In the Singapore market, prices have declined by \$5 per pound, mainly on account of the complete apathy of the US buyers and the increasing pressure of the new crop offerings. Some business in Indian pepper with the East European countries, at bid prices, is even reported. There are also reports that stockists are bidding lower to attract business from Russia; but no business has so far been materialised. The Indonesian Trading Agency is also believed to be negotiating with Russia and other East European countries. If its efforts succeed, there will be

a stiff competition between Indonesia and India in selling to Russia.

According to the latest reports, arrivals of superior quality are expected to start after a month in the primary markets in the South; but the new inferior crop has started moving. The carryover from the last season, which was placed around 6,000 tonnes earlier, is now estimated at 4,000 tonnes despite the exports of about 4,000 tonnes made in this period. A section of the trade places the crop 25 per cent more than that in the previous year.

COFFEE

The coffee industry has been passing through a difficult period and the chairman of many companies have already drawn forceful attention to the need for a change in the methods of marketing by the Coffee Board and for an entirely different system of exporting, particularly the better qualities of Arabica variety.

The stock of coffee with the Board continues to be high despite increas-

ed export and internal sales. Up to the end of September, over 24,000 tons of coffee of all varieties have been exported as against about 9,500 tons in the previous year. Tenders have been invited and are due on 1 November, 1961 for a quantity of 1,599 tonnes, made up of 699 tonnes of Arabica Cherry and 900 tonnes of Robusta.

Up to 15 September, 1961, the receipts into the 1960-61 Pool amounted to 67,276 tonnes (49,081 tonnes), comprising 28,988 tonnes (25,162) of Plantation variety; 10,197 (6,642) of Arabica Cherry and 28,111 (17,277) of Robusta. The figures shown within brackets indicate corresponding receipts for last year.

RUBBER

Production of Rubber is ahead of last year despite the increased number of rainy days. Consumption is, however, rising at a faster pace and imports have to meet most of the additional requirement.

According to preliminary figures issued by the International Rubber

31 OCT 1961 751

Group, world consumption of natural rubber was 1,000,000 tons in July 1961, 1,175,000 tons in June. The July figures were still slightly above that for the same month last year. The July production figure is, however, not yet known; but that for June was 155,000 tons against 165,000 tons for May and 160,000 tons in June, 1960. Stocks in the producing areas increased by 65,000 tons in July to a total of 280,000 tons, while those in the consuming areas decreased by 2,500 tons to a total of 215,000 tons.

Consumption of synthetic rubber declined from 162,500 tons in June to 142,500 tons in July, while production rose from 147,500 tons to 152,500 tons. Stocks at the end of July were 15,000 tons higher on the month, at 370,000 tons.

SHELLAC

Shipments of Shellac, under the new scheme formulated by the Union Government, have already begun. Under the new scheme, the Government has nominated the State Trading Corporation as the buffer stock

BEST TODAY—STILL BETTER TOMORROW!

agency to regulate the purchase and export prices of shellac. The Government has decided to fix the minimum purchase price of different qualities of lac and has reduced their export prices.

The new scheme envisages the stepping up of overseas trading in shellac as also fair price to the growers, who were facing difficulties owing to lower internal prices. There was, however, no change in prices in the Calcutta market after the resumption of export from 11 October.

But the export of shellac has not shown any appreciable improvement

after the introduction of the new export policy. On the contrary, it has shown a fall of nearly 50 per cent. Total exports, till 10 October, were only 8,441 packages, comprising 3,086 packages of shellac; 3,430 packages of seedlac; 40 packages of buttonlac and 1,875 packages of other varieties. During the last month till 8 October, shipments were as much as 14,575 packages comprising 4,093 packages of shellac; 9,900 packages of seedlac; 50 packages of buttonlac and 532 packages of other varieties.

It is generally felt that any appreciable improvement in the ex-

port of shellac is unlikely in the near future. Foreign importers think that, when they can import at the minimum export price (now prevalent), there is no necessity of blocking the money in shellac at present. If this

state of affairs continues for some time more, the local trade circles think that India's shellac trade will suffer considerably, not only due to the lower offtake, but also due to competition from Thailand—the only

HUKUMCHAND JUTE MILLS LTD.

Notice to Share-holders.

Notice is hereby given that the next Annual General Meeting of the Share-holders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Friday the 17th November, 1961 at 4.00 P.M. for the following purposes:—

- 1) To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1961.
- 2) To Declare Dividends.
- 3) To elect Directors in place of those retiring.
- 4) To appoint Auditors.
- 5) As special business to consider and if thought fit to pass with or without modifications the following resolutions:—

(i) As Ordinary Resolution:—RESOLVED that Rai Bahadur Moongtural Tapuriah, a Director of the Company, retiring by rotation, who has attained the age of 74 years, be and is hereby re-appointed a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him.

(ii) As Ordinary Resolution:—RESOLVED that M/s. The Bhagwati Trading Co. Ltd., associates of the Managing Agents, be and are hereby authorised to retain any commission which they receive or are entitled to receive as Agents of the insurers of the Company.

(iii) As Ordinary Resolution:—RESOLVED that the Board of Directors be and are hereby authorised to contribute to charitable and other funds, not directly relating to the business of the Company or the welfare of the employees, such amounts upto a total of Rupees Three Lacs only in any financial year notwithstanding that such amounts in any financial year will exceed Rs. 25,000/- or 5% of the Company's average net profits as determined in accordance with the provisions of the Companies Act 1956 during the three financial years immediately preceding, whichever is greater.

(iv) As Ordinary Resolution:—RESOLVED that the sanction of this Annual General Meeting be accorded to the expenditure amounting Rs. 2,75,422/-, already incurred by the Board of Directors

under the head of donations and subscriptions, during the financial year ended 31st March, 1961.

(v) As Ordinary Resolution:—RESOLVED that the Company do hereby approve of the Contracts entered into or to be entered into separately with each of the undernoted parties who are or may be deemed to be the associates of the Managing Agents of the Company providing for the purchase, sale and/or supplies of jute goods, machinery, machinery parts, stores, spare parts and materials, which the Company and/or the said associates manufacture, stock and/or can deal in, by or to the said associates provided that—

- (1) for any property supplied or sold by the Company the said Associates shall make payment to the Company within one month from the date of supply or sale of goods.
- (2) The prices or amounts charged to or received by the Company shall be at rates which shall not be less favourable to the Company than the market rates or which shall be otherwise reasonable.

- (i) Octavius Steel & Co., Ltd.,
- (ii) Duncan Brothers & Co., Ltd.,
- (iii) Central Cotton Mills Ltd.,
- (iv) Bhagwati Trading Co., Ltd.

Dividends, if declared, will be paid to Registered Share-holders only.

The Share Transfer Register of the Company will be closed from the 6th November, 1961 to 17th November, 1961, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.

9, Brabourne Road,
Calcutta,
the 11th October, 1961.

A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

Explanatory Statements in connection with the special business will be sent to the individual Share-holders.

28 October 1961

other lac-producing country besides India.

Thailand is reported to be undercutting India in the international market. Another problem, which is facing the shellac trade in the internal market, is the likely fall in the prices as a result of bumper Katki lac crop. If the buffer stock scheme does not become effective immediately, the producers are expected to suffer seriously.

SUGAR

Hectic buying interest, noticed since the decontrol of sugar, has subsided. At Muzaffarnagar, the main market for the commodity in West Uttar Pradesh, prices have declined owing to lack of support from the upcountry centres. Bold grain sugar, however, continues to be sold at 15 nP to 62 nP per maund higher than the controlled price. The small grain variety for which there is no demand from the Punjab and Himachal Pradesh, is being sold at a discount of 12 nP to 82 nP per maund. Factories, which have not completed sales of even the first quota, are reported to be eager sellers.

Now with the augmentation of sufficient stocks of bold grain variety, the position is expected to be normal in due course. Further, with the commencement of crushing operations immediately after Diwali, the supply position is likely to improve considerably, as sugar factories will be inclined to dispose of their stocks of old sugar to provide godown space for the new crop sugar.

According to the figures released by the Indian Sugar Mills Association, total production for the 1960-61 season up to September stood at 2,969,000 tons as against 2,416,000 tons produced last season. The offtake of sugar from the factories during 1961 was 226,000 tons as against 172,000 tons during the corresponding period of last year. Total despatches, including those for exports up to September 1961, were 2,080,000 tons as against 1,848,000 tons by the same date last season. The closing stock of sugar with the factories, as on 30 September, 1961, was 1,429,000 tons as against 730,000 tons on the corresponding date of last year.

Meanwhile, the price of raw sugar on the world market has been drifting downward again after its earlier abortive attempt at a recovery. Having slipped back to its post-war low of £22 10sh a ton during the late summer, the market struggled up to £24 only for renewed weakness to take it down again to £23. Too much sugar still exists in the world in relation to demand. Judging by early reports, the International Sugar Conference in Geneva has come nothing to rectify the position.

NON-FERROUS METALS

In Bombay, prices of Non-Ferrous Metals have shown a downward trend. Among the factors responsible for an easier tendency in prices were discouraging advices from London and Singapore, the weakness in the ready section, lower advices from Calcutta and Madras, larger arrivals from upcountry centres and

the tight monetary conditions. Reports that the US General Services Administration had sold 300 tons of different grades of tin at lower prices also had an adverse effect on sentiment.

Poor activity, limited turnover, slackened interest and a listless ready section led to increased offerings in Copper. In spite of the fact that the position of demand and supply of zinc in the US pointed up ward, sentiment was nervous in Bombay owing to reports of heavy arrivals and meagre demand. Lead lagged behind since trading was at a low ebb.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange showed a mixed trend. Despite bleak export quota prospects and expectations of a bumper crop, there has been an unusual rise of four points in the Groundnut January contract. The inspiration for the recovery has been the sustained buying by certain influential Punjab and Delhi operators, who are reported to have mopped up stocks in Saurashtra and Bombay. They seem to hold the view that the crop may not be as high as expected earlier.

The Castorseed section has failed to attract any attention and prices are moving idly in a narrow range. The easy tone is mainly attributed to the general weak trend of the market. Stray selling from some operators in Calcutta have also been assisting the downward trend in prices.

The Linseed section continues to remain weak due to lack of any buying enquiry from the industrial units in ready oil. The reports of a bumper crop in Canada is also a contributory factor.

With heavy arrivals of new groundnut crop in most of the southern producing centers, prices of both groundnut oil and groundnut are easier. Good business was done in Madras by the crushers buying almost all the arrivals of nuts. Calcutta too entered into the market for Deepavali season, and the sagging prices of groundnut oil bucked up a little.

Local arrival of groundnut continued to be the same for the past fortnight at the 100 ton level. In North and South Arcot districts there had been receipts of summer crops. With the arrival expected of fresh crops beginning November, the prices of both kernels and groundnut oil are expected to be depressed unless there is greater buying and demand from upcountry dealers.

From Andhra also came the vanaspathi interests, like Calcutta, to meet the festival demand during the early week of next month. Local bazar also absorbed sizeable quantities of groundnut kernels.

More business in groundnut oil was reported for November first week delivery. Also moderate business was done in groundnut oil for November second week delivery. Otherwise in forward positions business was not marked. This year's groundnut crop is reported to be fairly larger than last year's. The export policy of the Government had not yet been announced.

There were substantial arrivals of groundnut in South Arcot markets. But the price receded to 67 to Rs 68 per 80 kgs.

Last week groundnut oil ruled better at Rs 172 per 100 kgs. on some days. But the price declined with arrival of more kernels and slack demand from Calcutta interests. It went down to Rs 169.75 per 100 kgs. The price went to still lower levels towards the end of the week in Groundnut oil. Last Saturday it sold at Rs 166.65, but the report of large kernels arrivals in southern centers depressed the price still further down.

Only new groundnut crop is now available. The price range is also lower in this commodity. It was Rs 70/71 last week, but went down to Rs 68 by the week-end. Today it was further down by another rupee.

In Southern markets the price of groundnut oil ruled moderately. But during the middle of last week they also came down. In Guntur it was at Rs 405 per candy of 500 lbs in Vridhachalam it was at Rs 382 per candy of 500 lbs. In Villipuram it ruled at Rs 382. In Pollachi it was available at Rs 380 per candy and at Salem at Rs 380.

As for groundnut kernels the price of South Arcot came down to Rs 68 per 80 kgs from Rs 73. At Salem it was 75 but came down to Rs 67 per 80 kgs.

HIDES & SKINS

Firm prices ruled in the tanned cowhide market today. Arrivals were also moderate. Only in the premium and semi-premium marks some business was reported in the c.i.f. section. It is a fact there was shortage of raw hides affecting the trend in the tanned commodity prices also. For market quality fifths and inferior fifths there were some demands and isolated deals were put through.

Poor arrivals in tanned cow calf made its prices stiff. Tanned bull calf also had no change in price quotations.

In tanned goat the market remained firm. Continental and Russian demands apparently stiffened the rates.

WHOLESALE PRICES Small Decline

The official wholesale price index (with the year ended March 1953 as 100) declined by 0.7 per cent to 123.5 during the week ended October 7, 1961 as compared with 124.41 for the earlier week. The index was also lower by 0.9 and 1.8 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

Lower prices of Tea (—18%), Oranges (—14%), Onions (—7%), Fish and Chillies (—6% each), Maize (—5%), Cashewnuts, Groundnut oil and Black Pepper (—4% each), Gur (—3%) and Earley, Gram and Gingelly oil (—1% each) brought down the index for 'Food Articles' by 0.8 per cent to 119.7. The prices of Milk and Turmeric (+10% each), Bajra (+4%), Potatoes and Meat (+3% each), Jowar, Urad, Eggs and Beteinuts (+2% each) and Wheat, Ragi, Arhar, Mung, Masur, Mustard oil Salt (+1% each), however, moved up.

The index for 'Tobacco' remained stationary at the previous week's level of 96.0.

The index for the 'Fuel, Power, Light and Lubricants' group worked out to 121.5 as against 121.4 for the earlier week. The prices of Castor oil (+1%) showed a rise during the week under review.

The index for 'Industrial Raw Materials' receded by 1.3 per cent to 135.8 due to a decline in the prices of Tanning Materials (—6%), Groundnuts (—5%), Raw Jute (—4%) and Linseed and Gingelly seed (—1% each), although the prices of Raw Cotton and Raw Hides (+2% each) and Raw Silk, Castor Seed, Rapeseed and Lac (+1% each) showed advances.

The prices of Rayon yarn (+3%) and Brass and Copper (+2% each) moved up, while those of Tin (—4%) and Linseed oil and Zinc (1% each) showed a decline and the index for 'Intermediate Products' advanced by 0.3 per cent to 140.9 as against 140.5 for the earlier week.

A fall in the prices of Jute Manufactures (—2%) and Cement (—1%) was responsible for a decline in the index for 'Finished Products' by 0.3 per cent to 123.1.

For the Investor

INVESTMENT GOSSIP Subdued Tone

THERE has been no notable change in sentiment in Lyons Range when it recommended business after the long Puja holidays. Despite the settlement on the opening day, trading has remained on a steady undertone. The more speculative counters have been moving within a narrow groove these past few days; if bulls have been chary of extending commitments, bears too have been equally hesitant. During the period Lyons Range remained closed, sentiment in other stock markets in the country too was generally subdued partly because there was no fresh incentive and partly because an important stock Exchange, Lyons Range, was not functioning.

It is however not surprising that stock markets are experiencing somewhat stagnant conditions. The fact that there is now the Committee of Presidents of Stock Exchanges with the responsibility of ensuring the proper functioning of stock markets is a powerful restraining influence on the tendency to push up or depress prices to any great extent. Further, it is not as though the investment situation is clear of all hurdles. Corporate news is no doubt very good and the results of the survey recently published by the Reserve Bank of India of the finances of joint stock companies are of a variety that should give encouragement to investors. There is expansion and diversification of production around by established companies and new issues—their number will increase considerably in coming months—are coming on the market in a steady stream to attract the attention of investors. It is to be expected that the very prospect of a large number of new issues to be placed on the market in coming months will go to diminish interest in the existing list. The continuing anxiety regarding the release of adequate foreign exchange for maintenance imports acts as an effective check on bullish fervour while other factors like the coal and power supply position do not favour an unduly optimistic picture of industrial production. A further restraining influence—this may continue for some considerable time—is the coming general election in the country. Even so, indications are that steady conditions will continue to characterise trading in coming months.

NEW ISSUE NOTES Shama Engine

Shama Engine Valves Limited, a public limited company incorporated in September last, will shortly enter the market for raising equity and preference capital to finance its project for the manufacture of valves for all types of heat engines and internal combustion engines. The issued capital will be Rs 15 lakhs comprising Rs 11.25 lakhs of equity capital and Rs 3.75 lakhs of preference capital. Of this, the promoters, directors and friends have agreed to take up Rs 3 lakhs of equity capital. The Madhya Pradesh Government is expected to take up Rs 1 lakh of equity capital and Rs 75,000 of preference capital. The balance of Rs 6 lakhs of equity capital and Rs 3 lakhs of preference capital will be offered for public subscription. The entire public issue is proposed to be underwritten. While the Madhya Pradesh Government will underwrite the entire preference capital of Rs 3 lakhs, a few firms of brokers will underwrite the equity issue. The plant, which will be located in Bhopal, will have a licensed capacity of 6 lakh valves per annum. The company has entered into a technical collaboration agreement with a West German firm.

American Refrigerators

The directors of American Refrigerators Limited have finalised the allotment distribution of the company's recent equity issue. The number of shares applied for and the number of shares allotted against them are:—50—20; 100—40; 150—80; 200 to 250—80; 300 to 350—100; 400 to 600—150; 1,000 to 1,050—300; 1,500 to 2,000—500; 5,000—1,200; 6,000—1,500; 10,000—2,000 and 20,000—2,630.

Jayanti Shipping

The proprietors of India's only oil tanker, Jayanti Shipping Company of New Delhi, will soon enter the market to make a mammoth equity issue of Rs 1.5 crores. The sanction of the Controller of Capital Issues has been obtained. With the proposed equity issue, the private venture will be converted into a full-fledged joint stock company. The equity issue, which will be of Rs 100 each, will be made at par and is intended to finance the acquisition of ships.

Rajasthan Spinning

The equity issue to the public of 1,75,000 ordinary shares of Rs 10 each by the Rajasthan Spinning and Weaving Mills Limited has been over-subscribed. In the first instance, the company proposes to instal 13,200

spindles and put them in production by August, 1962.

Hindustan Electric

The Hindustan Electric Company Limited has proposed to raise the paid-up capital by Rs 80 lakhs by issuing 80,000 equity shares of Rs 100 each, at par. Of this, Rs 20 lakhs will be offered to the existing shareholders in the ratio of one share for every two shares held, while the balance of Rs 60 lakhs will be taken up by the foreign collaborator. Thus, the company's total paid-up capital will be raised to Rs 1.4 crores. Of this, the paid-up equity capital will be Rs 1.2 crores, 50 per cent of which will be subscribed by the Indian company and the balance by the foreign collaborator. This amount of foreign investment in Swiss francs will be utilised for covering the value of plant, equipment, etc., for the implementation of the project.

Camphor Products

Details of allotment to the public of 23,560 equity shares of Rs 100 each by the Camphor & Allied Products Limited are available. The issue was over-subscribed and the company received a total of 17,642 applications for an aggregate of 2,77,842 shares. Further, 1920 equity shares, reserved for allotment to the US collaborator in the project, have also been included for allotment in India. With the result, the equity shares to be allotted to the public will be 24,500 instead of 23,560. Applications for shares up to 95 will get 5 shares each; these between 100 to 135—10 shares; 140 to 195—15 shares; 200 to 295—20 shares; 300 to 395—25 shares; 400 to 450—30 shares; 455 to 495—35 shares; 500 to 550—40 shares; 555 to 600—45 shares; 600—60 shares; 1,000 to 1,005—75 shares and 2,000—155 shares.

India Carbon

The India Carbon Company Limited, a new company registered in Assam, has been granted consent to the issue of capital of Rs 50 lakhs, divided into 10,000 cumulative preference shares of Rs 100 each and 400,000 equity shares of Rs 10 each. The plant will be located at Gauhati. The foreign collaborators are Great Lakes Carbon Corporation of the USA, who will also invest in the equity capital of the company to the extent of Rs 16 lakhs. The Assam Government will subscribe to the preference shares. Out of the equity capital, 49 per cent, to be issued in India, will be offered for public subscription.

Kirloskar-Asea

Kirloskar-Asea Limited, Bangalore has been granted consent to the issue of capital of Rs 25 lakhs in equity shares of Rs 10 each, for cash at par. Out of this, shares worth Rs 7.5 lakhs will be issued to the foreign collaborator—Messrs Asea of Sweden. The proceeds will be utilised for the manufacture of switch-gear and motor starters.

Mandya National Paper

The Mandya National Paper Mills Limited, Bangalore, has been granted consent to the issue of capital of Rs 80 lakhs in equity shares of Rs 10 each for cash, at par. Out of this, shares of the value of Rs 10 lakhs will be issued to the existing non-resident shareholders—Messrs Parsons & Whittemore. The proceeds will be utilised for financing the expansion of the company's existing business of manufacturing paper. The present subscribed capital of the company is Rs 2 crores.

National Buildings

The National Buildings Construction Corporation Limited, a Government undertaking, having a paid-up capital of Rs 13 lakhs, have been accorded consent to issue further capital of Rs 6 lakhs, divided into equity shares of Rs 1,000 each for cash, at par.

Canara Bank

The Canara Bank Limited, Bangalore, has been granted consent to the issue of further capital of Rs 25 lakhs, divided into 50,000 equity shares of Rs 50 each, to be fully paid-up for cash, at a premium of Rs 15 per share. The proceeds will be utilised for strengthening the company's capital base.

Asian Cable

It would be recalled that the Asian Cables Limited decided to offer right

COMPANY NOTICE

shares to the existing shareholders in the ratio of two shares for every share held. The Government seems to have insisted that a part of it would be offered to the public also. Thus, the original terms of the offer have been modified and the company has applied to the Controller of Capital Issues afresh to raise an equity capital of Rs 1 crore, to be offered at par. Of this, Rs 50 lakhs will be offered to the existing shareholders, at par, in the ratio of one share for every share held, while the balance of Rs 50 lakhs will be offered to the public, at par.

Asiatic Oxygen

The Asiatic Oxygen Limited, a new company, has been granted a consent to the issue of capital of Rs 160 lakhs, divided into 12,50,000 equity shares of Rs 10 each and 35,000 cumulative redeemable preference shares of Rs 100 each. Out of this, 9,84,000 equity shares and the preference shares shall be issued for cash at par and 2,66,000 equity shares shall be for consideration other than cash to be allotted as fully paid-up to the shareholders of the Asiatic Oxygen and Acetylene Co., Ltd. in the ratio of 38 shares in the new company for every 10 shares in the latter. Messrs Air Products Inc. USA will subscribe to the equity capital of the company to the extent of Rs 25 lakhs. The company has been formed to undertake manufacture of oxygen, acetylene, electrodes, oxy-acetylene welding and cutting machines, arc welding transformers and generators for which six factories will be established at Bombay, Madras, Rourkela, Durgapur, Patna and Gauhati.

West India Chemicals

West India Chemicals (Private), Limited, Bombay, has been granted consent to issue capital of Rs 40 lakhs, after conversion of the company into a public company, divided into 40,000 equity shares of Rs 100 each for cash at par. The proceeds of the issue would be utilised for financing the expansion programme for the manufacture of sulphuric acid and superphosphate. The company's present paid-up capital is Rs 10 lakhs.

Kores Limited

M/s Kores (India), Limited, Bombay, has been granted consent to issue bonus shares of Rs 5,00,000 in ordinary shares of Re 1 each to be made in the ratio of one bonus share for every equity share held. The company is engaged in the manufacture of duplicating stencils, carbon papers, typewriter ribbons, ink tablets, stamp pads, inks, duplicating accessories, etc. The present paid-up capital of the company is Rs 5,00,000.

Sirpur Paper Mills

The Sirpur Paper Mills Limited has been granted consent to the issue of capital of Rs 1,09,27,820 divided into 10,92,782 equity shares of Rs 10 each for cash, at par. Out of this, shares of the value of Rs 54,63,810 will be offered to M/s Kimberly-

Clark Corporation of USA. The proceeds will be utilised for effecting substantial expansion to the company's existing business of manufacturing different varieties of paper. The present paid-up capital of Rs 2,89,47,840 consists of 21,85,524 ordinary shares of Rs 10 each and 70,926 6% (tax-free) preference shares of Rs 100 each.

Bisra Stone Lime

The Bisra Stone Lime Company Limited, Calcutta, has been granted a consent to the issue of 3 lakhs equity shares of Rs 10 each as fully paid-up bonus shares on capitalisation of its reserves to the extent of Rs 30 lakhs. The company which was established in 1910 is engaged in business in the raising of limestone and dolomite. The company's existing paid-up capital is Rs 10 lakhs.

Triveni Engineering

Triveni Engineering Works Limited has proposed to enter the market shortly with a public issue of 87,500-9.3 per cent cumulative redeemable Preference shares of Rs 10 each and 1,04,125 equity shares of Rs 10 each. Of the issued capital of Rs 60 lakhs, 50 per cent has been subscribed by the foreign collaborators, Messrs Bookers Macdonnell Brothers, UK. Of the balance of Rs 30 lakhs, the promoters and the companies with which the promoters are associated have agreed to subscribe for equity shares worth Rs 10,62,500 and equity shares of the value of Rs 21,250 have been reserved for the employees of the company. The company is setting up a plant for the manufacture of sugar machinery, steam turbines and other heavy industrial machinery at Naini, near Allahabad.

*

INVESTMENT NOTES Macneill & Barry

It is understood that negotiations are in progress for a change in the controlling interest of Macneill & Barry Limited, Calcutta. This change may not mean anything to the shareholders of the Indian company; because the change is from a family holding to the joint stock company, Inchcape & Company Limited. Negotiations are in progress with members of the Inchcape family for acquiring the shares which, if successfully concluded and approved by the Government of India, will result in just over 50 per cent of the equity capital of Macneill & Barry Limited being acquired by Inchcape & Company Limited in exchange for an issue of shares.

Permanent Magnets

The shareholders of Permanent Magnets Limited will be happy to note that the foundation stone of the company's Rs 25 lakh factory at Borjili, near Bombay, has been laid. The construction work will start this month. Orders for the machinery have already been placed abroad and the first shipment from Italy is expected in January. The entire machinery will be received by the end of March.

pected in January. The entire machinery will be received by the end of March.

National Rayons

There had been persistent rumours about the possibility of new shares being issued by the National Rayon Corporation Limited. The directors have issued a statement to the effect that there is no intention of considering any new issue of capital till the next annual general meeting.

TRAYONS

Travancore Rayons is expected to produce rayon-grade pulp from cotton linters and cotton waste by the

second quarter of next year. The necessary buildings are under construction and the first shipment of machinery is expected to arrive in India by the middle of November. The initial production of rayon-grade pulp will be 3,600 tons annually. This will be doubled to 7,200 tons.

Tensile Steel

The foundation of the factory buildings of Tensile Steel Limited, at Baroda, has been laid. The company hopes to finish all civil engineering works and erection of plants and machinery within the scheduled programme. It also hopes to commence production by the end of next year as scheduled.

NEW CENTRAL JUTE MILLS COMPANY, LIMITED

Regd. Office: 11, Clive Row, Calcutta-1

NOTICE

Notice is hereby given that the Annual General Meeting of the Shareholders of the Company will be held on Thursday, the 9th November, 1961, at 11-30 A.M. at the Registered Office of the Company at 11, Clive Row, Calcutta, to transact the following business:—

- (1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st March, 1961.
- (2) To declare dividends.
- (3) To appoint a Director in place of Shri M. L. Shah who retires by rotation and has attained the age of 65 years on 1-9-1959 and, in this connection, to consider and if thought fit to pass the following resolution of which a special notice as required by Sections 281 and 190 of the Companies Act, 1956, has been received by the Company, and is hereby given by the Company to its members:

“Resolved that pursuant to the provisions of Section 281 and other applicable provisions, if any, of the Companies Act, 1956, Shri M. L. Shah, who has attained the age of 65 years and retires by rotation, be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him.”

- (4) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. N. C. Jain & Co., Chartered Accountants, being eligible, offer themselves for reappointment.

As special business:—

- (5) To consider and if thought fit, to pass with or without modification the following resolution which will be proposed as a Special Resolution:—

“Resolved that pursuant to sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, and subject to the provisions of Article 100 and other provisions of Articles of Association of the Company, the members of the Company hereby authorise continuance of payment to the Directors of the Company and each of the Directors be and is hereby authorised to continue to receive in respect of each of the five financial years of the Company upto and including the financial year ending on 31st March, 1966 a share of commission of 1% of the net profits of the Company computed in the manner referred to in sub-section 198 of the said Act.”

By Order of the Board,
For NEW CENTRAL JUTE MILLS CO., LTD.,

For SAHU JAIN LIMITED,
A. P. JAIN

Director,
Managing Agents.

Calcutta,
7th October, 1961.

N.B. A member entitled to attend and vote, is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

An explanatory statement pursuant to the provisions of Section 173 of the Companies Act, 1956, has been forwarded along with Notice issued to the members of the Company.

STOCK EXCHANGES Selective Support

Watch-Dog Writes:

WITH hardly a week to go for the end of the *Samvat* year, stock markets lack the usual *Diwali* jubilation. In the absence of any driving force one way or the other, activity remains restricted and price movements, except in a few selected counters, are confined to narrow limits.

Reopening after the *Puja* holidays, the Calcutta Stock Exchange displayed a steady trend. Although activity was restricted, enquiry for Jute shares was again noticeable at improving levels.

The Bombay Stock Exchange produced several good features, although operators were inclined to book profits at bulges.

Mild buoyancy prevailed in selected shares on the Madras Stock Exchange.

CALCUTTA

Friday Evening.

THE local stock exchange started the Post-*Puja* week on a quiet note. Except for the renewed support lent to the jute section and a few other selected shares in 'other counters', conditions were not generally bright. Activity was also restricted as the market remained open only for four days during the week due to holidays on Monday and Tuesday. It was, however, satisfactory to note that the underlying sentiment was fairly maintained.

Whatever business done was mostly of a jobbing nature with more

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Preference Stock for the year ending 31st March 1962 at the rate of £2-14-8.16/49d. per cent less Income Tax at 7s. 9d. in the pound equal to £1-13-6d. per cent. Payment will be made on 1st December, 1961 to those stockholders whose names are registered in the Company's Stock Register on 15th November, 1961.

Applications for transfers received in this office before 12 O'clock noon on Wednesday, the 15th November, 1961, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

By Order of the Board

D. PUGH

Actg. AGENT.

Victoria House,
Calcutta, 26th October, 1961.

bargain hunters than sellers. Speculative operators, sensing the position, were ready to take quick profits. There was, however, no pressure to sell, thanks to the favourable corporate news.

Gilt-edged securities remained listless throughout the week. The market was bereft of buyers, both in the Central and State Government loan sections. Turnover was absolutely negligible.

Bank shares were a steady feature due to hopes of better earnings for the current year.

A significant feature of the week's trading was the return of Jute shares into the limelight. There was a broadening of buying interest in this section following the recent decision made by the industry to raise the working hours from 45 to 48 per week with effect from the 16 October. There was a belief that the mills would be in a position to wipe out the earlier losses during the second half of the year. Bally were enquired up to Rs 234 from Rs 230; Birlas up to Rs 28 from Rs 26.37; Champdany up to Rs 134 from Rs 129.50; Fort William up to Rs 31.06 from Rs 29.50 and Nuddea up to Rs 54 from Rs 51.25. Howrah, after being taken up to Rs 21.50 from Rs 21, receded at the close to Rs 20.87 due to profit-taking. New Central, however, moved narrowly between Rs 17.12 and Rs 17.19 with Anglo-India having support up to Rs 194 from Rs 192.

Coal shares were sluggish due to reports that the working of many collieries had been hampered by transport shortages. The only two bright spots were Amalgamated and Central India, having changed hands up to Rs 21.62 and Rs 11.94 from Rs 21.50 and Rs 11.75 respectively. Burrakur hovered idly around Rs 18.06.

Tea shares became hesitant and even the little support, which had been forthcoming, was more discriminating in view of the uncertain outlook for the marketing of the commodity. Reports of increased production in North India and the bleak prospects of any improvement in prices seemed to worry investors. Dealings were, therefore, restricted. Hasimara changed hands at Rs 31.12 to Rs 31.25; Jay Shree at Rs 17.87 to Rs 18.31; Rungamattae at Rs 50.75 to Rs 52 and Tezpur at Rs 17 to Rs 17.12.

Sugar shares were practically neglected with more sellers than buyers in evidence. Apart from the decision made for reducing production during the current season, the reports that exports of Indian sugar to the USA might be slashed caused a good deal of concern. The only exceptional feature was Carew, which was done up to Rs 13 from Rs 12.12. SKG were, however, on offer at Rs 10.75 to Rs 10.87 with Dyer Meakin remaining firm at Rs 35.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments on the opening day of the week. Against the pre-*Puja* closing of Rs 24.42, Indian Irons opened lower

at Rs 24.24 and receded further to Rs 24.18. After improving at one time to Rs 24.40, the scrip finished the week at Rs 24.40. TEXMACO, however, were a firm feature, having forged ahead to Rs 18.65 from Rs 18.30 on speculative buying. Britannia moved narrowly between Rs 13.31 and Rs 13.50; Jay Engineering between Rs 27.31 and Rs 27.75 and Binani Metal between Rs 12.00 and Rs 12.25. Jessop were fairly maintained at Rs 21.12 and so also J. K. Steel at Rs 21.62.

Textile shares came in for good support on the belief that the working of the mills, during the current year, might show a considerable improvement. Dunbar were wanted up to Rs 33.50 from Rs 33; Kesoram up to Rs 31.31 from Rs 30.50 and Bowreah up to Rs 36.50 from Rs 35.87. J. K. Rayon remained, however, very firm at Rs 19.31 with Jay Shree moving narrowly between Rs 17.19 and Rs 17.37.

After ruling initially quiet, Miscellaneous issues displayed a slightly steadier tendency due to the emergence of support at the lower levels. Activity was, however, prominent in three shares, viz. Rohtas, Hindustan Motors and Sirpur Paper. Rohtas, which were neglected at Rs 16.44, improved at one time to Rs 16.81 following the news that the shareholders would bet a large tax-free distribution on account of the concession under Section 150 of the Income-Tax Act. Towards the close of the week, the shares changed hands on the ex-dividend basis at Rs 16 to Rs 16.19. Hindustan Motor, after being offered at as low as Rs 19.19, rallied at the close to Rs 19.81 on reports that the lock-out in the factory might be lifted shortly. Sirpur Paper were keenly sought after up to Rs 16.62 from Rs 16.37 following the decision made by the company to issue right shares, at par. Following were the price trends of a few other selected shares:

	Pre- <i>Puja</i> Closing	Post- <i>Puja</i> High	Post- <i>Puja</i> Closing
Orient Paper	35.55	36.05	36.05
Shree Gopal	26.50	26.50	26.50
Sirpur	16.47	16.69	16.56
Rohtas	16.56	16.31	16.25xd
Dunlop Rubber	54.25	55.00	54.94
H. Motor	19.31	20.19	20.19
J. K. Synthetics	...	13.12	12.84
British Paints	27.00	27.37	27.37
Alkali Chemicals	38.00	38.12	38.06
NICCO	36.69	37.56	37.50

MADRAS

BUYOANT conditions were noticed in Madras Stock Exchange on 25 October. Star scrip was Tube Investments which on 25 October did business at Rs 285 eighteen rupees higher than last closing. Probably this share had consistently keeping its 10 per cent dividend there were much larger demands for this. Generally industrial shares were well maintaining their values and were

firm. There were good buying of banks. Electrics were steady. Sugars were easy. Plantings proved dull, while textiles proved to be very Bullish.

Government Securities:—The Government of Madras 4½ per cent 1972 loan declined to Rs 98.77. The Andhra State Loan of 4½ per cent 1971 was better at Rs 98.55. Others were at the marked rates.

Banks:—Business was done in Indian Bank fully paid at Rs 183. Indian Overseas Bank improved to Rs 198.00. Punjab National Bank had business at the market rate of Rs 19.90.

Electrics:—Ellore was at Rs 20.50. Salem-Erode was at Rs 13.26, business was done in South Madras at Rs 10.10. Tinnevely Tuticorin was transacted at Rs 11.15. West Coast was at Rs 14.00.

Sugars & Breweries:—Cauvery improved to Rs 117. Deccan continued to be steady at Rs 12.65. Travancore was at Rs 10.22. Mysore was quoted at Rs 57.75. United Breweries was available at Rs 104.

Plantings:—Dull tone prevailed here for the entire period of last week. Blue Mountain was quoted unchanged at Rs 3.11, Cochin Malabar at Rs 7.37. Coffee Lands was at Rs 16.30 and Consolidated Coffee was at the same rate of Rs 20.10. Kalasa was available at Rs 5.53. Kil Kotagiri improved to Rs 4.84. Malankara was available less at Rs 17.22. Mercara declined to Rs 8.63. Nelliampathy was one nP lower at Rs 2.61. Nilgiri was fifteen nP lower at Rs 8.60. Ouchterlony was available at Rs 3.67. Parkside reported business at Rs 29.5. Perikaramalai was at Rs 3.65. Business was done in Sangameswar at Rs 1.85. Thirumbadi was at Rs 1.67 and shares were bought at this lower rate. Valkundam gained 25 nP at Rs 32.50.

Textiles:—Bullish tone prevailed in this counter. Buckingham was available at Rs 252.00, and Bangalore Woollen was quoted at Rs 200.00. Cannanore was at Rs 171.00. Loyal was at Rs 39.25. Lakshmi was at Rs 160.00. Radhakrishna was higher at Rs 41.00. Rajalakshmi was one rupee higher at Rs 102.00. Rayalseema was available at Rs 163.00. South India Viscose was quoted at Rs 181.50. Travancore Rayon was quoted at Rs 40.50. Tirumurthi was quoted at Rs 123.00, two rupees higher. Vijayakumar went upto Rs 140.00.

Miscellaneous:—Aluminium Industries was quoted at Rs 23.50. Asbok Leyland was in demand at Rs 902. Dalmia Cement was higher at Rs 11.75. India Cement was slightly lower at Rs 6.32. Indian Steel Rolling was bought at Rs 11.85. Madras Cement remained at Rs 91.00. Madras Aluminium was quoted at Rs 24.65. Mettur Chemicals was at Rs 14.40. Mysore IITL was available at Rs 7.80 and Mysore Lamp at Rs 28.50. Parrys Confectionery was at Rs 4.70. Premier Fertilizer was marked at Rs 7.50. Radio and Electrics was done at Rs 3.00. REM Co. was done at Rs 25.25. Rallis was marked at rate of Rs 123.00. Seshasayee Paper was at Rs 8.50. Tube Investments was quoted at Rs 285.00.

Facts & Figures

Special Steels

The domestic production of alloy and special steels is insignificant at present and India's requirements are met mainly by imports. The country spent a sum of Rs 6 crores on the import of these varieties last year. The demand is continually rising and is expected to reach 200,000 tons by the end of the Third Plan.

Unlike ordinary steels, produced by conventional processes in large integrated works, alloy steels require specialised equipment and processes. The low-grade alloy steels, however, can be produced with relatively simple equipment the capacity for which exists in the Ordnance factories. A few units in the private sector are also producing such steels. The total production, however, is only about 10,000 tons a year.

The target of 200,000 tons laid down in the Third Five-Year Plan is sought to be achieved by:

	Tons
(1) Production in Ordnance available for non-defence use	35,000
(2) Mysore Iron & Steel Works (about)	15,000
(3) Tata Iron & Steel Company	50,000
(4) New plant in the public sector	50,000

The balance of capacity required is being created in the private sector. A number of new units with a capacity of 130,000 tons have already been licensed by the Government.

The new plant to be located at Durgapur next to the integrated steel works is estimated to produce about 80,000 tons of ingots per year or about 48,000 tons of finished products. It will be so laid out as to be capable of ultimate expansion in stages up to 300,000 tons of ingots per year and rapid expansion in the next stage to 160,000 tons of ingots or 100,000 tons of finished products.

An Indian firm of consulting engineers were entrusted with the work of preparing the project report. They have also been entrusted with the detailed designing and engineering of the plant. The project report has already been examined and accepted by Hindustan Steel and the Government. Preparatory work at site has begun. Most of the engineering services for the setting up of the plant are capable of being provided by Indian firms. Only the major parts of the plant and equipment will have to be obtained from abroad. The consulting engineers' estimate of cost for the plant proper is Rs 384 million.

The manufacture of special steels is a highly specialised process developed only in a few countries. For the rapid development of the production of these steels it is necessary to acquire the know-how and manufac-

turing techniques from firms which have specialised in such processes and have had experience.

Some firms in the UK, France, Japan, Canada and Austria have offered their services for production know-how and training of Indian personnel in the operation of the plant.

PUBLIC SECTOR

Increased Production

Industrial enterprises in the public sector recorded a further rise in production in 1960-61, according to statistics now available. The level of net profits in most cases were also on a higher scale, as compared with the previous year.

The HMT at Bangalore manufactured 1,002 machines worth Rs 3.3 crores in 1960-61, as compared with 702 machines valued at Rs 2.37 crores in the previous year. The Hindustan Cable Factory at Roopnainpur achieved an output of over Rs 1.6 crores in 1960-61 as against Rs 1.1 crore in the previous year. In the case of the National Instruments Factory at Calcutta, the rise in production was from Rs 53.7 lakhs in 1959-60 to Rs 59.3 lakhs in 1960-61.

The Nahan Foundry turned out over 3,172 tons of equipment valued at Rs 25 lakhs in 1960-61, as against 3,087 tons of the value of Rs 22.05 lakhs in the previous year. The Praga Tools Corporation recorded a rise of Rs 8 lakhs to Rs 48.32 lakhs of machine tools' output in 1960-61.

Both the factories under the Hindustan Insecticides improved on their past year's performance and together produced over 2,800 tons of DDT. Comparatively, the rise in the case of Hindustan Antibiotic Factory was much higher and amounted to 42.76 million mega units of finished penicillin, as against 33.15 mmu in the previous year. The National Newsprint and Paper Mills at Nepanagar, the only one of its kind so far in the country, manufactured 23,029 tons of newsprint in 1960-61, showing a small rise over the previous year. In the case of Sindri Fertiliser Factory, the rise in production in 1960-61 was of the order of about 15,000 tons of ammonium sulphate, the output in 1960-61 being 3,00,411 metric tons. The Nangal Fertiliser Factory went into production in February 1961 and from a monthly production of 1,185 tons in that month, production had risen to nearly 19,000 tons by August 1961. The Heavy Electrical Factory at Bhopal also commenced production during 1960-61.

The net profits in 1960-61, after allowing depreciation, taxation, interest on loans, etc., was substantially higher in the case of almost all the public sector enterprises. The HMT at Bangalore, nearly doubled its net profits to Rs 74 lakhs. For the first

time, a dividend of 10 per cent was also declared during this year. The Hindustan Cable Factory also doubled its profits to Rs 16 lakhs during 1960-61.

The net profit in the case of the National Instruments Factory is expected to be about Rs 8 lakhs in 1960-61 as against Rs 6.7 lakhs in the previous year. While the figures relating to net profits of the Nahan Foundry are not available, the gross profits in 1960-61 were higher at Rs 5.23 lakhs than in the previous year (Rs 4.5 lakhs). The Praga Tools Corporation, however, is estimated to have made a net profit of Rs 3.2 lakhs in 1960-61, showing a slight decline, as compared with the previous year, when the profit stood at Rs 3.5 lakhs. The financial result of the Hindustan Insecticides show that the net profits amounted to Rs 17 lakhs were made by the two DDT factories in 1960-61. The Penicillin Factory at Pimpri made a net profit of Rs 79 lakhs, and the Nepa Newsprint Factory Rs 37.8 lakhs, slightly higher than in the previous year. The working of the Fertiliser Factory at Sindri, showed a profit of Rs 1.51 crores for 1959-60. The accounts for 1960-61 have not been finalised so far. In the case of the Nangal Fertiliser Factory and the Heavy Electrical Factory at Bhopal, production being in the early stages, it is not time as yet to compute the profitability of these enterprises.

Nearly all the enterprises have taken up in hand programmes of expansion and diversification of their output. The HMT, for example, has entered into two technical collaboration agreements with M/s Renaults for production of special purpose machines and M/s Linex of East Germany for setting up a new machine tool unit at Panjaur in Punjab. The HMT has also put up in record time a second unit adjacent to the present factory, much ahead of schedule. A unique feature of this venture was that this was built entirely from the internal resources of the HMT.

The expansion programme, of the Hindustan Cable Factory centres round the manufacture of 2,250 miles of dry core cables annually, plastic insulated telecommunication cables valued at Rs 48 lakhs per annum and the installation of a wire drawing plant with a capacity of 1500 tons annually. The total expenditure on these expansion projects will be Rs 3.6 crores. In addition to these expansion schemes, the factory also plans to take up the manufacture of small tube co-axial, paper insulated power cables etc.

The National Instruments Factory at Calcutta proposes to manufacture in collaboration with a Hungarian firm of micro-optic theodolite. It has also entered into arrangements with two Japanese firms for manufacturing clinical thermo-meters and cameras. Recently, the ophthalmic glass project, to be built with Russian collaboration at Durgapur, has also been transferred to this company from the Heavy Engineering Corporation.

The Nahan Foundry, which is mainly engaged in the manufacture of sugar cane crushers, has now taken up manufacture of integral electric motors up to 10 H.P., centrifugal pumps, etc. In order to meet the

demand for metric weights, the factory has completed arrangements for mass production of various denominations of cast iron metric weights. The factory also proposes to take up the manufacture of agricultural implements during the Third Plan period.

The Praga Tools Corporation at Hyderabad has undertaken a big expansion programme for the manufacture of drill chucks, tool and cutter grinders and lathe chucks. The factory also proposes to manufacture Polish type of machine tools of light and medium variety. It is expected that the value of production in the factory, expected to be Rs 80 lakhs in 1961-62, will be doubled by 1964-65.

The production of DDT is to be doubled at both the units of the Hindustan Insecticides. The Hindustan Antibiotics has undertaken a programme for the production of streptomycin and tetracyclines. The streptomycin project, costing about Rs 2 crores, is expected to commence production before the end of the current financial year. Trial production in respect of the latter has already started. The Pimpri Factory also proposes to take up another project for manufacture of 50 tons of vitamin C annually. All these expansion programmes will altogether cost Rs 3.4 crores, which will be entirely found from out of its own resources.

The Newsprint Factory at Nepa propose to double its output during the Third Plan period. In order to overcome the difficulty in the procurement of chlorine, an essential ingredient, the factory has decided to instal its own plant for this purpose. In the case of Sindri Fertiliser Factory, a scheme to expand production by about 60% at a cost of about Rs 15 crores has been completed. The Sindri Factory has now developed into an important training centre for engineers and technicians, a factor of considerable importance in the context of our development programme for fertilizer production, during the Third Plan period.

The proprietors of Indian Patent No. 51131 "Process for the catalytic hydrogenation of carbon monoxide" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-mentioned Patent. Anyone interested should apply to:

MR. TUBOPHILE GOES WATER DIVINING IN TUBELESS TIMES

"It's here, it's here", screamed the Water Diviner, all excitement, "oceans of fresh water underground ... enough to cultivate this land for ever and a day. In fact," continued the Water Diviner, when he had got his breath back, "there's water, water everywhere" ... All right, all right, but meanwhile there's not a drop to drink, and I am dying of thirst in the middle of this tubeless land," retorted Mr. Tubophile,

really irritated. "Look here, chum, I've had enough of your tubeless mumbo jumbo. I ask for running 'hot and cold' and you take me to a dirty water hole! Then I ask for a drink of water and you suggest I burrow underground like a rodent. The truth, Sir, is simple. No tubes, no water! In fact, life without tubes is apt to be life without water and that's no life at all.

Spotlight on Cooperation

THE cooperative movement at the end of a decade of planned effort presents a mosaic of bright and dark patches. The Prime Minister who inaugurated the Conference of State Cooperative Ministers last Monday, as well as Mr S. K. Dey, the Union Minister for Community Development and Cooperation drew pointed attention to disparities in development, sectoral and regional. While some sectors, notably cooperative credit, have registered encouraging progress, other related sectors lag far behind. Reviewing the progress of the last ten years, Mr Dey made the valid point that cooperation as a movement is indivisible. The different sectors—credit, marketing, processing, industrial, transport and miscellaneous cooperatives—are closely interlinked. Substantial progress in one front will not be possible without corresponding progress in the related sectors. The massive support provided by the Reserve Bank, as acknowledged by Mr Dey, has imparted dynamism to the movement, especially in the sector of agricultural credit societies. But a stage has now been reached when it is recognised that primary credit societies cannot make further headway unless cooperative marketing is also able to keep in step. Marketing societies again look to the development of processing societies. The unequal development of the different sectors is one of the major hindrances to the conversion of purely credit societies into effective multipurpose service societies which is one of the aims of Government policy.

While different sectors of the cooperative movement have not been progressing at the same pace, the disparities among the States are even more glaring. The impression of a progressive movement, which is derived from all-India statistics, disappears when the figures for the country as a whole are broken down State-wise. The Prime Minister has divided the States into four categories according to the level of development of cooperation in each. Maharashtra, Gujarat, Madras and Andhra which are in the lead account for over half of the work done in the field. Mysore and Punjab which come next show a fair degree of progress. Rajasthan, UP, Kerala, Madhya Pradesh and Jammu & Kashmir are somewhat behind, "but are still moving in the right direction." In the remaining four States, Orissa, West Bengal, Bihar, and Assam, the movement has been stagnating or declining. The present position, the Prime Minister has said, is "too painful for words."

Enquiring into the reasons for the regional disparities, the Prime Minister has highlighted some important aspects which should serve to guide future policy. The movement has made progress in the States where persons not associated with Government have assumed the leadership for its development. Over the country as a whole it may be said that the movement has stagnated in areas where formerly the Zamindari system prevailed, while it has made striking progress in the ryotwari areas. In the latter the requisite popular response has been forthcoming. Leading public figures in these States have devoted their time and energy to the building up of

cooperatives. The result we see in flourishing institutions like the Maharashtra Cooperative Bank which recently celebrated its Jubilee. By contrast the movement languished in States where development began and ended in Government departments.

While there are differences in the public response to the opportunities of development through cooperation, it is also a fact that throughout the country the movement was started by Government's initiative and under its control. The position in this respect has remained largely unaltered. In fact, Government control has become more pervasive and has been strengthened by the large volume of financial assistance provided by the State. If, in spite of the handicaps of governmental control, and that too by a foreign Government, the movement was able to grow in some of the States, the quality of the administrators who nursed the movement in its early days made no small contribution to its success. In the old Bombay Presidency, it had the guidance of a civil servant of the calibre of Sir Harold Mann. In Madras the movement was started by the fabulous Nicholson and later it came under the stewardship of Mr J. C. Ryan whose vast experience in the field is still available to the cooperative movement in this country. Spade-work of the sort done by these Government officials must also be done by the Government departments or non-official agencies if the movement is to strike roots in the States where now it makes sorry showing.

Emphasising the absolute necessity for Co-operation, which he described as the via media between Capitalism and Socialism and a way of life which could be extended beyond the economic field, the Prime Minister has expressed his amazement at the increasing hostility displayed in certain quarters towards cooperation in general and in particular to cooperative farming. Criticism of cooperative farming does not stem in all cases from ideological prejudices. Even those who concede that genuine and successful cooperatives could transform the rural economy have misgivings about the prospects of cooperative farming at the present stage of development of the cooperative movement in the country. If cooperative farming develops as a voluntary and unforced movement of the farmers, it will be all to the good. But in existing circumstances, it is doubtful if any cooperative will be formed without Government taking a major share in its formation and functioning.

The perils of targetmanship are far more serious in the case of co-operative farming societies. The greatest danger is the deadening of the incentives to maintain production. Calculations of profit or market prices have little to do with the productive effort put in by the vast majority of agriculturists, who have no surplus for the market. Herding them together into co-operatives will not alter this picture. On the other hand, formation of co-operatives under Government auspices can deaden the incentive which impels every cultivator to put in his best even under the most adverse circumstances for the sake of his livelihood.

The Barriers in the Way

MORE than one speaker at the last meeting of the Central Advisory Council for Industries stressed the role of productivity in keeping costs under control, and so helping the export drive. The fact that there is now recognition on all hands of the need for productivity as distinct from increased production is a measure of the useful promotional work done by the National Productivity Council in the period of three and a half years since it was set up. However the impression still persists that all that the productivity movement has so far achieved is to increase the output of words. In fact one of the principal speakers at the annual conference of the National Productivity Council, which was inaugurated last Monday by the Union Minister for Labour and Employment, referred to the prevalence of this feeling among the public. The special jargon employed by productivity experts who, to judge by the propaganda literature put out, seem to live in a rarefied atmosphere of abstractions, may in part be responsible for the impatience at the seminars and their reports on which the Council had necessarily to concentrate its attention in the early stages. But the very theme of this year's conference—"Barriers to Productivity"—shows that the movement is getting to grips with its subject. The expertise gained from the training courses organised with the help of experts provided by TCM, the ILO and Governments of various countries, have created better understanding of the barriers that exist to the implementation or even acceptance of productivity programmes. The discussions at the conference have highlighted these obstacles from different angles.

It is commonly assumed that the main opposition to the adoption of measures necessary to increase productivity come from the side of the workers. The continuing controversy between employers and trade unionists over rationalisation with the Government taking a hand, provide the material for such a conclusion. And productivity was identified in the minds of the workers with rationalisation which they knew from experience was just "retrenchment" masquerading under a respectable label. But the work done by the National Productivity Council has brought about a welcome change in the attitude of Labour, which has no doubt been helped by Government's policy not to sanction schemes of rationalisation if they result in unemployment. If we are to go by what was said by spokesmen of Labour at the conference, there is now no justification for assuming that Labour will invariably oppose introduction of measures to increase productivity. In fact, the unanimity with which speakers of all shades of opinion—ranging from trade unionists to top executives of big undertakings in the public sector like the Railways and the Hindustan Heavy Electricals, as well as of the private sector—agreed on the crucial role of the management is most impressive. The conference has underlined the fact that further progress in productivity will depend on the receptivity of top managements to suggestions to introduce productivity techniques which have been found successful elsewhere.

To cite one instance, Mr S. Anantharamakrishnan, whom Manubhai Shah introduced to the conference as one who had risen from the ranks to be top-executive of one of the biggest engineering firms in the country, observed, in the course of a balanced review of the respective roles of management and workers, that a wide range of operational factors are essentially

management functions and fundamental needs for raising productivity. These he has categorised as follows:

1. Research and development for improvement of basic process.
2. Modernisation and improvement of existing plant and equipment; and provision of new machinery where necessary.
3. Standardisation and simplification of products, cutting out unnecessary variety.
4. Steady improvement of existing methods of machine operation and maintenance.
5. Thorough planning of the work and improvement of the effectiveness of all employees.
6. Opportunity for the development of the full personality of the employee, his skill and talent and for self-expression. Creation of a climate and realisation of the greatest possible cooperation and participation on the part of labour in the efforts for raising productivity.

If there is at present serious resistance on the part of the managements to the introduction of productivity programmes in their establishments, the reasons deserve careful investigation. It will not be realistic to dismiss their resistance as due to psychological causes or fears which may be dispelled by clearer understanding of what productivity means. This might have been true of Labour. But no one would seriously suggest that top management in our country, even if recruited on a hereditary basis, lack understanding of the elements of business management and have to be taught by the missionaries sent out by the National Productivity Council. This suggestion implicit in proposals for increasing productivity is perhaps the reason for what Mr G. Ramanujam described as the "explosive reaction" of some managements to such proposals.

Productivity has many facets as any tyro can say from a perusal of the folders distributed by the NPC. But the net result of the successful application of productivity techniques is increased production for the same inputs of the different constituent elements. And unless the increased production can be readily absorbed, it is bound to lead to redundancy of workers. The question of how this burden of redundant labour is to be borne is of vital importance to the success of the productivity drive. At present the entire burden is on the employers and acts as an effective disincentive to the adoption of productivity techniques except in the case of firms which are able simultaneously to implement schemes of expansion.

On the theoretical plane it is possible to argue with unassailable logic that, in the long run, there can be no question of redundant labour in an expanding economy. The significant phrase in this assessment is, "in the long run" and it offers little help to the worker who is rendered redundant in the short run or to his employer who is obliged to maintain him in idleness or in a superfluous job.

Some of the big industrial firms may be able to absorb redundant labour in other expanding units in their organisation. Some concerns may be able to provide for the surplus labour in their own schemes of expansion. But this course is not open for large number of industrial establishments. The scope for expansion is limited by the availability of materials and equipment which has been severely restricted in many cases by the overall shortage of foreign exchange.

It is also relevant in this context to draw attention to the Government policy which, for the present, is obliged to restrict expansion to export-oriented industries. The Union Minister for Labour and Employment has therefore

been discreet in suggesting that productivity schemes may be applied on a selective basis.

While it may be true that the domestic market which is short of all sorts of goods can absorb. All the products of industrial expansion, the same certainty is not true of export markets. Increased production for export markets will depend for its success on the adoption of improved marketing techniques. In his perceptive address to the conference, Mr P. L. Tandon, Chairman of Hindustan Lever has drawn forcible attention to this neglected area of business activity in which our productivity schemes can get bogged in spite of selective application. And he has emphasised "Improved Marketing" as the essential tool of increased productivity.

Meantime conditions favourable for industrial expansion, and elimination of the obstacles as they arise, are essential for the success of the productivity drive. Apart from an atmosphere of cordial industrial relations whose importance is obvious, the conditions include a regular and reliable supply of the materials and equipment required by expanding industries, adoption by the industries of efficient marketing techniques and provision of unemployment insurance so that units which succeeded in increasing productivity are not penalised for their success by being obliged to carry the burden of redundant labour.

Reaction to FMC Step

Speculation in the commodity markets has reached new levels of fantasy in the recent past. Despite bleak export quota prospects and the expectation of a bumper crop, there has been an unusual rise in the groundnut January contract due to sustained buying by certain influential operators. They seem to hold the view that the crop may not be as high as expected earlier. The bull phase in the oilseeds market has proved infectious so far as cotton prices are concerned. It is hard to understand why cotton prices are pushed up when there is no bullish factor to justify such a trend. The ruling cotton contract has been lifted to a new high in total disregard of likely consequences. Again, in the case of raw jute, prices were quoting at fantastic levels not long ago and it was found necessary for the LJMA to instruct its members not to pay more than the stipulated prices. Thanks to the bright prospects for a large crop during the current season, prices were brought down gradually after August to such low levels when the West Bengal Government had to get worried about securing a satisfactory return to the growers. In the case of mustard, despite a comfortable supply position, the November contract spurted from Rs 32 (per 40 kgs) in the beginning of October to Rs 35 by the end of the month.

The Forward Markets Commission has, therefore, had to be alert all the time in order to check undue speculative fluctuations in prices, particularly in raw cotton, raw jute and oilseeds. The first step was taken early last week when the Commission, perturbed by an excessive increase in the prices of the mustard November contract in Delhi, Agra, Kanpur and Bhatinda, decided to enhance the margins. The details of the new margins are:—(1) a special margin deposit of Rs 2,500 per unit of 4,000 kgs will be levied on members holding long open positions up to 100 units when the price of the November 1961 mustard futures in Delhi is above Rs 33 per 40 kgs. In respect of members holding open

4 November 1961

position above 100 units, the rate of special margin will be Rs 3,300 when the price is above Rs 33. In other words, the special margin will be 100 per cent of the value; and (2) the concession regarding free limit will be abolished forthwith in respect of the November 1961 delivery.

Although the prices in Delhi eased itself as a result, the Commission's warning went unheeded in other oilseeds markets, particularly Bombay. Developments at this centre have not been conducive to orderly trading. The bull operators, who were evidently tired of protracted listless conditions in the oilseeds market, threw caution to the winds and started swimming against the current. Presumably prompted by the firm trend in mustard, Delhi operators set the ball rolling by carrying purchases on a large scale in Saurashtra markets. Saurashtra operators, in their turn, lifted Bombay futures. Calcutta operators also went "long", while "shorts" were forced to cover their open positions.

Considering the weak beginning of the January contract following the Government announcement that export quotas of HPS groundnut, groundnut oil and expeller would not be released until the end of November and the reports of higher crop of groundnut this season, the swift rise in value is inexplicable, except in terms of speculative manipulation and price-rigging. Naturally, the upturn in Bombay and in other markets dried up arrivals in the primary markets, as the growers withheld selling in anticipation of a further rise in prices. Again, the vegetable oil-manufacturers sustained their buying at the ruling prices, as they were short of their stocks.

The sharp upswing in groundnut futures brought forth a spurt in other sections and also invited early official action. The FMC directed the oilseeds exchange authorities to devise ways to keep under check excessive bull manipulation. The Commission decided that the daily outstanding position in the January contract in groundnut should be submitted by the members to the Bombay Oilseeds Exchange authorities. The Commission also suggested that, above the level of Rs 210, the daily fluctuations in the forward contract should be confined to Rs 2. But, the decision of the Commission, instead of checking the rise in prices, only gave a further fillip to the market. Some of the powerful operators, who were not inclined to cover the outstanding in anticipation of a fall in prices, were alarmed by the Commission's decision and they consequently rushed to cover.

For a brief period on Friday last week, there was no trading, obviously to facilitate the oilseeds exchange authorities to devise ways for keeping the prices in check. But from the range of fluctuations in groundnut futures, it appeared as if the bull operators were in no mood to listen to reason, knowing only too well that, by imposing heavy margins on long positions, the FMC would be throwing out many a financially-weak operator out of the market, leaving the few fortunate strong to dictate the market to their advantage. The Commission, therefore, thought it necessary to direct recognised associations to keep the oils and oilseeds futures markets closed for a period of five days till 2 November to enable it to take such steps as may be necessary in the public interest.

The Commission's present move is welcome, since it is clear that, it is not any basic imbalance in the demand-supply position, but unhealthy speculation that led to the rigging of prices. It is significant that the FMC's suspension order has had a salutary effect on the oilseeds price trends in Bombay. In un-

official deals, the groundnut January contract has sought a low level of Rs 206.25 against the official closing rate of Rs 210.12 on Friday last. Moreover, the FMC's move is a timely warning to speculators that it will not hesitate to resort, once again, to special margins in other oilseeds as was done in the case of mustard. However, a special margin may temporarily check the rising trend and that, too, at the cost of weak operators. For, the strong bull operators can always afford to pay margins and still keep the prices at high level. The real remedy, therefore, is for the trade itself to regulate its conduct with a sense of responsibility. If this is not feasible, official interference can hardly be cavilled at.

World Economic Survey for 1960

THE World Economic Survey for 1960, the thirteenth in a series of comprehensive world economic conditions published by the United Nations, addresses itself to the question of savings with reference to growth and economic development. The subject is of importance not only to under-developed countries, where the problem of economic development boils down to one of raising the current depressed ratio of savings, but also to the industrially advanced countries, which, in spite of the higher technological achievement and per capita income have not found a way of escape from the recurring recessions that disturb the steady progress of their economies to full employment and full utilisation of resources. The recession through which the US economy passed during 1960 was a grim reminder of the risks to which free economies remain exposed in the absence of policies specifically directed to the achievement of a sustained rate of economic growth. The mildness of the 1960 recession in the US also provides no room for complacency in respect of their recurrence. The UN survey in this connection points out that the periodicity of post-war recessions has been no greater than in the pre-war years. The Survey also explodes the illusion which tends to an underestimate of the cost of recession on the ground that the loss incurred during the recession could be more than made good over the cycle as a whole. In this connection, it is stated that what is relevant in assessing the real cost is not the absolute level of production but whether the full production potential is realised over the cycle. Such an achievement is considered unlikely if the recovery is only adequate to carry production and employment to normal levels of full utilisation without any special enlargement of the capacity to produce.

The Survey defines the economic remedy to recessions in categorical terms as being one of promoting steady growth at full potential rates. As it points out "what is required is not only to maintain a high level of output and employment but to sustain a steady rate of growth that is adequate to absorb each year's new entrants into the labour force as well as the manpower released by advancing technology and rising productivity". Objections arising from possibilities of inflation from the pursuit of economic policies aimed at growth, are irrelevant for the reason that price stability is not necessarily inconsistent with a growth-oriented policy. Such objections are based on the wrong equation of inflation with excess of aggregate demand over supply. It is quite conceivable that situations might arise in which prices may go up despite considerable slackness in produc-

tion and employment. In the same way, excess demand does not in all cases lead to inflation. It is quite possible, for example, that a rise in wages with its bearing on demand may provide the stimulus to higher output per man hour so that far from leading to inflation it may tend to a reversal of the rising price trend that was originally initiated by the wage increase.

While a sustained rate of growth should be the desideratum of economic policies for all countries, the measure in which growth can be accelerated will obviously depend on the extent to which the rate of savings can be stepped up. Considerable concern has been expressed in the Western countries in respect of the adequacy of savings to finance a higher rate of growth without inflation. But on the basis of its own study of the rates of savings and investment, the UN Survey comes to the conclusion that the financing of relatively high rates of investment will not be a formidable task. In respect of the under-developed countries, however, it sees less ground for optimism. The record of these countries in stepping up savings has also been not very encouraging. It is shown that despite some rise in per capita incomes and households and government revenues, neither private nor public saving has shown any wide-spread tendency to increase. Further the increases that have taken place in the rate of investment have been financed by increases in foreign saving in the form of balances of imports over exports of goods and services and of foreign aid. The problem of encouraging savings of all kinds has assumed considerable urgency in these countries. The UN study of the problem throws interesting light on various aspects of it and particularly on the role of savings in investment and the various sources of saving

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

REVENUE RECEIPTS

Buoyancy in 1960-61 (Actuals)

ACTUALS in respect of main heads of revenue for the year to March 1961 are now available; and these give an indication as to buoyancy in receipts, so much so that the overall deficit of the Government, as measured by an increase in outstandings of Treasury Bills, has been converted into a surplus and duly reflected in a fall in outstandings of Treasury Bills.

The Budget estimate (all figures relate to the year 1960-61) of receipts under customs was Rs 162.50 crores. In February this year, Mr Morarji Desai, while presenting the Budget for 1961-62, revised the relevant figures to Rs 183 crores. In the event, the actuals are higher yet at Rs 188.70 crores.

In the case of union excise duties the upward trend in the three estimates is even more pronounced. The Budget figure was Rs 379.62 crores, including States' share of additional excise duties amounting to Rs 41.20 crores; the revised estimate was placed at Rs 394.98 crores, the amount ascribable to the States being Rs 40.69 crores; and the actuals are substantially higher at Rs 415.13 crores, with some doubt as to whether the last figure is not net of States' share. For, Table No 29 in the Reserve Bank of India Bulletin for September 1961, from which these figures are abstracted, makes clear that income-tax receipts are net after "allowance being made for payment to States"; but does not contain similar clarification in regard to union excise duties.

Surprisingly, receipts from corporation tax have been over-estimated, though the shortfall is more than made up by improved collections from income-tax. The Budget estimate under the former head was Rs 135 crores, which in the revised estimates was raised slightly to Rs 137.50 crores. The actuals, in the event, are substantially lower at Rs 99.52 crores.

The experience in respect of income-tax (net of payment to States) has been better. The revised estimates were lower at Rs 40.52 crores against the Budget figures of Rs 52.94 crores; but the actuals are sharply higher at Rs 85.94 crores. It is, incidentally, intriguing to find that in the normally "heavy" month for tax receipts, March, there was in fact an outgo of Rs 19.94 crores under income-tax.

	Budget	Revised	Actuals
Customs	162.50	163.00	168.70
Union Excise Duties	379.62*	394.98†	415.13‡
Corporation Tax	135.00	137.50	99.52
Income-tax	52.94	40.52	85.94

*Inclusive of additional excise duties payable to the States.

†May or may not be net of additional excise duties payable to the States.

‡Allowance being made for payment to the States.

We are disposed to think that in fact the actuals of receipts under union excise duties are net of payment of additional excise duties to the States. Otherwise it is difficult to

explain the startling conversion of overall deficit to a good-sized surplus.

According to the Budget estimates for 1960-61, the overall deficit to be met by expansion in Treasury Bills was Rs 153 crores. With the changed procedure for deposit of US counterpart funds under Public Law 480, and also with the transfer of Rs 144 crores from the State Bank during the year, the revised estimate reduced the expansion in Treasury Bills to Rs 15 crores. In actual fact, outstandings of Treasury Bills, far from showing any increase, have dropped by the considerable amount of Rs 191 crores to Rs 1,106.30 crores as at 31 March 1961.

Only part of the explanation may lie in an improvement in revenues vis-a-vis the revised estimates; it is almost certain that expenditures also tended to fall short of the Budget or revised estimates. It is interesting to note that, in the 1960-61 Budget Supplement, we had asserted that "Indian Finance Ministers have got into the habit of regularly under-estimating receipts" and that "there has also been a tendency to overestimate expenditure."

There is already evidence to suggest that the experience is not likely to be different in 1961-62. The Budget estimate for the year places expansion in Treasury Bills at Rs 64 crores, against the overall deficit of Rs 64.33 crores. But, as at the end of August 1961, outstandings of Treasury Bills have declined by Rs 32 crores. It is true, in March each year the special disbursements of Government call for heavy dosages of deficit financing; but then, it is equally true that in the same month the tax receipts of Government tend to be enormous. The total revenue receipts of the Centre, in March of both 1960 and 1961, exceeded Rs 100 crores.

It should surely be possible for Government more accurately to gauge revenue or estimate expenditure. As it presently stands, the monotonous regularity with which, on the revenue side, the Budget is exceeded by revised estimates, and the last by the actuals; and with which, on the expenditure side, the Budget figure is higher than the revised estimates, which in turn are found to be an exaggeration as compared with the actuals, are responsible for the gnawing doubt that both under-estimation of revenue and exaggeration of expenditure are deliberately under-

Indian Finance

taken in order that new tax imposts may be justified.

The justification for new tax levies lies in the need for resources for the Plan, and not in whether or no there is an overall deficit.

BANK RETURNS

Fair Rise in Deposit Resources

The bank statements for 27 October are the last, notionally, in respect of the 1961 slack season. Two of the three are available for analysis this week, with the return of Scheduled Banks being made public only next week. The latest returns show that the slack season is ending on very slack note indeed.

The statement for the Issue Department of the Reserve Bank, as at 27 October, discloses that Active Note Circulation has contracted by Rs 21.64 crores and is now placed at Rs 1,882.25 crores. Return of Rupee Coin from circulation is also satisfactory at Rs 1.31 crores. Foreign Securities are unchanged at Rs 116.86 crores, and, similarly, Rupee Securities are unaltered at Rs 1,558.86 crores. As a result, the Reserve Bank's cash in the till has improved by Rs 22.96 crores to Rs 38.48 crores.

Inter-governmental transactions are suggested in the return for the Banking Department. The Centre's Deposits are higher by Rs 14.86 crores at Rs 64.78 crores, but those of State Governments have fallen by Rs 8.27 crores to Rs 20.33 crores, and besides the States have increased their ways and means borrowings from the Reserve Bank by Rs 2.92 crores to Rs 62.37 crores.

Some element of slack season easing of pressure upon the banking system is reflected in the rise of Rs 1.88 crores to Rs 86.37 crores in Reserve Balances of member banks; and with the State Bank, in the same week, showing a fall of over Rs 2 crores in cash in hand and with Reserve Bank, the improvement in the case of other Scheduled Banks may have amounted to Rs 4 crores. At the same time banks have clearly been able to reduce indebtedness to the Reserve Bank, whose Other Loans and Advances have fallen by Rs 6.40 crores to Rs 129.53 crores; that the fall in this figure is mainly or wholly on account of Scheduled Banks' borrowings is indicated in the decline of Rs 4.69 crores to Rs 2.51 crores in the Reserve Bank's advances against usance bills.

The Reserve Bank's holdings of Government of India Treasury Bills purchased and discounted have fallen by Rs 9.30 crores to Rs 23.15 crores; this was a maturing liability which Government has apparently met by

November 1961

instituting counter-vailing deficit financing. However, Investments in the Banking Department are practically unchanged, the reason being that the State Bank has figured as a purchaser of gilt-edged for Rs 9 crores, and such sale by the Reserve Bank has concealed a rise in its own holdings of Government of India securities.

Lastly, in regard to the Reserve Bank returns, for the second week in a row, Balances Held Abroad show a rise, though in the latest period the improvement is only a nominal one of Rs 0.06 crore to Rs 28.33 crores; foreign assets held by the Reserve Bank now just exceed the Rs 145 crore mark.

A satisfactory slack season contraction of Rs 5.86 crores to Rs 238.84 crores in the total of Advances is revealed in the return of the State Bank for 27 October. On the other side, Deposits, too, show an improvement of Rs 1.16 crores to Rs 531.10 crores. The "affluence" has enabled the State Bank to purchase securities for Rs 9 crores, raising the portfolio to Rs 266.35 crores. Consequently, cash balances, including money at call, have had to be run down by Rs 1.60 crores to Rs 32.94 crores.

A fair rise in Deposits has been reported by the Scheduled Banks in the week ended 20 October as disclosed in the latest statutory return. Net Demand Deposits have risen by Rs 5.02 crores to Rs 824.63 crores, while net Time Deposits are also higher by Rs 1.39 crores at Rs 1,118.57 crores. With the State Bank, in the same week, figuring as having suffered a drain on Deposits to the extent of Rs 1.36 crores, it is clear that other Scheduled Banks experienced a rise of nearly Rs 5 crores in Deposits. At the same time, the total of Advances has shrunk somewhat by Rs 2.83 crores to Rs 1,243.19 crores. The gilt-edged portfolio is higher by Rs 1.17 crores at Rs 612.89 crores, but the implication of the State Bank having, in the relevant week, bought securities for Rs 8 crores is that other Scheduled Banks have disinvested for around Rs 7 crores. Borrowings from the State Bank have been marked up by Rs 2.28 crores to Rs 20.29 crores, though indebtedness to the Reserve Bank has been reduced by Rs 1.15 crores to Rs 12.84 crores. The end result is that cash balances, including money at call and short notice, have increased by Rs 7.46 crores to Rs 191.59 crores.

Evidence in the returns of the Reserve Bank for 27 October suggests strongly that the statutory statement of Scheduled Banks for the same week will disclose a halving of the indebtedness to the Reserve Bank. If the experience of the State Bank has been general to all Scheduled Banks, this liquidation of debt may have been enabled largely by a fall in Advances. It is, however, also possible that Scheduled Banks should have had a fair-sized accretion to Deposit resources.

NATIONAL INCOME 6.5 Per Cent Increase in 1960-61

An advance estimate of the national income in 1960-61 made by the Central Statistical Organisation places it at Rs 12,530 crores at 1948-49 prices. This represents an increase of about 6.5 per cent over the previous year. The net output at 1948-49 prices shows a rate of growth lower than that at current prices since a part of the rise in the national income at current prices is accounted for by rise in the price level. The rate of

growth at constant prices works out to 3.45 per cent during the First Plan and 3.63 per cent during the Second Plan. For the entire decade of planning the rate of growth works out to 3.53 per cent.

As compared with total output, the per capita output shows a slower rate of increase. This is to be explained by the explosive increase in population that has taken place during the last decade. The per capita income increased from Rs 246 in 1950-51 to Rs 289 in 1960-61 which represents an increase of only 1.62 per cent per annum. The rate of growth during the Second Plan period was lower at 1.53 per cent.

One noteworthy feature disclosed by the trend in national income for the last decade is the yearly variations which have been marked and which can be attributed to fluctuations in agricultural output. The decline in national income as well as in the per capita income during 1957-58 is particularly noteworthy, the relevant figures in respect of these two being only Rs 10,890 crores and Rs 267.4 respectively as compared with Rs 11,000 crores and Rs 275.6 respectively in 1956.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 31 October 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.375 per cent were allotted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 6 November 1961. Successful tenderers should make payment on Friday, 10 November 1961. Other conditions are as usual.

During the week ended 27 October 1961 Government of India Treasury Bills for Rs 25,75,00,000 were sold in favour of Reserve Bank of India.

IMF Credit Repayment

By Paul Einzig

THE demand for sterling resulting from the return of foreign balances to London during September and October enabled the Treasury to repay £100 million of the large IMF credit concluded in August. This decision is to be welcomed because it prevents a further spectacular increase of the gold and Foreign Exchange reserve. Such an increase is bound to create unwarranted optimism even though

it is entirely due to borrowing abroad, whether in the form of IMF credits or foreign-owned sterling balances. The Treasury was right in emphasising in the statement accompanying the announcement of the repayment decision that the improvement has only affected the short-term position and that the long-term problem has remained unsolved. That being so, it is a pity to publish reserve figures which, taken at their face value, convey an unduly optimistic picture, thereby increasing the difficulty of solving the long-term problem.

The fact that, instead of cancelling the amount repaid, it was added to the \$500 million of standby credit arranged in August, so that it remains available if needed again, shows that the Treasury is far from satisfied about the lasting nature of the improvement and prefers to be on the safe side. That seems to be a reasonable precaution. It may well be asked, however, why the whole large credit was not arranged in the form of a standby credit. Its amount would not then have been added to the reserve and, while its existence would have reassured the Foreign Exchange market, it would not have created the same degree of optimism in the wrong quarters as the spectacular increase of the gold reserve. It is to be hoped that any official purchases of Foreign Exchange resulting from a further flow of foreign funds to London will be used for converting further amounts of the IMF credit into standby credits instead of allowing it to increase the gold reserve further.

A banker would take a poor view of a business firm which, having acquired certain assets with the aid of borrowed money, would show the assets on his balance sheet without showing the bank loan among its liabilities. Yet this is exactly what is happening with IMF credits. They should be granted on the conditions that any official reserve figures should clearly indicate the net reserve arrived at after deducting the IMF credit. As it is, even though people are vaguely aware that part of the gold and Foreign Exchange reserve constitute borrowed gold and Foreign Exchange, they are liable to be hypnotised by the impressive gross reserve figure. It is not to the interests of the International Monetary Fund to encourage "fool's paradise economics" by allowing its credits to be used in a way as to convey unwarranted optimism.

During the 'twenties when the Finance Committee of the League of Nations was in charge of international action to assist in currency stabilisation, the rules applied to ensure that the League's financial assistance should be used to the best advantage of the nations concerned were much stricter than those applied in our days by the International Monetary Fund. This consideration deserves attention.

SUGAR

Unkindest Cut of All

The sudden cut by US of the ad hoc sugar quota allotted to India by 50,000 short tons has come as an unexpected blow and has raised serious misgivings about the way the US fulfils obligations of this sort. It may be recalled that an export quota of 2,25,000 short tons was obtained by this country after months of negotiations. A significant development is that the response from US buyers has been extremely encouraging in that the entire quota was sold out within a short time. What is more the bulk of this quantity has been already shipped and arrangements are well in hand to despatch the balance well before the end of the current year. It is at this juncture that the announcement of a cut in the quota has come.

Subsequent to the quota agreement hopes of an increase in the allotment as well as allocation of a permanent quota to India came to be entertained following hints of favourable reaction to India's plea. But it is now doubted in this country whether the US is really serious when entering

into such agreements. It is not explained why the US Government should have been so unmindful of the adverse impact of its sudden cut in the quota which was by no means granted in a hurry. It was in October last year that India applied for the grant of import quota for sugar. It had taken the US nearly 8 months to come to a decision. As a new applicant for quota, India's case had perforce had to be studied closely. In acceding to India's request, the US should evidently have been influenced by the extremely difficult position in which India is finding itself with regard to its sugar production. There is surplus of more than 12 lakh tons after meeting domestic and export demand. This huge accumulation is posing almost an intractable problem. The grant of an import quota of 2,25,000 short tons although it fell short of the quantity requested was nevertheless welcomed more as an earnest of US concern for India and its sugar industry than as a big help.

It will not be for us to find fault with US if it has not given us a quota at all on the same plea as it is now putting forth, namely, the need for safeguarding the interests of the domestic producers of raw sugar. The US may be legally within its rights to revise the quota. Again it is certainly open to it to want not to burden its refineries with high cost raw sugar when prices are falling in world markets. But we can justifiably object to the unreasonableness of cutting the quota after giving the impression that for all practical purposes the quota is a settled matter. Having granted a quota, which is by no means big, after long deliberation the US should have paused to consider the repercussions of a sudden cut. It cannot be believed that the US does not know that far from expecting a cut, India was looking forward to a bigger quota or that it has been making arrangements for the quick disposal of the allotted quantity. The commitments of traders and businessmen in both the countries who have entered into contracts on the basis of the full quota being allowed have also been grossly ignored. It is poor consolation to us to be told that the US may be adding the 50,000 short tons to next year's quota or that the quotas of other erstwhile non-quota countries who have been given quotas this year have also been cut along with that of India.

ALUMINIUM A Case for Going Slow

The Government's decision to increase aluminium production under the Third Plan to 1,42,500 tons may be regarded as ambitious and perhaps unpractical. The power shortage to which the Advisory Council of Industries drew attention must be kept in mind. The Koyna and Sharavati projects are still to be got ready. Bauxite is less important than cheap power for aluminium production. Foreign collaboration is not the only factor to be thought of in setting up a public enterprise when resources are limited. The Third Plan envisages an increase in aluminium production mainly from the older enterprises functioning with tariff advantages. The advent of new high-cost enterprises will perpetuate the difference in the price of aluminium as between imports and domestic output. The cheapening of the substitute for non-ferrous metals will be put off indefinitely then. But far more serious is the 'tight' power position to which Mr Trivedi alluded in reply to complaints about inadequate and irregular supply. The competing demand will be unsatisfied, if new aluminium plants are set up, as proposed by those who assume that non-ferrous metals must now be replaced by aluminium.

Caution about expansion has been sounded by Mr K. C. Mahindra who has argued that grandiose schemes for extending capacity are attended with risks. The progress under the Second Plan has been considerable and a target of 82,500 tons a year appeared sufficiently high. To raise the sights suddenly in order to satisfy one or more States is to miss the point that the transport of bauxite would cause difficulty. It would also interfere with the export of bauxite ore from Saurashtra. The Development authorities have not been unmindful of the difficulties and risks involved. Unless industry voices a demand there is no real case for expansion of aluminium when the older plants are being improved and extended by stages. As is known already the Madras aluminium plant can be made to produce 20,000 tons and that means it would be better to invest in the plant at Mettur than in Mysore. The sudden, swinging increase may hit the exports shipped in return for aluminium imported from Europe where the price of the metal has been falling in the wake of higher output. Here is a case for going slow, as many will agree. The aluminium industry may be vital for many industrial purposes from utensils to cables, but the original target must be reached before the installation of any further capacity can be contemplated.

Indian Finance

ed. The major Hirakud plant is being expanded and it is far more desirable to raise output where natural advantages are available, than to think of new ventures.

★

CEMENT

Japanese Example

The biggest exporter of cement mainly to Asian countries, is Japan and it is important to note that India, even if her output were to reach the Japanese output of 16 million tons a year quick delivery by ship is guaranteed by Japan. India cannot hope to export at the same rate as Japan which has displaced Britain as the major shipper to Singapore, Hongkong and other places. The Japanese export trade rests on quality rather than price. Having the advantage of abundant limestone and coal in suitable location, the steady and substantial expansion of the industry after the war is due to American interest in supplies to Korea and Taiwan. The 42 factories vary in capacity and output but many rely on branches of heavy industrial countries. The manufacture of cement from basic slag—developed for immediate needs—is being given up.

The earthquake problem is one reason for the extensive use of cement concrete. A trade publication narrates that Pakistan is a regular buyer of cement from Japan just like the Persian Gulf States. The fact that Indian factories are not able to produce up to installed capacity and are hampered by price control will doubtless be remembered by the observer who sees that Ceylon is trying to set up a new plant in

4 November 1961

spite of proximity to India which can ship cement. The Indian industry has a fuel problem in addition to transport difficulties. India has as many cement companies or factories as Japan, but the industry here cannot be said to have become rationalised like that in Japan or the UK except for the consolidation of interest carried out in 1936 in order to make certain of the benefits derived from tariff protection. It is not likely that the Government would allow a major grouping of industrial interests, though efficiency may demand it. One point to note here is that in Japan many cement factories have a capacity below 300,000 tons per annum and big steel companies have their own cement combines. The Japanese industry relies on silos for storing cement. The major industrial exports are possible through the development of shipping and the distribution of cement factories in the main islands helps Japan. Germany or Russia may produce more cement but they export much less than Japan which has regained her trade with the Philippines and Malaya. The emphasis laid on heavy industries in Japan has helped not only shipbuilding but cement manufacturers. This may hold a lesson for India at present.

★

COMMON MARKET

An Asian Version

An Asian common market, to which discreet references are made will put an end to some ambitions in underdeveloped countries that want to start new industries. The industrial base must be Japan and India but the latter is a high-cost producer whose industries are raised and maintained on protection. A Common Market means a cut, though gradual, in tariffs by stages and the problem of development even with collaboration will assume a new shape. The import of food and the export of manufactures rather than materials will appear logical but the creation of equality in a region with unequal distribution of population and resources will appear difficult. If Malaya were to rely on Japan and Australia, the chances for Indian exports, would be slender. And the fact that India cannot provide shipping for countries like Burma or Ceylon will be taken as a major handicap. Political relations must be cordial and India must be hence on good terms in future with Pakistan, if an Asian common market is accepted as the goal of policy. The Middle East that relies on export of oil can certainly turn from Europe to Asian countries for selling oil to new refineries. This might be easy, if Asian countries can provide both aid and commodities for Aden or Iraq. The scope for foreign capital will be greater but the flow may be governed by the

chances of better results in the field of investment in Malaya or Burma. The standards of living in Ceylon or Malaya are already higher, so that consumer goods industries may appear more suited to trading centres like Hongkong or Singapore than to Bombay.

The first condition, as stated earlier, is a change in tariffs. That means an increase in excise duties on local consumption, and the taxpayer here must be induced to submit for the sake of export opportunities. The situation has arisen already in the case of cloth and sugar. And now people talk of an excise on sacking in order to subsidise exports from India, since Pakistan is able to compete strongly at present. The Common Market will reduce consumption but will raise exports so that planners should be pleased and the appeals for austerity will perhaps increase. The export of capital will however present a problem. The rigid prohibitions might go and Indian business

must be free to move out to seek better opportunities available abroad. This is a concomitant of a common market like freedom of migration, but the latter will not be welcomed by India's neighbour.

★

FOREIGN TRADE

Straws in the Wind

Recent trade statistics of Pakistan and Japan show the way the wind is blowing. Pakistan's trade in jute with Europe is supplemented by rising export of manufacturers. The mill industry is being improved and expanded by the bonus voucher scheme. Of course India is a considerable buyer of jute but Pakistan means to develop export of sacking as a rival of India. This is not unnatural but India must, as Mr Pilkington noted, soon take

steps to lower the price of sacking for export. The last official report from Dacca on trade trends refers to the import of Egyptian cotton. There is now a trade treaty with Japan to encourage trade in cotton and cotton manufactures. The 14 jute mills equipped with 8072 looms are to increase loomage to 12000 and that means bigger exports of hessian and sacking. The plan to set up four more sugar mills in East Pakistan will probably reduce imports of sugar for consumption and India cannot hope to get a market for surplus sugar from Bihar in future. The import of trucks and buses on the OGL will not help India though Bedford and Leyland trucks can be purchased abroad under the OGL by Pakistan. The Pakistan Government follows India in excluding horror comics, and obscene writings. There is also a ban on anti-Islamic writings, so that Indian books can be screened for effect on readers. The

manufacture of autorickshaw with anese aid in Pakistan will bably improve urban transport. If more interest to India is the eat of Japan reducing her iron purchases as South Africa is wed as a promising source. The usal of Asian or African couns to trade with South Africa s not evidently impress Japan. provements to Port Elizabeth under way and Japan has pping to ensure the transport. ady increase in pig iron imrts is one reason for increasing ports. It may be added that iron imports from India are below those drawn by Japan m Australia which is now shipg coking coal. Trade ties between Japan and Australia are und to be closer since Britain's cision to join the European mmon market has forced Auslia to think of Japan as the st market for her wool and eat. Japan may find an outfor her textile and other manu- turers in Australia and Newaland as she may buy meat and eat in quantity. She may also nish capital goods for indus- al development in New-Zea- id, though her ability to invest road may be doubted by many. present.

*

WAREHOUSES Disappointing Progress

Though setting up of ware- uses was one of the major eps recommended by the Rural edit Enquiry Committee for nproving the marketing struc- ure for agricultural produce, the rogress in this field has been r from satisfactory. It is the ate Warehousing Corporations at have been rather inactive in e matter of opening up of ware- ouses. The Second Plan fixed a rget of 80 warehouses to be ened by the State Warehousing orporations, but not even one arehouse has been opened under heir auspices during the Second lan period. However, the Cen- ral Warehousing Corporation has uilt nearly 40 warehouses in the ountry and by the end of the urrent financial year, the Cor- oration is expected to have nother 7 warehouses. The Esti- nates Committee of Parliament as also highly critical of the rogress made in the direction f setting up warehouses and ad called for more concrete eps whereby progress could be teppped up. Such criticism has evidently gone home and it is ow learnt that the programme or the building of storage and warehousing facilities for food grains and commercial crops will be accelerated to achieve the bulk of the Third Plan target even by the middle of the Plan period.

The Third Plan envisages the construction of 35 central ware-

houses and as many as 600 ware- houses of smaller capacity at the State level. It has made a provi- sion of Rs 8 crores for ware- housing programme including Central assistance to the State. There is also a scheme for open- ing up of 20 warehouses for pro- viding facilities of a specialised nature for such commodities as fish, gur, ginger, coriander and tumeric which require special measures for preservation.

Several administrative measures are also being envisaged to achieve the revised targets for opening up of warehouses. First and foremost, the execution of the building works of the Central Ware- housing Corporation has been taken away from the general wing of the Central Public Works Department and entrusted to the food wing. Greater co-ordina- tion of the work of the 14 State Warehousing Corporations and the Centre is also aimed to be achieved through several adminis- trative measures. A sum of Rs 2.31 crores has already been sanctioned for construction of buildings at 34 centres in various big mandies in the country. By the end of the Third Plan it is ex- pected that the storage capacity of the warehouses of the Central and State Warehousing Corpora- tions will be increased to over 1.6 million tons from 350,000 tons at the end of the Second Plan.

*

ELECTRICAL MOTORS Further Protection

Thanks to the fiscal protection granted by the Government, the electric motors industry has come into its own. Further protection has been recommended by the Tariff Commission for another two years ending 31 December 1963 and has been accepted by the Government. The estimates of ex-works costs and landed costs made by the Tariff Commission in its recent inquiry of the indus- try do not disclose serious dis- advantages for the Indian indus- try. All the same continuance of protection has been recommended on the ground of difficulties lately suffered by the industry and the interests of further expansion and diversification on which the industry is now embarked. The protection to which the Govern- ment has now agreed, covers squirrel cage and slip ring motors of one to 500 h.p. (excluding variable speed motors) single phase motors of 1 to 3 h.p. and fractional h.p. motors of not less than 1/4 h.p. with the existing level of duty of 15 per cent "ad valorem." The component parts of the electric motors have also been brought under protection, the duties on imports of them being fixed at 20 per cent ad valorem. Moreover, fractional h.p. motors of less than one-fourth h.p. and competent parts which are mainly produced in the small-

scale sector will be protected at the prevailing duty of 35 per cent ad valorem.

In its report recommending con- tinuance of protection to the elec- tric motors industry, the Tariff Commission has also underlined the need for the Government to give encouragement to the indus- try to expand on the right lines. With a view to stepping up inter- nal production, the Commission particularly stresses that the in- dustry should be enabled to work double shift and that the Govern- ment should assure the requisite raw material supplies. The Tariff Commission has further pointed to the possibility of the presently envisaged installed capacity fall- ing short of requirements in spite of the industry working double shift and has stressed the need for the Government to license addi- tional capacity to meet all inter- nal requirements. At present, the demand for electric motors is assessed at about one million h.p. This is estimated to go up to 2.6 million h.p. in 1964. Should the target for installed capacity for power generation during the Third Plan be further raised, the demand for electric motors should also register a corresponding increase.

Give IOB Cheques and give your family and friends the freedom to buy what they like. You needn't be a customer to buy them. IOB Gift Cheques are avail- able at all our branches in India.

M. Ct. Muthiah, Chairman C. P. Doraiswami, General Manager
JW 108 1593

It is in the ranges of higher h.p. that the indigenous capacity is presently short. The Tariff Com- mission has urged the need for steps to be taken for the planned production of higher h.p. motors and has further emphasised that as far as possible, the possibility of utilising indigenous motors even with imported plant and machi- nery should be explored.

*

COASTAL SHIPPING The Demise of a Line

The Scindia Steam Navigation Co's shareholders are in the dark as to the dividend for 1960-61 but they know that the old Konkan coastal services are going to end because the costs are up and the fares cannot be raised as desired and approved by a committee that went into the question of enlarg- ing the fleet and raising fees. Pro- tection for coastal traffic does not promise any great advantage and unberthed passengers expect a subsidy not a tax—on fares paid. The Bombay Steam Navigation became a subsidiary of Scindia in

December 1939 when Killick Nixon gave up the managing agency of the firm registered in 1906. It has performed poorly and it is rather strange that when Mangalore port development is proposed the service on the coast should end. The war led to the requisitioning of the ships for naval purposes. Perhaps Scindia got the BSN shares (face value Rs 250) below par and could ignore the wartime losses like the losses made on the smaller Indian Cooperative Navigation Company.

The oldest of the coastal com- panies submerged since 1952 in Scindia has fared as badly as the inland navigation companies. It is known from the analysis of profits of public companies that the record of shipping is very in- different and the proposal to close the services only confirms the guess that a rise in traffic or income does not spell any prosperity to shipping concerns. The BSN according to its balance sheet as on June 30, 1939 had a capital of Rs 60 lakhs and a net block of Rs 74.64 lakhs. The profit was barely Rs 2.4 lakhs and the dividend on ordinary shares was just stepped up from 2 to 3%. The pre-war figures are cited here to confirm that BSN when acquired by Scin- dia 22 years ago had an undis- tinguished record of profits and the subsequent record only con- firms the view that prestige was the reason for one of the few take-over bids of the pre-war period. The end of commerce with Goa may be a major reason for the closure. The division of the small craft for port purposes may be easy and the opening of services to Kandla may be con- templated by Scindia, if permis- sion is accorded. However the point is that replacement of Killick Nixon did not produce any big profits for Scindia Steam and the long argument over the increase in fares shows that Government control of fares and freight rates is calculated to prevent the devel- opment of shipping, an industry embarrassed by debt for securing additional tonnage to fulfil not business purposes, but national ambitions.

*

HINDUSTAN SHIPYARD Lack of Orders No Problem

The progress of the Hindustan Shipyards in the last few years as can be gleaned from the annual report of the Company indicates expansion in output and also the achievement of a profitable level of working by the Company. The total output of the shipyard in- cluding that of ship construction, ship repair and capital and other works executed departmentally registered an increase of over 16 per cent and amounted in value to Rs 4,65.8 lakhs. The Company also earned a net profit of Rs 68,873 during 1959-60.

It is also encouraging that lack of adequate orders for the con- struction of ships has ceased to be a problem worrying the shipyard and it is rather threatened to be. The shipyard has presently orders for the construction of 9 ships—three for a shipping company in the private sector and 6 for the public sector—which will keep the com- pany occupied till the middle of October 1964. Further orders are also expected so that the shipyard will be provided with work for the entire period of the Third Plan. However, absence of dock- ing facilities is a serious handicap to the expansion of shipbuilding activities at the yard and though the Third Plan contains provision for the construction of dry dock- ing the project has been included in the list of schemes waiting foreign credit. Mr G. L. Mehta, Chairman of the Hindustan Ship- yard has drawn attention to this lapse on the part of the Planning Commission in not recognising the importance of docking facilities

for expansion of shipbuilding and has urged upon the Government the need for including without further delay the project for a dry dock at Vishakhapatnam in the list of priority programme for the Third Plan.

Difficulty in obtaining the re- quired odd and standard size materials is recognised to be another handicap to the smooth progress of shipbuilding at the yard. Referring to these, the annual report states that it may be necessary to modify the struc- tural plans of the first two vessels which in turn will delay the whole programme of construction. These difficulties have underlined the need for developing within the country itself sources for all the materials required for ship build- ing.

In his address, Mr Mehta ex- pressed grave concern at the flight of technical staff from one project to another. To prevent such flights from dislocating the work- ing of various projects, Mr Mehta

has suggested that the manage- ment in the public sector enter- prises should evolve a common code of conduct for the recruit- ment of technical staff.

*

NON-FERROUS MINERALS Rise in Output

The statistics of productions computed by the Indian Bureau of Mines show an increase in the output of the non-ferrous mine- rals during July 1961. The pro- duction of copper ore amounted to 40,175 metric tons—an increase of 3,058 metric tons over that of the preceding month. Similarly, production of lead and zinc con- centrates recorded an appreciable increase, from 1,236 metric tons in June to 1,403 metric tons in July 1961. The progressive total of output of lead concentrates during January-July 1961 was higher by 7.3 per cent while that of zinc concentrates registered a

marginal decline of 0.6 per cent compared to the corresponding period of 1960.

There was also an increase in the output of ilmenite, from 5,850 metric tons in June 1961 to 8,244 metric tons in July 1961 and rutile, from 18 million tons in June to 39 million tons in July 1961.

The production of silver at 548 kilograms recorded an increase of 59 kilograms over the previous month. There was an increase of 50 per cent in the cumulative total of output of silver in January-July 1961 compared with the corresponding period last year.

Among the non-metallic minerals, the production of crude mica was slightly higher at 2,269 metric tons as against 2,265 metric tons in the preceding month.

Among the metallic minerals, iron ore recorded a production of 863,000 metric tons during the month. The cumulative total of iron ore output during January-July 1961 registered an increase of 5.6 per cent compared to the output in the corresponding period of the preceding year.

In July 1961 a total of 657,000 metric tons of iron ore was despatched for consumption in the iron and steel plants while the despatches for export totalled 141,000 metric tons.

The production of manganese ore during the month was 84,000 metric tons and that of chromite 2,222 metric tons.

COAL MOVEMENT No Improvement

The supply of coal to industries has shown no signs of improvement in spite of the measures claimed to have been taken by the Government and the Railway Ministry. At the recent meeting of the Central Advisory Council on Industry at New Delhi, it was brought to the notice of the Government spokesmen that even the industries lying within the coal belt in the Bengal-Bihar area were having to slow down or suspend production for want of coal. This evidently is a measure of the transport difficulties that continue in the field of coal movement. The main bottleneck has been with respect to availability of railway wagons. This has been aggravated by failure to achieve the target fixed for other modes of coal transport particularly by sea. It is also a matter for recognition that resort to other means of transport has raised the price of coal unduly not only for the areas drawing their supplies by the sea route but also for industries situated near the coal areas on account of the additional levies imposed on coal used in this area for subsidising coal movement by sea.

The failure of the railways to discharge their obligation for

releasing additional wagons for movement of coal is borne out by statistics of wagon-loading for this year. Particularly during April-July there has been a steep fall in wagon loading as compared to Jan-March. The floods cannot be a reason for the prolonged shortage of wagons to which industrialists allude more in sorrow than in anger. Evidently, coal does not seem to have been accorded the high priority for movement by rail as compared with some other items. Shortage of railways wagons for coal movement is also confirmed by the accumulation of stocks at the pithead of collieries consequent on which collieries have had to curtail production. It has been disclosed by Mr T. N. Singh, Planning Commission member, at the meeting of the Central Advisory Council on Industry that the railways had been authorised to exceed their annual allocation by as much as 40 per cent to create additional haulage. While this is gratifying, on the basis of the present allocation of wagons for coal movement, the need for further raising the annual output of railway wagons cannot be doubted. The Railway spokesman has suggested that the industries should take advantage of the railway capacity throughout the year so that peak seasonal demand may be reduced. It may be granted that seasonal fluctuations in wagon loading in the case of coal are not on the same par as fluctuations in respect of jute or cotton grown locally. A more evenly spread demand may in the circumstances mitigate difficulties of wagon allotment and may be conducive to smooth movement. However this leads to the question of coal dumps to which there is vehement opposition from the industry for reasons widely canvassed for some time now and partially conceded by authority.

WORLD BANK A New Service

Active participation of the World Bank in the economic advancement of the developing member countries is now a well established fact. The newly established Development Advisory Service, with a view to providing a corps of expert talents to furnish financial and economic advice to the Governments of developing countries with particular emphasis on the preparation and execution of development programmes, is yet another extension of its activities. It also forms part of the general policy of the Bank to enlarge its technical assistance and training activities to the member countries.

Mr Eugene R. Black, the President of the Bank declared that the Bank's experience has confirmed beyond doubt the fact that

non-availability of adequate technical talents at every level is one of the major obstacles that hinder the rapid progress of the underdeveloped countries. The mounting demands for more and more technical assistance from the Bank during these years bears eloquent testimony to this fact. The Bank has so far organised over twenty general survey missions with the sole purpose of conducting probes into the economies of member countries and territories and to recommend future lines of development. Smaller groups were also deputed off and on for examining sector or regional problems and to undertake feasibility studies.

During these years, on the request of the member countries the Bank has deputed resident advisers to assist them on major policy problems like the allocation of scarce resources by effective development programming and the integration of Government policies to facilitate the best possible environment conducive for economic advancement. Requests for such help have been flowing at a pace that made ad hoc attempts at coping with them progressively more and more difficult. The new Development Advisory Service will eliminate at least part of these difficulties and will make available the services of highly qualified technicians to the members. Messrs Richard H. Demuth and Michael L. Hoffman will officiate as Directors of the Service.

US Budget as an Economic Indicator

There federal budget, through its accounting of federal receipts and expenditures, emerges as a major instrument for measuring the economic effects of government policies. As such it has tended to become something of a symbol, with surplus somehow linked to fiscal prudence and deficits to fiscal irresponsibility.

This is a vastly oversimplified view. As Mr Walter W. Heller, Chairman of Presidents' Council of Economic Advisers pointed out in an address last week before a business group in Chicago, the budget can be a highly flexible instrument, with constructive as well as destructive deficits.

During periods of economic slackness, Government looks to increased expenditures to help fill the gap and make money flow into the economy. This is hardly spending for spending's sake. If a budget deficit results, it is constructive in the sense that it expresses itself in the form of higher consumption and higher output at a time when they are needed and

when inflation can be effectively discounted as a significant threat to stability.

In the opposite situation, when the economy is tight and demands press against capacity, good management requires that expenditures be held in check. In this case, a budget surplus rather than a deficit would be constructive in that it would tend to draw money from the economy and thus reduce inflationary pressure.

Today, the US economy is recovering vigorously from the brief and mild recession of 1960-61. But the gap between the economy's actual and potential performance has still not been made up completely, and price inflation is notable by its absence. Under such circumstances, the moderate budget deficit of something over \$6,000 million that is now being projected for the current 1962 fiscal year beginning 1 July falls quite naturally into the constructive category.

As the economy continues its advance, the time may well come when inflation could become a factor to be reckoned with in government policy making. At present, Mr Heller sees the possibility that the second half of the calendar year 1962 may become "the critical period" for price stability.

According to present thinking, however, the federal budget should be in balance by that time. Hence, in keeping with the requirements of fiscal discipline, it should be performing its proper role as a restraining rather than a stimulating force in the economy.

Even this appraisal of federal fiscal policy, however, does not come to terms completely with the intricacies of that complex document known as the United States budget. What has been discussed so far is the conventional, or administrative, budget—the budget containing the figures that are most widely publicized. But this budget, with its emphasis on programmed spending, is subject to some limitation as an indication of the government's fiscal impact on the economy.

In point of fact, there are federal expenditures and receipts that are not fully reflected in this administrative budget. Not included, for instance, are the operations of US Government trust funds, such as the Social Security and Highway Funds, which involved some \$23,000 million in payments in the 1961 fiscal year that ended this past 30 June. Also not fully reflected in the administrative budget are some types of net government loans, such as those for housing and for export-import financing.

Thus, there is another method of government accounting, sometimes referred to as the cash budget to distinguish it from the administrative budget. This method shows an actual running tally of receipts receivable versus

Indian Finance

4 November 1961

federal spending rates, and hence tends to be more reliable and more useful measure of how much money the government is taking out of the economy as against how much it is putting in at any given time.

It follows, then, that the figures in this budget, which Mr Heller has characterized as the income-and-product account budget, are economically the more significant in showing the effect of government fiscal policy on production and income.

Tending to make the distinction between the two types of budgets particularly important right now is this: according to Mr Heller, preliminary projections by the Council of Economic Advisors suggest strongly that the income-and-product budget will be moving into balance, or even into surplus, in the first half of the calendar year 1962. This would be at a time when the conventional budget, covering the fiscal year from mid-1961 to mid-1962, would in all likelihood still be showing a deficit.

CEYLON A Trade Agreement with India

The exchange of views at Delhi has resulted in a trade agreement with Ceylon whose import restrictions occasioned anxiety in India. The assurance that copra, Jaffna tobacco and rubber would be imported in return for textiles and cured fish may satisfy traders in South India who now recognise that India sells more than she buys, and Ceylon is entitled to restrict her imports, just like Burma. The arrangement will help Indian buyers of coconut oil needed for soap-making. The import will help to push down internal prices so that Ceylon will soon be giving indirect help to restrain the surging prices of vegetable oils in India. The export of jaggery will help to cure the depression in India and the rubber manufacturing industry can now count on extra supplies though it is China that will long be the chief buyer of Ceylon rubber. One other point is that State Trading in Ceylon is now regarded as inevitable and Ceylon may use the CWE for purchases of tamarind or onions from India. The desire of Ceylon to reduce the trade gap may lead to larger shipments of spices also. This would be welcome owing to the very high prices ruling in India. The foreign trade of Ceylon is bound up with tea and the UK is the chief customer. It is a fact that Ceylon is a rival in Australia and the Middle East where India is trying to push the sale of tea. However, it is now recognised that trade rivalry need not pre-

vent a pact for restoring the traditional trade pattern. India cannot sell either plywood or bicycles but she can find a market for light engineering goods in Ceylon though tariff regulations will limit the volume of sales. The old agitation by Indian coconut-growers should not revive, because vanaspati and other interests in India require coconut oil. India's present inability to export edible oils is a good reason for letting in imports from Ceylon.

ELECTRICALS MACHINERY Expansion in Mysore

The inauguration of the Rs 3 crore expansion scheme of the Mysore Government's Electrical Factory at Bangalore by Mr B. D. Jatti is yet another step in the growth of the electrical machinery industry in the country. The factory which was started as early as 1937 has now become one of the biggest manufacturers of high voltage transformers. Greater strides will be taken with the completion of the present expansion programme for which technical collaboration of Messrs AEG of West Germany will be available. The present scheme envisages the production of transformers with power ranging from 60,000 kw to 200,000 kw per year by the end of the second year and 600,000 kw by the end of the fourth year. The factory will also undertake the manufacture of motors possessing an aggregate of 60,000 h.p. with the completion of the sixth year. According to the present calculation the annual production of the factory, with the completion of the newly launched programme, will be tantamount to Rs 6.5 crores. The consummation of the expansion scheme during the Third Plan and the manufacture of transformers, electric motors, switchgears and switch boards has assumed a measure of urgency in view of the fact that the Sharavathi hydro-electric construction project will be able to provide approximately one million kilowatts of power by the end of 1967.

The rapid growth of industrialisation in the country particularly during the past decade of planned growth has enlarged the scope of the electric goods industry. Some of the indigenous products such as fans and lamps have already earned a name for themselves in many of the international markets. The greatest hindrance to the further growth is the absence of designing facilities and the like. We are still to a large measure dependent on foreign countries for our requirements of electric machines and appliances. Viewed in this background, the efforts of the Bangalore factory, though modest are to be welcomed.

INVEST WISELY AND WELL

You may be prudent enough to save a portion of your income, but perhaps you are hesitant to decide on a safe investment.

Let this not disturb you. The State Bank is in touch with the leading brokers and will make their expert advice available to you quickly and without charge.

The State Bank will also keep your investments in safe custody and collect and credit to your account interest and dividends as and when they fall due.

It does not matter where you reside—the State Bank has a net-work of offices through which it offers to place these and other services at your disposal.

Why not talk things over with our nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than nine hundred offices waiting to serve you throughout India.

ASSAM SILLIMANITE Expansion Programme

The growing demand for sillimanite, particularly blocks and shapes extensively utilised by ceramic and glass industry, has acted as an impetus for the Assam Sillimanite Limited to expand its operations to cater to the needs of the industries. With robust optimism Mr S. M. Wahi, the Chairman of the company, outlined briefly the expansion programme undertaken by the company, in his address to the tenth annual general meeting held at Gauhati. The refractory plant situated in Bamgarh has started production of sillimanite blocks and shapes, fireclay bricks and

shapes and the plant at present possesses an installed capacity of 5,500 tons. Further expansion programme will be launched when the proposed loan of Rs 65 lakhs from the International Finance Corporation is obtained. To meet the increased demand for fireclay bricks and shapes the company has resorted to steps with a view to developing the mines around the factory. When fully developed, the plant will be in a position to supply the surplus production even to other factories.

Production of sillimanite during 1960-61 showed a slight increase to 7,540.01 tons as against 6,957.80 tons in the previous year. And the production is expected to reach 9,000 tons by the end of 1962. Total sales have also looked up to Rs 25.76 lakhs from Rs 22.71 lakhs. The profit of the company

registered a modest increase and is placed at Rs 2.94 lakhs from Rs 2.35 lakhs. The diamond saw plant at Paharpur near Calcutta has also produced satisfactory results during the year under review. The company proposes to double its capacity of production of sillimanite blocks and shapes and the scheme is likely to be completed in the immediate future.

COMPANY PRACTICE Two Suggestions

An esteemed Correspondent
Writes:

Section 84 of the Companies Act, 1956, originally required that "a certificate, under the common seal of the company, specifying any shares held by a member, shall be prima facie evidence of title of the member to such shares". Seriously perturbed by the frauds that came to light after the celebrated Mundra affair, the Government promulgated a Rule in 1959 requiring "that every share certificate shall be issued under the seal of the company, which shall be affixed in the presence of two directors and of the secretary or some other person appointed by the Board for the purpose and the two directors and the secretary or other person shall sign such certificates". "Provided that not more than one of the aforesaid two directors shall be a managing or whole time director

or, when the company has a managing agent, a director appointed by the managing agent under Section 377 of the Act or a director to whom Section 261 applies."

This amendment made the issue of share certificates more onerous and tended to create delays. Obviously moved by complaints received on this score, Government modified the Rule in 1960 thereby authorising persons acting on behalf of the directors under a duly registered power of attorney to sign the share certificates. The Rule further authorised a director to sign a certificate by affixing his signature thereon by means of a machine, equipment or other mechanical means such as engraving in metal or lithography, but not by means of a rubber stamp provided that the director shall be responsible for the safe custody of such machine, equipment or other material used for the purpose.

The revised Rule, it will be noticed, has almost nullified the security ensured by the earlier Rule and has gone to what may be described as the other extreme.

The corresponding provision in the English Act lays down that "the certificate of title to shares shall be issued under the seal of the company, and shall bear the autographic signature of one director and the secretary or some other person appointed by the directors" and is thus unequivocal. The US procedure varies from

State to State but in the main the requirement is "that every stock holder shall be entitled to have a certificate signed by the president or a vice-president, and the secretary or an assistant secretary... and sealed with the seal of the corporation certifying the number of shares owned by him in the capital stock. When any such certificate is signed by a transfer agent or transfer clerk and a registrar and the registrar is not the same person, partnership, association, trust or corporation as the transfer agent or transfer clerk, the signature of any such president, vice-president... upon such certificates may be facsimiles engraved or printed."

In the light of the practice in UK, and USA, our current procedure appears to be unsatisfactory. The personal signature of the directors must be insisted upon. If necessary the directors may be given a special honorarium with competent sanction in connection with any issue of capital which may require the signing of a large number of shares.

Section 193 of the Companies Act, 1960, lays down that every company shall cause minutes of all proceedings to be kept... by making... entries thereof in books kept for the purpose with their pages consecutively numbered and in no case the minutes of the proceedings of a meeting shall be attached or pasted to any book as aforesaid. The above procedure is very simple but commentators, as is their way, have made matters complex by suggesting alternatives e.g. the loose leaf ledger.

The English Act (vide Section 436) lays down that any register... minute book... required by this Act to be kept by a company may be kept by making entries in bound books or by recording the matter in question in any other manner. (2) where any such register... minute book... is not kept by making entries in a bound book but by other means, adequate precautions shall be taken for guarding against falsification and facilitating its discovery.

As regards the alternative procedure mentioned above, Mr W. F. Talbot writes "some companies keep their minutes on the loose leaf principle and if proper safeguards are provided, there is nothing against this practice. The modern loose leaf minute book is provided with a locking device which keeps the leaves fastened in the binder and can be opened only by means of a key. The key should be kept by the secretary... Other precautions which should be taken are to number each page and each minute consecutively throughout the book and each page should be signed by the chairman" (a procedure required under the Indian Act also).

When all is said and done, it will be recognised by all save

those enamoured with new fangled ideas merely by reason of their novelty that recording in bound book, with its pages machine-numbered is the safest and best method.

NEWS IN BRIEF

MONTECATINI, one of the large companies in Italy specialising in dyestuffs, aluminium, petrochemicals and synthetic fibres, has made an offer to the Government of India to participate in a "bi-way" in the development of base industries in the country. The company has expressed its readiness to offer financial participation up to about Rs 30 crores in the form of supplying equipment and technical know-how in the erection and operation of plant. Mr P. Giustiniani, Managing Director of the company, has been asked by the Government to prepare a concrete programme of industries in which his company was prepared to build.

The All-India first estimate of area under jute and mesta cultivation for 1961-62 puts the acreage at 2,536,000 as against the corresponding estimate of 2,140,000 in the previous year according to the fortnightly bulletin of the Jute Balers' Association, Calcutta. Of this the acreage under jute will be 1,836,000 and mesta 700,000 which indicates an increase of 231,000 acres under jute and 165,000 acres under mesta.

An agricultural implement manufacturing unit at an estimated cost of Rs 1.95 crores will be established in Bhubaneswar. Another such plant is likely to be established in Sambalpur in the near future.

An agreement providing a loan of \$20 million (Rs 9.5 crores) to India for the import of non-ferrous metals was signed by M. L. K. Jha, Secretary for Economic Affairs and Prof Galbraith, the US ambassador. The loan will be channelled through the DLF and is repayable in rupees. The loan will help in making full use of additional industrial capacities created in India in recent years and will be utilised in the US for the procurement of aluminium, copper and zinc.

The Government of India has reduced the stamp duty charged for the transfer of shares to the banks or their nominees as security against advances guaranteed by these institutions to Rs 7.50. The concession will also apply in case of instruments of re-transfers of shares executed by banking institutions or their nominees in favour of the person by whom or by whose predecessors the interest in such shares were transferred.

4 November 1961

The Government of Madras has entered into a contract with Russia for the purchase of 21 Russian tractors with bulldozers. Five tractors with bulldozers have already arrived at the Madras port.

The Northern Zone of the Geological Survey of India has estimated the reserves of gypsum in Nagpur at 800 million tons. According to the latest findings of the Survey the deposit of gypsum in Nagpur is the largest in the country.

The Government of India has decided to allow the export of 350,000 tons of bauxite annually for the next two years from now. Exports will be allowed irrespective of the origin of the bauxite. The exporters are advised not to enter into any commitments beyond this period of two years.

Thirty tons of finished steel products have been exported to Pakistan from Bhilai. This is the first export of finished steel made from Bhilai as so far only billets and pig iron were being exported from Bhilai.

The Mineral Development Corporation has prepared two project reports for the exploitation of diamond deposits of Ramkhera and Majhgawan areas in Panna District of MP. The Department proposes to undertake large-scale mapping with pitting, trenching, drilling, sampling, and washing for diamonds in the diamondiferous belts in Kurnool, Mahaboobnagar, Nalgonda, Guntur, Krishna and Anantapur districts during the Third Plan period.

The Union Government has sanctioned a loan of Rs 22.22 lakhs to the Maharashtra Government for financing expenditure on the Koyna Hydroelectric project for the second quarter of 1961-62. The total loan sanctioned since 1954-55 to the State amounts to Rs 28.71 crores.

The State owned Indian Oil Company has entered into an agreement with the USSR for the import of 50,000 tonnes of furnace oil from Russia. The first consignment of 10,000 tonnes is expected to arrive in India by the end of November or early December.

Following the recommendations of the Tariff Commission the Government of India has allowed an increase of Rs 13 per ton in the selling price of cement. The revised price of cement will be Rs 135.60 per ton of packed cement thus resulting in an increase of 85 nP per bag. The Commission had, however, recommended an increase of Rs 16 per

ton. The Government has also decided to continue the present arrangements for internal distribution of cement by the State Trading Corporation. The new price policy will be in force until 31 March 1966.

Twelve hundred tons of coal tar pitch have been despatched from Bhilai for export to South Korea. Another 1,800 tons of pitch are also expected to be despatched to South Korea next month. Two hundred tons of pressed naphthalene have also been despatched from Bhilai for export. The coal tar pitch and naphthalene are bye-products recovered from the coke-oven gases in the Steel Works and these products are being exported from Bhilai for the first time.

The annual general meeting of the Associated Chambers of Commerce of India will be held on the morning of Saturday, 2 December 1961 in the Royal Exchange, Calcutta. The Prime Minister, Mr Jawaharlal Nehru, will be the Chief Guest and will address the meeting.

PERSONAL

Sir Matthew Slattery, the Chairman of the BOAC, arrived in Calcutta on Tuesday on a two-day visit to India. During his short stay in the country Sir Slattery will also visit Madras, Bombay and Delhi and will hold discussions with the senior officials of the Civil Aviation Department.

Mr Sadath Ali Khan, Parliamentary Secretary to the Prime Minister, has been appointed ambassador of India to Iraq.

Mr K. N. Modi, has been re-elected President of the Western UP Chamber of Commerce for the third time at the Chamber's annual general meeting held at Meerut on 20 October.

Mrs Tarakeshwari Sinha, Union Deputy Finance Minister, will lead the Indian delegation to Colombo Plan Consultative Committee, which will meet at Kuala Lumpur in November.

Diwali Greetings

Reserve Bank Study

[A Short Editorial Comment on this study appeared in last week's issue].

An article published in the September 1961 issue of the Reserve Bank of India Bulletin reviews the finances of 1001 large and medium-sized non-Government public limited companies for the year ended 30 June 1960 (referred to throughout the study as 1959) with comparable data for the preceding four years. This study, like the earlier ones published in this Bulletin, does not cover banking, insurance and investment companies, government companies (as defined in Section 617 of the Companies Act, 1956), companies and associations functioning not for profit and companies limited by guarantee. The 1001 companies included in this study account for 77 per cent of the paid-up capital of all companies in the sectors covered. The broad inferences drawn by the study are that there have been (i) a further slackening of the pace of industrial growth in 1959, as reflected in a smaller assets formation relatively to previous years, and (ii) a substantial increase in corporate sales and profits. The predominant position of internal sources in the financing of assets formation has also been inferred from the facts assembled.

INCOME AND EXPENDITURE

In 1959, sales of the 1001 companies registered a substantial rise of Rs 170.5 crores or by 9.3 per cent to Rs 2002.2 crores as compared to a rise of Rs 94.4 crores or 5.4 per cent in 1958. More than half of the rise in sales was accounted for by the iron and steel, cotton textiles and engineering industries.

On the expenditure side, all the main items showed increases. Manufacturing expenses were higher by Rs 65.9 crores or 6.5 per cent; during 1958, these had declined by Rs 16.1 crores, or 1.6 per cent. Salaries and wages rose by Rs 24.2 crores or 8.4 per cent, excise duty by Rs 9.9 crores or 6.7 per cent and managing agents' remuneration by Rs 2.1 crores or 23.5 per cent.

PROFITS AND THEIR ALLOCATION

The larger sales in 1959 were reflected in a substantial rise in corporate profits. Profits before tax of the 1001 companies which had dropped from Rs 130.9 crores in 1956 to Rs 107.8 crores in 1957, and had recovered to Rs 120.9 crores in 1958, showed a marked rise in 1959 to Rs 161.5 crores—a rise of Rs 40.6 crores or 33.5 per cent. Most of the important industries registered a rise in profits, the largest increase being in cotton textiles, its profits in-

creasing from Rs 7.0 crores in 1958 to Rs 19.3 crores in 1959. In contrast to the general trend, profits of the shipping industry fell sharply from Rs 2.8 crores in 1958 to a mere Rs 43 lakhs in 1959.

In view of the changes in corporate taxation introduced by the Finance Act, 1959, figures in respect of tax provision, profits after tax, dividends and the rates of dividend for 1959 or 1958 are not comparable with those for the earlier years. In 1959, provision for taxation increased by Rs 3.2 crores to Rs 59.1 crores. Profits after tax were higher at Rs 102.4 crores; in 1958, these had amounted to Rs 65.0 crores. The amount set aside for dividends in 1959 was Rs 64.1 crores; it had amounted to Rs 46.9 crores in 1958. The large increase in profits enabled companies to record a substantial increase in retained profits which more than doubled from Rs 18.1 crores to Rs 38.3 crores.

The profitability of equity capital as measured by the ratio of profits after tax to net worth worked out to 10.5 per cent in 1959. The average rate of dividend on ordinary shares in 1959 was 11.8 per cent, while the ratio of dividends to net worth worked out to 6.6 per cent.

SOURCES AND USES OF FUNDS

Total gross assets formation in 1959 was smaller at Rs 157.4

crores, as compared to Rs 166.6 crores in 1958. In 1956, it was Rs 263.8 crores. Gross fixed assets showed a smaller rise of Rs 107 crores or 7.5 per cent in 1959, as against Rs 148 crores or 11.8 per cent in 1958, and Rs 177 crores or 16.5 per cent in 1957. The smaller rise reflected partly the impact of the drastic import curbs and partly the virtual completion of the investment programmes in some industries under the Second Five-Year Plan. Inventory accumulation, on the other hand, showed an improvement from Rs 5 crores in 1958 to Rs 15 crores in 1959; the rate of increase worked out to 2.7 per cent, as compared to 9.9 per cent in 1958 and 10.2 per cent in 1957.

Gross capital formation, comprising fixed assets and inventories, amounted to Rs 123 crores in 1959, as compared to Rs 153 crores in 1958 and Rs 229 crores in 1957. The study estimates gross capital formation for the entire public limited companies sector at Rs 159 crores in 1959, of which gross fixed assets would amount to Rs 139 crores and inventories to Rs 20 crores. For the four years 1956-59, which would broadly correspond to the first four years of the Second Five-Year Plan, gross capital formation in the entire public limited companies sector may be put at Rs 952 crores, of which gross fixed assets would account for Rs 739 crores.

A significant feature of the pattern of finances in 1959 was the predominant position of internal sources, which accounted for Rs 98.7 crores or 63 per cent of total funds, as against 48 per

cent in 1958 and 28 per cent in 1957. Depreciation reserves continued to be the most important internal source, forming 35.3 per cent of total funds. External sources provided Rs 58.7 crores or 37 per cent of total funds as compared to 52 per cent in 1958 and 72 per cent in 1957. Among external sources, borrowings showed a substantial decline from Rs 104.4 crores in 1957 to Rs 43.5 crores in 1958 and only Rs 5.7 crores in 1959. Borrowings from banks actually showed a net repayment of Rs 3.6 crores in 1959, as against a net borrowing of Rs 10.6 crores in 1958. During the four years 1956-59 together, total financing amounted to Rs 830 crores, of which external sources accounted for Rs 485 crores or 58.5 per cent.

New issues of shares and debentures in 1959 amounted to Rs 32.4 crores, as against Rs 27.8 crores in 1958.

ASSETS AND LIABILITIES

Total gross assets of the 1001 companies in 1959 amounted to Rs 2666 crores and net assets to Rs 2072 crores, as compared to Rs 2511 crores and Rs 1973 crores, respectively, in 1958.

The liquidity position of companies recorded some improvement in 1959, the ratio of current assets to current liabilities was slightly higher at 1.27 as against 1.26 in 1958, although lower than 1.48 in 1955. The percentage of current assets to net total assets, however, declined slightly from 53.9 in 1958 to 53.5; it stood at 59.7 in 1955.

The principal indicators of the growth of 1001 companies are shown in the Table below:

GROWTH OF THE COMPANY SECTOR
(1001 Public Limited Companies)
(Amounts in Crores of Rupees)

	1955	1956	1957	1958	1959	Percentage Increase (+) or Decrease (—) of				
						1956 over 1955	1957 over 1956	1958 over 1957	1959 over 1958	1959 over 1955
Paid-up capital plus free reserves (net worth) at the end of the year	747	818	868	912	976	9.5	8.1	5.0	7.0	30.6
Gross fixed assets at the end of the year	939	1076	1253	1401	1505	14.6	16.5	11.8	7.5	60.3
Net fixed assets at the end of the year	535	635	766	862	912	18.7	20.7	12.6	5.7	70.5
Inventory at the end of the year	421	512	565	570	585	21.7	10.2	0.9	2.7	39.0
Total assets (net) at the end of the year	1434	1661	1857	1973	2072	15.8	11.8	6.2	5.0	44.5
Total income during the year	1624	1859	2040	2126	2293	14.4	9.7	4.3	7.8	41.2
Sales (main income) during the year	1407	1586	1737	1832	2002	12.7	9.5	5.4	9.3	42.3

Dividends as percentage of paid-up capital (ordinary shares)	8.9	9.4	8.7	9.0	11.8					

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

I AM not particularly squeamish nor am I a great admirer of Stalin. But I find this grisly business of removing his coffin from the mausoleum in the Red Square more than ordinarily sick-making. The dead, even those we consider best dead, are entitled to certain elementary decencies and one of them is the privacy of the grave. This kind of post-mortem-getting-even is both cowardly and ghoulish. I suspect that some principle of tribal desecration is involved in this final indignity. You must not only pull down the idol but foul it in order to destroy the God-head. I cannot help feeling that Khrushchev and his followers are secretly embarrassed by their own acquiescence, during Stalin's lifetime, in the tyranny they so violently denigrate now. They are therefore feeling that arguments, persuasive as far as they go, will not be enough: Stalin must be formally and ceremonially disgraced. He should be dislodged from what the Ukrainian delegate described as the "sanctuary of the Soviet people and of all the workers of the world." With this gesture of ultimate exorcism the spell will be broken. And if as reported, the remains may be cremated and the ashes scattered, the catharsis will probably be complete. Alas, poor Yorrick: "Where be your jibes—"Nikita, do 'the Gopak'—now?"

Of course, Khrushchev may have had another reason for making Stalin's grave suddenly unquiet: it may be his way of telling Mao and Chou where they get off. The wreath that Chou ostentatiously laid to "Stalin, the great Marxist-Leninist" has, according to reports, been removed as a prelude to the removal of the coffin itself. Chou can now draw his own conclusions. And yet, it seems to me that Khrushchev is carrying to needless lengths his feud with Stalin and Mao. Death cancels all debts and it should not be too difficult to live in peaceful co-existence with Stalin's embalmed remains.

What further developments does this removal portend? In a country where history has a quick obsolescence we may probably see the very memory of Stalin erased pretty completely. Generations to come may conceivably not know from Russian sources that a man named Stalin ever walked on this earth, unless, of course, they deliberately decide to keep him

alive as a bogey-man. I can see Stalin passing quite easily into the demonology of Soviet tiny tots. I remember reading some years ago in a book on Soviet children that the ultimate in their execration of parental unreasonableness was: "You are a Wall Street father." Stalin—who is after all a father-figure gone sour—will in all probability take the place of the Wall Street parent in the mythopoeisis of the children of the Soviet millennium scheduled to start circa 1980.

It is a pity that Britain should be thinking in terms of restricting immigration from Commonwealth countries. Particularly unfortunate are the discriminatory overtones to the proposals. Apart from the violence they do to Britain's great traditions of hospitality, this making aliens of Commonwealth citizens would pull down one of the basic psychological props to the idea of the Commonwealth. Of course, Britain can quote Commonwealth examples of the sort of means tests and educational criteria it is now seeking to impose, but then it would be a case of following a bad example instead of setting a good one as it has so far been doing. Reciprocal inhospitality would be easy but I would urge strongly against it. It is possible, for example, for us to insist on assurance of employment from Indian nationals as a pre-condition of admission of British nationals in the country and create awkwardnesses of various sorts. Maybe in many cases it may hurt us more than it will to hurt them, but a desire to retaliate does not reckon too nicely these consequences. But it is not on this ground that I urge moderation. I would first ask for a little exercise in sympathy. Apart from the lunatic fringe in the Conservative Party and the more xenophobic among the working classes, no Englishman is really happy about these proposals. In the last few years West Indian immigration on a large scale has posed problems of adjustments and there has been trouble in industrial towns. Secondly, since the objection is mainly to unskilled and cheap labour, our own self-esteem should make us welcome the restrictions. Incidents like the passport racket that proved a major scandal last year really do little credit to us. Our own attitude has been consistently one of reluctance to let our people go

elsewhere because they find the country too indifferent to their needs. Therefore while it does great credit to Englishmen that many consider the restrictions very un-British, I would urge that it would be un-Indian to be either too bitter about these restrictions or to think of retaliatory restrictions. After all, many like the late Hilton Brown paid us the compliment of thinking of India as the best place in the world to live in. I should hate to think that we would ever make such men feel that they are unwelcome here.

Governors who met in New Delhi recently did not seem, according to reports, overly happy with their Constitutional ineffectualness. Opportunities for a personal sense of political fulfilment are somewhat meagre for a Governor under the Indian Constitution and in this he notably differs from his American opposite number, to whom the office of a Governor is often a political jumping board and not a dead-end. The Governor of New York or California has many a political prize dangling in front of him whereas in India the tendency has been to frown upon any ex-Governor seeking a fresh lease of political life. With the real power vested in the Chief Minister, who often is a key-man in the party, opportunities for a Governor are not very many. Ambitious men thus clear steer of the office of the Governor and the rather unfortunate habit of accommodating in Raj Bhavans those whom the voters have rejected has not added lustre to the office. During the discussion in the Constituent Assembly, the idea of making the Governor's an elected office was canvassed but was wisely rejected. Governors have some responsibilities under the Constitution for the safeguarding of minorities and so forth, but in practice these don't add up to much, especially when political expediency interferes with right action. Even in an emergency, a Governor has to act under Presidential directions and has to be guided by the advice of officials sent to replace the ministry. For the rest, a Governor's influence is in proportion to his own greatness, provided he has no overtly political ambitions. A person with independent claims to greatness like the Maharaja of Mysore—incidentally the only Maharaja, apart from the Sagar-i-Riyasat of Jammu and Kashmir, who stands in a class apart, who has continued in his earlier vocation—commands universal respect. It has always seemed to be somewhat odd that we should have not made more extensive use of

the ex-rulers for the office of the Governor. They have the right background for a largely ceremonial office like that of a Governor. Indeed in the years after independence many of them acquitted themselves very well as Rajpramukhs and even as Governors of the former British Indian provinces. Some princes went into the diplomatic service, where, as in the eighteenth and nineteenth century England, a private income came in handy. Since then, there has been a great change. One suspects a certain deliberateness in the policy that has put all but one of the former rulers out of their wonted duties. Perhaps some lingering prejudice of pre-independence days is responsible for this state of affairs. This is a great pity. Moreover, the policy has boomeranged with princes contesting the elections. Others have gone into business. But there must be quite a few who have no vocation for either politics or business. It would be a sensible idea to make extensive use of this source of talent for gubernatorial duties after the general elections.

Singam Iyengar, as he was familiarly known, came to Calcutta, if I remember right, in the late nineteen twenties. But he and father had known each other long before that. It was around 1921 or so, when Singam Iyengar, hearing of the great influence that a South Indian broker was wielding in Bombay, hid himself to the Gateway City, and made his way to father's flat; who was not in, but returned home shortly thereafter. Singam Iyengar greeted father as the old friend he was, exchanged pleasantries and then wondered whether Rangaswami—the South Indian junior partner in Batlivala and Karani—could find a job for both of them. And Singam Iyengar was properly flabbergasted to learn that father it was who was the Rangaswami in question. Years later, Singam Iyengar joined Indian Finance and soon afterwards betook himself to Capital. He had a flair for writing, his output was voluminous and perhaps this was assisted by his voracious reading. Hardly an evening passed without his visiting Oxford Book's lending library, and though his tastes were catholic it was the detective story that fascinated him. Early in the last decade, after about a quarter century of work in Calcutta, Singam Iyengar retired, continuing to be an occasional Madras correspondent of Capital. He typified the working journalist, not, it is true, the reporting type, but one who had the capacity to write tersely and effectively on almost any Indian topic. Ours was a long and enduring friendship, and so it is with sorrow that I report herein that Singam Iyengar last week shed his mortal coils.

