrespective of the recommendations of the Wage Board. The employers would take further steps after the next meeting of the U.P.A.S.I. If both sides were to agree on this, the Central Government's concurrence would also be obtained". The Governor of Kerala, Mr. Giri, who inaugurated the conference described it as a "unique and pioneering experiment". He said that if the conference proved fruitful, "it will set the beginning and assist us in providing ideal working conditions and make strike and strife a thing of the past". According to the Governor, the conference represented a significant departure from the normal practice of settling the issues either individually or at a State level. There are many things in common to the plantations in south India, and these might be considered a single unit on various grounds. It would, therefore, be of immense value to evolve a common agreement among various employers, workers' unions and the State Governments. This will enable the industry to go ahead with its development activities. Mr. Giri said that tripartite conferences were more helpful in solving the problems between labour and management and that compulsory adjudication had done much damage to the interests of the working class. Employers and employees should, therefore, aim at reaching settlements through "mutual negotiations and joint standing machinery constituted on a permanent basis".

Decisions of Wage Boards

The Governor added that the decisions of wage boards were accepted either by workers or employers as long as they were advantageous to them. "Even before the decisions of a wage board is fully implemented, the aggrieved parties clamour for constituting another wage board". Nevertheless, Mr. Giri said, the general opinion is in favour of constituting wage boards. Referring to the constitution of the Wage Board for the plantation industry, he said that "the wage boards were a long-winding process." He pointed out that if the present conference was successful in arriving at an agreement, the Wage Board would itself adopt those decisions for the south Indian plantation industry. It would also help settle the issues in other regions in a satisfactory manner.

COCHIN TEA SALES

At Sale No. 36, 360,000 kilograms of tea were on offer. There was less general demand. Plain and low mediums declined irregularly by about 10nP while mediums were 15nP to 20nP easier. High-grown broken were easier but fannings though prices eased towards the

Commodity Markets

HIGH RATES FOR TIN

CONTRARY TRENDS IN OTHER METALS

WHEN the International Tin Council announced in mid-August that its meeting scheduled for later in the month had been postponed until mid-September, the price of the metal slipped back. Speculators had been operating on the assumption that the control scheme's "floor price" would be raised to encourage producers to bring higher-cost workings into production—and to bring the scheme itself into accord with present realities. The reaction caused by the postponement was, however, temporary. Whenever the Tin Council may meet, whatever it may decide when it meets, the basic fact remains that tin is scarce and will remain so for many months. After the main holidays in the United States and Europe, demand has reassessed itself, pushing up the price of tin to the highest levels in years. Whether the strength of tin is in any way associated with the situation in Laos is debatable. It cannot in any case be attributed to the situation in West Germany, which would affect other major metals equally. In fact, at the height of the Berlin crisis, copper, zinc, and lead were hesitant. Particularly in the case of copper, the market's apathy was surprising, for further strikes at the Chilean mines implied a further interruption of supplies of this metal.

Difference between Tin and Copper

The statistical difference between tin and copper is profound. Near supplies of tin are very scarce, and the price cannot fall far unless demand contracts, which is impossible while most of the world's tinplate industry is active. Near supplies of copper are abundant (London Metal Exchange warehouses' stocks have increased by roughly a half this year), and temporary interruption of supplies is, therefore, comparatively unimportant. Nevertheless, the trend of copper prices seems now to be turning upward, under the influence of more active buying for actual consumption. The rundown of excessive stocks (many consumers bought unnecessarily last May) is apparently ended, and consumption, particularly in the United States, is expanding.

Consumers of zinc are more reluctant. This metal seems to have suffered more than the others from the economic restraints imposed by the U.K. Government. In the first half of this year, according to the British Bureau of Non-Ferrous Metal Statistics, U.K. consumption of zinc was 7 percent below the level of the same period of last year, and it is likely to decline further. At the same time, whereas the U.S. shipments that depressed prices in the London market early this year are no longer a problem, zinc has been pressed onto this market from Russia, and deliveries from the Congo also have increased. London prices cannot reflect the strengthening of the statistical position in the U.S.A. U.S. intake of lead, on the other hand, has stimulated business in this metal. The plan agreed at the meeting of the International Lead and Zinc Study Group in Mexico City last April whereby the U.S. Government takes surplus lead in exchange for surplus agricultural produce is now being implemented. The London Metal Exchange feels that high-level transactions of this kind can permanently stabilise the markets.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) fell by 0.9 percent during the week ended 19th August, compared with 127.9 to 126.7 (revised) for the previous week. The index was lower by 2.5 percent when compared with the corresponding week of the earlier month, but was higher by 2.2 percent than that of a year ago.

GOOD DEMAND AT TEA EXPORT
SALE

BETTER BUYING IN DUSTS

AT Sale No. 14, held on 4th and 6th September, there was a good demand at the Export auction at generally easier rates for the 56,288 chests on offer, with buyers showing a preference for well-made teas, which were free from stalk and fibre. Plain orthodox broken and Fannings were irregular, but generally declined by up to 10nP. Medium and better broken grades again showed a considerable fall in price, but better liquoring Assam O.F.'s often met with useful support at fully firm to dearer rates. There was a fair enquiry for C.T.C. descriptions, but these were irregular and generally declined by up to 30nP, while once again off-grades and teas with fibre were heavily discounted by the buyers. Legg-cut Dooars again declined by up to 20nP. There was fair support for Darjeeling teas at easier rates with buyers being selective. Whole leaf was weak, and there was less interest in tippy grades which showed a further decline.

	1961	1960
Clean Plain Pekoe	Rs. a kilo 4.30 to 4.60	5.20 to 5.30
Plain B.P.	4.50 to 4.60	4.90 to 4.45
Plain Fannings	4.10 to 4.20	4.35 to 4.75
Medium Assam C.T.C. B.P.	4.70 to 5.00	4.90 to 5.30
Medium Assam C.T.C. Fgs.	4.70 to 5.10	5.20 to 5.50
Best Assam C.T.C. B.P.	5.20 to 5.40	9.00 to 9.50
Best Assam C.T.C. Fgs.	5.20 to 5.70	9.00 to 10.00

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was better demand for the 25,320 packages of Dusts on offer. Plain leafy Dusts were taken up at prices which were sometimes up to 10nP below last rates, while the small powdery types sold well. The bright liquoring Assams were in much better demand than in recent weeks. Legg-cut teas were irregular, a few selected lines selling well. C.T.C. Dusts were well supported at irregular rates, the small and well teas were generally firm and sometimes dearer. The fibrous descriptions, however, were virtually neglected.

	1961	1960
Plain Orthodox Dust	Rs. a kilo 4.10 to 4.40	4.60 to 4.75
Medium Assam Dust	4.40 to 5.00	4.70 to 5.30
Legg-cut Dust	4.50 to 5.20	
Medium Assam C.T.C. Dust	5.70 to 6.10	6.00 to 6.30
Good Assam C.T.C. Dust	6.50 to 6.90	6.40 to 6.90

(Quotations are inclusive of excise duty.)

There was a good demand for the 223 packages of Leaf on offer, and prices were generally lower.

MIXED TREND IN FREIGHT
RATES

DUE to congestion at Japanese main ports, there was a reduction of enquiries from Japan, which made the Far East freight market quieter during the past week. On the Atlantic coast of Canada and the U.S.A., there was an increase in the number of bookings particularly in the grain trades. Fixtures of foodgrains were reported from U.S. Gulf to West Coast of India at 75s and to Karachi at \$ (U.S.) 9.30. A Liberty size vessel with rice in bags from Burma to Ceylon has been fixed at the unchanged rate of 42s 6d f.i.o. and stowed. Indian ore shippers have secured an Indian vessel for iron ore, now loading at Krishnapatnam and she is now loading at an average rate of 650 tons a day. It is reported that tonnage for the balance 27,000 tons of sugar from India to the U.S.A. has since been fixed at the unconfirmed rate of \$ (U.S.) 6 f.i.o. and trimmed. In the Hooghly river draft forecast for September, a reduction of 15 to 18 inches is anticipated.

HIDE AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 29th August and 4th September, 1961)

Cowhides: Wet salted (Ord.) 8,000 pcs. on the basis of Rs. 8.25 to Rs. 12.50, wet salted (Slaughtered) 21,600 pcs. on the basis of Rs. 7 to Rs. 16.50 and Rs. 19 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 30,100 pcs. on the basis of Rs. 200 to Rs. 225, Rs. 270 to Rs. 300 and Rs. 380 to Rs. 400; wet salted (he-killed) on the basis of Rs. 3.75 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinajpur 24,500 pcs. on the basis of Rs. 225 to Rs. 270 and Rs. 325 to Rs. 350; Kurban 3,200 pcs. on the basis of Rs. 450 to Rs. 500.

Bazaar Stocks

(4th September, 1961)

Cowhides: Wet salted 79,000 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 28,500 pcs.; Assam-Dinajpur 51,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissinganj 170,000 pcs.

COMPANY AND PUBLIC NOTICES

THE STANDARD JUTE CO., LTD.

NOTICE

NOTICE is hereby given that an Annual General Meeting of THE STANDARD JUTE COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11-20 a.m. on Wednesday, the 27th day of September, 1961, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1961, and to receive the Directors' and Auditors' Reports thereon.
2. To appoint Directors in the place of retiring Directors.
3. To appoint Auditors and fix their remuneration.

As Special Business

4. To consider and, if thought fit, to pass with or without modification the following ordinary resolution of which a notice has been given to the Company under Section 257 of the Companies Act, 1956.

"That Sir Walter Michelmores, M.B.E., be and is hereby appointed a Director of the Company."

5. To consider and, if thought fit, to pass with or without modification the following resolutions which will be proposed as Special Resolutions namely:—

(a) "Resolved that the existing maximum lending facility of Rs. 30,00,000 to the holding Company The Kinnison Jute Mills Co., Ltd., be increased to Rs. 40,00,000 on the same terms and conditions as at present."

(b) "Resolved that in conformity with Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956, authority be and is hereby accorded to the continuance of a payment to the Directors of the Company of a commission (to be divided between them in such manner as they shall from time to time determine) of 1% of the net profits of the Company in each financial year over the period of five years extending upto and including the financial year of the Company ending on 31st March, 1966."

The Share Transfer Registers of the Company will be closed from 11th September, 1961 to 27th September, 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Chartered Bank Buildings,
Calcutta, 19th August, 1961.

Note: A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.
A proxy need not be a member of the Company.

Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 is being sent to all members.

THE SHAHDARA (DELHI)-SAHARANPUR
LIGHT RAILWAY COMPANY, LIMITED

NOTICE is hereby given that the One Hundred and Eighth Ordinary General Meeting of the above-named Company (being an Annual General Meeting within the meaning of the Companies Act, 1956) will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 29th September, 1961 at 11-10 a.m. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1961, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend on the Ordinary Shares.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 20th to the 29th September, 1961, both days inclusive.

THE UNITED PROVINCES ELECTRIC
SUPPLY CO. LTD.

NOTICE

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 28th September, 1961, at 11-10 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1961, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. J. W. Eason who retires by rotation but offers himself for re-election.
4. To appoint a Director in place of Mr. K. L. Ganguly who retires by rotation but offers himself for re-election.

In this connection a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 261 of that Act to move the following resolution as a special resolution at the meeting:—

"That Mr. K. L. Ganguly, a retiring Director who is an associate of the Managing Agents of the Company, be and is hereby appointed a Director of the Company."

Mr. K. L. Ganguly is, according to the revised definition of "relative" contained in Section 6 of the Companies Act, an associate of the Managing Agents, and consequently his appointment as a Director of the Company should be effected by means of a Special Resolution in accordance with the requirements of Section 261 (1) (f) of the Companies Act, 1956.

5. To appoint Auditors and fix their remuneration.
6. As special business to consider, and if thought fit, to pass the following resolution namely:—

"That the draft Agreement (Supplemental to the existing Managing Agency Agreement dated the 13th August, 1960) submitted to this Meeting and for the purpose of identification signed by the Chairman thereof be and the same is hereby approved."

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 21st September, 1961 to the 28th September, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

HIT THE BULL'S EYE

There is a surer way of getting your rightful share of the rich export market. If you exercise strict quality control in the manufacture of your goods, maintain regular supplies, produce according to the buyer's specifications, arrange for after sales service facilities, a tidy sum in foreign exchange is yours. In the Export markets you are competing face to face with the highly industrialised countries of the west. For the buyer to select your goods in preference to those of other countries you have to compete on quality.

ISSUED BY
ENGINEERING EXPORT PROMOTION COUNCIL
INDIA EXCHANGE (7th FLOOR) CALCUTTA-1

THE INDIAN STEEL & WIRE PRODUCTS LTD.
NOTICE

NOTICE is hereby given that the Twenty-sixth Annual General Meeting of the Shareholders of The Indian Steel & Wire Products Ltd. will be held at its Registered Office, No. 7, Wellesley Place, Calcutta-1 on Friday, the 29th September, 1961, at 11-30 A.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Manufacturing and Profit & Loss Account of the Company for the year ended 31st March, 1961.
2. To declare dividend on Ordinary Shares of the Company.
3. To appoint Director in place of Mr. B. B. Ghose, who retires by rotation and being eligible, offers himself for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

Special Business:

5. To consider and if thought fit, to pass with or without modification, the following resolution which will be proposed as special resolutions:—

(a) RESOLVED that in lieu of the Directors' monthly remuneration of Rs. 125/- provided in clause 109 of the Articles of Association of the Company, the existing fee of Rs. 200/- payable to a Director for each meeting of the Board, or a committee thereof, attended by him, be increased to Rs. 500/- with effect from 1st October, 1961, subject to the approval of the Central Government.

(b) RESOLVED that necessary application for obtaining the approval of the Central Government be made.

(c) RESOLVED that the Articles of Association of the Company be altered or amended by substituting the following clause for clause 109:

"109. Unless otherwise determined by a resolution passed by the Company in General Meeting each of the Directors shall with effect from the 1st October, 1961, be paid out of the funds of the Company, by way of remuneration, a fee of Rs. 500/- for each meeting of the Board or a committee thereof, attended by him. A Director shall be paid all travelling, hotel and other expenses properly incurred by him in attending and returning from meeting of the Board of Directors or any committee thereof or in connection with the business of the Company."

The Transfer Books of the Company will be closed from 14th September, 1961 to 29th September, 1961, both days inclusive.

By Order of the Board,
INDRA SINGH & SONS PRIVATE LTD.,
A. SINGH,
Director,
Managing Agents.

Registered Office:
7, Wellesley Place,
Calcutta-1.

29th August, 1961.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll to vote instead of himself and that a proxy need not be a member.

The relevant Explanatory Statement in respect of item No. 5 of the Notice of the Annual General Meeting to be held on the 29th September, 1961, will be sent to the shareholders along with the Notice of the meeting. It can be inspected at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta-1, during the usual Office Hours on any working day.

If the dividends on shares, as recommended by the Directors, are passed at the meeting, the payments will be made on or after the 13th October, 1961, to those shareholders, whose names are on the Company's Registers on the 29th September, 1961.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LTD.

THE Directors of the above Company have decided to recommend payment of Dividend for the year ended 31st March 1961 as under:—

On Ordinary Shares at the rate of Re. 0.90 nP. per share subject to deduction of Tax.

By Order of the Board,

NOTICE

The Annual General Meeting of the Shareholders of Sone Valley Portland Cement Company Limited will be held on Saturday the 30th September, 1961 at 10.30 A.M. at the Registered Office of the Company at 11, Clive Row, Calcutta to transact the following business:

1. To receive and adopt the Directors' Report and audited Statement of Accounts for the year ended 31st December, 1960.
 2. To declare dividend.
 3. To elect a Director in place of Shri B. N. Chaturvedi, who retires by rotation, but, being eligible, offers himself for re-election.
 4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. Lovelock & Lewis, Chartered Accountants, being eligible, offer themselves for re-appointment.
- As Special Business:**
5. To consider and if thought fit to pass with or without modifications the following resolutions, which will be proposed as Ordinary Resolutions:

- (i) "RESOLVED that pursuant to clause (d) of sub-section (1) of Section 293 of the Companies Act, 1956, the consent of the Company be and is hereby granted to the Board of Directors of the Company borrowing moneys for the purpose of the Company, from time to time, notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), will or may exceed the aggregate of the paid-up capital of the Company and its free reserves that is to say, reserves not set apart for any specific purpose but so that the total amount up to which moneys may be borrowed by the Board of Directors shall not at any time exceed Rupees two crores."
- (ii) "RESOLVED that pursuant to sub-section (1) (e) of Section 293 of the Companies Act, 1956, the Board of Directors be and they are hereby authorised on behalf of the Company to contribute and/or subscribe from time to time in any financial year to any body, institution, society person, trust or fund for any charitable or other purposes not directly relating to the business of the Company or to the welfare of its employees upto a total amount of Rupees one lac or five per cent of the Company's average net profits as determined in accordance with the provisions of Sections 349 and 350 of the Companies Act during the three financial years immediately preceding, whichever is greater; provided however that any contributions to any political party or for any political purpose to any individual or body will be subject to the restrictions in Section 293A of the Companies Act."
- (iii) "RESOLVED that the Books, Registers and other documents re-

quired to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available at the Registered Office of the Company for inspection to the persons entitled thereto, to the extent and in the manner and on payment of fee, if any, specified in the aforesaid provisions between the hours of 11 A.M. and 1 P.M. on each business day.

Provided, however, that the register required to be maintained under Section 307 of the Act shall be open for inspection of the persons entitled thereto between the times above mentioned only during the period prescribed by sub-section 5 (a) of Section 307.

Managing Agents.

Calcutta,

5th September, 1961.

LINSEED DULL

Dull conditions prevailed during the past week. Although prices showed some weakness, trading was limited. Arrivals were still on the low side. Crushers showed interest for forward deliveries, but sellers were reserved. Trading in the oil market was slow. Buyers showed interest for forward deliveries, but sellers were not inclined to do business at these prices. The oilcake market showed little change. Local business was done daily at prevailing rates. The latest quotation is as follows: Ready-September Rs. 29.50 a maund.

NURSING A CONVEALSCING
JUTE INDUSTRY

THE prospects facing the jute industry at the present time are probably better than they have been for several months. With luck, moderately profitable working at reasonably competitive prices for jute goods may become possible during the next few weeks as the supply of raw jute improves. And that is a good thing, because some of the statements made during last Friday's West Bengal Assembly debate on the jute crisis revealed a depth of ignorance concerning the difficulties facing the industry, and a strength of prejudice against it, which were both astonishing and alarming. Certainly they did not promise well for a rational policy towards the industry if the mills should find their difficulties persisting and calling for further Government co-operation. Perhaps such nonsense as was talked last Friday by so many Members, both opposition and Congress, should not be taken too seriously so close to a general election. But it was remarkable nevertheless that after the events of the past few months, so little should be known by West Bengal's legislators of the true facts of the jute situation. Fortunately the Government, and especially Dr. Roy, has shown itself to be better informed, or else the prospects for the industry's future would be bleak indeed. It is clear that a serious job of education requires to be done if the mills are to make the changes and adjustments which will be required during the next few years to meet circumstances which are becoming increasingly more difficult and competitive with each one that passes. They are not going to be helped in this if apparently responsible legislators are allowed to get away with creating the impression in the public mind that India's largest earner of foreign exchange is attempting deliberately to sabotage the national export effort, make wild profits from speculation and exploit workers and jute cultivators alike.

The sole reason for the difficult situation which has existed this year has been the shortage of raw jute. This is a fact, and nobody who has ought to deny it has managed to produce the one which it is claimed exists if only the mills are to use it. It is an uneconomic mill indeed which chooses to incur the expenses of closure when it could be producing goods even at recent losses. It is probable that not a single mill on the river has escaped some measure of working loss during the past few months; some of them probably to an extent which will take years of profitable working to make up, and which would have been seen individual units out of business altogether but for the support provided by such maligned institution, the managing agency system. Yet some of the "remedies" suggested last Friday could not fail to make things worse and probably guarantee complete disaster. The industry will have a hard struggle during the next couple of years to rebuild its fortunes and keep its head above the competitive water. It is going to need all the help and encouragement the Central and West Bengal Governments can provide. Such exhibitions as occurred last Friday do not augur too well for its prospects.

The immediate future of the industry hangs on the price of raw jute. This has lately shown a tendency to rise again following last month's heavy fall, and despite the improvement in arrivals, the reason is probably the increase which has taken place in the mills' buying since a few weeks ago. There is a general opinion in the industry that the volume of the mills' requirements, bearing in mind the almost complete absence of stocks, will be quite sufficient to keep prices round about their current levels for the remainder of this year. This might well be correct. If it is, then the question of minimum prices need not arise unless the State Government succumbs to political pressure. It can be said and now that if it does, or if it is

persuaded to fix too high a floor price when quotations fall, then the mills will soon be in a sorry way once again. Already the Indian industry is only able to secure the orders which cannot be satisfied by the mills in Pakistan. If Indian prices are not competitive, not only will Pakistan be able to make greater inroads into world markets, but overseas buyers will no doubt soon abandon the remarkably patient attitude they have maintained during the recent period of high goods prices and turn instead to substitutes. It would be useful for the West Bengal Assembly to reflect that an overseas buyer who was loyal to the industry when its raw material prices were high because of natural shortage, is not necessarily going to remain so when they are kept artificially high by Government edict. Thanks to the more general awareness of the raw jute situation in the industry and in the Central and West Bengal Governments, and to such policies as the buffer stock scheme, there now seems some chance that the mills' dream of a permanent and plentiful supply of reasonably priced jute will soon be realised. It must not, in everybody's interests, be spoiled by adopting unrealistic floor prices for political reasons.

There is too little general appreciation of the fact that the interests of all parties—the jute mill owners, the Governments, the workers and the cultivators—coincide in what might be loosely termed the "prosperity of the industry". Some difficulties over reconciliation are inevitable; but it is not to the benefit of even the cultivators in the long run that the industry should be gradually squeezed out of business by the pressure of their demands. If it is sincerely felt that the income of the grower must be maintained, then the answer is to increase the yield from the land he devotes to jute cultivation. If discussion were concentrated on this possibility instead of on fixing an unrealistic floor price for fibre, then the interests of everybody would be served. There is no avoiding the need for sound thinking on this point; and no amount of chasing such red herrings as the effect of speculation, will serve to avoid the necessity.

The lessons of the period from which it is hoped the mills are now emerging point to one thing: they are not going to survive unless they can combine modernisation with flexibility and low-cost working. The inference from last Friday's debate that the chief complaint against the industry was that it was not capable of sustaining the kind of cost inflation so often indulged in nowadays for political reasons in industries serving the

home market, does not suggest that this point will be easily grasped in all the right quarters. But here it is as well to view the alternative. If India can absorb all the jute goods she is now producing, and is prepared to forgo the foreign exchange at present earned by the jute mills, then there is no problem worthy of the name. But if she is not, then there is no escape from the fact that the prices of jute goods are not determined by what legislators in India think they ought to be if prices are to be distributed all round. Pakistan has a programme for increasing her own capacity, and under the present circumstances of stagnant world demand for jute goods, this means that the expansion will take place at India's expense. If the Calcutta mills are to fight this competition and not simply go down under it, they will have to modernise both their weaving machinery and production methods during the coming years. Cheap raw jute is only one side of the problem; cheap and efficient labour is almost as important. Suggestions for fixing a floor price for fibre of Rs. 55 a maund and for permanently allocating three workers to a loom are wholly unrealistic against the facts of this situation. So far that matter are nationalisation and State trading, those other two emotional substitutes for hard thinking. So far the Governments' views on the industry's problems have been reasonably reassuring, although the refusal to concede another week's block closure in August was one of those futile gestures which never fail to bring about circumstances which are at least as bad and often worse than those they are intended to cure. Now that the industry is apparently emerging from the emergency conditions of the past month or two, there may be some official temptation to silence political criticism by taking steps which are not in the interests of the industry. This would certainly be disastrous.

It is difficult not to reach the conclusion, given the circumstances facing the Indian mills, that the next few years are going to see a serious and permanent contraction in manufacturing capacity. The fact that the industry is at present too large for the markets available to it, is attested by the almost chronic existence of sealed loomage. Even using the most modern production methods and under the most favourable circumstances at present conceivable in this country, it is doubtful whether the mills can ever hope again to work for more than a few months at maximum capacity. Under present Pakistani plans, for instance it is likely that India may have no sacking market left abroad in another five years' time. This is the kind of challenge which can only be met by drastic modernisation and reorganisation. Any state of mind which serves to place difficulties in the way of these desirable processes can be said, without any hesitation, to be opposed to the best interests of the country, the cultivators the workers, and, perhaps incidentally, the mill themselves.

BELGRADE: INTERIM BALANCE SHEET

Thompson: If you were in a dark room and unaware of where you were, it would be impossible to jaunt anywhere with safety. And if you knew where you were but intended to jaunt to a place you had never seen, you would never arrive alive. One cannot jaunt from an unknown departure point to an unknown destination. Both must be known, memorised and visualised.

Reporter: But if we know where we are and where we're going...

Thompson: We can be pretty sure we'll jaunt and arrive.

Reporter: Would we arrive naked?

Thompson: If you started naked.

This conversation stems from Alfred Bester's science fiction, *The Stars My Destination*. To be reminded of it soon after Mr. Nehru's return to India from his visit to Yugoslavia and the Soviet Union is to see the many real points of difference. If none of the other 25 attending the Belgrade conference of non-aligned nations knew it, India never forgot that it could achieve but little, very little. Many of the others, however, knew neither the point of departure nor the destination; and if they

did not get exactly nowhere it was largely because in spite of many exasperating frustrations, Mr. Nehru was able to give the conference a certain sense of direction. It may also be an exaggeration to say that, from his talks in Moscow, Mr. Nehru has returned completely naked.

If once there was in this country a simple minded tendency to discuss foreign policy in terms of abstract ideologies and undefined moral principles, this has perhaps been replaced by the equally deplorable one of viewing everything in terms of a victory or a defeat for India—as was regrettably pronounced in much of the Indian "coverage" of Belgrade. That this is precisely what irritates the other participants, that this attitude is totally inconsistent with the concept of non-alignment and co-existence are perhaps relatively small point but even an interim balance sheet is difficult to draw without shedding those largely superficial considerations of India's prestige. Mr. Nehru's prestige, at any rate, was never in doubt in Belgrade, which may in some ways have been a di-

advantage. But it is entirely to his credit that, part from the fact of India's obvious importance, Mr. Nehru never threw his weight about. It is the inherent unimportance of most of the other invitees that made them feel small—and, for that reason, talk big. It was left to Mr. Nehru to impress upon the conference that the question of war or peace was more urgent than Dr. Nkrumah's row with Mr. Olympio, that a third bloc would only multiply the problems of the divided world, that a empty warning to the Big Powers would be a humiliating as an abject supplication before them. In the event India had to concede some of the points insisted upon by the loud and the immature. Mr. Nehru's abrupt dissociation from Dr. Nkrumah's mission to Moscow, for instance, was followed by some sort of a joint representation; but the essence of the Indian view of Belgrade was by and large upheld. Some countries are perhaps less pro-Indian in consequence; but it is not unlikely that Moscow and Washington have privately been told that India's support for some of the extreme views aired in Belgrade remains limited.

It is quite impossible to say whether there is parity between the war making powers of the Russians and the Americans. The disparity among the nations gathered at Belgrade was too wide to be concealed from anyone. Some of the leaders from Africa, and not from Africa alone, displayed an incredibly frivolous approach to world problems about which their knowledge seemed minimal. Nor did every leader distinguish himself by manifesting an obvious concern for the good of his people. In Ghana there are widespread strikes against the austerity measures recently introduced; Dr. Nkrumah sees nothing wrong in holidaying at Sochi. In Indonesia things have been on the verge of collapse for years; for Dr. Soekarno it was more urgent to fly to Washington to deliver a message that could have been carried by the ordinary air mail post. An incidental but immense gain from Belgrade would be if some of the new leaders learnt something from Mr. Nehru about how mature men and nations should behave.

India expected nothing from the conference for herself; and if she got nothing, more or less, nobody can be inconsolable. If there were some misunderstandings with some Afro-Asian countries, that too was almost inevitable. Everybody's friendship could have been had only by being as irresponsible as everybody—and India was entirely wise to refuse to buy superficial popularity at that price. Some of those who disliked India at Belgrade may before long be deflated by forces within their own countries; others, it is hoped, will know better with more experience of international affairs. What was far more important from India's point of view was that in Moscow and Washington India's dignity should be maintained and her view understood. Moscow must now know the degree of India's association with the Belgrade conference; in November, when Mr. Nehru goes to Washington, President Kennedy will have as clear a picture.

The western Powers can hardly have been unduly surprised that many at Belgrade spoke eloquently and passionately on imperialism and colonialism. Nor is the passion wholly unnatural; it is not true that the two phenomena have disappeared altogether, and there may yet be strife in south, central and Portuguese Africa. What was unfortunate was that there seemed to have been no advance from the prejudiced and blinkered position which condemns dying western imperialism but ignores the burgeoning communist kind. Even Mr. Nehru sees nothing unusual in stopping off in Tashkent to admire the achievements of Soviet colonisation in this region of the Russian empire in Asia. The timing of the Russian announcement on the resumption of nuclear tests remains difficult of explanation; it is hard to see what they hoped to gain by "snubbing" the uncommitted, many of whom are distinctly friendly to them. A disappointment it was, however, and Mr. Nehru is sure to have made no secret of his feeling while in Moscow. The American follow-up was no boost either to neutralist morale. But was this not just the point Mr. Nehru had made—that there was but little the Belgrade countries could do to ensure war or peace? It is naive to say that India was humiliated because she did not have a bigger say than she had ever hoped to have.

There is a bill to settle; but it will not kill India. Perhaps this country would have been hap-

pier if there had been no Belgrade conference; but, once convened, there was no way of keeping out of it. Nobody can say that the world is worse after the conference and because of it. And of how many conferences is even that true? And yet, India will be unwise to overdo her self-satisfaction. If at Belgrade India seemed more sophisticated than most, and if Mr. Krishna Menon was able to annoy (something he enjoys) some of the delegates with his elementary lessons in English grammar,

PAPER PROFITS SUFFER

PAPER shares have declined considerably during the past year, their index having fallen from 235.9 to 200.0 (1952-53 equals 100). When the Government reduced the prices of the commodity at the beginning of 1960 on the recommendation of the Tariff Commission, it was feared that the profitability of the industry would suffer seriously. In fixing the new prices, the Commission made the mistake of calculating production costs on the basis of installed capacity rather than actual production. In addition, it forgot that manufacturing costs had increased after it had made its investigation. Investors have now become hesitant because they are divided in their opinions about the outlook for the industry. In his chairman's statement circulated along with the report and accounts of the Titagur Paper Mills Co Ltd for the year ended March 1961 (a full text of the statement was printed in last week's Capital), Sir Walter Michelson indicated the possibility of excessive supplies. During the second plan period, the output of paper was nearly doubled to 350,000 tons. It is intended to achieve a target of 700,000 tons during the third plan. In order to reach this target, the Government proposes to increase the total production capacity to 900,000 tons by setting up new factories and expanding the old ones. Already there is evidence that supplies have eased. Sir Walter, therefore, doubted whether demand could continue to double every five years as assumed in the production plans.

He pointed out that production costs had risen because various raw materials cost more now. The price of caustic soda, for instance, has been increased by the imposition of an excise duty of Rs. 40 a ton. Although there is a case for extending the excise net in order to spread the tax burden more widely, it is unwise to levy an excise duty on raw materials which raises the production costs of industry. The cost of coal has increased because much of it has to be carried by road as long as the railways are unable to handle all the traffic. Coal costs have also risen because the Central Government has imposed an additional cess. With higher coal prices, the cost of power supplied by the Calcutta Electric Supply Corporation has been raised. Sir Walter pointed to the prospect that Titagur Paper may soon have to increase its contribution to the employees' provident fund from 64 percent to 84 percent.

The adverse effect of increased manufacturing expenses has been reflected in the results of Titagur Paper. The Company's profitability has also been affected by lower selling prices (which have reduced total sales by 3.8 percent to Rs. 9.52 crores in 1960-61), and by the losses sustained at the mill in Orissa. This unit was not expected to work profitably yet; being designed to produce 1,000 tons a month, it could not be run economically with one machine only. The second machine could not be transferred to the mill until the workers became more experienced. Meanwhile, it was employed profitably at the No. 2 mill. Steps have been taken to transfer the second machine to the Orissa mill, which will become a profit-earning unit in the near future. After increasing depreciation from Rs. 32.42 lakhs to Rs. 57.75 lakhs and reducing taxation from Rs. 27.09 lakhs to Rs. 20.06 lakhs, Titagur Paper's profit has declined from Rs. 55.42 lakhs to Rs. 23.92 lakhs. The ordinary dividend has been cut from 25 percent, taxable, to 20 percent, taxable, including an interim of 10 percent. It offers a yield of nearly 5.8 percent at the present price of Rs. 34.06 a share. The dividend is covered nearly twice. A sum of Rs. 7 lakhs has been transferred from dividend equalisation reserve. Statutory development reserve receives Rs. 6.26 lakhs (against Rs. 24.90 lakhs) and the carry-forward is Rs. 1,48,295, against Rs. 2,48,642 brought in.

In spite of the various difficulties facing the industry, the outlook for Titagur Paper is being assessed with sober confidence. The order-book is full and the management does not foresee any difficulty in selling whatever is produced in view of the quality the Company maintains and the good service it gives its customers. The recommendations of Messrs Urwick Orr and Partners, who made a survey of the organisation of Titagur Paper, are being implemented in order to effect further economies and improve operational efficiency. Renovations at the No. 2 mill are proceeding and the electrolytic bleaching plant may be installed soon. The directors have decided to

are not both transient factors? The neutralist nuances the conference heard from the leader of the Indian delegation are all his own. It is difficult to see the obvious superiority of Indian diplomacy over Arab or Amharic when the former will be conducted in Hindi. There is no fat interim dividend for India to declare after the Belgrade conference; there is, neither, a calamitous loss to report. India has not jaunted into outer space; but she has come back home all in one piece.

obtain more loan capital to finance the construction of the mill in Orissa, and the State Bank of India has agreed to offer a cash credit facility of Rs. 50 lakhs. Meanwhile, strong representations have been made to the Government for increasing the prices of paper, especially of some grades, so that production costs are adequately covered and reasonable profits ensured. The industry's claim is reasonable, especially since various factories have already done their best to offset the increase in manufacturing expenses by improved operational efficiency. Unless they can earn sufficient resources to plough back into the business, future expansion will be difficult to finance. Some companies have already used most of their resources for expanding their production capacity. If their profitability does not improve, outside capital will be difficult to attract.

U.K. ECONOMY RESPONDS TO THE SQUEEZE

THE first effects of the deflationary measures applied to the British economy in July are now appearing. Not many relevant statistics are yet available, but those that have been published can be supplemented by reports on current business. It is evident that credit is now difficult to obtain, and that the strains on the economy that caused the authorities so much anxiety a few weeks ago are being relaxed. The most important relevant financial indicator is the advances of the 11 London clearing banks. In the month to mid-August their net advances (after allowing for items in transit) decreased by £104 million to £3,445 million. The decrease is the first recorded since January, and it seems at first sight to reflect a sudden reaction to the credit-squeeze (specifically, to the increase in "special deposits" and to the new directives on lending). It is unlikely that so big a movement could occur so quickly as a consequence of the change in the banks' lending policy; that change will probably be reflected more clearly in future figures. But the increase in Bank rate in July has increased the cost of borrowing and has thus strengthened the incentive to repay loans; it has also reversed the previous inclination to delay payment for British exports, and accelerated payments have enabled many firms to reduce their overdrafts.

No comparable figures are published by insurance companies, but it can easily be calculated that their arrangements to finance property companies' developments have been on a much smaller scale in recent weeks than they were previously. The authorities have felt that the facilities granted by the insurance companies were too liberal; also that the former practice of restricting only the banks' credit, when restraint was necessary, was both inefficient and inequitable. So they have requested the insurance companies, and also the hire-purchase finance houses, as well as the banks, to reduce their lending. The building industry is still very active, of course, as outstanding contracts are put into effect. It is the industry most obviously affected by shortage of materials, and its demand for labour has made labour scarce in other industries. But the building industry is more than most others dependent on credit in some form—on short term from the banks, or on long term from the insurance companies (operating through the property companies), or on longer term from the building societies (operating through individuals, whose resources are tending to diminish as higher short-term interest-rates, resulting from the increase in Bank rate, divert small savings into other channels).

Other industries are already reporting cutbacks in production and dismissals of redundant workers. Domestic-appliance companies are particularly prominent in this process of adjustment, and the iron and steel industry is noticeably affected. There are signs that within the next few months the motor-car industry (not for the first time in recent years) will lay off a considerable part of its labour-force. As bank advances increased for seven months until August, so the number of registered unemployed workers diminished for seven months until August. Between mid-July and mid-August the percentage of the labour-force unemployed increased from 1.2 to 1.4; and at the same time the number of vacancies diminished. The

changes were more than could be attributed to the release of "mature" children to the labour market; they reflected equally the redundancy of labour in some industries. Other workers will soon become seasonally redundant. And it is likely that the textile industry, which, because of the recent scarcity of labour, has not dismissed workers while demand for its products has declined, will soon add its quota to the total of unemployed.

It seems, then, that one of the main causes of official anxiety, excessive demand for labour, is already alleviated. Partly the scarcity was caused by hoarding labour that could not at present be fully employed but might be required later. Now it is necessary to economise; and the trading outlook does not suggest that more labour will be needed in the comparatively depressed industries in the foreseeable future. If labour is no longer scarce the pressure to raise wages will be relaxed. But it must be observed that in many categories of work labour is still scarce; also that in the past wages have continued to rise even while the labour market is slack. Some observers feel that the Government's measures were excessive and will drag the economy into recession—at a particularly inopportune time, moreover, for the maximum release of children from the schools—a result of

the increase in births just after the war—will occur next year. The changes now observable were not necessarily initiated by the deflationary measures; they began, probably, before these measures were imposed. In general, consumers' demand at home is apparently maintained, and exports are gradually increasing; but the forces of recession must be carefully watched.

Meanwhile, the trend of events confirms the more hopeful ideas concerning sterling. In the changed mood of business, and at higher rates of interest on borrowed money, industry is inclined to reduce rather than to increase its stocks. The trend of imports is therefore downward, and, with some help on the export side of the account, the deficit on visible trade is diminishing. It is reckoned that if allowance is made in the import figures for insurance and freight costs payable to British companies or institutions, the U.K.'s visible trade account is now approximately in balance. What is needed now, to provide for the outflow of long-term capital, is a considerable improvement in the invisible account. It, too, probably, is approximately balanced, whereas it should be substantially in credit. Only a drastic reduction in the Government's overseas spending can put it in credit quickly.

have increased. Electric power has cost more, and labour expenditure has risen following the recommendations of the Wage Board. But, in spite of the difficulties, Northbrook Jute and Lawrence Jute have produced satisfactory results, presumably because they stockpiled fibre when its price was low.

The profit of the Northbrook Jute Co. Ltd has improved from Rs. 24.11 lakhs in 1959-60 to Rs. 35.87 lakhs in 1960-61, after increasing depreciation from Rs. 4.86 lakhs to Rs. 6.09 lakhs. The ordinary dividend has been maintained at 30 percent, including an interim of 7.50 percent. It is covered more than six times and offers a yield of 12.5 percent at the present price of Rs. 24 a share. Statutory development rebate reserve is allocated Rs. 1.48 lakhs (against Rs. 60,700), machinery replacement reserve Rs. 3 lakhs (same) and general reserve Rs. 9 lakhs (against Rs. 7 lakhs). The carry-forward is Rs. 32,274, against Rs. 27,631 brought in. Sales rose from Rs. 2.02 crores to Rs. 2.62 crores. The balance of 13 carpet-backing looms functioned during the year. This section of the mill worked to full capacity, although later production had to be cut due to a decline in the demand for goods. The automatic weaving machine has been installed and production has started.

The Lawrence Jute Co. Ltd has maintained its ordinary dividend at 15 percent, taxable, including an interim of 7 percent. This is covered more than twice and the yield is 9.5 percent at a price of Rs. 158 a share. After providing Rs. 2.16 lakhs (against Rs. 2.74 lakhs) for depreciation, the profit is Rs. 10.34 lakhs, compared with Rs. 8.66 lakhs. General reserve receives Rs. 3 lakhs (against Rs. 2 lakhs) and taxation Rs. 1.65 lakhs. The carry-forward is Rs. 54,949, against Rs. 10,530 brought in. Lawrence Jute has taken steps to diversify its activities. It has been decided to invest Rs. 10 lakhs by buying at par 10,000 ordinary shares of Rs. 100 each in McNally-Bird Engineering Co. Private Ltd. The latter is a new company which has been formed in collaboration between Bird and Co. Private Ltd and the McNally Pittsburgh Manufacturing Corporation of the U.S.A. for setting up a manufacturing unit in Kumardhubi, West Bengal. Lawrence Jute also proposes to invest Rs. 12 lakhs in 16,000 ordinary shares of Rs. 10 each in Coates of India Private Ltd. Coates of India is an Indian Company formed in 1947 to take over the Indian business of Coates Brothers and Co. Ltd, London, a manufacturer of inks for the printing and packaging trades. It has established factories in Calcutta, Bombay and Madras.

The profit of the Auckland Jute Co. Ltd has declined from Rs. 29.05 lakhs to Rs. 23.26 lakhs, after increasing depreciation from Rs. 6.68 lakhs to Rs. 7.19 lakhs. The ordinary dividend has been cut from 27 percent, taxable, to 12 percent, taxable, including an interim of 7 percent. It is covered more than four-and-a-half times and offers a yield of 8.2 percent at the present price of Rs. 147 a share. Taxation is allocated Rs. 10.71 lakhs (against Rs. 12.65 lakhs), development rebate reserve Rs. 1.76 lakhs (against Rs. 50,000), machinery replacement reserve Rs. 3 lakhs (same) and general reserve Rs. 1.50 lakhs (against Rs. 1 lakh). There is a carry-forward of Rs. 45,981, compared with Rs. 34,111 brought in. The carpet-backing section could not work to full capacity. Steps are being taken to import automatic weaving machines. The modernisation of the sacking web section has been completed. Orders are being placed for equipment in order to modernise the mills further.

The Kinnison Jute Mills Co. Ltd is making satisfactory progress in modernising its equipment.

Current News and Comment

Outlook for Tata Steel

The shares of the Tata Iron and Steel Co. Ltd, which touched a high of Rs. 167 on 6th July, were sold down to Rs. 147 on 7th September. While the increase in the dividend from Rs. 6.80 to Rs. 7.25 a share through a bonus of 45nP a share had brought little cheer, the market was disappointed by the Company's working results for the year ended March 1961 and the chairman's statement to the shareholders. T.I.S.C.O.'s enlarged and modernised plant had been in operation for two years but production had not shown any marked improvement. The chairman, Mr. J. R. D. Tata, said that the target of 2 million tons of ingots or 1.5 million tons of finished steel was unlikely to be achieved for another two years. The market's disappointment could not, therefore, be dismissed as sentimental. The chairman, however, expressed surprise at the annual meeting last week that his statement had been interpreted harshly, for he had only tried to take the shareholders into confidence and acquaint them with the facts. He assured them that although the results for 1960-61 were unsatisfactory due to higher production costs and uneconomic retention prices, there was no cause for pessimism. With a gradual increase in production and with every possible effort to keep cost increases to the minimum, T.I.S.C.O.'s performance would show a "continued improvement." But he was quick to add that no spectacular results could be expected until the Company was able to feed the required quantities of improved raw materials to the plant; and the outlook for this was by no means promising. Mr. Tata added that the future profit-earning capacity would also depend to a large extent on the price increase to be recommended by the Tariff Commission which is expected to submit its report before the end of the current year. He hoped that new prices, which would be applicable to the 1960-61 output, would take into account the increase in costs and leave some margin for the Company.

Replying to the shareholders' plea for a higher equity dividend, Mr. Tata said that despite the not-so-satisfactory results, the dividend had been raised by 45nP a share. The management could hardly have done any better considering that the proposed dividend involved a distribution of 93 percent of the disposable surplus. T.I.S.C.O. paid a gross dividend of Rs. 10.50 a share before the expansion programme was undertaken; the proposed dividend works out to Rs. 10.36 a share. The chairman refuted the shareholders' contention that they had had a raw deal from the rights issues. Taking into account the bonus and quotation of Rs. 152 in 1953 was now worth Rs. 594. Shareholders were thus getting a gross return of 20 percent on that basis. This could be considered quite satisfactory for a Company which was strictly controlled by the Government. He ruled out the suggestion made by some shareholders that the management should support the shares by entering the market. It could think of doing that only if prices were unduly depressed, but no such necessity had arisen at present.

Mr. Tata said that the Company would have to incur a heavy capital expenditure during the next few years for keeping the plant and machinery in good condition, financing of associate companies and investments in new projects. The total investment might amount to Rs. 10 crores

or Rs. 15 crores, including Rs. 5 crores or Rs. 6 crores on beneficiation and ore mining, Rs. 1 crore on ore blending, Rs. 2 crores on coke-oven battery and the balance on new projects like alloy steel. The investment might rise to around Rs. 25 crores if the Company were to set up a rolling mill also. Referring to the alloy steel plant, Mr. Tata said that the economics of the project is still being studied. He doubted the possibility of T.I.S.C.O. shareholders deriving any direct benefit out of the project. The initial capital would be small, and after allowing for the share of foreign collaborators and Tatas, very little would be left for T.I.S.C.O. shareholders. The chairman also discounted the prospect of the shares of Indian Tube being offered to the latter. He described the prospects for power supply as unsatisfactory, with the D.V.C. authorities supplying only 55,000 kVA instead of 95,000 kVA promised by them. The Company is thinking of putting up a power plant in Jamshedpur with capital to be contributed by associate companies. It is also proposed to install another coke-oven battery in order to build up spare capacity. Mr. Tata said that on 4th September, the Life Insurance Corporation held 17,900 1st preference shares, 63,000 2nd preference shares, 92,000 2nd (A) preference shares and 270,000 equity shares of T.I.S.C.O. Its holdings of ordinary shares a year ago amounted to 222,000 shares. Referring to donations to political parties, Mr. Tata said that the directors had decided to donate funds to both the Congress and the Swatantra Party for contesting the general elections. No decision has yet been taken concerning the value of contributions, but the Congress would get a larger sum.

Bird-Heilgers Jute Results

The results of the Bird-Heilgers group of jute companies for the year ended March 1961 show how their working has been affected by fibre shortages. Production has had to be cut, so unit costs

Steps have been taken to install automatic weaving machines. It was not possible to work the carpet-backing looms to full capacity during the year. For a more economical lay-out and for improving operational efficiency, it was decided to convert mill No. 2 into a complete hessian unit and the changeover was completed in October 1960. The profit of Kinnison Jute has declined from Rs. 26.44 lakhs to Rs. 20.48 lakhs, after increasing depreciation from Rs. 7.94 lakhs to Rs. 9.09 lakhs. The ordinary dividend has been cut from 20 percent, taxable, to 7 percent, taxable, including an interim of 5 percent. It is covered more than four times and offers a yield of 4.8 percent at a price of Rs. 145 a share. Taxation receives Rs. 9.82 lakhs (against Rs. 6.64 lakhs), statutory development reserve Rs. 1.51 lakhs (against Rs. 68,000), machinery replacement reserve Rs. 3 lakhs (same) and general reserve Rs. 50,000 (against Rs. 3 lakhs). The carry-forward is Rs. 62,406, compared with Rs. 87,502 brought in.

Mysore Paper Maintains

The working of Mysore Paper Mills for the year ended March 1961 shows a setback which is attributable to the reduction in paper prices. Both production and sales have been satisfactory, but sales realisations are down from Rs. 1.41 crores in 1959-60 to Rs. 1.23 crores in 1960-61. The closing stocks are up from Rs. 1.96 lakhs to Rs. 4.66 lakhs. The gross profit is down from Rs. 23.06 lakhs to Rs. 20.96 lakhs but the ratio of gross profit to sales is slightly better at 17 percent, against 16.4 percent. After providing Rs. 6.68 lakhs (against Rs. 7.63 lakhs) for depreciation, Rs. 1.69 lakhs (against Rs. 14,000) for development rebate and Rs. 6.50 lakhs (against Rs. 8 lakhs) for taxation, the net profit amounts to Rs. 6.09 lakhs, against Rs. 7.30 lakhs in the previous year. Having paid out the loan of the Industrial Finance Corporation, the directors have transferred Rs. 12.50 lakhs remaining in the I.F.C. loan redemption fund no longer needed to general reserve. A sum of Rs. 2.50 lakhs (against nil) has been provided for the dividend equalisation fund. The dividend has been maintained at Rs. 1.50 a share (Rs. 100 paid), taxable, and it absorbs Rs. 3.75 lakhs. After making various adjustments, a sum of Rs. 36,663 is being carried forward, against Rs. 51,968 brought in.