ADVISORY COUNCIL Useful Discussions

The tiresome controversy of public sector versus private sector was at last laid to rest at the recent meeting of the Advisory Council for Industries. The Council listened with approval to Sir A. Ramaswami Mudaliar's remarks on the essential role of the public sector, but everyone did not agree with his suggestion that the working results of the public enterprises should not be judged by the same standards as those in the private sector; and for the very good reason that, by and large, the public sector operates in areas in which private enterprise was not interested, because costs of development were too high, gestation periods too long and prospects of profit uncertain. Mr Singhania, for instance, pointed out that there was no reason why public undertakings which directly compete with private enterprises in the same industry should be judged by a less severe standard.

But no sooner was the old controversy buried than a new one sprang up in its place. The debate continued about the allocation of scarce resources of foreign exchange over the respective needs of 'maintenance' and 'development'. Dr Lokanathan, who made out a well-reasoned case or according priority to maintenance imports, returned to the charge, this time with the powerful support of Mr G. L. Mehta. Mr Mehta felt that here was substantial unutilised

capacity and suggested that a working party should be set up to make an inventory of potential capacity which remains unutilised. The Minister for Industry, however, maintained that every thing possible was being done to ensure maximum utilisation of capacity and he did not agree that there was any substantial capacity remaining unutilised, at least in the sector of organised industries. No spokesmen of industry had so far complained of unutilised capacity and all industries borne on the books of the Development Wing had reported increased production as compared to the previous year.

There are reasons to think that the problem of unutilised capacity relates not so much to the organised sector as to the field of small industries. Government has a special responsibility for the small scale sector which has been developed as a matter of deliberate policy. The least they could do is to call a halt to new expansion of capacity in the case of products for which there is unutilised capacity in the small scale sector. In this context, Dr Lokanathan's observation that foreign exchange will be available to pay for maintenance imports required by small industries is of considerable interest and the possibilities in that direction should be examined without delay.

The inadequate utilisation of existing capacity in the Transport Industry was highlighted by an interesting speech by Mr T. S. Krishna. In this field there is no problem of foreign exchange, but a solution does not appear to be easier for that reason. The under-utilisation arises mainly from the numerous, vexatious restrictions imposed by State Governments in regard to payload, routes, mileage etc. Apart from the burden of taxation, which is the heaviest in the world, road transport industry is hampered by unreasonable restrictions of the payload that road vehicles are permitted to carry. Vehicles which can easily carry 7.5 tons, are allowed to carry only 4 tons, with the result that fuel is burnt to no purpose. Mr Krishna has also pointed out that the transport capacity of existing vehicles could be doubled without significant extra cost if truck-trailer combinations are permitted. There will be hardly any additional running cost if a truck hauls a trailer carrying an extra 6 tons. (But State Government regulations stand in the way. If truck-trailer combinations are allowed, road transport could carry more of low-rated traffic and at no greater cost than if goods were hauled by rail.

Another difficulty hampering road transport operators is the comparative lack of credit facilities. Unlike operators are not in a position to get credit from commercial banks, or

other industries, road transport from credit institutions set up by the State, against the security of their productive equipment. The only credit available to road hauliers is that extended by suppliers of vehicles under hire purchase schemes. Even this source of credit will be closed if the proposed legislation for regulating hire purchase is enacted into law. The Bill seeks to restrict the right of the supplier to regain possession of the goods supplied under hire purchase to a customer who has defaulted in payment of the instalments. The Bill is no doubt intended to deal with sharp practices indulged in by some unscrupulous dealers in consumer durables. But it is bound to make it almost impossible for transport operators to purchase vehicles on the instalment basis. The repercussions are bound to be extensive. In this context Mr Krishna has also pointed out that an investment of over Rs 90 crores will be required for lifting the targetted production of 60,000 commercial vehicles under the Third Plan. Where is the money to come from if the transport industry is shut out of all sources of credit? It appears that Government at the Centre as well as in the States are yet to realise the seriousness of the handicaps under which the road transport industry has to operate and which raise doubts whether the target of 20 per cent of the total goods traffic assigned to roads will be achieved in practice until they are mitigated.

The discussions of the Council achieved signal success in focussing attention on the serious shortages of transport, of power and of special grades of steel which threaten the achievement of Plan targets. The urgency of the problem in regard to both power and transport, particularly of coal, was highlighted both by Mr Thapar, President of the Federation, and by Mr Stenhouse of the Associated Chambers. In a speech packed with facts and figures, Mr K. K. Birla estimated that the shortage of power that is likely to develop would be of the order of three million kilowatts. Dr Vikram Sarabhai, Mr Charat Ram, Mr D. C. Kothari, Mr Kiroloskar, Mr N. D. Sahukar and Mr Vasavada of INTUC made useful contributions to the discussion.

It may not be quite correct to say that Government are unaware of the difficult situation in respect of both power and transport, but their estimates which are necessarily related to the overall requirements of the Plan will not satisfy those who are directly hit by these shortages. In a hard-hitting speech, Mr Karnail Singh, Chairman of the Railway Board, gave emphatic expression to his conviction that, with proper co-ordination and co-operation, it should be possible to provide adequate capacity to carry the additional traffic likely to develop during the Plan. He was also equally emphatic that the coal dumps scheme, which Mr Stenhouse said was impractical, has to be pushed through if the Railways were to carry the 100 million tons which they were expected to do in 1966.

As regards Power, the view of the Planning Commission, as explained

by its spokesman Mr T. N. Singh, appears to be that the revised target of 13.4 million kilowatts would be adequate. The continuing shortage which came to a head towards the end of the Second Plan, he pointed out, was the result, not of any failure in planning as had been suggested, but of shortfall in implementation caused by foreign exchange shortage. The position would not have been so bad if power projects had not been relegated to the category of non-core projects when the Plan was reappraised in 1957. He was confident that such a debacle would not be repeated, but he was not prepared to accept the suggestion made by Sir A. Ramaswami Mudaliar, and endorsed by several other speakers, that industries in the private sector should be allowed to establish power plants for their own use either individually or on a cooperative basis. This certainly would relieve the strain on the public sector projects. It is difficult to see what objection there could be to the proposal especially if the requisite resources could be provided through foreign collaboration without affecting the quantum of aid earmarked for the Plan.

Close on the heels of its annual conference the National Productivity Council has organised a Seminar on the Utilisation of Human Resources in Industry, which was inaugurated last Wednesday by Dr C. D. Deshmukh. It is easy to be sarcastic about the utility of seminars. And, as Dr Deshmukh pointed out, the NPC has already organised 169 seminars and symposia spread all over the country. But seminars, the Chairman of the Governing body of the NPC, Dr Lokanathan said, have their own place in the productivity movement. The fact that 100 representatives of industry have set aside other business to participate in the seminar, is ample confirmation that they serve some useful purpose.

The current series of seminars, said Dr Lokanathan, was the second that the NPC was organising with the participation of US experts. The seminar which began on November 1, in Delhi will be continued in Bombay, Calcutta and Madras. To lead the discussions the NPC has secured the services of American Experts through the courtesy of the Technical Co-operation Mission of the US Government. These include Mr Saul M. Silverstein, President, Rogers Corporation, Mr John D. Foster, Director of Personnel, The Port of New York Authority, Mr Water J. Burke, District Director of the United Steel Workers of America and Mr Richard Humphreys, Education and Research Director of the Allied Industrial Workers Union.

Mr Silverstein who addressed the inaugural session emphasised that productivity was 'number one function of management' and that adequate attention to marketing was necessary for maintaining high level of productivity. His companion Mr Burke traced the evolution of the American Labour movement to show how attention to human relations could soften the rigors of industrial disputes and clear the way for a co-operative approach of management and labour to problems of productivity.

JUTE

2½ per cent Looms to be Unsealed

The decision of the Indian Jute Mills Association announced on Wednesday to unseal 2½ out of the 12½ per cent looms now remaining sealed with effect from 13 November comes as no surprise as it had been generally expected that early steps would be taken progressively to raise mill output. In the course of the last one or two months the voluntary restrictions on the production of the industry have been lifted, mainly because of the considerable improvement in the raw jute supply position this season. From 42½ hours a week, mills working hours have been progressively increased to the present level of 48 hours. Similarly, the percentage of sealed looms with mills which at one time had reached a level of 17½ has now been brought down to 12½ and from the 13th of this month such percentage will further be reduced to 10.

The news of an increase in the percentage of looms in commission from the middle of this month will go to lessen the pressure that is now encountered in ready and near delivery goods. Overseas consumers had been hesitant so far to extend commitments because they expected they would be able to get their requirements at a lower price in view of the bumper jute crop. Their expect-

ation that with the decline in raw jute prices, goods prices would be marked down has been fulfilled to a large extent. Even so, it would appear that foreign buyers are still influenced by the fact that raw jute supply this year will be quite adequate if not considerably in surplus. The general tendency appears to be to take only immediate requirements in the hope of a further decline in prices.

It is idle to expect any further sizable fall in raw jute prices. It is true that the market trend is rather quiet and raw jute prices have declined somewhat during the past week. One has, however, to consider the persistent demand on behalf of the jute cultivators for the immediate inauguration of the buffer stock authority. The IJMA has noted this week that the constitution of the Jute Buffer Stock Association is virtually finalised and application will shortly be made for its registration. But it also notes that it is not expected that jute buffer stock purchases on any significant scale, if at all, will be required in the current season. This reasoning is evidently based on the calculation that with the progressive increase in mill production, demand for raw jute will so increase as to absorb this season's crop.

The jute market opened the week on a firm note, but with the higher levels bringing out mills as sellers in the ready and near delivery posi-

Ready Raw Jute:			
Assam Bottoms	33.00	33.50	32.00
Northern Bottoms	33.00	33.50	32.00
Dalsee	35.50	35.50	34.50
Futures:			
Hessian—November	49.70	50.12	48.52
Sacking—November	137.85	138.25	132.58
Raw Jute—December	33.52	33.70	31.96

tions, rates for these declined. A significant feature of mill selling was that it was mainly confined to the ready and near delivery positions evidently because of the big price differential between forward and near deliveries. At close last Thursday B Twills Ready was quoted at Rs 143.50 with the November position at Rs 140.50. At the same time the December and January-March deliveries were quoted at Rs 133.40 and Rs 128.40 respectively. A steady trend, however, soon returned to the market mainly because of the continued interest in the ready and near delivery positions partly because of due date considerations. The firm trend continued on Monday and Tuesday, but that applied only to the ready and near delivery positions. The forward positions were easier in sympathy with the futures market. Although there was covering business throughout the week under review in the near positions, closing prices on Thursday were below the best levels of the week, as follows: B Twills Ready Rs 143.25, November Rs 138.25; Hessian 40" x 10 oz Ready Rs 53.00 and November Rs 50.00.

The raw jute market maintained a steady trend in earlier dealings, but developed an easier trend in later dealings. Even the news of the unsealing of 2½ per cent looms failed to arrest the downtrend. Assam Bottoms closed on Thursday at Rs 31.50 per maund as against Rs 33 per maund a week ago.

TEA

Fair Demand, But Easier Trend

IN the Export Sale held in Calcutta this week, offerings were 73,019 packages. There was a good general demand; but plain broken and fannings were up to 10 nP per kilo easier. Although medium and best orthodox descriptions were well supported, prices were irregular. Best CTC descriptions were up to 30 nP easier, while there was an improved enquiry for the poorer and fibrous kinds, which were generally firm to dearer. Legg-cut descriptions were up to 20 nP easier.

Darjeelings were irregular and cheaper. Whole Leaf varieties were sold well; but the more stylish kinds were easier. There was less demand for Tippy teas and there were some withdrawals. Following rates were quoted:—Clean Plain BP Rs 4.40 to Rs 4.60; Plain BP Rs 4.10 to Rs 4.30; Plain Fannings Rs 3.90 to Rs 4.15; Medium Assam CTC BP Rs 4.70 to Rs 5.20; Medium Assam CTC Fannings Rs 4.60 to Rs 5.00; Best Assam CTC BP Rs 5.30 to Rs 5.60 and Best Assam CTC Fannings Rs 5.20 to Rs 5.60.

According to tea sources, arrivals of tea in the Port of Calcutta were higher at 786,661 chests in September as compared to 554,902 chests in the corresponding month

of last year. This put the total arrivals, in the six months ended September 1961, higher at 2,293,798 chests as compared to 1,789,208 chests in the corresponding period of last year.

Movement of tea by all routes, during the April/September 1961 period, showed an increase with arrivals by river amounting to 1,382,938 chests; by rail to 640,291 chests; by road to 197,545 chests and by air to 73,024 chests against 1,121,710 chests; 501,468 chests; 99,721 chests and 66,309 chests respectively in the six months ended September last year.

With 48.64 million pounds in September, total exports of tea from North-East India in the first nine months of the current year have increased sharply to 223.5 million pounds from 152.8 million pounds in the corresponding period of last year. Exports to the UK—the biggest buyer of North-East Indian tea—rose from 88.01 million pounds in January/September 1960 to Rs 133.22 million pounds in the period under review. Shipments to the UAR also increased from 18.12 million to 19.72 million pounds as did those to the USSR and the USA from 5.93 million and 8.01 million to 11.08 million and 10.55 million pounds respectively.

In the Cochin market, a quantity of 248,000 kilogrammes of Dusts was offered for internal consumption. There was less demand at easier rates. All mediums showed a decline of 20 nP to 30 nP a kilo and there were a number of withdrawals. High-grown noted fair demand; but were irregular and often easier. Residuals were sold well at slightly easier rates. CTC types were up to 15 nP a kilo easier.

In the Colombo market, offerings totalled 7,355,299 pounds. These met with good general demand. Better liquoring Dimbula/Dickoya BOPs declined by about 5 to 10 cents per pound and poorer sorts by 10 to 20 cents. Corresponding BOP Fannings were, however, firm. Medium broken were in slightly less demand at a decline of 3 to 8 cents. Uva teas were irregular; but generally lower following quality. Black leaf low-grown teas declined by 5 to 10 cents; but "teas for price" were fully firm.

In London auction, offerings were 20,819 packages including 19,445 packages from Northern India. A good demand was again in evidence for all Assam and coloury legg-cut Doors. For thin liquoring orthodox teas, the market showed some irregularity and prices in most cases showed a fall of about 1d per pound. Rates remained unchanged.

Production of tea in Pakistan has increased to 9.0 million pounds in September from 7.3 million pounds in the corresponding month of 1960. This puts the total tea output, in the first nine months of the current year, higher at 41

million pounds as compared to 24.9 million pounds in the similar 1960 period.

In the last week's issue, it was mentioned in these columns that "production of tea in Pakistan, during the 1961-62 period is estimated at 590 million as against 420 million pounds in 1960-61". This should read as "59 million pounds as against 42 million pounds in 1960-61".

COTTON Futures Firm

The cotton futures market during the past week emerged buoyant and firm thanks to the combination of various factors. The post mid-week trading resulted in a sudden turn in sentiment and Jarilla contract spurted to Rs 637.27 and indicated gains of about Rs 12.50 over the previous level. The irregular and narrow fluctuations during the commencement of the week cast a depressing spell on the market and it was at one time feared that the mild setback that occurred during the previous week might be extended further. Naturally enough the traders resorted to cautious short selling. But gradually the hesitant tone slipped away due to factors like the delay in crop movement, firm spot advices from local and terminal centres and the sudden spurt in groundnut futures. Fresh speculative support from some of the upcountry centres also fanned the enthusiasm. The market appeared to have taken no note of the discouraging advices from the piecegoods market and the possible intervention of the Forward Markets Commission. On Tuesday last the contract was quoted at Rs 636.25.

The authorities are perturbed at the rising trend in the prices of cotton particularly at a time when the supply position is considered quite comfortable. The total production of cotton during the current season is estimated at about 4.8 million bales. The carryover will be around 2.0 million bales. Moreover, the Government of India has already announced the import programme for approximately 1.2 million tons. Viewed against this background the present spurt in prices is thoroughly unwarranted.

The report of 1.9 per cent reduction in the cotton acreage in the USA for 1962 cast a gloomy spell on the mills. Crop reports that emanated from other cotton growing countries were also equally distressing.

A broadening of mill interest was noticeable in the spot market at Sewri for a new crops like Digvijay, Khandesh, 320F and 197/3. Spinners' interest in these varieties were pronounced presumably due to the satisfactory quality of the first arrivals particularly from Pachora and Dhulia stations. The prices of these growths tended to ride around the ceiling levels. Old crops like Kalyan, Laxmi, and L147 also met with regular mill interest. An upward trend in prices of Bengal Deshi was visible, deriving inspiration from the increased demand from overseas purchasers. In the import section

African cotton and Sudan grades attracted good spinner demand.

Total consumption of cotton by the mills in India from 1 September, 1960 to 31 July, 1961 amounted to 4,890,578 bales of 180 kilograms as against 4,671,721 bales in the corresponding period in 1959-60. Full description is provided below:

Description	1959-60	1960-61
Indian	4,086,407	3,852,725
Pakistan	19,028	16,770
American	165,677	613,396
Egyptian	128,171	108,140
Sudan	116,477	109,960
East African	139,814	156,553
Others	16,147	32,034
Total	4,671,721	4,890,578

Imports of cotton from foreign countries into India from 1 September to 14 October aggregated 290,438 bales in contrast to 231,079 bales in the same period in the previous year:

Description	1960	1961
American	154,586	226,017
Sudan	22,290	20,772
Egyptian	9,805	7,601
East African	38,257	31,900
Pakistan	853	...
Others	5,288	4,148
Total	231,079	290,438

Exports of cotton from India to foreign countries during the same period totalled 21,295 bales as against 4,235 bales in the corresponding period in 1960:

UK	...	455
Continent	109	884
Hongkong	942	2,105
Japan	3,116	13,971
USA	...	3,730
Other Countries	68	150
Total	4,235	21,295

Piecegoods

The cotton piecegoods market during the week under review depicted sluggish conditions. The heavy accumulation of stock with the mills precipitated a subdued outlook in the domestic sector. The export section did not produce any worthwhile developments.

Stocks of cloth with the mills at the end of September reached a new level of 441,700 bales against 367,300 bales in August. The mills attempt to dispose of their stocks even at lower prices failed to attract buyers.

Moderate demand for seasonal goods like flannelettes, gadlapat, prints, coloured drills and certain varieties of coatings was reported. On the contrary, dhoties, sarees and voiles were completely deserted. In the export section brisk business with UK was done. Stray business with Sudan in grey goods were transacted. Singapore was satisfied with a small quantum of bleached longcloth. It is expected that the destination is likely to account more quants of printed and dyed voiles. Enquiries from Australia for sheet-

ings flowed on an encouraging level. Italy's fancy was directed toward poplin, heavy drill and canvass.

Break in Non-Ferrous Metal Prices

The prices of Non-Ferrous Metals in the country, especially of copper, zinc and lead, have suffered a sharp break over the last two months. The main reason for the fall in prices is the restricted demand due to the widespread floods in the country. Secondly, the October/March import policy has discounted the fears of a likely cut in the imports of non-ferrous metals. The third factor is the downward tendency in prices on the London, New York and Singapore markets. Above all, the decline in prices has been aided by imports through the State Trading Corporation.

Prices of Tin have, however, been showing a steadier tendency, being influenced by advices from abroad, especially from Singapore where prices are stated to be improving. Although reports that the General Services Administration of the US Government had announced its intention to sell 1,000 long tons of pig-tin to the highest bidder next month and to keep the offer open for bids until 8 November 1961 were certainly of a bearish import, sentiment on the Bombay market has not been affected adversely to a any measurable degree.

Price movements in Copper are confined to narrow limits. Long liquidation induced by easier advices from the ready section due to more arrivals from upcountry centres and a lack of consumer interest have caused a lowering of the values.

The announcement by the International Study Group on Lead and Zinc, which concluded its meetings last week that there would be no restrictions on the production of lead and that the cuts in the output of zinc would continue, has little effect on the market.

Meanwhile, the announcement of the Indo-US agreement, whereby the US has agreed to give a DLF loan of Rs 9.5 crores for the import of non-ferrous metals from that country, has not enthused the traders in Bombay. It is felt that the new arrangements will make the import of aluminium, copper and zinc costly, as the American prices are substantially higher than those prevailing in other exporting countries. Traders are, therefore, reluctant to welcome the new agreement even though it ensures their import quotas.

SUGAR

Despite good festival demand, Sugar markets have continued to rule quiet. Apart from the fact that the demand is generally slack, the release of 200,000 tons for internal sale and the news of the decision by the USA to cut the import quota of Indian sugar have contributed to the easier tendency in prices.

The Agriculture Department, Washington, has announced a reduction of 50,000 short tons in sugar that will be purchased from India in 1961. In all, there will be a cut of 100,000 short tons in sugar purchases by the USA from all foreign countries. Besides the cut of 50,000 tons from India, those from Brazil will be cut by 30,000 tons and those from China (Formosa) by 20,000 tons. The cut has come when all the 225,000 short tons (188,000 long tons) of sugar allotted to India for export to the USA for 1961 have already been sold to American buyers and the bulk of it has already been shipped.

As a matter of fact, the export division of the Indian Sugar Mills' Association has been compelled to suspend all sugar shipments from the four ports of Calcutta, Bombay, Kandla and Vishakapatnam. Since no further communication has so far reached the ISMA regarding any interim arrangement enabling despatch of the consignments awaiting shipments in ports, great anxiety prevails regarding the disposal of stocks. In the absence of warehouse facilities, the Association may eventually be forced to sell the stocks at the respective local markets incurring heavy loss, unless assurance of adjustment for the 1962 US quota permits resumption of shipments.

There are, however, expectations that the USA may allot a supplementary export quota to India this year. The Government of India has already taken up the cut in Indian sugar quota with the US Government through the US Embassy in New Delhi and also through the mission in Washington. It is, therefore, hoped that the cut will be restored soon and permission will be given to export sugar in anticipation of and against the next year's quota.

Under the recent Ordinance to regulate the production of sugar in view of the current heavy surplus, the Government of India has framed rules, which take effect from 1 November 1961. While the objective generally is to limit production during the 1961-62 season to 90 per cent of the level of production attained in 1960-61, the rules contain certain safeguards particularly in respect of some types of factories. These include new factories and factories with rather low production as well as factories which have licences for effecting substantial production in their working capacity.

As regards factories already established but which have no programme of expansion in 1961-62, the target is fixed at 90 per cent of their production in 1959-60 or 1960-61, whichever is higher. However, in the case of factory which during each of these two years produced less than 11,000 metric tons of sugar, the rules lay down that the quota shall not be less than the highest production from that unit either in 1959-60 or 1960-61. No quota shall be fixed in respect of a factory which produced less than even two-thirds of 11,000 metric tons in 1959-60 or 1960-61. In the case of factory with an output that exceeded 11,000 metric tons in either of these two years, the rules lay down that

the quota shall not be less than 11,000 tons.

Meanwhile, sugar prices in London have returned to their lowest post-war level following the news of the failure of the world sugar talks in Geneva. At the talks, Cuba seemed to have demanded a sharp increase in her export quota under the International Sugar Agreement at the expense of some other producers, because of the ban on imports of Cuban sugar by the US Government. The Soviet block support Cuba's claim; but other countries were only prepared to agree to part of the increase that Cuba was asking and the Conference ended in a deadlock.

Supplies of sugar hanging over the world market, therefore, remain in heavy surplus. Since the US ban on Cuban sugar was imposed, Russia and China have both bought large quantities from Cuba; but this has not solved the problem, particularly as some of the Soviet purchases have found their way back into the world market.

FOODGRAINS

Divergent trends were witnessed in the Hapur Foodgrains market. Wheat prices were steady at Rs 15 to Rs 15.25 a maund for the average quality and up to Rs 16.50 a maund for the superior quality. Rice prices, however, sought lower levels, as the new produce was reaching the market. Gram reared small gains due to firmer Punjab advices and better demand. The markets for Barley and Bejher ruled quiet in the absence of active demand. In the Pulses section, Peas were steady. Urad prices drifted lower owing to new crop arrivals.

RUBBER

According to the latest report, the progress so far made in the field of replanting rubber is far from satisfactory. With a view to making it more attractive to the growers, the Rubber Board has recently enhanced its replanting subsidy to Rs 1,000 per acre. The Board will also extend other concessions to those who are interested in replanting their uneconomic holdings, such as the supply of planting materials and manure at subsidized rates.

Ceylon and Malaya are making tremendous progress in replanting and the rubber-growing industry in these countries has now reached a stage in which it is in a position to compete with the synthetic rubber industry in the matter of price.

The suspension of the free market for Ceylon's sheet rubber has been extended by the Commissioner of Commodity Purchase until the end of next year. This follows the conclusion of two contracts with Poland and China for the supply of sheet rubber. This means, that all shippers will have to sell their sheet rubber to the Commissioner of Commodity Purchase to help him fulfil the contracts.

Ceylon has concluded a contract with Poland to supply 6,500 metric tons of sheet rubber next year at a price of 5 cents above and over the average Singapore price per pound of sheet rubber calculated on a

weekly basis. Earlier, a contract was concluded with China to ship 31,000 metric tons of sheet rubber next year in exchange for 200,000 tons of Chinese rice.

PEPPER

Pepper prices have touched the season's worst levels owing to persistent liquidation induced by an absence of encouraging development. In the Cochin market, the rate is quoted at as low as Rs 337 per quintal for garbled ready and Rs 331 for the December position.

The main factor responsible for the shake-out is the protracted absence of export enquiries in the face of a comfortable supply position. While the Communist countries are virtually indifferent, the US has continued to quote lower prices in view of the lower offers received from Brazil. Sentiment in the market is also affected by the crisis in the Singapore market. The increasing inability to sell abroad due to stiff competition from Malabar and Brazil markets is responsible for the break in Singapore prices.

The all-India output of black pepper is expected to show an improvement of about 1,500 tonnes to 27,500 tonnes in the 1961-62 season. Moreover, the carryover stocks from the previous season are believed to be much more than the earlier estimates of 5,000 bags. Despite the end of the season, stocks of the old crop are reported to be freely available in the terminal markets.

BANGALORE SILK

The Bangalore Silk market was firm in respect of prices of flature and cottage basin raw silk. Whereas, flature raw silk of 20/22 Dr. was quoted between Rs 84.89 and Rs 87.64 per kgm. and cottage basin silk between Rs 74.75 and Rs 77.16 per kgm. there was downward movement in the prices of charka silk. The rates ranged between Rs 48.50 and Rs 57.32 per kgm. Mixed trend was noticed in the rates of reeling cocoons. While the rates of reeling cocoons from Mugur area declined to Rs 2.70 and Rs 3.25 per kgm, Channapatna dropped to Rs 2.00 and Rs 3.00 per kgm. Reeling cocoons from Sidlaghatta however remained firm, between Rs 4.50 and Rs 5.50 per kgm.

While Mysore race seed cocoons declined to a level between Rs 3.50 and Rs 4.50 per thousand, rates of foreign race seed cocoons ruled between Rs 4.00 and Rs 10.00 per thousand.

Prices of tasar raw silk in the Bhagalpur Silk market ruled between Rs 61.73 and Rs 83.77 per kgm. as in the last week. Tasar silk waste fluctuated between Rs 22.04 and Rs 24.25 per kgm. Tasar hand spun yarn, evoked interest between Rs 30.86 and Rs 46.30 per kgm. Reeling cocoons were quoted between Rs 105 and Rs 110 per kahan.

Prices of tasar reeling cocoons in Chalbasa ranged between Rs 145 and Rs 150 per kahan. Tasar silk waste was quoted between Rs 35.27 and Rs 41.89 per kgm. whereas hand spun yarn ruled between Rs 48.50 and Rs 60.62 per kgm.

GOLD & SILVER

Trading on the Bombay Bullion Exchange has been marked by divergent trends. While Silver has been ruling comparatively steady, Gold has lost much ground recording substantial losses on balance. Judged by the spot positions, the trend should have been downward for both the metals. Upcountry speculators, however, have preferred to rig up silver in total disregard of the continued excess of arrivals over the offtake.

The new account in silver was started at Rs 206.15, showing a rise of Rs 1.35 over that of the previous account. The bullish fervour in the white metal is attributed to keen speculative support extended by Rajasthan interests during the last few days. Rajasthan buying is probably induced by expectations of a good demand for silver in the coming weeks. It is stated that Rajasthan has had a good harvest this year and, as such, the demand for the metal is expected to be substantially larger. Arrivals amounted to 50 bars as against an offtake of 10 bars. Silver ready (below .996) changed hands at Rs 206.95 to Rs 207.15.

In contrast, Gold has remained easy in the absence of any important speculative prop. Moreover, heavy arrivals and the poor offtake have contributed to the weakness in the metal. However, it is expected that prices may be pulled up in sympathy with silver. Ready Gold changed hands at Rs 122.35 to Rs 122.80, while sovereign remained firm at Rs 97.25.

OILS & OILSEEDS

Only after the firm action by the Forward Markets Commission did the soaring prices of groundnut oil and groundnut came down in the Madras market. The bullish activity was on the increase and the market was actually in the doldrums until the Government took action. What they propose to do about the futures trading will be known by November 2, according to the local Oils and Seeds Exchange sources.

Groundnut oil went up to as high as Rs 413 per catty of 500 lbs during the latter part of last week and the order of closure of markets for five days from last Saturday in forward trading had some salutary effect. There is no forward transaction.

Also in the case of groundnut kernels, the price which went upto Rs 71/72 per 80 kgs came down after the Government action.

While the Andhra buyers kept aloof from the buying ring, the Calcutta interests did not so keep aloof and there was price shooting up.

The receipt of groundnut kernels locally was good at the rate of a hundred tons daily. In South Arcot, this was at 200 tons daily. Groundnut prices began to spurt up from the beginning of last Thursday. Indications of them were available earlier when the rate for groundnut oil per quintal was quoted at Rs 171.00. The next day, there was further increase to Rs 174.00 per quintal. On further bullish influence, the price once again shot up to Rs 179.40 per quintal and, last Saturday, it went as high as Rs 180 per quintal.

tal. Then came the Government action to arrest the further rise in prices. Though oil prices had become established, the further spin up of the rates had been kept in check.

Also groundnut new crop went on increasing step by step from Rs 6 per 80 kgs from Wednesday onward last week. It was quoted at Rs 68.69 last Friday and on Saturday. Before the market closure was known, the price was at Rs 70 per 80 kgs.

The following are the closing price of the oils and seeds in the market: Groundnut oil per quintal ex-Madras godown expeller Read 3 per cent FFA Rs 176.80. There is no trading in forward rates; Groundnut kernels per 80 kgs new crop Rs 67; Castor oil per quintal Tirupattur Rs 158.70; Coconut oil per lb Rs 40; Gingelly oil per quintal Rs 202.29; Gingelly seed per bag Rs 74/75 and Groundnut cake per bag of 160 lbs Rs 25.80.

In the upcountry markets, the summer crop arrivals still continue to be substantial in Villipuram and other towns nearby. The price was lower early last week, but went up later on. Almost all the important centres quoted Rs 70-71 per bag.

As stated earlier in this report last week groundnut kernels price closed higher in the Southern principal centres. Similarly, oils too ruled high in these centres. At Guntur or Bezwada, groundnut oil was quoted at Rs 410 per catty of 500 lbs. At Vridhachalam, the price was Rs 405 per catty. At Nandyal it was not less than Rs 400 per catty. Villipuram price was at Rs 406 and Cuddappah sold oil at Rs 400. Only in Pollachi, Tanjore and Salem, the price of groundnut oil was lower at Rs 395 per catty.

Groundnut kernels was at Rs 70 in Guntur, at Rs 72 in Vridhachalam, at Rs 71 at Villipuram, Rs 72 in Cuddappah and Rs 74 in Pollachi Salem was quoting at Rs 72. All quotations are per kgs.

HIDES & SKINS

Tanned cow hides prices remained firm due to moderate arrivals only. Only premium marks of this commodity had good demand and continues to have the same this week. In the c.i.f. section, business was confirmed at around the rates of 77½, 87½ and 52½. Fifths had good inquiries all through. There were rise in the rates of the inferior fifths for all weights. There was no appreciable change in tanned buffalo hides. In tanned cow calf overseas inquiry proved good.

As for tanned goat skin prices, they were still high due high price paid for raw skins. Similar was the case with tanned sheepskins.

The following are the prices of tanned skins and hides per lb: Cow Prime 5½ lb Rs 2.87 to Rs 3.00; 6½ lb to Rs 2.69; 8½ lb Rs 2.13 to Rs 2.25; 10½ lb Rs 1.94 to Rs 1.97; Inferior Fifths 4½ lb Rs 2.44 to Rs 2.56; 5½ lb Rs 2.37 to Rs 2.44; Buffalo 12/13 lbs Rs 2.46 to Rs 2.06; Buff calf 1½ lb Rs 2.75 to Rs 2.87; Cow Calf 1½ lb Rs 3.50 to Rs 3.62.

Company Reports

Diversification Activities by Fort Gloster

ACCORDING to the report issued by the directors of Fort Gloster Industries Limited, the modernisation of the sacking web spinning section will be completed with the arrival of further four spinning frames out of which two spinning frames with back process have already been shipped.

In the Cable division, further improvement in production has been recorded. Although competition has been experienced, an increase in demand is expected as a result of expansion in the power generation capacity of the country.

Schemes for expansion and diversification in new items of cables are being considered. The company has secured an industrial licence for the manufacture of VIR cables of larger sections, Trailing Cables for mines, Inter-vehicular railway coupler cables, railway signalling cable and special types of cables and flexible cords required for special purposes. Another industrial licence for the manufacture of paper insulated underground cable has also been received.

Meanwhile, the company's accounts for the year ended 31 March 1961 reveal a net profit, after providing for depreciation, of only Rs 12.98 lakhs as against Rs 24.67 lakhs for the previous year despite a rise in sales from Rs 3.85 crores to Rs 6.17 crores. This is mainly due to the rise in manufacturing costs.

In respect of allocations, the Depreciation amount is raised to Rs 21.79 lakhs from Rs 10.29 lakhs. After transferring Rs 4.50 lakhs from General Reserve, a sum of Rs 7.10 lakhs (Rs 4.25 lakhs) is provided for Taxation; Rs 1.75 lakhs (same) for Debenture Sinking Fund and Rs 77,000 (Rs 13.00 lakhs) for Development Rebate Reserve. The directors have recommended a taxable dividend of Rs 10 per Ordinary share on the capital increased by the issue of bonus shares as against Rs 25 per share paid on the original capital.

Hukumchand Jute Repeats

The restriction in output and wide disparity between the prices of raw jute and finished goods are reflected in the working results of the Hukumchand Jute Mills Limited for the year ended 31 March 1961. Although sales have risen to Rs 5.81 crores from Rs 4.47 crores, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 19.49 lakhs as against as much as Rs 25.23 lakhs for the preceding year.

In respect of allocations, the Depreciation amount is raised to Rs 11.42 lakhs from Rs 10.26 lakhs; Taxation to Rs 20.40 lakhs from Rs 20 lakhs and Contingency Reserve to Rs 20,000 from Rs 10,000. The provision for Development Rebate Reserve is substantially lower at Rs 45,000 against Rs 3.90 lakhs, while no provision is made for General Reserve against Rs 3.01 lakhs. The dividend on the Ordinary shares is, however, maintained at Rs 2.15 per share on the Ordinary shares, subject to tax.

The subscribed and paid-up capital is Rs 92.50 lakhs, divided into 7,00,000 equity shares of Rs 7.50 each and 40,000-7 per cent Cumulative Preference shares of Rs 100 each. Against this, General Reserve stands at Rs 28 lakhs; Investment Reserve at Rs 4 lakhs and Development Rebate Reserve at Rs 6.55 lakhs.

Morarjee Goculdas Pays More

Thanks to the rise in the net profit from Rs 37.84 lakhs to Rs 56.96 lakhs, the Morarjee Goculdas Spinning & Weaving Company Limited has been able to raise the ordinary dividend from 2½ to 24 per cent, taxable, for the year ended 30 June 1961. Sales are higher at Rs 4.98 crores against Rs 3.94 crores.

All allocations have been increased:—Depreciation from Rs 11.91 lakhs to Rs 15.91 lakhs; Taxation from Rs 10 lakhs to Rs 16.50 lakhs; General Reserve from Rs 2.50 lakhs to Rs 5.50 lakhs and Development Rebate Reserve from Rs 3.15 lakhs to Rs 4.50 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend.

Under the expansion and modernisation programme undertaken by the company, further orders for new machinery to the extent of about Rs 27.50 lakhs were placed during the year under review.

For the Investor

INVESTMENT GOSSIP Cheerful Sentiment

The stock market has been displaying a steady trend this week as sentiment is aided by revival speculative as well as investment support. Although the long-awaited announcement on cement prices has failed to generate much general enthusiasm, support is nevertheless forthcoming for selected cement shares. The speculative counters are led forward by Indian Iron which has recorded some useful gains presumably on hopes of an early announcement of a favourable retention price.

While continued good corporate news makes sellers hesitant, the fact that the principal counters on both Dalal Street and Lyons Range are benefiting by the sustained interest in them, has helped turn the overall picture cheerful. The week has witnessed a broadening of investment interest in jute shares on Lyons Range. It is believed that the jute goods industry has left its worst period behind and is well on the road to profitable working. Although overseas interest in jute goods is still halting, indications are that before long there will be a marked revival. At current prices mills are making moderate profit on their sales and production is being progressively increased. Cotton mill shares are meeting with sustained support as the industry is expected to make a better showing in view of the improved demand for cloth.

The constructive approach is also partly the result of the improved prospects of increased private US investment in India as a result of the recent discussions in New Delhi between prominent US businessmen and the Government of India. Indications are that the visiting US businessmen have been favourably impressed by the opportunities that are available in the country for profitable investment. Operators have also been encouraged by the removal of the restrictions on clean advances by banks. Technical considerations have been another important factor in the rally.

While the many favourable points in the investment situation may be expected to keep sentiment constructive, it is doubtful if prices will continue to scale fresh new highs in coming weeks. For one thing, Dalal Street will remain closed almost the whole of next week on account of the Diwali holidays. A fresh crop of new issues is expected in the course of the next few months and investors may not find it feasible to devote undivided attention to the existing list on the stock markets. There is then the lingering anxiety

about industrial production in view of the continued shortage of power, transport and coal to which the Central Advisory Council of Industry has drawn pointed attention.

NEW ISSUE NOTES Seshasayee Industries

More details are now available of the proposed capital issue of Seshasayee Industries. The company proposes to issue 400,000 ordinary shares of Rs 10 each to meet the bulk of the cost of the expansion programme, estimated at Rs 60 lakhs. The balance of Rs 20 lakhs will be raised by way of a medium-term loan from financial institutions. Of the proposed issue of Rs 40 lakhs, the existing shareholders are expected to take more than Rs 10 lakhs and the balance will be offered to the public. Efforts are being made to have the public issue underwritten. The LIC has agreed to underwrite Rs 15 lakhs and the Madras Industrial Investment Corporation an equal sum. The balance will be underwritten by brokers.

United Malleable Company

The United Malleable Company Limited, Bombay, has proposed to issue Rs 85 lakhs in equity shares of Rs 100 each, at par. Out of this issue, 23,900 shares will be offered to Messrs Union Malleable Manufacturing Company of Ohio, USA or their nominees, in part payment for the supply of plant and machinery and the balance will be subscribed in India for cash.

Business Credit and Finance Corp.

The Business Credit and Finance Corporation Limited, Bombay, has been allowed to raise its capital by Rs 15 lakhs for the expansion of its activities.

Usha Spinning

The directors of Usha Spinning have decided to close the subscription list for the issue of equity shares. The list opened on Monday this week and the equity issue was reported to have been over-subscribed even on the opening day. At the request of the underwriters, the preference list will, however, be kept open till 6 November.

Permanent Magnets

Permanent Magnets Limited has not extended the date for the payment of the first call money. Its bankers have been, however, instructed to accept the call money

with interest at the rate of 9 per cent, effective from 1 November

Tensile Steel

The last date for payment of allotment money at Rs 25 per share on the equity shares of Tensile Steel Limited was 30 October. However, on request from numerous shareholders, the directors have decided to extend the time till 30 November.

INVESTMENT NOTES IISCO Output

The production figures released by the Indian Iron & Steel Company Limited for last month give an encouraging reading. The output shows an all round increase: Pig Iron to 105,822 metric tonnes from 97,760 tonnes in September; Steel Ingots to 81,969 tonnes from 76,888 tonnes and Saleable Steel to 61,921 tonnes from 60,138 tonnes. Despatches are also higher at 66,257 tonnes against 58,138 tonnes; and these would have been still higher, but for the shortage of wagons. In this connection, the directors state that, due to short supply of 75 bogie-wagons by the railways, 3,000 tons of finished materials could not be despatched during the month.

TISCO Output

The production figures released by the Tata Iron & Steel Company have also shown an all-round improvement. The output of Saleable Steel in October was 5,700 metric tons more at 112,700 metric tons than the September output. This comprises 33,700 metric tons of semi-finished steel and 79,000 metric tons of finished steel, which compare with the September figures of 28,400 and 78,600 metric tons respectively. The output of Pig Iron has improved to 130,100 metric tons from 123,900 metric tons, while that of Steel Ingots is better at 137,600 metric tons as against 128,300 metric tons.

Automotive Manufacturers

The Automotive Manufacturers (Private) Limited has obtained the Government sanction to issue bonus shares worth Rs 2,50,000 in the ratio of one share for every four equity shares held.

Girdhardas Harivallavdas Mills

Girdhardas Harivallavdas Mills Limited, Ahmedabad, has obtained the consent from the Controller of Capital Issues to capitalise Rs 1.50 lakhs from Reserves and issue bonus shares. The bonus shares will be of the value of Rs 125 each and will be allotted to the holders of the existing 4,800 equity shares in the ratio of one bonus share for every four equity shares held.

Coimbatore-Salem Transport

The Coimbatore-Salem Transport (Private) Limited will be issuing bonus shares worth Rs 75,000 in the proportion of one bonus share for every share held by the existing shareholders.

Andhra Cement

The authorities of the Bombay Stock Exchange have decided to remove the equity shares of the Andhra Cement Company from the cleared list, because only a few transactions take place in these shares and they are largely inactive.

Madras Rubber

It is learnt that the construction work connected with the programme for manufacturing truck and car tyres by the Madras Rubber Factory Limited in collaboration with Mansfield of the USA has been progressing satisfactorily. The pilot plant has been received and it is expected that trial operations will start shortly. The new factory itself is expected to be in production sometime in the latter half of next year. The company has placed orders for the required plant and machinery with the suppliers in Europe and USA. Complete licences have been obtained from the Central Government.

Andhra Sugars

Andhra Sugars Limited has decided to issue additional capital for Rs 10 lakhs in equity shares of Rs 10 each to the existing shareholders in the proportion of one share for every three shares held.

Khandelwal Udyog

Khandelwal Udyog Limited has been successful in concluding a technical collaboration agreement with an Italian firm for the manufacture of industrial furnaces. The Italian collaborators are well known in the line and their equipment is already being manufactured in other European countries. The manufacturing programme includes both combustion and electric furnaces and will meet the needs of the metallurgical and engineering industries. With the exception of automatic controls and instrumentation, it is expected that most of the major components will be manufactured indigenously right from the beginning.

Dehri-Rohtas

The shares of Dehri Rohtas are attracting attention on rumours that the company has been permitted to issue bonus shares, which are expected to be announced shortly.

Dunlop Rubber

In connection with the bonus shares, Dunlop Rubber Company (India) Limited has convened a general meeting on 23 November. The new ordinary shares so distributed shall rank in all respects pari passu with the existing ordinary shares. Transfer Books of the company will be closed from 10 to 23 November, 1961.

Delhi Cloth

The Delhi Cloth and General Mills Company Limited has undertaken installation of two new plants—the PVC plant with a daily capacity of 20 tons together with ancillary units

of calcium carbide and chlorine and caustic soda and the rayon tyre cord plant with a daily capacity of 10 tons for the manufacture of high tenacity rayon tyre and yarn and fabrics. Agreements for the supply of know-how and machinery for these projects have been entered into with reputed firms of Japan and the USA.

STOCK EXCHANGES Pre-Diwali Jubilation

Watch-Dog Writes:

STOCK markets have given an impressive performance during the week under review. To main factors have contributed to the happy atmosphere. One is, that Diwali is fast approaching and it is customary to keep an open position. The second is the fresh flow of good corporate news. There is, however, a general disposition to book profits at bulges.

A broadening of enquiry in Jute shares at enhanced levels was the main feature of trading on the Calcutta Stock Exchange. Conditions in other sections also remained firm with selected issues making further headway.

The Bombay Stock Exchange was also buoyant, resulting in a quite heavy turnover. Tata Chemicals were a special of the week's trading, having recorded a smart rise on rumours of a right issue.

On the Madras Stock Exchange, selective buying continued and the volume of business was fairly large.

CALCUTTA

Friday Evening.

ALTHOUGH the local stock market started on a dull note, there was a welcome improvement in sentiment from the middle of the week, being influenced by the flow of excellent corporate news. Initially, sentiment was affected by the thought of the possibility of industrial production being hampered generally by the shortage of power and transport as well as strategic raw materials. This was revealed in the statement made by the Chairman of the Indian Copper Corporation. Operators also realised that there would be a growing shortage of funds in the near future, especially when a long queue of new issues was expected during the next few weeks.

But, the sudden turn in market sentiment from Wednesday was influenced by various factors. First was the announcement of the increase in the ex-factory price of cement. Although the disappointment over the Government in not having accepted the Tariff Board's recommendations in full caused a slight reaction in Cement shares, the market again firmed up on the second thought that the fixation of a uniform price might benefit smaller units and improve their working.

Secondly, the news of the decision made by the IJMA to unseat 24 per cent of the looms gave rise to a feeling that the industry would be making still better profits, as bigger

supplies of raw jute were available. Thirdly, a further rise in foreign exchange reserves led to a belief that it would be possible for India to obtain her requirements for importing the necessary equipment and raw materials.

Fourthly, operators received inspiration from the discussions at the Business International Conference, recently held at New Delhi. It was felt that there would be a better collaboration and more joint ventures between the two countries. Finally, the encouraging production figures released by both the IISCO and the TISCO for last month enthused the operators to be more active in their dealings. Although slight profit-taking was noticed at the higher levels, the tone of the market was well maintained till the close.

The Gilt-edged market presented listless conditions. The undertone was subdued following the reduction made by the Reserve Bank in their buying rates of several securities. With buyers few and far between, turnover was negligible. After opening at Rs 73, 3 per cent 1986 Conversion Loan receded gradually to Rs 72.15 before finishing at Rs 72.18.

Bank shares ruled very steady. Punjab National changed hands at Rs 19.75 to Rs 19.87 and United Commercial at Rs 90.50 to Rs 91.50.

It cannot be denied that a broadening of enquiry for Jute shares at enhanced levels was a major stimulating factor for the cheerful sentiment prevailing in the market. There was a growing feeling that, at the present prices of fibre and jute goods, mills might be making reasonable profits on simultaneous business. Almost all the shares registered handsome rises in prices. Birlas were taken up to Rs 29.25 from Rs 27.56; Delta up to Rs 170 from Rs 160; Ganges up to Rs 12.56 from Rs 11.69; India up to Rs 16.06 from Rs 15.50; Khaddah up to Rs 17.56 from Rs 17.00 and Nuddea up to Rs 69.00 from Rs 53.50. New Central were pushed up to Rs 18.12 from Rs 17.19. Howrah moved between Rs 21 and Rs 21.12.

With the exception of Burrakur which were subjected to continued speculative buying up to Rs 18.75 from Rs 18.06, Coal shares were in doldrums in the absence of any stimulating news. Bengal were on offer at Rs 354 against Rs 365 and Western Bengal at Rs 9.19. Amalgamated were, however, steady at Rs 21.81 with Central India ruling quiet at Rs 11.75 against Rs 11.94.

There was little doing in the tea section, as reports of auction sales did not contain any element to generate enthusiasm amongst the operators. Moreover, anxiety was expressed over the uncertainties concerning the marketing outlook for the commodity. Hasimara came in for offer at Rs 30.75 to Rs 30.87 and Tezpur at Rs 17 against Rs 17.12. Jay Shree were, however, boosted up to Rs 20.75 from Rs 18.25 following the diversification of the company's activities.

Except for a further rise in Dyer Meakin from Rs 36 to Rs 36.56 due to renewed demand, there was practically no trading in the Sugar

section. Raza-Buland were rather sticky at Rs 10.75 and as also SKG at Rs 10.75. Carew were supported up to Rs 14.06 from Rs 13 from interested quarters.

The increased demand for cloth was reflected in the Textiles section, which presented a firm front. Elgins were keenly sought after up to Rs 24.50 from Rs 22.06 and Cawnpore up to Rs 9.25 from Rs 9.00. Kesoram at one time touched a high of Rs 32.56 from Rs 31.62; J. K. Rayon Rs 20.19 from Rs 19.81 and Bowreah Rs 36.63 from Rs 36.50, to close finally at Rs 32.50; Rs 20.06 and Rs 36.00 respectively. Dunbar were rather quiet at Rs 33.37 with Jay Shree better at Rs 17.50 against Rs 17.31.

Engineering shares displayed a firmer tendency under the lead of Indian Irons which, in turn, were subjected to heavy speculative buying following the encouragement derived from the release of the production figures for last month. Higher advices from Bombay were also a contributory factor. After starting steady at Rs 24.72, Indian Irons receded to Rs 24.48. The emergence of bull support at this level pushed up the scrip to Rs 25.08, the highest level touched for the week.

Other engineering shares moved up in sympathy. J. K. Steel Old were wanted up to Rs 23.06 from Rs 21.87 and the new shares up to Rs 21.25 from Rs 19.56. Braithwaite were enquired up to Rs 39.50 from Rs 39.00 with Jessop changing hands at Rs 20.81 to Rs 21.25; Binani Metal at Rs 12.06 to Rs 12.19; Jay Engineering at Rs 27.62 to Rs 28.00 and Guest, Keen, Williams at Rs 40.12 to Rs 40.37. TEXMACO moved up to Rs 18.90 from Rs 18.56.

In the Miscellaneous section, most of the issues forged ahead, either on individual merit or interested support from special quarters. Indian Aluminium were pushed up to Rs 38.81 from Rs 35.44 on rumours of the possibility of a right issue. J. K. Synthetics touched a new high of Rs 14 from Rs 13.44 due to sustained buying by the Bombay operators. Dunlop Rubber showed a substantial recovery to Rs 56.25 from the recent low of Rs 54.61 following the announcement of book closing for the bonus issue. Alkali Chemicals came in for demand up to Rs 40 from Rs 38.75. Sirpur Paper were a very firm feature at Rs 16.56 following the announcement of the increase in dividend from 65 nP to 85 nP per share, subject to tax, and of the right issue. Indian Copper turned rather quiet at Rs 4.79 against Rs 4.90 following the pessimistic statement made by the company's Chairman, although the closing rate was better at Rs 4.90.

Among others, Indian Cable changed hands at Rs 36 to Rs 36.63; Orient Paper at Rs 36.15 to Rs 37.90; Shree Gopal at Rs 26.12 to Rs 26.75; Hindustan Motors at Rs 19.87 to Rs 20.12; Associated Battery at Rs 35.94 to Rs 36.37; Phillips Carbon at Rs 19.81 to Rs 20; Goodyear at Rs 38.50 to Rs 39.25; Rohtas at Rs 15.94 to Rs 16.31; General Tyres at Rs 6.31 to Rs 6.75 and BIC at Rs 9.75 to Rs 9.90.

L.I.C. BONUS ANNOUNCEMENT 1959 VALUATION RESULTS

WHOLE LIFE ASSURANCES
Rs. 16.00
per thousand per annum

ENDOWMENT ASSURANCES
Rs. 12.80
per thousand per annum

The Life Insurance Corporation has pleasure in declaring the above rates of bonus as a result of the second Valuation of its liabilities and assets as at 31st December 1959. These bonus rates are applicable to with-profits policies issued by the Corporation and in force as at the date of Valuation.

As regards the bonuses on with-profits policies issued by former insurers, these have been declared proportionately in accordance with the Scheme of Differential Bonuses approved by the Central Government and published in the Gazette of India dated 14th October, 1961.

The bonus rates applicable to all the policies are the same as those declared on the basis of the preceding Valuation as at 31st December 1957.

As at the date of the present Valuation the total sum assured under the policies was Rs. 1,997 crores, including bonuses, and Rs. 105 lakhs per annum under Annuities. Out of the gross profits disclosed by the Valuation, a sum of Rs. 24.47 crores has been utilised for allotting bonuses at the above rates to policy-holders, after providing for income-tax liability amounting to Rs. 4.58 crores and Government's share of Surplus amounting to Rs. 1.28 crores.

As already announced, bonus intimations in respect of both the first and second Valuations will be sent out to the policy-holders as soon as possible.

Don't throw away parts and money...

It sounds like an impossibility, we know, but it is none the less true. Many hard-to-replace parts costing valuable money are literally thrown away because they have been ruined due to faulty lubrication. Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Castex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Castex office.

Variety in Collaboration

THE cases of collaboration between Indian
enterprise and foreign interests continue to
increase and Government approval is based
on performance as well as promises. The
variety of interests or the diversity of pro-
jects is as much a matter of interest as the
entry of many nations into the field of invest-
ment on an appreciation of opportunities
in a developing country. Faith in foreign aid
seems to be increasing and the expansion of
established enterprise is also dependent on
the receipt of foreign aid and the assurance
of technical assistance.

An official catalogue of enterprises approv-
ed in July-September conveys the impres-
sion that engineering, including electrical
engineering, has acquired greater importance.
It also suggests that the upsurge of eco-
nomic expansion is not confined to one part
of the country. ELD and SF in the South
has arranged with Doulton for making sani-
taryware. And the manufacture of switch-
gear by Burn with the help of Reyrolle will
bring a famous British firm into the field.
An arrangement between Mond Nickel and
Indian Smelting and Refining for the manu-
facture of special steel castings is invested
with importance like the plan to make elec-
tric heaters. The latter is arranged with
Pye Radio of Cambridge, a company that has
a big name in telecommunications. The
manufacture of commercial graphite with the
help of Great Lakes Corporation has been
arranged by Bangur Brothers. This may
help to produce the crucibles needed for metal
using industries in India.

Import restrictions condition the approach
of local manufacturers to the question of
making spare parts for existing equipment
like tractors as also to the manufacture of
tools for workshops. Major industries like
paper are set for expansion. Consumer goods
like spectacle frames or sewing machines
needles also figure in the list of approved
schemes and it is noteworthy that automobile
electrical components find a place along with
machine-tools or spray guns. The West Ger-
man interest in the programme of diversifi-
cation in India proves that the export of ca-
pital has begun and the ability of domestic
capital to grasp opportunities must be en-
hanced, if only to prove soon that the second
industrial revolution proceeds without undue
strain. Domestic investment must keep step
with the inflow of outside capital and the
programme for more machinery to be manu-
factured locally can and should have more
significance if the foreign aid comes in the
form of essential capital goods.

The 96 schemes resting on the promise of
foreign aid include projects to be started
with help from East European countries.
There may not be much significance in a
few marginal schemes but the fact remains
that trade in recent years has led to famili-
arity with Hungarian, Polish and other pro-
ducts and local manufacture of glass, electric
meters, etc. may be stimulated by the exist-
ence of competition and the circumstance of
co-existence between the public and the
private sector. There is no need to stress

the point that the older and bigger firms enjoy
some advantages in arranging for collabora-
tion, say, for manufacture of industrial gases
or electric cables. The emphasis is now
admittedly on industry, not trade, and on the
import of capital and skill, not goods to be
sold on commission. A major consequence of
this inflow may be alteration in the whole
business of management. And Indian enter-
prises must command technical assistance to
make foreign collaboration fruitful or posi-
tive. The engineer must figure largely in
business hereafter and it is possible that men,
as Prof. Galbraith insisted, may become more
important than capital. For, the manufacture
of machinery on a new scale involves more
than financial expertise or the right connec-
tions with officialdom.

The licensing procedure ensures the avoi-
dance of monopoly and the preservation of
competition. That is perhaps the object of
letting in Italian as well as German interests.
The former now look for a place in the sun
along with old-established British or Ame-
rican firms that have found India responsive
to the challenge of the new machine age.
Among items to be made in India are hair-
clippers by a firm in Aligarh, (naturally
associated with locks and keys) as also air
jet drying equipment which may help to pro-
cess agricultural products. The growing
demand for power explains the inception of
many firms to make boilers of assorted sizes.

If the whole object is to limit imports in
future, the allocation of foreign exchange for
all approved projects must be prompt and
adequate. The foreign collaborators or the
Indian associates should have no cause for
complaint, if they have entered into commit-
ments on the basis of Government sanction.
This necessarily implies that priority to
the public sector must be modified by the
nature and implications of the new contracts
that now make Indian industry far different
in range, structure and objects. Industrial
organisation in 1930 could be viewed from
the angle of the managing agency firm,
largely British, but the position today is
radically different and Indian capital works
under supervision, while foreign capital enters
on specified conditions. The objects of joint
ventures are now different as are the oppor-
tunities now available in the country.
To make conditions favourable is certain-
ly a duty: that alone can ensure a fur-
ther flow of capital for investment. Aid in the
form of Government loans cannot enlarge
employment or provide goods to the same ex-
tent as large scale expansion that also means
a market at hand for existing industries,
though tea and jute may not derive any
benefit from the projects to make small tools
or plastic products. The association with
foreign manufacturers may help to produce
new comparisons on the basis of price for
electric motors or aluminium conductors. This
will also remove doubts on the necessity for
tariffs retained to supplement import restric-
tions which certainly have a bearing on the
course of development that has already led
to the making of air-conditioners and air
compressors alike in India.

World Economic Survey—II

THE UN study of savings in the under-developed countries highlights the extreme inadequacy of savings in the context of the need to step up the rate of economic growth. Though there exist other fundamental and structural disequilibria in the economies of these countries, the major impediment to a higher rate of economic growth is constituted by the low level of savings. While there are marked variations in the total volume of savings among the under-developed countries themselves, taken as a group the supply of savings as a proportion of gross domestic product is low. Further, in contrast with the advanced industrial countries, where almost the entire supply of savings comes from the domestic sources, in the under-developed countries there has been an increasing tendency to greater reliance on foreign capital to supply deficiencies in internal savings. The UN survey underlines the fact that foreign saving has been a factor of great importance in accounting for the change in the total supply of savings in the under-developed in the course of the last decade. In over one-third of the countries, increases in foreign capital have amounted to 2 to 3 per cent of the gross product. In one fourth of the countries, such increases have been even larger, while in some cases they have been as high as 9 to 10 per cent.

The increasing reliance on foreign savings only underlines the inability of the under-developed countries to raise the level of domestic savings, and considering that domestic savings constitute the greater part of total savings, this has been reflected in the behaviour of total net savings during the period 1950-52 and 1957-59. Only two out of every five countries in this group increased their total net savings by 2 per cent or more of gross product. In a majority of countries, the levels of total savings have remained practically unchanged during the period. The pattern of changes in savings has also been not uniform with high saving countries such as the Congo and South Africa registering notable declines and low saving countries recording rise in total savings.

The UN survey discusses the changes in saving and its behaviour pattern in terms of the trends in the various components. Foreign saving is classified into private and official saving depending upon the sources of funds. Domestic saving is sub-divided into government, corporate and household saving, with the latter two combining to form private saving in an economy. The UN study throws interesting light on the behaviour patterns of these different components of total saving and also offers meaningful explanations for the changes that have occurred in respect of each of the components.

The foreign capital flows have been compounded of both private long-term capital and official loans and grants, but the relative importance has varied as between countries. While as a whole, the flow of official capital has been larger than the flow of private capital, the proportion constituted by the flow of private capital relative to official capital has been larger for individual countries. One significant feature discernible in the flow of the foreign capital is the tendency for concentration in distribution disclosed by both private foreign capital flows and official flows. A significantly large proportion of the official loans and grants has gone to the lower per-

capita income countries. During the period 1950-59, nearly 22 per cent of the total flow of public funds went to countries with per capita incomes of less than 100 dollars. In contrast the flow of private foreign capital has tended to gravitate to countries with higher per capita income levels. Since private capital is motivated by considerations of profit, its flow has been governed mainly by factors such as size of domestic market, natural resources endowment, and rates of growth of world demand for the primary commodities scope of export market etc. The UN study highlights the fact that during 1950-59, long term private capital as a percentage of gross domestic product was on the average six times larger for the countries whose exports have expanded rapidly than for those whose exports have shown slow growth. Rhodesia, Nyasaland and Venezuela are instances of countries which because of their export potentialities have received large inflows of foreign private capital. India offers an instance of experience to the contrary.

In contrast to foreign savings, domestic saving has either declined or has barely changed in nearly two-thirds of the countries. In cases where domestic savings had declined the decline according to the UN survey has been of great magnitude. Contributing to the decline in domestic saving is the decline that has been registered for both government saving and private saving. The fall in the level of private saving is shown to be of greater magnitude than the fall in government saving. Only in three out of the 22 countries did government saving increase by 2 per cent or more of gross product between 1950-52 and 1957-59. In another five countries the increase was only of the order of one per cent. In the remaining countries, the volume of government saving is shown to have remained roughly stable or even declined. The pattern of government saving is closely related to the Government consumption with fall in consumption inducing rise in saving and vice-versa. The experience of the underdeveloped countries in respect of government consumption has been invariably one of increasing tendency in it. The rise is, in certain measure, inherent in the

very process of development on which these countries are embarked. Apart from the rise due to increase in population, there have been other factors at work such as the demand for improved social and economic services to which these countries have been subject. And efforts to raise disposable income have been barely sufficient to finance the expanded programme of investment in economic and social services. The weakness displayed by the commodity markets in the latter part of the decade has also tended to depress the level of Government savings.

In countries which have experienced considerable declines in domestic saving, the trends in private saving have generally been a major causal factor. But the pattern of changes in respect of its two constituents namely corporate and household has not been very consistent. While in some countries, the decline in the corporate saving has been the dominant factor, in others, the roles have been reversed between the corporate and household sector. But in most countries, household income in relation to both the domestic product and to disposable income is shown to have fallen significantly. Only three countries, namely, Jamaica, Rhodesia and Nyasaland have reported an increase in household saving for the entire period. The major factors affecting the changes in household saving have been the level of per capita income, and shifts in the distribution of income. The tendency for rise in the number of wage earners and also wage rates, and the resulting redistribution of the total income in favour of income groups with low saving capacity has left very little scope for saving to increase in the household sector. Further unfavourable export experience and the adverse effects on unincorporated enterprise which is a significant constituent of household saving has also contributed to the decline in the total of household savings in many countries.

While taken as a whole, the supply of savings in the underdeveloped countries is of relatively small volume in relation to the demands of capital formation to sustain an acceleration in the pace of economic development, there are countries in the group where the rate of saving approximates to the high levels characteristic of the advanced countries. This is true of Rhodesia, Nyasaland, Venezuela, Israel and the Congo, where the total supply of saving has exceeded 25 per cent. This is to be ascribed to the different structure of the economies of these countries as compared with the rest of the under-developed countries. Apart from the different levels of per capita income, the marked variations in the volume of savings between the countries also emphasise the varying import and influence of other factors such as the distribution of income, the size of the export market etc. Even among countries with the same low level of savings, the role and pattern of the various components of total saving have tended to differ widely.

While underlining the problem of capital formation for the under-developed countries, the UN Survey warns against too great a reliance on foreign capital in view of the recurring burden of interest payment and payment of principal also. The Survey has indicated scope for increasing the volume of saving in the domestic sector itself. It is pointed out, that while there has been widespread increases in real income in many countries in the under-developed region, the marginal rates of saving have continued to be low. The Survey draws special attention to the scope for increasing government saving both by economy in government ex-

penditure and by mopping up a greater part of the addition to total national income. A diversification of the tax structure with less dependence on foreign trade, and enlargement of the tax area in the domestic front has been strongly urged for increasing the volume of saving in the government sector. It is also observed that taxation of income has been inadequately utilised in many of the under-developed countries. Low tax rates and high exemptions are deficiencies common to the direct tax systems of many under-developed countries. Apart from the rectification of these deficiencies, the survey also suggests other measures, like an appropriately devised agricultural tax system, modification of price structures of public enterprises etc.

INDO-UK TRADE

Changing Pattern

By STEPHAN E. SCHATTMANN

TRADE between India and Britain has expanded substantially in both directions during the last ten years or so. In 1960, Britain still remained India's major trading partner, taking 27.3 per cent of her exports—a larger proportion than any other country—and providing 20 per cent of her imports.

There was a decline in 1960 in India's purchases from Britain, which led to a reduction of the total value of trade, but India remained Britain's sixth largest export market and India's goods ranked ninth in the list of British imports.

The pattern of Indian imports from Britain has undergone significant changes in recent years. There has been a steady decline in imports of consumer goods and of other goods now produced in India, coupled with a considerable shift towards capital goods, especially machinery of all types, chemicals and road vehicles and aircraft. This change, the result of the rising tempo of India's industrialisation, has affected particularly such commodities as cotton textiles, certain chemical products, rubber tyres, tobacco products, soap and others.

This is a trend not unfamiliar to Britain and it is fully appreciated against the background of the long-term importance of the Indian market to industry in Britain. Britain, whose very existence depends on the exports of its industrial products, has learned that the industrialisation of a developing country means more and not less demand for British products. It is enlightened self-interest, as well as the obligations of Commonwealth partnership, which determines Britain's resolution to continue its contribution to India's further development.

The main commodities exported by India to Britain in recent years are tea, textile manufactures (including cotton yarn and piece goods; jute yarn, fabrics, sacks and bags; carpetings of coir, jute and wool), leather (dressed and undressed), tobacco, bristles and shellac, raw wool, vegetable oils, mica, manganese and animal feeding stuffs.

In addition, Britain has benefited from the growing diversification of India's export through industrialisation. Sewing machines and small diesel engines are some examples of India's "new" exports which are finding a market in Britain. An event of some significance last year was the first shipment to Britain of steel billets produced at the Bhilai steel works. Pig iron has already been received from Bhilai.

Looking at the 1960 trade statistics the following picture emerges. Imports from India amounted to £146,600,000, against

£140,900,000 in 1959, an increase of four per cent. Cotton yarns and fabrics, linseed oil, tobacco, fruits and vegetables, manganese ore, mica, jute goods, oil seeds and oil nuts, and crude fertilisers, all registered increases over 1959. The value of cotton yarns and fabrics came to £14,660,000, an increase of 29 per cent. Shipments of linseed oil were £441,000 greater, or 65 per cent. Tobacco, at £9,200,000, was £1,100,000 more than in the previous year. Imports of fruit and vegetables at £1,700,000 registered an increase of 37 per cent.

Imports of some commodities, such as tea, coffee, animal feeding stuffs, raw cotton, wool, petroleum products and leather and leather goods declined. Feeding stuffs, at £10,500,000, were £1,600,000 or 13 per cent. less than in 1959. Leather and leather goods, at £13,000,000, were £640,000 down on 1959. To sum up, the drop in Indian shipments of tea—slight though it is—leather goods, animal feeding stuffs, cotton and wool was more than made up by larger shipments of cotton yarn, woollen fabrics and other textile manufactures, as well as tobacco.

The rapid progress in the manufacture of synthetic materials is a factor which must be borne in mind in any assessment of the future prospects of some of India's exports to Britain. Coir is being replaced by nylon in the manufacture of mats. Not only are nylon fibres said to have better wearing qualities, but the finished product is more attractive and therefore preferred by the housewife in Britain, even if the price is higher. Shellac faces competition from synthetic resins in the manufacture of paint. The gramophone industry, too, has gone over from shellac to plastics and now makes virtually all new records of plastic materials. Jute is coming up against changes in packaging techniques. Commodities which used to be carried across the oceans in jute bags are now shipped in bulk carriers, and paper bags are cheap and easy to make.

Indian imports from Britain in 1960 were worth £148,900,000 against £170,200,000 in 1959, a decrease of 12.5 per cent. Exports of machinery, other than electric, which showed the biggest fall declined from £54,600,000 in 1959 to £43,400,000 in 1960 a drop of 20 per cent. Electric machinery went down by £5,800,000 to £14,800,000, chemicals by £7,600,000 to £14,100,000 and railway vehicles by £2,400,000 to £1,400,000. Exports of aircraft fell by almost 50 per cent. to £8,600,000. British deliveries to India of cotton yarn and fabrics, and man-made fibres and products, also were substantially lower. Wool and tops, scientific instruments, photographic and capital goods and watches and clocks fell away as well. On the other hand, exports of road vehicles rose by £4,200,000 to £13,800,000, ships and boats by £2,100,000 to £6,042,000, petroleum and petroleum products by £1,600,000 to £4,000,000, and non-ferrous metals by £900,000 to £3,800,000.

Two agreements were signed in Delhi on 1 May for loans amounting to £40,000,000 to the Government of India from the British Government. The first is for £30,000,000, for development. This is the largest single loan ever made by Britain as part of its programme of overseas development assistance. The loan is intended as an initial contribution to the Third Five-Year Plan. It is to be used for purchases from Britain, about half for individual projects and the remainder for other capital equipment and machinery.

The second agreement covers a loan of £10,000,000 for the purchase of a broad range

of goods from Britain. Both loans are for a period of 25 years and no repayments are required until 1966. Total loans made by Britain towards India's development plan now amount to more than £120,000,000. In addition, negotiations are proceeding on the loan for expansion of the Durgapur steel works' capacity by 600,000 tons. It is likely to involve an amount up to £20,000,000 which will be available for the purchase of equipment in Britain.

No sketch of India's trade relations with Britain would be complete at this juncture without a reference to Britain's application for membership of the European Economic Community. While it is still far too early to make any definite statement on this important matter, one thing can be said.

By becoming a member of the European Economic Community, Britain would indeed have to subscribe to its basic principles which include a common tariff, common institutions, and a certain measure of common economic policies. This is bound to affect existing relationships within the Commonwealth. But, as Mr Macmillan said in the debate in the House of Commons on 2 August, it will be Britain's aim to make satisfactory arrangements to meet the special interests of the Commonwealth particularly, of course, in the economic field, and the Government has given an assurance that the Government will keep in the closest touch with the Government of India and the other Commonwealth Governments in all matters affecting their interests. Britain believes that by joining a rapidly-expanding economic unit of 250,000,000 people it would not only strengthen its own economy and contribute to the further growth of this large market, but would also serve best the interests of the Commonwealth as a whole.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

SLACK SEASON

Easy Conditions Experienced

THE 1961 slack season, in comparison with corresponding periods of the last two, three years, is seen to have produced relatively easy money conditions. It may be stated that the seasonal return of funds has been considerable; and because in the last busy season the outgo of specialised finance was large, it would have been reasonable to expect liquidation of debt to be of corresponding size. At the same time, it is possible to suggest that the return of funds in each slack season has not greatly differed in pattern or amount; but that the contraction in Advances on this account has been obscured by the sustained rise in bank credit consequent upon industrial demand for money over the period of the slack season. Hence, it may be that the easy money conditions of the 1961 slack season are at least partly owing to a slowing down in the rate of growth of industrial demand for bank finance.

Contraction in currency circulation is of satisfactorily large proportions. Active Notes have declined by over Rs 100 crores and there has been inflow of Rupee Coin. Normally it would have been possible to link currency contraction with fall in the foreign assets held by the Reserve Bank, since the impact of import surplus upon currency circulation is contractionist. But here, also, figures in this regard have got distorted by inflow of foreign assistance. Thus foreign assets held by the Reserve Bank in both Departments have increased by nearly Rs 22 crores. A measure of the import surplus is available in the fact, that, during the period, foreign currencies to the tune of \$250 million were purchased from the International Monetary Fund, though half of it had to be utilised for repurchase of currencies on a previous transaction. Nevertheless, the net impact of the latest IMF transaction should have been to increase foreign assets held by the Reserve Bank by some Rs 60 crores, whereas the rise actually is of the order of Rs 22 crores.

Currency has been contracted against Rupee Securities, but only part of this is by transfer to the Banking Department. Satisfactory revenue receipts as well as the special receipts under the Public Law 480 agreements have both enabled Government to institute reverse ad hoc. Rupee Securities held by the Reserve Bank in both Departments have fallen by roughly Rs 76 crores.

The fall in Other Liabilities is traceable to transfer of the Reserve Bank profit for the year to 30 June 1961, and this itself is partly reflected in the rise of Rs 11 crores in Agricultural funds.

Both the Central and State Governments were able to add to their cash position during the slack season. The latter, owing to receipts from the State loans, were also able sizeably to reduce their ways and means borrowings from the Reserve Bank.

The first implication of the small rise in the Other Loans and Advances of the Reserve Bank is that Scheduled Banks were in no position to reduce their debt to the institution. But figures relating to Scheduled Banks make clear the fact that borrowings from the Reserve Bank have been largely repaid. The inference is that other entities entitled to borrow from the central banking institution have steadily had larger recourse; we have in mind in particular the co-operative banks.

In fact, even after repaying the Reserve Bank, Scheduled Banks were able to add to their Reserve Balances. Borrowings from the Reserve Bank against usance bills have been cut by nearly Rs 19 crores.

The State Bank appears to have suffered a drain on its Deposits, but this is wholly owing to repayment of counterpart funds—the sum involved being Rs 24 crores. A small rise has been recorded, net of this special transaction, but it is nowhere as large, proportionately, as the increase in the Deposit resources of other Scheduled Banks.

The contraction in Advances of the State Bank is fairly high at Rs 28.49 crores, and there has been corresponding addition to giltedged investments.

Deposits of Scheduled Banks (excluding the State Bank) have gone up most hearteningly by Rs 54.66 crores; this, coupled with the fall of Rs 47.45 crores in the total of Advances, has enabled the other Scheduled Banks (a) to reduce indebtedness to the Reserve Bank by Rs 31.50 crores; (b) to add to cash balances by just under Rs 8 crores; and (c) to make fresh investments in giltedged for Rs 33.59 crores. However, strangely, borrowings from the State Bank have risen by Rs 4.62 crores. Since Reserve Bank credit would normally be available to the Scheduled Banks at the lowest-tier rate of 4 per cent, we may take it that recourse was had to the higher-costing credit from the State Bank purely on grounds of convenience.

BANK RETURNS

The 1961-62 Busy Season Begins?

A sharp rise in Active Note circulation in the week ended 3 November may be attributed to three causes—Divali disbursements, beginning of the month pressure for money and perhaps the start of the 1961-62 busy season.

Active Note Circulation has jumped by Rs 22.01 crores to Rs 1,904.26 crores and the outflow of Rupee Coin is also heavy at Rs 2.60 crores. Rupee Securities are practically unchanged at Rs 1,558.86 crores, and Foreign Securities are unaltered at Rs 116.88 crores. The Reserve Bank's cash in the till, therefore, has been drawn on to the tune of Rs 24.62 crores to be placed at Rs 13.86 crores.

The Centre's balances have come down from Rs 64.78 crores to Rs 62.86 crores, and those

Giltedged	237.47	266.35	+ 28.88
Total of Advances	267.33	238.84	— 28.49

Other Scheduled Banks:			
Net Deposits	1,367.04	1,421.70	+ 54.66
Borrowings from Reserve Bank	37.82	6.32	— 31.50
Borrowings from State Bank	14.05	18.67	+ 4.62
Cash Balances	153.18	161.01	+ 7.83
Giltedged	324.99	358.58	+ 33.59
Total of Advances	1,033.78	986.33	— 47.45

*Adjustment needs to be made for Rs 24 crores of Deposits made over to Reserve Bank in respect counterpart funds; net of such PL 480 transactions, State Bank's Deposits are seen to have risen by about Rs 5 crores.

of the State Governments by Rs 2.68 crores to Rs 17.66 crores. The pressure upon banks is suggested by the fall of Rs 12.20 crores to Rs 74.17 crores in their Reserve Balances, as also by the rise of roughly like size to Rs 141.82 crores in the Other Loans and Advances of the Reserve Bank; accommodation against usance bills is up from Rs 2.50 crores to Rs 7.76 crores.

Investments are more or less unchanged at Rs 200.84 crores, but with the State Bank having purchased securities for Rs 5 crores during the week, it may be inferred that the Centre instituted deficit financing for such an amount.

Lastly, there has been a sharp fall in Balances Held Abroad, which have declined from Rs 28.33 crores to Rs 20.53 crores; and foreign assets held by the Reserve Bank are now once again below the Rs 140 crore mark. That there should have been such a steep decline in a period when exports are normally expected to make good showing is a rather ominous sign.

The State Bank's return for 3 November discloses a rise of Rs 1.58 crores to Rs 240.42 crores in the total of Advances. However, this is almost fully covered by an improvement of Rs 1.04 crores to Rs 532.13 crores in Deposits. Cash balances were apparently thought to be too high, for the State Bank has added to its giltedged portfolio by Rs 5 crores, raising it to Rs 271.44 crores. As a result, cash balances have been drawn down by Rs 8.17 crores to be placed at Rs 24.77 crores. It is true, there is not much indication here of busy season influences already at work. But then the evidence in the Reserve Bank figures is overpowering, and it would

appear that the bulk of demand—whether for month-early disbursements, or for Divali expenditure, or as a result and as a symbol of the emergence of busy season pressure—for money in the first week of November has fallen upon Scheduled Banks other than the State Bank; the next week's return of Scheduled Banks should offer some confirmation.

According to the return of Scheduled Banks for 27 October, there has occurred, in the last week of the 1961 slack season, a considerable increase in Deposit resources. Net Demand Deposits have been marked up by Rs 7.45 crores to Rs 832.08 crores, and Net Time Deposits have risen by another Rs 2.14 crores to Rs 1,120.71 crores. Of the total rise of Rs 9.59 crores, Rs 1.16 crores can be traced to the State Bank. Besides, there has been a fair drop of Rs 8.06 crores to Rs 1,235.14 crores in the total of Advances, Rs 5.86 crores of this being attributable to the State Bank. As a result, banks have been able to repay debt: borrowings from the State Bank are shown Rs 1.62 crores lower at Rs 18.67 crores and indebtedness to the Reserve Bank has been practically halved from Rs 12.84 crores to Rs 6.49 crores. Even then, banks were able to augment their giltedged portfolio by Rs 12.04 crores to Rs 624.93 crores, and Rs 9 crores of the rise may be said to be on account of the State Bank. In consequence, cash balances including money at call have improved slightly by Rs 2.36 crores to Rs 193.95 crores; but with the State Bank in the relevant week reporting a fall of Rs 1.60 crores in cash balances, the improvement in the case of other Scheduled Banks is seen to be very nearly Rs 4 crores.

FOREIGN AID

Fresh Credit from Britain

An agreement for a credit of Rs 6.67 crores (£5 million) from the British Government to the Government of India was signed in New Delhi by Sir Paul Gore-Booth, the British High Commissioner, and Mr L. K. Jha, Secretary, Ministry of Finance, Department of Economic Affairs.

The loan is not attached to any particular project and can be used with immediate effect by India to pay for a broad range of imports from the United Kingdom.

In a statement after signing the agreement, Sir Paul Gore-Booth said:

"I have been in India now as the representative of my Government for just over a year, and for the third time I find myself taking part in a loan signing ceremony in this room. I am glad, Sir, to be the agent of aid. I hope to continue to be so, subject only to the limitations of the performance of economy back home in Britain.

"The particular loan agreement we have signed this morning is in a form which makes it readily available for use in India's overseas payments. As I said, I believe on the last occasion that I was here, besides aid tied to particular projects, resources are also required in a form which can be applied where needed for reinforcing the economic move forward on a board front. The character of this instalment is of that kind.

"By again setting a repayment term of twenty-five years my Government has confirmed its recognition of the need to avoid repayment arrangements which a developing country like India is likely to find burdensome in the short term. Also the first repayment on this loan will not be made until 31 May 1968 when you are well into your Fourth Plan, there being a grace period of seven years."

"You will all be aware that in view of the deterioration in certain ways of Britain's economic performance, especially in connection with our balance-of-payments and reserves position, the Chancellor of the Exchequer brought in during the summer a number of measures to restore the position. Among these are many that bear hardly on the taxpayer and citizen in Britain. However, in spite of the need to cut down Britain's spending on foreign account, the Chancellor did not cut down the amount of £180 million which is the present annual level of our Governmental aid to developing countries, including India. This is good evidence of the interest which Britain has in helping India, in spite of our own anxieties. As regards our economic fortunes in Britain, I am confident that we shall overcome our difficulties and continue to make good progress,—good for us and, I hope, good for you too.

"It will be an important feature of my tour of duty here that I was present at the start of your Third Five-Year Plan. It is an impressive thing that India is setting out to do, even more impressive seen in a world setting than perhaps many people here yet realise. Not less impressive, in my view, is the way in which the need for help from abroad not only for your own Indian plan, but for other developing countries, has met a response in countries such as my own. This is truly a most important development in world affairs. It is in terms of that concern, transformed positively into the most practical form of goodwill and pursued by us in spite of our own troubles, that I have had pleasure in attending here today on behalf of Britain."

Another Bank Rate Cut

By Paul Einzig

THE reduction of the Bank rate for the second time within four weeks brought comfort to those who have favoured all along the policy of taking the line of least resist-

ance. Their argument runs as follows:—Hard money policy has failed to check wage inflation, all it caused is a setback in the expansion of the output. In the circumstances, it would be wiser to let wage inflation proceed, because the rise in wages will then be offset in part at least by a rise in output. Those who take this line fail to follow up their argument to its logical conclusion. It is a generally admitted fact that from the point of view of wage inflation Britain is in a weaker position than her principal business rivals. Consequently the result of continuing on the same route must be the perpetuation and further deterioration of the balance of payments position. A wealthy nation such as Britain is of course in a position to pay for the import surplus for a number of years. Both the Government and private firms are able to raise credits and capital abroad. It is possible to sell out overseas investments and to transfer important British firms to foreign owners. Sterling can be bolstered up by such means for quite a while. But at what a price!

It is distasteful to me to have to criticise my country in a newspaper published abroad. But I feel that some useful purpose might be served by making opinion abroad realise that the policy pursued by Britain is fundamentally mistaken and against the basic interests of the British people. If only there could be sufficient evidence that the complacency disseminated from official British quarters is not shared by public opinion abroad it might influence British opinion and, through it, British official policy. As it is, the relief felt over the relaxation of the of the unpleasant measures adopted in an attempt to check wage inflation seems to have induced British opinion to accept the Government's claim that the Bank rate reduction is justified by an improvement of the situation.

In reality the sum total of the improvement has been a strengthening of sterling as a result of the return of hot money, and this again has been entirely the result of the large credit granted by the IMF. The July measures have not checked the wage inflation, in fact the Trade Unions have stepped up their demands. If only half of what they are asking conceded, the resulting cost inflation and demand inflation would inevitably aggravate the balance of payments position. And the ease with which the disinflationary policy has been reversed will give the Trade Unions the maximum of encouragement to press forward with their demands. It is true, lip service is paid to continued credit squeeze. But the decline of interest rates, both through its material and psychological effects, will result in increased pressure to relax the restrictions, and the chances are that they will in fact be relaxed or circumvented in one way or other.

CEMENT

New Prices

The revised cement prices announced on 31 October, 1961 have been fixed following an investigation by the Tariff Commission which was more comprehensive than the enquiries undertaken on earlier occasions. Whereas previous enquiries were confined to the determination of the adequacies of prices in relation to current costs, on this occasion the Commission was required by its terms of reference to take into account all aspects of the industry, such as production, prices, distribution, development etc. The Commission had therefore made its recommendations in the perspective of the growth of demand for cement in the country and the programme of development envisaged for the industry.

In their report submitted towards the end of August, the Commission had recommended ex-works prices for each factory ranging from Rs 67.50 to Rs 103, including selling agent's commission and 'incidental packing charges'. These prices were to remain in force for a period of three years from 1 July, 1961 to 30 June, 1964. They had also suggested that, if it was not administratively feasible to give retrospective effect to the revised prices, the prices of the several units should be suitably adjusted so that they do not suffer any loss on account of

their sales during the period from 1 July, 1961 up to the date when the new prices were brought into force. Subsequently they had also worked out ex-factory prices including these adjustments. The prices recommended by the Commission involved an increase of Rs 11.65 in the weighted average price per ton (excluding selling agent's commission Rs 1.50 and incidental packing charges Rs 1.25). The corresponding increase in the weighted average of subsequently adjusted prices was Rs 12.78 per tonne.

While the Government have accepted the Commission's finding that an increase of this order is necessary to meet the rise in the cost of production due to causes which are largely beyond the control of the units, the prices fixed by them differ from those recommended by the Tariff Commission in three respects, namely, the quantum of the increase necessary to meet increased costs and requirements of development, the period for which it is to be in force, and the individual ex-works prices.

In fixing ex-works prices for each unit in the industry, the Tariff Commission had taken into consideration the contention that such a policy provided no incentive for improvement or for economies in production. But they came to the conclusion that, because of the wide disparity in costs of manufacture, it did not appear possible to have a common ex-works selling price for the majority of units in the industry. Government however are of the view that a system of differential prices based on the costs of individual units is not conducive to efficiency and feel there should be a uniform

ex-works price which will provide the incentive for increased productivity. At the same time it is recognised that some of the units whose costs are high for various reasons may not be able to operate within the uniform prices proposed and extra prices will have to be allowed in their case to enable them to continue in production till they are able, by effecting economies and increasing production, to bring down their costs within the level to which the uniform price has reference. Government have accordingly fixed a uniform ex-factory price of naked cement of Rs 69.50 per tonne for the industry as a whole, with extra prices for high cost units for a temporary period. This system of prices, it is claimed, will avoid penalising low cost units for their efficiency, while compelling high cost units to achieve economies and, in the long run, held to keep the prices down.

The weighted average of the prices now fixed will involve an increase of Rs 10.19 over the corresponding average of the prices before 1 November, 1961, as against the increase of Rs 11.65 recommended by the Commission (or Rs 12.75 after adjustment for sales after 1 July). In view of the fact that the new prices will be in force for a longer period, that is, up to 1966 instead of middle of 1964 as recommended by the Commission, the smaller increase now allowed is considered adequate to meet increased production costs as well as the needs of rehabilitation and development. Moreover, the costs were worked out by the Tariff Commission on the basis of 90 per cent utilisation of capacity. Full utilisation of capacity, if it could be maintained, should also lead to a larger margin between the actual costs and the ex-factory selling prices.

The scheme now adopted is in effect a reversion to the system that obtained before 1958 when the ex-factory prices were fixed on the basis of the costs of ACC factories which were taken as standard, with

extra prices for newly established high cost units, with the difference that the uniform price is fixed at a higher level on the basis of the costs of the units that account for over 75 per cent of the total cement output.

Under the scheme of distribution that has been in force since 1956, all producers are required to sell cement to the State Trading Corporation at prices fixed under Cement Control Orders issued from time to time under Section 18(G) of the Industries (Development and Regulation) Act, 1951. The STC distributes the cement all over India at one uniform price on f.o.r. destination basis at the rail heads. This uniform destination price is arrived at by adding to the weighted average of ex-works prices, extra charges in respect of rebate on rate contracts, average railway freight, selling agent's commission, sales tax, remuneration of STC, contingency charges and excise duty, and, in the case of packed cement, packing charges. (Retail selling prices are fixed by State Governments after adding to the f.o.r. destination price, incidental charges such as transport from railhead to stockists godown, godown charges, margin of profit for stockists, State sales tax, local taxes etc.).

On the basis of the revised ex-factory prices, the selling price of unpacked cement at railheads has been fixed at Rs 94, excluding excise duty and packing charges. Adding Rs 23.60 for excise duty and Rs 18 for packing charges, the price of packed cement works out to Rs 135.60 per tonne, an increase of Rs 13 over the price before 1 November. In view of the fact that the increase in ex-works prices recommended by the Tariff Commission involved an increase of only Rs 12.78, it appears that the saving effected at the cost of the industry by the lower prices fixed by Government has been ab-

Indian Finance

11 November 1961

sorbed by increased allowances for distribution charges. It appears that this has been done to enable the STC to cover the current deficit incurred by it in distributing cement at uniform prices all over the country as a result of increased freight and other charges.

The necessity for continuing the present arrangement for distribution through the STC was questioned by representatives of some manufacturers who felt that it now served no useful purpose. But opinion was not unanimous and a large number of units, especially the recently established ones, had admitted that STC had really done a good job and arranged distribution in a rational way. The Tariff Commission agreed that the STC had on the whole acquitted itself well in the internal trade of cement and recommended that no change in the present system of distribution was called for, a recommendation which was readily endorsed by the Government.

The ex-factory prices before the revision, prices as recommended by the Tariff Commission in their report, and the revised prices are shown in a separate table. While Rs 1.50 in respect of selling agent's commission and Rs 1.25 towards incidental charges on packing were included in the prices recommended by the Commission, they are provided outside the ex-factory prices in the revised prices as well as in prices before revision. So the prices recommended by the Commission have been reduced by Rs 2.75 to make them comparable. The adjusted prices recommended by the Commission, taking into account sales since July, involve an increase of Rs 1.13 in the weighted average of the prices recommended in the main report.

*

COMPANY REGISTRATION

South Makes Headway

The trend of new company registrations during the second quarter of 1961-62 discloses continuation of the high level of activity that was witnessed in the first quarter also in respect of new floatations. Thus, during the second quarter, a total of 424 new companies were registered all over the country as against 427 new companies registered during the earlier quarter. Of the 424 companies registered, 44 were public companies and 380 private companies, their authorised capital being Rs 23.5 crores and Rs 52.7 crores respectively. A significant feature disclosed by the new registration for the latest quarter is the headway being made by the Southern region in forging ahead in new corporate activity. The four States of Andhra Pradesh, Kerala, Madras and Mysore constituting the Southern region accounted for nearly 1/3rd of the total new registrations for the entire country during the current quarter as

against the proportion of 1/5th recorded during the previous quarter. It is also noteworthy that with 92 new companies registered, the Madras State tops the list in respect of the number of new floatations. Kerala, Maharashtra and Rajasthan were the only other States which recorded an increase in new registrations as compared to the previous quarter.

Notable among the new registrations were 20 giant-sized companies incorporated with an au-

thorised capital of Rs 1 crore and more each. The total authorised capital of these 20 giant-sized companies amounted to nearly 2/3rds of the total authorised capital of all the companies registered during the period. The Durgamur Projects incorporated with an authorised capital of Rs 25 crores was the biggest company formed during the quarter. The McNally Bird Co., WS Insulators (India) and Oriental Power Cables were the giant floatations in the private sector.

The number of companies incorporated with an authorised capital of Rs 50 lakhs and more was 37 out of which 4 were Government companies viz., Kerala State Industrial Development Corporation, Kerala State Small Industries Corporation, Kerala Primo Pipe Factory and the Durgapur Projects. This takes the total number of Government companies registered during the two quarters ending September 1961 to ten with their authorised capital at Rs 68.26 crores.

HASTINGS STREET
A House of Memories
BURN & CO

No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded

the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.

Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

LIC No Change in Investment Policy

The decision taken against the Estimates Committee's suggestion that the LIC should leave the stock market alone has been taken as a sign of willingness to raise the yield on the funds invested. The LIC will, therefore, continue to support new issues, and purchase good shares offered for sale when the market is slack. The

whole principle of buying equities is derived from the prewar policy pronounced by Prudential which applied Sir Earnest Lever's own principles of investment far beyond the limited field of Government or approved securities. It is no accident that Prudential, as a big investor, is represented on the Board's of many UK companies and can intervene, as in the case of the BSA Co., when things look dark.

The same principle might be applied in India and LIC's keenness to get control of LIC can be

cited. The fact that the LIC buys old shares at a premium is due to the net worth of the shares. And break-up value is the basis of buying, not the face value, for the LIC cannot ignore the cardinal fact of inflation. That LIC operates as an investment trust, though its own capital is held entirely by the Government, should be kept in view, because the old Insurance Act's provisions are accepted as the guiding rule. Those who sell out old shares are left with funds to subscribe for new issues and the LIC indirectly

augments the supply of investible funds by its own programme of graduated and diversified buying. That Madras or Calcutta does not find much favour as against Bombay has been mentioned by some who feel aggrieved, but this year the net has certainly been cast wide and promising shares including plantation shares have been taken by the LIC when offered. This helps to widen the present market for sound but inactive shares. And appreciation in share prices has invariably followed the LIC's purchases, so that shareholders can regard the LIC with a measure of gratitude even for its modest purchases of selected planting and industrial shares. That the LIC does not book profits but goes on adding to its portfolio of assorted investments is a familiar complaint, but that may be due to the sense of growth and to the need for offsetting the depreciation inevitable in some cases.

* INDUSTRIAL ESTATES The ECAFE Seminar

The ECAFE Seminar at Madras on industrial estates had the advantage of considering a UN report on the features of industrial estates in Britain and Italy. It is true that India too is developing estates but there has been no industrial town developed like Slough in Buckinghamshire by non-official enterprise. An Italian critic has pointed out that small estates in small towns are not worth-while and has argued from experience in South Italy that uplift involves heavy outlay and the Indian planners must keep in view the results secured, not the programme framed.

The industrial estates near Delhi or Hyderabad, with ready access to markets and materials, promise better results on investment than those set up at Virudhunagar or Erode. This is hardly surprising and if private enterprise gets the backing it needs for making components for big industries, the gain is largely secured by private enterprise at present. From the employment angle industrial estates do not contribute much but they afford training and other facilities to small enterprise at present and the export of talent to SE Asian countries may be readily envisaged by optimists today since regional trade is expected to increase.

The UN Seminar had the advantage of considering the result obtained in Ceylon where economic policy has been nationalist in the sense, that a cut in import is the major object of all present planning. Ceylon is being transformed from a tourist attraction to an industrial centre and the review of industrial planning sug-

gests that Ceylon does not mean to rely indefinitely on tea, copra and rubber. She means to escape from being a plantation to becoming a source of manufactured goods. The ambition hits industrial neighbours who are likely to urge that making steel or cement on a small scale is both inexpedient and unwise.

The major development today is that in the States industrial planning is concerned mainly with small industries and official advice regarding factory design or equipment is provided along

with recommendations for essential imports. The Industries Department in the States is concerned also with technical education. And the division of labour as between Centre and State Governments is a consequence of the policy pursued over eight years. Of course, backing for some big projects is also offered on occasions and the Madras Government has developed a special interest in local iron and steel production, means to set up a rolling mill to get over shortages experienced often.

BANKS

A Legal Point of Some Interest

A legal point of some interest has been settled lately at Trivandrum. The Official Liquidator of the Palai Central Bank rejected a claim for preferential treatment in respect of payment on drafts. But he has since been overruled. The distinction between a depositor and other creditors is real

and substantial, as the Kerala High Court has affirmed now. The draft is a negotiable instrument relating to payment due. It is not like a cheque payable out of deposits held and proportional payment is ruled out for the drafts relates to remittance, a function that banks undertake for a profit described as a commission. The evidence of experts has guided the Court and in regard to bill payable the same practice may be enjoined by the very circumstances of liquidation. The banks that look to the Palai Bank may we

ORGANISED BY
THE FEDERATION OF INDIAN CHAMBERS OF COMMERCE & INDUSTRY
WITH THE ACTIVE SUPPORT OF THE GOVERNMENT OF INDIA

gue that the failure does not affect rights and obligations just in the case of draft arising from purely temporary custody of others' funds by the defaulting bank.

The Court has provided a remedy, though the liquidator's mistake may be expensive for those who enforced their claim. The question that arises is whether the liquidator should be excused from paying the costs of actions, if he hid it out of ignorance. But ignorance of law is not a convincing defence and the liquidator should be made to pay for his mistake or else his previous employer should realise his inadequacy as a liquidator. This is one way of improving banking practice—fines for mistakes would be permissible when the liquidator is in a fiduciary position and under specific obligation to respect the known rights of third parties.

The same problem may not arise in the case of merged or submerged banks but the payment entails less resources for depositors whose claims cannot be met by a call on the shareholders who have not so far been called upon to meet the contingent liability in respect of partly paid shares. There is, of course, the issue whether shareholders' consent for the arrangement to amalgamate one bank with another bigger institution was secured specifically and whether a claim to call on unpaid capital was precisely waived under the terms of a forced union of interests. The company law administration will perhaps help in elucidating the position. That it is unsatisfactory and obscure would be admitted by most people.

FIRESTONE

A Familiar Pattern

The consent given for capital issues by the Government only confirms what is known about Britannia Biscuit's bonus issue or the expansion programme of Investa Machine Tools. The more significant item relates to Firestone Tyre raising its capital from Rs 20,000 to Rs 110 lakhs. The Tariff Commission dealt with the structure of the tyre industry and made mention of the peculiarities of Firestone India, under direct American control for over 20 years now. The action taken to rectify the defects by bringing capital into relation with profits is perhaps a prelude to the inception of an enterprise similar to Goodyear India. That Firestone has already a stake in a public company to make synthetic rubber at Bareilly is known to many and the Indian investor will be afforded an opportunity to invest in a new venture sponsored by Firestone in India. The pattern of development in this case too is familiar. The subsidiary will probably be turned into a public

company in which Indian capital will be asked to participate. It is obvious that only equity shares will be offered and the US interest in the Company will be defined by means of a prospectus.

The current passion for tyre shares is patent in the rise of Dunlop Rubber and the high premium maintained on Ceat Tyres in Bombay. The interest lately developed in General Tyres and Madras Rubber Factory owes certainly much to the general appreciation of tyre makers' prospects in India. Three of the US majors are in India, and if General Tyre has not come from the USA, it is not because the desire is lacking, but because prospective collaborators have not been able to get the Indian Government's approval for the terms outlined by General Tyre which has entered the film industry by buying control of RKO's radio and television interests. The value of intelligent expansion in new fields has been proved by the record of Aerojet, a subsidiary of General and the company is the world's biggest producer of tennis balls through another subsidiary. It has one foot in the plastics industry and its prospect of "tireless gains" may have its own appeal for Indian enterprise. But it is not coming in and it is Firestone that is evidently ready for an early take-off into the capital market.

COASTAL SHIPPING

BSN Services to Continue

The argument over the Konkan Coastal traffic has ended with a hint that an eight per cent rise in fares may be allowed to permit continuance of the Bombay Steam Navigation Company's services. Whether the threat worked or whether the State Government regarded the public interest as supreme does not matter. The gain to Scindia Steam in the matter of revenue may be small, but the losses can be soon reduced. A point worth examining now is whether the Railways should not undertake packet services and set up small ports on the coast. It is far better than to think of investing in road services to limit competition. The British Railways manage ports and shipping and the Indian Railways can acquire a shipping interest though it may not be possible to copy Canadian Pacific that runs services on land, water and air at present.

The inland navigation companies too should be State-owned and operated and the Third Plan has singularly overlooked the difficulties of companies like IGN and RSN which are forced to accept uneconomic rates and fares. The Railways can divert traffic by owning ships and running them and give some relief to consignees

of coal. The BSN episode, while it certainly illustrates the limitations of a take-over, also proves that depressed industry like shipping needs special consideration. And State acquisition is desirable on all counts especially if Mangalore Port is to be developed to link coastal ports serving trade on the West Coast. The Ramdas disaster in 1947 established in a way the need for State control of coastal passenger traffic and it has been a wonder why the Government that sinks so much in the Vizag Shipyard should not do something about the packet ports like Ratnagiri or Rewas.

The obvious conclusion is that planning so far has been incomplete and the ambition to enter the overseas trade has obscured the more important object of improving minor ports and a regular passenger trade from Bombay to Cochin or Kandla and Karachi. The shipping companies in their present position cannot do much for their expenses are up and income is stagnant. The old services to Rangoon have been cut drastically. The Central Government can afford relief by acquiring small coastal lines and adding second-hand vessels that Britain can probably supply on credit under the ECGD scheme. Short runs and the carriage of mixed cargo may help the Government to earn, say 3 per cent on its investment. It would also help the fishing industry to reach big cities.

AII

An Eventful Year

In more than one way, 1960-61 was an eventful year for the Air India International. Most importantly it witnessed the entry of the AII into the jet age and the introduction of the Boeing jet engines in all the important routes. This one development has dominated and influenced the fortunes of the AII during 1960-61. During the same year, the AII also earned the distinction of being the first Asian carrier to operate across the North Atlantic. This came as a result of the pool partnership agreement which the AII concluded with the British Overseas Airways Corporation and the Qantas. The partnership agreement obliges the signatory members to plan their services in such a way as to complement each other's operations rather than to compete with each other. As the annual report of the AII points out, this enables the three airlines to give jointly much better service to the travelling public because the days of operation and points of call can be spread to meet the requirement of traffic. The tripartite agreement is designed as a measure to secure for the partners a greater share of the total available traffic in the face of international competition. The basic principle of revenue pools is the

sharing of common traffic rights between two points. Pool partnerships are now a common feature of airline operations. Air India itself has pool partnership agreements with other lines like the AEROFLOT on the Delhi-Moscow line, and with the Czech Airlines on the Bombay-Prague sector.

With the acquisition of jet engines, the AII has introduced Boeing services on the India-Japan route and on the India-East Africa route while at present the fleet of the AII consist of engines other than jet also, homogeneity of fleet is planned to be achieved by disposing of its fleet of super constellations, of which it has now nine. As a result of the introduction of jet services, the total capacity offered by the AII recorded an increase of 72.7 per cent over the capacity offered in the previous year. However, it is stated in the annual report that the traffic actually carried did not keep pace with this increase, having gone up only by 41.2 per cent which resulted in a reduction of the overall load factor from 58.2 per cent in 1959-60 to 47.3 per cent in 1960-61.

The financial results of the company have also shown considerable improvement in 1960-61 as compared with the previous year. The operating profit of the company increased from Rs 18.26 lakhs in 1959-60 to Rs 1,17.41 lakhs in 1960-61. The net surplus increased from Rs 26.98 lakhs to Rs 67.97 lakhs. And after adding the previous year's carry-forward, the total disposable surplus amounted to Rs 83.00 lakhs.

IDA

Credit for Pakistan

The International Development Association (IDA) today extended to Pakistan a development credit equivalent to \$1 million to assist the Dacca/Narayanganj/Demra Irrigation project. This project, the first of its kind to be carried out in East Pakistan, is designed to increase agricultural production in a densely populated and very poor area, and will also serve as a pilot project to provide information and experience which should be of value in developing irrigation schemes in considerable areas of similar land in East Pakistan.

The credit, the first to be extended to Pakistan by IDA, is repayable in foreign exchange over a term of 50 years, free of interest. The IDA funds, along with the rupee funds needed to complete the financing, will be made available to the East Pakistan Water and Power Development Authority, which will execute the project.

The economy of East Pakistan is based predominantly upon agriculture. The cultivated area is

11 November 1961

22 million acres, with little further land available, but the population already exceeds 50 million and is growing rapidly. The pressure of population on the land is severe, and in recent years some rice has had to be imported to supplement local supplies. Increases in food production are urgently needed to improve the national diet, to reduce imports of food grains, and to keep pace with the growth of population. In these circumstances full advantage must be taken of irrigation, flood control and drainage works, which make it possible to increase yields, extend double cropping and reduce the risk of crop failures.

The project will be carried out on some 20,600 acres of flat and fertile alluvial land immediately southeast of Dacca, the capital city of East Pakistan. At present most of the land is inundated every year to a depth of between five and fifteen feet as the rivers rise after the monsoon rains. One crop of deep-water rice is harvested, and almost all the land then lies unused until the next annual flood.

Under the development scheme, a dual pumping station would regulate the supply of water to the area. Flood protection would be provided during the monsoon season, when excess water would be pumped out of the protected area. During the rest of the year water would be pumped up from the Lakhya River for distribution through irrigation canals to be dug within the area. With the aid of these measures, it should be possible to produce three crops a year on most of the land, and two crops a year on the remainder. Average gross production per acre should be tripled, and it is estimated that the gross annual value of the increase would represent a return of over 75 per cent on the cost of the scheme.

Repayment of the IDA credit will begin on 1, April 1972, after a ten-year period of grace. Thereafter, one per cent per annum of the principal will be repayable for ten years and 3 per cent will be repayable each year for the final 30 years. A service charge of 1/2 of one per cent per annum on the amounts withdrawn and outstanding will be made to meet IDA's administrative costs.

PLYWOOD

A Four-Point Programme

Inaugurating the Federation of Indian Plywood Industry at Calcutta last week Mr Manubhai Shah, the Union Minister for Industries, highlighted the importance of establishing "built-in" co-operative research units in each industry all over the country for attaining specialisation in all categories of industrial produc-

tion. Toward this end the Minister has assured Government assistance to the tune of Rs 20 lakhs, Rs 15 lakhs for meeting part of the capital expenditure, the balance to be met by the industries, and Rs 5 lakhs for covering the running costs. About the enormous benefit to the industries by eliminating the needless expenditure that inflate the cost of production there will be no two opinions. Higher productivity through the employment of improved technology will be an added attraction of the translation of the results of

such research centres into industrial practices. The small units also stand to gain, for they can adopt such results which otherwise will remain beyond their reach.

For the evolution of a uniform policy and free and frank discussions within the industry and with the authorities, the formation of a central federation becomes imperative. In the circumstance the constitution of the Federation in the plywood industry is a matter of great import. In his inaugural address Mr Manubhai

Shah has made a forceful plea for the implementation of a four-point programme in the industry. The first point refers to the development of a high pressure salesmanship aimed at educating the consumers of the advantage the utilisation of relatively cheap plywood in lieu of natural wood. The second step is calculated to utilise profitably the waste products of the industry, which form nearly 45 per cent of aggregate production. Thirdly, the Minister drew the attention of the industry to launch an ex-

MAKE MONEY FASTER: EXPORT BY PAN AM JET

Jet Clipper Cargo delivery to Europe, the Far East and the U.S.A. lets you reinvest your money faster—and you save on insurance, crating, handling.

Businessmen who need a quick return on their investment—manufacturers of wearing apparel, leather goods, livestock and mica, for example—find Pan Am Jet Clipper Cargo the ideal way to ship to the U.S.A., the Far East and Europe.

In addition to savings on insurance, crating, and handling all along the line, you get the most impor-

tant saving of all—time. Your goods can be in your customers' hands less than 72 hours after they leave your establishment. Prompt payment means that your money is back working for you weeks sooner than it would be, had you shipped by surface transportation.

For a free estimate on what this advantage can mean to you, call your local Pan Am Jet Clipper Cargo Expert:

Calcutta: 42 Chowringhee, Tel. 44-3251 (5 Lines)
New Delhi: Imperial Hotel, Tel. 48172, 48117

JWPA 61

port drive with a view to fetching foreign exchange. Last but not least, Mr Shah underlined the need for a speedy modernisation of the industry which should form an implicit and integral part of all the industries.

That this four-pronged programme will ultimately result in the efficient performance of the industry cannot be denied. But how far the industry will be able to shoulder the task is a matter for conjecture. The past performance of the industry, due chiefly to numerous inhibiting factors like the paucity of raw materials does not provide room for optimism. The task that devolves on the industry is therefore a formidable one. The Minister's assurance of making available adequate raw materials to the industry will afford some consolation. The performance of the industry in future will to a large measure depend on the activities of the Federation.

NRDC 31 New Inventions

Increased and sustained progress in the working of the National Research Development Corporation is reported in the Seventh Annual Report of the Corporation for the year ending March, 1961.

During the year, 31 inventions were reported for development, by 14 research institutes, including two from foreign countries, bringing the total number of inventions reported up to March 61 to 584.

Among the new plants established during the period was the first Pine Oil Factory at Hoshiarpur, the Amul Baby Food Plant at Anand and the Carboxy Methyl Cellulose Plant at Bilimora.

Fifty new licences for commercial processes were issued as against 30 in the previous year.

During 1960-61, four new developmental projects, were sanctioned including a prototype plant for the integrated production of proteins and oil from groundnuts, an unit for the experimental production of aromatic chemicals at the National Chemical Laboratory, Poona, and a prototype plant for the production of a superior grade of activated carbon at the Regional Research Laboratory, Hyderabad.

During the year projects sponsored by the National Physical Laboratory at New Delhi contributed the largest number of inventions numbering five followed by CSIR Schemes (4); Regional Research Laboratory, Hyderabad (4); Central Food Technological Institute, Mysore (3); and two inventions each by the National Chemical Laboratory; Poona, the Shri Ram Institute for Industrial Research, Delhi, and the Indian Railways.

Fifteen Indian patents were obtained during the year including eight for the Union Ministry of Railways (Railway Board), four for the Union Ministry of Defence and three for the Indian Institute of Science, Bangalore. Eight new applications for the patenting in India of inventions were filed by the Indian Institute of Science, Bangalore, three by the Union Ministry of Food and Agriculture and one each by the Union Ministry of Railways and Union Ministry of Steel, Mines & Fuel.

The Railway Board obtained 10 foreign patents in Australia, West Germany, Czechoslovakia, France, Canada, UK and USA on the "Addition to Suri Transmission".

The Report points out the Shri Ram Institute for Industrial Research had filed patent applications in the UK, the USA, West Germany, France and Holland for an improved process for "imparting anti-shrink properties to woollen fibres".

Of the patents and processes referred to the Corporation, 39 processes had been licensed and were in production; 91 were released to industry free of royalties; 14 were being worked by departments; developmental action in respect of seven had been arranged with firms and large scale and pilot plant trials were in progress in the case of 16.

The Report says that preliminary trials had been completed in the Arya Chemical Works, Calcutta, for the production of a can sealing composition developed at the National Chemical Laboratory. Another firm in Saharanpur had placed in the market the sugar cane planter developed at the Indian Institute of Sugar-cane Research at Lucknow.

Among the processes made available free of royalties during the year was a transistorised community receiver; electrolytic engraving or etching on metals and improvements relating to protection of metallic surfaces against atmospheric corrosion.

INDUSTRIAL INDIA

A New TVS-Lucas Venture

Lucas electrical equipment to meet the demands of the expanding Indian motor industry is to be manufactured by a new company in Madras. Negotiations between Joseph Lucas and T. V. Sundaram Iyengar & Sons (TVS), of South India, have resulted recently in a partnership agreement initiating the formation of a new company. The capital employed in the new company would amount to more than £2,000,000, and this would include more than £1,000,000 worth of plant and machinery provided by Lucas. Initially some

components will be imported, but a gradual change-over to indigenous production is planned.

Employment will be provided in the new company in the first phase for more than 1,000 Indian nationals in all grades from engineers to unskilled operatives, and initial production will commence in 1962 with the manufacture of electrical equipment and spares for commercial and private vehicles.

Equipment to be manufactured will be of the latest design and will include dynamos, coils, starters, control boxes, distributors, horns, screen wipers, flasher units, and headlamps and side and rear lamps. It is intended that production will meet all the requirements of the motor industry.

In the new company, the board will constitute three Lucas and three TVS directors. The chairman will be Mr T. S. Krishna of TVS, and Mr J. W. Shield of Lucas will be the managing director.

US

Federal Budget Trends

At about this time every year, US government officials conduct one of their periodic reviews of the federal budget. Such a review has just been completed for the current budget covering the 1962 fiscal year that began 1 July.

The results of this view reflect two basic trends: a rise in receipts growing out of the vigorous economic upswing that began last spring, and a rise in expenditure growing out of moves to bolster the national security, improve international programmes, and promote domestic economic and social progress.

Total federal budget expenditures for fiscal 1962 now are estimated at \$89,100 million and budget receipts at \$82,100 million. The result is a projected deficit of \$6,900 million. This compares with a deficit of \$3,900 million in fiscal 1961, when outlays totalled \$81,500 million and revenues \$77,600 million.

Thus, receipts promise to be \$4,500 million higher in the current fiscal year than in the last. This reflects a continuation of the economic gains—the rising output and income—which have been underway since the first quarter of this calendar year.

It should be borne in mind, in this connection, that receipts in fiscal 1962 come largely from taxes on earnings in the calendar year 1961. This means that they have been affected, to some extent by the aftermath of the 1960-61 recession, and could have been even higher of the manpower and resources of the economy were more fully employed.

Now, with a more fully employed economy in prospect for the year ahead, and further significant gains in output and income anticipated, President Kennedy has announced his intention of sending a proposed balanced budget to Congress in January for the 1963 fiscal year that begins next July 1. The present thinking is that the only bar to such a move would be extraordinary and unforeseen spending requirements, particularly in the realm of national defence.

As for the \$7,500 million increase in budget expenditures in fiscal 1962 as compared with fiscal 1961, this reflects largely changes in that have taken place in governmental policy under the Kennedy administration, which took office in January of this year. These changes are evident in the greater attention which has been paid to the requirements of national security, international cooperation and domestic and social improvement.

US budget officials point out moreover, but budget outlays have been tending upward for the past several years as a matter of course. The principal factors have been the growing responsibilities of the Federal Government in the world situation, and the heavier need for governmental services brought about by the nation's expanding population, increasing urbanization and rapidly advancing technology.

It is noteworthy that federal budget expenditures, while increasing in amount over the years, have nonetheless remained at a relatively stable proportion of the total output of goods and services—the Gross National Product (GNP)—for most of the postwar period. In fiscal 1962, as in fiscal 1961, expenditures are estimated at about 16 per cent of GNP. And if the economy continues to improve and the GNP to climb as expected, there would be no appreciable change in this

proportion, though expenditures in fiscal 1963.

Certain recent developments, however, have contributed to pushing federal outlays as now estimated to a somewhat higher level than had been anticipated a few months ago. For one thing, the effects of the appropriations actually voted by Congress during its recently concluded session are now evident. For another, agricultural spending will be higher because of an even better than expected farm production performance, coupled with advance price-support payments to some farmers.

It is significant that the latest budget estimates for the current fiscal year are rather realistically and tightly drawn. Not only do they include the effects of the two aforementioned factors; they also include projected outlays based on supplemental appropriations requests which President Kennedy is expected to propose to Congress at its forthcoming

"Do LIC actually invest at the rate of Rs. 1½ million a day?"

"More! In fact they're the largest investors in the country."

PEOPLE ARE TALKING ABOUT LIC

With LIC's mounting business turnover, comes a steady increase in its premium income. A large part of this income is invested in the country's economy—averaging more than Rs. 1½ million every day.

These investments stimulate the economy, creating new wealth. By helping to finance industries LIC catalyses more jobs, more incomes and more goods.

Today there is increasing recognition everywhere of the part which LIC is playing towards domestic and national stability.

session beginning in January of next year.

At the same time, the Kennedy administration is making a valiant effort to hold down unnecessary federal spending. It is a fact not always known to the public but well enough understood among government administrators that President Kennedy, while advocating expanded programmes he deems essential to United States interests at home and abroad, has constantly stressed the need to maintain government operations at minimum possible cost. Now, to reinforce this view he has recently instructed US Departments and Agencies to hold down expenditures wherever feasible. This tight hold on the government's spending reins is also reflected in the current budget estimates.

The big unknown in all this, is the military situation. The defence expenditures in this fiscal 1962 budget are based on the actualities of the present international situation, not on budgetary considerations, and could go up or down depending on developments.

With this uncertainty aside, however, US officials are confident that the estimates in this latest fiscal 1962 budget review are essentially sound. They are equally confident that progress is being made toward achieving a balance in the federal budget for the following fiscal year.

★

NEHRU IN THE US Clarifying Issues

The visit of Mr Nehru to the USA takes place when tensions over Berlin are less acute and the Laos situation is on the mend. It also follows a visit by US businessmen to Delhi to ask questions and get assurances about the field for investment. The continuous consultation helps collaboration for diversification of industry and that is perhaps as hopeful a factor as the US effort to enlist Japanese interest in India's needs at present. The visit to Washington may help Mr Nehru to outline the case for foreign aid on the basis of India's own achievement. The more important consideration is that the visit will help to define the nature and units of neutralism, to dispel the impression that Pakistan is the friend of the USA, and not India.

The effect of the visit on the Congress party's election strategy should be taken into account. The Swatantra party's advocacy of free enterprise may be countered by letting the USA know that Indian economic planning has its points of resemblance with French rather than Russian planning. The obvious effort to drive a wedge between capitalism and socialism must be met by an early exposition of Indian policy and

programme, so that Mr Nehru's visit would have its own effect on the outcome of elections in India. The visit may help also to redefine India's attitude to colonialism to which objections have been formulated. But India has made so far no move against Portuguese power in Goa, not because of the risks but from a desire not to add to the world's troubles. The reserve or reluctance should be appreciated abroad. India's border problems have taken a new turn with Nepal moving away towards Peking. This is an ominous development, even in the American view, and the USA should probably give due weight to Indian concern over the results of the restoration of Royal authority. The USA will doubtless realise that Indian aid to Bhutan and Sikkim will help to insulate the Himalayan frontier and the bearing of economic aid to India on foreign policy may gain sympathetic notice. The loyalty of India to the United Nations, in the acts in the Congo, for instance, may not require specific notice, but India's Prime Minister, by a visit to Mexico, may establish the right contact with a country that is developing by raising a middle class to help political and economic stability. The principles of socialism in actual application in Mexico may help India to clarify her own policy. There is a real need to get in touch with Latin America and Mexico City can be the starting point for ascertaining, for instance, what Mexico has done with her oil industry. The US view of India's policy should be certainly clearer after the visits of Mr Harriman and Mr Johnson to Delhi. There is no need to say that the Democrats in office have favoured India and the Congress has good reason to be grateful to the late President Roosevelt for his interest in India's freedom.

★

BRITISH RAILWAYS A Clean Slate

The British Government's decision to write off the losses to the tune of £475 million sustained by the Railways will help the new Board to start afresh. But the failure of a nationalised enterprise to prove itself by performance will help the Tory party to decry any new plan for nationalisation. The new Board is empowered to raise railway fares promptly generally by notification. The other changes proposed will give Dr Beeching freedom to act. The Ministry of Transport counts for less than the Board that will retain its control of hotels and docks and the future may help to pay interest on loan that represent the British railway's capital. The budget for 1961/62 will be strained by the payment and hence there is now

talk of what Mr Lloyd means to do about a tax on capital gains. In October assurances were given to Labour about a new tax on the rich and the firmness of Mr Lloyd may be reflected soon in a tax on gains made on equities. The new preference for gilded is thus understandable. The outstanding feature is the resolve to go on with the railways as they are after so many inquiries about wage levels. The problem for railways under the ECM is not difficult but the chances of big traffic from the Channel Tunnel are small.

NEWS IN BRIEF

Total production of various machine tools by the 22 leading member firms of the Indian Machine Tools Manufacturers' Association in September 1961 amounted approximately to 4,128 and are valued at about Rs 69 lakhs.

The UP Government has decided to establish 29 more industrial training centres with a seating capacity for 8,000 trainees. The seating capacity of the existing 15 institutes will also be increased by 1,760 seats by the end of the Third Plan.

The second blast furnace of the Rourkela Steel Works has recorded a record production of 1,304 tonnes of pig iron on Tuesday last week as against its rated capacity of 1,000 tonnes. Total production of pig iron in October 1961 aggregated 41,007 tonnes against 31,950 tonnes in September. Output of steel also registered an increase of 9,503 tonnes. The average monthly production in both the blast furnaces had gone up by about 68 per cent of their rated capacity.

The first rayon factory in Punjab will be set up in Yamunanagar with an investment of about Rs 10 crores. The factory will be in the private sector and will provide employment to nearly 15,000 people.

The Government of Maharashtra has constituted a 17 member Board of Management for the State Industrial Cooperative Association Limited comprising both officials and non-officials under the chairmanship of Mr M. K. Firodia, the Chairman of the District Central Cooperative Bank Ltd, Ahmednagar. The new Board of Management took over charge on 1 November.

Mr Manubhai Shah, the Union Minister for Industries announced last week that three factories for the manufacture of newsprint would go into production before the end of the Third Plan and the existing production of the Nepa

mills would be doubled during period.

The Pakistan Government decided to decontrol hard currency and in future industrial concerns would make direct imports under licences issued by the Controller of Imports and Exports.

Preliminary work on the construction of the shipyard at Cochin has started. The first stage of the project estimated to cost 15 crores would be completed by the Third Plan period. The subsequent stages of the shipyard would be executed in the Fourth Plan.

The Government of India has decided to set up a new diesel locomotive workshop at Varanasi in the public sector. A provision of Rs 12.54 crores has been made for this project in the first year of the Third Plan. Part of the amount will be utilised for the import of special equipment. Mr G. P. Sahani will be the General Manager of this new enterprise.

The Bhilai Steel Works has exported about 147,500 tons of pig iron valued at over Rs 320,000 upto the end of October 1961. In addition, the Bhilai Steel Works have despatched 818,863 tons of pig iron to foundries all over India upto end of October '61.

Yugoslavia is the new buyer of pig iron from Bhilai. The other countries buying pig iron from Bhilai are Japan, United Kingdom and Pakistan.

PERSONAL

Mr U. Thant of Burma has been nominated Acting General Secretary of the United Nations by the Security Council. Mr Thant will hold the post till April 1963, the date when the late Mr Dag Hammarskjöld's second five-year term would have expired.

Mr C. R. Sundaram has been appointed Chairman of the National Small Industries Corporation in place of Mrs Maragatham Chandrasekharan who has resigned the office in order to stand for the Lok Sabha during the forthcoming general elections.

Mr M. G. Pradhan, the Deputy Director-General of Civil Aviation, will succeed Mr K. M. Raha, as Director General of Civil Aviation.

The Indian Road Transport Development Association has elected Dr F. P. Antia as president and Mr J. R. Price as Vice-President for the ensuing year at its annual general meeting held in Bombay.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

WHEN Mr Nehru's trip to the US was planned earlier this year, India and the US were figuratively slapping each other's back and proclaiming what buddies they were. After a rather indifferent spell, Indo-US relations were on the mend. We were undisguisedly happy at Mr Kennedy's election as President and Mr Kennedy paid us the compliment of referring in glowing terms to Mr Nehru in his inaugural. India has had in the last few months continuous evidence of American interest in India's plans of economic development and we can hardly forget American initiative in getting other nations, often reluctant, to commit themselves more overtly to India's attempts at economic regeneration. Even in matters of international politics, both have, except for differences over particular issues like the US intervention in Cuba, stood nearer each other than before. Indeed sometimes, as over the Katangan imbroglio, we found ourselves nearer each other than either with its "traditional friends." And yet, we find to-day that the atmosphere is murky with suspicion and mutual recrimination and not even Mr Nehru's visit has succeeded in wholly clearing the air. The change in mood has been dated by some observers with the Belgrade Conference. This is rather ironical, considering India's well-known reluctance to participate in it and the stand we actually took there. Mr Nehru was, by common consent, the only leader at Belgrade who was anxious that the neutral summit should not become a forum of anti-colonialist hysteria. He got small thanks for his effort to restore thus a better sense of priority and perspective at Belgrade. Since then much has happened including the Russian explosion of the monster bomb. What has obviously and avowedly irked many Americans is the appearance of India not wanting to offend Russia even when it is so obviously in the wrong. This is rather unfair considering that Mr Nehru has promptly deplored the Russian resumption of tests. But what gives some semblance of justification to these complaints is Mr Krishna Menon's rather predictable performance at the UN. It should not have been difficult for Mr Menon to make his points, largely unexceptionable, in a rather different way. But if he had, he would not be

Mr Krishna Menon but Mr Nehru. Mr Nehru would not have held the scale so ostentatiously even, toted up the number of explosions on either side, or quoted Congressional evidence that showed that the US tests followed the Russian at such short notice as to make it quite obvious that the moratorium was not a period of idleness. Not that there is any disposition on anybody's part to blame the US for being barely within the letter of the agreement to desist from tests, but it does make the moral horror at Russian resumption of tests, extensively peddled editorially, somewhat hypocritical. Mr Krishna Menon being what he is, does rub this sort of thing in. Unfortunately, procedural wrangles about priority to be accorded as between an Indian and UK-US resolution had exacerbated feeling, though when it came to the sticking point, India did vote, along with the rest, asking the Soviet Union to desist from further tests. There is, of course, a vital difference between India and the US over the question of banning of further tests as exemplified in the rival resolutions. The US feels—in my opinion, quite justifiably—that the kind of blanket moratorium without treaty obligations for international supervision and sanctions would become in practice only a moratorium at Russia's pleasure. And with Russia at the end of her current series of tests, she may virtuously agree to a proposal that she will disregard when the time comes. All this is evident enough, but a difference of this sort should not make the two countries suspect each other's bona fides. It will be sad day when America feels that those who are not with them are against them.

★

India is doing the delegates to the Delhi meeting of the Commonwealth Press Union proud. It certainly was some occasion, all the big guns of Fleet Street attending in their strength and booming away about the Freedom of the Press and the Commonwealth ties. They have since left on a tour of the country and one hopes that they will take time off entertainment and receptions in their honour to see something of the country and the changes that are taking place. The Indian Press is free in the obvious sense of being allowed by the Government to say pretty nearly all that it wants to say without much inter-

ference. This is certainly not true of the Press of many other countries including some which are members of the Commonwealth. But, whether our Press itself says all that it ought to is a different question altogether. Quite the most interesting discussion in Delhi was that on monopolistic tendencies in the Press, a subject of obvious relevance to conditions in this country. Newspaper proprietors are rather touchy about this subject here, but, Mr Roy Thomson, a late arrival to the newspaper business and the reputed owner of a chain of over 100 newspapers, was engagingly candid about it. He said somewhat naively that monopoly was a fact of life. A newspaper is a business proposition and one has to gather more and more newspapers in one's hand in order merely to survive. Lord Burnham of the Daily Telegraph dissented vigorously. Apart from the fact that the economics of the proposition is certainly not so simply inexorable as Mr Thomson put it, it is unthinkable that one man should have the power to sack 100 editors. (Ask yourself the question "Why not, when one man can sack a hundred mechanics?" You will at once notice the force of Mr Burnham's argument.) Mr Thomson himself is reputedly without any desire to impose his politics on his editors. But not all proprietors are as detached about what is being written in their papers. Lord Beaverbrook is a notorious example. The Daily Express goes for Lord Mountbatten and Pandit Nehru everytime it gets a chance merely because the "Beaver" happens to dislike them. Innumerable other examples can be found in Christiansen's recent book, "Headlines All My Life". The fact is that the Press is not merely an industry, it is also power, power of the most subtle sort. In any case the fact that the manufacture of news and views has its points of similarity with the manufacture of, say, breakfast cereal or jute goods does not mean that it should be organised like them. Anyway, neither the economics nor the ethics of monopoly in industry, much less the newspaper industry, is self-evident; otherwise they would not have had a Commission of Inquiry into the question in Great Britain. In India where there is no rival medium of mass communication and advertisements like the television, monopolistic tendencies have even greater dangers from the point of view of the integrity of the Press. And, finally, the fact that in both countries there are newspapers, which stand alone and play a vigorous and decisive part in the country's

life is a pretty conclusive piece of evidence against the casual relationship between monopoly and survival that Mr Thomson sought to establish at Delhi.

★

If you are not one of those who believe with Shaw that the two-party system is the diabolical invention of the British Monarchy to perpetuate itself, you would probably agree that it is a workable political device and India needs an effective opposition. If you go thus far with me, I think I can persuade you, on the strength of the Swatantra Party's election manifesto, that much the best thing that could happen to this country is its emergence as a viable opposition to the Congress. Alone among the parties in the country, it is not embarrassed by the fact that the Congress has stolen the socialist thunder. Thus it is able to provide a body of coherent ideas which is a recognisable alternative to what the Congress has to offer. You may not agree with what the Swatantra Party has to say about the deleterious effects of central planning or the sturdy virtues of free enterprise, but you do know that there is nothing wishy-washy about them. Secondly and more importantly, the kind of excesses that you have to fear from the Congress is precisely what Swatantra in effective opposition would save the Congress from. It is better that the Congress should watch its steps because the Swatantra rather than the Communist Party is wide awake and able to kick up a row. When the Congress absorbs, as it will do sooner or later, the PSP and isolates the Communist Party, we shall have as in Britain, a genuine right and left with appropriate but ineffective lunatic fringes. I am not suggesting that it is how things will actually pan out: I am merely indicating that I would wish it this way rather than any other way. This would be in accordance with the historic opposition between the Progressive and the Conservative (both words used in a loosely descriptive rather than in a pejorative sense) and would ensure stability, dynamism and continuity in our political life. As an opposition the Swatantra has another merit: Among the parties of the conventional right, it is the only one that has no particular communal or obscurantist affiliations. Wedded to tradition as a Conservative party is bound to be, it has certain obvious dangers stemming from religious and other orthodoxies to beware of. The Swatantra leadership is irreproachable in this respect. Its most obvious weakness is organisational inadequacy, as is shown up by the rather farcical goings on in its West Bengal Unit. This may well prove embarrassing to its electoral fortunes.

Olympus

INDUSTRIES FAIR

Impressive Evidence of Growth

WORK is proceeding round the clock to complete arrangements for the Industries Fair scheduled to open on 14 November. Drenched by unexpectedly heavy showers, the exhibition grounds off Mathura Road presented a desolate spectacle when the Prime Minister visited the site early last week to acquaint himself with the progress of the work. And doubts have been expressed whether it would be possible to put up the stalls with all the exhibits in position by the opening day. But the outlook now is more encouraging.

The Fair, sponsored by the Federation of Indian Chambers of Commerce and Industry, is being organised in close collaboration with the Government of India. The task facing the organisers has been a formidable one. The grounds extending over 180 acres had to be provided with drains, roads, power lines etc before the work on the stalls could be started. The civil works involve the coordination of the activities of several Government departments. And as in all activities concerning Government departments, it is not possible to rush ahead without ripping over Red Tape. The subsequent process of disentangling consumes more time than is gained by speeding. In the case of some Government concerns which had been asked to participate in the Exhibition, the time taken in getting formal sanction from the competent authorities, authorising the financial commitment involved, has taken more time than they have at their disposal to put up the exhibits.

In spite of the handicaps the work is making good progress. The Federation has set up a temporary establishment at the site. The Secretary-General, Mr P. C. Ansal, and Mr Chentsal Rao the secretary of the Federation are daily attendance, besides the staff detailed to look after the thousand and one details connected with the organisation of the fair. It is confidently expected that the preparations will be completed in time and, if the worst comes to the worst, at least the stalls on the VIP route would

be ready in time for the formal opening by Vice-President Radhakrishnan.

An idea of the magnitude of the organisational task can be gained from the number of participants and the scale of the display. This year's Industries Fair is the biggest of all exhibitions, so far held in New Delhi, not excluding the Agricultural Fair and the Railway Centenary Exhibition. Provision has been made for two million sq feet of ground space which is more than double the space available in the First Industries Fair.

The Exhibition is intended to highlight the industrial development of the country during the decade of planning. To that end, 400 Indian Business Houses, not to speak of Central Government Departments and State Governments, of which eleven are taking part, and all public undertakings, from the Railways to the Publications Branch of the Government of India, are making Herculean efforts to put up an impressive show. There is a proposal that the Fair should not be treated as a nine days' wonder and that, it should be retained as a permanent Industrial exhibition which will give visitors from abroad a comprehensive view of India's export potential.

Development plans lean heavily on the assistance generously extended by friendly countries. The impressive pavilions put up by foreign countries—a total of 18 foreign countries are taking part in the exhibition, including, the USA, Britain, West Germany, Russia and other East European Countries, Yugoslavia and Vietnam to mention a few—proclaim the contribution that each can make to the industrial progress of this country by way of equipment and productive techniques. Countries on both sides of the Iron Curtain are represented in strength. In its own way the Fair may be said to provide a wholly beneficial demonstration of "competitive co-existence".

Four out of the five biggest pavilions are being put up by foreign countries, namely the US, Russia, Britain and West Germany. The US pavilion occupying 5.5 acres has been described by the Exhibition Director of the US Government as the biggest industrial show organised by his Government so far. A notable feature of the US pavilion is the emphasis on heavy machinery required for

the India's Third Plan, rather than on gadgets and consumer durables typical of the Affluent Society. But this emphasis on heavy machinery does not exclude exhibits from new frontiers in technology. Visitors to the Fair will be able to see the aero car which sails in the air one foot above the ground. Those who are disappointed by the meagre Third Plan allocation for roads will watch this vehicle with wistful eyes, for it can travel over stretches of land which are not motorable. But it does not offer any immediate hope of relief in the current shortage of transport for coal.

Vostoks and Sputniks in the Russian pavilion, the third biggest in the Fair in respect of area covered, will be a powerful counter attraction. Russians had not dismantled the pavilion which they had built for the last year's industries fair. It has been renovated by Soviet technicians specially flown for the purpose from Russia. The Russian exhibits will also focus attention on the types of machinery required for Indian projects.

Indo-British collaboration is the major theme of the British pavilion which is in two sections. While one section will recall the pioneering role of Britain in the industrialisation of India, the other will display the products of British firms as well as of Indian firms with British connection. The ISCON display highlighting the work done by the Consortium in the construction of Durgapur Steel Works promises to be one of the star attractions of the British pavilion where the British air craft industry has also planned an impressive display.

The Indian Railways pavilion, the second biggest in the Fair besides projecting Railways achievements, is also intended to serve as a show-window for Railway equipment which India is now in a position to export. The exhibits include working models of electric and steam locomotives, coaches, wagons and other equipment. Among Government Departments and undertakings, the Defence Departments, Atomic Energy Commission, Hindustan Steel, the Export Promotion Department of the Ministry of Commerce and Industry and the Council of Scientific and Industrial Research are putting up impressive displays.

★

Sales Potential of Govt. Publications

The stall being put up by the Publications Branch of the Government of India seeks to provide helpful guidance through the maze of Government publications. An attempt will be made to tell the public of the vast mass of

material available regarding various activities of Government and what is more important, where the particular information sought can be found. This display has a business angle of interest to the publishing trade; one of its aims is to impress on Publishers and Booksellers the sales potential of Government publications. Though these are not all best sellers, some tote up impressive sales figures, while demand for others is a continuing one to which Government Book depot are not always able to cater. Some of the more popular publications run out of stock soon after they are published, and it is not always practicable to arrange for prompt reprints, partly on account of the time taken in bringing them up to date. But even without revision these are useful as they contain valuable information. It is not generally known that there is provision for waiving Government's copyright in such publications on request from interested parties, and in appropriate circumstances. In some cases copyright has been waived for reprinting publications of special interest whose stocks have run out, of a limited number of copies for private distribution. It is learnt that it should be possible to extend the scope of this concession to the publishing trade to enable them to cater to the needs of the general public. In so far as Acts are concerned, there is a general waiver of copyright in respect of annotated texts and commentaries. Government also does not insist on copyright in Reports and the necessary permission to reprint is freely given in respect of those which are not in stock on application to the Manager of Publications, as also for publishing translations. Reprints of other publications which are not presently available in Government Book Depots, it is learnt, may also be similarly sanctioned on application, or on payment of a nominal Royalty.

Simultaneously with the inauguration of the Industries Fair, the Planning Commission will begin talks with representatives of State Governments on the annual plans of the States for 1962-63. The talks will begin with assessment of resources and will also focus attention on the progress in different agricultural sectors, irrigation, co-operation, education and training programmes and programmes for the utilisation of rural man-power. The discussions with each State will be spread over three days. Eighteen working groups, each, dealing with a major development aspect, have been set up to study in detail the continuing and new programmes of States for 1962-63, and the annual plans of the States will be finalised in the light of these studies.

Markets

JUTE Rise in Gunny Stocks

Figures relating to stocks of jute goods at the end of October released on Wednesday this week show that there was an overall rise of 3,000 tonnes in total stocks which stood at 55,400 tonnes as compared with 52,400 tonnes at the end of September. All the categories have contributed to the rise—hessian stocks at 17,000 tonnes were 1,400 tonnes higher, sackings stocks at 29,900 tonnes were 300 tonnes higher and other varieties at 8,500 tonnes were 1,300 tonnes higher. The rise in stocks is as yet small, but nevertheless it indicates that overseas buyers are no longer quite keen to take their requirements at prevailing prices. It is true that some good business had been put through in the past few weeks, but it cannot be concluded from the trend of prices especially in respect of ready and near delivery positions that overseas buyers are prepared to buy even their immediate requirements at any price. The present squeeze in ready goods may not last long in view of the IJMA policy of progressive increase in mill output. From the 13th of the current month 2½ per cent of looms will be unsealed and this

means an increase in production of about 2,000 tonnes per month. In view of the rise in end-October stocks, the industry may not effect any further increase in production in a hurry even though stocks, especially those of hessian, are still very low. The industry has perforce to take into consideration the possibility of an early revival of US interest in burlap. Perhaps overseas buyers were justified in thinking so far that prices would decline in line with the fall in raw jute prices. Such an expectation may not prove true any longer for the simple reason that it is extremely unlikely that raw jute prices will be allowed to fall much below prevailing levels. This is not to say that current prices of jute goods, especially those pertaining to the ready and near delivery positions, are reasonable. Prices have been rigged up partly because of some real demand and partly because of speculation. Once overseas consumers realise that there is no chance of any further fall in raw jute prices, they may begin to evince interest in the market. But they may be scared away by any continuation of the present high price levels. As the present situation in the jute goods market has been brought about largely by an actual shortage of goods because of adverse developments during the past few months mainly stemming from an

acute shortage of raw jute, the obvious remedy is to ensure an adequate supply of jute goods.

This is being done and as a matter of fact production has considerably been stepped up in the course of the past few months. Mills have now reverted to a 48-hour week and they have only 9½ per cent of their looms idle. Perhaps it will be in the interest of the industry to lose no time in increasing mill output further if it is convinced that such a step will help toward bringing goods prices to reasonable levels. For, overseas buyers have made it abundantly clear that they would rather make alternate arrangements for meeting their packaging needs than pay a high price for jute goods. Since the industry depends mostly on the foreign markets for the absorption of its production, it simply cannot afford to ignore the reasonable expectations of the foreign consumer who has another source of supply in Pakistan which by virtue of the number of advantages of its mills, the most important of them being an ample supply of high quality raw jute at cheap prices, is able to supply them goods at prices lower than Indian mills could supply comparable goods.

STOCKS OF JUTE GOODS AT THE END OF OCTOBER, 1961.

(000 Metric Tons/Tons)				
	31-10-61	30-9-61	31-10-60	
Hessian Cloth & Bag	17.0 (16.8)	15.6 (15.4)	30.9 (30.5)	
Sacking Cloth & Bag	29.9 (29.4)	29.6 (29.1)	40.1 (39.5)	
Others	8.5 (8.3)	7.2 (7.1)	8.6 (8.4)	
Grand Total	55.4 (54.5)	52.4 (51.6)	79.6 (78.4)	

Profitability Returns to Jute Industry

The going in the jute industry is now good, according to the Indian Central Jute Committee, as ample jute supplies at reasonable prices have restored profitable mill working.

The Committee said in its monthly Jute Bulletin that there was no problem of demand for the mills' monthly production. Gunnies were selling quite as fast as the industry seemed capable of stepping up its output.

The Bulletin, however, noted that the industry's stocks of jute goods, brought down to a low figure by successive phases of production cuts during April-August this year, had failed to cushion the impact of a sudden resurgence of demand. The result was a disturbing upsurge of speculation leading to a squeeze on all ready and near delivery goods.

Although there was a seeming excess of speculation, the Bulletin discounted the notion that the rise of the market could entirely be the work of speculators. It was due

partly to a revival of world trade in the commodities, chemicals and some semi-manufactured products that moved into consumption channels in the bagged form. Quite substantial business had taken place during September-October with the US, Australia, Cuba, Burma and the UK.

Even though volume of genuine trading was nowhere near the quantum changing hands daily in speculative paper deals, the dominant feeling of shortage in the goods market was having an undesirable effect on prices. The latter were not only ruling high, rather too high for the good of the industry, but also tended to fluctuate sharply from day to day.

High and unstable prices, said the Bulletin, were under-mining overseas users' confidence in jute goods and the only way to remedy the situation was to enlarge the supply of ready goods.

★

TEA Demand Slackens

In the Export sale held in Calcutta this week, offerings were 73,975 packages. There was less demand than in recent weeks and prices were generally easier. Plain broken and Fannings were quoted up to 15 nP per kilo easier and sometimes more. Medium and best orthodox Assam broken were an irregular feature and were often much easier with a number of withdrawals, mainly plain and medium BOPs. Similar Fannings also declined in prices.

Clean leaf CTCs were generally 20 nP to 30 nP easier with some withdrawals in this category. Cheaper and offgrade varieties were irregular, but were taken up readily at prices up to 20 nP below last rates. Legg-cut Dooars were 10 nP easier. Darjeelings met with less support and were easier. Whole leaf except for the cheaper varieties was a weak feature. The demand for Tippy teas was also limited. Following rates were quoted:—Clean Plain Pekoe Rs 4.10 to Rs 4.30; Plain BP Rs 4.00 to Rs 4.15; Plain Fannings Rs 3.80 to 4.00; Medium Assam CTC B P Rs 4.80 to Rs 5.00; Medium Assam CTC Fannings Rs 4.60 to Rs 5.00; Best Assam CTC BP Rs 5.10 to Rs 5.40 and Best Assam CTC Fannings Rs 5.10 to Rs 5.50.

Meanwhile, the production figures, released by the various producing countries, have shown a mixed trend. The output in South India is slightly higher at 15.9 million pounds in September as compared to 15.1 million pounds in September last year. This puts the total output to the end of September at only to 124.4 million pounds as against 129.7 million pounds in the corresponding period of 1960. Ceylon has produced 26.5 million pounds in September as against 26.3 million pounds. Total output, in the first nine months of the current year, is higher at 339.6 million pounds as against 329.1 million pounds in January/September, 1960.

Production of tea in Indonesia was lower at 7.5 million pounds in July as compared to 7.5 million pounds in July 1960. The total tea output, in the first seven months of the current year, is, however, higher at 57.6 million pounds as against 56.9 million pounds in the corresponding period of last year. In East Africa, production was slightly lower at 3.8 million pounds in August as against 3.9 million pounds. The total East African output of tea, during the first eight months of the current year, is higher at 69.8 million pounds as against 69 million pounds in the corresponding period of last year.

A sharp decline of over two million kilograms is reported in the shipments of tea from Cochin to various parts of the country and overseas during the six-month period ending 10 September 1961 as compared to the figures of shipments for the corresponding period of last year. As against 20,305,283 kgs of tea shipped during April/September 1960, the quantity shipped during the same period this year, amounted to only 18,021,292 kgs.

In the Colombo market, offerings were 7,492,720 pounds. There was a strong general demand with the exception of low-grown teas. At the opening, a useful selection of Dimbula/Dickoya broken teas met with stronger competition at advances ranging from 5 to 15 cents per pound. Best medium broken teas were firm; but other useful liquoring sorts were 5 to 10 cents dearer. Uva teas were irregular following quality; but prices were frequently dear. Low-grown teas were in less demand at irregularly lower rates.

In London auction, offerings were 30,300 packages of tea, including 26,452 packages from North India. The market continued with a strong demand for all descriptions with good quality CTC Assams being well competed for and prices tending dearer. Teas from the Doonars were fully firm, any weakness being for those of orthodox manufacture. Plain teas were sold well at firm rates.

★

COTTON Futures Scale New Peak

AFTER a period of nervous selling in the initial stages the Jarilla March contract forged ahead to scale a new peak of Rs 643 per three quintals thanks to the encouraging spot advices, the hectic buying by spinners and investors and the possibility of scarcity in the market arising out of the delayed arrivals of the new crop presumably due to the absence of global quota. The tight supply position in the ready section also favoured the bullish sentiment.

The nervousness in the opening stages was obviously the result of the step taken by the Forward Markets Commission in suspending

the forward trading in the oilseeds market and the denial of the earlier reports of damage to 320F and 216F crop in the Punjab and the contract reacted slightly. However, at lower levels the contract met with some support from the spot houses and from that period onwards it gathered momentum and gained further strength to reach the new high of the season.

Meanwhile the Textile Commissioner has in a press note warned the cotton trade and the textile industry that the Government will not hesitate to adopt any measure to curb the rigging of prices which showed a tendency to pierce the official ceiling. The steps that will be undertaken by the Commissioner include random requisitioning of cotton for mills in areas where the crop has started moving and where the possibility of prices piercing the ceiling looms large. Apart from this the authorities may also resort to requisitioning of cotton from both the mills and the trade irrespective of the contractual obligation of delivery to the mills in cases where the prices ride above the ceiling level. The press note adds that the Textile Commissioner may even order to seal off certain cotton areas to freeze the stocks and regulate the movement of cotton. The Textile Commissioner has expressed grave concern at the malpractice of heavy mixing of the good staple varieties with inferior short staple varieties and called upon the industry and trade not to pay prices higher than the maximum provided.

The Government of India, during the last week end, announced an import quota of 175,000 bales (of 400 lbs each) of 1-1/16" and above from any area. Out of the total quantity, 45,000 bales will be allotted to the mills against their retention quota under the Export Incentive Scheme and the rest will be distributed to the consumers of foreign staple 1-1/16" and above on the basis of their consumption in the previous season. The entire quantity of 175,000 bales will be available for shipment only after 31 December, 1961, but not later than 31 May, 1962.

The spot market at Sewri depicted lively conditions with mill interest being extended to new crop 197/3, Vijay, Digvijay, L147 and CO2. Interest in old crop L147, Laxmi, Digvijay, Kalyan, Wagad and Moglai was also pronounced. The downpour in the Punjab tracts where the crop is at the picking stage has caused serious anxiety of the damage to the crop.

A marked improvement in the prices of Bengal Deshi delivery contract consequent on the renewed enquiries from shippers was the main development in the export section. The sales of that variety as on 28 October totalled 43,700 bales.

The possibility of arriving at some favourable agreement by the six-member Uganda delegation who will visit India this week, has created a

stir in the market. In the meantime the prices of East African cotton have firmed up by nearly ten per cent.

Exports of all varieties of cotton from the United States in 1960-61 season (August-July) totalled 6,857,000 bales of 500 lbs gross. Though the last season's cotton exports was a shade below the previous season's, it has exceeded average exports of 5,297,000 bales per annum during the past five seasons by about 29 per cent or by 1,560,000 bales.

The cotton crop in the Kirghize Republic during the current year, according to official sources, is likely to reach 1,500,000 metric quintals, an increase of about 20 per cent over the previous year. The main factor that contributed to the higher output, as claimed by the Minister of Agriculture, is the increased mechanisation in sowing and reaping of cotton crop on about one-third of the aggregate area under the cotton cultivation. It can be gleaned from the official estimates that the average production from each hectare will amount approximately to 22 quintals of raw cotton which will be tantamount to seven metric quintals of spinning cotton.

Piecegoods.

The Bombay piecegoods market during the week under review evinced a subdued tone. Though the export demand was somewhat maintained, the turnover in the domestic section dwindled into a tiny trickle.

Demand from upcountry centres was far from encouraging. After covering fairly large volume of seasonal goods, North Indian centres, particularly Punjab, preferred to keep away from the market so much so that prices of many of the items slipped down by about two per cent. Demand for sarees, dhoties and coatings failed to flow on an encouraging scale.

According to the consensus the moorat trading will not be on a scale as it was in the previous year. Nevertheless the trade circles feel that the market will gradually pick up within the next fortnight especially with the commencement of the arrival of the new crop.

Moderate business was transacted on the export front. The United Kingdom figured as the prominent purchaser of piecegoods from the market and that destination accounted for a moderate quantum of grey sheetings of wider widths and furnishing fabrics. Sudan was satisfied with small quantity of bleached mull, gadlapat, dhoties and volles. Booking on a small scale of calendared cloth, bleached dhoties and mulls by Ethiopia and Eritrea was reported. Singapore and Australia focussed their attention on the usual varieties though the offtake failed to reach the expected level. Stray business was transacted with Burma. Enquiries from the Continent were directed toward many of the lots available.

Resumption of Futures Trading in Oilseeds

THE Forward Markets Commission has allowed the resumption of futures trading in Groundnut and groundnut oil in all the recognised centres with effect from 6 November on certain conditions. In the first place, trading shall be subject to a maximum of Rs 215 per 250 kg for groundnut and Rs 17.65 per 10 kg in groundnut oil in Bombay, with similar maxima at parity prices in the other recognised centres. Secondly, the outward payments to "longs" shall forthwith be withheld. These measures are imposed with regard to all the current hedge and transferable specific delivery contracts in groundnut and groundnut oil until further orders.

The closure of the market during the whole of last week would appear to have had, on the whole, a salutary effect in arresting the gathering bull movement. Further, the new crop, which is currently estimated by the trade to be much larger than that of last year, has started moving in some parts of the country and, in order to assist the marketing of the same, the Commission has decided to open the recognised forward markets with effect from Monday this week.

Trading started on a dull note on the feeling that the steps taken by the FMC would result in reducing the volume of speculative business. January contract began at Rs 238.62 and eased to Rs 208.50; but moved up again to Rs 209.62 before closing finally at Rs 209.37. The hardening tendency in prices, noticed towards the close, was mainly due to modest short-covering on certain reports that the inflow of the new crop in Saurashtra was being lifted promptly by the crushers in that region and the growers were withholding supplies in the hope of realising higher prices in future. In the ready section, Bold quality was quoted at Rs 44 and Groundnut oil at Rs 18.90.

Trading in the Castorseed section was a dull affair in the absence of fresh incentives. The foreign demand for castor oil continued to be negligibly small. Reports, that the new crop would be substantially larger this year, also induced the traders to be cautious in their commitments. March contract opened at Rs 161 and improved by only 75 nP before ending quietly steady at Rs 161.25. Ready rate was quoted at Rs 32.50 and Castor Oil, commercial quality, at Rs 13.45.

In the Linseed section, trading was nominal. March contract fluctuated between Rs 36.75 and Rs 36.87 and closed steady at Rs 36.81.

★

GOLD & SILVER

Price movements on the Bombay Bullion Exchange were confined to narrow limits, thanks to the pressure of arrivals having somewhat abated. According to trade estimates, the average daily offtake in the last few days in gold has improved from 4,000 tolas to 6,000

tolas, thereby lowering the discounts of ready metal over the futures prices from Rs 1.45 to Rs 1.00. Ready rates moved between Rs 123.70 and Rs 123.85, while Sovereign remained firm at Rs 98.25.

In the case of Silver also, the pressure of unrefined metal has remained heavy. The average daily arrivals are placed at 25 bars. The discount of ready metals over futures prices has, however, declined from Rs 1.40 to Rs 1.25 owing to the hopes that the offtake would soon improve. Ready silver (below .996) changed hands at Rs 206.85 and Rs 207.

★

SUGAR

Despite festival demand, Sugar prices have been showing an easier tendency. This is mainly due to the fact that mills are still anxious sellers. In the Hapur market, spot delivery is quoted at Rs 107 per bag and mill delivery Sambhaoli (D/29) at Rs 106. In the Bombay market, conditions are somewhat steadier, thanks to an improvement in the offtake of the commodity. However, the weak tendency, which manifested itself in the preceding week in the wake of the quota release, has continued, recording a fall of Rs 1.50 a bag in all the grades.

According to the statement made by the Union Deputy Minister of Food, who led the Indian delegation, to the Conference of the International Sugar Council held in Geneva, India's case for higher export quotas of sugar for 1962 and 1963 have been put forward strongly, both at the Conference and to the Negotiating Committee set up by it. The Conference will meet again by the end of this month or early in December to fix export quotas for the member countries of the Council.

★

FOODGRAINS

Price movements in the Hapur Foodgrains market showed a mixed trend during the week under review. Wheat and Gram prices improved further and this was attributed to limited arrivals in the face of good demand. Moreover, stockists were reluctant to part with their stocks on the hope of realising better prices at the tag-end of the season. Peas and Arhar hardened due to good demand from millers. Urad attracted consumer demand.

★

CHEMICALS & DYES

Sentiment on the Bombay Dyes and Chemicals markets showed a slight improvement. Turnover, however, was not large due to the proximity of Diwali and the New Year. While dealers were busy with the closure of accounts, buyers and stockists waited for the "moorat" transactions.

Among Chemicals, shortage of goods and a slight increase in demand accounted for better prices in Caustic Soda, with the ICI quality quoting around Rs 50 and the Indian quality at Rs 48. Rongalite was slightly better around Rs 2/10 for the German quality and around Rs 2.50 for other varieties. Bleaching powder was in demand at Rs 74.

Menthol had buyers up to Rs 156 for the Chinese variety on reports of shortage of supplies.

Dyes were in doldrums in the absence of demand. There were expectations that stockists would cut down prices in order to induce buyers enter the market. Among vat colours, blue RSN Japanese variety was quoted around Rs 34. In scarlet RC, the Germany variety was available around Rs 9.50.

★

PEPPER

Conditions in the Cochin Pepper market took a slight turn for the better, reflecting improved buying support locally and the absence of sellers. There was, however, no encouraging foreign advice. The rate for the ready position is quoted around Rs 353 and the December position at Rs 344 per quintal.

Reports from Singapore have indicated that Indonesian pepper dealers are negotiating with Russia for the sale of 3,000 tons of Lampung black pepper. A representative of an Indonesian firm has left for Moscow to negotiate the deal and it is believed that the firm has 6,000 tons of pepper, awaiting shipment in Singapore. The Indonesian firm has turned to Russia, because America cannot meet the price for the commodity.

It is also reported that Indonesia will sell about 7,000 tons of pepper on the Singapore market at whatever price it will fetch. Trade circles point out that, if the sale materialises, the local market will upset the balance between supply and demand and thus worsen the situation.

★

COFFEE

Coffee trade interests in the UK have welcomed the Coffee Board's open auctions for export quota, due for introduction in January next, in preference to sealed tenders as at present. The Chairman of the Coffee Board, who has returned after a month's tour of the UK and the Continent, has envisaged bright prospects for increased exports of Indian coffee, the quality of which has found general appreciation everywhere on the Continent. It is expected that French coffee interests will show more interest in Indian coffee should the French Government relaxes import restrictions.

★

There has been a fall of about Rs 10 per kg in the prices of Cloves in Bombay during the past few days. The sudden fall is attributed to reports that the newly-formed New United Spices Company has been given a quota worth about Rs 6.30 lakhs for distribution among the members.

Owing to short supply, the price trend in cloves has hitherto remained steady. Sentiment has been aided by the consistent improvement in the rates of cinnamon. But, with the change in the supply position now, the price trend is expected to remain downward. A section of the trade, however, feels that the actual distribution of the imported material may be delayed. In that event, the fall in prices may be checked.

RUBBER

According to reports from London, rubber producers in Malaya and other countries have protested at the British and US Governments' decision to alter the arrangements for sales from the natural rubber stockpiles. Till now, sales by both Britain and the USA have been regulated according to the price. But, under the new arrangements, certain quantities have been decided upon which will be sold. The price of natural rubber, already seriously depressed by competition from synthetic rubber, has fallen to its lowest level for several years.

Rubber supply, offered at the Rubber Exchange, Djakarta, is reported to be decreasing lately following the Government's regulations aimed at diminishing competition between private and State exporters. Under the new regulations, the Exchange market is no longer functioning freely since the Government was to stabilise the local price in favour of the State trading companies. The brokers' activities have been curbed and only direct transaction from the producers to the exporters is allowed.

Meanwhile, the producers, who are not dealing in the export trade, are obliged to sell their products to the State companies. Business circles, however, say that, following such regulations, both State and private exporters have already found it difficult to make timely despatch of their merchandise.

★

TIN

On the London Metal Exchange, Tin prices have started to rise rapidly again over the past week or two. The market, which in January this year was only £780 a ton, had risen to just over £990 by early September, when the US Government announced that it was applying to Congress for the release of the metal from the strategic tin stockpile. This brought the prices back sharply to around £940 a ton.

No decision about the stockpile releases, however, is likely until early next year and, in the past fortnight, the market has recovered by over £30. A large deficit of tin continues, as there has been no change in the statistical position. Traders consider a premium on near-by supplies. Nobody knows how much metal remains in the hands of the speculative operators or when reserves, built up in Congo, are likely to become freely available.

There is a general feeling that, unless the US Congress agrees to release a part of the massive American stockpile early next year, a serious shortage of the metal will develop in the new year.

On the Bombay market, too, conditions in the Tin section remain firm due to the absence of offerings, higher London and Singapore advices and better reports from the ready section.

★

OILS & OILSEEDS

The groundnut oil and groundnut exchange in Madras officially closed business after the Forward Market Commission's directive and opened only on Monday last. Tuesday was a holiday due to Deepavali. The market conditions

were easier last week and it was due to the timely action by the authorities to close the transactions for a week to prevent speculation. Prices came down in the case of oil. When the market opened the price of ground oil was quoted at Rs 178.55 per quintal. The price of groundnut kernels (new harvest) remained at Rs 67 per 80 kgs, during the middle of last week. It also came down to Rs 65 per 80 kgs. on Monday last.

Arrivals of groundnut in the city were at 100 to 120 tons daily of new peanut crop mainly from adjoining districts of the City. Due to Forward Market Commission's careful watching, rainy conditions and uncertainties of the groundnut oil price only restricted trade could be noted in the market.

Calcutta interests showed avid interest in ready groundnut oil stocks. Last week very substantial sales of groundnut oil took place for Calcutta to which place sizeable quantities were shipped at a higher level of quotations. Groundnut oil arrivals were from the Andhra Pradesh, mainly from Vizianagaram, Warangal, Guntur, Kamamatham and Bezvada. Rainy season prevented quick dispatch from that side to Madras for Calcutta dealers to round off already committed transactions. Even then spot oil was quoted at Rs 179.00 per quintal. During the middle of last week, the quotation substantially remained around this figure though latterly it declined by a rupee or thereabout per quintal.

In Southern markets arrivals of kernels were interrupted by intermittent rains. South and North Arcot district centers reported free availability of goods. The price of groundnut however declined by about Rs 6 per bag.

The price of gingelly seed was steady at Rs 72 per bag.

Groundnut oil in upcountry markets remained unofficially at the same rates as quoted last week. At Guntur it was at Rs 410 per candy of 500 lbs, at Vridhachalam at Rs 395, at Nandyal at Rs 390, at Villipuram at Rs 396, at Cuddappah at Rs 395, at Pollachi at Rs 380, at Tanjore Rs 390 and at Salem Rs 385.

As for groundnut the rate was Rs 68 per 80 kgs at Guntur, Rs 64 at Vridhachalam and Villipuram at Rs 67 at Cuddappah and Pollachi and Rs 72 at Salem.

★

HIDES & SKINS

Cow hide prices were too high this week. With the result buyers hesitated to make any deals. Also arrivals into the market were not much. This high price is ascribed to the high quotations for raw skins. In the c.i.f. section also poor dealings were reported. Only inquiries for fifts of high quality were noted on the basis of 44d for 8/8½ lb and 54d for 5/5½ lb.

There was no change in tanned cow calf skin market. Here also there were poor arrivals. In tanned buff calf, while there was no change in quotations, 'sizable shipments' to US were reported. Also fair business was reported in tanned goat skins. Contrary reports were received about tanned sheepskins trade. In high quality commodity of this variety, some business materialised.

Company Reports

Lower Profit for Champarun Sugar

The decline in sales from Rs 2.02 crores to Rs 1.63 crores is reflected in the working results of the Champarun Sugar Company Limited for the year ended 30th June 1961. The net profit, before providing for Depreciation and Taxation, is lower at Rs 10.58 lakhs as against Rs 11.56 lakhs for the preceding year.

In respect of allocations, the Depreciation amount is raised to Rs 1.70 lakhs from Rs 1.75 lakhs. A sum of Rs 60,000 (nil) is provided for General Reserve. Taxation provision is lower at Rs 3.75 lakhs against Rs 4.00 lakhs and Rehabilitation Reserve at Rs 1.54 lakhs against Rs 3.00 lakhs. The dividend is reduced from Rs 1.50 to Rs 1.20 per share, subject to deduction of tax.

The total quantity of cane crushed is higher at 7,888,183 maunds against 5,880,080 maunds and sugar manufactured amounted to 730,009 maunds against 551,373 maunds. In this connection, the directors state that the company's estates have continued to produce cane both for crushing and seed purposes. Cane plantings for the current season in the areas serving the company's factories have been on an increased scale as compared to last year.

Better Results of J. K. Business Machines

Despite a decline in sales from Rs 59.31 lakhs to Rs 52.75 lakhs, J. K. Business Machines Limited has reported a net profit of Rs 7.84 lakhs for the year ended 31st March, 1961 as against Rs 3.99 lakhs, thanks to various amounts being written off and transferred.

In respect of allocations, the Depreciation amount is slightly higher at Rs 1.19 lakhs against Rs 1.17 lakhs, apart from providing a sum of Rs 4.89 lakhs (nil) for General Reserve. No provision is, however, made for Development Rebate Reserve against Rs 35,000. The dividends, both on the Ordinary and Preference shares, have been passed over again.

The directors state that, on account of severe restriction on imports and keen competition in exports, there was a substantial fall in the turnover of the Import and Export sections, which have been largely compensated by increased turnover of the indigenous products.

Travancore Sugars Pay Less

The Travancore Sugars & Chemicals Limited has reported a net profit of only Rs 8.80 lakhs for the year ended 30 April 1961 as against Rs 12.60 lakhs for the previous year, reflecting the increased cost of raw materials and labour. Sales are lower at Rs 1.18 crores against Rs 1.64 crores.

Due to lower profits, allocations have been reduced:—Depreciation from Rs 3.11 lakhs to Rs 3.02 lakhs and Taxation from Rs 4.60 lakhs to Rs 4.82 lakhs. Capital Reserve is, however, raised to Rs 29,000 from Rs 24,000. No provision is made for General Reserve against Rs 50,000. The dividend on the Ordinary shares is reduced from 10 to 7½ per cent, subject to deduction of tax.

The subscribed and paid-up capital is Rs 45 lakhs against which General Reserve is shown at Rs 4 lakhs; Share Premium Account at Rs 6.50 lakhs and Capital Reserve at Rs 1.20 lakhs. Gross block amounts to Rs 71.92 lakhs; total depreciation to Rs 36.49 lakhs and the net block to Rs 35.44 lakhs.

For the Investor

INVESTMENT GOSSIP Outlook for Equities

It is not surprising that the stock market is currently in a buoyant mood. For, there has been an important favourable influence in the shape of the Government decision on the recommendations of the Estimates Committee on LIC investments. Ever since this august body had recommended that the investible funds of the LIC should be entirely diverted to Government loans, the stock market has been perturbed. The deep concern of both investors and operators over this proposal stemmed from the apprehension that sizable funds that are now available to the stock market would be denied to it as the LIC is the largest single investor in industrial shares. More than the denial of a regular flow of investible funds to the stock market, the proposal, if accepted would have undermined investor's confidence in the words of Authority as Government spokesmen had made it quite clear at the time of the nationalisation of life insurance that a portion of the funds of the LIC would be made available for investment in the stock market. The LIC has since come to play an important role in the stock market and more often than not the latter's trend is being influenced by LIC buying or lack of it. The Estimates Committee's proposal therefore was a bolt from the blue and marketmen were most anxious to know Government's reaction to it. The long time taken by Government to announce its decision on the proposal deepened the anxiety of the market. It is therefore with a sigh of relief that the market received the news that Government has decided in favour of status quo as far as LIC investments are concerned. It is believed that now that it has been decided that the LIC should continue to look after the investment of its funds, it will begin to take increased interest in the stock market hereafter.

Even otherwise, the market has been in a constructive frame of mind these past few days. Presumably, operators have been encouraged to take an optimistic view by some recent developments. Although the increase in the selling price of cement, has not evoked spontaneous enthusiasm, it has nevertheless given an

indication that the industry's difficulties have received consideration. This raises the hope that favourable decisions will be made as regards the selling price of paper, a matter that has been referred to the Tariff Commission.

It is, however, doubtful, if equity prices will be able to make any further progress upward—already at the moorat session, though the undertone has been steady, there has not been much fresh buying. For one thing, there is the opinion of the Union Finance Minister that there is need for a restraint on dividends and for higher taxation. The speech in which this was explained by Mr Morarji Desai was made a few days ago but at that time it was brushed aside in the prevailing enthusiasm. But second thoughts may engender caution. While it is not to be denied that industrial expansion will be taken a big step forward during the Third Plan, the investor will also want to know how the new and old industrial enterprises will work in the coming one or two years. This is governed, among other things like raw materials, etc; by an adequate availability of power coal and transport. Knowledgeable circles fear that acute shortages in these may develop quite early during the current Plan period.

NEW ISSUE NOTES

Hindusthan National Glass

THE Hindusthan National Glass Manufacturing Company, Limited, incorporated in 1946, has been granted a consent to the issue of bonus shares of the value of Rs 9 lakhs on capitalisation of its Reserves to that extent. The company is manufacturing bottles and tumblers. Its existing paid-up capital is Rs 25 lakhs, divided equally in equity and preference shares. The bonus shares will be issued in the proportion of two bonus shares for every five shares held.

Firestone Tyre

Firestone Tyre and Rubber Company of India (Private), Limited, Bombay, has a paid-up capital of Rs 20,000, all in equity shares of Rs 10 each and entirely held by the American Company, Messrs Firestone and Rubber Company, Akron, Ohio, USA. It has been granted consent to issue bonus shares of the value of Rs 1,09,80,000.

WHY TAKE CHANCES?

In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you can be sure if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

INDIAN STANDARDS INSTITUTION

NEW DELHI - BOMBAY - CALCUTTA - MADRAS - KANPUR
ISI—2.61

Oriental Fire

The Oriental Fire & General Insurance Company, Limited, Bombay, has been granted consent to the issue of further capital of Rs 35 lakhs in equity shares of Rs 5 each for consideration other than cash. The shares will be offered to the shareholders of National Fire & General Insurance Company, Limited and the Asiatic Government Security Fire & General Insurance Company, Limited, for the purpose of amalgamation of the two companies, after the scheme of amalgamation has been sanctioned by the High Court.

Investa Machine Tools

Investa Machine Tools & Engineering Company, Limited, Bombay, have been granted consent to the issue of further capital of Rs 20 lakhs in equity shares of Rs 100 each for cash, at par. The proceeds will be used to finance expansion scheme.

NOCIL

A new Rs 15 crore petro-chemical project will be undertaken by the National Organic Chemical Industries Limited, which has been registered as a separate company for the purpose. It will have an issued capital of Rs 9 to Rs 10 crores. The technical collaboration agreement has been finalised with a West German firm and it has been approved by the Central Government. The foreign collaborator will participate substantially in the capital of the new company. Of the issued capital, the public will be offered a portion according to the normal formula recommended by the Government. The foreign exchange component of the cost of the project is likely to be about 50 per cent of the initial issued capital of Rs 9 to Rs 10 crores, that is about Rs 5 crores. Negotiations for foreign exchange loans are being carried on with two or three agents in Europe and the USA on terms acceptable to the Government of India. All arrangements for loans, the signing of the

agreements and other necessary formalities are expected to be concluded by March or April next year.

Schrader-Scovill Duncan

Schrader-Scovill Duncan Limited has finalised the details of allotment of the company's recent public issue of 84,028 equity shares, which was over-subscribed by 22.28 times. The allotment has been made by ballot in regard to applications for 100 shares; and 50 per cent of these applicants will be allotted ten shares each. Applicants for 200 shares have been allotted 10 shares each, while the allotments in other cases are:—15 against 300 shares applied for; 23 against 400/600 shares; 40 against 700/1,000 shares; 50 against 1,100/1,400 shares; 75 against 1,500/2,500 shares; 100 against 2,600/3,000 shares; 125 against 3,100 shares; 150 against 4,000 shares; 175 against 5,000 shares; 200 against 5,100/5,600 shares; 225 against 6,500 shares and 277 against 10,000 shares.

Hindustan Twyford

Hindustan Twyford Limited has proposed to make the first call of Rs 25 per share on the holders of preference shares whose names appear in the company's register as on 21 October, 1961. The first call of Rs 25 per share is payable on or before 30 November.

Selected Satgram Collieries

With reference to the company's recent issue of 20,500 equity shares of Rs 100 each to the existing shareholders as rights at par, which has been over-subscribed, the directors have, in consultation with the approval of the Stock Exchanges of Bombay and Calcutta, allotted the 20,500 equity shares on 1 November on the following basis:—Right and renunciation shares allotted in full; applications for additional shares up to 50 shares allotted in full; and applications for additional shares above 50 shares allotted "pro rata" on equitable basis, having regard to the holdings of the applicants. Allottees will have to pay to the company Rs 25 per share as allotment money before 31 December, 1961.

*

INVESTMENT NOTES

Tata Chemicals

The Ordinary shares of Tata Chemicals Limited have been in favour during the past few days on the reports that the company will be raising additional capital and offering the new shares at par to the existing shareholders. It is now announced by the managing agents that an agreement has been concluded with the Bombay Mineral Company to take it over as a going concern with the issue of 5.2 lakh equity shares in Tata Chemicals, at par. The acquisition of the business of this company is expected to improve the earning capacity of the Tata Chemicals Company.

Zenith Steel

It is learnt that the Zenith Steel Pipe Limited has been making satisfactory progress with regard to the construction of the factory. According to present indications, the factory will come into operation in the second quarter of 1962. The company has received an industrial licence for the manufacture of sockets. It is hoped that, with the additional foreign exchange of the order of Rs 3.50 lakhs agreed to be made available by the ICICI, it will be possible for the company to undertake this additional line of manufacture. The ordinary shares of the company have been a steady feature on the Bombay Stock Exchange, at Rs 13.

*

INVESTMENT BRIEFS

West Coast Paper Mills Limited has proposed a higher dividend of Rs 7.50 per share, taxable, for 1960-61 as against Rs 6.00 per share, taxable, for the preceding year.

Parkside Estates Limited has declared a final dividend of 15 per cent, making a total of 22½ per cent, taxable, for the year ended 30 June, 1961 as against 27½ per cent, taxable, paid for 1959-60.

Hemalatha Textiles have raised the dividend from 4½ to 8 per cent, subject to tax, for the year ended 30 June, 1961.

Arthala Tea has again passed over the dividend for last year.

Great Eastern Shipping Corporation has proposed a gross dividend of 78 nP per share for the year ended 30 June, 1961. This works out to a net dividend of 72 nP as against Re 1.00 paid for the previous year.

Tractors (India) Limited has declared a taxable dividend of Rs 3.25 per share for the year ended 30 June, 1961 as against a taxable dividend of Rs 3.00 per share previously.

*

STOCK EXCHANGES Profit-Taking Easily Absorbed

Watch-Dog Writes:

TRADING in stock markets continues to remain patchy and support has been selective. There is a tendency to book profits at the best levels on the feeling that prices have already touched very high levels. With the result, *moorat* trading on Tuesday generally lacked the cheer and the usual spurt of activity. But significantly enough, shares on the cash list have been active.

The Calcutta Stock Exchange provided a few firm features despite intermittent profit-taking.

On the Bombay Stock Exchange, trading for the Samvat year 2,018 started well with the turnover on a large scale than in the previous year. There was, however, an undertone of caution, which seemed to restrain operators from extending their commitments.

Active conditions were seen on the Madras Stock Exchange where, favoured textile and miscellaneous shares improved on further demand.

CALCUTTA

Friday Evening.

THE local stock market started the week on a confident notes; and both the speculative and investment counters scored further gains over the week-end levels due to renewed buying support. It looked as if the market was preparing ground for a cheerful *moorat* session on Tuesday when, at as is well-known, trading would give one an idea about the future trend of share values.

It was thought that, with the decision of the Government not to take over the investment function of the LIC, the Corporation would now support the market more freely. Again, there was a general feeling that, if anything worse would befall the market, it was unlikely before the next election. Above all, it was the report of encouraging corporate performance that accounted for the upsurge of buying, which was helpful in moulding the sentiment of the operators.

Contrary to expectations, the special *moorat* session on Tuesday lacked the cheer and the usual spurt of activity. This was mainly due to the general feeling that prices had already reached very high levels. There was, therefore, a tendency to book profits at the recent high levels. Investors, too, diverted their attention to only those shares with growth prospects. There was also an anxiety to maintain the present levels rather than enlarge the commitments.

Thus, the post-Diwali session witnessed only restricted activity. Whatever transactions done, were of a squaring-up nature. It was, however, encouraging to note that the scarcity of scrip and the regular absorption by investors pushed up the prices of a few selected shares, resulting in profit-taking at the higher levels being easily absorbed.

The Gilt-edged section was devoid of interest. Sellers were seen in most issues and, with buyers reserved, prices developed a sagging tendency. Enquiry from institutional investors also declined due to the onset of the busy season. The borrowing programmes, announced by several Corporations at attractive rates of interest, were also a contributory factor. 3 per cent 1986 Conversion Loan opened lower of Rs 72.18 and after touching a fresh low of Rs 71.90, improved towards the close to Rs 72.05.

Bank shares came in for selective enquiry on the hope that profits might show an improvement during the current year. Punjab National were supported up to Rs 19.81 from Rs 19.69 with United Commercial quoting around Rs 94.50.

A halt was cried to the steady rise in the prices of Jute shares, noticed during the past few weeks. Apart from the fact that the upswing in values in recent weeks was considered to be steep, support from investors was still conspicuous by its absence. Most of the share were subjected to profit-taking on the feeling that the mills might take some more months to wipe off the losses incurred during the early part of the year.

Birlas were at one time taken up to

Rs 30.25 from Rs 29.62 (Rs 28.94); Ganges up to Rs 12.69 from Rs 12.12 (Rs 12.62); Howrah up to Rs 21.25 from Rs 21.12 (Rs 21.12); Nuddea up to Rs 68.50 from Rs 66 (Rs 62.25) and New Central up to Rs 19 from Rs 18.37 (Rs 18.75). Anglo-India were, however, maintained at Rs 200 and so also Barnagore at Rs 145. Figures shown within brackets were the closing rates for the week.

Although Coal shares turned steadier in sympathy with the general trend of the market, turnover remained restricted in the absence of any stimulating news. Burrakur were pushed up to Rs 19.44 from Rs 18.75 due to speculative activity, while Central India steadied up to Rs 11.94 from Rs 11.75 and East Indian to Rs 32.87 from Rs 32.44. Western Bengal moved narrowly between Rs 9.06 and Rs 9.31 and South Karanpura between Rs 8.25 and Rs 8.37.

The uncertain outlook for the marketing of the commodity and the reports of a further decline in auction prices induced some selling in Tea shares. Brooke Bond were on offer at Rs 15.62 to Rs 15.69; Gohpur at Rs 12.50 to Rs 13 and Tezpur at Rs 17.19 to Rs 17.25.

Sugar shares were practically neglected in view of the uncertain conditions prevailing in the commodity market. The only exceptional feature were Dyer Meakins which forged ahead to Rs 38.50 from Rs 36.56 due to persistent rumours of the possibility of a bonus issues. Champaman remained very steady at Rs 18.87 despite the dividend being reduced. Raza/Buland were rather quiet at Rs 10.75 against Rs 10.94.

Despite intermittent profit-taking, Textile shares continued to present a firm front, thanks to the cheerful conditions prevailing in the piece-goods market. Cawnpore had buyers up to Rs 10 from Rs 9.25 and J. K. Rayon up to Rs 20.94 from Rs 20.12. Elgins, after touching a new peak level of Rs 24.87 from Rs 24.50, receded at the close to Rs 24.06 due to profit-taking. Kesoram developed a reactionary tendency to Rs 31.37 from Rs 32.50 due to lack of fresh support.

Engineering shares were generally influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement considerations on Thursday. Against the previous week-end closing of Rs 25.04, Indian Irons opened better at Rs 25.12 and advanced further to touch Rs 25.22 during the *moorat* session. After reacting at one time to Rs 24.96, the scrip closed finally at Rs 25.10. TEXMACO advanced at one time to Rs 20.05, due to heavy bear-covering, finishing at Rs 19.90. Guest, Keen, Williams were almost maintained at Rs 40.37 with Binani Metal hardening further to Rs 12.56 from Rs 12.12. J. K. Steel met with business at Rs 22.62 to Rs 22.94; Jessop at Rs 20.75 to Rs 21.15 and Marshalls at Rs 3.87 to Rs 4.06.

Miscellaneous issues showed a mixed trend. Indian Aluminium were an outstanding feature of the week's trading and the scrip forged ahead to Rs 38.62 from Rs 36.81 due

11 November 1961

to persistent rumours of a right issue at an early date. Dunlop Rubber were keenly sought after up to Rs 38.25 from Rs 37, closing finally at Rs 38.25. Goodyear were enquired up to Rs 40.62 from Rs 39.37; Sirpur Paper up to Rs 17 from Rs 16.50; J. K. Synthetics up to Rs 14.19 from Rs 13.81; Jay Shree Tea up to Rs 26.75 from Rs 20.25; Indian Cable up to Rs 36.75 from Rs 36.44; Rallis India up to Rs 163 from Rs 157; Hindustan Motor up to Rs 20.36 from Rs 19.94; Rohtas up to Rs 16.72 from Rs 16.50; Orient Paper up to Rs 38.50 from Rs 37.90 and Shree Gopal up to Rs 26.87 from Rs 26.50.

Among others, British Paints changed hands at Rs 27.50 to Rs 27.62; Indian Copper at Rs 4.86 to Rs 4.93; BIC at Rs 9.56 to Rs 9.87; Isaacs Holden at Rs 18.87 to Rs 19.19; NICCO at Rs 38.35 to Rs 38.50; Sone Valley at Rs 5.06 to Rs 5.31; Phillips Carbon at Rs 19.75 to Rs 20.06 and General Tyres at Rs 6.87 to Rs 7.31.

*

MADRAS

Post-Diwali business in Madras Stock Exchange was brisk. Both the textiles and the miscellaneous counters recorded good business. Sugars were quiet. Plantings were featureless, while public utilities commanded attention in stray cases. Chemical shares as usual came in for good investment support.

Government Securities:—Madras Government 4 per cent 1967 was quoted at a lower rate of Rs 98.30. The same Government's 4 per cent 1971 was available at the unaltered rate of Rs 98.52. Andhra Government 4½ per cent 1972 was at Rs 98.20.

Banks:—Canara Bank improved to Rs 84.71, there were buying in Indian Bank at the unaltered rate of Rs 181.00. Indian Overseas Bank was lower by a rupee and a half at Rs 195.00. Punjab National Bank was quoted at Rs 20.00 and the State Bank of Mysore was listed at Rs 170 and that of the State Bank of Travancore was marked at Rs 125.00.

Electrics:—Negapatam improved to Rs 10.60 and Salem-Erode to Rs 13.75. Karaikal remained at Rs 9.20. Tinnevely-Tuticorin was at the marked rate of Rs 11.50 and West Coast was at Rs 14.00.

Sugar and Breweries:—Cauvery gained at Rs 117.50. Deccan was bought at a lower rate of Rs 12.27. Kothari remained at Rs 8.30. Travancore went down to Rs 6.69 and United Breweries was marked at Rs 104.00.

Plantings:—Blue Mountain was unchanged at Rs 3.16. Chembra was at Rs 3.75. Cochin Malabar was at Rs 7.45. Coffee Lands went up to Rs 18.12 and Consolidated Coffee also moved up to Rs 22.20. Cowcoody had declared a 15 per cent f.t.d. and quoted at Rs 4.65. Kalasa was at Rs 5.80. Kalpetta improved to Rs 12.05. Kil Kotagiri was listed at a higher rate of Rs 5.05. Manar was lower at Rs 2.10. Manimala was the same at Rs 8.75. Neelamalai had declared a 7½ per cent dividend and quoted at Rs 4.44. Nelliam-

pathy was five nP higher at Rs 2.55. Nonsuch was quoted at Rs 28.25. Nilgiri was at Rs 8.65. Ouchterlony was marked at Rs 3.65. Periakaramalai went up by a single nP at Rs 3.69. Rajagiri was ten nP higher at Rs 20.10. TR & T was available at Rs 11.20. Other scrips remained at the listed prices.

Textiles:—Anglo-French registered a decline of Rs 3.50 and quoted at Rs 146.00. Bangalore Woollen was quoted at Rs 233.00 and Buckingham was at Rs 253.50. Cannanore was one point higher at Rs 176.00. Coimbatore Cotton did not change at Rs 199.00. Coimbatore Spinning was available at Rs 64.50. Dhanalakshmi went up to Rs 254.00. Lakshmi was the same at Rs 170.00. Loyal gained a little at Rs 50.75. Madura also moved up to Rs 40.40 with keen buyers at this. Mettur was the same at Rs 388.00. Premier gained Rs 20 and was quoted at Rs 330.00. Radhakrishna was bought at Rs 40.50. Rajalakshmi was the best buy today at Rs 105.00. Ranga Vilas improved to Rs 51.50. South India Viscose

gained fifty nP over last week's rate and was available at Rs 191.50. Travancore Rayon was quoted at Rs 44.50.

Miscellaneous:—Aluminium Industries were better at Rs 23.80. Andhra Cement was bought at Rs 9.35. Ashok Leyland improved and was bought at Rs 9.25. Dalmia Cement registered an increase of ten nP over last closing and was available at Rs 12.85. There was buying in India Cements at Rs 6.66. Indian Steel Rolling Mill also commanded inquiries at Rs 12.20. Kirloskar Electric was lower at Rs 15.75. Madras Rubber was bright at Rs 20.00. Mandya National Paper was at Rs 8.50. Mettur Chemical was on demand at Rs 14.70. Mysore Paper was better at Rs 13.00. Premier Fertiliser was available at Rs 7.65. Rallis was better at Rs 161.00. Textool remained at Rs 180.00. Travancore Cements was at Rs 8.60. Tube Supplier was on par at Rs 10.00. Tube Investments was lower at Rs 282.00. W I Plywoods was quoted at Rs 216.00.

Facts & Figures

RESEARCH

Detergents from Surplus Sugar

As a result of research at Britain's Tropical Products Institute in London, sugar now being produced in excess of domestic needs can be made into detergents as good as, and in some ways better than, petroleum-based products. Sugar-producing countries can now convert their surplus production into detergents in cheap and simple plant and so save imports of conventional products.

These sugar detergents are better than the petroleum products in several ways. They can be completely broken down in sewage treatment, so that they neither give rise to foam problems in sewage works and rivers nor prevent the re-oxidation of the river water. They are edible, even nutritious, so that they can be used without trouble for washing vegetables and fruit before packing them for the market. They can be used also with benefit in diets to help sick people with certain ailments.

Dr G. R. Ames, of the Tropical Products Institute, talking about his work on producing new forms of sugar-based detergents, said that until recently these substances had mainly been made by reacting sugar with a fatty acid to give a product which was not very soluble in water—a defect which restricted its use as a domestic detergent. Dr Ames has evolved a method for making soluble products by introducing a second simple acid into the sugar molecule. He is now working on

methods for making new soluble detergents which will contain a greater proportion of sugar to fatty acid.

Insoles from Leather Waste

A process for the manufacture of leather boards from tanned leather shavings and trimmings discarded in shoe factories and tanneries has been developed at the Central Leather Research Institute, Madras. The boards can be used as insoles for shoes.

About 3,000 tons of leather trimmings available annually are discarded as waste. It is estimated that nearly Rs 25 lakhs worth of leather boards can be produced from it.

Details of the new process are given in the current issue of Vigyan Pragati Hindi monthly of the Council of Scientific and Industrial Research.

OXIDISING SALTS

Another article deals with the production of oxidising salts which are used, among other things, for decorative finish on fittings, hardware, instruments, electrical appliances and fans. These salts are at present imported.

The method described, developed by the National Physical Laboratory at New Delhi, is simple and economical and can be followed by small-scale industry. The required raw material sulphur, caustic soda and caustic potash, are available in abundance in the country.

LOK SABHA

20 New Bills

A bill to facilitate introduction of correspondence courses under the aegis of the University of Delhi is among the 20 new bills to be introduced by the Government in the forth-coming session of the Lok Sabha commencing on November 20, 1961. One other bill defines the duties and powers of the Comptroller and Auditor-General of India.

The Criminal Law is to be amended to make the production, circulation, etc. of documents resembling currency notes an offence under the Law. The Institute of Technology Bill will be introduced to constitute each of the Indian Institutes of Technologies, Kharagpur, Bombay, Madras and Kanpur, as a body corporate and make provisions for co-ordinating their activities. The Indian School of Mines (Dhanbad) Bill, is intended to declare the Indian School of Mines, Dhanbad, an institute of national importance.

CREDIT INFORMATION BUREAU.

The Reserve Bank of India (Amendment) Bill will be introduced to amend the parent Act to permit the establishment of a Credit Information Bureau and for certain other purposes. The Laws relating to Wealth Tax, Gift Tax and Expenditure Tax are also to be amended. The other bills to be introduced are: Sugar (Regulation of Production) Bill; the Telegraph Wires (Unlawful Possession) Amendment Bill; the Indian Railways (Second Amendment) Bill; the Indian Succession (Amendment) Bill; the Indian Tariff (Amendment) Bill; the Iron, Ore Labour Welfare Fund Bill; the Drugs (Amendment) Bill; the Air Corporations (Amendment) Bill; the Atomic Energy Bills; the Vishva-bharati University (Amendment) Bill, and the State Financial Corporations (Amendment) Bill.

The business before the Lok Sabha also includes discussion on the international situation, tenth report of the Union Public Service Commission, Supplementary Demands for Grants (General) for 1961-62, Supplementary Demands for Grants (Railways) for 1961-62, and the Demands for Excess Grants (Railways) for 1959-60.

The Proprietors of Indian Patent No. 56043 "Compressed Gas Containers for Fire Extinguishers" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the abovenumbered Patent.

Cottons labelled 'Sanforized' will not shrink out of fit

Our technical experts keep a constant check on all mills licensed to use the internationally-known label 'Sanforized'. Such vigilance ensures that material bearing this label is up to specifications laid down by us, and that it will not shrink even after many, many washings.

Month after month and throughout the year, these experts visit the licencees, carefully examining fabrics both from the warehouses as well as off the processing machine

From each mill, they take an extensive random sampling of various fabrics. Each must be a quality fabric before it can be stamped with the label 'Sanforized'

These samples are catalogued, measured and submitted to rigorous wash and minimum shrinkage tests both here and in the U.S.A. in fully equipped technical laboratories

The catalogued samples are then re-examined and re-measured. The results of our experts' findings are recorded, each mill having its own dossier

A copy of these reports, together with their samples, are sent to the home office in New York. This multiple-checking ensures that all cottons marked 'Sanforized' will not shrink out of fit

Make certain you get the full measure of value of the material you buy—

Look for **'SANFORIZED'** on the label and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 55 Marine Drive, Bombay 2.

INVESTOR'S SUPPLEMENT

Conditions in the stock market remained steady but dull during October. With a large number of uncertainties in the investment situation, bulls were reluctant to extend commitments but bears were found to be not very active. The hesitation of bears to hammer down values had evidently stemmed from the fact that a number of companies were on the threshold of expansion and diversification of activities. Moreover, corporate news continued to be good. A feature of the trading during the month was that investment support was forthcoming throughout the period for selected shares as well as selected groups of shares. It was the scrip on the forward list that was rather dull with price movements confined to narrow limits. Operators were evidently influenced to adopt a cautious approach to the market by the decision to impose a uniform margin on carry-over business, the Pusa holidays on Lyons Range, the dislocation to traffic and damage to crops caused by the recent floods in Eastern India and the continued coal, power and transport shortage.

The first meeting of the Presidents of the Stock Exchanges, the body that has been charged with looking after the interests as well as the orderly working of stock exchanges in the country, had decided that a uniform scale of margin should be made applicable. The measure envisages a graded scale of carry-over margins ranging from 2 to 50 per cent, depending on the quantum of carried forward business in all the cleared shares from one settlement to another. In determining the margin the value of the membership card and the security deposit of a member will be taken into account. This was the only measure decided upon. The AICC session at Madurai was another factor that called for caution but the final outcome of the session in terms of resolutions was not very disturbing. The AICC had approved the election manifesto as expected but marketmen derived some comfort from the fact that an amendment seeking to put a ceiling on urban property had been defeated.

The fact that the Calcutta stock exchange remained closed for nearly half the month was a powerful restraining influence on trading during the month. With one of the principal stock exchanges in the country remaining closed for a fortnight, operators elsewhere were naturally cautious. A further important adverse influence was the continued anxiety about the supply of coal and power to industrial enterprises and the inadequacy of the transport facilities. The floods in

Steady Conditions Prevail During October

Eastern India and road traffic and apprehended that industrial production might be hampered by the delay in the movement of basic materials to the factories.

If bull operators lacked enthusiasm, it was partly because of the approaching general elections in the country. Although the Congress election manifesto has been approved by the AICC, there are the election speeches to

N.T.—No transaction.

reckon with. Above all, the stringency in the money market coupled with a number of new issues in the offing discouraged extension of commitments.

However, the uncertainties in the investment situation seemed

to affect only the forward list. Cash shares, atleast those that were backed by good corporate news and growth prospects, met with good investment support. Sectionwise, textile shares were in good shape almost throughout

the month having been eagerly sought after. The revival of interest in textile shares could be traced to optimistic reappraisal of dividend prospects. Offtake of cloth in the domestic market was reported to be quite satisfactory for some months and indications were that export performance of the industry would also show considerable improvement. While textile shares received sustained attention, jute shares on Lyons Range were also developing an improved undertone with selected shares in demand. There was a growing belief that the jute industry had left its adverse period behind atleast for some time. Indications were quite good for profitable working what with the abundant supply of raw jute at reasonable prices coupled with the revival of foreign interest. There was a squeeze in ready jute goods the prices of which as a consequence were much higher than those in the forward delivery positions. Mills were thus enabled to do simultaneous business on a profit. The fact that mills had begun to show some profit after sustaining considerable loss during the past six months or so seemed to have impressed both operators and investors. Moreover, the jute goods industry has embarked upon a policy of progressive increase of its production. Jute mills reverted to a 48 hour week from the middle of the month and there were indications toward the end of the month that further steps would be taken to increase production by the unsealing of a portion of the looms remaining out of commission.

Elsewhere, the market ruled dull. Coal shares were not active presumably in view of reports of the accumulation of stocks at pit-heads. Teas were a dull market most of the time but recorded some improvement toward the close. Earlier listlessness was due to apprehensions about overproduction of Northern Indian tea but with the improvement in the prices obtained at auctions later in the month, sentiment in the section steadied up. It was not surprising that sugar shares were depressed as marketmen seemed to think that under the new sugar policy, profits would be adversely affected. While engineering shares were steady, the miscellaneous section showed a number of firm spots on sustained investment enquiry. Bank shares were in demand throughout the month with most of them displaying a steady trend. The improvement in sentiment in the section was presumably due to expectations of improved earnings. The Gilt-edged section ruled listless with enquiry confined to few loans.

(a) After transferring Rs 275,000 from General Reserve.

(b) After transferring Rs 125,000 from Dividend Equalisation Reserve and Rs 30,311 from Capital Reserve.

(c) After transferring Rs 72,950 from Development Rebate Reserve.

(d) After transferring Rs 200,000 from Stores and Spare Parts Reserve and Rs 100,000 from Debenture Redemption Reserve.

(e) After transferring Rs 6,300 from Contingency Reserve and Rs 2,09,700 from Dividend Equalisation Reserve.

(f) After transferring Rs 45,000 from General Reserve and writing back Rs 104,280 being excess provision for depreciation.

(g) After transferring Rs 550,000 from General Reserve.

(h) After transferring Rs 2,883,218 from General Reserve No. 1.

(i) After transferring Rs 100,000 from General Reserve and writing back Rs 90,000 being liability in respect of Inter-state Sales Tax.

(j) Included Rs 30,000 transferred from contingency Reserve.

(k) After writing back Rs 163,430 from Development Rebate Reserve.

(l) After transferring Rs 10,000 from General Reserve and Rs 100,000 from Debenture Redemption Reserve.

(m) After writing back Rs 85,000 from Development Rebate Reserve; and after transferring Rs 9,75,000 from Machinery Renewal Reserve.

(n) After transferring Rs 500,000 from Taxation Contingencies Reserve.

(o) After transferring Rs 120,000 from Contingency Reserve.

(p) After transferring Rs 8,33,375 from General Reserve.

(q) After writing back Rs 100,000 being excess provision for taxation.

(r) After writing back Rs 9,000 from provision for depreciation and including Rs 108,227 being dividends forfeited.

(s) After transferring Rs 7,00,000 from Reserve No. 1.

(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After writing back Rs 1,00,000 from provision against jute stocks as jute contracted for.

(v) After transferring Rs 1,00,000 from General Reserve and writing back Rs 30,000 being over provision for Inter-state Sales Tax.

(a) After transferring Rs 20,828 from General Reserve No. 1.
 (b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.
 (c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.
 (d) After transferring Rs 80,000 from General Reserve.
 (e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.
 (f) After transferring Rs 234,698 from General Reserve.
 (g) After transferring Rs 2,656,522 from General Reserve.
 (h) After writing back Rs 360,718 being excess depreciation provided in 1958.
 (i) After transferring Rs 1,008,546 from General Reserve No. 1.
 (j) After transferring Rs 250,000 from Dividend Equalisation Reserve.
 (k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.
 (l) After transferring Rs 297,425 from excess depreciation.

(m) After transferring Rs 119,825 from Development Rebate Reserve.
 (n) After transferring Rs 120,000 from Dividend Reserve.
 (o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.
 (p) After transferring Rs 5,27,512 from General Reserve.
 (q) After transferring Rs 400,000 from General Reserve.
 (r) Includes Rs 100,230 being provisions made in previous years written back.
 (s) After transferring Rs 3,22,899 from General Reserve and Rs 75,000 from Depreciation Reserve.
 (t) After transferring Rs 9,50,000 from General Reserve.
 (u) After transferring Rs 200,000 from General Reserve.
 (v) After transferring Rs 1,00,000 being Adhoc. reduction in Stock-in-trade provided last year.
 (w) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 390,580 from General Reserve.
 (y) After transferring Rs 255,000 from General Reserve.
 (z) After transferring Rs 525,000 from General Reserve.
 (a1) After transferring Rs 1,075,000 from General Reserve No. 1.
 (a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.
 (a3) After transferring Rs 14,72,855 from General Reserve.
 (a4) After transferring Rs 300,000 from General Reserve.
 (a5) After transferring Rs 4 lakhs from Reserve No. fall in price.
 (a6) After transferring Rs 109,648 from General Reserve.
 (a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.
 (a8) After transferring Rs 271,042 from General Reserve.

AIR CONDITIONING COSTS

with **BLUE STAR-WORTHINGTON**
Packaged Air Conditioners
5, 7½, 10 tons

Now made in India

Here's how BLUE STAR-WORTHINGTON Packaged Air Conditioners
offer you a four-way saving in air conditioning costs.

CUT COSTS on tonnage. Single units range from 5 to 10 tons,
operate independently.

CUT COSTS on installation. Units can operate
without ductwork.

CUT COSTS on subsequent expansion. Single units
connect up into multiple systems with minimum alterations.

CUT COSTS on operation and maintenance.
Every unit is engineered, built and
individually performance-tested in
BLUE STAR'S own plant to
WORTHINGTON specifications.

For a better air conditioning job,
call in BLUE STAR

Get complete details from BLUE STAR offices at:

Lotus Court, Jamshedji Tata Road, Bombay 1
7 Hare Street, Calcutta 1

Prospects of Indo-US Trade

GRAVE concern, bordering almost on the desperate, has been voiced in recent discussions on exports in forums of both the business and industrial community and the Government. At the basis of such awowals of anxiety lies an awareness of the formidability of the problem of export promotion which the country faces at present. The Third Plan assumes, as a basic condition for its success, an increase in the country's exports to Rs 700 crores per annum being the minimum required to pay for the maintenance imports during the Plan period. Looking at the problem from the standpoint of the currently wide-spread shortage of raw materials and the resultant idle capacity precipitated in many industries, the rise in exports that may be required may be even greater than that postulated in the Third Plan. Against this, one has only to picture the performance of the country in the realm of exports during the Second Plan period to get at the real dimensions of the problem of export promotion set by the Third Plan. Throughout the Second Plan period, the country had been experiencing continuing deficits in the balance of payments position, with the situation turning particularly unsatisfactory in the last year of the Plan period. Notable declines in export of traditional items like tea, cotton textiles, manganese ore and mica came as unexpected checks on the progressive trend in exports. What was even graver, even the small rise in exports was more than neutralised by rise in volume of imports that became unavoidable to meet the requirements of industries for their essential raw materials.

While these developments present a fair perspective of the problem of export promotion, an aspect of it that cannot escape attention, is the grave imbalances that characterise our trade with our major trading partners. Such imbalances are of a substantial order in our payments position vis-a-vis the European Common Market and especially West Germany within it and the dollar area represented by the USA and Canada. In this light, the essence of the problem of export promotion would consist in trying to achieve a balance in our trade with countries with which, presently, we are running huge deficit. Necessarily, greater importance attaches to expansion of trade with the US in view of the chronic and widening deficits that are being incurred consequent on dependence on that country for a substantial part of our import requirements of raw materials. It may be mentioned that imports from the US had increased from a level valued at Rs 170.32 crores in 1957-58 to Rs 240.02 crores in 1960. Against this, exports have only partially recovered since the decline from the high level of Rs 132.87 crores in 1957. In the course of these three years, the total deficit in our balance of trade with the US has widened from Rs 38.45 crores to Rs 138.38 crores in 1960. The back of the problem presented by adverse payments position will thus have been broken if we could devise ways of stepping up our exports to the US. A study of our export trends in the US with reference to the major commodities of export and in relation to the total volume of the US import trade should indicate what scope exists for

such trade improvement. Such a study has been brought out by the Indian Chamber of Commerce in a recent publication.

India's main exports to the US now consist of primary items of the traditional variety like, jute goods, cashewnuts, tea, pepper, manganese ore etc. Exports in recent years have revealed an unsteady trend marked by steep declines in a few of them. The fall in exports has been particularly pronounced in respect of mica for which the US remained an important buyer till 1959, when earnings from this item amounted to Rs 3.28 crores. Export of manganese ore is also yet to recapture the high level which obtained in 1957 when total shipment to US amounted to 792,000 tons. Competition from Brazil with the advantage of proximity to the US market has operated to diminish India's share which in 1960 amounted to only 441,000 tons. Pepper is another material in respect of which the near monopoly which we once enjoyed had been lost owing to competition from Indonesia. While in 1951, nearly 93 per cent of the US requirements were met by imports from India, the share in 1960 had dwindled to 53 per cent. Indonesia along with Ceylon has also emerged as a powerful competitor to India in exports of tea to the US. While in the matter of tea exports, India takes second place to Ceylon in total shipments, it is disturbing that we should have lost ground in the course of the last two years. total exports having come down from a level valued at Rs 15.47 million dollars in 1958 to Rs 13.94 million dollars in 1960. The fact that these declines have occurred in a period of recession of economic activity in the US may encourage hopes of recapturing grounds lost in them. However, a substantial expansion of exports is achievable only on the basis of a policy of sustained diversification. There are a number of commodities, both primary and manufactured, which could with special efforts taken in behalf of them, find a place in our exports to the US. Coffee is an instance of a commodity, export of which to the US though at present of an insignificant order, could be stimulated with more concentrated and purposive efforts. Similarly, the growing interest among Americans for Indian artware and handicraft products could be taken advantage of to stimulate sales of these goods. The beginning made in export of sugar and the foothold gained in respect of light engineering goods are heartening signs. These small triumphs could be utilised for further exploratory campaigns in export promotion.

One noteworthy feature of Indian exports to the US is the extreme insignificance of the proportion constituted by present exports to total US imports. This is a fact that confirms the vast possibilities that exist for expansion of our exports. "Trade instead of aid" is a slogan that is gaining greater appreciation both in Indian and American circles. The recent convention of American businessmen, has showed that the industrialists and businessmen in the US, apart from being interested in investment in India, are also appreciative of the possibilities for mutual expansion of trade.

Structure of Industrial Financing in India

By H. T. PAREKH

THE Structure of Industrial Financing in India can perhaps be conveniently outlined by dealing first with the facilities for finance available to very small and small industrial undertakings and then for medium and large-sized industries. For this purpose very small may be those needing capital under Rs 1 lakh and small as those requiring under Rs 5 lakhs. Units requiring finance between Rs 5 and 50 lakhs may be called large. It may, however, be observed that this is not altogether a satisfactory division. Capital costs have risen so high compared to costs 10 or 20 years ago that under the above definition an enterprise which in the past came in the category of medium may now fall in the category of large. For instance, the smallest unit in sugar industry or cement industry now costs over Rs 1 crore whereas in the pre-war days its cost was under Rs 25 lakhs.

In recent years a wide variety of institutions, agencies and schemes have been set up to provide finance to these different sectors. Active steps have been taken by Government to provide assistance in suitable forms both to small and large entrepreneurs.

SPECIALISED AGENCIES

At the smallest level in the range of up to Rs 1 lakh industrial finance can be obtained directly from State Governments under the State Aid to Industries Acts. State Governments operating through their Industries Departments have arrangements to provide direct industrial loans for very small amounts on easy terms, both as regards the rate of interest and kind of security. To cut down delays in the grant and disbursement of such loans, the State Governments have recently been transferring the function of administration of such loans to State Finance Corporations which exist in each State. These Corporations, which were set up to provide loans to small industries, have now been taking over increasingly the responsibility of granting loans also to very small enterprises as agents of the State Governments which assume the risk and provide the funds. As a result of this development it can be expected that financial assistance to very small entrepreneurs would be more readily available under the direction of specialised financial institutions than was the case when State Governments were directly handling this business. The loans disbursed under the State Aid to Industries Act are on an average about Rs 3 crores per year.

Besides direct grant of loans by State Governments, the Central Government has taken two important steps to facilitate availability of industrial finance to very small and small units. One is that the Central Government has put into effect a scheme of guarantee under which commercial banks and finance corporations can provide loans to small industries up to Rs 5 lakhs; the Government stands as guarantor for risk up to about 80 per cent of what is assumed by the lending institutions. This measure should considerably help entrepreneurs in obtaining small loans through local banks which would bear only a small part of the total risk involved and would therefore be induced to lend funds more

liberally. The primary difficulty of small units is their inability to provide security in the form required by the financing institutions due to lack of mortgageable assets; under the guarantee scheme lending institutions will be able to grant loans freely even where the security is inadequate.

Under another scheme, small entrepreneurs are enabled to obtain machinery on hire-purchase basis through the National Small Industries Corporation which is owned and operated by the Government. Under this arrangement imported and indigenous equipment can be purchased on the security of such equipment on easy instalments at low rate of interest with only a small margin to be provided by the entrepreneur. Small industries requiring equipment worth up to Rs 5 lakhs can get assistance from this organisation which has several branches in the country. The number of machines delivered during the three years ending March 1961 amounted to 4,600 valued at over Rs 4 crores while orders placed for machines on that date exceeded 7,500 valued at over Rs 8 crores.

NATURE OF ASSISTANCE

It will thus be seen that financial assistance for setting up or expanding small industries is today made available in three alternate ways, viz (1) direct Government loans, (2) loans from banks under Government guarantee, and (3) supply of machinery or equipment through a Government Corporation under the scheme of hire-purchase. Though the volume of loans granted under these various schemes has not been very large, a well thought-out machinery is now functioning which should enable small entrepreneurs to meet their requirements in an expeditious way.

The agencies described above provide assistance up to Rs 5 lakhs. In each State we have a State Finance Corporation which, besides being an agent of the Government in several States for very small loans, gives loans on its own up to Rs 10 lakhs. These Finance Corporations have been set up by the State Governments which hold part of the equity capital and have also guaranteed both capital and interest for the entire issued capital of these Corporations. These Corporations also raise loans from the market on Government guarantee. It can therefore be that financial assistance to small or medium industries is provided by these specialised agencies sponsored and controlled by State Governments. The total loans provided by the 15 State Finance Corporations in India have amounted to Rs 30 crores including Rs 8 crores in 1960-61.

It should be evident that both State and Central Governments have thus taken considerable initiative in establishing a network of lending institutions and schemes to meet the needs of industries which may be regarded as very small, small or medium.

THREE INSTITUTIONS

For medium to large requirements of capital, the existing facilities consist of three special financing institutions which are (1) The Refinance Corporation for Industry (RCI), (2) The Industrial Finance Corporation of India (IFC), and (3) The Industrial Credit and Investment Corporation of India (ICICI).

It is now widely agreed that commercial banks should extend their lending activities to medium-term finance for capital development and to facilitate such financing the RCI has been set up under the Chairmanship of the Governor of the Reserve Bank of India.

IFC which has been in existence since 19 is a Government sponsored Corporation which the Government, banks and other credit institutions hold capital which guaranteed by the Government. This Corporation has played an important part in providing industrial loans which have exceeded Rs 100 crores. Individual loans or guarantee made by IFC in some cases have exceeded Rs 2 to Rs 3 crores. Until recently, loans Rs 1 crore or over were guaranteed by the Government, but now they are only subject to Government approval. IFC also has obtained a loan of \$10 million from US Development Loan Fund for relending to industries.

The operations of ICICI are similar to those of IFC. ICICI was set up under the auspices of the World Bank, with joint participation of British, American and Indian investors in its capital. Additional funds in foreign currencies and in rupees have been provided by the World Bank and the Government of India. ICICI's activities extend to loans, both in foreign currencies and rupees, and under-writing of, and subscription to, share capital of industrial concerns. It has so far obtained three lines of credit for a total of \$40 million from the World Bank for relending to private enterprises in India. It has also been playing an active part in the under-writing field. Its operations during the seven years of its existence exceed Rs 40 crores.

It is necessary at this stage to recognise the role of the Life Insurance Corporation of India, which is the largest investor in the country, having accretion of fresh funds exceeding Rs 20 lakhs a day. LIC is continuously on the look-out for suitable investments for its funds and is playing a major role as provider of new capital for industrial development. LIC is a long-term investor, unlike the IFC and ICICI which are largely lenders and which to maximise assistance have to revolve their funds continuously.

DEVELOPMENT CORPORATIONS

In addition to the above institutions we have another specialised institution, the National Industrial Development Corporation promoted and run by the Government of India. This Corporation investigates the possibilities of starting new industries; but its present active role lies in giving loans for modernisation to cotton and jute textile industries. It has so far sanctioned loans of over Rs 15 crores to these industries.

Among the recent trends to be noted is the attempt on the part of some State Governments to set up Industrial Development Corporations, one of whose functions will be to provide finance in the medium range above Rs 10 lakhs. The Madras Investment Corporation is already providing finance above Rs 10 lakhs for projects in Madras State. Steps are being taken in Andhra, Kerala and Uttar Pradesh to set up such Corporations. It is expected that this will help foster local initiative in setting up medium-size undertakings.

A variety of finance corporations described above or development banks, as they are aptly called, have been set up to provide development capital. They act as catalytic agents. They play the role not only as financiers of lenders but more in that they assist an orderly and systematic development of industries as well as the capital market. They investigate all aspects of a project before sanctioning assistance and thereby help educate the entrepreneurs in modern ways of promoting new industries.

Progress of National Research Development Corporation

REVIEWS of the annual report of the National Research Development Corporation that highlight the financial results are apt to give a misleading impression of its role and performance. The Corporation was set up in 1953, on the lines of similar organisations which had been set up a few years earlier in the UK and in Canada, to bridge the gap between research and development. The principal function of the Corporation is to arrange for the commercial development of inventions and processes arising out of researches conducted in national laboratories as well as such others as may be voluntarily assigned to it by any institution or individual. Prior to the establishment of the Corporation, this work was done by two organisations functioning under the Ministry of Commerce and Industry, namely the Industrial Liaison Committee which dealt with the patents and processes sponsored by the Council of Scientific and Industrial Research and the Patents Advisory Council which dealt with the exploitation of Government-owned patents. The functions of these two bodies were taken over by the NRDC which, besides undertaking development of inventions/processes of CSIR laboratories renders the same service to other Research organisations such as the Indian Council of Agricultural Research. Commodity Committees like the Indian Lac Commodity Committee, Government and private research institutions, universities and private individuals.

The developmental work which otherwise would have to be undertaken by each institution is now dealt with by a specialised organisation which incurs all the expenditure necessary to bring the invention to the stage of commercial production. For this purpose it undertakes largescale pilot plant trials on its own or arranges for such trials in State-owned industries or private firms, in each case reimbursing any loss that may be incurred by these undertakings on account of the trials. The main point to be borne in mind is that, though the NRDC is not prevented by its Memorandum of Association from making profit from the licensing of patents/processes, as is made clear by the Memorandum of Association. The first Article setting out the objects begins with the following words: "To develop and exploit in the public interest or profit or otherwise...."

In accordance with this definition of its functions, with the emphasis on development and the public interest the Corporation has so far released 94 inventions and processes free of royalties or premia. Among the functions assigned to the Corporation is that of advising and assisting Government departments, universities, research institutions as well as individuals in securing patents for their inventions/processes both in India and in foreign countries. While the developmental functions involve expenditure which grows in proportion to the volume of work undertaken on behalf of the institutions mentioned above, the income consists of a moiety of the premia and royalties from inventions licensed by it. In the early stages a much larger number of

of inventions has to be processed up to the trial stage every year than those licensed, so that it will be some years before the income from royalties on licences of previous years is sufficient to cover the current deficit. In fact, when the NRDC was set up, the Ministry of Finance estimated that it would be ten years before it could reach the break-even point. The Corporation has been in existence only for eight years.

In this context it is also relevant to compare the record of similar institutions elsewhere. The Estimates Committee of the Lok Sabha in its report on the NRDC had noted that the NRDC of Britain had not been able to balance its budget even after ten years. And whereas in the case of the analogous institution in Britain the entire amount of the royalties is credited to its account, the NRDC in India has to make over 70 per cent of the income from licences to the laboratories and departments from which the inventions originate. The recurring losses sustained by the organisation, which now exceed its paid-up capital of Rs 10 lakhs by a sum of Rs 35,000 need not therefore be viewed with perturbation, nor used as a measure of the efficiency with which it has been performing its functions. For a fair evaluation it will be necessary to look into the details of its working, the number of inventions developed, the number of licences issued, production established etc.

The total number of licences reported to NRDC up to the end of March 1961 was 58; of which after deducting those dropped or withdrawn, the number of effective inventions on hand was 234. As already indicated 94 of these were released to industry free of royalties or premia or the relevant technical details were published. So far a total of 129 processes have been licensed of which 39 are in production. The value of total production from these processes up to the end of 1958-59 was estimated at over Rs 28 lakhs and the relative saving in foreign exchange at over Rs 11 lakhs. Production in 1961 was also estimated to be of the order of Rs 3.5 crores.

During the year under report, NRDC had a gross income of Rs 1,83,786 by way of premia and royalties. After payment of 70 per cent of this amount to the research institutions from which the inventions were received the net receipts from premia and royalties amounted to Rs 53,036. Besides, there was an income of Rs 12,896 from sales of Activated Carbon—Hykol 'O' produced in the course of the trials undertaken by NRDC. The steady increase in the income from royalties, which amounted to Rs 68,286 in 1960-61 as against Rs 53,039 in the previous year, is most gratifying, especially when set against the fact that the NRDC is now following a policy of non-exclusive licences.

The NRDC has so far set up 16 large-scale pilot plant trials besides arranging with firms for development of 7 processes. Four new projects, involving a total expenditure of Rs 28.63 lakhs, were sanctioned during the year. These are: (1) A prototype plant for production of a superior grade of activated carbon, designated Hykol 'X' at Regional Research Laboratory, Hyderabad; (2) A prototype plant for integrated processing of oilseeds at Tata Oil Mills Ltd, Bombay, for production of proteins and oil from groundnut according to process developed at CFTRI, Mysore, the cost of the plant being borne by NRDC while Tata Oil Mills Co Ltd will provide the buildings and other services and operate the plant on their account; (3) A unit at the National Chemical Laboratory Poona for production of various aromatic chemicals including Costus Root Oil; and (4) A project for setting up a

pilot plant for production of Para and M Cymenes at Shri Ram Institute for Industrial Research, Delhi, based on the work of Yedannapalli of Loyola College Madras.

A number of processes licensed by NRDC were brought into production during the year, by various firms including the Am Baby Food Plant at Anand, the Carbox Methyl Cellulose Plant of Sardesai Brothers at Billimora, the Pine Oil Factory of Prabh General Agencies at Hoshiarpur, Silver Mi Capacitors of Manilal and Co, Bombay, a Bituminous Emulsions of Shalimar Tar Products (1935) Ltd Calcutta; and a Bullock Drawn Sugar Cane Planter was manufactured and marketed during the year by Steel Engineering Corporation, Saharanpur. In addition preliminary trials have been completed in the Arya Chemical Works, Calcutta, for the production of a Can Sealing Composition developed at the National Chemical Laboratory; Pilot plant trials for production of Citric Acid based on the process developed by NC have been successfully completed by Sarabhi Chemicals, Baroda. Tulsi Industries Poona have completed installation of a plant for production of Cation Exchange Resins from Cashew Shell Fluid also developed by NC; Poona, while P. Ramanlal & Co, Bombay have completed the installation of plant for production of Ethyl Ether according to the process developed at the Shri Ram Institute for Industrial Research.

The Estimates Committee in their Report mentioned above had commented on the time lag between the reporting of an invention to the laboratories and completion of arrangements for commercial utilisation. The NRDC report does not furnish information on which improvement has been effected in this respect since the Estimates Committee reported in March 1960.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BUSY SEASON

Extreme Pressure in Prospect?

THE returns of the Reserve Bank for the second Friday in November disclose a spectacular expansion in currency circulation, possibly one of the largest on record for any single week; and there is also the indication that Scheduled Banks' recourse to central banking credit has been substantial. While to some extent it may be argued that there has been spillover of the month-early demand for money into the second week, there can scarcely be any doubt that the main reason for the very steep rise in Active Note Circulation, as also for the prematurely large utilisation of Reserve Bank credit by the banking system, is to be found in an early start of the 1961-62 busy season. It needs moreover to be suggested that industrial production, which had tended to be somewhat slack since the beginning of the year, may quite likely be in process of recovery and swifter growth. Not for some years now has the busy season started so early; and that fact bodes extreme pressure upon the money market over the next five months. There are various implications, naturally.

It is almost certain that expansion in Scheduled Banks' Advances should set a new record. In the 1960-61 busy season, some element of reduction in Advances in March-April consequent upon the Central Government's end-of-fiscal-year disbursements served slightly to soften the pressure of demand for money. In fact expansion in Advances, despite a slowing-down in the rate of growth of industrial production, exceeded Rs 200 crores. We may take it that the current busy season may witness an increase of not less than 10 per cent over that figure.

We cannot be equally certain that there will be proportionate improvement in Deposits, though the experience during the 1961 slack season has been heartening. On the other hand what is beyond doubt is that the quantum of expansion in Advances will greatly exceed the rise in Deposits. Banks will inevitably need to replenish their resources in two ways, since the authorities in Government and in the Reserve Bank will not wish that credit is denied to enterprises engaged in raising industrial output.

Disinvestment in giltedged may be resorted to in larger amount than in the last year or two; and borrowings from the Reserve Bank should swiftly reach the level whereat the highest of the three-tier bank Rate will be applicable. Reluctance to borrow at six per cent and a desire to minimise the quantum of borrowings that will attract the 6 per cent rate will both mean that, if at all that were possible, banks would prefer sales of giltedged.

But what is the entity to which the banks can sell giltedged? Government securities suffer from an extremely narrow market, and the Reserve Bank is almost the first and last resort.

Unfortunately sales of giltedged pose their own problem. If interest rates are steadily pushed up—and of course they will be—the yield pattern on Government securities is also bound to rise: so prices will fall, and banks will face the unpleasant choice of selling giltedged at a loss, or borrowing at 6 per cent. We would offer two solutions, in order that the giltedged market is not allowed, as happened in 1956, almost to collapse.

The first of our suggestions is that there be suitable modification of the usance bills scheme, whereunder bills relating to busy season financing are left out of the reckoning of quotas for determining the rate at which central banking credit can be obtained. That is to say usance bills pertaining to busy season financing should be discounted by the Reserve Bank at 4 per cent. Otherwise it will inescapably be busy season requirements which will be given short shrift; industrial borrowers are "steady" customers, and banks may give them preference.

The second of our suggestions is that the Reserve Bank be prepared to enter into "badla" transactions with banks in regard to giltedged. The Reserve Bank should be a "spot" purchaser and a "forward" seller of giltedged; and vice versa as far as the banks are concerned. This will enable banks to convert their holdings of giltedged, to the extent necessary, into cash in their time of need—in the busy season; and to repurchase such parcels when their cash position is better—in the slack season. Such transactions will ensure that the selling pressure in giltedged does not get reflected in a drop in prices.

The interest rate structure will be forced upward, with the distinct possibility that inter-bank call money will command very nearly 6 per cent by the mid-point of the busy season—or may be even earlier. A warning is necessary in that banks would be well advised to desist from any raising of rates paid on Deposits in a futile hope that thereby they will attract new Deposits. Tightness in the money market may also act as a bear factor upon Stock Exchanges.

Lastly the prospect for banks' profits should immensely improve. The greater slackness of the 1961 slack season will have affected banks' earnings. But the high level of Advances till around March 1961, and prospectively the week-by-week expansion in bank credit in November and December 1961, may together serve so to augment banks' earnings as to offset the "loss" during the slack season.

From the next week it is proposed to publish a table marking the progress of the 1961-62 busy season, with comparative figures for the last two busy seasons.

BANK RETURNS

Vast Expansion in Active Notes

On top of last week's currency expansion of Rs 24 crores (including outflow of Rupee Coin), the returns of the Reserve Bank for

10 November show that, partly as a result of spillover of month-early disbursements but largely owing to the gathering stride of the busy season, Active Note Circulation has risen by what may be a record figure of Rs 42.27 crores; and Rupee Coin that has gone out into circulation amounts to a further Rs 2.73 crores. Foreign Securities are unchanged at Rs 117.76 crores, and currency has been expanded against Rupee Securities for Rs 50 crores (to Rs 1,608.84 crores) by transfer from the Banking Department. The Reserve Bank's cash in the till, in consequence, has improved by Rs 4.99 crores to Rs 18.85 crores.

Inter-governmental transactions are indicated in the return for the Banking Department. States' balances are lower by Rs 7.44 crores at Rs 10.22 crores and their ways and means borrowings have increased by Rs 1.88 crores to Rs 65.85 crores. The Centre, recipient of such largesse, reports its balances as having risen by Rs 2.54 crores to Rs 65.40 crores. It would appear that the Centre has cancelled ad hoc for about Rs 20 crores, since Investments merely reflect the transfer to the Issue Department, whereas they should have been higher by Rs 20 crores in respect of the purchase of securities in such amount from the State Bank. But we may infer that the disinvestment by the State Bank largely related to Treasury Bills, as the Reserve Bank's relevant portfolio of bills purchased and discounted marks a rise of roughly Rs 20 crores to Rs 46.85 crores.

The rise of Rs 3.48 crores (largely on account of the State Bank) to Rs 77.65 crores in Reserve Balances of member banks belies any pressure upon the banking system due to the emergence of the busy season. That in fact banks have begun to feel the pinch can be gathered from the considerable rise of just under Rs 13 crores to Rs 154.70 crores in the Reserve Bank's Other Loans and Advances—the bulk of the rise presumably attributable to increased recourse to central banking credit by the banking system. Advances against usance bills, as if to confirm such a reading, have gone up by Rs 5 crores to Rs 12.69 crores.

Balances Held Abroad continue to behave erratically, and the eccentricity is to be explained in terms of foreign aid receipts. In the latest week they have risen by Rs 5.21 crores to Rs 25.74 crores (foreign assets held by the Reserve Bank now exceed Rs 143 crores). While the export season is in full swing, we must remember that imports for the Third Plan are also heavy. Hence foreign aid receipts appear to make the difference between foreign exchange loss and gain.

It is to be hoped that foreign assets shown in the Reserve Bank returns will be built up to Rs 175-200 crores before the end of March, when seasonally exports begin to taper off.

The return of the State Bank for 10 November shows that spillover of month-early disbursements and busy season pressure are reflected equally in a drawing down of Deposits by constituents and in an increase in Advances. Deposits are lower by Rs 5.68 crores at Rs 526.45 crores, whereas the total of Advances has mounted by Rs 5.46 crores to Rs 245.87 crores. With a view to arming itself with resources for meeting further demands for money, the State Bank has disinvested for Rs 20 crores, reducing holdings of Government securities to Rs 251.88 crores. As we have pointed out earlier, the disinvestment may relate to Treasury Bills. As an end result, cash balances including money at call have improved by Rs 3.11 crores to Rs 27.88 crores. The rise of just around Rs 5 crores to Rs 29.65 crores in Other Assets

18 November 1961

would suggest that certain inter-office adjustments are pending action.

Beginning of the month disbursements, and possibly the onset of the 1961-62 busy season, are fully reflected in the return of Scheduled Banks for 3 November. Net Demand Deposits have shrunk by Rs 8.95 crores to Rs 823.13 crores, while net Time Deposits are nominally better by Rs 1.24 crores at Rs 1,121.95 crores. The loss in Deposits attributable to other Scheduled Banks is even greater, since in the relevant week the State Bank reported a rise of Rs 1.04 crores. The total of Advances has risen by Rs 3.82 crores to Rs 1,228.98 crores (excluding Rs 10.35 crores due from banks). Disinvestment in giltedged has been avoided, with the portfolio in fact rising by Rs 5.80 crores to Rs 630.73 crores—the State Bank accounting for about Rs 5 crores of the rise. But borrowings have been heavy. Indebtedness to the Reserve Bank has risen by Rs 10.03 crores to Rs 16.52 crores, and borrowings from the State Bank by Rs 1.47 crores to Rs 20.14 crores. Even so, cash balances including money at call have fallen by Rs 10.16 crores (State Bank's share: Rs 8.17 crores) to Rs 183.79 crores.

The next return of Scheduled Banks will presumably attest to intensification of busy season pressures. Borrowings from the Reserve Bank will have gone up, perhaps by some Rs 13 crores to nearly Rs 30 crores; some Rs 13 crores to the State Bank may also and indebtedness to the State Bank have risen, though slightly. If the State Bank's figures for 10 November are any pointer, the impact upon Scheduled Banks of the busy season pressure should be two-fold: the busy season pressure should be a fall in Deposits coupled with a rise in the total of Advances. Maybe, also, there will be some element of disinvestment in giltedged.

TREASURY BILLS Suspension of Auctions Suggested

There is little point in continuing, for the present, with public auction of Treasury Bills. A low rate of discount contrived by subscriptions from special quarters will achieve precious little by way of contributing to stability in the interest rate structure. No bank is in a position to ex-ante short-term accommodation to Government; and hence the public auctions should be suspended for the duration of the busy season.

Sales of intermediates should also be stopped. Renewals in respect of holdings of the State Bank could of course, without disruption to the money market, be continued. What is public knowledge should be given official recognition.

Furthermore, we would suggest that by and large Reserve Bank policy must be to effect sales of Treasury Bills during the slack season, so that maturities can help to add to resources of banks in the busy season. Indeed the offers during the slack season can be raised and so adjusted as to permit banks to earn their 2½ per cent for 91 days, and then to provide banks with funds for meeting each successive year's busy season demand.

In this context, it would be worthwhile to examine the possibility of issuing Treasury Bills with a maturity of 182 days. For almost invariably banks can "spare" funds in six-monthly lots. Secondly, as we have seen in many a year, a really "slack" season still does not obviate pressure upon the banking system in the busy season that follows, since banks for purposes of keeping idle resources at a minimum are more or less compelled to invest in giltedged. Thus, what is necessary in Indian conditions is a type of security or investment which has due regard for the pattern of availability of bank funds and for the

needs of the busy season. Between April and June, a choice of 91 day and 182 day Treasury Bills could be offered for banks' investment; and between July and October, the public auctions could be restricted to the 91 day variety.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 14 November 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs. 99.370 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.520 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 20 November 1961. Successful tenderers should make payment on Friday, 24 November 1961. Other conditions are as usual.

During the week ended 10 November 1961 Government of India Treasury Bills for Rs 65,47,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 8 to 11 November 1961 amounted to Rs 35,00,000.

91 days' Intermediate Treasury Bills will be sold from 15 to 18 November 1961 at Rs 99.386 per cent. Sales can be stopped at any time without notice if Government think it necessary.

Hot Money Influx Continues

By Paul Einzig

THE setback in sterling through the anticipation of a Bank rate reduction and through its materialisation on 2 November has proved to be short-lived. The influx of hot money which the Bank rate cut was intended to check continues unabated. This is only natural, seeing that the difference between British and American interest rates is even now over 3 per cent, while the cost of covering the Forward Exchange is under 3 per cent. Moreover, only part of hot money reaching London is invested nowadays in the conventional type of short loans. It can be invested much more profitably in municipal Treasury bills or in deposits with hire purchase finance companies controlled by the clearing banks. Before the acquisition of control over those companies by the banks the risk attached to depositing money with them corresponded more or less with the high interest rates they were prepared to allow. Once they have

come under the control of one or the other of the leading banks, or even if the latter only acquired a substantial minority participation in their capital, it has become inconceivable that they would be allowed to default on their deposits. The high deposit rates allowed by them much more than compensate for such additional risk as may exist.

Curiously enough, the mere anticipation of the Bank rate cut was sufficient to result in a contraction of the premium on forward dollars. The reduction of interest rates was fully discounted, so much so that forward rates remained virtually unchanged following on the Bank rate cut. The reduced interest differential is more or less offset by the smaller cost of covering the exchange risk. It is a great pity neither the British nor the United States authorities deemed it expedient to check the unwanted movement of hot money from New York to London by ensuring a widening of the premium on forward dollars against sterling. From the point of view of British authorities this would have obviated the necessity for an inopportune Bank rate cut, while from the point of view of the United States it would have prevented an unwanted decline of the gold reserve.

There is reason to believe that the Exchange Equalisation Account did in fact engage in forward operations during recent months, though their extent was not sufficient to keep the discount on forward sterling wide enough to discourage the influx of hot money. The only conceivable argument against operating on a much larger scale is that, while spot dollars can be converted into gold, the only way in which any risk of a depreciation of sterling could be covered would be by means of forward gold purchases which would be costly. Actually the risk of a dollar devaluation at present is negligible and in any case, Britain's balance of payments position being what it is, such a devaluation would be certainly followed by a corresponding devaluation of sterling, so that no loss would arise on any official dollar holdings of forward claims. On the contrary, since sterling is at a relatively high premium the odds are more in favour of an appreciation of the dollar by a cent or two before forward contracts mature.

From the point of view of the American authorities it would be 'certainly worth-while' to incur a fractional loss in order to bring about an appreciation of the forward dollar and thereby obviate an inopportune decline of the gold reserve. In face of a heavy speculative pressure on the dollar such tactics would be of no avail. Since, however, there is no such pressure they could be applied usefully. It is indeed a pity that there is not a sufficient degree of cooperation between the British and American authorities to engage jointly in such operations and to share the negligible cost involved.

Notes

INDUSTRIAL ESTATES Review of a Seminar

The ECAFE Seminar on industrial Estates which concluded its 11-day session in the Madras city, has spotlighted the role of industrial estates in the industrial growth of developing economies. In the course of the session, the Seminar dealt with every aspect connected with the development of industrial estates and has made about 150 recommendations having a bearing on the healthy development of industrial estates. Besides indicating the principles that should underlie Government policy in developing industrial estates, the Seminar devoted special attention to the problems of size, location and finance that arise in connection with the promotion and growth of industrial estates. The main subjects discussed at the Seminar were the objectives and policies in establishing estates, planning of industrial estates, organisation, management and financial arrangements, integration of industrial projects with programmes of urban or regional development and the role of international and regional co-operation in the development of industrial estates. In their sum, these recommendations form an

impressive corpus of ideas on the subject. An essential prerequisite for planning of industrial estates was stated as being the clear formulation of Government policy regarding the purpose, type and geographical distribution of the estates proposed to be set up. Within the framework of such a policy, it was indicated, certain surveys should be undertaken for ascertaining the feasibility, prerequisites and industrial growth prospects for each proposed estate. While the Seminar expressed itself in approving terms of the initiative and responsibility generally taken by Governments in the developing countries in the starting of industrial estates, it recommended that Governments should progressively encourage the entrepreneurs to assume such responsibility by joint action through the formation of companies or co-operatives. In the encouragement being given by the Governments, the Seminar has underlined the undesirability of providing special concessions and facilities which were not available to units outside the estates. Provision of ready-made factory accommodation is considered sufficient inducement to make the programme attractive.

In respect of the location of industrial estates, it was stated at the Seminar, that they should be planned with more emphasis on availability of basic facilities like power, water supply, transport, proximity to market and sources of labour and raw materials. It has favoured the provision of general purpose factories and necessary common services in the estates sponsored publicly in the less developed localities like the smaller towns and rural areas. Though the necessity of developing industrial estates in the rural areas was recognised, a selective approach was considered prudent for reasons of the comparative shortage of the basic facilities in the rural areas. Regarding size, it has been stated, that an estate should be large enough to achieve practical economies of scale and utilise fully the special buildings and services provided within the estate. The Seminar has cautioned against big concerns being permitted to get a foothold in the industrial estates meant for the development of small industries whether by direct or indirect investment of control. Preferential treatment to new types of production as against traditional ones and to industries capable of earning foreign exchange has been suggested in the matter of admission to estates. In the matter

of finance, the seminar took note of the fact that in the countries of the ECAFE region, financing of industrial estates was almost entirely done by Government agencies. In view of the rigidity and limits to such finance provided by the government and its agencies, it has been suggested that banking institutions and insurance companies should be induced to take up the financing of industrial estates, and as a measure of safety, it has proposed that the governments should stand guarantee for such institutional loans.

The suitability of industrial estates for developing large scale industrial centres and complexes and promoting industrialisation projects connected with the development of ports, airports, larger power plants, petroleum refineries has also been underlined. In order to promote such large industries, it would not be necessary for public authorities to provide the service and assistance usually extended to small scale industries in industrial estates. What it suggests is that public authorities might acquire land, develop it and give it on sale or lease basis for development as industrial estates. These projects might be called "Industrial Areas" to be distinguished from "Industrial Estates" which will be confined to the development of small industries.

The Seminar has also laid stress on the scope for international and regional co-operation in the field on industrial estates among countries in the ECAFE region. Among the suggestions it has made for furthering such co-operation are organisation of study tours and observation teams, and setting up of research centres and institutions for drawing up norms for layouts, factory designs specification for building materials. The role of the UN and other such international agencies in the matter of undertaking detailed studies of the specific problems of small industries and industrial estates like financial arrangement, promotion of ancillaries, administration and management of industrial estates has also been emphasised.

AGRICULTURAL LABOUR Deterioration in West Bengal

The Second Agricultural Labour Enquiry for the West Bengal State the results of which have now been published, has disclosed a further accentuation of pressure on land and deterioration in the conditions of the agricultural labour in the State since 1950-51 when the First Agricultural Labour Enquiry was conducted. The increasing pressure on land is reflected in the rise in the number of rural households, and the increase in the size of the agricul-

tural labour household and the average number of wage earners per household. There has been a rise of about 8.9 per cent—from 10,78,999 in 1950-51 to 11,63,100 in 1956-57—in the number of agricultural labour households in the State. The percentage of landless agricultural labour households was also higher at 63.49 in 1956-57 as compared with 53.71 in 1950-51. A further aggravating factor to the problem of increasing numbers on land was the increase in the average size of the agricultural labour household to 4.30 in 1956-57 from 4.0 in 1950-51. There is also a corresponding rise in the average number of wage earners per household to 1.52 from 1.50 in 1950-51.

The report has highlighted the increase in the average annual income of an agricultural labour household at Rs 657 in 1956-57 against Rs 608 in 1950-51 in the face of the decrease witnessed in the daily wage rate of adult male casual workers and of adult women. The daily wage rates for these two are shown to have come down to 143 nP and 98 nP from 166 nP and 104 nP respectively. The increase in income has however been more than matched by the rise in consumption expenditure which is shown to have increased from Rs 625 in 1950-51 to Rs 725 in 1956-57 with the result that the annual deficit in income in the case of the agricultural labour families has been further widened during the period between the two enquiries.

It is the figures relating to indebtedness that offer the most conclusive evidence of the continuing adversity of conditions faced by agricultural labour in the

tate. The latest report shows that 69 per cent of the agricultural labour households was indebted during 1956-57 as against 33 per cent in 1950-51. Further there has been rise in the average accumulated debt per household from Rs 15 to Rs 39 and in the average debt per indebted household to Rs 55 from Rs 44. The report also shows a decline in the proportion of debt incurred for consumption and a rise in the proportion for production purposes. In the face of the substantial rise in the position of indebtedness of the labour families, these changes leave the picture for 1956-57 unaltered as compared with 1950-51. These findings are a depressing commentary on the ineffectiveness of planning in tackling one of the most crucial problems of our economy.

FLOOD CONTROL Urgent Rethinking

Flood control has of late become a major preoccupation with the Centre and the State Governments and the idea of chalking out adequate programmes has, particularly after the unprecedented floods that surged almost in all parts of the country this year, gained further momentum. The recent floods, which in their wake have wrought heavy havoc to persons, property and livestock, have exposed the inadequacy of the prevailing arrangements in controlling the river waters. The recurrence of floods at regular intervals has also evidenced that all is not quiet on the water front. In his address to the 33rd annual meeting of the Board held in New Delhi Mr U. Ananda Rao, the President of the Central Board of Irrigation and Power, has underlined the urgency for a complete re-orientation of the flood control programmes and advocated for the constitution of a separate ministry for coping with this formidable task.

There can be little doubt that the floods this year have made drainage more important than irrigation and additional dams on the main rivers appear necessary. Equipment for construction made locally may help in the execution of projects for flood control. It is true that there are disputes over the further use of river waters and expert arbitration has been undertaken in respect of the Godavari and Krishna on the score that reorganisation of States demands a new adjustment of riparian claims and rights. Flood control, as applied to river basins in other countries, may have some value for India. Finance need not be a problem. The idea of a betterment levy may be extended to secure extra funds for flood

control schemes. A levy on an acreage basis or a royalty on the land directly benefited is obviously necessary. Not even thoughts of election hazards must be allowed to forget that high yields or high prices justify a new levy similar to that collected in the past in the Damodar river valley. The States must decide on a uniform levy and a special share in agricultural income tax can be set apart for flood control. A levy on commercial crops in dry areas may be inexpedient, but it is known that wet cultivation has increased in recent years in the South and the recovery of a part of expenditure undertaken by the State Government from the cultivators would be both just and expedient. The diversion of flood waters into new canals will certainly enlarge the supply for irrigation and a revision of revenue settlement appears overdue. Taxation of property in land has not changed much after the war and most of the States have failed to increase land reve-

nue owing to their preference for indirect taxation like sales tax, whereas cultivators who have changed over from paddy to other crops have made far better profits. The promise of Central grants may entail recourse to a new levy on land, graduated perhaps in the light of social justice, and that is one issue that must be faced in the next budget. The fact that power supply comes from major irrigation schemes is one argument for a levy which must be taken as the people's contribution. It is futile to think of getting labour gratis and it is only fair that the poor should get work in the slack season. The States hereafter should explain how flood control preserves property values and try to get popular approval for a levy to meet the cost. The Poona dam disaster is certainly one reason for going into the designs and materials used. But that may be less important now as compared with the apportionment of the cost of

flood control in future. The Centre has little responsibility for expenditure which must mainly fall on the areas served. Conservation of irrigation works is facilitated by flood control. This is another reason why agriculturists should cheerfully bear part of the cost of flood control.

HEALTH SURVEY A Realistic Appraisal

The report of the Health Survey and Planning Committee is both realistic in its appraisals and firm in its recommendations. The committee which was headed by Dr A. Lakshmanaswami Mudaliar was constituted two years ago to make an evaluation of developments in the field of health and medical services since independence and make recommendations keeping in perspective the needs of

he next 10 to 15 years. On the question of providing free medical service on the scale visualised by the Bhore Committee, the committee is of the opinion that it is not feasible. The objective of providing one bed for every 1,000 population too may probably be attained only in the course of the next two or three plan periods. Finance will continue to be the biggest stumbling block in the way of a rapid development of health services and the committee as admitted that the question of financing of medical care needs careful study. However, the objective of bringing the benefit of health services to the population at large need not be kept in abeyance pending the mobilisation of the required finance. The committee is of the view that except

in the case of "genuinely indigent patients" a system of graded charges in hospitals may be adopted. An alternative would be, as the committee has pointed out the levy of a health cess.

While the committee is fully aware of the inadequacy of personnel to man the medical services, it does not hesitate to disapprove of any short-cut to training of personnel. The target set by it is one doctor for ever 3,500 people by the end of the Fourth Plan. The number of medical colleges required computed on the basis of one college for 5 million people will come to 90 even at the present level of population. However, the committee has not hesitated to emphasise the need for maintaining a high quality in professional education. It has

proposed a limit of 100 students in a medical college, so that there is scope for greater personal contact between student and teacher. It is also gratifying to note that it has cautioned against adoption of any consideration other than merit in granting admission to medical colleges. Even in the case of sections of population whom the Constitution has assured special treatment the rule should be to select the best available candidates.

Hard work faces Government and others concerned with the improvement of the health services in the country. The committee has made valuable recommendations in regard to drug control, water supply and sanitation, nutrition, communicable diseases, research, administrative organisation and population problem. Far-reaching suggestions have been made in regard to population problem and it is a matter that can brook no delay. That fact that the committee has gone to the extent of suggesting the legalising of abortion indicates how seriously it views the rapid growth of population in the country.

★ PRICES Need for Definition

In his presidential address to the Second Quarterly meeting of the Indian Chamber of Commerce, Calcutta, Mr S. P. Jain referred to the bearing which a rational price policy has on the smooth and successful implementation of the Plan. The trend and behaviour of prices are obviously matters in respect of which the greatest uncertainty attaches both in view of the inherent unpredictability and the weaknesses of Government policies. Though the importance of a stable price level has been recognised by the Government and the Planning Commission, there is yet to emerge a coherent and comprehensive policy which would succeed in keeping the prices within the desired bounds. The Third Plan objectives in the price realm are couched in general terms and lacks precision in respect of the relations that should subsist between prices in various sectors. The basic weakness of the price policy, is that it is based on a sectoral approach and pays scant attention to the overall efficiency of the economy. For instance, there is much extravagant enthusiasm in the Government's policy of encouraging dispersal of industries which when unrelated to the locational advantages and accessibility and sufficiency of raw materials leads to the emergence of uneconomic size units. The deleterious effects that have flown from this policy are evident in the huge idle capacity that has developed in many industries in the country with its bearing on

prices. The problem of maintenance importance is another adverse development.

It is agricultural prices that hold the key to the general behaviour of prices and the performance of the economy during the Third Plan. While the Second Plan experience in respect of controlling prices in the agricultural sphere has been extremely disappointing, it should be a matter for gratification that supply factors have now turned more favourable. Particularly in respect of food-grains, the buffer stocks being built up with imports under PL 480 agreement with America, and the indications of increase in internal productions are factors that should help to bring prices down. While the supply position may offer satisfaction, there is room for doubt about the adequacy of the means proposed by the Government to stabilise price levels in the agricultural sphere. State trading has not been a success having hardly brought down prices in any sphere. The behaviour of sugar prices even in the midst of a surfeit of production and supplies has reinforced doubts about the working of the price controlling machinery of the Government.

★ IRRIGATION The Vast Undone

The need for extending the irrigation facilities and the development of electric power in a country which is predominantly agricultural and on the developing stage require no special emphasis. During the past decade of planned growth considerable headway has been made in these spheres, but that much leeway has to be made remains an indisputable fact. The quantum of water flowing annually through the different rivers in the country is estimated at 1,356 million acre and the utilisable portion has been placed at 450 million. Unfortunately for the country, only 120 million acre feet have so far been harnessed for these purposes and the Third Plan envisages an addition of 40 million to this. The irrigated area on the eve of the First Plan amounted to 51 million acres and subsequently 20 million acres have been added. Power development during the past decade was more than doubled from 2.31 million kw in 1950 to 5.70 million kw. This is no doubt a creditable achievement but there is nothing to gloat over, for the country's hydro-electric potential is estimated at 40 million kw. Considering the restricted reserves of coal in India, the exploitation of water resources for the generation of electricity becomes all the more prominent and the scope in this regard, barring perhaps in a few States like Madras where all the hydro-potential has almost been exhausted, is indeed vast. The extension of water for irri-

gation and other purposes also requires immediate consideration for some States are more often than not faced with scarcity or non-availability of water particularly during the summer seasons.

Inaugurating the annual general meeting of the Central Board of Irrigation and Power at New Delhi, Mr Lal Bahadur Shastri, the Union Minister, spotlighted the significance of inter-State co-operation for the maximum utilisation of water resources in the country. The disputes between the States will have to be ironed out in the best interests of all and an attitude of give and take will help in narrowing regional jealousies. The examples set by the States of Kerala and Madras and Rajasthan and the Punjab are worthy of emulation by other States. The proposal to link large rivers and thereby connecting different parts of the country by a net-work of navigable canals is an idea well worth considering because of its economic potentialities as also for its possibilities as an instrument of national integration.

★ EDUCATION An Imaginative Gift

The US Administration has announced the formation of an Educational Consortium for India to help the country set up an Institute of Technology at Kanpur. The message conveyed by President Kennedy himself to Mr Nehru on his birth-day, has come as a second gift, apart from the ceremonial cake, to Mr Nehru on the fateful occasion. Seeking of aid was no part of Mr Nehru's visit to the US, but the announcement has been timed to coincide with his visit and comes as an unusual and thoughtful birthday present.

The Kanpur Institute which has already been set up is designed to be one of the four leading technical institutes of its kind in the country. Three other such institutes at Khargpur, Bombay and Madras are already well set and have made considerable headway in expansion of facilities and improvement of standards. The Kanpur Institute, was started later than the other three institutes and delay in the construction of a new building, has impeded its progress. Now that American assistance has been promised for the Institute, it should be possible for it to make greater headway and catch up with its counterparts in the other three cities.

The US aid for the project is being sponsored by the Agency for International Development. The support of the AID will be channelled through the "Educational Consortium" which is being formed with nine major US Universities and Institutes of technology, viz. the California Institute

of Technology, Carnegie Institute of Technology, Case Institute of Technology, Massachusetts Institute of Technology, Ohio State University, Princeton University, Purdue University, University of California and University of Michigan. The Consortium will be administered by the Educational Services Incorporated of Watertown, Massachusetts under an AID-financed contract.

The assistance from the Consortium will mainly be in the form of sending of US faculty members to Kanpur in an advisory capacity, provision of advanced training in the US institutions to Kanpur faculty members and advising the institute on its need for equipment and also providing some of the equipment which is

not available in India. Further, part of the rupee costs of constructing the new building to house the Institute will also be paid by the US Government from rupees derived from the sale in India of US surplus wheat and rice. The Consortium representatives are already in India developing working understandings with Indian and US authorities. On the basis of the exchange of visits, the AID and ESI are expected to chalk out plans for actual operations to begin early in 1962.

★ INVENTIONS Fugitive Talents

The Inventions Promotion Board in the Union Ministry of Commerce and Industry has honoured

19 independent workers by awarding cash prizes ranging from Rs 50 to Rs 2,500 for their novel inventions of different sorts. This constitutes the first series of cash prizes awarded by the Board for the sole purpose of fostering a spirit of invention among independent workers, artisans and technicians in the country. The first prize of Rs 2,500 was awarded to Mr Ram-jilal of Deoli for designing the Azimuth Calculator (Sun), a useful instrument for the defence and meteorological services. He has further worked out Polaris and grid convergence graphs and Sun/Star bearing tables.

Another notable device is the instrument for structural testing, which can be developed as a pro-

CONSULT US ON YOUR FOREIGN BUSINESS PROBLEMS

Do you have any special problems connected with your trade or travel abroad?

Do you wish to know more about the currency or customs of foreign countries?

Do you require any specific information on trading opportunities in overseas markets?

THE STATE BANK OF INDIA has for the benefit of its constituents a full fledged INFORMATION SERVICE to provide answers to these questions and many more—all free and without obligation.

Here is an opportunity for expanding existing connections and building up new ones in your overseas trade. Your enquiries will receive individual and prompt attention.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 900 offices waiting to offer you complete banking facilities for overseas trade.

DALMIA ENTERPRISES IN THE NATION'S SERVICE

You are cordially invited to visit
DALMIA PAVILION
AT THE
INDIAN INDUSTRIES FAIR, 1961
at NEW DELHI
(15th November 1961 to 1st January 1962)

per substitute for the Beggs Deformometer and has been proved useful for the measurement of deformation on models. The capacitance type electronic moisture content meter, having the potentiality to record directly moisture contents in terms of percentages of total moisture present, is claimed to help increase the productivity and quality control in textile and similar industries. Another important invention is the improved device for reeling yarn bottoms. This can be employed for removing residual yarn from bobbins and pins returned from winding and weaving departments of the textile mills. In comparison with the conventional method of stripping it has been found that with this machine the output per person can be doubled. A self closing water tap which utilises water pressure for its operation is yet another invention which will soon find a wide application. A young school boy of 15 years has

designed an electro-timer, a simple device using two alarm time-pieces which, when put to any circuit, acts as a time switch to put on and to put off the supply at pre-set times. It is heartening evidence of fugitive talents. Besides awarding such prizes, the Board also extends financial assistance to guide the country's inventive talent through the proper directions. The encouragements and assistance offered by the Board are, in the long run, destined to pave the way for more and more inventions, which in their wake, can make for radical changes in the various industrial and technical fields in the country.

RAILWAYS Higher Charges in the Offing?

Railways are contemplating a closer look at operating statistics

to discover if certain railway charges could be raised. The Port Trusts have met rising costs by putting up all charges besides taking toll of rising traffic. But export trade considerations may limit increases by the Railway. Besides new higher rates for smalls it is possible to contemplate a rise in charges on goods traffic. But a limitation of extra-legal charges that go to the staff must precede a plea for upgrading railway charges. Subsidies for ore or coal may be justified, if high-rated traffic increases with the prevention of pilferage. Statistical studies can have value, only if rates are raised in line with the greater speed of traffic.

The application of cost accounting to the railways as a State undertaking may help the other State enterprises to determine costs and prices. The duty to make a profit is axiomatic under the Third Plan and the adjustment of rates for long distance traffic may also be justified in view of the

Indian Finance

increase in the competitive inter-State traffic by road. The reclassification of goods undertaken for two decades under the impulse of wartime pressures is another argument for readjustment. The other is that the cost of claims which will go up, when the railways have to accept legal responsibility as a common carrier. The tax on passenger fares may limit the chances of raising charges for passengers but it is admittedly necessary to achieve improvement and safety rather than cheapness in passenger services. Railway economics as evolved by Kailash and others may stand in need of revision if the rule of "charging what the traffic will bear" needs to be applied in the case of priority movements. The concessions offered even to staff must also be limited in future, if net revenue is to be kept up at a rising rate in order to meet debt servicing. The credit-worthiness of the State Railways will rest on the growth of revenue and the duty to avoid the experience of the British railways after the war is clear enough. Regional and other pressures must be ignored and the railways must take into account the lift in prices of commodities like cotton and oil seeds this year. A part of the increase can well be absorbed by measurement of volume originating from the producing centres in order to counter the fall in movement to ports, owing to the fall in some exports. The rule of internal free trade cannot be infringed by the application of differential rates including special rates. With larger goods trains in vogue, speed must be raised. Railway users may concede that the revision of rates is necessary provided they are satisfied that it will result in greater operational efficiency.

INDO-GERMAN TRADE Need for Expansion

Speaking at the fifth annual general meeting of the Indo-German Chamber of Commerce held in Bombay last week, Mr Morarji Desai, the Union Finance Minister, expressed concern at the imbalance in trade between India and the Federal Republic of Germany and pleaded for liberal terms for reversing this unfavourable trend. He, however, acknowledged the growing awareness of West Germany in India's development programmes and the quantum of assistance provided by that country. But at the same time Mr Morarji brought home the fact that under no circumstances can aid be considered as a proper substitute for trade. There is no gainsaying that financial aid is propitious for accelerating the pace of development of under-developed nations, particularly in the initial stages, but the creation of the wherewithal for repaying

18 November 1961

it is equally important. It is in this regard the role of a balanced trade looms large.

Our trade deficit with West Germany in 1959 was of the order of about Rs 99.11 crores and in 1960 it was marked slightly lower at Rs 96.95 crores. The need for bridging this yawning gap therefore becomes obvious. The quota restrictions imposed by the West German Government acted as an impediment of a serious nature in bolstering our exports to that destination and the crippling import duties left the competitive ability of our goods considerably weakened. Viewed in this light some slackening in the restrictions on quotas and easing of the burdensome import duties are necessary for stimulating exports from India. Another solution for this problem lies in the indigenous production of the machinery, for the supply of which we depend on the Federal Republic. It is a matter for gratification that more and more products of German designs are now manufactured in India by the joint Indo-German industrial undertakings. As the time element has to be reckoned in our march toward self-sufficiency the imbalance in the trade is likely to continue for a few years.

In his welcome speech, Mr G. Wilhelm, the President of the Chamber, drew attention to the slight improvement registered in exports from India to West Germany during the first seven months of the current year. This development was largely the result of direct contacts between Indian business and their counterparts in that country. Such dealings, as averred by the President, will prove fruitful in boosting our exports to West Germany. But the question of Indo-German trade is bound up with the question of Britain's entry in the European Common Market.

US Improved Balance of Payments Position

According to estimates discussed at last week's annual convention of the National Foreign Trade Council, US commercial merchandise exports this year will approximate \$19,500 million. This is about the same as last year's total, and is in line with projections offered last January. Actually, US exports have been at record levels for the past two years. But the fact that 1961's total now is running barely above 1960's raises the question whether the current export boom is coming to an end. Involved in this are the economic trends in Western Europe, which is a major market for US goods. There seems little, if any, doubt that West European prosperity will continue, but much obviously will

depend on the extent to which the nations of that region can maintain their remarkable economic growth rates of the past several years.

Members of the National Foreign Trade Council, a leading private body comprising a representative and influential cross-section of American companies engaged in various aspects of international commerce, also envisage a US import total for this year of about \$14,700 million. This, too, is about the same as last year's total, although not quite up to the levels anticipated when 1961 began.

The lag in imports is attributed principally to the effects of the brief and mild recession in US economic activity from mid-1960 to the spring of 1961. With the recession long since over, however, and US economic activity there has been an increasing demand for goods, both foreign and domestic, in recent months. Hence, imports may well be larger next year than this.

On the basis of these estimates, the US trade surplus—the excess of merchandise exports over imports—figures to be about \$5,000 million this year. Again, this is about the same as last year's surplus.

The over-all deficit in the US balance of payments, however, will be much smaller than 1960's abnormally high \$3,800 million. For 1961, the deficit is being estimated at a rather moderate \$1,500 million—\$2,000 million.

The balance of payments, of course, reflects all the international transactions of the United States. Thus, even a healthy \$5,000 million trade surplus has not been sufficient to offset the large outflow of US funds in such forms as US Government economic aid and US private investment abroad.

It is not that there has been any diminishing of these forms of assistance to economic development around the world; if anything, they have been on the rise. But

this year there has been a striking reduction in the flow of short-term money out of the United States. This development is taken here and elsewhere as evidence of renewed international confidence in the US dollar, in the vitality of the US economy, and in the ability of the US Government to keep its balance-of-payment difficulties under control.

This does not mean that the difficulties have as yet been overcome completely. In fact, with imports rising and exports not showing a similar surge, there is the possibility that the all-important trade surplus, representing principal cushion against US capital outflow, could be smaller in 1962 than in 1961.

Hence, from the viewpoint of US Government policy—with which US business interests generally coincide—it becomes important to build up the trade surplus and to spur a larger flow of capital to the United States. One such step is to stimulate travel

Where on
earth is

Mogadiscio?

Frankly, till somebody in Mogadiscio ordered BINNY's cloth, we too didn't know that it was the capital of Somalia in East Africa.

Today BINNY's cloth is imported by 50 countries—superb fabrics made from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved.

Rigid Quality Control* ensures maximum durability and perfect finish.

Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

*Testing cloth for defects

Every yard of cloth from the looms is examined thoroughly for defects before it is passed for dyeing or bleaching and finishing.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels • Anticrease Suitings • Tussores • Union Fabrics • Silk Sarrees etc. etc.

BINNY—a great name in textiles

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited
Subsidiaries of Binny & Co. (Madras) Ltd.

UNION CARBIDE INDIA now offers from its Trombay plant

These four synthetic organic chemicals now being produced at Union Carbide India's Trombay Plant serve as raw materials and intermediates in the processing and manufacture of a whole host of products for industry and the home—from dyes, textiles and drugs to automobiles, leather cloth, foodstuffs and photographic films.

For your requirements of these organic chemicals write to your nearest Union Carbide India Office.

INTUC 1104

to the United States, and thus reduce the traditional net outflow of tourist dollars resulting from the heavy US travel to other lands. This is being done through official US Government programmes, and unofficially through private endeavours.

Another step, and the major one, is to keep the US trade surplus as high as possible through an expansion of US exports. To businessmen, this means greater efforts to sell their products abroad and to keep them competitive, price-wise and quality-wise, in world markets.

To the government, this has meant the launching of an ambitious export expansion programme. Exports are being encouraged through such devices as liberalized credit facilities, increased trade missions abroad, establishment of trade centres in important cities around the world, greater participation in international trade fairs, and broadened insurance coverage of American shipments against defaults and political risks.

It is noteworthy that in all this there has been virtually no mention of a general policy of import restriction as a means of bolstering the US trade position. Indeed, while there have been a few special cases requiring special international attention, any thought of resorting to a general policy of import restriction was rejected at the outset as incompatible with the basically liberal trade policies of the US Government. These policies traditionally have sought an expansion of world commerce from which all nations could benefit.

It is important to note that the National Foreign Trade Convention, in its final declaration of policy, also rejected the concept of trade restriction. Instead, it indicated support for further liberalization of the 27-year-old US Trade Agreements Act, which expires next June 30, along lines evidently being considered by the administration of President Kennedy. As outlined to the con-

vention by George W. Ball, US Undersecretary of State for Economic Affairs, one key feature of the new trade programme now under study would be additional presidential authority to negotiate deep, across-the-board tariff cuts.

WHEELS INDIA A New Stride in Industrial March

"Wheels India Ltd" a joint venture between M/S TVS of Madras and Dunlops, was inaugurated last week, by Mr K. C. Reddi Union Minister for Commerce and Industry. The inauguration of the project represents a new stride taken by the Madras State toward further industrial growth and development. The capital participation by Dunlops and TVS is in the ratio of 45:55, with the total capital outlay at Rs 1.4 crores. Dunlops' contribution will be mainly in the form of machinery and equipment.

The factory which is located at Padai, a village near Ambattur 8 miles north of Madras, is designed to manufacture wheels for the Dodge, Bedford, Leyland and Mercedes Benz. Production will be confined mainly to two types unlike in the UK, where Dunlops are making 102 different types of wheels. The production capacity for the factory has been fixed at 180,000 wheels on single shift and 210,000 on double shift. The wheels will be of the fully welded type, the latest adopted in the foreign countries. The factory has been equipped with the latest degreasing plant and for the first time in the country, it will be adopting CO₂ automatic welding process. It is also noteworthy that production plans are being so designed that the factory could get into full production on commissioning.

Inaugurating the project, Mr K. C. Reddi underlined the importance of developing the ancillary wing of the automobile industry.

In the advanced countries, the automobile industry is organised essentially as an assembling industry which ensures its economies of specialisation and overheads. In India, on the other hand, the retarded development of the ancillary wing in the automobile industry has involved greater capitalisation for the main automobile manufacturers who have to undertake the production of items usually supplied by the ancillary units. Recent progress in the development of ancillary units has been commendable and there has emerged over 100 units covering a large number of ancillary items such as electrical equipment, wheels, rims and instruments. That the value of production in the ancillary units should have gone up from Rs 2.3 crores in 1956 to Rs 12.5 crores is a measure of the progress made. The scope for the further enlargement of the area of operation of the ancillary units is however still great. The automobile industry still consumes a substantial amount of foreign exchange for import of spare parts and components. The entry of the new project jointly sponsored by the TVS and Dunlops is in the circumstances to be welcomed. In the very first year of production itself, the new factory will enable the country to effect a saving in foreign exchange to the tune of Rs 94 lakhs.

★

CENTRAL REVENUES Buoyant in September

The revenue realised from items on which duties are levied and collected by the Central Government in the first six months of the financial year 1961-62 amounted to Rs 441.30 crores. Of this, Rs 102.33 crores were collected during September 1961. The corresponding figures for the first six months of the financial year 1960-61 and for the month of September 1960 were Rs 367.77 crores and Rs 75.86 crores respectively.

Following are details of the revenue realised under various heads:—

Revenue Head	(In Lakhs of Rupees)			
	September 1961	September 1960	1961-62	1960-61
1. Customs ...	17.71	13.74	95.99	77.95
2. Union Excise Duties excluding Coal Cess and Salt Cess ...	39.06	31.72	229.42	193.80
3. Corporation Tax ...	23.85	14.51	51.58	36.78

BURMAH-SHELL Notable Performance

The Burmah-Shell Oil Company has, in a small publication, reviewed the working of the Company during 1960. A noteworthy feature of the publication is the pictorial presentation that has been used to describe the Company's activities. This has greatly contributed to simplicity in understanding the various aspects of the Company's working.

The Survey records the total sales turnover of the Company during 1960 at 3.7 million tons valued at over Rs 172.06 crores. Noteworthy features in the performance on the sales side during the year are an 11 per cent increase in the Company's trade in Aviation Fuel contributed mainly by Turbine Fuel and a rise by 42 per cent in the sales of Liquefied Petroleum Gas. These two however account for only a minor share of the total production by the Burmah-Shell, the more important items being Motor Spirit, Kerosine and Light and Heavy Diesel Oils. The respective shares of these items in the gross proceeds at Rs 172.06 crores are Rs 38.68 crores, Rs 38.37 crores and Rs 49.72 crores.

The break-up of the total gross proceeds into the various elements of expenditure provides an interesting study of the economics of the oil industry. A sum of Rs 58.83 crores amounting to 34 per cent of the gross proceeds is attributed to CIF cost of products. Wharfage and Railway freight are shown to account for a sum of Rs 12.10 crores or 7 per cent of the gross proceeds. Marketing expenses are placed at Rs 22.90 crores. Taxes paid by the Government in the form of sales taxes and Central Government duties and income tax have absorbed nearly Rs 76.03 crores which working out to 45 per cent of the total gross proceeds provides a measure of the heavy burden of taxation which the oil industry has to bear at present. The total profit of the Company after providing for taxation is shown at Rs 2.11 crores or 1 per cent of total

18 November 1961

turnover and as a proportion of the capital employed worked out to 3.97 per cent in 1960. It is however remarkable that this was more than matched by the increase of Rs 3 crores in the net capital employed in the Company's business.

The Survey also attempts a forecast of the future trend in the demand for petroleum products in the country for the next five years. This indicates a likely fall in the proportion of consumption

of kerosine as well as of motor spirit and of light diesel oil. On the other hand, high speed diesel oil and furnace oils figure as items for which the demand will go up. An equally important feature of demand will be its diversified pattern, in which the range of products in demand will be widened.

It is stated that there will be many customers requiring various types of industrial feedstocks such as Light Naphtha, to produce fertilisers and a

wide range of chemicals. This should augur well for the development of a petro-chemical industry in the country.

★ WHOLESALE PRICES Slight Fall

The official wholesale price index (with the year ended March 1953 as 100) receded by 0.4 per cent to 124.0 during the week-ended 21 October, 1961 as com-

pared with 124.5 for the earlier week. The index was lower by 0.2 and 2.1 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

The index for Food Articles rose by 0.2 per cent to 121.3 as compared with 121.1 (revised) for the previous week due to an advance in the prices of Potatoes (+12%), Rice at Dumka (+6%), Gur and Onions (+5% each), Gingelly oil (+4%), Barley and Grain

Pan Am gives you the priceless extra of experience...

Pan Am has more million-mile pilots than any other airline

and the most frequent jets from Europe to the U.S.A.!

Choose Pan Am... relax with the world's most experienced airline

When you fly Pan American, you're in the world's most experienced jet hands. Pan Am's hospitality and courteous, efficient service are sure to make your trip an enjoyable and memorable one.

Pan Am has carried over thirty million passengers during its 33 years of international flying. Pan Am Jets can now take you to any of 85 cities on all 6 continents.

Pan Am offers the most frequent jet service between Europe and the U.S.A. This winter there are 106 Pan Am jet flights a week in both directions — serving 22 cities in

Europe and 11 in the United States. Your choice of first-class *President* Special or low-fare *Rainbow Economy* Service on every flight.

(+3% each) and Maize, Ragi, Arhar, Masur, Bananas Ghee and Mustard Oil (+1% each) although the prices of Wheat at Sugar and Milk (-6% each), Eggs (-4%), Fish (-3%), Cashewnuts (-2%), Urad, Groundnut oil, Black Pepper, Cardamoms, Betelnuts and Salt (-1% each) showed declines.

The index for 'Tohacco' remained unchanged at its earlier week's level of 96.0.

The index for the Fuel, Power, Light and Lubricants' group worked out to 121.6 as against 121.7 for the previous week. The prices of Castor oil (-2%) showed a fall during the week under review.

Lower prices of Groundnuts (-8%), raw Cotton (-5%), raw Jute and Cotton seed (-2% each) and Castor seed and Gingelly seed (-1% each) brought down the index for Industrial Raw Materials by 2.6 per cent to 132.7. The prices of Rapeseed (+2%) and Raw Silk (+1%), however, moved up.

The prices of Rayon Yarn (+4%) and Coir Yarn (+1%) showed advances while those of Zinc (-6%) and Linseed Oil (-1%) were marked down and in the result the index for Intermediate Products rose by 0.2 per cent to 140.8 during the week under review.

The index for 'Finished Products' stood at 123.8 as against 123.9 (revised) for the previous week. Items which showed variations during the week were —Jute manufactures (-1%) and Bricks and Tiles (+1%).

NEWS IN BRIEF

THE Government of India has decided to extend the benefit of compulsory contributory provident fund under the Employees' Provident Funds Act to industries engaged in stone-ware jars and crockery. This will take effect from 30 November and is applicable to establishments which employ twenty or more persons.

Up to the end of December 1960, the total number of exempted and unexempted establishments covered by the Act was 8,131 and the number of subscribers in such establishments totalled about 2.8 million. The aggregate accumulations of provident fund in exempted and unexempted establishments were Rs 193.45 crores, excluding refunds.

All towns and villages with a population of more than 5,000 will be electrified by the end of the Third Plan. In addition, half the villages, having a population ranging between 2,000 and 5,000 will be provided with electric power.

In 1951, only 3,687 villages were electrified. In the First and Second Plan periods, the number increased to 23,000 which will further rise to

43,000 by 1965-66. This means a phenomenal rate of increase in the number of villages electrified since the commencement of the planning period. A more impressive achievement is that about 40 per cent of the larger villages, having a population over 5,000 will have electricity for agricultural, domestic and industrial use.

Bhilai Steel Plant produced 86,941 tonnes of Pig Iron and 72,225 tonnes of Steel Ingots in October 1961, as against 82,607 and 66,570 tonnes respectively in September. Production of Pig Iron for Sale was 32,531 tonnes as against 31,462 tonnes in September. Saleable Steel production was 51,460 as against 41,755 tonnes in September.

Durgapur Steel Plant produced 61,288 tonnes of Pig Iron and 44,700 tonnes of Steel Ingots in October as against 57,481 tonnes and 42,784 tonnes respectively in September. The production of Saleable Pig Iron was 18,343 tonnes as against 16,812 tonnes in September. Production of Saleable Steel amounted to 37,877 tonnes against 29,612 tonnes in September.

Rourkela Steel Plant produced 39,379 tonnes of Pig Iron and 32,522 tonnes of Steel Ingots in October as against 29,886 and 23,310 tonnes respectively in September. Production of Saleable Pig Iron was 5,903 tonnes. Production of total Saleable Steel rose to 20,397 tonnes from 17,364 in September.

The Government owned Chemicals Company, manufacturing caustic soda, sodium hydro-sulphate, hydrochloric acid, and other chemicals at Eloor in Kerala will shortly embark upon a three-year expansion scheme. The expansion programme, when completed, will step up production of caustic soda from 35 to 100 tons per day and of sodium hydro-sulphate from 900 metric tons to 3,000 metric tons. The Company has also plans to produce 4.2 metric tons of sodium sulphate daily.

Full scale prospecting work by the National Mineral Development Corporation to exploit the country's largest iron ore deposits in Bailadila area in MP will commence from January 1962. Recent experiments conducted by the Indian Bureau of Mines have revealed a high percentage of raw iron blocks upto 82.2. The entire prospecting work is scheduled to be completed before the next monsoon sets in.

According to provisional figures issued by the international rubber study group, world consumption of natural rubber in August totalled 177,500 long tons as against 157,500 tons in July. Consumption of synthetic rubber in the month amounted to 155,000 tons in contrast to 140,000 tons in July.

Kerala Government has sanctioned a Rs 3.4 crore scheme for the distribution of chemical fertilisers to increase the production of coconuts in the State by about 34 million nuts during the Third Plan.