The directors state that negotiations with foreign firms for the supply of plant and machinery in order to raise the production from 8,000 tons to 18,000 tons a year have been completed, and letters of indent have been issued for most of the equipment. Mysore Paper has received the Government's sanction for issuing 1 million equity shares of Rs. 10 each at a premium of Rs. 2 a share. The directors have accordingly decided to offer to the existing shareholders 1 million equity shares in the ratio of four new shares for every one held at a premium of Rs. 2 each. The additional capital is to be used for financing expansion. The expansion and modernisation schemes are estimated to cost about Rs. 3.50 crores. The additional share capital will provide Rs. 1 crore. A sum of Rs. 60 lakhs is to be borrowed from the I.F.C. Foreign exchange loans of the value of Rs. 1.40 crores are to be obtained from the Commonwealth Development Finance Company and the Industrial Credit and Investment Corporation of India. The remaining Rs. 50 lakhs will be raised by bank borrowing.

Rohtas Fares Badly

The ordinary shares of Rohtas Industries Ltd have suffered a serious setback during the past month or so, but the price now appears to have settled down around Rs. 15.56. The disappointment started on the apprehension that the results for the year ended March 1961 would be unsatisfactory, and their publication now confirms the fears expressed earlier. Rohtas Industries has had to contend with numerous difficulties which are beyond the management's control. Many of the adverse factors are expected to be rectified in some measure during the current year. The outlook is, therefore, assessed optimistically to this extent. The paper section reflects the adverse effects of the unremunerative prices which have been fixed by the Government since the beginning of 1960. There has been a substantial rise in production costs. The prices of various raw materials, such as chemicals, spare parts and coal, as well as power, have increased considerably. Transport charges are also a great deal higher. The imposition of an excise duty of Rs. 40 a ton on caustic soda, which is an important raw material for the production of paper, has increased manufacturing expenses. So the present prices of paper have proved inadequate to compensate for the rising production costs and the benefits of improved operational efficiency have been offset to a large extent. Although the output of paper machines has increased, it could not be used fully

due to the shortage of pulp. Steps have, therefore, been taken to increase pulp production. It is also proposed to remodel the existing paper machines in order to increase production and improve quality.

As far as the cement section is concerned, production costs have increased due to the rise in the cost of coal, spare parts, power and transport. The retention prices for Rohtas Industries' cement have proved unremunerative, but it is hoped that the Government will soon increase them on the recommendations of the Tariff Commission. The sugar section has incurred losses because the price fixed for the commodity has proved unremunerative. Production has also been affected by inferior sugar-cane supplies. Steps have, therefore, been taken to replace the diseased variety of cane by proper grades. The unremunerative working of the section is also due to the losses which have been incurred in exporting the commodity. The asbestos cement and vanaspati factories have done well. In view of the increased demand, it is proposed to extend the output capacity of the asbestos cement unit.

The profit of Rohtas Industries has declined from Rs. 1.40 crores in 1959-60 to Rs. 66 lakhs in 1960-61, after reducing depreciation from Rs. 76.03 lakhs to Rs. 58.32 lakhs. An ordinary dividend of 10 percent, taxable, has been declared absorbing Rs. 50 lakhs. It offers a yield of 6.4 percent at the present price. The ordinary dividend was 20 percent for the previous year, but the share capital has meanwhile been doubled. Development rebate reserve is allocated Rs. 5.05 lakhs (against Rs. 3.10 lakhs) and the carry-forward is Rs. 5.97 lakhs against Rs. 1.93 lakhs brought in.

Jardine Henderson Repeats

The profit of Jardine Henderson Ltd has declined from Rs. 27.03 lakhs in 1959-60 to Rs. 24.62 lakhs during the year ended March 1961, after providing Rs. 1.36 lakhs (against Rs. 1.42 lakhs) for depreciation. The ordinary dividend has been maintained at 7 percent, taxable. It is covered more than one-and-a-half times and offers a yield of 10.2 percent at the present price of Rs. 68.50 a share. Taxation provision receives Rs. 7 lakhs (against Rs. 7.50 lakhs) and general reserve Rs. 1 lakh (against the same). The carry-forward is Rs. 5,09,716, against Rs. 5,21,494 brought in. Since the Company has substantial investments in the various jute mills under its management, its income has suffered following the difficulties facing the jute industry. In view of the fact that the jute mills have incurred considerable losses, Jardine Henderson has had to meet the working capital needs of the managed companies to a great extent. Until the prospects for the jute industry brighten up, the income of Jardine Henderson may not show much improvement. The Company expects to benefit more from its investments in tea companies because the production of the commodity has increased considerably during the current year. Unless tea prices decline greatly due to the weight of larger supplies, the industry is expected to do better during the current year than it did in 1960. Jardine Henderson's subsidiaries—Diamond Products Ltd and the Kassisur Co. Ltd—have done well. Their profits and turnover have risen. An application has been made to the Government of India for increasing the production capacity of Diamond Products Ltd. It is stated that progress is being made in the construction and development of the Dhanbad works of Meameco Ltd, and the manufacture of coal-mining machinery has started. It is expected that the licensed production of haulages and conveyors will be achieved in early 1962. In view of the further capital expenditure on the project, Jardine Henderson is unlikely to receive any dividend from this subsidiary for some years. The Company's investment in Braithwaite and Co. Ltd has proved remunerative. In view of the expansion Braithwaite proposes to undertake, it may not increase the dividends in the next few years. The directors of Jardine Henderson are actively pursuing the programme of diversifying its activities. The sales department has done well—the turnover rose from Rs. 12.41 crores to Rs. 12.61 crores.

Aluminium Industries Expanding

The working of the Aluminium Industries Ltd for the year ended March 1961 showed a net profit of Rs. 18.29 lakhs, after providing Rs. 10.98 lakhs for depreciation and Rs. 16.41 lakhs for taxation. The net profit for the previous year was Rs. 19.81 lakhs, after providing Rs. 11.89 lakhs for depreciation and Rs. 16 lakhs for taxation. Adding Rs. 1.53 lakhs brought forward from the previous year, the total comes to Rs. 19.82 lakhs. The proposed final dividend of 90nP (9 percent) a share, subject to deduction of tax, and the interim dividend of 90nP a share on the old shares and 30nP a share on the new ones, paid in March 1961, account for Rs. 16.80

lakhs. The balance of Rs. 3.02 lakhs is carried forward.

It is stated that about 66,300 kilometres of bare aluminium conductors and 9 million core-metres of covered aluminium conductors were manufactured during the year. The production of aluminium rod, accessories and tools was maintained at a high level. On the sales side, brisk demand was reported for aluminium conductors and accessories, although intense competition prevailed. The profit-earning capacity of Aluminium Industries was maintained only through increased production and sales. The limited availability of aluminium metal restricted the sale of rods to other conductor manufacturers, although the Company had a rod-rolling capacity in excess of its own requirements at the Hirakud works.

Dealing with expansion, the directors state that the construction of the factory for manufacturing high-tensile galvanised steel wire in Kundara has made satisfactory progress. Subject to the availability of raw materials, the new factory, it is expected, will be in regular operation by the end of 1961. The Government of India has granted a licence to Aluminium Industries for increasing its covered conductor manufacturing capacity at the Kundara works and for establishing a new covered conductor factory near Hyderabad. Work has commenced on these expansion programmes. The Government of India has granted another licence to the Company for establishing a plant in Kundara for manufacturing a special type of low voltage aluminium cable for underground applications. The details of the project are now being scrutinised by the directors.

Birla Cotton Profit Doubled

The Birla Cotton Spinning and Weaving Mills Co. Ltd has reported excellent results for the year ended March 1961. While sales have increased by 15 percent from Rs. 4.30 crores to Rs. 4.95 crores, the gross profit has more than doubled itself from Rs. 22.93 lakhs to Rs. 46.05 lakhs. This has enabled the directors to raise the dividend from Re. 1 to Rs. 2 a share, subject to tax. After providing Rs. 7.79 lakhs (against Rs. 6.50 lakhs) for depreciation, Rs. 35,000 (against Rs. 4.75 lakhs) for development rebate and Rs. 18.50 lakhs (against Rs. 6 lakhs) for taxation, the net profit amounts to Rs. 15.51 lakhs, against Rs. 4.06 lakhs in 1959-60. From this, the directors have set aside Rs. 7 lakhs for general reserve (against nil), and the proposed dividend absorbs Rs. 7.99 lakhs, against Rs. 3.50 lakhs, leaving Rs. 1.34 lakhs to be carried forward, against Rs. 83,509 brought in.

The directors state that the cost of production increased during the year as a result of higher cotton prices and the implementation of the Textile Wage Board award. The working of the mills has, however, been satisfactory. Birla Cotton has added the latest type of winding and wrapping machines. Orders have been placed for several other machines for replacing the old machinery or for improving the various processes. The Company has asked for the Government's permission to install additional spindles for balancing the ratio of looms to spindles. The spinning and pressing factory in Malout has not shown good results due to the uncertainty in the cotton trade. The tent factory was unable to use its full capacity on account of the paucity of orders from the Government. Orders worth Rs. 50 lakhs, were, however, received at the end of the financial year, and deliveries are to be completed by the end of 1961. Merchandise and Stores Ltd and Rajputana General Dealers Ltd were amalgamated with the mills during the year. As a result of the amalgamation, Birla Cotton's reserves increased by Rs. 19.06 lakhs which represent the excess of assets over liabilities and capital issued to the shareholders of the two Companies. The Rs. 10-paid shares of the Company are quoted around Rs. 20.

United Breweries Profit Up

A handsome rise in the profit and the maintenance of the dividend at 60 percent are the main features of the working results of the United Breweries Ltd for the year ended March 1961. Both production and sales increased appreciably during the year. The net profit amounts to Rs. 13.84 lakhs, after providing Rs. 2.14 lakhs for depreciation and Rs. 10 lakhs for taxation. The net profit for the previous year amounted to Rs. 11.03 lakhs, after providing Rs. 2.29 lakhs for depreciation. Adding Rs. 1.24 lakhs brought forward to the profit of the year, Rs. 4,309 being the excess provision for doubtful debts written back, Rs. 53,349 being the refund of income tax, Rs. 21,000 being the excess provisions for directors' fees written back, and Rs. 7.17 lakhs being the provisions made in previous years no longer considered necessary, the available surplus for appropriation is Rs. 23.04 lakhs. Out of this, general reserve gets Rs. 12.35 lakhs (against

Rs. 15.10 lakhs) and development rebate reserve Rs. 15,000 (against Rs. 40,000). The interim dividend of Rs. 2.50 a share, subject to deduction of tax, absorbed Rs. 3 lakhs. The proposed final dividend of Rs. 3.50 a share, subject to deduction of tax, will absorb Rs. 7 lakhs. The balance of Rs. 53,924 is carried forward. During the year, the subscribed capital was increased to Rs. 20 lakhs with the allotment of 80,000 equity shares of Rs. 10 each. The directors are now recommending the issue of equity shares worth Rs. 5 lakhs to be offered for subscription at par to the existing shareholders, as on 30th December, 1961. The total outlay on the dividend this year is Rs. 10 lakhs (against Rs. 6.20 lakhs last year).

With uninterrupted working, production increased appreciably and sales of bottled beer rose by 16.3 percent, the total turnover and profit being the highest so far achieved. Selling prices in Mysore State, which were reduced by 14.3 percent in September 1959, were restored to their former level on 1st July, 1960. Thus, the benefit of the increased rates was available during nine months of the year. Selling prices for customers outside the State, which remained unaltered over a long period, were increased in February 1961, to allow for a change in the basis of calculating the drawback of duty. United Breweries holds 53.63 percent of the equity capital of the subsidiary, McDowell and Co. Ltd. The Company's holding in the capital of another subsidiary, Phipson and Co. Ltd, amounts to 74.05 percent. The sales of this subsidiary also rose by 14.1 percent in 1960. In the case of another subsidiary, Phipson and Co. (Pakistan) Ltd, a wholly-owned subsidiary of Phipson and Co. Ltd, the progress has been satisfactory in 1960 with sales up by 16.9 percent over the previous year. United Breweries holds 78.2 percent of the capital of the subsidiary, Ruttonjee and Co. Ltd. This company has been granted a licence for establishing a brewery in West Bengal. The plant and machinery has been ordered, and the factory will be located in Kalyani, near Calcutta. The construction of the buildings will start in the near future, and the brewery is expected to be in operation by the middle of 1963. Dealing with prospects, the chairman says that sales increased by about 14 percent, compared with the corresponding period of the previous year. The profit has shown a similar trend. The directors have decided to declare an interim dividend of Rs. 2.50 a share, subject to deduction of tax, and 1962. It is reported that from March 1961, the Customs duty on malt was increased to 100 percent and a duty of 50 percent was levied on hops. At the same time, bottles were subjected to an excise duty of 15 percent. To cover these increased costs, selling prices were increased. The new machinery on order has been shipped, and it is expected that it will be installed in October 1961. This will enable the Company further to increase the production of first-class bottled beer. The proposed capital issue will help meet part of the expenditure on the programme. In spite of the threat of Prohibition, the directors say, United Breweries can look forward to the future with confidence.

United Nilgiri Earns More

A record crop and an impressive rise in the profit are the main features of the working results of the United Nilgiri Tea Estates Ltd for the year ended March 1961. The net profit for the year amounts to Rs. 12.86 lakhs, after providing Rs. 2.15 lakhs for depreciation. This compares with the previous year's net profit of Rs. 8.41 lakhs, after providing Rs. 2.20 lakhs for depreciation. With the amount brought forward from the previous year, the total comes to Rs. 13.51 lakhs. From this, the directors have provided Rs. 6.50 lakhs (against Rs. 4.30 lakhs) for taxation. A sum of Rs. 90,000 (against Rs. 50,000) has been transferred to development reserve and Rs. 85,700 (against nil) to general reserve. Gratuity reserve gets Rs. 11,324. After transferring Rs. 980 to development rebate reserve, the balance of Rs. 30,106 is carried forward. The interim dividend of 10 percent, subject to deduction of tax, absorbed Rs. 2.19 lakhs. The proposed final dividend of 12 percent, subject to deduction of tax, will absorb Rs. 2.63 lakhs.

The crop for the year was a record one at 828,976 kilograms, against an estimate of 635,023 kilograms and against a crop of 611,893 kilograms for last year. The average sale price was Rs. 5.11 a kilogram. Although this was a little lower than that for the previous year, the increased crop helped the Company to realise substantially improved profits. The crop for the current year is estimated at 650,000 kilograms. The new E.C.P. tea drier was installed in March this year. Due to delivery delays, the two tea rollers ordered some 14 months ago have not yet been received. The directors state that they are handicapped by the shortage of cement, steel, corrugated iron and

asbestos cement sheets, etcetera, in completing the expansion programmes.

Sholapoor Spinning Makes Profit

The working of the Sholapoor Spinning and Weaving Co. Ltd for the year ended March 1961 shows that the sales are up by Rs. 64.55 lakhs from Rs. 1.63 crores to Rs. 2.27 crores. The Company has made a profit of Rs. 7.69 lakhs, against a loss of Rs. 6.83 lakhs in 1959-60. Of course, the results can by no means be considered satisfactory because the profit of Rs. 7.69 lakhs is too poor on a sale of Rs. 2.27 crores, and it also includes Rs. 3.50 lakhs representing the premium under the export incentive scheme. The premium amounted to only Rs. 34,257 in the previous year. It will take Sholapoor Spinning a long time to wipe out its accumulated losses amounting to Rs. 1.05 crores, clear arrears of depreciation totalling Rs. 46.58 lakhs, pay arrears of the preference dividend amounting to Rs. 12 lakhs and provide Rs. 6 lakhs towards gratuity. Together, these liabilities add up to Rs. 1.69 crores. While no provision has been made for depreciation out of the year's profit, a small sum of Rs. 43,000 has been set aside for development rebate. Sholapoor Spinning is working 81,676 spindles on average in each of the first two shifts and 18,688 spindles in the third shift and 1,612 looms on average in each of the two shifts. The third shift of "B" spinning started on 19th August, 1961. The directors are conscious of the need for modernisation and renovation of the mills' plant and machinery and are giving due attention to the problem. Sholapoor Spinning has installed four semi-automatic jiggers for dyeing and one double-folding machine. It has also installed 25 Bahnsen's humidifying units. It has placed orders for superspeed winding and warping machines, metallic card clothing and stentering and drying range under licences received under the export incentive scheme.

Mysore Spinning Profit Up

Mysore Spinning and Manufacturing Co Ltd has reported satisfactory results for the year ended March 1961. The sales are slightly down from Rs. 1.71 crores to Rs. 1.68 crores, but the gross profit is up from Rs. 7.18 lakhs to Rs. 8.53 lakhs. Depreciation provision has been raised from Rs. 4,557 to Rs. 6.04 lakhs and development rebate reserve gets Rs. 81,000, against Rs. 85,000. No provision is found necessary for taxation. The directors have transferred Rs. 5.80 lakhs (against nil) from general reserve to the profit and loss account and Rs. 47,990 from investment reserve. In the previous year, the directors withdrew Rs. 3.03 lakhs from the reserves. These funds have been used for the payment of proposed dividends and the arrears of octroi duty which absorb Rs. 6.19 lakhs and Rs. 2.32 lakhs, respectively. The dividend has been maintained at 14 percent, taxable. A proportionate dividend is to be paid on new shares. The directors expect improved results for the current year because of the improvement in the cotton supply position. Mysore Spinning's plans for renovation and expansion are progressing satisfactorily. It has added Rs. 13.69 lakhs to its fixed assets during 1960-61 and has spent a further Rs. 19.93 lakhs since the close of the year. A complete six-colour roller printing plant and a bleaching plant are being erected. A high speed Whitin's combing equipment is also being installed. The Company has placed orders for a waste spinning plant of 1,200 spindles. Efforts are also being made to secure licence for importing 144 automatic looms from the U.S.A. under the export promotion scheme. Mysore Spinning has received permission to issue rights shares in proportion of one equity share for every two held. The Rs. 50-paid share of the Company is currently quoted around Rs. 67 cum dividend, offering a gross yield of 11.6 percent.

Puthutotam Cuts Dividend

A drop in the net profit of about Rs. 1 lakh and a cut in the dividend, are the highlights of the working results of Puthutotam Estates Ltd for the year ended 31st March, 1961. The net profit amounted to Rs. 1,60,304.43, after providing Rs. 1,36,000 for taxation, compared with the previous year's Rs. 2,61,418.59, after providing Rs. 2,25,000 for taxation. With the amount of Rs. 91,115.45 brought in, the total comes to Rs. 2,51,419.88. The directors have recommended a dividend of 7½ percent, subject to tax (against 12 percent), and this dividend will absorb Rs. 1,57,500. The balance of Rs. 93,919.88 is carried forward. The tea crop harvested during the year amounted to 155,024.14 kilograms, and the net average price worked out to about Rs. 3.99 a kilogram. The Arabica coffee crop harvested amounted to 261 tonnes and 263 kilograms. Valuation has been made at Rs. 2 a point, working out

at about Rs. 147.90 a 50 kilograms. The Robusta coffee crop was 126 tonnes and 160 kilograms, and this was valued at Rs. 2 a point. The directors say that coffee is valued only at Rs. 2 a point this year, against Rs. 2.20 adopted last year and much higher figures adopted in the earlier years. The fall in income to the low level in spite of the higher yields is mainly due to the steep fall in the coffee price and the mounting scale of expenditure. The cardamom crop harvested amounted to 5,220 kilograms. The estimated crop of tea for the 1961-62 season is put at 145,150 kilograms. The coffee crop estimated in Arabica is put at 235 tonnes and Robusta is placed at 110 tonnes. The estimated cardamom crop is 6,806 kilograms.

Negapatam Electric Raises Dividend

The Negapatam Electric Supply Co. Ltd has earned a net profit of Rs. 88,146.28 for the year ended 31st March, 1961. This figure is arrived at after providing for depreciation and taxation. The previous year's net profit was Rs. 85,422. With the amount brought forward from the previous year, which includes excess provision for taxation in previous years no longer required, income tax refund relating to 1955-56 and sinking fund for redemption of debentures transferred, the total comes to Rs. 1,34,047.71. Out of this, the directors have provided Rs. 5,000 for gratuity concerning previous years. Special reserve under the Act accounts for Rs. 14,231. Contingencies reserve gets Rs. 4,500 (against Rs. 5,000). Development Reserve gets Rs. 22,000 (against Rs. 12,000) and general reserve Rs. 15,000 (against nil). The dividend on cumulative preference shares at 7.8 percent, subject to tax, accounts for Rs. 7,800. The proposed dividend of 12 percent, taxable, on ordinary shares (against 10 percent), will absorb Rs. 59,782.20. After meeting the small requirements of consumers' rebate reserve, tariffs and dividends control reserve, and taxation reserve, the balance of Rs. 3,642.06 is carried forward. The Company availed itself of a loan of Rs. 2,50,000 from the Madras Industrial Investment Corporation Ltd for repayment of the debenture loan of Rs. 2 lakhs to the Life Insurance Corporation of India, and Rs. 50,000 for meeting the extension programmes. Against its application to the State Electricity Board for a loan of Rs. 1 lakh for carrying out rural extension programmes during the year 1959-61, the Electricity Board sanctioned a loan of Rs. 50,000 to the Company. During the year, L.T. extensions involving a length of 5.1 miles were taken up by the Company, and the total amount of capital expenditure incurred during the same period was Rs. 91,040.20.

India United Mills Modernise

In spite of the heavy slump in equity values since about the beginning of June, the shares of India United Mills have remained remarkably steady. The latest quotation around Rs. 15.40 shows only a small decline from the year's high of Rs. 15.96. Early in the year, the shares could be bought around Rs. 12.68. The continued strength in India United Mills' shares reflects the Company's highly encouraging performance in 1960 and the prospects of still better results during the current year. The results for 1960 have enabled it to return to the dividend list after wiping out the accumulated losses and arrears of depreciation. The chairman, Mr. M. D. Bhat, says in his annual speech that if 1961 continues to be as encouraging as it has been so far—eight months of working are already over—the United India Mills will be able to build up steady reserves and go ahead with confidence with the renovation programme. Its mills are now working to full capacity. The entire spinning section is working in three shifts and all the looms are working two shifts. Mill No. 5 is working its looms in the third shift as well. The dye house production, especially the prints and khaki varieties, has substantially increased, and there is a good demand from the powerloom sector for India United Mills' yarns. Meanwhile, every effort is being made to improve the quality. Mr. Bhat cited figures to show how the mills' production had increased during the current year. During the first six months of 1961, the mills produced 18.4 million lbs of yarn and 74.8 million yards of cloth, against 33.4 million lbs of yarn and 143.8 million yards of cloth in the whole of 1960.

The Company's plant and machinery are old, the original value of the plant and machinery amounting to Rs. 3.40 crores has been written down to Rs. 40 lakhs. The replacement of the plant and machinery and renovation are urgently needed, and a complete overhaul of the dye works is overdue. The directors are alive to this problem, and India United Mills spent Rs. 17.80 lakhs on additions to the machines in 1960. With a favourable climate due to the increased tempo of the third plan, Mr. Bhat hopes that the Company's financial position will steadily improve.

the management to pay reasonable dividends and also to execute a phased programme of rehabilitation which is being planned. In view of its improved financial position, India United Mills proposes to spend about Rs. 1 crore a year for purchasing new machines and to complete the renovation of certain sections of spinning and dye works in the next three years. Major repairs and the overhaul of machines, which are not to be replaced for the present, are receiving close attention of the board and a substantial amount is being spent on such work every year. The chairman assured the shareholders that they could now expect the board of directors to function as a homogenous team for consolidating the Company's progress.

More from Vijayeswari Textiles

Vijayeswari Textiles report substantially increased profits for the year ended 31st December, 1960. The dividend is raised to 16 percent from the previous year's rate of 9 percent. The Rs. 100 paid-up shares are now quoted at Rs. 131 with investment enquiry at this rate. The net profit for the year amounts to Rs. 4,67,016, after providing Rs. 4,60,118 for depreciation. The previous year's net profit was Rs. 1,52,035, after providing Rs. 1,01,735 for depreciation. With the amount of Rs. 476 brought in, the total comes to Rs. 4,67,492. Out of this, the directors have transferred Rs. 100,000 to general reserve (against nil). Development rebate reserve gets Rs. 77,500, and gratuity reserve gets Rs. 14,000. The contingent reserve gets Rs. 18,983. The proposed 16 percent dividend, subject to tax, will absorb Rs. 2,55,000. The balance of Rs. 309 is carried forward. The directors say that the Company has now installed the full complement of its sanctioned spindleage, namely 12,180 spindles. The directors propose to expand the spindleage by 10,000, for which application to the Central Government has been submitted and orders are now awaited.

Kumbakonam Electric Pays More

For the year ended 31st March 1961, the Kumbakonam Electric Supply Corporation Ltd has earned a net profit of Rs. 2,87,715.04. The net profit for the previous year was Rs. 2,41,282. With the amount brought forward, which includes excess provision for taxation and refund on revision of income tax and wealth tax, the total comes to Rs. 3,32,024.77. Out of this, the provision for gratuity for previous years comes to Rs. 17,800. The Special Reserve under Electricity Act accounts for Rs. 34,537. Contingencies reserve gets Rs. 15,000 (against Rs. 13,500). Development reserve gets Rs. 60,000. The dividend on cumulative preference shares at 7.8 percent, subject to tax, absorbs Rs. 19,500. The proposed dividend of 12 percent, subject to tax, on the ordinary shares (against 10 percent), will absorb Rs. 1,79,946. The balance of Rs. 5,241.77 is carried forward. Against the Company's application to the State Electricity Board for a loan of Rs. 5 lakhs for carrying out rural extension programmes during the year 1960-61, it was granted a loan of Rs. 2,42,000. During the year, high tension lines to various places, involving a length of 8.53 miles, were completed. Low tension lines were extended in addition to various other L.T. extensions, aggregating to a total of 22.85 miles. The total amount of capital expenditure incurred during the year is Rs. 4,78,205.51.

Ossoor Estates Repeat

During the year ended March 1961, Ossoor Estates Ltd has made a profit of Rs. 1.37 lakhs, compared with Rs. 2.03 lakhs in the previous year. Adding Rs. 42,437 brought forward from the previous year, the total comes to Rs. 1.80 lakhs. From this, taxation provision gets Rs. 35,300. The interim dividend of 5 percent absorbed Rs. 32,500. A final dividend of 10 percent, subject to deduction of tax, has now been recommended, making a total of 15 percent for the year (the same as last year). The final dividend of 10 percent will absorb Rs. 65,000, leaving Rs. 46,714, which is carried forward. A total coffee crop of 145,996 metric tonnes was harvested and delivered to the Coffee Board. This has been valued at Rs. 1.90 a point. The crop was higher than the previous year's production of 135,230 tonnes. The all-in-cost is lower at Rs. 1,990 a tonne against Rs. 2,225 a metric tonne in the previous year. The 1959-60 crop has been revalued at Rs. 2.22 a point. The 1961-62 crop has now been estimated at 155 metric tonnes and the all-in cost of production at Rs. 1,806 a metric tonne.

The directors have been thinking of expanding the Company's activities. The Sulgodu Estate, which is owned by the Sulgodu Estate Private Ltd and which is in the neighbourhood of the Company's properties, is considered to be an ideal proposition for purchase. With this end in view, the

Company resolved at an extraordinary general meeting, held on 16th February, 1961, to authorise the directors to purchase the entire issued share capital of Sulgodu Estate, consisting of 100,000 ordinary shares of Rs. 2 each at a price of Rs. 7.50 a share. The directors referred the matter to the Government for approval. The Company has now received permission from the Government to purchase the shares at a price of Rs. 7, not Rs. 7.50. It has, therefore, become necessary to convene an extraordinary general meeting to obtain approval from shareholders, and it will be held on 18th September, 1961. There are many advantages in purchasing the estate, according to the directors. The property of the Ossoor Estates Ltd is a very old one and the planted acreage was opened 100 years ago. In order to increase production to meet the growing production costs, the directors felt it necessary to expand the Company's activities. For this purpose, it is stated, the purchase of Sulgodu Estate will be useful. The directors say that higher production is the only way to check the rise in cost and offset the fall in prices. A quick increase in production cannot be expected from an old estate. The younger Sulgodu Estate will help step up production.

Wartyhully Estates Earn More

Wartyhully Estates Ltd has made a net profit of Rs. 3.46 lakhs for the year ended March 1961, compared with Rs. 2.78 lakhs for the previous year. With Rs. 1.15 lakhs brought forward from the previous year, the total comes to Rs. 4.62 lakhs. Out of this, taxation provision is allocated Rs. 1.20 lakhs (against Rs. 89,000). A sum of Rs. 50,000 (against Rs. 50,000) has been transferred to general reserve. An interim dividend of 5 percent subject to tax, absorbed Rs. 60,000. The proposed final dividend of 10 percent, subject to tax, will absorb Rs. 1.20 lakhs. The Company has maintained the dividend at 15 percent. After making these appropriations, there is a balance of Rs. 1.12 lakhs, which is carried forward. A total crop of 321,525 metric tonnes was harvested during the year, compared with 171,645 tonnes in the previous year. The cost of production was Rs. 1,977 a tonne, against Rs. 3,260 a tonne. The 1961-62 crop has been estimated at 250 tonnes, with the all-in-cost of production at Rs. 2,267 a tonne.

Indian Plastics Earn More

In spite of the keen competition in plastics and P.F. moulding powder, Indian Plastics Ltd has been able to show slightly better results for the year ended March 1961. Although sales are down from Rs. 86.16 lakhs to Rs. 82.20 lakhs, the gross profit is higher at Rs. 5.01 lakhs, against Rs. 3.59 lakhs in 1959-60. The profit margin works out to around 6 percent, against 4 percent in the previous year in spite of keen competition and higher raw material prices. Depreciation provision has been raised from Rs. 1.64 lakhs to Rs. 3.71 lakhs, and Rs. 36,416 (against Rs. 40,960) has been set aside for development rebate. The ordinary dividend has again been skipped while the preference dividend absorbs Rs. 1.24 lakhs. The carry-forward amounts to Rs. 3,633, against Rs. 33,618 brought in.

The directors state that the demand for P.F. moulding powder has gone down considerably during the current year following the imposition of excise duty. The prices of raw materials have increased more than those of finished goods. The directors state that they are trying their best to improve the working results. The Company has not been able to avail itself of collaboration with Bakelite Gesellschaft M.B.H. of West Germany as permission from the Central Board of Revenue to remit the first payment intimating the amount considered as taxable was received only recently. The money is now being remitted. The Rs. 10-paid share of Indian Plastics is currently quoted around Rs. 9.56.

Bajaj Electricals Profit Rises

The working of Bajaj Electricals Ltd for the year ended March 1961 fully justifies the directors' decision to recommend an increase in the ordinary dividend from 8.10 percent to 9 percent. While sales have risen by 12.5 percent from Rs. 2.13 crores to Rs. 2.39 crores, mainly as a result of a larger supply of electric lamps to the Company from Hind Lamps Ltd, the gross profit shows a rise of about 60 percent from Rs. 9.47 lakhs to Rs. 15.21 lakhs. After providing Rs. 1.41 lakhs (against Rs. 1.18 lakhs) for depreciation and Rs. 5.40 lakhs (against Rs. 3.15 lakhs) for taxation, the net profit amounts to Rs. 7.03 lakhs, against Rs. 4.32 lakhs in 1959-60. After bringing in the previous year's surplus of Rs. 6,664 and the refund of tax amounting to Rs. 24,158, the directors have allocated Rs. 2.75 lakhs (against Rs. 75,000) to general reserve. The provision for development

rebate has been raised from Rs. 25,000 to Rs. 45,000. A sum of Rs. 23,704 has been set aside for short provision for taxation in relation to the previous year. The dividends on both ordinary and deferred shares have been raised, and they absorb Rs. 3.71 lakhs, against Rs. 3.24 lakhs in the previous year.

The Company has a 50 percent interest in Hind Lamps Ltd, and half the production of electric, miniature and fluorescent lamps manufactured by Hind Lamps is supplied to Bajaj Electricals. The directors state that the expansion programme of Hind Lamps is nearing completion, and a further increase in the output of electric lamps is expected in the current year. A further expansion of Hind Lamps is being considered. The Company has added electrical appliances and accessories and anodised aluminium hardware to the diversified lines handled by it. Part of the machinery for manufacturing electrical and scientific instruments has been installed and import licences for the balance are awaited. Bajaj Electricals has received a further licence for manufacturing insulation testers. It proposes to manufacture tungsten filament wire and allied products for electric lamps and fluorescent tubes in collaboration with Philips of Holland. The Company is negotiating for suitable land in Poona for constructing its own building for the expansion of the instrument factory. The Rs. 100-paid share of Bajaj Electricals is quoted around Rs. 115 and the Rs. 75-paid share is quoted around Rs. 79.50. By an ordinary resolution to be placed before the shareholders' annual meeting, the Company's authorised capital is proposed to be increased from Rs. 50 lakhs to Rs. 2 crores by creating 110,000 ordinary shares of Rs. 100 each and 40,000 second preference shares of Rs. 100 each.

Contin Finance Results

In his statement from the chair at the latest annual general meeting of the Contin Finance and Mining Company, held last week in London, Mr. W. J. C. Richards, chairman, said that at the end of June 1961, the total market value of the Company's quoted investments, with those of the subsidiary Company, was £58,740 in excess of the figures taken into the accounts. (Extracts from Mr. Richards' statement appears on another page of this week's Capital.) The Company's holdings, however, had to be kept under constant examination as the rapid advance in the value of shares traded on the London Stock Exchange carried a large element of risk. Although transactions were many, the spread of investments, as shown in the directors' report, did not vary greatly from the previous year. The Company's holdings in mines were reduced and those in commerce and industry were increased. Explaining why a lower dividend had been recommended despite a higher profit before tax, Mr. Richards said that this was due to a provision of £11,100 being made in the consolidated accounts against the Inland Revenue's claim on "the liquidation operations" concerning the Consolidated Tin Mines of Burma Ltd. The claim is, however, being contested, and "if the dispute is settled in favour of the Company, the amount set aside in these accounts will be restored to the profit and loss account."

National Electrical Pays More

The working of National Electrical Industries, Bombay, for the year ended March 1961, shows all-round improvement in production, sales and profits. Production rose from Rs. 62.64 lakhs in 1959-60 to Rs. 83.52 lakhs in 1960-61 and sales from Rs. 63.49 lakhs to Rs. 80.54 lakhs. The gross profit of Rs. 7.60 lakhs showed an increase of Rs. 1.45 lakhs over the previous year's figure of Rs. 6.16 lakhs. After providing Rs. 1.52 lakhs (against Rs. 1.10 lakhs) for depreciation, Rs. 75,000 (against Rs. 45,000) for development rebate, and Rs. 2 lakhs (against Rs. 1.81 lakhs) for taxation, the net profit amounts to Rs. 2.81 lakhs, against Rs. 2.25 lakhs in 1959-60. The dividend on ordinary shares has been raised from 12 percent to 13 percent, and this absorbs Rs. 1.77 lakhs, against Rs. 1.31 lakhs. The preference dividend takes Rs. 77,346, against Rs. 34,851. After allocating Rs. 10,000 (against nil) to modernisation and rehabilitation reserve, there remains Rs. 21,532 to be carried forward, against Rs. 11,032 brought in. The directors have been able to pay a higher dividend without writing back any amount from dividend equalisation reserve whereas Rs. 1.25 lakhs had been withdrawn in the previous year.

The Company's working results in the current year should show further improvement because of the completion of its expansion programme. The directors state that the programme launched two years ago to increase both the range and production capacity of power transformers is likely to be completed by October 1961. The transformer factory is being extended by constructing a new building with a much heavier crane, and some

special items of plant required for manufacturing larger transformers are being installed. With the completion of the expansion scheme, the output of transformers will rise to 30 percent above the present level by the end of March 1962. Simultaneously, the range of production will also be increased to include transformers up to 15,000 kVA and 132 kV. The Rs. 50-paid share of National Electrical Industries is quoted around Rs. 76.

W.I. Vegetable Products Profit Up

The Western India Vegetable Products Co. Ltd has reported satisfactory results for the year ended March 1961. Its sales and profit are higher, although the profit margin works out to only 2.4 percent on the turnover. The sales of finished products and raw materials increased from Rs. 2.23 crores in 1959-60 to Rs. 2.68 crores in 1960-61, and the gross profit improved from Rs. 5.48 lakhs to Rs. 6.48 lakhs. After providing Rs. 1.78 lakhs (against Rs. 1.61 lakhs) for depreciation, Rs. 56,000 (against Rs. 57,209) for development rebate and Rs. 1.80 lakhs (against Rs. 1.60 lakhs) for taxation, the net profit amounts to Rs. 1.87 lakhs, against Rs. 1.31 lakhs in the previous year. From this, the directors have set aside Rs. Rs. 30,000 (against nil) for general reserve. The proposed dividend of 9 percent, taxable, (against the same) absorbs Rs. 1.53 lakhs. The carry-forward amounts to Rs. 2,162, against Rs. 1,089 brought in.

The directors state that the Company has attained "near-full production" on the basis of the licensed capacity, but the profit margin could not be as high as expected due to the unprecedented rise in the prices of main raw materials. The bottleneck in the hydrogen gas section has been removed, and the whole section has been centralised in a new cell house. Western India Vegetable Products has received a licence to manufacture 40 tons of vanaspati a day. It is expected that the vanaspati output will increase substantially during the current year. The Company has still a considerable standby capacity in the refinery section, and this remains unused at present. The solvent extraction plant will not be erected according to schedule due to the failure of indigenous manufacturers to supply the components in time. It is stated that the Company's products are finding favourable markets both in India and abroad. The Rs. 100-paid share of the Company is quoted around Rs. 117 cum dividend, offering a gross yield of 8.3 percent.

Project for Glass Containers

Pramod and Mapara Private Ltd of Bombay has sponsored a new project for manufacturing glass lining chemical vessels used in colour, chemicals, dyes, pharmaceutical and petro-chemical industries. The West German firm of Eisenwerke Kaiser Slautern is collaborating in the venture, and the new Company will be known as Eisenwerke Kaiser Slautern (India) Ltd. The factory will be located in Poona, and the plant will have an annual production capacity of 600 vessels of capacity ranging from 5 gallons to 2,000 gallons. The project is said to be the first of its kind in India. Its total cost is estimated around Rs. 35 lakhs, of which Rs. 25 lakhs will be spent on imported plant and equipment. The plant is expected to go into production by the end of 1962. The Company's authorised capital will be Rs. 50 lakhs, of which Rs. 25 lakhs in equity shares of Rs. 100 each is proposed to be issued in the beginning. It is likely to enter the market for raising capital before the end of the current year.

Plan Targets for Plantations

Speaking at the annual general meeting of the United Planters Association of Southern India in Coonoor on Monday, Mr. H. C. Kothari, president, said that the third plan target for the tea industry has been fixed at 900 million lbs and exports at 550 million lbs. The export target for coffee has been fixed at double the present level. The targets for tea represent an increase of 24 percent in production and 18 percent in exports. While planters appreciate the Government's anxiety to increase exports, they wonder whether the production target is not a little too high. The all-India tea output has increased since 1954 at an average rate of only 12 million lbs a year, whereas to reach the target of 900 million lbs, an average increase of about 40 million lbs a year over the next five years will be necessary. "Considering the relatively small increase in planted acreages that has occurred in recent years, it seems to me that new planting offers little prospect of adding greatly to production," Mr. Kothari said that although India is the world's largest producer and exporter of tea, she does not enjoy a monopoly. Her share in the world market has declined from 41 percent in 1958 to 39.8 percent in 1959 and 36 percent in 1960. In terms of earnings, the reduction is from Rs. 136 crores in

1958 to Rs. 126 crores in 1959 and Rs. 121 crores in 1960. There can be no real gain in planning for increased production when India is losing ground in the world market at the current production levels. Dealing with the marketing of coffee, Mr. Kothari said that an important reason for the present difficulties is that India has produced, and is still producing, a rapidly increasing crop, while overproduction has brought a fall in prices in the world markets. Her 1960-61 crop has reached an all-time high of 67,000 tons, while the world stock of coffee is already sufficient to meet two years' needs. Discussing the development of the rubber-growing industry, Mr. Kothari said that the U.P.A.S.I. is glad that the Government has enhanced the subsidy for rubber replanting. But since replanting is a long-term operation, "I think it will be advisable to cover the disbursement of subsidy under a five-year appropriation instead of an annual one," the president said.

Scrap Export Policy

The scrap trade and industry is greatly perturbed over the export policy for ferrous scrap for the July-December period. While the trade had been keenly awaiting the Scrap Committee's verdict on its plea for interim relief, the new export policy imposes drastic curbs and additional levies in spite of the Central Steel Ministry's earlier decision to maintain the status quo till the Scrap Committee had completed its enquiry. Under the new policy, the export of heavy melting scrap has been banned and the export levy payable on shipment of No. 2, 2a and 3 bundles has been raised from Rs. 7½ to Rs. 15 a ton. The new policy also stipulates that the exporter of No. 2, 2a and 3 bundles shall deliver the domestic furnace owners 20 tons of heavy melting scrap for every 100 tons of inferior scrap to be exported. This will have the effect of doubling the export levy payable to domestic furnace owners for the export of unwanted inferior scrap. The ban on the export of heavy melting scrap will deprive the exporters of inferior scrap of the compensatory incentive of Rs. 5 a ton which accrued to them on account of the permission to ship 1 ton of heavy melting scrap for every 5 tons of inferior bundles exported.

In a memorandum to the Central Minister for Steel, Mines and Fuel, the Scrap Traders and Exporters Association states that the new policy will adversely affect the fulfilment of the year's scrap barter and surplus scrap collection and also give rise to unhealthy scepticism about the Scrap Committee which has still to complete its enquiry. It says that the new policy is unequally weighted in favour of the few domestic consumers of a small quantity of heavy melting scrap and that the high export levy on shipments of turnings and borings will hit the scrap collection drive. In the past when export was difficult, collection was as low as 500 tons a month and it rose to 9,000 tons a month when the export outlook improved. The arising of turnings and borings at present are estimated around 250,000 tons and the domestic needs at 25,000 tons, indicating a huge exportable surplus. The Association has urged the Government to withdraw the levy imposed on turnings and borings. It has also strongly criticised the ban on the export of heavy melting scrap. It contends that there is no shortage of heavy melting scrap in the country and that price control has created an artificial shortage. Instead of easing availability, the export ban will cause supplies to dry up as collections might become unremunerative. Moreover, improved supply of heavy melting scrap is unlikely to solve the problem of billet shortage because heavy melting scrap is no ready substitute for billets. The billet shortage cannot be solved by making available added quantity of heavy melting scrap for which existing furnaces have no melting capacity. The Association contends that the billet shortage can be eased by asking domestic furnaces to adjust the production ratio of billets to castings. It has urged the Government to lift the ban on export of heavy melting scrap. It has also pleaded for skulk exports to be excluded from the trade scrap barter ceiling. On the basis of the expected availability of steel this year, scrap arisings are estimated around 1.5 million tons. The anticipated domestic consumption is placed around 150,000 tons, which leaves a huge exportable surplus. The Association has, therefore, urged in its memorandum that the scrap policy should be directed to achieve the maximum exploitation of the surplus potential by permitting the free export of ferrous scrap.

Oilseeds Prices Fall Sharply

The downward trend in oilseeds prices, which has been in evidence since about the beginning of July, gathered considerable momentum last week. Between 4th and 8th September, groundnut January declined from Rs. 212.37 to Rs. 202 a 250 kilogram, groundnut oil from Rs. 17.40 to Rs. 16.25 a ten kilogram, castor March from

Rs. 167.37 to Rs. 159 a 250 kilogram, and linseed March from Rs. 37 to Rs. 35.56 a 50 kilogram. On 7th July, when futures trading commenced in new crop contracts, groundnut January were quoted at Rs. 225, groundnut oil January at Rs. 19.40, castor March at Rs. 178.87 and linseed March at Rs. 38.31. The marked strength in oilseeds prices until a few months ago reflected mainly the tight supply position of groundnut which had lifted the spot quotation for groundnut Karad bold to an all-time high of Rs. 279 a 250 kilogram. Marketable supplies were restricted because of the prevailing bullish psychology. Even castorseed continued to hold firm in spite of the disappointing export performance of castor oil. But market psychology has undergone a marked change with the satisfactory progress of monsoon. The prospects of a record groundnut crop, variously estimated between 2.7 million tons and 3.1 million tons, against 2.2 million or 2.3 million tons last year, have unnerved stockholders. With buyers reserved and stockholders anxious to dispose of their goods, ready groundnut prices have crashed. The Karad bold variety has declined by Rs. 51 a 250 kilogram since the beginning of July whereas groundnut futures have declined by Rs. 23 a 250 kilogram. The current prices of groundnut appear low compared with the record high levels seen this year. But historically, they are still on the high side.

The coming few weeks are crucial for the groundnut crop. An unfavourable turn in the weather during this period can upset all calculations about the crop. But if the market's present crop estimates turn out to be correct, groundnut prices can be expected to record a further sizeable decline. But few observers expect prices to come down to world parity. Meanwhile, the disparity between Indian and world prices is still very wide. Apart from the pronounced weakness in groundnut which had an unsettling effect on the general trading sentiment, the sharp break in castor futures was attributed to reports that the U.S. Government was thinking of disposing of a large quantity of castor oil, estimated around 69,200 long tons, from its stockpile over a period of five years or so. The sale of stockpile oil can have a significant effect on the export outlook for Indian castor oil. Shipments of castor oil from Bombay between January and August totalled 19,269 tons, against 39,434 tons in the same period of last year. The U.S.A. which took 22,350 tons of castor oil from India in 1960 has not taken even a small quantity so far this year. And with Brazil quoting 14 cents a lb for its first pressure castor oil, there is little chance of India selling any to the U.S.A. this year. It is feared that castor oil exports to the U.K. might also be affected when it joins the European Common Market. While export prospects appear discouraging, the outlook for the new castorseed crop is considered promising, although it is much too early to form any idea about the crop. These prospects of a bumper crop of groundnut have raised hopes of an early announcement of a large export quota for groundnut H.P.S. The export quota for 10,000 tons released on 25th August was exhausted within a few days of the announcement.

Cloth Exports Disappoint

In 1960, international trade in cotton textiles recorded an increase of 11 percent over the preceding year but exports from India fell by 14.7 percent from 814.6 million yards to 694.83 million yards, although foreign exchange earnings were well maintained at Rs. 547 million, against Rs. 547.2 million in 1959. The performance in 1961 is likely to be much worse. The all-India figure for the first five months shows a fall of 48 million yards from the corresponding figure for 1960, and cloth shipments from Bombay during January-August totalled 368.3 million yards valued at Rs. 28.66 crores, against 409 million yards valued at Rs. 31.21 crores in the same period of last year. With world markets offering stiff resistance to high Indian prices bookings for the coming months indicate a gloomy prospect. Increasing competition, import restrictions by some of India's traditional customers and high domestic prices resulting from various fiscal levies and curbs on production and expansion have affected the exports of Indian textiles in varying degrees. The sharp decline in exports in 1960 was mainly due to the cotton crisis which brought in its wake an unprecedented raw material shortage.

In his speech at the annual general meeting of the Cotton Textiles Export Promotion Council in Bombay last week, the chairman, Mr. Neville N. Wadia attributed the declining trend in textile exports to Government curbs on production and expansion and also the lack of enterprise shown by the industry in developing the export of finished goods. The chairman said that with many underdeveloped countries of Africa and Asia strengthening their infant textile industries, grey cloth exports from India are likely to decline whereas the door to printed goods is wide open. But progress in this field has been disheartening, running at a meagre 4 percent of the country's total ex-

ports. Mr. Wadia said that while the extension of the agreement between Lancashire and Hong-kong till the end of 1962 would increase India's quota for that year for goods to be retained in the U.K., Britain's entry into the European Common Market would adversely affect Indian textile exports as the accounts for the largest off-take of Indian goods. The Council, Mr. Wadia said, has recommended to the Government several changes in the incentive scheme which will encourage more mills to enter the field. The Council has emphasised the need for stimulating the export of fine and superfine goods which have been comparatively negligible in the past. Mr. Wadia rightly points out that compared with competitors abroad, Indian industry is "tied hand and foot" with curbs on production and expansion, resistance to rationalisation and modern machinery and numerous other impositions of excise duties on finished products as well as on a large number of items used in the course of manufacture. So the industry cannot renovate its equipment or expand the production to meet the ever-increasing demand at home and abroad. The competitive strength of the industry cannot be built up unless it is permitted to install automatic looms and rationalise its production. The Government of India's decision to give licences for the establishment of five modern mills to produce cloth for export is unlikely to help the industry's cause.

Indian Banking Statistics

The Statistical Tables Relating to Banks in India, 1960, issued by the Reserve Bank, contains detailed statistical information relating to Indian banking. The data are presented in two sections. The summary tables, forming the first section, give consolidated data for the various constituent units of the Indian banking system, namely, scheduled banks, non-scheduled banks and co-operative banks. The detailed tables, under section 2, contain information on the various items of assets and liabilities as well as profits of scheduled and non-scheduled banks based on their balance-sheets as at 31st December, 1959 and 1960, and the profit and loss accounts for 1959 and 1960. This publication is a useful supplement to the Report on the Trend and Progress of Banking in India, 1960, released in last June, which reviewed in detail developments in the sphere of commercial banking in India as also the Reserve Bank's policies.

During 1960, the increase in the deposits of scheduled banks was much smaller than in 1959 even after taking into account the phased transfer of P.L. 480 funds from the State Bank of India to the Reserve Bank, at the rate of Rs. 12 crores a month from July 1960 onwards. The rise in bank credit, however, was quite sharp, compared with the rise in 1959. In order to meet the demand for more funds, the banks had to run down a part of their investments in Government securities. The deposits and loans of non-scheduled banks witnessed a decline in contrast to a rise recorded in 1959. Total earnings of banks were larger in 1960 than in 1959, mainly due to a marked increase in the level of advances and partly to a rise in their lending rates.

Registration of B.I.C. Shares

Dismissing a petition by a Calcutta firm called Financiers Ltd against the refusal of the British India Corporation Ltd, Kanpur, to register some shares purchased by the petitioner, Mr. Justice Broome of Allahabad High Court said he was not satisfied that there had been any unreasonable delay in effecting registration. He added that the petitioner had been unable to explain why the balance-sheet of the Company had not been sent when all other demands of the B.I.C. had been met. He accordingly directed that the petitioner should furnish a copy of the balance-sheet in question to the committee of management of the B.I.C. and within two months of its receipt, the committee of management would decide whether to allow or refuse registration. It appears that registration had been applied for by the petitioner in November 1959, but various objections were raised by the B.I.C. which demanded, among other things, a list of directors of the petitioner's Company, a copy of the balance-sheet and so on. During the period that elapsed between January 1960 and January 1961, the petitioner complied with all these demands but the balance-sheet was not sent. So the B.I.C. refused to enter the petitioner in its register of members. On behalf of the petitioner, it was contended that under the articles of association, the B.I.C. had the power to refuse registration only to those shares in which the Company had a lien. The shares purchased by the petitioner were all fully paid up, and the B.I.C. had no lien on them. On behalf of the B.I.C. it was submitted that the Company was being run by a committee of management appointed by the High Court. The committee—in view of the previous sad experience of the Com-

pany at the hands of speculators, wished to exercise extreme caution before admitting fresh members to its register. It was for this reason that the balance-sheet of the petitioner was demanded to enable the Corporation to institute enquiries for finding out whether he was the real purchaser of the shares in question or only a benamidar.

K.E.S.A. Annual Report

In its annual report for the year ended March 1961, the Kanpur Electricity Supply Administration says that the pending power demand in Kanpur is about 175,000 kilowatts, against the present generating capacity of 57,740 kilowatts. The report says: "There has been no relief to the existing old plant which has been operated under extreme pressure and without adequate standby necessary for overhaul and repairs. Much of the plant in the power-house has long since outlived the maximum economic life of 25 years prescribed in the Electricity Supply Act, 1948, and it is only by unremitting care in its maintenance and repairs within such short intervals that it has been possible to carry the load on the power-house. The situation is a continuing risk to the continuity of electricity supply."

The K.E.S.A. did a record business during the year. The production of 304.8 million units and the revenue of about Rs. 2.49 crores was higher than that attained by the undertaking in history. The maximum demand on the system reached a new peak of 57,740 kilowatts which was higher than the highest recorded in any previous year by 3,515 kilowatts. The generation of electricity increased by about 27.3 million units over the production in the preceding year. The undertaking was faced with a demand for electricity for industrial and other purposes totalling 70,000 kilowatts, which was in addition to the normal growth in load. Since then, further demands on electricity have been received, raising the total demand to 175,000 kilowatts. The annual report says that the installation of an additional generating plant is an imperative necessity. It is proposed to make a beginning with the setting up of 3 x 60,000 kilowatts generating station. The Kanpur power system is also to be connected to the State grid starting from Rihand in the south-east and extending north-west to the Yamuna project near Dehra Dun.

I.D.A. Loan for U.P. Tubewells

Uttar Pradesh has been given a development credit equivalent to \$6 million (Rs. 2.80 crores) by the International Development Association for the expansion of tubewell irrigation. The project provides for the drilling and equipping of 800 tubewells in the first three years of the third plan. The estimated cost of the project is \$12 million, and the I.D.A. loan is intended to cover half the cost. The number of State tubewells in U.P. in 1946 was 1,847, irrigating 12.5 percent of the total irrigated area in the State. Between 1946 and 1951, another 458 tubewells were constructed bringing the total to 2,305. Between 1951 and 1961, the number rose to 3,948, which is by far the largest in any State in India. Bihar, in fact, gave up the programme of State tubewells altogether during the second plan period. The State tubewells in U.P. have, however, been continuously running at a loss for various reasons. The capital cost on these tubewells at the beginning of the current financial year was Rs. 31.12 crores. The losses have been placed at between 7.4 percent and 8 percent. The recent report on minor irrigation prepared by the Programme Evaluation Organisation of the Planning Commission said that the economics of a tubewell—given its level of capital cost and overhead charges—depends on the cost of power and the number of hours it is used. In both these aspects, the record in U.P. has been rather poor.

The expectation in the State, when the tubewell programme was extended, was that cheap hydel power would be available for energising them. Actually, a number of tubewells are run on thermal power, and some even on diesel power. The rate of hydel power charges to tubewells in U.P. is about 3½ pias a unit, compared with about 2½ annas a unit of thermal power. The distribution cost of electric power also becomes relatively high in rural areas because of the long transmission lines. The Programme Evaluation Organisation has also commented upon the practice of fixing "the culturable command area" of a tubewell in excess of the area it can actually irrigate. In U.P., the average C.C.A. a tubewell is fixed at about 1,000 acres, although the total area actually irrigated averages no more than 250 acres. The P.E.O. report says: "Fixing the C.C.A. on the higher side adds to the difficulty of irrigation and increases its cost. The high C.C.A. affects the interests of the cultivators in the command area adversely. There is a justification for reducing the C.C.A. and determining it in such a way that

the intensity of irrigation to be achieved in the tubewell command is much higher, at least 80 percent, if not more." Although it is presumed that tubewell water is to be used for foodgrain production, in U.P. it is also diverted by cultivators for the sugarcane crop. The State's Irrigation Department has calculated that a tubewell can just break even if it runs for 2,300 hours a year, against the present average of 2,000 hours. But this is dependent on the availability of power, and the construction of new tubewells with the I.D.A. loan may not fulfil the ends in view unless the Government also takes steps to augment the power supply.

Sugarcane Acreage in U.P.

With a view to checking the growing acreage under sugarcane in the State, the U.P. Government has decided to revise the method of bonding—the system under which the cane unions enter into yearly contracts for supplying sugarcane to factories. The new formula for bonding will permit the cultivators to contract for supplies only to the extent of the last five years' average plus 12½ percent extra. It is, however, by no means certain that restricting the quantity of contracts will alone bring about an automatic reduction of the area under sugarcane cultivation. Sugarcane is the safest crop for the cultivators since it brings an assured price. Because of the cumulative advantages enjoyed by the crop, more and more land in the State has been brought under sugarcane. In two years' time, the area under cane increased from 2.7 million acres to about 3.5 million acres. In the reserved or classified zones of the factories, the acreage increased from 1.9 million to 2.5 million. The low yield an acre in U.P. has been a source of increasing concern, it having remained static for the last 25 years, although a separate department for sugarcane development was set up in 1935. The department has been claiming that it distributes improved variety of canes worth Rs. 75 lakhs every year, besides giving seed subsidies amounting to Rs. 10 lakhs. The claim is disputed by the sugar industry in the State which says that the total expense of the Cane Development Department is Rs. 2.80 an acre, most of which is paid by way of salary and travelling allowance and only about 0.37nP an acre goes to the cane grower. Assuming that improved varieties of canes are distributed, it has been pointed out by competent authorities that there are serious limits and even risks to the wholesale dependence on new varieties. Dr. R. R. Panje, Director of the Indian Sugarcane Research Institute in Lucknow, while maintaining that even the existing varieties are capable of yielding three times more, says that most "new varieties are falling off from their initial promise within the time it takes them to spread." He adds: "While varietal selection has gone ahead at an increasing rate, varietal failure in cultivation has kept pace with it too. The kind of situation has been unfortunately with us now for so long that failures of varieties and their replacement by new ones is taken by many as a normal feature of the industry. It is astonishing to find many otherwise well-informed persons insisting that varieties should be tested faster and faster and released earlier and earlier."

CONTRACTS AND THE LAW

THERE is nothing more absolute in law than that a contract is a contract, and nothing more true in practice than that a contract is frequently more honoured in the breach than in the observance. When a dispute arises and the case is taken into Court, it is often more difficult to prove that the plain English of a contract bears its ordinary and literal meaning than to disprove that it has not an entirely different interpretation. It may be assumed that the breach in the observance of the terms of a contract is occasioned by the action or inaction of one of the parties to it, and it is not uncommon for the party who commits the breach to be the plaintiff in the law suit resulting therefrom. Thus it may and does happen that the literal wording of a contract is sometimes interpreted by the Courts of law according to what is deemed to be the intention of the contracting parties, and sometimes on the other hand the intention is not admitted as overriding the actual wording. The law of contract has engaged the study and learned research of many eminent lawyers, and volumes of legal treatises have been compiled and published to show how easy it is to make a contract and how ingeniously it may be converted into an instrument for litigation. The complications and contradictions which so frequently happen through the interpretation of the wording and meaning of a contract by the Courts of law, generally do arise from too great reliance on precedent and too little knowledge and understanding of the real intention of the contracting parties.

A Ditcher's Diary

I AM QUITE PREPARED TO BELIEVE THAT IF TOMORROW there is a referendum on Prohibition the majority of the Indian people will vote for it. I am equally certain that they would vote against India's secular Constitution, against the Hindu Code, against cow slaughter, against English education, against all taxation and perhaps also industrialisation—in fact against everything Mr. Nehru and his Government stand for. There is, therefore, no democratic argument in favour of Prohibition; progress itself would then be ruled out. If it be said that only a small minority in this country drink (a proposition yet unproven because in large parts of India peasants drink plenty) the answer is, then why bother about so negligible a minority? But Mr. Morarji Desai, Mr. Shriman Narayan and Mr. G. L. Nanda are not even interested in rational arguments. When the first-named claims that Prohibition is an economic programme, as well as being a moral and social one, he is only being more hypocritical than he ought to be. Part of the dangerous success the fanatics are now so near to achieving I attribute to the failure of the more rational among India's leaders to be more articulate and assertive—chiefly men like Mr. Nehru, Dr. B. C. Roy, Dr. Mahatab and Mr. A. K. Sen. Mr. Nehru's views on drink are clearly stated in his Autobiography. He has since allowed himself to be swamped by the noisy and the orthodox in the Congress Parliamentary Party; and the liberalism in which Mr. Nehru personally believes is not part of what looks like being the official policy. To a lesser extent this applies to the others I have named; none of them is a toper or an addict, but they are all sensible enough to know the futility of Prohibition, to say nothing of the worse evils it brings in its wake. Have they spoken out? I have the same charge against many journalists in the country. Not many of them care either for Hindi or for Prohibition—the two are linked—and yet their opposition to either piece of illiberal orthodoxy has at best been half-hearted. Thus is liberalism defeated either by fascists or by communists; and even the C.P.I. and the Swatantra seem equivocal. The Spectator has recently published extracts from Kenneth Allsob's book, The Bootleggers, which I hope eventually to see on sale here in India. It deals with Prohibition in the U.S.A.—"The era of clear thinking and clean living", which turned out to be one of the most alcoholic periods in American history and certainly the one which saw the most organised crime. It is interesting to learn how closely the bootlegging fraternity was linked with politics in the various States. So much so that no local election candidate could hope to win unless he had the bootleggers and racketeers behind him. I have heard similar stories about Congress politics in Bombay; and if they are untrue now, I fear they might not always be so. Bootleggers' prices for hooch will not be quoted in Capital; but the daily Press can certainly look forward to a much enlarged crime page—all a present from the Prohibitionists.

"DO YOU KNOW" SAID THE STERN FATHER TO HIS mendacious son, "what happens to little boys who tell lies?" "Yes" said the boy "when they grow up they become weather forecasters". Nobody who has found himself sweating in a thick suit on

a hot day, or caught in a shower without his umbrella, is going to quarrel seriously with that statement. And when Lord Casey talks about the "humiliation" suffered by humanity at the hands of unexpected weather, he expresses the heart-felt indignation which most of us have shown at times. But I often wonder what ought to be done about weather—meaning to decide exactly what kind of weather one requires—is another. Suppose, for instance, (and this always seems to happen in the U.K.) the farmers want rain to water the crops whereas the rest of the country wants fine weather for holiday-making, who would decide which to have? Whoever he was and whatever his decision he could not expect to be popular; and if he were a politician he might lose the next election. Between two countries, this kind of conflict could produce a war. No, the old aphorism that you can never please everybody is true of the weather more than anything else. I could foresee other complications. The Russians proposed some time ago to orbit a huge reflector in space so as to give Moscow the benefit of sunshine all the year round. But suppose the Muscovites enjoyed their fair weather so much that they forgot all about making 100 megaton nuclear bombs and surpassing the West in productivity? Then Mr. Khrushchev would be left to tear his hair in frustration while the sun-warmed people of Moscow disported themselves in pavement cafes. Mind you the prospect has some appeal for me, although probably not for Mr. Khrushchev. To go to the other extreme, I myself have always maintained that Indian productivity will never reach western standards until the whole country has been air-conditioned. But on a sober view of things I think the old saying that "everybody complains about the weather but nobody ever does anything about it" had better stay true for just a little while longer.

SIR PAUL GORE-POOTH'S CHOICE OF SUBJECT FOR his Feroze Gandhi Memorial Lecture on Thursday was, I thought, very apt. He spoke as I would expect a British civil servant to speak although, referring to the very different American system, he was good enough to concede that "advantages are not all on one side." They indeed are not, and I was reminded of a harangue I was subjected to once by a loud Harvard man. Passionately convinced that the New Deal was the next best thing to the Second Coming, he succeeded in persuading me that President Roosevelt might never have put the New Deal through with a British type of civil service in the U.S.A. My admiration for the British civil service is considerable without being uncritical; but in a society less scrupulous and gentle than Britain's today (yesterday is another matter), a supposedly non-political but permanent civil service can present the people with the worst of both worlds. The Indian Civil Service was excellent for the limited purposes it was intended

to serve. It was incompatible with elected Ministers with real authority; and it had to go with British rule. I am well aware that some of the surviving I.C.S. have served the country well—mainly in terms of "continuity", a word used frequently by Sir Paul. It is possible to argue from this point that the Nehru Government never attempted anything so "revolutionary" as the New Deal; but that would be unfair. What I suggest is that the I.A.S., which is beginning to acquire some of the arrogance of the I.C.S. without an equal insistence on integrity and efficiency, is developing on lines that can serve neither a revolutionary régime nor an alien or continuous one. (That some of the members of the old I.C.S. set deplorable examples is neither here nor there, though the fact should be recorded as proof of unprincipled surrenders by a once proud caste.) Am I wholly wrong in thinking that many of the transfers now taking place in the districts are in some way connected with the coming elections, during which some officers are electing to be more "accommodating" than others? Free primary schools, health centres and other symbols of a welfare State are mushrooming in many places. Are they being located without a thought of possible electoral advantages to certain Parties or candidates? All this could be done only with the assistance of the allegedly non-political civil service of India. There is no limit to how non-civil some politicians can get. But how non-political can a civil service stay—in some conditions?

SOME YEARS AGO, I HEARD IT SAID THAT FEW MEN in mid-century British politics exemplified the pristine idealism of the Labour movement more faithfully than Lord Pethick-Lawrence, who died in London last Sunday at the ripe old age of 90. Without necessarily endorsing the remark at the time, I could always appreciate the sincerity with which it was made, in this country at least: the debt of gratitude which India owed Lord Pethick-Lawrence for furthering the cause of her independence has never been forgotten. In his own quiet and unassuming way, he had helped build the framework of limited self-government which materialised some years after the famous Round Table Conference of 1931; later, as Secretary of State for India and Burma in the post-war Labour Government, he played a major rôle in paving the way to complete independence. Although usually considered as one, Lord Pethick-Lawrence to my mind was never a politician in the true sense of the term. He was an intellectual, despite his deviation from what could have been a brilliant academic life; and he was also an idealist, who chose to make his way via Eton and Cambridge to social work in the East End. Politics, it seems, were primarily a means of giving his intellectual preferences and his ideals some practical significance. Occasionally his devotion to various causes led him into serious errors of judgment, as in the more violent days of the suffragette movement, or when, as a pacifist, he opposed Britain's entry into the first world war. But about the sincerity of that devotion, there was never a doubt. Many may regret that Lord Pethick-Lawrence's influence in the Labour Party was restricted somewhat by his shortcomings in oratory, and by a certain personal diffidence. But that the influence was considerable, even in the heyday of men like Bevin, Morrison and Cripps, no one will deny. The influence was born of a brilliant mind and a kindly heart which Labour, Britain and India will now sadly miss.

CONTIN FINANCE & MINING CO. LTD.

CHAIRMAN, MR. W. J. C. RICHARDS'S
STATEMENT

The fifth annual general meeting of Contin Finance and Mining Co. Ltd., was held on September 5, 1961, in London.

Mr. W. J. C. Richards, Chairman, presided, and the following is his Statement circulated with the Report and Accounts for the year ended 30th June, 1961:—

The rapid advance in value during the year of most stocks dealt in on the Stock Exchange, carried a large element of risk, and the Company's holdings were constantly under examination. There were many transactions although the spread of investments as shown in the Report does not vary greatly from last year. Our holdings in mines were reduced and those in commerce and industry were increased. At the end of the year the total market value of our quoted investments, with those of our subsidiary company, was £58,740 in excess of the figures taken into the accounts.

Rise in Profits Tax

The profit before taxation was a little more than the year before, but profits tax has increased and the profits of the subsidiary company may be assessed in a manner which could not have been foreseen. Shareholders who derived their holding from The Consolidated Tin Mines of Burma Limited will recall that it was necessary to give a blanket guarantee for the liabilities of that Company in order to liquidate it and be entitled to a remittance of its funds from Burma. We had to assume liability for the continuing operations of the Mining Company until it was liquidated, and a dispute has arisen with the Inland Revenue regarding taxation arising from these operations. We are resisting the Inland Revenue claim which is estimated to amount to £11,000, but provision has been made for it in the consolidated accounts. This has made a heavy inroad into the profits for the year, and is the reason why the Directors are recommending a lower dividend than last year. If the dispute is settled in favour of the Company the amount set aside in these accounts will be restored to the Profit and Loss Account.

After having written a further £10,000 off the debt of The Consolidated Tin Mines of Burma Limited (in Voluntary Liquidation), its value in our books is realistic and no such provision will have to be made in future. Bearing this in mind, together with the surplus on the book value of our investments and the possible successful issue of the tax dispute, the Directors feel justified in recommending a dividend which draws on the balance brought forward.

The report and accounts were adopted.

Money

THE CALCUTTA MONEY MARKET

ADVANCES INCREASE

Wednesday, 13th September.

ADVANCES in the Calcutta money market have registered a slight increase during the past week, chiefly on account of the requirements of the cotton mills and against grains and seeds storage. The jute industry has slightly lowered its demand for funds, and very little change has taken place in the needs of the sugar mills and the engineering and iron and steel industries. In the interbank market, the call rate has increased to between 4½ and 4¾ percent, nominal. The tightness is due to the accumulation of funds for tax payments this week-end.

There has been a fall in the supply of bills in the exchange market, chiefly on account of gunnies. The quantity of tea bills has been well-maintained. Remittance demand has been fair. In the London money market, the pound has strengthened on the publication of the sterling area's gold and convertible currencies reserves for the month of August. At the close, gains were registered against all major currencies and, in particular, the U.S. dollar.

BULLION WAS STEADY DURING THE PAST WEEK DUE TO increased bull support. Silver advanced from the previous week's level of Rs. 237.50 to Rs. 238, quoted today for ready delivery. The rate for forward delivery was Rs. 203.50. The London and New York prices were 80-5/8d and 91.375 cents.

Gold was steady in sympathy with silver and the price rose from Rs. 146 to Rs. 147. The sovereign at Rs. 95.50 showed little change.

DURING THE WEEK ENDED 8TH SEPTEMBER, GOVERNMENT of India Treasury bills for Rs. 20,61,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 12th September. The total amount offered was Rs. 2,10,00,000. Tenders at Rs. 99.40 percent were allotted approximately 95 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 18th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 13th September to 16th September at Rs. 99.416 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 4th September to 9th September amounted to Rs. 1,27,75,000.

THERE WERE RISES OF Rs. 26.24 CRORES TO Rs. 1,899.86 crores in active notes and of Rs. 13.36 crores to Rs. 1,907.79 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 8th September, 1961. The currency expansion was covered by increasing Rupee securities of the paper currency reserve by Rs. 15.01 crores to Rs. 1,548.57 crores. This was presumably done by transferring securities from the Banking Department, in which investments declined by Rs. 14.27 crores to Rs. 261.16 crores. Deposits of the Government of India rose by Rs. 10.99 crores to Rs. 63.50 crores and other Government accounts by Rs. 12.12 crores to Rs. 31.95 crores. Balances of commercial banks at Rs. 75.85 crores showed a decline of Rs. 25.40 crores due to the subscriptions to the new State Government loans. Balances held abroad again fell by Rs. 86 lakhs to Rs. 18.73 crores. Other loans and advances rose from Rs. 116.78 crores to Rs. 134.75 crores, of which advances to scheduled banks against usance bills amounted to Rs. 5.49 crores (Rs. 36 lakhs). Ways and means advances stood at Rs. 48.11 crores, against Rs. 53.32 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 1st September, 1961, shows a rise of Rs. 1.65 crores to Rs. 526.85 crores in total deposits. Investments in Government securities are up by Rs. 8.99 crores to Rs. 261.27 crores, while other authorised investments remain unchanged at Rs. 9.37 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 1.99 crores to Rs. 236.46 crores. Cash and balances are, in consequence, shown at Rs. 29.04 crores or Rs. 1.57 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 1st September, 1961, shows Demand and Time liabilities at Rs. 844.73 crores (Rs. 22.85 crores on account of borrowings from banks) and Rs. 1,154.14 crores (Rs. 18.59 crores) compared with Rs. 839.64 crores (Rs. 19.72 crores) and Rs. 1,156.13 crores (Rs. 18.39 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 85 lakhs and Rs. 3.29 crores to Rs. 45.16 crores and Rs. 94.00 crores, respectively. There is a rise

MR. AL FOIL GOES OVERSEAS

"Westward Ho!" shouted Mr. Foil, importantly perched upon a tea chest, "I go as a Protector of Tea (Aluminium lining for tea chests and packages) and come back with foreign exchange. Busy voyage ahead, though," Mr. Foil continued shouting, "What with having to keep out the damp devil and keep in the tea flavour. But I am not worried. Have long experience in the matter of lining tea chests with aluminium foils which stand up to all sorts of ill usage like rough crossings and wet weather (the Bay of Biscay and the Channel y'know) ... In fact, aluminium foil packaging keeps the tea full flavoured and factory fresh right up to the tea lover's table ... to England, America or any place in the world ... I, Al Foil, alumnus of aluminium, guarantee satisfaction!"

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries.

URBAN CO-OPERATIVE BANKS: A SURVEY

THE Reserve Bank of India has just published a report on the survey of urban co-operative banks which was conducted in 1958-59 in accordance with a recommendation made at the first Bombay State Co-operative Urban Banks Conference held in Bombay in August 1957. The main object of the survey was to study the organisation, methods of business and rôle of urban co-operative banks in financing small-scale industries. The survey covered a representative sample of 93 urban banks in ten States and one union territory and also a sample of both industrialist and non-industrialist members of each of these banks.

It was found that although the average membership of the urban banks had risen by about 20 percent during the three-year period 1955-56 to 1957-58 such members constituted only 5 percent to 15 percent of the population in the area of operations of the banks. There is thus considerable scope for increasing the membership of the banks. Furthermore, a majority (57 percent) of the members of the banks was engaged in "trade" and "profession and service" and only a small proportion (8 percent) of the members was engaged in "industry".

Average Working Capital

The average working capital of the banks worked out to Rs. 5.55 lakhs, of which owned funds constituted 22 percent, deposits 71 percent and borrowings from co-operative financing agencies and other sources 7 percent. Urban banks in Bombay, Madhya Pradesh and West Bengal had a sizeable proportion of savings deposits, while those in other States had a sizeable proportion of fixed deposits. The proportion of current deposits was sizeable in Madras and West Bengal. Generally, non-members accounted for a higher proportion of deposits than members. The rates of interest offered by the banks on deposits were found to be on par with the rates offered by commercial banks in most States. The financial accommodation granted by the banks was predominantly in the form of fixed loans. Short-term loans advanced by the banks studied during the survey accounted for about 78 percent of their total loans. Medium-term loans were predominant only in the States of Assam, Madhya Pradesh

and Orissa. None of the banks reported long-term loans.

Loans against personal security formed 48 percent of total loans while those against merchandise, bullion and real estate individually formed less than 20 percent. Assam, Bombay and Mysore accounted for a large part of the loans against personal security while Andhra Pradesh, Madhya Pradesh, Orissa and West Bengal had a considerable proportion of loans against real estate. Loans against bullion and ornaments constituted a high percentage in Kerala and Madras and those against merchandise in Punjab and Delhi. In Andhra Pradesh, Madras, Kerala, Orissa, Madhya Pradesh and Assam, loans for domestic purposes and for repayment of old debts were sizeable. Loans for business purposes were predominant only in Bombay, Mysore, Punjab and Delhi. In West Bengal, a major portion of total loans was for industrial purposes.

Proportion of Overdues to Demand

The proportion of overdues to demand exceeded 40 percent in Assam, West Bengal, Orissa, Madhya Pradesh and Punjab and Delhi, while in Andhra Pradesh, Madras, Mysore and Kerala, it varied between 10 percent and 40 percent. The proportion was the lowest in Bombay at 9 percent. A major portion of the loans outstanding carried interest at rates varying between 7 percent and 9 percent a year in all the States except Assam and West Bengal, where a substantial portion of the loans outstanding carried interest at rates varying between 9 percent and 12 percent a year. Rates of interest over 12 percent a year were reported in a few cases in Andhra Pradesh, Madras, Assam and West Bengal.

Nearly 61 percent of total investments of the banks studied during the survey was in Government securities, followed by investments in fixed deposits, which constituted 20 percent of the total. The average earnings of the banks rose by 26 percent from Rs. 25,400 in 1955-56 to Rs. 32,000 in 1957-58. The average earnings were the highest in Bombay at Rs. 79,600 and were less than Rs. 30,000 in the other States. Parallel to the rise in average earnings, the average expenses of the banks also rose by 25.5 percent from Rs. 19,600 in 1955-56 to

Rs. 24,600 in 1957-58. Nevertheless, the average profits of the banks increased from Rs. 5,900 in 1955-56 to Rs. 7,400 in 1957-58 or by about 25 percent. The arrangements for audits of these banks were found to be adequate in most of the States. The arrangements for supervision were, however, found to be neither adequate nor uniform in the different States. There were no uniform or systematic arrangements for inspection too. Most of the urban banks studied during the survey had no buildings of their own. Consequently, arrangements made by them for safe custody of cash were found to be not quite satisfactory.

Total Borrowings

The sample of members studied showed that about 52 percent of total borrowings of industrialist members and 70 percent in the case of non-industrialist members were supplied by urban banks. Almost the whole of the borrowings of industrialist members was for industrial and business purposes while about 70 percent of the borrowings of non-industrialist members was for business purposes, the balance being for domestic and other purposes. Of the total borrowings of industrialist members, 48 percent was against personal security, 35 percent against merchandise and 15 percent against real estate. The corresponding percentages for non-industrialists were 70, 5 and 13.

As for the rôle of urban banks in the financing of small-scale industries, it was found that only in Bombay, Kerala, Madras, Mysore, Punjab and Delhi and West Bengal, loans were granted by the banks for industrial purposes during 1957-58. Furthermore, the industrialist members appeared to rely mostly or wholly on their own resources for their fixed-capital investment in industry. While commercial banks played an important part in providing the working capital requirements of industrialist members in Andhra Pradesh, Bombay, Kerala, Madhya Pradesh and Madras, the non-industrialist sector comprising mainly of money-lenders and traders supplied almost the entire working capital requirements of industrialist members in Assam and about 86 percent in Punjab and Delhi.

Although urban banks play at present a minor rôle in the financing of small-scale industries, the fact that they are suitable for catering to the needs of individuals living in urban centres and are engaged in a variety of industrial activities has been recognised. The Sub-Committee of the Small-Scale Industries Board, set up in 1956, made detailed recommendations for using the medium of urban banks for channelling finance to small-scale industries. These have, however, not been effectively implemented so far. Recommendations have also been made in certain quarters for bringing the urban banks within the orbit of Reserve Bank finance and also for the extension of the credit guarantee scheme to them. These recommendations deserve early consideration in the interests of the rapid development of the small industries sector of the economy.

Uneven Development

The general picture of co-operative urban banking as it emerges from this study is one of a fairly widespread, financially sound, expanding and useful framework of banking institutions which have their own place of importance in the banking structure of a large part of the country. However, their development is found to be uneven as in certain States they have not made much headway. But, with the rapid pace of economic development and industrialisation in the country, the need for the expansion of banking facilities is bound to be keenly felt in urban centres in the near future, and urban banks will be required to cater to the credit needs of the urban people to an increasing extent. Because of the significant contribution which the urban co-operative structure can make to the development of a sound and satisfactory co-operative banking system, positive efforts are needed for the rapid promotion and development of urban banks. Some of the directions in which this may be done are:

- (1) An assessment may be made of the scope for the establishment of urban banks in new centres.
- (2) Active efforts may be made by the management of urban banks to expand their membership, diversify their activities, and offer a wider range of facilities to their members.
- (3) In their loan policy, the urban banks should adopt a sufficiently wide and diversified system of lending to suit the needs of the different categories of members.
- (4) The working of urban banks should be placed on sound and efficient lines by reducing emphasis on trading activities, by the toning up of accounting and operational efficiency and by reduction and avoidance of overdues.
- (5) There should be a continuous building up of member-relations.
- (6) The banks should be better housed in order to enhance their popularity and promote public confidence in them.
- (7) State Governments should ensure adequate arrangements for audit, inspection and supervision of the banks, and where necessary, extend special facilities and aids to them, such as those recommended by the Sub-Committee set up by the Small-Scale Industries Board in 1956 and by the Seminar held in Hyderabad in 1959. The Report says: "The development of urban banks cannot take place either entirely or mainly on the initiative of the State Governments. The banks themselves should adopt a progressive attitude and make arrangements to examine their own problems, pool their experience and help each other in various ways".

Stocks and Shares

MODEST RECOVERY FOLLOWS MEETING WITH FINANCE MINISTER

TRANSPORT AND RAW MATERIAL DIFFICULTIES WORRY OPERATORS.

Wednesday Evening.

THERE has been a modest recovery in the stock market during the past week. Selling pressure has declined and confidence has started returning slowly because the week-end meeting between the Finance Minister and the presidents of the various stock exchanges has removed a major uncertainty. Mr. Morarji Desai made it clear that the stock market authorities should themselves take appropriate steps to restrain excessive speculation. His view is considered appropriate because the delicate working of the stock exchanges could be harmed if the Government were to enforce reforms hastily.

Few operators deny that there is scope for improving the working of the stock exchanges. Experience shows that haphazard and isolated measures taken by a single exchange can easily become abortive. When Calcutta, for instance, imposed margins on sales of five speculative shares a short while ago in order to restrain selling, the aim was not achieved because these shares were sold freely in the other stock markets. In the circumstances, it is hoped that if all the markets can act together, the remedial measures are likely to be more effective. It is reliably learnt that a committee of various stock market officials has already been formed in order to formulate measures to improve their working.

The fact that the week-end's meeting was attended by the chairman of the Life Insurance Corporation, the chairman of the State Bank of India and the Deputy Governor of the Reserve Bank, has persuaded operators that these institutions might help in restoring confidence. Although the Life Insurance Corporation is believed to have bought some shares, its support is still small. Now that the State Government loans have been fully subscribed, it is thought that the L.I.C. may extend greater support to industrial shares.

In spite of these favourable developments, the trend may not improve much, at least for the time being. Large funds have been mopped up by new issues. The warm response given to these issues is willing to take risks, especially when shares with growth potentialities can be bought at par. Meanwhile, money conditions have become tighter, and when the trade demand for funds gathers momentum in coming weeks, the pressure on banking resources will increase. Under the circumstances, it is hard to assess the extent to which fresh resources will become available for investment in existing stocks and shares.

Corporate news has been mixed in character. The turnover of many companies has increased steadily and is likely to rise further as domestic demand grows. But there are two disturbing factors. One is the growing shortage of raw materials and transport facilities. The second is that profitability is being affected by rising production costs. In the case of some commodities such as steel, cement and paper, ex-factory prices have been fixed by the Government at unremunerative levels. The latest reports of some companies show that profits have declined in spite of an improvement in operational efficiency.

At today's settlement, share prices are generally higher and the carry-forward charges have been slightly increased because the next settlement will be held after three weeks instead of two weeks. Indian Iron has improved fractionally to Rs. 25.30. The production figures issued by the Company for August 1961, show that the output of steel ingots has declined from 77,595 tons to 76,053 tons and that of saleable steel from 65,720 tons to 62,609 tons, to which semis contributed 6,644 tons (against 14,825 tons) and finished steel 56,965 tons (against 50,895 tons). The output of pig iron is higher at 101,000 tons (against 100,407 tons). Despatches have improved from 53,410 tons to 62,156 tons.

Engineering shares have been bought at improved levels. Interest is being taken in Britannia Engineering on prospects of a rights share issue due to the diversification of activities. Texmaco, Guest, Keen, Williams and Jessop have improved.

Selected miscellaneous shares are in demand. Associated Batteries, Indian Cable, Dunlop Rubber, Britannia Biscuits, Goodyear India and British Faints have increased. Rohtas appear to have settled down at the present low figure on the hope that paper prices may be increased. Hindustan Motors have fluctuated widely and Indian Aluminium have become steadier. Railis have reacted on replacement buying. Metal Corporation have improved on expansion prospects. Scattered support has been forthcoming for Orissa Minerals, Alkali Chemical and Union Carbide. Among new shares, Hindustan Twyford, Isaac Holdens and Dr. Paul Lohmann have been bought. Hindustan Aluminium have recovered on replacement

ment buying but Sirsilk are neglected. Angelo Brothers have reacted on profit-taking.

Cotton mill shares are buoyant, although Bowreah have reacted at the close on profit-taking. Interest has been taken in Kesoram, J. K. Rayon, Bharat Commerce and Dunbar. Prospects of improved cloth offtake in the coming months have helped sentiment.

There is scattered support for jute shares in the belief that the mills' working may improve with bigger supplies of raw jute. Interest is being taken in Northbrook, Lawrence, Anglo-India, Fort William, New Central, Howrah and Birla.

Routine business has been transacted in coal shares and prices have fluctuated narrowly. Burakur, Bengal, New Beerbhoom, East Indian and Amalgamated have met with scattered support.

Paper shares are quietly steady. Orient, Sirpur, Titagur and Seshasayee are being bought in small parcels.

Tea shares have reacted due to the softer trend in the price of the commodity. Hasimara and Hantapara have declined on profit-taking, but Huldibari are being supported on producing satisfactory results. Brooke Bond have become easier on cutting the dividend.

Government securities are steady but business is limited. All the 13 State Government loans were fully subscribed or over-subscribed last week, but some of them have since been offered at small discounts. The Reserve Bank is believed to have bought and sold some Government securities in switch operations. The 3 percent Conversion loan 1966 has been steady around Rs. 72.90.

CARRON

**Haulages
for India's
Mining
Industry**

The mining industry requires the best in haulage equipment—and CARRON haulages have been known for their dependability, heavy, continuous duty, robust construction and silent running. It is these essential qualities that make CARRON the first choice in haulage gear.

CARRON haulage equipment has been serving the Indian mining industry for many years, and now, it is backed by Voltas' nationwide sales and service organisation.

Where on
earth is
Mogadiscio?

Frankly, till somebody in Mogadiscio ordered BINNY's cloth, we too didn't know that it was the capital of Somalia in East Africa. Today BINNY's cloth is imported by 50 countries—superb fabrics made from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. "Rigid Quality Control" ensures maximum durability and perfect finish.

Quality Control:
Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

***Testing cloth for defects**
Every yard of cloth from the loom is examined thoroughly for defects before it is passed for dyeing or bleaching and finishing.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make: Shirts • Khaki Drills • Bleached & Dyed Drills • Towels • Anticrease Suits • Tussors • Union Fabrics • Silk Saris etc. etc.

BINNY—a great name in textiles

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited
BINNY & CO. MADRAS LTD.

the year ended March 1961, against Rs. 2.02 lakhs in the previous year. A dividend of 10 percent, subject to tax, has been declared, against 8 percent, taxable. Allocations include Rs. 73,042 for taxation (against Rs. 79,000), Rs. 28,204 for development reserve (against Rs. 5,753) and Rs. 20,000 for general reserve (against Rs. 12,282). After making all necessary adjustments, there is a carry-forward of Rs. 34,360, against Rs. 39,820 brought in. Units of electricity sold amounted to 6,349,779, against 5,569,089.

Cherra-Chhatak Ropeway

The profit made by Cherra-Chhatak Ropeway Co Ltd has increased from Rs. 97,508 to Rs. 152 crores for the year ended March 1961, after providing Rs. 12,478 (against Rs. 12,318) for depreciation. A taxable dividend of 60p a share has been declared, against 45p a share, taxable, absorbing Rs. 57,000. Taxation is allocated Rs. 68,239 (against Rs. 32,263), and dividend equalisation reserve gets Rs. 26,000 (against nil). With other adjustments, there remains a balance of Rs. 4,077 to be carried forward, against Rs. 3,674 brought in. Raisings totalled 34,212 metric tons, against 26,754 tons and despatches were 35,409 metric tons, against 27,157 tons.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during August 1961 was: iron 131,500 tons; steel ingots 131,700 tons; semi-finished steel for sale 25,100 tons and finished steel 77,600 tons.

Bombay Market

SHORT-COVERING LIFTS SPECULATIVES

GREATER OPTIMISM ABOUT TATA STEEL

Wednesday Noon.

THE Bombay stock market started the new account in a cheerful mood during the past week. Sentiment improved as soon as it was known at the week-end meeting between the

Central Finance Minister and the presidents of the various stock markets that the Government would not introduce any reform by legislation. The stock market authorities were urged to initiate moves of their own in order to restrain excessive speculation. Short-sellers were inclined to cover their open positions and there was evidence of fresh support.

Steel shares gained when the chairman of the Tata Iron and Steel Company made it clear at the annual general meeting of the Company, held in Bombay last week, that the long-term prospect is encouraging. During the next couple of years, the Tata Iron and Steel Company should achieve the target output of two million tons of steel ingots. For the time being, its working is likely to be affected by the shortages of various raw materials. The chairman also said that the management would support the shares if their price were depressed unduly.

The Life Insurance Corporation is believed to have bought some shares, and its support is expected to broaden now that the new State loans have been subscribed last week. The report that the Tata Engineering and Locomotive Co. Ltd will soon expand its activities is interpreted bullishly.

Tata Steel improved to Rs. 144, and Indian Iron to Rs. 24.16 on support from Lyons Range. Among engineering shares, Tata Locomotive recovered to Rs. 344 on replacement buying. Mukand Iron improved to Rs. 27.25 on knowledgeable support and Premier Construction were quoted at Rs. 187. Alcock Ashdown were sold freely at Rs. 293 and Larsen and Toubro came to hand at Rs. 37.50. Motor shares improved at the close on short-covering. Hindustan Motors rallied to Rs. 19.20 and Premier Automobiles changed hands at Rs. 156.25.

There were widespread gains in the cotton mill section at the close. Century were quoted at Rs. 569 on paying a higher interim dividend. Bombay Dyeing came to hand at Rs. 66 and Kohinoor were taken at Rs. 255. Simplex were done at Rs. 169.50 and Khatau were wanted up to Rs. 477.50. Morarji were in demand at Rs. 390 and United Ordinaries gained at Rs. 15.24. Apollo were sold down to Rs. 1.86, but Finlay attracted interest at Rs. 315. Svadeshi were placed at Rs. 257 and Tata Mills were indicated at Rs. 65.

Miscellaneous shares improved after having lost considerably earlier. In the cement group, Associated Cement recovered to Rs. 161.50 and Digvijay were quoted at Rs. 172. Among sugar mills, Belapur were dealt in at Rs. 276 and Phalton were transacted at Rs. 138. Maharashtra Sugar were steady at Rs. 190.50 and Walchandnagar Industries improved to Rs. 164.50. Mining shares were steady, and business passed in Shivrampur Syndicate at Rs. 96.50. Steamship company shares were quiet and sellers predominated. Scindia

Steam were available at Rs. 12.40 and Great Eastern Shipping were offered at Rs. 13.40. Chemical shares were quietly steady, and business was done in Tata Chemical at Rs. 16.69. Indian Dyestuff came to hand at Rs. 450 and Polychem were done at Rs. 200. Colour-Chem realised Rs. 341.25. Rayon shares recovered at the close on replacement buying. National Rayon rallied to Rs. 533 on short-covering, combined with fresh support. Gwalior Rayon were a shade higher at Rs. 50. Baroda Rayon were dealt in at Rs. 139. Bombay Burmah came to hand at Rs. 590 and Voltas improved to Rs. 285 on investment support. Tata Oil were transacted at Rs. 69.50 and Ceat Tyre were bought up to Rs. 208.75. Synthetics and Chemicals recovered to Rs. 183.

Bank shares were steady, although turnover was limited. Bank of India changed hands at Rs. 133 and Central Bank were done at Rs. 62.50. Insurance shares were steady, and New India Assurance were taken at Rs. 57.50.

Electric company shares met with scattered interest, and Ahmedabad were in demand up to Rs. 90.50. Tata Hydro were done up to Rs. 108 and Bombay Suburban were placed at Rs. 98.50.

Madras Market

SENTIMENT BETTER AFTER DULL START

SELECTIVE DEMAND FOR TEAS AND RUBBERS

Tuesday Evening.

DULL conditions prevailed in the Madras stock market during the early part of the past week, but sentiment improved at the close on fresh support. Operators were relieved when it was known that the Government would not enforce any reform by legislation. The fact that the stock market authorities themselves were asked to take steps in order to restrain speculation, was interpreted bullishly. Prices of selected shares improved considerably at the close on substantial outside support.

Business was dull in Government securities, and some new State loans were being sold at discounts. There was selective support for bank shares, but sugar shares were hesitant due to the uncertain outlook for the industry. Notwithstanding lower auction advances, selected tea shares were in demand. Rubber shares were steady on prospects of bigger production, but coffee shares reacted further on fears of excessive supplies. In the textile section, interest was taken in selected shares on the hope that the demand for piecegoods would improve in the coming months. In the miscellaneous group, interest continued in cement and aluminium shares.

Among banks, business was done in Indian Overseas at Rs. 187 and Punjab National were quoted at Rs. 18.05, ex-dividend, ex-rights. Canara Banking realised Rs. 80.50 and Andhra were quoted at Rs. 100. Among public utilities, Salam-Erode were dealt in at Rs. 13.25 on paying a taxable ordinary dividend of 12 percent. Tinnevely-Tuticorin were done at Rs. 11.80 on declaring a taxable ordinary dividend of 12 percent. Vellore were placed at Rs. 13.50 and Ellore were taken at Rs. 20.50.

In the sugar group, Deccan reacted to Rs. 13.08, as did E.L.D. to Rs. 37.75. United Breweries were steady at Rs. 106.50 on issuing rights shares and Mysore were quoted at Rs. 57.75. K.C.P. were quiet at Rs. 24.50 and India were available down to Rs. 11.75.

Among planting shares, Blue Mountain were dealt in at Rs. 3.14, and Cochin Malabar came to hand at Rs. 7.10. Coffee Lands were sold freely down to Rs. 17.25, but Mysore Amalgamated were wanted up to Rs. 5.90 on paying a taxable ordinary dividend of 10 percent. Swinton were done at Rs. 3 and Teekoy came to hand at Rs. 5.30 on declaring a taxable ordinary dividend of 4 percent. Ochterlony were transacted at Rs. 3.78 and Periakaramalai were done at Rs. 3.62. Business passed in Parkside at Rs. 29.62 and in Peermade at Rs. 23.37. Kil Kotagiri were steady at Rs. 4.65 and Lucky Valley were placed at Rs. 11.75. Coffee Lands were easier at Rs. 17.25 and Coorg were sold freely at Rs. 5.30.

Among textile shares, Bangalore Woollen were steady at Rs. 215.50 on declaring an interim ordinary dividend of 6 percent, taxable. Buckingham were bought up to Rs. 249 and Anglo French were quoted at Rs. 123. Lakshmi improved to Rs. 156, as did Madura to Rs. 37.25. Mettur were steady at Rs. 384 and Radhakrishni were wanted up to Rs. 32.50. Sarada were done at Rs. 67 and Cauvery Spinning were quoted at Rs. 14.13. Travancore Rayon recovered to Rs. 38.8 and interest was taken in South India Viscose up to Rs. 179.

In the miscellaneous group, Aluminium Industries were steady at Rs. 23.05, but Ashok Leyland were easier at Rs. 8.50. F.A.C.T. were done at Rs. 9.35 and India Cement were placed at Rs. 6.52. Enfield came to hand at Rs. 11.70 and Binny were in demand up to Rs. 245. Kirloskar Electric were supported at Rs. 14.25 and business was done in Madras Aluminium at Rs. 24.50. Madras Rubber Paper reacted to Rs. 8.90. Mysore Paper were

quoted at Rs. 20.37 and Seshasayee Paper at Rs. 8.25. Standard Motors were bought up to Rs. 16.15 and Spencer were dealt in at Rs. 23.50. Tube Investment changed hands at Rs. 256.50 and United Electricals reacted to Rs. 9.50. Textool were steady at Rs. 175 and T. Stanes made Rs. 32.53.

Rebuilding this
ancient land
of ours

RAZA BULAND SUGAR CO. LTD. Rampur (U.P.)

Where we make the finest quality white crystal sugar made anywhere in India!

ORISSA CEMENT LTD. Rajgangpur (Orissa)

Where the most up-to-date equipment and the latest production methods make possible a large output of highgrade refractories, to meet the needs of all types of furnaces in the Steel, Cement, Glass and large number of other industries.

DALMIA CEMENT (BHARAT) LTD. Dalmiapuram (Madras State)

Where we are busy steadily producing increasing quantities of cement, one of the essential industrial products for all development projects, for helping build the brighter tomorrow of our dreams.

DALMIA ENTERPRISES IN THE NATION'S SERVICE

WE
IN
BIRDS
MEET
THE
DEMAND

Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structurals and castings. And the Birds/Heiglers group is always there to spur their production... to meet these demands. But expansion doesn't suffice achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

London Market

DULL TREND CONTINUES IN STOCK MARKET

INDUSTRIALS LOSE EARLIER GAINS

London, 13th September.

ALTHOUGH the holiday season is drawing to a close, there is still little sign of buyers returning to the stock market and there is a fairly general reluctance to open commitments with the outlook so obscure. There were signs of a better trend developing at one time during the past week when Wall Street moved into new high ground, but international uncertainties and the start of the big U.S. motor strike caused buyers to withdraw quickly and prices eased. Disappointing company statements that now appear with monotonous regularity are also having a depressing influence and with the likelihood of such statements becoming more numerous in the coming months, investors prefer to remain liquid. One section that has remained very steady is gilt-edged, but even here, the demand has been of a modest character. However prices have steadily hardened. Industrial equities failed to maintain their better tone of the latter part of last week, and are now looking distinctly dull. I.C.I. have fallen back following Press comment on the over-produced state of the chemical industry and many other leaders have lost ground. Property shares have met with a selective demand, but insurances have eased on the U.S. hurricane news. Gold shares drifted lower in idle trading and coppers reversed an earlier better trend. There was a substantial setback in tin shares which was touched off by the request for an early release of metal from the U.S. stockpile. Oils have eased under the lead of Shell which were not helped by adverse Press comment. Teas have been a good deal quieter after their recent advance and rubbers have been idle but steady.

COMPANY MEETINGS AND DIVIDENDS
DECLARED OR PROPOSED

Name of Company	Date	Hours I.S.T.

New Delhi

DETAILS OF ROURKELA STEEL PLANT EXPANSION PROJECT

FRESH RECRUITMENT OF FOREIGN TECHNICIANS FOR MANNING THE WORKS

(FROM OUR NEW DELHI CORRESPONDENT)

SOME details are now available of the project report concerning the expansion of the Rourkela steel plant by 800,000 tons. The West German Government has already provided credit and the expansion project, it is expected, will be completed by 1966. The existing Rourkela plant is designed for an annual production of 1 million tons of steel ingots, to be finished into 720,000 tons of saleable products as follows:

(1) wide and heavy plates	200,000 tons
(2) hot rolled sheets, narrow light plates and strips	300,000 tons
(3) cold rolled sheets and strips	170,000 tons
(4) hot dipped tinplates	50,000 tons
Total	720,000 tons

Capacity of the primary mills: Preliminary studies established that the slabbing mill could roll 1.8 million tons of ingots a year in 6,000 operating hours. The wide strip and the plate mills have adequate capacity to process all the slabs rolled by the slabbing mill. An extension of the plant to a capacity of 1.8 million tons, in terms of steel ingots, could be made without duplicating the primary mills, and would, therefore, be an economic extension.