Oil production in the Middle East in the first nine months of 1961, recorded an increase of 8.6 per cent over the same period in 1960. Oil produced amounted to 210,347,000 metric tons compared with 193,705,000 tons in the first nine months of the previous year. All leading countries achieved higher output. Kuwait yielded 61,687,000 tons, Saudi Arabia 50,910,000 tons, Iran 43,686,000 tons and Iraq 36,260,000 tons. Iran had the largest proportionate increase of any of the major Middle East producers.

According to the All-India Automobile and Ancillary Industries Association, production of components for the automobile industry in India this year is expected to touch Rs 20 crores. The component production (excluding tyres, tubes, other rubber items, ball bearings and batteries) is today running at an annual rate of Rs 12 crores in the organised sectors, the residue being contributed by the small sector.

The Government of India has constituted a 11 member study group to conduct a probe into the various aspects and problems of the hosiery industry with Mr I. B. Dutt, Industrial Adviser, Textile Commissioner's office, as Chairman.

A Rs 1 crore plant for the production of wrist watches will be set up in Baroda by the Hindustan Equipment Suppliers Limited. In the initial stages the factory will produce 80,000 watches per annum which will subsequently be raised to 300,000 pieces. Negotiation with a foreign firm for technical and financial collaboration is under way.

Huge iron ore deposits of great importance to Australia's future have been discovered in the north-west of Western Australia. The deposits are expected to total 1,800 million tons five times Australia's total known reserves.

Exports of British commercial vehicles reached the record value of £94,153,420 in the first nine months of 1961. Exports of commercial vehicles, accessories and components were actually 13.5 per cent above the figure for the previous year. With the record exports registered this year Britain has emerged as the world's leading exporter of commercial vehicles.

According to the Indian Bureau of Mines, production of iron ore in September 1961 was 930,000 metric tons. This brings the total output during January-September to 8,645,000 metric tons which is higher by 7 per cent compared to the output during the corresponding period of the preceding year.

Orissa was the leading producing State with an output of 375,000 metric tons followed by Bihar which recorded an output of 232,000 metric tons. Production from Madhya Pradesh, Mysore and Maharashtra amounted to 200,000, 144,000 and 17,000 metric tons, respectively.

Despatches of iron ore for consumption in the iron and steel plants in the same month totalled 690,000 metric tons while despatches for export amounted to 135,000 metric tons.

In early November, the construction of the second stage of Indian Aluminium Company Limited's Hirakud smelter was completed, five months ahead of the original completion schedule. The first stage—10,000 tonnes—of the Hirakud smelter was commissioned in early 1959. The Government of Orissa made available, ahead of schedule, a partial supply of power to the smelter so that half of the expanded facility has gone into operation. The smelter is scheduled to go into full operation early next year when the balance of the power will become available. This expansion will increase the Hirakud smelter's capacity from 10,000 tonnes per annum to 20,000 tonnes and will raise India's total aluminium smelting capacity from 18,000 tonnes to 28,000 tonnes—an increase of about 55 per cent.

The current demand for aluminium in India is about 50,000 tonnes and is expected to rise to about 120,000 tonnes by the end of the Third Plan. Besides the existing units, several new smelters are likely to be established by 1966, which is likely to raise the installed capacity in the country to 97,500 tonnes.

PERSONAL

Mr M. Ct. Muthiah, Chairman of the Indian Overseas Bank Limited, returned to India on 16 November after a tour of Europe, the USA and the Far East.

Mr S. K. Kooka, Commercial Director of Air India International has been appointed a member of the Advisory Committee of the Indian Airlines Corporation and Mr Biren Mukherji, Chief Traffic Manager, of AIC has been made a member of the Advisory Committee of the Air India International.

Mr V. Viswanathan will succeed Mr V. N. Jha as Secretary of the Union Ministry of Home Affairs. He will take over charge on 27 November. Mr Jha has been appointed Chairman of the Union Public Service Commission.

Mr D. S. Joshi, Additional Secretary in the Union Ministry of Commerce and Industry, left for Hungary to negotiate a trade agreement between the two countries for 1962.

Mr G. Parthasarathy, who is at present a member of the Indian delegation to the United Nations, has been appointed as Chairman of the Vietnam Commission. Mr Parthasarathy will be proceeding to Saigon by the end of next week to take up his new appointment.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IN DELHI for a short while last month, I had a glimpse of the Indian Industries Fair taking rather leisurely shape at the exhibition grounds on Mathura Road. It crossed my mind then that, as in an Indian wedding, the real preparations will start only when the guests start arriving. But as in an Indian wedding again, the muhurat will find everybody and everything more or less ready. (Usually, the bridegroom is more, and the bride less, ready.) Reports from Delhi indicate that the late arrival at the Fair is, provided he is not as tardy as his proverbial counterpart, likely to have more fun and greater enlightenment than those whom the call of duty or of pleasure takes there earlier. A visit in early December may prove rewarding, for by then the participants will have got into their stride and the spirit of the thing. But that need not postpone our formal congratulation to those whose energy, resourcefulness and hard work have made this Fair a great showpiece. Like many other things destined to become memorable, the idea of an Indian Industries Fair developed from rather nebulous impulses and with no particular design. But already it has achieved a pattern. The first Fair, held in 1955, provided some tangible evidence of the rather modest strides the country had taken towards industrialisation during the First Plan period. This year's Fair, a more ambitious venture, will bear testimony to the great qualitative and quantitative changes that have come over our economy in a decade of planning. Thus the Fair has imperceptibly become part of the apparatus of planned development, a quinquennial standing back and appraisal of changes in the landscape. Its chief virtue is its palpableness. There is no abracadabra about national income, per capita income, index of production and the rest of the statistician's esoterisms to grapple with. You have visual and concrete evidence of what is being attempted and done. And the fact that it has been jointly sponsored by the FICCI and the Government of India gives, as the Fair itself will do, meaning and content to professions of faith in a mixed economy. Besides a modest sense of fulfilment, the Fair also provides an occasion for a healthy spirit of emulation. This year's Fair, in particular, has had as many as eighteen nations compete with one another in presenting to the Indian public: the best examples of their enterprise

and technological sophistication. Seeing them must engender a certain impatience with our backwardness, but such an emotion need not be negative, especially since these very nations are actively assisting us along the road they have already traversed. The foreign visitor to the Fair will have cause for wonderment too. India's growth as an industrial nation has been remarkable and if the scene is somewhat confusing and helter-skelter, there is little doubt about the vitality of the Indian entrepreneur of the last few years. The range and variety of things we now make come with a vivid shock of surprise to those who have thought of India as the land of Maharajas and rope tricksters.

There is one suggestion for the future I should like to make. Delhi is not necessarily the obvious choice for an Industries Fair in the country, though at the rate they in Delhi have been acquiring experience for this kind of show, it may soon be the only choice. But apart from that, the claims of other cities like Calcutta or Bombay are not easily brushed aside. I would naturally press the claims of Calcutta, but others besides me can easily see how odd it is that an Industries Fair should be so tardy in coming to the industrial capital of the country.

Mr Nehru's visit to the US has been a triumph of a rather unusual kind: normally such visits are exercises in public relations. Even this particular visit was probably so planned. In the event, it had turned out that the essence of Mr Nehru's triumph this time has been his statesmanship rather than his considerable public-relations potential. For this circumstance we have to thank the rather murky atmosphere of misunderstanding that suddenly developed on the eve of his visit. Mr Nehru had his work cut out for him. No synthetic bonhomie would have done and Mr Nehru rose to the occasion. His savoir faire was remarkable: he sailed through searching and even hostile questions with ease and assurance. At the end of it all he gave nothing away and yet successive despatches from America show how the hostility was breaking down progressively and how there is now a more precise and sympathetic understanding of our international stances. How one wishes Mr Menon had a tithe of this gift of Mr Nehru! Mr Nehru evaded no

question, but he was not once brow-beaten into apologetics about our stands that irritated the US. The result has been, if one is to judge by reports, a greater understanding of the vast area of agreement between us and our differences. Belgrade and Russian tests which had become touchstones of sincerity with some Americans reared their heads repeatedly. Mr Nehru was asked, for example, why the Belgrade Conference did not condemn the Russian tests. Mr Nehru answered for himself and said that he did condemn them. This was both a correction on a point of fact and a gentle reminder that he cannot be held answerable for the conduct of all the neutrals in the world. He also drew attention to the fact that he did ask—almost the only man to do so—the nations gathered at Belgrade that they should lift their eyes a little beyond their horizons and take note of the happenings in the larger arena of international politics.

Areas of agreement between the US and India were recalled both by Mr Nehru and Mr Kennedy often enough to have made an impression on even the most impervious. The things that bound us were the important things. A shared dedication to the values of an open society, the tradition of governance by consent and the sanctity of the rule of law constitute a not inconsiderable community of feeling and thinking. And these are the things that matter. Even our neutrality will make better sense if Americans recalled their own early history: Benjamin Franklin, probably the first US diplomatic representative, worked hard at keeping the US away from the French Revolution. The Jeffersonian horror of entangling alliances is understandable in a nation on the make. The compulsions of our neutrality are not dissimilar. This point was made by Mr Galbraith also when he told the NBC Television audience last week, "there was a period in our own history when we were isolationists and the same tendencies are unquestionably at work in India."

A rather interesting development reported is the agreement between Mr Nehru and Mr Kennedy to keep constantly in touch with each other and to keep alive a continuous process of consultation. It is possible to read too much into this, but obviously something more than what is now obtaining is being contemplated. Even if it is not to be analogous to the "family" consultations among the members of the Commonwealth, exchange of views at the stage

when policies are being processed, will obviate difficulties that arise when differences come to the surface after policies have congealed. If the right conventions develop, we may see the end of the fits of sulks the two countries go into from time to time.

Last week saw the consummation of one marriage of convenience and the dissolution of another. The Ganatantra Parishad in Orissa has decided to merge itself with the Swatantra Party and the Muslim League in Kerala has walked out of the coalition. Cynics cannot even pretend to be interested in such goings on. The Parishad now sees in the Swatantra Party an ideological soul-mate, but when it entered into coalition arrangements with the Congress some years ago, it fell over backwards professing socialism. It is clear that if things had gone rather differently in Orissa in the last two years, the Parishad would be singing a different tune. But then words are not merely the breath of politicians, it is their food. They eat them continually. Swatantra leadership may have less explaining to do on this liaison with the Parishad than on its dallying with the Dravida Munnetra Kazhagam in Madras. (Its support of Acharya Kripalani who can hardly be classified as a Swatantrite,—indeed, he can hardly be classified as anything—is for well-known reasons a special case.) The DMK's socialism may be phoney, but it can be called a rightist party only in the disreputable sense of being an incipient Fascist one. Even the rather elastic ethics of party groupings for electoral purposes can hardly accommodate this piece of opportunism on the part of a leadership, which, whatever one's differences with it, we respect as fundamentally honest. One can only infer from such arrangement that none of the parties really expects to displace the Congress in the seat of power. For it is clear that such motley groupings are hardly capable of running a government.

The breaking loose of the Muslim League from the Kerala Troika may be considered good riddance by the other two horses, though they too are pulling in different directions. The Congress will be vastly relieved, for it puts an end to an alliance that made nonsense of its professed secularist politics. It has never been a defensible arrangement, even on the rather specious ground that you cannot be too squeamish when it comes to fighting the Communists. Meantime, the PSP-Congress split is apparently on the mend, since both parties have agreed to abide by Mr Giri's decision on the one major quarrel that is festering relations. But then the situation is bound to be unstable so long as the major partner in the coalition is playing the minor role.

EAVESDROPPER.

Olympus

TOP ADMINISTRATION Engineers Stake Their Claims

THE problems of management of the big engineering enterprises in the public sector, which stand in the way of getting the best out of these ventures, were highlighted at the symposium of engineers inaugurated in New Delhi last Sunday by the Union Home Minister, Mr Lal Bahadur Shastri. Two points were repeatedly emphasised in the course of the discussions. One was the need for thorough overhaul of antiquated rules and regulations, especially in the matter of financial sanctions, which strangled the growth of the enterprises. The second concerned the selection of proper persons for the posts of chief executives. (The speeches left no room for doubt about the deep dissatisfaction among engineers at the manner in which top administrative positions in technical departments are being filled by non-technical civil servants on short tenures.

Regarding the need for revision of rules and regulations which lead to considerable delay, Mr K. L. Rao, member of the Central Power and Water Commission, has estimated that a saving of ten to fifteen per cent in the cost of works could be effected if the procedures could be streamlined so as to ensure prompt payments. In this connexion Mr Shastri made the important suggestion that a committee consisting of representatives of concerned ministries, engineers and a representative of the Comptroller and Auditor General may be set up to go into the question of streamlining procedures and that the Cabinet Secretary may be asked to take the lead in the matter.

On the question of selection of personnel for top executive positions, Major General Harkirat Singh, President, Institution of Engineers (India) and Engineer-in-Chief, Indian Army, set the pace with a forcible criticism of the organisational set-up of technical departments under non-technical civil servants. This practice, he said, results in a pattern where there is authority without responsibility, and responsibility without authority; for, the Secretary of a Ministry, who had the power to over-rule the technical head of the department, had no responsibility for giving effect to technical or departmental proposals. This point was further elaborated in the different papers presented at the symposium and by the speakers who participated in the general discussion.

The public may have difficulty in following all this talk about the feel-

ing of frustration among engineers; for, as Mr Lal Bahadur Shastri pointed out in his inaugural speech, now, at any rate, there is no denial of opportunities to engineers. At the same time he said that there should be no objection to the appointment of suitable civil servants as top executives of industrial enterprises. Paying a tribute to the successful record of the Railway engineers who had been placed in charge of large projects, Mr Shastri also reminded his audience that it was not Railway engineers alone who had made good. Others also have done equally well. And it is not possible to draw a rigid line in the matter.

While the position as stated by the Minister will be generally accepted as quite reasonable, the sense of frustration among engineers, which found passionate expression at the symposium, is a fact to be reckoned with, especially in view of the pivotal role of engineers in the implementation of Plan targets. It has been estimated that over two-thirds of Plan activities will fall on the engineering profession. The people as well as the Government look to the engineers to ensure the success of the programme of planned development, and sometimes they have the feeling, legitimate or not, that they have been let down.

The Home Minister had referred to the long delay in the execution of projects. During his recent visit to Manipur and Tripura he found that water supply projects for which provision was made even in the First Plan had not yet been completed. He also drew pointed attention to the continuous rise in the estimates of big projects, sometimes amounting to twice the original estimates.

An explanation of the wide gap between original project estimates and actual expenditure later found necessary, as well as of delays in implementation which inflated costs, was offered in a paper submitted by Mr M. Ganapati, former Resident Director of Hindustan Steel at Rourkela. Mr Ganapati has been intimately connected during the last fifteen years and more with a large number of major projects of a varied nature such as Ganga Bridge at Kashi, Chittaranjan, Integral Coach Factory, Madras, Kandla Port and several projects of the Western Railway. The main reason, according to Mr Ganapati, is inadequate planning in the first instance. A certain amount of initial planning is undertaken in the case of all projects which are finally approved for inclusion in the Plan. But this is only the beginning. Considerable detailed planning is necessary before the project could be sanctioned and work commenced. Here we have been depending upon foreign consultants for major projects because of lack of

adequate experienced engineers and consultants in our own country. And the foreign consultants are not always in a position to appreciate the practical difficulties in implementing the project in its various phases, with the result that plans and estimates have to be revised from time to time after the execution of the project had already commenced and much time and money is lost on this account. Mr Ganapati, therefore, suggested that the preparation of the preliminary and final project reports should be done in great detail by people who have intimate knowledge of the conditions obtaining in the country.

Next in order of importance is the question of personnel. In this connexion, Mr Ganapati made the point that shortage of experienced and qualified technical personnel for the intermediate and higher levels makes it all the more necessary that the top executive should have a reasonably intimate knowledge of the working of the project or industry, especially in the early stages. Entrusting the work to non-technical people who cannot have a grasp of the situation cannot but lead to delay and inefficiency.

On the question of the delays caused by interference by Accounts and Audit, what Mr Ganapati had to say is of considerable interest and merits the attention of engineers in charge of projects as well as accounts officers. "While there are cases," said Mr Ganapati, "of impossible account officers who wish to interfere in all stages of work and prevent the smooth execution of projects, it must be recognised that an efficient organisation is absolutely necessary for assisting the executive in planning and controlling expenditure and for ensuring that every rupee spent is worthwhile. It may be tedious to have to convince the accounts department about the justification for expenditure under various heads; but with proper understanding and the realisation of a sense of urgency, it should be quite possible to ensure the cooperation of the accounts department except in cases where individual accounts officers are obsessed with their own importance even to the extent of interfering with the progress of the work. It is, however, necessary that the head of the project must have the last say in the matter as regards any decision. Once the right man is selected for the post, he should be trusted to deliver the goods, and his decision should be honoured as, after all, he will be held responsible for the satisfactory execution of the project." It may be added that the Home Minister, in his speech, expressed his preference for a system of control under which the fullest discretion is allowed to the man in charge, with a special audit where necessary as in the case of Company Law Administration.

Industries Fair

Auspicious showers followed by bright sunshine heralded the formal inauguration by Vice-President Radhakrishnan of the Indian Industries Fair last Tuesday. Coming as he did straight from the concluding session of the International Literary

Seminar, his speech was redolent of the stimulating discussion initiated by Aldous Huxley on what education should aim at in the modern world. Paraphrasing an ancient text inscribed on the *samadhi* of Maharshi Debendranath Tagore at Santiniketan where the Poet was wont to meditate, Dr Radhakrishnan defined the aim as the creation of an integrated personality having "vital efficiency and dynamism, intellectual satisfaction and spiritual wealth." His inaugural address at the Industries Fair was almost a continuation of the speech he had made a few minutes earlier at the Seminar, especially when he warned against losing sight of ultimate human values in pursuit of economic progress.

The first Industries Fair was held towards the end of the First Plan. The second, as Mr Madan Mohan Ruia said in his welcome address bears visible testimony to the achievements of the Second Plan, the growing role of the public sector and the participation of friendly countries in India's industrial development. He also expressed the hope that the Fair would help to create conditions for increased trade between India and the rest of the world. It has actually done more. It has served to highlight the trials and tribulations of a developing economy anxious to get out of the ruts of centuries of stagnation, though this was not a part of the plans of the organisers. The incomplete pavilions enveloped in scaffolding, the empty stalls, unopened crates of exhibits, the unmetalled roads which the rain reduced to slush, gave a mute demonstration of the difficulties yet to be overcome.

Role of Exhibitions

Taking advantage of the presence in Delhi of a number of experts from foreign countries who have come to set up their pavilions at the Fair, the Directorate of Advertising and Visual Publicity of the I. & B. Ministry has organised a two-day Seminar on the Role and Techniques of Exhibitions. Mr L. K. Nair, Director of Advertising and visual publicity explained Government's growing interest in Exhibitions as a method of popularising the Plan. Exhibition units had been set up by various Government departments at the Centre and in the States. But many problems have yet to be overcome before Exhibitions could be effective for the purpose for which they are intended. The most formidable, Mr Nair said, was the problem of expenses. Mr T. N. Singh, Member of the Planning Commission, who inaugurated the Seminar admitted that "we have not yet been able to find a solution of the problem of touching the hearts of the people." And he posed the interesting question why Exhibitions in general should need costly sideshows to lure the general public to view the exhibits intended to enlarge their mental horizons. It, however, seems doubtful if any answer to this question would emerge out of the discussions, except the one suggested by Mr J. P. Mathur, that Exhibitions represent the effort to bridge the gap between entertainment on the one hand and education on the other.

DESIGN...

for finest performance

Of all aspects of industrial endeavour the most intriguing is thermo-dynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story... a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is tailor-made to give optimum performance under varying local conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities

of waste material in the form of bagasse for fuel; again in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will tailor-make not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

The Calcutta Electric Supply Corporation Limited

Sir Harry Burn's Review

The Sixty-fourth Annual General Meeting of The Calcutta Electric Supply Corporation Limited was held on November 9 in London.

Sir Harry Burn, K.B.E., F.C.A. the chairman, presided.

The following is his review which had been circulated with the report and accounts:—

There were increased sales to all classes of consumers during the year ended March 31, 1961. The total energy sold of 1,955 million units shows an increase of 138 million units over the previous year. Sales of energy have increased each year for the last 14 years and over that period sales have increased more than threefold, thus reflecting the ever-increasing need of electrical energy particularly for industrial uses. It is indicative of the expansion that has been going on in India and our forecast shows that this expansion will continue. Later on in this report I refer to the grave shortage of power in the industrial areas of West Bengal and Bihar and the extensions to your company's plant that are being made.

Industrial demand accounts for 50 per cent of the energy sold for various purposes. The balance is shared equally between sales to waterworks and for domestic use, the latter being used mainly for air-conditioning and refrigeration. There was a 15 per cent increase in sales to the jute mills, our largest consumer responsible for 34 per cent of the total industrial demand. An acute shortage of raw jute made conditions very difficult for the jute mills. Once again the textile mills and engineering works showed a large increase in their consumption rose by 15 per cent. Next in importance are cotton mills, chemical works and paper mills; in these their consumption rose 10 per cent. The five classes of energy mentioned above were responsible for 80 per cent of the company's sales of high tension energy for industrial purposes.

And for low tension industry expanded further with increasing by 9 million units million units; the number of consumers rose by over 1,200 more than 16,700. Consumption of public waterworks increased to the extent of 4 per cent solely due to larger demand from the Calcutta Corporation. Sales of domestic power showed a substantial rise, due to the growing popularity of small air-conditioning

units suitable for residences and small offices.

Sales of energy for lights and fans increased by 16½ million units to 259 million units. Housing development continues, but is mostly confined to the outskirts of the Calcutta suburbs.

Public lighting sales have increased by approximately one million units in each of the last two years. Expansion of electric street lighting by the Calcutta Corporation has not been as extensive as hitherto.

The Calcutta Tramways Co., Ltd. is the sole consumer for traction purposes. Improvement in their operating conditions is reflected in the increase in consumption of 2½ million units.

Bulk supplies are given to some nine distributing undertakings, seven of which are owned by the State Electricity Board and the remaining two by the Riverside (Bhatpara) Electricity Supply Co. Ltd. and the Chandernagore Electric Supply Co. Ltd. The State Board was responsible for 94 per cent of the total sales of 89½ million units and for almost all of the increase of 23 million units over the previous year. The largest State undertaking is the North Calcutta Grid which distributes energy entirely outside the Company's licensed area.

Sales under special contracts increased by nearly 8 million units to more than 100 million units. The bulk of those sales, and of the increase in consumption, were at our special tariff to owners of large office and residential buildings, public institutions, cinemas and hotels. That tariff is particularly designed to give relief to our low tension distribution. The remaining consumers under special contract are the Central and State Governments, the Calcutta Corporation and the Calcutta Port Commissioners; their consumption showed little change from that of the previous year.

REVENUE ACCOUNT

I have already referred to increased sales to all classes of consumers. Despite the restrictions I refer to below sales of energy for the current year continue to improve. The revenue account shows that the revenue from the sale of current rose by nearly £1 million to £9,800,000. The gross revenue exceeded for the first time £10 million. Interest received amounts to £88,305 an increase of £44,578 over the previous year and is attributable to the return on treasury bill investments and interest on bank deposits. Commensurate with higher revenues is heavier expenditure.

The cost of generation and distribution rose by £530,000 to £5,088,000. Coal accounts for £414,000 of this increase. Expenditure on coal including handling and ash disposal charges amounted to £3,240,000 (consumption 1,293,000 tons) and accounts for 80 per cent of the total operating cost of generation. Power purchased from the Damodar Valley Corporation cost £288,000 more than the previous year, 390,406,000 units were imported, an increase of 87,850,000 over the previous year, but the power made available was insufficient to give the relief necessary to allow essential and urgent plant overhauls to be taken in hand. I will revert later to the present power position. Increases in wages include adjustments of dearness allowances and overtime rates. Cost increases in respect of materials call for no special comment and are commensurate with the expansion of the Company's system. By comparison with the previous year administration and general establishment charges show a considerable increase. This is mainly due to expenditure in the previous year having been reduced by the writing back of a provision created during other years and no longer required. Nevertheless there was a moderate increase in expenditure during the year under review and it was mainly due to higher salaries and wages costs. The wealth tax, for which there was a charge of £99,723 in the previous year, was abolished with effect from April 1, 1960. The depreciation charge has risen by £31,500 to the figure of £960,600. The balance on revenue after taking into account the depreciation charge has increased by £213,000.

I will now deal with the net revenue account. The Indian tax charge is £1,164,387 as compared with a charge of £595,923 for the previous year which was materially eased by the adjustment of provisions set free on settlement of appeals relating to assessments of previous years. It will be noted from the directors' report that the sum of £356,541 has been transferred to net revenue account in order to equate the Company's clear profits with its reasonable return. This transfer has been made from reserves created in the past specifically for this purpose, and leaves a balance at the end of the year of £187,816 all of which it is expected will be utilised during the current year. When these reserves are exhausted it is essential that the Company's tariff structure should be able by itself to earn the reasonable return and thus ensure the provision of the internal finance that will be required during the next three or four years in connexion with the major extensions at New Cossipore to which I refer below. Initial allowances for depreciation eased the burden of taxation during the period these were operative. This acceleration of the depreciation charge as permissible for tax purposes connoted higher assessments and therefore higher taxation in future years and as stated above the Company has now entered this period. Our rates have been held unaltered for the last 15 years, but now with the steadily rising costs of generation, distribution, repairs and maintenance and an increased tax charge it has become necessary to place the structure of the Company's tariffs under close examination with the object of ensuring that, when required, rates are so adjusted as to earn the reasonable return permitted by the Electricity (Supply) Act, 1948. An investigation into the Company's rate structure is, therefore, now being carried out.

The allocation for the contingency reserve fund has been made as required by the Act and it is proposed to make the customary contribution to the retiring gratuity fund. Provision has been made for the debenture interest and sinking fund charges. The continued expansion of the Company's operations makes it essential to conserve our finances to meet the consequent capital expenditure. The board have, therefore, deemed it advisable to appropriate a sum of £550,000 to special appropriations for plant expansion, replacements and contingencies. Dividends on the preference stock amounting to £63,650 have been paid and it is proposed to pay a final dividend of 4 per cent (actual) for the year. The balance left to be carried forward on net revenue account is £124,585.

BALANCE-SHEET

The balance-sheet shows an increased holding in Treasury bills, £979,300 as against £771,700 at March 31, 1960. Thus funds are available to meet current commitments in respect of plant and other payments falling to be made in the United Kingdom. Payments of Indian tax falling due during the concluding months of the year, to which reference was made in last year's review, have reduced the deposits with bankers to £55,000. At the end of the previous year these deposits stood at £531,000.

Capital expenditure during the year amounted to £1,332,000, and was almost entirely for our trans-

mission and distribution system. The greater part of the expenditure was on mains and service connexions. As a provision for capital expenditure during the year there was available the sum set aside for depreciation of 960,000 and the allocation to special appropriations for plant extension, replacements, and contingencies amounting to £550,000, making a total provision of 1,510,000. During the period January 1, 1951, to March 31, 1961, the outlay on capital expenditure was £13,400,000, which as met by the internal finance made available over that period from depreciation reserves and appropriations for plant expansion and replacements.

In July of 1960 Mr. Macpherson and Mr. Hobson visited Calcutta and met the Chief Minister, officials of the Government and of the State Electricity Board and representatives of the Damodar Valley Corporation. The company's assessment of the supply position and the impending shortage of power it revealed was conveyed at a conference convened for the purpose and permission was requested to install a fourth station at the New Cossipore generating station as providing a further contribution to the generating capacity available in the state as a whole. Permission for this project, to which reference was made in last year's review, was not then forthcoming.

I was in Calcutta this year throughout the month of February and discussed the matter with the Chief Minister when he informed me that we were then at liberty to go ahead with the project. During my visit I also met the chairman of the State Electricity Board, the chairman and the general manager of the Damodar Valley Corporation and leaders of commerce and industry in Calcutta and West Bengal with whom I had talks on the power situation. I went over all sections of our organization and was afforded ample evidence of the care and attention which our staff devote to their work. Dr. Roy, the Chief Minister, and his officials take a keen interest in the Company's activities. They are fully aware of our problems and the service we render to the industrial and residential communities. I desire to say how much the board appreciate the assistance given by Dr. Roy over the issue of importances and supplies of the necessary indigenous materials.

Our secretary, Mr. Colley, who is commercial manager in Calcutta for a number of years, accompanied me during my visit and carried out an inspection of the various sections with which he is concerned.

Special attention continues to be given to the training of Indian engineers. Quite a number of our permanent staff were originally appointed under our technical

training scheme which was started in 1946 for young Indian graduates chosen by a selection committee in Calcutta for training in the United Kingdom. In addition, short refresher periods of training in the United Kingdom are given to selected members of our permanent staff. We are grateful to the Electricity Council the Area Boards, and various manufacturing companies who provide facilities for this training.

POWER SITUATION

In last year's review I referred at length to the question of the future supply within the Company's licensed area and recounted the steps which had been taken over the decade and a half that had elapsed since the end of the war to meet the growth of demand on the system. I also related the circumstances which brought the Damodar Valley Corporation into the picture and how our expectations for an adequate supply of power from this source—as provided for by agreements entered into in April, 1954, and January, 1959, had not been fulfilled. We anticipated, however, that by the end of 1960 the Damodar Valley Corporation would have commissioned sufficient new generating plant to have enabled them to honour their commitment to us of 95 mw. for the year 1960-61. Unfortunately our hopes were not realized and despite our most persistent requests throughout 1960 and early 1961 to the Damodar Valley Corporation to afford us power up to their full contractual obligation they never found it possible to afford us a supply of more than 60 mw. at the time of our daily system peak. As a result we were unable to take out of service for routine maintenance the turbo-alternators at our New Cossipore Station all of which were long overdue for overhaul. I regret to have to report that all three failed on load, the 50 mw. Machine on the 9th February this year followed by the two 30 mw. Machines on the 1st and the 11th April. All three turbines failed by a breakdown of blading and this can be directly attributed to the necessity to keep the machines in commission beyond the time when they were due for normal overhaul. The Company took the view that they would be failing in their duty to consumers had they not accepted the considered risk of keeping these machines in service at a time when they were entitled to expect an early augmentation of the import from the Damodar Valley Corporation. The 50 mw. Machine was recommissioned on the 7th May and the 30 mw. Machine No. 2 on the 25th May, thus restoring the Company's total effective generating capacity to about 275 mw. The remaining machine required extensive overhauling which was not completed until the 21st August on which date the machine was again on full load. I wish now to express

the board's high appreciation of the work carried out by the agent, Dr. Bowker, and the chief engineer, Mr. Kanga, and the station engineers and those members of their staff concerned in getting the station on load again and in dealing with the allocation of power during this period of emergency—their hours were long and the work arduous. I also desire to pay a warm tribute to the turbine manufacturers and the craftsmen they so promptly sent out to remedy matters and get the machines into commission with the minimum of delay.

The maximum demand on the Company's system at the time of these failures was approximately 385 mw sent out and although the Damodar Valley Corporation were able at times to increase their export to 85 mw (and for a short period to 105 mw) the outage of the New Cossipore plant totalling 110 mw entailed load shedding on an extensive scale. In shedding this load the Company endeavoured at all times to maintain its low tension supplies, particularly to hospitals, pumping stations and other essential services the restrictions falling mainly on high tension consumers, including unfortunately those taking high tension supply for domestic purposes. The board desire to express their very great appreciation of the voluntary acceptance by its large industrial consumers particularly the constituents of the Indian Jute Mills Association and the Indian Engineering Association of restrictions on their demands on the Company at the time of its peak loads during this crisis. These restrictions which were devised to spread the burden on the most equitable basis over all sections of industry, mitigated to a very considerable degree the hardships imposed on other sections of the community.

Although the breakdowns to which I have referred greatly increased for the time being the impact on the public of a shortage of power in the city, a shortage is bound to continue to a lesser extent for the next few years, since the demand in the area is already outstripping the Company's maximum generating capacity augmented by the off-take available from the Damodar Valley Corporation. As I explained in my review of last year the Company has been assured by Government that they will provide the ultimate solution of the problem in the shape of a bulk supply through the West Bengal State Electricity Board, first some 60 mw (not now expected to be available until January, 1964) from Government's Durgam Chatterjee Station and thereafter increasing supplies from the station they intend to build in the Bandal area near Calcutta which will increase their supply to some 120 mw by January, 1966. The Company now anxiously awaits these additional supplies and our best wishes are with the State

Board in the speedy accomplishment of the various power projects they are now engaged on. We trust that the construction and commissioning of the plant will proceed smoothly as planned.

In the meantime I am glad to be able to report that Government, reversing the decision communicated to us a year ago, have now agreed that we should, with the utmost dispatch, proceed with our plan to increase the capacity of our New Cossipore Station by the installation of a further machine of 50 mw. Finance in respect of expenditure to be incurred in India has been arranged on reasonable terms and, advised by our consultants, Messrs. Merz & Mclellan, we are now engaged in negotiating the necessary contracts. It is hoped to commission this machine, at an all-in cost of some £3,500,000, towards the end of 1963, some 12 months before the State Board anticipate having their new Bandal Station in operation.

Even before the recent crisis, it was apparent that the growing load on the Company's system was bound over the next few years to exceed the total power resources available and we accordingly requested Government to arrange for the control of the distribution and consumption of electricity under Section 22B of the Indian Electricity Act. Government accordingly appointed an Electricity Supply Control Advisory Committee on whose advice they issued orders that no new or additional supply of electrical energy for a connected load of 100 kw or above shall be given to any impending or existing consumer as the case may be without the prior sanction of Government. Provided the full contractual supply of 100 mw is available from the Damodar Valley Corporation this restriction, taken in conjunction with the continued voluntary agreement by certain large industrial units to restrict their demands at the time of the Company's evening peak loads, should, as far as can be seen, enable the Company without further substantial load shedding to carry out proper and regular maintenance of its plant and thus alleviate the position until our new plant is commissioned two years hence.

Following the recent breakdowns at New Cossipore to which I have referred, there has been a certain amount of ill-informed criticism in the press and in particular it has been suggested that the Company's generating plant is largely worn out. This is far from true, as in fact the plant at New Cossipore (now completely repaired) and that at Mulajore are in first class condition and capable of many years of useful service, while the Southern Station, though old and not so efficient, has been well maintained and will continue to provide a satisfactory source of power especially during peak load periods.

Mr. W. H. Thompson, C.S.I., has intimated his intention to retire from the board after the annual general meeting and I therefore, take this opportunity of stating how much we appreciate his services to the Company and the keen interest he has taken in its affairs. He was secretary from 1936 to 1945 and became a member of the board in the latter year. Mr. Thompson had a distinguished career in the Indian Civil Service and on retirement in 1922 he became general manager of the Bengal Telephone Corporation Ltd. He also represented the Bengal Chamber of Commerce on the

Bengal Legislative Council until he returned to the United Kingdom in 1936. During the war he was assistant secretary, Ministry of Home Security in charge of the Air Raid Warning System. Mr. Thompson has our best wishes for pleasant years of retirement which he contemplates in the countryside of his choice.

Tribute to Staff

It affords me much pleasure to express our thanks to the staff and employees in Calcutta. The expansion of the Company's operations and their devoted efforts in meeting the calls on their ser-

vices bear witness to the interest and zeal they take in the affairs of the Company.

Mr. Henderson demitted his charge as agent on March 31, 1961, having carried out his responsible duties with care and competence. Mr. Canning, the acting chief engineer, also retired after many years of yeoman service particularly at the generating stations. We wish them both happy years of retirement.

Dr. Bowker, our chief engineer, took over the post of agent as from March 31, 1961. He has a wide

experience of the Company's affairs, having been with us since 1936, is well qualified to carry out the duties of agent and has amply illustrated this during recent months. I also desire to record the board's appreciation of the able manner in which Mr. Colley has carried out his duties as secretary.

The report and accounts were adopted.

Note: The above statement is not a report of the proceedings of the Annual General Meeting referred to.

With 39.44 million pounds in August 1961, tea exports from Ceylon have also increased to 289.69 million pounds in the first eight months of the current year from 281.65 million pounds in the corresponding period of 1960. Tea exports from South India were, however, slightly lower at 34.4 million pounds in the six months ended September as against 38.23 million pounds in the corresponding period of last year. Exports from East Africa were slightly higher at 3.16 million pounds in August as against 3.07 million pounds in August last year.

Meanwhile, in the Export Sale held in Calcutta, offerings were 71,934 packages. Although the market opened with a good demand, prices eased considerably as the sale progressed. Prices were sometimes a little irregular, but the trend was easier. Plain broken and Fannings eased by 20 nP to 25 nP. Useful liquoring orthodox Assams meet with good support at easier rates; but the plainer sorts were a weak feature and were often neglected. CTC types were irregular and often up to 20 nP easier with more demand for Fannings than broken. Off-grades were very irregular. Legg-cut teas were 10 to 15 nP easier.

There was a fair enquiry for Darjeeling teas at generally easier rates. Plain whole Leaf teas were sold at up to 30 nP easier; but the more stylish ones were a weak feature and there were many withdrawals. Tippy teas met with a fair enquiry at easier rates. Following rates were quoted:—Clean Plain Pakoe Rs 4.00 to Rs 4.10; Plain BP Rs 3.80 to Rs 4.00; Plain Fannings Rs 3.60 to Rs 3.80; Medium Assam CTC BP Rs 4.40 to Rs 4.60; Medium Assam CTC BP Rs 4.90 to Rs 5.20 and Best Assam CTC Fannings Rs 4.90 to Rs 5.30.

In the Internal Sale, offerings were 27,047 packages of Dusts. Demand was good and general. Better liquoring CTC dusts opened up to 20 nP dearer; but they became irregular as the sale progressed. Plain CTCs were generally easier, particularly the fibrous types which proved difficult of sales. Orthodox dusts came to a good market, the exportable varieties being generally 10 nP to 15 nP easier. The small and better absorbed at firm to dearer rates with the tin plain liquoring types easier. Following rates were quoted:—Plain Orthodox Dust Rs 3.70 to Rs 4.00; Medium Assam Dust Rs 3.95 to Rs 4.15; Legg-cut Dust Rs 4.10 to Rs 4.60; Medium Assam CTC Dust Rs 5.20 to Rs 5.60 and Good Assam CTC Dust Rs 6.00 to Rs 6.40.

In the Cochin market, offerings were 518,000 kg of Leaf tea. Against fair demand, prices were 20 nP to 30 nP a kilo lower for every type except best liquoring Nilgiris, which were irregular.

In the export sale held at Chittagong, offerings were 7,923 chests. Sentiment was steady and there was good demand for clean neat BOPs, which were frequently dearer. Best liquoring Fannings were fully firm; but the cleaner varieties showed an easier tendency. Legg-cut fannings ruled steady, varying from Rs 1.50 to Rs 1.60 per pound. BOP was quoted at Rs 1.80 and BP at Rs 1.40 (nominal). The next export sale

will be held on 22 November, when the offerings are expected to be 8,200 chests.

In London auction, offerings were 28,072 packages including 21,979 packages from Northern India. Except for the poorest descriptions, there was a good demand with prices generally maintaining last week's level.

Production of tea in North-East India was lower at 98.85 million pounds in October as compared with 101.11 million pounds in the corresponding month of last year. Production in Indonesia was lower at 7.00 million pounds in July as against 7.4 million pounds in July 1960. Total production of Indonesian tea, in the first seven months of the current year are, however, higher at 57.6 million pounds as against 56.8 million pounds in the corresponding period of last year.

COTTON Special Margins on Hedge Contracts

THE imposition of special margins by the Forward Markets Commission on the cotton hedge contracts in Bombay, Akola, Ujjain and Ahmedabad with a view to curbing the rigging of prices does not brook any surprise to those who have been closely observing the activities of the Commission, particularly its intervention in the groundnut futures a few weeks back, and the uptrend in prices of cotton futures. The margins imposed in Bombay will be at the rate of Rs 60 per bale whenever the price of the Jarilla March, 1962, hedge contract in cotton at the East India Cotton Association is above the marginal line of Rs 645.50 per three quintals and at the rate of Rs 120 per bale whenever the price is above Rs 665.50 per three quintals. Clarifying the stand taken, the Forward Markets Commission in a press note states that the forward prices in cotton have risen appreciably during the past few weeks and the FMC considers the time has come to introduce measures on the freedom of the operation in futures market in cotton.

In an earlier press note published by the Commission on 6 July, while agreeing to the request of the cotton trade to permit forward trading in cotton during the current season without restrictions, it has been clearly indicated that the Commission will in no circumstance hesitate to reimpose special margins should the conditions so warrant.

Expressing grave concern at the FMC's action, Mr. Madanmohan Ruia, the President of the East India Cotton Association, described the reimposition of special margins as quite unwarranted and detrimental to the trade. While listing the various difficulties that the trade will be forced to confront on this score, Mr. Ruia felt that it would only result in the concentration of business in the hands of a few with adequate resources and that the small traders will be squeezed out of the trade altogether. He also added that the step will further reduce the utility of hedge con-

tracts and will culminate in diminution of business in the forward contract market. His allegation that the imposition came as a bolt from the blue fails to make any impression, for the Commission has already warned to that effect and the threat was dangling all the while. The cotton futures market, during the past week, opened on a subdued note. But as the week progressed largely due to the active demand it once again firmed up and touched a high of Rs 644.75 per three quintals. Bears were found active to cover their sales presumably due to the rumours of the delay in the movement of crop in some cotton growing areas. Spinners from Coimbatore and Ahmedabad figured as the leading buyers during the week.

The malpractice of mixing of cotton, despite the warning issued by the Textile Commissioner, continued unabated and adulteration in many upcountry centres were reported to have been carried out on a lavish scale. Mills were found anxious to secure cotton for the November-December delivery and they were found ready to pay even higher prices for the popular varieties.

The announcement of the import quota for 175,000 bales of cotton stipulating 1-1/16" and above, failed to produce any effect on the market mainly for two reasons. Firstly the trade felt that the quota allowed is far short of their expectation and secondly that the quota will be valid for shipment only after 31 December. The trade also pointed out that on the basis of the price indications the Sudanese growths and East African varieties should be preferred to Egyptian cotton.

The Uganda cotton delegation which came to India to explore the possibilities and selling more cotton to India expressed its willingness to allow export of about 200,000 bales to India every year. The suggestion for concluding a special Rupee payment agreement between the two countries is understood to have been made and it is known that the Uganda delegation was not sympathetic to the proposal considering the adverse balance of trade of that country. It has been announced that Uganda would sell 175,000 bales of cotton to India during the current season. The delegation was not optimistic of the cotton output in Uganda in the current season. At one time it was expected that the crop would amount to 450,000 bales but subsequently it has been revised downward due to the havoc caused by flood and heavy rain on the crop and is estimated at a low of 350,000 bales.

Piecegoods

Barring the bright spell created by the moorat transactions, the piecegoods market at Bombay depicted a dull trend during the past week. The total turnover during the moorat trading amounted to 0.15 million bales in Bombay and about 75,000 bales in the Ahmedabad market. Though the quantum of transaction cannot be reckoned as sizable, considering the lull prevailing in the market for the past couple of months, the volume of transaction can be regarded as considerable.

The cheerful note evinced on the moorat day, however, proved to be shortlived. This was largely attributed to the conspicuous absence of any appreciable follow-up demand from the upcountry centres. Stray business was reported in some of the available varieties. During the week under review a pronounced shift from winter garments to summer clothing was visible. Naturally enough, enquiries for saris, voiles, mulls, long-cloths and other sorts flowed on an increased scale. Demand for coat-dings, flannelettes and gadlapats, on the contrary, tapered off.

The UK again came to the lime-light on the export front and a good deal of business was transacted in the expectation of export licences in the immediate future. The issue of licences by the Government of Burma to the Joint Venture Corporations, Co-operative Societies and other private and public limited companies, has in its wake, brightened the scope for increased trading with that destination. The chances of expanding India's trade with Canada are also rated high in view of the fact that quotas for the imports of goods from Japan have already been fixed. All other destinations, during the week, were practically inactive.

Wool Market Active

The new Wool export policy for the period October 1961-March 1962 has now been announced. There is no change. Quotas on contract basis are to be released through licences available to all categories of shippers on a first-come-first-served basis on production of Agmark certificates. No separate quotas are fixed for individual exporters. A ceiling of 100 bales per shipper, on consignment basis is fixed.

Following the announcement of the above policy, the Delhi wool market has become very active and operators have been busy covering their commitments. Arrivals, which have increased, average 200 to 300 maunds daily during the past fortnight. But, the foreign buyers—UK, USA and the Continent—still find Indian quotations high and they have lifted very small quantities. The home industry is still the main buyer.

Exports of home-grown wool from India, during the April/June quarter of 1961, rose by 57 per cent as compared with the previous quarter to 8.1 million pounds, actual weight. This was, however, 9 per cent less than in the second quarter of 1960. The rise between the two latest quarters was due mainly to the resumption of exports to the Soviet Union; and shipments to that market rose from nil in January/March to 2.2 million pounds a quarter later. Exports to the UK and the USA increased by 15 and 4 per cent as compared with January/March to 3.0 and 1.8 million pounds respectively.

Woolen and worsted yarn production of the mills during January/June 1961 fell slightly to 58.5 thousand quintals (one quintal equals to 210.35 lbs) as compared with 59.1 thousand quintals in the corresponding six

Markets

JUTE Problem of Price Stabilisation

ALTHOUGH no steep decline has taken place in raw jute prices during the past few weeks, there is the lingering apprehension in some quarters that raw jute values may be pushed down further whenever arrivals tend to increase. The demand therefore has been made for the early commencement of jute purchases by the buffer stock authority. In an assessment of the jute supply position as against the fibre consumption needs of the mills, the Central Supervisory Body for Jute at its meeting in Calcutta this week has pointed out that merely by regulating mill purchases it should be possible to maintain jute prices at reasonable level this season. The meeting noted that the jute shortage of the past season had now disappeared and the major problem of price stabilisation had more or less been satisfactorily solved. The points to note are the steadiness of raw jute prices from September onwards both in Calcutta and in the secondary markets and the near parity of prices between Cossipore and the upcountry markets. The progressive increase in production by the jute goods industry will bring about an increase in the demand for raw jute and this factor will help stabilise jute prices. Already mills have stepped up their purchase and the quantity purchased by them during the last two months is placed at around 700,000 bales of Indian jute each month. Referring to the import of jute cutting from Pakistan, it is pointed out that so far a total of 350,000 bales of cuttings had been licensed since July. The import policy in this regard has been governed mainly by the need to supplement the limited fibre supplies in July and August and then to assist the mills in competing with Pakistan in the overseas sacking markets. It is also pointed out that further imports, if any, would be permitted only to the extent that they did not adversely affect Indian jute prices. It is, however, to be

noted that Authority is making ample provision for meeting any emergency. Even though it is believed that there will be no occasion for the buffer stock authority to buy any jute, the organisation is nevertheless kept ready to intervene in any emergency. Apart from the steady buying by mills, indications are that the demand for raw jute will record some improvement in coming weeks. Firstly, stocks of jute with mills are still not sufficient to meet the demand without quick replenishment and production is being progressively increased. Secondly, the earlier idea of very big crops both in India and Pakistan is being revised especially after there have been reports from Pakistan that the crop in that country is not expected to be as large as originally anticipated.

The jute goods market ruled steady in earlier dealings on continued speculative interest in the ready and near delivery positions. Toward close of the week under review there were rumours that the East India Jute and Hessian Exchange might reimpose margins on both futures and

JUTE GOODS FUTURES BANNED

The East India Jute and Hessian Exchange has banned all fresh dealings in jute goods futures. A press note issued after an emergent meeting of the Board of Directors of the Exchange on Thursday says that all fresh transactions in jute goods futures (Standard Contract number one hessian cloth and Standard Contract number two sacking bags for November 1961 delivery) has been prohibited with effect from 18 November 1961. This decision of the Board has the approval of the Forward Market's Commission. Offsetting transactions will however be allowed in respect of outstanding transactions prior to this prohibition.

pucca goods and consequently a quiet tendency prevailed.

Earlier, forward trading in jute and jute goods was suspended for two days by the authorities. This followed the existence of emergency in the trade arising out of a squeeze in jute goods caused by shortage of ready goods.

The raw jute market ruled generally unchanged during the past week. Some improvement was noticeable around midweek but by close prices were back at the starting level. If a reactionary trend had not set in, it was largely because of small but sustained mill buying throughout the week.

TEA Rise in Exports

According to the figures released this week, direct exports of North-East Indian tea to the UK have risen sharply to 27.94 million pounds in August from 15.24 million pounds in the corresponding month of last year. This put the total direct exports higher at 46.67 million pounds in the five months ended August 1961 as compared to 33.45 million pounds in the corresponding period of last year.

Cut of the total exports in April-August 1961, shipments to London accounted for 43.23 million pounds against 31.02 million pounds and those against private sales and forward contracts for 3.44 million pounds against 31.02 million pounds and 2.43 million pounds respectively in April-August last year. Earnings from the exports of tea, during the first half of the year, increased to Rs 40.78 crores from Rs 35.58 crores in the corresponding period of last year. This improvement in earnings is entirely due to the high prices obtained in the first half of the year.

months of last year. It was 9.5 thousand quintals lower than the previous six months (July/December 1960). Woollen yarn production fell to 29 thousand quintals from 32 thousand quintals during January/June 1960. A greater fall was recorded from the previous six months' production of 37 thousand quintals. Worst yarn output at 29.5 thousand quintals showed a rise of 2.46 thousand quintals over the corresponding period production of 27 thousand quintals. It was, however, lower than the July/December 1960 production of 31.1 thousand quintals.

In the wool market abroad a better tone prevailed at Bradford following improved prices obtained at the Australian and London sales and quotations for most higher quality tops showed the first upward trend for some weeks. The better tone in wool markets is causing top makers to adopt a much firmer attitude in the top market. Some topmakers are managing to sell at a rate which keeps pace with their current production. Most spinners, however, are buying only hand-to-mouth, though they are believed to have yarn business on their books, which is yet to be covered in tops. Covering awaits the arrival of greater stability in prices and this week is believed to show a move in that direction.

SUGAR

Sugar markets have continued to rule weak as demand from the consuming areas is poor. In the Muzaffarnagar market, prices have shown a further decline of 50 nP per bag to quote around Rs 107.50. While most of the factories are still holding good quantities against the previous releases, available for sale, a number of mills are reported to have finished the sales of the entire quantities released till the end of October.

According to the latest reports, production of sugar in the country, till 15 October, amounted to 29,72,000 tons and the industry had stocks of 12,99,000 tons. Factories in Western

Uttar Pradesh will be starting their crushing operations during the second fortnight of the current month. It is estimated that the industry has carried over stocks of nearly 15,00,000 tons to the new season, while stocks at the end of the 1959-60 season were about half of this figure. Unless proper outlets are found immediately for the huge stocks of sugar with the factories, the problem will be further aggravated with the commencement of production in the current season.

Against this background, domestic consumption is still running at a low level and has not kept pace with the rise in production. It looks as if no worthwhile improvement will take place unless consumption is promoted by reducing the price of the commodity. On the export front, too, the outlook is far from encouraging, as there is at present a glut in world sugar markets. Whether there will be an improvement in the international price of the commodity, depends on the fate of the International Sugar Agreement. The International Sugar Conference will meet at the end of this month.

In this connection, the Indian Sugar Mills Association has suggested that the first measure to lighten the burden of huge stocks is to encourage internal consumption by reducing the market price of the commodity. This may be done by reducing the excise duty. The Association has also suggested another way to reduce stocks. This is to maximise export of sugar and sugar products. In order to ensure smooth and uninterrupted exports on a large scale, it is necessary that the export policy of the Government for sugar in the current season is clarified and planned efforts are made to increase exports. To encourage the export of sugar products, ancillary industries like confectionery, fruit canning, etc., should be encouraged to produce more with the supply of sugar at the export price. Apart from these measures, the Government should create a buffer stock of about 500,000 tons to give an immediate relief to the industry.

PEPPER

Conditions in the Pepper market have continued to remain quiet as demand from overseas buyers has been at a low ebb. Both the futures and the ready sections have closed with considerable net losses, reflecting discouraging advices from overseas and inland markets. In the Cochin market, the rate is quoted around Rs 349.50 per quintal for the ready position and Rs 346.50 for the December delivery.

Exporters are showing apathy to make definite commitments and are in a mood to wait for prices to settle at lower levels following increased arrivals of the new crop, which have already started arriving at many terminal markets. Market sources predict that prices will fall further if the present inactivity on the export front persists. Moreover, the reports, that the next crop is going to be a good one, has already exercised a bearish influence with sellers, who are anxious to dispose of their stocks.

World production and consumption of pepper is delicately poised at around 60,000 tons a year and stock of Lampong is believed to total nearly 7,000 tons. Thus, there seems to be a danger of a pepper glut. Consequently, prices have dropped sharply, as dealers and growers are trying to convert their stocks into cash before it is too late.

FOODGRAINS

Barring wheat which displayed a hardening trend, the Hapur Food-grains market ruled quiet during the week under review. Wheat improved by 50 nP to Rs 15.50 a maund for the average quality and to Rs 17.50 for the farm variety. The market for Rice continued to be depressed, as the new crop was reaching the market in increased quantities. Following the easy supply position, the Uttar Pradesh Government lowered the rice procurement levy.

Gram sought lower levels due to easier advices from the Punjab. Although new Maalze arrivals were reported to be heavy at 10,000 maunds, mostly from Rampur, prices remained steady at Rs 12.81, thanks to good consumer support. In the Pulses section, Peas and Arhar declined further on selling pressure from stockists. Although some demand was reported for conversion into dal, loading difficulties accounted for the depressed tone. Urad and Moong, however, continued to attract demand at the previous levels.

CHEMICALS & DYES

Conditions in the Bombay market for Dyes and Chemicals have continued to remain depressed. Even the long-awaited moorat transactions were not able to brighten up the situation. There was no demand even at the current low levels. Some items attracted the attention of the buyers when the prices were about a rupee lower. These included bleaching power and Ammonium Bicarbonate.

In the Dyes section, however, prices are comparatively steady although the demand has been at a low ebb. A delegation of dyestuff traders is expected to submit a memorandum to the Government, narrating the grievances arising from the changes recently effected in Government policies. The memorandum is expected to point out how the revision of the tariff list has completely upset the price structure. The price of Naphthol has declined from Rs 10.15 to Rs 8 with forward goods on offer at Rs 7. There has been a similar decline in RC Base. Pointing out the losses sustained by the trade as a sequel to the Government's decision to assess the import duty on Naphthols and Bases on the basis of their c.i.f. values, the trade will request the Government to re-include naphthols and bases in the tariff schedule. A suggestion has also been put forward that the tariff value of naphthol should be fixed at Rs 30 per kilo and that of bases at Rs 25.

NON-FERROUS METALS

Prices on the Bombay Non-Ferrous Metal market showed a mixed trend.

While a steady tone prevailed in the Tin and Copper sections, prices of Zinc and Lead displayed an easier tendency.

Although reports from the ready section were quieter, owing to paucity of enquiry, speculative operators found it worthwhile to lend support. They felt that the supply position would get tighter with the rapid depletion of the existing stocks under pressure of constant consumption. Advices from London and Singapore were also considered to be encouraging. Although the US had begun the sale of tin from its stocks, the stockpile release was not expected in any near future by the traders.

There was improved bull support for Copper and all offerings at higher level were easily absorbed. Reports of apprehensions over a probable strike at Chilean el Salvador and Portrerillo mines after the end of the sixty-day truce induced a steadier tendency here also.

After initial steadiness, prices of Zinc developed a reactionary tendency due to increased offerings and a contraction in demand.

Conditions in the Lead section were quiet on reports that lead prices in US had touched the bottom. A weaker trend on the London Metal Exchange owing to reported sale by Russia and other Communist countries, was also a contributory factor.

GOLD & SILVER

Prices on the Bombay Bullion Exchange showed a mixed trend. With increased buying by Calcutta operators and the firmness in the ready section, Silver prices developed a hardening tendency. Arrivals amounted to 12 bars as against an offer of 10 bars. Ready silver (below .996) changed hands at Rs 207.10 to Rs 207.15.

The Gold section, however, ruled weak. Weakness in the ready section due to increased arrivals and selling by spot dealers of about 15,000 tolas created uneasiness among the bull operators. Delhi operators, however, appeared as buyers and consequently the decline in prices was arrested towards the close. Gold ready changed hands at Rs 124.50 to Rs 124.70, while Sovereign remained firm at Rs 98.

OILS & OILSEEDS

The Bombay market for Oils and Oilseeds presented a weak appearance and the volume of business was extremely small, reflecting the lack of interest by bull operators. Although futures trading was resumed from 6 November, the imposition of a ceiling of Rs 215 on the January contract for groundnut tended to create a sense of disappointment. But, the main factor contributing to the increased selling pressure was the improvement in the marketing of the new crop in the major producing areas. The inflow of the new crop was stated to be increasing fast in Andhra, Karnataka, Saurashtra and Maharashtra. On the other hand, the demand from crushers and vanaspati manufacturers tended to decline after their pre-Diwali purchases. In

the circumstances, bulls were inclined to reduce their holdings. Groundnut Bold ready was quoted at Rs 43.75 and Groundnut Oil at Rs 18.25.

In the absence of overseas demand for castor oil, prices in the Castor-seed section turned easy. Moreover, a steady declining trend in shipments from the country during the recent months caused a growing concern among the exporters and operators. Castor ready was quoted at Rs 31.75 and Castor Oil, commercial quality, at Rs 13.25.

Trading in the Linseed section continued to be dull and the overall tendency was bearish in line with the bearishness of the groundnut and castor-seed sections. The lull in demand for linseed oil from the paint industry also tended to impart easiness to the market. Linseed ready was quoted at Rs 39.75 and Linseed Oil at Rs 17.20.

In the Calcutta market, however, the price of linseed hardened further to Rs 31 a maund for ready delivery.

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED.

(Incorporated in England)

Liability of Members Limited

DIVIDENDS

The following Dividends have been recommended in respect of the year ended 31st March, 1961, payable on the 27th December, 1961:—

- (1). On the Preference Shares @5% (Five Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.
- (2). On the Ordinary Shares @ 10% (Ten Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

Payment of any Dividend declared will be made only to those Member whose names are registered in the Books of the Company on 20th December, 1961 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from 7th December to 20th December, 1961, (both days inclusive).

By Order of the Board,
JARDINE HENDERSON, LTD.
D. FORDWOOD,

Secretary,
Agents.

4, CLIVE ROW,
CALCUTTA-1,
9th November, 1961.

due to acute shortage of seeds and the decreased arrivals from the up-country centres. Moreover, there was keen demand from the crushers, but their requirements were not being met.

The price of Linseed Oilcake was also firm due to the increased local demand. The bullishness was accentuated by poor stocks. The oil market was also active and ready goods were sold at higher prices. Forward transactions were, however, limited in the absence of declared sellers.

After the control by the Forward Markets Commission, the price of groundnut oil and kernalis in the Madras market kept steady throughout last week. Calcutta interests have also been buying without interruption. Kernel arrivals have also kept up the quantity both locally and in southern centres.

Forward positions of oil remained fairly at lower levels, while the groundnut oil quotations tended to be firm. It was probably due to keen demand for spot goods for which even higher rates were paid for fulfilling commitments. Another reason for the firm trend was perhaps that shipments had to be done willy nilly, while the ships were berthing at Madras port or expected soon to carry oil cargo to Calcutta.

Due to rainy season, groundnut oil from Telangana and other Andhra centers normally expected at Calcutta this part of the year could not be shipped. A small quantity had been shipped to Calcutta only last week; but it was not much to fill up the demands made by that market.

As and when weather improves in Andhra, more shipments of groundnut oil is possible.

This week local demand for oil had now slackened as Diwali is over.

Madras State has begun to get intermittent rains and sometimes there are also heavy downpours hampering arrivals of groundnut into the City market. Despite this, the arrivals daily are reported at 75 to 100 tons locally, while both North and South Arcot markets report receipt of about 500 tons daily. This is good. South centers sold heavily to the crushers and they expect the same demand to continue for another fortnight.

An analysis of the groundnut oil and groundnut prices for the past year and the year before shows that there had been an erratic trend. The seeds and oils markets closed with the following rates: Groundnut oil per quintal ex-Madras godown expeller Ready 3 per cent FFA: Rs 170.90 (Rs 408 per candy of 500 lbs), November-end Rs 174.20: (Rs 395 per candy): January 1962 Rs 169; Groundnut kernels per 80 kgs new crop Rs 68; Castor oil per quintal Rs 158.75; Coconut oil per tin Rs 40.25 to Rs 40.50; Gingelly oil per maund Rs 25; Gingelly seeds per bag Rs 74/75 and Groundnut cake Rs 27.50.

In as much as the spot oil was quoted around Rs 180/181 per quintal there was not much change throughout the week. The oil price for spot was quoted at Rs 180.80 on November 9, it went up to Rs 181.65.

on the 10th and again went down to Rs 180.75, all per quintal. On Monday, the price was further lower at Rs 179.90. The January 1962 quotation also did not vary much. In the middle of last week, it was at Rs 170 and progressively declined to Rs 168 on November 10, Rs 166 on November 11 and went up by three rupees Monday last. As for new crop of kernels, the price was at Rs 66 last week, gained a rupee on November 10, and remains at Rs 68 consistently till today.

In Southern markets, kernels price was around Rs 69 in the northern side like Guntur. In the southern centers, the price was quoted at Rs 65/66, whereas the groundnut oil price varied from Rs 410 at Guntur to Rs 390 in Pollachi.

Steady conditions are expected to continue for sometime more.

HIDES & SKINS

With a fair reimbursement of tanned cow hides in the market, clearances were good with moderate prices. In the CIF section, previous little business was reported and it was reported and it was stated that the high prices were the reason for the dullness.

There were no changes in tanned cow calf and tanned buff calf.

In tanned goat skins, it would appear there was an attitude of wait-and-see from overseas traders. Prices of raw skin continued to rule high. Also in tanned sheepskin market, there was not much to report.

The following were the prices of tanned skins and hides (per lb):— tanned cow 5/5½ lb Rs 2.87 to Rs 2.94; 6/6½ lb Rs 2.56 to Rs 2.62; 8/8½ lb Rs 2.19 to Rs 2.22; 10½12 lb Rs 1.94 to Rs 1.97; inferior fths 4/4½ lb Rs 2.44 to Rs 2.50; 5/5½ lb Rs 2.31 to Rs 2.37; buffalo hides 10/12 lb Rs 2.00 to Rs 2.03; buff calf 1½/2 lb Rs 2.75 to Rs 2.81; cow calf 1½/2 lb Rs 3.50 to Rs 3.62.

BALMER LAWRIE & CO. LTD.

NOTICE is hereby given that the Board of Directors has today declared an Interim Dividend of 7% (subject to deduction of Income-Tax) in respect of the year ending 31st December, 1961, payable on or after 11th December, 1961 to those members whose names are entered in the Register of Members of the Company on that date. Dividend Warrants will be despatched to members and no application to the Company is necessary.

NOTICE is also hereby given that the Register of Members of the Company will be closed from 23rd November, 1961 to 11th December, 1961, both days inclusive.

By Order of the Board,
D. MANSON
Secretary.

Company Reports

Brooke Bond Tea Pays Less

A substantial reduction in the crop harvested from 14,06,874 kg to 12,15,847 kg as a result of severe drought conditions is reflected in the working results of the Brooke Bond Tea Estates India Limited for the year ended 30 June, 1961. Although the average sale price realised is higher at Rs 5.31 as compared to Rs 5.00 per kilo for the previous year, the average garden cost of production has increased by about 49 nP per kilogram over that of the previous year, mainly as a result of a fall in the manufactured crop.

The net profit for the year, before providing for Depreciation and Taxation, amounts to only Rs 11.09 lakhs as against Rs 15.24 lakhs for the preceding year. In respect of allocations, the Depreciation amount is raised to Rs 2.32 lakhs from Rs 2.42 lakhs and Capital Reserve to Rs 21,986 from Rs 10,850. Taxation provision is, however, lower at Rs 3.35 lakhs against Rs 5.20 lakhs and Development Rebate Reserve at Rs 5,400 against Rs 21,000. No provision is made for General Reserve against Rs 2.00 lakhs. The dividend on the Ordinary shares is reduced from 15 to 10 per cent, subject to tax.

The directors have, in their report, stated that the Assam Carriage Tax was found unconstitutional by the Supreme Court in August, 1960. Payments from the company's estates ceased in July, 1960; but the Assam Government introduced a new Act, viz, the Assam Carriage Tax Act, 1961, seeking to revalidate their previous legislation with retrospective effect and to allow the continuation of the tax until March, 1962. The company has filed a write petition and obtained a stay order against the Assam Government. The decision of the Assam High Court is still awaited and is expected before the end of this year.

Replanting of uprooted areas continues and the company has obtained permission to plant out new extensions of about 20 hectares on Dhullie and 14 hectares on Dibru-Darrang.

Waverly Jute Repeats

Although the mill remained closed during the year ended 31 May, 1961; the revenue obtained from the sale of loom-hours and rent of godown have enabled the Waverly Jute Mills Company Limited to show a profit.

The net profit, after providing for Depreciation and Taxation, amounts to Rs 2.64 lakhs as against Rs 2.52 lakhs. Apart from providing Rs 2.00 lakhs for General Reserve, the Depreciation amount is reduced to Rs 45,392 from Rs 1.05 lakhs and Taxation to Rs 1.90 lakhs from Rs 2.50 lakhs. The dividend on the Ordinary shares is, however, maintained at 30 nP per shares, less tax.

New Savan Sugar Fares Well

Thanks to a higher net profit of Rs 2.39 lakhs against Rs 2.52 lakhs, the New Savan Sugar and Gur Refining Company Limited has been able to raise the dividend from 50 nP to 56 nP per share less tax, for the year ended 31 May, 1961.

In respect of allocations, Depreciation is raised to Rs 1.37 lakhs from Rs 95,901 and Taxation to Rs 73,000 from Rs 53,000. No provision is made for General Reserve against Rs 50,000.

The lessee factory crushed a total quantity of 33,85,358 maunds of cane with a recovery of 9.48 per cent during the 1960-61 season as against the crush of 28,47,570 maunds and a recovery of 9.78 per cent for the previous season. The increase in the crush is a direct result of improvement in the varietal position resulting into higher yield.

Hindustan Wire Skips Dividend Again

Labour troubles in the company's factory and the consequent loss of production are reflected in the working results of the Hindustan Wire Products Limited for the year ended 31 March, 1961. Sales are shown lower at Rs 20.11 lakhs against Rs 23.12 lakhs, while the accounts reveal a loss of Rs 3.87 lakhs against a net profit of Rs 1.52 lakhs for the preceding year. No depreciation is provided for the year on the assets and this amounts to Rs 2.20 lakhs. In the previous year, a sum of Rs 1.52 lakhs was provided for Development Rebate Reserve.

The directors state that services of foreign technicians are availed of by the company for improving the quality of its products and also for making necessary alterations in the machines to bring down the cost of production. This has resulted in considerable improvement.

For the Investor

INVESTMENT GOSSIP

Buoyant Trend

The stock market is in a buoyant mood with several shares quoting at the best levels so far in the current year. It is, however, difficult to point to any particular fresh development that may be properly regarded as responsible for the sustained bullish fervour that has been noticeable for the past several days. As has been already noted in this column, the fact that Government has decided, notwithstanding the suggestion of the Estimates Committee, to let the LIC continue to deal with the investment of its funds as hitherto may perhaps be marked out as the most important favourable factor in recent weeks. It is quite on the cards that operators have logically concluded from this that the LIC may soon resume its buying of equities in right earnest. Otherwise, there has not emerged any fresh development of specially bullish import which had not been there some two weeks ago or even earlier.

The statement that the present situation is the result of the success of the bulls in their tussle with the bears can be only partially true. It would appear that bears have been overextending themselves over the past couple of months or so encouraged by the major uncertainty of the coming general election and once bulls have begun to assert themselves, the former have been caught napping. But the fact that the re-

Dividend Doubled By Kallinugger & Khoreel Tea

The Kallinugger & Khoreel Tea Company has presented the reports and accounts only for 1959. The net profit amounts to Rs 85,741 (including Rs 13,000 transferred from provision for Taxation) as against Rs 39,554 (including Rs 20,000 transferred from Contingency Reserve).

A sum of Rs 11,097 (Rs 10,388) is provided for Depreciation and Rs 20,500 (Rs 12,879) for Taxation. The dividend is doubled to 6 per cent, less tax. It may be added that the dividend for the previous year was paid out of Contingency Reserve.

Tools Private Limited and has now been converted into a public company. The factory is situated at Coimbatore and the company has paid a dividend of 5 per cent for the year ended 31 March 1961. The authorised capital is Rs 50 lakhs, divided into 50,000 equity shares of Rs 100 each. The issued, subscribed and paid-up capital is Rs 2.76 lakhs. The present issue is for Rs 24.90 lakhs, of which Rs 2.90 lakhs has been taken by the directors and their friends and the balance of Rs 22 lakhs is the actual offer to the public.

Jay Shree Textiles

Jay Shree Textiles Limited has decided to issue 2,45,900 new ordinary equity shares to the existing shareholders of the company, at par, in the proportion of one new share for two existing ones, held by those shareholders whose names are registered as on 30 November 1961. Transfer Books will be closed from 21 to 30 November, 1961.

Hindustan Oxygen

The Hindustan Oxygen Gas Company Limited, Rajkot, is expected to enter the market by the middle of next month with an equity issue of 30,000 shares of Rs 100 each. The authorised capital of the company is Rs 1 crore. Of the issued capital of Rs 30 lakhs, the promoters, directors and their friends will take up shares worth Rs 11 lakhs. The balance of Rs 19 lakhs is offered for public subscription. The company will produce industrial gases, principally oxygen and dissolved acetylene. The factory will be located at Ahmedabad. The company has secured licences for the import of plant, machinery and equipment and has made arrangements with its US suppliers for the necessary technical know-how. The plant will have a production capacity of 2,81,16,000 cubic feet of oxygen and 70,29,000 cubic feet of acetylene.

Glass Corporation

The Glass Corporation Private Limited, Dholpur, Rajasthan, having a paid-up capital of Rs 1,00,000 has been accorded consent to issue bonus shares of the total value of Rs 35,00 in the ratio of 7 bonus shares to 20 shares held on capitalisation of the company's reserves to a like extent.

Canara Industrial & Banking

The Canara Industrial & Banking Syndicate Limited, Mysore, which has a paid-up capital of Rs 47,21,411 has been granted consent to the issue of capital of Rs 50,00,000 in 5,00,000 (B) class ordinary shares of Rs 1 each for cash, at a premium of Re per share, to the existing shareholders on rights basis. The proceeds will be utilised for strengthening the bank's capital structure.

the Central Government permits these shares to be issued in two instalments. The LIC has been approached for a Debenture loan of Rs 30 lakhs to finance the company's expansion programme. The company has two projects in hand - a solvent extraction plant to be set up in Bombay and the manufacture of fans and fractional h.p. motors in Delhi. The company needs Rs 60 lakhs for these two projects. The production of ceiling and table fans has already started.

R. R. Engineering

R. R. Engineering Company Limited, which is formed by taking over the business of the partnership firm of R. R. Engineering Company, proposes to set up a factory in Uttar Pradesh for the manufacture of machine tools, sugar mill machinery and steel structures, steel castings and alloy steels. The capital outlay on the project is estimated at Rs 42.50 lakhs, which will be financed by the issue of shares to the tune of Rs 25 lakhs; loans from banks to the extent of Rs 11.50 lakhs and Deferred payment credit of Rs 6 lakhs. Out of the issued capital of Rs 25 lakhs, the directors and promoters have subscribed for Rs 8 lakhs of ordinary capital. The balance of Rs 17 lakhs will be offered to the public in 70,000 equity shares of Rs 10 each and 10,000 preference shares of Rs 100 each. The preference shares will carry a dividend of 10 per cent subject to tax. The company has entered into technical collaboration agreement with various German firms.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

5%RUPEE DEBENTURE STOCK, 1970

Interest for the Half-year ending 31st December, 1961.

Notice is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st January 1962 to Debenture Stockholders registered on the books of the Company on 19th December 1961. Applications for transfers received at the Company's Office at Victoria House, P. B. 304, Chowringhee Square, Calcutta-1, upto 19th December 1961, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 20th December, 1961 to 31st December, 1961 both dates inclusive.

By Order of the Board,
H. C. BOWKER
Agent.

Victoria House,
Calcutta, 16th November, 1961.

metres, water metres and marine and locomotive engines, proposes to set up a plant for the manufacture of electric house service metres. The company has obtained the necessary licence. The manufacturing programme will be undertaken in two phases. In the first phase, it is proposed to manufacture 55 per cent of the components and the balance will be imported. In the second phase, which will be undertaken after a period of two years, the factory will produce 85 per cent of the components. A public limited company will be formed to undertake this project. The estimated capital outlay on the first phase of the programme is Rs 50 lakhs, of which Rs 30 lakhs will be in Indian currency and the balance in foreign exchange. Of the proposed capital, Rs 12.5 lakhs will be taken up by the promoters and their associates. The LIC is expected to take up Rs 5 lakhs and the balance of Rs 12.5 lakhs will be offered for public subscription. Efforts are being made to secure foreign collaboration and to get a major part of the cost of the machinery financed by the foreign collaborator.

INVESTMENT NOTES Mirzapur Electric

Subject to the consent of the Controller of Capital issues, the Mirzapur Electric Supply Company Limited has proposed to capitalise Rs 49,500 out of the balance standing to the credit of the net revenue and appropriation account of the company for the year ended 31 March 1961. The company proposes to issue 5,500 equity shares of Rs 9 each, at par. Such shares are to be appreciated as capital and distributed among the existing equity shareholders of the company as on 27 November 1961 in the proportion of one new share for every 10 existing shares held by them. The new shares will rank pari passu with the existing shares, but they shall not be participating in any dividend declared prior to 27 November 1961. Instead of declaring dividend, the company will be issuing the above bonus shares with a view to conserving liquid cash required for its expansion programme.

M CLM Bank

It has been announced that the two series of Debentures for Rs 1 crore each, offered by the Madras Co-operative Central Land Mortgage Bank Limited, have been subscribed in full. The Debentures carry interest at 4½ per cent and the 15-year Debentures at 4¼ per cent. The issue price in both cases was fixed at par.

Khandelwal Udyog

Khandelwal Udyog Limited, a company belonging to the "Khandelwal group" of Bombay, has proposed to commence the manufacture of industrial furnaces. The company has concluded a technical collaboration agreement with an Italian firm. The collaborators are one of the leading furnace manufacturers in Italy and their equipment is already being manufactured in other European countries under licence. When in

full production, Khandelwal Udyog's furnaces department shall be manufacturing furnaces worth Rs 25 lakhs per annum. Their manufacturing programme shall include both electric and combustion furnaces and shall specially serve the growing requirements of the engineering and metallurgical industries. Their range shall cover various types of furnaces and shall include the manufacture of Bell Type Furnaces for bright annealing of wires and strips and continuous automatic lines for heat treatment of ferrous and non-ferrous components. The company will also manufacture furnaces for the glass and ceramic industries. It is expected that the major portion of the furnaces shall be manufactured indigenously right from the commencement with the exception of the automatic controls and instrumentation.

Mill Merger

Subject to the sanction of the High Court and in accordance with the scheme to merge the Lakshmi Cotton Manufacturing Company Limited with the Vishnu Cotton Mills Limited, the shareholders of the Lakshmi Cotton will be given shares of Vishnu Cotton in the following ratio:—One (54 per cent) first Cumulative Preference shares of Rs 250 each of Vishnu will be given for one (5 per cent) Preference share of Lakshmi; and 4½ equity shares of Rs 100 each in Vishnu Cotton will be given one equity share of Rs 250 each of Lakshmi Cotton. All dealings in Lakshmi Cotton shares, done until 25 November 1961, will be settled on 30 November, 1961. Shares received against such contracts will have to be transferred before the closure of the Transfer Books. No dealings in Lakshmi Cotton shares will be permitted after 25 November, 1961.

IN BRIEFS

Balmer Lawrie & Company, Limited has proposed a taxable interim dividend of 7 per cent for the year ended 31 December, 1961, payable on or after 11 December to those shareholders registered as on that date. Transfer Books will be closed from 23 November to 11 December, 1961.

Cauvery Sugars have raised the dividend from 6 to 8 per cent, taxable, for the year ended 30 June, 1961.

Rajagiri Rubber has recommended a final dividend of 10 per cent, making a total of 20 per cent, taxable, for the year ended 30 June, 1961, same as in the previous year.

Nelliampathy Tea has raised the dividend from 13 to 15 per cent, taxable, for the year ended 30 June, 1961.

Blue Mountains Coffee has reduced the dividend from 12½ to 10 per cent, taxable, for the year ended 30 June, 1961.

Waterfall Estates have also reduced the dividend from 12½ to 10 per cent, taxable, for the same year.

Dyeer Meakin Breweries Limited has produced excellent working results for the year ended 31 March, 1961. The net profit for the year at Rs 55.25 lakhs represents an increase of Rs 11.62 lakhs over that of the

previous year. The directors have proposed to recommend a dividend of 30 per cent, taxable, on the increased capital as against 25 per cent on the original capital.

The maiden balance sheet of General Tyres Limited, for the period from 14 June, 1960 to 30 June, 1961, shows a net loss of Rs 1.05 lakhs after providing Rs 1,337 for depreciation and Rs 1,337 for taxation.

The India Jute Company, Limited has reported a net profit of Rs 16.12 lakhs for the year ended 31 March, 1961 as against Rs 18.08 lakhs. The dividend is reduced from Rs 1.75 to Rs 1.50 per share, subject to tax.

The Megna Mills Company, Limited has, however, shown a marked rise in the net profit from Rs 14.20 lakhs to Rs 23.12 lakhs for the same year. The dividend is raised from Rs 1.20 to Rs 1.25 per share, less tax.

★

STOCK EXCHANGES

Watch-Dog Writes:

A Consolidation

STOCK markets have had the best week of the year. Trading has continued to be brisk and there is again a spurt in prices, as operators appear to be optimistic about the near-term outlook. The scarcity of floating scrip and the reserve of holders have also helped to push up prices.

The market has, however, turned somewhat cautious from Thursday. In the absence of fresh development, there is naturally a hesitancy to enlarge commitments and enough evidence is available to indicate that there is a general tendency to book short-term profits. The undertone, however, remains basically healthy.

After recording a fresh rise in prices, the Calcutta Stock Exchange developed a slightly reactionary tendency towards the closing days of the week.

Price movements on the Bombay Stock Exchange were rather erratic due to alternate bouts of buying and selling.

There was hesitant trading on the Madras Stock Exchange where the favourites remained in the background due to the cautious attitude of the operators.

★

CALCUTTA

Friday Evening.

THE rising trend of prices, noticed on the local stock exchange towards the previous week-end, gathered further momentum during the week under report. While encouraging Bombay advices stimulated sentiment, short-covering in regard to selected shares accentuated the price-rise.

In brief, the trading pattern reflected the domination of the bulls over the market for the second week in succession. Bulls increased their support due to a number of favourable developments. First, there was scarcity of scrip. As a substantial "short" position had been built up in earlier months, bears were forced to cover their purchases in a rising market.

Secondly, hopes were entertained that the LIC might buy more freely than hitherto in view of the Government's decision not to take over the investible funds of the Corporation. Thirdly, the reports of the Government thinking of promoting exports by giving tax concessions were welcomed. Fourthly, the substantial rise in active note circulation gave rise to a feeling that inflationary pressures might increase and the shares would be a useful hedge against inflation. Finally, excellent corporate news provided further encouragement.

But, the sharp gains in prices were not held till the close of the week. Apart from the fact that the slight setback in sentiment arose mainly from technical considerations, the market appeared to be a little tired after its recent upsurge. In the absence of fresh development and in view of the many difficulties still facing the industry, operators were inclined to book profits before entering into fresh commitments. Nevertheless, no material damage was done to the general price level and the remarkable steadiness in several shares, despite profit-taking, indicated that the market might resume its upward movement.

Gilt-edged securities continued to remain dull due to lack of institutional support. Interest was limited to only a few loans and changes were against holders. Against the previous week-end closing of Rs 72.05, 3 per cent 1986 Conversion Loan eased off to Rs 71.75.

Bank shares were generally steady. Punjab National were enquired up to Rs 20.62 from Rs 19.81, while United Commercial turned rather quiet at Rs 94 against Rs 94.50.

Although selected shares continued to attract attention as a result of the LJMA's decision to unseat 2½ per cent of the loans from Monday this week, the Jute section, in general, encountered heavy profit-taking. Apart from the fact that the recent upswing in values had been rather steep, there was a complete absence of support from investors, who were not inclined to take an entry into this section. There was a growing feeling amongst them that it would take months, if not years, of profit-taking working to offset the loss of the mills which had suffered earlier in the year. Birlas were at one time taken up to Rs 29.62 from Rs 29.19 (Rs 28.75); Howrah up to Rs 22.75 from Rs 21.12 (Rs 22.25); Ganges up to Rs 12.50 from Rs 12.12 (Rs 13.00) and New Central up to Rs 19 from Rs 17.69 (Rs 18.62). Nuddea were a narrow market moving between Rs 62 and Rs 63.50, while Dalhousie came in for offer at Rs 115.50 against Rs 120 with Barnagore well maintained at Rs 135.50, despite the reduction in dividend from 30 to 10 per cent for the year ended 31 March, 1961.

Although turnover in the Coal section continued to be restricted due to reports of wagon shortage, prices tried to look up in sympathy with the general trend of the market. Bengal were enquired up to Rs 387 from Rs 354; New Beerboom up to Rs 22.81 from Rs 22.25; Central India up to Rs 12.50 from Rs 11.84 and Western Bengal up to Rs 9.62 from Rs 9.12. Burrakur moved erra-

tically between Rs 18.87 and Rs 19.44 on alternate buying and selling, to close finally at Rs 18.69.

The Tea section was 'devoid of interest and dealings were few and far between. Apart from a general fear of a further decline in auction prices, it was believed that supplies would be more than adequate during the current season. Banarhat changed hands at Rs 278 to Rs 281; Bhatkawa at Rs 18 to Rs 18.37; Dauracherra at Rs 6.87 to Rs 7.06; Grob at Rs 9.87 to Rs 10.12 and Tezpor at Rs 17.50 to Rs 17.62.

Apart from Dyer Meakins which were keenly sought after up to Rs 45 from Rs 40.87 following the company's proposal to diversify its activities and raise further capital, Sugar shares were generally neglected in view of the obscure outlook for the industry. Carew were slightly better at Rs 13.69 against Rs 13.62, while Cawnpore were marked back to Rs 12.94 from Rs 13.19 and SKG to Rs 10.75 from Rs 10.87.

Although Textile shares presented a firm front on expectation of better results for the current year, higher levels attracted considerable profit-taking. Jay Shree touched a new high of Rs 19 from Rs 18.69, (Rs 18.62); Kesoram Rs 32.75 from Rs 31.87 and J. K. Rayon Rs 21.50 from Rs 21.06 (Rs 21.06). Elgins closed better at Rs 24.12 and Cawnpore at Rs 9.81, after touching low levels of Rs 23.87 and Rs 9.75 respectively.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy speculative buying till the close on Thursday. After opening higher at Rs 25.44, Indian Irons gradually advanced to cross the Rs 26 mark to touch Rs 26.10 before reacting at the close to Rs 25.88. In sympathy, TEXMACO were at one time pushed up to Rs 20.70 from Rs 20.25 (Rs 20.35); Guest, Keen, Williams up to Rs 41.25 from Rs 40.50 (Rs 40.75); J. K. Steel up to Rs 23.62 from Rs 23.06 (Rs 22.62); Binani Metal up to Rs 13.25 from Rs 12.44 (Rs 13.06); Indian Standard Wagon up to Rs 123 from Rs 107 (Rs 119.50); Jessop up to Rs 21.56 from Rs 21.06 (Rs 21.50) and Kumardhubi up to Rs 7.12 from Rs 6.75 (Rs 7.12). Dalmia Iron were in demand up to Rs 10.87 from Rs 10.37 and so also Britannia up to Rs 13.81 from Rs 13.44. Figures shown within brackets were the week's closing rates.

After recording fresh higher levels, Miscellaneous issues were subjected to heavy profit-taking towards the close, as will be clear from the following prices of a few selected shares:

Coal Transport

IT has been evident for sometime now that
the outlook for coal production, the key-point
in the industrial programmes, is clouded by
uncertainties in regard to the facilities for
the movement of coal. More than six months
have passed since difficulties made their
appearance in the realm of coal transport and
though a variety of new measures have been
taken by the Government and the Railway
Ministry to mitigate the strain on the Rail-
ways, the crisis in coal transport has shown
no signs of abatement. Reports of current
production of coal indicate decline in output
in some collieries consequent on difficulties
experienced in respect of movement. Earlier
measures taken by the Government particu-
larly in the direction of diverting more coal
by the sea route to the southern and western
regions of the country have evidently not been
productive of the expected measure of success
in improving the transport situation for coal.
Failure to secure the requisite number of ships
for movement from Calcutta to the Southern
and Western ports has upset the calculations
in regard to the possibilities for transporting
more coal by the sea route. This has been
further aggravated by other factors like dis-
locations due to weather and draft conditions
in the Hooghly, and delays at the destination
ports etc.

In this background and in the context of the
Third Plan demand for coal, the foremost
problem that has to be faced in respect of coal
movement, is the existing deficiency of the
railway system in meeting the demands ori-
ginating for coal transport. This question
has been brought to sharp focus by Mr Darab
C. Driver, in his Presidential address to the
sixteenth annual general meeting of the Coal
Consumers' Association of India held in
Calcutta last week. Quoting Sir B. P. Singh
Roy, Chairman of the Coal Transport Advisory
Committee, Mr Driver, has pointed out that if
the target for coal production fixed at 97 mil-
lion tons in the Third Plan were to be reached,
the daily average number of wagons available
would have to be increased in a progressive
manner to reach a level of 12,339 during the
final year of the Plan. The statement of the
problem makes it necessary to assess the out-
look for coal movement in the Third Plan in
the light of the Government's policy in re-
spect of coal movement.

In framing its policy in regard to coal
movement, the Government has shown little
evidence of appreciation of either the mag-
nitude of the problem that will emerge in re-
spect of coal movement or the effects of the
various measures that have been proposed
to secure improvement in coal movement. The
main points in the Government's policy espe-
cially as it has crystallised after the recent
experience of difficulties in coal movement, are
movement of coal by roads for industries
situated near the Bengal Bihar coal-fields,
the creation of coal dumps to shorten the
hauling of coal by railways and the use of
box type wagons capable of carrying greater
quantities of coal than those now in use.
Movement of coal by road is already being
enforced in the case of some important indus-
tries in the West Bengal State, and the effect
has been far from satisfactory from the point
of view of the efficient working of these in-

dustries. The additional cess of 80 nP that
has been imposed on coal moving from colli-
eries for the purpose of subsidising consumers
of coal brought by coastal steamers, together
with the higher freight charges for trucks as
compared with railway charges, has led to
an anomalous situation in which industries
near Calcutta have to pay even higher freight
per ton of coal than that payable for coal
reaching the Cochin port in the South from
the same originating point of supply. The
case for subsidising coal for industries in the
Bengal area in a manner similar to the sub-
sidy granted for coal movement by sea to the
Southern and Western region is in the cir-
cumstances only obvious.

The Government has also reckoned without
the extra cost and difficulties which indus-
tries will have to face in drawing their
supplies of coal from dumps and also in
the use of box type wagons. The idea
of the box type wagons which could hold
greater quantities than the present wagons
is no doubt good, but as Mr Driver has
drawn attention to, the mechanical device
now being used for unloading the old type of
wagons will need replacement. The utility
of coal dumps to industries is even more
dubious in view of the extra cost and the
very real risk of the coal drawn from such
dumps not conforming to specifications of
size and quality required by the industries.
The condition of the roads near the coal
fields and the availability of trucks are also
hardly likely to permit coal movement on the
scale at present being envisaged by the Gov-
ernment and the Railway Ministry.

There are no doubt other aspects of trans-
port policy which should call for commenda-
tion in view of the relief that would be pro-
vided to the railways. The development of
the Central India coal fields has been accorded
priority in the Third Plan schemes for coal
production. The anomalies involved in a
system of transport which involved long
hauling of coal from the Bengal fields to the
Western region avoiding nearer sources in
Central India are too patent to be ignored.
The use of alternative fuel, more specifically
furnace oil in States far removed from coal
belts is also a proposition that deserves to be
looked into more seriously. In the present
context, however, these measures will have
only marginal significance. The focal point
for transport lies in the Bihar and Bengal
areas and it is on the improvement of trans-
port in these regions that attention will have
to be concentrated.

The main burden of coal transport during
the Third Plan will continue to fall on the
railways and the key to improvement in
movement by rail lies in provision of more
wagons. The present capacity for wagon
manufacture at 28,000 per annum is much in
excess of the wagons required for meeting the
Third Plan demands for coal. While the re-
quirements of other industries will have to be
considered, a more serious limiting factor in
increasing the number of wagons will be the
shortage of steel of the requisite type. Com-
pared to this, the other problems faced in
increasing movement of coal by railways are
insignificant.

RBI STUDY

Co-operative Banking

THE Reserve Bank of India has, in the October issue of its Bulletin, described, with a wealth of statistics relating to all aspects of functioning, the progress of the State and Central Cooperative Banks which represent, as it were, the two pillars of the cooperative edifice in the country. The study relates to the working of these institutions during the period from 1951-52 and 1959-60, which coincides with the First and Second Five Year Plans. This was a period which witnessed greater official solicitude for the cooperative movement in its major manifestations. The report of the First All India Rural Credit Survey undertaken in 1956 cast special obligations on the Government for the progress of the cooperative movement and particularly for the strengthening of the basic foundations of the institutions operating in the cooperative field. The Reserve Bank study thus provides a stock-taking of the results that have been achieved over the period of a decade. The coverage of the performance of these institutions during the First Plan period provides also the necessary background for an assessment of progress subsequent to the publication of the report of the First Rural Credit Survey which marked an important landmark in the history of credit cooperation in the country.

The Reserve Bank study shows that during the period 1951-52 to 1959-60, the State and Central Cooperative Banks have made tremendous progress the most notable aspect of which was the improvement recorded in respect of the resources position. This could be seen from figures relating to the paid-up capital and reserves which constitute the owned funds of these institutions and deposits and other borrowings which represent the borrowed funds. Between 1951-52 and 1959-60, there was a more than seven-fold increase in the paid-up capital of the State Cooperative Banks, the total having increased from Rs 1.90 crores in 1951-52 to Rs 14.60 crores in 1959-60. It is noteworthy that the rise in the paid-up capital was particularly marked since 1956-57 when consequent on the recommendations of the All India Rural Credit Survey, the support of the State Governments became more abundantly available by way of contribution to the share capital. The rise in the share capital of the Central Cooperative Banks from Rs 4.52 crores in 1951-52 to Rs 31.49 crores in 1959-60, was of the same proportion as that experienced by the State Cooperative Banks and here also increased State contribution since 1956, was a telling factor. In this connection, the Reserve Bank study shows that while the share of the Government has risen from about 19 per cent to about

PROPORTION OF OUTSTANDING LOANS AND ADVANCES TO DEPOSITS

Year	STATE COOPERATIVE BANK			CENTRAL COOPERATIVE BANKS		
	Outstanding Loans and advances	Deposits	(1) as per centage of (2)	Outstanding Loans and advances	Deposits	(4) as per centage of (5)
1951-52	20.0	21.2	94.5	35.9	36.2	94.0
1952-53	20.0	24.2	82.5	35.9	39.1	91.8
1953-54	22.7	24.9	91.1	38.4	41.2	93.2

1955-56	34.8	36.7	94.8	54.3	55.7	97.5
1956-57	49.6	38.4	129.3	71.9	58.5	123.0
1957-58	74.7	45.4	164.4	161.0	66.9	151.0
1958-59	101.2	58.4	173.2	130.8	73.0	167.8
1959-60	129.9	60.2	215.9	176.1	95.4	184.6

28 per cent, the share of the societies had declined from 69 per cent to 66 per cent in the total share capital of the Central Cooperative Banks.

Both the Central and State Cooperative Banks have also recorded a fair-sized rise in their deposits. The State Cooperative Banks have very nearly trebled their deposits from Rs 21.18 crores in 1951-52 to Rs 60.15 crores as at the end of 1959-60. The Central Cooperative Banks have also registered a comparable rise from Rs 38.24 crores to Rs 95.41 crores. In respect of both these deposits, there has been a heartening decline in the share of the individuals and others matched by a corresponding rise in the share accounted for by cooperatives. In the case of the Central Cooperative Banks, the proportion of deposits held by cooperatives showed a rise from 30 per cent to 40 per cent.

The most outstanding feature of the working of these institutions during the period was the tremendous rise registered in respect of loans and advances. From about Rs 20.01 crores in 1951-52, the loan and advances (outstanding) of the State Cooperative Banks rose to Rs 129.86 crores. The loans and advances made by the Central Cooperative Banks showed a similar increase from Rs 35.95 crores in 1951-52 to Rs 176.11 crores as at the end of 1959-60. In both cases the rise in credit disbursed has been more pronounced subsequent to 1956, a feature, which is ascribable to the effect of the initiation of the Integrated Credit Scheme at the instance of the All India Credit Survey.

While measured in terms of the rise in the paid-up capital, deposits and loans and advances, there can be no mistaking the enormous strides made by the State and Central Cooperative Banks, there are aspects of working of these institutions dealt with in the Reserve Bank study which give cause for concern. Attention may be drawn to the smaller rate in the growth of deposits in relation to the increase in borrowing and the low proportion constituted by owned funds to the total working capital of the cooperative banks. The borrowings of the State Cooperative Banks have increased during the period

1951-52 to 1959-60 from Rs 11.27 crores to Rs 94.89 crores. The rise in the borrowings of the Central Cooperative Banks from Rs 12.07 crores at the end of 1951-52 to Rs 110.32 crores at the end of 1959-60 was even more marked. As a result of the rise in the paid-up capital, deposits and borrowings, the total working capital of the State and Central Cooperative Banks has also shown enormous increase. From Rs 36.72 crores in 1951-52, the total working capital of the State Cooperative Banks increased to Rs 174.74 crores in 1959-60. The Central Cooperative Banks witnessed a rise in total working capital from Rs 60.11 crores to Rs 247.40 crores at the end of 1959-60. The effect of such pronounced rise in the borrowings unmatched by comparable rise in the deposits, has been to weaken the financial viability of these institutions which is reflected in the decline in the proportions of owned funds and deposits to working capital. The proportion of owned funds to total working capital in the case of the State Cooperative Banks had declined from about 13.7 per cent in 1954-55 to 10.0 per cent in 1958-59. Similarly the rise in proportion of deposits to total working capital had declined from 58 per cent to 34 per cent during a period when the proportion of borrowing to total working capital in the case of State Cooperative Banks rose, from 31 per cent to 54 per cent as at the end of 1959-60. In the case of the Central Cooperative Banks the proportion of deposits to working capital declined from 64 per cent to 39 per cent while the proportion of borrowings rose from 31 per cent to 54 per cent. The position in respect of reserves is also hardly satisfactory particularly in the case of the State Cooperative Banks. While during the period, the paid-up share of capital of these banks increased by about 670 per cent, the rise in statutory reserves was only of the order of 85 per cent. Consequently, statutory reserves as a proportion of paid-up share capital which stood at about 62 per cent as at the end of June 1952 is shown to have gone down to about 15 per cent in 1960.

The smaller rate of growth of deposits in relation to borrowings and total working capital and the unsatisfactory position re-

vealed by reserves indicate the extent to which the finances of the cooperative banks are in need of improvement. The fact that the rise in borrowings has come in the wake of the liberal extension of credit by the Reserve Bank on the recommendations of the Rural Credit Survey, cannot explain for the failure of the Central and State Cooperative Banks to attract deposits on a scale corresponding to the increased activities in the provision of credit. Attracting of more deposits is thus the primary problem to which the Cooperative Banks have to address themselves. For it is on deposits that they have to depend for the inner vitality and dynamism which can carry the cooperative movement on its own. As the Reserve Bank study has observed, the need for stepping up the deposit resources of the Cooperative Banks is particularly great in view of the demands that will arise in the context of the Third Plan schemes for cooperative development. The Reserve Bank study has suggested the usefulness of an increase in the interest rates payable on deposits by the Cooperative Banks for increasing deposits with them.

INTERNATIONAL

Capital Movement

THE movement of capital in Europe especially in the last year and the prospect of freedom to export capital, when the European Common market is an accomplished fact, has made international finance resume its position. In the last century, the export of capital was substantial and financial centres thrived by means of free trade in money on the basis of the gold standard. If exchange controls in the last thirty years impeded the flow of funds from one centre to another, there has been in recent years a move towards convertibility on the basis of stability—not because of the International Monetary Fund but on account of high interest rates in Europe.

Only last month PEP turned in a report on the capital market in Europe while the heads of stock exchanges in Europe propounded a scheme for extended business in international shares. The restoration of Frankfurt and Amsterdam as major centres, like the flight of funds from Africa to Europe, has created a situation in which the money power has become once again a factor. Central banks are not the only element in the situation developing since 1958. Non-banking funds figure in the speculative movements that shift funds, and if Tangier has declined and fallen, Switzerland reportedly is embarrassed by the volume of foreign funds deposited in Zurich.

The lift in gold prices last year together with the weakness of the US dollar was a sign of capital moving in new directions. Not the fall in exports, but the outward flow of US capital then created a measure of diffidence. The adverse balance of trade in the case of developing countries like India was not corrected by the flow of funds there was also hope of relief from Italy which started to export capital in 1960. Adjustment of bank rate to control capital movements or to limit the supply of credit or even to secure extra deposits from abroad for short terms have not altered the problem due to disparity in the very limited value of Bank rate changes in economic policy, and the UK has accepted, in only recently, the need to plan in the economic sphere.

The US recession affected Europe in a new way: the dollar came out in hope of compensating

ment in Europe, while US investment in Western Europe including the UK, started to increase. That big business gains from an enlarged supply of funds is obvious. That investment abroad is a hedge against inflation at home needs no mention here. It may be surmised that the ascent of bullion prices in India is due to the difficulty in sending funds abroad. And international tension has influenced a positive preference for gold and silver, because it is accepted that the usual liquidity preference can be translated easily into terms of gold for hoarding. Credit restrictions at home covering up interest rates cannot affect the depreciation of paper money.

The formal solution that PEP approves is a liberalisation of conditions for the movement of money so as to promote exchange stability, as already envisaged by the European monetary agreement. The banking system can help to discourage 'hot' money liable to withdrawal. Switzerland has done it with success. The Exchange Equalisation Fund can help: so can the IMF, if it is known that austerity in imports is fully accepted as a condition for economic survival. The last Vienna meeting of the IMF did not go into the issue of money in flight across many national frontiers. But it realised (largely at the instance of the French) that easy borrowing can only coincide with a hard money policy, leading to a deflation of costs and restoration of the capacity to export. The avoidance of devaluation is now an article of economic faith and if the placing of orders with foreign firms, for example, for ships means an outflow of capital, it must be accepted as one of the incidents of international co-operation.

What is most significant in the light of the PEP study (made with German and French collaboration) is that outside the organised money market, there is a lot of money being put to work at intervals. Hence, India is not the only country with an unorganised money market which is a constant factor in economic life and activity. The acute need for capital is a relevant factor in appraising the emergence of a worldwide market for available funds. The official agencies for economic aid cannot admittedly meet all the needs. Money must be got—on acceptable terms and foreign investment must be enlarged by guarantees. The regular large-scale investment by Europe in Africa has tapered off and the prospects are clouded by the rise of socialism in the Middle East also. The external stimulus to foreigners to invest abroad can come from tax concessions or permission to diversify and the whole aim of new Investment Centres is to explain India's circumstances and policy. European countries that need more money do not take the same line since the Marshall Plan over ten years did the job of patching up ravaged economies efficiently. The retention of controls can be justified by India though the PEP publication does not like them to survive in Western Europe at present. Access to the new issue market is still hedged in by conditions, it is noted. It is true that the Treaty of Rome looks forward to a new Investment Bank that would integrate the economy of the six countries—seven, if the UK joins up.

One of the issues raised is whether the UK can invest on a considerable scale in the Commonwealth, if Europe offers more opportunities for quick profits. The main problem for Europe too is to get US backing for investment abroad and the net rate of US saving (and of economic growth) must go up, as US economists take care to point out. The old policy of an "open door" cannot be reinstated, as PEP is at pains to point out, but the

precise and deliberate encouragement of foreign investment is far easier for Europe. The big European companies like Philips Elec. and Unilever can attract more capital from abroad and their large resources may be applied further to advantage abroad. It is clear that private enterprise is not unimportant for governments are ordinarily concerned with maintaining full employment at home along with the highest revenue possible. If the European Bourses help to create a big market in international securities, some money for use abroad may be secured. Full information to help outside investors who exchange 'control for liquidity' (to use a new familiar phrase) is called for, and foreign shareholders must be given a chance to buy rights shares. This is certainly necessary in India, as non-residents are usually deprived of the chance to buy, at par new shares, except in special cases. The risks of international investment can be covered by insurance to some extent. And 'tied' loans to subsidiaries abroad offer a degree of protection that cannot be matched by any Government scheme. This is India's known shortage of foreign exchange demands the supply of capital goods by the foreign collaborator in return for shares issued by the Indian Company, made possible by collaboration.

The regular remittance of current profits may perhaps encourage foreign investors to extend their activities in developing countries. And even countries like Japan, with little capital to spare now, may look at opportunities abroad in a new light, if it is made clear that the aim of India is to follow West European practice in dealing with foreign capital. Alignment with the West in this respect would be both just and expedient. And the repatriation of Indian capital held abroad may be facilitated by a better adjustment of administrative practice to needs.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

BANKS

Where is the Money to Come From?

THERE is a bright side to the busy season that has just started. As compared with the "opening" figures for the two earlier busy seasons, there are certain distinctly hopeful signs:

- (1) As at the eve of the busy season (that is, the figures for the last Friday in October) borrowings of Scheduled Banks from the Reserve Bank are lowest for the three seasons under review.
- (2) Deposits of other Scheduled Banks have risen by a larger amount in the 1961 slack season than they did in the 1960 slack season.
- (3) Cushion in the form of giltedged that can be sold is of more comfortable proportions, since other Scheduled Banks have actually added to giltedged in the year to 27 October 1961 as contrasted with net sales exceeding Rs 50 crores in the previous year.
- (4) Cash balances of other Scheduled Banks do not show much variance from the figures as at the eve of the 1960-61 busy season.

Against this is the fact of considerable importance that the Advances/net Deposits ratio has inched up from 63.5 per cent at the eve of the 1959-60 busy season to 67.9 per cent and 69.3 per cent at the eve of the 1960-61 and 1961-62 busy seasons, respectively, in the case of other Scheduled Banks. Even the State Bank's ratio of Advances to Deposits has been steadily on the rise, what with loss of Deposits on account of return of counter-part funds. For the present we may assume that lending by Exchange Banks as a proportion of Deposits has not shown much variance. The implication, all too clearly, is that the banking system generally finds itself already in a somewhat over-extended position even before the 1961-62 busy season has gathered steam.

As the busy season progresses, therefore, the strain upon banks is going to become well-nigh insupportable. With the best will in the world, and with all the credit that the Reserve Bank may extend, it could well happen that banks will be unable to consider an expansion of their Advances' portfolios. A credit squeeze may be in the offing, with money just not being available to meet the demand.

How can this situation be eased? In particular, what is the means whereby credit can be assured to productive enterprises? For the short term, Reserve Bank's preparedness to lend freely to and purchase liberally of securities from the banks may help. Hopes need also to be pinned upon the accrual of fresh Deposit resources. While such intense industrial and trade activity will reflect itself hearteningly in banks' earnings, the impact upon balance-sheets will not be as favourable. We are, let it be clear, in sight of Advances

(including bills purchased and discounted) working out to 75 per cent of net Deposits, and more.

One solution perhaps might lie in accepting, however reluctantly, the prospect of bank Advances being consistently high as a ratio of Deposits; this is the price to pay for a developing economy and such the task that will devolve upon the banking system. But adequate safeguards would be necessary: certainly, banks will have to provide for losses to be experienced, and inner reserves would have to be built up. Secondly banks would need to have the confidence that in times of pressure they can count upon maximum assistance from the Reserve Bank. Thirdly thought may be paid to the evolution of some form of insurance of bank Advances, in addition to the prospective insurance of bank Deposits. Fourthly, investors in bank shares will have to be "educated" as to what, in a developing economy, constitutes a safe level of Advances.

A similar solution would be to cease to set store by the Advances/Deposits ratio, and

instead to measure the state of a bank's finances by means of a liquidity ratio. To be included in the liquid assets would be: (a) cash balances; (b) unencumbered securities, including Treasury Bills it need hardly be said, maturing within, say, five years; and (c) bills purchased and discounted, of course free of borrowings thereon.

A third method might be to isolate what in effect are contra entries in a bank balance sheet. For determining the total of Advances, vis-a-vis the credit ratio, bills purchased and discounted could be excluded, as also industrial Advances whereagainst assistance has been sought and/or obtained from the Refinance Corporation.

We have suggested, it will be seen, new methodology; which, unfortunately, does not yield a lasting solution. Given that industrial production must not be allowed to suffer for want of bank finance, what is really needed is a manner by which banks could increase

Indian Finance

their resources and/or a way in which some pressure of the demand upon banks can be removed. Deposit insurance is a step obviously in the right direction for enabling or fostering growth of resources. Another not yet assisted officially is bank expansion. We would suggest that banks be encouraged to embark upon a concerted programme for opening new branches. In many such new centres, the experience will, at least for some time, be one of loss; we wonder whether it should not be possible for some form of subsidy being offered to such banks as establish branches at places where the population is below specified, stipulated levels. It is a dismal matter of record that the State Bank, despite its successful programme of a vast system of new branches, has failed to attract new Deposits over a period when other Scheduled Banks have greatly added to theirs; and in the case of the State Bank the loss on this account was partly or wholly met from the fortuitous profit made on the deposit of counterpart funds with that institution. Other banks may be more fortunate.

A further suggestion concerns itself with a peculiar aspect of the demands upon Indian banking in recent years. While we have seen price rises and shortages in particular commodities at different times, there have usually been at the same time surpluses in other commodities. At the moment, for example, banks are groaning under the weight of sugar financing. Not so long ago it was cement that was "slow-moving", and cotton textiles before that. From time to time it is inevitable that there be areas of surpluses. We think it should be possible for the banks to "discount" locked-up Advances with the Reserve Bank, and at a special rate of 4 per cent. The resources so released would become available for enlarging industrial production or for busy season financing.

In conclusion it may be stated that, in Calcutta particularly, the money market has been docile during the past week; and it looks scarcely possible that a tight money scare is in the offing. But we would reiterate our conviction that once the busy season gathers stride the pressure upon banks, already fully extended as they are, is going to be enormous. It is not too early to consider how banks can be helped to finance the busy season without depriving industrially productive enterprises of bank credit.

BANK RETURNS

Pause in Progress of the Busy Season

After a quicker start than we have known for some years, the busy season appears to have paused to consolidate itself. Currency contraction is considerable, and it would seem that banks have been able to repay a sizeable amount of their borrowings from the Reserve Bank.

The returns of the Reserve Bank for 17 November disclose that Active Note circulation has declined by Rs 28.11 crores to Rs 1,920.42 crores, and there has also been inflow of Rupee Coin for Rs 1.26 crores. Currency has been contracted against Rupee Securities for Rs 30 crores, reducing the latter portfolio to Rs 1,578.84 crores. Foreign Securities are unchanged at Rs 116.86 crores, and the Reserve Bank's cash in the till is slightly lower by Rs 2.63 crores at Rs 16.24 crores.

By dint of the transfer from the Issue Department, Investments are higher by Rs 80

25 November 1961

crores at Rs 180.52 crores; and there has therefore been no deficit financing. The Centre's balances are lower by Rs 2.91 crores at Rs 62.50 crores, and though Deposits of State Governments have improved by Rs 0.91 crore to Rs 11.13 crores, the latter would appear to have felt some strain since their ways and means borrowings from the Reserve Bank have gone up by Rs 7.76 crores to Rs 73.60 crores. Easing of pressure upon the banking system is suggested by the improvement of Rs 5.17 crores (of which perhaps Rs 1.68 crores is attributable to the State Bank) in Reserve Balances. Moreover, a sharp reduction in indebtedness to the central banking institution is indicated in the fall of some Rs 23 crores to Rs 131.85 crores in the Other Loans and Advances of the Reserve Bank; and a large part of this is accounted by the fall of Rs 10 crores odd to Rs 2.20 crores in the Reserve Bank's advances against usance bills.

Balances Held Abroad are somewhat lower by Rs 1.15 crores at Rs 24.58 crores—but foreign assets in the possession of the Reserve Bank still exceed Rs 140 crores.

There is an unexplained rise of Rs 8 crores to nearly Rs 29½ crores in Other Liabilities; has interest on the 4 per cent 1973 (a special

*As at third Friday in November for Reserve Bank and State Bank and as at second Friday in November for other Scheduled Banks.

issue for Rs 300 crores was created as a funding operation, it may be recalled) just been received by the Reserve Bank?

Easing of busy season pressure is also revealed in the return of the State Bank for 17 November. Advances have shrunk by Rs 2.99 crores to Rs 242.19 crores, and Deposits are better by Rs 1.17 crores at Rs 527.62 crores. There is small disinvestment in giltedged for Rs 1½ crores, and cash balances have improved by Rs 1.68 crores to Rs 29.56 crores.

Spillover of month-early disbursements and busy season pressure have made their impact strongly felt upon the return of Scheduled Banks for 10 November. Net Demand Deposits are lower by Rs 2.09 crores at Rs 820.05 crores, and net Time Deposits show a drop of Rs 4.18 crores to Rs 1,107.77 crores. However, it needs to be remarked that the bulk of the drain in Deposits (Rs 5.88 crores) was on account of the State Bank. The total of Advances has expanded by Rs 5.99 crores to Rs 1,245.31 crores, but again mainly attributable to the State Bank. So also, the drop of Rs 20 crores to Rs 610.94 crores in giltedged is traceable to the State Bank. But the strain upon banks is attested to by the rise of Rs 9.62 crores to Rs 26.14 crores in

borrowings from the Reserve Bank—the State Bank scarcely participated in such enlarged central banking credit. Even so, cash balances of other Scheduled Banks appear to have fallen by over Rs 4 crores; cash balances of Scheduled Banks are lower by Rs 0.92 crore at Rs 182.87 crores, but the State Bank in the relevant week reported a rise of Rs 3.11 crores.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 21 November 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs. 99.375 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 27 November 1961. Successful tenderers should make payment on Friday, 1 December 1961. Other conditions are as usual.

During the week ended 17 November 1961 Government of India Treasury Bills for Rs 74,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 15 to 18 November 1961 amounted to Rs 15,00,000.

91 days' Intermediate Treasury Bills will be sold from 22 to 25 November 1961 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government think it necessary.

Foreign Currency Deposits

By Paul Einzig

WRITING in 1922 Keynes remarked in A Tract on Monetary Reform with reference to Forward Exchange:—"There are few financial topics of equal importance which have received so little discussion or publicity." The same could be said today about the market in Euro-dollars, Euro-sterling and other foreign currency deposits. It is true after having remained for years a closely-guarded secret of the Foreign Exchange department the financial Press does now make occasional reference to the new device. In spite of this, the moderate increase in the volume of discussion or publicity it receives lags far behind the spectacular increase in the importance of the new device.

Very few people outside arbitrage departments realise even today that the interest differential between Euro-dollar and Euro-sterling deposit rates has become a decisive factor influencing the international movement of short-term funds. Even as recently as 11 November, The Economist, discussing movements of funds resulting from the Bank rate change, referred to the differential between British and American Treasury bill rates, implying that it is this differential which matters. Yet for many months Foreign Exchange dealers pay practically no attention to that differential and base all their operations on the differential between Euro-dollar and Euro-sterling rates. The fact that until recently the Treasury bill differential was around ½ per cent (allowing for the cost of forward covering,) while the Euro-dollar Euro-sterling differential seldom exceeds nowadays ¼ per cent and is very often 1/16 per cent, speaks for itself.

Nor is it without significance that nine-tenths of the short-term funds held by German banks abroad is now held in the form of foreign currency deposits instead of foreign Treasury bills or bank acceptances. The use of these deposits provides opportunity for an almost indefinite variety of arbitrage transactions in which Euro-dollars and, to a less extent, Euro-sterling play the role of intermediary currencies. If Foreign Exchange departments want to increase their funds and their head offices are unable or unwilling to comply with their request, all they have to do is to bid for Euro-dollar deposits which will be forthcoming in any reasonable amounts. Once in possession of these deposits they can swap into any of the free currencies and engage in profitable operations. British insurance companies have acquired the habit of employing in Euro-dollars their premium-reserves on their American insurance business, which have to be kept in dollars but need not be kept in the United States. Needless to say, the actual dollar deposits remain in the United States but, as far as the insurance companies are concerned, they deposit it with some leading London bank whose name is a sufficient guarantee that they can recover their dollars when needed.

We are only at the beginning of a movement which is bound to lead to increasing internationalisation of the monetary system and of the financial markets in general. Already it is almost as easy to borrow or lend in London in dollars or D. marks or Swiss francs than to borrow or lend in sterling. Deposits in terms of other hard currencies, too, are becoming increasingly popular. The development of this system calls for a thorough re-thinking by bankers, Treasury officials and economists.

Notes

OIL PRICES

Impasse

The decision of the private sector refineries, rejecting part of the Damle Committee's recommendations on oil prices, and Government's reaction thereto have brought about an impasse in the negotiations between the Government and the private companies on the subject of oil prices. While the private companies have been given a temporary reprieve from immediate enforcement of the Damle Committee's recommendations, the apparently irreconcilable attitudes being adopted by the two sides would seem to ender an amicable settlement somewhat difficult of achievement.

The main concern of the Government in the controversy in which it has been engaged for sometime past with the private companies has been to evolve a structure of prices which would ensure the maximum saving in foreign exchange on imports of crude oil and refined products into the country. The Damle Committee, which was set up for the purpose, had indicated in its report possibilities of achieving reduction in retail prices of refined products to the order of Rs 15.0 crores on the basis of the 1962 sales of the three major oil companies.

panies. Of this reduction, that on the bulk-refined products is to account for Rs 12.41 crores. The total is made up of (i) Rs 4.83 crores on account of the actual difference between the posted prices as on 24-3-1961 and 1-11-1959 (ii) Rs 6.64 crores on account of discounts recommended by the Committee on the posted prices of bulk-products and refined products (iii) Rs 3.34 crores on account of reductions proposed by the Committee in the distribution and marketing charges and profit margins of the companies. The Committee has also fixed the rate of discounts for the different refined products imported by the private oil companies: 10 per cent on the f.o.b. cost of kerosene, aviation fuel and high speed diesel oil, 9.3 per cent on light speed diesel oil, 5 per cent on motor spirit and 3 per cent on furnace oil.

The controversy that has now flared into the open concerns the issue of providing discounts by the private oil companies on the refined products imported by them. The findings of the Damle Committee in respect of the scope of discount for the refined products are based on the availability of discounts on crude oil and the fact of such discounts enjoyed by the Indian Oil Company and the Western India Oil Company on refined products imported by them. The discount enjoyed by the IOC on its imports from the Soviet Union may not be a relevant example in view of possible ulterior aims of the Soviet Union. What is important is to find out whether the private companies can obtain discounts from their suppliers on the refined products imported by them into India. But particulars to determine this have been lacking as the private companies have been inclined to be rather reticent about these matters. Their argument is that, unlike in the case of crude, there is a sellers' market in refined products (especially in middle distillates) and they are, therefore, not able to obtain discounts from their suppliers. And the discounts obtained by the WIOC on refined products cannot be taken as indicating a general scope for discounts as the quantities imported by it are insignificant.

The decision of the private sector companies rejecting the Damle Committee's recommendations in respect of the need for allowing discounts on refined products has been interpreted as being an attempt to bring pressure on the Government to agree to

expansion of refinery capacity. Such expansion of a considerable order has already been built into all the three refineries. Mr Malaviya has however chosen to consider the question of expansion separately from the question of implementing the Damle's Committee's recommendations.

In view of the deadlock reached, the Government has given time to the private companies to implement the Committee's recommendations. The companies have been allowed to utilise their foreign exchange allocation for this period for getting imported products at the most favourable prices. While the extension is designed to maintain continuity of supplies to the country, it should also enable negotiations to be resumed for reaching a mutually acceptable settlement.

Though the attitude of the two sides seems to be unbridgeable, it is worthy of note that the area of differences over the question of oil prices is really very narrow. The companies have agreed to the recommendations of the Damle Committee in regard to the scope for discounts on imports of crude and other matters such as distribution charges and return on capital. The acceptance of the recommendation regarding the scope for discounts on crude oil, is a significant gain and implies that differences over the issue of discounts on refined products could be got over by arrangement for expansion of internal refining capacity. As internal refining capacity increases, we may progressively do without imports of refined products and the present quarrel will cease to be the irritant it is now.

WOOLLEN GOODS Task before the Tariff Commission

The export of wool is surpassed by the import of wool, and if India has exported woollens it is because of the import of wool. The Tariff Commission probably has forgotten what took place in 1934 with the major interests refusing to give any evidence pro or con. The position is now different, as the price-fixing is being undertaken. The requirements of the knitting industry have to be kept in view when fixing prices. The difference between wool and cotton is plain because the former depends on imports and the rise of top makers in India will remove the need for imports of Australian wool by India in future. The import control naturally creates some difficulties for woollen manufacturers and the seasonal demand is also a factor in fluctuations. The distribution of licences to import can only be on the basis of age and productive capacity.

The desire for producing shoddy out of waste and rags is only a sign of the country's poverty. No moral stigma can attach to the open preference of woollen mills for liberal imports of shoddy and mungo. The inquiry in progress has revealed already that the industry to-day has a weak base but the older mills can argue that tariff protection is not enough and the supply of raw materials must be maintained provided fair prices are charged for manufactured goods. The whole issue is one of determining profit margins before fixing import quotas. But it may be noted in passing that the case of woollen goods is distinguishable from papers and the review of protection in force is connected with the enlargement of imports of raw wool for the major units that provide yarn for the cottage industry, and for women who knit at home for either pleasure or profit.

The inquiry is certainly in season, but any comparison with Japanese goods may be off the mark because even now, Japan is a major exporter, though dependent on Australian wool imported. The home market for Japanese manufactures is also a large one and the Indian woollen industry's chequered record is due mainly to problem of raw material supply. The argument over optimum return on capital is of less significance than the progress made in worsted manufacture and the increasing use of mixtures in fabrics. The inquiry will probably lead to a guarantee of imports and stability in natural wool prices should ensure a regular and adequate supply on the score of employment afforded by the Indian woollen industry. But the demand for

woollens too can only follow a rise in the standard of living and the case of the mills must rest partly on the replacement of imported woollens by Swadeshi goods in recent years.

DEFENCE PRODUCTION

Impressive Evidence

The impressive display of various products ranging from the aeroplanes to cheese in the Defence Pavilion in the Indian Industries Fair at New Delhi highlights the progress registered by the ordnance factories and other units of the Defence production organisation. Keeping "save foreign exchange" as its motto the Defence organisation, has apart from catering to its own requirements, extended its activities to manufacture consumer goods of various sorts which keep the defence industries fully engaged during non-operational period. With the entry of the organisation into these fields of production, the superior technical know-how acquired during the Second World War was also profitably utilised to serve the cause of the civilian consumers also.

The most spectacular section in the pavilion is the one housing the aircraft and aircraft engines. The prestige exhibit in the pavilion is the work model of the Avro 748 designed by the Hawker Siddely Aviation and constructed by the Development Centre of the Maintenance Command, Kanpur. The section devoted to the lathes and precision machine tool making machines lends much attraction to the pavilion. Progress in the manufacture of mountaineering equipments is also spotlighted by the display of various equipments including those utilised for scaling the Everest.

The civil trade activities carried out by the Defence industries comprise the manufacture of trucks and tractors, scientific and optical instruments, machineries and tools, iron and steel alloys and non-ferrous metals, sporting arms and ammunitions, leather and textiles, general engineering goods, acids and chemicals. The progressive utilisation of indigenous components in manufacturing these products is a noteworthy factor and the percentages of the locally made components will stepped up further to about 75 per cent by the end of 1962. Apart from these, the ordnance factories are also engaged in the production of items like sound projectors, photo-enlargers, film strip projectors, prismatic binoculars, pressure cookers, coffee machines, collapsible water tanks and amphibious vehicles.

The total value of production at the ordnance factories for the

year ended March 1961 has been estimated at Rs 33.14 crores as against Rs 25.14 crores in the previous year. Considering the pace of progress made by these factories the prospects for making further headway in the industrial production in future can be rated high.

EXPORTS

A Modest Rise

A modest rise in exports from India has not removed doubts about the trade gap. Recovery in exports for the nine months ending September 1961 has not helped to raise foreign assets much, but tighter import control may help to some extent to limit the drain. High prices ruling have reduced the export of vegetable oils, hides and skins as well as ores. Improvement under tea or jute manufactures shipped may

temper present diffidence about the future. The export quotas for raw cotton or sugar cannot help to raise either export volume or value considerably and the traditional items like tea, tobacco or jute manufactures must be relied upon rather than light engineering exports.

The need for foreign aid to tide over the balance of payments is again underlined by the latest figures relating to India's trade. What is clear now is that industrialisation increases the pace and volume of machinery imports, and if India makes more chemicals on her own as also rayon, she has to import more metals and transport equipment. The need for local manufacture of machinery is established by the persistence of an adverse balance. And collaboration with foreign firms is a means to the end. The difficulties over fuel or transport must also be removed soon, if growing industry is to look for new

export connections. The trade returns do not support the placency even over coffee exports and it is clear that export production must involve more than the acquisition of new lines for the State Trading Corporation or even the conclusion of trade pacts with Poland or Hungary. India's trade policy is being reviewed again and some concessions for exporters are on the cards. The lack of industrial production does not exactly favour textile exports of a large scale at present. But it is evident that raw material imports are indispensable for rubber manufactures as well as cotton mills that now hope to get more US cotton under a long-term agreement. The need to maintain control over costs in export industries has been stressed, and India's disadvantage as a high-cost producer can be limited by concentration at convenient points as Mr S. P. Jain cogently argued recently.

SMALL INDUSTRIES

Japanese Interest

The prototype production and training centre opened last week in Howrah by the Japanese Prime Minister, Mr Hayato Ikeda, is yet another indication of the deep interest taken by Japan in the economic development of India. Japan is extending to us both economic and technical assistance of considerable proportion during the past few years. Perhaps the latest in the field of economic aid is the grant of a loan of \$80 million to cover the first two years of our Third Five Year Plan. The Howrah project is of special significance at the present juncture because the development of small scale industries is an integral part of our Five Year Plans. While the growth of large scale industries is fostered, special attention is also bestowed on the development of small industries. As the premier country which has developed its large scale industries side by side with a rapid growth of small industries, Japan is a natural guide for us who too want to achieve more or less

similar results. The Howrah centre is put up jointly by the two countries at a cost of Rs 120 lakhs, one half of which will be borne by Japan and the other half by the Government of India. In recent years a number of projects have come up in India as a result of technical collaboration between the two countries. There are about 150 projects in this category which include units which manufacture various consumer, industrial and precision goods. In the field of technical training, Japan's contribution is no less important. While a large number of Indian students have received training in Japan, a number of Japanese technical experts have taught in various Indian universities during the past few years.

The idea of putting up small compact industrial units has caught on in the country as will be evident from the popularity of the State sponsored industrial estates. With the large assistance now available and the increased allocation in the Third Plan for small industries, the pace of growth of small industries will be greatly accelerated hereafter.

But the small scale units cannot survive long if their products are not continuously improved in quality. This is possible only by the use of efficient tools and the employment of trained technical personnel. The Howrah centre will be able to meet this demand to some extent. There is need for more such centres because the demand for tools and technicians from the small scale industries sector cannot be met fully by the Howrah centre alone.

HOUSING Obstacles in the Way

Speaking at the sixth Conference of Housing Ministers at Ehubaneswar last week, Dr B. Gopala Reddi, Union Minister for Works, Housing and Supply, has referred appreciatively to the progress of housing. He has pointed out that the performance in the field of housing is creditable as the Second Plan targets have been fulfilled in a large measure. The logic of this self-

appreciation will not be readily apparent: considering that the targets for housing in the Second Plan were by no means high in relation to the felt needs of the population, hitting them cannot be a matter for excessive gratulation.

The problem of finding dwelling places for the entire population that is growing at an alarming rate can have only the third place—the first two to be given to food and clothing in the list of priorities. It is also to be admitted that we do not simply have the necessary resources to undertake the task of building houses for the entire population (it has been estimated that rural housing alone will involve an outlay of Rs 12,500 crores). Even so, concerted effort has to be put forth to reduce the growing shortage of housing.

Since the dawn of the planning era, increased allocations have been made for housing: the Third Plan makes a provision of Rs 142 crores compared to the Rs 84 crores in the Second Plan. Over and above this, the Life Insurance Corporation has set aside Rs 60 crores for supplementing Government's various housing schemes. The LIC's allotment for the Third Plan compares with about Rs 17.5 crores made available during the period of the Second Plan. These funds will be augmented further with the setting up of a Central Housing Board envisaged in the Third Plan.

Though the funds are not plentiful, if even the limited allotment is put to effective use within the scheduled period, the psychological effect on the people will lessen the frustration at the necessarily slow pace of the housing programme as a whole. Dr Gopala Reddi did well to emphasise the need for spending the provision wisely and well. The various agencies through which loans and subsidies for house building are routed should be made to keep in view the main objective of the programme so that they do not put unnecessary obstacles in the way of people wanting to take advantage of various schemes.

Another aspect of the housing problem is the growth of slums: Slum clearance work has come up against heavy odds and in the five and a half years of operation of the slum clearance scheme, only about 17,000 houses have been built although about 200 slum clearance projects were sanctioned envisaging the erection of 53,900 houses. In the meantime, new slums continue to spring up around industrial units old and new as housing the workers of an industrial unit is still nobody's responsibility but that of the workers themselves. Attractive concessions are unutilised largely. For instance, the entire finance needed can be obtained by the industrial workers who are members of co-operatives, 25 per

Indian Finance

25 November 1961

cent as subsidy, 65 per cent as a loan and the balance of 10 per cent by withdrawal from their Provident Fund Accounts. Yet industrial workers have not shown much enthusiasm in having houses of their own. This means either that they have not been clearly told of the concessions or the conditions governing the grant of loans, or that these concessions do not fully take into account their capacity to pay the stipulated instalments. Similarly, employers have also not shown much interest in the subsidised industrial housing schemes under which seemingly attractive concessions are available to them. For instance there are discouraging factors such as the high cost of building materials or the non-availability of building sites at reasonable price near their factories which render the concessions largely ineffective. Compulsion of employers to provide houses for their employees will not prove to be the ideal remedy because it may result in retarding industrial progress. In other sectors of housing too there are many factors that are damming the flow of available funds to individuals and organisations desiring to undertake house building. By removing such obstacles now strewn in the way of greater house building activity, progress can be appreciably quickened.

MAN POWER Colombo Plan Survey

The survey conducted under the auspices of the Colombo Plan on the technical training facilities in the South-East Asia has revealed that the major impediment in the economic progress of the countries in this region is not so much paucity of finance as dearth of technical knowledge. The survey was carried out by the representatives of the 21 member countries of the Colombo Plan and was spread over a period of more than one year. Aspirations for attaining self-sufficiency permeated all the development programmes framed by the countries and the survey has underlined the importance of co-operative endeavour to the mutual benefit of the participant nations particularly in the dissemination of information regarding the technical advancement made by each country. The survey, however, does not favour the constitution of regional centres. It suggests that national centres with proper facilities for imparting instruction to candidates from other countries will be more beneficial to meet the needs of this region. The report submitted by the team contains some points that should guide all the prospective planning for expanding training facilities. The production of food being the major

preoccupation of the region, the survey has rightly placed emphasis on providing training in agriculture, animal husbandry and fisheries. While such opportunities are not totally wanting, they are not commensurate with the magnitude of the problem. Carrying out man-power surveys to assess both present and future needs is also advocated, for, they can guide the training policies and help these countries to evolve greater co-ordination between technical education and the user firms. Another factor brought home by the survey is the need for providing scholarships and other assistance to the competent candidates to get comprehensive training in their trade. The survey has also spotlighted the other drawbacks like the serious gap in man-power between the professional engineers and skilled craftsmen and the scant attention paid on prospects and even status of the technicians.

ENGINEERING EXPORTS Performance in August

The analysis of India's engineering exports in August points to a big fall in certain lines during this year. The slackening may be due to exporters' own difficulties in getting materials for shipment. But a beginning in export of iron and steel has been noted and Pakistan as well as S. E. Asia is an outlet. The present insignificance of exports to African markets is indicated clearly in the trade figures compiled by the Engineering Export Promotion Council. The scarcity of non-ferrous metals conditions naturally the volume of alloys exported by India. The shipment of wood screws to the UK may be due to the links with UK manufacturers. Among points to note is that exports of buckets and

pans, especially to Ceylon have declined and the only considerable export line relates to export of aluminium utensils to the Persian Gulf, because Ceylon has curtailed purchases of brass utensils in line with its import control. The fall is pronounced in the case of cutlery, but in the case of razor blades the export prospect looks good because Ethiopia is buying more; so is Aden and Kenya. The reduced offtake of locks and keys by Burma or Ceylon is partly offset by increased exports to the Persian Gulf and to African countries like Nigeria and Sierra Leone.

The decline in exports compared with 1960 has not touched export of stoves and pressure lamps for which Saudi Arabia and Bahrain appear to be promising markets as the chief fuel is available. The demand for stainless steel utensils and cutlery in Arabia appears to be growing so also in Singapore and Kenya because of the Indian

Progress is not achieved in a day. It is the result of Forethoughts, Sweat, Toils and Tears and when one plan is executed you have to think ahead of future plans so that progress could be continuous.

J.K. visualises the Country's need in years ahead and are continuously planning to fulfil the needs as they arise.

To Sales Manager,
M/s Ashok Leyland Ltd.,
Bangalore, Madras

Dear Sir,

Our Ashok Leyland Comet 203" wheelbase passenger bus has covered over 400,000 miles with the original engine. It is remarkable that this extremely satisfactory performance has been achieved despite the difficult journeys from Bangalore to all these years. It has carried tourists to the hill station, averaging 15 miles per gallon of diesel oil. The majesty of its run over Ootacamund making over 460 trips to the hill station, averaging 15 miles per gallon of diesel oil. The majesty of its run over the winding ghat sections has won the admiration of not only the passengers but also of other motor operators. It is a pleasure to own a Leyland bus, to experience its economy, its great strength and its smooth run over all types of roads. It is a pleasure too to talk about it to others.

Yours faithfully
for S R M S
M.V. Chakravarthy

SRMS ON CONTRACT

MYF 4334

197-AL-1490

element in the local population. The trade returns record the improved sales of oil engines in Egypt, Bahrain and Iran during this year. The export of typewriters or office equipment can only be inconsiderable, but a good trade in pumps has been kept going. A major item in exports now is the sewing machine and it is a fact that the USA too has bought Indian machines just like Ceylon or Egypt. The sales of sewing machines for eight months produced over Rs 20.78 lakhs and the sale of parts to overseas buyers is a part of the export connection. It may be added that India supplies sewing machines to Pakistan also. The sale of small, portable air-conditioners to the Persian Gulf has started but the sale of oil-mill machinery to Burma implies reduced sales of groundnut oil by India. Tea machinery for Kenya will assist a rival and the increase in sales of tea machinery to Tanganyika is due to the growth of gardens,

referred to in the latest report of the Bombay-Burmah Trading Corporation. There seems to be an established trade in batteries also and markets have been found already in Egypt, the Sudan, and Thailand. The electric lamp business also is getting on and the biggest customer to date appears to be Iraq. It is a good wind that helps fans to sell well and many African countries as well as Malaya and Kuwait figure as regular customers. There is hardly any business in cables or wires yet, but the sale of switches or sockets to Burma and Kenya is maintained. There is much talk about motors. But only four cars and two trucks were sold in eight months. On the other hand, the sale of cycles yielded over Rs 10 lakhs and it is noteworthy that the biggest market for Indian cycles is, surprisingly enough, the USA. The changes in the UK industry probably govern the new development in India's own bicycle exports. The sale of components

and spares is increasing gradually and it may be claimed that exports in this case only follow the rise in production. The sale of tin boxes called steel trunks by custom is flourishing and a new line of export is steel furniture including safes and strong boxes. The best of many markets appears to be Kuwait—small but financially secure.

BOMBAY PORT Programme of Extension

The detailed version of the programmes for the extension and the development of the Bombay port released last week does not make impressive reading, for, the bulk of the allocation of Rs 25.53 crores for the Third Plan is earmarked for the completion of the schemes that have been taken up during the last Plan period.

Indian Finance

The allocation for such schemes for the current Plan period is of the order of Rs 16.64 crores.

Under the head of carry-forward items, the largest allocation (Rs 6 crores) is provided for the modernisation of the dock. The scheme envisages the linking of the Alexandria dock and the Victoria dock and the preparation of the detailed designs is reported to be nearing completion. Next in importance comes the execution of the dredging operations in the main harbour canal which carries an outlay of Rs 4 crores. It should be remembered, in this connection, that the allocation for this purpose in the Second Plan was even higher at Rs 5 crores, but hardly one-fifth of the amount was utilised for dredging operations and the major portion remains to be spent in this Plan period. An increased allocation of Rs 2 crores has been provided for the completion of the labour housing scheme as against Rs 26 lakhs set apart in the Second Plan. The break-up for other allocations are: Rs 1.56 crores for the electrification of the 54 cranes in the Alexandria dock; Rs 75 lakhs for the construction of passenger terminal building at the Ballard pier; Rs 37 lakhs for 125 ton floating crane; Rs 62 lakhs for drag suction dredger with a hopper capacity of 2,000 tons; Rs 15 lakhs for reorganisation of electrical distribution system; Rs 83 lakhs for the port trust hospital and equipment and Rs 36 lakhs for the rim bascule bridge at the entrance of the Alexandria dock.

The total outlay for the implementation of the new schemes in the Third Plan has been split up into Rs 5.99 crores for essential improvement programmes and Rs 2.9 crores for the programmes that are requisite for the maintenance of the existing services. Top priority, under this head, has been accorded for the extension of the Ballard pier with an outlay of Rs 2 crores. Next in order of allocation comes the acquisition of tugs—five harbour tugs and one dock tug—entailing an amount of Rs 1.5 crores. Other notable provisions are Rs 55 lakhs for two grab dredger units; Rs 15 lakhs for two flat barges; Rs 5 lakhs for three launches; Rs 25 lakhs for the replacement of the steam tug Azad; Rs 40 lakhs allotted for the purchase of diesel locos; Rs 50 lakhs for the passenger terminal building at Ballard pier; Rs 33 lakhs for the electrification of Hughes dry dock; Rs 1 crore for housing purposes and Rs 95 lakhs for minor capital, renewal and replacement works.

The lethargic progress of the various development and extension activities in the Second Plan is largely attributed, inter alia, to the non-availability of adequate foreign exchange. Lapses in the implementation of the programmes were also not rare. Considering the inadequacy of harbour facilities in the country and the result-

hamare bhai
ko le jao

It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam.

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, re-

fused to go. "Do not take me away", he said. Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: "Hamare bhai ko le jao." As Keenan recalls, "The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother."

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

ant dislocation in loading and unloading operations, the completion of the port development programmes is national necessity.

THE CUSTOMS As a Literary Critic

A new task for the customs department is the scrutiny of literature imported from abroad. There is no Lord Chamberlain in India to examine new stage plays though the censorship is active on the screen. The fear of foreign books corrupting morals has led to the exclusion of a world-famous book by D. H. Lawrence. The London Court decision has been so far ignored. Advisory Committees to assist the customs are promised and arguments with publishers will not end, for local statutes dealing with obscene writings of local provenance or origin will not settle the issue of letting masterpieces come in.

There is still argument about Henry Miller's books in the USA and the applause of critics or readers has not dispelled doubts developed by the Post Office. The publisher's reader is hardly in the picture though in the USA or the UK he is a potent figure standing between the author and publisher. The whole issue is seen as one for the Police, but Watch Committees do not come in to condemn the

Decameron or the Heptameron. The Ministry of Cultural Affairs will probably prepare its own index of objectionable writings that must be always excluded by the customs which will probably start a hunt—not for hidden gold but for books—in the baggage brought in.

The other problem remains. Books in the classical languages including Sanskrit may create a problem for the officials keen on the preservation of purity. What Bernard Shaw said about the excess of puritanism that condemned one play of his may not be quite easily forgotten at present. The attempt to set up a literary censorship that will keep out the Arabian Nights or Chinese classics may lead to an argument over civil liberties in a secular State. It is the peculiar privilege of the Papacy to declare some books improper and it may be added that Eire is the only country that operates a censorship over literature, both native and imported. But Irish example is not the best in this matter.

RESEARCH Three Items of Interest

The September issue of the Journal of Scientific and Industrial Research reports the results

of studies carried on at the Central Fuel Research Institute, Jeal-gora, for determining the conditions for producing cokes of requisite purity from Indian coals for use in the manufacture of calcium carbide. These studies are of considerable economic significance as the consumption of calcium carbide in the country is expected to increase from 15,000 tons per year at present to 60,000 tons by 1965-66.

Hitherto, on account of the high phosphorus and ash content of Indian coals were considered unsuitable for use in the manufacture of calcium carbide. Trials carried out in pilot plant and industrial furnaces have shown that when cokes from washed coal are used the furnace performance and the quality of calcium carbide produced are better. Further, the consumption of electricity is less than when cokes from unwashed coals are used. Experiments with blends of coke from Assam coals, petroleum coke and wood charcoal have shown that by restricting the proportion of coke from coal to 50 per cent of the total carbonaceous material, calcium carbide conforming to British standard specifications can be obtained.

Another article in this issue discusses the use of chemical preservatives as adjuncts to the conventional methods of preserving canned fish. Of the various chemicals tried for this purpose at the

Central Fisheries Technological Research Station, Ernakulam, propionic acid has been found to be the most promising.

A third article in the Journal outlines the conditions for the moulding of porous bronze bearings which are finding increasing use in, among other things, automobiles, textile machinery, electric fans and which require comparatively little or no lubrication during service. Studies in this connection were carried out at the National Metallurgical Laboratory, Jamshedpur.

BURMA The Protectionist Urge

The new Burmese tariff in force from 15 September proves that political independence is often followed by high, severe protectionism. The duties on luxuries like cars or liquor are high, but the duties on salt, coffee and oil have also been raised. A country, assured of a large market for rice, timber and minerals has embarked on a policy of excluding foreign goods by prohibitive duties, as set out in the Indian Trade Journal recently. The list is comprehensive and may be called an extension of import control. But it does not conform to current hopes of a common market for SE Asia.

FIT **Firestone** BEST TODAY—STILL BETTER TOMORROW!

and even if Burma's foreign assets are down, she has no serious problems due to planning. The only import duty left unchanged at 10 per cent is that on newsprint. Every other item now bears a higher duty and hopes of India increasing her textile exports are nipped in the bud. The duty on paints is up to 75 per cent and that on motor tyres to 40 per cent. India's prospects of exporting manufactures are certainly compromised by the higher duties on items as different as fountain pens and coir goods.

The protectionist urge in Burma has developed before the rise of local industry, though the home market is going to remain small. The moderate duties on iron or steel are offset by the 100 per cent duty on electric fans and refrigerators for which India may reasonably look to Burma for custom. The fact that Burma before the war believed in free trade and often pleaded for separation because of India's protectionist policy may have little relevance in view of her independence. The duties are invariably related to value and groundnut oil, meat, flour or fish from India imported for the people is necessarily going to cost more. This is also calculated to drive all Indian traders out of business because the major exports are controlled by the monopoly Boards run by the Government at present. By comparison, the new tariffs in Cyprus look very moderate and preferences will help the UK and the Commonwealth to maintain trade in yarn, cloth and leather goods. Duty-free items include paper and board as well as salt and biscuits. This is evidence of adherence to a revenue tariff, though Cyprus has for years imported more goods than she has sold. It may be added that both Greece and Turkey will enjoy advantages in trading with Cyprus.

AVIATION

Rising Costs

The failure of US airlines to make profits has a parallel in the

inability of KLM to pay a dividend this year. An old, experienced major airline is handicapped by rising costs and the results announced last week showed that a loss was sustained. The rise in traffic did not help as tourist fares did not produce a surplus of revenue over expenditure. The loss may seem small but it is clear that big jet airliners do not yield much profit on the Atlantic routes. The keener competition also is a factor in reducing income and there is a threat that big shipping lines might start subsidiaries to compete with the BOAC or other lines. The KLM with its age and financial strength is, of course, better off than many US airlines at present, but the problem of profit has been raised and rationalisation is called for. So many nationalised airlines are now in the field that any agreement on limiting services and raising fares may prove difficult.

What is obvious is that ambition to expand air services must be restrained by countries like India which cannot afford to compete strongly with older airlines. The KLM results may signify little to Holland but it is a sign that costs are squeezing out profits and air cargo does not provide compensation for the fall in tourist trade this year. The crisis over Berlin has affected KLM appreciably and the cold war has inevitably lowered receipts. KLM's double-barrelled Board will probably explain the how and why, but it may be noted that the difficulties are due to the speeding up of air services for reasons of prestige. The international airlines cannot afford to ignore either the airport charges that are going up or the pilots' pay. That countries like Ceylon or Malaya run foreign services is due to economic nationalism breaking out in many new directions. It is a surprise that countries that do not produce or even service aircraft are prepared to maintain airlines at present. KLM's experience of adversity must also restrain India's ambitions to buy new bigger aircraft by borrowing abroad for so-called development of civil aviation.

US

GATT and US Trade Policy

In Geneva last week, began a meeting that will last a month at which most of world's trading nations will discuss many important trade problems of mutual concern. The occasion is the nineteenth session of the General Agreement on Tariffs and Trade (GATT), to which the United States and 38 other nations are contracting parties.

This regular meeting of the GATT parties does not involve tariff negotiations as such. Thus,

it is not to be confused with the current round of multi-lateral tariff-cutting negotiations which has been in progress in Geneva under GATT auspices for the past year. This is sometimes called "The Dillon Round", as it was undertaken at the suggestion of C. Douglas Dillon, then the US Undersecretary of State and now US Secretary of the Treasury. It is also necessary to distinguish between the regular GATT meeting, which will run 13 November-8 December and the annual GATT ministerial meeting, which will take place in Geneva 27-30 November while the regular session takes a four-day recess. George W. Ball, Undersecretary of State for Economic Affairs, will represent the United States at the ministerial meeting, which will deal primarily with several problems basic to international trading relationships. These include future actions with regard to tariff reductions, international trade in agricultural products, and the trading difficulties of less-developed countries.

It still is not known whether US government will have made public any of its plans for further liberalizing its trade programme by the time the 27 November ministerial meeting opens. However, a constructive exchange of views is in prospect, and it is possible that US plans may emerge as the session progresses.

Discussions on agricultural products are likely to centre on the problem of greater access generally to world markets. The record indicates that agricultural products have not been subject to the same kind of trade liberalisation as have industrial products. Of particular concern to the United States and a number of other countries is the question of access to the markets of the European Economic Community (EEC)—the six-nation common market—which is the process of setting its external tariff schedules.

A committee of the GATT has been studying the trade problems of the less developed lands for about a year now, and its report will be a matter of considerable interest. Here again, the problem seems to be one largely of permitting less developed lands greater access to world markets for their growing production. The textile problem however, is not expected to figure prominently in these discussions, as it already is being handled separately by international action taken at the initiative of the United States.

The regular GATT session, as distinct from the ministerial meeting, will take up more than 60 agenda items, many of them related to the EEC and its tariff schedules. Also to be discussed is the removal of quotas and other non-tariff import restrictions.

One of the principal items, as far as the United States is concerned, deals with Japan. It is the US view that Japan, which is

a full participant in GATT, should receive all the agreements benefits, including most-favoured-nation treatment. This means, in effect, that tariff concessions granted to one party should be extended to all—a practice which the United States follows in keeping with many other GATT participants.

There are a number of GATT nations, however, which do not extend most-favoured-nation treatment to Japan, under an article of the agreement which permits certain types of discrimination where so-called low-wage countries are involved. It appears that the United States will again try to have its views on equal treatment for Japan accepted by all GATT parties.

This is in accord with the US view that GATT is the basic instrument guiding commercial relations among the world's principal trading partners. The GATT provisions are designed to promote mutually beneficial trade and thereby raise living standards, expand employment, and utilize more fully the world's resources. Hence, the United States sees GATT as a cornerstone of its commercial policy.

The United States participates in GATT under the authority of its trade agreements act, which was originally approved by the US Congress in 1934 and has been extended and amended several times since then. This act delegates to the president power to negotiate reciprocal reductions with other countries.

It was under this act that the United States became one of the original eight parties to the GATT back in 1947, when the principle of bilateral tariff negotiations was extended on a multi-lateral basis. There are now 39 parties to the GATT, and several other nations are participating in the talks and the current negotiations with an eye to formal accession.

The present US trade agreements act is due to expire next 30 June, and President Kennedy has indicated that this administration is considering recommendations to Congress for its renewal and liberalisation.

CESC

Power Demand Insatiable

Melancholy interest attaches to Sir Harry Burn's review of the affairs of the Calcutta Electric Supply Corporation Limited for the year ended March 1961. News is to hand of the sad demise of Sir Harry in England last Sunday. In his death, India in general and Calcutta in particular has lost a good friend. He was long associated with the CESC of which he was first a director and became Chairman from 1955. His association with Calcutta however

dated back to 1922. Before he joined the CESC he had occupied top positions in a number of commercial institutions as well as associations.

In his survey, Sir Harry pointed out that shortage of power in Calcutta and its industrial environs was bound to continue for a number of years, though to a lesser extent than had been experienced in the first half of the current year. The simple fact is that demand is fast outstripping supply. However, there is reason to believe that with steps already taken to control distribution and consumption of electricity and the voluntary agreement by certain large industrial units to restrict their demand at the time of the company's peak loads, the situation may not get out of control as it did early this year. The key factor will still continue to be the availability of the contractual supply of 100 mw from the Damodar Valley Corporation. The period of shortage could have been reduced at least by a year if the sanction had been forthcoming for the construction of a fourth machine at New Cossipore Station of the CESC when a request in this regard was made to the Government in the middle of 1960.

Anyway, sanction has now been granted and the company has taken up the work of putting up the new machine in right earnest. As regards the power crisis earlier in the year, it would seem that the CESC's calculations were based on the assumption that the DVC would fulfil its contractual obligation to supply 95 mw in 1960-61. But at no time during the period the supply exceeded 60 mw. Calculations were thus upset and the company decided to defer the already long overdue overhaul of the machines at New Cossipore in the hope of an early improvement in the DVC supply. The result was the inevitable breakdowns which occurred in quick succession. Thanks to the expeditious completion of the repairs all the machines are now back in commission. The condition of the company's generating plant is quite good now and in the words of Sir Harry "... the plant at New Cossipore (now completely repaired) and that at Mulajore are in first class condition and capable of many years of useful service, while the Southern Station, though old and not so efficient, has been well maintained and will continue to provide a satisfactory source of power especially during peak load periods."

Sales to all classes of consumers have increased during the Year ended 31 March 1961. The total energy sold amounted to 1955 million units showing an increase of 138 million units over the previous year. There has been a progressive rise in sales during the past 14 years and according to the company's forecast this expansion is expected to continue in coming years in view of the rapid

progress of industrialisation in the areas served by the CESC. The revenue from the sale of current rose by nearly £1 million to £9,800,000, and the gross revenue exceeded for the first time £10 million. After making provision for the usual reserves, a special appropriation amounting to £550,000 has been made for plant expansion. After paying the dividend on the preference stock and the dividend on equity stock at 7½ per cent (3½ per cent interim and 4 per cent final) a sum of £124,585 has been carried forward on net revenue account.

GOOD YEAR

New Life at Ballabgarh

The inauguration of the Rs 6 crore Goodyear tyre factory in Ballabgarh by the Vice-President Dr Radhakrishnan, has added a new dimension to the industrial

growth of the Punjab. While addressing the gathering at the inaugural ceremony Dr Radhakrishnan acclaimed the new factory at Ballabgarh as a symbol of Indo-American collaboration and stated that it would not only assist India to accelerate the pace of industrialisation but also pave the way for closer understanding between the two countries in future. Equipped with the most modern machinery, the plant has a daily production of 250 tyres working on two shifts and the programme for stepping up production to 750 tyres will be launched with the availability of adequate power supply and also employing three shifts. The factory's requirements of raw rubber will be met from the Goodyear plantations in the Far East and Kerala and synthetic rubber will be imported from the USA. The import of synthetic rubber will be completely stopped when the proposed synthetic plant at Bareilly goes into production.

In his welcome address Mr R. E. C. Carry, the Managing Direc-

tor of Goodyear (India) Limited spoke in glowing terms his appreciation of the Government of India's support and sympathy for the installation of the new factory. Mr Carry also hailed the Government's gesture as a true reflection of the Government policy in facilitating congenial condition for the foreign private investments in the country. The same opinion was voiced by the US trade mission which toured India recently and the participation of more and more industrialists from America in India's industrial development is anticipated. The new plant also testifies to the Goodyear company's faith in the future of the country.

METTUR INDUSTRIES

A Silver Jubilee

record is impressive enough and Beardsell with ample experience of the cloth trade in Madras have made a contribution to its success. But more important is the connection with UK textile interests and the Lees of Lancashire have always found a place on the Board. Indian investors have certainly done well out of participation in a modest Indo-British venture and if Mettur shares are hard to get at Rs 390 it is because of the reassuring record. A rights issue, a bonus issue and a special dividend from the reserves have only made all shareholders appreciative of Mettur. The initial dividends were small, but after the war, stepping up was quite easy. Renovation of plant raised output which has always found a quick sale owing to the consistent quality of the plain white goods that Mettur turns out for the millions.

No worry over stocks or power cuts has interfered with production of fast moving lines, preferred always for durability, not elegance. The reserves and the cash or the value of net block may quicken hopes of another bonus issue. But it is patent that unlike other companies, say Century, Mettur is not seeking to diversify activities and the conservatism that has nourished its financial strength is one reason for the reluctance to go on to other lines. It may be added that the quotation is marked by high stability and the 30 per cent dividend paid for 1960-61 was wholly in accord with general expectations. That Mettur affords a high yield marks it out among the blue chips quoted in Madras and Indian shareholders have already expressed conventional gratitude for a policy that has preserved high earning power. This is a year of jubilee for Mettur Chemical also, but that company looks to prospects, not to the past performance, and both dividend and premium are modest, because price control limits the earnings available for distribution. However, the main point is that Mettur is a growing industrial centre, because of the Cauvery's water and hydro-electric power.

WHOLESALE PRICES

Slight Advance

The official wholesale price index (with the year ended March 1953 as 100) advanced by 0.6 per cent to 124.3 during the week ended October 28, 1961 as compared with 124.1 (revised) for the previous week. The index was also higher by 0.3 per cent when compared with the corresponding week of the earlier month but was lower by 1.3 per cent than that of a year ago. The monthly average for October, 1961 worked out to 124.3 as against 124.6 (revised) for September, 1961 and 126.2 for October, 1960. Higher prices of Potatoes (+9%), Maize and Masur (+6%

each), Eggs and Gur (+5% each), Barely (+4%), Groundnut oil (+6%) and Wheat Mustard oil and Coconut oil (+1% each) raised the index for 'Food Articles' by 0.3 per cent to 121.7. The prices of Oranges (-20%), Onions (-8%), Cashewnuts, Milk and Black Pepper (-6% each), Jewar at Akola (-5%), Mung and Gingelly oil (-3% each), Ragi (-2%) and Rice, Meat and Chillies (-1% each), however, moved down.

The index for 'Tobacco' remained stationary at its previous weeks level of 96.0.

The index for the 'Fuel, Power, Light & Lubricants' group also stood unchanged at the earlier week's revised level of 122.0.

The index for 'Industrial Raw Materials' rose by 1.0 per cent to 135.8 as compare with 133.3 (revised) for the previous week due to an advance in the prices of Groundnuts (+8%), Linseed (+3%), raw Jute, Castorseed and Rapeseed (+2%) and Gingery seed and Manganese ore (+1% each), although the prices of raw Hemp (-7%), Cotton seed (-3%) and Tanning Materials (-2%) showed declines.

The index for 'Intermediate Products' receded by 0.8 per cent to 139.7 as a result of decline in the prices of Rayon yarn (-6%) and Cotton yarn (-1%). The prices of Linseed oil, Coir yarn, Zinc and Copper (+1% each), however moved up.

An increase in the prices of Jute Manufactures and Oil cakes (+1% each) was responsible for raising the index of 'Finished Products' by 0.2 per cent to 124.2 as against 123.9 (revised) for the previous week.

AT THE FAIR

Atomic Energy Pavilion

Our New Delhi Correspondent writes:

To those interested in the growth of the industrial potential of the country, a visit to the Atomic Energy and Defence pavilions at the Industries Fair will be a heartening experience, for the indisputable evidence they provide of the growth of technical skills of a very high order. The rapid strides that India has already taken to produce basic materials required for carrying out independently a full scale atomic energy programme are highlighted by the exhibits at the Atomic Energy pavilion. These include models of and explanatory panels dealing with India's three reactors—Apsara, Zerlina and Canada India Reactor—flow sheets of processes leading to the production of nuclear grade uranium and its fabrication into fuel elements, and various types of electronic equipment made by the Trombay establishment for working with radio-active materials.

The Atomic Minerals Division of the Department has located deposits of these minerals in different parts of the country, including the largest known deposit of monazite in the world containing 10 per cent thorium, in the Ranchi plateau.

"German Day"

International co-operation in India's industrial development was the dominant theme of the speeches made on the occasion of the German Day at the Industries Fair which was inaugurated last Saturday by Minister for Industry Manubhai Shah. Minister von Merkatz of the Federal Republic of Germany, who had specially come for the occasion, spoke with deep feeling of the growth of Indo-German friendship and recalled that India was the first country to declare in 1950 the end of the state of war with Germany. Both he and the German Ambassador stressed that the impressive display put up by German industries—nearly 80 German firms, including some of the most prominent, are represented at the Fair—was not intended to serve purely business interests. Nor was it intended as a display of national achievements nor to satisfy the desire for national prestige. The main interest said the Minister, was "to improve the existing contacts between the industrial circles of our two countries, and thereby to make a genuine contribution to Indo-German friendship in particular and international understanding in general. The German Ambassador said that the "significant participation of German industry" should be regarded as "proof of the importance the Federal Republic attaches to India and also give proof that India's role in world economy by its successful endeavour to build up its economy is well estimated."

NEWS IN BRIEF

THE Lignite Corporation has set up a clay washing plant in Neyveli at a cost of about Rs 14.5 crores for the utilisation of the raw white China clay found abundantly in the lignite mines. The plant is expected to be commissioned early next month.

The Bhilai Steel Works have so far exported 25,560 tons of billets to E. Pakistan, W. Pakistan and the UK. The foreign exchange earnings from the current export of billets are placed at about Re 1 crore. Another 3,800 tons of billets will shortly be exported to the United Kingdom. The export of billets to the UK is particularly heartening in view of the fact that the UK has all along been an exporter of billets. 433,450 tons of billets have been supplied to the indigenous rollers.

The National Coal Development Corporation has decided to develop two big mines, one in MP and the other in Bihar at a cost of about Rs 7.5 crores. Rs 2.5 crores will be invested in the Chalkari colliery in Bihar and Rs 5 crores in the Jamuna colliery in the MP. According to present calculations the annual output from these collieries will be of the order of 1.5 million tons and their available reserves are placed at 118.8 million tons.

During the quarter ended September, Indian Copper Corporation produced 2.34 million kgs of refined copper. Out of this, 2,032 kgs were released for internal consumption. The Corporation also produced 1.68 million kgs of rolled brass, 82,000 kgs of Y. M. circles and 425,000 kgs of rolled copper during the same quarter.

A agreement for the release of \$55 million (Rs 26.4 crores) from the PL 480 Funds earmarked for the Third Plan projects has been reached between the Government of India and the US Government. This grant will be allocated to three major development programmes and one exploration programme under the four different agreements concluded by the two Governments.

The US industrial production scaled a new peak in October after slumping a bit in September. The output of the US mines factories and utilities was 13.1 per cent higher in October than in 1957 (the base for its industrial production index). The October index figure was 113.1 compared to 111.5 in September and 112.9 in August. The production in September had been curtailed largely due to the stoppage of work in the auto-industry.

PERSONAL

Mr K. C. Reddy, the Union Minister for Commerce and Industry, left Bombay by air for Frankfurt on a ten day visit to Europe. Mr Reddy will be having discussions with the West German authorities on trade matters of mutual interest and then proceed to Geneva to lead the Indian Delegation to the GATT Conference.

Mr Russi Modi, Deputy Agent, Tata Steel, has been appointed as its Agent in Calcutta.

Mr J. C. Rayan till recently Chief Officer of the Agricultural Credit Department of the Reserve Bank of India has retired from his post. Mr T. J. Rao, Joint Chief-officer so far, has succeeded him.

Mr Daulatrao Jayramrao has been elected President of the Bombay State Cooperative Land Mortgage Bank at a meeting of the Board of Directors of the Bank held last week.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

LET me relate a true story. It has a certain Kafkaesque flavour which might amuse if it did not anger. A friend of mine bought years ago a piece of land in a village on the outskirts of Madras with a view eventually to building on it. As a Government official, he was living mostly outside Madras, but wherever he was, he was regularly remitting the nominal land revenue due on the plot. The acknowledgements of these were somewhat irregular and being a tidy soul, he took the matter up with the postal authorities, who cleared themselves after a not inconsiderable delay. Sometime in 1955, he found himself in Madras and thought it a good idea to meet the village official and put the records straight by getting an official acknowledgement of payments made. He met the worthy and after a lot of humming and having he looked up the records and told my friend that he was making a mistake; he had no land in the village as he claimed. Naturally, my friend did not find this very amusing. He showed him the most recent postal acknowledgement of the money order sent. The gentleman agreed that this certainly was odd and helpfully suggested seeing the Deputy-Tahsildar at the Headquarters. But my friend had no time for this. After this began a protracted attempt by friends to find out what really had happened. (Meantime the land revenue continued to be remitted and even fitfully acknowledged.) After a lot of running from pillar to post in offices situated at different places, it was finally discovered that the land had been acquired by Government for some hospital sometime in the early fifties.

But this is not the end of my story. It was discovered after inquiry that a sum of about two thousand rupees was accorded as compensation for this acquisition and even this amount has not yet been paid to him. The fact of this amount being due to him came to the knowledge of my friend over a year ago but despite repeated requests, official and unofficial, the amount still remains unpaid.

Several questions arise out of this, what may well be a typical case. Though a most elaborate procedure is prescribed for acquisition of land for public purposes solely for the purpose of giving the affected interests a chance to have a say in the matter, my friend not

only knew nothing about it. On the other hand, he had been led to believe, by the quiet appropriation of the land revenue paid, that he was still owning the piece of land. I dare say that some kind of constructive notice of the various proceedings was given by publication in the official gazette and at the site. But surely equity and good conscience require that in a matter like this, in which important rights of appeals have been provided for the citizen, and the exercise of which is circumscribed by stringent time limits, something more was required than a perfunctory compliance with the letter of the law. As it is, adjectival and procedural law is, by a convention that is becoming less and less defensible, weighted heavily in favour of Government. Incidents like these reduce the Constitution to a mockery. When the fourth amendment to the Constitution was debated in 1955, there was a lot of argument about the rights and wrongs of expropriation without compensation. Procedural vagaries of this sort render such arguments unreal.

Thus, a citizen has had his property taken away without so much as by your leave by a procedure that may be barely legal but hardly anything more. Secondly, he has been denied his right of appeal against not only the act of acquisition but also the quantum of compensation. Thirdly for several years moneys owing to him have remained unpaid. Fourthly, all these years he has been paying land revenue on land that has ceased to be his long ago. One wonders in what state village accounts are when year after year land revenue is being appropriated on lands on which no such revenue is due. Is there any kind of reconciliation being attempted between the land revenue owing and paid? Or is it that Government has no duty to refund taxes wrongly paid? And finally what is the little man to do when he is up against this kind of thing?

Sweden has long had—since 1809 in fact—a rather unique official called the "ombudsman", roughly translatable as the "grievance-man." Other countries have also caught up with their version of an official to whom the harassed citizen can turn for comfort and help. Thus, Finland has had an ombudsman since the early twenties and Denmark since 1955. Norway is to have one soon and among the Commonwealth coun-

tries, New Zealand has already introduced a bill for the creation of a Parliamentary Commissioner for Investigations. In England, "Justice", the British section of the International Commission of Jurists has recently produced a report on the subject by a Committee under the chairmanship of Sir John Whyatt, a former Chief Justice of Singapore. This report, described by Lord Shawcross as a "real character of the little man", has been published under the title "The Citizen and the Administration" (Stevens & Sons Price 10sh. 6d.) and has been widely discussed in the press. I have not had an occasion to read the book yet, but the discussion in the papers has shown that a document of great interest to us in India has made its appearance.

The Whyatt Committee has drawn largely on the Swedish model but has suggested important departures. The record of the Swedish institution, as summarised by the Economist in a recent issue, makes interesting reading. The Swedish ombudsman examined just over 1000 complaints against officials in 1959. Of these, as many as 803 were found to be either without foundation or to need no action. 247 resulted in admonitions and 5 in prosecutions of officials. This is certainly revealing of a high degree of administrative purity, though I am prepared to concede that when an Indian ombudsman comes into being, he will also be burdened with a large quantity of frivolous complaints. But there will be enough injustice for him to set right. The most interesting part of the Swedish practice is the wide publicity the activity of the ombudsman receives. In the words of the Whyatt Committee quoted by the Economist: "In practice the real sanction is the publicity which is given to the ombudsman's criticisms of the administration in his annual reports to Parliament but more especially in the daily press. Every day at 11 A.M. a representative of the Swedish Press Bureau calls at the ombudsman's office to examine the complaints and the decisions of the previous day. The files are laid out on a table for the pressman's inspection and contain all the inward and outward correspondence and any report relating to the particular complaint or decision—The pressman selects those cases which are of general interest and circulates the information to the national papers. . . . Almost every day, the pressman has something to report."

The Whyatt Committee has certain reservations about the suitability to England of this and other practices of the Swedish

ombudsman. It would, for example, confine the British ombudsman's reporting to an annual presentation of the facts of the "more important cases" he had investigated during the year and to special reports from time to time of cases of particular interest. Moreover, the reporting is to be done only to select committee of MPs. On the face of it, this seems to empty the office of the ombudsman much of its effectiveness. But then, with a sensationalist press, a continual exposure of the ombudsman's activity—the major part of which will, in a reasonably well-administered country, be "a waste of time" in the sense that he would be sifting baseless complaints—may well demoralise the permanent civil service. The other departure from Swedish (and Danish) practice suggested by the Committee is that for some time to come, complaints to the ombudsman should be routed through the MPs. (In Sweden or Denmark, you can send in your complaint even by the telephone. Curiously, this arrangement conceived as a gesture to the MPs, some of whom, it appears, resent the ombudsman as a usurper of their traditional function. But despite the concession made for these and other susceptibilities, the Whyatt Committee's report comes firmly on the side of creating the new office.

The logic of having a similar grievance-shooter in our country is even more obvious. Plannin has spawned officials by the hundred who have been invested with powers large and small and the cautionary tale I quoted at the beginning is by no means an exception. Even if we discount allegations of an irredeemably corrupt officialdom, the protection is worth having just to rescue the little man from the coils of red tape. As the Crichton Down case in England some years ago proved even a bureaucracy of sea-green incorruptibility, can be a mighty engine of oppression. When Auden was in India some years ago, he asked a rather interesting question: Why is it that I, W. H. Auden, B.A. (Oxon) and a comparatively big noise and Muniamma an unlettered villager both have an instinctive claustrophobic horror of a government building? The answer is that it is the seat of the worst form of power—the anonymous empire, as it has been called. A kindly functionary who can mitigate the terrors of this faceless power is an essential democratic appurtenance.

Tailpiece: One of the complaints to the Danish ombudsman was from a school-master who was teaching divinity. He complained that the authorities were needling him because he reserved the right to propagate agnosticism after school hours.

PROGRESS OF THE PLAN Rethinking on Priorities

ACTION taken to follow up the recommendations and suggestions contained in the Third Plan have been explained by spokesmen of the Planning Commission at a press conference last week. Apart from the thoroughly welcome indication that the Commission have not gone into hibernation after the Plan was approved by Parliament ten weeks ago, not much light has been thrown on the progress of implementation in different sectors, nor on the action taken to deal with the serious difficulties which had cropped up even as the Plan was hatching. The discussions of the Central Advisory Council of Industries towards the end of last month served to focus the attention of the public and of the Government on the serious shortages of Power and Transport which threaten the achievement of the targets set for Industry. It was however evident that the Planning Commission were not impressed by the forecasts of the demand for electric power that were put forward on that occasion. The official view seems to be that the Plan has taken into account all the reasonable requirements in providing for an increase of 7 million kw of generating capacity and that there is no reason to apprehend any shortage, provided all the projects included in the Plan are completed according to schedule. To ensure that there is no shortfall in the implementation of the power programme, a team of the Ministry of Irrigation and Power and the Planning Commission has visited all the States in order to review the progress of the projects and to assess their requirements of essential materials, such as, steel, cement etc.

While the assessment of the Planning Commission regarding the growth of demand for power by the end of the Third Plan may not be wide off the mark, constant review of the pattern of demand and adjustment of the phasing of projects in other sectors will still be necessary. The suggestion for slowing down of rural electrification, in order to provide more power for industry, will call for a radical change in the basic approach to Planning. The Planning Commission cannot be blamed if they are unable to accept the suggestion when it is clear that no

State Government could be expected to endorse it.

Dr Ramaswami Mudaliar had made a proposal at the last meeting of the Industries Advisory

Council that industries in the private sector may be allowed to establish power plants to meet their own requirements, either individually or on a cooperative basis. The Planning Commission seems to have resiled a little from the rigid position taken at the Council meeting. The clarification now available marks a distinct advance. It has been explained that the Planning Commission is not opposed, as a matter of policy, to the establishment of 'captive power plants' by industry, and that proposals would be con-

sidered on merits as they come in. It is now up to the industries concerned to take the hint and put up specific proposals, for the spokesman of the Planning Commission has also pointed out that, at present, they have no such proposals before them.

Availability of resources rather than ideological prejudices, it has been indicated, will determine the acceptability of the proposals. Nevertheless, a substantial increase of capacity for generation of electric power, through the initiative of individual industries,

appears rather remote. Firms having the advantage of foreign collaboration may be able to find the necessary foreign exchange for the import of equipment. In fact a prior assurance that industries could have their own power plants may speed up the finalisation of collaboration agreements. This was one of the points taken up for discussion at the recent meeting of the Business International in Delhi. Foreign investors are hardly likely to be attracted to enter into joint ventures in India, if their investment is likely to

remain infructuous because of delays or irregularities in the supply of power from the Government projects.

In view of the overall shortage of power, Government, it may be supposed, should have no objection on merits to permit industries which are able to make their own arrangements for power, and to find the necessary resources, to set up their plants. But the position, however, is not so simple. The capital cost of the plants in rupees or foreign currencies represents only a part of the total

resources required for the generation of power. Before any proposal by an industrial establishment to set up its own generating plant is approved, the Planning Commission will also have to take into account the possibility of making available the resources, in the way of fuel, required for running the plant. If the plant runs on oil, foreign exchange will have to be earmarked for the purpose; if on coal, arrangements will have to be made for transport of the additional quantities of coal for which provision has not been

made in the transport plan. The present state of affairs regarding the transport of coal does not encourage the hope that this will be practicable.

In fact the most disturbing feature of the implementation of the Plan is the apparent helplessness of the authorities concerned in the face of the transport crisis that has been developing over the last two years. To say the least, it is not very encouraging to be told, at this stage, that the Planning Commission has set up a Working group to draw up a fully

**Your Pan Am Ticket can offer
21 CITIES for ONE RETURN FARE
TO LONDON!**

Travelling on business? Going on home leave? Whatever your objective, a Pan Am ticket will enable you to *see* and *do* as many as 21 cities in 15 countries on your Clipper trip to London. One return fare does it all!

You can s-t-r-e-t-c-h your Pan Am ticket to allow a *full year* on route, or you can fly direct to London on Pan American's famed Boeing 707 Intercontinental, and *be* there on the *same day* you leave Calcutta!

No matter how you choose, you'll enjoy the matchless security of knowing you're aboard the world's most experienced jet airline, in the hands of men who have flown *over a million* and a half overseas jet passengers—far more than any other airline.

"President" first-class or "Rainbow" economy service available on four Pan Am big jets every week from Calcutta and Delhi. See your Travel Agent about a Clipper trip to Europe, or call Pan American in:

co-ordinated programme for the production of coal and its transport to the consuming centres; for this only serves to highlight the lack of co-ordination of the programme that has already been drawn up. The crisis in coal transport appears to be the result, not so much of failure of the different departments concerned with the implementation of the plan, as of the failure to draw up adequate programmes in time. The difficulties are aggravated by the number of agencies whose activities have to be co-ordinated. The individual Ministries whose estimates of requirements have not been accepted in full by the Planning Commission feel that they cannot be held to account for the final result so long as they have carried out the programme allotted to them.

The Coal Dumps Scheme about which a lot is heard is an example of inadequate planning. The Railways' plan to set up dumps has apparently been approved without making provision for roads or vehicles to carry the coal from the dumps to the consumers. There is nothing to show that the target for the production of commercial vehicles as indicated in the Draft Outline has been revised to include provision for the additional vehicles required for the coal dumps scheme which was thought up subsequently. The indications are that the implementation of the coal dumps scheme will be halting and the benefits of bulk transportation of coal will be not be realised in actual practice.

There is no doubt that the difficulties experienced as the Plan is being implemented are the result of overall shortage of resources, principally of foreign exchange, which leaves little elbow room for adjustment of the size of the sectoral plans. But the shortage of total resources need not stand in the way of readjustment of the order of priorities or the phasing of the projects where it is clearly necessary. The current shortages of power and coal which have made hay of production schedules support the case for stepping up the level of investment in the early stages of the Plan for the speedy implementation of power and transport programmes, even if such action involves holding up of some of the industrial programmes for a short period. The Industries Advisory Council was told that the Railways have been permitted to spend up to 40 per cent over the original allocations for this year, for implementation of their development plans ahead of schedule in the crucial sectors. The review of the progress of plan implementation undertaken by the Planning Commission will be meaningful if it is accompanied by similar rethinking, as regards other sectors, on the question of priorities of implementation if not allocation of total resources.

Markets

JUTE Heavy Rawjute Arrivals

THE jute markets displayed a quiet trend during the past week. Sentiment in the goods section was adversely affected by the continued absence of foreign enquiries and the measures initiated by the East India Jute and Hessian Exchange with a view to curb speculation. However, the decline in price levels was comparatively small in hessian presumably due to the prevailing belief that the US might evince increasing interest in the primary market in coming weeks. The figures relating to burlap consumption in US during October seem to be partly responsible for this belief. Burlap consumption in October has increased by one million yards to 95 million yards. The fact that October-end stocks at 206 million yards show a rise of 3 million yards over September-end stocks despite higher consumption is indicative of increased US buying interest.

Prices in the raw jute market eased during the past few days. Evidently the large arrivals of raw jute during last month were partly responsible for the depressed mood of the market. Arrivals of raw jute in Calcutta and mill stations in October amounted to 669,390 bales as compared to 529,100 bales in the previous month. Of the total Indian

jute amounted to 608,910 bales against 483,840 bales. Imports from Pakistan were 60,480 bales against 45,260 bales in September. Arrivals of raw jute so far this season, July to October, are substantially higher at 1,708,870 bales compared to 1,415,110 bales in the corresponding period last year. With such large arrivals it is not surprising that mills have not been very keen on buying their requirements in a hurry.

It is however to be noted that any further decline in raw jute prices is likely to revive the demand for measures to maintain raw jute prices at levels that are equitable to the cultivators. At its meeting in Calcutta last week the Central Supervisory Body for jute thought it should be possible to maintain raw jute prices at reasonable levels by merely regulating mill purchases as supply would not be much in excess of demand. It was further pointed out that the quantity of jute purchased by mills during the last two months would be about 700,000 bales of Indian jute each month. It will be evident that mill purchase atleast in the past two months had been stepped up considerably. It is unlikely that mills have reduced their offtake of raw jute during the current month. The possibility is that with their requirements increased as a result of the unsealing of a further 2½ per cent of looms from 13 November, mill buying has been further stepped up. It would appear therefore that the decline in raw

jute prices noticeable now has occurred despite continued good offtake by mills. Hence the present trend is the result of nervousness on the part of holders brought about by a temporary dull in mill purchase. This view seems to be borne out by the fact that during the past one or two days raw jute prices have tended to stabilise at the lower levels in response to sustained mill interest. However the LJMA has indicated that it will take suitable measures to ensure that raw jute prices do not decline any further.

The Forward Markets Commission has also initiated steps to arrest any further deterioration in raw jute prices. The Commission has, with immediate effect, fixed minimum prices for forward trading in raw jute, on both hedge contracts and transferable specific delivery contracts, for the respective periods for which forward trading has so far been permitted by the Commission. The levels at which these minimum prices have been fixed correspond to Rs 30 per maund for Assam bottoms delivered at Calcutta.

Gunny prices lost ground in the past week ended Thursday partly in sympathy with the raw jute market and partly due to lack of buying interest. Overseas interest was confined to small and immediate delivery shipments. At one time there were rumours about impending orders for a sizable quantity of hessian but it would appear that they had gone to Pakistan. The slight increase in US burlap consumption in October together with a rise in stocks in that country seemed to have renewed hopes of early revival of US interest in Indian hessian. That was responsible for the fact that the decline in hessian prices has not been as steep as in the heavy goods section. A feature of the past week's trading is that mills have been selling more freely than hitherto in forward positions.

In the raw jute section, mills showed little interest in the market in the first half of the week and as a consequence prices were daily marked down. With the revival of mill purchases from Monday onward the downtrend was checked.

TEA ★ Outlook

THERE is again a fall in the prices obtained at the export auction held this week. This is mainly due to the larger supplies. Both foreign and domestic consumers are inclined to take their requirements slowly in view of the prospects for a further decline in the price level. It is generally believed that supplies will be more than adequate during the current season.

The softer trend in prices has set in, in spite of a smaller crop being harvested in North-East India during October, when the output showed a decline of 2 million pounds as compared with the corresponding month of last year. Up to the end of October this year, however, North-Indian production has amounted to as much as 529.4 million pounds as against 461.6 million pounds in the corresponding period of 1960.

World supplies are now running about 88 million pounds ahead of the 1960 figure. Even allowing for the increased consumption, there is likely to be some imbalance between supply and demand. The immediate market prospects are not therefore, favourable to the producer. The trade even thinks that the prices for Plain teas may fall still further before any upward trend can be hoped for.

Production of tea in South India was estimated slightly higher at 15.4 million pounds in October as against 13.1 million pounds in October last year. In the first ten months of the current year, however, total output is lower at 139.7 million pounds as against 142.8 million pounds in the corresponding period of last year.

With 8.55 million pounds in October, production in Pakistan during the first ten months of the current year, has risen to 49.65 million pounds from 32.81 million pounds. East Africa has remained static at 69 million pounds to the end of August, while Indonesia has registered a nominal gain of one million pounds at 57.6 million pounds to the end of July.

With 41.73 million pounds in October, total exports of North-East Indian tea, in the first ten months of the current year, are higher at 265.24 million pounds as compared to 200.06 million pounds in the similar 1960 period. Tea supplies to the UK rose from 120.39 million in January/October 1960 to 162.7 million pounds in the period under review. Imports into the USA, however, showed a decline to 81.27 million pounds in the first nine months of the year from 90.23 million pounds in the corresponding period of 1960.

Although exports have so far been heavier than in 1960, the average prices are lower than the previous season's. This is mainly due to the fact that foreign countries not willing to pay higher prices in view of the adequate supplies in the world market. Considering that in 1960 supply and demand were more or less in balance, it is feared that the weight of supplies during the current year will result in further softening of the prices.

This may probably be the reason that the Tea Board has decided to suspend, until further orders, the existing system of allotment of quotas to tea estates for export of tea. Tea can now be exported without any quantitative limit during the financial year. Export of each consignment will, however, continue to be covered by an export licence issued by the Tea Board on payment of the prescribed fees. It would be recalled that the quota system for tea export was introduced in 1933.

Meanwhile in the Export Sale held in Calcutta, offerings were 72,889 packages. There was only a fair demand. Prices for most descriptions showed a considerable decline and there were a number of withdrawals. Plain Broken opened 20 nP easier; but declined further during the course of the sale and were often up to 40 nP easier towards the close. Clean Black Fannings were generally 10 to 20 nP easier; but poorer sorts were often 40 nP below last rates.

The few orthodox Assam descriptions with useful liquors were well

supported and were sometimes dearer; but most teas of the medium or poorer category were considerably easier. CTC teas were irregular; but the best were well supported. Secondary sorts and inferior CTC types were weak. Legg-cut teas met with a restricted enquiry and were 30 nP to 40 nP below last rates. Darjeeling and Tippy teas met with a fair enquiry, while Plain broken were 10 nP and sometimes 20 nP easier. More stylish Leaf grades were, however, once again a weak feature of the sale. Following rates were quoted:—Clean Plain Pekoe Rs 3.85 to Rs 4.00; Plain BP Rs 3.50 to Rs 3.70; Plain Fannings Rs 3.40 to Rs 3.80; Medium Assam CTC BP Rs 4.10 to Rs 4.50; Medium Assam CTC Fannings Rs 4.10 to Rs 4.50; Best Assam CTC BP Rs 4.80 to Rs 5.30 and Best Assam CTC Fannings Rs 4.90 to Rs 5.50.

In the Internal Sale, offerings consisted of 24,822 packages of Dusts and 276 packages of Leaf grades. There was a strong general demand for Dusts. CTC types with clean leaf appearance met with keen competition and advanced by 30 nP per kilo and sometimes more. Fibrous teas of this category were, however, irregular. Plain orthodox varieties opened 5 nP to 10 nP easier; but the demand for this category strengthened as the sale progressed. The better liquoring dusts were dearer throughout.

Non-wither legg-cut teas came to a good market although prices were irregular. The few Darjeeling dusts, on offer, were sold extremely well. Following rates were quoted:—Plain Orthodox Dust Rs 3.75 to Rs 4.00; Medium Assam Dust Rs 4.00 to Rs 4.20; Legg-cut Dust Rs 4.20 to Rs 4.80; Medium Assam CTC Dust Rs 5.50 to Rs 5.85 and Good Assam CTC Dust Rs 6.20 to Rs 6.50.

Stocks of tea in Calcutta warehouses were higher at 929,168 chests at the end of October as against 746,832 chests on the corresponding date of last year. Out of the total stocks at the end of last month, 560,407 chests were held in public warehouses and 368,761 chests in the private warehouses as compared to 438,666 chests and 308,186 chests respectively at the close of October last year. Teas afloat at the end of October were, however, lower at 9,763 chests as against 37,567 chests on the corresponding date of last year.

In the Cochin market, offerings were 412,000 kgs of tea Dusts. Against a fair demand, low medium and medium sorts were irregularly 10 nP to 20 nP a kilo easier. High-grown were irregular and lower. Coloury medium were slightly easier, while residuals were the weakest feature of the sale.

In London auction, offerings were 15,150 packages of Ceylon tea. There was good competition for the best liquoring teas at slightly higher prices with all other useful liquoring mediums and high-grown being fully firm. The lighter and plain liquoring teas were, however, generally 1d to 2d per pound easier. Low-grown were up to a half penny down. South Indian teas were again an irregular market with prices for the most part easier, especially for the lower quality descriptions. Offerings of South Indian teas amounted to 6,382 packages.

Tea stocks in London were slightly higher at 7.06 million kg at the end of October as against 68.4 million kg on the corresponding date of last year. While spot stocks increased from 54.8 million kg at the end of last month, afloat stocks declined from 13.6 million kg to 11.3 million kg.

COTTON ★ Futures Unnerved by Special Margins

BARRING the initial reaction, the imposition of special margins on the cotton hedge contracts by the Forward Markets Commission in Bombay and other places failed to arrest the rising trend in prices. Strangely enough, the margins drew fresh strength from the adoption of the restrictive measures by the FMC. After having slightly slipped to Rs 643 from Rs 646 in Tuesday's deals, the Jarilla March shot up further to a new high of Rs 658 per three quintals. Bulls, who have reported to have paid a large amount as margins, appear to be determined to raise prices as they consider the outlook for cotton bullish. But later, the contract reacted mildly to Rs 650.25 on bull liquidation presumably due to the apprehension of the introduction of fresh curbs on the market.

Close on the heels of the announcement of the margins by FMC, the Government of India has reimposed compulsory survey of Indian cotton during the current season and steps are being adopted for the appointment of regional committees in different areas for this purpose. The decision was taken in response to the representations made by the Cotton Advisory Board, the Indian Cotton Mills Federation and the East India Cotton Association. It may be noted that the Government had earlier removed the system of compulsory survey on the anticipation of favourable cotton supply position in the season, but largely owing to the unfavourable weather conditions, the position has since altered substantially. Despite the imposition of compulsory survey the cotton futures market ruled steady. The trade and growers have raised their protest at the reimposition of the survey and alleged that such a step would be detrimental to their interests. Naturally enough, speculation in market is rife about the steps which the Government might adopt to prevent the rigging up of prices. Imposition of further curbs on the trading is likely as the Government is bent upon to keep the prices well within the official ceiling.

An outstanding development in the spot market at Sewri, during the week under review, was the sudden improvement in the outlook for cotton exports chiefly due to the renewed demand for Bengal Deshi and other short staple varieties from Japan. It has been reported that that destination during the past few days have accounted for nearly 20,000 bales. The export quotation is reported to have gone up by 3d to 19d per lb cif Bombay. Vijay, Kalyan and Moglaj met with renewed demand. Keen

interest was also visible in Khandesh and Berar.

In the import section, the African section firmed up due to the scarcity of the goods. Spinner interest in higher grades of Sudanese cotton was on the whole well maintained. Meanwhile the trade is expecting the announcement of a fresh import quota by the Government of India.

Stocks of cloth with the mills are progressively accumulating as can be seen from the accompanying table:

	Total
May	268,500
June	317,300
July	339,300
August	367,300
September	394,800

Piecegoods

The Bombay piecegoods market during the past week appeared to be listless. The encouraging business transactions evinced during the "moorat" failed to produce any improvement in the market.

The turnover both in the export and domestic sectors was limited. The main factors for the dull trading were the unwillingness on the part of the merchants to dispose of their goods at the prevailing prices and the reluctance of purchasers to enter into any deals at this stage.

Demand from upcountry centres was meagre. Seasonal goods like coating were completely neglected. Stray enquiries for the next season's goods like shirtings, clothings, mulmuls and volles were reported during the week under review. Stringent money conditions was also partly responsible for the dull trading in the market.

Prices of many of the available varieties were left unaltered. Anxiety on the part of some mills to sell at least part of their stocks of dhoties and saris was evident but demand for these goods was negligible. Stray demand for power-loom goods was reported and it is expected that demand will improve further within the next few weeks.

Export front depicted a sorry spectacle. Bookings to overseas destinations including the UK were meagre. Singapore's fancy was focussed on bleached white drill, khaki and white satin jean drill. Australia evinced keen interest in grey cloth, terry towels, mattress and flannelettes. France's interest was for coarse sheetings while New Zealand turned toward denims, drills, sheetings and pillow cases.

★ Sugar Crisis

SUGAR prices in various markets have continued to display an easier tendency in the absence of demand. Mills are stated to be anxious sellers on the fear that the monthly quota will be released soon. Some of the factories in the Uttar Pradesh State are likely to start new production late by about a month.

In West Uttar Pradesh, the sulphitation sugar factories are finding it difficult to market their produce even at the former controlled price, while the carbonisation mills are quoting their produce at higher than the controlled rate. Stocks with the factories were put at a high figure

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications are invited on the basis of the Prospectus, copies whereof are available from the Company's Bankers, Underwriters and Brokers mentioned herein, and its Registered and Regional Offices.

A copy of the Prospectus together with the documents required to be attached thereto has been duly filed with the Registrar of Companies, Assam, for registration. Consent of the Central Government has been obtained to this issue. An Industrial Licence has been obtained from the Central Government for the establishment of this new industrial undertaking. An application has been made to the Calcutta Stock Exchange for permission to deal in and for quotations of the Shares of the Company.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON MONDAY THE 4TH DECEMBER 1961 AND WILL CLOSE ON SATURDAY THE 9TH DECEMBER 1961 OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON WEDNESDAY THE 6TH DECEMBER 1961.

INDIA CARBON LIMITED

(Incorporated on 12th June 1961 Under the Companies Act, 1956)

AUTHORISED CAPITAL:

50,000 Preference Shares of Rs. 100/- each	Rs. 50,00,000

REGISTERED OFFICE:

Saraniam, Gauhati (Assam).

REGIONAL OFFICE:

6, Old Post Office Street, Calcutta-1.

OBJECTS OF THE COMPANY:

The Company was incorporated on 12th day of June, 1961 for the purposes set out in the Memorandum of Association of the Company and in particular to establish a factory at Gauhati to Manufacture Calcined Petroleum Coke and Calcined Anthracite Coal with an initial annual capacity of 50,000 tons.

Calcined Petroleum Coke is one of the basic materials required for production of Aluminium and other Electro-Chemical and Electro-Metallurgical products, viz., Ferro-Alloy, Ferro-Manganese, Ferro-Silicon, Calcium, etc. In Aluminium its consumption is 0.43 ton for one ton of Aluminium ingot. At present, India is entirely dependent on imports and with increased industrial activity during the Third Five-Year Plan, the requirements of Calcined Petroleum Coke are estimated to be more than 70,000 tons. The Company is the first in India to undertake the production of Calcined Petroleum Coke and Calcined Anthracite Coal. The Company's first Plant at Gauhati would result in saving of foreign exchange to the extent of Rs. 1.20 crores to Rs. 1.50 crores annually and may earn some foreign exchange through export of Calcined Petroleum Coke after meeting the Home demand in full, which is estimated to be as follows:—

Industry.	Year 1962.	Production in tons	Consumption of Calcined Petroleum Coke Yearly:	Consumption of Calcined Anthracite Coal Yearly:
Aluminium		57,500 tons	24,750 tons app.	nil
Soderberg Paste for Ferro-Alloys, Ferro-Manganese, Ferro-Silicon.		13,000 tons	12,000 tons app. or 6,000	and 6,000 tons app.
Electric Pig-Iron and Calcium Carbide.				

FACTORY SITE:

The Factory will be located on a plot of land measuring about 25 acres adjacent to the Gauhati Refinery from where the bulk of raw material supplies would be received through existing railway line belonging to the Gauhati Refinery. The Plant site is near the Brahmaputra River which is navigable throughout the year and is next to the main Railway Line. Ample Water, Fuel Oil and cheap Electricity are readily available at site and have been arranged for. The land is sufficient to meet the needs of future expansion.

RAW MATERIALS:

50,000 tons of Raw Petroleum Coke would be available to the Company from Gauhati Refinery and Digboi Refinery with whom contracts for exclusive supplies of their entire production have been finalised. Anthracite Coal of required quality may be available in sufficient quantities from Jammu and Kashmir Mines.

The Plant is expected to go into production before the end of 1962.

TECHNICAL AND FINANCIAL COLLABORATION:

The Company has entered into an agreement with one of the largest Private Corporation of U.S.A., Messrs. Great Lakes Carbon Corporation, who are world's leaders in the production of Calcined Petroleum Coke and Calcined Anthracite Coal. The collaborators are participating in the Equity Capital of the Company to the extent of Rs. 16 lakhs. They will provide all the technical 'know-how' and 'show-how' for design and operation of the Plant and make available continued assistance and information to improve Product Quality, Operating Costs and Marketability. They will arrange for purchase of Plant and Equipment in U.S.A., make available experienced and qualified personnel for erection and initial operation of the Plant and train Indian personnel in their Plants in U.S.A. and assist in sale and export of the product.

PROFITABILITY:

The Directors are of the opinion that within the first year of the working of the Company's factory, the profit will be sufficient to ensure reasonable dividend return to the Shareholders of the Company.

CAPITAL OUTLAY:

The total estimated cost of the Project will be about Rs. 80,00,000 as under:—

(a) Land and Buildings and cost of engineering, erection of Plant and Machinery as per estimates made in 1961	Rs. 62,50,000
(b) Cost of "know-how" and technical assistance (by issue of Equity Shares)	Rs. 4,00,000
(c) Preliminary Expenses including underwriting commission, brokerage and other expenses of the issue	Rs. 1,15,000
(d) Promotional Expenses incurred for technical and commercial investigations and negotiations	Rs. 2,35,000
(e) Working Capital	Rs. 10,00,000
	Rs. 80,00,000

FINANCIAL RESOURCES:

1. SHARE CAPITAL:
10,000 Preference Shares of Rs. 100/- each Rs. 10,00,000
4,00,000 Equity Shares of Rs. 10/- each Rs. 40,00,000
2. Loan from I. C. I. C. I. Ltd., and/or EXIM Bank, Washington Rs. 30,00,000
| | Rs. 80,00,000 |

L.C. I. C. I. Ltd., Bombay have agreed in principle to grant Rs. 30 Lacs long-term loan in Indian Rupees and the EXIM Bank, Washington has also agreed in principle for the grant of loan of U.S. Dollars 4,78,000.

MINIMUM SUBSCRIPTIONS:

The Minimum Subscription in respect of Public Issue on which the Directors will proceed to allot shares is Rs. 11,80,000/-. The subscription of this amount is assured by reason of the underwriting referred to herein.

BROKERAGE AND COMMISSION:

Under-writing Commission at 2½% of the nominal value of the Equity Shares is payable to the Under-writers.

Brokerage at the rate of 1% of the face value of the shares will be paid on allotment in respect of Application Forms bearing the stamp of the Bank or the Member of the recognised Stock Exchange.

SPECIAL BENEFITS:

The Company will get the benefit of the Development Rebate and also exemption from tax under Section 15(c) of the Indian Income-Tax Act and the Shareholders will be entitled to exemption from Wealth Tax on their holdings for a period of 5 years under Section 5(1) (XX20) of Wealth Tax Act. For Corporate Bodies, it will attract provision of Section 56(a) of Indian Income-Tax Act.

INSPECTION OF DOCUMENTS:

Copies of Prospectus and necessary documents mentioned therein are open for inspection at the Registered Office of the Company or at its Regional Office at Calcutta during business hours.

APPLICATION FOR SHARES:

Application for Equity Shares must be for a minimum of 25 shares on multiples thereof.

Application Forms properly completed must be lodged together with the amount payable on Application before the closing date of the subscription list with the Bankers of the Company or their main branches at Ahmedabad, Bangalore, Baroda, Bombay, Delhi, Gauhati, Hyderabad, Kanpur, Madras, Shillong, and Surat.

PROSPECTUS AND APPLICATION FORMS:

Copies of the Prospectus and Application Forms may be obtained from the Registered Office of the Company, Saraniam, Gauhati, its Regional Office, 6, Old Post Office Street, Calcutta-1, its Bankers, Brokers, and Underwriters whose names are mentioned above.

of 11.91 lakh tons at the end of last month as against only 5.95 lakh tons in the corresponding period of last year. Production, during the same period, was estimated at 29.77 lakh tons as against 24.21 lakh tons in 1959-60.

The sugar industry in the Punjab is also reported to be facing a crisis due to over-production and accumulation of stocks. Another difficulty with which the industry is faced is the fixation of price of molasses at a very low rate of 68 nP per 100 kg; but the industry in the State has demanded that different rates should be fixed for the manufacture of potable liquor and power alcohol.

In view of the various difficulties facing the industry, the Government of India is understood to have agreed to regulate sugar releases in such a manner as not to precipitate a further fall in prices. The prices are to be maintained around the previous ex-factory controlled rate of Rs 37.85.

Mill interests have been greatly perturbed over the falling prices since the commodity was decontrolled. The present fall in prices and the blanket cut of 10 per cent from the production of last year without taking into consideration the individual mills' difficulties are, it is feared, will retard the growth of the industry and defeat the very purpose of the proposed measure.

Bihar mills particularly have represented to the Government against the decision for a cut in production and sought modification of the basis on which the proposed cut is to be effected. They have suggested that the cut should be on the basis of the average production over the period of five years or so and not of the last year's. In this connection, the Sugar Mills' Association has stated that a reduction in the excise duty, the creation of a buffer stock of about 500,000 tons and the maximisation of sugar exports, will be necessary to lighten the burden of huge stocks.

FOODGRAINS

In the Hapur Foodgrains market, prices ruled generally steady. Wheat recorded fractional gains at Rs 15.50 a maund for the average quality and up to Rs 17 for the farm produce. The market for Rice continued to remain depressed on account of increased inflow of the new crop. Gram, however, ruled steady and so also the market for Barley. Prices of Peas and Arhar improved fractionally, thanks to brisk demand for conversion into dal.

CHEMICALS & DYES

Trading conditions in the Bombay Dyes and Chemicals markets were slightly better during the week under report.

The Dyes market became active due to the flow of enquiries for Indigo, Vat Violet, Naphthol, etc. Although the prices of these items have not shown any material improvement it is felt that they might have gone down further, but for these enquiries. Whether this improvement will herald an upward move-

ment is difficult to say. At any rate, there is general belief that the prices are now being held in check.

Among Chemicals, Hydrosulphate of Soda was in request at higher levels, the French and Belgian varieties fetching Rs 2/5/6. The ICI quality was in demand up to Rs 2/8/6. On the other hand, the improvement in supply accounted for a decline in the prices of Caustic Soda solid. The ICI quality dropped to Rs 49 and the Indian variety to Rs 44.45.

COFFEE

The Coffee Board has released 21,99,600 kilograms for export sale to any destination on 28 November. This will be out of the 1960-61 crop and will consist of 3,57,600 kilograms of Arabica Cherry; 2,35,800 kilograms of Arabica Monsooned; 13,12,800 kilograms of Robusta Cherry and 2,93,400 kilograms of Robusta Monsooned variety.

The total sales of coffee for export from the 1960-61 crop as on 1 November 1961 amounted to 27,258 tonnes. For the first ten months of the year, the Coffee Board has released 28,308 tonnes of coffee for internal consumption. Receipts into the 1960-61 Pool amounted to 67,386 tonnes up to 31 October.

CLOVES

There has been a landslide in the prices of Cloves, which have declined by more than Rs 25 per 10 kg since 19 November. In the Bombay market, the rate has slumped by Rs 60 to Rs 315 per 10 kg within a period of 10 days. The fall has been equally steep in several centres in South India as well as in other parts of the country.

Sentiment has been mainly affected by the prospects of improved supply. It is also stated that the STC will import a fairly large volume of cloves by the middle of next month. According to a section of the trade, these imports may be worth about Rs 5 lakhs and the distribution work is likely to be entrusted to an association formed by traders. The fact, that cloves from Zanzibar can be had at attractive prices, gives credence to this belief. The current price of cloves in Zanzibar is placed at Rs 60 per 28 pounds.

NON-FERROUS METALS

Prices on the Bombay Metal Exchange showed a mixed trend.

Tin prices improved moderately, as reports from Singapore, London and New York indicated that international tin prices were bound to rise in the course of the next few months. Observers felt that the estimated world shortage of tin of about 20,000 tons this year was likely to be aggravated, as the year drew towards its close. Dealers think that the prospect of the tin price crossing the mark of £1000 a ton is much more easy now than ever before.

Even though business in Copper section was much below normal, the feeling was generally better due to better spot demand.

Conditions in the Zinc and Lead sections have remained quiet with prices displaying an easier tendency on the news that major producers of these metals in the USA and Canada have cut their selling prices and that dealers are apprehensive of the Russian metals flowing into the market.

Although the world output of coffee during the current production year is lower, only a narrow trading market can be expected for the immediate future. This forecast, issued by Messrs Volkart Brothers Company, New York, is based on the slight downward modification in quota allotments provided in the in the International Coffee Marketing Agreement which has been renewed for another year with 28 producing countries participating, but with the significant absence of active support from any major consuming nations.

Another important factor is the additional carryover stock, which will be added to the already huge pile by the end of June 1962. The forecast adds that this may account for the liquidatory selling by 'longs' who must have suffered considerable losses. But a relieving feature is the improvement in world imports during the past seven months of this year with the US and some of the West European countries making favourable showing.

PEPPER

Conditions in Pepper markets have continued to rule better due to encouraging overseas advices coupled with poor stocks. In the Cochin market, the rate for the ready position is quoted at Rs 357 per quintal and Rs 355 for the December delivery.

New crop arrivals in the terminal markets are reported to be meagre and the market sources in Cochin expect a further rise in prices. Exports are adopting a "wait and watch" attitude.

GOLD & SILVER

Prices on the Bombay Bullion Exchange showed a mixed trend. While the Silver section ruled comparatively steady, Gold prices displayed an easier tendency.

In the Silver section, sentiment was favourably influenced by an expectation of large activity with the onset of the busy season. Higher upcountry advices were also a contributory factor. Arrivals amounted to 16 bars as against an offtake of 10 bars. Silver ready (below .996) changed hands at Rs 208.20 to Rs 208.65.

'Gold prices, however, were depressed to fresh lower levels following the increased carryover charge and large stocks in the market, estimated at 1,50,000 tolas. Of this, 50,000 tolas were the floating stocks, while the rest was against the budia. Arrivals were 8,000 tolas as against an offtake of only 4,000 tolas. Gold ready changed hands at Rs 121.25 to Rs 121.45, while Sovereign remained rather quiet at Rs 98.25.

OILS & OILSEEDS

The Bombay markets for Oils and Oilseeds presented generally a steady front. In the Groundnut section, trading highlighted by brisk activity in the spot section. The tempo of the marketing of the new crop was stated to have slowed down in the major producing areas with the growers being inclined to hold on to their supplies in anticipation of higher prices in future. Crushers and vanaspathi manufacturers also lent sustained support to the market. Sentiment was mostly aided by the reports of continued firmness in mustard seed in North India. Groundnut bold ready was quoted at Rs 44.25 and Groundnut Oil at Rs 18.55.

Although the outlook for the export of castor oil continued to be bleak, buyers in the Castorseed section managed to keep prices at a higher level. This was mainly due to the fact that, with the ceiling of Rs 215 for groundnut futures acting as a deterrent, the speculative attention was diverted to this section. Castor ready was quoted at Rs 32.25 and Castor Oil, commercial quality, at Rs 13.60.

Linseed was in the limelight after a dull spell. Upcountry operators, especially those from North India, were reported to be aggressive buyers. The sustained strength in rapeseed and mustard seed in North India also provided a strong bullish factor to the market. Ready Linseed was quoted at Rs 42.50 and Linseed Oil at Rs 18.10.

In the Calcutta market, the price of Linseed has again risen to Rs 31.50 a maund from Rs 30 for ready delivery. Although crushers were keen for obtaining more supplies, sellers were not keen to transact any forward business at current prices. In sympathy with seeds, prices of oil and oilcake also increased. There was good local demand, which was difficult to satisfy by the existing low stocks.

HIDES & SKINS

There were good choice of quality of tanned cow hides in the market and the price was also of an advantageous nature for dealers who were prepared to pay a little higher on quality. Clearances of cowhides were also quicker and there were not much arrivals too. Foreign buyers kept quiet in the market which ruled very quiet. Demands for inferior fifts continued to be fair. For semi premium marks of 8/8½ lbs negotiations were put through on the basis of 58d, 53d and 45d. Inferior fifts ruled at the same prove throughout the week.

In tanned cow calf exporting demand was fairly high. Reimbursement of tanned hides from outskirts was next to nothing and prices continued steady. Tanned buff hides also did not change. In tanned sheep skins prices did not change. Business was also little. Only in market quality loose lots were traded at unchanged rates of last week. There were also poor interest in this commodity.

Company Reports

Panchura Estates Pay Less

Panchura Estates Limited has reported a decline in the net profit from Rs 1.15 lakhs to Rs 28,798 for the year ended 30 June 1961. In respect of allocations, the Depreciation amount is reduced to Rs 7,007 from Rs 7,765, while no provision has been made for Taxation as the directors have felt that the balance, remaining in the Reserve, will be sufficient to meet the taxation needs for the current year. The directors have recommended a first and final dividend of 26 per cent, less tax, as against as much as 40 per cent, less tax, paid for the preceding year.

The company harvested a total quantity of 9,756 bushels of dry Cherry only and this has been valued at Rs 15 per bushel. A total quantity of 1,55,974 pounds of green leaf was harvested and it was sold at a contract rate of 25 nP per pound.

Karamchand Thapar & Bros., (Coal Sales) Maintain Distribution

Karam Chand Thapar & Bros. (Coal Sales) Limited, is making a steady progress and accounts for the year ended 31 March, 1961 show a further improvement on those of the previous year.

Although sales of coal are shown lower at Rs 3.22 crores against Rs 4.54 crores, the net profit for the year, before providing for Depreciation and Taxation, amounts to Rs 15.70 lakhs as against Rs 12.84 lakhs for the preceding year.

Apart from providing Rs 2.50 lakhs for General Reserve, Taxation provision is raised to Rs 6.25 lakhs from Rs 6.00 lakhs and Depreciation to Rs 26,810 from Rs 18,759. The provision for Development Rebate Reserve is, however, lower at Rs 2,321 against Rs 4,175. The dividend is maintained at 24 per cent, subject to deduction of tax.

Expansion Progress of Tata Chemicals

ACCORDING to the circular issued to the shareholders by the Tata Chemicals Limited, the company's long range programme for the expansion of the production capacity in Soda Ash and other products made satisfactory progress during the year ended 30 June, 1961. Most of the remaining major units, planned for the Soda Ash Plant, were commissioned or completed during the year. Some time must, of course, elapse thereafter before the actual rate of output matches capacity, as the plant consisting, as it does, of many separate units and sub-units will have to be integrated into one smoothly operating whole before full production can be continuously sustained.

The company's expansion programme includes, in the final stages, a provision for doubling the capacity of the Chemical Caustic Soda plant. A final decision on this proposal will be taken after the recommendations of the Tariff Commission and Government's orders thereon are known. The company has made certain submissions to the Tariff Commission and, if they are accepted by the Commission and by the Government, the company will go ahead with the expansion of this plant.

This expansion, along with a number of other schemes the company has undertaken during the same period, will, from its inception in 1957-58, eventually cost Rs 6 crores, of which Rs 4.15 crores have been spent up to 30 June 1961. This expenditure was financed to the extent of Rs 1.86 crores from borrowings; Rs 1.17 crores from internal resources including allocations to depreciation and Rs 1.12 crores from additional share capital.

Subject to the consent of the Controller of

Capital Issues being obtained and subject to the conditions, if any, prescribed by him, the company has decided to issue further 5,03,920 ordinary shares of Rs 10 each of the existing 24,80,000 unissued ordinary shares of Rs 10 each. These shares will be issued and offered, at par or such premium as the Controller of Capital Issues may prescribe, to the holder of the existing ordinary shares in the ratio, as circumstances permit, of one further ordinary share to 5 existing shares, with option to such holders to apply for additional further ordinary shares. The full amount of Rs 10 per share (plus such premium, if any, as may be prescribed) shall be payable to the company on application for such further ordinary shares as aforesaid.

The further ordinary shares shall not confer on the holders thereof the right to any dividend declared at or prior to the annual general meeting to be held in the year 1961; but shall entitle such holders to all dividends declared after such meeting in proportion to the capital for the time being paid up on such shares and the period during which such capital shall have been paid up and such further ordinary shares shall, for all other purposes, rank pari passu with the existing ordinary shares of the company.

Meanwhile, the company's sales for the year have shown a rise to Rs 4.16 crores against Rs 3.41 crores, while the net profit, before providing for Depreciation, amounts to Rs 57 lakhs as against Rs 48.16 lakhs for the preceding year. In respect of allocations, the Depreciation amount is raised to Rs 23 lakhs from Rs 20.75 lakhs and Development Rebate Reserve to Rs 17.40 lakhs from Rs 14.35 lakhs. No provision is made for Taxation against Rs 1.05 lakhs previously. The dividend on the Ordinary shares is raised by 1 per cent to 6½ per cent, subject to tax.

For the Investor

INVESTMENT GOSSIP Late Spurt in Prices

Conditions in the stock market continue to be steady this week also although the uptrend has neither been uniform nor widespread as it had been last week. There were indications even toward last week-end that a considerable section of operators was inclined to book their profit. Evidently, the view was gaining support that the uptrend had already been taken too far and the time had come for a correction. Trading in the earlier part of the current week continued to reflect a cautious attitude and the trend has been irregular with prices moving both ways, though within narrow margin. However, pivotal shares in the forward list and selected shares all along the list and especially in the miscellaneous section have continued to find favour with operators and investors. Indications are that even if prices do not move up further, they may not move down either.

Perhaps a major influence in the market at the present juncture is the absence of excessive selling pressure even at the bulges. Most of the shares bought seem to have been held tightly by holders despite the sizable appreciation in price. The resultant scarcity of floating shares has been a potent factor in the accentuation of the bull phase. Bullish fervour has been kept up by the various favourable developments such as the improved prospects of foreign aid and foreign collaboration especially after the recent meeting between the Prime Minister and Mr. Kennedy, the prospects of a rapid development of industries during the Third Plan period, etc. More tangible incentives have been provided by good corporate news. Even so bulls appeared to be chary of extending commitments till mid-week due presumably to the still lurking apprehension about fresh curb measures. Although it is arguable that there has been no excessive speculation as the interest has been quite widespread and not confined to the speculative shares, the tendency during the first half of this week is to await indications from the Committee of the Presidents of Stock Exchanges which is scheduled to hold its meeting early in December. It is naturally presumed that the behaviour of the stock market since its last meeting will come for review at its coming meeting. The news about further Chinese incursion into Indian territory proved to be only a temporary influence. Perhaps the main reason why bulls have been emboldened to push ahead after mid-week is the lack of force behind bear operations.

INVESTMENT SPECIAL India Carbon

INDIA Carbon Limited will open its subscription list for its proposed equity issue on 4 December. The list will close on 9 December or earlier, but not before 6 December 1961.

The authorised capital of the company is Rs 1.50 crores, divided into 10,00,000 equity shares of Rs 10 each and 50,000 preference shares of Rs 100 each. The issued capital is Rs 5 lakhs and it is proposed to raise a further capital of Rs 45 lakhs, made up of 3,50,000 equity shares of Rs 10 each and 10,000—9.3 per cent (taxable) redeemable cumulative preference shares of Rs 100 each.

The public issue now proposed will be for Rs 11.80 lakhs. A sum of Rs 2.50 per share is payable on the equity capital on application and another Rs 2.50 on allotment. The balance is payable in calls. On the Preference shares, a sum of Rs 50 per share is payable on application and the balance on call.

The Government of Assam has agreed to take up the entire preference issue, while the promoters, directors and their friends will subscribe for an equity capital of Rs 7.17 lakhs. Great Lakes Corporation, New York, the technical collaborators of the company, will be allotted Rs 16 lakhs of equity capital. A further equity capital of Rs 3,000 will be issued to non-residents.

The company will establish a factory at Gauhati for the manufacture of calcined petroleum coke and calcined anthracite coal, with an annual capacity of 50,000 tons. The plant is expected to go into production before the end of November 1962.

The total capital outlay of the project is Rs 80 lakhs of which Rs 50 lakhs will be provided by share capital and Rs 30 lakhs by loan from ICICI and/or Expot-Import Bank, Washington.

Glaxo Laboratories

Glaxo Laboratories (India), Private Limited, Bombay, has been accorded permission to the issue of further capital of Rs 1 crore in 10,00,000 equity shares of Rs 10 each, to be issued as bonus shares on capitalisation of reserves.

Gammon India

Gammon India (Private), Limited, Bombay, incorporated in 1922 and engaged in business as Civil Engineers and Contractors, has been given consent to the issue of 2,50,000 equity shares of Rs 10 each as fully paid-up bonus shares on capitalisation of its reserves to the extent of

Rs 25 lakhs. The company's existing paid-up capital is Rs 30 lakhs. It will issue five bonus shares to the holders of six shares.

New Commercial Mills

New Commercial Mills Company Limited, Ahmedabad, has been granted consent to the issue of bonus capital of Rs 14,31,750 divided into 5,772 equity shares of Rs 250 each. The bonus shares will be issued to the existing equity shareholders of the company in the ratio of one bonus share for every five equity shares held, on capitalisation of the Share Premium Account of the company.

Devashola Tea

The Devashola (Nilgiri) Tea Estates Company Limited, Madras, has been granted consent to issue equity bonus shares of the value of Rs 240,000 on capitalisation of the company's reserves to a like extent. The bonus shares will be issued in proportion of 2 bonus shares for every 5 shares held by the existing shareholders.

Seshasayee Industries

Seshasayee Industries Limited, Madras, has been granted consent to issue further capital of Rs 40 lakhs in the form of equity shares of Rs 10 each for cash, at par. The proceeds of the issue will be utilised for the manufacture of HT & LT porcelain insulators, transformer bushings, etc.

Simco Meters

Simco Meters Limited, Madras, has been granted consent to issue capital of Rs 35 lakhs consisting of equity shares, worth Rs 22 lakhs and 9 per cent preference shares of Rs 3 lakhs for cash, at par. The proceeds will be utilised for the manufacture of house service electricity meters, in collaboration with Denis Ferranti Meters Limited, UK.

Southern Brick Works

Southern Brick Works (Private), Limited, Madras, has been granted consent to issue equity capital of Rs 25 lakhs for cash, at par, privately. The proceeds of the issue will be utilised for starting a factory in Madras for the manufacture of bricks and tiles.

Perfect Pottery Company

Asian Cables

It would be recalled that the directors of the Asian Cables Corporation Limited had decided, on 10 March, to make a right issue in the rates of two for every share held to the existing shareholders. Thereafter, the Government would seem to have advised the company to issue part of the capital to the public and part to the existing shareholders and thus the right issue scheme was modified from 2:1 to 1:1. When this was communicated to the shareholders, there was a hue and cry from the existing shareholders and they made a representation to the company to stick to the original decision.

Now, it appears that the company has been allowed by the Government to offer the shares, in the first instance, to the existing shareholders as they have a right to subscribe to the fresh issue to be made by the company. The company will now proceed with the issue of Rs 1.55

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE

Notice is hereby given that an extra-ordinary general meeting of the Company will be held at the Registered Office at 12, Mission Row, Calcutta-1, on Thursday, the 21st December, 1961 at 11-00 a.m. to consider and, if thought fit to pass, with or without modification, the following resolution:

"Resolved that the consent of the Company be and is hereby accorded to the Board of Directors borrowing and continuing to borrow moneys for and on behalf of the Company to the extent of Rs. 3 crores outstanding at any one time in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose, and that such borrowing shall be exclusive of temporary loans obtained, or from time to time to be obtained, from the Company's Bankers in the ordinary course of business."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy (who need not be a member of the Company) to attend and, on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED.
L. K. SEN CHOWDHRY,
Actg. Secretary,
Managing Agents.

Registered Office:
12, Mission Row,
Calcutta-1.

Dated, 23rd November, 1961.

Note:—An Explanatory Statement is annexed to the convening notice issued to the members of the Company.

crores consisting of 1,55,000 ordinary shares of Rs 100 each. Of this, 55,000 shares will be offered to Phelps Dodge Enfield International Corporation, which is collaborating with the company in its project No. 2 for the manufacture of high tension power cables and magnet wires. The balance of one lakh new equity shares will be offered to the existing shareholders in the ratio of two for every share held.

INVESTMENT NOTES Premier Automobiles

According to the latest reports issued by Premier Automobiles Limited, the progress of the company's manufacturing activity has been encouraging during the year ended 30 June 1961. There has been an increase in the proportion of parts and components of vehicles made in the company's Works. The company's application to the Government for the expansion programme is still under consideration. The company has also applied to the Controller of Capital Issues for permission to issue a further equity capital of Rs 2 crores to meet the rupee expenditure for the purchase of land, buildings, etc., for the sheet metal project.

Mandhya National Paper

The directors of the Mandhya National Paper Mills Limited have, in their latest report, stated that the construction of the factory building is practically complete and the entire plant and machinery, except for a small consignment, has been received at the site. The erection of the machinery will be over very shortly. The present production capacity is 35 tons per day and it has been decided to double the capacity. The Industrial Finance Corporation of India has sanctioned a loan of Rs 1.20 crores for the expansion project. In addition, a further sum of Rs 80 lakhs will be raised in the form of equity shares, for which the sanction of the Controller of Capital Issues has been received. The company may be in a position to issue the capital to the existing shareholders early next year and the directors expect the mills to go into production by the middle of 1963.

Firestone Tyre

The Firestone Tyre & Rubber Company, Akron, Ohio, USA, has announced plans to produce tyres in Osaka, Japan, in co-operation with the Ohtsu Rubber Industry Company Limited. An agreement, signed by the two companies, gives Firestone its fourth facility for the production of tyres and tubes in the South Pacific and Eastern Hemisphere. Under the agreement, Firestone will provide technical information and assistance and share its knowledge of new developments with Ohtsu. Firestone will set up a sales organisation to market its products in Japan and will export if the demand warrants. Ohtsu expects to expand considerably in the next several years to take advantage of the growing Japanese tyre market, which is the largest in Asia with 1,900,000 cars, trucks and buses registered in 1961. The agree-

ment with Ohtsu, which has been approved by the Japanese Government, gives Firestone 17 tyre factories outside of the United States.

INVESTMENT BRIEFS

At a meeting held towards the end of last week, the directors of the Emerald Valley Estates Limited decided to sell the Emerald Valley Estates for consideration of Rs 9 lakhs.

Consolidated Coffee has maintained the dividend at 20 per cent (taxable) for the year ended 30 June, 1961.

Coffee Lands & Industries Limited have doubled the dividend to 12 per cent, taxable, for the same year.

Kirloskar Electric has raised the dividend from 9 to 11 per cent, taxable, for the year ended 30 June 1961.

Jeyapore Sugar has raised the dividend from 8 to 15 per cent, taxable, for the year ended 30 June 1961.

K.C.P. has maintained the dividend at 15 per cent, taxable, for the year ended 30 June 1961.

BALANCE-SHEET BRIEFS

J. K. Steel Limited has produced excellent working results for the year ended 30 June 1961. Sales have jumped to Rs 154 lakhs from Rs 126 lakhs, while the gross profit has gone up to Rs 33.60 lakhs from Rs 27.29 lakhs in the preceding year. The dividend is, however, maintained at 20 per cent, subject to tax.

The Hindustan Sugar Mills Limited has reported a rise in the net profit from Rs 45.58 lakhs to Rs 63.58 lakhs for the year ended 30 June, 1961. The directors have maintained the distribution at Rs 29 per share (Rs 20 being the dividend and Rs 9 being the bonus), less tax.

Tycoon Tea has reported a decline in the net profit from Rs 5.30 lakhs to Rs 2.47 lakhs for 1960. The dividend is reduced from 30 per cent to 10 per cent, subject to tax.

STOCK EXCHANGES

Rally after Initial Dip

Watch-Dog Writes:

ALTHOUGH stock markets have generally buffered a sharp setback early in the week due to renewal profit-taking, there has been a remarkable recovery from Wednesday onward due to the emergence of bull support coupled with occasional short-covering. There is, however, a general disposition to move cautiously following an anxiety over the renewed Chinese incursion into Indian territory.

After recording further losses from the week-end levels due to renewed offerings, the Calcutta Stock

Exchange showed an impressive rally towards the close.

Price movements on the Bombay Stock Exchange were rather erratic due to alternate bouts of buying and selling.

Enquiries were well spread on the Madras Stock Exchange though the price trends were not uniform.

CALCUTTA

Friday Evening.

THE local stock market started the week on a quiet note. As the market appeared to be in a slightly over-bought position, the reactionary trend in prices, noticed towards the week-end, gathered further momentum due to renewed profit-taking sales. But, the recession in prices was not found to be a sign of a bear phase as was interpreted by certain sections. The general impression was that, unless a substantial corrective movement took place, the technical position of the market would become vulnerable.

Moreover, it was feared that the imposition of automatic margins on budia turnover, decided to be adopted by the Presidents of the various Stock Exchanges at their last meeting in Bombay, would be given concrete form in the forthcoming meeting, to be held in Calcutta in the first week of December. Above all, the absence of any fresh incentive and the news of fresh incursion by the Chinese into the Indian territory gave cause for some anxiety. At the same time, the absence of any bear pressure even at the decline and the persistent support lent to a few selected shares helped the market to keep its morale intact.

It should, however, be said that the market turned again active on Wednesday — the settlement day — when the moderate nature of the carry-forward charges seemed to have emboldened the bulls to tighten their grip on the market. Moreover, good corporate reports together with the expectation of a substantial foreign investment helped the market to consolidate previous gains and advance further. As a matter of fact, not even a shade of doubt in respect of confidence in market being shaken deepened in any mind and the initial shake-out had done a lot of good.

Gilt-edged securities were listless and prices displayed an easier tendency due to the absence of institutional buying. Considering that the busy season had started, banks did not show interest. Even State Loans found sellers at the quoted rates and, in some instances, even lower. 1 per cent 1966 Conversion Loan, after touching a new low of Rs 70.85, improved towards the close to Rs 70.95.

There was a revival of interest in Bank shares on the belief that their profits had improved during the current year. Punjab National changed hands at Rs 20.25 and United Commercial at Rs 91.75.

Although select shares continued to attract attention, the Jute section, in general, encountered heavy profit-taking at the recent high levels. Apart from the fact that recent upswing in values had

25 November 1961

rather steep there was a complete absence of support from investors. There was, therefore, a predominance of sellers. Howrah were on offer at Rs 21.50 against Rs 22.06; Ganges at Rs 12.91 against Rs 13.25; Birlas at Rs 28.69 against Rs 28.87 and New Central at Rs 17.62 against Rs 18.31. Nuddea, however, met with good support up to Rs 60 from Rs 57.75 and so also Megna upto Rs 14.00 from Rs 12.19.

Coal shares were rather sluggish and whatever little support there was, was confined to only a few selected shares. The lack of confidence stemmed largely from the various difficulties facing the industry. It was even thought that there was not much scope of improvement in the transport situation during the next few months. New Beerboom met with good enquiry up to Rs 22.87 from Rs 22.62; Western Bengal up to Rs 9.69 from Rs 9.37 and Central up to Rs 12.44 from Rs 12.31. Equitable turned rather quiet at Rs 30 against Rs 30.12 with Burrakur moving irregularly between Rs 18.50 and Rs 19, to close finally at Rs 18.87.

The tea section was devoid of interest and dealings were very few. Apart from a general fear of a further decline in auction prices, it was believed that supplies would be more than adequate during the current season. The only two bright features were Brooke Bond changing hands up to Rs 17.12 from Rs 16.44 and Hasimara up to Rs 31.12 from Rs 30.56. Gohpur met with some enquiry up to Rs 13.06 from Rs 12.81 and so also Dhekhakhat up to Rs 21.19 from Rs 21.06. Tezpur were, however, on offer at Rs 17 to Rs 17.25 against Rs 17.62.

Apart from Dyer Meakin which continued to have sustained support up to Rs 43.37 from Rs 42 following the company's proposal to diversify its activities and raise further capital, Sugar shares were generally dull. Raza/Buland, Carew, Cawnpore and Ramnagar were well maintained at last levels.

Textile shares shared the general trend of the market. Jay Shree were fancied and had buyers upto Rs 18.31 from Rs 18.12 following the company's decision to issue right shares, at par, in the proportion of one for two held. Dunbar closed better at Rs 33.75 against Rs 32.87, while Kesoram moved between Rs 31.31 and Rs 31.87 and J. K. Rayon between Rs 20.19 and Rs 20.44. The demand for Elgins seemed to have subsided and the scrip was marked back to Rs 22.56 from Rs 23. Cawnpore also moved down to Rs 9.37 from Rs 9.81 on profit-taking.

In the week's dealings, the lead to the sharp recovery in prices was mainly given by the speculative issues under the lead of Indian Irons which, in turn, were subjected to settlement considerations till Wednesday. Against the previous week-end closing of Rs 25.66, Indian Irons opened higher at Rs 25.80 and advanced further to Rs 25.92. After reacting at one time to Rs 25.54 on settlement considerations, the scrip showed a sharp recovery to Rs 26.28 before finishing the week at Rs 26.18. TEXMACO, however, firmed up to Rs 20.40 from Rs 20.10 in view of the short position, while Guest, Keen, Williams changed hands at Rs 40.87

to Rs 41.75; J. K. Steel at Rs 22.50 to Rs 23.12; Jessop at Rs 20.87 to Rs 21.12; Britannia at Rs 13.50 to Rs 13.75; Braithwaite at Rs 39.87 to Rs 40.25; Binani Metal at Rs 12.44 to Rs 12.81 and Jay Engineering at Rs 27.69 to Rs 27.87.

After ruling initially weak, Miscellaneous issues displayed a firmer tendency towards the close, as will be clear from the following price trends of a few selected shares:—

	High	Low	Closing
	Week's	Week's	Week's
	RsnP	RsnP	RsnP

MADRAS

22 November

There was select buying in textiles, chemicals and industrial in today's market. This proved mainly to be selective investment support to some of the scrips that were on the front generally this week. Banks were steady and public utilities too. Sugars and Plantations were weak.

Government Securities: The Madras Loan 4½% 1972 was quoted at Rs 98.25. 4% Madras Government 1971 was available at Rs 98.52. Andhra Government's 4½% 1972 Loan was quoted at Rs 98.00. 4½% 1970 Andhra Loan was quoted at Rs 98.25.

Bank: The Indian Bank continued unchanged at Rs 181.00 and the Rs 80 paid share was sold at a lower rate of Rs 152.00. Pandyan improved by half a rupee to Rs 27.50. Punjab National Bank was at Rs 20.40.

Electrics: Ellore declined to Rs 20.25. Kumbakonam was at Rs 10.78. Salem-Erode was available at Rs 14.00. Tinnivelly-Tuticorin was sold at Rs 11.75 and West Coast was at Rs 14.00.

Sugars & Breweries: Cauvery declined to Rs 123.00. Deccan was at Rs 12.22. E.I.D. was sold at Rs 37.50. India Sugar was at Rs 10.80 and K.C.P. remained at Rs 16.25. Kirlampudi declined by a rupee at Rs 77.00.

Plantings: Amaparai was lower at Rs 3.40 and Balmadies was offered at Rs 14.20. Blue Mountain did not change at Rs 2.90. Cochin Malabar was at Rs 7.40. Coffee Lands declined by half a rupee at Rs 17.00 and Cons. coffee was available at Rs 21.40, registering a decline of forty nP. Kil Kotagiri was at Rs 5.08, Kumer-gode gained ten nP. at Rs 4.60. Midland was available at Rs 11.20. Mysore Coffee xd was at Rs 5.25. Ouchterlony was lower at Rs 5.25. Peermade was at Rs 22.75 and Peninsular was marked at Rs 22.00. Periakaramalai was at Rs 3.75. Sangameswar xd was was at Rs 1.82. T.R. & T. was at Rs 10.85. Twyford was quoted at Rs 11.85. United Nilgiri was at Rs 23.50. Waterfall gained a little at Rs 2.87.

Textiles: Anglo-French declined to Rs 144.00. Buckingham was at Rs 259.00 increasing by three rupees and Bangalore Woollen was unchanged at Rs 246.00. Coimbatore Spinning was sold at Rs 65.00. Kothari gained a little at Rs 13.75. Lakshmi was unchanged at Rs 169.00. Madura was at Rs 42.25, and Loyal was at Rs 51.00. Radhakrishna declined to Rs 40.00. Rajalakshmi was at Rs 109.00. South India Viscose was at Rs 188.00. Travancore Rayon was quoted at Rs 45.75.

Miscellaneous: Aluminium Industries was available at Rs 23.70. Ashok Leyland was marked at Rs 9.30. Dalmia Cement declined to Rs 12.45. FAC.Ts. was quoted at Rs 9.12. Forest Industries was better at Rs 2.65. India Cement was at Rs 6.61. I. S. Rolling was at Rs 11.90. Madras Rubber improved to Rs 22.25. Mettur Chemical was quoted at Rs 15.20 and Mysore Cement was at Rs 8.65. Mysore Paper was at Rs 15.05. Panyam Cement gained two points to be marked at Rs 105.00. Seshasayee Paper was five nP. higher at Rs 8.55. Southern Structurals was at Rs 11.25. Travancore Ogale improved to Rs 6.20 and Tube Investments moved to Rs 289.00.

SCIENCE NEWS

Hill Streams for Power Generation

One of the significant developments in the field of power generation in 1960-61 is the harnessing of hill streams fed by glaciers, producing enough electric power for groups of villages in remote areas in the country.

During the Second Plan a micro or baby hydel set was installed at Chaila, in Himachal Pradesh, on an experimental basis, for harnessing the waters of the Giriganga, about 18 miles from Simla. This power house has been meeting the demands for electricity from the nearby villages, and a second set is being installed in the Bharmour valley in Chamba district and another is being planned for Chini in 1961-62. In the Third Plan period, it is proposed to install 13 micro sets in Himachal Pradesh.

The head required for these micro sets is low—a maximum of 25 ft. with adequate water flow. An attempt is also being made to use timber planks for penstocks instead of cement and steel and assemble and erect them at site.

Improved Malted Milk Powder

An improved process for the production of nutritive and palatable malted milk powder and allied products has been developed at the Central Food Technological Research Institute in Mysore. The new process makes use of solid powder, such as malt extract and milk powder, as base material instead of fresh milk and malt liquor. Production is thus facilitated since the amount of water to be evaporated for preparing the product is reduced.

The base materials required in the new process are ragi, jawar, barley, wheat and milk which are easily available in the country. The total capital outlay for a 300-ton annual capacity plant is estimated at about Rs 6.85 lakhs.

In recent years a considerable market has been developed for malt products in India. The demand has been largely met from imports. In 1957 the total value of malted milk and malted milk powder imported was about Rs 95 lakhs. Since then, imports have been drastically reduced to about 5 to 10 per cent.

THE INDIAN IRON & STEEL CO., LTD.

NOTICE.

LOST—Allotment Letter No. 0/10709 for 100 Ordinary Shares (Rights) in the abovementioned Company issued in the name of Shri Nitve Chand Auddy having been reported as lost, an application for the issue of the relative Certificate for the 100 ordinary shares Nos. 5429659/758 registered in his name without production of the said Allotment Letter has been received from the shareholder. AVB CEMENT-MAKING MACHINERY equal to the World's Best

TREMENDOUS BOOST TO CEMENT AND ALLIED INDUSTRIES

ACC-VICKERS-BABCOCK LTD., the powerful new engineering enterprise, will 'tailor-make' for industry the very latest cement-making machinery.

The AVB Plant at Durgapur is in the final stages of construction. It is equipped with some of the world's most up-to-date machine tools and staffed by highly skilled technicians and experienced design engineers.

AVB are now ready to accept orders for cement-making machinery which will be 'tailor-made' to specific requirements.

Now in a position to make a major contribution to the cement industry, AVB will help the nation achieve the Third Five Year Plan target of 15,000,000 tons of cement every year.

AVB will be able to draw on the vast technical knowledge and rich experience of three famous engineering concerns:

THE ASSOCIATED CEMENT COMPANIES LTD.
INDIA'S PIONEERS IN THE MANUFACTURE OF CEMENT AND CEMENT-MAKING MACHINERY AND

VICKERS LTD., London, WORLD-RENOUNDED MANUFACTURERS OF HEAVY EQUIPMENT FOR MANY LEADING INDUSTRIES

IN CLOSE COLLABORATION WITH
FULLER COMPANY, CATASAUQUA, PA., U.S.A.,
THE WORLD-FAMOUS MANUFACTURERS OF FULLER COOLERS AND OTHER FULLER EQUIPMENT WHO HAVE UNRIVALLED ENGINEERING AND RESEARCH FACILITIES

...a powerful partnership for progress

ACC-VICKERS-BABCOCK LTD.
15, Queen's Road Estate, Bombay 1
Calcutta Office: Ilaco House, 1 & 3 Brabourne Road, Calcutta 1

Problems of Industrial Finance

IN Madras during the last week, there has been detailed thought given to the subject of finding sources of finance for the industry in the private sector. The occasion was provided by the annual conference of the State Finance Corporations. Besides the discussion during the Conference, which began with a forthright and constructive address from the Governor of the Reserve Bank, special studies on particular aspects of the subject prepared by the Reserve Bank of India were also made available. But these were deferred for further consideration at a later date. Though no particular decision of immediate interest can be said to have been taken it is clear that in the next few months we shall have a fuller picture of where the money is to come from for financing the private sector's tasks in the Plan and how institutional agencies are going to help in this regard.

The Third Plan envisages fixed capital expenditure of industry in the private sector at Rs 1350 crores. As against this, estimate of funds available is only Rs 1250 crores showing a shortfall of Rs 100 crores. The fact that during the Second Plan, according to the latest estimates, a sum of Rs 850 crores has been mobilised for investment in the private sector against an anticipated Rs 620 crores may engender some confidence about the Third Plan expectations. But it will be poor planning, to assume automatically that the sources of funds will be as plentiful during the Third Plan as they proved to be during the Second. For instance, considering the selective character of public support for new issues noticeable for some time, realisation from new issues may not net in the full quota of Rs 200 crores. Increased cost of production and the spiralling of wages may make the hopes of getting Rs 600 crores from internal resources of the corporate sector somewhat difficult of realisation. Foreign credits and assistance from the Central and State Governments may not exceed the Rs 300 crores and Rs 20 crores already taken credit for. If these were to happen, the overall shortage may go up to much beyond the Rs 100 crores anticipated by the Third Plan. This will mean that the private sector has to lean heavily on institutional agencies for its requirements of finance for fixed capital requirements.

Increasing reliance on institutional agencies and commercial banks will become unavoidable in the coming years. The extent to which commercial banks can be expected to play the role of provider of finance for fixed capital expenditure and medium term requirements of industry is one that does not lend itself to an easy estimate. The implications of this proposal from the point of view of the banks have been discussed in World of Finance this week. Banks have in the last few years, been obliged to play willy-nilly the role of a medium term lender and the ability of the banks to do this has been enhanced by the activities of the Refinance Corporation lately. A great deal more will have to be done before banks can overtly commit themselves to the tasks and responsibilities of a long-term and medium term lender. The reported suggestion, of the

Reserve Bank study that commercial banks, at least the major ones, should go in a much bigger way for long term and medium term lending, will have to be examined in far greater detail before anyone can assume that banks can be made a suitable source of long term finance for the industry.

This leaves the other institutional agencies like ICICI, and Industrial Finance Corporation and the State Finance Corporations. These are institutions that have come into being to meet the special needs and requirements of planned development. They are comparatively new, as financing institutions go, and they may be said to be feeling their way. Mr H. V. R. Iengar, expressed himself as disappointed with the achievements of the State Finance Corporations. It is difficult to deny that the nature of their assistance and the terms and conditions on which it is to be extended are conceived on somewhat rigid lines by the State Finance Corporations. This has led to the denial of assistance to many enterprises and entrepreneurs worthy of such assistance and even where the assistance has been promised, disbursements have been somewhat niggardly. For instance, figures for 13 State Finance Corporations available show that loans sanctioned since inception upto end of 1960-61 add up to slightly over 30 crores of rupees. Of these disbursements amount only to slightly over Rs 17.5 crores. The industry-wise distribution of loans also shows no particular enterprise and among the various State Finance Corporations, performance varies.

If the State Finance Corporations are to make headway and play a significant role in the financing of the private sector, they will have to conceive their tasks on much broader lines than they have done hitherto. Reports aver that the Reserve Bank does not think that there can be any objection to the State Finance Corporations taking an interest in equity shares. The fact that the Governor of the Reserve Bank feels that the State Finance Corporations are not enterprising enough would seem to lend plausibility to the hope that one way in which the State Finance Corporations may utilise even their somewhat meagre resources—now comparatively idle, from the point of view of the private sector—in more effective ways than has been the case so far.

The needs of the smaller units in industry stand on a somewhat different footing and the Reserve Bank has produced a report on the subject also. Many of the ideas in the report have been canvassed for some time and the principal practical step so far taken has been the State Bank's pilot scheme to co-ordinate the activities of various agencies offering credit to the smaller industrialists. Term lending assumes importance in these cases as it does in the case of the larger units in the industry. The need for liberalisation of procedures, of security requirements, for the quick processing of applications and for humanising and personalising the way the relationship between the lender and the borrower cannot be over-emphasised.

THE ISAAC HOLDENS MILL AT JAGATDAL, WEST BENGAL

LIGHTING BY PHILIPS

Isaac Holdens (India) Limited, India's commission woolcombers, are a Company of the Duncan Group and their mill, the only one of its kind in India, covers 114,000 sq. ft. . . . twice the size of a hockey field. Licenced to produce 10 million lbs. of wool-tops per year, Holdens' workers are engaged in the wool sorting, scouring, carding and combing—operations that require a high and even level of illumination.

Naturally, the mill management specified Philips lighting.

Philips' modern, streamlined fittings provide the right amount of

illumination and thereby contribute towards the overall efficiency and high productivity achieved in this mill.

Philips' exclusive lighting—consisting of lamps, fittings and accessories—ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of research and development aimed to meet the ever-growing demand for better lighting. And hand-in-hand with Philips' unrivalled quality comes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

quality lighting for ultimate economy

PHILIPS INDIA LIMITED

CAUSTIC SODA

Problem of Costs

WHILE Government have accepted the main recommendation of the Tariff Commission, to continue protection to the caustic soda industry for a further period of three years at existing rates, the ancillary recommendations are more relevant to the programme for the further development of the industry and the measures that have to be taken for its economic working. Under prevailing conditions of restricted imports, the necessity for protection may not be very obvious. The Commission however are of the view that continued protection is necessary both for providing the necessary stimulus for the further development of the industry as well as for maintaining continuous check on its performance. Since 1955, when protection was first granted, the industry has made significant progress and it is felt that withdrawal of protection at this stage when largescale developments are envisaged would be decidedly harmful to its progress.

During the period 1948 to 1959, the installed capacity of the industry increased from 12,000 tons to 98,940 tons. There has been further additions of considerable order to installed capacity during the last year of the Second Plan. The progress both in respect of installation of additional capacity and production has been more marked during the Second Plan period than during the First Plan period. While between 1950 and 1955, installed capacity increased by 23,100 tons, the increase during the Second Plan period was of the order of 75,700 tons. Along with the increase in production, there has also been a noticeable improvement in the quality of production which has come as a sequel to the attention drawn to that aspect by the Tariff Commission in one of its earlier reports on the industry.

There are now eighteen units engaged in the manufacture of caustic soda, of which eleven manufacture for sale and the remaining seven, mostly paper and rayon mills, make caustic soda mainly for own use. The annual installed capacity of these eighteen units has been assessed at 143,900 tonnes, of which the achievable capacity is estimated at 122,400 tons. Production has increased from 58,311 tons in 1958 to 97,400 tons in 1960 and was running at the annual rate of 116,000 tonnes during the first half of the current year. Along with the increase in the total output, production of rayon grade caustic soda has also increased from 24 per cent of the total to 42 per cent in the first half of 1961.

On the other hand, demand for caustic soda has been increasing at a faster rate than production and, after allowing for expansion during the Plan period, there is likely to be a large gap between supplies and requirements. The Planning Commission has fixed the target for capacity at 400,000 tons and the production target at 340,000 tons. The Tariff Commission estimate that demand will increase from 201,000 tonnes in 1961 to 391,000 tonnes by 1964. Including additional capacity licensed and expected to be established by that date, the maximum production likely to be realised is estimated at 254,000 tons leaving a gap of 65,000 tons. Such conditions of persistent shortage which ensure that all the caustic soda produced is easily sold hardly offer any incentive for cost reduction. Protection in such circumstances may be considered an aggravating interference. But the logic of protection has to be sought in other considerations. But this does not mean that the duty for seeking all possible reductions

in cost should be shirked. Indeed protection itself casts this duty on the producers and the industry would not have deserved the help extended if it did not consciously try to seek every mode of reducing cost. This is particularly incumbent on it because caustic soda, as is well known, is a basic raw material and enters in the production of a variety of articles of great importance to industry. Many of these industries are of crucial importance from the point of view of exports. And the most important single reason for the comparative failure of our export drive is the fact that our exports tend to get priced out of every market abroad by competitors who are able to quote a much lower price for their products.

While recommending continuance of protection, the Tariff Commission have also noted that the weighted average of the fair ex-works price of Indian units is more than double the landed cost of the imported product. The landed cost is not always a fair basis of comparison, for the domestic prices of the exporting countries are usually higher than their export prices. Even so, the fair ex-works price of caustic soda in India, it has been noted is 36 per cent higher than the domestic selling price in Britain. The question of reduction of costs is, therefore, of urgent importance, if the large number of industries which use caustic soda in their manufacturing processes are to make a good showing in export markets. Among these industries may be mentioned, soap, textiles, paper, rayon, vanaspati, aluminium and a numerous group of miscellaneous industries such as rare earths, dyestuffs and intermediates, petroleum products, drugs and pharmaceuticals, plastic raw materials and other organic chemicals.

The recommendations of the Tariff Commission are of value in that they help to focus attention on the areas where effective action can be taken to reduce the cost of this basic industrial material, if that aspect is kept in view in drawing up the programme for the future development of the industry. Analysis of the cost of production shows that electric power accounts for 42 per cent of the total cost, conversion charges for 24 per cent and raw materials for 13 per cent. The costs are also related to the process of manufacture adopted, chemical or electrolytic, and the success achieved in utilising chlorine which is a by-product of the latter process. Since conversion charges as at present amount to 24 per cent on the average, the units should be enabled, and encouraged, to achieve the economies of scale, in order to bring down this element of the total cost. A comparison of the figures of individual factories shows that the unit with the largest daily output has also the lowest cost of production, even though at present it is obliged to waste practically its entire output of chlorine. The Commission have, therefore, recommended that while licensing additional capacity, existing units should be encouraged to expand their capacity to an economic size and in licensing new units due attention should be paid to the importance of setting up plants of large size in areas advantageously situated with regard to power and the principal raw material, common salt.

The 18 units of the industry now in operation are dispersed in eleven States and the daily rated capacity ranges from two to eighty tonnes. When the programmes of expansion for which capacity has been licenced are fully implemented, there will be 27 caustic soda units dispersed in thirteen States. But twenty of these will still have a capacity of less than 50 tonnes per day and only three will have a capacity of more than 75 tonnes

which is considered necessary for economic working.

Since the Tariff Commission last reported, considerable progress has been made in the utilisation of chlorine and this is not at present a serious problem. But, with the programme of expansion envisaged, it is estimated there would be an excess of 57,000 tonnes of chlorine per year. The alternative of switching on to chemical process is not advisable for the reasons that the cost of production is much greater and in this process the entire chlorine is wasted in the form of calcium for which there is only very limited use. In choosing between the two processes, the Tariff Commission has emphasised that reduction of the cost of caustic soda should, in the present stage of development, receive priority over complete utilisation of chlorine.

The contribution that State Electricity Boards can make to building up this basic industry is highlighted by the fact that 4,000 kwh of electricity are required to produce one tonne of caustic soda. A difference of one naya paise per unit in the electricity tariff will mean a difference of Rs 40 per tonne in the cost of caustic soda. It is a matter of regret that only a few of the State Governments are prepared to supply power at concessional rates and none of them has agreed to maintain current rates throughout the Third Plan period. The Railway administration could also be more responsive to the requirements of the industry by providing adequate number of tank wagons for movement of caustic soda lye and by adjusting freight rates so that freight will not be an inhibiting factor on the growth of demand for liquid caustic soda. In view of the current shortage of coal or other fuel, and steel used as packing material, use of caustic soda in liquid form should be encouraged as it leads to saving in both these items.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

BANKS

A New Source of Medium-term Loans?

AS long ago as in 1956 this journal had drawn attention to the emergence of a new form of lending by banks. From that year it has been found that short-term accommodation, which is the kind of finance that the banking system has traditionally extended, was being put to medium-term use by constituents. Ostensibly taken for financing stocks, loans were in many instances "invested" in the acquisition of new plant and equipment; and the bank accounts of such constituents tended to show some rigidity at the upper level of their overdrafts. Industrial ventures were thus compelled to utilise bank loans because, at the time and until the middle of 1958 or so, the capital market was very hard indeed to tap. Then there are also the cases where existing companies preferred to finance their expansion through bank loans rather than by approaching the shareholder with a rights issue. The convenience of borrowing (against stocks) from banks and utilising the proceeds in the purchase of plant and equipment has been such that it is likely that a not inconsiderable sum, of the total of Advances of the banking system, is now tied up in the form of medium-term loans. It is logical and necessary that banks should now seriously consider medium-term finance as part of their operations, instead of permitting its existence camouflaged as short-term accommodation.

We find that a working group in the Reserve Bank of India has recently submitted a report, and one of the recommendations contained therein is to the effect that major banks should branch out into medium-term financing. The financial requirements of the private sector, during the Third Plan, are placed at Rs 1,350 crores; available resources still leave a short-fall of about Rs 100 crores, and the institutional agencies (banks, etc.) are supposed to come up with around Rs 130 crores. While bank credit will expand in the quinquennium by a larger amount, it is doubtful if that portion of it attributable to the needs of fixed investment can, on the present basis, be covered. For, the simple fact of the matter is that the rate of growth of Deposits lags behind the rate of expansion of Advances; and banks are already working at a high ratio of Advances to Deposits.

It is therefore not enough for banks to embark upon medium-term lending; what needs to be done is a greatly expanded working of the Refinance Corporation. The major banks can merely act as the experts who will vet the proposals for medium-term loans; they do not have the resources to extend such assistance. Hence it will be the Refinance Corporation (whose resources can surely be enlarged with another tranche of allocation from Public Law 480 counterpart funds) which will be the lending authority, with major banks acting as agents.

There is need for another kind of agency to reduce the pressure upon the banking system, in order that banks can be enabled to cater to the enlarged demand for the financing of trade, commerce and stocks. (A brief reference to such an agency was made in last week's article). Where industrial output, temporarily, outpaces demand, banks in recent years (as in the case of cotton textiles, cement and sugar) have been called upon considerably to step up Advances to the affected industries. More often than not the imbalance gets corrected in a short (relatively, that is: but the period may last as long as two years) while; and in the interim bank finance is locked up. Similarly in the case of industries dependent for some of the components upon imports, the foreign exchange shortage sometimes involves a sharp increase in "semi-manufactured" articles that have to be financed. Such situations again reduce

the quantum of resources available with banks for their normal and traditional short-term, working capital loans.

It will be seen that both agencies are refinancing in character. And this is the crux of the problem facing banks. The demand that will be thrown up for merely the strictly "banking" sort of accommodation is of itself going to be enormous enough. Unless there is a sharp and unexpected (at the moment) improvement in the growth of new Deposits, banks will just not have the resources for taking on new kinds of services, essential though in the interests of the Third Plan they may be. Insurance of bank Deposits may conceivably help in quickening the pace of Deposit accrual; a more energetic branch expansion programme may, it is barely possible,

mobilise resources from areas which presently are outside the sphere of banking operations; and the vast governmental disbursements on plan projects could, it may be presumed, provide a fillip to Deposit growth. But, a good proportion of plan disbursements find their way back to Government in the form of taxes, and another fair amount gets lost in the "unmonetised" areas; and Government's greatly reduced use of deficit financing should also temper the rate of growth of Deposits. In such circumstances it seems to us that over the next five years, and until the banking habit has spread a good deal more, resources with banks will be inadequate. Therefore, it will be necessary for banks to be able to "refinance" their Advances which have taken on a medium-term character as well as to "discount" such of their loans which, owing to surplus production, have become stagnant; and the alternative is for banks to have massive resort to central banking assistance. To consider now how bank (major or not) could extend medium-term loans is to put the cart before the horse; what comes earlier and is much more urgent is to find out how banks' resources can be augmented for taking on such new and necessary tasks.

It is relevant to point out that, at the annual meeting of the Indian Council of Economic Affairs, attention was focussed this week on credit for private sector enterprises. The President of the ICEA, Mr K. N. Mookerjee, stated bluntly that the rate of growth of bank Deposits would be far too meagre as compared with his assessment of a doubling of the demand for bank credit by the end of the Third Plan. Shortage of banking finance is what he apprehends, and he has called upon the Reserve Bank and other authorities to take "timely" steps. The address of Mr K. P. Mathrani, Chairman of the Industrial Finance Corporation, appeared to be in the nature of a rebuttal, since he took it upon himself to give a detailed exposition of the assistance that public sector agencies had extended to private sector enterprises. His estimate is that, of Rs 945 crores of investment in organised industries during the first decade of planning, the contribution from public sector entities (various Financial Corporations, the Central and State Governments, the State Bank and the Life Insurance Corporation) works out to something like Rs 224 crores; and to this could be added another Rs 40 crores in the form of underwriting and guarantees of deferred payments. In short, as much as 28 per cent of investment in private sector industries had been found from public sector agencies.

In another context, however, Mr Mathrani has come to the heart of the matter. Various types of institutions now exist in the country for assisting industry: but then, he added, in this vast country, the demand for funds is "almost insatiable." As we have argued, it is not that India does not possess financial institutions; merely that we have need of one more, and that the activities of another need to be stepped up.

BANK RETURNS

Fair-sized Rise in Deposit Resources

Further easing of busy season pressure is disclosed in the returns of the Reserve Bank for 24 November. Active Note circulation has declined by Rs 1775 crores to Rs 1,902.67

crores—but the expansion in currency in the present busy season still exceeds the relative figures for the corresponding periods of the last two busy seasons. Rupee Coin has returned from circulation for Rs 1.48 crores—but the outflow in the first four weeks of the current busy season is larger than in the previous two years. Currency has been contracted against Rupee Securities for Rs 20 crores, reducing the latter portfolio to Rs 1,588.84 crores, by transfer to the Banking Department. Foreign Securities are unchanged at Rs 116.86 crores, and the Reserve Bank's cash in the till has moved down slightly by Rs 0.77 crore to be placed at Rs 15.44 crores.

Inter-governmental transactions are suggested in the return for the Banking Department. The Centre's balances have been marked down by Rs 13.11 crores to just a shade less than the traditional minimum of Rs 50 crores—Rs 49.39 crores. The States have obviously received payment, since their Deposits are higher by Rs 11.21 crores at Rs 22.34 crores despite a fall of Rs 7.14 crores to Rs 66.46 crores. The Centre, moreover, has had a maturing liability in respect of Treasury Bills purchased and discounted, which are lower by about Rs 16 crores at Rs 33.99 crores. Hence, recourse has been had to deficit financing. The magnitude of created money probably comprises (a) Rs 5 crores, being the increase in Investments (Rs 25 crores to Rs 205.19 crores) surplus to the transfer from the Issue Department and (b) Rs 12 crores representing State Bank purchase of gilt-edged during the week.

A further reduction in the pressure upon banks is indicated in the rise of Rs 1.29 crores to Rs 84.12 crores in Reserve Balances of member banks as also in the decline of Rs 2.27 crores to Rs 129.58 crores in the Reserve Bank's Other Loans and Advances. That the latter is largely on account of reduction in indebtedness of Scheduled Banks is confirmed by the fall of some Rs 2 crores to Rs 0.25 crore in the Reserve Bank's advances against usance bills. In as much as the State Bank's return for the same week shows a drop of over Rs 3½ crores in cash in hand and with Reserve Bank, it is also possible that the rise in Reserve Balances of other Scheduled Banks is larger—almost Rs 5 crores.

There is a mysterious rise of Rs 6 crores to Rs 35.69 crores in Other Liabilities, but this is offset by as unusual an increase of Rs 6 crores in Other Assets. Balances Held Abroad have improved by Rs 4.40 crores to Rs 28.98 crores, and foreign assets held by the Reserve Bank now exceed Rs 145 crores.

Easing of the strain on banks is also suggested in the return of the State Bank for 24 November. Deposit resources are better by Rs 1.40 crores at Rs 529.02 crores. The total of Advances has contracted by Rs 1.29 crores

to Rs 240.90 crores. So much so, the State Bank, by running down its cash balances by Rs 4.05 crores to Rs 25.51 crores and "liquefying" Other Assets to the extent of Rs 4 crores, has been able to add Rs 12 crores to its gilt-edged portfolio, raising it to Rs 262.14 crores. However, as a result, borrowings have gone up nominally by just under half a crore of rupees to Rs 0.70 crore.

The return of the Scheduled Banks for 17 November shows how the banks were able greatly to reduce debt to the Reserve Bank. On the one hand, the growth in net Deposits is of commendably large size—Rs 10.23 crores, of which only a little over Rs 1 crore is on account of the State Bank. Net Demand Deposits are higher by Rs 1.72 crores at Rs 821.77 crores, and the rise in net Time Deposits is a sharp one of Rs 8.51 crores to Rs 1,126.28 crores. On the other hand, the total of Advances has dipped by Rs 8.58 crores to Rs 1,236.73 crores. Both these have enabled borrowings from the Reserve Bank to be reduced by Rs 21.22 crores to Rs 4.92 crores. Indebtedness to the State Bank has also gone down by Rs 0.78 crore to Rs 17.57 crores. Disinvestment in gilt-edged adds up to nearly Rs 3.79 crores, the portfolio now being shown at Rs 607.16 crores. As an end result, cash balances have been marked up by Rs 6.10 crores to Rs 188.97 crores.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 28 November 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs. 99.375 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 4 December 1961. Successful tenderers should make payment on Friday, 8 December 1961. Other conditions are as usual.

During the week ended 24 November 1961 Government of India Treasury Bills for Rs 25,61,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 29 November to 2 December 1961 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government thinks it necessary.

91 days' Intermediate Treasury Bills sold from 22 November to 25 December 1961 amounted to Rs 22,00,000.

No Sterling Devaluation

By Paul Einzig

ONCE more there is some talk about the possibility of a sterling devaluation, or alternatively of a decision to adopt the system of floating exchanges. In view of the recent influx of foreign funds to London and of the revival of pessimism about the dollar, these rumours are somewhat unexpected. They are based on the assumption that the Government's efforts to defer wage increases have broken down. This assumption is likely to prove well-founded to a very large degree, even though the Government is justified in claiming that to some extent at any rate the wage increase process has been slowed down. If, as seems probable, the next two months will witness the granting of some wage concessions, the prospects of an improvement in the balance of payments position will be none too favourable. It is no wonder, therefore, if many people have begun to speculate what the next move will be. Most people consider it unlikely that the authorities will revert to the orthodox device of Bank rate increase and intensified credit squeeze. In order to make an impression the Bank rate would have to be raised this time even higher than 7 per cent, and most people are thoroughly tired of seeing interest rates in Britain at a level which was formally considered to be appropriate to backward countries only.

Even allowing for this consideration, a devaluation of sterling in the foreseeable future may safely be ruled out. The Government is known to be dead against it, mainly because it assumes that Britain's trade rivals would follow this example and this would nullify any beneficial effect on the balance of payments. Nor is the Government responsive to the idea of a floating pound. That idea had strong advocates ever since the Conservative Government assumed office ten years ago. It has recently been disclosed that in 1952 there was a strong possibility of its adoption, and that it was to the credit of Lord Cherwell that Sir Winston Churchill decided eventually against it. The trouble is that sterling could only safely be floated out of strength not out of weakness, yet when sterling is strong there is no inducement to make such a change. The Government fully appreciates the advantages of stability within the support points and in existing circumstances it is not likely to abandon it for the dubious advantages of a fluctuating sterling.

Possibly official circles build some hopes from the effect of tariff cuts on British costs and prices, though from this point of view it is necessary to differentiate between effects in the short run and effects in the long run. The additional tariff cuts to members of the European Free Trade Association in 1962 cannot be expected to produce any dramatic effects, and we are still a long way from any conceivable agreement with the Common Market as a result of which more effective cuts would be made. Possibly the negotiations in Geneva may lead to some reciprocal tariff cuts within the framework of GATT. All this is liable to aggravate rather than relieve the balance of payments position in 1962, whatever its effect may be later. There remains the possibility of borrowing abroad both on Government and on private account and of selling out foreign investment or admitting foreign participations in British industry. It would be a most unsatisfactory temporary solution, as temporary relief would be secured at the cost of increased difficulties in the future.

Notes

RURAL WORKS Catalyst of Development

The rural works programme, which is a distinct feature of the Third Plan, is intended to serve the dual purpose of increased agricultural production and additional employment in the rural areas. The Plan envisages that additional employment created under this programme in the last year of the programme will be of the order of 2.5 million. It was proposed to provide employment for 100,000 persons at the end of 1961-62, to between 400,000 and 500,000 at the end of 1962-63, to one million persons at the end of 1963-64 and to reach the target of 2.5 million by the end of the last year of the Plan. The realisation of the full employment potential, it goes without saying, will depend on the efficiency with which programmes are executed and on how the experience gained in the actual working of the pilot projects is put to practical use. During the last slack season 32 pilot projects were in operation and it has been estimated that these have provided employment, so far, to about 10,000 persons for 100 days on an average. The Planning Commission expects to take up another 150 blocks after the coming harvest

for extending the programme. The State Governments have been asked to send in proposals for eight to ten blocks in each State. Including the blocks selected during the first series of pilot projects, there will be about 180 pilot projects in operation at the beginning of 1962-63.

The rural works programme is being taken up as a Centrally sponsored programme, and States have been assured that financial provision for it will be made over and above the present allotments under the Third Plan. The entire expenditure on the first and second series of pilot projects, that is, upto the end of 1962, will be borne by the Central Government. But from 1962-63, the expenditure is to be shared by the Centre and the States. The pattern of assistance will be 50 per cent grant and 50 per cent loan.

By and large, it is unfortunately true that the significance of these programmes as catalyst of economic development in rural areas has not yet been sufficiently appreciated. The Planning Commission is acutely aware of this. The Planning Evaluation Organisation has undertaken a preliminary survey of a large number of blocks and reports have been submitted to the State Governments. A special officer deputed by the Planning Commission has also visited 15 blocks in different States and reported on the problems encountered in these areas. But this investigation was confined to organisational aspects and the identification of the causes of delay in getting the projects started, such as failure to arrange in advance for preparation of estimates, technical clearance, supervision etc. The public aspect of the programme also needs a probe.

Ideally rural works programme should spark off a wide range of economic activities in rural areas. Its success will particularly be judged by the extent to which it is able to create conditions for full employment in the rural areas on a continuing basis. Agricultural programmes alone cannot be expected to achieve this objective. Rural industrialisation is the only solution. The Planning Commission proposes to take up in each State, as a pilot scheme, two of the blocks selected for the rural works programme for intensive development of rural industries. The Planning Commission is also setting up a Rural Industries Planning Committee to review the progress of industries in rural areas as well as to chart out the

policy and programmes for their further development. This committee should get down to its task without delay.

FERTILISERS

Revised Targets

After a spell of indecision and vacillation, the Government seems now to have made up its mind about the level of capacity that should be licensed for fertiliser production in the Third Plan period. While the Third Plan fixed a target of production for nitrogenous fertilisers at nearly 1.0 million tons, foreign exchange shortage and other difficulties in requisitioning the necessary machinery and equipment seemed to point to the futility of pitching the target at 1.0 million tons, though, even at this level, dependence on imports will not have been eliminated. Second thoughts seem now to have prompted further revision of targets and it is understood that the Government has taken a decision to license a total capacity of 1,170,000 tons for nitrogenous fertilisers to be reached by the end of the Third Plan period. Though, this is 17 per cent higher than the Third Plan target at 1.0 million tons, actual production that will be attained by the end of the Plan period will be of the order of only 1.0 million tons, since, even under the best of conditions, full utilisation of capacity is not a practicable proposition. Including the fertiliser units already existing, there will be a total of 18 fertiliser projects in the private and public sectors by the end of the Third Plan. With the exception of Kashmir every other State will be having a fertiliser factory each. In the private sector seven plants have already been licensed, the latest one being the project sponsored by Kothari and Sons of Madras for setting up a 30,000 tons of fertiliser plant at a cost of Rs 15 crores at Tuticorin. In the public sector, fertiliser plants are envisaged to be set up at Gorakhpur in UP, Naharkatiya in Assam, Rourkela in Orissa, Neyveli in Madras and Durgapur in West Bengal. Most of the new plants are not expected to be ready for commissioning before the penultimate year of the Third Plan, and in this light no substantial decline in imports is to be expected till the last year of the Plan. Estimates of imports indicate that imports which in 1960-61 were of the order of 120,000 tons will progressively rise touching a peak in the third year at 350,000 tons, after which it is expected to decline to 300,000 tons and 240,000 tons in the last two years of the Plan.

While in view of the growing pressure of demand for fertilisers, the decision of the Government to license capacity in excess of the original Third Plan target will be welcomed, the inconsistencies of

the pricing policy pursued by the Government in respect of fertiliser cannot be passed over. The higher price of Indian fertilisers and its deterrent effects on more widespread use of them by the cultivators have often come for adverse comment. The Fertiliser Distribution Inquiry Committee, in its report, drew attention to the huge difference between the landed cost of fertilisers and the ultimate price charged by the State Governments, and traced it to the relatively higher handling and interest charges, and sales tax levied by the State Governments. The Committee also indicated scope for bringing the margin on distribution of fertilisers from the high level of Rs 90 per ton to Rs 30. The very system and machinery for distribution with the Central Fertiliser Pool at the helm functioning as a weak limb of the Food Ministry seem ill-adapted to an enterprising policy in respect of fertiliser prices and distribution. The need for an autonomous body to handle distribution and with powers for price fixation has been long felt. But differences between the Food Ministry and the Finance Ministry have raised difficulties in the way. The Finance Minister seems to be bothered with the loss of revenue that will result from a slight reduction of the present prices, while being oblivious of the gains in agricultural production that will result from more widespread use of fertilisers. The remark of the FAO that "it is not consistent to treat fertilisers simultaneously as a means of agricultural development, and a source of public revenue" is a telling comment on the price policy that is now being pursued by the Government.

TEA INDUSTRY Sorely Tried

Speaking at the annual general meeting of the Assam Branch of the Indian Tea Association, Mr I. F. Morriss, urged upon the Government the need for reduction or even abolition of the export duty on tea and simplification of the internal taxes. These suggestions have obviously been made with a view to providing incentives to the tea industry to step up production and as a stimulus to export promotion. In both these regards, the experience of the tea industry in the course of the last two years has been disappointing. In respect of exports, there has occurred a decline in the total share of India in the last two years. Indian tea has lost ground to its competitors namely, Ceylon, Indonesia and East Africa in the principal markets of the UK and the USA. Matters were made

worse by the fall in production during 1960 as a result of which exports had recorded a further steep decline. What lends urgency to measures intended to provide incentive to growers is the target for production fixed at 900 million lbs in the Third Plan. The rate of growth of production of tea in the country in the last decade would provide hardly any ground for optimism for reaching the Third Plan target. The industry faces a multitude of problems in successfully embarking on schemes of development among which, lack of incentive arising from the crushing burden of taxation, shortage of fertilisers and lack of finance to put through scheme to raise output are notable. There is hardly another industry which has to bear taxation at rates comparable to those of the tea industry. Apart from the Central Excise and income tax on tea companies the tea industry is also subject to a

variety of other taxes such as agricultural taxes in Kerala, the Assam carriage tax, the West Bengal Entry tax, etc. The crushing burden of taxation is a great disadvantage to exports of Indian tea in relation to exports from other countries like Ceylon, Indonesia and East Africa. In this connection, it deserves to be noted that East Africa which is emerging as a strong competitor in the UK and the continent levies no export duty which gives it a keener edge in the competition with other countries and particularly with India. The Third Plan has set a target of 600 million lbs for tea exports the outlook for which will necessarily be conditioned by the competitive character of Indian tea prices. It is in this connection that the need for reducing the export duty on tea as suggested by Mr Morriss assumes significance. A reduction of the export duty will, as Mr Morriss pointed out, greatly en-

courage big buyers to make their purchases in India and also enable the country to quote competitive prices.

Mr Morriss has also drawn attention to other problems faced by the tea industry such as shortage of fertiliser, difficulty in obtaining licences for import of plant and machinery required by the tea industry, delay in payment of compensation to owners of tea gardens that have been requisitioned by the Government. There are two aspects to the problem of fertilisers faced by the tea industry. There is first of all a physical shortage which impedes attainment of maximum output in the tea gardens. Besides, it is also odd that the tea industry should be called upon to pay a higher price for fertilisers than other agriculturists which on the face of it is patently unjust.

IRON & STEEL

Wage Board Repercussions

The appointment of a wage board for iron and steel may lead not only to a rise in retention prices to meet higher costs of production but to cost differentials between the new and the old works. The public sector enterprises cannot escape an award about wages. The tripartite representation is not going to make much difference either to the inquiry or its outcome. The wage board's appointment may suggest that steel is already a major industry like cotton or jute, but the point to note is that India is not at present self-sufficient in iron and steel; also that exports are exiguous and temporary.

There is no need to describe the current operating difficulties of the industry. The Chairmen at Company meetings have mentioned coal and other shortages. A rise in wages may leave less for reserves or distribution as dividends. This is a conclusion drawn from the market angle. The other is that ambitions to launch new steel plants in the South may be stifled quickly. This may not provoke so much pessimism as the fear of coal shortage even in Bengal. The material consideration for many is that no guarantee of any increase in price to meet the probable rise in wages has been given by Mr Nanda. This may hit shareholders more severely than supposed, and the desire to expand output may be checked. However, this is not the main issue. The competitive capacity of the Indian steel industry in relation to its growth over a decade might be endangered by a rise in wages. The likely surplus may be hard to sell abroad and the country will have to rely long on export of iron ore, not on

export of iron and steel, even if prices for export items are not subject to excise. In any case, steel may become like sugar, an export hard to sell abroad. That raw materials like coal are likely to be dearer is another reason for apprehension, and if wages are not related to productivity, the condition of India as a high cost producer may become unenviable. Not the impact on excise revenue but the failure to reach output in relation to capacity (as in the case of Britain today) may mark off the Indian iron and steel industry. The risks are patent but the Government is committed to a wage policy that still thinks of the needs more than the deserts. The engineering industry too will be made to bear the burden to some extent and the first round of wage increases will not be the last, even if regional variations are provided. For the award itself may lead to labour trouble of one sort or other. The closure of a new works as done lately at Margam in Wales may not give relief to the industry though a shortage may help big traders to secure higher profits. It is perhaps dangerous to assume that the industry will not grow up as expected but big profits from the State plants to finance development may be ruled out and one of the assumptions in the Third Plan, may, therefore, be shaken.

EXECUTIVE SUITE

Parkinson's Law in Operation?

The pace of Indianisation in foreign firms has been accelerated and a reply in Parliament only confirmed what had been said about the trend in recent years with more of the better paid jobs falling to Indians in the foreign firms of Indian domicile. While official directives have helped, the trend has been favoured by inflation and other factors, including the demand for trained staff in Britain. According to experts, technical and scientific staff are needed at home, and emigration is not encouraged. The facilities for increased supply were indicated in a report made to Lord Hallsham last month. More teachers of science too are wanted, and that is one reason why the reduced inflow into India is to be attributed to other than Government pressure for getting more jobs for nationals. Of course, expansion in the private sector creates more openings and the Government as employer has to compete actively and peacefully with the foreign firms that get the pick for various reasons. This aspect has not been mentioned so far as a result of what is called Indianisation. How far this trend is due to the increase in Indian directors in, and the Indian share in control of, British

or other firms may need to be examined. Take-over bids, if successful have many consequences. And the admission that 23.9 per cent of occupants of posts carrying a salary of over Rs 3,000 had gone to Indians by January 1961 is more than a sop to national pride. It is an apt indication of the growth of Indian influence in foreign firms.

What is clear at present is that representations have worked and Mr T. T. Krishnamachari's plea that more Indians should be given superior posts has been quite effective. The enlargement of opportunities offsets the increase in tax liability and the expansion of the executive class among Indians has been secured quickly enough. This is not wholly due to the political and economic climate: it is rather the result of co-operation in the fullest sense, and one of the probable results is that Indians holding jobs abroad may be tempted to come home because opportunities for them have al-

ready improved outside the Government service. A comparison of the number of posts and salary scales may even suggest that Parkinson's law is at work now in the private sector and the time may come soon when the gazetted posts in Government service would be less in number and not so attractive as those offered by the private sector for those who are both able and adaptable.

KGF

Compensation for Loss of Monopoly?

The Mysore Government sells the gold from the KGF at a fixed price to the Reserve Bank which takes it at the price fixed by the IMF. The difference between the market price and the official price is made good by the Centre which makes a big profit as the sole shareholder in the Reserve Bank.