Product mix: On the basis of the above study and anticipated demand, the Co-ordination Committee has fixed the annual target for the finished products after the expansion as follows:

(1) wide and heavy plates	280,000 tons
(2) hot rolled sheets, narrow light plates and strips	300,000 tons
(3) cold rolled sheets and strips	300,000 tons
(4) hot dipped tinplates	50,000 tons
(5) electrolytic tinplates	100,000 tons
(6) galvanised sheets	160,000 tons
(7) electrical steel sheets	50,000 tons
Total	1,240,000 tons

Nature of expansion: To achieve the above production, no addition to the main units of the hot rolling mills is required, but the soaking pits and slab reheating capacities will have to be increased. The coking, iron-making and steel-making capacities will be increased. For further processing, in addition to increasing the cold rolling capacity, new units for electrolytic tinning, continuous galvanising and electrical sheet rolling will be provided. In providing additional facilities, taken into account. The processes recommended and the equipment specified under the expansion programme are of the latest design and practice and well proven in actual operation in various steel plants abroad.

Raw Material Requirements

Raw materials: The estimated annual requirements of different raw materials, after expansion, are given below:

(1) Coal	
(a) coking quality	2,380,000 tons
(b) steam quality	112,000 tons
(2) Iron ore	
(a) Lumps (—80 m.m. to +12 m.m.)	1,411,000 tons
(b) Fines (below 12 m.m.)	1,008,000 tons
(3) Manganese ore	
(a) blast furnace quality	842,000 tons
(b) O.H. quality	315,000 tons
(4) Dolomite	
(a) blast furnace quality	266,000 tons
(b) fettling and converter lining quality	66,000 tons
(5) Quartzite	63,000 tons
(6) Flourspar-bauxite	10,000 tons
(7) Coal: The present metallurgical coal supply to the plant is:	
Kargali, washed	75 percent
Jharla, unwashed	25 percent

Due to a shortage of good metallurgical coal deposits, a certain amount of weakly coking coals such as those available in Argada and Sirkha may have to be used. Steam coal can be supplied from Korba in Madhya Pradesh and from Hingri Ram-pur on Hingri-Talcher coal belt.

Iron ore: Iron ore will be supplied from the Company's own mines in Barsua. According to the consultants for the mines, the mining capacity provided is 3 million tons a year on a two-shift basis and 4 to 4.5 million tons on a three-shift basis. As it is proposed to use the fines also after proper beneficiation, no additional mining capacity is required. Additional handling and storage

traced from the coke oven gas. This process does not require the by-product ammonia. To use the by-product ammonia in the fertiliser plant, the ammonia has to be purified to remove organic impurities which can cause hazards in the fertiliser plant. Investigations have shown that the plant required to purify this ammonia would cost approximately Rs. 12 million, which is uneconomical. The use of by-product ammonia for the manufacture of calcium cyanamide was also investigated. For this, too, the ammonia has to be purified to remove all organic impurities and the cost of purification, as indicated above, is too high.

By-product plants

Ammonium sulphate plant and sulphuric acid plant: Another alternative is to use the by-product ammonia for the manufacture of ammonium sulphate. To deal with the total ammonia produced after the expansion, an ammonium sulphate plant with a capacity of 80 tons a day will be required. Also, a new sulphuric acid plant with a capacity of 60 tons of 60° Be acid a day will be necessary to produce the additional sulphuric acid required for the sulphate plant. The total cost of the ammonium sulphate plant and the sulphuric acid plant will be about Rs. 70 lakhs, compared with Rs. 1.20 crores for the ammonia purification plant. In view of the above, it is proposed to include an ammonium sulphate plant with a capacity of 80 tons a day and a sulphuric acid plant with a capacity of 60 tons of 60° Be acid a day to dispose of the by-product ammonia.

Benzol recovery: Benzol is recovered in the present by-product plant at a pressure of 15 atmospheres. Benzol recovery under such high pressure gives about a 4 percent higher yield than recovery under low pressure. The high pressure also reduces the volume of wash oil under circulation. Since the coke oven gas has to be compressed to about 50 atmospheres for the separation of hydrogen in the fertiliser plant, it was decided to compress the gas in two stages. In the first stage, the gas is compressed to 15 atmospheres in the by-product plant for high pressure benzol recovery and to clean the gas to a higher degree of purity for the fertiliser plant. In the second stage, gas is compressed to the final pressure in the fertiliser plant.

Out of the 72,000 N.c.b.m. an hour of coke oven gas required by the fertiliser plant, 58,000 N.c.b.m. an hour will be supplied from the existing two streams and 14,000 N.c.b.m. an hour will be supplied from the new stream. The new stream will be connected up to the existing streams before the existing compressors. The additional gas produced from the new coke oven batteries will be used in the steel plant and the purity required is not as high as in the fertiliser plant. The additional yield of about 4 percent does not justify the high cost of compressing the gas to 15 atmospheres, only for high pressure benzol recovery. A low pressure benzol recovery plant will be lower both in capital investment and operating cost, and this process is adopted for the expansion.

Distillation plant: The existing distillation plants for tar and benzol have ample capacities to deal with the additional crude tar and crude benzol from the new batteries. No extensions to these units are proposed.

Storage and loading facilities: Adequate storage and/or loading facilities have been provided for all crude, intermediate and final products in the different units to ensure continuous and efficient operation of the entire plant.

New Blast Furnaces

Blast furnaces: After the expansion, the annual requirement of pig iron will be 1,600,000 tons for steel-making and the works' foundry. To allow for the furnace relining and down time from other causes, this production should be achieved in 340 days, that is, a daily production of 4,700 tons should be planned. At present, there are three furnaces, normally rated at 1,000 tons. The additional production of the existing furnaces by the use of an improved operating technique, and partly from a new furnace to be installed.

Capacity of the new furnace: The new furnace will be rated for a daily production of 1,500 tons, but will be capable of producing up to 1,800 tons a day by the use of sinter and under favourable operating conditions. The capacity of the new furnace has been decided on the following considerations: (1) this size of furnace will fit into the existing layout; (2) the layout of the Rourkela plant permits installation of two more blast furnaces only. It is best to use this space by installing one large furnace now and leave place for another furnace so that it will be possible to increase the steel plant capacity to over 2 million tons of ingot steel a year in future; (3) large furnaces are cheaper a ton of pig iron both in terms of capital outlay and operating cost. And (4) after meeting the requirement of iron for steel-making and the works' foundry, extra pig iron can be cast in the two pig casting machines—the second of which is now being installed. The quantity of saleable pig iron is estimated to be 80,000 tons a year in terms of foundry grade iron. With the use of improved techniques indicated earlier, the present three blast furnaces should produce about 1,200 tons a day.

Blast furnace blowers: For the existing three blast furnaces, four blowers are provided, three normally operating and one as a stand-by. Each of these blowers is rated for a normal blast supply of 120,000 N.c.b.m. an hour and maximum continuous supply of 160,000 N.c.b.m. an hour. These blowers are designed for a maximum discharge pressure of 2.3 atmospheres absolute. The normal

UNION CARBIDE INDIA NOW MANUFACTURES AT TROMBAY

Ethyl Acetate

"Union Carbide" Ethyl Acetate is an excellent fast evaporating solvent for making lacquers, thinners, varnishes, dopes, coated paper, inks and photographic films. It is also widely employed in

the manufacture of dyes, drugs and antibiotics, perfumes and synthetic flavours. For your requirements of Ethyl Acetate or for further information write to your nearest Union Carbide India Office.

PWTUC 247A

blast requirement of the new 1,500 tons a day furnace will be 160,000 N.c.b.m. an hour. It is proposed to provide a new blower of the same capacity as the existing ones and install it in the space already provided in the power-station. Thus, the blowers will be interchangeable and with a total of five blowers installed, one will be a stand-by.

Gas cleaning plant: The present gas cleaning plant consists of six identical units designed for cleaning a total gas volume of 500,000 N.c.b.m. an hour. With the installation of the new 1,500-ton a day furnace, the maximum crude gas make in the four furnaces will be approximately 660,000 N.c.b.m. an hour. To take care of the additional 100,000 N.c.b.m. an hour of gas, it is proposed to install two additional units of the same capacity as the existing ones.

The gas make of 660,000 N.c.b.m. an hour is the maximum rate from the four furnaces together. In practice, the four furnaces will seldom be working to their maximum capacities simultaneously. It is found that the average gas make is 15 to 20 percent lower than the theoretical maximum rate. Thus, it would be possible to clean the total gas from all the four furnaces in seven cleaning units, when one of the units is down for maintenance.

Steel-melting shop: The steel-melting shop consists of four 80-ton open hearth furnaces and three 40-ton L.D. converters. Though laid out for a production of 1 million tons of ingot steel a year, its inherent capacity is such that up to 1,300,000 tons of steel a year can be produced without additional equipment. Extensions will have to be done to get the remaining 500,000 tons of steel to make a total production of 1,800,000 tons a year.

Nature of the Expansion

On the open hearth side, it is possible to increase the capacity by another 100,000 tons a year by the addition of a fifth open hearth furnace, for which space is left, and by operating all the furnaces with basic roof and oxygen lancing. The balance of 400,000 tons a year to make a total additional production of 500,000 tons will have to be obtained by increasing the capacity of the L.D. plant by providing two more converters of about the same capacity as at present. Alternatively, it is also possible to get the entire additional production of 500,000 tons by extension to the L.D. side alone by the installation of two more converters of slightly higher capacity. Since the latter alternative will be cheaper both in capital outlay and operating costs, it is proposed to extend the L.D. side only to achieve the proposed production of 1.8 million tons a year.

Converter size: As explained above, two additional 50-ton converters will be able to give the desired additional production. However, it is pro-

posed to provide the additional converters of 60-ton capacity. The extra cost involved for the 60-ton converters, as compared with 50-ton converters, is small, whereas the higher capacity converters will provide greater flexibility and the plant will be able to produce more steel as and when the mills can take it. Further, installation of higher capacity converters will enable increase in capacity of the steel plant to beyond 1.8 million tons, if required. In deciding on the size of the converters, the strength of the existing building and crane girders to take the heavier hot metal cranes and also the need to maintain maximum flexibility in operation, have been taken into consideration.

Dust cleaning arrangement: The existing L. D. converters are not provided with any dust cleaning arrangement. As the L. D. fumes pollute the plant atmosphere, it is essential to clean the fumes. Out of the five converters, only three will be in operation. It is proposed to install one precipitator type central gas cleaning plant to clean the gas produced from any three converters in operation. The piping system between the converters and the central gas cleaning system will be so arranged that the fumes will be taken to the gas cleaning plant through a common duct with shut-off valves at suitable places to disconnect any converter not in operation.

Hot metal handling: In the existing plant, there are two 1,100-ton mixers and space has been left for the installation of a third mixer, by the side of the existing mixers, situated in-between the L. D. and open hearth plants. Two hot metal tracks enter the mixer building at an angle of 45° and on these tracks, the hot metal ladles can be brought under the two mixer cranes. With four blast furnaces in operation, the steel-melting shop will receive up to about 4,800 tons of hot metal a day at the rate of three to four ladles an hour. This number of ladles cannot be handled with the existing two mixer cranes and the layout does not permit installation of a third crane. It is, therefore, proposed to install the third mixer at the south-west end of the converter plant with a new mixer crane and with facility to bring the hot metal ladles on two tracks entering at 45° within the reach of the mixer crane. This arrangement permits handling of the hot metal at two independent points and also allows feeding of the mixer metal to the converters from either end, thus giving maximum flexibility in operation. Further, this arrangement permits the expansion of the steel plant capacity to beyond 2 million tons in future by the installation of a sixth converter and a fourth mixer.

Lime and dolomite calcining plant: The existing plant consists of three vertical shaft kilns for calcining lime and two vertical shaft kilns for

calcining dolomite. The vertical shaft kilns for dolomite have not yet operated satisfactorily. It cannot be said, with any degree of certainty, if the dolomite available will lend itself to satisfactory calcining in vertical gas-fired kilns. To meet the increased requirement of lime under the expansion programme, it is necessary to install two additional lime kilns. Therefore, instead of adding two more lime kilns, it is proposed to convert the two dolomite kilns into lime kilns and install a new rotary kiln, of 100-ton a day capacity, for producing the entire requirement of dead burnt dolomite after the expansion.

Oxygen plant: To meet the additional requirement of oxygen for the new L. D. converters and additional scarfing to be done in the rolling mill, it is necessary to install two more oxygen producing units, one unit being of the same capacity as the existing units and the other of a higher capacity. One of the two additional units will be able to produce 99.5 percent pure gaseous oxygen and 99.99 percent pure nitrogen, as at present. The second additional unit is not required to produce nitrogen for the fertiliser plant. This unit, however, will be designed for producing oxygen partly as gaseous oxygen and partly as liquid oxygen.

Finishing Mills

Rolling mills: The main units of the hot rolling mills have adequate capacity to process the 1.8 million tons of ingots to be produced after the expansion. Soaking pits and the slab reheating furnace capacities will have to be increased. Facilities for hot scarfing of slabs will be provided and one more coiler will be added after the strip mill. Major expansion will be on the cold rolling mills. In addition to increasing the cold rolling capacity by the installation of a five-stand Tandem cold rolling mills, facilities will be provided for electrolytic tinning and continuous galvanising. A new plant for the production of hot rolled electrical sheets will be installed.

Plate mill: Some 280,000 tons of finished plates, it is planned, will be produced in the existing 3.1-meter plate mill. The mill and the finishing equipment are adequate for this production. The production from the plate mill depends on the width and thickness of the plates to be rolled. Based on an average mixed product, the plate mill can roll 300,000 tons to 350,000 tons a year. In future, when the demand for plates increases, and the 2-meter wide strip mill planned at Bokaro comes into operation, all plates below 1,850-millimeter width and 10-millimeter thickness can be planned on that strip mill. This will leave only wide plates and plates above 10-millimeter thickness to be rolled in this plate mill. Under these conditions, it will be possible to produce

up to half a million tons of plates a year from this mill. The finishing equipment already provided are adequate to deal with this increased production.

Strip mill: The 1,700 millimeter wide strip mill has a roughing train, and a finishing train. The roughing train consists of one reversing and one non-reversing four-high stands. The finishing train consists of six four-high stands in tandem. After the expansion, approximately 1,140,000 tons of slabs will have to be rolled to strips. There is ample capacity in the mill for this. With a favourable product-mix and under good operation and maintenance, the strip mill is capable of rolling appreciably more than is required under the expansion programme. In America and Russia, mills of this size are now rolling over 2 million tons of slabs a year.

Coiler: After the expansion, the strip mill will be operating three shifts and in order to maintain the mill production, it is essential to have three coilers. A third coiler will, therefore, be provided in the space already left in the existing layout.

Finishing lines—slitting knives: There are two finishing lines in the existing plant, one for finishing coiled strips and the other for finishing divided strips into finished plates and sheets. The coiled strip finishing line is designed for slitting wide strips into narrower widths and also for finishing both wide and slit strips into finished sheets and plates as required. In this line strips up to 5-millimeter thickness can be recoiled after trimming and slitting. Strips above 5-millimeter thickness can be finished into sheets and plates. The rotary knives and spacer rings, already provided with this line, are capable of slitting strips to a minimum 33-millimeter width. It is proposed to provide additional rotary knives and spacer rings to enable this line to slit strips down to a minimum width of 80 millimeters of which this line is capable. Based on an average product-mix, this finished line is capable of an output of 190,000 tons of finished products a year. The divided strip finishing line is designed for finishing divided strips into finished sheets and plates. This line is also provided with one pair of slitting knives for slitting plates when required. With average product-mix, this line is capable of giving a finished output of 210,000 tons a year. The finished hot rolled products from the strip mill after the expansion will be about 250,000 tons to 300,000 tons a year. The combined capacity of the above two finishing lines is 390,000 tons a year. Therefore, no additional facilities are required.

Cold sheet finishing lines: In the present installation, there are two cold rolled sheet finishing lines, each capable of an output of 120,000 tons a year. After the expansion, the total production of cold rolled finished sheets will be 300,000 tons a year. To deal with the additional production, it is proposed to install one more finishing line of the same capacity as the existing ones. In the existing cold rolling mill, there is facility to slit cold rolled strip to a minimum width of 250 millimeters. As there is demand for cold rolled strips in widths down to 125 millimeters, it is proposed to install two slitting lines designed to slit strips to a maximum width of 300 millimeters down to 125 millimeters with provision for recoiling. Each of these lines will be capable of giving an output of approximately 10,000 tons a year.

Electrolytic tinning lines: For the planned production of 100,000 tons of electrolytic tinplates, it is proposed to install an acid ferrous line. This line will be designed for a maximum operating speed of 1,200 feet a minute. The line will be located in the new bay adjacent to the present cold rolling mills building. A trimming shear has been incorporated in the tinning line itself to side-trim the strips. As there is no demand for tinning in coils, no coilers have been planned in the lay-out for installation of two coilers in the future. The line will be initially designed with four plating tanks, and will have a capacity to produce 100,000 tons a year of electrolytic tinplates a year when operated 6,000 hours a year. It should be possible to operate up to 8,000 hours after the operating and maintenance personnel have acquired the requisite skill. Space has been left in the layout to add four more plating tanks in future. With additional plating tanks, the capacity of this line can be increased up to about 130,000 tons a year based on 6,000 operating hours a year and up to 175,000 tons a year by operating 8,000 hours a year.

Licence Agreements

Licence agreement for ferrosil line: The patent for ferrosil line is held by the United States Steel Corporation and a licence agreement will have to be signed between Hindustan Steel Ltd and the United States Steel Corporation before the ferrosil line can be installed.

Licence agreement for Armo-Sendzimir continuous galvanising line: The patent for the line is held by Messrs Armo-International Corporation of the U.S.A. Therefore, to install these galvanising lines, it will be necessary to enter into a licence agreement with Messrs Armo-International Corporation.

Foundry: The existing foundry has got a capacity of 30,000 tons a year of iron castings consisting of ingot moulds, bottom plates and miscellaneous casting. Three cold blast cupolas, each having a capacity of 9 tons an hour, are provided. Provision exists for converting the existing cupolas into hot blast ones, thereby raising the capacity

of each cupola to 12 tons an hour. Under the expansion programme, it is proposed to increase the grey iron foundry capacity to 64,000 tons a year, and to add a steel foundry and non-ferrous foundry. The steel and non-ferrous foundry will be located in a separate building and will include a five-ton electric furnace for steel and a 1-ton gas fired crucible furnace for non-ferrous metals.

Estimate: The total estimated cost for the expansion is Rs. 776,000,000. This cost includes the investment required for such additional processing plants as electrolytic tinning plant, continuous galvanising plant and electrical sheet mill. Inclusion of these units has increased the capital investment of the expansion without increasing the total output, but it has considerably increased the sale value of the final products. Out of the above estimated cost of Rs. 776,000,000, approximately, Rs. 465,000,000 will be the expenditure in foreign exchange.

Investment cost: The total cost of the present 1-million-ton plant, according to the latest revised estimate, is Rs. 1,700,000,000, which works out to an investment cost of Rs. 1,700 a ton of ingot steel capacity. For increasing the capacity by 800,000 tons of ingot steel a year, the additional investment is Rs. 776,000,000, which works out to Rs. 970 a ton. Taking the entire investment cost will be Rs. 1,375 a ton of ingot steel capacity. This figure is attractive and compares favourably with the corresponding cost for similar installations abroad.

Rourkela Teething Troubles

The Rourkela plant has more than its fair share of "teething troubles", said the Minister for Steel in the Lok Sabha during last week. "It is a more complex plant than the other two, and so its operation requires a higher degree of skill. Although Hindustan Steel has trained men, they do not possess the requisite skill which can only be acquired through experience. To overcome this difficulty, Hindustan Steel is engaging some more highly skilled foreign technicians to operate and maintain this plant and to train the Company's technicians in operating the various units efficiently." Replying to another question earlier, the Minister had stated that training was no substitute for experience. He, however, did not explain how he proposed to work the fourth steel plant when experienced personnel are not available to work the existing plants.

Using Washery Middlings

The ad hoc committee on the use of washery middlings, set up by the Coal Council of India, has recommended that future planning of thermal power-stations and washeries should, as far as possible, be integrated. One of its specific suggestions is that two non-coking coal washeries should be set up. The location of one of these has been suggested in Karanpura, in Bihar. This washery will have an input capacity of 2.8 million tons, and will supply washed steam coal to the railways and washed slack coal to the steel plants. The project report for this washery is presently being finalised. The second non-coking coal washery, it is proposed, will be based on coals from the Central India coalfields. The supply from this will be to the railways. Its exact location will be decided after examination of such factors as the availability of resource outlets for middlings, and the general economics of washing. This examination is at present in hand.

Scheme for Export Promotion

The Cabinet Committee on Export Promotion approved a comprehensive export incentive scheme, including increased rebate on articles of export. Besides approving a provision of Rs. 10 crores made for the liberal scheme of rebate, the Cabinet Committee endorsed the export plan for 1961-62, worked out by the Committee of Economic Secretaries. The plan provides for larger export quotas than was visualised in the third plan, particularly concerning engineering products. To promote the export of manganese ore, the Cabinet Committee, it is understood, has decided that rail freight rates should be reduced by 50 percent for a period of six months to begin with. This will, however, apply to ore transported from distances of over 200 miles of the nearest ports. The position will be reviewed after six months. The Cabinet Committee also discussed measures which would contribute to increased exports of specific commodities. As for cotton textiles, it was agreed that sufficient foreign exchange should be allocated to enable mills to undertake rationalisation and modernisation programmes. In the case of vegetable oils, it was felt that a scheme of subsidy would act as an incentive to export. As for tea, the distribution of adequate quantities of fertilisers would ensure a better quality and higher yield. The Cabinet Committee, it is also understood, has discussed proposals for legislation to vest the Government with powers to take steps for the promotion of exports. Some of the steps suggested for stepping up exports are: (1) a steady increase in agricultural and industrial production; (2) restraint on consumption of certain commodities; (3) rebate or remission of income tax; (4) reduction of costs; (5) increasing productivity by the industries and improving relative profitability of export sales; (6) provision of foreign exchange facilities for trade promotion work; (7) conducting of market surveys for exploring foreign markets; (8) establishing servicing organisations for exports of engineering goods; (9) reduction of railway freight; (10) increased drawback of excise duties; (11) provision of liberal credit facilities; (12) imposition of suitable quality control and pre-shipment inspection measures; (13) sup-

ply of fertilisers for increasing the cash crops linked with export performance; and (14) supply of indigenous raw materials on concessional rates for the manufacture of goods intended to be exported.

Manganese ore: Indian prices are \$1 to \$6 a ton higher than world prices. One method suggested for bringing down prices is to reduce railway freight. Another method suggested is to introduce the modernisation of the ore mines by the liberal import of machinery as also a regular supply of railway wagons.

Tea: A regular supply of fertilisers to the tea industry is essential in order to step up the production of tea, and consequently, the exports. At present, fertilisers are distributed to the tea planters through State Governments. A suggestion was received some time ago that fertilisers should be distributed to the planters through the Tea Board, and a special allocation of fertilisers should be made to this industry.

Vegetable oils: Internal high prices and the policy of the Ministry of Food against exports have been largely responsible for the decline in the exports of vegetable oils. At present, there is a disparity of Rs. 600 a ton in groundnut oil and Rs. 400 a ton in linseed oil over world prices. The Ministry of Commerce has suggested a subsidy to equalise prices in order to promote the exports of these two oils.

Cotton textiles: The export of cotton textiles has been falling. Rationalisation and modernisation of the industry is essential in order to compete in the foreign markets. This would require a substantial amount of foreign exchange expenditure.

Hides and skins: It is reported that for improving the exports of hides and skins, liberal imports of raw skins are necessary. Further, large-scale programme for a better collection of fallen hides and for the introduction of improved methods of flaying are necessary. A large number of abattoirs run on hygienic lines by local bodies would be essential.

New manufactures: New manufactures, such as light engineering goods and chemical industries as well as plastic industries, could be stepped up considerably provided raw materials for the manufacture of the items concerned are given to the industry at the same rates at which their competitors in foreign countries get these materials. A particular reference is invited to the price of iron and steel. A committee which was set up for examining this question has reported that Indian prices of iron and steel are considerably higher than what their competitors pay abroad. This is a matter which requires urgent attention.

Conditions, in India, by and large, are similar to those that prevailed in the United Kingdom immediately after the war—an unsatisfied home market, inadequate supplies and inflation. It will pay dividends if some one in the Ministry of Commerce studies the methods by which exports were then stepped up in Britain and are being stepped up at present.

Agreement with French Petroleum Institute

An agreement between the State-owned Oil and Natural Gas Commission and the French Petroleum Institute for oil exploration in Jaisalmer, Rajasthan, was signed on Tuesday. The agreement provides for the creation of an Indo-French exploration team functioning under the Oil and Natural Gas Commission. After the completion of one year of collaboration, the parties are entitled to terminate agreement any time after two months' notice. Such premature termination of agreement, however, will not affect the credit arrangement extended to India, the unused portion of which can still be used by the Oil and Natural Gas Commission to meet the obligations concerning any other contract or any other seismic drilling contractor or any other commitment made against the credit prior to the termination of the agreement. The French Institute as consultants will assist the Commission in securing contractors' services on most economic and competitive terms, and will train six Indians a year without any extra cost. A sum not exceeding \$8.4 million out of the \$30 million extended by France will cover foreign exchange costs, the rupee expenditure being met by India. The Oil Commission will pay the French Institute 30,000 new francs a month in foreign exchange and 18,000 new francs a month in Indian currency, for services visualised under the agreement. The Commission will also pay air passage both ways for French personnel who will ordinarily be employed for three years. The entire amount of any tax, fee, and duty of any kind charged in India either to the Institute or the personnel will be paid by the Commission.

Engineering Goods Exports

Actual exports of engineering goods during 1960-61 amounted to Rs. 9.2 crores, as against advance estimates of Rs. 8.5 crores. Exports during April-May 1961, for which period only statistics are available, are:

April 1961	Rs. 98.01 lakhs
May 1961	" 82.36 lakhs
Total	Rs. 1,80.37 lakhs

These compare favourably with the exports during the corresponding period of last year:

April 1960	Rs. 70.07 lakhs
May 1960	" 74.52 lakhs
Total	Rs. 1,44.60 lakhs

Having fun—wish you were here

Kodaikanal. Flowers, ferns, waterfalls—nature on exhibit. Days replete with relaxation. Boating, swimming, unhurried walks. Plains looked lovely at distance—intend keeping them there as long as possible. (And Wills' Gold Flake? As fine as ever—superbly satisfying—wherever you go they're good.)

London

T.U.C. CRITICISES U.K. ECONOMIC POLICY AT PORTSMOUTH CONFERENCE

FREEZING OF WAGES OPPOSED: MORE HOLIDAYS FOR WORKERS URGED

(FROM OUR LONDON CORRESPONDENT)

WHATEVER satisfaction Mr. Selwyn Lloyd, the U.K. Chancellor of the Exchequer, may derive from the decision of two large industrial companies to follow his request for a dividend pause, he must have been disappointed by the response his plans for meeting the economic crisis has received from the Trades Union Congress in annual session in Portsmouth last week. Far from being impressed and co-operative, the T.U.C. was highly critical of his handling of the economic situation and came down unequivocally against any suggestion of a wages "pause" and especially the possibility of arbitration awards being set aside. It indicated that legitimate wage claims would have its full support, even to the extent of strike action if that proved necessary. As for labour conditions, it called unanimously for a vigorous nationwide campaign to secure a 40-hour week for all workers without delay and extended support to all claims for three weeks' annual holiday plus eight statutory holidays for all workers and requested the Government to ratify the principle of equal pay for women. The compliance with all these demands will add to the difficulties which the labour situation now represents.

In spite of the tough line which the T.U.C. adopted in its consideration of the economic situation and the uncompromising tone which marked the speeches of several union leaders, it was evident that in the wider interests of Britain as a whole, it was anxious to play some part in finding a solution to the major economic problems. Nevertheless, it was only prepared to do this on its own terms. As far as the Government's proposed Economic Planning Council is concerned, for instance, it would be prepared to participate provided this was a small, professional body, meeting as often as necessary and with a definite and acknowledged rôle in the preparation of policy. Three conditions must precede T.U.C. co-operation, namely: (1) the Council should consist of a maximum of 15 members, drawn from the Government, employers and unions; (2) independent members should be excluded on the grounds that people with neither the responsibility nor the power to take decisions would turn the Council into an ineffective debating society; and (3) its decisions and advice should be heeded by the Government both in its day-to-day management of the economy and in the formation of long-term plans. In addition, it is proposed to pose three questions to the U.K. Chancellor, his answers to which would dictate the T.U.C. response. The questions are: what sacrifices were he prepared to demand from the wealthier sections of society? Did he intend to set up a planning commission which could really plan for expansion and higher living standards? What prospects of success could he offer? The trade union movement is not interested in an advisory body which is divorced from the centre of power.

This month, Britain will receive the outstanding £17 million of the £535 million drawing agreed with the International Monetary Fund. Against this, there will be a further payment to the European banks, although last month's £200 million apparently represented the greater part of the outstanding Basle debt. Last month's performance must be reckoned satisfactory, although the gold outflow was running at £100 million a month during the first half of this year. Two important points are, first, that sterling suffered in August from the pressure caused by the Berlin crisis. Secondly, an outflow produced by "leads and lags" should—now that sterling is stronger—right itself over the next few months. The really significant figure, which will not emerge for some time yet, is how Britain's overseas liabilities have moved. This will show how far the increase in the reserves represented a real improvement in the external monetary position.

Less Overseas Sterling

The August issue of *Economic Trends* shows that overseas sterling holdings declined this year to £4,257 million from £4,272 million at the end of March. On 30th June last year, the holdings totalled £4,275 million. Apart from the sterling area, the holdings fell in all the principal groups

of countries. In the sterling area itself, sterling holdings rose from £2,443 million at the end of March to £2,604 million at the end of June. Holdings of North America fell to £114 million from £143 million, of Latin America to £35 million from £48 million, of western Europe to £662 million from £747 million and of other non-sterling countries to £290 million from £338 million. Holdings by non-territorial organisations were £1 million down at £552 million.

Trade with Non-sterling Countries

The trade of the United Kingdom, and of other sterling countries together, with the rest of the world showed very similar changes between 1959 and 1960, both in imports and exports. The rise in imports was, however, much larger than the gain in exports. This is apparent from an article in the *Board of Trade Journal* which shows that, over the two years, imports by the whole group, and by each of its two parts, rose by 20 percent in value, while both contributed about equally to a 7 percent increase in the area's exports. But, as the table below illustrates, prices and volume changes combined very differently to make up these movements in value. Of the 20 percent rise in imports, price increases accounted for only 1 percent and a higher volume for 19 percent. In contrast, larger shipments made up just 4 percent of the 7 percent export gain, the other 3 percent reflecting price increases.

STERLING AREA TRADE WITH NON-STERLING COUNTRIES					
(Changes percent from 1959 to 1960)					
	Imports from sterling countries	Exports to non-sterling countries	Imports from non-sterling countries	Exports to sterling countries	
	Value	Price	Volume	Value	Price
United Kingdom	+20	+1	+19	+7	+2
Other sterling area	+20	+1	+18	+6	+4
Whole sterling area	+20	+1	+19	+7	+3

The price rise for overseas sterling area sales to non-sterling countries was even higher than for U.K. exports—about 4 percent, compared with 2 percent. This increase was very much a reflection of the higher values of wool and jute. The increased rates for tea and for copper also contributed, although cocoa and coffee were cheaper. Even so, total overseas sterling area sales outside the area fell 5 percent short of the 1957 level. The 1 percent rise in import prices was due partly to commodity prices. There was little change in prices of goods from western Europe, while purchases from the United States were 1 percent dearer and those from Japan on average cost 4 percent more. Food and fuel costs were lower.

Over 1960 as a whole U.K. exports, seasonally adjusted, declined at first but later increased slowly, while other sterling area sales tended to fall off later in the year. In other sterling countries, imports declined at the end of the year, while U.K. purchases tended to rise.

Machine Tool Exports

Performance of the British machine tool industry in June might be taken as the pattern of what Mr. Selwyn Lloyd is seeking from industry in general. Both export sales and new export orders were well up on those of May and also of June, while net new orders for the home market were below those of May and of June last year. Export orders for metal working machine tools are rising strongly. June brought a further increase in net new export orders to nearly twice the value of June 1960. This makes the inflow in the first half of 1961 11 percent more than a year earlier. New orders from the home market, on the other hand, have been declining since the end of 1960; in June, they were 2 percent less than a year earlier and in the first six months of 1961 17 percent less.

Deliveries to both home and export markets continue to increase: in the first six months of the current year, they were 40 percent and 18 percent more, respectively, than in the same period of 1960. New orders are coming in at a higher rate than deliveries. Since the beginning of the year, orders to hand for the home market have increased by 4 percent and for export by 18 percent. The total unfilled order-book at the end of June was nearly £114 million—equal to about ten months' output.

Building Industry Booming

Constructional work carried out by contractors in the second quarter of this year reached an all-time peak of £600 million, according to the U.K. Ministry of Works' figures. The index of production, which shows the trend after allowing for price increases, was 126—a rise of 4 percent since the first quarter and 8 percent higher than a year ago. Some spokesmen of the building industry, although admitting that estimates and plans for some types of new construction have lately levelled off, believe that activity will not begin to slacken until well into 1962. As one would expect, industrial building was the main factor in the remarkable expansion of the past year. At constant prices, industrial building work was 19 percent higher than a year ago, private miscellaneous building (which includes stores, office blocks, etcetera) was up 10 percent, and work for public authorities, excluding housing, up 14 percent.

On the other hand, new housing work in the second quarter was only 6 percent higher than a year ago, with a small increase in public authority housing and a 9 percent rise in housing for private developers. Both private and public housing starts may well be sharply affected by the new credit squeeze and the suspension of the special Government mortgage scheme. But there seems to be plenty of work on hand for the rest of the year.

Jute

FUTURES MARKET AUTHORITIES RESTRICT TRADING HOURS

CONTROVERSY CONTINUES ABOUT THE FAIR PRICE FOR JUTE

It is gratifying to see that the East India Jute and Hessian Exchange has acted swiftly to try and bring about a more realistic market. For some time, in spite of restrictive measures, it has been felt that speculative activity has again become a menace to the proper conduct of business. Speculators are adept at finding loopholes and recently the large increase in business proved highly injurious to genuine trade interests. Now the directors of the Exchange have curtailed the "working hours" of members. Trading will be done from 9 a.m. to 10 a.m. and 1 p.m. to 4.30 p.m. on week-days, and from 9 a.m. to 10 a.m. and 12 noon to 2 p.m. on Saturdays. Restrictions have also been imposed on the volume of daily business transacted by individual members. These measures are in the nature of an experiment for a period of two months.

Meanwhile, the jute trade continues to occupy a considerable amount of discussion time in Government circles. The diversity of opinions tends to create doubt and discontent in the minds of the grower, in whose interests various suggestions are supposedly advanced. Ministers and others who talk so glibly about the trade obviously have only a vague notion of the subject with which they are dealing, and do not appreciate its ramifications and complexities. Otherwise how could we get the "fair price" for cultivators ranging from Rs. 25 to Rs. 55? The statements which have been made by members of the Government from time to time show a great deal of confused thinking. Nationalisation of the jute trade has again been suggested, and the grandiose schemes put forward by many show a lack of understanding. Perhaps it may be pertinent to recall the Government's previous experiments in the jute trade, and in the marketing of jute over the years, which have come to a disastrous end, costing the country many lakhs of rupees. The creation of a buffer stock is a step in the right direction, but there are many difficulties before this can become reality.

Lower Prices Expected

Many in the jute industry in Calcutta do not know what to make of conditions yet, and they feel that the only thing to do is to wait and see. The manner in which prices are being maintained, and even occasionally advanced, is rather puzzling, particularly when imports in most agencies are reported to be above average for the time of year. Arrivals on an all-India basis are estimated to be about 125,000 maunds daily. It is apparent that many in the industry are of the opinion that lower prices are likely to come, but few are prepared to express their views on how soon this can be achieved. Meanwhile, reports from the agencies indicate that there has been some trouble among farm workers, but the effect of this has not yet been felt. Crop prospects have improved recently, and good rain has provided sufficient steeping water in all areas. It was the shortage of steeping water that caused prices to rise at the beginning of this month. Now that this has been overcome, many believe that prices will ease. Mills continue to be interested in purchasing jute for the near position, and throughout the past week, a fair amount of daily business was conducted. There was very little interest in forward shipment in spite of sellers' keenness to sell, and mills followed a cautious policy in anticipation of lower prices towards the end of the year.

Similar conditions prevail in the manufactured goods market. Mills are interested in the near position as this shows a considerable premium over the forward positions. January-March heavy goods, for instance, are Rs. 10 lower than September, and in hessians the forward section is Rs. 5 lower. At current rates, simultaneous business in the near position continues to show a profit, and manufacturers are keen to take advantage of this.

It was expected that the I.J.M.A. gunny stock figures for August would show a steep decrease, but when they fell by only 7,000 tons, the market became quiet. Actual stocks, as reported by member-mills of the I.J.M.A., were 63,100 tons, of which 19,700 tons (28 percent) were hessians, 34,000 tons (48.5 percent) were sacking, and 9,400 tons (23.5 percent) were other goods. Hessian stocks are now the lowest since April 1959 and indicate a good off-take from the American continent. Compared with the previous month, hessian stocks are down by 3,300 tons, sacking by 3,500 tons and other goods by 200 tons.

I.J.M.A. Production Figures

During August 1961, mills reporting to the I.J.M.A. produced 77,000 tons of jute goods, of which 28,100 tons were hessians (36.5 percent), 34,300 tons sacking (44.6 percent) and 14,600 tons other goods (18.9 percent). The hours worked during the month were 187, but this was based on mills working 42 hours a week, and did not take into account the hours lost by mills which worked fewer hours. Production increased by 13,600 tons

over July, which can be accounted for by the increase of 51 in working hours.

THE JUTE MARKETS

Manufactured Goods: Prices fluctuated rapidly at the opening because of speculative activity. Heavy goods, in particular, came in for a lot of interest and opening quotations on Thursday were on average 50nP lower than on the previous day. B Twills for September delivery were based on Rs. 132.50 and forward shipment for the first quarter of 1962 at Rs. 122.25. Hessians showed minor variations, so 40in 10oz. was quoted at Rs. 49.30 for the near position and Rs. 45.25 for forward shipment. The I.J.M.A. gunny stock figures for

August appeared to disappoint operators since they showed a fall of only 7,000 tons and prices reacted downwards. As the market dropped, buying interest developed at the lower levels, and heavy speculative activity forced up heavy goods and hessians rapidly. Some covering was done against hessian sales to the Argentine, so 40in. 10oz. moved up to Rs. 51.25, while business reported with Middle Eastern countries caused B Twills to rise to Rs. 134.75. After the week-end, conditions in both sections of the market were quiet. In the absence of fresh overseas enquiries, and some selling pressure from mills at the higher prices, rates displayed a declining tendency. During Monday, prices fell by Rs. 2.50 in sacking and Re. 1 in hessians. Tuesday brought a similar pattern, except that the losses were less pronounced.

Opening quotations on Wednesday morning were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
40in. 7oz.	38.35	36.75	35.25	33.75
40in. 8oz.	41.00	39.25	37.75	36.00
40in. 10oz.	46.75	47.75	46.75	44.75
B Twills	131.75	128.25	126.00	121.25
Heavy Cees (Plain)	132.00	130.00	127.50	121.25
A Twills	159.00	157.00	154.00	149.00
Liverpools	153.00	148.00	144.00	138.00
Cornsacks	134.00	131.00	129.00	123.50

Raw Jute: The market was steady at the opening, with buyers interested in ready and near delivery jute. Sellers were reserved, however, and business was limited. Assam jute was based

I.J.M.A. STOCK FIGURES FOR AUGUST

The Indian Jute Mills Association reports total stocks of jute goods at the end of August as follows:

Description	31st August, 1961		31st July, 1961		Increase over (+) or decrease from (-) last month		31st August, 1960	
	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)

HEAD OFFICE:
INDIAN CHAMBER BUILDINGS, MADRAS-1

on Rs. 35.50 a maund for Bottoms, and there was little variation over the next two days. Imports began to fall off in the agencies, and with the gunny market firm, prices tended to rise. Business was reported almost daily with all mills, and although the individual lots were small, collectively they were enough to keep sellers' ideas steady. By Monday, Assam rates had advanced to Rs. 36, but with weather reports becoming favourable, particularly in relation to steeping water, and imports showing an improvement, fibre prices began to drop. Over the next two days, prices fell by almost Rs. 2, and sellers were soon keen for business at almost any price.

On Wednesday morning, the market was quiet, and opening quotations were based on the following:

	Landed at Mills Basis Bottoms	Rs a 100 kilos	Rs a md.	Shipment
Assam	92.50	34.50		Sept.-Oct.
Northern	92.50	34.50		"
Purnea Desal	89.75	33.50		"
Daissee White	91.00	34.00		"
Assam Tossa	96.50	36.00		"

Assam-Northern	89.75	33.50		"
Desal	89.75	33.50		"
Daissee	89.75	33.50		"
Pakistani Cuttings	125.00 a bale			Sept.

THE PAKISTANI JUTE MARKETS

PRICE FALL STOPS AS GROWERS HOLD BACK STOCKS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE market remains basically steady. For a few days there was a firmer undertone in all sectors of the trade, mainly in Cuttings. This caused prices in Calcutta to rise in sympathy, and also in overseas markets. At the close, however, although arrivals remained very small, Cuttings came down and the undertone thus weakened. Interest this week has centred round the successful efforts on the part of the authorities to maintain prices. This has been done by propaganda at levels vary-

ing from the Jute Board down to village union councils, telling the growers not to sell jute in large quantities in order that they might get better prices later. These efforts have been reinforced by the fact that middle men have refused to take any risk after the last spectacular price drop. Consequently, arrivals have been remarkably small in all parts of the country, the price fall has stopped and in many places there has even been a rise.

The question that is exercising every baler's mind, is whether to buy now before prices rise higher or to wait for another drop. Those who advocate buying now say that the longer the growers withhold their jute, the greater will be the demand when the jute becomes available. On the other hand, those who feel that prices must come down, say that the weight of the crop, which has been harvested and retted and which is still being harvested and retted, must very soon become too heavy for the growers to hold on. The longer they wait the more they will have to bring in later, it is further pointed out. This correspondent is inclined to believe that the latter is more likely to happen because local manipulation will not affect overseas markets, and secondly, no baler will go long. Reports from all quarters show that there is a lot of jute waiting to come in and tossa should also be available fairly soon. It is also very definite that there is no marked improvement in the quality of the crop, nor can anything be expected. If anything, the percentage of Export Hearts is higher and overseas buyers may soon receive offers of Export Hearts combined with Lightnings. Many representatives of overseas buyers have recently visited Pakistan, and more are expected during the coming weeks. Almost certainly the result of these visits will be a larger premium for tossa, as there is a serious shortage of high grade white jute, which has to be replaced by tossa.

It is reported that negotiations behind the scenes are going on to supplement the Conference steamer service from Pakistan to the U.K. and the Continent. Many balers are dissatisfied with the so-called rationalisation of freight, as this has resulted in steamers refusing to accept cargo for certain destinations because their quotas have been exceeded. This would be annoying at any time, but particularly so in a season when buyers insist on buying for shipment by named steamers. The latest reports are that there is a German line or shipowner, who is negotiating to supply services outside the Conference at a freight rate several shillings cheaper. E.P.C. registrations during the second half of August were remarkably low at

204,401 bales. The U.K. was the largest buyer with 42,000 bales. Belgium bought 32,000 bales and India 29,000 bales. France bought 16,000 bales and Japan 13,000 bales. The total is less than the purchases made up to this date last season, and considerably less than the season before.

THE FOREIGN JUTE MARKETS

FIBRE PRICES RISE AS SELLERS WITHDRAW

(FROM OUR DUNDEE CORRESPONDENT)

THE sudden rise in fibre prices as the result of the sellers withdrawing their offers has done a lot of good to the Dundee raw jute market. Shippers here were offering jute lately at well under the E.P.C. prices ruling in Pakistan, but the chairman of the Pakistani Jute Board said the other day that the E.P.C. rates would not be allowed to decline further. Already, there has been a fall of about £6 a ton in some qualities since last week, and sellers are not making offers as freely as they did before. They seem to be scared about the future and, as far as good quality fibre is concerned, few offers are being made.

Only one or two firms are quoting for Mill Lightnings, for instance, at £127 for September shipment and £125 for October, with Mill Hearts none-too-freely mentioned at £107, Grade Hearts from £90 and £91, September-October, c.i.f. U.K.-Continent. The prices of dark jute have also been raised to £127 for Grade Tossa-2/3 and £119 lowest for Grade Tossa-4, while Continental Tossa-2/3 is now at £107, October shipment, c.i.f. U.K.-Continent. It is reported that a fair volume of business was transacted with Continental spinners by London brokers last week. Meanwhile, Dundee spinners have also been buying more freely.

The spinners have apparently been encouraged by the larger sales of jute yarns. Large quantities of hessian yarns have been bought at 17.73d a lb for 8 lbs C.H.W. cops and at 18.87d for 8 lbs J.C.H. warp, on spoons. Perhaps the fact that values were reduced by another £5 a ton from 1st September brought out the new business. Much more cloth and bags were sold last week, and the prospects, on the whole, have much improved.

The prices of hessian cloth have been reduced from 15.63d to 15.25d for 40in. 10oz. and from 13.21d to 12.90d for 8oz. a yard from 1st September. Manufacturers have transacted a good volume of business, and the prices of jute goods are now very firm indeed. Calcutta goods have gone dearer but they are now quieter at 74s 9d for 40in. 10oz. Hessians and 57s 3d for 73oz., September, 71s 9d and 55s 9d October, 70s 3d and 53s 9d October-December, and B Twills at 200s 6d, 196s, 192s 3d for the respective positions, all f.o.b.

I.J.M.A. PRODUCTION FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total production of jute goods for August as follows:

	Description	Quantity
1. Gunny Bags		
(a) Hessian	6,135 metric tons (6,038 tons)	
	1,68,10 thousand metres (1,83,8 lakh yds.)	
	96.4 lakh nos.	
(b) Sacking	33,938 metric tons (32,403 tons)	
	7,25,38 thousand metres (7,93,3 lakh yds.)	
	3,35,3 lakh nos.	
2. Gunny Cloth		
(a) Hessian	22,475 metric tons (22,120 tons)	
	7,76,28 thousand metres (8,40,1 lakh yds.)	
(b) Sacking	943 metric tons (928 tons)	
	1,830 thousand metres (20,1 lakh yds.)	
3. Other manufactures	14,794 metric tons (14,560 tons)	
4. Total production (All kinds)	78,286 metric tons (77,049 tons)	

Summary							
(000 metres and 60,000 yds.)				(000 metric tons and tons)			
August 1961	July 1961	August 1960	August 1961	August 1961	July 1961	August 1960	August 1961

NORTH INDIAN TEA OUTPUT RISING STEADILY

POLICY OF CHECKING INTERNAL CONSUMPTION EXAMINED

(BY A SPECIAL CORRESPONDENT)

INDIA is now leading in the race to produce more tea, and the latest crop figures show north India well ahead with the 1961 output at 147,264,493 kilograms at the end of August, whereas up to the same date of last year, the figure was only 122,031,456 kilograms. This large increase is expected to continue for some years, especially because the third plan target has been fixed at 900 millions lbs. A study of monthly production figures shows north India lost heavily from the drought from April right up to August last year, but by September 1960 tea bushes were flushing normally, with the output only 2 million lbs below the figure for September 1959 and actually 3,750,000 lbs higher than the 1958 output. In October 1960, about 7.5 million lbs more tea was manufactured, indicating that the plantations had fully recovered. From these figures, it would not seem possible for the current year's crop to continue to forge ahead at the same pace as early this season. Meantime, other producing countries are also making more tea, although the output of south India and British East Africa is slightly behind last year.

In view of the fact that the World Food and Agriculture Organisation has estimated that there will be 15 percent too much tea within the next five years, it is disturbing to note that although the Tea Board expects a bumper crop, it has embarked on some negative methods like withdrawing all the propaganda units in the country in order to restrict the internal consumption of tea with a view to releasing it for export. This will prove to be a costly error, for the available world supply of tea is already high at 722 million lbs, against 656 million lbs last year.