The arrangement in force is endangered by the proposal for a take-over by the Centre. The Chief Minister has argued that the subsidy should continue. The issue has been raised because of negotiations for giving up control of the mines. There has been no reference to the excise duty that the Mysore Government collected in the past from the gold mines on the score that the royalty paid by the British mining companies under an old agreement was quite inadequate because of the premium on gold in 1940 and after. The subsidy paid is the equivalent of the excise duty. But the opposition has endorsed the Government view that such compensation is necessary in the event of a transfer of control to the Centre. The argument is different from that relating to coal mines in Bengal because the plea of Dr B. C. Roy is on account of fuel and power shortage. In the case of Mysore it is a financial argument based on the fact that cheap

MORE PIPES to meet the nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

CUT AIR CONDITIONING COSTS CUT

with BLUE STAR-WORTHINGTON

Packaged Air Conditioners

5, 7½, 10 tons

Now made in India

Here's how BLUE STAR-WORTHINGTON Packaged Air Conditioners offer you a four-way saving in air conditioning costs.

CUT COSTS on tonnage. Single units range from 5 to 10 tons, operate independently.

CUT COSTS on installation. Units can operate without ductwork.

CUT COSTS on subsequent expansion. Single units connect up into multiple systems with minimum alterations.

CUT COSTS on operation and maintenance.

Every unit is engineered, built and individually performance-tested in BLUE STAR'S own plant to WORTHINGTON specifications.

For a better air conditioning job, call in BLUE STAR

power has helped the mines to work for a long period. There is also the fact that Mysore today has the only domestic source of gold, owing to the impossibility of imports from Russia or any other supplier. The Planning Commission cannot enter into the argument. The fact that for years the difference in price has been paid has been cited. The compensation paid to the British companies in 1956 should have been recovered, but the Mysore Government apparently holds that the State is entitled to set up a corporation and run the mines, if the subsidy is not offered. The Finance Commission will probably propound a solution for the difficulty described. The enlarged State has to provide for mineral development from its own resources and the most interesting point made is that the price of gold in India is abnormally high as compared with the price in London or New York. But the latter is the official price for buying gold and the Mysore claim is not for a subsidy of Rs 214 per ounce to subsidise deep level mining of lower grade ore but for proper compensation due to the monopoly of a source of supply.

★

VIDARBHA Industrial Potential

The survey conducted by the Small Industries Service Institute in the Vidarbha region has brought to sharp focus the vast industrial potential in the area. The survey was carried out at the behest of the Industries Department of the Maharashtra Government for utilising the industrial development opportunities in Vidarbha and the survey has suggested about 80 small industries that can be developed in the region. According to the recent estimates, these enterprises will entail a capital outlay of Rs 1.3 crores. Though the employment-potential they hold out—opportunities for barely 3,700 persons; is not very attractive, there is diversity in the programmes contemplated. Among the ventures listed in the survey are fertilisers, chemicals, plastics, rubber, paper and paper boards, ceramics, leather and leather goods and small machine components. The individual capital requirements of these industries have been estimated to range from Rs 5,000 to Rs 10 lakhs.

About fifty per cent of the projected units will be established in the Nagpur region and the rest will be located in places like Akola, Amravati, Wardha, Chanda, Bhandra, Gondia, Achalpur, Murtizapur and Kamptee. The plan for the promotion of small industries in this region has been subjected to detailed discussion by the Vidarbha Coordination Committee. The major objective

the plan, as revealed during the discussions, is to help the industrialists to make the right choice for their future entrepreneurial activities. It has also been suggested that Government assistance should be extended to the industrialists to develop each unit to the maximum capacity. The Government's proposal to establish industrial estates in different regions of the State during the current Plan will render the requisite help to the new ventures. The facilities afforded for securing loans against Government guarantee will certainly eliminate most of the financial difficulties. The absence of a branch of the Small Industries Service Institute in Nagpur has been a serious handicap to small units and the setting up of one will stimulate the development and growth of small industries. The Coordination Committee has also disclosed the Government's intention to instal some large-scale industries in the Vidarbha area. The readiness expressed by some big industrialists to start new ventures in Nagpur can be deemed as a happy augury.

★

MACHINE MAKING

Full Order Books

The review of machinery manufacture in India made by Mr Manubhai Shah at Bombay on Nov. 25 has made it clear that progress in industry depends on the local supply of machinery for existing industries. The beginning made with textile machinery before the war has been greatly extended in recent years and most of the new projects undertaken with foreign aid relate to the production of machinery and stores. Mr Shah's claim that imports are being reduced by the increase in domestic output of machinery is perhaps less significant than the reference to full order books. The engineering industry's performance may be reckoned satisfactory if it were not for the power shortage imposed by irregular coal supply to which Mr D. C. Driver drew pointed attention recently.

The support given to the engineering industry in India by the investor is in part derived from prospects and the assurance of foreign technical aid. The engineering concerns are assured of a market, but production up to capacity remains a problem because power and rail transport shortages persist. The steady success in light engineering exports has not altered the conclusion that the engineering industry has to grapple with high cost and the supply of skilled labour is inadequate. However, Mr. Shah hopes that apprenticeship schemes will help and to the adaptation of factory layout and design. In this case it is Japan that must influence India and the keener

competition with Japan in Asian markets in future may limit assistance available especially if India hopes to sell railway equipment as a rival of Japan that has long supplied S. E. Asia and Latin American countries. The fact that chemicals and engineering alone are considered progressive at present is not so much due to the growth of demand as to the curb on imports and the success of many new ventures is bound up with the continuance of prosperity in the textile, paper and other industries.

★

MICA LABOUR Depressing Picture

The report of the Committee set up by the Government of Bihar to conduct a survey of the wage structure and allied factors in the mica industries in the State has revealed depressing conditions of employment obtaining in the mica industry. The Committee, in the course of its inquiry, went into all important aspects of employment, such as the nature and duration of employment, the level of wage and method of payment and other facilities provided to labour in general which may broadly be classified as fringe benefits. The report of the Committee discloses a highly unsatisfactory state of affairs in respect of all these matters.

The study of the Committee covered conditions in the mica industry as well as the mines. The total number of workmen employed in the registered and the unregistered factories is shown to be 5,752 while in the mica mines, the total number of workers is placed at 1,761. A depressing feature of employment conditions is the temporary nature of employment for a majority of the workers. Nearly half of the employees in the factories are reported to be working on temporary basis, while the proportion of temporary workers in the mines is even higher.

The wages earned by the workers in both the factories and mines are below subsistence levels. The average daily basic earnings of mica workers are shown to vary between Rs 1-4-6 and Rs 1-7-7 in the factories and between Rs 1-8-0 and Rs 1-15-6 in the mines. An attendance bonus which varies on an average basis from Re 0-2-0 to Re 0-3-0 is the only other additional earning for the factory workers. The mine workers are in this matter better placed since, in addition to the attendance bonus, they enjoy also other allowances, though even in this case, the total earnings do not add up to a decent figure. Absence of wage payment on the piece-rate basis is one of the reasons which ex-

plains the depressed level of wages in the mica industry. Though the importance of introducing piece-rate system of wage payments in industrial establishment has been emphasised by the Government, difficulties of standardising operations in the mica industry, would seem to preclude possibilities for introducing the system in the mica industry.

The workers in the mica industry also compare unfavourably with workers in other industrial establishments in respect of fringe benefits which include housing accommodation, medical facility, recreational facility, and provident fund scheme. Such benefits are reported to be almost non-existent in the factories, though the workers in the mines are provided with medical and recreational facilities, on account of the services provided by the Mica Mines Welfare Organisation. Absence of such fringe benefits have made the inadequacy of cash earnings even more pronounced. The Committee has called for urgent steps to make conditions of living more tolerable for the mica workers. One problem that has to be faced is the existence of innumerable small units in the industry which would make enforcement of welfare measure somewhat difficult.

★

IDA Three Credits to India and...

The International Development Association (IDA) has extended to India three development credits totaling \$22.5 million for projects to increase agricultural production. A credit of \$8 million will assist the Salandi project for the irrigation of about 225,000 acres in the State of Orissa, in eastern India; another credit, of \$4.5 million, will help to finance completion of the Shetrunji project for the irrigation of 88,000 acres in the State of Gujarat, in the west; and the third credit, of \$10 million, will assist a project of flood protection and surface drainage of about 8 million acres in the State of Punjab, in the north. The credits are repayable in foreign exchange over a term of 50 years, and are free of interest.

The Orissa project includes the construction of a dam on the Salandi River, a main canal 45 miles long, and about 450 miles of distribution canals, as well as related structures necessary for the operation and maintenance of the dam and the canals. Extension services are well established in the area. In addition, the State of Orissa will provide technical assistance to farmers in the planning construction and operation of field channels and in the establishment and operation of a

rainage programme to improve techniques of irrigation farming. The total cost of the project is estimated at the equivalent of \$10 million. The State of Orissa will provide 40% of the financing needed and the Central Government will provide 60% as a loan, most of which will come from the proceeds of the IDA credit.

The Shetrunji irrigation scheme will provide water for 88,000 acres of land in the State of Gujarat. Some of the main civil works, including a dam across the Shetrunji River, have already been built. The work now to be undertaken to complete the project involves building about 94 miles of main canals and distribution canals, houses, workshops, buildings and service roads.

The total cost of the project is estimated at the equivalent of \$9 million. The State of Gujarat is providing half the fund and the other half, the rupee equivalent of the \$4.5 million IDA credit, will be provided as a loan from the Central Government to the State.

With the introduction of perennial irrigation in the 19th Century, the Punjab became one of the chief agricultural States in India. Unfortunately, however, the extension of irrigation and the building of embankments for roads, railways and town sites, without providing adequate drainage, has caused the water table to rise steadily. It is now so near the surface that water-logging is severe over wide areas of the State and agricultural production has thereby been reduced. In many places the lands have become salty and are now useless for agriculture. The high water table has also aggravated the serious floods which occur in the Punjab when the monsoon is heavy. They cause serious loss of life as well as of agricultural production and severe damage to buildings and other property.

To prevent this flooding the Punjab is building embankments along the rivers to keep them in their channels and constructing a system of adequate surface drainage. The project being assisted by the IDA credit consists of the construction of 17 miles of such embankments, the enlargement of 40 miles of existing drains, and the excavation of 2,000 miles of new drains.

The estimated cost of the works to be undertaken is equivalent to \$10 million. The Central Government will make the entire amount available through loans from the State of Punjab. Half of the loan will represent the proceeds of the \$10 million IDA credit.

Repayment of all three credits will begin after a ten-year period: the repayment of the irrigation credits will begin on 15 April, 1972, and that of the Punjab drainage credit on 15 May, 1972. Thereafter, 1% per annum of the principal will be repayable for

ten years, and 3% per annum will be repayable each year for the final 30 years. A service charge of 3/4 of 1% per annum on the amounts withdrawn and outstanding will be made to meet IDA's administrative costs.

Another to Pakistan

The International Development Association has recently extended a development credit equivalent to \$2 million to Pakistan to help finance the first phase of a programme to improve the inland water transport system of East Pakistan. This is IDA's second credit to Pakistan. The first, in the sum of \$1 million was extended in between for an irrigation project in East Pakistan.

Various rivers traversing East Pakistan make it one of the largest deltaic areas in the world. There are some 2,800 miles of navigable

channels, which increase to about 4,000 miles during the rainy season. In general, water transport is the most economical and in large areas the only means of transportation. About 60% of the two billion ton-miles of freight carried annually in East Pakistan is transported by watercraft. In the Greater Dacca Area alone, over six million passengers use water transport annually.

Inland water transport is, however, operating under difficult conditions and at relatively high cost. Many of the motorized vessels are old and run-down, and repair facilities for them are scarce and expensive. Even more fundamental, however, most of the rivers are unstable, frequently changing course, and are apt to silt up. Until recently, channel maintenance, navigational aids, pilot services and port facilities for cargo and passengers were the responsibility of different agencies with no central control.

In 1958 the Inland Water Transport Authority (IWTA) was established, with the initial advice of the World Bank, as an agency of the East Pakistan Government. Its main responsibilities are to provide river conservancy services, to operate and improve inland ports, terminals and storage facilities, and to supervise inland water transport operations. Of the amount of Rs 220 million provided under the Second Five-Year Plan for improvement of the inland water transport system of East Pakistan, Rs 80 million has been allocated for a programme being executed by IWTA. The balance of Rs 140 million has been allocated for improvements in the river fleet, most of which is privately owned.

The IDA development credit will help to finance the first phase of the Authority's programme. During this phase, cargo jetties will be built at Dacca, Khulna and Narayanjanj and mechanical equipment will be installed to expedite

ASHOK LEYLAND COMETS hold aloft the life-line for man and industry

INDIAN OXYGEN LIMITED
HEAD OFFICE
49/1, DIAMOND HARBOUR ROAD,
CALCUTTA-27.

Dear Sirs,

We operate 4 Nos. of Leyland Comet trucks and have ordered two more chassis. The Comets are used for the carriage of liquid oxygen from the producing factories for local distribution as well as for supplying to depots remote from the factory. As an operator of a large number of trucks, our main considerations are reliability of transport consistent with economy of operation and Leyland Comets have met these requirements to our satisfaction.

Yours faithfully,
T. N. S. (P. L. Sinha)
Production Manager

DATE 9/12/60

This is one among the many letters we are receiving from satisfied users asking for more Comets.

The exacting standards of precision combined with fine craftsmanship make Leyland the most wanted vehicle in over 50 countries.

ASHOK LEYLAND LIMITED
Ennore — Madras

ASHOK LEYLAND COMET
— precision-built to give lasting service

the handling of cargo. These facilities, together with the provision of mooring places and related dredging, should result in quicker turn-around time of vessels and lower handling costs, thus eliminating one of the causes for the high cost of transport. Increased port capacity will also help deal with the larger volume of cargo traffic resulting from the further economic development of East Pakistan. Terminal buildings for passengers and landing stages will be constructed at these ports and also at Barisal and Chandpur. As a result vessels will be able to load and unload more quickly and conditions for passengers will be safer and more convenient.

Part of the IDA credit will pay for the services of experts who will assist the IWTA for a period of at least two years in conducting its operations and in training permanent staff. The credit will also provide funds for a study of navigable waterways that will lead to recommendations for detailed surveys.

The first phase of the programme will cost about Rs 19.4 million (about \$4 million) which will be financed by loans from the Government of Pakistan to the Provincial Government. Half of these funds will come from the \$2 million IDA credit.

Repayment of the IDA credit will begin on 1 April, 1972, after a ten-year period of grace. Thereafter, 1% per annum of the principal will be repayable for ten years, and 3% per annum will be repayable for the final 30 years. A service charge of 3/4 of 1% per annum on the amount withdrawn and outstanding will be made to meet IDA's administrative costs.

COMPANIES

Concentration in Madras

The review of the working of Companies Act 1956 in the Southern region for the quarter ending 30 September 1961, indicates that a total of 124 companies with an authorised capital of Rs 1,547.35 lakhs have been registered in the Southern region. 111 of the new companies were private companies with an authorised capital of Rs 948.85 lakhs while 11 were public companies with an authorised capital of Rs 598.50 lakhs. The distribution of the new companies reveals a marked concentration in the Madras State which accounted for 93 out of the total of 124 new companies. New registrations in Kerala amounted to 20 while Andhra Pradesh and Mysore had 6 companies each. Notable among the new registrations are nine companies which were floated with an authorised capital of Rs 50 lakhs and more. These are

(1) Sun Paper Mill Limited, (2) Reichhold Chemicals India Private Ltd. (3) W. S. Insulators of India Limited, (4) Simco Meters Limited, (5) All Steel Industries Corporation Limited, (6) South Bend India Limited, (7) The Kerala State Industrial Development Corporation Ltd, (8) Kerala State Small Industries Corporation Limited and (9) The Kerala Premo Pipe Factory Limited. Madras and Kerala between them accounted for all the giant floatations, Madras accounting for 6 of them.

Industry-wise classification of the new floatations indicates that slightly more than half of the new registrations was in the field of transport, communications and storage, the total being 63. It is remarkable that 62 of these registrations were in the Madras State. The next largest registrations were in the field of commerce (Trade and Finance), the total being 24. Kerala accounted for 10 registrations, Madras 9 and Andhra Pradesh and Mysore 2 each.

During the quarter under review 39 companies with a total paid-up capital of Rs 18.32 lakhs were struck off the register of Companies as defunct, while another 36 companies with a total paid-up capital of Rs 35.78 lakhs went into liquidation. Further foreign companies viz. PKN Company (Burmah) Limited, (2) Aislabey Estates Limited, and (3) Gresham Fire and Accident Insurance Society Limited are shown to have wound up their business in the Madras State. Against this, one foreign company viz. Fertel Engineering Limited established a place in the State of Madras.

ECM

Commonwealth Pressures

One result of the Accra conference of Finance Ministers is the assurance by Mr. Heath that Commonwealth trade should not be disrupted. The guesses about the reasons for Mr. Heath's frank speaking are beside the point now. There is no eagerness to put a tax on raw materials from the Commonwealth because the UK economy requires metals and raw materials like tobacco. The issue whether the ECM is a rival in the case of raw materials like cotton or jute does not seem to be up for examination, and the trend in UK trade with Europe in recent years is apt to be ignored for the reason that Canada and others have protested about the retreat from Imperial preference. The continued dependence of the UK on imports of wool and other materials is one reason for second thoughts. The other is a reasonable fear that the developing countries like India would buy less machinery from Britain in future. The sterling area's trade

would contract further and to compete in Europe with Germany or Italy is harder. These fears are in the background. Nothing has been said about export duties collected by Commonwealth countries on their shipments to the UK. The preferences have been retained to help the UK's export trade and export duties in Ceylon or Malaya have been imposed mainly to obtain revenue. But the Commonwealth may be told that export duties are incompatible with entry into the UK market on the former scale and the cheapening of materials like oilseeds or leather is vital for a competitive British industry in future.

The issue is one to be faced by many countries that maintain import control in addition to protective tariffs. The ideal of ECM is a low tariff group that allows the movement of men, money and materials. The Commonwealth is, on the other hand, largely protectionist and has gradually made Britain also protectionist. It may be recalled Joseph Chamberlain got his ideas about Tariff Reform from New Zealand. That is a historical and perhaps an irrelevant point. The main risk is that Canada and West Indies may drift towards the USA and the infiltration of US capital may be enlarged because the UK has less capital to spare for investment abroad. But the main point is that political ties will be loosened—they were frayed by the Suez crisis—and the UK may find it harder to resist the new pressures of European politics. Mr. Heath has reassured the Tory dissidents like Sir Derek Walker-Smith and party unity has been retrieved after Brighton. That is Mr. Heath's claim to fame among Conservatives at home.

LIC

General Insurance Prospects

The freedom given to the LIC to look after its affairs has been reinforced by a hint of a bigger bonus after the valuation. This is perhaps meant to draw in new policyholders before the year ends and it is patent that in refusing to accept the views of the Estimates Committee, the LIC kept its eye on new business prospects. Far more important than investment is the recent warning to general insurer alone about observance of the code of conduct in force. In view of the LIC's own control of four companies which are going to be amalgamated because their business is improving and reserves are getting bigger though one company failed to make a profit out of its reinsurance operations in 1959. The general branch may get bigger if the STC extends its patronage on a big scale. The poor results for the general branch in 1959 and 1960 may lead to a new policy and the general insurance companies may feel competition from the LIC's wing soon. The funds are small at present, but it is easy to limit expense and the LIC may even try to secure business abroad. The important point is that even if an assurance against nationalisation has been offered, the public sector

can compete strongly because of State aid given to industrial concerns and the dependence of many on the IFC and other agencies. Whether business will be dimmed up because of larger opportunities remains to be seen. Of course, the figures relating to assets, revenue etc. of the general branch are not big like that of the Commercial Union but the LIC's fire or marine branches can be developed easily by securing business from the State Governments that have to insure machinery, vehicles, etc. The growth prospects for the LIC in the general insurance field may be called good, even if some assets are in dispute.

TUBE INVESTMENTS

Good Reason to be Satisfied

Tube Investments of India is a progressive concern in every sense and the larger profit for the year ended 31 July has led to addition to reserves and a large carry-forward needed to meet the requirements of plant extension. Tube Investments has up and coming subsidiaries and expects profits from chains, saddles and lamps. The chairman at the annual meeting spoke of the satisfactory results, the improved labour situation and the disappearance of imported components in the output of the factory that is now assured of its raw material. Tubing for various purposes is also being produced and T. I. is not wholly dependent on the flourishing bicycle business. The saddles and chains, when rated output is reached under both heads, will leave a surplus for sale and replacement needs will be easily met. The only sore point mentioned by Sir A. R. Mudaliar relates to the power tariff which was revised in 1959 and has made expanding industry in Madras conscious of costs even more than power cuts in summer. The expansion of both production and sales in 1960/61 has made T. I. a major feature on the industrial landscape and the U.K. associate has good reason to feel satisfied with the performance and prospects of T. I. of India. Few protected industries have shaped so well and so fast. The dividend is 10% again but T. I. is growing and the shareholders retain faith in the possibilities of growth in a company whose last report indicates conclusively that it is dynamic. It may be noted its net block exceeds Rs 3 crores and earnings after depreciation and tax exceed 20% on the capital.

EXPORT MARKETS

Burma and—

A report on the market in Burma for diesel engines and chemicals and pharmaceuticals, prepared by First Secretary (Commercial) Indian Embassy, Rangoon, draws attention to the scope for expanding India's exports of these goods to the Burmese market. Diesel engines particularly are noted to be in good demand in Burma in view of the variety of uses

made of them in rice mills, saw mills, oil mills, pumping sets, marine boats, generating sets etc. Requirements are of present mostly met by imports from the United Kingdom. But Japan and West Germany are emerging competitors in the Burmese market. Proximity to Burma should enable India also to effectively compete with present suppliers. In this connection, the report lays emphasis on the price factor which at its currently high level in relation to the products of other countries, is operating as a major deterrent to the expansion of Indian exports. Also important is the need for a vigorous publicity campaign, and on this issue, the report has underlined the importance of illustrated brochures, and catalogues, containing a comprehensive description of the engines and other technical details, and also regular distribution of price lists to all importers.

The market for pharmaceuticals and chemicals in Burma is now controlled by the UK, the USA, West Germany and the Netherlands. Pharmaceuticals figure as one of the items of Government imports. The "Burma Pharmaceuticals Works Ltd." a Government concern imports medicines in bulk and after simple processing and packing places the items in the market for sale to the general public. The sole importing agency for the entire pharmaceutical trade in Burma is the Rangoon Drug House Ltd., and all the pharmaceutical agents and distributors place their orders with this firm. The report of the Indian embassy observes that it would be worth while for Indian manufacturers to consider initial expenditure on promotional advertising in the medical journal of Burma, prominent dailies and magazines. The appointment of agents and distributors for familiarising the Burmese public with Indian products is also considered necessary. In view of the keen competition from the UK, the USA and West Germany, great emphasis has been laid on quality.

With effect from 15 September, Burma has raised its tariff on a number of imported articles. The new duties, in some cases, like cotton textiles, electrical fans, refrigerators and paints are prohibitive. How far Indian exports will be hurt by the new duties remains to be seen. But the raising up of tariff on imported items makes it necessary to explore scope for expansion of exports of articles which bear only moderate duties. The duty on diesel engines at 15 per cent is moderate and should permit expansion of Indian exports. This applies to pharmaceuticals also though in this case certain items enjoy tariff protection, their imports being completely banned.

—Indonesia

Exploring the scope for boosting India's exports to Indonesia is timely when a trade delegation from that country is touring this country. Similarity in the various economic problems of the two nations are well known: both countries are in the thick of development programmes, and the problem of foreign exchange shortage is also common to both. As between the two, there is no gainsaying that India is better-placed for

stepping up its exports to the other. But the paucity of foreign exchange in Indonesia makes opportunities for India somewhat meagre. Nevertheless, the picture is not entirely hopeless. From Indonesia's point of view, apart from pepper, oil is perhaps the only commodity which it can offer in abundance for exports. The reported decision of the Government of India to import sizable quantity of oil from Indonesia assumes a certain topical importance in view of current uncertainties. From the Indian side, the outlook for exporting manufactured goods, especially engineering products, is bright. Apart from these, the country can also export commodities like steel and iron pipes, shoes, cotton cloth, cement, bicycles and films to Indonesia. The recent agreement of the State Trading Corporation to export cotton yarn worth about Rs 1 crore testifies to the scope for catering to the needs of the textile industry in that country. The need for examining these spheres and the adoption of suitable steps cannot be over-emphasised. In view of the tight foreign exchange position in both countries, barter deals seem to offer possibilities.

RESEARCH

Two New Processes

Details of a new and economical process for the manufacture of low carbon ferro-chrome, developed at the National Metallurgical Laboratory at Jamshedpur, have been published in the November 1961 issue of *Research and Industry*, a monthly periodical of the Council of Scientific and Industrial Research.

Low carbon ferro-chrome, containing less than one per cent carbon, is used in the alloy steel industries for the production of different types of stainless steels, automotive steels, heat and electrical resistant alloys and hard steels for the milling and mining industries.

Low carbon ferro-chrome which was hitherto mainly imported can now be produced in India directly from high carbon ferro-chrome by the new process. No additional capital is involved in the new process for furnace equipment where facilities exist for the production of high-carbon ferro-chrome and ferro-silicon.

A ferro-chrome plant is now being set up at Bhadrak in Orissa in the private sector to produce 8,000 tons of low-carbon ferro-chrome and 2,000 tons of high-carbon ferro-chrome.

Another article published in this issue of the Journal describes the production of thermal insulation boards from coconut husk and pith according to a process developed by the Central Food Technological Research Institute (CFTRI), Mysore. The boards have insulation properties comparable to those of cork or other cellulose boards.

About 30,000 tons of pith are estimated to be available in India annually. At present, there is not much use for the pith and its disposal presents a problem. About 1,000 million lb of husk are sundried and used as fuel.

The work of CFTRI is of significance as natural cork, the most important among materials of low-thermal-conductivity, is not indigenous to India. Large quantities of cork and other insulating materials like asbestos, insulation boards, bricks, etc. are imported.

US

Trends in Capital Investments

The capital investment budgets of American businessmen are on the rise. This is significant not only for the vitality it reflects in the current US economic upsurge, but also for the support it lends to the efforts being made by the administration of President Kennedy to accelerate the nation's long-term economic growth rate. Capital investment, of course, is an important ingredient of economic expansion.

The latest report on this subject indicates that American businessmen will be spending \$35,800 million dollars for new plant and equipment. This is four per cent more than the estimated capital investment total for this year.

These tentative plans, uncovered during the regular October survey of the McGraw-Hill Company, are subject to later revision, of course.

These revisions should become evident in the company's next regular survey, due in the spring. McGraw-Hill, publisher of *Business Journals* and a pioneer in the study of capital spending, emphasizes that its surveys are not forecasts, but rather reports on what companies actually are planning to invest.

What is particularly significant about these autumn surveys is their value in indicating the trend of capital spending. The record shows they have been remarkably accurate in this regard.

If these surveys have tended to err, it has been on the side of understating the magnitude of change, when inducted in the early stages of business swings. Research economists have noted that capital spending is something of a laggard as a business indicator. This means that as the economy moves to higher levels of capacity utilization, as is the case now, the tendency has been for business outlays on plant and equipment to exceed the planned levels.

A case in point is the survey conducted during the fall of 1958, which indicated that business outlays in 1959 would rise less than one per cent. Yet actual expenditure during 1959, a year of strong economic activity, turned out to be seven per cent higher than in 1958.

If this pattern continues to hold true, it follows that capital spending in 1962 should increase by more than the four per cent reported in this latest McGraw-Hill survey. There is considerable encouragement in this analysis, particularly for those who have tended to look upon the four per cent projected increase as rather moderate and not necessarily in keeping with a vigorous general economic advance.

McGraw-Hill economists, it should be noted, share the view that the present preliminary plans tend to underestimate the eventual 1962 total. This appraisal is based partly on the fact that even at this early date plans for total 1963 spending are put at \$34,500 million, which is higher than the estimated 1961 total.

In addition, they note that virtually every important industry will be increasing its investment in new facilities in 1962. Manufacturers as a whole are planning a seven per cent increase, well above the average for all types of industries. Moreover, producers of non-ferrous metals, electrical machinery, autos, rubber, paper and some other products already expect to spend more in 1963 than in 1962.

The rise in scheduled capital spending reflects the considerable improvement in industrial operations this year. US manufacturers were operating at 81 per cent of capacity this past September, compared with 77 per cent, when the year began. The reported rise in the industrial production index for October indicates that industrial expansion has continued, and that operating rates have been pushed to still higher percentages of capacity.

This is a trend which promises to carry into 1962. Manufacturers anticipate that, on the average, the physical volume of their sales will rise seven per cent next year. This is in line with most of the business forecasts made to date, and according to the estimates would lift operating rates close to or above the 90 per cent level.

Coupled with the likelihood that more efficient operating rates would tend to improve earnings, this should provide significant incentives for further increases in capital spending. Still to be taken into account moreover, are the possible effects of any special moves the US Government may make to stimulate spending for plant and equipment—such as the Kennedy Administration's announced plans for wider depreciation allowances on textile machinery and its recommendations to Congress on tax incentives for capital investment.

WHOLESALE PRICES

Small Decline

The official wholesale price index (with the year ended March, 1953 as 100) declined by 0.5 per cent to 124.8 (revised) for the previous week. The index was also lower by 0.3 and 1.7 per cent respectively, when compared with the corresponding week of the previous month and that of a year ago.

The index for 'Food Articles' receded by 0.6 per cent to 120.5 as compared with 121.2 (revised) for the earlier week due to a fall in the prices of Gur (—9%), Rice at Kumbakonam (—5%), Tea (—4%), Urad and Betelnuts (—3% each), Gingelly oil (—2%) and Jowar, Bajra, Barley, Rag, Mung, Mustard oil and Sugar (—1% each), notwithstanding an increase in prices of Cashewnuts (+8%), Rice at Jayanagar and Contai and Oranges (+5% each), Arhar, Bananas and Milk (+3% each), Fish, Eggs and Salt (+2% each) and

Wheat, Maize, Masur, Potatoes, Coffee and Cardamoms (+1% each). The index for 'Tobacco' remained stationary at the previous week's level of 95.7.

The index for the 'Fuel, Power, Light and Lubricants' group also stood unchanged at its earlier week's level of 122.0, despite a rise in the prices of Castor oil (+1%).

Lower prices of raw Hemp (-11%), Tanning Materials (-4%), Lac (-2%) and raw Cotton, raw Jute and Castorseed (-1% each) brought down the index for 'Industrial Raw Materials' by 0.2 per cent to 136.3 as compared with 136.6 (revised) for the previous week. The prices of Cotton seed (+3%) and raw Silk (+1%), however, moved up.

The index for 'Intermediate Products' rose by 0.2 per cent to 140.3 as a result of an increase in the prices of Linseed oil, coir Yarn and Tin (+1% each), although the prices of Lead (-3%) and Zinc (-1%), showed declines.

A fall in the prices of Jute manufactures (-4%), and Handloom cloth and General Chemicals (-1% each) was responsible for a decline in the index for 'Finished Products' by 0.7 per cent to 123.9.

(For table See page 962)

NEWS IN BRIEF

The World Bank has granted last week a loan equivalent to \$2 million to the Development Bank of Ethiopia. Like an earlier Bank loan of \$2 million to the Government of Ethiopia, this loan will be utilised for meeting the foreign exchange requirements of projects financed by the Development Bank of Ethiopia. The Bank loan is for a term of ten years which may be extended fourteen years by agreement between the Bank and the DBE with respect to individual projects for which a longer period is appropriate. Amortization of the loan will begin 1 March 1965. This is the fifth loan made by the World Bank in Ethiopia, bringing the total lent there to \$25.5 million. Loans of \$21.5 million have been made to finance improvements in road transport and telecommunications.

As a measure of export promotion, the Government of India has decided to allow drawback of customs and/or Central Excise duty on export of oil mill machinery, railway wagons, glycerine, tooth powder, gas plants, thermocells, vacuum flasks, valve-type football bladders, room coolers, incandescent lamps, pencils, canvas and tarpaulin. Changes have been made in the items relating to shrimp cartons, plywood, steel products (wire, gauze, netting and so on and steel clips for railway track) and fatty acids.

Exports of mica from the port of Calcutta during the week ended 31 October totalled more than 0.3 million kgs., of which black mica accounted for over 43,000 kg., split mica more than 0.1 million and scrap and others more than 0.1 million kgs. Norway was the leading purchaser accounting for 97,540 kgs. Next came

Japan with 23,575 kgs, Poland with 22,732 kgs and the UK with 20,291 kgs.

The world refined oil capacity at the end of 1960 aggregated approximately 1,241.4 million tons against 1,162 million tons at the end of the previous year. Out of this 687 million tons or 55.3 per cent belonged to American interests and 15.4 per cent (190 million tons) to Anglo-Dutch interests. The share of communist bloc stood at 13.2 per cent on 163 million tons, of which 140 million tons was held by the USSR alone. The refining capacity of Europe totalled 221.8 million tons.

The Government of India has entered into an agreement with the Burmese Government for the purchase of 1,800 tons of Burmese teak valued at Rs 1.5 crores. This deal is 'the biggest India has made since the War.

According to a recent survey conducted by the Reserve Bank of India, the total assets of Indian joint stock companies in Pakistan is to the tune of Rs 17.6 crores. In view of the paucity of foreign exchange and the need for industrialisation at home, the Government did not generally allow investments abroad by Indian companies.

The US Department of Commerce has revealed that the aluminium exports by the countries in the world rose 21% higher in 1960 than in 1959. The 1960 exports of crude aluminium, the major item exported, amounted to more than 1.1 million short tons against 960,200 tons in 1959. Exports of semi-fabricated aluminium in the same year was placed higher at 321,500 in contrast to 265,700 tons. Canada was the largest exporter with 552,155 tons followed by the USA with 284,979 tons and Norway with 152,272 tons.

India exported about 7.1 million lbs of cashew kernels during the first nine months of the current year. This represented an increase of about 3.8 million lbs over the quantum exported in the corresponding period in 1960. The USA maintained its imports from India almost at the same level. There was an appreciable level of increase in the exports to other traditional markets like the UK, Australia and Canada. Poland was a new comer in the cashew kernels market and accounted for 1.6 million lbs export of cashewnut shell liquid also showed an upturn and was placed at 4,800 tonnes.

Sardar Swaran Singh, the Union Minister for Steel, announced in the Lok Sabha that all the three expansion schemes of steel plants were nearing completion. While the project reports on Bhilai and Rourkela had been scrutinised by the Technical Committee, that on the Durgapur was still under examination. The Minister also announced that the expansion of Mysore Iron and Steel Works for raising its capacity to 100,000 tons of steel ingots from 30,000 tons per annum would be executed in the current Plan period.

If you can say so about all the purchases you make, you will be saying good-bye to the uncertainty of material, quality, durability of product etc.

Unfortunately, there are many articles produced in India which do not conform to any standard—although they should. For, standards ensure quality products, fair competition, consumer goodwill, increased profits. To manufacturers producing goods according to Indian standards, the Indian Standards Institution grants licences for applying on their goods the ISI mark which is a third-party guarantee of quality.

Write to ISI for a list of products which are manufactured to prescribed standards and carry the ISI mark. Make sure that the next time you buy anything, it is a quality product carrying the ISI mark.

INDIAN STANDARDS INSTITUTION
NEW DELHI - BOMBAY - CALCUTTA - MADRAS - KANPUR
ISI-4.61

The total quantity of fish and fish products exported from India during 1960-61 amounted to 19,914 tons. Mr M. V. Krishnappa, Union Deputy Minister for Agriculture, also stated that the Government had no proposal to set up a fish canning factory in the public sector.

According to Pick's World Currency Report private hoards of gold at present amount approximately to 13,000 tons worth about Rs 20,000 crores. Total hoards are now at a record level and the current value is 8.1 per cent higher than a year ago.

The Government of India has decided to constitute a committee to consider the various problems of the ferro-manganese industry. The committee will study the ways and means of ensuring regular supply of raw materials of requisite quantity and consider the question of railway

freight for movement of raw materials and finished products. Problems pertaining to export and marketing abroad of the ferro-manganese and any other allied matter will also be studied by the committee.

On the recommendation of the Tariff Commission the Government of India has agreed to continue protection to the caustic soda industry for a further period of three years ending 31 December, 1964, at the prevailing rates of duty i.e., 30 per cent ad valorem (preferential) and 41 per cent ad valorem (Standard).

The Indo-Norwegian Fisheries Project at present operating in Kerala will shortly be extended to Mysore and Madras also. These States have been selected because of their contiguity with Kerala and the similarity of fishing operations in the States.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE CENTENARY of Tea Auctions in Calcutta falls upon 27 December 1961, but its celebration is being "updated" so that Mr Nehru's presence in Calcutta can be taken advantage of; for, at special auctions to be held on Saturday, 2 December 1961, Mr Nehru is to be the honoured guest. The realisations, as is proper, are to go to the benefit of the Prime Minister's National Relief Fund, and though but seven chests are to fall under the hammer, hopes are being entertained that the amount collected will be in the environs of Rs 50,000. I gather that a move was afoot to have the Prime Minister conduct the auctions; but no, a little bird just whispered to me. Instead each of the seven brokers will be duly represented, in auctioning off the seven chests. For the commanding position that the Calcutta Tea auctions have achieved, not a little credit is due to J. Thomas & Co, the successor company to R. Thomas & Co which, the first known tea broking house to have been established, is older than the auctions by ten years. Incidentally, the centenary of the auctions as held at 8 Mission Row is due on 24 March next year, and I suppose another set of celebrations, with J. Thomas & Co, a particular host, is in store for us. Of the seven chests to be offered, I see that three are from gardens under managing agencies—Andrew Yule, Duncan Brothers and Davenport. It is altogether fitting that tea from Hasimara (Davenport) has been chosen for the privilege of being auctioned at a function marking a centenary, since the managing agency house in question itself celebrated its 75th birthday on 27 November 1961. If I wish more power to the auctioneers' gavel, it is because I am hoping that my friend's estimate of Rs 50,000, as the proceeds to be turned over to a very worthy cause, proves to be an underestimate.

The reports of the Official Liquidator of the Palai Central Bank published in the Press make pretty unsavoury reading. It is evident that dishonesty at the top set in motion chicanery all along the line and the directors' own dealings left them without any real control over their employees or agents. Share-holders did not have either the ability or the desire to keep the Board in good behaviour. Most of them probably did not even know that anything

was wrong, for dividends continued to be paid year after year. These dividends were paid by the simple expedient of year-end adjustments creating fictitious credits to the profit and loss account. This practice enabled the company to keep the shareholders happy from 1936 to 1957 when the Reserve Bank stopped the farce. A rather odd beneficiary of this skulduggery was the Government: it collected income tax on non-existent profits in the not inconsiderable sum of Rs 25.96 lakhs. Part at least of this, in the sum of Rs 4.75 lakhs, being the tax on declared profits for the assessment years 1957-58 to 1959-60 may yet be salvaged by the liquidator since the report says that the assessments have not been made yet and revised returns may, in the circumstances, be accepted. But nothing whatever can apparently be done about the irrecoverable advances to the tune of Rs 2,32.30 lakhs unless, of course, more detailed investigation reveals debts that have not become time-barred, or are owed by directors against whom it is possible and worth-while to proceed. The merchant bank that runs itself by family tradition and unwritten rules hardly gets a testimonial from the report detailing the doings of the family that controlled the Palai Central. The final verdict is in these terms: "As the Official Liquidator.... I state that in my opinion loss has been caused to the bank since its formation by the acts of commission and omission of the directors and of the auditor of the bank." Further action should await the direction of the Kerala High Court, but it seems unlikely that the share-holders who got dividends on unmade profits have any claims to satisfaction. The depositors have much to depress them in the report, but it behoves Authority to make such amends as it can, by special procedure, if necessary. The suggestion that the taxes already collected by it should be disgorged may not find too ready an ear: even if it did, there may be legal difficulties in carrying out the idea. After all, if Government were to return all the taxes it has wrongly collected, there will be no end to the process. Any impulsiveness in this respect may be quickly snuffed by the thought of all the taxes that ought to have been collected and not collected. (As the village idiot philosophised, "Some people get more than they deserve and some people less than

they deserve. On the whole justice is done.")

From the long term point of view, it is necessary that some kind of professionalism in banking is fostered as a matter of policy. The habit of a smart Alec thinking of a bank as a family chest into which to dip as fancy takes him, needs discouragement. The training of directors may be difficult, but the need for a class that will have a professional rather than personal interest (and pride) in its job is paramount. Retired managers and agents with no financial axes of their own to grind in the affairs of the bank may well form a pool from which to draw for membership of bank directorates.

Incidentally, it is odd that the Kerala Banking Inquiry held in 1956 did not get at the facts of the pernicious practices of entrenched interests. Its preoccupation with pay scales and working conditions made it miss what now stand revealed as monstrous deviations from standards of propriety in banking. The affairs of Palai Central will get further airing before we hear the end of it. If at the end of it all, it is possible to salvage something out of the wreck and compensate the depositors, by some kind of merger, if necessary, it would be a clean end to a dirty episode in Indian banking.

Oscar Wilde once stood on its head the Aristotelean dictum that Art was an imitation of Life by averring that on the contrary it was Life that flattered Art in this fashion. A recent mishap may provide a rather macabre confirmation of Wildean aesthetics. (Or is it ethics?) An English passenger, John Greystoke by name, is reported to have leapt out of an aircraft while on a flight to Lagos in Nigeria. The name will ring a bell to the cognoscenti: Lord Greystoke was Tarzan's alias. It is a measure of the values of the times that Tarzan should recall Johnny Weismuller or Lex Baxter or any of the several other screen Tarzans—you can fix a man's age by the screen Tarzan he recalls—rather than the fictional aristocrat who had a whale of a time in Africa. Mr John Greystoke's rather unconventional departure from the plane has points of interest to others besides the coroner. The biologist or psychologist, for example. Is some principle of atavism involved in this attempt of Mr Greystoke to imitate the exploits of his fictional namesake? It would be frivolous to object that atavism is a principle in biology and there can be no "throw-back" to or from a creature of fiction. Even biologists, notably Medawar—have veered

round to view that biological continuity—or discontinuity, as in atavism—is to be inferred not only from purely genetical evolution but also from transmission of socially acquired characteristics in the form of historical and other traditions of knowledge and skills. The Shavian idea of the Life Force blundering through Shakespeare and Hamlet, through Faust, Marlowe and Goethe without particularising too nicely whether anyone of these were live-creatures or products of the imagination, is respectable biology today. If you consider this theory too thin-spun, consider another, based on psychology. Is it unlikely that the sight of the African soil released some obscure impulse in Mr Greystoke, whose unconscious, I assume, had been stored with the varied adventures of Lord Greystoke, better known as Tarzan? It is a pity that James Thurber isn't alive to draw the appropriate moral from the episode, for the secret life of Mr Greystoke may have obvious points of affinity with that of Mr Walter Mitty. The written word is still a potent force and the winds of change blowing fiercely through Africa may be no match for an inflamed imagination fed on romantic literature. (A rather different and less engaging encounter between the two forces is part of the history of our times.) Of course, I may have to give up this rather attractive theory if it turns out that Mr Greystoke was unacquainted with the works of the late Edgar Rice Burroughs. Well, let us await the verdict of the coroner. Should it turn out to be "Death due to misadventure," I know what conclusions to draw about the imagination of the coroner.

Popular recognition comes tardily to greatness such as Sir Bijoy Prasad Singh Roy's. In the turbulent politics of the days before independence, the kind of politics that Sir Bijoy felt instinctively drawn to was hardly calculated to win popular acclaim. But the liberals were then not entirely useless, even politically, as anyone with any acquaintance with the details of the politics of the time knows. Post-independent Indian politics too was, for different reasons, not such as to make men like Sir Bijoy see in it a vocation for themselves. And industry was the gainer by this circumstance. Like Sir A. Ramaswami Mudaliar, whose career has its points of resemblance with his, Sir Bijoy turned his talents to a sphere in which he has achieved great success. He was associated with a wide variety of industrial and commercial interests to all of which he brought the gifts of an alert and trained mind. Sir Bijoy had a large number of interests outside industry and commerce and the social life of Calcutta will be the poorer for his passing away.

AVRO-748

A Great Landmark

THE building of the Avro 748 by the IAF Maintenance Command in Kanpur, as Mr V. K. Krishna Menon said in his message of appreciation to Air Vice-Marshal Harjinder Singh, AOC-in-C, Maintenance Command is not just making an aeroplane, but a great landmark in our national and technical progress. This is the first major transport aircraft manufacturing project in which India is associated from the blueprint stage to the development and production of the aircraft. The successful completion of the first production model was signalled by the public flight inaugurated by the Prime Minister last Sunday. The IAF has now the distinction that it is the only air force manufacturing the aircraft it uses.

The Avro project for manufacture of transport aircraft to replace the existing fleet of Dakotas was approved in 1959 and the agreement with Hawker-Siddley Aviation Ltd, was entered into on July 7, 1959. Notable features of the project and its progress since the Aircraft Manufacturing Depot was formally inaugurated by the late Air Marshal S. Mukherjee on January 23, 1960 were explained by Mr R. P. Sarathy, Additional Secretary, Defence Ministry, and Air Vice-Marshal Harjinder Singh at a press preview of the static exhibition arranged in connection with the inaugural flight. Since the first rivet was driven on May 12, 1960, 414 technicians worked round the clock to complete the aircraft in record time. The jigs, tools and rigs required for the manufacture of the aircraft were locally made out of the resources available at the various defence establishments and material and equipment salvaged from disposals. Normally such capital equipment is imported from the original manufacturers. By undertaking indigenous manufacture of these items, the Kanpur Depot has not only saved time but also more than Rs 1½ crores in foreign exchange. While construction of the first production model was under way, jigs and tools were also being installed for the construction of another two aircraft. According to the programme of manufacture envisaged, 12 aircraft will be made in 1963, 18 in 1964 and thereafter it would be possible to turn out 36 aircraft a year by working double shift.

Under the agreement with the British manufacturers, who have extended the fullest co-operation and have also undertaken to make available all further modifications of the aircraft made during ten years of the agreement, there is scope for developing an export market. And it was stated that some neighbouring

countries had shown interest in Avro 748.

In spite of late start in industrialisation, India will not be at a disadvantage as compared with advanced industrial countries in undertaking aircraft manufacture. It may be mentioned in this context that mass production technique is not suitable for aircraft manufacture. Each single aircraft and every part of its housing have to be fabricated by hand with meticulous care. The vast potential of technical manpower—the AVRO project has demonstrated that quality of Indian craftsmen—gives India a decided advantage in this field.

From this point of view the training programme, which one may call a by-product of the Avro project, is a most encouraging development. The Air Force Technical Training School, which has been functioning for a year at Kanpur, imparts training to over 1,500 airmen every year in various technical cadres. It is also proposed to start a scheme for training 600 civilians every year to meet the requirements of skilled technical personnel. Besides, the Air Force Tutorial College at Kanpur will be running three types of courses; the Aeronautical Department to train executives; the Technological Department run by the Air Force Station, which would run short courses for the improvement of production techniques; and the Administrative Department which would provide short efficiency courses on administrative, accounts and factory legislation aspects of the industry. It may be recalled that the Ministry of Scientific Research and Cultural Affairs, have commenced a scheme of training engineers in engineering, aeronautical and telecommunication subjects in part-time evening colleges. During the last few months, 24 Tutorial Colleges have been established at Defence Establishments throughout India. About 3,500 students are undergoing a three-year training to prepare them for Associated Membership of the Institution of Telecommunication Engineers (India).

A New Industrial Complex

The large supplies of natural gas available from the Nahorkatiya and Moran fields will provide the basis for the establishment of a large industrial complex in the locality. According to the latest estimates made at the end of June 1961, the reserves, it is learnt, are of the order of 740,428 million cubic feet. The availability of gas from the oilfields for industrial uses is placed at about 35 million cubic feet per day. Three of the industrial projects to be set up around Nahorkatiya—a thermal power station, a fertiliser plant and a project for supplying natural gas

for domestic use and small scale industries—will be in the public sector. The private sector projects include a Synthetic Rubber plant, a Synthetic Plastics plant and a plant for manufacturing Carbon Black. A synthetic fibre and plastics plant and an Automat brick making plant may also be set up.

The Rs 10-crore power station at Namrup near Gauhati, will have an installed capacity of 50,400 kw. The Fertiliser Corporation of India will set up the fertiliser plant costing Rs 12 crores to produce 50,000 tons of ammonium sulphate and 50,000 tons of urea per annum. A Rs 15-crore synthetic rubber plant to be located near Nahorkatiya, with annual capacity of 20,000 tons per annum, will be set up by an Indian firm in collaboration with foreign concerns. The Synthetic Plastics plant and the Furnace Carbon Black plant have already been licensed. The Plastics plant costing Rs 4 crores will produce 4,000 tons of polyethylene and other plastics. The Carbon Black plant costing Rs 1 crore will produce 10,000 tons of carbon black per annum.

Sources of Energy

An ECAFE Regional Seminar on Source of Energy and Electric Power Development is meeting in Bangkok, at which India is represented by Dr Lal C. Verman, Director of the Indian Standards Institution, who left Delhi last Sunday. Dr Verman will be presenting two papers at this Seminar, one on Voltage Standardisation and the other on Standardisation of Electric Equipment. Among the countries of the ECAFE region, organisations for developing standards have been functioning only in India and in Japan. Other countries are just making a beginning. The formulation of standards on a uniform basis is a matter of considerable importance to the industrial development of the region as a whole. The standards in use in the West, which have been developed to suit temperate climates, may have to be modified to suit the different climatic conditions met with in the ECAFE region.

In this respect the work done by the ISI can provide helpful guidance. Dr Verman will also participate in the Intra-Regional Seminar on Hydrological Field Methods and Equipment Used in Hydrology and Hydro-Meteorology, which is jointly sponsored by the ECAFE and the World Meteorological Organisation. He will present a paper on International Standardisation of Methods of Measurement of Flow of Water in Open Channels. The Indian Standards Institution functions as the Secretariat of the International Committee on this subject.

Eleven Productivity Teams

The National Productivity Council will be sponsoring eleven productivity teams during 1962 with TCM assistance. Generally these teams will visit the US, countries in Western Europe and Japan, depending

on the nature of the subject of study. The Minister for Industry, who gave this information to Lok Sabha in a written answer, also stated that the final selection will be made out of the following 13 subjects of study: (1) Technique of International Trade; (2) Leather Industry (tanning, leather goods, footwear, sportsgoods, industrial leather, belting etc.); (3) Radio and Electronics; (4) Food Preservation and Canning Industry; (5) Non-Ferrous Metal Industry—Rolling and Processing; (6) Cable Industries; (7) Glass and Optical Industry; (8) Steel Re-rolling Industry; (9) Fuel and Power Industry; (10) Tools, Jigs and Fixtures Industries; (11) Posts & Telecommunications; (12) Woollen and Worsted Industry; (13) Industrial Designs in Metal Industries.

AT THE FAIR The Walchand Group

The impressive show put up by the Walchand Group at the Industries Fair recalls the pioneering role of its founder in the development and diversification of Indian industry. If Jamsheedee Tata initiated steel manufacture on modern lines, the late Walchand Hirachand, turned his attention to the development of the steel-using industries. He was the pioneer of Indian shipping as well as the first to make airplanes and automobiles in India. The concerns which he founded or helped to develop have grown into a far-flung industrial empire which has achieved the unique success of integrating modern industry, with progressive agriculture. The units of group—Foundries and Farms, Diesel Engines and Hume Pipes, Structural Construction and Sugar Farms, Lathes and Looms, Motor Cars and Machinery—are dispersed all over the country. The pavilion with its massive display of sugar mill and other types of machinery depicts the progress achieved in different lines of manufacture. The Walchand Industries Limited, which have grown up round the nucleus of a sugar farm established on a barren tract of land, comprise, besides the sugar factory, a Distillery, an Oil Mill, a Hydrogenation Plant and a Soap Manufacturing unit. The latest addition is the manufacture of plastic products. This industrial complex also manufacture the entire range of machinery required by a modern sugar factory.

The Health Pavilion

"Health Helps Industry, Industry Helps Health," is the basic theme of the Health Pavilion of the Ministry of Health in the Indian Industries Fair. A separate section is devoted to the significant role played by industry in promoting nation's health by production of drugs and other medical equipment. A section on "Conquest of Disease" depicts the growing provision of health services in hospitals, clinics, primary health centres, including family planning. Other sections present the needs of an industrial workers' family in terms of nutritious food, safe water hygienic environment and health care.

The Deccan Sugar & Abkhari Company Limited

Sixty-Fifth Annual General Meeting

Mr C. R. Srinivasan's Review

Before commencing the proceedings of the Sixty-fifth Annual General Meeting of the Shareholders of the Company held on 27th November 1961, Mr. C. R. Srinivasan, Chairman, made the following statement and requested Shareholders to observe 2 minutes silence in memory of Mr. H. I. Wofnor, a past Chairman and Director of the Company.

"Before commencing the proceedings of the meeting, it is my melancholy duty to convey to you a most distressing piece of news. I refer to the untimely and altogether unexpected death of Mr. H. I. Wofnor on Friday morning. He arrived from England for consultations on many matters of business on Thursday noon. I found him in very good spirits and I was talking to him till 9 p.m. Next morning I heard the tragic news that he had died in his sleep. I believe all of you know him or heard of him as one of the prime architects of the new deal in the Parry Group of Companies. Personally, I have moved with him in close intimacy for the last 25 years and with every passing year our friendship has found fresh points of contact and concord. He was a friend of this country in the fullest sense of the word and had faith abundant in its destiny. It almost looks as though he came to die in the land of his adoption where he had spent the greater part of his fruitful life. May God rest his soul in peace. I will ask you to stand up and observe 2 minutes silence in memory of a great Britisher who has served this country as well as any Indian could have, and in doing so, served his own country also."

In his review of the working of the Company the Chairman said:

"It gives me pleasure to welcome you to the Sixty-fifth Annual General Meeting of this Company.

The Accounts for the year ended 31st May 1961 and the Report of the Directors thereon have been in your hands for the statutory period and with your permission I shall take them as read.

The results contained therein reflect the position that was forecast in my statement at the last Annual General Meeting, namely that stocks at our factories would build up due to the increase in the all-India sugar production. Releases of sugar for sale by Government were severely restricted and this accounts for the drop in turn-

over of not less than Rs 86 lakhs compared with the previous year.

This is the major reason for the reduction of Rs 8.50 lakhs in our Net Profit before Taxation. I would mention that although the Company received a bonus in the shape of a rebate of Excise Duty of some Rs 4 lakhs for increased production, this was more than offset by the contributions of not less than Rs 6.50 lakhs that had to be made towards Sugar Export losses.

Thus, bearing in mind the need to conserve the resources of the Company, your Directors have been reluctantly forced to recommend a lower final dividend of 13½% for the year under review as against 18½% paid for the last year, thus making the total for the year 21% against 25½% last year.

In other respects I consider that the printed Accounts and the Notes thereon are self-explanatory and do not require further specific comment, but I shall, of course, welcome any questions thereon at the conclusion of my speech.

As you may have seen from the Report before you, the quantity of cane crushed and sugar produced during the year at Samalkot and Pugalur constitute a record for both factories. While this achievement, by itself, is gratifying, the immediate benefit was, as I have just said, largely lost by reason of smaller releases of sugar from both factories. The policy of the Government of India is to release every month a fixed percentage of the production of each factory, the total quantity released being the estimated all-India consumption for the month, excluding exports for which special releases are made from time to time. The effect of this policy is to make available in the States of U.P. and Bihar a much larger quantity than can be consumed in those States. Under controlled conditions, much of this surplus was allotted to other States including Madras and Kerala, in spite of the fact that the Southern Region as a whole is self-sufficient and had no need to import anything like the quantities allotted by Government during the control period.

Now that decontrol has come in the wake of over-production, with uncertain prospects as to the size of exports, we are entering a period of unstable prices and selling pressure. Already prices have come down by about Rs 20

per tonne. We can only hope that they will become stabilised at a level which would not have serious repercussions on all sugar manufacturers.

The rehabilitation and consolidation of Samalkot Factory to which I referred in my speech last year is proceeding. The suppliers of the fourth mill are expecting shortly the licence to import the foreign components. All going well, it is hoped to instal the mill in time for the 1963/64 season.

I stated in my speech last year that orders had been placed for almost all the equipment required for the expansion of Pugalur Factory from 1,000 tons to 1,250 tons cane per day, at an estimated cost of between Rs 25 lakhs and Rs 30 lakhs. The advantages of expansion need no emphasis. A lower cost of manufacture from higher output enhances the ability of a unit to withstand competition in times of abundance of supplies, but considering the position in which the industry is today, it would be wise to review decisions taken under somewhat different conditions a year or so ago. Your Directors, after careful consideration, have come to the conclusion that it would do no harm to go a little slow with the expansion scheme. Accordingly, the proposed extension originally scheduled to be completed before the 1962/63 season will be delayed probably by another year. These considerations however do not apply to the Samalkot Factory where the more urgent need is rehabilitation and not expansion.

An interesting development in connection with Pugalur Factory is an agreement made with Seshasayee Paper & Boards Limited whereby they will supply the factory with two oil-fired boilers and the necessary oil fuel to burn in them, and in return take all the bagasse produced in the factory for the manufacture of paper in their new factory near Erode. No capital expenditure will be incurred by the Company, and while no monetary remuneration will be received for the bagasse, it is hoped that the oil-fired boilers will provide steadier working conditions with a constant steam pressure, thus resulting in slightly reduced working costs. In the interests of the industrial development of the country this is a welcome step and I am sure our co-operation will be appreciated. The present position is that an application for

an import licence for the two boilers made by Seshasayee Paper & Boards Limited is pending with the Government of India.

The Tariff Commission's Report on the Price Linking Formula is still under consideration of the Government of India. We continue to be in the unhappy position of not knowing the final price for cane for the year 1958/59, 1959/60 and 1960/61. Reasonable provision has been made in the Accounts for these years, and some interim payments have been made to the growers.

The distillery at Samalkot is not doing very well. Our main market is West Bengal where competition is keen. To add to our difficulties, the Government of India have fixed a very low ex-distillery price under the Ethyl Alcohol Price Control Order 1961. If we sold at this price, we would be making a considerable loss. Representations have been made to Government to consider the question of price for smaller distilleries after an examination of their actual costs. It is to be hoped that the Price Control Order will not be enforced in the meantime.

Sales of Carbonic Acid Gas were not unsatisfactory but, here again, there is severe competition in a restricted field. Nevertheless, this section of the factory makes a useful contribution to Overheads.

Our relations with Labour and Staff during the course of the year have remained satisfactory. The Sugar Wage Board recommendations have been published and accepted by Government, and preliminary arrangements have now been made for negotiations with Staff and Labour, both at Samalkot and Pugalur, with a view to arriving at a long-term agreement on future terms of service. It is hoped we shall be able to conclude a settlement with the Unions on suitable lines.

Now you will expect me to say something about future prospects. In my speech to you last year I stressed that a state of over-production was being reached and, in the event, the present position is worse than I envisaged at that time.

The sugar year 1960/61 started with a carry forward of 5½ lakh tons which is generous but not unduly so. 5 lakh tons is generally considered the carry forward required to take care of any unexpected shortfall in pro-

duction. Production for the year 1960/61 reached the record figure of only just short of 30 lakh tons against which internal consumption has amounted to only 21 lakh tons and in addition 2.7 lakh tons have been, or are to be, exported by the 31st December, 1961.

You will see, therefore, that we started the current sugar year 1961/62 with a stock of 11.8 lakh tons and, allowing for the buffer stock of 5 lakh tons, there is 6.8 lakh tons surplus. As you all know, Government is trying to adjust the position by stipulating that factories shall only produce ninety per cent of their highest production in the preceding two years; various exemptions however are being made in favour of new factories and those with a small output and which for various reasons did not reach a certain minimum production in 1959/60 and 1960/61. In the result I therefore fear that we must look forward to a production of very nearly 30 lakh tons again during the current year. I sounded a note of warning last year when I said that the bulk of next year's sugar crop is already in the ground. It is very difficult to see how factories which have registered cane for their full requirements are going to deal with their excess production. In the case of our two factories, I am glad to say that as production last year reached record figures, we are unlikely to exceed the ninety per cent target this year, and I therefore, hope that the question of payment of the penal excise duty will not arise. Other factories are not so fortunately placed and there must be considerable hardship in those areas where there is no jaggery industry to take up the surplus if factories refuse to crush all the cane offered. Even if the surplus cane is used to produce jaggery, or khandsari sugar, this is likely to be offered at give away prices which in turn will restrict the offtake of factory sugar. Government have still not made any announcement regarding sugar cane prices for the 1962/63 season, and with all the earnestness I can command I would urge Government to set at rest without delay the anxiety of growers and millers. Ministers have admitted in Parliament that the current sugarcane price is attractive compared with the realization from other crops, and if it were not, how is the increase of over 8 lakhs acres under sugarcane during the last two seasons, mostly in U.P., to be explained? The simplest and most efficacious way of reducing the production of sugar in the country to something approximately to the country's requirements is an adjustment of cane prices by an emphasis on payment for quality, and may I take this opportunity of pleading once again for a floor price which will cover growers' out-of-pocket expenses, the balance to be paid on the basis

of quality. This I consider one of the most important aspects of the problem, both to meet the immediate situation and to build up an industry which may stand a chance of competing in the world markets in the future. As long as cane is paid for on the basis of weight irrespective of quality, I fear that India will be priced out of the export market.

Other steps which might be taken to remedy the situation are to cancel a number of licences for additional factories already granted, but for which no effective steps have yet been taken. Government have announced that they will not license any further new factories, but this does not go far enough. There may be difficulties in the way of cancelling licences already granted, but is it fair to allow factories to go into production with little chance of operating profitably, to the detriment of the interests of shareholders? There is general agreement that the demand for sugar in the country must be stimulated to mop up the surplus production and there is no reason why this should not be done. The average annual consumption per capita of the population in India is 5.5 kg. compared with 47 kg. in U.S.A. and 55 kg. in U.K. The significant fact is that the annual consumption in 1957 was 20 lakh tons and in that year the then Finance Minister doubled the excise duty on sugar with a view, as he said, to restrict consumption and to make sugar available for export. How well he succeeded in the first part of his intention is shown in the offtake for subsequent years.

		lakh tons
1958	..	20.5
1959	..	20.7
1960	..	20.2
1961	..	21.0

(estimated)

It is significant that offtake should have remained static over this period despite the increase in the population, and surely this is evidence enough that the decision of 1957 should be reversed and the excise duty reduced by fifty per cent. Our people want sugar, but at a price they can afford to pay.

There has been much talk about exporting our surplus production and earning valuable foreign exchange, but even if the Government, the industry, and the growers are prepared to subsidise exports, such exports can only absorb a small part of India's surplus production. India has become a member of the International Sugar Agreement, a step which was necessary to enable her to take advantage of the American quota, and her rights under this Agreement are not likely to exceed 1,50,000 tons per annum. What our quota will be from America this year is any-

one's guess, but we well know what happened to the initial quota of 2,25,000 tons which, overnight, was cut by 50,000 tons. It would be wise to realise that U.S.A. has her own problems and we cannot expect her to accommodate us at all costs. Efforts are also being made for a quota for supply to Great Britain under the Commonwealth Sugar Agreement, but latest information is that this is not likely to materialise. It is, therefore, unlikely that India's exports will reach 5,00,000 tons, and this, only at a loss of something on an average of Rs 300 per ton after full rebate of excise duty, cane cess, etc. We doubtless need foreign exchange, but some may ask whether it cannot be bought at too high a price.

Andhra State is already surplus in the production of sugar and Madras State is approaching that condition. As long as Government maintain the system of monthly releases adjusted to the approximate offtake of the markets, I think a price level can be held which will give a reasonable margin of profit, but I would be failing in my duty if I did not warn you that the industry is passing through a most difficult time and I wonder if we have seen the worst yet. Stocks are moving, but not as fast as they are accumulating, and this is a situation which cannot go on indefinitely. There are two difficulties to be faced—one, financial; and the other, physical. By the time our two factories stop crushing in April next, we expect to be holding stocks amounting to 23,000 tons and valued at Rs 1.84 crores. That is a heavy enough burden to carry financially. Any further addition will be a severe strain. The purely physical problem needs no explanation from me. No Company can go on building godowns indefinitely to store unwanted stocks, nor does sugar quality improve through storage. I, therefore, fear that a further and probably more drastic restriction of production may have to be enforced during the 1962/63 season.

In my opinion, the crisis in the industry, and it is a crisis although the Food Minister denied this at the last annual general meeting of the Indian Sugar Mills Association, cannot be met by exports. Exports can only be made at a substantial loss which the industry cannot afford to bear. The solution lies in increasing national consumption, and this can be done by paying for cane on the basis of quality, and also reducing the excise duty on sugar which will make sugar available at cheaper rates. Should consumption then rise faster than expected, the capacity is available, and it should be easy to match increased consumption with increased production.

And now, may I strike a personal note before I close. I joined

the Board of this Company in 1943 and have functioned as its Chairman from 1956. The Company is in fine fettle and during the past few years in particular, shareholders have gathered a rich harvest in dividends. At the moment the outlook may not be quite so promising, but there is no need to take a pessimistic view. I have indicated some of the correctives the situation calls for and I have no doubt Government will give serious thought to the problems posed, once the General Elections in the offing are over. The malaise affects the whole industry and not a particular unit and sugar represents too large an investment in our national economy to be ignored. We have been dealing with problems of sugar so far only in terms of internal and external consumption as edible sugar—sugar as a detergent is coming into the picture and if expectations are not belied, quite a new outlet for sugar may perhaps enter our calculations. So let us wait and hope for the best; and in that confident hope let me bid you farewell. This is the last meeting of the general body that I shall preside over. A few weeks back when I had occasion to address the shareholders of Parrys Confectionery Limited, I told them that I have decided to retire from all active work and from the Boards of all Companies I have been associated with, as soon as convenient, for reasons of health. I regret I have to say the same thing to you. I have carried a heavy burden on my shoulders these fifty years and need rest. I am sure you will not begrudge it. My best wishes are with the companies I have lived and worked for—"God bless you."

The Report and Accounts for the year ended 31st May 1961 were adopted and a final dividend for that year at the rate of 13.5% subject to deduction of tax, on the Company's Ordinary Share Capital was declared payable on the 28th November 1961.

The retiring Directors, Sir T. S. Venkataraman and Kumara-raja M.A.M. Muthiah Chettiar of Chettinad, were re-elected and the retiring Auditors, Messrs. Lovelock and Lewes, were re-appointed.

Mr. G. N. Noel-Tod, in proposing a vote of thanks to the Chairman, said:

"At this Meeting, which Mr. Srinivasan has said is the last over which the will preside as Chairman, it is fitting that I, who have been associated with him on the Board since 1954, should propose a vote of thanks.

It is difficult for me to realise that my association with Mr. Srinivasan in this Company will before long terminate. It has been a great experience for me to have worked for these years with, and under the guidance of, Mr. Srinivasan.

Mr. Srinivasan has pointed out that of recent years Shareholders have consistently enjoyed good dividends and I can assure you that the build-up of the Company to its present level of prosperity has been, in no small measure, due to Mr. Srinivasan's leadership as Chairman of the Board. It would be idle for me to attempt to disguise the fact that there have in the past been differences of opinion between the Board and certain

Shareholders. Such differences of opinion must inevitably arise from time to time, and do in fact arise in other companies. Nor in this Company are they unique to the time of Mr. Srinivasan's Chairmanship. I remember well the apprehensions of Shareholders as to the conduct of the affairs of the Company by the Board and the Managing Agents in the early fifties when, due to disease in the cane, the Pugalur factory had

temporarily to be closed. Consistently, however, this Board has always had as its objective the achievement of maximum prosperity for the Company. Equally, I do not doubt that Shareholders have the same objective, the differences of opinion relate only to the methods adopted to achieve this end.

I would like on your behalf to thank Mr. Srinivasan for his services to the Company over the

past 18 years and to wish him many happy years in retirement." On behalf of the Shareholders, Mr. S. Srinivasa Iyer, desired it to be recorded that the Company greatly appreciated the services of the Chairman and this was carried with acclamation.

N.B.—This does not purport to be a report of the proceedings of the Annual General Meeting.

Markets

JUTE Minimum Raw Jute Quotas for Mills

CLOSELY following the fixation by the Forward Markets Commission, of minimum price corresponding to Rs 30 per maund for Assam Bottoms delivered at Calcutta, the Indian Jute Mills Association initiated steps calculated to arrest the decline in raw jute prices. It was announced on Monday that the IJMA was reconstituting its Jute Quota Sub-committee with a view to stepping up mill purchases. It may be recalled that this committee was formed at the time of the acute shortage of raw jute to prescribe maximum raw jute quotas in order that the available supply was distributed to all the units in the industry. Expressing grave concern at the recent signs of a break in the jute market, the IJMA has pointed out that the fall in prices is not due to any decrease in purchases by the mills, which have continued to be substantial, but rather to the unusually large arrivals of raw jute. The Quota Sub-committee will lay down minimum quotas of jute to be purchased by the mills. The scheme is of course applicable to member mills but the IJMA has expressed the hope that non-member mills will co-operate in its efforts to support the market by stepping up their purchases of jute. In a Press Note announcing the steps taken to maintain raw jute prices, the IJMA has pointed out that for the successful working of the quota scheme there are two conditions which should be satisfied. In the first place, any stepping up of jute purchases by mills will require large funds which the industry will not be able to find from its own resources in view of the heavy losses incurred by it earlier in the year. Hence it is essential that the mills obtain from the banks more liberal credit facilities than have been available hitherto. Secondly, mills cannot be expected to go on purchasing jute at the minimum price now fixed if gunny prices decline with the result that mills are forced to incur heavy losses on

simultaneous business. The Press Note has noted that if it so happens that there is loss on simultaneous business, the IJMA would have to take prompt and effective action to remedy the position.

The situation created by the steep decline in jute prices has received wide attention and Mr. Nityananda Kanungo, Union Minister for Commerce, assured Parliament the other day that necessary measures had been initiated to restore stability to the market. Government has rejected the demand for fixation of floor prices for raw jute and Mr. Kanungo has explained how statutory fixing of minimum prices bristles with difficulties since jute goods are mainly dependent on foreign markets. The Minister has however said that with the Forward Markets Commission closely watching and controlling

futures trading and the buffer stock agency kept ready to step in whenever there is an emergency, there is no need for undue anxiety. The buffer stock agency, which is awaiting formal registration, will begin to make purchases the moment jute prices in Calcutta fall below Rs 30 per maund.

Thanks to the prompt steps taken by Government and the IJMA, prices in the raw jute market were well maintained at the prescribed floor levels. Mills evinced fair interest on most days and toward the close of the week the undertone was steadier mainly in sympathy with the goods section. It is to be expected that holders who appeared to be nervous and who were keen on selling at a discount some time ago will now hold on to their stocks despite the heavy pressure from arrivals because there is now the double assurance that mills will step up their purchase and that raw jute prices basis Assam Bottoms will not be allowed to go below Rs 30 per maund.

After a quiet opening, the goods market firmed up in later dealings mainly due to due date covering in ready goods. Ready delivery sackings were particularly firm reflecting a squeeze. Although there were re-

ports of scattered foreign business both in hessian and heavy goods, there was no indication of the long expected revival of overseas interest. The outlook for heavy goods exports does not appear to be very bright in view of the growing competition from Pakistan. Speaking at the annual meeting of the Gunny Trades Association in Calcutta on Tuesday, Dr. B. P. Kedia, has emphasised the need for taking emergent action to regain the lost markets for Indian jute goods. He has pointed out that there is severe competition to our heavy goods from Pakistan which is able to make headway in foreign markets because of the cost advantages of its jute goods industry. He has referred in particular to Pakistan's export bonus scheme and has suggested that Government of India should examine the possibility of adopting a similar course in order to safeguard foreign exchange earnings from jute goods exports.

TEA Prices Recede in Most Cases

In the Export Sale held in Calcutta this week, offerings were 74,063 packages. There was a fair general demand; but prices for the majority of the descriptions were again easier and the market was irregular. Plain Broken and Fannings were 15 nP to 30 nP easier, while plain BOPS were up to 30 nP lower and sometimes more. Medium Assam BOPs with good liquors were very well supported and the better descriptions were at times dearer. Similar OFs were, however, irregular.

The best CTC descriptions received good support with selected lines selling at dearer rates. The medium, poorer and secondary grades were, however, very irregular. Legg-cuts were well supported and sometimes dearer. The cheaper Whole Leaf grades were 10 nP to 15 nP easier, but the more stylish kinds declined by 30 nP and were at times difficult of sale.

Darjeeling teas received fair support, while Tippy sorts were easier. Following rates were quoted:—Clean Plain Pekoe Rs 3.75 to Rs 3.95; Plain BP Rs 3.40 to Rs 3.60; Plain Fannings Rs 3.30 to Rs 3.60; Medium Assam CTC BP Rs 4.10 to Rs 4.50; Medium Assam CTC Fannings Rs 4.10 to Rs 4.50; Best Assam CTC BP Rs 4.80 to Rs 5.40 and Best Assam CTC Fannings Rs 4.90 to Rs 5.50.

In the Internal Sale, offerings were 25,189 packages of Dusts. There

*November delivery went off the Board on 25 November. The rate was quoted at Rs 48.46 for hessian and Rs 126.45 for Sacking on 24 November.

was a much improved demand. CTC types came to a strong market and were taken up at rates which were 20 nP to 30 nP per kilo above last levels. The fibrous teas, although irregular, were in better demand. Plain orthodox types declined in value by up to 10 nP, but the better liquoring dusts were generally firm to dearer.

Non-wither leg-cuts were in good demand and were generally dearer except for the plainer types which were irregular. Following rates were quoted:—Plain Orthodox Dust Rs 3.70 to Rs 4.00; Medium Assam Dust Rs 4.00 to Rs 4.20; Legg-cut Dust Rs 4.30 to Rs 4.70; Medium Assam CTC Dust Rs 5.70 to Rs 6.00 and Good Assam CTC Dust Rs 6.30 to Rs 6.70. Also 380 chests of Leaf grades were offered for internal consumption. These were absorbed at irregular rates.

Exports of North-East Indian tea are higher at 81.94 million kg this season up to 11 November as against 73.28 million kg in the corresponding period of the previous season. Shipments to the UK at 53.40 million are higher by 2.42 million kg than in the previous year, but lower by 2.10 million kg as compared with the 1959-60 season.

During the period under review, an appreciable increase in exports is noted to the USSR. From 4.33 million kg in 1959-60, the figure rose to 4.80 million kg the following year and went further up this season to 5.72 million kg. Besides Russia, the trend of shipments this season indicates larger exports of North-East Indian tea to the USA, UAR and other Middle Eastern countries, South America, West Indies and Central American countries.

Meanwhile, the Assam Government has convened a tea conference on 18 December. Representatives of the Indian Tea Association and tea planters will attend. The conference will try to devise ways for stepping up tea production in the State. The question of the creation of a tea finance replanting fund, expansion of gardens and the supply of fertilizers will figure prominently in conference.

Assam has now about 1,000 tea gardens and the total land under tea is nearly one lakh acres. Annual production is 350 million pounds against the country's overall production of 700 million pounds. The target has now been set at 900 million pounds by the end of the Third Plan. Assam will, therefore, have a major responsibility in reaching the target of tea production set under Third Plan.

In the Cochin market, offerings were 312,000 kilogrammes of tea dusts for internal consumption. Against less demand, Low Medium and Medium sorts were 20 nP to 30 nP a kilo lower, while better Mediums were up to 20 nP a kilo easier. Poorer sorts and residuals were much lower than last week's prices. Highgrowns were slightly easier. Unorthodox types were 10 nP to 25 nP lower.

Production of tea in Ceylon amounted to slightly more than 27.75 million pounds in September 1961 and the total, at the end of third

quarter, was nearly 341 million pounds, which is about 11.75 million pounds more than the same period of last year. Good growing weather was experienced last month and a preliminary estimate of the October crop at 40 million pounds indicates an increase of nearly 50 per cent on last year's figure.

Production of tea in British East Africa in September 1961 increased to 5.4 million pounds from 3.9 million pounds in the corresponding month of last year. This raises the total British East African tea output, in the first nine months of the current year, to 57.1 million pounds from 56.6 million pounds in the January/September 1960 period.

COTTON Mild Setback in Futures

THE tightening of control measures has at last started yielding results in the futures market in Bombay. The Jarilla March contract after the initial spurt during the past week has showed signs of decline and the buying spree is reported to have practically come to an end.

The reimposition of compulsory survey by the Textile Commissioner did not create any surprise in the market as the trade was fully aware that the authorities would introduce similar steps to cry a halt to the runaway prices of the contract. The increasing arrivals of new cotton crop at many of the upcountry centres also helped to prevent further rise in prices. The report that emanated from Khandesh and Vidarbha reveal that the new crop had started moving, though the pace of arrival was not upto the expectations. It is expected that sizable quantum of new crop will be arriving within the next few weeks. The marketing of cotton in many areas during this season has been delayed on account of the untimely rain in the last two months. This resulted in a virtual scramble for cotton and the spinners were prepared to meet their requirements even at higher prices. According to the official version, the recent spurt in prices was purely artificial and they are confident that the prices will come down in the immediate future. The outlook of indigenous cotton during the current season, which has been estimated at around 4.8 million bales, also does not warrant such a trend in prices.

Meanwhile the East India Cotton Association has been reported to have discussed the petition submitted by jobbers and brokers about the frequent intervention of the Forward Markets Commission in the market. The Board is likely to take up the matter with the authorities shortly.

In the spot market at Sewri, a slight slackening of mill demand was visible during the week under review. Spinner interest hovered around Vijay/Digvijay, Kalyan, 197/3, C02 and Surti. The prices of Vijay/Digvijay and C02 were kept firm due to the support lent by Southern and Ahmedabad mills.

Larger arrivals of Bengal Deshi in the terminal markets had their effects

in the prices on the export front and prices slipped down slightly by about 5 points during the past week. Demand from overseas particularly from Japan was well maintained. Sales registered with the Export Trade Controller's office till 22 November aggregated 88,200 bales.

The prospects for absorbing the entire quantum of 118,750 bales (shippers share) within a few days are rated bright provided the present trend is maintained. Rumours of further release of export quota for Bengal Deshi created a last minute rush in the registration of sales.

The import section was devoid of any fresh development. The American cotton met with good spinner interest. Sudan and African growths also attracted attention on a moderate scale.

The monthly review of world situation by International Cotton Advisory Committee has reported a possible reduction in the production of extra long staple cotton during the current season. Consumption of extra long staples has already turned down in many of the consuming countries particularly in the United Kingdom and India and the total consumption during the past season slipped down by 1 million bales to 1.2 million bales. According to the ICAC exports of extra long staple cotton in 1960-61 totalled about 1.5 million bales.

Total consumption of cotton by the mills in India from 1 September to 31 August amounted to 5,372,900 bales (180 kgs) in contrast with 5,105,085 bales in 1959-60

Description	1959-60	1960-61

East African	155,545	171,285
Others	18,689	34,250

Piecegoods

The Bombay piecegoods market displayed listless conditions during the past week also. Demand in both the export and import sections was at a low ebb and the turnover fell down to a mere trickle.

Only stray business was transacted in the domestic sector. Seasonal goods and a few lots of grey cloth met with some attraction of dealers and consumers from Rajasthan, Southern States and Bihar. Dyed and printed flannels and seasonal coatings were also in request. Contrary to the earlier expectations, saris and dhoties were practically neglected.

It has been reported that the mills were reluctant to sell their goods at a lower price. A section of the trade feel confident that if the demand for piecegoods was kept at a level to offer their stocks at comparatively lower prices. Some of the upcountry dealers have reported to have cancelled even their moorat contracts, presumably due to the easy trend in prices. The tight monetary conditions were also partly responsible for the dull trading in the market. The prices of powerloom cotton piecegoods, however, ruled firm largely

due to the shortage of good quality cotton yarn.

The export section was on the whole devoid of any fresh developments. Even the traditional buyers like the UK and Sudan shied away from the market. Business on a moderate scale was concluded in dhoties, mulls and chaddars with Ethiopia and Eritrea. Singapore accounted for a small quantum of bleached longcloth at slightly reduced prices.

Enquiries for grey goods from Burma flowed on a small scale. Holland focussed its attention on grey cloth and finished cotton bags. Chile's fancy was directed toward poplin dress material.

Sugar Quota Cut Restored

The United States has agreed to the resumption of sugar shipments to India on the understanding that this consignment will be either equated against next year's quota or held in bond at Ports if it arrives before the year-end. This has, to a large extent, solved the problems created in India by the cut of 50,000 tons imposed by Washington last month in the Indian sugar quota. The only remaining question is to resolve the problems arising out of the cancellation of three scheduled shipments of sugar from India to the US. These problems relate to claims of damages made by the US firms for non-delivery of sugar according to original schedule.

The US decision to restore the import cut is generally welcomed by the traders as they feel that the decision will give the necessary fillip to the falling trend in sugar prices. Moreover, the announcement of this decision is considered most opportune in the context of the industry's recent request to the authorities to put a check on the falling prices by releasing limited quotas of sugar for internal consumption.

The overall outlook for the sweet commodity is not, however, likely to undergo any radical change in view of the large carryover stock from the previous season and the prospects of sizable production. The impact of the production will, no doubt, felt only by the middle of December when the inflow will gather sufficient momentum. This apart, the floating stocks at all important consuming centres are stated to have been greatly improved.

Meanwhile, sugar prices in the main producing centres in North India have turned weak in the absence of buying support from Gujarat, Rajasthan, Madhya Pradesh and the Punjab. The move on the part of some of the mills to market their produce at an enhanced rate also met with resistance at higher levels. In view of the inactivity of the sugar markets, it is considered possible that the Government of India will take immediate steps to regulate sugar releases and thus help in stabilising the prices.

FOODGRAINS

Conditions in the Hapur Foodgrains market ruled generally steady last week. Wheat was steady at Rs 15.50 a maund for the average quality and up to Rs 17 for the farm produce. Thanks to the easy supply position, the market for Rice remained quiet. 3ram improved fractionally to Rs 14.87 a maund for the Punjab variety due to good demand and firm advices.

In the Pulses section, Peas and Arhar rose further on good buying support for conversion into dal. Dealers were reported to be holding arhar stocks on hopes of early exports. Other pulses were generally steady.

CHEMICALS & DYES

Conditions in the Bombay Dyes and Chemicals markets were better with a fair turnover and an increased demand. The paucity of supplies was the main reason for a steady rise in prices. There were also fears that the supply position would not improve in the immediate future.

In the Dyes section, prices looked up on fears of a further shortage of goods. Indigo was in great demand; but the stocks were not reported to be adequate to meet the demand. The Italian variety shot up to Rs 9-0-0 and the German to Rs 10-4-0. Among vat dyes, blue RSN Japanese improved to Rs 35. In Naphthols, AS-1B was better at Rs 52, while AS was lower around Rs 8-8-0.

Among Chemicals, Bleaching Powder registered a substantial improvement in prices due to the shortage of goods. Consumers and the upcountry dealers showed a marked preference for the imported varieties. In Rengolite, the German quality attracted the attention of the dealers from Ahmedabad around Rs 2-0-0, while the Russian quality was traded around Rs 2-7-6 due to the increase in supplies. Price movements in Caustic Soda were confined to narrow limits.

PEPPER

Pepper markets are ruling generally weak in the absence of foreign advice and due to selling pressure. In the Cochin market, the rate for the ready position is quoted around Rs 330 per quintal and the December delivery at Rs 326.

Reports of arrivals of the new crop have induced caution among buyers who are found bidding for levels a couple of points below the sellers' ideas. Sellers, on the other hand, are waiting for fuller reports about the arrival position pending which they are showing a marked disinclination to make any commitment. The ready section is also affected by the prevailing sentiment.

The export front is also inactive, as market sources are gloomy about the export prospects, which are unsettled by the Brazilian entry into the American market with selling offers of more than anticipated size.

Although there has been a protracted absence of foreign demand during the past several weeks accounting for a bearish trend in the spot and forward sections, it is encouraging to note that India's export performance during 1960 was commendable. In a

review of the world pepper situation, the latest issue of the Forward Markets Bulletin states that the prominent role played by India since the war is more striking in the export of pepper than in production. In 1960, India exported 18.74 lakh metric tons against the 1950/55 average of 14 lakh metric tons and the maximum reached in 1958 of 19.61 lakh metric tons.

As regards production, the target laid down for pepper at the end of the Third Plan period is 27.4 lakh metric tons as against the output estimated during 1960/61 season at

26.6 lakh metric tons. It is said that the world production of pepper in the near future is not expected to differ greatly from the average of 73.3 lakh metric tons during the four years ending 1959 though, in the long run, the production is expected to show a substantial rise.

Referring to the establishment of co-operatives in Ceylon, which purchased pepper at a price fixed by the Government in order to mitigate the effects of price fluctuations on producers, the review suggests that a co-ordinated production and export policies by the main exporters like

India, Cambodia, Indonesia, Sarawak and Singapore might bring about a similar result.

It is also noted that the timings of harvesting of pepper in India, Indonesia and Sarawak—the three principal suppliers of pepper to the world market—are such that they follow one another in succession and assure the world of a more or less steady and continuous flow of the commodity. The bulk of the Indian crop is marketed from November to March, while the Sarawak produce moves from June to August when the Indonesian crop enters the market.

THE LARGEST INDUSTRY AND TRADE FAIR OF ASIA

RUBBER

On the London market, Rubber prices have suffered a sudden and sharp fall in recent weeks. According to London market sources, it is part of a long-term adjustment, which has been inevitable for at least year by which time the natural production is being enabled to become fully competitive with its synthetic rivals.

In the recent weeks, Russian appetite for rubber has been reduced. More importantly, the British Board of Trade and the US authorities have announced policy changes which will allow them to dispose of their stockpiles more readily. But these factors only brought about more quickly than what was anticipated the price of natural in London almost exactly equal to that of most widely used synthetic grades. The pressure of synthetic competition has stiffened as the surplus production capacity develops.

More and more countries, which have previously relied on the US or Canadian exports of synthetic rubber, are expanding their own plants and several European countries—with Italy leading—have recently become net exporters. Within the next few years, the total capacity in the world is expected to expand by over 20 per cent and it is unrealistic to expect that more than about three-quarters of it will be used at first. This is despite the fact that synthetics are rapidly improving their share of the total rubber market and last year, for the first time, accounted for more than half of the total consumption.

Meanwhile, a new sliding scale of rubber export duty varying with the movement of London prices of rubber has been introduced in Ceylon from 26 November. This is in keeping with the recommendation of an official committee, which went into the question recently. The announcement has not given the details of the scheme; but has stated that the duty will be worked out on the basis of the earlier weeks' London prices.

At the present London price of sheet rubber, the new duty will be about 14 cents. The present export duty on rubber is a flat rate of 20 cents a pound of sheet rubber. The new scheme is expected to help the producer obtain his minimum price in adverse conditions while enabling the Government to realise higher revenue in times of boom.

CASHEW

There has been an increase in the export of Cashew kernels from India during the first nine months of this year. The rise in exports has been mainly brought about by the increase in the offtake by traditional markets like the UK, Australia and Canada, while the USA maintains her quantum of imports. The offtake by Russia is, however, less as compared to that in the corresponding period of the previous year.

India exported 71,000,000 pounds of kernels up to the end of September, which represented an increase of about 3,750,000 pounds over the quantity exported in the first nine months of 1960. Poland, a new comer in the Indian cashew kernel market, accounted for an offtake of 1,550,000 pounds while France and

Japan were said to be potential markets.

In line with the kernel exports, Indian export of cashewnut shell liquid is also maintaining an upward trend. According to the Cashew Export Promotion Council, India exported 4,800 metric tons of liquid valued at Rs 35 lakhs up to the September-end. The UK was the principal buyer.

The Council has, under consideration, the question of instituting some sort of quality control measure for imported raw cashewnuts. The Council has also decided to set up a sub-Committee to draw a scheme for streamlining the procedures relating to the collection, marketing and processing of cashewnuts.

CARDAMOM

There has been a marked increase in the area under Cardamom in the Kerala State; but the yield is not expected to be much higher due to the "kutte" disease which has affected the crop. The crop yield is expected to be about 600 pounds per acre; but now it is placed around 200 pounds per acre. The State Government has started a Cardamom Research station at Pampadum, which distributes disease-free seedlings at low cost. A loan of Rs 100 per acre is also given for replanting.

COFFEE

According to the Coffee Board, receipts of coffee into the Pool up to the end of October 1961, out of the 1950-61 crop, amounted to 67,386 metric tons against 49,160 metric tons in the corresponding period of the previous year. Out of the total receipts, Plantation variety accounted for 28,968 metric tons; Arabica for 10,218 metric tons and Robusta for 28,200 metric tons against 25,181 metric tons; 6,667 metric tons and 17,312 metric tons respectively in the similar 1950-60 period.

With the release of 3,213 metric tons in October 1961, total release of coffee for the internal market in the first ten months of the current year, amounted to 28,708 metric tons as against 24,380 metric tons in the corresponding period of the previous year.

Sale of coffee for export of the 1960-61 crop, up to 1 November amounted to 27,258 metric tons comprising 17,921 metric tons of Plantation; 3,158 metric tons of Arabica Cherry and 6,177 metric tons of Robusta. Exports during the current season, are almost double as compared to the 1959-60 season when exports up to 9 November 1960 amounted to only 14,127 metric tons.

GOLD & SILVER

Prices on the Bombay Bullion Exchange continued to show a mixed trend. While the Gold section remained depressed, prices of Silver displayed a fairly steady tendency.

In the Gold section, price gave way further on bull liquidation. Support was lacking owing partly to increased arrivals of smuggled gold and partly to the rising stock position. Arrivals amounted to 7,000 tolas as against an offtake of only 3,000 tolas.

Ready rates moved between Rs 122.25 and Rs 122.30, while Sovereign ruled steady at Rs 98.25.

Although offtake was still low and below expectations and activity restricted, prices of Silver managed to hold their levels, thanks to the bulls having maintained their grip on the market. Discouraging advices from the gold section did not have any adverse effect on the sentiment. Arrivals amounted to 40 bars as against an offtake of only 12 bars. Ready silver (below .996) changed hands at Rs 209.50 to Rs 210.05.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange showed generally a steadier tendency, being influenced by higher advices from Rajkot. Although trading in the Groundnut section commenced on a weak note and prices registered a small setback on fears that the authorities might impose a margin on purchases, there was a tendency for prices to move up later in the week. The improvement was attributed mainly to higher advices from the spot section where crushers and vanaspathi manufacturers were steady buyers. Groundnut Bold ready was quoted at Rs 44.25 and Groundnut Oil at Rs 18.60.

There was a good deal of speculative activity in the Linseed section. Apart from the fact that North Indian buyers lent a consistent support to the market, the shortage of spot supplies and higher advices in respect of rapeseed and mustard tended to inject a bullish feeling into the market. Linseed ready was quoted at Rs 43.75 and Linseed Oil at Rs 18.25.

There are, however, reports that exports of linseed oil have come down to an alarmingly low level this year owing to the fact that the Indian price is considerably higher than the prevailing international price. In recent months, the difference between the Indian price and the world price has been as wide as £40 per ton.

Moreover, the Australian market, which was traditionally a big outlet for Indian linseed, is reported to have been almost lost to Indian linseed oil and partly due to difficulties in obtaining shipping facilities. Some of the exporters have, therefore, suggested that, if the Government does not extend incentives to revive the lost market, the declining trend in the export of linseed oil, witnessed since 1958, may continue eventually to find Indian Linseed oil out of world trade.

In the Castorseed Section, trading was purely speculative in character with the conditions in respect of exports of castor oil remaining discouraging. The best levels of the week could not be maintained as buyers were inclined to book the available profit at higher levels. Castor ready was quoted at Rs 32.25 and Castor Oil, commercial quality, at Rs 13.60.

There were declines in the prices of both groundnut oil and kernels due to good arrivals of kernels in the Southern markets. Both in the southern markets and in the city kernels are being received at an accentuated rate with increased volume too. North and South Arcot districts

market are receiving about 500/600 tons daily.

In Madras city the arrival is around hundred tons daily. Calcutta later estimates are taking at present, are not keen though prices of oil had gone down to some extent. The decline is expected to continue for sometime more and at the most there would be another fall of about 3/4 rupees only per candy.

Both in Andhra and Telangana areas there was reported paucity of groundnut stocks. Also from the North Indian sides like Madhya Pradesh there was not much of stocks and this helped in keeping the price level not very low. Probably due to the fact that Calcutta wanted to keep going their vanaspathi factories, they evinced better interest in December middle deliveries last week though January forward transaction was only at a nominal level. This forward quotation for December middle was at Rs 175.50 per quintal and for the first week it stood at Rs 177.25. At this rate both the valdas were traded upon. Spot goods remained almost dormant though its rate of Rs 178.10 is considered lower and weaker than the previous weeks.

There was not much of an offtake in groundnut oil because locally the crushers had already committed themselves to November deliveries which they had to honour. This mainly contributed to the lower level of oil price in the market this week.

During the middle of last week groundnut oil was quoted at Rs 177.90 per quintal. Due to earlier commitments by some of the local big dealers, there were offerings at Rs 179.45 and the price went up again as high as Rs 180.75 per quintal. But on Monday again the price came down because the anticipated inquiries failed to materialise and there was dullness in the market. The apathy contributed to a lower rate at Rs 179.45 per quintal. Tuesday morning the price came down still lower to Rs 178.10 per quintal or Rs 494 per candy of 500 lbs.

HIDES & SKINS

The demand for tanned cowhide was poor both locally and from overseas due to high prices. Particularly overseas demand kept themselves lean on the price factor according to the shipping sources. For fifts and fourths of the inferior hide there was some demand.

Light weights continued to be in demand fairly on the basis of 79d, 69d and 53d. Only poor quality came for offering with the result since the last few weeks the overseas market had been trying to obtain their quality from outside the East India Tanneries.

While there was little change in tanned buff calf, the arrivals in tanned cow calf was better. Again here too the quality of the commodity was in question. For tanned buff calf there were good inquiries from United States and the Continent. Little business was reported in tanned goatskins. Inquiries, however, were reported from United States. In tanned sheepskins also poor business resulted last week.

For the Investor

INVESTMENT GOSSIP Subdued Trend

Although the heavy selling pressure that characterised trading early in the week has gradually yielded place to moderate support at lower levels, the undertone of the stock market even toward the end of the week is rather cautious. It is true holders too do not seem to be anxious to lighten their portfolios. This suggests that genuine investors are not unduly concerned about the so-called adverse developments while corporate news continues to encourage. The very fact that there is thus a scarcity of floating scrip should pave the way for the return of steady conditions to the market before long. One of the main reasons that brought about Monday's nervous selling is said to be the statement made by the Union Finance Minister, Mr. Morarji Desai to the effect that the scheme of automatic margins will soon be implemented. This rather violent reaction to a development which has already been discounted indicates that Mr. Morarji Desai's statement has belied the hope entertained by some that the scheme may not be put into effect at all. But what seems to be an unsettling influence for operators, should be welcome to investors; for the automatic margin scheme is designed to discourage excessive speculation. With speculation under effective control investors will be encouraged to take sustained interest in the stock market undisturbed by violent price fluctuations.

Even if Mr. Morarji Desai had not obliged the bears with his statement about the early implementation of the automatic margin scheme, it would have been difficult to maintain the higher levels. Operators would have turned cautious in view of the meeting of the Committee of the Presidents of the Stock Exchanges. Since this committee has been entrusted with the responsibility for ensuring the proper functioning of the stock exchanges, its meetings are vested with special importance and it is but natural for operators to be cautious before every meeting lest some decision taken at the meeting upsets their calculations. Moreover, the situation on our northern borders and in Goa seems to have reached a stage at which there are grave possibilities. On both the questions, Government's attitude has hardened quite a good deal lately. The general expectation is that before the current session of Parliament is over, more will be heard on these vexed questions.

NEW ISSUE NOTES United Breweries

United Breweries Limited, Madras, has proposed to issue 5,000 equity shares of Rs 10 each, at par, pro rata, to equity shareholders as on 30 December 1961. The new shares shall rank pari passu with the existing equity shares in all respects.

Seshasayee Industries

The original proposal made by Seshasayee Industries to issue equity shares for Rs 40 lakhs to the existing shareholders has been dropped and the closure of Transfer Books from 1 November to 11 November is infructuous. The company now proposes to issue 4,00,000 equity shares of Rs 10 each to the public. An extraordinary meeting has been convened on 14 December 1961.

Investa Machine Tools

The Investa Machine Tools & Engineering Company Limited has received permission from the Controller of Capital Issues to issue to the holders of the existing ordinary shares further equity capital of Rs 20 lakhs. The directors have decided, subject to the approval of the shareholders, to raise the paid-up capital of the company by the issue of 20,000 new ordinary shares of Rs 100 each, at par, to be offered to the existing ordinary shareholders in the ratio of two new ordinary shares for every three existing ordinary shares. This will raise the paid-up capital of the company to Rs 60 lakhs. This additional capital is to provide a part of the finance required for the company's expansion project, which includes the setting up of a new factory at Chinchwad at a cost of Rs 80 lakhs, excluding the cost of a new foundry.

Modella Woollens

Modella Woollens Limited, Bombay, has been granted consent to issue capital of Rs 65 lakhs, divided into 6,50,000 equity shares of Rs 10 each, for cash, at par. Of this, shares of the value of Rs 13.33 lakhs shall be issued to the foreign collaborator, Messrs Robert Jowitt and Sons Limited, Bradford, UK. The proceeds of the issue shall be utilised for the manufacture of woollen shoddy yarn wool tops.

Nuboard Company

Nuboard Manufacturing Company Limited, Bombay—a company re-

cently incorporated in the State of Maharashtra for the manufacture of chipboard in collaboration with the Indian nationals resident in British East Africa—has been accorded consent to the issue of Rs 25 lakhs in equity shares of Rs 10 each of which 50 per cent will be allotted to the foreign collaborators against supply of machinery and the balance for cash at par. The requisite licence under the Industries (Development and Regulation) Act has been granted.

Thomas Mouget

Thomas Mouget & Co. (India) Private Limited, proposed to be incorporated in West Bengal, has been granted a consent to the issue of capital of Rs 37.60 lakhs in 37,600 equity shares of Rs 100 each. The company is being formed for undertaking the recovery of iron and steel scraps from the Steel Melting Shop slag at the Durgapur Steel Project. Messrs Thomas Mouget & Company Limited of Redcar, England, will invest shares worth Rs 27.82 lakhs, being the cost of plant and machinery to be supplied by them.

Electro Equipments

Electro Equipments Corporation Private Limited, Bombay has been granted consent to issue capital of Rs 24,99,800 divided into 2,49,980 equity shares of Rs 10 each, for cash, at par. The proceeds of the issue will be utilised for financing the expansion from 60,000 meters per annum on single shift basis to 2,20,000 meters per annum on two-shift basis. The company is now proposed to be converted into a public company. The company has a subscribed paid up capital of Rs 10,00,200 in equity shares of Rs 10 each.

Calcutta Credit Corporation

The Calcutta Credit Corporation Limited, engaged in business as financiers of automobile vehicles and development of lands and buildings, has been granted a consent to the issue of capital of Rs 15 lakhs in 15 lakh equity shares of Rs 10 each out of which 1 lakh shares shall be issued for cash, at par, and 50,000 shares shall be issued as bonus shares on capitalisation of its reserves to the extent of Rs 5 lakhs. The company's existing paid up capital is Rs 14 lakhs.

Assam Government Marketing Corporation

Assam Government Marketing Corporation Limited, Shillong, has been granted consent to the issue of further capital of Rs 10,00,000 in equity shares of Rs 100 each for cash, at par. All the shares will be issued to the Government of Assam. The proceeds will be utilised for the implementation of some new schemes of marketing of small scale industry products. The present paid up capital is Rs 4,23,600 in equity shares.

INVESTMENT NOTES Sayaji Mill

The shareholders of the Sayaji Mills Limited, Ahmedabad, have endorsed the decision of the management to take over the entire block of 21,000 equity shares at the rate of Rs 105 each of the Subhalakshmi Mills of Cambay. The management proposes to run the Cambay unit as a subsidiary. It is stated that the Sayaji Mills will make an aggregate investment of over Rs 1 crore.

Tensile Steel

The equity shares of the Tensile Steel Limited are admitted for dealings on the non-cleared list of the securities of the Bombay Stock Exchange. The unit of trading is 5 shares. Only those shares on which the allotment money is fully paid can be sold and delivered.

Modern Mills

The shareholders of the Modern Mills Limited, having their names on the company's register on 15 December 1961, will get one new ordinary share, at par (Rs 50), to one old ordinary share. The ex-rights deals have been permitted from 27 November and their first settlement will be after 25 December 1961.

Calcutta Chemical

The Calcutta Chemical Company has recently commenced manufacturing menthol BP (synthetic) under manufacturing licence from the Central Government. This is the first venture for the manufacture of synthetic menthol in India. The production at present is small; but the company is making arrangements to increase the production and is also trying for foreign collaboration for large scale manufacture.

Two New Projects

Chamanlal & Brothers, Bombay, have proposed to undertake two industrial projects and are seeking US collaboration for the same. The company has obtained a licence to set up a plant for the production of industrial and pharmaceutical equipment. The planned initial capacity is 1,000 tons per annum. It is proposed to form a new company for undertaking this project and is prepared to allow the foreign collaborator to participate up to 49 per cent of the equity capital or to a rupee equivalent of the foreign exchange cost of the imported plant and machinery and technical know-how.

The second project envisages the production of seamless steel tubes and welded steel tubes. The initial capacity will be 48,000 tons each on two-shift basis. The size of the tubes will vary from 4 to 8' diameter. The company is seeking the services of the foreign collaborator for design fabrications and erection of the plant. In return, the foreign firm will be given shares in the equity capital of the company up to 49 per cent.

STOCK EXCHANGES Cautious Trading

Watch-Dog Writes:

CAUTION has been the keynote of trading in stock markets during the week under review. For want of fresh incentives, price movements have been irregular as every attempt at rally has proved to be short-lived due to profit-taking. There is also a general disposition to restrict commitments, resulting in a moderate turnover.

Although the Calcutta Stock Exchange started the week on a weak and hesitant note, influential buying in selected shares promoted slightly steadier conditions towards the close of the week.

Prices on the Bombay Stock Exchange showed a mixed trend. Kohinoor Mills, Associated Cement and Sirpur Paper were the bright features.

Price trends on the Madras Stock Exchange were easy. There was a tendency to take profits, being influenced by the cautious note in outside markets.

CALCUTTA

Friday Evening.

LYONS Range, which disclosed unbridled enthusiasm in the previous week, turned sober during the week under review. The market took a sudden plunge on the opening day of the week due to some unfavourable developments. First, the decision made by the Committee of the Stock Exchange to impose a margin of Rs 2 per share on fresh purchases of Orient Paper and Dunlop Rubber had the inevitable result. The move was aimed to check a run-away boom in the prices as was seen recently in these two particular shares.

Secondly, advices from Bombay were not encouraging following the fixation of heavy budla charges at the turn to settlement. Thirdly, developments in Goa gave cause for some anxiety. Finally, the statement made by Mr. Morarji Desai in the Lok Sabha that the automatic margin system would become effective shortly induced some of the weak holders to liquidate their holdings.

Taking advantage of the situation, bears dominated the scene and depressed prices. Even at the lower levels, there were no signs of buying interest, as the operators did not seem to have got over the nervousness caused by the sudden landslide in values on Monday. Of course, frequent attempts at rally were made; but the recovery in prices was only moderate. On the whole, the market swayed this way or that by the manipulations of a few, who were adept in interpreting a particular development either bullishly or bearishly to suit their financial commitments.

The Gilt-edged section continued to lack support and the tendency was for the prices to sag slowly on small offerings. Where changes occurred, those were against the holders. Little

or no interest was shown in the State Loans section. 3 per cent 1986 Conversion Loan showed a further decline to Rs 70.90 from the week-end level of Rs 71.25.

Bank shares remained practically unchanged with United Commercial quoting Rs 92 and Punjab National Rs 20.37.

Jute shares, which had been in the picture for the past few weeks, were slightly depressed and only selected shares showed some improvement from the initial low levels. The fear that the fixation of a minimum price for raw jute might affect the profit margin of the mills was the main contributory factor. Ganges came in for offer at Rs 12.25 to Rs 12.50; Birlas at Rs 28.12 to Rs 28.37; Howrah at Rs 21.25 to Rs 21.50; Megna at Rs 13.37 to Rs 13.87; Nuddea at Rs 59.50 to Rs 64 and New Central at Rs 16.87 to Rs 17.31. Lawrence ruled comparatively steady, with buyers up to Rs 176 against Rs 170.

The Coal section remained dormant as the crisis in the industry persisted due to the shortage of wagons. The only steady feature were Amalgamated at Rs 22.56. Bengal were, however, lower at Rs 357.50 against Rs 360; New Beer-boom at Rs 22.50 against Rs 22.62 and Western Bengal at Rs 9.66 against Rs 9.87. Burrakur, after ruling firm at Rs 18.87 on rumours of the dividend being maintained, turned quiet at the close at Rs 18.44 due to some speculative selling.

Except for some enquiry in the shares of those companies whose gardens are situated in Assam, Tea shares were generally dull and quiet. Brooke Bond changed hands at Rs 17.19 to Rs 17.62; Hasimara at Rs 31.50 to Rs 32.12; Hattikhira at Rs 9.87 to Rs 10.06 and Methoni at Rs 17.12 to Rs 17.31. Jay Shree displayed a slightly easier tendency to quote at Rs 19.75 against Rs 20.12 on lack of fresh support.

Sugar shares displayed a slightly steadier tendency, thanks to the news of the USA having agreed to accept the cancelled quota. Carew ruled very firm at Rs 13.69 with Cawnpore improving to Rs 13 from Rs 12.59. SKG moved narrowly between Rs 10.62 and Rs 10.81 with Raza Buland rather quiet at Rs 10.75 against Rs 10.87.

Textile shares showed an irregular tendency due to profit-taking at every rise in prices. Kesoram were at one time taken up to Rs 31.50 from a low of Rs 30.75 and J. K. Rayon up to Rs 20.06 from Rs 19.69, to close finally at Rs 31.37 and Rs 20 respectively. Cawnpore were, however, quiet at Rs 9.44 against Rs 9.50 and so also Jay Shree at Rs 18.44 against Rs 18.50.

In the week's dealings, price movements were mostly influenced by the speculative activity in Indian Irons. After opening steady at Rs 26.16, Indian Irons were depressed at one time to Rs 25.38 at which level some short-covering induced the scrip to recover to Rs 25.72 before closing

finally at Rs 25.50. However, TEXMACO met with sustained covering due to a heavy bear position built up earlier, resulting in a sharp jump at one time to Rs 22.40 from a low of Rs 20.15. The closing rate was, however, lower at Rs 21.60 due to profit-taking. Guest, Keen, Williams turned quiet at Rs 40.37 against Rs 41, while Brathwaite were in enquiry up to Rs 40.25 from Rs 39.87. Indian Standard Wagon showed a drop of Rs 3 at Rs 117 with Kumardhubi hovering narrowly around Rs 6.87. J. K. Steel met with business at Rs 22.25 to Rs 22.37 and Dalmia Iron at Rs 10.62 to Rs 10.81.

In the Miscellaneous section, most of the issues suffered minor losses due to scattered liquidation. But for some replacement buying at the lower levels, the entire list would have shown major losses for the week, as will be clear from the price trends of a few selected shares:—

	Week's High	Week's Low	Week's Closing
Orient Paper	41.70	40.15	40.60
Shree Gopal	27.75	27.37	27.37

Three Inadequacies

POWER shortages, transport difficulties and what was it? It escaped Mr Nehru for a moment—foreign exchange predictably were the subjects to which Mr N. Stenhouse, President of the Associated Chambers of Commerce of India, emphatically addressed himself at last week's annual meeting of the ACCI. But while the topics were predictable Mr Stenhouse's approach refreshingly was not. We can no more rely upon the "traditional" export items to earn a larger amount of foreign exchange; it is from the newer industries that we should plan for any material expansion in exports. And here the difficulty lies not in any shortfall in quality, but in costs being too high. Indeed, speaking in support of the resolution on exports Mr A. I. Murison felt that, at least in regard to the traditional exports, there was muddled thinking about the cost of quality and standards. Buyers were no fools; nor for that matter were sellers. And they both continued to be in business when the one was supplied by the other with a commodity of adequate quality and at reasonable prices. So it was that he thought it "dangerous to insist too severely on quality control and pre-shipment inspection." But what are the elements in costs that can be reduced, so as to make the products of new industries more competitive in the world markets?

Firstly, there is the cost of labour, and Mr Stenhouse was gratified that the Labour Ministry now put greater store by an improvement in productivity as the criterion for any increase in wages. Secondly, taxes as a constituent of export prices do render Indian articles uncompetitive, and the ACCI in its resolution has called for such export goods to "be freed of all Central and local levies"—with Mr R. M. King suggesting that "we must persuade the Government to forego taxes which form so large an element in final export prices of our goods". Thirdly, a fuller utilisation of existing capacity with industry is called for, and Mr N. M. Wagle has pointed out that if engineering export industries had the raw materials, the spares and components for enlarging production, a reduction in export prices would result. Lastly, modernisation of every kind, in particular the "modern tools which are used by our competitors overseas" (the words are Mr King's), is suggested as a method by which Indian export goods could be made more competitive.

We certainly agree that rebate of every kind of tax is desirable in the present context; but it needs to be recognised that such concession can only be short-term and to last until other measures to cut costs begin to be effective. There can be no alternative to productive labour and optimum use of machinery for keeping down costs; tax concessions and the like are, let it be admitted, a form of export subsidy that is a confession that the rupee is over-valued. The stumbling block to acquisition of modern tools is foreign exchange; but which is to come first, the modern tools so that exports can increase, or an increase in exports to pay for the modern tools? Obviously, in our view, the former, and to the extent that reserves permit, licences for import of "modernising" equipment should

be freely given for industries with an export bias or potential.

The shortage of power and of transport may be dealt with together. Both are basic raw materials for development, as also for that matter are steel and coal. If steady industrial progress is to be achieved, the targets for the basic raw materials must be so set as at any time to exceed anticipated demand at the time; in the alternative we must suffer some element of stagnation. It has been made clear at the ACCI meeting ("The alarming prospect of the situation," said Mr Stenhouse, "is the extent to which new expansion or new industry is now prevented because of the inability to secure power.") that shortage of power may conceivably frustrate the successful completion of the Third Plan. Speaking on the resolution on power, Mr A. R. Foster stated bluntly that "it might well be that lack of power would prove to be the most important single factor preventing the achievement of industrial targets." We emphasise the need to plan for more power, a larger railway capacity and increase in the target of coal production. Prospects are not bleak of our securing foreign assistance for developmental projects, and therefore we should proceed on the basis that the Third Plan had underestimated requirements in respect of coal, power and transport capacity.

The ACCI Chairman need not have exerted himself to convince Mr Nehru. The Prime Minister declared: "I can say with the utmost confidence that the sky is the limit for the power and steel that India needs. It does not matter how much we can consume or whether we consume." In such awareness, surely, an assessment as made at the ACCI meeting should help Government in deciding to revise upwards the relevant targets. If such efforts are taken, we shall have done all in our power to ensure the success of the Third Plan. The threat of war inherent in the nuclear testing gave Mr Nehru pause. We do not want to be annihilated, but, as Mr Nehru said:

"It is a mad world. The fact is that our plans may come to an unexpected end because of happenings over which we have no control."

In yesteryears Chamber meetings usually constituted a forum where spokesmen of private enterprise entered a plaintive plea for reduction of taxes and where the Government personage as vehemently stressed why taxes would continue to be high. Perhaps because we shall not be having a tax Budget, in view of the elections, until next May, or simply because there is now really no particular grouse against taxation, Mr Stenhouse has made little more than passing reference to it. In fact the ACCI is in favour of an increase in indirect taxes, a policy "which must be continued." However, the ACCI President went on to suggest that tax policy can be "a powerful instrument for the encouragement of corporate and individual savings"; and he has asked for a "judicious extension of the present tax reliefs and some lowering of tax levels"—suggestions which have the full support of this journal.

ITI

Satisfactory Progress

INDIAN Telephone Industries is one of the few Government undertakings which have, in recent years, set up a consistent record of satisfactory progress. The Post and Telegraph department is the major—one may almost say the sole—customer for its products. But the public's concern about its working extends beyond the dutiful citizen's interest in the affairs of Government undertakings. For the level of output at Durvaninagar determines the extent to which the P & T Department is able to satisfy the growing backlog of demand for telephone connexions. The public can, therefore, derive comfort from the story of progress unfolded in the latest annual report of ITI. Increased production, sales and profits are, among the highlights of the report for the year ending March 1961. Moreover the Chairman's speech, reviewing the growth of the factory during the Second Plan, also projects the picture to give an idea of the programme of expansion envisaged during the Third Five Year Plan.

The ITI has overfulfilled its Second Plan targets as will be evident from the figures given below:

	Second Plan Target	Achievement
Telephones	3,20,000	4,07,956
Exchange Lines	2,15,000	2,55,950
	Rs	Rs

Long Distance Transmission Equipments ... 106 lakhs 164.25 lakhs

The Transmission Division has recorded notable increase in output during the year under report—from Rs 46 lakhs in 1959-60 to Rs 75 lakhs in 1960-61. The Division has started production of 8 Channel Carrier Systems and VFT equipment required by Posts and Telegraphs. This Division is expected to reach optimum production by the end of the Third Plan. The ITI has also initiated manufacture of a wide range of testing equipment which will meet the requirement of a number of users other than the P & T Department. Production of these instruments during 1960-61 is valued at Rs 1.25 lakhs.

As export possibilities of Testing Instruments have been mentioned by the Chairman, it will be in order to take a hard look at the costs of manufacture. The experience in regard to the other items, which have been manufactured by ITI for some time, is not discouraging. In respect of a number of items such as Automatic Telephones, Group Selector Switch, Final Selector Switch, Relay Carrier Systems etc. cost of production has shown a downward trend. The cost of testing instruments should also show a similar trend when production reaches targeted levels.

Proposals for expansion involving a total capital outlay of Rs 2.80 crores have been finalised. When the programme of expansion is completed annual production is expected to be stabilised at 1,80,000 Telephones, 1,36,000 Exchange Lines and Rs 260 lakhs worth of Transmission Equipment. This level of output should be sufficient to meet the yearly average of the total requirements of these items estimated for the Third Plan period. The anticipated requirements during the five years are: Telephones 8,75,000, Exchange Lines 6,60,000 and Transmission Equipment Rs 12.88 crores. But if any delay is made for the time required to reach the targeted levels of annual output, it is clear that at this level of output it may not be possible to meet the backlog of demand for telephone connections. In view

of the rapid growth of demand for telecommunication equipment, the maximum output of the factory by the end of the Third Plan will be well below requirements. A second factory, of which there is a hint in the Chairman's speech, may have to be set up to cope with the growing requirements.

While the Third Plan includes provision for the expansion scheme costing Rs 2.8 crores, there is no mention of a second factory. The question is whether the ITI will be able to repeat the achievement of the HMT by presenting the nation with a duplicate factory built out of its own resources. This seems hardly feasible in view of the obvious differences in lines of manufacture undertaken by the two concerns. Though ITI has been making increased profits, (Rs 46.57 lakhs in 1960-61 as compared with Rs 37.13 lakhs in the previous year) the reserves which could be drawn upon to finance development amount to less than half a crore of rupees. The present expansion scheme of the factory, it has been mentioned, is to be financed by loans. The Posts & Telegraphs Department is the biggest customer of the Company and its profit margin can be increased by suitable alteration in the Agreement between the two organisations. The public have cause for concern if any change in the Agreement, on which a decision is expected to be reached in the current year, is followed by increase in the charges levied by the Posts & Telegraphs Department.

It will be advantageous to set up the new factory, even though the ITI cannot be expected to find the necessary funds, if it is possible to fabricate most of the required plant and equipment within the country. The achievements of the Ordnance factories and the atomic energy establishment, which have successfully made a wide range of equipment required by them, give an indication of what could be done by pooling of the productive resources and the technical talent available in the country. The prospects of the new factory will be definitely bright if the hopes of developing an export market for Test Instruments are fulfilled.

INDUSTRIES FAIR

India's Coming of Age

THE organisation of the Industries Fair on a scale to impress one and all is certainly a feather in the cap of the Federation of Indian Chambers which can now say that British business domiciled in India is co-operating readily and fully and development is an agreed purpose of the two wings of the private sector. That foreign countries except China are represented fully is a well-meant compliment to the industrial potential of India. It is also a sign of active assistance given already to the development plans of India. The new interest shown by Japan in India's confident plans is truly more significant than any assurance of loans to the Government, as Japan now thinks of help in making toys as well as tractors. The Industries Fair is, of course, a good testimonial to the industrial policy pursued over a decade in order to minimise imports. It is also a proof of the market for non-consumer goods growing up steadily. The evidence provided by engineering exports in recent years cannot be ignored in the context of the second industrial revolution. The association of British big business with the new government plants at Durgapur and Bhopal is an apt indication of altered trade connections. Manufacture of

locomotives at Chittaranjan started with technical aid from Beyer Peacock, Vulcan Foundry and other UK manufacturers and the tradition has been maintained effectively. Trust in India's future is also attested by increased investment in this country and the control of prices by increased output is an article of faith for the private sector too at present. The older agency houses have been mostly replaced by joint ventures concerned with manufacture—in new lines too. This is something distinctive though a parallel may be found in Mexico where US firms have gradually embarked on local production for a growing market and accept the conditions imposed by the Government. The Industries Fair will help to make known the sources of India's postwar development, with the increasing emphasis on the limitation of imports after the steady decline in foreign exchange assets.

The evolution of modern capitalism with overseas capital contributing more than financial assistance, playing a truly positive part in developing production and marketing calls for notice. This, of course, is not strange but the political changes had injected doubts. They are now completely dispelled by the forms and volume of investment, by the conversion of private concerns into public companies less concerned with trading than manufacture, proving incidentally that in a mixed economy adaptability is both necessary and possible at present. That is why the Fair as a performance, repeated now for the public benefit, can be described as a combined operation, devoted as much to growing support connections as to the preservation of the home market which can easily dispense with imports of machinery, motor cars as well as woollen goods or yarn. India's coming of age industrially can and should be made known most effectively by a Fair that betokens our faith in the future.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

Review of Indian developments?

International Monetary Fund delegation presently in India charged with the task of examining the Indian economy and developments over the past twelve months. The report that is being made, and the report that sumably will later be submitted, are both more than ordinary importance this year. India "owes" \$250 million to the IMF in respect of its transaction earlier in the year, this figure contrasting with our quota of \$600 million with that international financial institution; hence, there is some room for us in the form of the unutilised portion of the quota, and it may well be that, in order to pay for maintenance (as distinct from developmental) imports, we shall have need later in the course of the Third Plan to have fresh recourse to the facilities of the IMF. While the overall state of the economy is what matters most, the IMF delegation may be expected in particular to study the condition of the World of Finance.

What will be its findings? It is to be hoped that due note will be taken of the success of the price front. For a year, now, prices have been more than stable: they have been pushed down. Such stability has been gained without resort to an increase in bank rate. As has often been stressed, in the final analysis the only solution for a distorting upward tendency in prices lies in additional production. In this regard, though the early part of 1961 there appeared to be some element of stagnation in industrial output, it is now clear that production is moving firmly upward. More goods and a wider range of manufactures are now made in India than ever before. We have correspondingly been able to effect some savings in import bill, though this has not been reflected in the movement of foreign exchange reserves. The difficulty has been that, with industrialisation, the import bill for primary products and industrial raw materials is relentlessly growing.

The pressure upon the money market was enormous, though happily the 1961 slack season witnessed a return of funds. Nevertheless banks were put to considerable strain and the Reserve Bank, which had introduced measures to correct a situation of excessive liquidity last year, was compelled to release money so impounded. The three-tier bank rate is still in operation, and this innovation undoubtedly will find approval with the IMF. But we would like to take this opportunity again to suggest its repeal and moreover to suggest that there may even be a case for reduction in bank rate.

A fundamental mistake that is being made to think that, with bank rate at 4 to 6 per cent (the three tiers), money is much too tight in the country. Finance derived from the organised money market continues to be tight, but in the unorganised money market the

rates are much dearer. Small industry is oftentimes compelled to have recourse to "fringe" institutions, which have no hesitation in charging what really are penal rates. Costs of production are pushed up, and the incentive for enterprise on the part of the entrepreneur is reduced. True, small efforts are under way for extending greater assistance to the little men in industry and in business. Perhaps expansion of the branches network of banks will help monetise a larger part of the country. But it needs to be remembered that dear money in the organised sector makes money prohibitively costly in the unorganised sector. Thus, as an incentive to added production we would favour a lowering of bank rate to, say, 3½ per cent.

The case for the continuance of three-tier bank rate apparently rests on the proposition that thereby some sort of barrier is placed in the way of non-industrial users of bank money, the argument being that banks, reluctant to borrow at 6 per cent or even 5 per cent, will be hostile to propositions emanating from such marginal borrowers. But then during the so called slack season, industrial advances steadily expand even as production mounts higher. By the eve of the next busy season, high ratios of Advances to Deposits are once again in evidence. So, the busy season financing, which is self-liquidating, may conceivably suffer. That surely would not be the intention of the monetary authorities.

The case against a three-tier bank rate is quite strong. It is a fact, and not just coincidence, that Government's borrowings from the market have been poor since the inauguration of the three-tier system. It is obvious that there will be reluctance to invest in gilt-edged offering a return of 3½ per cent to 4 per cent, when there is the certain knowledge that months hence such investor might be compelled to borrow—if a bank at up to 6 per cent, and if an individual or other institution at a still higher rate. If reliance is to be placed on market borrowings as an avenue of resources for Government expenditure on the Plan, the three-tier system has to be done away with—because as it stands it inhibits investment in Government loans.

On the other hand, there is sufficient proof that selective monetary controls, though not wholly effective, are not altogether futile. For Government to possess a greater degree of effectiveness in the trends of prices there are two pre-requisites: on the one hand, by encouraging the establishment of branches by banks, much more of the economy has to be brought within the fold of the organised sector of the money market. Just as the State Bank was able to "subsidise" its branch expansion programme, we would suggest that concessions be given to such banks as open a branch in small centres with stipulated maxima of population. On the other, by reducing interest rates in the organised sector, more entities who for various reasons borrow from the fringe sector will be enabled to seek the assistance of banking finance or, in the alternative, to reduce the rates of interest they are called upon to pay.

BANK RETURNS

Deposit Resources Again on the Rise

Beginning of the month disbursements, rather than busy season pressure, may be said to be responsible for the expansion in currency during the week ended 1 December 1961: spillover into the second week may be anticipated, and the slight hardening of the inter-bank call money rate can be taken to mean that there has also been some busy season demand.

Active Note Circulation has risen by Rs 5.75 crores to Rs 1,908.42 crores, and there has been outflow of Rupee Coin for Rs 0.32 crore. Foreign Securities are unaltered at Rs 116.86 crores, and Rupee Securities show a fractional change at Rs 1,558.84 crores. In consequence cash in the till has been drawn: Rs 6.07 crores to Rs 9.38 crores.

It would appear that the Centre has instituted counter-vailing deficit financing in order to meet the maturing liability in respect of

PROGRESS OF BUSY SEASONS

(In Rs Crores)

	1959-60	1960-61	1961-62
Reserve Bank:			
Active Notes	+24.06	+33.93	+26.17
Rupee Coin	+1.46	+1.32	+2.91
Banks' Deposits	+4.80	+10.78	+8.21
Other Loans and Advances	+5.87	+5.28	+1.50
State Bank:			
Deposits	+7.17	+11.31	+0.96
Borrowings	+1.06	+1.35	+0.79
Cash Balances	+4.62	+1.45	+8.14
Gilt-edged	+7.88	+0.11	+0.91
Advances	+3.10	+2.10	+4.99
—As %age of Deposits	(27.6)	(37.4)	(45.8)
Other Scheduled Banks:			
Net Deposits	+25.78	+3.99	+5.47
Borrowings from RBI	+12.29	+5.50	+4.70
Cash Balances	+15.83	+6.85	+9.71
Gilt-edged	+9.47	+2.68	+2.04
Net Advances	+11.76	+4.74	+4.50
—As %age of Net Deposits	(61.2)	(67.8)	(68.8)

Notes: As at first Friday in December for Reserve Bank and State Bank. As at last Friday in November for Other Scheduled Banks. Figures in brackets are percentages.

Treasury Bills purchased and discounted by the Reserve Bank. For investments are higher by Rs 9.45 crores at Rs 214.63 crores, and the State Bank is known besides to have purchased gilt-edged for Rs 4 crores. Against this, Treasury Bills purchased and discounted by the Reserve Bank have been marked down by a corresponding figure of Rs 14 crores to Rs 19.76 crores. The Centre's balances are better by Rs 4.03 crores at Rs 53.42 crores, but there may have been some payment received from the States, whose Deposits have fallen by Rs 7 crores to Rs 15.34 crores; ways and means borrowings of State Governments are, however, lower by Rs 0.29 crore at Rs 66.17 crores.

Beginning of the month disbursements have apparently caused a little hardship to the banking system. Reserve Balances of member banks are shown lower by a shade under Rs 6 crores at Rs 15.34 crores; and in addition the Reserve Bank's Other Loans and Advances have risen slightly by Rs 1.45 crores to Rs 131.03 crores. But advances against unsecured

bills are lower by Rs 5 lakhs and are now at the nominal figure of Rs. 20 lakhs.

After a trend of improvement in Balances Held Abroad, the latest returns disclose a fall, small though it is. The drain during the week, owing to import surplus not covered by foreign assistance, is a fractional one of Rs. 16 lakhs to Rs. 28.82 crores. It is, however, heartening to record that foreign assets held by the Reserve Bank continue to exceed Rs. 145 crores. Something like four months remain in which there is normally a surplus of exports over imports. It is to be hoped that, by the end of the export "season" foreign assets held by the Reserve Bank will have been raised to not less than Rs. 175 crores.

The State Bank's return for 1 December reveals a further improvement of Rs. 3.03 crores to Rs. 532.05 crores in Deposits. It looks as if the upward trend in Deposits is being re-established, for such is the evidence offered in the latest figures of Scheduled Banks as a whole. If the trend should continue there may be some mitigation of the busy season pressure upon the banking system. But the demand for money, caused by month-to-month disbursements, has involved an increase of Rs. 2.93 crores to Rs. 243.83 crores in the Advances of the State Bank. Nevertheless, the State Bank has opted to increase its gilt-edged portfolio by Rs. 4 crores to Rs. 266.34 crores. In so doing, borrowings are somewhat higher by Rs. 26 lakhs at just under Rs. 1 crore, and cash balances are lower by Rs. 0.71 crore at Rs. 24.80 crores.

The statutory statement of Scheduled Banks for 24 November records an eminently satisfactory increase in Deposit resources. Net Demand Deposits have moved up by Rs. 8.79 crores to Rs. 828.56 crores, while the increase in the case of Net Time Deposits is a smaller one of Rs. 1.34 crores to Rs. 1,127.63 crores. Of the net increase of Rs. 8.13 crores during the week, the amount traceable to the State Bank is Rs. 1.40 crores. Simultaneously, the total of Advances has receded by Rs. 2.94 crores to Rs. 1,233.79 crores, Rs. 1.29 crores being ascribable to the State Bank. The two-fold accretion to resources has enabled Scheduled Banks firstly to reduce indebtedness to the Reserve Bank by Rs. 2.60 crores (the share of Other Scheduled Banks is even more, since the State Bank's utilisation of central banking credit in the relevant week rose by Rs. 0.49 crore) to a nominal level of Rs. 2.32 crores and secondly to increase cash balances from Rs. 188.97 crores to Rs. 196.23 crores; here, too, the share of Other Scheduled Banks is larger, with the State Bank in the week under review reporting a decrease of Rs. 4.05 crores in cash balances. However, borrowings from the State Bank are shown to be little higher at Rs. 17.93 crores against Rs. 17.57 crores. Lastly, the gilt-edged portfolio has gone up by Rs. 11½ crores to Rs.

618.68 crores, but this is wholly on account of the State Bank's purchase of Rs. 12 crores in that week.

BUSY SEASON

Here Yesterday, Gone Today

What has happened to the 1961-62 busy season? It seems to have disappeared into thin air. While the inter-bank call money rate firmed up slightly in the earlier part of the week, a subsequent reduction in the rate would seem to suggest that the pressure that was generated was owing to month-to-month disbursements. With such expenditures out of the way, and in the absence of busy season demand for finance, money markets are entirely comfortable.

It looks as if the fair-sized accretion to Deposit resources in the second half of November has acted to minimise the impact upon the banking system of the strain arising from any element of the busy season's demand. Also, it is true that Advances have not registered any significant expansion. Indeed, as the figures show, while the State Bank's Advances as at 1 December are higher than the level at which they were at the notional start of the busy season, in the case of other scheduled banks there is seen to have occurred over the period some small contraction in credit. The possible explanation may be that there is greater demand for and sale of industrial products so that constituents have been able from such income to liquidate part of debt to banks.

As such, the current busy season seems to be following the pattern of recent years, when the busy season started to exert its pressure only towards the middle or end of December. We, nevertheless, are still convinced that the expansion in bank Advances by the end of April next year should assume record proportions. It would be unfortunate if the present relatively easy conditions in the money market should induce a feeling of complacency. We need to add, however, that there now seems reasonable hope that a larger proportion than we had anticipated of the increase in bank Advances is likely to be covered by new accruals to Deposits.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 5 November 1961. Total amount offered was Rs. 2,00,00,000. Tenders at Rs. 99.375 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.500 per cent per annum.

When is Money "Hot"?

By Paul Einzig

ALTHOUGH financial writers all over the world added the term "hot money" to their vocabulary a long time ago, during the late 'twenties or early 'thirties, its meaning has never been adequately defined. Yet its definition is of considerable practical importance. Official policies are based on a differentiation between "hot" money and "genuine" foreign balances, without giving due consideration to the question where exactly the borderline lies, or indeed whether there can be any borderline at all. For instance, the Exchange Equalisation Account converted recently \$300 million into gold, and repaid in two instalments of £150 million to the International Monetary Fund, on the basis of the assumption that the foreign balances whose influx had enabled it to do so represent balances of a more sedate nature than the ill-famed hot money. There is beyond doubt justification for differentiating between working balances of banks and funds kept here by holders outside the Sterling Area for legitimate requirements arising from sterling's role as an international currency, and, on the other hand, funds transferred here for speculation or arbitrage.

The question is, does the attitude of holders of the two types of balances differ from each other sufficiently to warrant the adoption of policies based on the assumption of such differences. It has been our experience throughout the post-War period, and also before the War, that whenever sterling comes under a cloud foreign working balances and funds, kept in London for genuine commercial or financial requirements, leave London almost as fast as do speculative and arbitrage funds. It is true, banks have to keep in London certain minimum amounts, especially if they have London branches. But the difference between this hard core of working balances and the amount to which they rise and at which they are maintained in the absence of a sterling scare, accounts for a very substantial proportion of the ups and downs of the gold reserve. To assume that if foreign balances which do not consist of speculative or arbitrage funds can be safely depended upon for staying with us, is utterly devoid of realism.

Nor can a differentiation between hot money and genuine balances be based on the maturity of these balances. Much perfectly genuine foreign money is employed in money at call or at short notice, while much speculative money and especially arbitrage funds, are employed in long time deposits, or in loans to local authorities or other relatively long investments. As far as Treasury Bills are concerned, even if they have distant maturity dates they can always be realised at a moment's notice. In any case maturity dates have the inexorable habit of getting shorter as the days, weeks and months are passing. So even if we were to assume that all money at call and at short notice is red hot, all money up to say three months is hot and all money beyond six months is stone cold. It would be necessary to revise maturity statistics at very frequent intervals in order to form an opinion about the average temperature of foreign funds. But I doubt that the authorities even possess statistics which distinguish between foreign funds according to maturity or, for that matter, according to the object for which they are kept here.

Notes

SILVER

Best Bet

Silver was suddenly in the news last week. And a rise in Indian prices is due to a feeling that prices abroad will go up if US Treasury sales end. The price support for home-mined silver belongs to the past. One result may be that base metal producers who get more silver from smelters will be able to step up production. Australia and even Burma might gain like Mexico if more silver is sold beyond the USA. But the USA is also stopping silver coinage and the dollar hence ceases to be a silver certificate. The break with bimetalism is complete and final and W. J. Bryan who spoke out for silver against gold will be shocked if he were alive because the Democrats have done the job of stripping silver of its status.