Earning Foreign Exchange

The idea of exporting to earn foreign exchange is good as far as it goes, but who among the world's consumers is going to buy Indian rains teas, to stock for six months or longer on borrowed money at exorbitant interest rates? For the past few years, people in the trade have emphasised the importance of developing the Indian market. But now that there is no longer any international tea production control, there is always the danger of overproduction with its attendant evils of losses to producers followed by short-time working for labour. All this means giving away India's produce to Continental and other foreign buyers apparently assisting in bringing about a situation of this nature by offering to export too much tea at a loss, although it does not seem to be common sense. After all, consumers will take their requirements and no more and pay a fair price, but once buyers become shy and if the surplus grows, buyers take only their requirements—at their ideas of price, regardless of the producer's cost of production. In the long run, the law of supply and demand will come into force on any market. Pakistan, it appears, has adopted a policy of providing for home consumption at fair prices before allowing exports. The Pakistani crop is estimated around 57 million lbs, but so far only a small proportion has been allowed for export.

Extensive Propaganda

This correspondent pointed out in a recent issue of Capital that a more extensive propaganda was needed to help increase consumption in overseas markets, or for that matter, the aim should be to increase consumption in all markets. As a contrast to the Tea Board's ruling as reported above, the discussions by jute interests reveal that the Assembly has devised certain steps to end the jute crisis. It has, therefore, been recommended that "intensive research work be started to procure jute goods for consumption within the country so that the dependence of the industry on foreign markets be eliminated." That policy should also be adopted by the Tea Board because the surplus in world tea production is already in sight.

Fair Prospects

Up to mid-August, the sales at the Calcutta and Dooars gardens working at useful profits. But with the weight of rains teas now coming on offer, prices will probably fall to a lower level, although the larger output will have a beneficial effect on production costs. The recession in prices at this time of year is seasonal, and as the companies will profit from the marked increase in production, the prospects look fair.

COCHIN TEA SALES

At Dust Sale 36, 117,000 kilograms of tea were offered. There was a good demand at fully firm rates.

FLOODS AFFECT NEW KERALA PEPPER CROP

BUT REPORTS OF DAMAGE EXAGGERATED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE apprehension of a section of the trade that the new Indian pepper crop will be down by at least 25 percent due to the recent floods in Kerala is apparently exaggerated. This correspondent has had the occasion to travel across the pepper growing belt of Kerala, and his enquiries show that the damage has not been very serious. The growers whom he met are disinclined to place the loss at anything more than 10 percent. But the producers in some parts of Kerala say that pepper vines are being affected by some mysterious disease which leads to the total destruction of the affected vines. But it is presently limited to certain areas, mostly in Malabar, and one cannot measure its impact on the standing crop which is due to be harvested in November-December. One can, however, expect a maximum loss of 15 percent in the Indian pepper crop for the 1961-62 season. During the last season, the total size of the crop was around 25,000 tons. The growers say that the new crop will be late because of the heavy rains in the pepper growing areas during the past four months.

The uncommitted stocks of pepper in India appear to be negligible. According to the export trade in Kerala, they will not exceed 2,000 tons. Whatever is left behind is in strong hands too, so exporters in India have been unwilling to revise their price ideas downwards to keep them in parity with American quotations. In spite of the reluctance of American dealers to quote higher and the inactive demand emanating from other foreign buyers, the Indian exporters have been resisting the temptation of selling low. Recently, there have been some levelling off in the disparity between Indian and American quotations. The American dealers have, therefore, started showing some interest in Indian pepper. Shippers in Cochin think that the present trend will continue until the new Indian crop reaches the market as the rush from Sarawak and Indonesia is over. Competition from these two major producers has not been serious this year. Brazil has been competing with the traditional producers in Asia, but her pepper is less attractive to consumers. Indian prices are now ruling firm around Rs. 400 a quintal.

Fall in Production and Consumption

According to a recent report of the Food and Agriculture Organisation, both production and

consumption of pepper have declined by 20 percent during the past 20 years. The world production of pepper amounted to 83,000 tons 20 years ago. But it declined to 68,000 tons in 1959. Pepper production and demand are not, however, likely to make any marked progress in the immediate future. It cannot, therefore, be said that the future of this commodity is bright unless the Asian and African countries, which are rapidly developing their economies, consume more pepper.

Rain Affects Coffee Crop

The coffee industry in south India is heading for a fall in production. The standing crop, it is expected, will be considerably less than the 1960-61 season's record crop of 67,000 tons. Although the Coffee Board places it around 53,000 tons, the planters' estimate is that it will not exceed 48,000 tons. The steep fall in production is chiefly the result of the unprecedented rains in the coffee growing areas of south India. Extensive damage to the standing crop is reported from Coorg and Wynad. Rains had a particularly damaging effect on the Robusta crop of Wynad, it is reported. The big drop in production will necessitate a smaller export allocation which in turn will reduce the foreign exchange earning from coffee. One need not, however, think that a smaller export from India will in any way influence the world market, for this country's contribution forms only a very small percentage of the world supply. In terms of actual figures, it is only about 2 percent of world exports. Besides, the world is now having coffee stocks sufficient to meet two years' requirements.

Threat of Direct Action

The failure of the tripartite conference held recently in Trivandrum may lead to labour unrest on south Indian plantations. Although it was the labour unions' reluctance to negotiate for a settlement ignoring the recommendations of the Wage Board that was mainly responsible for the failure of the conference, some of the labour unions have threatened that they will resort to direct action unless the workers are given some interim relief. If they act according to their threats, the plantation industry in Kerala, which has been enjoying peaceful times since the communist-sponsored strike of 1958, will have to face labour unrest accompanied by the resultant losses.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for August 1961:

Upper Assam: Weather seasonable; outturn good; immediate prospects good; blight in Nahorkatiya not so severe.

Central Assam: Weather seasonable; outturn above normal; immediate prospects good; slight black rot prevalent in Jorhat.

Lower Assam: Weather favourable, but rainfall was deficient in Mangaldai; outturn normal to good; immediate prospects good.

North Cachar: Weather seasonable but rainfall above normal in Lakhimpur; outturn about normal; immediate prospects fair; black rot prevalent.

South Cachar: Weather seasonable; outturn normal to good; crop prospects favourable; black rot prevalent; blight not so severe; helopeltis prevalent in some districts in Hailakandi.

Eastern Dooars: Weather seasonable; outturn normal to good; immediate prospects favourable; black rot prevalent in Kalchini.

Central Dooars: Weather reports good; crop prospects fair to good; outturn normal to good.

Western Dooars: Weather seasonable; outturn normal; crop prospects generally favourable.

Darjeeling: Wet weather; outturn about normal; immediate prospects fair; blight blight severe.

Terai: Weather favourable; outturn good; fresh attack of red spider; prospects fair.

RISE IN OUTPUT OF INDUSTRIAL FIBRES EXPECTED

A useful collection of information about textile fibres, covering production, international trade, consumption, stocks, and prices, is provided each year by Industrial Fibres, prepared by the Commonwealth Economic Committee. The latest volume, for the 1959-60 season, is now published by the Stationery Office at 10s net. While the sections on natural fibres deal with situations whose details are widely known, those on the man-made fibres arouse a great deal of interest because they cover more ground than most other statistical surveys on the subject, giving, among other things, estimates of planned capacity for various countries. In the United Kingdom, where production of rayon yarn and staple in 1959 was 328 million lbs, the planned capacity at the end of the current year is given as 570 million lbs. Similarly, British producers of non-cellulosic yarns and staples, whose output was 86 million lbs in 1959, are stated to have plans for raising the total to 174 million lbs by the end of the year. Nylon 11, derived from sebacic acid (a product of castor oil) receives some mention, and there is also an account of the widespread development work which is being done on polypropylene, polythene, and polyurethane fibres.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

FAIR BUYING IN DUSTS

AT Sale No. 15, held on 11th and 13th September, there were 70,414 packages on offer at the Export auction. After a hesitant start, there was a good general demand at lower rates, with buyers paying particular attention to clean, well-made teas of orthodox manufacture. Plain broken were well supported, but where stalk was present they were up to 15nP easier. Fannings declined by some 15nP, although more general support was forthcoming at these lower rates. Better orthodox descriptions met with more demand than in recent weeks, although prices again declined. C.T.C. teas were an irregular feature but met with more enquiry, and clean medium and good liquoring sorts were sometimes considerably dearer. More fibrous teas, however, once again met with a heavy discount. Whole leaf grades were again a weak feature, but there was more support for any teas free from stalk. Tippy teas and Darjeelings met with a little more enquiry at easier rates.

Quotations

	1961	1960
Clean Plain Pekoe	Rs. a kilo 4.20 to 4.50	Rs. a kilo 5.30 to 5.55
Plain B.P.	4.10 to 4.30	4.40 to 4.55
Plain Fannings	3.95 to 4.10	4.45 to 4.75
Medium Assam C.T.C. B.P.	4.80 to 5.20	4.80 to 5.50
Medium Assam C.T.C. Fgs.	4.80 to 5.20	5.10 to 5.40
Best Assam C.T.C. B.P.	5.30 to 5.70	8.00 to 9.00
Best Assam C.T.C. Fgs.	5.40 to 6.10	8.00 to 9.50

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a fair demand for the 26,325 packages of Dust at easier rates. Enquiry for C.T.C. dusts was selective and prices were much lower, particularly towards the close. The few bright liquoring teas, however, met with better support. The fibrous C.T.C.'s were virtually neglected. Plain orthodox dusts were absorbed at a discount of 20nP to 30nP, whilst the Assam varieties proved difficult of sale and there were heavy withdrawals, particularly towards the close of the auction. Legg-cut dusts were irregular and generally much easier.

Quotations

	1961	1960
Plain Orthodox Dust	Rs. a kilo 4.00 to 4.25	Rs. a kilo 4.65 to 4.50
Medium Assam Dust	4.30 to 4.70	4.80 to 5.40
Legg-cut Dust	4.30 to 5.00	
Medium Assam C.T.C. Dust	5.50 to 5.80	6.00 to 6.25
Good Assam C.T.C. Dust	6.30 to 6.50	6.40 to 6.80

(Quotations are inclusive of excise duty.)

The 227 chests of leaf teas on offer met with fair support, the few green teas selling extremely well.

HIDES AND SKINS DULL

The market was dull. Stocks of hides were higher, but those of skins were less than in the previous week.

Bazaar Sales

(Between 5th September and 11th September, 1961)
Cowhides: Wet salted (Ord.) 9,000 pcs. on the basis of Rs. 9 and Rs. 12.12 to Rs. 12.25; Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 7 to Rs. 16.50, Rs. 19 and Rs. 28 to Rs. 29.

Goatskins: Wet salted (Patna, Daissee, Kustia) 57,900 pcs. on the basis of Rs. 190 to Rs. 210, Rs. 280 to Rs. 280 and Rs. 370 to Rs. 385; Wet salted (he-killed) on the basis of Rs. 362 and (she-killed) on the basis of Rs. 3.37 a piece; Assam-Dinajpur 25,600 pcs. on the basis of Rs. 260 to Rs. 270 and Rs. 290 to Rs. 310; Purneah-Kissenganj 4,000 pcs. on the basis of Rs. 290 to Rs. 310; Dinajpur 1,000 pcs. on the basis of Rs. 450 to Rs. 480.

Bazaar Stocks

(11th September, 1961)

Cowhides: Wet salted 87,400 pcs.
Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 31,500 pcs.; Assam-Dinajpur 71,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 143,500 pcs.

LINSEED STEADY

The market was steady in the past week due to continued shortages of seed supplies, and small business was reported. The oil market rose due to small stocks in the hands of millers and in sympathy with the rise in other oil markets. The oilcake market was steady. The latest quotation is as follows: ready September Rs. 29.75 a maund.

COMPANY AND PUBLIC NOTICES

ASHOKA CEMENT LIMITED
Registered Office: DALMIANAGAR, (BIHAR).
NOTICE

THE Annual General Meeting of the Shareholders of Ashoka Cement Limited will be held at the Registered Office of the Company at Dalmianagar on Saturday, the 30th September, 1961 at 10.30 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and audited Statement of Accounts for the year ended 31st March 1961.
2. To declare dividend.
3. To elect a Director in place of Shri S. P. Jain, who retires by rotation, but being eligible offers himself for re-election.
4. To appoint auditors for the current year and fix their remuneration. The retiring auditors, M/s. N. C. Jain & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

As Special Business

5. To consider and if thought fit to pass with or without modification the following resolutions which will be proposed as Ordinary Resolutions:

(i) "Resolved that, pursuant to clause (d) of sub-section (1) of Section 293 of the Companies Act, 1956, the consent of the Company be and is hereby granted to the Board of Directors of the Company borrowing moneys for the purposes of the Company, from time to time, notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company, (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), will or may exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose but so that the total amount up to which moneys may be borrowed by the Board of Directors shall not at any time exceed Rupees two crores."

(ii) "Resolved that pursuant to sub-section (1) (e) of Section 293 of the Companies Act, 1956, the Board of Directors be and they are hereby authorised on behalf of the Company to contribute and/or subscribe from time to time in any financial year to any body, institution, society, person, trust or fund for any charitable or other purposes not directly relating to the business of the Company or to the welfare of its employees upto a total amount of Rupees one lac or five per cent of the Company's average net profits as determined in accordance with the provisions of Section 349 and 350 of the Companies Act during the three financial years immediately preceding, whichever is greater, provided, however, that any contributions to any political party or for any political purpose to any individual or body will be subject to the restrictions in Section 293A of the Companies Act."

Share Transfer Books and Register of Members of the Company will remain closed from the 25th September to 30th September, 1961, both days inclusive.

By Order of the Board,
For ASHOKA CEMENT LIMITED,
S. SRIKRISHNA AYYAR,
Director,
Secretaries.

Calcutta,
September 5, 1961.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on poll instead of himself and such proxy need not be a member of the Company.

Explanatory Note as required under Section 173 of the Companies Act has been forwarded to the members of the Company.

MACNEILL & BARRY LIMITED
NOTICE

NOTICE is hereby given that the Registers of Members and Share Transfer Books of the Company will remain closed from the 23rd to 29th September, 1961, both days inclusive.

By Order of the Board,
A. N. MITRA,
Secretary.

2, Fairlie Place,
Calcutta-1,
7th September, 1961.

THE BISHNAUTH TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of The Bishnauth Tea Co., Ltd., will be held at the Registered Office, at No. 4, Mangoe Lane, Calcutta, at 4 P.M. on the 29th September, 1961, for the following purposes:—

1. To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1960, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. A. B. Kingsley who retires by rotation and who being eligible offers himself for reappointment and in this connection to consider and, if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution:
"That Mr. A. B. Kingsley be and is hereby reappointed a Director of the Company".

Special Notice as required by Section 261 (2) of the Companies Act, 1956 dated, 2nd September, 1961, has been received by the Company from a member expressing his intention to propose the Resolution for the reappointment of Mr. A. B. Kingsley as Director as a Special Resolution. The Notice states that the sanction of a Special Resolution becomes necessary for the reappointment of Mr. A. B. Kingsley as Director as Mr. A. B. Kingsley happens to be a Director and Member of Messrs. J. Thomas & Co. Private Ltd. who by Special Resolution have been approved as Brokers for the sale of the teas produced by the Company and who may be deemed to hold an office of profit under the Company.

4. To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS**1. As Ordinary Resolution:**

To consider and if thought fit, to pass with or without modification the following Resolution which will be proposed as an Ordinary Resolution:—

"That Mr. D. K. Basu be and is hereby appointed a Director whose period of office shall be liable to determination by retirement of Directors in rotation."

2. As Special Resolution:

To consider and, if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution:—

"That the arrangement, sanctioned by Special Resolution of the Company in General Meeting on 28th December, 1956 whereby Messrs. Geo. Williamson & Co. continued to act as Agents for the sale at London Tea Auctions of the teas produced by the Company be and is hereby renewed for a further period of five years with effect from 1-4-1961 on the same terms, namely, that they shall be paid a remuneration by way of commission at the rate of upto two per cent. on the sale prices obtained; and that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such Agents as aforesaid; and that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do."

3. As Special Resolution:

To consider and, if thought fit, to pass with or without modification the following

Resolution which will be proposed as a Special Resolution:—

"That subject to the approval of the Central Government, the following Article be and is hereby substituted for Article 114 of the Articles of Association of the Company:

Each Director shall be paid out of the funds of the Company by way of remuneration for his services the sum of Rs. 100/- for each meeting of the Board or a Committee thereof attended by him. The Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Directors may be held and who shall come to that place for the purpose of attending such meeting, such sum as the Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his remuneration as above specified."

The Share Transfer Books and Register of Members of the Company will be closed from the 20th September, 1961 to the 29th September, 1961, both days inclusive.

By Order of the Board,
THE BISHNAUTH TEA CO., LTD.,
WILLIAMSON MAGOR & CO., LTD.,
V. S. VIJI,
Secretary,
Managing Agents.

Calcutta, 6th September, 1961.

- Notes—1. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.
2. Explanatory statement pursuant to Section 173 of the Companies Act, 1956 is being sent to all Members.
3. The dividend, if declared, will be paid on or after 12th October, 1961 to those shareholders whose names appear in the Company's books on 29th September, 1961 or to their mandates. No application for Dividend Warrants will be necessary.

The company meeting and dividends table appears on page 412

FOREIGN AID: CHOOSING THE RECIPIENTS

INDIA first began to take the measure of the seriousness of her economic problems a year or so after independence, as the utopian expectations of the liberation movement faded. This awakening coincided with the launching of the Marshall Plan, which poured thousands of millions of dollars into the reconstruction of western Europe. Those whose memory reaches back so far will recall the bitter indignation with which this contrast was commented upon by Indian newspapers and politicians. The Americans were all but accused

penetration. Yet, if a selection is made on sound economic criteria, and provided certain strategically placed nations are given favoured treatment on purely political grounds, the danger seems limited. After all, if Western nations decide that there is no prospect of substantial economic benefit from investment in country X, then the Russians should be allowed to lose their money trying to prove the contrary if they want to. Despite widespread defeatism in the West, we have to recognise that the Russians do lose their money very often in such poor calculations. The millions that Moscow has poured into Egypt since President Nasser fell out with the West do not appear to have brought significant gains, economic or political, and the recent Russian hand-out to President Bourguiba will no doubt go the way of previous French assistance—toward M. Bourguiba's personal aggrandisement and his pet projects. The utility of Russian aid to Cuba remains to be proved; so far it has produced only propaganda gains which would cause the Americans no damage if they decided to leave Dr. Castro alone

A POT-BOILER ON BANKING

THE annual report issued by the central board of directors of the Reserve Bank of India, for the year ended June 1961, is a rather tame affair. Most of what it says has already been said often before, including by the Reserve Bank. To the extent that there is anything new, it is wrapped up in verbiage characteristic of bureaucratic timidity—verbiage that would sink even divine revelation to the level of common platitude. Perhaps the time has come for the central board of directors to think once again about what the real purpose of these reports should be. The endless recital of facts, statistics and edicts can serve no useful purpose; there are enough Reserve Bank reports which do that already. When the central board of directors speak, their collective wisdom should be directed to explaining clearly and unequivocally how the economy (especially banking) has progressed, what has gone wrong, what the prospects for the future are, and how these prospects can be improved. Were it recast on the basis of these criteria, the latest report would run to five pages, not 50. It would not, for instance, give an encyclopaedic list of selective credit controls, while dismissing the main problem facing Indian banking in mere half-sentences to the effect that "there is need . . . to consolidate and strengthen the banking system through geographical and functional expansion of its scope, for undertaking the larger tasks that lie ahead."

The basic deficiency of the Indian banks in recent years can be simply stated. It is that their resources have not been growing fast enough to keep pace with an economy that is expanding and becoming increasingly monetised. At first, the existence of the deficiency was simply not recognised. But, during the past couple of years, both agricultural and industrial activity have increased rapidly. The banks have been unable to nourish this increase with an adequate supply of credit; thus has the relative stagnation of the banking system as a whole been shown up. For a long time, the Reserve Bank thought that the stagnation was not serious at all. It assumed that any unbalance which arose from time to time between the supply of, and the demand for, banking funds could be cured by the gadget of selective credit controls. The gadget was used with gay abandon, inasmuch as arbitrary limits were periodically imposed on advances against shares or against particular commodities. But the effectiveness of the policy proved extremely limited, because plenty of money was available from the unorganised money market and because the banking stringency was not enough to dissuade speculators from making large capital gains in a period of rising prices. The Reserve Bank's affection for selective credit controls is by no means diminished now. On the contrary, the latest report claims that such controls have "worked with a larger measure of success during the (past) year than in the earlier years". The fact, unfortunately, is that trends in the commodity markets do not bear out any such assertion. In the one sector where such controls were made extremely stringent—jute and jute goods—their effect on prices was no more than marginal. In the other sectors where prices fell, such as foodgrains and sugar, it was because of easier supplies, and not because of the credit restrictions. Nevertheless, the commitment to such controls remains: the report reaffirms the Reserve Bank's "two-pronged" monetary policy of "ensuring an adequate flow of credit to meet the genuine requirements of agriculture, industry and trade, and checking speculative excesses with their inflationary overtones."

Fortunately, even the Reserve Bank has come to realise that selective credit controls are not the ultimate answer to the banks' problems. Such

while they promoted genuine progress in Brazil and Mexico.

As these facts come to be recognised in Western capitals, blackmail of the order "Give me what I want or I'll ask the Russians for it" will increasingly meet the retort "Go to the Russians if you wish; they are free to squander their roubles as they choose". In fact, Russian capacity to aid being very limited and the gullibility of African and Asian leaders being similarly limited, very few of these latter will actually go to the Russians and come back with anything worth while. The West has no serious reason to shrink from a rational aid policy, capable of being understood by those who benefit later as well as by those who benefit immediately, which would concentrate the finite capital surplus available on those few nations, like India, where significant returns could be obtained in a comparatively short time. The "Aid India Club" is the first sign of a conversion to this point of view, and its reinforcement should not be hampered by nostalgia for scattering bounty over the whole of the undeveloped earth.

controls are, at best, negative in character, in that they only redirect the flow of banking resources, not increase them. In consequence, the past year has been featured by much active tinkering on the question of how the growth of the banking system can be promoted by long-term measures rather than temporary expedients. The by-products of this thinking have so far been mainly three. One is that the deposit insurance scheme has been introduced to reinforce popular confidence in the banking system, and to rescue it from the after-effects of the Palai Central bungle. The second is that measures are being devised to strengthen the capital structure of banks, and to increase their cash reserves as well as their liquidity requirements. And the third is that a move has been inaugurated towards higher interest rates—for the private sector, although not for the Government. If, in its preoccupation with other trivia, the

BRITAIN CONSIDERS PLANNING

IT is at first glance surprising that while some countries (most obviously Yugoslavia) incline away from a planned economy, others (notably India and some in western Europe) incline towards it. Even Russia has found virtue in monetary incentives; even the United States has seen advantages in governmental regulation of business. It is not really surprising. Either system, free enterprise or planned, has some merits, and each desires the benefits of the other. Planning is an aspect of the British Government's new policy that has not received enough attention. Significantly, the Federation of British Industries, which is not the kind of body that one would expect to be predisposed towards any "interference" by the Government, has expressed regret that the remarks of the Chancellor of the Exchequer on this subject have not been more widely noticed. Both the Federation of British Industries, representing employers, and the Trades Union Congress, representing workers, have recently discussed with the Government the objectives and the problems of planning. It is unlikely that any detailed plan will emerge from these and similar talks. But already a principle has been established, that the British economy needs a clearer purpose, a firmer sense of direction.

The idea, apparently, is not to develop a "mixed" economy, in which public and private enterprise operate side-by-side, but rather to formulate a policy for a period of, say, five years. Ideally, of course, the policy would be acceptable equally to the Government (and its economic advisers), the employers, and the workers. It is difficult to imagine that they would all be equally enthusiastic, but at least the policy must be such that no main faction actively opposes it. Fortunately, such controversial questions as the "pause" in wage increases are not involved in a long-term plan as such. Unfortunately, such questions can easily become involved in the actual operation of a plan. More fundamental are such matters as capital investment. A recent report of the Council on Prices, Productivity and Incomes emphasised the need to plan long-term investment, with a view not simply to expanding production but also to improving efficiency. Other bodies, notably the National Institute of Economic and Social Research, have made similar recommendations. It is easier, however, to formulate a plan than to operate it. The Government can direct its own departments and the public boards (even in Britain they cover a wide sector, mainly fuel and power and transport), but it cannot direct free enterprise—at least, not in a positive sense,

Reserve Bank directors' report has relatively little worth while to say on these developments, that does not detract from their importance.

The framing of the deposit insurance scheme can, in fact, be counted as the outstanding achievement of the past year, and an achievement for which the Reserve Bank could justifiably claim much credit. One would have thought that the occasion of the annual report would be a suitable one for the directors to answer the numerous criticisms of the scheme which have been made in the recent past—for instance, that it has been introduced too late, and that the cover given to depositors is not enough. But the subject receives only cursory mention. Instead, the directors' report is larded with such shattering revelations as that "the Fifth All-India Conference of Warehousemen was convened by the Central Warehousing Corporation in November 1960 at Indore." One sincerely hopes that the space given to various subjects in the directors' annual report does not reflect the Reserve Bank's sense of priorities. It is true that the other measures which are proposed for strengthening the banking system are described in greater detail; and about the move towards higher interest rates the central bankers have even found possible to offer some explanation. But neither of their dissertations on these two subjects really gets to the core of the problem. For instance, no indication is forthcoming about how the banks can reinforce their capital and reserves unless there is first a sharp improvement in their profits. So far, attempts to increase profits have consisted mainly of tinkering around with interest rates. But the Reserve Bank cannot seriously believe that this will be enough unless a firm check can also be kept on the rise in the banks' labour costs. Similarly, in pleading for higher interest rates, the central bankers seem almost wholly unaware of the criticism that these will inflate industrial costs, without necessarily discouraging speculation. Nor do they explain why the Government should be allowed to continue to borrow money at artificially low rates of interest, while credit is deliberately being made dearer for the private sector. An expert and detailed discussion of problems such as these is what one expects from the Reserve Bank directors' annual report.

It can refuse permission for building a factory in a particular location, but it cannot insist that a factory be built or re-equipped. One of the big difficulties is to maintain private industry's capital investment while private industry is experiencing, or expecting, a recession in orders.

The restrictive side of the operation is important, because it conflicts with the broad purpose of the positive planning that is now being discussed. In many minds, the most conspicuous achievement of the British Government in the field of planning is the diversion of industry to "regions that have been neglected, or have surplus labour because their main activity has declined. Such regions abound in Scotland and Wales (even now, after years of development there), because large areas have never been industrialised and in others old industries (for example, shipbuilding in Scotland, coal-mining in Wales) have been permanently reduced in scale. The mere fact that it is necessary to prevent companies from expanding in congested areas, and to offer financial incentives to persuade them to expand elsewhere, implies that industry is not allowed to be fully efficient. The social purpose of this policy is admirable; but can it be reconciled with a long-term economic plan whose main purpose is to promote efficiency? The Government has given no indication, so far, that it considers planning as a whole. Britain's roads are appallingly inadequate for the traffic that they have to carry—or that they would carry if they could function properly. It is partly for this reason that industries and people gravitate towards the south-east, near the big market, and the big port, of London. This gravitation is a major problem. It can be eased, but not solved, by regulating development. It might be solved by an adequate system of roads, making communication with more distant regions easy. The Government's programme for roads, although more ambitious than it was a few years ago, is not a comprehensive plan.

The planning that is being discussed now is more statistical. The idea is to gather information on resources and requirements and to relate it to a hypothetical picture of the economy as it should be some years hence. Factors involved are the supply of capital and labour, the value of exports and imports, the overall balance of external payments, the optimum level of demand at home. How such factors will be shaped into a plan has not yet been explained. The customary methods—stimulating here, restraining there—will, of course, be employed. But methods that have often failed in the simpler task of regulation are obviously

not effective for the more complex task of planning. The "stop-go" technique is out of favour; but how can the economy be maintained on a level course? The Radcliffe Committee could not answer that question, after the most painstaking investigation. It should not, however, be too difficult to clarify the problem. It is generally agreed that the trade cycle is governed by the investment cycle. The investment cycle reflects the corporate

Current News and Comment

Outlook for Kinnison Jute

In his statement to shareholders of the Kinnison Jute Mills Co. Ltd, which has been circulated along with report and accounts for the year ended March 1961, Sir Walter Michelmores, chairman, discusses succinctly the prospects for the jute industry. (A fuller version of the statement is published on a later page.) During the first six months of the current year, the mills have incurred substantial losses because fibre prices have been too high in comparison with those of jute goods. There has also been a sharp increase in unit costs following the cuts in production. Considerable lay-off compensation has had to be paid to workers. It is, nevertheless, hoped that bigger supplies of raw jute will be available henceforth and mills may be able to work on a more profitable basis, provided the price of fibre remains at a reasonable level. High fibre prices, by pushing up the prices of jute goods, have reduced the foreign demand for gunnies. The consumption of jute goods has declined in many countries, and customers abroad are inclined to buy as little as possible because current prices are considered too high.

Meanwhile, competition from the Pakistani mills has increased. They are believed to have undercut Indian mills in many markets. The competition is likely to be stiffer in the future. Pakistan proposes to install another 6,000 looms during the next few years, of which 5,000 looms will be devoted to the production of sacking. It is estimated that by 1965, Pakistani mills may be producing 30,000 tons of sacking a month. Considering that India's exports of sacking range from 32,000 tons to 33,000 tons a month, it is not difficult to visualise the strength of the competition. Indian mills will have to face. The Pakistani mills enjoy many advantages over the Indian industry. They can get superior jute at lower prices. They pay smaller wages. The export bonus scheme increases their profitability. Under the circumstances, it is urgently necessary to create favourable conditions for the Indian industry so that it becomes more competitive.

Kinnison Jute has taken steps to improve its operational efficiency. The modernisation programme of the preparing and spinning sections has been completed. Orders have been placed for new weaving machines. The wide looms already installed have helped improve the Company's profitability. But it is feared that profit margins might decline in view of the extensive installation of wide looms throughout the industry.

Macneill and Barry Jute Results

The Macneill and Barry group of jute mills have produced less favourable results during the year ended March 1961 than they did in 1959-60. So the dividends have had to be cut. The Gourapore Co. Ltd, for instance, has reduced the ordinary dividend from 30 percent, taxable, to 25 percent, taxable. The dividend is covered more than five times and offers a yield of 6.7 percent at the present price of Rs. 371 a share. The profit has declined from Rs. 33.47 lakhs to Rs. 30.59 lakhs. Taxation receives Rs. 14.50 lakhs (against Rs. 6.50 lakhs), machinery replacement reserve Rs. 1.59 lakhs, development rebate reserve Rs. 3.54 lakhs (against Rs. 3.06 lakhs), general reserve Rs. 1.50 lakhs (against Rs. 15.50 lakhs) and dividend equalisation reserve Rs. 2 lakhs. A sum of Rs. 1.59 lakhs has been transferred from machinery overhauls reserve. The carry-forward is Rs. 82,035, against Rs. 63,814 brought in.

The profit of the Nuddea Mills Co. Ltd has declined from Rs. 18.45 lakhs to Rs. 7.99 lakhs. The ordinary dividend has been cut from 8 percent, taxable, to 6 percent, taxable. It is covered more than one-and-a-half times and offers a yield of 8 percent at the present price of Rs. 50 a share. Machinery replacement reserve is allocated Rs. 3.85 lakhs (against Rs. 73,513), development rebate reserve Rs. 74,795 (against Rs. 1.74 lakhs) and general reserve Rs. 1 lakh (against Rs. 9.50 lakhs). A sum of Rs. 1.85 lakhs has been transferred from machinery overhauls reserve. The carry-forward is Rs. 1.08 lakhs, against Rs. 49,497 brought in. The sale of the south mill has not yet been com-

pleted. Meantime, arrangements have been made to protect the mill from the loss of rent arising from the protracted negotiations. The directors of both mills state that profits during the current year may be lower than those earned during 1960-61. Working has been unprofitable during the first six months of the current year, but indications are that it may become profitable before the end of 1961. The directors also mention that production costs have been inflated by cutbacks in manufacture. The carpet-backing unit of Gourapore is doing well, and the installation of this section is expected to be completed in 1962.

Macneill and Barry Profit Up

Macneill and Barry Ltd has produced satisfactory results for the year ended March 1961. Kilburn and Co. Ltd, a subsidiary, has also done well. The activities and sales of Kilburn continue to increase. The various development projects of Macneill and Barry have made considerable progress. Three new Companies are likely to be formed during the current year, and production of one of these is expected to begin in March 1962.

After providing Rs. 3.36 lakhs (same), for depreciation, the profit has improved from Rs. 45.23 lakhs in 1959-60 to Rs. 49.81 lakhs in 1960-61. The ordinary dividend has been increased from 8 percent, taxable, to 10.50 percent, taxable. It is covered more than two-and-a-half times and offers a yield of 10.2 percent at the present price of Rs. 103 a share. Taxation is allocated Rs. 20.70 lakhs (against Rs. 19.40 lakhs), capital reserve Rs. 3.52 lakhs and general reserve Rs. 7 lakhs (against Rs. 6 lakhs). There is a carry-forward of Rs. 3.27 lakhs, against Rs. 2.93 lakhs brought in.

Bonus from Thackersey Group

The Thackersey group of textile mills—Hindustan Spinning and Weaving Mills, Western India Spinning and Manufacturing Company and Indian Manufacturing Company—proposes to issue bonus shares and also sub-divide their shares of Rs. 1,000 each into shares of Rs. 250 each. The decisions were taken by the respective board of directors at their meetings last week. Hindustan Spinning and Western India propose to issue bonus shares in the ratio of one ordinary share for each one already held. Indian Manufacturing's bonus issue is in the ratio of one for three. Steps are being taken to implement both schemes by obtaining the consent of the Controller of Capital Issues and having the necessary resolutions passed at the shareholders' general meeting. All the three Companies have huge reserves in relation to their equity capital. Hindustan Spinning has a paid-up capital of Rs. 24 lakhs divided equally between the equity and preference capital. Its total reserves at the end of March 1961, stood at Rs. 1.27 crores, of which general reserves accounted for Rs. 98.47 lakhs. The capitalisation of Rs. 12 lakhs does not require an increase in the authorised capital which stands at Rs. 50 lakhs. The paid-up capital of Western India is also Rs. 24 lakhs, consisting of Rs. 12 lakhs in equity shares and Rs. 12 lakhs in preference shares. The reserves at the end of March 1961 totalled Rs. 1.12 crores, of which general reserves accounted for Rs. 92.56 lakhs. Indian Manufacturing has an equity capital of Rs. 18 lakhs which is supported by shareholders' reserves amounting to Rs. 95.12 lakhs. The latest quotations for the Rs. 1,000-paid shares of the three Companies are: Hindustan Spinning Rs. 4,800, Western India Rs. 3,725 and Indian Manufacturing Rs. 2,660. The market for these shares is extremely thin because of their high prices. The proposed stock split should help create a wider market.

More from Hasimara Industries

The ordinary shares of Hasimara Industries Ltd have improved to Rs. 32.12 on prospects of diversification of activities. In their report for the year ended December 1960, the directors state that Hasimara Industries has taken over the Seksaria Cotton Mills (in liquidation) and will run it on a licensed basis. The latter is a Bombay

cotton mill, and the directors of Hasimara have submitted a scheme of reconstruction to the Bombay High Court.

The profit of Hasimara has improved from Rs. 16.53 lakhs in 1959 to Rs. 26.44 lakhs in 1960. The ordinary dividend has been increased from 12½ percent, taxable, to 17 percent, taxable, absorbing Rs. 5.44 lakhs. The yield is 5.3 percent at the present price. Taxation is allocated Rs. 12 lakhs (against Rs. 7.42 lakhs) and general reserve Rs. 8.50 lakhs (against Rs. 4.50 lakhs). The carry-forward is Rs. 2.54 lakhs, compared with Rs. 2.60 lakhs brought in. The tea output amounted to 2.8 million kilograms. The average sale price of the Hasimara division rose from Rs. 4.63 a kilogram to Rs. 4.93 a kilogram, but that of Tumsong declined from Rs. 6.59 a kilogram to Rs. 6.52 a kilogram. The estimates have been made for a crop of 77,370 maunds at a cost of Rs. 96.10 lakhs.

Uneconomic Price for Bombay Gas

In his chairman's statement at the annual general meeting of the Bombay Gas Co. Ltd in Bombay last week, Mr. B. L. Jalan explained how the uneconomic price for gas fixed by the Maharashtra State Government has affected the working results. (A fuller version of the speech appears on a later page in this week's issue of *Capital*.) The price of gas is virtually lower than it was in 1956, but production costs have increased. Although Bombay Gas has to pay more for its coal supplies than Oriental Gas of Calcutta, the latter enjoys the benefit of a higher price. Mr. Jalan said that the price permitted to Bombay Gas is only a fraction of the rate for bottled gas which is being sold by other producers. There is little logic in maintaining the price at a level which does not compensate for the rise in production costs. Other public utility services, such as electricity, telephones, railways, and posts and telegraphs, have been compensated by higher prices for the increase in their costs. Bombay Gas, Mr. Jalan said, deserves credit for having increased its output considerably during the past few years in spite of the unremunerative price for gas. The demand for gas has increased, and the indications are that it is likely to rise further in coming years. If an increase in production is to be permitted in keeping with the rising requirements, it is necessary that the price of gas be raised to a more economic level. Unless a reasonable profit is offered to the manufacturer, it will be difficult to undertake any expansion programme, because investors will not be encouraged to put their funds in a concern which is not considered profitable. As for the coal shortage, Mr. Jalan did not feel enthusiastic about the move to carry coal to Bombay by sea. It is feared that the transport of coal by the rail-cum-sea route may prove more expensive for consumers.

Lower Profit for McLeod

The profit of McLeod and Co. Ltd has declined from Rs. 19.74 lakhs in 1959 to Rs. 18.45 lakhs during the year ended December 1960, but sales have improved from Rs. 2.62 crores to Rs. 2.72 crores. The directors state that earnings from the tea and engineering departments declined, although the working of the shipping department was unsatisfactory. Income from the jute, insurance and agency departments improved. The ordinary dividend has been maintained at 15 percent, taxable. This offers a yield of 7 percent at the present price of Rs. 213 a share. The dividend is covered more than three times. Taxation receives Rs. 5.20 lakhs (against Rs. 6.65 lakhs), convertible funds redemption reserve Rs. 2 lakhs (same), investment reserve Rs. 1.75 lakhs and general reserve Rs. 1 lakh. The carry-forward is Rs. 2.19 lakhs, against Rs. 2.43 lakhs brought in.

Meenakshi Mills Sales Rise

In spite of the voluntary cut in yarn prices and an acute shortage of indigenous cotton which forced the mills to switch over part of the production to superfine counts made from high-priced foreign cotton, the working of Shree Meenakshi Mills, Madurai, for the year ended March 1961 shows a marked improvement over the previous year's performance. Sales of yarn, cloth and waste are up by 16.4 percent from Rs. 3.90 crores to Rs. 4.54 crores. The gross profit has recorded an increase of 23.8 percent from Rs. 55.31 lakhs to Rs. 68.49 lakhs. The ratio of gross profit to sales has improved from 14 percent to 15 percent. Provision for taxation has been raised from Rs. 15.70 lakhs to Rs. 24 lakhs and, in addition, the directors have set aside Rs. 7.25 lakhs for arrears of tax. Depreciation provision amounts to Rs. 12.34 lakhs, including Rs. 82,517 for development rebate, against Rs. 14.17 lakhs in 1959-60. After making these provisions, the net profit amounts to Rs. 22.38 lakhs, against Rs. 21.08 lakhs. With Rs. 6.33 lakhs

transferred from general reserve, the disposable surplus amounts to Rs. 26.81 lakhs. The employees' gratuity reserve and dividend equalisation reserve get Rs. 1 lakh each. The allocation to the machinery renewal and replacement reserve has also been maintained at Rs. 6 lakhs. General reserve gets Rs. 4 lakhs, against nil in the previous year. The preference dividend for 1960-61 amounts to Rs. 32,312 and the additional preference dividend for 1959-60 takes Rs. 3,202. The ordinary dividend of 32½ percent absorbs Rs. 14.29 lakhs, leaving Rs. 17,521 to be carried forward. The directors state that Meenakshi Mills acquired during the year 88,557 equity shares of the paid-up value of Rs. 10 each of the Alagappa Textiles (Cochin) out of a total of 150,000 shares for a consideration of about Rs. 18.04 lakhs. This makes Alagappa Textiles, which has 38,296 working spindles, a subsidiary of Shree Meenakshi Mills. After taking over, the Company has been able to secure sanction for an additional 7,680 spindles for installation there for replacing the old ones.

Raghuvanshi Mills Repeat

Raghuvanshi Mills Ltd has reported satisfactory results for the year ended March 1961. The sales of cloth and yarn are up from Rs. 1.55 crores in 1959-60 to Rs. 1.71 crores in 1960-61. The sales of waste, are, however, down from Rs. 5.27 lakhs to Rs. 4.31 lakhs. The gross profit has increased from Rs. 22.14 lakhs to Rs. 23.34 lakhs. The ratio of the gross profit to sales is slightly lower at 13.3 percent, against 13.7 percent in the previous year. The dividend has been maintained at 10.5 percent, subject to tax. After providing Rs. 6.23 lakhs (against Rs. 5.78 lakhs) for depreciation and Rs. 6.47 lakhs (against Rs. 6.65 lakhs) for taxation, the net profit amounts to Rs. 9 lakhs, against Rs. 8.08 lakhs in 1959-60. Allocations include development rebate Rs. 1.96 lakhs (against Rs. 1.17 lakhs), gratuity reserve Rs. 1.25 lakhs (against Rs. 52,000) and general reserve nil (against Rs. 2 lakhs). The proposed dividend absorbs Rs. 4.20 lakhs, leaving Rs. 1.80 lakhs to be carried forward, against Rs. 20,892 brought in. The directors state that in accordance with the policy of progressive modernisation of the mills, additions worth Rs. 11.23 lakhs were made to the fixed assets in 1960-61 and that further orders for new machinery are being considered. The scheme of amalgamation of Raghuvanshi Mills with Sidhpur Mills has not become effective, since a fresh meeting of the Sidhpur Mills has not yet been called in accordance with the orders of the Gujarat High Court.

Modella Woollens Share Offer

Modella Woollens Ltd—a new Company incorporated in Bombay—is launching a Rs. 1-crore project to manufacture 1.5 million lbs of wool tops and a like quantity of shoddy yarn a year. The wool top combing, dyeing and printing unit will be set up in Chandigarh and the shoddy yarn plant in Thana (Bombay). The British firm of Robert Jowitt and Sons of Bradford is providing the technical know-how and also participating in the Company's equity capital to the extent of £100,000. The foreign collaborators will not be paid any royalty or know-how fees. Modern machinery for the wool top plant worth about Rs. 25 lakhs has been ordered from the U.K. firm of Prince Smith and Stells on deferred payment terms spread over five years. The machinery is likely to arrive at the site by April-May 1962. The plant is likely to go into production by about the middle of the year. The Company is taking over from the promoters—Kanshi Ram Kadir Nath—subject to the Government's sanction, a complete and new automatic shoddy spinning unit of 2,000 spindles which is already installed in Thana and is almost ready to go into production as soon as the raw materials are received. The entire project is estimated to cost Rs. 1 crore. Machinery worth Rs. 25 lakhs is being imported on a deferred payment basis. Arrangements have been finalised with a leading exchange bank for a loan of Rs. 30 lakhs. The balance will be met by the issue of equity capital. Of the authorised capital of Rs. 1 crore in equity shares of Rs. 10 each, the promoters, directors and their friends have already taken up Rs. 10 lakhs. An application is being made to the Controller of Capital Issues for issuing equity shares worth Rs. 55 lakhs. Of the proposed issue, the directors, promoters and their friends will subscribe Rs. 11.25 lakhs and the foreign collaborators Rs. 13.25 lakhs. The Life Insurance Corporation has agreed to take up shares worth Rs. 5 lakhs. The balance of Rs. 25.50 lakhs is to be offered for public subscription some time in November.

Coimbatore Spinning to Modernise

The working of the Coimbatore Spinning and Weaving Co. Ltd for the year ended December

1960, shows a net profit of Rs. 2 lakhs, after providing Rs. 3.50 lakhs for depreciation. The previous year's net profit was Rs. 3.20 lakhs and the provision for depreciation was Rs. 3.65 lakhs. Adding to the year's profit Rs. 87,296 being the commission, the total available is Rs. 2.87 lakhs. Out of this, income tax paid for 1955 absorbs Rs. 4,020. The balance of the profit of Rs. 2.83 lakhs is adjusted towards the loss of Rs. 12.58 lakhs brought forward from the previous year, leaving a net loss of Rs. 9.74 lakhs which is carried forward.

The directors say in their report that in the context of the unsettled conditions and with the considerable part of the machinery being old, the profits of Coimbatore Spinning should be considered satisfactory. But they have decided not to declare any dividend for the year, since it is not a prudent policy to do so when there is a carried-forward loss. The report says that the committee of directors helped achieve considerable progress. This is shown by the satisfactory working results for the first seven months of the current year. The directors hope that with the active part that the committee takes in managing the affairs of the Company, the results for 1961 will be bright. It is stated that an interim dividend for 1961 is being considered. The directors say that the "A" mill with 30,000 spindles and the weaving department with an installed capacity of 407 looms will have to be replaced by new plant and machinery. The directors hope to start the programme during the current year.

Nil from Sri Palamalai Mills

Although Sri Palamalai Ranganathan Mills Ltd has passed the dividend for the year ended March 1961, as it did in the previous year, the working results for the year are more encouraging than before. As the profit of the year was adjusted towards the loss carried forward from the previous year, the directors could not declare any dividend. The net profit of the Company amounts to Rs. 1.97 lakhs, after providing Rs. 83,885 for depreciation. The previous year's net profit amounted to Rs. 21,156. Adding to the profit of the year Rs. 1,605 being the refund of sales tax, the total available amounts to Rs. 1.9 lakhs. From this, the donations amount to Rs. 1.126 and the bonus for the previous year Rs. 53,796. The balance of the net profit amounting to Rs. 1.44 lakhs is adjusted towards the loss of Rs. 2.63 lakhs brought in from the previous account. This leaves a net loss of Rs. 1.19 lakhs which is carried forward.

Referring to the Company's working, the directors say that its operations have shown considerable improvement over those for the past three years. The encouraging results are attributed to the favourable condition in the yarn market and the replacement and renovation of machinery. Capital expenditure during the year amounted to Rs. 2 lakhs. Since the close of the financial year as on 31st March, 1961, Rs. 1 lakh has been invested in new machinery. In spite of the rise in the profit, the directors regret their inability to declare any dividend in view of the carried-forward loss.

General Papers Maintains

The working of the General Papers Ltd for the year ended March 1961, shows a profit of Rs. 1.96 lakhs, against Rs. 1.57 lakhs in the previous year. With the amount brought in from the previous year, the total available for appropriation is Rs. 1.98 lakhs. Out of this, the directors have allocated Rs. 12,000 (against nil) to dividend equalisation reserve and Rs. 90,000 (against Rs. 74,000) to taxation provision. The proposed dividend of 12½ percent, subject to deduction of tax (the same as in the previous year), will absorb Rs. 93,750. There is a balance of Rs. 1,909 which is carried forward. The report says that the Company has made satisfactory profits during the year. This has enabled the directors not only to maintain the dividend, but also to transfer Rs. 12,000 to dividend equalisation reserve.

Midland Rubber Repeats

The working of Midland Rubber and Rubber Products Co. Ltd for the year ended March 1961, shows a net profit of Rs. 13.90 lakhs, after providing for depreciation, against the previous year's profit of Rs. 12.45 lakhs. With Rs. 66,364 brought in, the total amounts to Rs. 14.56 lakhs. Out of this, the directors have allocated Rs. 8.20 lakhs to taxation provision (against Rs. 600,000) and Rs. 5,000 to development rebate reserve. In accordance with the Preference Shares (Regulation of Dividends) Act, they have decided to increase the rate of the preference dividend to 6.40 percent a year, subject to deduction of tax, effective from 1st April, 1959. The additional dividend for 1959-

60 on preference shares accounts for Rs. 6,880. The proposed dividend at 6 percent, tax-free, (Rs. 6.40 gross) on the preference shares for 1960-61 absorbs Rs. 1.10 lakhs. The proposed ordinary dividend at 12½ percent, subject to deduction of tax (the same as last year), will absorb Rs. 5.06 lakhs. The balance of Rs. 8,115 is carried forward.

The total tea crop for the year was higher at 740,800 kilograms, compared with the previous year's 680,979 kilograms. The total rubber crop was also higher at 479,928 kilograms, against 422,000 kilograms in the previous year. The cost of production for tea declined to Rs. 2.77 a kilogram from the previous year's Rs. 2.84 a kilogram. But the average selling price realised was lower at Rs. 4.47 a kilogram, compared with Rs. 4.54 a kilogram for the previous year. The 1961-62 tea crop is estimated at 737,000 kilograms at Rs. 2.75 a kilogram and the rubber crop at 492,151 kilograms at Rs. 2.11 a kilogram.

Be Be Rubber Earns More

The working of the Be Be Rubber Estates Ltd for the year ended March 1961, shows a net profit of Rs. 1.80 lakhs, compared with Rs. 1.40 lakhs in the previous year. With Rs. 424 brought in, the total available is Rs. 1.80 lakhs. Out of this, the directors have paid Rs. 6,786 being the balance of the preference dividend for 1959-60. The proposed dividend of 6½ percent on preference shares for 1960-61 will absorb Rs. 21,429. The provision for agricultural income tax amounts to Rs. 1 lakh (against Rs. 64,018). The proposed dividend at 5 percent (against nil) on equity shares will absorb Rs. 43,305. The balance of Rs. 8,621 is carried forward.

The total crop for the year amounted to 429,057 lbs. against 390,923 lbs during the previous year. The estate cost of production was 87.7 cents a lb. The average price realised was Rs. 1.62 a 100 lbs, including the excise duty. Nearly one-fourth of the rubber output harvested has been converted into Sole Crepe which fetched good price. This accounts for the increased sale proceeds. Against the purchase price of Rs. 3.30 lakhs for the three rubber estates acquired in 1959, the Company has so far paid to the vendors Rs. 2.54 lakhs, and the balance is yet to be paid. The 1961-62 crop is estimated at 416,000 lbs.

Nilgiri Tea Pays More

The recent rise in the price of ordinary shares of Nilgiri Tea Estates, touching par after a long time, fully reflects the substantial increase in the profit for the year ended March 1961. The net profit for the year, after meeting all expenses including depreciation and after providing Rs. 2.70 lakhs for taxation, amounts to Rs. 3.05 lakhs compared with the previous year's profit of Rs. 1.89 lakhs. Taxation provision in the previous year was Rs. 1.60 lakhs. With Rs. 26,790 brought forward from the previous year, the total surplus is Rs. 3.32 lakhs. Out of this, the proposed dividend at 7.35 percent on preference shares (subject to tax) absorbs Rs. 20,657. The balance dividend on preference shares for 1959-60 at 0.85 percent accounts for Rs. 2,368. The proposed ordinary dividend at 10 percent, against 8 percent last year, will absorb about Rs. 1.4 lakhs. General reserve gets Rs. 1.30 lakhs. The balance of Rs. 38,206 is carried forward.

Since the coffee area in the Mailoor Estate has not proved a paying proposition for a number of years, the directors have decided to abandon the area gradually and plant it with tea. During the year, 14.48 acres of unremunerative tea, 8.27 acres of coffee and 12.48 acres of wasteland and some Gravollis trees in the Mailoor Estate were sold. The tea crop for the year amounted to 530,450 kilograms at 258.09nP a kilogram. The tea crop from 1961-62 is estimated at 467,700 kilograms, at 299.76nP a kilogram. The average sale price was 433.17nP a kilogram, excluding excise duty. The coffee crop for the year amounted to 358 bushels. The 1961-62 coffee crop is estimated at 400 bushels. The directors propose to convene meetings of preference and equity shareholders to consider the question of increasing the rate of dividend from 6½ percent to 8 percent, subject to deduction of tax, on the preference shares, and also to make the preference shares redeemable after five years at the option of the Company.

Cottanad Plantations Earns More

During the year ended March 1961, Cottanad Plantations Ltd has earned a net profit of Rs. 85,327, against Rs. 57,396 for the previous year. With Rs. 1,482 brought in, Rs. 15,000 transferred from general reserve, Rs. 11,372 transferred from bad and doubtful reserve advances, and Rs. 1,155 being the excess provision for dividend in the previous year, the total available for appropriation is Rs. 1.14 lakhs. Out of this, taxation provision

amounts to Rs. 44,000 (against Rs. 25,000). The dividend at 7½ percent on preference shares (grossed), taxable, accounts for Rs. 8,220. The proposed dividend of 10 percent, taxable, on equity shares will absorb Rs. 60,000. The balance of Rs. 2,116 is carried forward.

The tea crop for the year amounted to 159,751 lbs, compared with 149,858 lbs for the previous year. The cost of production was lower at 98.7 cents a lb, compared with 110.7 cents a lb in the previous year. The net price realised amounted to 178 cents a lb, against 168.9 cents a lb in the previous year. The rubber crop for the year amounted to 49,430 lbs, against 43,132 lbs. The cost of production for rubber was lower at 74.3 cents a lb, against 86.5 cents a lb. The 1961-62 tea crop is estimated at 161,000 lbs and rubber at 55,000 lbs. The coffee crop for the year amounted to 78.3 tonnes. The Company's working during the year has been satisfactory. The favourable trends in production costs and the sale price of tea continued, but the benefits of a higher coffee crop have been wiped out by the steep fall in prices realised by the Coffee Board. So there has been a reduction in the rate of distribution to growers. The 1960-61 crop has been valued only at Rs. 2 a point in view of the adverse trend.

Kalasa Tea Profit Up

The Kalasa Tea and Produce Co. Ltd has reported an impressive rise in the profit during the year ended March 1961. This has enabled it to declare a higher dividend than last year. The net profit for the year amounts to Rs. 4.15 lakhs, against the previous year's Rs. 2.27 lakhs. With Rs. 48,233 brought forward from the previous year and with Rs. 1,926 being the excess provision in the previous year no longer required, the total surplus amounts to Rs. 4.65 lakhs. Out of this, taxation provision is allocated Rs. 1.35 lakhs (against Rs. 77,000) and general reserve Rs. 1 lakh (against Rs. 50,000). A sum of Rs. 20,463 (against Rs. 1,850) is transferred to development rebate reserve. The proposed dividend of 25 percent (against 20 percent), subject to deduction of tax, will absorb Rs. 1.50 lakhs. The balance of Rs. 59,573 is carried forward.

The 1961-62 crop is estimated at 267,165 kilograms. The directors report says that the estates experienced exceptionally heavy rains in July 1961, and although about one and a half acres of tea were destroyed, the damage was less than what might have been expected. The essential supplies and services are being maintained in spite of the dislocation to communications, and production continues as usual.

Lingapur Estates Show Loss

The working of Lingapur Estates Ltd for the year ended March 1961, shows a loss of Rs. 47,816, after providing for depreciation and all other charges, against the previous year's net profit of Rs. 3.35 lakhs. The balance brought forward from the previous year is Rs. 69,378, and Rs. 1 lakh is transferred from general reserve. These two items total Rs. 1.69 lakhs. From this, the year's loss of Rs. 47,816 is deducted, leaving Rs. 1.22 lakhs for appropriation. From this, income tax provision takes Rs. 76,000 (against Rs. 7,000). The interim dividend at 10 percent, subject to deduction of tax, absorbed Rs. 42,610. The proposed final dividend of 15 percent, subject to deduction of tax, will absorb Rs. 63,915. The balance of Rs. 7,437 is carried forward. The coffee crop for the year amounted to 169,680 tonnes, compared with 224,007 tonnes in the previous year. The all-in-cost of production amounted to Rs. 3.30 a tonne, against Rs. 2.365 a tonne. The coffee crop is valued at Rs. 1.90 a point. The 1961-62 crop has been estimated at 247 tonnes and the all-in-cost of production at Rs. 1,943 a metric tonne.

World Bank and I.D.A.

The World Bank and its new affiliate, the International Development Association, have just published their annual reports. Together, they record total commitments during the past year of \$711 million in loans or credits for development projects in 21 countries. The year saw the establishment of the I.D.A. and the commencement of its operations; it also witnessed the settlement of the Indus waters dispute in which the Bank had mediated since 1952. The reports—the Bank's sixteenth and the I.D.A.'s first—were presented to the annual meetings of the boards of governors of the two institutions in Vienna. During the year, the Bank made further progress in increasing the flow of development funds and co-ordinating efforts to assist economic development. It took a leading part in the consideration by particular groups of Governments of the problems of external finance for the Indus river settlement plan and for the five year plans of India and Pakistan. Throughout, it continued to co-operate with the capital markets

and with private institutional investors in raising capital for economic development.

The I.D.A. designed to aid economic development with credits bearing less heavily than conventional loans on the balance of payments of under-developed countries. It came into existence on 24th September, 1960, and has since carried out its first transactions, providing the equivalent of \$101 million in the form of 50-year interest-free development credits to four countries. By the end of the fiscal year, it had 51 member-Governments whose subscriptions total the equivalent of about \$906 million. It now has a lengthening list of proposals under investigation all over the world. They include projects for the development of electric power, transport, agriculture and other activities of a kind traditionally financed by the Bank. They also include projects of a kind not hitherto financed by the Bank: for instance, for municipal water supply and technical training.

The World Bank report records 27 loans totalling \$610 million made during the year. Transportation lending accounted for \$311 million—over half the total of Bank loans made in 1960-61. Loans were made for railways in Burma, Colombia, India, Japan and Thailand, for road improvements in Argentina, Chile, Mexico, Panama and Peru, and for a new port in Israel. Loans for electric power development took second place, amounting to \$125 million. One loan was made in Africa (Uganda), two in Asia (Ceylon and Japan), three in Latin America (Colombia, Costa Rica and El Salvador) and two in Europe (Norway and Yugoslavia). These loans, it is estimated, will help add more than a million kilowatts of capacity in the countries concerned. Loans for agriculture amounted to \$126 million: this total was mainly accounted for by the loan of \$90 million to Pakistan as the Bank's share in financing the works under the Indus settlement, but it also included loans for agricultural credit in British Guiana and for irrigation projects in Mexico and the Sudan. Industrial lending of \$48 million was made: up of loans for steel in Japan and for industrial development banks in India and Pakistan. The report describes the consortium meetings during the year of countries interested in financing economic development in India and Pakistan. These meetings resulted in the commitment—subject to legislative approval or other necessary authorisation—of loans and grants which should enable the current stages of the five year plans of both countries to be carried forward.

Sales of Bank loans passed the \$1,000-million mark during 1960-61. The first sales of loans, in 1948 and 1949, were made with the Bank's guarantee, but by the end of fiscal year 1955-56, when total sales had reached almost \$280 million (of which over \$200 million were without recourse to the Bank), the decision was taken "that the Bank would not normally offer its guarantee in any further sales of its loans to other investors," the report says. Since the decision of 1956, the Bank has sold over \$730 million worth of loan maturities without its guarantee. By far the greater part of the sales of loans have been made outside the United States, and particularly to investors in Europe.

The year's lending brought the cumulative total of Bank loans—net of cancellations and refundings—to \$5,669 million, of which \$4,320 million had been disbursed at 30th June, 1961. Net earnings reached \$63 million, an increase of \$3.7 million over the figure of the previous year, and the reserves increased by \$95 million to \$602 million. Disbursements, at \$398 million, were \$146 million lower than in the previous year. This reflects the fact that many of the projects for which Bank financing has been asked for have been larger projects which take longer to complete.

I.F.C. Extends Commitments

In keeping with its objective of extending financial aid to private enterprises in the member-countries, the International Finance Corporation made new loans amounting to \$6.2 million in 1960-61, bringing the total so far, "net of cancellations and expirations," to \$44.4 million. According to the fifth annual report of the Corporation just published, the effective "operational investments" held by it on 30th June, 1961, totalled \$27.9 million, of which \$24.4 million were disbursed. I.F.C. funds have been committed in 18 countries. They have not only supplemented large amounts of business capital, but have helped draw private investment into new ventures. In other words, much domestic investment has been stimulated by the association of the International Finance Corporation with individual projects. An important change in the basis of its operations is in the offing. The proposal to alter the charter to enable I.F.C. investment in capital stock has already been approved by governors exercising 56 percent of the voting power, as against the requisite 60, but since no member has voted against it, the amendment will in all likelihood be carried. When it is formally adopted, the I.F.C. will be empowered to make in-

vestment in such form or forms as it may deem appropriate. The amendment includes a provision that the Corporation will not assume responsibility for managing any enterprise in which it has invested and will not exercise voting rights for such purpose or for any other purpose which, in its opinion, is properly within the scope of managerial control.

The countries in which the I.F.C. made loans during 1960-61 are Argentina, Chile, Colombia, Finland, India, Jamaica, Mexico and Venezuela. The Indian concern granted a loan is K.S.B. Pumps Ltd, which is setting up a plant near Poona to manufacture 800 pumps a year. But the loan to another Indian concern, Kirloskar Oil Engines, which had been granted earlier, was cancelled. An analysis of the investments made during the year shows that a variety of projects were being financed with I.F.C. funds. In Argentina, the loan was made to a local subsidiary of well-known Swiss manufacturer of machine tools, which has embarked on the production for the first time in that country of gears for tractors, lorries and other motor-vehicles. I.F.C. investments went to a cement plant in Chile, to a welding electrodes manufacturer in Colombia, and to two other concerns in the latter country making packing goods and furniture. In Finland, money was sanctioned for one of the largest manufacturing enterprises in pulp, sawmilling, heavy machinery and shipbuilding; to a producer of ready-mixed concrete in Jamaica; to a high-speed twist drill project in Mexico; and to a devilled ham producer in Venezuela.

Petrol Prices in India

Statements emanating from New Delhi often give the impression that petroleum prices in India are unreasonably high. Comparative statistics recently compiled by oil company sources do not, however, support the impression. They show that the company selling price, that is the basic selling price, of regular grade petrol in India is lower than in most European countries. The final pump price charged to the consumer in India is high, but that is because the taxes levied on the commodity are extremely heavy. Even so, the final price for the consumer here is much lower than in most European countries. For example, as against the Indian pump price of Rs. 662 a kilolitre (Rs. 233 basic price, plus Rs. 429 taxes), the price a kilolitre is Rs. 670 in Sweden, Rs. 710 in Portugal, Rs. 700 in Norway, Rs. 740 in Italy, Rs. 670 in Ireland, Rs. 720 in Belgium, Rs. 930 in France, Rs. 940 in West Germany and Rs. 700 in Greece. The basic selling price in some of these countries, incidentally, is lower than in India—Rs. 210 in Belgium, Rs. 230 in France and Rs. 200 in Italy. In the others, it is only slightly higher. In countries like Austria, Denmark, Holland and the U.K., where the basic selling price is higher than in India, the pump price is substantially lower, as the rate of taxation is appreciably less. Two difficulties which add to the consumer price in this country are not encountered to the same degree in Europe. They are, firstly, the comparatively longer overland hauls by rail and road, and, secondly, the need to serve a large number of small consumers accounting for an insignificant offtake individually, but dispersed over a wide area. Yet despite the higher distribution costs resulting from these factors, Indian retail prices, exclusive of taxes levied by the Government, compare favourably in the majority of cases, it is pointed out.

Returns on Foreign Bank Accounts

Under the current Exchange Control regulations, persons resident in India are permitted to maintain, and make payments out of amounts held by them, in accounts abroad with general or special permission of the Reserve Bank of India. It is desired to have information of all such accounts except those maintained in the currency of Burma, Ceylon and Pakistan. Accordingly, all persons concerned are requested to furnish to the Exchange Control Department of the Reserve Bank, particulars of accounts stating the balances in them on the date of opening of the accounts and on 30th June, 1961, or any later date before 12th November, 1961. This information should be furnished not later than 12th November, 1961. Some accounts have been held abroad prior to the enforcement of the Reserve Bank's notification of 14th July, 1947. These "pre-zero" accounts and other accounts whose maintenance abroad has been authorised for special consideration, will continue to enjoy their existing position after information is furnished. It is not the intention to freeze these balances in any way, but because of the shortage of foreign exchange, they will have to be taken into account when holders of such balances apply for the fresh release of foreign exchange.

Instances have come to the notice of the Reserve Bank of new accounts having been opened without its permission. All Indian nationals resident in India, who have such accounts abroad in,

currency other than those of Burma, Ceylon and Pakistan, should also report them. They are advised either to close the accounts and have the sums to their credit remitted to India, or to apply to the Exchange Control Department of the Reserve Bank, and obtain permission to maintain such accounts. Such applications will be considered by the Reserve Bank on merits. No penal action will be taken for opening these accounts if action in terms of this paragraph is completed not later than 12th November, 1961. The Government of India has issued a notification under the Foreign Exchange Regulation Act, 1947, directing the submission of returns.

Conference on Textile Imports

Eight major textile consuming countries met in Washington recently to discuss the ways of increasing their imports of cotton fabrics and clothing from the underdeveloped world. They included the United States, which imports barely 6 percent of its total requirements, and Britain, which imports roughly 40 percent. The other countries attending were Canada, France, Italy, West Germany, Belgium and Holland. The purpose was to help underdeveloped countries find orderly markets for their cotton textiles without unduly affecting the economies of the more advanced countries. Apparently, there was no effort to persuade Britain to accept larger imports as she is doing so much already. At the same time, there seemed to be little prospect that the United States would open her markets wider; rather the contrary. Mr. Ball, the U.S. Under Secretary of State for Economic Affairs, said that he hoped to reduce Hongkong's cotton textile exports to the American market by as much as 10 percent. The hope is that other industrialised countries, which take little or none of their cotton textile imports from the underdeveloped world, would absorb the Hongkong output diverted away from the American market. The producing countries would have to accept limits on their export expansion. An international marketing agreement for textiles would be the first for any manufactured commodity if, indeed, it can be reached.

Machine Tools from France

Britain—together with West Germany—is reported to be losing ground to France as far as new export orders for machine tools are concerned, according to the magazine *Metalworking Production*. It states that French manufacturers had received 32 percent more contracts during the first six months of the current year, while British orders were fewer than last year. German manufacturers are reported as saying that "business is not coming in as fast as a year ago." During the first quarter of this year, French machine tool manufacturers are said to have received new export orders exceeding £5 million, which amounted to an increase of 37 percent over last year's figures. British manufacturers, who achieved an 80 percent increase in new export orders last year, suffered a 13 percent decline during the first four months of the current year. A similar trend is reported from West Germany, but in each case even the present level of new business is on a high level by "normal" standards. Outside the big three machine tool producers in western Europe, the Belgian industry is making large gains. Manufacturers there have received export orders for the first two months of this year of almost £2½ million—an increase of 66 percent, compared with last year. British manufacturers, however, reached an output of £40 million in the four months ended April, which is 31 percent more than during the same period of last year. The Germans are said to make little, if any, progress in this matter, and French production has increased by only 16 percent. German machine tool manufacturers are said to find an increasing market in Japan, but to lose heavily to Russian and east European competition in China and in underdeveloped countries in the Far East. France's largest market is Brazil. Britain's sales to West Germany, Italy and Japan are said to have more than doubled in the past 12 months.

Cotton-growing in Africa

Sierra Leone, it is reported, is to undertake an investigation by experts of the possibility of using some of its land for cotton-growing. It is not long since a Ghanaian Minister expressed the hope that his country would develop both cotton-growing and cotton textile manufacture before long. Both countries have been encouraged to consider making cotton one of their staple products by the success which Nigeria and the Congo have achieved in that direction, and the possibility that they will proceed with their plans and make substantial additions to the world's supplies will presumably have to be taken into account. At present, although the world consumption of cotton increases

almost uninterruptedly year by year, production follows a similar course, and each new season starts with an accumulated stock equivalent to more than six months' requirements. The question arises whether, if annual production is regularly increased by 500,000 bales or so from new producers in Africa, the balance of supply and demand would be disturbed and the accumulated stock would become burdensome. Presumably, the larger supply could be absorbed into consumption if the price was considered attractive, and several countries which support cotton prices in the interests of their own farmers might have to reconsider their policies. In the long run, the tendency would no doubt be for the newer producers not to put their crops on the world market, but to dispose of them to textile mills in their own countries. Especially in countries which have not long been independent, the urge to establish a cotton textile industry is strong, and in those which can grow the raw material it is virtually irresistible. One point is sometimes overlooked when development along these lines is contemplated. It does not always prove that the cotton which a country can produce most economically is the type best suited for converting into the qualities of cotton goods which that country normally consumes.

Working of U.P. Turpentine Factory

The working of the Government-owned turpentine and rosin factory in Bareilly has been criticised by the Public Accounts Committee of the U.P. Legislature. It will be recalled that the State Government acquired the factory in 1947, and a Government nominee was appointed its general manager. The managing agents resigned in 1950, and the shares held by them were transferred to the Government. Some difficulty was, however, experienced by the existence of another separate concern within the premises of the turpentine and rosin factory, namely, the Turpentine Subsidiary Industries Ltd. The physical lay-out of the two concerns was such that it was not possible to demarcate them by erecting any wall or fence, so the Government decided to buy out the other concern. The purchase price paid for its shares, according to the Public Accounts Committee, was very much on the high side. The Committee points out that the so-called factory of the other concern consisted of "a few tin sheds with some pans and ovens and the capital invested therein was practically insignificant." The whole deal, the Committee adds, "was carried out in an irresponsible manner and it disclosed scant concern for public interests."

The turpentine and rosin factory's experiment in making its own casks has also proved a failure. The "kanju" logs bought for the purpose were found to be defective and unsuitable after sawing. The Committee says that even if the idea was to build a standby stock in the event of a breakdown of the contract system for getting casks, the logs should not have been bought on a mass scale. Another distressing feature noted by the Committee is the "habitual disappearance of large quantities of rosin from the factory. In 1957-58, the loss in this way was estimated at 10,000 maunds. The losses have increased every year, and the Committee has demanded the fixing of responsibility for this on the officials concerned. "All these," the Committee says, "speak very poorly of the standard of management of the factory and we would emphatically suggest that the Government should carry out a proper and early review of the existing arrangements. We also feel that there is at present insufficient financial control over the activities of this Company.....In the opinion of the Committee, it would be desirable to make one Government Department responsible for the direction of the affairs of the Company."

More Incentives for Exports Urged

While India's imports have increased substantially over the last decade from Rs. 724 crores a year in the first plan to Rs. 1,072 crores a year in the second, exports have remained almost stagnant around Rs. 600 crores a year during the same period. The annual average of Rs. 614 crores for the second plan shows an increase of 9 percent in volume over the figure for the first plan, but even this has not been reflected in export earnings because of the lower prices realised by exports. Although the Government is worried about the problem for a long time and has not only removed many of the fiscal impediments but has also introduced incentive schemes for many commodities, the results achieved so far have been far from encouraging. With India's foreign exchange reserves at a dangerously low level and the import bill estimated to rise to Rs. 1,270 crores a year during the third plan period, it is clear that desperate efforts will be necessary if exports are to reach the third plan target of Rs. 740 crores or

Rs. 760 crores a year. In a memorandum submitted to the Import and Export Policy Committee, the Indian Merchants Chamber, Bombay, has suggested the creation of a Ministry of Foreign Trade with a special export department. It is urged that it should have adequate and competent personnel and should try to arouse enthusiasm in promoting exports. The export promotion schemes, the Chamber says, should be immediately reviewed in order to make them powerful instruments of export promotion. It would be necessary to reorient India's export policy so as to satisfy the demand of the various export markets not only for commodities which she can offer them conveniently but also for those they actually need. The Chamber urges the need to diversify the India's export trade, both commoditywise and countrywise, particularly because traditional lines are known to be facing keen competition abroad. The Chamber has suggested the granting of an incentive on the line of the currency retention scheme in force in many countries for manufacturer-exporters and other exporters. The percentage of export earnings on which import entitlement is to be based should be sufficiently attractive. The scheme may be implemented by issuing export bonus certificates which will mention the import entitlement. The list of commodities to be allowed to be imported under the scheme would include items which are raw materials, components and accessories so that industries exporting their finished products will be able to replenish the raw material contents of the exported goods on an adequate basis.

The success of the export promotion drive, the Chamber says, will be mainly conditioned by two factors—cost and quality. Export industries are urged to introduce economies in their manufacturing programmes. The Government also should render all possible help and facilities to the former. The scope of the drawback and rebate system should be widened to cover other export commodities. Other fiscal incentives such as rebate of income tax and super tax on export earnings should be introduced. The Chamber lays stress on market research and surveys of export markets and the study of consumer preferences in them. Improvement in the machinery for collating and disseminating statistical data and other relevant information concerning the needs of importers in various countries. It has also emphasised the need to avoid anything that would dampen the enthusiasm or impair the confidence of exporters. It is critical of the increased incursions of the State Trading Corporation in the export trade and suggests that the S.T.C.'s area of operations should be confined to the exploration of markets and the conclusion of arrangements with overseas Governments' buying and selling agencies functioning on a Government level.

A NEW LIGHT

THERE is some satisfaction in feeling that Mr. Arthur Kitson, the inventor of the wonderful light which bears his name, is an Englishman, though he has, so to speak, worked out his idea amid American surroundings. Philadelphia is the city in the States which has had the honour of shewing the way in the high illuminating possibilities of petroleum; and there is not much doubt that both gas and electricity will find that a very serious rival has now entered the field to contest their own claim to public favour. In the United States it can, no doubt, be easily understood that what has "caught on" in Philadelphia has penetrated elsewhere. As a matter of fact, New York, Pittsburgh, Baltimore and other big centres have not been slow to recognise the advantage of the new light. There is, I believe, at least one Kitson light in India; and European countries in many busy centres are giving it the preference over gas and electricity. In Great Britain it is everyday winning adherents, and any Londoner who is at all sceptical as to the merits of the light may receive an object lesson in proof of its virtues by walking up Portland Place at night where in that well-known thoroughfare he will see a splendid installation of the "Kitson" in full working order. It has often been observed that inventions breed inventions. This is doubtless true. A hundred instances could be cited to prove the statement. In India we are all tolerably acquainted with the Weisbach mantle, but as has been well remarked, "it is doubtful whether at the time he invented his well-known mantle Carl Auer von Weisbach foresaw the possibilities of high candle-power illuminations which could be produced by its use. In the history of illuminants there is plenty of evidence to shew that inventors have, from time to time, tried to use oil in connection with an incandescent mantle, and certain methods of so using oil have now and then flattered their inventors with something which looked like success. But Mr. Kitson has gone one better than his competitors, the result being a lamp or a method of lighting which is likely to cause as great a revolution in street lighting as was effected in the manufacture of steel by the Bessemer system."

FROM

CAPITAL

19th September, 1901

A Ditcher's Diary

THERE WAS SOMETHING ODDLY ALOOF ABOUT THE personality of Mr. Dag Hammarskjöld. He seemed friendly towards all and yet intimate with none, which may well have been the key to his undoubted success as Secretary-General of the United Nations—a body so easy to love, as Mr. Nehru does, and so easy to hate, as General de Gaulle does. Regret at his tragic death in the Congo, which may yet be the grave of the U.N. itself, is, however, sincere and entirely genuine, perhaps even in the communist camp. Mr. Hammarskjöld was a civilised man; and it was not wholly surprising to read that, amid his worldwide preoccupations, he had found time to translate into Swedish the poetry of St. John Perse, Nobel Laureate. Dag symbolised discipline and dedication, and his successor—I still hope it will not be successors—will have the highest standards to maintain, in a job that is being made daily more difficult.

YET THE FACT MUST BE FACED THAT THIS WAS NOT the first time the U.N., under Mr. Hammarskjöld's leadership, had bitten more than it could chew; and my sympathy for the organisation on that occasion is limited by my suspicion that on this occasion it went about the Katanga business in a manner less than wholly straightforward. I have seen it suggested that the U.N. did so because it desperately wanted a success to show the U.N. General Assembly's sixteenth session. This is probably true in part; but it cannot be the full explanation. Nor is it wholly credible that the U.N. forces moved into Katanga because the fund for the Congo is non-existent; any money Elisabethville may be persuaded to part with can only go to the Aduala Government at Leopoldville, whose contribution to the massive U.N. bill in the Congo is nil. But why should it be necessary to speculate on the motives of an international organisation like the United Nations? Its duties entail, I suppose, a measure of secret diplomacy, although this can easily be overdone. But the results of its diplomacy and the consequent actions should surely be an open book for all to read. I hate to have to add to the criticism, frequently unfair, that the Secretary-General had already received in the course of his dedicated years on Turtle Bay; but I am unable to praise the organisation for the feeble justification it has produced for its action in Katanga which has led to many casualties. I have always in the past laughed when U.N. officials talked of an "impending" civil war in the Congo; a civil war has gone on in that country ever since the day of its independence, and that is the truth. There is very little evidence that ten days or so ago there was a deterioration in the situation warranting U.N. action. The statement speaks of the Central Government's threat of invading Katanga. Is there any reason at all to think that the Aduala Government was capable of effective invasion any more than the far more popular Lumumba Government was? In any event, Mr. Aduala could easily be told quite plainly that it was none of the U.N.'s business to recover dissident estates for Leopoldville. What saddens me most is that India should have got involved in the Congolese mess, and at the price not only of valuable lives

but also of her fair name. And we are asked by Mr. Nehru to believe that this country never missed a bet in the Congo!

SUCH IS THE RELENTLESS GRIND OF JOURNALISM that many in the profession must look, as I do, to a reasonably mild prison sentence as their last opportunity of writing that scholarly and authoritative *oeuvre* which they all fancy they have in them. Mr. Nehru, for instance, has rarely written anything of importance except in jail. It is very different with Bertrand Russell who, in a life that has never been sheltered or exclusively academic, has written books in a ceaseless stream on an astonishing variety of subjects. The ghost stories of later days are another matter; but most of his other works, such as *History of Western Philosophy*, were products not only of a brilliant mind but also of sustained hard work. Some say he has never excelled *Principia Mathematica*, which he did with Whitehead; but his works in their totality have profoundly influenced at least three generations on five continents. When such a man, and that at the age of 89, is sent to jail, although for only a week, there is sure to be much genuine regret. And a pity it was. I must yet submit that neither Russell's age nor his erudition has anything to do with the Campaign for Nuclear Disarmament. George Orwell once had a close look at the British Left in the 'thirties and found in its ranks some very odd creatures with little in common: pacifists, vegetarians, socialists, homosexuals, anti-vivisectionists and I can't remember who else. This is in part true of the C.N.D.; and I cannot agree that just because some of these people are obviously sincere (so were the Nazis) it follows that unilateral disarmament makes sense. There is not a fool (with the possible exception of General Obukhov, who recently said his tanks would survive a nuclear war) that needs to be told that if all the nuclear weapons now in the armouries of the U.S.A. and Russia were used, mankind might disappear. What, then, are the circumstances in which one or the other might be most tempted to use those ghastly things? Surely the answer is that the temptation would come when it was clear that one might get away with an attack and not suffer annihilation in retaliation. These are cruel terms on which to live; but it is a cruel world in cruel times that we live in.

WHEN PARTICULAR SECTIONS OF A DECAYING SOCIETY are chosen for spasmodic castigation on particular scores, something in me stands in the way of my joining the game with anything like alacrity. I rather try to take in the general picture. The result often is the melancholy conclusion that there is no cure for the particular disease; perhaps none for the general malaise either. With everything else in disarray in West Bengal, I saw no reason at all to expect its school-teachers to behave very differently from, say, students or organised labour or the clerks or the unemployed. It would be learned to write of the betrayal of the Bengali intellectual in terms of Julien Benda; but it would

all be beside the point. As far as I can see, the teachers have some genuine grievances; they always had, and in this they are by no means alone. It is also obvious to me that the Education Department of the Government of West Bengal did not move at all until a strike was threatened; and the threat itself was not unrelated to considerations of the coming elections. It will thus be seen that no party involved was in the least bit inspired by thoughts of improved educational standards for West Bengal, which I do not consider will immediately follow higher wages for teachers. At many points, I do not accept Neil McInnes's thesis (propounded in an annual supplement to *Capital* a couple of years ago) that the achievement of industrialisation has nothing at all to do with universal literacy; but I am beginning to see his point that no education worth having will ever reach the people of this country until you restrict the numbers to be educated. This is a somewhat cruel point of view, inasmuch as one is asked to resign oneself to a decision that would leave the majority of the people even without the slender benefits of an acquaintance with the alphabet. The benefits are indeed slender; but the country's resources are slenderer still; and if you spread them too thin you get neither the educated *élite* you need for progress nor universal elementary education. But, as I have said, neither the State Government nor the thousands of teachers involved in the agitation are really interested in these questions.

IN THIS ERA OF TABLOID NEWSPAPERS AND THE lighter-hearted journalism, official publications are generally looked upon as pretty stuffy things fit only for the compulsory reading of bureaucrats and a certain number of unfortunate business executives. Britain's *Board of Trade Journal* has somehow managed to avoid the more obvious pitfalls of departmental publishing and to present its inevitably heavy matter with a certain air of brightness and whiteness. I say this because the *Journal's* 75th birthday, which fell last week, provides one of those rare occasions when one weekly newspaper can say something felicitous about another. Actually the *Board of Trade Journal* originally appeared as a monthly publication and its first number, which is dated 15th September, 1886, is date-lined "August-September 1886." A special article in the most recent issue describes some of the background of the time; then, as now, Britain had a trade gap; her exports were running at about £19 million a month, against about £320 million today, while imports were £29 million a month, compared with £370 million today. The Marine Department of the Board of Trade still had a section for "wooden ships". The original monthly publication was sold at sixpence and today the weekly is available at one shilling and three pence. The early issues were 48 pages in size, but by 1893 it had swollen to 128 pages an issue. The index for that year shows that among the *Journal's* contents was a report on the current Bengal opium sales. Although not as old as some other publications, at 75 the *Board of Trade Journal* is one of the pioneers of modern economic journalism. Throughout the years it has provided a service of reliable factual information, which has been of the greatest value to industry and commerce wherever British enterprise has established itself. Long may it continue.

India today is caught up in the feverish activity of industrial advancement. Projects are planned... dams are being built... all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines... and the STEEL consumed by them. In dams and bridges, in the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary—absolutely necessary! And so steel has come to be indicative of the economic development of a country; indicative of what a country is worth in cold hard cash.

THE KINNISON JUTE MILLS CO., LTD.

CHAIRMAN, SIR WALTER MICHELMORE'S STATEMENT

The following Statement has been circulated to shareholders of The Kinnison Jute Mills Co. Ltd., by the Chairman, Sir Walter Michelmores.

Dear Sir/Madam,

Last year for the first time a statement by the Chairman was enclosed with the Accounts and I am again issuing a statement this year with a view to providing to all Shareholders of the Company more detailed information in regard to the Company and the industry as a whole.

It will be seen from the Directors' Report and Accounts that profits for the year ended 31st March, 1961, show a reduction from those of the previous year—a feature which is common to the majority of Companies in the Birds/Heilgers Group—due partly to the extremely difficult trading conditions in October/December, 1960, when Jute purchased at advantageously cheap prices was not delivered until long after contract due dates. It is regretted that the improvement in the overall efficiency of the Mills and the number of spindles being operated per loom from June 1960, was not maintained up to the end of the financial year and this also militated against profits reaching the level of the previous year.

Prospects

The current year could well be the most critical the Jute Industry has encountered in its long history. The disproportionately high price of raw jute has

involved Mills in crippling losses on simultaneous trading up to the time of writing. Block closures of one week each month in June and July, 1961 and curtailment of production in August and part of September due to shortage of raw material have added their burden in the shape of lay-off compensation to the labour force and increased costs consequent on the reduced volume of goods produced.

The drastic curtailment of the electrical power supply between the hours of 6.00 p.m. and 10.00 p.m. from February, 1961 called for a rearrangement of shifts in your Mill and Factory, but it is pleasing to record that the flow of production was not interrupted.

News of the 1961-62 crop both from India and Pakistan is heartening in regard to expected output—although quality may not be up to normal due to shortage of steeping water. It is hoped that ample supplies of fibre will be available at a price which will permit Mills to do simultaneous business without incurring a loss.

Modernisation

Apart from a small quantity of additional machinery on the fine side still to be received, the modernisation programme of the Preparing and Spinning Sections of the Mills is completed for the time being. The Spinning and Preparing Machinery installed in

No. II Mill in 1949 still continues to give excellent service.

In pursuance of the policy of developing and extending the most modern techniques in machinery, your Directors have placed orders with Messrs. James Mackie & Sons Limited for 24-Onemack' Weaving Machines. Application has been made for the relative import licence.

Wide Looms

The wide looms installed in No. I Mill have contributed their share to the year's profits. It was not, however, found possible to work looms to capacity and for two periods during the year one shift had to be cut back in order to adjust supply to demand. It is becoming increasingly apparent that the scale of installation of additional wide looms is such that competition will tend to be in excess of demand and the competition arising from this situation will inevitably result in a shrinkage of profit margins.

Labour

The Wage Board for the Jute Industry set up by the Government of India, while considering the issues involved, made an unanimous recommendation as to the grant of Interim Relief to all categories of workers involved, and this was accepted by Government. The extent of the Relief amounted to:—

(a) Rs. 2.85 monthly per worker from 1st October, 1960 to 31st December, 1960.

(b) Rs. 3.42 monthly per worker thereafter.

While there can be no doubt of the desirability of raising the income and standard of living of agricultural and industrial labour in the country as a whole, including the Jute Mill industry, regard must, nevertheless, be had to the competitiveness of the industry, not only in relation to other countries which produce jute goods, but also in relation to alternative packaging (or non-packaging) media such as paper and bulk handling. Unless, therefore, higher remuneration and standards of living can be related to productivity, which might be achieved by the extension of piece-rates and the system of payment by results, indiscriminate wage increases can only be to the long-term detriment of this vital export industry.

Raw Jute

The quality of the 1960-61 crop was better than that of the previous season and could be considered as being above normal. The quality of deliveries to the Mills was satisfactory.

The period covered by these accounts was characterised by an acute shortage of raw jute, which dominated market trends. The small 1959-60 crop, resulting mainly from the low prices prevailing at the time of sowing in the early months of 1959 and unrelieved by the relatively small imports permitted from Pakistan, was followed by another short crop in 1960-61. On this occasion the crop failure was caused by the unseasonably dry weather during the period February/May, 1960 which delayed sowings so long that the eventual area put under jute was reduced, while in certain areas the young plants died and a scarcity of seed handicapped re-sowings. The industry, therefore, started the new season in July, 1960 with the by no means large carry forward of 12½ lac bales and faced the prospect of another season of reduced supplies. Unfortunately the situation was aggravated by the fact that licences for the import of Pakistan Cuttings were not issued in time for them to be a factor in preventing jute prices from reaching uneconomic levels.

The Indian Jute Mills Association was under no illusions as to the seriousness of the outlook for the industry and, in addition to making representations for a greater liberalisation of fibre imports, urged upon Government the need for a controlled restriction of output in order to conserve jute and avoid the complete dislocation of the industry when supplies started to fall off towards the end of the season. From early June, 1960 the Association permitted its member Mills to seal looms voluntarily on the understandable fact that the loom hours lost would be recoverable after 1st November, although, as it so happened, this recovery became largely impossible owing to the persistent deterioration in the jute supply position. In October, 1960, the Association introduced a jute purchase quota system designed to control buying and ensure an equitable distribution of available fibre supplies. This arrangement has been successfully maintained to end August, 1961 and has levelled out Mills' stocks.

Early in December, after consultation with Government, the voluntary sealing scheme was abandoned in favour of a total compulsory sealing, under the Working Time Agreement, of 17% of the total looms. Towards the end of the month, again with the approval of Government, this arrangement was replaced by a reduced working week of 45 hours with a 12% loom sealing, in order to permit a greater number of the labour force to obtain employment. From the end of January, 1961, the working hours were further shortened to 42½ per week.

Despite these corrective measures, the industry's jute stock position showed no signs of improving and it became increasingly evident that the available supplies were even less than anticipated, and that the final crop figure would be somewhere in the region of 32 lac bales, including Mesta. With stocks continuing to dwindle, the Indian Jute Mills Association approached the Central and State Governments in May on the need for further production cuts to conserve jute, and agreement was finally reached on a block closure of the industry for a week in June and a week in July. Even these measures have proved insufficient to bridge the gap until new crop became available in quantity, and from the beginning of August Mills individually have taken steps to adjust their output in accordance with their jute supplies in each case.

It is now abundantly clear that the initiative taken by the industry in regulating production from October, 1960 was instrumental in saving the industry from complete disaster.

Every possible effort must be made to ensure there is no recurrence of this unfortunate situation.

remedy possible is a guaranteed supply of raw material at reasonable and stable prices. This entails a substantial increase in the yield per acre by the adoption of modern agricultural practices and the creation of an organisation to ensure that prices do not fall to levels unremunerative to the Jute cultivators. The association has forged ahead with its plan for supplementing the jute development work of the Central and State Governments. Three intensive cultivation blocks have been started in each of the three different zones in West Bengal with the object of demonstrating to the growers the advantages of using improved seeds, fertilizers and mechanical implements. A seed multiplication scheme has also been worked out in detail envisaging financial assistance from the Government of India for the purpose of improved seed multiplied by registered growers and its sale at subsidised rates to the cultivators.

Your Company held substantial stocks of jute in the first six months of the period under review and was, therefore, spared the disastrous experience which befell a section of the industry at a time when jute prices were entirely out of parity with those of finished goods.

Jute Goods

The policy of selling up and down the market in small lots was continued throughout the year with generally satisfactory results.

Trading conditions were far from satisfactory throughout the period under review and, latterly, for many years. The root cause of the trouble has been, of course, the abnormally high prices of jute per maund, a price which bears no relationship to normal conditions in the international market for jute goods and which, if maintained, would gradually lose the Indian jute industry all of its export business. That overseas buyers have been antagonised by the high prices is unquestionable, and business has been slack as a result. Buyers have deliberately followed a policy of digging into their stocks and replacing only to a limited extent, waiting for a levelling off of prices at lower levels. Consumption has also been restricted in a number of markets: in the U.S.A. alone, it has fallen by 60 million yards in the first seven months of 1961 compared with the corresponding period of 1960.

Owing to this limited purchasing activity, and with Pakistan capturing the greater share of the business that has been offering, the prices of Indian jute goods while still high by normal standards have not been in parity with jute prices. It is for this reason that the Mills have suffered severe financial losses in recent months. Business was also retarded by the stringent controls imposed by the Forward Markets Commission in November, 1960 on trading in transferable Specific Delivery Contracts, controls which were designed to curb speculation but which necessarily affected genuine traders as well. The further restrictions introduced by the Reserve Bank of India to limit credit facilities by scheduled banks against stocks of jute and jute goods had the same effect.

A healthy finished goods market will not be possible until the industry's raw jute supply problems have been solved; and in the long term the expanding jute industry in Pakistan will become even more of a force to be reckoned with unless means can be devised of strengthening the Indian Mills' competitive position.

Buyers generally are becoming increasingly quality conscious and with a view to improving the products of your Mills and supporting Export Promotion further progress has been made in Statistical Quality Control.

Competition from Pakistan

I feel that pointed attention must be drawn at this juncture to the very serious threat posed by Pakistan to Indian exports of sacking goods. In recent months Pakistan has been under-cutting India to the extent of Rs. 8/- or Rs. 9/- per hundred bags, and as I write their prices are approximately Rs. 5/- per hundred bags below our market prices. It follows, inevitably, that they take first cut of the business of any importing country and it is only when their manufacturing capacity is fully booked that the foreign buyers turn to India for the balance of their requirements. In the result no less than 80% of the recent Australian business in cornsacks was placed with Pakistan, whose mills have also made serious inroads into the markets of Cuba, Africa and Burma and of other countries which have traditionally been the prerogative of India.

So much for the present, but if the present position in which India—the home of the jute trade—finds itself is most unhappy, the prospects for the longer-term future are even more bleak. Pakistan is understood to be placing orders for an additional 6,000 looms, to be installed over the next few years, and these looms are expected to be operative by 1965. It is anticipated that of this total, 5,000 looms will be for the manufacture of sacking, and assuming an average of two and a half shift per day, production would be of the order of 30,000 tons monthly. In recent years India's exports of sacking have averaged 32,000 or 33,000 tons monthly, so it will be readily seen that if the present price differential remains and Pakistan continues to be able to take priority in all export markets, then by 1965 India's export trade in sacking goods will have vanished entirely, leaving it only to satisfy its indigenous demands.

The reasons why the Pakistan mills can undercut the Indian are three-fold; first, Pakistan mills prices normally buy better quality jute and at cheaper prices than the Indian mills; second, wage rates in Pakistan are appreciably lower than in India; third, the export bonus scheme operating in Pakistan has the effect, in present conditions, of adding approximately Rs. 200/- per ton to the trading profits of Pakistan mills. Even allowing for the fact that efficiency is lower and power costs higher in Pakistan I estimate that there is at present a price advantage of approximately Rs. 300/- per ton in their favour. In the result, while under-cutting Indian mills to the extent necessary to sell their entire production they

can still make substantial profits—and will continue to do so at India's expense.

In these circumstances it is vital that Indian mills be given the earliest opportunity of competing on even terms with Pakistan; the longer action in this matter is delayed the more difficult it will be to regain the markets lost. The jute industry being the premier export industry of the country, and its highest dollar earner, the consequences of a serious decline in it can be nothing but a disaster to the general economy of the country.

Subsidiary Company—The Standard Jute Co. Ltd.

This Company continues the manufacture of goods on a limited scale. Last year it was mentioned that fairly substantial funds had been accumulated and while these were being loaned to Kinnison at a rate advantageous to both Companies, it was hoped to utilise them in a diversification of interests outside the jute industry.

Your Directors have now to advise it has been decided to invest:—

(a) Rs. 6 lacs in the purchase of 6,000 Equity Shares of Rs. 100/- each, at par, of McNally-Bird Engineering Company Private Limited;

(b) Rs. 6,75,000/- in the purchase of 9,000 Equity Shares of Rs. 10/- each in Coates of India (Private) Limited.

Approval of these investments was obtained in General Meetings of the Company held on 12th July, 1961 and 12th August, 1961, respectively.

The McNally-Bird Engineering Company Private Limited is a new Indian company formed and registered in relation to a collaboration between Bird & Company (Private) Limited and the McNally Pittsburgh Manufacturing Corporation of Pittsburgh, Kansas, U.S.A., and will establish a manufacturing undertaking at Kumardhub.

Coates of India (Private) Limited is an Indian Company formed and registered in 1947 to take over the Indian business of Coates Bros. Co. Ltd., London, manufacturers of inks for the printing and packaging trades, and has established factories in Calcutta, Madras and Bombay.

THE BOMBAY GAS COMPANY LTD.

CHAIRMAN, MR. B. L. JALAN'S REVIEW

Extracts from Chairman's Address of Mr. B. L. Jalan at the Annual General Meeting of The Bombay Gas Company, Limited, held on the 15th September, 1961.

Gentlemen,

In a recent address in Calcutta, I had traced the three distinctive stages of economic growth which the country will have passed through in a relatively very short span of three decades. As I said then, what we should aim at is a kind of "incentives-based regulated economy". Much of the progress which we have achieved would not have been possible but for such incentives. At the same time, it is true that a lot more could be achieved if we relied more on incentives rather than on restrictive regulations. To satisfy the growth-hunger of our economy, as perhaps of all developing economies, we will have to devise an ingenious system of incentives without permitting the growth of a lop-sided economic system. The objective of orderly and balanced development should not interfere with the larger objective of acceleration of the growth rate.

Incentives-based Regulated Economy

The incentives take many forms: positive and negative; direct and indirect; financial and non-financial; and tangible and notional. Sometimes negative incentives in the form of removal of deterrents to industrial production such as shortages of feed stocks, fuel, power and transport facilities may be as effective in the promotion of industrialisation as direct, positive and financial incentives.

During the last few months, disquieting news flashes regarding such shortages have appeared. Steel production which is so vital to the country's industrialisation and general progress was hampered by non-availability of coal which again was due to transport bottlenecks. In fact, transport difficulties and production and distribution of coal have become the subject of an ominous controversy in the official and non-official quarters. We are aware of the power failure in Calcutta and Delhi. These failures only aggravated the chronic power shortage in the country. Many industrial proposals in several States could not be promoted owing to non-availability of power or cheap power.

My object in pointing out the specific instances is merely to establish that there is a great scope for the State to provide increasingly and to strengthen the basic sinews of industry and thus accelerate the pace of industrial and economic growth in the country. While it is true that the national income in the country increased by 42 per cent during the first decade of planning, we are conscious of the great leeway which we have to make in order to catch up with the economic standards of more advanced countries. Owing to the population growth at a rate of over 3 per cent per annum, the per capita income during the first two Plan Periods could increase by only 18 per cent. We are still ranked among the lowest group, our per capita income being Rs. 302 in 1959-60 against Rs. 1,426 in Japan, Rs. 4,863 in the U.K. and Rs. 11,118 in the U.S.A.

An attempt has been made recently to recodify our tax law by passing a new Income Tax Act. While there is, no doubt, a lot of scope for differences of opinion on the changes which this new Bill has or has not brought about, one thing is patent: it has not gone far enough in simplifying or rationalising our tax system. The adherence to a system of multiple taxes such as Expenditure Tax and Wealth Tax has been guided by doctrinaire approach rather than by pragmatic approach to economic problems. While these taxes have not been given up, the highest rate of individual income tax continues to be as high as 84 per cent while Prof. Kaldor, on whose suggestions the so-called integrated tax system was adopted, desired the rate to be reduced to 45 per cent only.