The silver situation as one of growing shortage was plain even in January. Mocatta and Goldsind (one of the Big Four in Bullion) declared that a deficiency of silver would lift prices. However, the US may start selling silver freely to Europe and US mines may be able to raise output, if token coins in silver reappear, especially, if Britain goes in for decimal coinage to get into line with the European Common Market.

With a total ban on silver and the end of trade with Tibet, the Bombay bullion market sees that silver is the best bet and the price must catch up with gold as the gold sovereign has touched Rs. 100. The biggest bullion market need not fear smuggling, but dehoarding may depress prices. Of course, the Government has paid off some years ago its debt in silver to the US Government. And there may be no desire to buy silver for the paper currency reserve. Experts have left old ideas a long way behind and India is on the gold bullion standard with little to show by way of gold. It is only right and proper to add that the French Government has reinstated the silver franc and bought 60 million ounces of silver for coinage purposes. That is part of the process of economic recovery under General de Gaulle. The Chinese Government that sells its silver in Hongkong is bound to benefit because new signs of trouble in Indo-China may create a new urge for switching into silver. Those who have gone in for traditional investment in gold and silver have reason to feel satisfied though high prices may lead to less work for Indian silver-smiths, who depend now largely on tourist custom.

TEA

A Vote of Thanks

Mr Nehru's tribute to the tea trade in Calcutta may have its own effect on the plans for auctions in Assam or in distant Kundla. The replacement of Chinese tea by Indian tea is an achievement. More important is the transformation of agriculture by the scientific methods due to planting. It is the planter that nourishes the brokers and blenders. The UPASI's diamond jubilee souvenir recorded how the agency houses shaped the fortunes of planting. But the tea trade today provides the Indian market with tea, contributes more money to excise revenue than liquor and earns a lot by exports.

The emergence of Calcutta as a major market, a close rival of London, is more than the result of official policy. The Cochin market is in its way a limb of the Calcutta tea trade and the evolution of auctions there is a sign of Calcutta being able to take care of the South Indian crop. The Indianisation of the trade is perhaps less significant than the gradual Indianisation of the planting industry, opening new avenues for many who need not go to

Ceylon or Malaya for jobs. The foreign buyers who come to Calcutta are well served by the system of auctions that give origin and grade due weight in pricing. The tea trade remains essentially a free trade. The Government does not think of floors or ceilings, control forward dealings and apply margins, because there is no speculation in tea and there is no import problem, as in the case of jute or cotton. Voluntary regulation and reliance on tradition mark off the tea trade as a disciplined and efficient body of middlemen who have never created a trade crisis or a tempest in a teapot. That alone deserves a vote of thanks to Mission Row, though most people will think of Indian Iron and Steel if Mission Row is mentioned in print.

Meeting Foreign Competition

Addressing the annual general meeting of the Assam branch of the Indian Tea Association held at Tejpur, Mr A. S. Bam, the Chairman of the Indian Tea Board, referred to the increase registered in both production and export of Indian tea during the first nine months of this year. Figures relating to production of tea in the country, despite the set-back suffered in South India, are placed at 550.6 million pounds in contrast to 487.3 million pounds in the corresponding period in the previous year. Exports also showed signs of bracing for a big leap forward and upto the end of October the quantity of tea exported amounted to 329.98 million pounds as against 304.09 million pounds in the relevant period last year. Earnings from tea exports also looked upto Rs. 92.4 crores from Rs. 85.3 crores. The UK, as usual, figured as the leading purchaser of tea from India with an increased offtake of 15 million pounds more than the previous years total.

The optimism expressed by the Chairman will be widely shared, but there is no room for complacency, for the Indian tea is confronting severe competition in the foreign markets from other tea exporting countries like East Africa, Ceylon and China. Grave apprehension has been expressed that other competing countries are by virtue of the advantages they enjoy in relation to Indian tea, likely to outpace Indian tea even in the traditional markets. In quality Indian tea compares favourably with tea produced in other countries. There is little doubt that the crippling taxation on tea in India at various levels has considerably weakened the competitive ability of our tea and even in the field of propaganda work, other countries have stolen a march ahead of us.

How far the challenge posed in the international market by other exporting countries will be met will depend largely on the efforts

of both the industry and the authorities. The stepping up of production, reduction of cost without impairing the quality, reducing the tax burdens and the setting up of an adequate propaganda machinery in the traditional markets as well as in potential markets assume significance in this connection. Apart from these, a considerate treatment from the authorities in providing the plantations and industry their requirements like fertilisers and other raw materials will be welcomed. The future of the country's major foreign exchange earner cannot be left at stake.

DVC

Mounting Costs

Mr Jaisukhlal Hathi, Deputy Minister of Irrigation and Power, told Lok Sabha last Monday that the estimated cost of DVC, as it stands now, works out to Rs. 186.45 crores. The original estimate of Mr Voorduin, based on the very rough data then available, was Rs. 55 crores. This was scaled up to Rs. 74.98 crores when the first detailed estimates of the 'first phase projects' were made in 1951. Apart from enlargement of the scope of approved schemes and inclusion of additional schemes from time to time, which pushed up cost estimates, the Minister listed the following additional reasons for the increase in the expenditure programme of the Damodar Valley Corporation:

1. Increase in the cost of machinery, materials and labour;
2. Low output of machinery due to comparative inexperience of operating personnel at the earlier stages;

THE UNITED COMMERCIAL BANK LTD.

3. Additional cost of land acquisition;
4. Increased cost of personnel owing to protraction of construction schedule caused by delay in availability of some of the essential equipment;
5. Heavier cost of repairs and inadequate provision for spare parts in case of earth and rock-moving equipment;
6. Construction of diversion roads, provision of terminal facilities in the Naviga-

tional canal etc. and
7. Repairs to excavations and structures damaged by flood.
The figures of expenditure incurred by the Corporation and revenue receipts during 1960-61, given by the Minister in Rajya Sabha last week, are as under:

	Rs
Total gross expenditure	14,17,77,393
Total receipts	7,93,08,392
Net expenditure	6,24,69,001

Mr Hathi also stated that under Section 39 of the Damodar Valley Corporation Act, 1948, for a period not exceeding 15 years

from the establishment of the Corporation, if the Corporation runs in deficit, the interest charges and all other expenditure shall be added to the capital cost. The Corporation has not yet opened revenue account.

MANGANESE INDUSTRY

Alarming Symptoms

A timely warning has been given by Mr A. N. Haksar, Chair-

man of the Shivrajpur Syndicate Ltd, against the adverse situation that has been developing in respect of the manganese trade in the country. For the past one year, the manganese industry has been passing through a crisis and recent reports of working of the mines pointed to a further accentuation of the crisis conditions in the industry. The most alarming symptom of the present crisis is the cessation of operations by manganese mines consequent on the slump in exports, the gravity of which is underlined by the fact that while over the period 1958-60 exports averaged 12.04 lakh tons valued at Rs 19 crores, ie, an average of about Rs 154 per ton, exports in the first half of 1961 were only of the order of 3.18 lakh tons, valued at Rs 3.15 crores ie, less than Rs 100 per ton. Since May last more than 75 per cent of the manganese mines is reported to have stopped working. The reported cut in production of the Shivrajpur Syndicate is a sign of further aggravation of the adverse conditions in the industry.

The decline in exports and setback to internal production are traceable to a variety of factors both internal and external. What is regrettable however is the passivity of the Government even after there has been clear evidence of deteriorating conditions. As early as May 1961 a special ad hoc committee of the Mineral Advisory Board had sounded a warning against governmental complacency in the face of declining trend in manganese exports and had in fact put forward a number of useful recommendations. The Government however displayed little interest for concrete measures. Reluctance to take action to save the industry has been evident not only in respect of implementing the recommendations of this Committee, but also in respect of giving effect to the 50 per cent reduction in freight rates that was announced by the Railway Minister.

The State Trading Corporation is understood to have suggested the canalising of manganese export through one agency. At present the export trade in manganese ore is handled by the STC to the extent of fifty per cent, and the balance of 50 per cent is allocated among the innumerable units in the producing sector. The merit of the proposal advanced by the STC is that it will enable more effective bargaining with the importers who are an organised class. The STC's own record in the field of manganese exports would lend little support to the merit claimed for the proposal. At the same time, the extremely competitive character of the manganese export trade has also to be taken into account. Compared to exports from Brazil and Russia, Indian exports are at a decided disadvantage in the matter of costs. It is also a matter of recognition that the area of com-

9 December 1961

petition is getting further widened with the entry of new producing countries. In this circumstance, it is of urgent importance that the Government should take bold measures to retrieve the industry without allowing conditions to worsen further. Mr Haksar has suggested a number of measures which include revival of the barter transactions, substantial reduction in railway freight on ores, provision of adequate incentives for manganese export, and reduction in the duty on royalty.

SHIPPING Problems

Various aspects of shipping development came for examination at the three-day session of the Shipping and Ship-building conference held at Bombay last week. Special attention was drawn to the need for increasing the shipping tonnage even beyond the target fixed in the Third Plan. It may be recalled that while the National Shipping Board had originally suggested an outlay of Rs 105 crores for shipping in the Third Plan, the Planning Commission fixed the total outlay at Rs 55 crores only. There has been some rethinking in governmental circles since then about the role of shipping in the Third Plan, and spokesmen in the Transport Ministry had indicated that additional funds would be made available for shipping during the Third Plan, when the outlay of Rs 55 crores will have been spent.

The main limiting factor to increasing the shipping tonnage is scarcity of foreign exchange. It has been indicated by Dr Subbaroyan that arrangement for deferred credit by Indian shipping interests with foreign countries should enable more tonnage to be acquired. The credits offered by Yugoslavia and Japan are pointers to such scope for increasing the shipping tonnage. It has also been pointed out that such credits were likely to be available on deferred payment facilities and at fairly reasonable rates of interest from some of the European countries. While in view of the scarcity of foreign exchange, arrangement of deferred payment credit may seem desirable. There are difficulties posed by finding the rupee part of the funds and the rates of interest to be paid. While loans are available from the Shipping Development Fund, the interest payable for them has been considered to be somewhat high and frequent suggestions have been made by the shipping companies for reducing the rate of interest. It is relevant to point out that the sub-committee set up by the National Shipping Board has also supported this plea of the shipping companies and has suggested grant of loans at concessional rates of interest for construction of vessels

and mechanisation of sailing vessels.

Another aspect of shipping development relates to the need for ensuring gainful employment of tonnage for the Indian ships. Mr G. L. Mehta who touched on this question in his speech, referred to the haphazard and short-sighted policy being pursued by the Government in regard to coastal shipping, which had only contributed to needless strains on the inland transport and particularly on the Railways. This had been evident in respect of the coal transport policy. Diversion of more coal by the sea route would give further fillip to coastal shipping, and the anticipated rise in production during the Third Plan would seem to warrant such diversion.

COPPER ORE New Deposits

Large deposits of copper ore estimated at 28.35 million tons in the Khetri-Daribo area in Rajasthan and Rangpo area in Sikkim located after conducting detailed work have significance to the country in the context of acute scarcity of copper and the huge drain on foreign exchange in importing copper to meet internal requirements. The Khetri reserve of 28 million tons has only an average copper content of 0.8 per cent while the Rangpo deposits are richer in grade and the contents are placed higher at 6.24 per cent. The reserves proved in Khetri and those indicated in Daribo are considered adequate to feed a smelter plant with a capacity of 11,500 tons of electrolytic copper per annum. For mining and concentration of the copper ore available in Khetri and Daribo and smelting the concentrates an allocation of Rs 12.5 crores has been provided in the Third Plan. The deposits in the Rangpo area will be exploited by the Sikkim Mining Corporation, a joint venture sponsored by the Government of India and the Sikkim Durbur, at an estimated cost of Rs 2.5 crores. The copper ore mined from this deposit will be concentrated at the mine and will be transported to one of the smelters for smelting.

The production of the copper at the Indian Copper Corporation's only plant in Ghatsila has been more or less stagnant at around 8,000 tons per annum while the consumption of copper during the current Plan has been estimated at 180,000 tons. The speedy exploitation of the copper reserves in these areas therefore assumes special significance. Though the copper from these deposits will be moderate in quantity, the saving of foreign exchange by reducing the import of copper will provide a welcome relief to the already strained foreign exchange reserves of the country.

US

Aid for Development

The new US Agency for International Development (AID) made its first loan last week. It was a \$50 million advance to Brazil to help that country obtain essential imports and stabilize its economy.

Thus the new agency, which came into formal existence less than a month ago, is off to a good operational start as it draws up its programmes and studies the best ways of meeting its objectives. These objectives can be summarized as assisting the less-developed nations advance their economic and social progress, and in the process helping them strengthen their national independence.

This is especially pertinent with regard to the many new states which have been coming into existence in recent years, some of which may not have the economic viability or the trained personnel to support adequately their aspirations or their sovereignty. Thus, they are not always able to make effective use of their most precious resource—their people—and must look to assistance from the more advanced nations.

This would be sufficient motivation for the US programme of international economic cooperation, even if the problems generated by world communism did not exist. But the fact that communism does exist, and lurks in the background as a disruptive force ever ready to feed on weakness and disorder, is another reason for helping the new and developing nations achieve a needed measure of stability.

The stability which AID envisages is by no means static. It is recognized that in many cases lasting stability can be achieved only through dynamic, progressive measures leading to significant changes and improvements in political, economic and social conditions.

On this basis, the AID programme can have little hope of real success unless the recipient nations are prepared to help themselves and to undertake needed internal reforms. This, in fact, has been the understanding of the Kennedy Administration in proposing the new US aid programme, and of the US Congress in approving it. What this involves, in effect, is that to qualify for AID attention, a developing nation must have a national programme for rational development, and must show a clear interest in working to strengthen its independence.

Often, in this connection, the most useful allocation of assistance can only be determined after a searching study of all the resources available to a nation. In many cases, AID may find it advisable to give priority to the development of training facilities and educa-

tional resources. Inevitably, this kind of effort takes some time to bring it to fruition.

Hence, there is growing recognition that worthwhile achievements in the realm of development assistance, geared to self-help efforts on the part of recipient nations, may be the work of long years. President Kennedy himself, for instance, has spoken in terms of a decade of development.

The important task right now seems to be to get the new agency into efficient operation at the level of economic assistance funds already appropriated by the US Congress and made available for fiscal year 1962 which began on 1 July. These funds approximate \$2,400 million, compared with some \$2,100 million in the 1961 fiscal year, and embrace a wide and varied scope that includes development loans, development grants, contributions to international organizations, and many kinds of special activities.

Complicating the task is the fact—that AID combines activities conducted by two predecessor agencies—the International Cooperation Administration (ICA) and the Development Loan Fund (DLF). These two organizations had entered into about 1,000 technical assistance projects abroad and had extended some 200 development loans.

The projects and programmes of the past are undergoing intensive review to ascertain the extent to which existing aid operations meet priority objectives in each developing country. The thought is that those projects and programmes judged to be marginal or peripheral in importance will gradually be terminated, or "phased out." Any significant change in the character of the assistance effort for a country is not likely to be apparent, however, for at least six months because of the "momentum" of the existing projects and programmes and the length of time required for a proper and searching review.

Planning for next year's AID budget—that is, for the 1963 fiscal year beginning 1 July, 1962—already is in progress. It obviously is too soon, however, to tell whether this will lead to a request for any significant changes in congressional appropriations.

Always to be kept in mind, and often too little understood abroad, is the fact that the funds available for US assistance to other nations are necessarily limited by congressional determination. Already more requests for assistance have reached AID than the agency can satisfy.

In general, the demand is running about one-third to one-half higher than the funds available. As a specific example, requests for development grants, largely for technical assistance, now total some \$400 million, while the amount available for this purpose during the current fiscal year is about \$300 million.

INDIAN INDUSTRIES FAIR (INTERNATIONAL) 1961 NEW DELHI

TIMINGS

DAILY - 2.30 P.M. TO 9.30 P.M.

SATURDAYS & SUNDAYS - 1.00 P.M. TO

9.30 P.M.

TICKET :

25 nP.

CHILDREN BETWEEN 3 & 12 YEARS 10 nP.

ALSO IN THE MORNINGS OF TUESDAYS &

FRIDAYS : 10.30 A.M. TO 1.00 P.M.

TICKET : Re. 1/- (FOR MORNING)

ORGANISED BY

THE FEDERATION OF
INDIAN CHAMBERS OF
COMMERCE & INDUSTRY
WITH THE ACTIVE SUPPORT OF
THE GOVERNMENT OF INDIA

THE LARGEST INDUSTRY AND TRADE FAIR OF ASIA

These are some of the factors prompting AID officials to take a hard look at their operations. They are doing this with an eye to setting up constructive and realistic systems of priorities consistent with the criteria and objectives of the US effort to help other nations modernize their societies and realize their legitimate economic, social and political aspirations.

ARGENTINA Prospects For Trade

Dr Frondizi's visit to Delhi is more than a token of Latin

America's interest in India. The problems of Latin America are more than political. The end of dictatorship in the new world with the Trujillo packed off to take their pleasures abroad marks the happy beginning of a new era. The USA thinks of development on new lines, the preservation of parliamentary government despite the rise of communism in Cuba. The ABC group (Argentina, Brazil and Chile) is hardly mentioned today, but the idea of neutralism is not discarded. The ties with Europe also are being restored. And Latin America is thinking of economic unity and a low tariff arrangement among the ten republics. The New World is taking a look at Asia also, though

cultural affinity may exist only with the Philippines at present.

Dr. Frondizi's visits to Europe and Washington have helped to rehabilitate the republic in the eyes of foreigners. Few now think of Buenos Aires as the city depicted by Albert Londres in "the Road to Buenos Aires". The picturesque is replaced by the progressive and Argentina thinks of reducing disparities in income, just like Mexico, though Argentina is less radical than conservative. The multiracial harmony of Latin America is in contrast to the situation in many countries in Africa. And Iberian or rather Roman doctrine colours the Latin American view of the colour problem. The secularism of Argentina is

accepted as part of the Republican way of life. But Argentina unlike Peru is a new country and the English influence, even as in Chile, goes back to the days of liberation from Colonial rule. The Anglo-Saxon dominance, raised by the Monroe doctrine to some extent, is sapped by the emergence of new industries and trade. But pan-Americanism is a rule of conduct and the USA has to be the leader without pressing its followers too much to imitate the American way. The UN helps Latin America to get over the limitations of regionalism. It also helps them to see Africa and Asia emerging rapidly into the world of power politics, but not as pawns.

It will be perhaps rash to talk of trade when Argentina has import difficulties and limited exchange reserve. But Indian exporters should like Japan or Germany go in for Spanish catalogues soon to reach out to new markets. There may be a useful trade in textiles or footwear if it is known that India today can sell more than cornsacks or teachests. The treatment of foreign capital (as in India) may be a signpost to the future. The Argentine so long treated as the playboy of the Western world is now eager for work and wealth. That alone may encourage hopes of more trade though Argentina is largely a primary producer that cannot meet the Indian demand for machinery. But shipping services to the River Plate from India by Indian lines may help and a floating exhibition may prove the herald of more trade, better trade.

GLASS & CERAMICS Tremendous Progress

It is expected that manufacture of all items of Glass and Ceramics would be established in the country, by the end of the Third Plan period. The Minister for Industry, who gave this information in Lok Sabha last week, said that the Industry had made tremendous progress in the last decade. Except for very specialised types like vitrified sanitaryware, translucent tableware, electrocast refractories, ophthalmic glass, heat resisting tableware etc. practically all other items are now manufactured in India. With the implementation of the schemes already approved and of those which are under consideration, it is hoped that the country will not only be self-sufficient in most of the items of Glass & Ceramics by the end of the Third Plan period, but will also be in a position to earn substantial amounts of foreign exchange through exports to neighbouring countries. Statewise breakdown of capacity and pro-

Indian Finance

Madhya Pradesh	59,440	59,027

GUJARAT Accent on Industries

The Gujarat Government has been lately concerned with schemes designed to promote the planned growth of industries in specially demarcated areas around the bigger cities like Ahmedabad, Surat, Baroda and Porbandar. For this purpose the Government has decided to establish a statutory body, the Industrial Areas Development Corporation which will be empowered to provide all facilities including the facility of disposal of affluent. This decision is a sequel to the increasing emphasis that is sought to be laid on the industrial progress of the State during the Third Plan period. Already the Government has taken some concrete measures to encourage private enterprise to set up units in the State. One significant concession that has been granted is the waiving of the duty on electricity generated by new industrial concerns. Complete waiving of the water charge has also been suggested by the Standing Committee of the State Advisory Council for Industries in one of its recent sittings.

Among the major schemes included for implementation during the Third Plan period is the Rs 28-crore fertiliser project. Two American, one Japanese and one Indian firm of consultants are understood to have approached the State Government for being given charge of the work relating to the project. Attempts are also being made to locate in the State one of the six textile mills proposed by the Centre for being set up during the Third Plan period whose output will be diverted solely for exports.

The third refinery in the public sector which is proposed to be set up in the Gujarat State is a project which holds great significance to the future growth of industries in the State. The remoteness of the State from the main coal belt is a definite disadvantage in the matter of industrial progress. The discovery of oil in Ankleshwar has ensured the nucleus for the growth of petro-chemical indus-

try of considerable potentialities. The potentialities of the oil industry may provide the answer to the deteriorating situation with regard to coal as a result of which many industries in the State have been handicapped of late.

The State Finance Corporation will also be a source of greater strength to future industrial growth in the State. Reinforcement of its capital structure and more State aid to the Corporation are steps that are being now considered to enable it to play a more effective role in bringing new enterprises into being.

SUGAR Problems of Marketing

The annual accounts of the Deccan Sugar & Abkhari Company Limited, which was presented by Mr C. R. Srinivasan, reflect clearly the effects of the situation that has developed in respect of sugar production and trade during the last year. The features that call for notice are the drop in turn-

over of about Rs 86 lakhs, the reduction of profits by Rs 8.50 lakhs and the scaling down of the dividend from 18½ per cent paid for the last year to 13½ per cent. It is significant that both the units at Samalkot and Pugalur had shown record cane crushing as also production of sugar, but the financial results remained unsatisfactory in view of the difficulties of sale because of the controlled release of sugar by the Government. Excess stocks and reduced turnover should be the lot of many another unit in the sugar industry and draws attention to the problem of marketing facing the sugar industry as a result of overproduction of sugar during the last season. The proposed move of the Government to restrict production in the factories to 90 per cent of their highest production has purely temporary significance, and overlooks the problem of providing the outlet for the sugarcane that is produced in the country. Exports as an outlet for surplus production have also very little significance in view of the high cost that characterises sugar production. On an estimate of the quotas likely to be available for India from the

USA, and under the International Sugar agreement, Mr Srinivasan, has pointed out that India is unlikely to reach 500,000 tons and also that such exports will involve loss of nearly Rs 300 per ton after full rebate of excise duty cane cess etc. Mr Srinivasan sees a solution to the problems of marketing only in stimulation of the internal consumption of sugar in the country, the scope for which is admittedly great considering the present low per capita consumption. It is worthy of note that the annual average consumption per capita of the population is only 5.5 kg compared with 47 kg in the USA and 55 kg in the UK. It is also a significant fact that during the entire Second Plan period, consumption of sugar in the country has shown very little improvement and this is largely owing to the unsatisfactory level of prices for sugar which precluded its consumption on a large scale by the poorer classes. Between 1957 and 1960, the offtake of sugar in the country has remained static at a level of a little over 20.0 million tons. Taking into account the increase in population registered during this period, there can be seen to

Take the guesswork out of Lubrication...

Chances are you do not use the right lubricant in the right quantity for the right machine. You may be replacing too many costly parts and writing it off as a normal maintenance expense. It isn't really—it is the result of faulty lubrication practices.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

STATE BANK OF INDIA

India's Leading Bank — at the Nation's Service

have occurred an actual decline in the per capita consumption of sugar. That the decline should have occurred in the wake of the doubling of the excise duty on sugar by the Finance Minister in 1957 is not purely accidental and proves the restrictive effects on consumption brought about by the doubling of the excise duty.

★

LEATHER INDUSTRY Export Potentials

The leather industry's role as an important foreign exchange earner was highlighted by Mr Manubhai Shah, when he inaugurated in Madras, the Leather Boards Manufacturing Unit of the Nagappa Industrial Trading Corporation. At present exports consist of both the manufactured products and raw hides and skins, though it is the latter that predominates in total exports. The most important item of leather manufacture from the point of view of exports is footwear and this side of the industry holds great potentialities for the future. The Third Plan has fixed a target of production for footwear manufacture at about 140 million pairs which compares with the target at 102 million pairs in the Second Plan. Compared with the potentials of growth, the target for additional production which calls for an increase of nearly 40 per cent over production at the end of the Second Plan can be considered modest. There can be no question of raw material shortage in view of the abundance of the country's cattle wealth.

The predominance of the primary material in the export of leather industry points to the need for enlarging the internal basis for manufacture. The limited foreign exchange earning capacity of the primary materials is also a point which emphasises the importance of concentrating on the manufacturing side. The growing demand that has been noticeable in foreign countries for leather boards which are used for making soles, stiffeners, and heel-lifts and a variety of other purposes is also a pointer to further possibilities in exports.

Mr Manubhai Shah has also drawn attention for increasing the foreign exchange earnings by utilising leather scraps and trimmings that at present find no use and go as waste. Though the scope for such utilisation of waste leather may be limited, the importance of it cannot be overlooked in view of the prospects for additional foreign exchange earnings held out by exports of products made out of such leather waste. In this light, the new unit of the Leather Board that has been started in Madras has considerable significance. The new industry has been appropriately described

as one which "produces wealth from waste and that too in foreign exchange." Being the first one of its kind in the country, the new unit should point to the way in similar units could be set up to make full use of the waste leather.

★

IFC More Foreign Credits

The Industrial Finance Corporation has been exploring the possibility of obtaining credits in foreign currencies other than dollars. As regards dollar credits, formal agreement for a DLF loan of \$10 million was executed in December 1960 and was almost entirely disbursed in sub-loans during the succeeding six months. At the end of June 1961, the IFC had pending with it applications for dollar loans equivalent to \$5.82 crores. At the last annual meeting, the Chairman stated that a further tranche of dollar loan, which is under negotiation, would soon be available.

The Finance Minister told Lok Sabha last week that Government of India had agreed to the Kreditanstalt (German Bank of Reconstruction) extending a credit of DM. 15 million (Rs 1.8 crores) to the IFC. The agreement for this credit is yet to be finalised.

MINING MACHINERY British Mission

The British Mining Machinery Mission, now on a tour of India for the purpose of assessing India's requirements of mining machinery, arrived in Calcutta this week. The Mission consists of three members and is led by Mr James Anderson, who is associated with the mining industry in Great Britain in various capacities, i.e., as President of the A.M.E.M.E., Vice-Chairman of the Federation of Associations of Colliery Equipment Manufacturers, President of the Scottish Engineering Employers' Association etc. The two other members of the Mission are Mr J. D. Morton, Managing Director of Siemens-Schuckert (Great Britain) Ltd, and Mr Leonard Wood, Deputy Chairman of Hugh Wood and Co Ltd. At a press conference held in Calcutta, the members of the Mission reviewed India's private sector mining position especially in the context of the coal industry's development during the Third Plan. The Mission evinced keen interest in the development of India's coal industry. It was explained that in view of the competitive prices quoted by Britain for mining machinery, the Indian firms could get their requirements from Britain.

NEWS IN BRIEF

THE State Warehousing Corporation opened nine warehouses in Gujarat in November. They are located in Bavla, Dhandhuka, Talod, Patna, Cambaya Gondal Deesa, Savarkundla and Badharpur.

West Germany has entered into an agreement with Nepal for setting up a technical institute in Kathmandu at a cost of Rs 25 lakhs. West Germany will provide the necessary machinery and training equipment for the institute.

Production of saleable steel by the Indian Iron and Steel Company at their Burnpur and Kulti Works in November totalled about 62,119 metric tons. Production of pig iron in the same month amounted to 103,064 metric tons and that of steel ingots aggregated 81,209 metric tons.

The Government of Punjab has made an allocation of Rs 8.94 lakhs for the introduction of a crop insurance scheme in the State during the current financial year. Wheat, gram, sugarcane and cotton will be covered by the scheme.

Total output of electricity by the public utility power stations in the country in August amounted to 1,623.1 million KWH as compared with 1,383.7 million KWH in the corresponding period in 1960.

According to figures released by the TISCO office, the production of pig iron in November amounted only to 125,500 metric tons against 131,100 metric tons in October. The output of steel ingots also slipped down to 128,800 metric tons from 137,600 metric tons. Semi-finished steel production showed a decrease of 5,900 metric tons at 27,860 and finished steel production was marked down by 5,000 metric tons to 73,000 metric tons.

The Central Warehousing Corporation has decided to set up a warehouse building in Cochin with a storage capacity of 3,000 tons at an estimated cost of Rs 6 lakhs.

The Government of India has introduced a scheme of enrolling exporters with a view to developing confidence among foreign importers and abiding relationship between foreign importers and Indian exporters. Enrolment would be done by the various export promotion councils, the commodity boards and Director Ge-

neral of Commercial Intelligence and Statistics. The enrolled exporters are required to accept a minimum recognised standard for conduct of business. They would enjoy certain facilities that their names would be made available to the Indian Trade Commissioners abroad and visiting overseas purchasers. They would also get import licences for raw materials and machines under export promotion scheme and priority treatment in rail and shipping space allocation, over and above drawback and rebates of import and export duties.

Overseas shipments of the electronic products scaled a new peak in the first nine months of the current year. Exports were valued at \$437.4 million, a 33 per cent advance over exports in the same period a year ago.

A comprehensive socio-economic survey, with particular reference to industries, will shortly be undertaken under the aegis of the UNESCO in Hyderabad, Calcutta, Baroda and one place in Punjab which is yet to be selected. The UNESCO has entrusted the survey in Hyderabad to the Indian Institute of Economics.

The Government of Jammu and Kashmir has decided to install three more electric generators with a total capacity of 40,000 kilowatts, in order to meet the power requirements of the industries situated in Jammu city and Kathua.

The Air India International made an opening profit of Rs 117.41 lakhs during 1960-61 as against Rs 18.26 lakhs during the previous year.

PERSONAL

Mr William H. Weathersby, at present Director of Personnel in the US Information Agency, Washington, will succeed Mr John V. Lund as the Director of US Information Services in India.

Mr Radhabinod Pal of India was elected as member of the UN International Law Commission last week by the General Assembly.

The Government of Maharashtra has appointed Mr Frank Moraes, Editor-in-Chief of the Indian Express, as Sheriff of Bombay.

Mr R. K. Ramadhyani, former Secretary, Ministry of Information and Broadcasting, has been appointed Secretary to the President of Indian Union.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

TUNNEL under the English Channel, or bridge over it? Another bridge across the Hooghly, or a tunnel under it? I remember reading somewhere that the idea of a tunnel connecting France and England originated in the nineteenth century. At the moment, with Britain certain to enlarge trade with the European Economic Community, a link of this nature is being quite seriously considered. There are many supporters of a bridge, instead of a tunnel; and the steel involved in a bridge may provoke backing from, shall we say, a vested interest. But a tunnel is "all-weather", and though I don't claim to the art of reading the future, tunnel it surely will be, if ever there is such linking of France and England. Even so, here in Calcutta. I see that the World Bank has promised \$80,000 for a detailed study of whether or no we could have a tunnel under the Hooghly; and no doubt the Ford Foundation team, which has already been given a grant for the drawing up of a master plan for the city, will consider and advise another connecting link between the two sides of the river. A novel idea that was mooted, in a conversation I had on the subject, was for such tunnel or bridge to be built by a company owned by American or other foreign capital; its income would be found by levying a toll. The trouble is, we do have a toll bridge upriver, at Bally, and it is sparsely used. Its location should of course be south; otherwise there will be no relief of traffic congestion through the main city roads.

How urgent Calcutta's problems are was made evident in Parliament during the week. The Minister of State for Transport, Mr Raj Bahadur, confessed that there has been further silting up of the Hooghly; and Balari Bar is the trouble spot. In consequence drafts of ships have been affected—they can come with less cargo than ever before. Dredging is a drudge, but that alone can keep the river free; and for their part the Port Commissioners are doing a valiant job. Two more dredgers are prospectively to be with us during the Third Plan, for use in order that Haldia, Calcutta's satellite port, can be approachable by larger ships. It is sad but true that Haldia exists only in name; and we have to wait for advice of various kinds before construction work can

appreciably progress. When will Haldia take some of the load off Calcutta? Your guess is as good as mine.

Also on the floor of Parliament it looked almost as if the propriety of Dr B. C. Roy's talks in America, with World Bank officials and with President Kennedy, was being questioned. Mr Morarji Desai, answering the volley of questions, fielded them in adroit manner. Mr A. D. Mani wanted the Finance Minister to deny that help for the master plan for Calcutta had formed a subject of Dr Roy's discussions with the American President and World Bank officials; Mr Desai's reply: "I cannot say what Dr Roy said to Mr Kennedy. I was not present." But the Finance Minister did make it clear that neither State Governments nor their Ministers could "negotiate" with foreign Governments. But I nothing doubt that in fact Dr Roy broached the subject of Calcutta; and it was very proper for him to have done so. Negotiations he would not have conducted, but it was surely up to him to prepare the ground. The Ford Foundation is helping, the Third Plan does have an allocation for the development of Calcutta. So, if Dr Roy educated World Bank officials as to Calcutta's problems, and did succeed in securing sympathy for them, why, more power to him. A master plan for Calcutta will take years in its preparation, and I wonder whether I shouldn't suggest, as a means of reducing congestion in Calcutta, that State Government offices could usefully be shifted in the first instance. In this context, a friend has also suggested that two or three storeys could easily be added to many of the strong buildings in the business areas; the LIC has money to spare, that it could make available for so important and necessary a purpose. So, why not create new office floor area, by the simple expedient of building another storey or two?

As usual Mr Nehru's programme in Calcutta was crowded, if that's a word that will suffice, and certainly there can be no doubt that the function he most enjoyed was the centenary of the Calcutta tea auctions. When Mr B. P. Bajoria, a-flush with happiness in Davenport's 75th birthday, bid Rs 35,000 for the first lot to be offered at the special auctions (with, of course, J. Thomas and Company Limited having the honour of

knocking it down), Mr Nehru would have been amused to know that something like Rs 130 per kilo was the selling price. And so with the 6 other lots that followed. Mr G. A. Whittaker, Chairman of the Calcutta Tea Traders Association, contented himself in his speech with making it known that it was the intention of the trade to raise Rs 3 lakhs to be donated to the Prime Minister's National Relief Fund. Something less than half of this was got from the special or "Centenary" Catalogue. More is to be raised at a Charity Auction later in the month, when as Mr Whittaker put it, "Sellers, Buyers and Brokers are being invited to donate... at the rate of one rupee per chest of tea sold." In mellow mood Mr Nehru suggested that the history of tea needed to be written; and the range of his own knowledge quite took the breath of his audience away, when he advanced the view that the English word, "tea", is probably a corruption of the word "Chai" by which name tea is known in the whole of Asia and in Russia. Such history would be more fascinating, the Prime Minister said, than accounts of kings (schoolboys will heartily concur). And the whole function came to an end as pleasantly as one could wish, with Mr K. Ghosh, Vice-Chairman of CTTA, drawing an analogy, in his vote of thanks, between the Prime Minister's efforts to "release forces of human understanding" and tea's "attribute of lessening tension and creating a climate of understanding between peoples."

As I reported last week, Davenport and Company Limited celebrated its 75th birthday a few days ago. I now learn that the firm Davenport and Company had already been in existence for 20 years when, one hundred years ago, the first Calcutta tea auctions were held. In 1886, the public limited company was appointed Managing Agents and Secretaries, in succession to Lloyd and Company Limited, of 17 tea companies and the Behar Tramways Company Limited. A scarce few of the original remain, and the largest group of tea gardens managed by Davenports, Hasimara Industries Limited, was a later "acquisition." Hasimara's crop is now in the region of 6 million lbs, and extension programmes now in hand are expected to raise the output, by the end of the Third Plan or so, to 7.8 million lbs. Of the total of 4,200 acres under tea at Hasimara, 870 acres represent young plants, that is, acreage brought in during the last decade. It is thus not a small contribution to Indian tea production that Hasimara and Davenport can boast of.

In a thoughtful talk at last week's Rotary Club meeting, Mr K. U. Mathew recorded his gentle disagreement with the Planning Commission's estimate of 14 million tons of petroleum products a likely demand at the end of the Third Plan; and Mr Mathew should know, for he is intimately connected with the oil industry. His estimate rather is that we should need something like 16.2 million tons. The fact is, that shortfall in coal production inevitably poses a greater pressure upon and a higher demand for oil. If coal production is short of demand by 3 million tons, two million additional tons of oil are necessary to make good the gap in the demand for fuel. It seems to me quite evident that underestimation of oil needs is likely to lead to all sorts of trouble; hurried purchases of refined products, for which we have to pay more, and at a time when our foreign exchange reserves may be scanty—or in the alternative resignedly to allow industrial production to slump. I do not at the moment wish to go into the details of the oil controversy that Mr Malaviya sparked off a week or so ago. But I gather that Burmah-Shell (for example) are working their refinery under capacity. They would be able to raise their throughput by 700,000 tons, or twenty-five per cent without expansion of plant or equipment. Certainly, imported crude is cheaper than refined products. For a start, therefore, the refineries in the private sector should be encouraged to raise throughput where possible by permitting import of crude on a larger scale. In the long-term, of course, we have to see whether we do have sizable reserves of oil. Oil exploration is something with which we have not persevered—it's a costly business. But I fancy that foreign cooperation would be ready, willing and eager to take up exploration if the terms are attractive enough. In such circumstances the foreign partner would bear the costs (infructuous and awesomely high as many a search may prove to be) if they had the confidence that they could be an equal partner with Government in the sharing of profits in cases where oil is discovered. But if India does have the oil, it is imperative that we are more energetic in searching for it: the import bill for crude is rising year by year, and at quite a fast lick. Doctrinaire considerations should not enter here, if only for the simple reason that Government has neither the rupee resources nor the foreign exchange to embark upon large-scale oil exploration. Brow-beating of the oil companies can merely earn us small, reluctant concessions. There is I sense, I am sorry to say, not much rapport between Government and the oil companies—and as a result it is the country which is paying through the nose in terms of foreign exchange.

Olympus

TC Most Valuable Instrument of Govt. Policy

THE presentation of the annual report of the State Trading Corporation has been followed by a comprehensive statement by the Minister of Commerce in Lok Sabha in which he has bestowed generous praise on the achievements of this organisation which, in the course of the five years of its existence, has received more rickbats than bouquets. Mr Kanungo gave full credit to the STC for the growth of trade with East European countries and the increased exports of iron ore. He also highlighted the useful work done by the STC in developing markets for new commodities, in undertaking import and distribution of items in short supply and in the equitable distribution of cement. The range and volume of the business handled by the Corporation, he said, had been steadily increasing. The total turnover of the Corporation in the commodities directly handled increased from about Rs 10 crores in 1956-57 to Rs 65 crores in 1960-61. The direct exports of the Corporation also increased from Rs 5.79 crores to Rs 36.69 crores over a period of five years. Major items which recorded an increase in exports are Iron Ore, Shoes, Mica, Pulses, Salt, Shellac and Coffee. Besides the direct business transacted by STC, it has also assisted private industry and trade, in importing essential capital goods and raw materials as well as to export finished goods, and the volume of such business has increased from Rs 19 crores in 1957-58 to Rs 46 crores during 1960-61. Mr Kanungo also referred to the Trade Development Fund created by STC out of its profits and said that the Corporation has under consideration, among others, schemes for assisting improvement of mining, transport and port facilities with a view to augmenting exports of ores, and certain other projects designed to promote exports generally.

Concluding his panegyric of the STC, Mr Kanungo said that the Corporation has now become "a most valuable instrument of Government's commercial policy. It has not only supplemented the activities of the private sector and has rendered help to private trade in spheres in which the

help was needed, but it has enabled Government to deal effectively with the complex variety of trading problems which arise in the present world conditions."

Mr Kanungo's unreserved praise of its achievements should put some heart into the organisation which has been wilting under a shower of unkind criticism from spokesmen of Trade and Industry. Lack of definition of its functions has made the STC specially vulnerable to such hostile criticism. The Estimates Committee which examined the working of the Corporation last year had suggested that the Government of India should make a clear demarcation of its functions and activities in the light of experience gained hitherto. Mr Kanungo announced at the end of his speech that the main Objects Clause of the Memorandum of Association of the State Trading Corporation was being suitably amended to incorporate the functions that Government consider should be assigned to the Corporation. These functions—which are broad enough to include all the present activities of the STC and many more to which it has not yet applied its hand—are:

- to undertake trading generally with State Trading Countries as well as other countries in commodities entrusted to it;
- to explore new markets for traditional items of export and to develop exports of new items with a view to diversifying and expanding the export trade;
- to undertake at the instance of the Government import and/or internal distribution of any commodities in short supply with a view to stabilising prices and rationalising distribution; and
- generally to implement such special arrangements for import, export or internal distribution of particular commodities as Government may adopt in the public interest.

More Scheduled Air Services

The Air Corporations (Amendment) Bill, introduced in Rajya Sabha on 28 November includes provision for supplementing the Scheduled Services of IAC and the AII by private operators on routes which are not at present

served by either of the Corporations. Under Section 18 of the Air Corporations Act, 1953, the two Corporations have the monopoly of operating scheduled air transport services. As neither is in a position to provide scheduled services on certain routes, it has become necessary to permit private operators to operate scheduled services on such routes for a limited period under terms and conditions prescribed by Government. Section 18 is therefore being amended to enable the Central Government to grant permission for such services, by private operators.

The Air Transport Council, constituted under Section 30 of the Act, has no work at present. Section 30 is being amended to enable the Council to be dissolved, while at the same time empowering the Central Government to constitute an Air Transport Council as and when it becomes necessary. After the Bill is enacted Air India International will be renamed Air India, the name by which it is better known abroad.

Railway Earnings

Railway earnings during the six months from April to September 1961 have registered an increase of Rs 28.82 crores as compared with the figures for the corresponding six months of last year. The Minister for Railways, who gave this information in Lok Sabha during question hour, attributed the increase mainly to three factors:

- increase mainly in passenger traffic;
- merger of tax on Railway passenger fares in passenger fares from 1-4-1961. Railways will have to pay general revenues, for transfer to the States, a lump sum in lieu of tax on fares merged in passenger fares.
- enhancement of
 - surcharge on freight on small consignments from 10 per cent to 20 per cent from 1-4-1961.
 - coal freight rates beyond 335 kilometers from 1-7-1961.

The fact that the Minister was not able to attribute any part of the increased earning to larger volume of goods traffic is disturbing, for it suggests that, either industrial activity has remained stationary, or that the Railways have not been able to improve on their performance in the last year of the Second Plan.

National Income Committee Reconstituted

The National Income Committee, which was set up on the suggestion of the Prime Minister in

October last year, it seems, has not yet been able to get down to its work. Apart from reviewing changes in levels of living during a decade of planning and recent trends in the distribution of income and wealth, the Committee was particularly asked by its terms of reference to "ascertain the extent to which the operation of the economic system has resulted in concentration of wealth and means of production." The expectation that the findings of the Committee could be drawn upon in finalising the programmes of the Third Plan has not been realised. In the meantime it was found necessary to reconstitute the Committee, as most of the original members had dropped out.

The composition of the reconstituted Committee was indicated by the Prime Minister in Lok Sabha last week. Mr P. C. Mathew, Director, Central Statistical Organisation, who was member-secretary of the old Committee, becomes Chairman of the reconstituted Committee, and is the only link between the two committees. Apart from officials of the Planning Commission and Government of India, the Committee also includes representatives of the Reserve Bank and institutions engaged in economic research, while the chiefs of these institutions were members of the old committee. Their deputies have been appointed to the new one. Professor M. Mukherjee of the Indian Statistical Institute takes the place of Prof Mahalanobis on the Committee; Dr K. N. Raj takes the place of Dr B. N. Ganguli, Director, Delhi School of Economics; Mr P. N. Dhar, the place of Dr V. K. R. V. Rao, Director, Institute of Economic Growth; Mr M. V. Divatia, the place of Dr P. S. Lokanathan, Director of NCAER; Dr N. S. R. Sastry, the place of Dr R. K. Madan, Executive Director of the Reserve Bank of India. The Gokhale Institute of Politics and Economics, Poona, which was not represented on the old Committee will be represented in the reconstituted Committee by Prof V. M. Dandekar. The first meeting of the reconstituted Committee is expected to be held on 19 December.

POWER DEVELOPMENT ECAFE Seminar

It has been announced that at the two ECAFE Seminars currently in session in Bangkok, namely UN Regional Seminar on Energy Resources and Electric Power Development and Inter-regional Seminar on Field Methods and Equipment used in Hydrology and Hydrometeorology, respectively, India will be represented by Mr T. N. Idnani, Member, Central Water and Power Commission and Mr K. K. Framji, Chief Engineer, and Ex-officio Joint Secretary, Union Ministry of Irrigation and Power.

Markets

JUTE Steady Trend

The undertone of the raw jute market has been steadier during the past week. Raw jute prices basis Assam Bottoms improved to Rs 31 per maund before closing Thursday at Rs 30.50. The recovery is partly due to the measures initiated by the Indian Jute Mills Association toward giving support to the market. In accordance with the decision announced earlier, the IJMA commenced the issue of jute purchase quotas to member mills with effect from 1 December, on the basis of stocks with and consumption of individual mills. The total quantity for which purchase quotas have been issued is placed at 690,800 maunds. While it is incumbent on those mills to whom quotas have been issued to purchase the specified quantity, there is no restriction on purchases above the minimum quota or purchases by mills to whom quotas have not been issued as a consequence of their having stocks equivalent to over 18 weeks' consumption of raw jute. It would appear that mills have been advised to purchase their quotas without waiting for any price advantage. But it is unlikely that mills which have not been issued any quota or mills which have received comparatively smaller quotas will be interested in increasing their stocks more than

necessary in view of the continuing absence of sizable foreign inquiries.

The improvement in sentiment noticeable after mid-week appears to have stemmed mainly from the fact that raw jute arrivals have considerably slowed down during the past few days. With the knowledge that purchase quotas to the tune of about 700,000 bales have been issued to IJMA mills, there was reason to expect that sellers would not be keen to conclude business in a hurry. When the raw jute market opened the week last Friday the undertone was steady with mills showing interest in all grades. However, prices remained generally unchanged with Assam Bottoms quoting Rs 30 per maund. Although there was still no change in price levels on Saturday, sellers did not offer freely and indications were offerings would further diminish as there were reports of falling imports in the up-country markets. There was a distinct improvement in sentiment when the market opened on Monday and rates were marked up all along the list by 50 nP. Most sellers had withdrawn from the market. But mill buying too continued to be small. The uptrend continued the next day also with rates marked up by another 50 nP. Assam Bottoms was done upto Rs 31 per maund. Mills, however, continued to show only moderate interest presumably in the hope of that levels would decline with improvement in arrivals. Such expectations were partially fulfilled though for entirely different reasons. In line with the other markets in the country, the jute markets were

PRICE TRENDS

January-March	42.00	43.25	41.75
40" x 8 ozs.	39.00	39.50	39.00
40" x 7 1/2 ozs.			
Sackings:			
B Twills—			
Ready	140.00	139.00	130.00
January-March	123.00	126.00	124.75
Heavy Ceas (Green)	131.00	132.00	130.00
Corn sacks	135.00	136.50	134.00
Cubans	173.00	173.00	172.00
A Twills	161.50	163.00	161.00
L Twills	155.00	155.50	149.00
D. W. Flours	164.50	165.50	159.00
Sugar Twills	158.00	155.00	150.00
Ready Raw Jute:			
Assam Bottoms	30.00	30.50	30.50
Northern Bottoms	29.50	30.00	30.00
Daises	32.00	32.50	32.50
Futures:			
Hessian—February	45.76	46.98	47.20
Sacking—February	121.10	123.35	122.10
Raw Jute—December	30.96	30.96	30.90
Raw Jute—March	...	32.96	32.86

also adversely affected by the news as regards Goa and the country's northern border. With panicky conditions prevailing in most markets, holders in the raw jute market were found to be anxious to discount rates but buyers were scarce. Assam Bottoms reacted to Rs 30.50 on Wednesday and the rate remained unchanged on Thursday also.

Interest in the jute goods market was mainly confined to ready delivery goods. Although some business was reported done with UK and USA toward close, foreign buyers continued to remain on the sidelines taking only their immediate requirements. Any large scale buying is improbable for at least some weeks to come as the general tendency would be to keep commitments to the minimum in view of the coming Christmas holidays. Even in the case of ready delivery position activity tended to slacken in later dealings. The outlook for heavy goods is not considered to be encouraging in view of the growing competition from Pakistan which is able to offer buyers better prices on account of its comparatively low cost of production. Although hessian seems to be faring better than sacking, it cannot be assumed that the demand for this category of goods will continue to be good. The US, the principal market for Indian hessian, has not been taking as much as it used to. The decline in burlap consumption in US this year is due to the high prices prevailing earlier in the year. Even so US buying is slow in reviving although prices have fallen considerably in the past one or two months. It would appear that Argentina, another important customer is not likely to evince much interest in buying Indian hessian in view of its own foreign exchange problems.

The jute goods market opened the week steady with interest centred on ready delivery goods. B Twills December closed last Friday at Rs 130.50 with January-March at Rs 124.75. Hessian 40" x 10 oz December was done at Rs 49.50 with the January-March delivery at Rs 46.75. In sympathy with the firmness of the raw jute market and helped by the activities of the forward market, sentiment continued to improve in the next two or three days. By close on Monday B Twills was quoted at Rs 132.50 for December delivery and Rs 126.25 for January-March position. Hessian 40" x 10 oz December also improved to Rs 51 with the January-March position quoted at Rs 48. Prices declined steadily during the next few days as sentiment had been adversely affected by political news. Closing prices on Thursday were: B Twills—December Rs 130.75, January-March—Rs 125.00; Hessian 40" x 10 oz—December Rs 52.50; January March—Rs 48.

TEA

Improvement in Demand

IN the Export Sale held in Calcutta this week, offerings were 71,957 packages. There was a better general demand than in recent weeks for all

but the plainest and more fibrous orthodox descriptions. Plain Brokenes were irregular and generally declined by 10 nP to 20 nP per kilo; but similar Fannings were fully firm to dealer on last rates.

Orthodox Assam brokenes were irregular and generally easier except for the best which were sold above last rates. Similar fannings met with useful competition and were generally dearer. Best liquoring CTCs were fully firm, while those in the medium category were generally dearer with more competition for fannings than brokenes. Off-grade CTCs were irregular and those with useful liquors were generally dearer. The remainder were fully firm or sometimes a little easier.

Legg-cut Dooraos improved in prices by up to 10 nP and sometimes more. Darjeelings met with good support at irregular rates with the best generally dearer. Despite more demand, whole Leaf grades were again easier with more interest for the cheaper varieties. Tippy sorts were sold readily. Following rates were quoted: Clean Plain Pekoe Rs 3.65 to Rs 3.75; Plain BP Rs 3.40 to Rs 3.50; Plain Fannings Rs 3.45 to Rs 3.65; Medium Assam CTC BP Rs 4.30 to Rs 4.60; Medium Assam CTC Fannings Rs 4.40 to Rs 4.70; Best Assam CTC BP Rs 5.00 to Rs 5.40 and Best Assam CTC Fannings Rs 5.00 to Rs 5.50.

In the Internal Sale, offerings were 25,651 packages of Dusts and 363 packages of Leaf grades. There was a good and general demand for Dusts. CTC teas with a clean leaf appearance opened fully firm to dealer; but eased towards the close. Fibrous types were, however, irregular.

Orthodox descriptions declined by 5 nP and sometimes 10 nP except for the brighter lines which were keenly competed for legg-cut varieties which were sold, but at irregular rates. The better liquoring lines were a little dearer. Following rates were quoted: Plain Orthodox Dust Rs 3.70 to Rs 4.00; Medium Assam Dust Rs 3.95 to Rs 4.15; Legg-cut Dust Rs 4.30 to Rs 4.70; Medium Assam CTC Dust Rs 5.60 to Rs 6.00 and Good Assam Dust Rs 6.30 to Rs 6.70. Leaf grades met with a fair demand.

Meanwhile, Indian tea exports to Italy has been showing a declining trend. According to reports reaching Calcutta from the Indian Embassy in Rome, the share of India in the total exports of tea to Italy is only 7 per cent, a fall of 3 per cent from the usual share of 10 per cent. This fall is attributed to the entry of Indonesia and West Germany in the Italian tea market. While the Indonesian tea is selling here at the rock bottom prices, the emergence of West Germany is explained by the role which Hamburg tea auctions are playing in releasing supplies within the EEC.

Italian market is traditionally dominated by the Ceylonese tea. The competition from Indonesia and West Germany has led to a decrease in the share of Ceylonese tea too. From 56.20 per cent, the share of Ceylon in the total Italian imports of tea has come down to 52.72 per cent. In the Cochin market, offerings

were 586,000 kilogrammes of Leaf tea. Demand was smaller than last week. Highgrown best liquoring teas were irregular following quality. Mediums and Good Mediums were 20 nP to 30 nP a kilo easier. Plain and Low Medium Fannings were 30 nP to 40 nP a kilo lower, while similar BOPs were neglected. Unorthodox types were steady. Against heavy withdrawals a large quantity of tea was sold below cost price.

There was again a discriminating demand at the auction held in Mincing Lane last week. Offerings were 79,502 packages. For North Indian descriptions, the market was irregular and lower, especially for thin plain liquoring invoices which were a weak feature. For any bright colour tea, a fair demand was forthcoming and prices for these tended to show resistance to the general trend.

The British African growths offered were sold on similar lines with withdrawals frequent among the plainer kinds. The better liquoring high

and medium growth Ceylon teas, however, met with strong competition at full rates, while colour sorts showed little change; but only a limited response was experienced for plain and thin kinds and prices were irregularly easier. South Indian teas were also irregular and lower, apart from those with useful leaf where fairly steady prices were obtained.

The price range for seasonal peak quality widened from 67 to 92 pence per pound against 70 to 92 pence in the previous week. Quality, medium and plain teas mostly recorded losses of fully 2 pence per pound.

Imports of tea into the UK from all sources over the January to October period of this year totalled some 449.1 million pounds against 404.9 million pounds over the corresponding period of last year. UK exports during January to October this year were just over 26 million pounds as compared with about 25 million pounds in the same 1960 period.

COTTON Steady Trend

Trading in the Bombay cotton futures market last week was restricted to four days on account of the "hartal" observed by the brokers and jobbers on Friday and Saturday as a mark of protest at the intervention of the authorities. Despite the meagre transactions that followed the imposition of special margins by the Forward Markets Commission, the sentiment in the market tended to rule generally steady. The market depicted fairly active trading conditions in the initial stages of the past week. The Jarilla March contract after opening at Rs 653 advanced further to Rs 657.25 and finished at Rs 656.25. The contract, however, forged ahead and on Tuesday last was quoted at Rs 664.50. Business transacted during the week under review was on the whole of a squaring-up nature and the

turnover amounted approximately to 30,000 bales.

Following the requisition drive initiated by the authorities the arrival of new cotton crop has undergone a distinct change. Recently mills have developed a preference for 197/3 cotton but scarcity of that growth is indicated in the crop movement at the terminal markets. The movement of kapas was restricted in terms of quantity and diverted in terms of quality. Growers have shown a general apathy to bring to the market that type of kapas which was eagerly sought after by the mills. Cotton merchants also were cautious in purchasing such types of cotton that are likely to be requisitioned by the authorities.

The spot market at Sewri depicted fairly active conditions. Needy mills were found anxious to make purchases of all the available lots of new crop at the prevailing prices. Spinner interest was particularly pronounced in Vijay/Digvijay, 197/3, L147, Kalyan, Moglai, CO 2 and Surti. Prices during the past week were marked higher by about 15 points per candy.

Fairly active business was conducted in East African and Sudan growths in the import section. American cotton also attracted the attention of the mills. Prices of these varieties remained steady.

The ceiling fixed for the registration of sales of Bengal Deshi was reached on the opening day of the past week. How far the balance of 25,000 bales will be utilised remains to be seen. According to the consensus the scope for further export of Bengal Deshi in view of the downward revision of this crop in Punjab and Rajasthan and the increasing tendency to mix it with long staple cotton appears to be remote.

The overall production of cotton textiles by the Indian mills in October last has been provisionally placed at 72 million kg (160 million pounds) of cotton yarn and 390 million metres (417 million yards) of cotton cloth.

At the end of the same month the composite mills of the cotton textile industry held an estimated stock of 1.75 metric lakh bales of cotton cloth as unsold and 1.69 lakh metric bales of cotton cloth as sold but not lifted.

The total production in the first ten months of the current year amounted to 711 million kg (1,569 million pounds) of cotton yarn and 3,923 million metres (4,290 million yards) of cotton cloth.

Exports of mill made cloth from Bombay in October 1961 shipped down to 35.51 million yards worth Rs 2.77 crores from 36.48 million yards valued at Rs 2.83 crores in the preceding month. While the exports of grey and coloured piecegoods declined slightly to 17.82 million yards and 10.76 million yards from 17.89

9 December 1961

million yards and 11.68 million yards respectively in the month under review, that of white piecegoods looked up nominally to 6.94 million yards from 6.91 million yards.

The earnings from exports of apparel and other textiles were also marked slightly lower at Rs 48.8 lakhs compared with Rs 51.1 lakhs.

In the first ten months of the current year, the exports of mill made cotton textiles from India aggregated 439.07 million yards valued at Rs 34.04 crores as against 498.37 million yards worth Rs 38.41 crores in the relevant period last year.

The cotton board has announced that the Spanish cotton industry has undertaken to restrict its exports of cotton yarn and piecegoods to the United Kingdom at the level of thirty per cent below the 1960 level. The present arrangement which came into force from the commencement of October 1961 will continue for one year. The exports of cotton from Spain to the United Kingdom have registered a marked improvement since 1959 and exports in 1960 aggregated 64 million square yards.

Piecegoods

Trading in the Bombay piecegoods market turned out to be a dull and drab affair. Demand in both the export and domestic sections was few and far between with the result that the total off-take was meagre and the stocks piled up with merchants and mills. Demand from the upcountry centres failed to flow on an encouraging level despite the stray inquiries from Rajasthan, UP, and Bihar. The reluctance of up-country dealers to enter into bulk purchases was largely ascribed to the stringency prevailing in the money market.

Prices in respect of mill made varieties, however displayed mild variations. A few popular varieties of standard quality were reported to have quoted at 5 to 10 per cent higher than the ex-mill rates, while some sorts were offered at 2 to 5 per cent below the ex-mill prices. On the other hand, prices of power loom goods ruled firm. The turnover of power loom saris and dhoties was fairly maintained.

On the export front, enquiries from almost all the overseas countries were reported during the past week, though the actual business transacted was far from encouraging. Stray bookings in grey sheetings were made for the United Kingdom. Italy, Burma and Singapore also evinced some interest in grey goods. Continental countries directed their attention on grey canvas and long cloth. Enquiries from South Africa were meagre presumably due to the competitive prices quoted by other exporting countries like Japan and Pakistan.

Fall in Coffee Output Expected

ACCORDING to a report issued from Coimbatore, the Coffee crop for the current year is expected to be about 28 per cent less than that of last year. The crop for 1961-62 will be about 49,000 tonnes as against 68,000 tonnes in the previous year. It may be added that the crop for last year was an all-time record.

About 20,000 tonnes of the current year's crop—about 40 per cent of the total production—will be earmarked for export. The bulk of the exportable coffee will be of the Plantation variety. About 12,000 tonnes of this variety will be reserved for consumption in the country.

The Robusta coffee yield is not expected to be more than 17,000 tonnes, forming about 60 per cent of the previous year's yield. Part of last year's exportable robusta coffee is expected to be diverted for internal consumption this year, making up about 19,000 tonnes for the country's market for the current year.

The industry has a problem of disposing of large stocks of Robusta grades, as plantation varieties have been exported in large quantities and the balance available has been easily absorbed by the internal market. But, sales to export markets were not attractive due to a glut of world supplies.

The shortage of Plantation grades has latterly been reflected in higher prices in the internal market. But, with rising costs of production and a loss incurred in most cases on Robusta sales, it is expected that the average price for the 1960-61 crop will not be more than Rs 1.90 per pound. It is stated that there are not many producers who have got a cost of production very much lower than this figure.

PEPPER

The new Pepper season has started on a discouraging note. Despite sizable exports and fair indigenous consumption during the season ended 31 October 1961, Malabar black Pepper now receives virtually no buying support from abroad. The present behaviour of the market discloses the buyers' confidence in supply. In the Cochin market, the rate is quoted around Rs 320 per quintal for the ready position and Rs 318 for the December delivery.

Various factors have contributed to the present dull state of the market. First, the US buyers are holding back and are watching developments in markets of origin. Secondly the situation in Singapore is rather intriguing. Although a greater part of the stock is in strong hands and production of Lampung is over, the Singapore market is slowly giving way. Finally, the Chinese dealers, who were having monopoly in pepper trade are annoyed over the entrance of the Government-sponsored Indonesian pepper-dealing firm into their field of activity and are trying to wreck it.

According to certain reports, the Indonesian trading agency is now

trying to win over Communist countries of Eastern Europe by offering the commodity at cheap rates. If the negotiations between them materialise, there will be stiff competition between Indonesia and India in the coming months in selling pepper to the Communist countries.

Market circles in Cochin have stated that forward sales in Malabar black pepper are really inadequate to cushion off the impact of the new arrivals which have started. The present position is thus none too encouraging. At the same time, it is too early to jump to any conclusion about the long-term prospects.

GINGER

The marketing of Ginger has gathered momentum in the primary markets, halting the uptrend in prices witnessed since Diwali. Though the prices have not registered any fall, the sentiment in the market has become cautious in anticipation of a downturn.

Cochin, the main terminal centre, is reported to be receiving about 500 bags a day on an average and within a short time arrivals there are likely to grow larger. The inflow into the Bombay market is also picking up, the receipt at present being about 400 bags a day.

12 DEC 1961

The impact of the increasing arrivals of ginger on the market; because the demand from the local trade is brisk and absorbs the entire receipt, leaving nothing to add to the floating stock. However, seems that the bull phase, seen during the last few days has come to an end. Local support will be reserved in the next few weeks, as traders like to wait till the prices come to a more reasonable level and reflect the pressure of the crop, which is stated to be the same magnitude as in the last season. This apart, activity on the export front is negligible and the commodity may not be much in demand so far as shippers are concerned.

RUBBER

The shortage of Rubber continues to be keenly felt. With a rising output of tyres and tubes and various rubber components, it is expected that there will be a further increase in consumption. Even in 1960, was found necessary to permit imports for about Rs 11 crores and is stated that the gap between the output of natural rubber and consumption is as much as 30,000 tons. By 1965-66, total consumption is expected to be 100,000 tons with a possibility of a significant increase in the output of the rubber estate.

Their replantation programme has only recently got into stride and it may be several years before India can expect to bring about a sharp rise in indigenous production of natural rubber.

SUGAR

According to the figures released by the Indian Sugar Mills Association, total production for the season 1960-61 up to 31 October 1961 amounted to 2,978,000 tons as against 2,420,000 tons in the previous season. This excludes 55,000 tons produced by the factories for 1961-62 season prior to November 1961 as against 54,000 tons produced by the same date last season.

The offtake of sugar from the factories during October was 285,000 tons as against 173,000 tons in October last year. Total despatches including exports up to 31 October were 2,385,000 tons as against 2,021,000 tons. The closing stock (including new season's production) of sugar as on 31 October was 1,185,000 tons as against only 595,000 tons on the corresponding date of last year.

In the wake of the prospects of a reduction of excise duty on the sweet commodity, a further quota of sugar for sale by the factories in the open market, has been released by the Government. This has robbed the market of a measure of stability which it was beginning to show in the preceding week. The market was expecting that, in view of the declining trend in sugar prices, the release of sugar quota will be delayed for some time. But,

contrary to this expectation, the quota has now been released. This has unnerved the traders as it has become difficult for them to make any commitments. The general feeling among the traders is that it will not be wise to keep a big stock and that it will be advisable to buy only for the immediate requirements.

Thus, the immediate outlook for the industry is obscure and there is great concern on the part of even the efficient producers over the decline in prices that has been taking place in recent weeks. With heavy interest charges incurred on accumulated stocks and the payment of high prices for cane, it is pointed out that mills have been affected by restricted sales and huge losses on exports. It is felt that there cannot be any significant reduction in stocks so long as the output remains at a high level and internal consumption is not much more than 2,100,000 tons annually.

The restriction of the cut of 50,000 ton in the US quota has been welcomed. But, it is argued that exports in 1962 cannot be raised appreciably if the present conditions in the internal markets continue to be in evidence. A larger US quota will certainly be helpful; but the prospects for the industry will improve only if the Government decide on a sizable reduction in the excise duty at an early date.

The ISMA has also urged that Central Government to reduce the Third Plan sugar target to 3,000,000 tons in view of the problems of surplus stocks, lower internal consumption

and limited scope. The internal consumption of 20.66 lakh tons was lagging behind the Second Plan target of 2,250,000 tons. The Association feels that it will be a sound policy to let consumption increase before expanding production capacity. The stock it holds at present can afford a safe cushion for any sudden spurt in consumption.

NON-FERROUS METALS

Price in the Bombay Non-Ferrous Metal market showed a mixed trend. Tin prices presented a steadier appearance, being influenced by the local speculative support, better spot advices, encouraging reports from the upcountry centres and higher price trends in London and Singapore.

In the Copper section, price movements were mostly confined to narrow limits in the absence of outside incentive. Bulls were inclined to unload partially, even though the ready reports were by no means discouraging.

Increased offerings and slackened buying caused a sharp fall in the Zinc section. The burden of large stocks seemed to have had an adverse effect on sentiment. Advices from foreign countries were also depressing. Lead prices have not shown much change over last levels.

On the London Metal Exchange, the recent persistent talk about the current shortage of Tin has taken on a more moderate tone of late. Supplies are obviously still short, or else prices would not be as high as they are. But some people have begun to wonder whether the scarcity is quite as bad as was earlier supposed. The US tin consumption showed a 10 per cent drop in September and, even taking the first nine months of this year as a whole, the use of tin in the USA is down on last year's level.

The consumption in the UK has also declined, while the demand from the Continent has been slack of late. Nevertheless, a report issued by a leading metal dealer shows that the tin situation is still as serious as ever. World tin production has fallen over the past ten years, while consumption has gone up. In its view, the US stockpile sales will still be needed to relieve the position.

In the case of Lead, international traders see signs of some improvement in the short-term prospects for the metal following the recent steady drop in world stocks and improvement in the prices on the London Metal Exchange from their 15-year low earlier this month. The demand from manufacturers has tended to become firmer and this has been reinforced on the British market by some shortage of Commonwealth metal—Britain's main source of supply.

Copper prices have maintained a steady undertone. Although supplies are plentiful, sellers are reluctant to operate in view of the Katanga situation and the possibility of a New Year strike in Chile.

GOLD & SILVER

After ruling initially firm, prices on the Bombay Bullion Exchange displayed a slightly easier tendency towards the close.

Silver prices spurted following reports that President Kennedy had decided to stop the Federal sale of silver from its stockpile. Operators from Calcutta, Delhi and Rajasthan were the main buyers, while the bears were virtually squeezed out to cover their outstandings. Better ready off-takes also aided the sentiment. Arrivals amounted to 22 bars as against an off-take of 12 bars. Ready (below .996) changed hands at Rs 212.10 to Rs 212.45.

The Gold section, however, ruled easy, mainly on account of the rising floating stocks and lack of sufficient off-take in the ready section. Arrivals of contraband gold remained heavy, which steadily brought down prices. Moreover, some short selling was also effected. Arrivals totalled 8,000 tolas against an off-take of 5,000 tolas. Ready changed hands at Rs 120.60 to Rs 120.85, while Sovereign ruled steady at Rs 98.50.

OILS & OILSEEDS

The stringent restrictions enforced by the Forward Markets Commission about a month ago in order to arrest the rise in groundnut and groundnut oil prices have apparently failed. On Saturday last, the rate crossed the official ceiling and was placed at Rs 217 in groundnut and Rs 17.85 in groundnut oil in private dealings.

The present rise in futures prices has been mainly influenced by the strength in the spot market rather than any speculative manoeuvring. The January contract mustered strength and steadily advanced to the limit set for it. The contract was obviously inspired by the firm advices from expeller industry and the ready section. The strength in ready prices, despite the bumper crop estimate in the new season, has been mainly caused by the abnormal change in the process of the marketing of the new crop. Farmers, too, preferred to withhold their stocks, apparently hoping that the scarcity, created by their action, will help them to obtain higher prices. Again, vanaspathi manufacturers, in order to meet the rising demand, have also buying groundnut at rising prices. Above all, the exporters, who have substantial commitments abroad in groundnut HPS groundnut expeller and extraction, are frantically buying in order to fulfill their contractual obligations. There is thus a scramble to cover raw groundnut or expeller in the ready market, while supplies are limited owing to the slow marketing tactics of the farmers. Ready Groundnut Bold is quoted at Rs 46.50 and Groundnut Oil at Rs 19.10.

Castorseed, though marched forward in keeping with the general trend in the market, lacked the basic strength of groundnut. The lull on the export front and the bright crop prospects were the main restraining factors. Castorseed ready was quoted at Rs 32.82 and Castor Oil, commercial quality, at Rs 13.75.

Although Linseed looked up in sympathy with the rise in the prices of groundnut and castorseed, it could not attract the attention of the speculators. Linseed ready was quoted at Rs 44 and Linseed Oil at Rs 18.38.

Company Reports

Gillanders Arbuthnot Pays More

DESPITE the fact that there has been no relaxation in the Government's policy of restricting imports, the sales organisation of Gillanders Arbuthnot & Company Limited has improved its turnover, although there has not been a corresponding increase in the net profit for the year ended 31 March, 1961. Sales are shown at Rs 1.82 crores against Rs 1.76 crores, while the net profit, after providing for Depreciation and Taxation, is slightly lower at Rs 14.58 lakhs against Rs 15.17 lakhs for the preceding year.

In respect of allocations, General Reserve is maintained at Rs 3 lakhs, while the provision for Development Rebate Reserve is higher at Rs 4,553 against Rs 4,200. The Depreciation amount is reduced to Rs 2.11 lakhs from Rs 2.23 lakhs and Taxation to Rs 10.37 lakhs from Rs 11.54 lakhs for the preceding year.

In respect of allocations, General Reserve is maintained at Rs 3 lakhs, while the provision for Development Rebate Reserve is higher at Rs 4,553 against Rs 4,200. The Depreciation amount is reduced to Rs 2.11 lakhs from Rs 2.23 lakhs and Taxation to Rs 10.37 lakhs from Rs 11.54 lakhs. No allocation is made for Contingency Reserve against Rs 1.00 lakh.

A sum of Rs 5.83 lakhs, realised as profit on the sale of investments and the Rangoon House Property, is transferred to Capital Reserve. The dividend on the Ordinary shares is increased by 1 per cent to 11 per cent, subject to tax.

In connection with the recent formation of some new companies, the directors state that the Adequate Weighters (India) Limited will start production early in 1962 as the necessary licences have now been obtained. The factory of the Indian Tack and Nail Company Limited, which was started in collaboration with a British firm, is almost complete at Konnagar and production is expected to start early next year.

The directors are in consultation with several foreign manufacturers and a new joint company, to produce a wide range of specialised chemicals, will be floated within the next few months.

Against a paid-up capital of Rs 90 lakhs, General Reserve is shown at Rs 28 lakhs; Capital Reserve at Rs 5.83 lakhs; Contingency Reserve at Rs 6 lakhs; Investment Depreciation Reserve at Rs 7 lakhs and Development Rebate Reserve at Rs 28,753. The gross block at Rs 31.82 lakhs is depreciated by Rs 17.29 lakhs, leaving a net block of Rs 14.53 lakhs.

Great Eastern Shipping Pays Less

The steady loss in coastal operation is reflected in the working results of the Great Eastern Shipping Company Limited for the year ended 30 June, 1961. The dead-weight tonnage under operation decreased from 1,32,265 tons in 1959-60 to 1,15,294 tons in the year under report. The gross freight and charter hire earnings were only Rs 2.84 crores against Rs 3.30 crores.

The gross profit, before providing for Fleet Depreciation, Development Rebate Reserve, adjustment of loss on the sale of a vessel and managing agents' minimum remuneration, stands at Rs 69.48 lakhs as against Rs 83.58 lakhs. After providing fleet depreciation of Rs 58.26 lakhs (Rs 61.76 lakhs), the loss of Rs 13.91 lakhs on scrapping of s.s. "Jag Janani" and the managing agents' minimum remuneration of Rs 50,000 (Rs 1.95 lakhs) and after taking into account of Rs 5.35 lakhs being estimated refund of Burma Income-tax, there is a surplus of Rs 2.16 lakhs.

The directors have, however, thought it prudent to debit Rs 9 lakhs (Rs 32.85 lakhs) to the Profit and Loss Account as Development Rebate Reserve towards unabsorbed development rebate. This provision and the exclusion of the Burma Income-tax Refund, which relates to previous years, bring about a deficit for the year under report, amounting to Rs 12.19 lakhs as compared with the deficit of Rs 12.99 lakhs in respect of the previous year.

The directors have proposed the transfer of Rs 7.85 lakhs from the General Reserve No. 2 to the Profit and Loss Account to cover the deficit for the year under report. After adjusting the deficit of Rs 6.84 lakhs and adding the amount of Rs 85,549 carried forward from the previous year's account, there will be a surplus of Rs 1.86 lakhs, which the directors propose to carry forward.

The directors have again transferred Rs 5.22 lakhs from the Reserve of Exempted Profits and Rs 3,58,750—from the Dividend Equalisation Reserve to pay the dividends of Rs 5.50 per share on the Preference shares and 78 p per share on the Ordinary shares (against Re 1.00 paid previously).

Lower Profits for India Jute

Despite a rise in sales from Rs 2.20 crores to Rs 3.30 crores, the India Jute Company Limited has reported a marked decline in the net profit from Rs 36.45 lakhs to Rs 28.21 lakhs for the year ended 31 March, 1961.

In respect of allocations, a sum of Rs 8.81 lakhs (Rs 6.99 lakhs) is provided for Depreciation; Rs 8.25 lakhs (Rs 11.48 lakhs) for Taxation and Rs 1.25 lakhs (Rs 1.44 lakhs) for Development Rebate Reserve. A sum of Rs 3.50 lakhs is set apart for Contingency Reserve. The dividend on the Ordinary shares is, however, raised from 12 to 14 per cent, subject to tax.

The directors state that the prospects for the current year are somewhat more encouraging in view of the possibility of simultaneous business being done at a profit. The modernisation of the Preparing and Spinning departments of the jute mill section progressed satisfactorily during the period under review.

It has been decided to sale No. 3 mill's land, building and electrical installation to the Madras Mills Company Limited for a consideration of Rs 10 lakhs.

The National Industrial Development Corporation Limited has now released the property and the legal formalities for the former transfer of the property are now in the closing stages and consequently this transaction will be given effect to in the next year's accounts.

The company has commenced production of yarn in the cotton mill. There are now 15,100 spindles operating in this mill on treble shift basis and the working of this unit is progressing satisfactorily. The modernisation of this mill is under implementation and satisfactory progress has been made in the Spinning and Preparing departments. The proposed loan from NIDC has not yet been finally sanctioned; but negotiations have reached the stage where this is expected to be done shortly.

Loom Project Expansion of Megna Jute

The modernisation of the Preparing and Spinning departments of the Megna Mills Company Limited has progressed satisfactorily and the first phase of the Broad Loom Project consisting of 50 Broad Looms and ancillary machinery was completed during the year ended 31 March 1961. Installation of a further 50 Broad Looms and ancillary machinery for the manufacture of Tufted Carpet Backing has now been taken in hand and 3 looms have already been installed and gone into production. The NIDC have agreed to grant a loan of Rs 10 lakhs to meet part of the cost of the Broad Loom Project expansion and the necessary formalities are now in the course of finalisation.

In connection with the establishment of a Paper and Pulp Mill in Assam, the directors state that the negotiations with the Government of Assam in regard to the selection of a site and the lease of the necessary bamboo forests have reached a closing stage.

Meanwhile, sales for the year ended 31 March 1961 have shown a rise to Rs 4.87 crores from Rs 3.52 crores, while the net profit, before providing for Depreciation and Taxation, is higher at Rs 28.84 lakhs as against Rs 27.74 lakhs for the preceding year.

In respect of allocations, the Depreciation amount is raised to Rs 11.04 lakhs from Rs 9.90 lakhs and Taxation to Rs 17 lakhs from Rs 3.79 lakhs. The provision for Development Rebate Reserve is lowered to Rs 3.31 lakhs from Rs 6.51 lakhs, while a sum of Rs 7.00 lakhs is set apart for Contingency Reserve. The dividend is raised by $\frac{1}{4}$ per cent to 12 $\frac{1}{2}$ per cent, less tax.

Beharil Mill Skips Dividend Again

There was a general improvement in the working of the Beharil Ramcharan Cotton Mills Limited during the year ended 31 March 1961, and this is reflected in the rise in sales from Rs 1.73 crores to Rs 1.90 crores and in the net profit from only Rs 1.43 lakhs to as much as Rs 10.44 lakhs.

After providing Rs 4.95 lakhs for arrears of Depreciation up to 31 March 1960 and Rs 3.38 lakhs for Depreciation for the year ended 31 March 1961 and Rs 11,860 for Development Rebate, the directors have carried forward the balance of Rs 3.00 lakhs to next year without paying any dividend.

The directors state that the working during the current year also has so far been encouraging and satisfactory. The feel that the company has now turned the corner and may look forward to better results in future.

General Tyres Limited

General Tyres Limited has presented its report and accounts for the period from 14 June 1960, being the date of incorporation, to 30 June 1961. The working of the company for this period has resulted in a loss of Rs 1,05,205 after providing Rs 1,337 or Depreciation and Rs 8,000 for Taxation.

Against a loan of Rs 60 lakhs sanctioned by the Industrial Finance Corporation of India, a sum of Rs 25 lakhs was drawn up to the end of the period under review. The said Corporation has also furnished a Deferred Payment Guarantee for 39.62 lakhs in respect of plant and machinery to be imported from Czechoslovakia.

Since 30 June 1961, further progress has been achieved in respect of civil engineering work relating to construction of buildings, roads, drains, etc.; further consignments of plant and machinery have been shipped; sanction has been received from the Government of West Bengal for the supply of electric power and two senior technical personnel have been deputed for technical training in Czechoslovakia.

For the Investor

INVESTMENT GOSSIP Market Rudely Shaken

It is not surprising that the stock market had been rudely shaken by the recent developments with regard to Goa and Sino-Indian relations. Perhaps the reactionary trend had been taken too far but there was nothing to stop the bears from doing what they liked with the market in the first two days of the week as bulls were quite unnerved by the developments. On both the issues facing it, the Government of India has taken firm action. When the market came to know that preparations were afoot by India to meet any possible emergency in Goa, sentiment appeared to recover after the initial shock but when it became known that China had threatened to send its troops across the border into India if India continued what China termed "the military activities in the Himalayan region" there was panic in the market. A similar trend prevailed in the commodity markets also. Bulls were taken completely by surprise by the news as was evident from the heavy unleashing. It was a field day for bears who hammered down the prices to new low levels before steps could be taken to stop them from unduly depressing price levels. The reactionary trend would have continued unchecked but for the measures taken by the stock exchange authorities. In Lyons Range, the Calcutta Stock Exchange imposed margins on sales of all shares in the Forward list. The announcement that the scheme of automatic margins would come into effect from Friday soon followed. The Bombay Stock Exchange announced on Wednesday that the system of automatic margin would come into effect on Dalal Street from next Monday.

Sentiment toward the close of the week shows some improvement with the more speculative issues regaining part of their heavy losses. Now that the scheme of automatic margins has been brought into force, very wide fluctuations may not be witnessed. The improvement noticeable in the past two days may prove shortlived if there is any further disturbing political news. The trend in the next few days will depend on the news about Goa and our northern border. In the absence of any disquieting development, sentiment may be expected to improve gradually as the recovery movement will be helped by the continued encouraging corporate news.

NEW ISSUE NOTES

Jeewanlal (1929) Limited

Jeewanlal (1929) Limited has been given sanction by the Controller of Capital Issues to issue 3,80,000 equity shares of Rs 10 each for cash, at par, payable in two instalments of Rs 5 per share; and 18,000—3 per cent Cumulative Redeemable Preference shares of Rs 100 each for cash, at par, payable in three instalments of Rs 30, Rs 25 and Rs 25 per share respectively.

Both the equity and preference shares will be offered initially to the existing equity shareholders or their nominees. In the event of all or any of the shares not being taken up by the existing shareholders or their nominees, it is proposed to offer the same to the public as the company intends to have its shareholdings as broad based as possible.

The amount required by the company in connection with the establishment of the new Rolling Mill is estimated to be over Rs 2 crores. Part of the above requirements will be financed by the proposed issue of Rs 54 lakhs and the balance to be met with by loan. It will, therefore, be necessary to import machinery and plants from the UK and Germany for manufacturing rolled aluminium to the extent of Rs 90 lakhs. Application for import licences, in this connection, has also been made; and the Central Government has agreed to grant licences to import 2,000 tonnes of aluminium ingot each year. The Aluminium Laboratories Ltd., Canada, one of the Aluminium Ltd. group of companies have agreed to collaborate with Jeewanlal for all the technical know-how etc. and to set up a plant in a most up-to-date fashion to ensure economic working and production.

In view of the rapid increase in the consumption of aluminium products, both for domestic and industrial purposes, Jeewanlal's new venture is welcome.

India Carbon

The subscription list of India Carbon Limited was opened on Monday this week. The response to the issue on the first day itself was overwhelming. There are reports that the issue may be over-subscribed by nearly 40 times. Unofficially, the rate is quoted at Rs 7 premium.

Hicks Thermometer

Allotment details with regard to the recent issue of Hicks Thermometer (India) Limited are now released. Those applicants who applied for 50 to 100 shares will get 20

shares—200 to 300 shares—25; 400 shares—300 to 500 shares—50; 500 to 800 shares—75; 800 to 1,100 shares—100; 1,100 to 1,400 shares—125; 1,400 to 1,700 shares—150; 1,700 to 2,000 shares—175; 2,000 to 2,300 shares—200; 2,300 to 2,600 shares—225; 2,600 to 2,900 shares—250; 2,900 to 3,200 shares—275; 3,200 to 3,500 shares—300; 3,500 to 3,800 shares—325; 3,800 to 4,100 shares—350; 4,100 to 4,400 shares—375; 4,400 to 4,700 shares—400; 4,700 to 5,000 shares—425; 5,000 to 5,300 shares—450; 5,300 to 5,600 shares—475; 5,600 to 5,900 shares—500; 5,900 to 6,200 shares—525; 6,200 to 6,500 shares—550; 6,500 to 6,800 shares—575; 6,800 to 7,100 shares—600; 7,100 to 7,400 shares—625; 7,400 to 7,700 shares—650; 7,700 to 8,000 shares—675; 8,000 to 8,300 shares—700; 8,300 to 8,600 shares—725; 8,600 to 8,900 shares—750; 8,900 to 9,200 shares—775; 9,200 to 9,500 shares—800; 9,500 to 9,800 shares—825; 9,800 to 10,100 shares—850; 10,100 to 10,400 shares—875; 10,400 to 10,700 shares—900; 10,700 to 11,000 shares—925; 11,000 to 11,300 shares—950; 11,300 to 11,600 shares—975; 11,600 to 11,900 shares—1,000; 11,900 to 12,200 shares—1,025; 12,200 to 12,500 shares—1,050; 12,500 to 12,800 shares—1,075; 12,800 to 13,100 shares—1,100; 13,100 to 13,400 shares—1,125; 13,400 to 13,700 shares—1,150; 13,700 to 14,000 shares—1,175; 14,000 to 14,300 shares—1,200; 14,300 to 14,600 shares—1,225; 14,600 to 14,900 shares—1,250; 14,900 to 15,200 shares—1,275; 15,200 to 15,500 shares—1,300; 15,500 to 15,800 shares—1,325; 15,800 to 16,100 shares—1,350; 16,100 to 16,400 shares—1,375; 16,400 to 16,700 shares—1,400; 16,700 to 17,000 shares—1,425; 17,000 to 17,300 shares—1,450; 17,300 to 17,600 shares—1,475; 17,600 to 17,900 shares—1,500; 17,900 to 18,200 shares—1,525; 18,200 to 18,500 shares—1,550; 18,500 to 18,800 shares—1,575; 18,800 to 19,100 shares—1,600; 19,100 to 19,400 shares—1,625; 19,400 to 19,700 shares—1,650; 19,700 to 20,000 shares—1,675; 20,000 to 20,300 shares—1,700; 20,300 to 20,600 shares—1,725; 20,600 to 20,900 shares—1,750; 20,900 to 21,200 shares—1,775; 21,200 to 21,500 shares—1,800; 21,500 to 21,800 shares—1,825; 21,800 to 22,100 shares—1,850; 22,100 to 22,400 shares—1,875; 22,400 to 22,700 shares—1,900; 22,700 to 23,000 shares—1,925; 23,000 to 23,300 shares—1,950; 23,300 to 23,600 shares—1,975; 23,600 to 23,900 shares—2,000; 23,900 to 24,200 shares—2,025; 24,200 to 24,500 shares—2,050; 24,500 to 24,800 shares—2,075; 24,800 to 25,100 shares—2,100; 25,100 to 25,400 shares—2,125; 25,400 to 25,700 shares—2,150; 25,700 to 26,000 shares—2,175; 26,000 to 26,300 shares—2,200; 26,300 to 26,600 shares—2,225; 26,600 to 26,900 shares—2,250; 26,900 to 27,200 shares—2,275; 27,200 to 27,500 shares—2,300; 27,500 to 27,800 shares—2,325; 27,800 to 28,100 shares—2,350; 28,100 to 28,400 shares—2,375; 28,400 to 28,700 shares—2,400; 28,700 to 29,000 shares—2,425; 29,000 to 29,300 shares—2,450; 29,300 to 29,600 shares—2,475; 29,600 to 29,900 shares—2,500; 29,900 to 30,200 shares—2,525; 30,200 to 30,500 shares—2,550; 30,500 to 30,800 shares—2,575; 30,800 to 31,100 shares—2,600; 31,100 to 31,400 shares—2,625; 31,400 to 31,700 shares—2,650; 31,700 to 32,000 shares—2,675; 32,000 to 32,300 shares—2,700; 32,300 to 32,600 shares—2,725; 32,600 to 32,900 shares—2,750; 32,900 to 33,200 shares—2,775; 33,200 to 33,500 shares—2,800; 33,500 to 33,800 shares—2,825; 33,800 to 34,100 shares—2,850; 34,100 to 34,400 shares—2,875; 34,400 to 34,700 shares—2,900; 34,700 to 35,000 shares—2,925; 35,000 to 35,300 shares—2,950; 35,300 to 35,600 shares—2,975; 35

Orissa Mineral Development Company Limited. The existing paid-up capital is Rs 70 lakhs.

Marikar Motors

Marikar (Motors), Limited has proposed to issue 12,000 equity shares of Rs. 50 each, at a premium of Rs 10 per share, to the equity shareholders at one share for every equity share held. A sum of Rs 12.50 per share plus premium of Rs 10 is payable along with application; Rs 12.50 on allotment and the balance of Rs 25 in two calls.

INVESTMENT NOTES

ISCO

According to the figures released by the Indian Iron & Steel Company for last month, the output of Pig Iron has shown a decline to 103,064 metric tons from 105,823 metric tons in October and Steel Ingots to 81,209 metric tons from 81,969 metric tons. The output of saleable Steel is slightly higher at 62,199 metric tons against 61,921 metric tons. Despatches of saleable steel are substantially lower at 60,837 metric tons against 66,257 metric tons. In this connection, it is stated that 5,000 metric tons of finished material could not be despatched due to wagon shortage.

TISCO

The production figures released by the Tata Iron & Steel Company show a sharp fall in November as compared to the previous month. The output of Pig Iron is 125,500 metric tons against 130,100 metric tons; Steel Ingots 128,800 metric tons against 137,600 metric tons. The output of semi-finished Steel has recorded a decrease of 5,900 metric tons at 27,800 metric tons, while that of finished steel has fallen by 5,000 tons to 74,000 metric tons.

Jav Engineering

It is learnt that the Jay Engineering Works Limited is negotiating with several concerns in Iraq, Egypt and Yugoslavia to help them set up assembly plants by providing technical know-how, equipment, personnel and component parts. Already, the company has signed agreements with South Viet Nam and Ceylon under which it will provide technical know-how for setting up sewing machine assembly plants. A group of engineers of the firm will shortly leave for those countries to give shape to these projects. The company has also obtained a licence to put a unit in Ceylon and will shortly register a company under the name of Usha Industries Limited. In the proposed company, Jay Engineering will hold 51 per cent of the shares and the Ceylonese 49 per cent. The firm also proposes to arrive at similar arrangements in other countries like Burma, Pakistan and Thailand.

Tata Johnson

Tata Johnson (Private), Limited—a new company to be set up by TELCO to undertake the manufacture of two paper-making plants of 50 tons a day capacity—is understood to have sought a licence from

the Government of India to import a Maag Gear cutting machine. The import will be made by the STC from Switzerland. The scheme, when completed, will result in an annual turnover of Rs 186 lakhs.

Synthetics & Chemicals

Synthetics & Chemicals Limited has decided to step up production capacity from 20,000 to 30,000 tons per annum and the expanded plant is expected to reach commercial production early in 1963. Substantial progress has been made with regard to the original plant, which is expected to be commissioned in August 1962. The proposed expansion is expected to cost Rs 5 crores and the foreign exchange involved will be of the order of Rs 1.5 crores. Ultimately, the total cost of the project will be Rs 20 crores. Negotiations are well under way with the Government of India and the foreign participants for the necessary foreign exchange. As soon as the Government's approval is obtained, the directors may consider the ways and means of raising additional rupee finance to meet the expansion programme.

STOCK EXCHANGES Debacle and a Late Rally

Watch-Dog Writes:

STOCK markets received a fresh hard knock during the week under report when prices crumbled under the impact of large offerings. Two main contributory factors were the fresh threat from China and the mounting tension over the Goa situation. Buyers were, therefore, conspicuous by their absence, while the bears were aggressive in their raids. Towards the close of the week, however, there were attempts at rally.

Political news again adversely affected sentiment on the Calcutta Stock Exchange where further landslide in values was noticeable. There were, however, signs of returning confidence towards the close, thanks to the introduction of automatic margin system with effect from Thursday.

Values on the Bombay Stock Exchange moved rather erratically in the wake of political news before staging a smart recovery towards the close.

Lack of animation characterised trading on the Madras Stock Exchange. Sellers predominated in a number of shares, resulting in a sharp decline in prices around.

*

CALCUTTA

Calcutta, Friday Evening.

THE Calcutta Stock Exchange took a dramatic plunge when trading was resumed this week. This fresh setback occurred when the market was yet to recover from the previous week's fall in values. Leaving aside the technical heaviness experienced in Bombay which had its normal reaction in Calcutta, the disturbing reports about the Goa situation and

the Chinese threat brought forth a fresh wave of selling pressure.

While the fall in prices on Monday was pronounced the sensational fall on Tuesday caught the bull operators completely unawares due to aggressive bear raids. In order to restrain such activity, the Committee of the local Stock Exchange imposed the following margins on fresh blank sales of the clearing shares:—Rs 3 per share in respect of Indian Iron, Indian Aluminium, Indian Cable, Orient Paper and Dunlop Rubber; Rs 2 per share in respect of TEXMACO, Hindustan Motor, Burrakur Coal, Howrah Jute, Rohtas and Shree Gopal Paper; and 50 nP in respect of Indian Copper.

Despite the imposition of margins on blank sales, there were no signs of marked stability. This was mainly due to an anxiety to await further developments, as the situation was rather confusing though it was generally accepted that the decline in prices was overdone. As a matter of fact, some quarters even expressed uneasiness over the settlement, due on Wednesday.

Thanks to the bears being compelled to cover their sales due to settlement considerations and the general feeling that the worst was over, prices displayed a slight recovery at the close on Wednesday. The improvement in prices was carried a stage further during the remaining days of the week following the introduction of the automatic margin system of 10 per cent on rise or fall of prices in any of the clearing shares with effect from Thursday onward. There were also reports of the LIC having made selective purchases at the recent low levels. Thus, the market witnessed signs of confidence and, with the clearing counters encountering good support, a steadier tendency developed towards the close of the week. Turnover remained, however, restricted due to a cautious attitude adopted by the operators.

The Glitced section continued to rule quiet with turnover restricted. Prices of all dated loans declined fractionally. There was virtually no interest in State Government loans and holders were even ready to discount current prices if they would get firm buying indications. 3 per cent 1966 Conversion Loan moved narrowly between Rs 70.90 and Rs 71.10.

Except for some enquiry in Punjab National at Rs 20.50, Bank shares remained generally dull.

Despite firmer advices from the gunny market, Jute shares displayed an easier tendency due to liquidation by the weak holders. Howrah were on offer at one time as low as Rs 19.75 against Rs 21; Ganges at Rs 11.69 against Rs 12.50; Birias at Rs 27 against Rs 28.19 and New Central at Rs 16.12 against Rs 17.37, to close finally better at Rs 20.00; Rs 12.12; Rs 27.06 and Rs 16.37 respectively. Fort Williams were however, nearly maintained at Rs 27.75 and so also Champdany at Rs 128.

Coal shares lacked support in the absence of any improvement in the wagon supply position. Scattered interest was, however, shown in Bengal up to Rs 350; East Indian

up to Rs 33 and New Beerbb up to Rs 22.75. Western Be were rather quiet at Rs 9.37 against Rs 9.62. Burrakur, after ruling tially firm at Rs 18.31 following news of the dividend being retained, turned quiet at the close, Rs 18 in sympathy with the general trend of the market.

Tea shares also reacted in sympathy with the general trend. Sterer support was, however, for coming for the shares of 8 gardens due to an improvement in the prices obtained at this week's auction. Bhaskara changed hands at Rs 18.87 to Rs 19.12; Bishna at Rs 22.87 to Rs 23; Gelpur at 12.94 to Rs 13.06 and Jayshee Rs 18.75 to Rs 19.75.

Sugar shares were offered freely while buyers were found to be cautious in making commitments at the lower levels. This was mainly due to the obscure outlook for the industry. The news of dividend being passed over again caused Carew to slip down to 13.10 from the previous week's rate of Rs 13.09. Darbhanga was on offer at Rs 10.75 and Raza-B at Rs 10.50.

Textile shares declined on a broad front. Kesoram eased off further to Rs 30 from Rs 30.75; J. K. Ray to Rs 18.62 from Rs 18.62; Eagles Rs 21.19 from Rs 22.13 and Dumb to Rs 32.81 from Rs 33.13.

In the week's dealings, speculative issues were the worst affected and the lead of Indian Irons. Again the previous week-end closing of 25.52, Indian Irons opened lower, Rs 24.96 and receded further to 23.62 before finishing the week better at Rs 24.00. In sympathy TEXMACO were marked down, one time to Rs 19.90 from Rs 21.8 Jessop to Rs 18.09 from Rs 20.02 at J. K. Steel to Rs 31.12 from 22.06, to close finally at Rs 21.55 at Rs 21.50 respectively. Kumardhu moved narrowly between Rs 6.1 and Rs 6.67; Braithwaite between 19.87 and Rs 40.37 and Guest, Keo Williams between Rs 38.12 and 38.37.

A considerable decline in price was noticed in the Miscellaneous section, although some of the issues emerged with minor losses on balance. The following table shows the price trends of a few select shares:

	AS on Week's Ago	2 Dec.	Low	High

Pan Am

gives you
the priceless extra
of
experience...

Pan Am has more million-mile pilots than any other airline

and

the most
frequent jets
from Europe
to the U.S.A.!

Choose Pan Am... relax with the world's most experienced airline

When you fly Pan American, you're in the world's most experienced jet hands. Pan Am's hospitality and courteous, efficient service are sure to make your trip an enjoyable and memorable one.

Pan Am has carried over thirty million passengers during its 33 years of international flying. Pan Am Jets can now take you to any of 85 cities on all 6 continents.

Pan Am offers the most frequent jet service between Europe and the U.S.A. This winter there are 106 Pan Am jet flights a week in both directions — serving 22 cities in

Europe and 11 in the United States. Your choice of first-class *President Special* or low-fare *Rainbow Economy* Service on every flight.

For reservations see your Travel Agent or call your nearest Pan Am office in

Indian Finance INVESTOR'S SUPPLEMENT

Earlier Firmness not Maintained in November

THERE was increased activity on the stock market most of the time during November: toward the close, however, sentiment was rather quiet. Equities scaled new heights helped by sustained bullish fervour. The opening was dull but later prices developed an uptrend responding to buying interest. Initial hesitancy seemed to have been caused by continued anxiety over the shortages of coal, transport and power and imported raw materials but it yielded place to an optimistic note following the announcement of an increase in the selling price of cement. It is true that the announcement was not received with much enthusiasm but second thoughts appeared to have been somewhat favourable, probably mainly because by granting an increase in the selling price Government has shown itself sympathetic toward the industry's difficulties. Bullish operators had perhaps been impressed by some of the favourable developments against the background of continued good corporate news. In Lyons Range, the optimistic appraisal of the prospects of the jute industry gave additional fillip to the general buoyant mood. In earlier dealings, jute shares were in good request presumably due to the general belief that the jute goods industry had left its worst period behind. Despite the fact that overseas interest in jute goods continued to be halting, the expectation was that before long there would be a marked revival of foreign support. With raw jute prices comparatively cheap, mills were able to do simultaneous business at a profit. There was also a broadening of interest in cotton mill shares as offtake of cloth both on domestic and export demand was on a satisfactory level. Yet another factor that was considered to be of bullish import was the indication of increased private American investment in India as a result of the discussions in New Delhi between prominent US businessmen and the representatives of the Government of India. The removal of restrictions on clean advances by banks and the oversold position were other important influences acting on the market in the first week of the month.

Something much more important than these was in store for the market in the second week: that was the announcement that Government did not propose to make any change in the investment policy of the LIC. The stock market was badly shaken by the recommendations of the Estimates Committee with regard to the investment of the funds of the LIC. The proposals were to take away the available investible funds from the LIC for purposes

of subscribing to government loans. That was contrary to the assurance given by Government on more than one occasion that a part of the funds of the LIC would be always available for investment in the share market. With the nationalisation of life insurance,

the market soon after the Estimates Committee's recommendations were published. Till the announcement making it clear that Government was not to implement the recommendations, there was a lingering apprehension among market men. The

*Turned ex-Bonus on 23 November, 1961.

the LIC has become the largest single investor in equities. If all the funds of the LIC were diverted to Government loans an important source of funds for the private sector would be eliminated. It was this fear that had been responsible for the depression in

Government decision to maintain the status quo came as a relief and revived confidence in the market.

With the reassurance that part of the LIC funds would continue to be available for the stock market, bulls were able to strengthen

their position. The belief gained ground that the LIC which was practically out of the market for several weeks probably awaiting government decision would enter the market in right earnest as it had been given the green signal once again. Bulls were also able further to tighten their hold by pointing to the report that government was contemplating granting of tax concessions for increased exports. The bullish trend was accentuated often by the scarcity of scrip. Even when the trend tended to be somewhat quiet, the recession was generally restricted to the forward scrip. The cash list remained remarkably steady as holders were not keen to liquidate even when prices were ruling high.

Toward the close of the month, however, there were signs of uneasiness. Roughly the last ten days witnessed an irregular trend although most of the time the undertone was steady. The main reason for the emergence of caution was the general feeling among operators that the uptrend had been taken too far and that a correction was due. And a corrective did take place. But it did not take much time for bulls to regain control. Sentiment turned quiet toward the end of the month following disturbing political news. Operators were very much worried about the early implementation of the scheme of automatic margins. The general belief seemed to be that the scheme would be finalised at the meeting of the Committee of Presidents of Stock Exchanges scheduled to be held in the first week of December. Sectionwise, jute shares were in good demand in the first half of the month but were subdued in later dealings. Investors who evinced great interest in the section appeared to have revised their opinion as the month progressed. Besides the general reactionary trend in the market as a whole, renewed fears about the profitability of the industry seemed to have caused unloading. There was also lack of fresh interest.

A similar trend was noticed in the textile section also though the buying interest in the section was more sustained than in the case of jutes. During the second half of the month, higher levels attracted profit-taking and by close the trend became rather quiet in tune with the rest of the market.

After a fairly active fortnight coal shares became sluggish in the absence of support. Sugar shares were a generally dull market in sympathy with the conditions in the sugar market. With fears of further decline in auction prices tea shares ruled quiet.

(a) After transferring Rs 20,638 from General Reserve No. 1.

(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.

(c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.

(f) After transferring Rs 234,695 from General Reserve.

(g) After transferring Rs 2,656,822 from General Reserve.

(h) After writing back Rs 360,718 being excess depreciation provided in 1958.

(i) After transferring Rs 1,098,546 from General Reserve No. 1.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.

(m) After transferring Rs 119,825 from Development Rebate Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 5,27,512 from General Reserve.

(q) After transferring Rs 400,000 from General Reserve.

(r) Includes Rs 100,280 being provisions made in previous years written back.

(s) After transferring Rs 3,22,599 from General Reserve and Rs 75,000 from Depreciation Reserve.

(t) After transferring Rs 9,50,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 1,00,000 being Adhoc. reduction in Stock-in-trade provided last year.

(w) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 800,560 from General Reserve.

(y) After transferring Rs 255,000 from General Reserve.

(z) After transferring Rs 525,000 from General Reserve.

(a1) After transferring Rs 1,075,000 from General Reserve No. 1.

(a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(a3) After transferring Rs 14,72,855 from General Reserve.

(a4) After transferring Rs 300,000 from General Reserve.

(a5) After transferring Rs 4 lakhs from Reserve to fall in place.

(a6) After transferring Rs 100,648 from General Reserve.

(a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

(a8) After transferring Rs 271,942 from General Reserve.

Credit to Small Industries

THE Reserve Bank's Guarantee Scheme for enlarging the supply of credit to industrial units in the small scale sector was introduced as an experimental measure from 1 July, 1960. Some aspects of its working during the first year of operation were explained in answer to questions in Lok Sabha recently. The Reserve Bank of India operates the Scheme designated the "Guarantor Organisation" as agent of the Government of India. The credit institutions which extend credit to small scale units under the scheme do not receive advances from the Reserve Bank of India. But any losses incurred on advances made by them to small scale units under the Scheme are shared by the Reserve Bank to the extent of 75 per cent. The facilities under the Scheme are now available to 93 specified credit institutions, namely, the State Bank of India and its subsidiaries (9), other scheduled Banks (48), State Cooperative Banks (21) and State Financial Corporations including the Madras Industrial Investment Corporation Ltd., (15). Other credit institutions can also participate in the Scheme and become eligible for the guarantee provided they are prepared to share the risk to the extent of 25 per cent.

The Scheme was introduced in 22 districts in the first instance and was subsequently extended to 30 other districts. At present all the more important industrial centres in the country are covered by the Scheme. But so far none of the districts in industrially backward regions has been brought under the Scheme. This is one of the serious drawbacks in its working, for one of the main arguments for encouraging the development of small scale industry is that it helps to even out regional disparities in economic development. The strident demand from backward regions for the establishment of large scale industries in their areas is met by the argument that, whereas suitable locations for large units are, by their very nature, limited to a few regions which have the necessary facilities, there is nothing to prevent the development of small scale units in any part of the country. But in the development of small industries, as in Community Development, it appears that the main beneficiaries of schemes of Government assistance are the comparatively better off sections of the particular groups which are intended to be benefited, rather than those who are most in need of special assistance. This phenomenon suggests the need for re-examination of Government's promotional efforts, whether in the field of Agriculture, Culture or Industry.

On purely humanitarian grounds a case can be made out for pumping tax payers' money to help the population of depressed areas. A Welfare State cannot very well evade the obligation to do so. The case of the handloom weavers who were driven to the wall a few years ago is an instance where assistance was clearly necessary and has been well utilised. But if the present pattern of governmental assistance to small industries is sought to be justified on the ground that considerations of rapid growth cannot be ignored, economic criteria must be equally applied to the Scheme

as a whole. The districts where the Scheme is now in operation, it is stated, have been selected on the basis of the relative importance of outstanding loans to small scale units and the potentiality of further expansion of such loans in the area. If the small scale units in these areas were able to secure substantial volume of credit even before the Scheme was introduced, it is not clear why the Guarantee Scheme should be introduced in such districts in preference to others which are comparatively backward.

About the actual working of the Scheme itself—the number of loans guaranteed by the Reserve Bank, their distribution, the total amount, the number of defaults if any, etc.—there is no information in the answer furnished by the Minister. But in reply to a specific question whether it had come to the notice of the Reserve Bank that some of the 'affidavits' of the credit institutions sponsoring the loan applications were "in some cases false", the answer given was that the "institutions specified for the grant of facilities under the scheme are all established institutions of repute." But the main point, which perhaps was not clearly brought out by the question, is whether the Reserve Bank's guarantee, which is intended solely to assist small units which might not otherwise be considered creditworthy, is being taken advantage of to strengthen the credit rating of establishments which do not come under the category of small units as defined by the Scheme.

For the purposes of the Scheme a small scale unit is defined "as one which is engaged in manufacturing, processing or other operation (not trading) and whose investment in assets of a capital nature like land, buildings, machinery, equipment etc., together with the capitalised value of rented premises, if any, but excluding the amounts spent on housing and amenities for workers, is not in excess of Rs 5 lakhs". It is also laid down that in computing the total capital investment, land and buildings owned by the industrial unit and machinery and equipment used to do business should be evaluated on the basis of original cost incurred by the owner (and not written down value) and in case of rented premises, value should be calculated by capitalising the rent at the rate of 8 per cent per annum. It may be noted that the definition relates to the capital assets of the unit and not of the owner. There is nothing to show that a "small unit" forming part of a big industrial complex and owned by a company set up for the purpose will not be eligible for assistance under the Scheme.

The ease with which the severe restrictions clamped by the Reserve Bank of India, to check speculation in food grains or in the stock market, have been foiled by experts as the game would suggest that the fear, that assistance to small units may be diverted to others are not so small, may not be entirely unwarranted. To raise the question does not mean casting doubt on the standing or repute of the specified credit institutions. The point is whether the scrutiny of the applications by the Reserve Bank is searching and comprehensive enough to spot out the "wrong'uns".

THE CHARTERED BANK

historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.

The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

A Hopeful Beginning

THE Afro-Asian Conference, inaugurated by the Prime Minister last week, affords heartening evidence of the progress towards intra-regional economic co-operation. The topic, as Mr Nehru pointed out, came up at the Bandung Conference when it was decided that further steps should be taken to strengthen economic and trade relations. But subsequent efforts to pursue the matter through correspondence between the Governments concerned did not yield results and the hopeful initiative of the late Prime Minister of Ceylon was cut short by his assassination. In the meantime non-Governmental agencies have been active in exploring the scope for regional co-operation in trade and economic development and their efforts resulted in the establishment of the Afro-Asian Organisation for Economic Co-operation (AFRASEC) following the Economic Conference of Asian and African countries which met in Cairo in December, 1958.

The Second Afro-Asian Conference, also held in Cairo in April/May, 1960, was attended by representatives of 39 Afro-Asian countries and observers from seven countries outside the region. This Conference, which was inaugurated by President Gamal Abdel-Nasser, adopted and confirmed the constitution and by-laws of the organisation. The Conference resolved that the national federations of chambers of commerce, industry and agriculture and similar institutions existing in such Afro-Asian countries as have participated in the Asian-African Conference held in Bandung in 1955 were eligible for full membership. It was also resolved that central chambers of commerce in other Afro-Asian countries which shall attain independence thereafter, as well as in any other such independent sovereign country as has its seat of Central Government situated in Asia or Africa, would be eligible for membership. Associate membership is open to the national chambers of commerce or similar institutions in African countries and territories which have not yet attained independence. The central chambers of commerce of thirty-eight countries were accepted as members at the Conference held in May, 1960.

The Third AFRASEC Conference currently in session in Delhi has on its agenda the following topics:

1. Arbitration arrangements in the region.
2. Possibility of increasing the regional trade in specified commodities along with world trade.
3. The impact of external market groupings on the trade and economic development of Afro-Asian countries.
4. Economic development of the Afro-Asian countries through mutual aid and investment.

The Conference is being attended by delegates and observers from thirty countries in Africa and Asia and seven international organisations, namely, the United Nations, Economic Commission for Asia and Far East, Economic Commission for Africa, ILO, ICC, League of Arab States, and the General Union of the Chambers of Commerce, Industry and Agriculture in Arab countries.

A notable feature of the present session is that the discussion of the topics on the agenda is accompanied by bilateral and multi-lateral trade talks among representatives of different sectors of trade. These talks should help to give a practical direction to the discussions which might otherwise get bogged in generalities. As Mr K. C. Reddy, Union Minister for Commerce and Industry, who inaugurated the Trade Talks Session, pointed out, the Conference is almost like an assembly of trade missions and it may be possible to achieve within one week

or so, almost the same advantages as could be gained by visiting the different countries.

Prevailing trends towards formation of regional trade blocs, initiated by the EEC, have directed thinking in Asian and African countries toward possibilities of establishing a similar pattern in their region. In fact this appears to be the dominant theme of most of the speeches made at the open session of the Conference. While the difficulties in the way—the result of historic and geographic factors which have kept the countries of this region isolated from one another in a state of underdevelopment—cannot be ignored, there is also growing realisation that a beginning has to be made for closer economic collaboration. While industrially advanced countries of the West are organised in closed economic blocs, Afro-Asian countries which are keen on economic development in conditions of freedom have not much choice in the matter. The surprising thing, as Mr Nehru said, is not that Afro-Asian countries are feeling the urge towards closer economic collaboration, but that they should be so slow about it. Progress would be easier if, as he has suggested, the problem is broken down to manageable dimensions, and within the broad general approach comprehending all Afro-Asian countries, measures are taken for closer integration on a regional basis of countries which fit with the pattern of co-operation.

Mr Shriyans Prasad Jain in his welcome speech has made the eminently practical suggestion that the best point to start with is to bring about an increased flow of trade within the present economic set-up. In this context he has also suggested for consideration of the Conference the question of a scheme of regional tariff preferences and the feasibility of having a common market for certain specified commodities.

The lack of complementarity in the economies of the different countries of the region can be exaggerated and it is not likely to remain a permanent feature, especially in view of the planned development undertaken by many countries in the region. Mr K. C. Reddy has done well to emphasise that the existing proportion and the pattern of intra-regional trade among the countries of the region need not themselves determine the possibilities of future growth, and that, among countries with more or less similar or comparable stage of economic development, substantially increased opportunities of trade can be created through a co-operative process of economic development. Such a process will itself alter both the volume and pattern of intra-regional trade. For the major barrier to the development of trade among these countries is not so much lack of complementarity as the lack of contacts and of means of rapid communications and transport between them. A close and detailed examination of the trade of the region, which can be most advantageously undertaken by AFRASEC, should indicate the scope for development of intra-regional trade on lines which will strengthen the economy of the region as a whole as well as of the individual countries in their relations with the outside world.

If regional co-operation is to yield positive results it should not be restrictive in its approach and effects. Mr Mohamed Rouchdy, in his presidential address, declared that the co-operation envisaged "does not wage war against any other group, but we seek it in fact as a means to develop our economic resources. Naturally this co-operation aims primarily at expanding trade and strengthening economic relations between our countries". At the same time it is also necessary, as Mr Reddy reminded the Conference, to look forward to increased trade, not only within the region, but also with the rest of the world.

US and World Trade

By LEONARD WEISS

SINCE the days when the reciprocal trade programme was first introduced in 1934, the United

States has consistently worked for the maximum feasible expansion of multilateral international trade, free of discrimination among countries and with a minimum of government interference with such trade.

The United States pursues this basic objective of maximizing free multilateral trade largely through active participation in the General Agreement on Tariffs and Trade (GATT). There are 39 countries which are now full contracting parties to the GATT and a number of additional countries variously associated with it.

This agreement, which has been in existence for 13 years, is essentially a trade agreement in which we participate by authority of our Reciprocal Trade Agreement Act.

Reduced to its basic essentials the GATT comprises, first, a series of tariff schedules which have resulted from a number of multilateral tariff negotiations. These schedules provide the maximum level of tariffs which the member countries will apply to each other on specified articles or commodities.

Second, the GATT contains provisions governing the conduct of trade among its members; for example, it establishes the principle of non-discrimination in the application of trade regulations by its members and it prohibits quotas on imports or exports as a normal means of trade restriction.

Third, the members of GATT hold periodic meetings which are highly important as a broad international forum for the settlement of current trade problems.

Through its leadership and the strong trading relationships which it has built up through the GATT, the United States has made substantial progress toward the achievement of this goal of maximizing free multilateral trade. Unjustified discrimination against our trade has to a large degree been eliminated, and the general level of barriers to profitable international trade is the lowest it has been in modern times.

We have not, of course, eliminated all of our problems in this area. There is much to be done, and no doubt there will always be problems in this field, because the pursuit of our objective is a highly complex operation in which the United States must exhibit considerable flexibility and employ imaginative new approaches to deal with the rapidly changing international situation.

This is true now as it never has been before. Let me illustrate by describing two major aspects of our current relations with other free-world nations.

The first aspect is the rapid emergence of regional trade groupings such as the European Economic Community, the European Free Trade Area, and the Latin American Free Trade Area.

The radial reorientation which characterizes the European Economic Community constitutes a major challenge to our own ability to respond with the fullest degree of imagination and resourcefulness. The basis of the EEC, or European Common Market, as it is popularly called, is the creation among the six participating countries of a customs union and the removal of all types of barriers to trade, investment, and mobility of labour under the aegis of a central executive with certain supranational powers.

The EEC is a part of a concerted effort to achieve eventual political integration of Western Europe. The United States has steadfastly supported the political and economic integration of Western Europe and has welcomed the prospect of the United Kingdom's participation in the institutions of the Treaty of Rome.

There are basic similarities of approach between the early years of our Republic and this present impetus toward integration which place us in a peculiarly advantageous position to understand and sympathize these bold and imaginative steps. Just as the United States went through its early period arguing the pros and cons of the power of the States to regulate commerce among themselves, so also the states composing the EEC today are coming to recognize the tremendous possibilities inherent in a large, freely accessible market.

Our political support for the EEC stems even more from the great promise which it holds for contributing to the future peace and stability of Western Europe and the rest of the world. The overwhelming importance of this is certainly self-evident to our own generation.

However, in giving our support to such groupings as the EEC and the LAFTA, we are concerned that the legitimate trading interests of ourselves and other outside countries be adequately taken into account.

We accept the fact that, in the process of formation, trade adjustments are necessary, and we believe that any adverse trade effects will be minimal and temporary. We look to the new prosperity which should arise as the result of market integration to create new and increased demands for our exports. Accordingly, it is particularly essential that these groupings be "outward looking" in their commercial policies.

We feel that the best way to assure ourselves that this will be the case is to make certain that these regional arrangements are consistent with the provisions of the GATT. The conditions and criteria for the acceptability of customs unions set forth in the GATT are carefully designed to protect the legitimate trading interests of the other GATT participating countries, and the GATT forum is well suited to work out on an amicable basis such trading problems as may arise on this score.

The round of tariff negotiations with the European Common Market at Geneva will give an indication of whether the EEC intends to be an truly outward looking and to provide a common external tariff which will assure to the United States and other countries that they can share in the greatly expanding market which will result.

We are confident that the EEC will demonstrate the same vision which inspired its establishment and will adopt a far-sighted commercial policy in this respect.

The second major area of our foreign economic relations which illustrates why we must adopt new and imaginative approaches is the pressing need for giving real recognition and assistance to the hopes and aspirations of the less developed areas of the world, particularly the newly emerging independent nations in these areas.

Our record of assistance to the less developed countries toward economic development is a good one, but it must be improved. We must not only continue to provide them with financial and technical assistance; we must make greater efforts to provide proper conditions for the expansion of their export earnings.

Only thus can they finance an ever-increasing percentage of the great volume of imports of capital goods and industrial raw materials that they must have if they are to reach the economic "takeoff" stage.

It goes without saying that we wish to assist the less developed countries—that we do assist them—in developing their potential in traditional export products, the raw materials that we need for our industrial complex and the tropical food-stuffs and beverages that we consume.

One way in which we are doing so is in giving more attention to commodity stabilization problems, in the hope of finding ways to reduce wide fluctuations in export earnings in such commodities as coffee and cocoa, where a decline of a few cents per pound can wipe out the benefits of millions of dollars in development loans.

However, a major problem for the less developed countries is the expansion of outlets for industrial products.

These countries are not satisfied to expand their exports of primary commodities alone. They see that the most advanced countries are industrialized countries. They equate economic progress with industrialization, and they demand the opportunity to share in the progress associated with it.

As they begin the process of industrialization, they call upon us and the other industrial coun-

tries to help them by keeping our markets open to them.

The extent to which the industrial countries have so far responded is inadequate. A committee of the GATT which for the past two years has been seeking ways of expanding the export earnings of the less developed countries has found the chief difficulties to be barriers maintained by the industrial countries in the form of high tariffs, high excise taxes, and quantitative import restrictions.

We and other industrialized countries must recognize that the less developed countries have a comparative advantage in the production of a number of simple manufactures, although our own advantage is overwhelming in the production of most complex products. It is to our own advantage, as well as the advantage of the less developed countries, to encourage rather than hinder the shifts in production, when those shifts add to our economic strength and well-being.

Worldwide economic development can proceed best on a joint basis, that is, with industrial and less developed countries developing together and co-operating with one another in that development.

Upsurge in Consumer Buying

By GILBERT GRANT

THE long awaited upsurge in consumer buying seems to be under way at last, bearing out the expectation that retail sales in the US would reach record rates by the end of the year.

The latest official report places sales of all retail stores at a seasonally adjusted total of \$18,600 million for October. This was an increase of three per cent over September, and just a shade below the all-time monthly high of April 1960.

All signs point to a continuation of the upward trend, and to the probability that the previous monthly record will be eclipsed when the November and December results are tallied.

There is a good chance, too, that a new annual record will be established for 1961 despite the slow start at the beginning of the year.

No definitive over-all statistics are yet available beyond October, but unusually strong sales records were chalked up in November, by department stores and automobile dealers—both good barometers of over-all retail activity.

Meanwhile, with two weeks of the traditionally heavy Christmas selling season behind them, retailers are reporting that their sales are exceeding even the optimistic early forecasts. A recent survey by the newspaper *Wall Street Journal* finds that retailers now expect their Christmas sales to top the 1960 level by better than five per cent.

There is good reason to believe that what is under way is more than a temporary spurt. A sharp rise in instalment credit extension in October, points to a continuing uptrend in consumer buying. (This kind of credit rise historically has been the prelude to a period of rising activity in consumer markets, particularly for durable goods.)

This tends to bear out the optimistic sales predictions that are being made for the months ahead. Automobile manufacturers, for instance, look for a substantial rise in sales in 1962 over 1961, after having sold more cars this past November than in any November in history. Also, the head of a leading merchandising organization is on record as saying that total US retail sales next spring should show an increase of more than five per cent over 1961 levels.

These trends must be viewed, of course, in relation to US economic activity as a whole.

According to the *Wall Street Journal* survey, most retailers are attributing their brisk sales pace to the continuing upturn in the economy.

As far as consumer buying is concerned, this is reflected most pertinently in the rising levels of employment and incomes. As has been noted on several occasions, the total personal income of all Americans has been on the upgrade since the early part of this year, with new highs being reached virtually every month.

In October last—the latest month for which such data are available—personal income hit another new high at a seasonally adjusted annual rate of \$425,000 million. This compares with \$421,000 million in September, and with \$406,000 million in October 1960. The average weekly wage of factory workers, meanwhile, rose to a new high of \$94.71 in October.

A particularly significant development is the sharp improvement in the employment situation reported for November, when the number of gainfully employed in the United States totalled better than 87.3 million—a record for the month. Especially encouraging is the fact that the seasonally adjusted rate of unemployment dropped to 6.1 per cent of the labour force after having hovered just under the seven per cent mark for more than a year. The sharpest dip in the unemployment rate in three years brought the rate to the lowest point since September 1960.

Deserving special note is the fact that results far exceeded seasonal expectations. Unemployment was hardly changed at just under 4 million, although a rise in joblessness of about 500,000 is normal during November. Indeed, total non-farm employment actually rose by 300,000 to a total of 82.1 million despite the fact that it usually drops at this time of the year.

Government officials have been expecting this kind of improvement in the employment picture for some months. Now that the improvement seems to be coming about, they look for it to continue.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

CAPITAL

Bank of India Shows the Way

With its offer of a rights issue the Bank of India Limited has shown that even before the Reserve Bank could finalise its plan for raising the ratio of Capital and Reserves to Deposits it is possible for a bank to go ahead in this direction. But the Controller of Capital Issues has seemingly insisted on a stiff premium, justified though it may be by the Bank of India share quotation; in fact the share market greeted the news by putting up the price of the scrip by Rs 16.50. We may anticipate more rights issues from banks, with The Economic Times going so far as to mention three banks specifically. But the question is, on the enlarged capital, will Indian banks generally be in a position to maintain dividends or at least offer a reasonable return to shareholders?

In the view of banks the answer to the question seems to be, yes. It is true, working during the current year should prove exceedingly profitable. Meantime there has not been much further increase in the charge of interest paid on Deposits, despite the raising of Deposit rates earlier in the year and notwithstanding the accrual of fresh resources in the course of the past eleven months. The net profit of banks should therefore be rising satisfactorily.

However, banks are being called upon not merely to raise their capital but also to add to reserves. It is understood that the Indian Banks Association has submitted to the Reserve Bank that the ratio of Capital plus Reserves to Deposits should be 6 per cent rather than the 7½ per cent suggested by the central banking institution. Toward this end the IBA has stated that, under certain conditions, it would undertake to persuade members to transfer 20 per cent of the net profit to Reserve with a view to realising such an objective in a period of 5 years or so. If the alternative plan mooted by the IBA finds acceptance, automatically the disposable surplus of banks will be reduced by one-fifth.

Here is the rub: banks can raise share capital only if they convince shareholders that the return on rights issues will be attractive; but if the rate of dividend so implied is in fact paid out, the profit may not allow of the required quantum of transfer to Reserve. The qualification is, unless either earnings improve more sharply than we can presently anticipate or expenditure is cut down more than we can currently hope for.

It is inevitable that banks should begin to impose commitment charges, or levy some interest upon unutilised portions of overdraft limits; it is also inevitable that more and more of banking facilities and services will have to be paid for, and at dearer rates. So on the earnings side of the ledger it is reasonable to expect steps being taken by the banking system to augment income.

We would emphasise that it is as necessary and desirable for banks to cut down on the

expenditure. We do not favour what we believe to be the currently high rates of interest paid on Deposits. They do little good, in that Deposits lured in by the interest available thereon probably form but a small and negligible proportion of the aggregate of newly accruing resources.

For it is necessary to remember that besides the responsibility for raising Capital and adding to Reserves, banks will have to incur the expenditure tantamount in a branch expansion programme. Branch expansion is essential both for enlarging the share of the organised money market in the total of economic activity in the country and for mobilising the new resources that will be needed to meet the industrial demand for funds.

BRANCHES

Implications of New Development

National and Grindlays Bank Limited has hit the World of Finance headlines with the opening, in Calcutta, of two new branches in quick succession. A number of interesting issues arise. It is patent that new Deposits are being assiduously sought, and that the lesson has been learnt now that a new branch in a reasonably populated area is productive almost immediately of new resources in excess of the demand for Advances therefrom. The savings deposit campaigns of the exchange banks have been most fruitful, and the logical consequence has been the decision to expand the branch net-work. The interest rate structure in India, the continued existence of the three-tier bank rate and the uneconomic cost of funds from the home offices, coupled with the desire to participate more fully in Indian industrialisation, may all be taken as the reasons why exchange banks have become keenly aware of the need to augment Deposits—by opening new branches, if that were necessary. To the extent that the Reserve Bank accords the required sanction we may therefore expect further expansion of exchange banks' operations in this country.

This raises the second issue. Why shouldn't the establishment of exchange banks' branches in India be "reciprocated" in Britain? It is not wholly or even mainly in London that there is a concentration of Indian business activity. Manchester and Glasgow are centres which Indian Scheduled Banks would be well advised to have a second and thoughtful look at. We would welcome initiative shown in this regard, though it would be desirable to add that caution is called for, since Britain already suffers from near-saturation of banking facilities. But, from the Government point of view, such a development would be devoutly to be wished for, in so far as prospects would be there of an increase in "invisible" earnings of foreign exchange.

In the third place the vigour thus shown by National and Grindlays is surely worthy of emulation by the Indian banks in respect

of expansion of the branches net-work within the country. We trust the challenge will be taken up, so that the banking habit spreads and in order that banks will be able to mop up the resources that will be required for meeting the industrial demand for finance which will be thrown up during the Third Plan.

BANK RETURNS

Vast Expansion in Currency Circulation

Steep currency expansion, caused largely by beginning of the month disbursements and perhaps partly by busy season demand for funds, is disclosed in the returns of the Reserve Bank for 8 December.

Active Note Circulation is sharply higher by Rs 39.48 crores at Rs 1,947.89 crores, and there has been outflow of Rupee Coin in the unusually large amount of Rs 2.52 crores. With Foreign Securities unchanged at Rs 116.86 crores, currency has been expanded for Rs 45 crores against Rupee Securities mostly by transfer from the Banking Department; an element of Rs 10 crores of the rise is likely to be traceable to deficit financing. As a result, the Reserve Bank's cash in the till is better by exactly Rs 3 crores at Rs 12.38 crores.

Investments in the Banking Department, by dint of the transfer to Rupee Securities, are lower by Rs 35 crores as against the expansion of Rs 45 crores in the Issue Department; hence the inference that the Centre has instituted deficit financing for Rs 10 crores. As such beginning of the month disbursements could be met from these proceeds, and the Centre's balances are practically unchanged (up by Rs 0.35 crore) at Rs 53.76 crores. On the other hand, in the case of State Governments, their balances are seen to have been run down by Rs 5.15 crores to Rs 10.19 crores and their ways and means borrowings from the Reserve Bank higher by Rs 5.93 crores at Rs 72.10 crores—clearly the pressure of month-end expenditure.

Banks have apparently felt some strain, though not much. Their Reserve Balances are down by Rs 3.83 crores to Rs 74.33 crores while, at the same time, higher recourse to central banking credit is implicit in the rise of Rs 1.33 crores to Rs 132.36 crores in the Reserve Bank's other Loans and Advances.

The Reserve Bank's portfolio of Treasury Bills purchased and discounted is higher by Rs 12 crores at Rs 32.09 crores, but this may be attributed to State Bank "disinvestment" in gilt-edged during the week for such amount.

Balances Held Abroad have moved up slightly by Rs 1.11 crores to Rs 29.93 crores, and foreign assets held by the Reserve Bank, at Rs 146.79 crores, are now in sight of the Rs 150 crore mark.

Spillover of month-end disbursements is fully reflected in the return of the State Bank for 8 December. On the one hand constituents have drawn upon their Deposits, which are lower by Rs 3.89 crores at Rs 528.16 crores. On the other their borrowings are also higher, the State Bank's Advances being marked up by Rs 0.67 crore to Rs 244.50 crores. The bank has disinvested in gilt-edged for about Rs 13 crores, reducing the portfolio to Rs 253.36 crores. However, Other Assets are higher by Rs 7 crores or so at Rs 34.96 crores. The State Bank's borrowings

from the Reserve Bank have gone up by Rs 0.70 crore to Rs 1.56 crores, thus exceeding the Rs 1 crore mark after a long, long pause. As a consequence cash in hand and with Reserve Bank, balances with other banks and money at call in the aggregate have improved by Rs 1.05 crores to Rs 25.85 crores.

The beginning of the month has similarly made its impact felt upon the return of Scheduled Banks for 1 December. Net Demand Deposits have declined by Rs 3.80 crores to Rs 824.76 crores though this is partly offset by the rise of Rs 2.95 crores to Rs 1,130.57 crores in net Time Deposits. However, if regard is had for the rise in Deposits reported in the relevant week by the State Bank, it would be seen that other Scheduled Banks have had a drain of nearly Rs 4 crores in Deposit resources. The total of Advances has gone up by Rs 6.21 crores to Rs 1,239.98 crores, with slightly less than half of the rise attributable to the State Bank. It follows that borrowings from the Reserve Bank should have risen. But the extent of the rise is, at Rs 0.91 crore to Rs 3.23 crores, rather small. Banks have apparently preferred to run down their cash balances, which are markedly lower by Rs 7.61 crores at Rs 188.62 crores. At the same time, however, indebtedness to the State Bank has been reduced by Rs 1.53 crores to Rs 16.40 crores, and there has been an addition of just under Rs 6 crores to Rs 624.49 crores in the gilt-edged portfolio; the State Bank accounting for Rs 4 crores of the increase.

Notes:—As at second Friday in December for Reserve Bank and State Bank.

As at first Friday in December for Other Scheduled Banks.

Figures in Brackets are percentages.

Still Conspicuous by its Absence

The call money rate has again declined, after an initial firmness earlier in the month. The inference is that the pressure at the time experienced in the money market was owing to the demand implicit in the beginning of the month disbursements rather than seasonal enquiry, as much. It may also be that growth of Deposits has contributed to the comfortable position of the banking system. In other words, the 1961-62 busy season has yet to put in its appearance, at least as reflected in the banking returns.

However, the fact that tax payments are due this month may serve to disturb the equi-

librium, and tightness, though temporary, may be expected to be thrown up in the next week. The nearing of the end of the year may also cause transactions of a winding-up nature by banks. Both these may mean that, though the busy season has not yet started, by the end of December we may expect a hardening of money rates.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 12 December 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs. 99.375 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 18 December 1961. Successful tenderers should make payment on Friday, 22 December 1961. Other conditions are as usual.

During the week ended 8 December 1961 Government of India Treasury Bills for Rs 18,36,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 13 to 16 December 1961 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 6 to 9 December 1961 amounted to Rs 1,38,25,000.

That Floating Sterling Nonsense

By Paul Einzig

IN recent weeks there has been a strong revival of agitation in favour of abandoning stability and adopting the system of a floating pound. A recent public statement by the Chancellor of the Exchequer conveyed the impression that he is not so firmly opposed to that solution as to a devaluation, even though it is safe to assume that he would only resort to it if and when he could do so out of strength not out of weakness. A by no means negligible section of opinion in the Treasury and the Bank of England too regards the floating pound, if not as an ideal solution, at any rate as a tolerable evil. And in many unofficial quarters a fanatical crusading fever is developing in favour of that singularly unintelligent solution.

It has often been suggested that Britain is always prepared for the last War instead of the next. In a similar way those campaigning for a floating pound seem to be prepared for the last peace instead of the present one. Because in the 'thirties amidst the deflationary conditions and competitive currency depreciations prevailing then, flexibility was preferable to rigidity, they assume unthinkingly amidst our totally different conditions the same formula would be equally satisfactory. Yet it ought to be obvious to everybody that in existing conditions the adoption of floating sterling—which in practice means an attempt to correct our adverse balance of payments by allowing sterling to depreciate to a level at which imports would be balanced by exports—would not produce the desired effect.

A large number of countries would link their currencies to sterling so that as far as they are concerned the depreciation of sterling would not stimulate exports or handicap imports. As for the countries which would not follow sterling, it is anybody's guess whether the increase of exports and reduction of imports would be sufficient even to compensate for the adverse change in the terms of trade resulting from the depreciation of sterling.

In any case in many lines in which British exports would become more competitive as a result of a sterling depreciation, industry is working to capacity and the result of the depreciation would be merely longer order books. It would be little short of a miracle if the trade unions could be induced to work harder in order to be able to benefit by improved export possibilities. Before the War there was an immense unused productive capacity and a very large reserve of unemployed labour. Today there is only unused capacity in certain industries and virtually no unemployment.

This brings us to another major difference compared with pre-war conditions. The bargaining power of the trade unions is incomparably stronger than it was during the 'thirties'. If the higher prices of imported goods resulting from the depreciation should lead to a rise in the cost of living it would be followed immediately by new wage demands. The rise in wages would soon offset and possibly more than offset, the stimulating effect of sterling depreciation on exports. On the other hand, even if an appreciation of sterling were to reduce the cost of living, this would not be followed by wage reductions.

The proof of the pudding is in its eating. The only important country which has adopted a floating exchange since the War is Canada, which did not save her from being the victim of the gravest and most persistent trade recession that any country has experienced since the War.