As regards a liberal credit system, we may refer to the proposal being discussed at present among the banking circles to reduce the advance-deposit ratio. In support of the proposal it is mentioned that the ratio is higher as compared to those prevailing in advanced countries such as the U.K. and the U.S.A. One would easily see the futility of comparing such ratios with those of advanced countries if the basic objective of accelerated rate of growth is kept steadily in view. First, our ratio is lower as compared to rapidly developing countries such as Japan where it is as high as 100%. Secondly, the banking habit in countries like the U.K. and the U.S.A. is so widespread that even a lower ratio would meet the requirements. Thirdly, our deposit-advance ratio has not been growing appreciably in the past. While it was 64.42 per cent at the end of 1951 and rose to 71.63 per cent at the end of 1956, it was as low as 52.79 per cent at the end of 1959. If in March, 1961 it was 72.12 per cent, it fluctuated between 56 per cent and 72 per cent during the preceding 12 months, depending on seasonal requirements of the money market. Moreover, the insecurity to which the bank depositor is exposed will be well taken care of by Deposit Insurance which is very rightly being sponsored and

by a more vigilant policy followed by the Reserve Bank.

Gas Price: A Case of Disincentive

When we think of incentives, the case of our Company for raising the price of gas sold by it comes to my mind in bold relief. If one were to mention a glaring case of disincentives by restrictive regulations, one could easily cite the example of our own Company. While there is a clear and strong case for providing incentives for further expansion of the Company by allowing a reasonable price so as to enable it to create its own resources for expansion, it has been denied even a basically economic price which would cover its mounting costs and yield a minimum fair return to the investors. While the general level of prices has increased five-fold since the beginning of the Second War, the gas price chargeable by your Company has been rigidly held at a level lower than that of 1926. I am not aware of any such instance in any other industry. The rates and prices charged by public utilities, such as railways, road transport services and air lines run by the Government have been increased from time to time.

The increasing costs of raw materials—coal and diesel oil—and the continuous upward trend in salaries, wages and dearness allowance, have resulted in a precipitate fall in net revenues. Since the close of accounts, the cost of diesel oil has increased by Rs. 24.01 per kilo-litre. The increase in the excise duty on coal from Re. 1 to Rs. 4 on account of the Coal Mines Amendment Act, will cost your Company a further sum of Rs. 3 lacs annually.

No Surplus Left

The cumulative increase of costs without a corresponding rise in the sale price of gas has resulted in yielding negligible, if any, profits from the main operations of the Company, namely, production and distribution of gas. Leaving out the income from investments and providing for taxation, the net profit from the main operations of the Company comes to the meagre amount of Rs. 20,694, which means practically no profit.

The prices of basic commodities like steel have been increased from time to time, on the recommendation of the Tariff Commission, in view of the increased costs. The Government of India have similarly granted repeated increases in prices in the case of many other basic and important industries such as cement, caustic soda, paper, coal and the like. The Hydrel Companies in Bombay regularly levy in their bills "Fuel Adjustment Charge" on account of increase in the cost of fuel. Likewise, in the case of the Calcutta Electric Supply Corporation, the coal surcharge on the rates for electricity is raised automatically by the Corporation so as to cover increases in the pithead price of coal and/or in freight. There have also been increases in prices levied by several public utility concerns, such as electricity, water, telephones, railways, posts and telegraphs, air lines, and the like. The Tariff Commission is presently engaged in an inquiry relating to the price of cement, pursuant to a representation made by the cement industry to the Government of India that the price of cement fixed in 1958 was uneconomic today. You can view this factor in juxtaposition with the authorised price of town gas payable to your Company, which is lower today than the 1926 level. The price of coal has gone up from Rs. 26.53 per ton delivered at factory in 1926 to Rs. 52.36 per ton in 1960. This represents a 97 per cent increase. Similarly, the wage bill during the same period increased by about 60 per cent per thousand cubic feet of gas sold.

We may also compare the cost of coal to and price of gas charged by the Oriental Gas Co. Ltd. in Calcutta, which is a directly comparable case. While the Calcutta Company gets its coal at a delivered price of approximately Rs. 35 per ton (against the price paid by your Company at Rs. 52.36 per ton) and charges an effective gas price of Rs. 5.25 nP per thousand cubic feet (against the price allowed to your Company of Rs. 3.94 nP per thousand cubic feet).

It has to be impressed on the Government that an industry subjected to price regulation should be enabled to provide substantial funds for rehabilitation, modernisation and expansion from internal sources, and that the return on investment in such an industry should have some relationship with the return in other industries, so that it might be in a position to compete effectively for new funds in the capital market.

Increasing Production and Efficiency

In spite of all sorts of adverse factors affecting the growth of the Company, I am proud to inform you, gentlemen, that your Company has kept up the tradition of increased production from year to year, to meet the increasing demand of the existing customers.

At this juncture, it would not be out of place to mention that your Directors do not wish to rest content by meeting only the increased needs of existing customers with increased production, but have a keen desire to expand its present capacity by installing additional plant and equipment so as to meet the greater requirements of those who do not enjoy the benefit of this cheap and highly convenient fuel. The greatest factor inhibiting this growth, as you know, is the uneconomic selling price of gas. We cannot, you will appreciate, approach investors to invest more funds in an industry which does not permit an adequate and fair return, more particularly in view of the many competing and growing demands on the limited financial resources available in the country.

Summing Up

I may now sum up the case of the Company for an adequate rise in the price of gas:

1. The Company continues to get the price lower than that prevalent in 1926;
2. The prices of all components of cost have risen phenomenally;

3. The gas price received by the Company is about the lowest town gas price in the world;
4. While the Company pays 50% more for coal delivered ex-factory as compared to the Oriental Gas Co. Ltd., Calcutta, it is allowed a price which is 25% lower than that being charged by the Calcutta Company;
5. The price received by the Company is only a fraction of the price of bottled gas, which is only a bye-product, now being sold in the town by large companies;
6. The Company has, in spite of the meagre or no profit earned, maintained perfect service by supplying quality gas to its consumers;
7. Since 1946, the Company has increased the production of gas by over 60 per cent;
8. The Company has been denied the benefit of an escalator clause which is allowed to electricity and public utility companies in Bombay, Calcutta and elsewhere;
9. The Company has been denied also the necessary margin in price for creating internal revenue for financing an expansion programme, which is a feature of price-fixation by the Tariff Commission in other industries such as steel and which is invariably an important factor in its industrial expansion in all the fast-advancing countries of the world;
10. The Company has practically ceased to earn any profit from its operations of gas production and distribution;
11. By denying compensatory allowance for meeting the rising costs in spite of continued good services and expansion in production, efficiency has been penalised and the investors denied a fair return on the capital invested;
12. Without an adequate return on capital, investors are not interested for further investments to expand the capacity of the Company to keep pace with the ever increasing demand and to replace the use of costlier gases by some 33,000 Bombay consumers, which is about double the number of the existing consumers of your Company.

We have again moved the Government of Maharashtra for allowing us a reasonable and adequate rise in the price of gas in order to cover increases in the manufacturing costs, and also to enable us to launch a programme of expansion in gas connections. As you are aware, rapid industrialisation is the sheet anchor of the present economic policy and programmes of Government. We have every hope that the Government will make a realistic reappraisal of the Company's case this time, and allow the Company to make an adequate increase in the price of gas.

Coal Supplies

The Company has recently been experiencing considerable difficulties in securing full or regular supplies of coal: the total wagon allotment during the first six months of this year was only 2,118 wagons as against a quota of 2,520 wagons.

The coal supply position showed further and marked deterioration from July this year. The total loadings in July were only 308 wagons (as against the quota of 420 wagons); but as most of these were lost in the second half of the month, the actual deliveries during July were only 227 wagons. The shortage of coal was so acute that the fuel gas supply to the consumers had to be drastically reduced during the period from the 23rd to the 30th July.

In spite of continuous representations from the Company to all competent State and Central Government authorities, the supply position during August deteriorated alarmingly. The Company was compelled to cut down gas supplies to the extent of 15 to 20% to all its consumers except for Public Lighting with effect from the 22nd August. The inconvenience caused by such a cut to important consumers like hospitals and maternity homes and to major industries like the Government Mint, can be easily imagined. The shortage of coal results in reduced coke production, which also causes widespread inconvenience to those using coke for domestic purposes.

A study of the causes of the present sharp fall in the coal supplies reveals:

1. that there is a downgrading of the priority of supplies to this public utility concern by the Coal Controller;
2. that alternate supplies from other collieries programmed for the Company during the third week of August, were diverted to other shipments, thereby causing a further delay in loading for the Company; and
3. that the Company's allotted and programmed supplies from the Colliery scheduled to load in box wagons, were diverted to the Railway and Steel Plants at the last moment.

An examination of the question as to how far the present difficulties with regard to coal supplies can be solved by the movement of coal by the rail-cum-sea route from Calcutta to Bombay would show:

1. that sea transport is open to a variety of risks and delays due to labour troubles, port detentions and weather conditions;
2. that movement by sea with the completion of necessary formalities may take about 8 to 10 weeks and is of no help in improving the present position; and
3. that the landed cost of coal at the Gas Works by the rail-cum-sea route may involve an additional financial burden of about Rs. 10 to Rs. 15 per ton, over and above the subsidy offered by the Government.

Moreover, the proposed mode of transport being in an experimental stage, it is not appropriate that the fuel supplies to a public utility concern, playing a vital part in the civic and industrial life of Bombay, should be exposed to the risks and uncertainties of an altogether new experiment.

Your directors feel that when the selling price of the major product of this Company, town gas, has been frozen at an uneconomic level by the Government, the imposition of any additional tax on the Company at this stage, would further aggravate the critical financial position with which it is faced.

This does not purport to be the Proceeding

Money

THE CALCUTTA MONEY MARKET

SMALL RISE IN ADVANCES

Wednesday, 20th September.

THERE has again been a small increase in the overall level of advances in the Calcutta money market during the past week. Most of the increase is accounted for by the jute, iron and steel industries. Accommodation for sugar, and for the storage of grains and seeds, is slightly less, while cotton credit remains at about the level of a week ago. In the interbank market, some relaxation of the extremely tight conditions noticed recently appeared to be in sight. The call rate rose to 5 per cent at one stage, but later some business was reported down to 4 per cent.

More gunny bills have been seen in the exchange market, but those relating to tea shipments have been relatively firm. Remittance has been on a moderate scale. Sterling is firm, and has closed with gains against all the major currencies except the Swedish krona.

SILVER REACTED ON PROFIT-TAKING DURING THE past week. The price declined from the previous week's level of Rs. 238 to Rs. 237.75, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 203. The London and New York prices were 80½d and 91.375 cents.

Gold was steady on reports of seizures of contraband metal. The price improved from Rs. 147 to Rs. 147.50. The sovereign at Rs. 95.75 showed a rise of 25nP.

DURING THE WEEK ENDED 15TH SEPTEMBER, Government of India Treasury bills for Rs. 130,74,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 19th September. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were allotted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 25th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 20th September to 23rd September at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 13th September to 16th September amounted to Rs. 5 lakhs.

A DECLINE OF Rs. 9.40 CRORES TO Rs. 1,889.46 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 15th September, 1961, but the total note issue rose by Rs. 96 lakhs to Rs. 1,908.75 crores. Notes held in the Banking Department consequently increased by Rs. 10.35 crores to Rs. 19.20 crores. Deposits of the Central Government rose by Rs. 10.03 crores to Rs. 73.53 crores and those of other Governments by Rs. 6.21 crores to Rs. 38.16 crores. Balances of commercial banks at Rs. 78.66 crores showed a rise of Rs. 2.81 crores, but balances held abroad again fell by Rs. 97 lakhs to Rs. 17.76 crores. Other loans and advances increased from Rs. 134.75 crores to Rs. 136.96 crores, of which advances to scheduled banks against usance bills amounted to Rs. 6.59 crores (Rs. 5.49 crores). Ways and means advances stood at Rs. 49.45 crores, against Rs. 48.11 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 8th September, shows Demand and Time liabilities at Rs. 835.38 crores (Rs. 16.69 crores on account of borrowings from banks) and Rs. 1,138.92 crores (Rs. 18.12 crores), compared with Rs. 844.73 crores (Rs. 22.85 crores) and Rs. 1,154.14 crores (Rs. 18.59 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 56 lakhs and Rs. 20.13 crores to Rs. 44.60 crores and Rs. 73.87 crores, respectively. There is a rise of Rs. 2.83 crores to Rs. 610.67 crores in investments. Advances and bills discounted at Rs. 1,243.27 crores show a rise of Rs. 12.41 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6 percent and 63 percent, against 7 percent and 61.4 percent.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 8th September, 1961, shows a drop of Rs. 2.80 crores to Rs. 524.02 crores in total deposits. Investments in Government securities are down by Rs. 1.97 crores to Rs. 259.30 crores, while other authorised investments remain unchanged at

credits, overdrafts, and bills discounted and purchased have increased by Rs. 8.83 crores to Rs. 245.29 crores. Cash and balances are, in consequence, shown at Rs. 24.86 crores or Rs. 4.13 crores less.

THE POSSIBILITY OF A WORLD SHORTAGE OF SILVER has stimulated a renewed interest in the London silver market during the past few months, and many speculators are now finding it more attractive than the gold market, which hitherto held their attention. Prices were fairly stable during 1960, but early this year the forward delivery price reached 80½d a fine ounce—the highest level since January 1957. Although forward prices subsequently eased, they are now showing renewed signs of strength. The chief silver producing countries are Mexico, the United States, Canada and Australia but, as the total world consumption of silver exceeds production, there is an excess of demand which has to be met from other sources, such as the demonetisation of silver coin and the sales of U.S. Treasury "free" stocks of silver. After the second World War, the United Kingdom decided to replace her silver coinage by one made of cupro-nickel. This made available silver bullion, which was used for repayments to the United States of amounts due under lend-lease and which also provided a supply of silver to meet industrial demands. Refining of the withdrawn coin is still in progress, but of 5 million ounces refinded during 1960 only about 1 million ounces were offered in the market, the remainder being retained by the mint to meet coinage orders from abroad. At the present rate of refining, these stocks should last for about another six years. Silver certificates in circulation in the United States are covered by official holdings of silver; any silver in excess of this amount forms U.S. Treasury "free" stocks from which the Treasury has the option to sell to industrial consumers at about 78d a fine ounce. Because the market price for silver has been above U.S. official selling prices, industrial consumers have drawn heavily on these stocks. If withdrawals continue at the same rate, it is estimated that these stocks could be exhausted in less than three years. China has become an important exporter of silver to the London market during the past 18 months. There is the possibility of a continued supply from this source, which is thought to come chiefly from the demonetisation of silver coin. The country has run into economic difficulties, and these silver sales are helping to raise funds to pay for wheat and barley purchased from Canada. The demand

for silver is likely to remain strong. The industrial demand is continually expanding with the increasing use of silver in the electrical and electronics industries, and industry as a whole used about 5 percent more silver in 1960 than in the previous year. Silver is also still in demand for coinage; the London market recently supplied France, Austria, Sweden, Switzerland and Italy with metal for this purpose. Production seems unlikely to expand significantly in the future and, with supplies of non-production silver decreasing, an increase in the price of silver seems inevitable when U.S. "free" stocks are exhausted.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 22-9-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

"IT SHOULD BE LIKE THE ONE I BOUGHT FROM YOU LAST YEAR!"

This is one of the oldest and most commonly used of standards. But it is certainly vague. And when you use it, you are never sure of getting your exact requirements.

This is where Indian Standards come in useful. Developed by the Indian Standards Institution, each standard helps you to easily specify your requirements, ensures quality of the product and good value for the money you spend.

ISI prescribes standards for industrial and consumer goods. Under its certification marking scheme, goods produced to relevant standards qualify for carrying the ISI Certification Mark. This is a third-party guarantee of the products' continuous satisfactory performance and service. The next time you buy anything, look for the ISI mark.

PROUD ACHIEVEMENT

The J. K. Organisation can legitimately be proud of the fact that it has been the first in various fields of industrial activity in India.

FIRST to manufacture Calico Prints in India—J. K. Cotton Spinning & Weaving Mills Co. Ltd., Kanpur.

FIRST to install Electric Furnace for manufacturing steel in Northern India—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to produce Baling Hops for use by the Jute and Cotton Textile Industries in India—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to manufacture hydraulically operated modern cane crushing mill for small-scale Khaddar sugar units—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to produce Aluminium virgin metal from Indian Bauxite in India—Aluminium Corporation of India Ltd., Jyokanagar.

FIRST to produce Engineers' Files in India—J. K. Engineers' Files, Bombay.

FIRST to establish Plastic Industry in Northern India—Plastic Products Ltd., Kanpur.

FIRST to produce Heavy Chemicals in Western India—Eastern Chemical Co. (India) Bombay.

FIRST in the world to produce on a commercial scale Hydrosulphite of Soda by Sodium Amalgam Process—J. K. Chemicals Ltd., Thana.

FIRST Continuous process Rayon Plant in India to produce Viscose Rayon and the first such factory in India to be built up in record time—J. K. Rayon, Kanpur.

FIRST Nylon Plant in India—Jyokanagar (under construction) Kera.

FIRST to manufacture Portable Typewriters in India—Blackwoods India Ltd., Calcutta.

FIRST Woollen mill in India to export woollen goods to Norway and Sweden—The Raymond Woollen Mills Ltd., Thana.

LARGEST Jute Mill in Northern India—J. K. Jute Mills Co. Ltd., Kanpur.

RATE CONTRACT

ALIND-KER-AL-LITE

Building wire

Manufactured to BS 2791:1956 for aluminium conductors and accessories
1557:1954 for polythene insulation and PVC-sheathing (in place of conventional CTS and TRS wires).

ALIND-AL-VINYL

All-purpose wire

Manufactured to BS 2791:1956 for aluminium conductors and accessories
2004:1955 (IS 694:1955) for PVO insulation (an ideal alternative to VIR for conduit or casing-and-capping wiring).

Stocks and Shares

MONETARY STRINGENCY RESTRAINS MARKET ACTIVITY

BONUS ISSUE MOVE BY DUNLOP RUBBER WELCOMED

THE stock market has closed the week in an uncertain mood. The earlier improvement was inspired by good corporate news. The decision of Dunlop Rubber to issue bonus shares by capitalising reserves in the proportion of one new share for every two held has helped sentiment. The deliberations of the Import and Export Advisory Councils have had moderately bullish effect because it is thought that the Government will take steps to ensure that the installed capacities of the existing industries are used as fully as possible. Considering that deficits in India's foreign trade have become chronic, there is no alternative but to promote exports. Under the circumstances, the Government is expected to give further incentives to exporters. New Delhi appears to be veering round to the view that the prices of Indian commodities have become uncompetitive in foreign markets. The Government might thus take positive measures to reduce the production costs of industry.

In spite of the prospects for improved corporate working, Lyons Range has been disturbed by some unfavourable developments. Political developments in Punjab are being watched carefully. There is evidence of a growing shortage of credit. Money has become dearer, and it is difficult to estimate the extent to which fresh funds are likely to flow into stocks and shares. Large resources have been invested in new share issues during the last few weeks. Although the Life Insurance Corporation is believed to have bought some shares recently, its support is still marginal. The trend is likely to remain uncertain for the time being. Selling pressure has declined, but support is very poor. Operators are not inclined to extend their commitments in view of the coming Puja holidays.

The possibility of stock exchange reforms has again started attracting attention. Although the government has said that it will not introduce any measure compulsorily, the stock market authorities themselves are expected to take appropriate action to restrain speculation. The committee of the various stock markets formed for evolving reforms is expected to submit its report soon. Considering that the Government may intervene unless some concrete measures are introduced, the report of the committee is awaited with keen interest. Whether further restrictions will be imposed by insisting on compulsory deposits for buying and selling shares or by some other means, it is difficult to foresee at the present stage. It is, nevertheless, taken for granted that some restrictive measures will be introduced soon. A favourable factor is that henceforth all stock markets are likely to co-ordinate their actions. This should contribute to healthier working and prevent the diversion of business from one stock market to another.

Indian Iron have fluctuated narrowly and the closing price is Rs. 24.26. In the engineering section, Britannia Engineering are being bought on prospects of diversification of activities. Texmaco have reacted after an earlier improvement. Escorts propose to issue ordinary shares at a premium of Rs. 4 a share in the proportion of one new share for every held. Jessop, J. K. Steel and Guest, Keen, Williams have gained fractionally. Jay Engineering are steady on producing good results.

Prices of selected miscellaneous shares have hardened, although closing levels are below the best touched earlier. Dunlop Rubbers enjoy support due to the prospect of a bonus share issue. Hindustan Motors have fluctuated widely on rumours of a strike. Indian Aluminium have reacted, but Indian Cable have become steadier. Indian Copper have been maintained and Rohas have become sluggish around the current price. Sirsik have recovered on replacement buying. Sirsik have improved on prospects of reorganisation with foreign collaboration. Kesoram have been transferred from the cotton mill group to the miscellaneous section under the name of Kesoram Industries. Hindusthan Twyford, Isaac Holdens and Dr. Paul Lohmann have attracted support. Sellers predominate in India Steamship due to the uncertain freight outlook. Britannia Biscuits have hardened, as have Metal Corporation on expansion prospects. Cement shares have been supported in the belief that the price of the commodity will be increased soon. Jaipur Udyog have improved. Imperial Tobacco are steady but National Tobacco have fallen on profit-taking.

Paper shares have become steady and Orient have gained on influential buying. Sirpur are being wanted on hopes of expansion with foreign collaboration. Seshasayee Paper, Titagur and Shree Gopal are steady.

Cotton mill shares are being supported on hopes of improved cloth offtake. J. K. Rayon have reacted on replacement buying. Interest is being

taken in Bharat Commerce and Dunbar, but Bowreah have reacted on profit-taking.

Although selected jute shares have been bought, investors are cautious due to fears that the mills have incurred substantial losses so far during the current year. Kinnison are steady on prospects of diversification of activities. New Central, Birla, Anglo-India, Barnagore and Howrah have become steadier.

Coal shares have been neglected and prices have declined. Burrakur, Pench Valley and New Beerhoom have reacted. Sellers predominate in Central India, but Bengal are steady. Investors are worried because no effective measure has been taken yet for relieving the transport shortages.

Tea shares have generally reacted due to the softer trend in the auction prices. Brooke Bond have fallen on reducing the ordinary dividend from 15 percent, taxable, to 10 percent, taxable. The profit has declined from Rs. 13.06 lakhs in 1959-60 to Rs. 8.47 lakhs during the year ended June 1961. Hasimara are being supported on the proposal to diversify activities. Hantapara and Tezpur have reacted on profit-taking.

Government securities are quietly steady and the 3 percent Conversion loan 1986 has been maintained at Rs. 72.85. In spite of the fair demand for short and medium-dated stocks, business has been limited due to the shortage of sellers. The new State Government loans are easier and some of them are being offered at discounts.

Salem-Erode Electricity

A taxable ordinary dividend of 12 percent has been maintained by the Salem-Erode Electricity Distribution Co. Ltd for the year ended March 1961. The revenue profit has fallen from Rs. 7.02

LET YOUR APPLICATION DECIDE
WHICH HONEYWELL INSTRUMENT
FITS YOUR NEEDS

Do you have a temperature or control job to handle?

There is no need to "shop around." From one source—

Honeywell—you can be sure of getting exactly the

right instrument to fit your needs and budget.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Honeywell

First in Control

PS-5-101/2

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings. Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry. Precision electronic instruments and control systems for aircraft and missiles.

lakhs to Rs. 6.62 lakhs, after providing Rs. 2.23 lakhs (against Rs. 2.01 lakhs) for depreciation. The provision for taxation absorbs Rs. 2.25 lakhs (against Rs. 2.41 lakhs). After making all necessary adjustments, there remains a balance of Rs. 7,244 to be carried forward, compared with Rs. 32,709 brought in. Units of electricity sold at Salem amounted to 24,746,691, (against 21,730,491), while those sold at Erode were 10,999,099 units (against 9,794,129 units).

Shahjahanpur Electric

The revenue profit of the Shahjahanpur Electric Supply Co. Ltd has risen from Rs. 1.37 lakhs to Rs. 1.46 lakhs for the year ended March 1961, after allocating Rs. 44,741 (against Rs. 37,445) for depreciation. A taxable dividend of 6½ percent has been maintained, and it absorbs Rs. 56,875. Taxation is allocated Rs. 42,300 (against nil). Making other adjustments, there is a carry-forward of Rs. 74,240, against Rs. 1,32,673 brought in. Units of electricity sold amounted to 3,624,912, against 3,643,450.

Bombay Market

EARLIER IMPROVEMENT NOT MAINTAINED

POLITICAL DEVELOPMENTS CAUSE ANXIETY

Wednesday Noon.

THE Bombay stock market showed divergent trends during the past week. Share prices improved at first due to short-covering, combined with fresh support. The decision of the Government to promote exports by giving fresh incentives was interpreted bullishly. Operators were encouraged by reports that many companies proposed to expand and diversify their activities. It was

believed that Tata Locomotive would go in for substantial expansion in the near future.

At the close, operators turned cautious and prices slipped back on profit-taking due to the disturbing political developments in Punjab. It was thought that the committee of the various stock markets would submit an interim report soon and it might recommend measures for restraining speculation.

Tata Steel closed lower at Rs. 141.50 and Indian Iron were shaded at Rs. 24.20 on pressure from Lyons Range. In the engineering section, Tata Locomotive reacted to Rs. 338.50 on profit-taking, but Premier Construction were supported at Rs. 184.50 by knowledgeable quarters. Alcock Ashdown were freely offered at Rs. 293 and Larsen and Toubro declined to Rs. 38. Mukand Iron were steady at Rs. 27.50 on influential buying. Motor shares were quietly steady, and Hindustan Motors lost at Rs. 19.28 on pressure from outside interests. Premier Automobiles came to hand at Rs. 155.

Cotton mill shares reacted at the close due to profit-taking. Century improved at first on paying a higher interim ordinary dividend but closed lower at Rs. 548. Khatau were in demand at Rs. 497.50 on prospects of a better dividend and on hopes of a bonus share issue. Morarji were being bought at Rs. 387 on rumours of bonus shares. Bombay Dyeing closed at Rs. 66.60 and Svadeshi at Rs. 261.50. Simplex were sold at Rs. 164 and India United ordinaries were done at Rs. 15.24. Sellers predominated in Apollo at Rs. 1.86, but Kohinoor were supported up to Rs. 283.

Cement shares improved in the miscellaneous section on talk that the price of the commodity would be increased soon. Associated Cement rose to Rs. 164.50 and Digvijay were wanted up to Rs. 177.50. Sugar shares were quietly steady, and business was done in Belapur at Rs. 274. Phalton were transacted at Rs. 138 and Maharashtra Sugar met with support up to Rs. 191. Mining shares were steady, and Shivrampur Syndicate were bought up to Rs. 96. Steamship company shares produced mixed trends. Scindia Steam recovered to Rs. 12.80 on short-covering, but Great Eastern Shipping were freely offered down to Rs. 13.60. Chemical shares were quietly steady, and business was done in Tata Chemical at Rs. 17. Indian

Dyestuff reacted to Rs. 442.50, but Polychem were in demand up to Rs. 202.50. Colour-Chem came to hand at Rs. 340. Rayon shares reacted at the close. National Rayon lost at Rs. 523 and Baroda Rayon were sold down to Rs. 139.50. Gwalior Rayon fell to Rs. 47 on talk that Hind Cycles would be amalgamated with the former, but there has not been any authoritative confirmation of this move so far. Bombay Burmah improved to Rs. 392 on prospects of diversification of activities. Voltas were placed at Rs. 282 and Tata Oil were steady at Rs. 69.50. Synthetics and Chemicals recovered to Rs. 189 on short-covering, but Ceat Tyre were quiet at Rs. 205.

Bank shares were steady, but business was limited. Bank of India were done at Rs. 133 and Central Bank came to hand at Rs. 62.50. Insurance shares were quietly steady, and New India Assurance were indicated at Rs. 59.

Electric company shares met with scattered support, and Ahmedabad improved to Rs. 91. Tata Hydro were placed at Rs. 109.50 and business was done in Bombay Suburban at Rs. 100.

Madras Market

QUIET UNDERTONE AT THE CLOSE

SELECTIVE DEMAND FOR TEA AND RUBBER ISSUES

Tuesday Evening. THE Madras stock market closed the past week with a quiet undertone after a steady spell earlier. Share prices improved at the beginning on good corporate news. Operators felt relieved that the Government would not introduce any legislation to reform the stock markets, at least for the time being. Later, share prices retreated on profit-taking due to easier advices from Calcutta and Bombay.

Business in Government securities was limited, and some of the new State Government loans were being sold at discounts. Bank shares were steady in the belief that the profitability of banks might improve during the current year. Selected sugar shares were bought on good corporate news. In the planting section, tea and rubber shares were taken with discrimination due to the good progress of the crops, but coffee shares were sold at lower prices. After being steady at first, cotton mill shares reacted at the close on profit-taking. Among miscellaneous shares, cements were fancied on hopes of an early rise in the price of the commodity.

In the banking group, Indian Overseas came to hand at Rs. 188 and Indian at Rs. 174. Punjab National were done at Rs. 18.37 and Canara Banking at Rs. 80.50. Public utilities met with scattered support. South Madras were indicated at Rs. 9.80 and West Coast at Rs. 13.90. Cochin were steady at Rs. 12.49 and Salem-Erode were wanted up to Rs. 13.50.

In the sugar section, Andhra were transacted at Rs. 26.85 on the decision to issue ordinary rights shares at par, in the proportion of one new share for every three held. Travancore were done at Rs. 10.60 on paying a taxable ordinary dividend of 7½ percent. United Breweries were maintained at Rs. 106.50, but Kothari were quiet at Rs. 8.65. Business passed in Deccan at Rs. 13.33 and E.I.D. were in demand up to Rs. 38.12. The Reserve Bank, it is believed, has given its consent to the latter company for accepting transfers of the ordinary rights shares on the London register in September 1960, to the Madras register after 18th September, 1961.

Among planting shares, Blue Mountain were steady at Rs. 3.08, but Cochin Malabar reacted to Rs. 7.37. Coffee Lands were available at Rs. 16.75 and Consolidated Coffee declined to Rs. 20.65. Devon were steady at Rs. 13.76, as were Highland at Rs. 14.20. Kil Kotagiri were taken at Rs. 4.73 and Lucky Valley were done at Rs. 11.75. Mysore Coffee were steady at Rs. 5.45 and Nilgiri were transacted at Rs. 10. Ouchterlony were sold down to Rs. 3.75, but Parkside were steady at Rs. 29.70. Peermade met with support up to Rs. 23.50, but Periakaramalai reacted to Rs. 3.66. Teekoy were sold at Rs. 5.50, but United Nilgiri were in demand up to Rs. 21.18.

In the cotton mill section, Buckingham hardened to Rs. 250, and Bangalore Woollen to Rs. 215.50. Anglo French were steady at Rs. 124 and Coimbatore Pioneer came to hand at Rs. 282. Lakshmi reacted to Rs. 157 on profit-taking and business was done in Madura at Rs. 37.90. Loyal were bought at Rs. 47.50 and Mettur were steady at Rs. 384. Radhakrishna came to hand at Rs. 32.50 and Sarada were transacted at Rs. 67. South India Viscose lost at Rs. 186, as did Travancore Rayon at Rs. 38.95.

Aluminium Industries were steady at Rs. 23.30 in the miscellaneous section, but Ashok Leyland were easier at Rs. 8.86. India Cement were supported up to Rs. 6.55 and Madras Cement were bought at Rs. 91. Enfield were steady at Rs. 11.70 and F.A.C.T. came to hand at Rs. 9.50. Hindustan Lever were done at Rs. 47 and Kiroloskar Electrics were in demand at Rs. 14.85 on prospects of expansion. Madras Rubber were steady at Rs. 15.50 and Mettur Chemical were wanted up to Rs. 14.55.

CAPITAL, 21st September, 1961.

Seshasayee Paper were transacted at Rs. 8.30 and business was done in Standard Motors at Rs. 16.05. Tube Investment improved to Rs. 258 on hopes of expansion and Textool were transacted at Rs. 175. United Electricals were quoted at Rs. 9.50 and Binny were taken at Rs. 250.

Bright idea!

"—We'll go to Kalyani?" "—But is it really a nice place?" "—go there and have a look at the open roads, green parks, and clean, quiet surroundings. Just the things we love."

"—But what about the other things we love no less?" "—you mean electricity, filtered water, underground sewerage, school and hospital and things like that? Surely, Kalyani has them all." "—And transport to Calcutta?" "—Oh, don't worry. 19 trains a day and what's more, these are soon to be electrified. And the way industries are growing up at Kalyani very soon people will have prospects of employment right there. And then, do you think, we would care any more about this dirty, noisy, suffocating Calcutta? It'll be simply glorious to live at Kalyani."

Aluminium Cable Sheathing Press sheathing a power cable. 22 presses of this type have been sold within a few years.

Small unit: Big capacity:

SCHLOEMANN
ALUMINIUM CABLE SHEATHING PRESS
for the extrusion of cable sheaths, tubes, sections and wire rod... in any desired length

This revolutionary double-acting, horizontal, 1600-ton installation meets a long-felt requirement of the cable industry for a press unit that is compact... easy to operate... and capable of manufacturing high quality products on a large scale.

SCHLOEMANN ALUMINIUM CABLE SHEATHING PRESS

- The wall thickness of the cable sheath is automatically kept constant over the whole cable length, also in case of unforeseen press stoppages, by a simple operation of the die adjuster.
- Each operating cycle is fully automatic. Operation can also be controlled manually.
- Production capacity stands in favourable ratio to size and power consumption of the press.

SCHLOEMANN, the well-known German engineering company, supplies Rolling Mills, Counterblow Hammers and Hydraulic Presses for Ferrous and Non-ferrous metals. Among the many nationally important undertakings that have chosen SCHLOEMANN machinery are TISCO, Hindustan Steel at Rourkela, TELCO, The Mysore Iron & Steel Works and the Indian Steel & Wire Products Ltd.

London Market

STOCK MARKET UNCERTAIN

LOWER TREND IN VALUES

London, 20th September.

UNCERTAIN conditions were apparent in the stock market during the past week, and there have been some erratic movements in prices, but the trend was downwards at close. The international situation was the major adverse factor, but the uncertain economic outlook and a steady flow of disappointing company statements made buyers even more cautious. However on Friday, the market was looking more stable than for some time, and a distinctly firm tone was experienced on Monday due to week-end Press comment which was rather optimistic about the investment outlook. Business increased and prices went steadily ahead until the early afternoon, but it was then that news of the death of Mr. Hammarskjöld was received and the advance was halted. As a precaution, jobbers lowered prices today, but little selling has been reported so far. Home equities in the main are lower. The August figures were of little assistance and with Ford Motor expressing the view that sales would be likely to fall by 15 percent as a result of the "little budget", buyers have been few. Cunard came into demand on vague talk of a link-up with P. and O., but there was a reaction later on the denial. Shipping shares have been helped, as a whole, by news of fewer laid-up ships. There has been little help gold shares and prices have tended to ease. Copper came under the influence of the serious events in Katanga, but prices were off the bottom. Tins have been less active. Oils have been quiet and the British Petroleum interim statement was of little influence, although the lower profits were disappointing. Selective buying of teas increased following the new bid for Doon Doona by Brooke Bond. Rubbers have been idle.

New Delhi

INDIAN COTTON TEXTILE EXPORTS FALL

DETAILS OF BHILAI STEEL PLANT EXPANSION PROJECT

(FROM OUR NEW DELHI CORRESPONDENT)

EXPORTS of mill-made cotton piecegoods during 1960 totalled 694.83 million yards, compared with 814.60 million yards in 1959. The decline was of the order of 120 million yards, or roughly 14.7 percent. It is reported that the lower output of Indian cotton textiles in foreign markets is due to the low level of international prices, compared with those at which Indian cotton textiles were offered. Actual exports of mill-made cotton piecegoods during the period January-March 1961, with the comparative export figure for the same period in 1960, are given below:

Period	Quantity (in million yards)
January-March 1961	152.22
January-March 1960	186.58

Cotton piecegoods exports from Bombay port for the period April-June 1961 were 137.62 million yards. Based on the quantity of cotton piecegoods exported from this port, cotton piecegoods exports from all ports in India for the period April-June 1961 may be estimated at about 152 million yards, compared with the actual exports during the period April-June 1960 of 166.74 million yards. From the figures given above, it would be observed that mill-made cotton piecegoods exports during the half-year January-June 1961, will be less than the quantity exported in the first half of 1960.

Among the major markets which registered a decline were the U.K. to the extent of 29 million yards, the U.S.A. 17 million yards, Australia 7 million yards, Malaya and Singapore 5 million yards, Aden 4 million yards and Canada 3 million yards.

Declining Manganese Ore Exports

Hitherto, India enjoyed a position of pre-eminence in the world market as a supplier of manganese ore. The highest export figure was reached in 1957. But unlike iron ore in recent years, manganese ore exports have declined steeply. The immediate cause of this decline is the worldwide recession and fall in steel production. The effect of the recession has been felt more in the case of manganese ore than in the case of iron ore, largely because trade in the former is not possible on such a bulk basis or against such long-term contracts as in the case of iron ore. This decline has, however, not been peculiar to India. It is merely a reflection of the decline in total world imports of manganese ore. Whereas during this period, 1958-59 over 1957-58, there was a decline in the total world imports of over 25 percent. Briefly stated, the reasons for the decline in exports of manganese ore are:

- Development of mining areas in relative proximity to consuming centres, partly for economic reasons and partly for political and strategic reasons, by consortia of producers or consumers. Also freer availability of manganese ore with the re-entry of Russia as the world's largest producer and supplier of manganese ore.
- Technological advances—low-grade manganese ore which was hitherto being used as a desulphurising agent in the production of steel is being gradually replaced by caustic soda.
- A growing tendency among some countries to enlarge their trade on the basis of barter or link agreements.
- A decline in steel production in 1957 and 1958 in the U.S.A. and later in Europe, with the result that the steel producers found themselves carrying large stocks.

(v) Production of ferro-manganese in the U.S.A., which had so far sustained a high level of payment for high-grade ores, has declined sharply.

Official Promotion Measures

Detailed below are the steps taken by the Government and the State Trading Corporation to encourage the export of manganese ore:

- The export duty on different grades of manganese ore was totally removed with effect from 25th November, 1958.
- The export of manganese ore has also been arranged through barter deals, against the import of Indian requirements of stainless steel, tinplate, wheat, etcetera.
- East European countries have not so far been regular buyers of Indian manganese ore, largely on account of payments difficulties. Rupee payment arrangements have now been worked out with most East European countries under which imports of certain essential items will be permitted from these sources, subject to the condition that these countries will agree to use the rupees so received for purchase in India of certain commodities, including manganese ore.
- The Ministry of Labour has been persuaded to defer the application of the labour welfare laws of Rs. 2 a ton on manganese ore.

(v) As a result of persuasion, the Ministry of Steel, Mines and Fuel has with effect from 15th February, 1960, reduced the rates of royalties on high-grade manganese ore from 12½ percent to 7½ percent, and on low-grade manganese ore, from 10 percent to 5 percent of the sale price at pit's mouth. This reduction brings the levy to the 1952 level.

(vi) Shipping freight on manganese ore from Bombay-Madras-Calcutta to the U.K.-Continent has been reduced from 72s 6d to 60s from 2nd September, 1960.

(iii) With a view to improving the competitive position of Indian ore in the overseas market, the railway freight on low and medium grade manganese ore below 42 percent has been reduced with effect from 1st September, 1959. The question of effecting a further reduction is being considered in consultation with the Railway Board.

(viii) An export incentive scheme has been announced recently whereby manganese ore exporters are allowed to use 5 percent to 10 percent of the foreign exchange earned by them through the export of manganese ore for the import of mining machinery and equipment.

Falling Kyanite Exports

As a measure of export promotion, the export of kyanite has been decontrolled. Kyanite exports from India during the last few years have been as follows:

Year	Total exports 25,564 tonnes
1956	24,456 "
1957	19,791 "
1958	22,350 "
1959	25,846 "
1960	5,490 "
1961 (Jan.-March)	

The overseas demand is mainly for Lapse Baru kyanite, the main producers of which are the Indian Copper Corporation, Calcutta, and Kharwan Minerals, who export their entire production themselves. Even the foreign market for Lapse Baru kyanite is in danger of being lost as a cheaper substitute called mullite, which is a synthetic kyanite, is being increasingly developed in the U.S.A. Another factor which is responsible for restricting the demand for Indian kyanite is the high sea freight. South Africa and Kenya, India's competitors in this item, enjoy an advantageous position.

Coffee Sales Abroad

The allocation of coffee for export during the 1960-61 season was reviewed from time to time and the Board at its meeting last June, decided to allocate 34,250 tonnes of coffee, consisting of 17,250 tonnes of Plantation, 6,000 tonnes of Arabica Cherry and 11,000 tonnes of Robusta for export out of the 1960-61 crop deliveries. This is the highest figure ever reached for coffee exports. A major quantity out of the export allocation has already been sold. In addition to the system of sales by tender, the Board has also been selling coffee direct to foreign buyers abroad. A quantity of 1,650 tonnes of Robusta Cherry Flats coffee was sold to Italy out of the last season's crop through the State Trading Corporation, against a barter deal. The following quantities have so far been sold direct out of the 1960-61 crop:

Sweden	15 tonnes
Hongkong	25 tonnes

Negotiations are under way for the sale of some Robusta coffee to Turkey and Italy.

Three Conferences in the Capital

An atmosphere of unreality prevailed at three conferences which were held here last week. The discussions in the Import Advisory Council were largely confined to maintenance versus capital imports for new units. Economists and the representatives of the Associated Chambers favoured greater emphasis on maintenance imports, while the Minister of State for Industry backed by the representatives of the Federation of Indian Chambers of Commerce and Industry, advocated rapid industrialisation. The Minister in the so-called policy statement "refused to sacrifice the future of industrial development for the sake of making full use of the existing industrial capacity." This was on 11th September. On 13th September, another conference was held to discuss coal shortages. This conference had before it a paper by Mr. S. L. Kirloskar, which stated that "before we consider new projects, it would be worth while to examine how the production of the existing units could be maintained and further expanded, when there was shortage of raw materials, particularly hard coke."

There was a similar atmosphere of unreality at the Export Advisory Council meeting. There was talk of legislation to restrict domestic consumption in order to boost exports. No attempt was made to face the basic issues. The first one is that the

standard of living is steadily rising, leading to a larger demand for goods. This is stimulated by the Government pumping large sums of money into the market. As the case of sugar shows, producers are very keen to earn foreign exchange for India, provided they are allowed to increase internal prices and given all other incentives. The increased prices of sugar have become the normal prices for the country, and the consumer of sugar is now called on again to subsidise exports. It is the competitive price and the quality of Indian goods and not the change of ministers, which will stimulate exports. This will be possible if only competition is introduced in India.

The two-day conference on coal was a futile but time-consuming exercise. The almost unanimous opposition to the coal dump scheme left the Minister for Fuels unmoved. He merely promised to consider the various views expressed. Of the questions which could be raised, the following is an example. A coal dump, say, is created in Kanpur. Firstly, what will the coal special carry back to the fields? This, of course, is no concern of the Ministry of Fuel. Secondly, an industry in Lucknow or Allahabad will have to get its coal supplies by road. In the present coal crisis, four major organisations of the Central Government have played a leading rôle. On top comes the Planning Commission, which neither provided adequate funds to the railways to create transport capacity to meet the requirements of the second plan, nor ensured that development was married to transport.

Second on the list comes the Ministry of Commerce and Industry, which to quote its own Minister is not prepared to "mortgage the massive industrialisation merely because some existing units were facing temporary difficulties." Third come the railways. Instead of frankly admitting that there is neither the line capacity nor wagons to transport coal, the Railway Ministry for almost a year has been producing figures to show how wonderful its achievements in this field have been.

Last, but not least, is the rôle which has been played by the Ministry of Fuel. At the beginning of the second plan, it adopted an anti-private sector policy. On paper, it implemented the recommendations of the Bhoothalingam Committee, but created so many procedural difficulties that the report almost became a dead letter. It was early in 1961 that it realised that in a mixed economy, the private sector did have a rôle to play and that it produced most of the metallurgical coal. Some adjustments were made. Meanwhile, the Ministry had to prove that it had reached the coal production target in the public sector for the second plan. The Ministry of Transport played its rôle also. Without any assessment, it declared that it would move one million tons of additional coal by sea. The railways must have heaved a sigh of relief. It is now learnt that there are not enough ships to carry the coal. The Minister of State for Shipping and Road Transport, Mr. Raj Bahadur, told the Lok Sabha the other day that as soon as bridges had been strengthened and roads widened, there would be no difficulty in transporting coal by road.

Indian Wool Exports Fall

In the year ended 31st March, 1961, Indian wool exports reached 26.55 million lbs, compared with the record figure of 41.87 million lbs recorded in the previous 12 months. Comparative values are Rs. 7.1 crores and Rs. 11.03 crores, respectively. Since April, Russia has again entered the market, and has purchased about 6 million lbs. The home trade is taking most of the finer sorts.

The Bhilai Project

The following are some details of the scheme to expand the Bhilai steel plant by 1 million tons during the third plan period, the entire equipment for which Russia has agreed to supply on its "usual and normal basis." The technical project report of the first stage of the Bhilai steel works was prepared by Russian organisations in 1955, and provided for an output of 1 million tons of steel with a possible expansion up to 2 million tons of rolled stock. The project report visualised the construction of the following principal production plants: coke and by-products, sintering, blast furnace, open-hearth and rolling mill. Included in the general works facilities were repair and auxiliary shops, power supply facilities, transport facilities, etcetera. The projected structure and efficiency of individual plants and facilities were described as follows:

Coke and by-product plants—a coal preparation plant, a coke unit comprising three coke oven batteries of 65 chambers each, and chemical plants (chemical products recovery, benzol rectification, tar distillation, sulphuric acid plants). The annual output of 4.25-millimeter metallurgical coke was rated at 1,145,000 tons.

Sintering plant—two sintering machines with a sintering area of 50 square metres each and a total annual output of 1 million tons of fluxed sinter.

Blast furnace plant—three blast furnaces with a useful volume of 1,033 cubic meter each and an annual output of 800,000 tons of open-hearth pig iron and 310,000 tons of foundry iron, making a total of 1,110,000 tons. The project of the first stage made no provision for the use of blast furnace slags.

Open-hearth plant—six stationary 250-ton open-hearth furnaces with Dinas roofs, with a total annual output of 1 million tons of ingots. Provision was made for the enrichment of the combustion air in oxygen to intensify the process.

The rolling mill plant was designed to comprise four mills: a blooming mill, a roughing mill, a

mill and two finishing mills. Adopted as a cogging mill with the two high reversing type blooming mill with 1,150-millimeter diameter rolls; it was scheduled to roll six to seven tons of ingots. The pre-heating facilities of the blooming mill comprised five groups of soaking pits. A continuous billet mill consisting of 10 stands in two consecutive groups, including four 700-millimeter and six 500-millimeter stands, was to be installed for rolling large-sized billets for the merchant mill and small-sized billets for sale. A rail structural mill consisting of a 950-millimeter roughing stand and three 800-millimeter finishing stands was to roll heavy rails, sleeper bars, beams and other heavy structural shapes. The annual output of the rail structural mill was assumed as 365,000 tons on a two-shift basis.

A 350-millimeter semi-continuous merchant mill consisting of 12 stands was to be installed for the production of merchant stock, the output of the mill being 255,000 tons on a two-shift basis. The total rolled stock output of the works was rated at 770,000 tons a year, including 150,000 tons for sale. The general plant for the works expansion provides for the development of the existing plants and shops and the construction of a few new plants and structures, while retaining the existing parallel location of the plants and their transport communications.

The fenced-off territory of the works comprises 451.5 hectares, the area under construction being 23.3 percent. The external goods turnover of the works will include 10 million tons of deliveries and 2.6 million tons of shipments. As previously, the works will be connected with the Calcutta-Bombay railway trunk line via the Bhilai station. All freight (except ore and limestone) incoming to the works from the external railway network will be received and all salable products of the works outgoing to the external network will be shipped via the existing works station.

Works Expansion

According to the wishes of the Indian Government, the works expansion is scheduled for completion within four years. In the course of the first two years, it is planned to build blast furnace No. 4 with a capacity of 1,719 cubic meters, coke oven batteries Nos. 4 and 5, open-hearth furnaces Nos. 7 and 8, with a capacity of 500 tons each, the slag processing plant, four additional groups of blooming soaking pits, and install additional equipment for the rail-structural and merchant mills. In the third year, it is planned to put into operation blast furnace No. 5, coke oven battery No. 6, open-hearth furnace No. 9, with a capacity of 500 tons and two more groups of blooming soaking pits, and also to complete the reconstruction of the continuous billet mill. In the course of the fourth year, there will be put into operation the third sintering machine, open-hearth furnace No. 10 with a capacity of 500 tons, the last two groups of soaking pits and the new wire mill, and open-hearth furnace No. 6 will be reconstructed for a double charge.

According to the project specifications, the total amount of equipment to be installed at the works in the course of its expansion is estimated in round figures at 71,545 tons, of which 56,722 tons of equipment will be installed in the principal plants. The construction site will be supplied with power from the functioning plants of the works. The maximum number of workers to be engaged in the construction work is estimated at 32,000 men.

The project for the expansion of the iron and steel works in Bhilai visualises a further rise in the technical standard and economic indices of the works operation. It provides for the introduction of advanced technological processes, equipment and construction methods verified by the operational experience of the Russian iron and steel industry during recent years. The rise in technical standard of the works will ensure the following:

(a) the construction of larger (as compared with the project of the first stage of the works) metallurgical units, that is, blast furnaces with a useful volume of 1,719 cubic meters and open-hearth furnaces with a capacity of 500 tons.

(b) the improvement of technological processes and the unit design, such as oxygen utilisation in open-hearth furnaces not only for the enrichment of combustion air, but also for blowing through the furnace bath; the application of magnesite-chromite crowns in open-hearth furnaces, mould casting directly from molten iron coming from the blast furnace plant; the increase in the weight of ingots for heavy rail rolling and the increase in the size of blooms for the continuous billet mill, etcetera.

(c) the better use of equipment and floor spaces, in particular, increased use of rolling mills, repair shops, power and transport facilities.

(d) fuller use of industrial waste; for instance, the arrangements for the conversion of blast furnace slag into building materials, a fuller use of excess coke oven and blast furnace gases, etcetera.

(e) wider mechanisation and automation of production processes and transport operations; for instance, in the dispatcher's control of the works gas facilities, more extensive use will be made of telemechanical aids for control and signalling purposes, the transportation network will employ electric centralisation of switches and signals, semi-automatic blocking and automatic signalling at crossings, etcetera.

(f) more efficient and cheaper construction methods—wider application of reinforced concrete structures, including fabricated members, etcetera.

The improvement in the technical standard of the works finds its reflection in increased labour efficiency. The total number of men employed at the works is estimated at 12,000, against 7,300 in the project of the first stage of the works—an increase of 65 percent at a 2.5-fold increase of production. In the present project, the annual steel output a man is estimated at 208 tons, compared with 137 tons in the project of the first stage of the works, which is an increase of 52 percent.

According to the composition of coals which are to be delivered to the works for coking, metallurgical coke will contain 23 percent of ash, 0.6 percent of sulphur and 0.8 percent of volatiles. The project visualises a corresponding expansion of the by-product output. The yield of principal coking by-products is rated as follows:

	Percent of dry blend
Tar, anhydrous	2.70
Ammonium sulphate (the ammonium yield is adopted at 0.25 percent)	0.99
Crude benzol distilling at 180°	0.60
Coke oven gas with a calorific value of 4,300 Cal/ cubic meters a ton of dry blend	305 cubic meters

The total amount of chemical products in the by-product plants will run into 138,000 tons annually, including 32,600 tons of ammonium sulphate; 2,980 tons of toluene; 12,480 tons of pure benzol; 3,000 tons of various oils; 3,400 tons of naphthalene; 1,900 tons of crude phenols; 42,850 tons of road tar; 32,500 tons of combustible mixture for gas carburisation in open-hearth furnaces, etcetera.

The amount of chemical products for sale, less internally used at the works, will be about 105,000 tons a year.

The project provides for the expansion of plants for the recovery and processing of coking products, which will require the installation of additional equipment and apparatus. The gas cooling, benzol recovery and distillation systems in the chemical product recovery plant remain unchanged. Due to the small ammonia content in the tar supernate, no lime is to be used when processing it in the sulphate department.

In connection with the increase in the amount of processed crude benzol in the benzol rectification plant, continuous removal of toluene is visualised, and a new process of evaporation of the washed fraction-benzol-toluene-xylene is to be introduced and the functions of the rectification units redistributed. The tar distillation and fraction processing systems in the tar distillation plant remain as they are. A second tubular apparatus will be installed in connection with the increase in the plant output. The sulphuric acid plant is to be expanded. The projected additional units are a new oven, a heat exchanger for the catalyst chamber and a new sprinkling cooler for the monohydrate absorber. The output of the sulphuric acid plant will amount to 27,000 tons annually in terms of monohydrate, which will fully meet the requirements of the chemical plants.

Blast Furnace Production

The open-hearth plant requirements for pig iron have been estimated at 1,962,000 tons. The total works requirements for pig iron, including the foundry (72,000 tons) will amount to 2,034,000 tons a year. At the request of the Indian authorities, the works will also produce 300,000 tons of iron for sale. The blast furnace plant is to be expanded by the erection of two blast furnaces with a useful capacity of 1,719 cubic meters each. The Bhilai works possesses all the necessary conditions for the construction of large blast furnaces. The expediency of building larger blast furnaces is determined by the large output of pig iron at the works. The quality (strength) of coke permits the construction of large-volume furnaces.

The 1,719-cubic meter blast furnaces exhibit a higher output and technical and economic efficiency in construction and operation than 1,033-cubic meter furnaces. In Russia, large blast furnaces are mostly built with a capacity of 1,719 cubic meters over, which show a high performance. The 1,719-cubic meter blast furnaces are to have an increased gas pressure at the furnace top. The coke combustion intensity in these furnaces is to be 0.90 ton a cubic meter of furnace volume a day. The output of a 1,719-cubic meter furnace is rated at 1,738 tons a day or 608,000 tons a year. The project visualises that two 1,033-cubic meter furnaces and two 1,719-cubic meter furnaces will produce only open-hearth iron, while one 1,033-cubic meter furnace will produce foundry and open-hearth iron.

With 350 blast furnace operating days a year in the average furnace campaign, the annual output of pig iron in the plant will be 2,090,000 tons of open-hearth iron and 271,000 tons of foundry iron, making a total of 2,361,000 tons. Liquid open-hearth iron will be delivered to the open-hearth plant (1,962,000 tons) and to the foundry for mould casting (69,000 tons). The remaining open-hearth pig iron (59,000 tons) and foundry iron (271,000 tons) will proceed to the casting machines. Of the 330,000 tons of solid pig iron, 3,000 tons will be used in the foundry, while 327,000 tons will go for sale, including 268,000 tons of foundry iron and 59,000 tons of open-hearth pig iron which can be used by other works for the production of ingots or steel castings.

Blast Furnace Slag Processing

The contract for the design of the works provides for the processing of blast furnace slags

into various building materials. A plant has been designed for processing about 780,000 tons of molten slags a year, which corresponds to the slag output by three 1,033-cubic meter blast furnaces. The annual output of the slag processing plant amounts to 700,000 tons of slag products.

The output of slag building materials and their assortment have been determined with a view to using these materials, essentially, in the Bhilai area, at the construction site of the second stage of the iron and steel works and the town near it. The following materials are scheduled for production by agreement with the Indian authorities: granulated slag, mineral wool, mineral wool mats and cast slag gravel. Granulated slag produced in the amount of 250,000 tons a year is to be used in the cement industry of the works area as an admixture in the production of slag portland cement and as a partial substitute for sand in the preparation of concrete and reinforced concrete at the construction sites of the works and the town. Mineral wool and its products are intended to be used as insulation material (ceiling and wall panels, etcetera) in industrial and housing construction in the Bhilai area, and partly in other areas. Some 32,400 cubic meters of mineral wool and 183,600 cubic meters of mats are to be produced, including 112,000 cubic meters of synthetic tar bound mats and 71,600 cubic meters of stitched mats with paper lining. It is planned to produce about 400,000 tons of cast slag gravel and to use it in the production of concrete and reinforced concrete in the construction of the works and the town in place of crushed stone. The slag processing plant is to include: a hydro-chute granulation unit, a section for the production of mineral wool and products by horizontal blowing with subsequent processing of slag fibres, and a crushing-screening unit for the preparation of cast slag gravel. The project provides for a possible expansion of the plant to handle all the slag produced by the five blast furnaces (1,662,000 tons).

Steel Production

The total amount of steel to be produced is rated at 2.5 million tons of ingots annually. The production of carbon rail and merchant steel has been provided; a possibility of producing low-alloy metal is also visualised. The increase in steel production is to be achieved by the expansion of the functioning open-hearth plant, involving the installation of 500-ton open-hearth furnaces with steel tapping into two 270-ton ladles, and the reconstruction of one of the existing furnaces to handle 500 tons. This will provide for the expansion of the plant foreseen when building its first stage, and for the necessary increase in steel production with relatively low capital outlays.

The new open-hearth furnaces are to have magnesite-chromite crowns. The existing 250-ton furnaces are to be reconstructed to operate with magnesite-chromite crowns. The advantages of basic crowns are particularly pronounced when oxygen is used, as implied in the present project. In this case, the temperature of the crown is raised above 1,700°C at which the strength of Dinas crown is insufficient. Basic crowns ensure a considerable rise in the furnace output.

In contrast to the project of the first stage of the plant, whereby oxygen was to be used only for the enrichment of the combustion air, the expansion of the plant involves a combined use of oxygen, both for the enrichment of combustion air and for blowing through the furnace bath. Oxygen consumption in the open-hearth furnaces is rated at 35 cubic meters a ton of ingots. Along with the application of oxygen, it is planned to intensify the melting process.

The output of the open-hearth furnaces is rated as follows: 250-ton furnaces—200,000 tons of ingots a year; 500-ton furnaces—300,000 tons of ingots a year. Based on the above output of the furnaces, the open-hearth plant is to comprise five 250-ton and five 500-ton furnaces. Four 500-ton furnaces are to be built anew; besides, the existing furnace No. 6 with a capacity of 250 tons is to be reconstructed during its overhaul, to bring its capacity to 500 tons. The construction of the new furnaces will involve the extension of the main building of the plant. Added to the existing equipment will be three floor-type charging machines, two overhead travelling casting cranes with a lifting capacity of 125 to 150 tons each and four ladle cranes with bigger capacities.

A second mixer department with a 1,300-ton mixer is to be added. The building containing the bulk materials department of the stockyard is to be extended with two reinforced concrete bunkers added to it. The flame cutting of scrap is to be moved from the magnetic materials department of the stockyard. A second mould yard has been provided to ensure the preparation of an increased number of mould trains.

The ingot stripping department building is to be extended to service trains with ingots of 500-ton melts; a third crane with a pushing capacity of 250 tons is to be installed there. The open-hearth furnaces are to operate on burden consisting of molten pig iron and reprocessing works scrap. The content of molten pig iron in the burden is determined by the balance of the works scrap and will amount to 0.785 ton a ton of usable ingots.

The rolling mill and open-hearth plants as well as the repair shops are the principal sources of scrap at the works. Besides, the project takes into account the wear scrap accumulating in all plant and shops (worn parts of equipment, production stock, metal structures, etcetera) and metal covered from the open-hearth slag. The total

522,000 tons a year. A small part of the steel scrap is used in the foundry.

Most of the pig iron scrap is due to the breakage of moulds and bottom plates. Besides, pig iron scrap is supplied by the blast furnace plant and the foundry. The total resources of pig iron scrap are estimated at 105,000 tons a year. The pig iron scrap is consumed by the blast furnace and open-hearth plants and the foundry.

Rolled Stock Production

At the request of the Indian authorities, the following programme of rolled stock production has been adopted in connection with the expansion of the works:

Rolled product	Annual output (thousand tons)
Heavy railway rails, 60—50 lbs/yards	500
Light rails	20
Railway sleeper bars	82.5
Structural shapes (ordinary beams 3 to 24-in. high, broad-flange beams, girders, T-beams, angles)	386.5
Merchant rolled stock (rounds, 1.8-in. dia.; squares, 1.3-in. flats, 2.5-in.)	251
Rolled wire, 5.3-10-millimeter diameter	400
Total finished rolled products	1,650
Blanks for re-rolling at other works, cross section 2x2 to 3x3in.	315
Grand total	1,965

The total rolled products output provided by the project is based on the reduction of 2.5 million tons of ingots. Steel consumption a ton of finished products will average 1.27 tons. Compared with the project of the first stage of the works, the output of wide-gauge rails will increase five-fold, that of structural shapes by about 35 percent and that of merchant rolled products, almost two-fold. To ensure the required assortment of rolled products, supplementary equipment is to be added to the existing mills; besides, a new 250 millimeter wire mill is to be installed.

According to the contract for the preparation of the project for the expansion of the works, the production of billets for sale on the continuous billet mill was rated at 400,000 tons and that of rolled wire at 300,000 tons. The project determines the possible annual output of the 250-millimeter wire mill at 400,000 tons of rolled wire. To ensure full use of the wire mill putting out finished products, the billet output by the continuous billet mill for re-rolling at other works has been reduced, compared with the contract, to 315,000 tons.

The assortment of the rolled wire produced by the wire mill has been altered, as against the contract, which provided only for 6.5-10-millimeter diameter rolled wire. Since the Indian authorities subsequently stated that it wished to obtain rolled wire of a smaller diameter, an annual output of 200,000 tons of 5.3-millimeter wire is provided, which makes 50 percent of the total rolled wire output. In order to increase the output of the blooming mill, it is planned to roll part of the blooms for the rail-structural mill from heavier ingots (9.5 tons, against 7.45 tons provided by the project for the first stage) and to increase the cross-section of blooms for the rail-structural mill and for the continuous billet mill (300x300 millimeters instead of 200x200 millimeters visualised by the project of the first stage).

The average hourly output of the blooming mill will be 350 tons. In connection with the increase in the blooming mill output, it is planned to build eight groups of soaking pits in addition to the five existing ones. The existing one-piece ingot car is replaced by a two-piece car; an additional section of the receiving table is installed to receive two ingots. Simultaneously, two additional crane equipment with 850-millimeter rolls and a 1,200 kW drive for each are to be installed on the continuous billet mill, for rolling 300x300-millimeter blooms before the first group of working stands with 700-millimeter rolls. Two additional coolers will be installed and the bloom storage expanded.

The billet mill will roll billets for the merchant mill with cross sections from 100x100 millimeter to 150x150 millimeter (532,000 tons), billets for the wire mill with a cross section of 80x80 millimeter (416,000 tons), as well as billets for sale (315,000 tons). The hourly output of the continuous billet mill is determined by the output of the blooming mill and will amount to about 300 tons of billets. To increase the output of the rail-structural mill, and hence to lengthen the length of strip rolling and rear sides of the mill. As has been stated above, the weight of the blooms to be rolled will be increased. Some 20 pits for delayed rail coolers, four continuous lines for rail finishing and six to ensure the necessary throughput of the thermal treatment and finishing equipment, considering the increasing hourly output of the mill. It is also planned to add an open storage for finished products.

The annual programme of the rail-structural mill output includes: 500,000 tons of rails; 82,500 tons of sleeper bars; 161,500 tons of large structural shapes and 6,000 tons of 3½ in. to 8 in. rounds.

The average hourly output of the rail-structural mill will vary widely depending on the shape to be rolled: from 50 tons for 4x4 in. angles to 180 tons for 90 lbs rails and 200 tons for 8 in. rounds.

The annual output of the mill, including the rolling of a great number of heavy shapes, will amount to 750,000 tons. To meet the annual production goal, the mill should operate 5,500 hours a year, on a three-shift basis, with holidays.

A third continuous furnace is to be added to the 350-millimeter merchant mill and the finished product storage expanded. The annual output programme of the mill includes 185,000 tons of 1.3-inch rounds, 40,000 tons of 1.3-inch squares, 30,000 tons of 2.5-inch flats, 225,000 tons of small structural shapes and 20,000 tons of light rails. The average hourly output of the mill will vary from 50 to 170 tons, depending on the kind and size of the shape to be rolled. To meet the annual goal of 500,000 tons of merchant stock, the mill should operate 5,500 hours a year, on a three-shift basis, with holidays. The 250-millimeter wire mill is designed to comprise 37 working stands including 29 stands with horizontal rolls and eight with vertical rolls, the total driving power being 22,000 kW.

STRUCTURE AND OUTPUT OF THE WORKS' PRINCIPAL PLANTS

Plant	Product	Works expansion project	Annual output (thousand tons)	
			Project of first stage of the works	Works expansion project total
Coke	Metallurgical coke	+25	1,145	2,290
Sintering	Fluxed sinter		1,000	1,870
Blast furnace	Iron (natural), including open-hearth foundry iron		1,110	2,361
Open-hearth	Ingots		800	2,090
			310	271
			1,000	2,500
Rolling mill	Blooms		859	2,142
	Billets		427	1,263
	Finished rolled stock		365	750
	- do -		255	500
	- do -		—	400
	Total rolled stock		—	—
Slag processing	Granulated slag	Hydrochute granulation unit	—	250
	Slag wool	Department for production of mineral wool and products	—	38
	Cast slag gravel	Crushing-screening unit for production of cast slag gravel	—	412
Total production from slags			700	

Taking into consideration the Indian practice of producing railway rails semi-killed steel big end-down ingots without feeder heads, it seems expedient to carry out at the works some experimental meltings of killed and semi-killed steel and through investigations of finished rails made from them, to test their quality and production cost and with the aim of comparing the quality of rails rolled from killed and semi-killed steel ingots. If these experiments point to the expediency of producing rails from semi-killed steel at the Bhilai works, the production of such rails can be ensured without any changes in the range and characteristics of the rolling mill plant equipment. It would also be advisable to stage an experimental check-up of the technical and economic efficiency of production of different types of merchant steel from semi-killed metal as compared with killed metal. If rails and the merchant rolled stock which is to be produced from killed metal, are rolled from semi-killed steel ingots, the yield of usable blooms will increase, and this will bring about a corresponding decrease in the amount of trimmings by approximately 75,000 tons a year.

The additional blooms can be used for rolling annually another 70,000 tons of billets on the continuous billet mill to be sold to other works. The

Strip rolling in the roughing and the first middle groups of stands will be done simultaneously in four threads, in two second middle groups—in two threads in each group, in four finishing groups—in one thread in each group. The maximum rated speed of the strip emerging from the final stands will be 30 meters a second. The whole output of the mill will be produced in coils. The average hourly output of the wire mill will vary from 55 to 105 tons depending on the rolled wire diameter. To meet the annual production goal, the mill should operate 5,800 hours a year on a three-shift basis, with holidays.

The project for the expansion of the works provides for the production of railway rails and part of the merchant rolled stock from killed steel big end-up ingots with feeder heads, totalling 950,000 tons. The practice of rail production in Russia shows that killed steel ingots yield better quality rails which meet exactly the consumer's requirements.

CONSTIPATION AND PILES

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well-known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

ACCRA MEETING DISCUSSES PROBLEMS OF COMMONWEALTH TRADE

INTERESTS OF MEMBERS TO BE SAFEGUARDED,
SAYS U.K. CHANCELLOR

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Chancellor of the Exchequer, Mr. Selwyn Lloyd, is having a busy time at present. Reports from Accra, where he is attending the usual annual meeting of Commonwealth Finance Ministers, suggest that he has been regaled with fears and warnings by his colleagues about the probable outcome of Britain joining the European Common Market. Apart from individual reactions, the general feeling appears to be that unless Commonwealth interests are fully safeguarded, the effectiveness of the Commonwealth could decline to a point where it exists in name only, and that would be a major calamity. Another widely held fear—voiced particularly by the underdeveloped Asian and African countries—is that the present British leadership in world affairs and economic matters particularly would be replaced by a faceless group directorate, leading to the disappearance of the unique prestige and contacts enjoyed by the Commonwealth in the interests of west European policies directed against the United States on the one side and the communist bloc on the other.

Mr. Lloyd's contribution to the discussion apparently took the form of a reassurance that Commonwealth interests would be protected during the negotiations and that talks as to how to ensure Commonwealth participation in these would start shortly. The British delegation to European Common Market negotiations will be headed by Sir Pierson Dixon, U.K. Ambassador in Paris, under the overall leadership of Mr. Edward Heath, the Lord Privy Seal, with member-representatives of all the Government Departments involved, all with wide experience of international affairs. From Accra, Mr. Selwyn Lloyd is to go on to Vienna for the annual meetings of the I.M.F. and the World Bank.

A news flash from the U.K. Board of Trade states that Britain's trade gap widened last month by £12 million. The gap—the excess of imports over exports—was £40.4 million, compared with £27.8 million in July. Imports totalled £359 million, compared with £350.8 million in July, not perhaps a very significant rise. Exports, on the other hand, declined from £308.6 million in July to £305.2 million in August; and re-exports were also lower at £13.4 million, against £14.4 million. This is disappointing in view of the fact that exports have been holding their own surprisingly well in spite of many handicaps.

A second disappointment in the economic outlook is the U.K. Iron and Steel Board's announcement that the production of steel is showing the effects of a widespread reduction in demand. In August, the output was 338,400 tons a week, compared with 380,200 tons a week in July. In August 1960, production was 422,900 tons a week. The output has, therefore, declined by nearly a quarter. Part of the current demand is being met from stocks, which began falling in the second quarter of the current year. The Board believes that stock withdrawals might have accelerated in August. Pig iron production in August amounted to a weekly average of 264,900 tons, compared with 276,600 tons in July and 291,400 tons in August 1960.

August Retail Sales

Any ideas that the July upsurge in retail trading in anticipation of the U.K. Chancellor's "Little Budget" would be followed by an equally sharp downturn once the measures were announced, are not borne out by the August figures. Although only provisional, these show that on a seasonally-adjusted basis, the index of the value

of sales last month was maintained at the high level of 117, to which it rose from 114 between June and July. The U.K. Board of Trade draws the conclusion that on the information so far available, retail trading was broadly maintained last month at the high level reached in July, which was significantly higher than during the second quarter of the current year.

Although sales by durable goods shops, which benefited most from the July buying spree, may have eased down a little, food shops did well, and sales by clothing and footwear shops moved up after having remained steady in recent months. Comparing the value of August retail sales with those of August last year, the rise appears to be about 6 percent. But of this about two-thirds can be attributed to higher prices.

Construction Work Abroad

During the year ended March last, construction work abroad carried out by British firms rose in value by £11 million to about £135 million. The work was carried out in 63 different countries by more than 60 firms. New contracts obtained during the period fell by some £33 million, compared with the previous year and the total of £98 million was the lowest since 1955. The unsettled political climate in many parts of the world may have had some effect on the willingness of U.K. contractors to tender and the pressure of work at home has limited the capacity of some firms to accept additional overseas commitments.

Influx of Building Contracts

In terms of work done, the building and contracting industry had a record second quarter. According to U.K. Ministry of Works' figures, the industry also received enough orders to stoke the great building boom for months to come. The value of new orders in April-June was £491 million, although lower than the first quarter total of £521 million, was a healthy advance on the figure of £452 million in the second quarter of last year. Moreover, the fall between the first and second quarters this year was less than it usually is, even allowing for the increases in prices. This outcome is perhaps some consolation to the industry for the problems it is facing in winning more work overseas.

The U.K. Chancellor's credit squeeze has naturally still to do its work of contracting the flow of building work. Before he made his "Little Budget" statement in July, it was apparent from the U.K. Board of Trade's figures for schemes approved that the pace had gone out of factory building plans. The only fall in new orders in the second quarter, compared with the same quarter last year, did occur in contracts for industrial work, but they were still slightly higher than in the first quarter. Orders for new housing were up, although the rise can be accounted for by higher prices. Contracts for new work placed by public authorities were sharply higher—£142 million, against £121 million—a comparison that helped provoke Mr. Lloyd's request to local authorities to cut down their housing plans and underline his determination to keep all forms of public spending under closer observation.

Chartered Bank Terms

Terms of the equity "rights" to be made by the Chartered Bank were announced after the market hours on 12th September. The bank is to raise £22 million by the issue of 1.1 million new £1 ordinary shares at 40s a share, on a one-for-five basis, to finance a greatly increased volume of business. The existing ordinary shares finished 6d firmer at the close of Stock Exchange dealings on 13th September at 53s 6d. This puts a value of 2s 3d on the "rights", suggesting a premium of about 12s on the new shares. Payment for the new shares is being spread over nearly a month, with 20s payable on 2nd November and a further 20s not later than 30th November. The issue is being underwritten by Pender and Boyle for a commission of 6d a share, which on 1.1 million shares equals £27,500. The maintenance of the annual dividend rate of 15 percent on the increased capital is forecast by the directors, who hope to recommend a final dividend of 7½ percent actual for the year ended December 1961. At a price of 52s, the £1 ordinary shares give a yield of a little over 5½ percent.

The directors of Doom Dooma Tea have produced the logical and probably decisive reply to Brooke Bond's take-over offer, by realising the Company's underlying assets. They have received a firm offer from Indian interests for three of their five estates. This would produce a cash distribution of £290,000 or 35s a share, and still leave assets worth £12.5 million, or 45s a share—a total of 80s. Brooke Bond offered 45s. This 45s Indian offer is in sterling, and remittance to London would depend on the consent from the Reserve Bank of India. But Mr. W. K. Warren and his co-directors say that they can see no reason why permission should not be granted without undue delay.

Reply from Doom Dooma

Doom Dooma shareholders should now have no hesitation in rejecting Brooke Bond's offer, which initially expired on 19th September. Following the correct take-over procedure, the Doom Dooma board is avoiding any action which might nullify the Brooke Bond bid, pending the shareholders' reactions. Baring Brothers have advised Doom Dooma, while Lazard Brothers acted for Brooke Bond. Assuming Brooke Bond's offer is rejected, a shareholders' meeting will be called. The next step would probably be the realisation of Doom Dooma's two remaining estates. These moves underline the real values of tea estate companies which are now well above stock market prices.

Jute

MARKET BECOMES STEADIER IN RESPONSE TO NEW PAKISTANI CROP ESTIMATES

INDIAN GOVERNMENT WILL NOT FIX FLOOR PRICE FOR JUTE THIS YEAR

PROPAGANDA still seems to play a large part in the activities of the jute world. In Pakistan, following earlier announcements of a bumper crop, official estimates printed by an East Bengal daily now indicate that the current acreage will only be 35.8 percent larger than last year's instead of over 50 percent larger. Government circles there say that they expect the new crop to be about 6.5 million bales, instead of the 8 million bales previously indicated. One wonders how the estimates can be changed so sharply in such a short time. This is the question now being asked in the market, and naturally a very strong reaction has resulted from the announcement of the figures. The Pakistani market has become very steady, and it has extended its influence to Calcutta although it would be wrong to say that this is the sole reason for the recent steadiness of Indian rates. Operators in Pakistan appear to be determined to force up prices for exports as it is known that overseas buyers are interested, and the stocks of jute held by Dundee and the Continent are not sufficient to allow them to postpone buying indefinitely.

Steadier Feeling

Various factors have combined to produce the steadier feeling in all sections of the Indian markets. In spite of the absence of demand for jute goods from abroad, which may be due to a desire to wait until the results of the increase in mill hours make themselves apparent, the goods market has ruled fairly steady. This is the result to be due to local covering against higher-priced commitments, combined with speculative covering in anticipation of overseas business. Fortunately, bazaar holdings are not as heavy as they might have been had the mills been more willing to sell for forward deliveries in recent months, but the heavy discount for forward deliveries, as compared with the prices for early shipment, has encouraged mills to hold for better prices as the delivery periods come nearer. The raw jute side has been dominated by the lack of business in manufactured goods. Mills have refrained from buying jute and although they cannot be said to be heavily stocked now that working hours are being increased, they can comfortably wait until they get some incentive from the goods market, or until jute prices drop. However, if mills are going to build up any kind of reserves, they have still a lot of jute to buy as they have not bought much more than their consumption up to now.

It has now been definitely announced that the Government will not fix a floor price for jute this year. This has come as no surprise to the trade in spite of the agitation from certain sections for minimum prices, as it was fairly obvious from the beginning that the Government was reluctant to accept the plea. For the next few months, it is generally thought, raw jute prices will not show much change, as mills must keep up a certain pressure of buying not only to lay in stocks but also to keep running with the increased working hours. In the new year, when the buying pressure slackens, prices may show a tendency to drop. Only then might the Government step in to prevent a slump.

It is learnt that the booking of jute from jungli stations along the northern bank of the Ganges has been temporarily suspended, due to flood conditions affecting the line and transport in general. It is expected that bookings may open after about a week as the flood waters have now receded. Other stations south of the river have not been affected. In the Nowgong area, there has been labour trouble in some agencies over the question of wages. It is not expected that this will have any effect on imports, as the trouble so far has been confined to a very small area.

The Siamese Crop

Latest reports from Siam indicate that the estimate of the crop there this season is about 1 million bales. This is more than double last season's output, of which only 26,000 bales were exported to India, as it was rather late in the season that any contracts were made. Thailand's internal consumption is estimated to be about 200,000 bales, so she will have about 800,000 bales available for export. Now that the import duty on Siamese jute has been lifted, it is hoped that import licences will be readily available. Siamese jute is mainly mesta and compares favourably with Indian grown mesta but tends to be much coarser. As for imports of jute from Pakistan, so far this season licences for about 300,000 bales have been authorised up to the end of September. Some of these, although not many, have not been used. It is expected that licences for the last quarter of 1961 will be issued in the near future. Last season, total imports of Pakistani jute into India amounted to 415,000 bales, according to B.B.A. statistics.

Thus, with only three months of the season over, the figure will be nearly reached.

Raw Jute Arrivals

Arrivals of raw jute at Calcutta and mill stations during August 1961 amounted to 312,500 bales, 23,650 bales being from Pakistan and 288,850 bales from India. Total arrivals during July and August 1961 now amount to 510,500 bales of which 31,650 bales came from Pakistan and 478,850 bales from Indian stations. Total arrivals during August were not only 114,500 bales more than in the previous month, but were 67,500 bales more than in August 1960. During July and August 1960, total arrivals amounted to 424,000 bales, 74,000 bales being from Pakistan and 350,000 bales from India. Thus, in the current season, arrivals over the first two months are 86,500 bales more than in the first two months of the previous season. Many operators expected a larger arrival figure for Pakistan, and it is thought that this does not include a fair quantity of cuttings which must be in transit.

THE JUTE MARKETS

Manufactured Goods: There was a marked absence of demand throughout the past week. Overseas enquiry was negligible and this was said to be due to the belief that goods would be available at lower prices when the effects of the increase in mill working hours were felt. In any case, buyers usually operated very sparingly on a falling market. Small sales of hessians were made and there was some pressure to sell heavy goods. Prices fluctuated according to the bazaar's views

and the supply and demand position, but the general tendency was upward. At the opening, all markets were quiet and September B Twills were quoted at Rs. 131, which was about Rs. 10 more than the January-March position. But 40in. 10oz. hessians were quoted at Rs. 49.50, with the forward position Rs. 5 less. Some business in hessians, together with local speculative activity, succeeded in raising indications in both sections. By the week-end, sacking had advanced by Rs. 2.75 and hessians by Rs. 1.20. This trend continued after the week-end until September B Twills reached nearly Rs. 135 and 11-porter hessians Rs. 50.85. Selling pressure at the higher levels brought a quieter tendency, and on Tuesday, sacking dropped by Re. 1 and hessians by 50nP. Prices fluctuated thereafter within narrow margins, with little business passing.

Opening quotations on Wednesday morning were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	37.65	37.00	35.00	34.00
40in. 8oz.	41.25	39.50	38.10	36.25
40in. 10oz.	50.50	48.50	47.25	45.00
B Twills	132.70	129.75	127.70	122.75
Heavy Cees				
(Plain)	133.00	130.25	128.50	122.75
A Twills	162.00	160.00	158.00	151.00
Liverpools	154.00	150.00	146.50	139.00
Cornacks	135.50	132.75	130.75	125.00

Raw Jute: The fibre market was steady at the opening due to interest both from the mills under contract and also in mill agencies. Opening quotations for Assam Bottoms were based on Rs. 35 a maund for September-October shipment. Daily interest from mills and the steadiness of the goods market helped to push up raw jute prices, and for the next few days, although sellers' ideas were higher, quotations remained unchanged. The main interest was in quick shipment jute, and occasionally premium rates were paid for short delivery. Many sellers were keen to book forward business, but there were no buyers. On Saturday, rates were advanced a further 50nP to Rs. 35.50 and they remained at this level for the rest of the week. Ready bills of lading commanded a premium of Re. 1. Imports into the upcountry markets showed little change. Arrivals in Cossipore showed a big improvement and 862 wagons were reported. This was 280 more than

"Do LIC actually invest at the rate of Rs. 1½ million a day?"

"More! In fact they're the largest investors in the country."

PEOPLE ARE TALKING ABOUT LIC

With LIC's mounting business turnover, comes a steady increase in its premium income. A large part of this income is invested in the country's economy—averaging more than Rs. 1½ million every day.

These investments stimulate the economy, creating new wealth. By helping to finance industries LIC catalyses more jobs, more incomes and more goods.

Today there is increasing recognition everywhere of the part which LIC is playing towards domestic and national stability.

THE PAKISTANI JUTE MARKETS

FIBRE RISES ON KEEN DEMAND

(FROM OUR EAST PAKISTAN CORRESPONDENT)

IN all its sections, the market has been firmer over the past week with demand keen and sellers reluctant. Loose jute prices have risen in some places by as much as £9 a ton. The pucca bale market has been noticeable for more business done rather than for higher prices. Overseas buyers have reluctantly paid higher rates particularly for Tossas, and E.P.C.s have gone up by £3 except for Export Hearts, O.T-4s and Cuttings. In the Narayanganj loose jute market, despite an increase in arrivals the trend has been steady with very keen buyers. The equivalent of £122 is being paid for Export Lightnings, although the overseas market is not more than £107 and E.P.C.s are £3 higher. In northern Bengal imports have been negligible and prices have been higher, although not to the same degree as in Narayanganj. The jat areas are almost on a par with Narayanganj prices, but imports are small. In the district areas, imports are small. As there has been more interest in Tossas, the white prices have not moved upwards quite as much as in other parts of the country.

There is still no complaint that moisture in the jute is heavy or that the quality is poor, but hard centred jute is common. This has been caused by the rising and falling of river levels. Due to the lack of steeping water, croppiness is common, particularly in Tossa. There has been so little water that growers could not get all the jute under water. Early Tossa arrivals gave every indication of a healthy good crop. The jute was clean and lustrous. Unfortunately, this is no longer the case. The district Tossa, mainly the Hard District variety, which is coming in now is coarse and overgrown. Northern and jat Tossas are very late and what is coming in, is poor. Considering the fact that one expects better quality from the early arrivals, it is feared that later arrivals of these grades will be even worse. The weather for some days has been dry and river levels have been falling. This will surely affect

the quality of the Tossa crop, and already a severe lack of steeping water is apparent. In the jat areas, very large quantities of jute have been retted and are ready for sale. Large quantities are also in the steeping tanks. This is also true to a lesser extent in the district areas. In the northern areas, lack of steeping water has delayed harvesting.

The general sentiment in the market has been bullish. Balers feel that all parties are oversold for September. The mills have been buying on a hand-to-mouth basis and may well be frightened into heavier buying. Overseas buyers who have successfully kept prices down by buying only their urgent requirements and paying higher prices for float jute are also short, and may be forced into heavier purchases. Extensive Government propaganda has encouraged the seller to dispose of his jute only in small quantities in order to get better prices. All these factors have contributed to a rising market.

If one takes the crop at 6.5 million bales, which is generally accepted today, one finds that 75 per cent or roughly 5 million bales have been harvested. Out of this 600,000 bales have gone to the mills and approximately 800,000 bales to foreign buyers, making a total of 1.4 million bales. The balers have a further 600,000 bales in their godowns. This means that the growers and middle men between them are holding 3 million bales with more to come very soon. It is hard to believe that they can hold on much longer, or that they can resist the temptation of the present high prices. If prices come down when arrivals increase, sellers may well withdraw again, resulting in a sea-saw market. The main thing, however, is that there should be a fall in the market very soon. If there is not, more business will go to Siam than that country can accommodate.

In the pucca bale market in Narayanganj, there has been a sudden interest in Export Hearts and strangely enough the same price of roughly £93 c.i.f. Continent (equivalent of Rs. 160 a bale f.o.b. Narayanganj) is being paid for any position from September to December. This was forecast some time ago by this correspondent, as there is still a lot of Export Heart buying to be done by European mills. Cuttings have now firmed up and are quoted at approximately £53 for all positions up to December. The disappearance of the discount in the forward position is very unusual. Since sellers have raised their prices, and in some cases, have completely withdrawn, overseas buyers have been obliged to pay slightly better rates and to increase their rate of purchase slightly.

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES RAISED

(FROM OUR DUNDEE CORRESPONDENT)

PRICES for jute yarns and cloth in the United Kingdom were raised by £5 a ton from Thursday last, making the sixteenth change this year. Members of the trade are "fed up to the back teeth" to use one of the old Army phrases, since each time there is an alteration in values of home-produced yarns or cloth, each firm notifies its customers involving considerable labour and expense. It must be annoying to merchants, spinners and manufacturers who have no option but to accept the changes as they come, but it is altogether a different matter with consumers. They have got tired of hearing of rising or falling prices during this season, so they really do not know where they are. This correspondent has heard reports that many firms have simply deserted the jute trade and are meeting their requirements with some other substitutes. A considerable amount of business has been lost to the jute industry because of uncertainty concerning the future.

No definite answers can be given to the many questions being asked about the vagaries of the market. When sowings were in progress, it was reported that there would be a record crop from a greatly increased acreage, and the weather was said to be very favourable for the growing crop. When arrivals first started coming in, it was seen that the quality was poor. Since then, offers of jute above the grade of Mill Hearts have been scarce. Mill Firsts have been seldom mentioned around £157, and Mill Lightnings from £129 are sparingly offered for October or November shipment. Mill Hearts are more freely obtainable at £106 and Grade Hearts from £90, with Grade Tossa-2/3 at £129 lowest, four £120 and Continental Tossa-2/3 from £108, same shipment, c.i.f. U.K.-Continent. Spinners in Dundee have been buying fibre fairly freely.

Calcutta goods have been irregular as usual but with quite a firm undertone. The rates last week were 74s 9d for 40in. 100z. and 57s 9d for 7 1/2oz. September, 71s 9d and 54s 9d October, 70s 3d and 52s 9d November-December and 67s 9d and 51s January-March with B Twills at 199s, 195s 3d, 191s 6d and 183s 9d for the respective positions of shipment, all f.o.b., Calcutta.

Jute yarns and cloth in Dundee were in quiet but steady demand. But the latest rise in prices is likely to stop practically all business. Buyers are not prepared to pay more than the recent rates, and they will probably wait for a return to lower terms or buy something other than jute.

PROBLEMS OF WAGE FIXING

By Mary Sur

IN the U.K. today national negotiation of standard rates of pay is the practice in practically all industries. Aided by full employment and good organisation, the trade unions have eventually secured their goal of uniformity and standardisation of wage rates. It all seems very neat and tidy and logical on paper compared with the great variety of methods of wage fixing in India—awards of industrial courts and wage boards, notification of minimum wages, and local collective agreements—but, though tidy, perhaps it is not so rational after all. This, at least, is the thesis of Mr. D. J. Robertson's book, *Factory Wage Structures and National Agreements*. Drawing on a number of special studies of individual factories and general research over some years, he shows that there is, in fact, in the U.K. a wide gap between nationally settled wage rates and actual factory earnings, the former in many cases being treated mainly as minima and the latter being boosted up with supplementary pay in the form of so-called "incentive schemes" and regular overtime.

The mythology of "the rate for the job" and "fair wages", writes Mr. Robertson, has given an ethical tone to national bargaining, but is actually far removed from the facts. For the sake of uniformity wages have been compressed into a few standard rates, but these do not take account of a number of common causes for local variations in wages. Thus differentials based on degrees of skill and experience have been ironed out and this has caused a good deal of discontent. Then there are the differences between firms in the same industry. In a central service such as railways, there may not be much local variation, but in manufacturing industry—engineering, for instance—there are often wide differences in structure, organisation and output. They may differ in profitability and rates of expansion, and this may cause differences in the need to attract labour. Variations in the end-product of firms even in the same industry may cause differences in the intensity of demand for certain types of labour. Also firms differ traditionally in their methods of payment. All these differences make it difficult to apply national standard rates without variation if the firm is to have sufficient elasticity to meet certain situations, particularly shortage of skilled labour.

Incentive Payments

To circumvent the rigid national rates in order to meet local difficulties, companies are using piece-rates and overtime as supplements to the standard rates. Piece-rates are represented as incentive schemes, but when, in fact, incentive bonuses work out at anything up to 50 per cent of the pay packet, then it is obvious that the basic national rates are too low. In fact payment by results has made nonsense of national rates by reducing them to something less than the minimum in many cases. Incentive schemes are used in order to attract the right type of labour: they are stretched to include employees not on direct production and others whose output it is difficult to measure properly, so that, in effect, the idea of incentive is lost and the additional earnings are looked upon as a supplement to the standard rates. There is also a good deal of jugglery within incentive schemes—a matter that has been commented on by a number of other investigators. In shipbuilding, for instance, arbitrary amendments are made to actual piece-rate earnings because for various reasons the men cannot earn enough bonus to keep them satisfied. In other cases groups of workers agree not to exceed a certain output, or else "bank" any excess output one day in order to use it to level out production which is not too good on another day. The object of these unofficial adjustments is to ensure a regular income level, which is what the average worker desires. In the same way overtime has often become a permanent feature of a job in order to ensure regular earnings at a higher level than standard rates.

Mr. Robertson's conclusions may be quite startling to many trade unionists in the U.K. He argues that national collective bargaining may be necessary, but that it should be limited to settling minimum rates and broad conditions of service, and that national bargaining should be supplemented by local negotiations on wages related to local conditions. This, he says, would do away with schemes of payment by results which are not really incentives at all and with overtime which has ceased to be casual. Local negotiations would take into account all local conditions, and would be in the hands of those who know the facts.

Lessons for India

What lessons could be drawn from this study which would be relevant to India? We have no nationally negotiated wage rates, but in a number of ways rates of pay are being laid down nationally, industry-wise or region-wise. There is first the machinery of adjudication. Although most tribunals deal with local disputes, they tend nowadays to follow certain common patterns, and in some cases they have laid down a wage structure for a whole industry in one region. For Government employees there have been two Pay Commissions, and the pay structure in banks has been laid down by a central tribunal. More recently we have the idea of the Wage Board which has been applied in the cement, cotton textile and sugar industries, and is now to be applied to jute,

plantations and iron and steel. Special legislation set up a Wage Board to fix the pay of working journalists. Meanwhile in the unorganised industries minimum wages have been notified by the appropriate Government under the Minimum Wages Act.

Originally, Government machinery concerned itself with the fixing of minimum wages. Early tribunals rarely went into the question of rates for other than unskilled workers. However the Report of the Committee on Fair Wages stimulated demands for standardisation of pay scales on an ethical basis, that is according to calculations of a "fair" wage rather than the capacity of the industry to pay it. The terms of reference of Wage Boards usually contain the clause "to work out a wage structure" for the industry concerned. Industrial courts at the present time generally evolve wage structures for the companies whose cases are referred to them, and there is some evidence of a tendency to compress all groups into a few tidy wage categories.

Regional Differences

Now, while India does not face a shortage of labour as in the U.K., pockets of shortage exist as far as skilled labour is concerned. But more important is the fact that there are wide regional differences even in the same industry. The employers' main complaint about Wage Boards is that they do not and cannot take sufficient account of local differences. National settlement of a wage structure for a whole industry is bound to raise

local difficulties. Even a tribunal award in an individual company may leave so many points of detail in dispute that much time has to be spent on negotiation within the company in order to fit employees into the scales laid down in the award. To those who work in industry differentials are important. One man may have more responsibility than another even though on paper he is in the same category; tradition among the employees often rates one job higher than another. It is only at the factory level that these questions can be sorted out.

There seems, therefore, to be much to be said for applying Mr. Robertson's recommendations in India, that is to say limiting national or industry-wide awards to minimum rates or scales for the main categories of workers in the trade, and leaving it to local collective bargaining to establish rates or scales where differences in jobs or local conditions require it. This, of course, would call for collective bargaining on a much wider scale than at present, when only a beginning has been made by some of the more forward-looking companies. Government's general policy of appointing a Wage Board for an industry could still be pursued, but at the same time encouragement could be given to the settlement of details of the wage structure by negotiation at local level. Wage Board awards could contain a rider that further details are to be settled by local negotiation and registered as settlements. It might give further work to government conciliation officers, but it would further the principle of voluntary settlement, while maintaining a check over minimum rates. It would force the local unions to bargain more responsibly instead of letting their case go for decision to a third party, and it would overcome the employers' complaint that Wage Boards ignore local difficulties.

Are you in need of a loan for your industry?

The problem of finance faces a small industrialist like any other entrepreneur. To help solve this problem, a scheme for the co-ordinated provision of finance has been evolved by the various financing agencies with the assistance of the Central and State Governments.

The State Bank is ready to assist small industrialists with advances against raw materials, manufactured articles and ready stocks etc., as well as with advice as to any other source from where credit can be obtained.

There may be a branch of the Bank in your town. Why not take your problem to the Agent who will be glad to be of assistance?

STATE BANK OF INDIA

People in glass houses...

Every day, more people are using more glass to modernise their homes. And for more reasons than one. Glass invites cheerful, natural light; seals out moisture, noise and unhealthy dust. It's easy to clean and keep clean, too!

Why don't you try glass? Take any room. Fit good, strong glass (HPG, to be sure) and see how spacious it looks—how wonderfully livable it becomes! Or may be you could use an elegantly functional glass partition. Why not do it?

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

LABOUR PRODUCTIVITY: NEW RESEARCH STUDY

Social and Cultural Factors Affecting Productivity of Industrial Workers in India. (Published by U.N.E.S.C.O. Research Centre on Social and Economic Development in Southern Asia, University Enclave, Delhi 6. Price Rs. 12, pages 127+51.)

The advisory committee of the U.N.E.S.C.O. Research Centre recommended in July 1956 that the latter should take up as its first project the study of the social and cultural factors affecting the productivity of industrial labour in India. It is tacitly assumed that social and cultural factors do influence the efficiency, and hence the productivity, of workers in modern, large-scale industries. The main objective of the present study was to examine the extent to which these factors affect the working capacity of the modern industrial worker, that is, whether these factors help to increase or impair his efficiency. The enquiry also covers the general examination of the work behaviour of the personnel. The pilot study indicates some trends, like the lack of national integration. Can those workers better adapt themselves to factory conditions who have more favourable attitudes towards life in a modern industrial civilisation, who are less subjective to caste influence and so on? Questions such as these would naturally suggest themselves for further investigation. An attempt has been made to find answers to these questions from the findings of the study, as well as what social and cultural influences have contributed to such adaptability and attitudes. Another series of correlations have been worked out between productivity and a large number of selected items of the schedule, including those relating to age, experience, education and dependants. The selection has been made on the basis of their suitability for such correlation treatment. The values of the correlation co-efficients are mostly found to be low, although in several cases they are significant. The value of this study lies not so much in the results so far obtained as in its pioneering character and in the useful spade work it has done. It will undoubtedly provide rich material to future research scholars on the subject.

DYNAMICS OF GROWTH

India's Economic Development and International Economic Relations. By M. S. Khan. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 12, pages 163.)

In this book, Professor Shabbir Khan considers the problem of long-term development of the Indian economy and examines the rôle that international economic relations can play in it. With a view to gaining an insight into the process of growth—the prime-mover of economic development in a country like India—the author discusses it in terms of chosen variables and of their functional relationship in economic models. Professor Khan then considers the impact of international economic relations on India's development. He discusses these relations broadly from the standpoint of the dynamics of growth with reference to international trade and the rôle of international capital in developing an under-developed economy. Against the background of this theoretical framework, the author draws an analytical sketch of the developments during India's two five year plans, especially in the sphere of international economic relations and explains how they have influenced the pattern of growth of the Indian economy in recent years. Professor Khan has included in his book much valuable statistical material in the form of statements.

ECONOMIC DEVELOPMENT

Analytics of Modern Economic Problems in India. By Bimalendu Dhar and Jatikummar Sen Gupta. (Published by Post-graduate Book Mart, Calcutta. Price Rs. 12, pages 332.)

The volume is a collection of 16 essays in applied economics written separately by the two authors. It is mainly intended for students of economics, although it might also interest the general reader because of the wider interest now being taken by the public in economic problems. It is—as the authors point out in the preface—a modest attempt to present a factual and analytical study of selected economic problems in the context of present-day Indian conditions. The authors have tried to strike a mean between the rigour of analysis and the lucidity of presentation. Nevertheless, the discussion on some of the topics is abstruse. The book includes essays on the problems of productivity, rationalisation, economic planning, land tax, import control, etcetera, while two essays discuss the investment of life insurance funds before and after nationalisation. Another essay deals with social insurance in India. The topics of the essays do not seem to have been chosen with any definite purpose and are merely a collection.

RAISING TEA EXPORTS TO E.C.M. COUNTRIES INTENSIVE CAMPAIGN FOR HOME MARKET NEEDED

(BY A SPECIAL CORRESPONDENT)

SPEAKING in Coonoor recently, the chairman of the Indian Tea Association drew attention to the possibilities for future tea exports if the U.K. Government succeeds in its negotiations for joining the European Common Market under terms suitable to the Commonwealth countries. The Commonwealth countries are the places where the propaganda campaign for Indian tea should be launched instead of trying to teach the British housewife how to make tea. A drink-more-tea campaign, incidentally, has been revived in Britain on behalf of the Indian tea industry. The British people already consume about 10 lbs of tea a head a year. Even if consumption can be raised by 1 lb a head, the extra off-take would be around 25 million lbs whereas with a market of over 400 million people in India, a like increase in consumption would account for about 200 million lbs and thus enable the tea producing industry to earn a good profit margin to the great advantage of the Government which would earn increased revenue from taxation. So instead of cancelling propaganda to sell tea in India which was reported in these columns last week, the money now being spent in England should be added to funds for development of the tea-drinking habit here in India.