Notes

COAL Problem of Finance

The financing of the expansion programmes of the private sector collieries has assumed considerable importance in the context of the schemes for coal development in the Third Plan. The target for the private sector has been fixed at 17 million tons of additional coal and this is estimated to call for a capital expenditure of nearly Rs 100 crores. The foreign exchange part of the capital requirements has been assured by the World Bank which has already agreed to provide an amount of nearly 35 million dollars in foreign loans on account of procedural difficulties is causing considerable difficulties to the private sector collieries and it has been reported that for want of spare parts and components machinery and equipments are lying idle in the collieries. In this connection it is worth pointing out that the World Bank loan is to be made available only to the Government which is to decide the allocation colliery-wise. The screening of applications of the private sector collieries for foreign exchange is reported to have been completed.

The fact that the collieries have to find and provide the rupee equivalent of the World Bank loan to the Government in exchange for the foreign exchange has posed an immediate problem to the collieries. While the overall requirements of rupee finance for the entire Plan period has been assessed at about Rs 60 crores, the immediate requirements are placed at about Rs 25 crores. The problem is acute for the small collieries which have no access to sources of credit that are available to the bigger ones. It was to arrange facilities for credit for these collieries that a conference was called in Calcutta at the instance of the Reserve Bank. The object was to draw up a scheme whereby the commercial banks could be prevailed upon to meet the requirements of the private sector collieries for their Third Plan expansion schemes. Though much was expected of the conference particularly in view of the sponsorship by the Reserve Bank, it is a matter for regret that it should have ended indecisively without any concrete proposals for meeting the immediate credit requirements of the private sector collieries. In this circumstance it is inevitable that the expansion plans in the private sector collieries which are part of the Third Plan schemes for raising total coal production to 97 million tons, should be further delayed. The shortage of funds experienced by the private sector collieries in embarking on expansion plans also draws attention to the inequity of the present pricing scheme for collieries. That the present system leaves but a bare margin of profit has been one of the main points of criticism against the Government's policy toward the private sector collieries. The earnings of a number of collieries have also been adversely affected by indiscriminate downgrading of coal by the Coal Board. The plea for a more equitable system of prices should be appreciated in the context of the development schemes envisaged for the private sector in the coal industry in the Third Plan.

Mechanisation

The problems relating to mechanisation of the coal mining industry were discussed at a symposium held in Dhanbad early this week. Mechanisation has assumed special significance in the context of the development schemes for raising coal production in the Third Plan, and also of the pro-

gressive increases that are envisaged in the subsequent Five Year Plans. While the Third Plan target has been fixed at 97 million tons, the targets for the Fourth and Fifth Five Year Plans are envisaged at 200 million tons and 300 million tons respectively. At present it is manual labour that predominates and arising from this, the output per man shift continues to remain the lowest in India. The Third Plan demands on mechanisation are of an order that call for heavy investment on import of machinery and equipment. This holds particularly true of the development programmes in the public sector which are being undertaken by the National Coal Development Corporation. The Corporation has already done some pioneering work in mechanisation of coal industry in the Second Plan and the near attainment of its targeted production in the Second Plan has been owing to such schemes of mechanisation which it initiated.

A serious handicap to headway being made in respect of mechanisation of coal mines is the absence of internal capacity for manufacture of mining machinery and equipment. The Third Plan envisages the setting up of a mining machinery manufacturing plant at Durgapur. The project will be ready for commissioning only by the end of 1965-66. Imports to meet the Third Plan requirements are inescapable. Many countries like the USA, Poland and Hungary have evinced interest in supplying mining machinery to meet the country's Third Plan requirements. The recent visit of the British Mission has highlighted British interest in helping India mechanise coal industry. Shortage of foreign exchange would preclude liberal imports to sustain the tempo of development required by the Third Plan programmes for coal production. Progress in mechanisation is also bound up with the availability of power to the coal mines and the attitude of labour. The importance of other factors such as technical supervision and considerations of cost cannot also be ignored. Mechanisation also leads up to questions relating to the safety aspect of mining which has tended to be neglected owing to financial reasons. For encouraging colliery owners to pay more attention to safety aspect Mr J. B. Jabbi, Chief Inspector of Mines, has suggested that a system must be devised by which cost of works carried out essentially for safety could be reimbursed.

BANKING

Dearer Money

The proposal to increase the paid-up capital of banks has been implemented by more than one bank. The Canara Bank, the PNB, the Dena Bank and the Bank of India are asking for extra

share capital in order to follow the rise in their own deposits. The silver jubilee of the Indian Overseas Bank (in 1961-62), may lead to the usual jubilee issue of shares on advantageous terms and the lead held by Indian Overseas over Indian Bank shares is based on the prospect of a rights issue. But the major problem for banks is one of keeping up dividends and maintaining allocation to reserves in line with increased capital. That means interest rates on advances will not go down and dearer money—a generic condition of economic growth—will persist in spite of the present illusory 4 per cent bank rate. The consequences for investors in Securities and preference shares or debentures can only be gloomy and the influence of the money market will compel many to look for a spread between the yield on gilt-edged and the yield on equities. The normal factors have been ignored long but a new mood of realism and nervousness has come lately and the 2 per cent difference may soon reappear.

That is one reason why ordinary shares are talked down eagerly and Indian operators have come to forget rudely that growth is a nebulous factor and dividends actually received matter more. The investor who feels that half a loaf means more than somewhat is coming to see that economic policy by itself does not create dynamism all the way and the shadow of politics may be deeper than presumed, for Goa has proved a market factor in a new sense. And the recent deflation has spread far beyond tyre shares like Dunlop or Premier. The safest shares are those of financial institutions that go on adding to reserves, distribute risks care-

MADRAS Interim Budget

The interim budget of the Madras State that was presented by Mr C. Subramaniam, the State's Finance Minister, discloses a deficit of Rs 637 lakhs for the next financial year. Revenue receipts are estimated at Rs 9,271 lakhs and expenditure at Rs 9,907 lakhs. Against this, estimates for the current year show a deficit of Rs 637 lakh, with the revenue receipts and expenditure being placed at Rs 8,969 lakhs and Rs 9,606 lakhs respectively. Substantial additional expenditure over original estimates are being incurred under education (Rs 87 lakhs) Public Health (Rs 32 lakhs) Community Development (Rs 57 lakhs) Civil Works (Rs 43 lakhs) and Harijan Uplift (Rs 34 lakhs). The capital outlay schemes are expected to take up Rs 1,820 lakhs against the budgeted amount of Rs 1,541 lakhs.

For wiping out the deficit, hopes are placed on increased share from the divisible pool which shows a higher growth than anticipated. Further, a larger devolution of the divisible Central revenue is also anticipated as a result of the recommendations of the Third Finance Commission.

The budget provides for a number of novel schemes intended to benefit the poor. These include a proposal for giving to poor students interest-free loans repayable in easy instalments after the students begin to earn and a scheme for the grant of old age pensions of Rs 20 per mensem to all destitutes over the age of 65. The age restriction is to be relaxed to 60 in the case of persons handicapped by loss of sight, speech or limbs and lepers. The scheme for the grant of educational loans will in the first instance be initiated for children of all non-gazetted officers and teachers.

The other new schemes provided for in the budget include the starting of an engineering college at Salem, setting up of industrial training institutes at Tiruchirappalli, Dindigul, Paramakudi and Mettur. In addition, general purpose engineering workshops are also proposed to be set up at Tuticorin and Mayyaram.

An important feature of the interim budget is the top priority accorded to power projects. Provision for such schemes at Rs 54.35 crores amounts to nearly one-third of the total outlay during the year. It is also noteworthy that this provision for the

Plan schemes in the current year which is the first year of the Third Plan is expected to exceed the target fixed by the Planning Commission. While the budget estimates for the current year anticipated an outlay of Rs 47.87 crores, the actual expenditure is expected to reach Rs 50.60 crores which works out to more than 17 per cent of the total Third Plan outlay at Rs 291 crores. The outlay during the Second year of the Plan is expected to exceed Rs 58 crores or nearly 20 per cent. At this rate, it can confidently be asserted that the total outlay on the Third Plan will exceed the target fixed by the Planning Commission by a considerable margin.

The claims to be made on the Centre by the Madras Government suggest that all States will soon do the same. The additional taxation envisaged because of the Third Plan is rather vague: the scope of such taxation may de-

pend on the Finance Commission's coming award. The growth of revenue does not prevent a deficit and that alone may lead to taxes especially as charitable outlay of various kinds is proposed. The Revised Estimates for 1961-62 also leave the impression that extra taxation is inescapable. The closing balance is adequate but the 100 new schemes will strain resources. And fresh borrowing is contemplated. That depends largely on the position of the big banks in 1962. The State will rely on Central loans to a greater extent. That may be possible on account of the rise in Central Excise revenues this year, as also the repayment promised.

A fall in capital outlay will probably help to raise new loans and if no reference is made to a tax on urban lands to obtain extra revenue, the explanation is the coming election. Moreover local bodies may have an eye on taxation of land values. Lloyd

George's ideas have to be worked out by the authorities. And revenue deficits may be a spur to fresh thinking on the taxation of capital gains on land and houses.

The budget has only sought sanction for public expenditure required for some months. The new legislature alone will have to consider new tax measures and it is evident that a caretaker budget has no effect on the market whereas the interim wage award has led to some prejudice against planting shares in Madras as well as Kerala. The more important factor is Goa at present and the drop in Mysore shares is taken as a symptom of growing mistrust. The Madras budget, is, however, a hint that the Union Government too will do nothing drastic for some months and the status quo will perhaps promote confidence in the prospects of industry which is, however, handicapped by raw material shortages and export difficulties due to high costs.

AIR CONDITIONING COSTS

with BLUE STAR-WORTHINGTON

Packaged Air Conditioners

5, 7½, 10 tons

Now made in India

Here's how BLUE STAR-WORTHINGTON Packaged Air Conditioners offer you a four-way saving in air conditioning costs.

CUT COSTS on tonnage. Single units range from 5 to 10 tons, operate independently.

CUT COSTS on installation. Units can operate without ductwork.

CUT COSTS on subsequent expansion. Single units connect up into multiple systems with minimum alterations.

CUT COSTS on operation and maintenance. Every unit is engineered, built and individually performance-tested in BLUE STAR'S own plant to WORTHINGTON specifications.

For a better air conditioning job, call in BLUE STAR

TANGANYIKA

Prospects for Aid

As talks are to take place the programme of aid to Tanganyika will probably be defined in detail. Yet the advance to self-government may lead to the withdrawal of Asian capital. Whether India can induce Indian capitalists to stay on when independence has been attained is debatable. The official programme contemplated may be one of technical aid and the emigration of skilled personnel under guarantees may be arranged. India cannot offer loans but an assured market for cashew or cotton may be got here. The famine this year may limit exports of sisal or coffee and it is evident that purchase of minerals in return for Indian exports may not be easy to arrange as Tanganyika may look to Japan for textiles or other goods. The industrialisation of East Africa is very limited and only the Congo

has plenty of minerals. The scarcity of labour is as acute as the lack of capital. And though Mr Nyerere may not blame the USA like Dr Jagan he may hope for less help from the Asian countries than from the USA or West Germany because the German connection as in S. W. Africa has not faded out. As a trust territory Tanganyika may be unwilling to impose high tariffs. She too may rely on export duties on produce like coffee or oilseeds. Economic nationalism cannot raise its head very soon and if a customs union is prepared and the development of road transport in East Africa is speeded up the chances are in favour of bigger exports. Access to the capital market abroad may depend on the export surplus kept up over a decade and it is certain that new plantations may be created if the European market is within reach. The Colombo Plan leaves out the African countries. Only Liberia is well placed because the USA

is developing both rubber plantations and iron ore. Curiously, a recent survey in the *Guardian* failed to mention the shipping industry of Liberia which is a major maritime power.

GOA

The Stakes

The preoccupation with India's frontiers is not due merely to the latest White Paper on China but to the international complications envisaged by professional pessimists in markets on account of Goa. The situation is not likely to clear up soon for the big Powers have to look to Berlin and other problems. In fact, Goa may be regarded as a side-show—not at all like Suez—because the problem is one really of persuading Salazar to negotiate for withdrawal. The opportunity may have gone, but it is still open to ascertain whether Portugal's investment in Goa, particularly the

harbour can be bought by the Indian Government. The economic stake that Britain has in Portugal, the investments in communications and mines as well as a new fertiliser plant, may make a financial approach legitimate, and if nobody has cared to mention discreetly the idea of a deal for barracks, berths, etc. it is because of the assumption that an internal revoult can secure all that is wanted. The fact that enough compensation can be got later on by including Goa in Indian territory and obtaining customs revenue has been ignored and the Goan leaders have evidently offered no suggestion about purchase or perpetual lease.

Transactions in relation to territory have been many in the past. Russia sold Alaska and the Virgin Islands were bought by the USA. The British got cash for La Guayana harbour in order to avoid complications. The fact that Afro-Asian support can be got easily for India must not obscure the point that Pakistan may support Portugal for her own reasons, if an appeal were made. That should certainly be avoided and the Indian Government should realise that Portugal (and Spain) have good reason to expect the backing of the Anglo-Saxon powers. The transfer of territory is by no means difficult. Withdrawal from Tangier by an international authority in order to oblige Morocco was arranged. And the procedure may be copied with variations in regard to Goa and other places under Portuguese rule. The simplicity of a commercial transaction may not appeal to our idealists but some will see the point that in the Congo financial considerations prevail over UN directives as Dr O'Brien has pointed out after leaving his post. The theory of aggression cannot be easily applied for Albuquerque established Portuguese authority which was not shaken by either the rise of the Maratha power or the rise of British dominion in India. Perhaps any reference to history may be inexpedient, for the really important point is that Portugal is a poor country and may need money as recompense for what she has put in.

TEA
Favourable
Outlook

That the outlook for tea exports has turned distinctly favourable is suggested by the figures for exports during the first nine months of the current year. Exports up to the end of October this year are estimated at 329.98 million lbs valued at Rs 92.38 crores compared with 304.09 million lbs valued at Rs 85.31 crores in the corresponding period of last year. Considering that the lower level of production in 1960 was responsible for the fall in exports, it may be seen that

the rise in exports in the first nine months of the current year has been made possible by the increased production of tea that has been registered. It is to be noted that total production of tea in the first nine months of the current year is placed at 549.4 million lbs as compared with 487.3 million lbs during the corresponding period of last year. At the current rate of exports, it is expected that the country would be able to record a total exports during this year of 475 million lbs valued at Rs 126 crores.

Tea being the principal foreign exchange earner, it is important that measures are taken to stimulate its exports. Though India faces keen foreign competition from Ceylon, Indonesia and East Africa, the potentialities of exports do not seem to have been properly assessed either by the industry or the Government. The crushing burden of taxation which the indigenous industry has to bear places the Indian exports at a distinct disadvantage as compared with exports from other countries. Schemes of development with accent on better output per acre have assumed considerable significance. The Third Plan target for production is 900 million lbs is seemingly unachievable in view of the record of progress in the past decade and the difficult circumstances of shortage of fertilisers and lack of adequate capital funds in which the industry has to operate. While shortage of fertilisers is not peculiar to the tea industry, it is harsh that the tea industry should be asked to pay higher price for fertilisers than other agriculturists. Even at this higher price there is no guarantee of adequate supplies. There are also difficulties experienced by the tea industry in securing other raw materials and stores, while the problem of finance has proved to be the most taxing.

The Government has done well in deciding to suspend the quota system for exports. That the quota system is not adapted to the need for stimulating exports of tea was long evident. And though its abolition might not have any direct effect on tea exports, at least the free flow of exports should be facilitated by the new measure. This may sustain the tempo of rising exports that has been discernible in the first nine months of the current year. All these would seem to point to further rise in exports if only such rise could be matched by corresponding increase in production. There is however one adverse sign that calls for notice and this relates to the lower level of prices that is realised for exports in the current year. It has been disclosed by Mr Satish Chandra in the Lok Sabha that prices at the Calcutta tea auctions have after keeping steady until recently have shown a downward tendency since August. This is a matter for con-

cern since the fall in prices will inevitably affect the total export earnings realised from export of teas.

RICE

Research Makes
Headway

The importance of rice research to improve the per acre yield particularly in the developing countries was underlined at the meeting of the working parties of the International Rice Commission in New Delhi this week. Considerable headway has already been made in the course of the last decade, as the rise in production from 151 million tons to 265 million metric tonnes in the course of the last decade would testify. But the growing demand arising from rise in population and the improvement in the standard of living calls for more intensified efforts. For, more

people depend on rice for their subsistence than on any other grain, and it is also noteworthy that rice is grown on larger areas than any other crop. The scope for improvement is particularly great in the developing countries since present yields are extremely low in comparison with output in other countries.

The holding of the meeting at New Delhi has particular significance to India which has just embarked on its Third Five Year Plan, a major aspect of which is the improvement of agriculture and achievement of self-sufficiency in foodgrain production. Mr K. R. Damle, Secretary to the Union Department of Agriculture, referred to the programmes that have been included in the Third Plan for promoting research in agriculture. It has been stated that the programme for rice research would entail a total cost of Rs 20 crores. The programme provides for a rice specialist in each State assisted by an agro-

nomist, statistician and other supporting staff. The engineering problems relating to rice cultivations are also sought to be covered by the research and development work.

In his speech, Mr S. K. Patil, Union Minister for Food and Agriculture, who inaugurated the conference, laid special emphasis on the use of pure and improved seeds to the ever-growing circle of farmers. Presently, there are more than 4,000 Government farms and go-downs and many other private farms for the supply of improved seeds to the farmers. Still, the use of improved seeds is far from being wide-spread. This is not only owing to lack of adequate propaganda machinery, but also due to the inadequacy of the existing seed-farms to meet the requirements. Mr Patil underlined the scope for co-operation between countries in promoting research and referred to the arrangement made by the FAO for the interchange of seed of

THE DAY BREAKS BRIGHTER TOMORROW

BEARING TOMORROW'S JOY: the strength
in four hundred million limbs.
Today's work. Today's patience.
Burden borne, feet firmly on the ground.
Tomorrow... a little less of care, a little more of joy.

And for HINDUSTAN LEVER, too,
tomorrow begins today.
In the research laboratory, in the factory and office.
Work, patience, care.
To serve tomorrow's homes and the nation's needs
with products that grow better and better.

To Sales Manager,
M/s Ashok Leyland Ltd.,
Ennore, Madras

Dear Sir,

Our Ashok Leyland Comet 203" wheelbase passenger bus has covered over 400,000 miles with the original engine. It is remarkable that this extremely satisfactory performance has been achieved despite the difficult journeys the vehicle has done all these years. It has carried tourists from Bangalore to Ootacamund making over 450 trips to the hill station, averaging 15 miles per gallon of diesel oil. The majesty of its run over the winding ghat sections has won the admiration of not only the passengers but also of other motor operators.

It is a pleasure to own a Leyland bus, to experience its economy, its great strength and its smooth run over all types of roads. It is a pleasure too to talk about it to others.

Yours faithfully
for S R M S
M.V. Chakravarthy

Ennore, Madras

It is refreshing that the industrial backwardness of the State of Kerala is gaining the attention of the Government of India. Though the efforts will bear fruit only after some time, the decision of the Government to set up new industries both in the large scale and small scale sectors, will be widely appreciated. Quite recently Mr Shriman Narayan, member of the Planning Commission, after having detailed discussions with the members of the Kerala Cabinet, is reported to have stated that for the speedy industrialisation of the State, greater emphasis should be accorded on setting up rural-based industrial undertakings. Mr Narayan's suggestion is of topical interest in view of the abundant supply of raw materials in the State that are suited for the development of small scale industries. The National Council

The implementation of these schemes should give greater momentum to industrial progress.

The report of the Indian Textile Delegation to North and West Africa sponsored by the Cotton Textiles Export Promotion Council has brought to sharp focus the paramount need for rationalising and modernising the textile mills in the country, setting up adequate propaganda machinery abroad and to manufacture goods to suit the taste of consumers in order to stimulate exports of cotton textiles to those countries. The delegation, deputed to visit these countries and to explore the potentialities of our exports, had to face handicaps like the lack of time, inadequate background material and statistical data in the newly independent States. Nevertheless, the suggestions made in the report show that it has done a magnificent job in assessing the export potentialities and channels through which our cotton textiles can be exported on a large scale to those destinations. Apart from the fierce competition from other exporting countries and the

The Second annual report of Heavy Engineering Corporation and the review of the Corporation's work that was presented to the Lok Sabha last week, highlight the production programmes of the heavy machinery building project, the heavy machine tool building project, the foundry project and of the coal mining machinery project. It may be recalled that the Third Plan lays considerable emphasis on making good the lack that currently exists in respect of production capacity in all these vitally important sectors. Projects for heavy machinery plants are in the nature of priority schemes on whose implementation the future industrial progress of the country depends.

The coal mining machinery project is intended to manufacture 45,000 tons of coal mining machinery per annum. The important items that are proposed to be manufactured at this plant are coal cutters, loaders, conveyors, electrical winders, booster fans, pumps, automatic cages etc. The capital cost of the project including the township is estimated at Rs 200 crores. Already some progress has been recorded in respect of preliminary work at Ranchi and Durgapur. The completion of the arrangements for supply of water and power has laid the ground-work for starting of the construction work on the project.

There is little doubt that the scope for promoting exports of cotton textiles will largely depend on the Government and the textile mills. The need for speedy modernisation of our mills with a view to stepping up production without impairing the quality hardly requires special mention. A true assessment of the tastes of consumers in those countries will offer greater opportunities to manufacture quality goods to cater to the specific demand as to colour, design and finish at competitive prices. The suggestions to appoint Trade Commissioners in the newly independent States and the sponsoring of Industrial Missions to find out

The heavy machine building plant is designed to have a capacity of 80,000 tons of machinery a year and will produce machinery and equipment primarily for the iron and steel industry. The project is also expected to meet some of the requirements of the other heavy industries like the mineral industry, coal mining industry and also of the general engineering items like heavy cranes, excavators etc.

The foundry forge project is intended to serve as a metallurgical base to the heavy machine building plant and will provide

One important prerequisite for the scheduled implementation of these projects is the availability of the trained personnel of the type and quality suited to the various projects. To meet such requirements of trained personnel, the Corporation has a proposal to set up a training institute complete with workshop facilities to train approximately 800 trade apprentices and 200 graduate and technical apprentices from the second year of its operations. A comprehensive programme of training in India, Czechoslovakia and Russia is also designed to be implemented.

Speaking at the fifteenth annual general meeting of the Indian Tool Manufacturers' Association in New Delhi last week Mr S. L. Kirloskar, the President of the Association, called upon the Government of India to offer the requisite incentives, particularly financial assistance, to encourage prospective entrepreneurs to take up the production of various types and ranges of machine tools with a view to expediting the growth of the industry to cater to the needs of the country during the Third Plan period. While appreciating the fine gesture of the Government in placing a total ban on the import of machine tools comparable to the types produced indigenously, Mr Kirloskar spotlighted some of the loopholes in the Government's policy that stifle rapid growth of the industry in the country. This is particularly distressing at a time when the indigenous production is lagging behind the mounting demand. The main grouse of Mr Kirloskar pertained to the Government's procedure in channelling the Government orders through public sector factories despite the solemn assurance given by the authorities to treat all the units on equal footing. With the imposition of ban on imports, the Government has insulated the units in both the public and private sectors from foreign competition. There is therefore no need for further pampering of the public sector at the expense of the private sector.. The President also underlined the significance of imparting technical

Another interesting point which Mr Kirloskar made was the need to provide more flexibility for development. The large-scale manufacturing units should be allowed to undertake a compre-

hensive range of production of the highest standard required, but at the same time small and medium-sized units also should be given equal opportunity to develop single lines of manufacture, which will generate dynamic development of this crucial industry. Mr Kiroloskar was also confident that the industry would attain the production target of Rs 35 crores per annum fixed for the current Plan period provided the manufacturing units realise their opportunity and the Government offers adequate support to them.

The Mining Inspectorate's report for 1959 contains no data on titanium production, perhaps for strategic reasons. The metal is used for paints and other purposes associated with Kerala which has very few minerals compared with Bihar or even Rajasthan. Like Madras, the State is very poor :

minerals, but the rutile sands make as export business possible. The progress of titanium oxide production has led to the confirmation of protection recently, and a new plant with the help of Laporte Industries of UK is to be set up in Maharashtra. Increased output of sulphuric acid in India is an advantage.

The transfer of the mineral concern by the Madras Government to a new company associated with Indian Rare Earths at Alwaye will ensure a bigger supply of illuene and other sands. Titanium dioxide output has risen to 10 tonnes a day and the inflow of essential imports has been maintained. British Titan products can claim to have kept the Indian industry going and has financed so far the ex-

pansion programme independently from its own resources. The record may be called exceptional because export of illuene or other sand in bags can be soon reduced and the special paints and chemicals made in India. The increased demand in India for titanium oxide is stated to be a reason for continuance of protection and the most important consideration for many is that a "war baby" has grown up. The best thing about the paint industry is that it contributes to excise revenue and the foreign capital and knowhow have been obtained for its development without much difficulty. There is certainly no private interest in titanium oxide but if a new Indian company comes in the investor will be ready, able and willing to subscribe to its capital

because British Paints proved a real draw to the stock exchange this year.

★ ROURKELA Expansion of Capacity

With the expansion of its present capacity from 1 million tons of ingot steel per year to 1.8 million tons under the Third Five Year Plan, the Rourkela Steel Plant bids fair to be the most modern of the steel producing units in the country.

Preliminary work regarding the testing and the preparation of the site for the expansion has already started and tender invita-

tions for the various units of the main plant have been issued.

The project report and the necessary technical specifications for the expansion programme were prepared by the Central Design Bureau of the Hindustan Steel Ltd. The tonnage of finished products planned under the expansion scheme is as follows:

	1 million tons per annum.	1.8 million tons per annum.
Wide and Heavy Plates	200,000	280,000
Hot rolled sheets, narrow light plates & strips	300,000	300,000
Cold rolled sheets and strips	170,000	300,000
Hot dipped tin plates	50,000	50,000
Electrolytic tin plates	...	100,000
Galvanized sheets	...	160,000
Electrical steel sheets	...	50,000
Total	720,000	1,240,000

The main plant units to be erected under the expansion programme are:

One coke oven battery of 80 ovens with necessary by-product plant.

One blast furnace with a capacity of 1500/1800 tons per day with the ancillary units.

Two 60-ton L.D. converters with necessary additional ancillary facilities.

An additional 200-ton per day capacity oxygen plant.

One 5-stand Tandem Cold Rolling Mill, with one 2-stand 4-high Skinpass Mill, one continuous annealing plant, one continuous electrolytic tinning line and two continuous strip galvanizing lines, and

Extension of power plant by installing two 25,000 KW generating sets.

While one battery of 80 ovens is going to be erected under the 1.8 million tons expansion programme, the by-product plant will be laid out to handle 35,000 Ncbm per hour of gas to accommodate any additional expansion of the battery. Ammonia in the raw gas from the new battery and ammonia from the existing plant now recovered as 15 per cent concentrated Ammonia Liqueur, will be converted into Ammonium Sulphate after expansion.

The new blast furnace will have arrangements for injection of steam and oxygen in the blast and with prepared burden it would be able to produce upto 1,800 tons per day.

The expansion of the steel making capacity will be only on the L.D. side by the addition of two 60-ton L.D. converters. A gas de-dusting plant to clean the exit gases from the new converters, as well as the existing converters will be installed. This has been planned to eliminate the dust nuisance from Rourkela.

Most of the units coming under the expansion in the Cold Roll-

16 December 1961

ing Mills will be the first of their kind in India. These include, the 5-stand Tandem Cold Rolling Mills and the 2-stand Skinpass Mills with the necessary pickling and annealing plants. For the production of tin plates and galvanized sheets from wide strips, up-to-date processes such as acid ferrosan process for electrolytic tin plates and continuous Armco-Sendzimir process for strip galvanizing have been proposed.

A significant feature of the expansion programme is that all engineering and supervision in respect of construction will be done by the Indian engineers of the Hindustan Steel Ltd. The Central Designs Bureau, which has prepared the project report, will act as consultants, and the construction of the plant will be under the supervision of the Construction Organisation. The preparation of design drawings for structural steel work and column foundations of the Rolling Mills and other buildings, is now in an advanced stage.

Work in connection with the testing and preparation of the site of expansion is going on at a steady pace. Bore hole tests for the Rolling Mills have also been completed and those for the other units are in progress. Tenders for preparation of the site in Rolling Mills and By-Product Plant have been called and the clearance of the site for the Coke Oven has already started.

US Economic Development

The upturn in United States economic activity is proceeding rapidly once again, after September's brief and largely seasonal letdown. With the underlying trend thus re-established, it is possible to take a close look at this year's significant developments in major industries, and at the prospects for the coming year.

All in all, it now appears that the industrial production index which measures the physical volume of total US industrial output and which already is at a record high, will hit 115 per cent of the 1957 average by the end of 1961. This would mark a continuing gain over October's index reading of 113, and would represent about a 12 per cent advance during the year as a whole.

The general production trends clearly indicate that the expansion is based on an increase in real consumption rather than a rebuilding of inventories. The available statistics show a rise of \$3,000 million in manufacturers' sales from the recession low in the early months of 1961, as compared with an inventory rise of about \$1,000 million.

The bulk of the increase in manufacturers' inventories, moreover, appears to have taken the

form of goods in process of production, rather than of purchased materials or finished products.

Consequently, the inventory situation appears to be favourable, with stocks in almost all lines low in relation to present and prospective sales. It follows that inventory building could continue at a strong pace for some time without risk of overburdening supplies.

Conditions are shaping up favourably for a number of key industries. Steel production has increased 44 per cent since the end of 1960 on the basis of seasonally adjusted figures. New orders point to a continuing rise in output. Production this year is expected to approximate 99 million short tons (one short ton equals 0.91 metric tons). The industry looks for further improvement, with the 1962 steel production total rising to a level of 110-115 million short tons.

Production and sales of major non-ferrous metals—aluminium, copper, lead, zinc and tin—have picked up during the course of this year along with the business recovery. Consumption is expected to rise in 1962.

Automobile production is moving into high gear now following scattered labour difficulties in the past few months. Sales were strong in October and have hit record rates in recent weeks. Production in the fourth quarter of 1961 is running about double the rate of the first quarter, and automobile makers are trying to build up their dealers' stocks.

Estimates are that 1962 sales of domestic automobiles could run to 6.5 million or even 7 million, which would represent a sizable increase over the estimated 1961 level. Sales of imported cars are expected to hold at about the 400,000 mark.

Machinery production has been scoring significant increases since the early part of the year, and has now regained its pre-recession peak.

Electronics sales are in a definite upturn. In particular, the market for computers, controls and similar equipment, much of it related to technological progress, is strong.

Appliances—television, radio, furniture, rugs etc.—are all being produced in relatively large volume.

Production and sales of such building materials as lumber, stone, clay and glass have risen along with construction activity. Housing starts, on a seasonally adjusted basis, have been running more than 1.3 million units a year in recent months, compared with 1.0 million at the beginning of the year. Total construction outlays have climbed five per cent to new highs since February. The outlook appears to be poor continuing gains in housing and construction in 1962.

Textile and apparel production and sales are up 17 per cent since last January. The industry is

planning to increase its capital expenditures 10 per cent in 1962.

Demand for petroleum products has improved in recent months, although still lagging somewhat behind the general recovery pace. Estimates for next year point to a rise in consumption of about three per cent.

Chemical industry sales are at record levels, running 15 per cent above their year-ago levels. Sales and output of paper and paper products also have reached new high ground; packaging materials, used widely in industry and hence a leading indicator of basic business trends, have been doing exceptionally well.

★ PLANTING COMPANIES Depression in Scripts

Planting company reports bear witness to the fall in prices and crop too in some cases in 1961-62. The result is a deep depression in

planting scrips, leaving the Madras market inactive as manuscripts are on offer. The increase in wages proposed by the Wa Board will only create a mistri of plantings marked down already. The 10% of Blue Mountain caused disappointment natural but the 20% of Cons. Coff Estates has also led to disappointment and the shares have been offered for a week with the mark price quoting below Rs 20 cd. The trend of safe prices is watch with some anxiety and it is clear that an export trade can be built up if a cut in export duty is made. The wisdom of extending the acreage will be questioned, if India has a big surplus and famine in East Africa does not mean much, because African supplies to London are margin. The planting outlook has worried many since August and it is clear from a look at share prices that Madras prefers 'growth' not 'growth' shares, and the distaste for coffee shares is in striking contrast to the passion for coffee

drinking. The cut in Stanes Amalgamated dividend to 10 p.c. has been accompanied by a reference to the poor prospects for Indian coffee and promotion of sales at home may have to be undertaken on a large scale.

AUSTRALIA Menzie's Wins

The Australian election represents another personal victory for Mr Menzie's. The fear of inflation under Labour rule has been laid and the Labour party can examine how defeat arose from internal division. Dr Evatt's exit has again put Australian Labour out of the running for office and Mr Calwell has to maintain opposition without any advantage. The rise of a new class of voters who think of international conflicts and connections in a new way has not upset Mr R. G. Menzie's hold on the voter. And

if the export outlook is bad the Australian Government is thinking of sending another trade ship into Eastern waters in order to stimulate export trade with S. E. Asia.

The chances of capital influx on a large scale are improved by the prospect of another innings for Mr Menzie's. There may be fear of Asian capital coming in unexpectedly or secretly but Australia is an underdeveloped country and the need for capital is greater than the need for markets for wheat or wool. The enlargement of trade with China goes on without any reference to Communist designs or policy and Japan has been forgiven much, because she is a good customer. The voters in the State may like Mr Menzie's more than the Labour leaders. The trade unions will perhaps retain power and apply it as usual, but the Government can keep economic controls in force and to keep up borrowing abroad

for emergencies. The financial standing of Australia is now better than that of South Africa. That is one of the results of 1961 because most of Africa is reckoned less safe than the Asian countries where the risk of civil war is or was confined to Laos. And there too, the princes are patching up their differences.

INDUSTRIAL INDIA Shock Absorber Factory

The inauguration of the shock absorber factory of the Gabriel India Limited by Mr Y. B. Chavan, the Chief Minister of Maharashtra, at Mulund near Bombay constitutes an important landmark in the chequered annals of the automobile industry in the country. Production of shock absorbers within the country is significant

in more than one respect. It marks another step forward toward making the Indian automobile industry self-reliant and the saving of foreign exchange is an added attraction of the new project. The production capacity of the new plant in the initial stages will be of the order of 120,000 shock absorbers per annum which will subsequently be stepped further with the completion of the second and third stages of this plant. Another remarkable feature is the decision for progressive utilisation of indigenous contents, which at present will be about 40 per cent. Plans are also finalised to enhance it to 60 per cent by the completion of the second stage and when the third stage is completed it will be increased to 85 per cent. The three stages will be covered within a span of three and a half years. The saving of foreign exchange will also record a corresponding increase in each stage and when all the three phases of development programmes are implemented the total foreign exchange saving will amount to Rs 50 lakhs per annum.

In his inaugural address Mr Chavan drew pointed attention to the immense scope of ancillary industries to accelerate the pace of industrialisation in the country. While gratefully acknowledging the endeavours of the Gabriel India Limited, Mr Chavan observed that the new plant will bear eloquent testimony to the Indo-American collaboration. Gabriel Limited is a medium-sized industrial undertaking in the private sector, for which substantial financial assistance is provided by the Export Import Bank. As stated by Mr D. C. Anand, the Managing Director of the Company, production of shock absorbers in the new plant, would make a notable deletion in the imported components of automobile industry. It may also be remembered that this plant is the first of its kind established by the Gabriel Company (USA) outside the North American countries.

PERSONAL

A three-man delegation lead by Mr A. M. Thomas, the Deputy Minister for Food and Agriculture, left for Geneva to attend the international sugar conference.

Mr Govinda Narain has succeeded Mr S. N. Bilgrami, as the new Managing Director of the State Trading Corporation on Thursday last week.

The Board of Directors of the Press Trust of India has appointed Mr K. S. Ramchandran, chief of its Delhi Bureau, as the General Manager of the Trust. Mr K. N. Ramaswami, the present General Manager is due to retire shortly.

16 December 1961

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

MR G. L. Mehta was, in town last week, and though the primary purpose of his visit could, I reckon, be put down to the meeting of the Board of Directors of the Industrial Credit and Investment Corporation of India, a by no means subsidiary objective of his was to propagate the Indian Investment Centre, of which also he is Chairman. Since the Board of Governors of the IIC shares five among them with the ICICI's Board, naturally the "official" business could be conducted one after the other. That done, Mr Mehta felt free to expand upon the raison d'être of the IIC and to indicate the services that were available therefrom. Such elucidation was eminently desirable for the public knowledge about this (relatively) new institution is scant. Mr Mehta and Mr R. S. Bhatt, who is the Executive Director of IIC, met the Bengal Chamber and the Indian Chamber, made their facts known precisely and then proceeded to answer the questions that with machine gun rapidity were fired at them.

But first, if I may, something about the ICICI. You might justifiably argue that the ICICI can take credit for "pioneering" the new issue boom with its judicious underwriting of many an offer emanating not unoften from entrepreneurs of, at the time, less than national renown and reputation. Projects have been examined under a microscope; market conditions studied; the credentials, whether of the Indian entrepreneur or of the foreign collaborator, subjected to a close scrutiny. Then, and only then, and not till then, did the ICICI give the green signal for a new issue with its blessing and approval in the form of an underwriting operation. The ICICI has been in the nature of a catalytic agent: I dare say for every Rs 5 lakhs underwritten by this institution, ten times that amount has been vouchsafed by a (very properly) trusting shareholder public; and I may add that besides the spectacular success of the ICICI's operations has been responsible for practically every new issue to be offered only after it was duly underwritten; banks and brokers have climbed aboard the new issue bandwagon, and industries in the private sector have found it rather less hard to raise their capital needs from the market. If I remember right only two issues underwritten by

the ICICI resulted in large parcels left "unlifted." Phase II started with the availability of foreign exchange funds for companies to borrow: the World Bank has, I think, given three loans of \$10 million each, and a further amount of \$5 million was allotted from DLF. With foreign exchange reserves at a low level, industrialists were perforce increasingly compelled to go to Bombay rather than to New Delhi for their requirements in respect of any new projects they might have had. The result is that almost all the foreign exchange at the disposal of the ICICI has by now been committed, and we may expect Mr Mehta (or perhaps Mr H. T. Parekh) to hie himself to Washington early next year for negotiating, and may be even finalising, the next tranche of World Bank assistance for the private sector in India funnelled through the ICICI.

Nuff said, now, about ICICI. Those on Clive Street know how long it takes and how exasperating it is to conclude negotiations with a foreign collaborator. It often happens that a money-happy nouveau riche Indian entrepreneur thinks in grandiose terms of manufacturing practically everything that today is not made in India: so, he betakes himself to Delhi and sometimes succeeds in wheedling away an industrial licence therefor (that is, for practically everything, etc.). Then we have the commencement of discussions with 'A' in America, 'B' in Britain and down the alphabet, if that were possible, with 'Z' in Zanzibar. Muddled thinking causes delay; and it is a matter of months that elapse before agreement is reached that productive endeavour is to be concentrated on such-and-such items. Then another round of discussions in Delhi for fulfilling various other formalities, like clearance for getting the necessary foreign exchange. Placement of orders follows, and with luck, five to seven years after Genesis, things get a humming on the production line.

Time-wasting, effort-dissipating, hope-destroying and irritating, this rignarole. Hence the Indian Investment Centre, which seeks efficiently to do the following: (1) Advise Indian entrepreneurs as to the formalities that have to be gone through. (2) Inform foreign collaborators of the terms and conditions that

could be acceptable to Government. (3) Suggest the areas of production where the Indian entrepreneur would be well advised to restrict himself. (4) Compile a dossier of Indian entrepreneurs who are interested in new projects, also listing the fields of industry that they have experience in. (5) Compile a dossier of foreign companies that have given indications of wanting to invest in India. These are themselves necessary enough tasks that it is imperative should be done. But why the IIC has, I think, become very important indeed for Indian industrialisation is because, for reasons I shall be giving, prospects are now better than ever before of foreign investment in this country.

Investment in Europe is nearing saturation point; South America is politically a risk; labour shortage is imminent, and already present in some of the West European countries. As it is Sperry Rand (for example) chooses to manufacture its typewriters in Europe, closing down all productive units within America. Hence the growing interest in India; and there is also the consideration that the establishment of sub-

sidaries or affiliated companies (in the case of American enterprises) is attractive because of the desire, for the sake of prestige, to set up a global organisation. India seems again to be preferred because it is potentially a vast market. The Indian Investment Centre is therefore a very necessary institution for fostering industrialisation, and in broad terms it may be said to be entrusted with the task of liaison, in the preliminary stages of projects, between foreign collaborator and Indian entrepreneur. I am inclined to think that the IIC would be suggesting two kinds of projects which would be readily, and even gratefully, approved by Government. Industries with a high export potential will undoubtedly receive prompt and favourable clearance; industries set up with the intention of, say, direct export of the manufactures to the country wherein the foreign collaborators operate would similarly be accorded high priority. Then, projects whose net outflow of foreign exchange (royalty, consultants' fees, interest on loans, etc.) is exceeded by prospective earnings from export should be dealt with speedily by Government. I have high expectations of what the IIC can achieve, in the way of bringing about collaborative projects; I don't think that, with Mr Mehta and Mr Bhatt at the controls, I shall be disappointed.

EAVESDROPPER.

"LIC appear to be growing very rapidly!"

"They are among the largest insurers in the world!"

PEOPLE ARE TALKING ABOUT LIC

The LIC is winning favourable notice everywhere. And with reason. In 1960, the LIC achieved Rs 496 crores in "new business". This was an increase of 91% since Life Insurance was nationalized only a few years ago. Consider also the value of the total policies in force. By 1960 it had spiralled to Rs 2283 crores or nearly double the pre-LIC level.

The rapid strides made by the LIC have created a new confidence in the insuring public—a growing trust in the LIC's business initiative and sense of social mission.

Olympus

MINERALS DEVELOPMENT Assessment of Resources

SHORTAGE of foreign exchange may necessitate rigorous scrutiny and reordering of priorities in the implementation of the programmes for Industries and Minerals in the private sector. These programmes it is learnt, would be reviewed every six months and allotment of foreign exchange-credit would be made in the light of priorities which suggest themselves from time to time. This indication is available from what the Informal Consultative Committee of Parliament was understood to have been told by the Finance Minister last week, about the resources available for private sector programmes.

Total resources required for the approved industrial/mineral programmes of the private sector are estimated at Rs 1350 crores, including foreign exchange component of Rs 530 crores. As against this, total available resources were estimated in the Third Plan at Rs 1250 crores, including Rs 300 crores of direct foreign credit/participation in

capital. Government, it has been stated, is not in a position to make good the shortfall out of the foreign aid secured by it. Attainment of private sector targets in full will, therefore, necessarily depend on the success achieved in securing foreign collaboration and investment. At the same time it has been made clear that so long as foreign resources remained short of requirements, every effort will be made to ensure full attainment of targets in the case of 'high priority' programmes. The priorities, as indicated above, will be reviewed every six months and allocations of foreign exchange made accordingly. An important consideration which has been frequently stressed in connection with the allocation of priorities is the contribution an industry can make towards relieving the pressure on foreign exchange either through import saving or through additional exports.

The Planning Commission's estimates of the funds from different sources available for investment in private sector industrial/mineral programmes is given below along with comparative figures of the estimates of the funds drawn from different sources in the First and Second Plans.

	(Rs Crores)		
	First Plan	Second Plan	Third Plan
Loans from institutional agencies	18	80	130
Direct loans from Central and State Governments	26	20	20
Foreign Capital including Suppliers' Credit	42 to 45	200	300
New Issues	40	150	200
Internal and other sources	211 to 214	400	600
Total	340	850	1250

The figures in the last column above, it may be noted, do not represent rigid allocations made by the Planning Commission of the funds which private sector may draw from different sources, but are in the nature of broad estimates of the funds likely to be available from these sources.

While the position in regard to the private sector programmes is as indicated above, the total amount of external assistance available for disbursement by Government during 1961-62 for the implementation of Third Plan projects amount to Rs 1012 crores. The entire amount would be committed during the first two years of the Plan, but actual disbursements may be spread out over a longer period. The total of Rs 1012 crores available in the first year is made up of: (1) carry-over of assistance authorised for Second Plan projects amounting to Rs 368 crores; (2) external assistance for Third Plan projects

authorised during the Second Plan Rs 329 crores; and (3) aid authorised by the World Bank consortium for 1961-62 at the meeting held May/June in respect of which agreements have been finalised with donor countries up to 25-11-1961 Rs 315 crores.

Out of the total consortium aid promised of \$2286 million or Rs 1069 crores, aid totalling \$1295 or Rs 616 crores is expected to be authorised during the current financial year and, so far, bilateral agreements have been concluded with the donor countries for \$661.5 million or Rs 315 crores against the amount promised for 1961-62. In this connection it is pointed out that sometimes authorisation of the promised aid takes time when it is dependent on legislative approval. Then again more time is required for preparation of project reports, appointment of consultants etc. before inviting tenders for import of machinery and equipment. Actual utilisation of

the aid authorised for the current year may, therefore, not start till the very end of the financial year. In the meantime another meeting of the Consortium is scheduled to be held in January 1962 to review the position and consider what further resources may be made available, for the Third Plan.

Tax Collections

An optimistic assessment of the internal resources available for implementation of the Third Plan is justified by the resiliency of the economy as indicated by collections of taxes both direct and indirect. Collection of Income-tax including Corporation-tax during the six months from April to September amounted to Rs 109.84 crores as compared with Rs 93.93 crores during the corresponding period of last year, showing an increase of Rs 15.91 crores. The increase is attributed to the better performance of industry and commerce during the current year as compared with the last which is reflected in higher dividend declarations. Other direct taxes such as the wealth tax, gift tax and expenditure tax show small variations either way. As regards indirect taxes, while collections of Customs duties are running at about the same level as last year, Central Excise show increase of Rs 15.21 crores. The increase, though not very large, is an indication of expanding production. Out of the fifty-five items on which Central Excises are levied, all except nine items show more than the pro-rata expectations based on budget estimates for the year. Central Excise collections during April/September 1961 amounted to Rs 214.20 crores (Rs 193.78 basic duties and Rs 20.42 crores additional duties) against pro-rata expectations of Rs 229.41 crores (Rs 209.85 basic and Rs 19.56 additional duties.)

Incidence of Indirect Taxes

Recent years have seen a marked expansion of indirect taxation. More commodities have been brought under Central Excise, while the sales tax has been extended to areas where formerly it was not levied, such as Part B and Part C States. A study undertaken by the Tax Research Unit of the Department of Economic Affairs, Ministry of Finance, of the distribution of the money burden of indirect taxes shows the changes that have taken place since the first systematic study of the incidence of these taxes was undertaken by the Taxation Enquiry Commission in 1953-54. In the interval revenue collected from indirect taxes has gone up from Rs 431 crores in 1953-54 to Rs 968 crores according to the budget estimates of 1961-62. The actuals for the year according to current indications will be over a thousand crores.

The main findings of the study, which relates to the year 1958-59, are:

- In 1953-54 indirect taxes formed 3.6 per cent of consumer expenditure of all households in the country. By 1958-59 the proportion went up to 5.7 per cent. The rise was mainly under Central Excise Duties and Sales Taxes.
- The proportion of consumer expenditure paid in indirect taxes by rural households rose from 2.9 per cent in 1953-54 to 4.4 per cent in 1958-59, and by urban households from 5.9 per cent in 1953-54 to 9.3 per cent in 1958-59. Central Excise Duties were mainly responsible for raising the proportion for rural households and both Central Excise Duties and Sales Taxes for increasing the proportion for urban households. The increase in the relative burden on urban households over the period was slightly more than the increase on rural households. While urban households paid in 1953-54 twice the proportion of the consumer expenditure paid in indirect taxes by rural households, by 1958-59, the proportion paid by urban households increased to 2.1 times than paid by rural households.
- The distribution of the money burden of indirect taxes among different expenditure groups was progressive both in 1953-54 and 1958-59. The proportion of consumer expenditure paid in indirect taxes by different expenditure groups rose progressively from 2.4 to 5.5 per cent in 1953-54 and from 3.1 to 9.3 per cent in 1958-59. The proportions paid by different expenditure groups of rural and urban households separately also showed a similar trend. The progressive rise was: from 2.2 to 4.1 per cent in 1953-54 and from 2.5 to 6.9 per cent in 1958-59 for rural households; and from 3.6 to 8.2 per cent in 1953-54 and from 5.8 to 13.8 per cent in 1958-59 for urban households.

The burden of taxes was analysed for households divided into five categories according to monthly expenditure. The lowest category consisted of households with monthly expenditure not exceeding Rs 50 while the highest category consisted of households with monthly expenditure of Rs 301 and above.

GENERAL TYRES LIMITED

Production will Commence by Middle of 1962

Sir A. Ramaswami Mudaliar, the Chairman, on the Scope of New Activities

Chairman's address delivered by Sir A. Ramaswami Mudaliar at the First Annual General Meeting of your Company. Meeting of the Company held on 11th December, 1961.

Gentlemen:

I have great pleasure in welcoming you to the First Annual General Meeting of your Company. The Director's Report and audited Accounts for the period upto 30th June 1961 have been in your hands for sometime now and with your permission, I take them as read.

You will have observed from the audited accounts that there has been a net loss of Rs. 1,05,203 during the period under review which has been carried forward. The loss is really due to necessary expenditure incurred during course of construction of the factory. In this context the provision of Rs. 8,000 for Income-tax may appear to be paradoxical, but according to existing tax law this had to be done in respect of the interest on bank deposits earned during the period to the extent of Rs. 15,000.

If the structure of share holdings may be taken as an index, your Company has been favoured by a wide degree of public support. Subscriptions were widely distributed on a regional basis and also according to the size of applications.

I think it is desirable to review briefly the progress of the automobile tyre industry in the recent past and its prospects for the future in the light of road transport development in the country before referring to the progress made by your Company. Since the beginning of the First Plan period there has been remarkable expansion of motor transport in India and both road mileage and the number of motor vehicles have recorded substantial increase. During the decade covered by the First and Second Plans total road mileage in India increased from 1,48,500 to 3,94,000 and the number of commercial vehicles on road from 1,16,000 to 2,10,000. The automobile tyre industry fully kept pace with this development, production of tyres having increased from 9,00,000 Nos. in 1950-51 to 13,50,000 Nos. in 1960-61 representing a rise of 50 per cent. In fact the performance of the tyre industry compares very favourably with the trend of overall industrial growth in the country; taking 1951 as the base the indices of production of tyres and tubes in July 1961 were 298.1 and 259.8 respectively as against the general index of 174.2.

PRESSURE ON RLY. TRANSPORT

In view of the great pressure on railway transport and the need for coordinated development of various forms of transport as anticipated for the Third Plan period, there is substantial scope for expansion of road transport and consequently the tyre industry. According to the Third Plan the number of road vehicles (including passenger cars commercial vehicles, jeeps and station wagons, motor cycles and scooters) is expected to be 3,65,000 in 1965-66 representing an increase of about 75 per cent over that in 1960-61. The target for the production of automobile tyres to be achieved by 1965-66 has been fixed at 3 million Nos. (against an installed capacity of 3.7 million numbers) constituting a rise of more than 120 per cent over the production of 1960-61. It is understood that the Government of India are considering a further upward revision of the aforesaid target capacity.

The Government of India have issued licences to a number of industrial undertakings for expansion of capacity and/or setting up of new units for the production of automobile tyres and tubes within the Plan target. At present there are ten units licensed for the manufacture of automobile tyres and tubes out of which six are in operation as against only two in 1950-51. In the genuine interest of a healthy growth of the industry as a whole, the Government would, I am certain, consider the desirability of regulating their licensing policy in such a manner as to enable the new enterprises sanctioned to achieve economic production and establish themselves on a sound footing.

Your Company represents one of the undertakings licensed for establishing a new tyre plant in West Bengal with a capacity of 15,000 Nos. each of tyres and tubes per month. You will have got an idea about the progress of this Company from the Directors' Report already circulated to you. Construction of the main factory building, stores and offices is fast nearing completion. Out of the Import Licence for Licence for plant and machinery worth Rs. 80 lakhs obtained by the Company a major portion has already been received at the factory site and further shipments are on the way. It is expected that delivery of all plant and machinery to be imported from Czechoslovakia will be completed by 1962. According to arrangements with the Techni-

cal Collaborators a team of erectors is expected to be at the factory site shortly to supervise the erection of plant and machinery. The technical personnel deputed by the Company to Czechoslovakia for training and finalisation of the Project Report have returned to India. If there is no serious hold-up in the present programme the plant at the factory will be commissioned for trial production by the middle of next year, which will be accepted as a good performance.

In order that your Company may play its proper role in the growing tyre manufacturing industry in the country your Directors have decided to expand the scope of its activities and accordingly an application has been made to the Government of India for permission to expand and diversify the Company's operations by installing further and/or fresh capacity for the manufacture of tyres and tubes for cars, trucks and buses, motor cycles and scooters, etc.

RAW MATERIALS

As regards raw materials, the cost of the principal raw material for the tyre industry i.e. Indian rubber has increased since April 1961 due to the levy of a substantially higher rate of cess the increase being from approximately 13 nP per Kg to 30 nP per Kg. The supply of Indian rubber has been lagging behind the requirements of the tyre and general rubber industry, being about 25,000 tons as against the consumption of about 58,000 tons during the 12 months ending September 1961. It has been necessary to meet this gap by import of natural and synthetic rubber; estimated imports thereof during 1961 would be 21,000 tons and 8,450 tons respectively.

In regard to other important raw materials also, viz., tyre cord, bead wire, valves, carbon black, the country is yet largely dependent on imports. It is, however, gratifying to note that steps are being taken to arrange for production of these items in India and it is hoped that by the end of the Third Plan period the tyre and rubber products manufacturing industry in India will be substantially self-sufficient in this regard as certain projects are likely to be implemented by that time, viz., the 20,000 tons synthetic rubber plant at Bereilly, the three units licensed with a total capacity of 34 million lbs. of rayon cord, the unit licensed for manu-

facture of automobile tyre valves, the carbon black plant being set up at Durgapur with a capacity of about 15,000 tons per annum and the rubber chemicals plant near Calcutta. Grant of license for the setting up of a bead wire factory is also reported to be under the active consideration of the Government of India. When all these plants licensed or to be licensed hereafter go into full production not only will there be a substantial saving in foreign exchange now being spent on import of the materials but also the tyre industry will be saved a good deal of uncertainty and delay in the matter of such imports.

Before I conclude you will, I am sure, wish to join me in expressing our warm appreciation of the co-operation and assistance received from the Technical Collaborators Messrs. Technoexport Foreign Trade Corporation of Czechoslovakia, the services rendered by the Managing Agents of the Company Messrs. National Rubber Manufacturers Ltd., and also of the loyal and devoted work of the officers, staff and workers of the Company.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given that the Board of Directors has declared an Interim Dividend of 5% (subject to deduction of Income-Tax) in respect of the year ending 31st December, 1961, payable on or after 29th December, 1961 to those members whose names are entered in the Register of Members of the Company on that date. Dividend Warrants will be despatched to members and no application to the Company is necessary.

NOTICE is also hereby given that the Register of Members of the Company will be closed from 20th December, 1961 to 29th December, 1961, both days inclusive.

By Order of the Board,
BALMER LARIE & CO. LTD.
D. MANSON
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.
11th December 1961.

Markets

TE Sharp Rise in Jute Output

DE price fluctuations characterised trading in the jute markets, especially the gunny market. Sentiment was quite firm in early alings following the publication of the figures relating to jute goods stocks. It was generally expected that goods stocks at the end of last month would show a substantial rise as it was believed that offtake during the month had been at a disappointingly low level. But the actual stock position as disclosed by the figures is quite different. Total stocks of jute goods at the end of November were placed at only 57,400 bales at the end of October, owing a rise of only 1,900 bales. Hessian stocks at 17,700 bales were 700 tonnes higher than other goods at 9,800 tonnes are higher by 1,400 tonnes. Stocks of sacking at 29,900 tonnes, however, were 200 tonnes lower. The performance of sacking came as a surprise because indications were that this category of goods was not in active demand. The impression was strengthened by reports of the continued prefer-

ence of foreign buyers to jute goods from Pakistan because of the lower prices offered by that country. From the figures for sacking stocks at the end of November, it would appear that the offtake of sacking had been on quite a satisfactory level.

The figures relating to production of jute goods during November released a few days later confirmed that despatches last month had been quite large. Jute goods production in November amounted to 93,700 tons showing a sizable increase from October production of 77,700 tonnes. The rise in production is partly due to the increase in working hours. Mills in November had worked 208 hours as compared with only 178.5 hours during the previous month. It is also partly due to the fact that mills have unsealed a further 2½ per cent of their total looms from 13 November. From the two sets of figures it will be clear that total goods despatches during November should have been in the neighbourhood of 90,000 tonnes as compared with 75,000 tonnes recorded in the previous month.

The period of high production is likely to continue upto the end of January as the Committee of the Indian Jute Mills Association

has decided that the working of the additional 2½ per cent of the looms should be extended for a further period of one month up to the end of January 1962. The Committee has come to this decision after considering the market situation in the light of the stocks of jute goods held by the mills at the end of November. The extension by one month is expected to relieve the shortage of ready goods in the Calcutta market. It may be recalled at the time of the decision to unseal the looms with effect from 13 November, it was stated that the period of the unsealing would be to the end of the year. The Committee has further pointed out that the level of production after January will be determined on the basis of the stock position at the end of December and the matter will be reviewed when the stock figures are available next month. This will be about this time in January.

Following this announcement the jute markets have been running easy. B Twills Ready which was

Jute Goods Stocks as at 30th November, 1961.

at one time was done upto Rs 133.50 from an opening level of Rs 130.65 has come down sharply to Rs 127.90 by close on Wednesday.

Prices have moved both ways in hessian also but both the rise and fall have not been so sharp as in the case of sacking. 40"×10 oz Hessian Ready was quoting at Rs 52.50 and after being done up to Rs 54.25 it reacted to close on Wednesday at Rs 52. There were reports of some enquiries both from the US and UK around midweek but such enquiries were conspicuous by their absence as the week drew toward its close.

The raw jute market ruled steady in the first half of the week under review helped by the steadiness of the goods section but in later dealings developed a reactionary tendency and at close

on Wednesday Assam Bottom was quoting 50 nP lower on balance at Rs 30 the minimum prescribed level. Even at the lower level mill interest was meagre while sellers were keen for business. It would appear that besides the continued heavy arrivals sentiment has been adversely affected by reports that fresh licences for the import of a sizable quantity of jute from Pakistan have been issued.

TEA Good Export Demand

IN the Export Sale held in Calcutta this week, offerings were 71,905 packages. There was a strong general demand for all descriptions. Plain brokens were firm and sometimes dearer, while similar Fannings were often up to 20 nP per kilo dealer. Good and medium Assam BOPs with useful liquors met with strong support and were sometimes considerably dearer, while plainer BOPs from this district were well supported around last rates. Orthodox Fannings were also sold readily around last rates.

Best and medium CTC descriptions, though irregular, were generally well supported and were often dearer. Secondary sorts were, however, very irregular and sometimes declined in price. Legg-cut Dooars were dearer.

There was more interest in Whole Leaf grades and prices, particularly for the cheaper varieties, ruled dearer. Darjeelings met with good support and the better teas in this category were generally dearer. Tippy teas met with a fair demand. Following rates were quoted:—Clean Plain Pekoe Rs 3.80 to Rs 4.00; Plain BP Rs 3.40 to Rs 3.60; Plain Fannings Rs 3.50 to Rs 3.70; Medium Assam CTC BP Rs 4.50 to Rs 4.90; Medium Assam CTC Fannings Rs 4.50 to Rs 4.90; Best Assam CTC BP Rs 5.00 to Rs 5.60 and Best Assam CTC Fannings Rs 5.10 to Rs 5.70.

In the Internal Sale, offerings were 26,257 packages of dusts and 578 packages of Leaf grades. Demand for dusts was good in general, but at easier rates. Clean medium CTC descriptions decline in value by up to 20 nP, but the good CTC teas net with useful enquiry and were fully firm to dearer. Fibrous teas were sold well at irregular rates. Orthodox descriptions were 10 nP and some times 15 nP below last rates, the smaller plain liquoring kind meeting with less support than recent weeks. The few bright teas were, however, sold well. Legg-cut teas also depreciated in value and were irregular up to 15 nP easier. Following rates were quoted: Plain Orthodox Dust Rs 3.65 to Rs 3.90; Medium Assam Dust Rs 3.85 to Rs 4.10; Legg-cut Dust Rs 4.20 to Rs 4.50.

16 December 1961

Medium Assam CTC Dust Rs 5.45 to Rs 6.00 and Good Assam CTC Dust Rs 6.40 to Rs 6.80. There was a fair demand for the Leaf grades. The Green teas, on offer, were sold well.

Meanwhile, tea production in North-East India has shown a sharp decline to 58.98 million pounds in November from 98.85 million pounds in the previous month. Compared to November last year, however, when the output was 54.25 million pounds, last month's production shows an increase of 4.73 million pounds. In the eight months, April to November 1961, total production is substantially higher at 588.4 million pounds as against 515.84 million pounds in the corresponding period of last year.

Total exports of tea from India, up to the end of October 1961, amounted to 329.98 million pounds valued at Rs 92.33 crores as against 304.09 million pounds valued at Rs 85.31 crores and 347.19 million pounds valued at Rs 91.56 crores during the corresponding periods of 1960 and 1959 respectively. If the present trend in exports continues, it is expected that a total quantity of about 475 million pounds valued at Rs Rs 126 crores will be exported during the current year as against 430 million pounds valued at Rs 121 crores and 472 million pounds valued at Rs 126 crores during 1960 and 1959 respectively.

Total arrivals of tea in Calcutta from the producing regions in North-East India by rail, river and air, during the period January-October 1961, were 2.76 million chests as compared to 2.31 million chests in the corresponding period of last year. These arrivals should not have any adverse effect on the freight market. On the contrary, the quantity of tea sold at the Calcutta auctions during the current year had been larger.

Stocks of tea in Calcutta warehouses rose substantially to 1,044,777 chests at the end of last month from 929,168 chests at the close of October. Stocks in public warehouses rose from 560,407 chests at the end of October to 658,662 chests at the close of November as did those in private houses from 368,761 chests to 386,115 chests. At the end of November 1960, stocks in Calcutta warehouses were only 875,025 chests with public warehouses accounting for 545,107 chests and private warehouses for 329,918 chests. Besides, afloat stocks at the end of November 1961 amounted to 16,677 chests as compared to 9,783 chests at the end of the previous month and 56,476 chests at the close of November last year.

The steep fall in export prices of tea from North-East India at the Calcutta auctions has, however, been causing serious anxiety among planters. The fall is more conspicuous in respect of Common teas. It is gathered

that many gardens are selling much below the cost of production. Considering the bumper crop this season, producers expect a further fall in the coming weeks. The general feeling is that the absorptive capacity of the export market is being more than fully met.

In the Cochin market, 549,000 kilogrammes of Leaf tea were offered for export. Against better general demand, Plain and Low Medium Brokens were irregularly 20 to 25 nP a kilo lower, while similar Fannings were 30 nP to 40 nP easier. Good Mediums and Mediums were in form, while highgrowns were steady. Unorthodox types had better demand at improved prices. Plainest teas were the weakest feature of the sale.

According to trade sources from Cochin, total exports of tea from South India were lower at 41.86 million pounds during the period April to October 1961 as against 44.18 pounds in the corresponding period of last year. The decline in exports was due to poor demand from a number of important customers with the UK reducing her offtake from 27.71 million pounds to 25.86 million pounds in the period under review. South Indian tea supplies to the USA and Canada, on the other hand, increased from 2.58 million pounds and 2.89 million pounds in the seven months ended November 1960 to 3.28 million pounds and 2.93 million pounds respectively in the period under review.

COTTON Wide Price Fluctuations

Wide fluctuations in the price of the Jarilla March contract was the main characteristic of the trading in the Bombay cotton futures market. The ruling contract after a strident rise to Rs 684.25 closed on a slightly subdued note due to a host of reasons. The initial rally was fanned by the excellent buying support from the mills, the downward revision of the crop estimates to 4.65 million bales and the gloomy prospects of any sizable import of American cotton. It was at one time feared that the contract was heading to pierce the basic ceiling of Rs 693. However, toward the close of the week there was a veritable landslide in the values due to nervous long liquidation resulting from the reported orders of the Textile Commissioner on a few cotton firms in Bombay freezing their stocks, both sold and unsold. The sentiment was further affected by the apprehension of drastic measures by the authorities to cry a halt to the rising trend in prices. The change in sentiment was also partly due to the current rumours that the Forward Markets Commission will declare a state of

emergency in the trading market. All these factors naturally led to a spate of bull liquidation which erased half of the gains realised in the earlier part of the week. However on Monday last the futures market registered a distinct recovery thanks to the sustained upcountry support and encouraging advices particularly from Gujarat and buying by share-market interests. The Jarilla March contract on Tuesday closed at Rs 676.00.

Meanwhile the East India Cotton Association is reported to have decided to approach the Forward Markets Commission to allow trading in the August contract with a view to lessening the pressure on the ruling contract.

In the spot market a Sewri prices continued to ride above the ceiling in almost all the varieties. There was a broadening of mill buying in Khandesh, 137/3,147 and Moglaj. Toward the close of the week near panicky conditions were visible in the market obviously due to the reported orders of the Textile Commissioner to freeze stocks lying with some of the cotton firms. However this measure failed to deter mill buyers from effecting purchases at terminal markets where the prices ruled above the ceiling levels.

In the import section prices of African growths firmed up largely due to the paucity of offer from Kampala consequent on the reported damage to the Uganda crop. Higher grades of Sudanese cotton attracted sustained demand. Available lots of imported growths particularly American cotton were eagerly sought after.

In the export section, prices of Bengal Deshi ruled steady. According to the consensus, the Government is likely to release licences for the export of the balance of 25,000 bales of Bengal Deshi held out of the original export quota announcement of 150,000 bales.

The consumption of 197/3 cotton by mills during the past season totalled 840,588 bales. The crop estimates of this growth during the current season is placed at nearly 0.49 million bales.

A press note released by the Joint Chief Controller of Imports and Exports conveys the decision of the Government of India to extend the shipment period from 31 December upto 15 January 1962 in respect of imports of cotton stapling 1-1/16 inches and above but below 1-3/16 inches. The Govt. on 2 May permitted imports of 0.2 million bales of cotton stapling 1-1/16 inches and above from any area valid for shipment from 1 July to 31 December this year. Out this quantum, 50,000 bales of cotton stapling 1-1/16 inches and above but below 1-3/16 inches were allotted for distribution to consumers of imported growths on the basis of the allocation of such cotton during the previous season.

PAKISTAN CROP:

According to the Pakistan Department of Agricultural Economic and Statistics the area under cotton cultivation for the year 1961-62 will be about 3.3 million acres (2.9 million acres of American cotton and 450,000 acres of Deshi crop). These figures indicate a nominal decrease of about 0.1 per cent. The area under the American variety is slightly higher by 0.6 per cent while the Deshi crop is marked down by approximately 4.7 per cent.

PIECEGOODS:

Dull and featureless trading conditions continued to prevail in the Bombay piecegoods market. The turnover consequently dwindled into a tiny trickle. The earlier anticipation of a revival in the upcountry demand was belied and barring stray enquiries from Calcutta, UP and Punjab all other consuming centres were practically inactive. The absence of adequate demand from the upcountry centres was ascribed largely to the inadequate availability of funds and the lack of consumer demand.

The market seems to have received a jolt on the reports of fresh troubles in the border areas and the closure of booking traffic by the Railways had considerably restricted any improvement in the offtake. The disturbing reports of the failure of the two parties in the Mulji Jetha market also cast a depressing spell on the market.

Even the demand for powerloom goods like saris and dhoties failed to evince any sign of improvement. The prices, however, remained more or less unaltered presumably due to the high prices of yarn.

The export front also proved to be equally unsatisfactory. Despite stray enquiries from the United Kingdom, booking was rendered impossible on account of the disparity in prices to the tune of about two to three per cent between the exporter and importer. Booking on a moderate scale was reported to have transacted with Singapore and Continental countries. Indonesia kept away from the market presumably due to the supply of piecegoods from Hong Kong at competitive rates.

Canada focussed its attention on bedsheets, blankets and other household linens. Enquiries from Australia were directed toward heavy drill flannelette and USA's fancy hovered around bagging cloths.

Buffer Stock in Lac

IN pursuance of the decision of the Government of India that the State Trading Corporation should under-

lac, the STC invited open quotation from the market for IB, IIB and fine Bysakhi grades of seedlac. A number of quotations have been received in response to the tender and, after considering the quotations, the STC has decided to purchase at present about 700 maunds of IB and 4,300 maunds of IIB variety. It has been noticed that the stocks offered in response to the tender were mostly stocks, which were accumulated with the shippers and other traders in Calcutta and elsewhere.

As the next Katki crop of seedlac is expected soon, the STC proposes to enter upon the second phase of its buffer stock operations. It is proposed to start purchase operations with a view to stabilising prices within the framework of the scheme for the three grades at selected centres in the States of Bihar, Maharashtra and West Bengal. The regional office of the STC at Calcutta has been entrusted with the work of buffer stock operations and has been authorised to undertake all necessary actions in this behalf.

According to the Indian Lac Exporters Association, exports of shellac during the past month improved to 31,666 packages (each weighing 74.4 kg) from 28,049 packages in the previous month. While shipments of shellac and buttonlac increased from 13,964 packages and 429 packages in October, 1961 to 21,127 packages and 1,053 packages respectively in the month under review. Shipments of seedlac and other varieties, however, declined from 10,185 packages and 3,471 packages to 6,236 packages and 3,250 packages respectively.

Shellac is exported from this country under the minimum price scheme, which is Rs 152 per package f.o.b. Calcutta for Pure TN grade. While shipments of shellac are running at a satisfactory level at present, the State Trading Corporation, as mentioned earlier, has taken steps to establish buffer stocks for stabilising prices.

Thanks to the above measures, prices in the Calcutta market have developed a firmer tendency. The rate for the Pure TN variety is quoted around Rs 126 with good buyers at this level as against Rs 120 quoted a month ago.

SUGAR

Conditions in various Sugar markets have generally been quiet, thanks to the easy supply position. While the bold superior crystal is being traded at a premium of about a rupee per maund over the former controlled price, the inferior small crystal variety lacks enquiry even at the lower levels. All factories in West Uttar Pradesh have commenced their crushing season and are attracting adequate cane supplies at the Government-fixed rate of Rs 1.50 a maund. In the Hapur market, the rate is quoted at Rs 108.50 per bag.

The Export Agency division of the Indian Sugar Mills Association has stated that the US Government has allotted an advance quota of 50,000 short tons of sugar for India for the first half of 1962. The resumption of sugar shipment to the USA will commence at the end of this month. Already three ships had

been booked in this connection and as much as 31,500 long tons out of the 50,000 short tons (equal to 42,000 long tons) will be off India's shores by the middle of January next. Steps are also being taken to secure more shipping space in order to expedite early shipment of the balance quantity as well.

The advance allotment of sugar quota for 1962 now by the US Government is the result of strong representation made in this connection by the Government of India following the cut of an equal quantity effected by the Agriculture Department on 23 October in the 1961 quota. The cut caused serious inconvenience to the trade and industry in Calcutta; because they had already made arrangements, including commitment for shipping contracts, for shipment of the entire quota allotment to India for 1961.

It is unfortunate that the sugar problems have been tackled in a casual manner. Nothing has been done to promote consumption. If the domestic offtake were raised, the stock of 1.19 million tons would not look excessive. If domestic consumption is to be promoted, the price needs to be reduced. This can be done in two ways. The first is, that taxation on the commodity has to be reduced. Secondly, production costs must be cut by improving the operational efficiency of factories and by reducing the cane price and linking it to quality rather than quantity.

Talks will resume in Geneva this week about the Cuban sugar problem. Because of the US ban on Cuban imports, Cuba is demanding a sharp increase in her export quota for world markets. But, all countries, apart from the Soviet block, have so far refused to agree to the figure she wanted. The chances of finding an answer have improved in recent weeks, as it is now known that Cuba will have less sugar to export next year than expected, because of a drop in her output. Whether a real long-term solution to the sugar question can be found is another matter. The sugar market, like so many others, is still overshadowed by heavy surplus supplies.

FOODGRAINS

In the Hapur market, Foodgrains prices manifested a steady trend due to poor arrivals in the face of a good consumer demand and the tense political situation in Goa. Wheat registered a rise of 50 nP to Rs 16 a maund for average quality and up to Rs 17.75 for the superior farm produce. The "rabi" crop is reported to be progressing under favourable weather conditions.

The market for Rice continued to rule quiet, thanks to the increased inflow of the new crop. Consumer demand is also slack. Gram prices have steadied up to Rs 15.12 a maund for the Punjab variety in response to a good consumer demand. Despite heavy arrivals, Maize is steady at Rs 12.50 to Rs 13.50 due to support from stockists. Bajra prices have advanced by 50 nP to Rs 14.75 due to seasonal demand. Among Pulses, Peas and Arhar have drifted

lower in the absence of loading facilities.

A sharp increase in the prices of indigenous wheat provided the main feature of trading in the Bombay market. Mounting political tension and the decision of the railways to cancel certain train services and suspend booking created a stir in the market. It was feared that the City might face a shortage of wheat in the absence of arrivals from the Punjab. Consequently, varieties grown in that State attracted a strong trade support, which resulted in an improvement of Rs 4 to Rs 5 per quintal.

Indigenous Rice reflected a slightly steadier undertone in sympathy with the strength in wheat. In the Coarse grains section, Bajra revealed a firm tone with the prices rising by Rs 2 to Rs 3 per quintal. Jowar also looked up by about a rupee due to improved offtake and higher upcountry advices. Pulses made, however, a mixed showing. The suspension for goods booking imparted strength to gram, which rose by about a rupee.

NON-FERROUS METALS

Prices on the Bombay Non-Ferrous Metals market have shown a mixed trend, while Tin and Copper are ruling firm, Zinc and Lead have tended to decline.

After an initial easiness on lower Singapore advices, Tin prices strengthened considerably on growing tension over the Goa and China borders and the reports that many trains had been cancelled as a result. The consequent wagon shortage gave rise to heavy short-covering and strong bull support. The absence of offerings, higher upcountry advices, smaller delivery orders and paucity of stocks—all these factors gave the market a sharp upswing.

In sympathy, Copper prices moved up. Importers and the manufacturers have generally welcomed the Government announcement of the procedure to be followed for the import of copper unwrought in various forms from the USA only against quota licences. Some manufacturers feel that, with the publication of the procedural details, the flow of the much-needed raw material will be made easier. Others, however, do not regard the announcement as affording a large relief to the producers. They say that the imports from the USA under DLF involve higher costs, greater delays and procedural difficulties. Meanwhile, producers will continue to be starved of their essential raw materials until the supplies are received in the country.

Zinc has suffered a further setback in the absence of support, selling by the manufacturers and increasing arrivals. Since the International Study Group on Zinc and Lead decided at Geneva, towards the end of October, not to impose any cuts on the production of zinc, the problem of excessive supplies in the face of lower consumption has been aggravated. Those who had accumulated stocks in the hope that the October 1961 to March 1962 licensing policy would bring about restrictions in imports in view of

the acute stringency of foreign exchange, were disappointed when they found that more zinc was likely to be brought into the country.

GOLD & SILVER

After initial firmness, prices on the Bombay Bullion Exchange displayed an easier tendency due to liquidation on reports that the Government was not in favour of war if the Lisbon authorities wanted the Goa issue to be settled by peaceful methods.

The initial firmness in Gold was mainly influenced by the political developments with regard to Goa. Arrivals of smuggled metal, which at one time amounted to 10,000 tolas, declined to 4,500 tolas owing to the strict vigilance of the Indian military on the Portuguese border. Although the arrivals dwindled, the offtake did not improve to the expected level. Gold freely changed hands at Rs 121.25 to Rs 121.40, while Sovereign ruled steady at Rs 98.75.

Although a little replacement buying and bear covering caused Silver prices to move up for a while, this was not sustained. Sentiment was adversely affected by political uncertainties. Arrivals amounted to 28 bars as against an offtake of only 14 bars. Ready (below 998) changed hands at Rs 210.05 to Rs 210.40.

OILS & OILSEEDS

The Bombay Oilseeds Exchange presented an excited appearance with both spot and forward prices fluctuating both ways on hectic speculative buying and nervous selling induced by political developments. Initially, buyers were active under the shadow of a possible war, while fears of local shortages of spot supplies encouraged buying and prices soared sharply. Later, the market returned to relatively sober conditions as the threat of immediate war tended to recede.

While the futures trading in Groundnut continued to be suspended with the January contract remaining at the ceiling, spot prices of groundnut and groundnut oil registered a sharp rise due to sustained support from crushers and vanaspathi manufacturers. Towards the end of the week, there was, however, a general feeling that, with the commencement of marketing of the new crop, the internal prices would seek lower levels and thereby strike a parity. Ground ready Bold was quoted at Rs 46 and Groundnut Oil at Rs 19.25.

In the Castorseed section, operators exploited political tension with a marked aggressiveness. Although the prospects of exports of castor oil continued to be bleak with domestic prices remaining above world levels, reports that Brazil had raised its prices by about 75 per cent provided a good enough bullish factor to the market. Castor ready was quoted at Rs 33 and Castor Oil, commercial quality, at Rs 14.

The Linseed section generally followed the pattern set by groundnut and castorseed. Linseed ready was quoted at Rs 43.50 and Linseed

Company Reports

Ballarpur Paper Fares Well

Although the impact of the cut in paper prices, as recommended by the Tariff Commission, is very much more than what the working results of the Ballarpur Paper & Straw Boards Limited show, the adverse effect has, to a large extent, been offset by increased production and better operating efficiency. Production of paper for the year ended 30 June, 1961, shows a rise to 12,925 tons from 11,859 tons, while sales have increased to Rs 2.40 crores from Rs 2.35 crores.

The net profit, after providing for Depreciation and Taxation, is higher at Rs 36.41 lakhs as against Rs 34.39 lakhs for the preceding year. Except for Dividend Equalisation Reserve which is raised to Rs 10 lakhs from Rs 7.50 lakhs, all other allocations have been reduced.—Depreciation to Rs 7.38 lakhs from Rs 12.94 lakhs; Taxation to Rs 25 lakhs from Rs 27 lakhs; Development Reserve to Rs 1.10 lakhs from Rs 1.28 lakhs and General Reserve to Rs 15 lakhs from Rs 15.50 lakhs. The directors have proposed a dividend of 14.5 per cent, taxable, on the increased ordinary capital as against 14.3 per cent, taxable, on the original capital.

The directors have, in their report, stated that the first consignment of the imported plant and machinery is expected to be around June-July, 1962. The last and final shipment in completion of supplies is expected to take in March, 1963. For the proper and efficient working of the new plant, a suitable training programme is being devised in consultation with the company's machinery suppliers in Paris and West Germany.

Phosphate Company Reduces Dividend

The rise in freight and customs duty on raw materials and the increase in the cost of packing are reflected in the working results of the Phosphate Company, Limited for the year ended 30 June, 1961. Although sales are higher at Rs 30.50 lakhs against Rs 27.54 lakhs, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 5.78 lakhs as against Rs 8.40 lakhs for the previous year.

The Depreciation amount is raised to Rs 4.48 lakhs from Rs 1.13 lakhs, while Taxation provision is lower at Rs 4.90 lakhs against Rs 6.90 lakhs; Development Rebate Reserve at Rs 20,756 lakhs against Rs 49,428 and General Reserve at Rs 1.75 lakhs against Rs 2.00 lakhs. The dividend is reduced to Rs 25 per share, taxable, from Rs 35 per share, taxable.

The directors state that, although the Government has increased the price of super-phosphate with a view to compensate the rising cost of production, the full benefit of the price increase will be reflected only in the next accounts as the same became effective only from 11 May, 1961. Arrangements have been made with the ICICI for the foreign exchange requirement for the extension scheme. The expansion scheme is expected to come into operation by April, 1962.

Carew Skips Dividend

The decline in sales from Rs 4.32 crores to Rs 3.01 crores is reflected in the working results of Carew & Company Limited for the year ended 30th June 1961. The net profit, after providing for Depreciation and Taxation, is lower at Rs 4.15 lakhs as against Rs 4.81 lakhs. However, all allocations have been raised.—Depreciation from Rs 3.50 lakhs to Rs 4.30 lakhs; Taxation from Rs 4.82 lakhs to Rs 11.42 lakhs; General Reserve from Rs 1.00 lakh to Rs 2.00 lakhs and Development Rebate Reserve from Rs 20,000 to 50,000. Debenture Redemption Reserve is maintained at Rs 1 lakh. Although the dividend on the Ordinary shares is passed over again, the directors had the intention of recommending the payment of at least one year's arrears of dividend on the Preference shares.

In the above connection, the directors state that negotiations are in progress regarding the proposed formation of a Pakistan company to take over the Darsana branch. One of the conditions laid down by the Government of Pakistan is that the assets of the proposed Pakistan company shall be free from any specific charge in favour of foreign creditors. As a consequence, the directors have been discussing with the bankers, the State Bank of India, which has a charge on the floating stocks of the Pakistan branch if it be prepared to forego this charge and accept in its place the pledging of the shares in the Pakistan company.

The State Bank of India has recently indicated that it may be prepared to do so, subject to certain conditions. One of these is that, until the overdraft in India is brought into line with the cover represented by the company's floating assets in India, the company shall not pay any dividends without the State Bank's consent. The company has made a reference back to the State Bank on this point. But, at the time of preparing this report, there has not been time to receive a reply. The directors, therefore, feel that, until the negotiations with the State Bank of India have been finalised, they are not in a position to recommend any payment of a dividend.

Burrakur Coal Repeats

The Burrakur Coal Company Limited has reported a decline in sales from Rs 3.25 crores to Rs 3.22 crores and in the net profit from Rs 18.30 lakhs to Rs 16.86 lakhs for the year ended 30th June 1961. In this connection, the directors state that, although plans had been made and finance provided for a substantial increase in output during the year under review, this did not in fact materialise owing to a number of factors, including the shortage of transport, power, and explosives and the suspension of working at Budroochuck Colliery.

In respect of allocations, Statutory Development Rebate Reserve is increased to Rs 3.62 lakhs from Rs 2.28 lakhs, while the Depreciation amount is reduced to Rs 11.99 lakhs from Rs 12.19 lakhs and Taxation to Rs 11.62 lakhs from Rs 16 lakhs. No provision is made for General Reserve against Rs 1 lakh. The dividend on the Ordinary shares is, however, maintained at 13 per cent, subject to deduction of tax.

Raisings are higher at 13,09,305 tons against 13,06,528 tons, while despatches are lower at 12,79,394 tons against 12,85,397 tons.

Lower Profits for Orissa Minerals

The Orissa Minerals Development Company Limited has shown a substantial decline in the net profit from Rs 17.37 lakhs to Rs 11.29 lakhs for the year ended 30 June 1961, reflecting the decrease in the raisings and despatches of iron ore; lower output of manganese ore; depressed conditions prevailing in the manganese market and the decline in sales from Rs 1.31 crores to Rs 1.20 crores.

In respect of allocations, Depreciation is increased to Rs 5.61 lakhs from Rs 3.59 lakhs; Taxation to Rs 9.40 lakhs from Rs 8.40 lakhs and General Reserve to Rs 5 lakhs from Rs 4 lakhs. The provision for Statutory Development Rebate Reserve is lower at Rs 18,200 against Rs 2.08 lakhs. No provision is made for Building Reserve and Mechanisation Reserve against Rs 40,000 and Rs 3.00 lakhs respectively in the preceding year. The directors have recommended a final dividend of 18 per cent, making a total of 28 per cent, less tax, for the year as against 36 per cent, less tax, paid previously.

CSN Incurs Loss

The Calcutta Steam Navigation Company Limited has incurred a loss, after providing for Depreciation, of Rs 1.79 lakhs for the year ended 30 June 1961 as against a net profit of Rs 2.47 lakhs for the preceding year.

The Depreciation amount is reduced to Rs 3.13 lakhs from Rs 3.25 lakhs. In view of the loss, no allocations have been made for Taxation (Rs 96,000); General Reserve (Rs 50,000); Fleet Reserve (Rs 13,870) and Development Rebate Reserve (Rs 11,000). The dividend is passed over against Re 1 paid previously. The debit balance carried forward to next year is Rs 71,119.

The directors state that the company's activities were seriously affected owing to decreased available lighterage freight, one of the factors for which being reduced shipping in the jute goods trade. The result of these conditions is reflected in a substantial reduction of the company's income. So as to utilise the company's means to the best possible interest, fleet re-organisational measures have been adopted. Though the advantages of these steps are not expected to be derived immediately, the overall position should show an improvement, nevertheless. In concurrence with this programme, the company's resources will have to be retained for these immediate conditions.

For the Investor

INVESTMENT GOSSIP Hesitant Trend

Equity prices have tended to be steadier during the past few days although the undertone has continued to be rather hesitant. The recovery movement has been halting and values have moved both ways. The general feeling that prices last week had touched unreasonably low levels was aided by expectations of a favourable increase in steel retention prices. The fact that Hindustan Steel is anticipating an encouraging recommendation from the Tariff Commission in this regard has also been noted but active support for steel shares is yet to ensue although some improvement in rates has been recorded.

It is evident that political news is still the dominating influence in the stock market. There was a sizable recovery in rates on Thursday especially in the forward counters following indications of a peaceful settlement of the Goa issue. But it would appear that conditions will continue to be irregular so long as the matter remains unsettled. The fresh Chinese incursions and their subsequent threat to cross the border into India although temporarily relegated to the background will nevertheless continue to exert restrictive influence. Certain short-term adverse factors such as reports of payment difficulties in Calcutta, the anxiety about the outcome of this week's meeting of the Standing Committee of the Committee of Stock Exchange

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED. (Incorporated in England with Limited Liability)

DIVIDENDS

In supersession of the previous notice the dividends on the Ordinary and Preference Shares in respect of the year ended 31st March, 1961, if declared, will be payable on 17th January, 1962, to those members whose names are registered in the Books of the Company on 20th December, 1961.

By Order of the Board,
ARDINE HENDERSON, LTD.,
D. FORDWOOD,
Secretary,
Agents.

Clive Row,
Calcutta-1,
17th December, 1961.

Presidents kept operators cautious.

Even so, support has been forthcoming, though haltingly, for selected shares in the cash list. The LIC has bought some shares and the expectation is that it will make further purchases in coming weeks. That a substantial amount of money is available for investment in equities is clear from the tremendous support that has been accorded to the India Carbon issue which is said to have been very heavily over-subscribed. A significant point in the recent shake out is the comparatively small loss sustained by the cash scrip and their quick recovery during the current week. It would appear that now that the automatic margin scheme has been brought into effect, operators are not finding it as irksome as they thought it would be.

NEW ISSUE NOTES Jeewanlal Limited

Messrs Jeewanlal (1929) Limited, Calcutta has been granted a consent to the issue of 3,60,000 equity shares of Rs 10 each and 18,000 cumulative redeemable preference shares of Rs 100 each carrying a rate of dividend of 9½% free of company's tax but subject to deduction of tax at source at the prescribed rates. The company's existing capital is Rs 72 lakhs in equity shares. The company proposes to establish a rolling mill for aluminium industry in the Madras State at a cost of Rs 171.5 lakhs which will be met partly by issue of capital and partly by loans. The equity shares will be offered in the first instance to the existing shareholders in the proportion of 1 new share for every two shares held.

Hindustan Electric Company

Messrs Hindustan Electric Company Limited, Bombay, has been granted consent to issue capital of Rs 60 lakhs divided into 60,000 equity shares of Rs 100 each for cash at par. The entire issue will be made to Messrs Brown Boveri & Co. of Switzerland. The proceeds of the issue would be utilised for the manufacture of AC & DC generators, circuit breakers, isolators, instrument transformers etc. The company has a paid up capital of Rs 80 lakhs (Rs 60 lakhs in equity and Rs 20 lakhs in preference).

H. K. Steel and Wire Ropes

Messrs H. K. Steel and Wire Ropes Limited, Bombay, a new company, has been granted consent to issue

capital of Rs 55 lakhs for cash, at par, divided into 45,000 equity shares of Rs 100 each and 10,000 cumulative redeemable preference shares of Rs 100 each carrying a dividend of 9.5% free of company's tax, but subject to deduction of taxes at source at the prescribed rates. Of this, equity shares of the value of Rs 12.5 lakhs would be offered to a West German firm. The proceeds of the issue will be utilised for the manufacture of steel wire ropes.

Barium Chemicals

The Barium Chemicals Limited, New Delhi, has been granted consent to the issue of capital of Rs 50 lakhs, for cash, at par, in 40,000 equity shares and 10,000 (free of company's tax but subject to deduction of all taxes at source at the prescribed rates) cumulative redeemable preference shares of Rs 100 each. The proceeds will be utilised for setting up a factory in Andhra Pradesh for the manufacture of barium chemicals etc.

Bharat Fritz Werner

Messrs Bharat Fritz Werner (Pvt.) Limited, a new company registered on October 17, 1961 in the State of Mysore for the manufacture of Milling Machines, has been granted consent to the issue of Rs 30 lakhs, divided into equity capital of Rs 24 lakhs and preference capital of Rs 6 lakhs carrying dividend @ 9.5% free of company's income-tax but subject to deduction of tax at the prescribed rates. Out of this issue, equity shares of the value of Rs 10,79,900 will be allotted to the West German collaborators against supply of machinery, and the balance will be issued for cash at par.

Indian Hume Pipes

The Indian Hume Pipe Company Limited, Bombay, has been granted consent to issue Debentures of Rs 50 lakhs, divided into 5,000 7% taxable debentures of Rs 1000/- each, for cash, at par. The proceeds of the issue shall be utilised for redeeming business activity of the company. The company has a subscribed and paid-up capital of Rs 100 lakhs (Rs 60 lakhs in equity and Rs 50 lakhs in preference).

Sun Paper Mills

Sun Paper Mills Limited, Madras, has been granted consent to issue equity capital of Rs 30 lakhs for cash at par. The proceeds will be utilised for setting up a paper mill in Tirunelveli District, Madras.

Lodha Colliery

The Lodha Colliery Company (1920) Limited, Calcutta, has been granted consent to the issue of capital of Rs 23 lakhs in 23,000 equity shares of Rs 10/- each, at a premium of Rs 7.50 nP per share. The capital is required for the development of the company's collieries in the Third Five Year Plan period. The shares will be offered for public subscription by

means of a prospectus. The existing paid up capital of the company is Rs 87 lakhs.

carrying a taxable dividend of 9.3 per cent. The promoters, directors and their friends have taken up equity shares worth Rs 4.25 lakhs. The Government of Madhya Pradesh has agreed to subscribe 10,000 equity shares. A West German, the foreign collaborator, has indicated its interest in an option to purchase, within one year from 25 October, 1961, shares of about Rs 35,500 and the promoters may give this option, subject to the approval of the Government. The present issue is for 60,000 equity shares of Rs 10 each and 3,750 cumulative redeemable preference shares of Rs 100 each. The entire issue has been underwritten. The subscription starts on 18 December and closes on 27 December unless closed earlier or later at the discretion of the directors, but not before 21 December 1961. The company hopes to commence production towards the end of 1962.

ACTS

Fertilisers & Chemicals (Travancore), Limited is engaged in a big expansion and additional funds are needed for the purpose. The authorised capital is proposed to be raised to Rs 10 crores from Rs 5 crores and the subscribed capital to Rs 7½ crores from Rs 3.46 crores. Including the shares already issued, but not subscribed for, 40,38,478 equity shares will be offered for subscription. The concerned State Governments can be expected to take up large portions of this issue; but it will presumably be necessary to offer some portion for subscription in the open market.

ICM

The Delhi Cloth & General Mills Company, Limited has decided to sue Debentures worth Rs 2.5 crores in the third week of this month. The whole issue is to be underwritten. The LIC has agreed to underwrite debentures worth Rs 1.5 crores, while Rs 25 lakhs worth of debentures will be underwritten by the three subsidiaries of the LIC. The Debenture stock will be issued at 8½ per cent per annum and is repayable after 10 years at the rate of Rs 50 lakhs per year. Out of Rs 2.5 crores, a sum of Rs 1 crore will be utilised to repay the existing 5½ per cent debentures. The present debenture holders have been given the option of conversion. The directors have the option of redeeming the debenture issue earlier and in such a case a premium of 50

on Rs 100 will be paid. The proceeds of the issue will be utilised for financing the PVC and rayon tyre chord projects.

INVESTMENT NOTES Indian Tube

The Indian Tube Company, Limited has almost finalised its plans for setting up another Fretz Moon plant for the manufacture of 110,000 tons of steel tubes. The expansion scheme will involve a capital outlay of Rs 3.5 crores. Of the total of Rs 1.20 crores of foreign exchange required for the project, a part will come from increased equity participation by Stewarts & Lloyds of the UK who hold 40 per cent of the present capital investment in this joint venture with TATAS. The balance is expected to be raised through a loan in foreign currencies from institutional agencies.

INVESTMENT BRIEFS

Woodcote Estates, Madras, have skipped the dividend for the year ended 30 June, 1961. The name of Blue Mountain Estates Limited has been changed to "Blue Mountain Estates & Industries Limited with effect from 2 December, 1961.

BALANCE-SHEET BRIEFS

India Machinery Company, Limited has reported a rise in the net profit, after providing for depreciation and taxation, from Rs 1.45 lakhs to Rs 2.29 lakhs for the year ended 30 June, 1961. The directors have proposed a taxable dividend of 7 per cent on the Ordinary shares as against a tax-free dividend of 4 per cent for the preceding year.

The Saurashtra Cement & Chemical Industries Limited has earned a gross profit of Rs 22.44 lakhs for the year ended 30 June, 1961. The dividend is passed over and the deficit carried to next year amounts to Rs 57.56 lakhs.

STOCK EXCHANGES Activity at a Low Ebb

Watch-Dog Writes:

STOCK markets have continued to be in a crippled state. In view of the tension still continuing over the Goa situation, business has been at a low ebb as operators are marking time. The general feeling is that the trend of the market will rest or depend on the political development. Trading on the Calcutta Stock Exchange remained dull and featureless with price movements remaining narrowly irregular.

Prices on the Bombay Stock Exchange displayed an easier tendency although feeble attempts at a mild recovery were made towards the close.

Business was thin on the Madras Stock Exchange where the buying support continued to be feeble and the general tendency easy.

CALCUTTA

Friday Evening.

FOR the third week in succession, the local stock exchange was in a demoralised state and prices recorded fresh lower levels due to renewed liquidation. It was only during the closing days of the week that a feeble endeavour at rally was witnessed.

The shake-out started as a result of uncertainties in the political field created by the reports of renewed tension over the Goa situation followed by the Indian troop movements to the border areas. Not that there was any panic over the possibility of a flare-up on the Goa issue; but uncertainties were there as to, in that eventuality, how much dislocation of railway traffic, etc, would be caused.

Naturally, bulls got shy and preferred to lighten their commitments. This tendency to release holdings provided an opportunity to bears to start short-selling. Sentiment was also affected by the reports of one party having failed to make payments against the recent settlement. The result was, that equities rolled down helplessly until it was appreciated that there was no justification for the panic. A slow process of replacement buying started to enable the market to stage a partial recovery from the low levels touched early in the week.

There was, however, a considerable shrinkage in the volume of business. This was due to a cautious attitude adopted by the operators, who had suffered much loss during the recent debacle. Moreover, nobody anticipated that the crash in a couple of days would be so heavy as to demoralise the market so badly and disrupt the confidence.

Gilt-edged securities continued to rule quiet and the turnover was restricted in the absence of any buying enquiry. Prices of State Loans displayed an easier tendency. 3 per cent 1966 Conversion Loan hovered idly around Rs 71.

Bank shares were, however, a steady feature on the view that the profits would be higher this year. It is said that advances have been increased along with lending rates, while deposit rates have been held down. Punjab National were supported up to Rs 20.25 and United Commercial up to Rs 92.

There was little doing in the Jute section. It was feared that, if the prices of manufactured goods were not maintained at a commensurate satisfactory level, the mills might have to face adverse working. The decision made by the IJMA to continue the 2½ per cent loom unsealing for an extra month had also a bearish effect on sentiment. Ganges were on offer at Rs 12.19 to Rs 12.44. Howrah at Rs 20.12 to Rs 20.37; New Central at Rs 16.19 to Rs 16.37 and Megna at Rs 12.31 to Rs 12.44.

Nudea were, however, fairly steady at Rs 64 following the revival of the rumours with regard to the amalgamation of this company with a more promising concern (Gourepore Mills) in the same managing agency group.

Coal shares lacked any buying interest on reports that many collieries

would find it difficult to obtain money for expansion and the raisings had been affected by the large accumulation of stocks at the pit-heads. East Indian eased off to Rs 32.81 from Rs 33; Central India to Rs 11.87 from Rs 12.06 and Western Bengal to Rs 9.28 from Rs 9.37. Burrakur fluctuated rather irregularly between Rs 18 and Rs 18.31 due to alternate buying and selling, to close finally at Rs 18.25.

Except for some support lent to the shares of those gardens producing quality teas following an improvement in the prices obtained at this week's auction, the Tea section was devoid of any feature. Brooke Bond changed hands at Rs 15.75 to Rs 16.12; Bhatkawa at Rs 19.37 to Rs 19.50; Jay Shree at Rs 18.69 to Rs 19 and Tezpara at Rs 16.87 to Rs 17.06.

The slow offtake of the sweet commodity and the obscure outlook for the industry were reflected in the Sugar section where buyers were inclined to be rather cautious. The only two steady features were Carew and Cawnpore, having sustained support up to Rs 13.31 and Rs 13 respectively. Raza/Buland were, however, quiet at Rs 10.25 against Rs 10.50 and SKG at Rs 10.50 against Rs 10.87.

Textile scrips declined on a broad front although a modest recovery in prices was noticed towards the close. Cawnpore were depressed at one time to Rs 8.87; Dunbar to Rs 31.56; Kesoram to Rs 29.44 and J. K. Rayon to Rs 18.75, closing finally at Rs 9.00; Rs 31.62; Rs 29.75 and Rs 19 respectively.

In the week's dealings, speculative issues were the worst affected under the lead of Indian Irons which, in turn, were hit hard due to nervous liquidation. Against the previous week-end closing of Rs 24.26, Indian Irons opened lower at Rs 24.16 and receded further to Rs 23.72 before closing finally at Rs 24.14. In sympathy, TEXMACO were marked down at one time to Rs 21 from Rs 21.60 and Guest, Keen, Williams to Rs 38.62 from Rs 39.12 to improve towards the close to Rs 21.30 and Rs 39 respectively. Kumardhubi came in for some enquiry up to Rs 7.06 from Rs 6.87 with Indian Standard Wagon changing hands at Rs 11.4 to Rs 11.6. J. K. Steel turned quiet at Rs 21.47 against Rs 21.75 due to lack of fresh support.

The Miscellaneous section recorded a considerable fall in prices in the middle of the week, though some of the issues emerged with minor gains on balance. The following table shows the price trends of a few selected shares:—

	As on 9 Dec.	Low- est Rs	As on 15 Dec. Rs

The End of an Anachronism

WITHIN twenty seven hours of the com-
mencement of the operations, Indian troops
have put an end to a political absurdity
that ought to have ended at least fourteen
years ago. But the swiftness with which
the end came is less remarkable than the
exemplary patience with which this drama-
tic end was vainly sought to be avoided.
People who virtuously accuse India of hav-
ing besmirched her fair name would do well
to recall their own precipitateness on occa-
sions when they rushed to military action on
the most disreputable of excuses. And they
will not have to strain their memory too
hard by going further back than the fifties,
though if they did, they may feel their moral
style even more cramped. The US can re-
call its little adventure in Cuba early this
year, which, everyone, out of consideration
for the US, is trying his best to forget. Mr.
Adlai Stevenson, with whose misfortune
in having to justify American action in Cuba
we all sympathised, would be less ready to
be unctuously shocked at India's action if he
remembered half the sophistries he had to
think up on that occasion. And as for the
United Kingdom, it has, apart from its clas-
sic acts like its annexation of Sind which its
historians would hardly care to remember,
others more recent to live down. Suez, which
has in its ignobly different way, burnt itself
into English history as indelibly as Dunkirk,
is an embarrassment to be vicariously avenged
whenever an opportunity offers itself.
More recently, India has offended Britain by
pursuing to its logical conclusion the impli-
cations of the UN resolution on the Congo.
But these two nations which have in other con-
texts professed to find colonial pretensions
intolerably anachronistic shed all these
professions the moment any practical steps
are taken to put an end to them. In any
event, it is fair to ask them to find a justi-
fication for their acts that will at all com-
pare favourably with India's in regard to
Goa. In particular, they may be asked to
show how patient they were on all the occa-
sions they felt themselves impelled to take
the actions they took.

For fourteen years, the Government of India
has been under mounting pressure of public
opinion in the country to bring Goa back in-
to the Indian fold where, it is admitted by
all except Portugal, it properly belongs. The
Government of India has shown great reluc-
tance to do anything that might jeopardise
the chance of Portugal following the exam-
ple set by Britain and later and less readily
by France. (The de jure transfer of for-
mer French possessions in India was formally
ratified by France only recently.) But
Portugal had not only not shown the slightest
indication that it proposed to do anything of
the kind. On the other hand, it had taken
an arrogant and offensive attitude of pre-
tending that there was nothing to discuss or
negotiate. It took a legalistic stand as-
serting that Goa and other Portuguese pos-
sessions in India and Africa were part of Por-
tugal itself. Some encouragement to the
theory was given by the former US Secre-
tary of State, Mr. Dulles. The US has since
authoritatively renounced this rather odd
position and Mr. Galbraith reiterated the

other day at Jaipur that Goa was nothing
but a colony. Elsewhere and at other con-
texts, American opinion has been imploring
Portugal to get out of the twilight of the
Middle Ages. President Kennedy himself has
been advising Portugal to come to terms
with the legitimate urges of the peoples over
whom Portugal was ruling. There has been
no evidence whatsoever that any of these
hortatory and homilistic utterances made the
slightest impression on Portugal. In all
these fourteen years, the Government of
India had been holding firmly under check
any temptation to do anything remotely
resembling queering the pitch for a possible
peaceful settlement of the problem. In so
doing it had estranged itself from popular
and even instructed public opinion which
was inclined to think that the government
was shirking basic national duties by clutch-
ing at an illusory international prestige.

The more recent incidents in the environs
of Goa had created in Goa a political and
administrative vacuum fraught with the
gravest consequences. The fact that the
resistance to Indian troops was almost non-
existent showed how complete was the polit-
ical emptiness in the enclaves. It would be
wholly hypocritical to pretend that India should
have stood by and looked on unconcernedly
while the enclaves were in danger of passing
from the hands of the Portuguese authori-
ties who had abandoned their duty to rule
to the lawless elements who would have only
taken advantage of the situation.

At the United Nations, the Western powers
simulated more sorrow than anger that India
should have committed what they had the
hardihood to describe as an act of aggression.
They invoked the charter with a hypocrisy
that is stunning by its enormity. We can
easily retort, "Physician, heal thyself", but
we have a better answer. We know the
unavowed sources of this righteousness but
we need not point to them to justify our
action. The draft resolution that the Afro-
Asian members of the Security Council pre-
sented for the Council's consideration and
which the Council rejected puts the case
for the Indian action with a fair degree of
accuracy. The time has come to drop all
pretence and ask what precisely is meant by
the UN resolution on Colonialism passed
during the last session of the General As-
sembly. India has already become a victim
of the semantic legerdemain of Britain and
other European powers in the Congo im-
broglio. The resolution on Colonialism is
similarly sought to be rendered nugatory.
Time was when the Western Powers used to
profess to consider the wishes of the Gen-
eral Assembly sacred. But the fact that the
composition of the General Assembly has
changed somewhat nearer to reflecting the
realities of world geography has imparted a
sudden coolness to this profession.

We would be sad to think that Britain and the
US feel that India has done anything which
is even remotely untenable. But it would
be a sad day for us if we were to feel obliged
to mollify indignation motivated by un-
avowed animations of a disreputable kind.
India's conscience is clear. We wish we
could say the same thing of our detractors.

Limits of Afro-Asian Trade

(CONTRIBUTED)

THE Third Plan looks for an increase in India's trade with West Asia as well as the West Indies. Close economic relations with the ECM are now demanded by the foreign exchange position as also by the economic growth recorded by the advanced countries which are commended for giving aid but more is demanded as Prof. F. C. Benham has argued in a recent book issued by the Royal Institute of International Affairs recently. The book may be described as a real effort in persuasion. And unluckily it seems to have escaped general notice so far in India. The under-developed countries endorse the view that aid through trade should be made available and that the UN should play a greater part in passing on economic aid, prescribed as 1 per cent of the national income of the affluent countries including West Germany.

Since the greater part of India's trade is now with the USA and Western Europe, the outlook is not clear. India's trade with Burma was greatly curtailed in 1959-61 and the new tariff introduced this year is a formidable obstacle to Indian exports. The economic policy of Malaya or Indonesia may change, but the scope for Indian manufacture is dependent upon prices and deliveries. The tariffs of East Africa are mainly for revenue but not long ago, Zanzibar raised customs duties on a wide range of imports. And that too may cause concern when there is a plea for a low customs zone in Afro-Asia. The supply of manufactured goods in return for raw materials can be enlarged only if duties are kept down and the South East Asian countries on their part undertake to relax import control.

The oil exporting countries can do it without difficulty or delay so as to help India or Hongkong which are industrially advanced today. But the others, like Ceylon, may not be in a position to do the same, because the UK may not provide for them an assured market in future. The offtake of vegetable oils or oilcake in SE Asia may be limited because there is a demand for development of oil-crushing in the countries and the fact that India cannot sell machinery on a large scale must also be given due weight at present. There is, however, the fact that India imports from Burma or Iran more than she exports. The foreign trade returns for 1960-61 point to an adverse balance of trade not only with the USA or West Germany but with Afghanistan and the Sudan. The trade of India with the Philippines is negligible and exports to Thailand have fallen away. The STC can hardly hope to break new ground for Asian countries like Burma are still anxious to develop local agencies in the handling of foreign trade. Whether they will be ready to give up export duties in order to cheapen their goods, if and when sold to India, is a minor issue as compared with an agreement to adopt preferential tariffs among themselves.

It is also necessary to remember in Afro-Asian contexts that there are areas of clashing economic interests. For instance, African countries are rivals of India in selling coffee or cotton to Europe. They are also eager to sell mineral ores in order to obtain essential imports. And the control of economic life by foreign capital is pronounced in countries like Ghana or Malaya. This is a separate but relevant issue. The chances of India doing more

through old established agencies like the Bombay-Burma Trading Co. appear limited. For one thing is patent. The Governments in most countries try to think of regulating trade in line with political ties and the approval of Africans of neutralism does not mean that they can do much to help India out. The returns suggest that as trading partners even now Australia and New Zealand are more stable and promising than Kenya or Egypt. And the latest official analysis will also convey the impression that Nigeria or Kuwait is far more promising than Indonesia or Egypt. The fluctuations from year to year may be neutralised by long-term arrangements for getting Sudanese or Ugandan cotton in the future. The really important point is that a lot of the import surplus has to be paid for in sterling and the Indian currency reserves cannot stand the drain. This has to be explained, because the import controls in force make nonsense of the arguments for expanding regional trade. The fact that in the last century Western India had a vital trade connection with East Africa (described by Sir Richard Burton of Arabian Nights fame) counts for little at present. What is really important is whether Indian goods in respect of quality and price can compete either with Italy or Japan which has made a comeback in all export markets.

The Export Councils can ascertain easily the existence of competition but the incentives for Indian exporters can only be provided by the Government. The supply of salt or sugar on deferred payment terms to African countries that may decline to purchase from Natal appears a distinct possibility. But so far, India has been trying to reach only the US market because the price offered is higher and India hopes that Cuba's disappearance as a supplier to the USA has created the essential opening. The East African countries are now trying to start sugar mills. The experts at Delhi may well ask them to restrain ambitions and content themselves with sale of cotton in return for Indian sugar. The law of comparative costs is usually ignored at present. But India should try to tell East Africa or West Africa that agriculture in the tropics always comes first and India has more experience of industry and can offer either textiles or engineering goods if primary products are shipped by them. Of course, India cannot buy Coarsain bulk or take groundnuts from Nigeria. But a special unit for textile exports can be allocated if textile controls are withdrawn. The protection of the cotton grower or the cane grower for that matter requires reconsideration. It is evident that India has made only a beginning by dropping the import duty on raw jute. The diversification of the country's export trade depends on liberalisation of imports, especially of raw materials including cashewnuts and copra. The fiscal policy must be cleared up, for accelerated economic development may justify departures from protection. The needs of export trade may be more important today than the stimulation of local manufacture.

New Company Floatations

Company registrations since June 1960 are up and the capital issues are consequently higher. The available figures do not indicate whether company failures exceeding the registrations offset the increase in jointstock ventures. The loss of capital is small as

compared with the increase in capital but the statistical bulletin does not indicate what exactly is the paid-up capital of the new companies. The authorised capital is big, the increase in capital being about Rs 887 lakhs per month in 1961. But this too relates to the authorised capital, so the volume of saving in terms of capital provided for new companies cannot be exactly ascertained.

The formation of companies was checked in 1957 and 1958 but has risen steadily so that more companies are in the field today. The Company registration figures do not show the ratio as between public and private companies; they are also not quite illuminating as to the cases of collaboration with foreign interests authorised by the Government or about capitalisation of reserves allowed. But it may be noted that March 1961 saw the peak of registrations after the Budget restored confidence among investors in India who assumed that bonus issues would come along easily.

The actual shares in the capital market as between Government and private enterprise is not analysed and the Midland Bank's method of tabulating new capital issues in the UK has not been followed so far. The sanction to borrow abroad given in regard to some firms must find a place in the analysis of capital issues so that the proportion of foreign capital can be fixed by reference to the schemes, say, of Orient Paper Mills or Mysore Cement. The excess of applications for some floatations or the failure of some issues need not call for notice but the proportion of foreign funds to domestic savings must be fixed for the whole aim must be to raise the latter and to limit the former. The revival in capital issues is a real sign of economic growth and investors see that the economic climate has improved since 1958.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANKS

The Case Against Higher Deposit Rates

IT appears that there is a move on the part of some of the medium sized banks to have the inter-bank agreement on Deposit rates revised upward for that particular category of banking institutions. The reasoning seems to be that the medium banks would then be able effectively to compete for new Deposits. The necessity has arisen presumably because the large banks, in relaxing conditions for acceptance of savings bank Deposits (e.g., a "minimum" balance of Rs 5 and liberal facilities for withdrawals), have in so doing cut the ground from under the medium banks.

Bigness, again, is a virtue in that security of funds is better assured thereby. But, with the introduction of Deposit insurance this particular virtue will diminish in value. As it is, some latitude is allowed the smaller banks in that they are permitted to offer a slightly higher rate on Deposits. The present move may be said to be designed to imbue the medium banks with even greater competitiveness.

The argument continues that Deposit rates are anyhow too low, in relation to effective bank Rate. For, something like six months in the year, it is the highest tier (6 per cent) which is operative in respect of assistance provided by the central banking institution. Thus, de facto for half the year bank Rate is at 6 per cent. So, Deposit rates during the period are too low vis-a-vis bank Rate; and the inference is that entities other than banks are so able to entice away funds that might otherwise have been lodged with the banking system.

The first point we wish to clear up in this regard is that the interest offered is merely incidental to the drawing in of money to banks. Indeed, were it not for the inter-bank agreement, and if banks were permitted to bid what they wanted (and could afford), it is precisely those banks which chose to offer the high rates which would attract the least Deposits; the law of diminishing returns would set in, because banks prepared to pay higher rates on Deposits would immediately have their creditworthiness suspect.

Secondly, as we have already made clear, the security of funds assured through Deposit insurance, any distinctions that there might currently be between large and small banking institutions will be sharply reduced. As such the present "disparity" between rates of large and other banks should suffice to give the latter that extra in ability to compete.

Thirdly, we believe that a bank attracts constituents because of the service that it renders. The more personal the approach, the greater the rapport between bank official and customer, obviously the better the inflow of business. Swift, efficient personalised service can never be substituted by something so material as a rate of interest.

Fourthly, the diversion of funds from banks to other institutions is largely a myth. If

there is a new issue boom, then money will be attracted to the stock exchanges the prospects of growth so implied will far outweigh the doubtful attraction of an extra half per cent in interest rate available on Deposits. Money in circulation in the "parallel" money market cannot, except in dribbles and through expenditure on consumer goods, find its way into the banking system even if it so desired for the obvious reason of tax complications.

We therefore believe that the mopping of resources by banks rests but incidentally on the lure of the interest paid on Deposits. What needs to be spread is the banking habit; what is a prerequisite is the contraction of the parallel money market; what we lack is the covering of the countryside with banks.

Instead of an unavailing and even self-defeating series of increases in Deposit rates, banks would consequently be well advised to concentrate upon improving services and making available new facilities and opening up new branches. That would be the logical way to build up a sound banking system in this country. And there would be no bar in the way of establishment of new offices by the small and medium banks.

The consideration of an increase in Deposit rates is particularly untimely now, in that we have on our hands the need to strengthen the banking system, both by way of raising new capital and adding to Reserves. If Deposits are costlier, the surplus available either for dividends (the size of which determines whether or no a bank can make a rights issue) or for transfer to reserve will, it is clear, automatically be reduced.

Let the 1961-62 busy season (which at last seems to have got off to a belated start) draw to its close; let the inter-bank agreement on Deposit rates be re-considered then; and then, if found necessary, let Deposit rates be raised. Our own feeling is that such re-appraisal will result rather in a reduction in the rates.

BANK RETURNS

Foreign Balances Rise Again

The December instalment of advance tax payments has but slightly been reflected in the latest banking returns, but the hardening of the inter-bank call money rate during the current week would suggest that pressure upon the banking system has been considerable.

Middle of the month pause in currency circulation has been disclosed in the returns of the Reserve Bank for 15 December. Active Note Circulation has moved down fractionally by Rs 0.13 crore to Rs 1,947.78 crores, and there has been inflow of Rupee Coin for Rs 0.19 crore. Foreign Securities are unchanged at Rs 116.86 crores, and there has been a small adjustment in Rupee Securities, which are placed at Rs 1,603.81 crores. As a result the Reserve Bank's cash in the till has moved up by Rs 0.28 crore to Rs 12.65 crores.

In the return for the Banking Department there is evidence of inter-governmental tran-

MONEY MARKET

Snippets

We reproduce below the changes recorded in the November issue of the Reserve Bank of India bulletin as being of interest from the money market point of view.

As at the last Friday in October aggregate Deposits of Indian Scheduled Banks rose by Rs 7.42 crores to Rs 1,576.81 crores.

On the same date, and as from the last Friday in September, aggregate Deposits of foreign banks also rose by Rs 3.59 crores to Rs 233.53 crores.

Borrowings of State Co-operative Banks from the Reserve Bank, steadily rising, were placed at Rs 121.90 crores on 27 October.

As at 27 October reserves of Scheduled Banks maintained with the Reserve Bank, at Rs 79.28 crores, exceeded the statutory minimum by Rs 13.99 crores.

After a sharp rise of Rs 5.64 crores in savings Deposits of all Scheduled Banks in September, there has, by the last Friday in October, been a modest increase of Rs 1.45 crores to Rs 313.79 crores. In 1960-61, savings Deposits went up by Rs 28.45 crores to Rs 281.81 crores, whereas in the seven-month period to October 1961 the increase already amounts to just a shade under Rs 32 crores.

Indian Scheduled Banks added ten offices during October; the State Bank, 1; and Foreign Banks are unchanged at 70. The total for All Scheduled Banks, in rising by 11, is now placed at 4,322 offices.

In the fortnight to 29 September, secured Advances of Scheduled Banks against food articles declined by Rs 6.13 crores to Rs 115.76 crores; against food articles declined by Rs 6.13 crores to 115.76 crores; against industrial raw materials by Rs 7.47 crores to Rs 86.96 crores; against plantation products by Rs 0.66 crore to Rs 52.89 crores; but rose against manufactures and minerals by Rs 13.04 crores to Rs 442.72 crores and against other securities by Rs 0.80 crore to Rs 370.72 crores. Thus, the contraction in seasonal Advances was almost wholly offset by increase in industrial credit, so that the total of Secured Advances has fallen but nominally from Rs 1,069.44 crores to Rs 1,068.72 crores.

The bazaar bill rate has been unchanged for some time now, at 12 per cent in Bombay, 12.50 per cent in Calcutta and 13.92 per cent in Madras.

India's foreign exchange reserves rose during October by Rs 10.38 crores to Rs 302.88 crores, thus offsetting the decline of Rs 9.69 crores in September.

Outstandings of Government of India Treasury Bills declined in October by Rs 3.32 crores to Rs 1,020.83 crores; and the October figure is over Rs 45 crores lower than as at end of March 1961.

sactions. The rise of Rs 30 crores to Rs 209.74 crores in Investments is indicative of deficit financing instituted by the Centre, though the amount involved is probably Rs 5 crores less owing to purchase of securities from the State Bank in the relevant week for that sum. The Centre has made heavy payments to the States, utilising the proceeds from deficit financing for the purpose, so that its balances are lower by Rs 2.45 crores at Rs 51.31 crores. There has been a two-fold improvement in the position of the State Governments vis-a-vis the Reserve Bank. On the one hand, their Deposits have gone up sharply by Rs 17.13 crores to Rs 27.32 crores. On the other, their indebtedness to the Reserve Bank for ways and means advances has been reduced by Rs 7.44 crores to Rs 64.66 crores.

Not much strain has been felt by the banking system. In fact Reserve Balances have

PROGRESS OF BUSY SEASONS			
	(In Rs Crores)		
	1959-60	1960-61	1961-62
Reserve Bank:			
Active Notes	+42.77	+66.93	+65.53
Rupee Coin	+1.72	+3.49	+5.25
Banks' Deposits	+0.40	+15.25	+8.94
Other Loans and Advances	+0.30	+16.50	+5.78
State Bank:			
Deposits	+8.87	+14.88	+5.33
Borrowings	+1.18	+1.17	+1.62
Cash Balances	+0.19	+0.30	+4.20
Giltedged	+3.80	+22.43	+17.87
Advances	+0.47	+7.73	+9.31
—As %age of Deposits	(27.8)	(39.4)	(47.2)
Other Scheduled Banks:			
Net Deposits	+20.68	+5.08	+6.74
Borrowings from RBI	+5.89	+6.21	+3.86
Cash Balances	+3.02	+12.57	+1.74
Giltedged	+0.66	+5.53	+0.32
Total of Advances	+5.25	+7.43	+1.55
—As %age of net Deposits	(62.8)	(68.7)	(69.2)

As at third Friday in December for Reserve Bank and State Bank.

As at second Friday in December for Other Scheduled Banks.

NOTE: Figures in Brackets are percentages.

been marked up by Rs 3.10 crores to Rs 77.43 crores, though it is necessary to add that the bulk of it (Rs 2½ crores) is probably on account of the State Bank. However, there has been a small increase in recourse to central banking credit, the Reserve Bank's portfolio of Other Loans and Advances disclosing a rise of Rs 2.95 crores to Rs 135.31 crores and its loans against usance bills higher by Rs 1.10 crores at Rs 1.80 crores. Treasury bills purchased and discounted by the Reserve Bank are approximately Rs 1½ crores over at Rs 30.57 crores.

Lastly as far as concerns the Reserve Bank returns, Balances Held Abroad are up by Rs .65 crores to Rs 31.58 crores, and foreign assets held by the Reserve Bank are steadily increasing their way to the Rs 150 crore mark.

Tax payments may have been responsible for the increase in the Advances of the State Bank as at 15 December; and constituents would also appear to have drawn down their Deposits. The total of Advances has risen by Rs 3.65 crores to Rs 248.15 crores, whereas Deposit resources of the State Bank have fallen by Rs 2.39 crores to Rs 525.76 crores. The State Bank has accordingly disinvested in giltedged for Rs 5 crores, bringing the portfolio down to Rs 248.48 crores and in sight of being exceeded by Advances. Also, there is a small rise of Rs 0.23 crore to Rs 1.79 crores in the State Bank's borrowings. In the result, cash balances, including money at call and short notice, have moved up by Rs 2.89 crores to Rs 28.74 crores.

Month early disbursements have presumably caused a rise in the Advances of Scheduled Banks as at 8 December. However, from the point of view of resources of banks this has partly been covered by an improvement in Deposits; indeed, if the State Bank's figures are isolated, the rise in resources exceeds the expansion in Advances. Net Demand Deposits have declined by Rs 1.87 crores to Rs 822.89 crores, but this is more than offset by the rise of Rs 3.13 crores to Rs 1,133.91 crores in net Time Deposits. Thus, net Deposits have risen during the week by Rs 1.26 crores. The State Bank in the same week reported a fall of Rs 3.89 crores in Deposits, and so the rise in the case of other Scheduled Banks is seen to be over Rs 5 crores. The total of Advances has gone up by Rs 4.09 crores to Rs 1,244.06 crores, about one-sixth of it on account of the State Bank. The fall of about Rs 13 crores to Rs 611.62 crores in Investments is wholly ascribable to the State Bank. Borrowings from the Reserve Bank are higher by Rs 0.78 crore at Rs 4.02 crores, but again largely in respect of increased recourse to central banking credit by the State Bank. Consequently, cash balances, including money at call and short notice, are lower by Rs 3.50 crores at Rs 185.12 crores; but the fall in the case of other Scheduled Banks is higher at Rs 4.55 crores, in as much as the State Bank in that week reported a rise of Rs 1.05 crores in cash.

Katanga and "Colonialism"

By Paul Einzig

THERE has been much criticism of Britain's reluctance to encourage and actively assist in the military conquest of Katanga by United Nations forces for the purpose of handing it over to the Congolese Government. I am not concerned with the political aspects of this matter, but it has economic aspects

that deserve attention. The difference between the attitude of Katanga and of the rest of the Congo is that, under Mr. Tsimbe's regime Belgian and other European engineers, technicians, businessmen are allowed to carry on, while in the other provinces their life and property is not safe even if they are tolerated there. When India achieved independence, it adopted precisely the same attitude as Mr. Tsimbe and has no cause to regret having allowed British residents engaged in industry and business to carry on. The alternative would have been to drive them out and expropriate them. That may have secured some initial benefit, but it would have taken many years before the technicians could have been adequately replaced—unless it be by Soviet technicians aiming at undermining and overthrowing the democratic regime. India has derived considerable benefit by the smooth operation of industry thanks to its attitude towards British residents and British enterprise.

What is true about India is surely even more true about the Congo in general and Katanga in particular. By allowing Belgians and others to stay Mr. Tsimbe has taken a much more sensible attitude than his rivals. For the Congo is much less experienced than India was at the time of achieving independence. The removal of European technicians would disorganise production in Katanga even more than it would have done in India. Katanga wants to retain a certain degree of autonomy within the Congolese Federation precisely in order to be in a position to work out its salvation in its own way instead of being forced by the

NOTICE

Manager.

Central Government to adopt a line which would inevitably damage the country's economy.

Yet when Britain is opposed to using United Nations troops to force Katanga to submit to a regime that does not tolerate co-existence between Congolese and Europeans, she is accused of pursuing a "colonialist" policy and of being influenced by business interests in Katanga. In truth business interests are by no means unanimous over this matter. It would suit copper producers outside the Congo to stop or reduce copper production in Katanga, either by means of destruction of the plants under the pretext of military necessity, or by means of disorganising the production through the expulsion of Belgian and other European specialists. Those business interests—some of them are British—are even more powerful than the Belgian copper interests in Katanga. If the British Government allowed itself to be influenced by business interests in this matter it would probably yield to pressure by the anti-Katanga interests. There is no justification for the suspicion that if Mr. Tsimbe remained in charge it would mean that Belgian colonialism would continue. The political and administrative power would be in Congolese hands, and the continued presence of technicians and businessmen would not reduce Katanga to the status of a Belgian colony any more than did the continued presence of British technicians and businessmen reduced India to the status of a British colony. There has been too much emotionalism worked up on this question. It is high time that it should be viewed with more economic realism.

—Copyright.

Notes

GOA

The Aftermath

The assurance that Britain will not move against a member of the Commonwealth in order to help an old ally like Portugal will remove most doubts about the consequences of occupation of Goa. Mr. Nehru's declaration that Goa will be afforded a degree of autonomy is not new. But it will help to still doubts among pro-Salazar elements in Goa. The state of war will lead to a cessation of cashew imports for India from Africa. That will affect the industry in Kerala and reduce exports besides soon raising prices for raw nuts in India.

The theory that India has taken back her own territory may help to preserve the trade in mineral ore. If the United Nations accept India's explanation, Japan will probably keep up her investment in Goa. The export trade via Goa will help India to take yen credits and create openings for Japan as a supplier of capital goods. The loss of trade with Portugal in cork or wine can be disregarded, for the cold war ended all trade and the Indians in East Africa will perhaps keep up their connection with Portuguese colonies which are also likely to ask for independence. The danger to Dr. Salazar at home is also nearer. The oppo-

sition will use the reverse in Goa to press reforms at home and it may even be harder to apply repression in Angola since Portugal is isolated. Support from Spain means very little and the Portuguese Government will recognise at least now that empire really ended when Brazil broke away in the last century.

The extension of Indian authority will end smuggling. The stocks held may be sold in India but the customs will control Goa's trade in future and another loophole will be closed. The adjustment of import control will help the Indian revenue slightly. The imposition of either income-tax or sales tax can only be undertaken with the consent of the local people and Prohibition will not be applied unless local support is available. The local authorities will probably help to encourage trade with Bombay and Cochin in coconuts, copra and arecanuts. The deficit in India will be reduced and prices may tend to fall if Goa is a stable source of supply in the future. The WIP railway will perhaps be merged again in the Southern Railway zone, but if the British shareholders have not been paid off there may be some legal difficulties with the Company whose concession goes back to 1881. The port also belonged to the railway which paid for the improvements effected after 1929. The WIP railway's case may be duly presented when the official explanation is offered by Delhi for its proceedings. The gains to coastal shipping may be doubtful even if a steady traffic with Goa develops, for what matters is the level of freight rates, held now under official control.

The currency and banking arrangements of Goa must be in a flux during the interregnum of military rule. But the displacement of the Colonial arrangements will entail the opening of Treasury to help the pro tem Governor and the State Bank of India will probably be asked to enter Goa for the conduct of Government business. The suspension of business by the Portuguese banks will create a void. The resumption of remittances from India will call for a considerable transfer of funds and the Central Government will perhaps be ready to carry out the financial integration required for the large trade in ores, if it revives. Purely cash business may be temporary, and there can be no occupation currency with overprinting of notes, for Goa is

The big Indian banks will doubtless be ready to open branches as Goa is a port and British exchange banks as scheduled banks will perhaps be eager to set up branches on the West Coast. Discrimination would be injudicious, but, of course, the Chartered Bank can set up a connection with Goa through the Allahabad Bank more easily, because of its Indian domicile. The regional banks like the Bank of Maharashtra or the Canara Bank may be better placed for starting branches in Goa while Diu and Daman will probably be the field for the Banks identified specially with Gujarat at present.

The conversion of private bullion hoards into Indian currency may provide opportunities for money changers who do not have much scope at present at airports or even in Bombay and Calcutta. Those with Portuguese currency will probably be embarrassed but authorised dealers should help them to convert their money into sterling because the confusing situation is created by the Government and the need for sterling must be met by the Reserve Bank, especially as Goa is expected to retain a degree of fiscal autonomy by escaping the restrictions here. Trade with Portugal or Mozambique is out of the question, but the yen receipts for iron or manganese ore may help the Indian authorities to take a liberal view of the circumstances and needs of Goa. The difference between Pondicherry (still maintaining a connection with Saigon) and Goa is apparent. Trade with Karachi will probably be kept up if the position allows and banking connections with Pakistan will probably be routed through India in future. The problems of Goa have not been noticed though the FINANCIAL TIMES has pointed out that the business with Japan means money for India. Goa also may provide a useful market for Indian distillers because Goa will long remain "wet".

GOVERNMENT The Biggest Employer

The Central Government employed in June 1961 as many as 7,53,501 persons in addition to 67,442 not on the regular establishment. The figures show an increase over December 1960 as also March 1961. The figures do not include workers in the State railways and employees in missions abroad. The increase in the officials employed prove that a welfare State provides more jobs, also that the increase is continuing because of the Plans. A large number of persons are described as unskilled. Presumably, Government service does not provide any training or skill and a section of the Government servants' con-

ployment, while a man in an engineering industry can shift to some other jobs and coal-miners if thrown out of employment, can get off to agriculture or other occupations.

The monthly abstract of statistics also makes it clear that the Centre is a far bigger employer than the West Bengal Government which had on its payroll in February 1961 over 2,03,062 persons of whom 97,366 were described as temporary Government servants including 11,158 women. The Centre is a bigger and better employer and the prolonged clamour for equality of pay is supported by the statistics. The number of gazetted employees in Bengal is 5,278 while 75 per cent of the employees draw a salary of Rs 75 or less. The employees getting Rs 300 or above accounted for only 1.79 per cent. This may imply that Government employees do not enter the affluent society, also that the clamour for relief is well-founded. The total salary bill of Rs 2.39 crores is mentioned so that the civil administrative expenditure is not very large in relation to revenue and the problem is not one of retrenchment but of revision. The Pay Commission's proposals have evoked very little enthusiasm because the higher cost of living is not met by the increase sanctioned. The pay of the industrial worker may appear attractive in comparison with salary of Government servants and the eagerness for private employment now is due also to the prospect of a regular bonus to supplement wages. The figures convey the impression that Government service cannot absorb all the persons over 18 willing to start work. It is only through

economic development that the people who register in increasing numbers at the employment exchanges can get jobs. The percentage of jobs secured in relation to the volume of applications is not impressive at all and that is perhaps proof of the recruitment through exchanges does not appeal to most private employers.

*

PRODUCTION Trends and Prospect

The chemical industry too was affected by power cuts in summer and the fall in sulphuric acid output since September 1960 is ascertainable from the statistics of industrial production. The increase under soda ash or chlorine does not offset the decline under caustic soda and the chemical manufacturer's problem is not one created by distribution or price control. A rise in fertiliser production in 1961 is due to the progress of expansion schemes. The increase under copper sulphate or fall in sodium sulphide is of less interest than the fall under soap output. The 1961 figures provide proof of the difficulties in getting raw materials for soap making. The output in May 1961 slumped to 4,300 tons from 6,215 tons in April. The steep fall is a sign that the soap industry even with a big market at hand is not able to make headway.

The level of rayon output has gone higher after 1960 and if there is no increase under acetate the large increase under staple fibre in 1961 calls for notice. The entry of new units in the rayon industry is not so much a factor as the progress of plant expansion by the older units. The growing passion for rayon this year is based on improving output as well as the prospects assured by the limit set to imports. The world, however, will have a lot of rayon in 1963 and countries like Soviet Russia or Germany are catching up with Japan as a major producer of rayon. The pulp problem is not so big as the rise in world rayon output and if there is no real threat to cotton the advance in output in Europe means that cotton exports are going to fall and countries like Egypt or Brazil will fare badly. The surplus of rayon may spoil all chances of export especially if China produces rayon plus cotton goods for export. The enthusiasm for rayon in India must be tempered by a look at the vast increase in postwar production and the re-entry of Italy and Japan as major suppliers of rayon to the whole world. This is hardly ever spoken of today on the assumption that the new rayon companies can get off to a fine start and draw level with the older companies. But, as a powerful

TEA Output Regulation

The growing gap between world production and consumption of tea has promoted the Calcutta tea trade to suggest, once again, that India should, in consultation with other producing countries, keep in readiness some international machinery to regulate production. This suggestion has been made by Mr A. G. Whitaker, the Chairman of the Calcutta Traders Association. In support of his view, Mr Whitaker has mentioned that the crop this season has shown an overall increase of 50 million kg.

Moreover, a comparatively bigger North Indian tea crop this year together with an appreciable increase in the crops in Ceylon and Pakistan has had a depressing effect on tea prices in the Calcutta market. The price decline amounts to 60 nP per kg as compared to last year. Many teas are now being sold at prices near or below their cost of production. The long-term outlook, as forecast in a study made by the UN Food and Agricultural Organisation, however warrants little optimism. By 1965, the annual surplus of production over consumption is expected to reach the level of 40 to 50 million kg. Although it will be wrong to take an alarmist view of this report, it will be equally wrong to ignore the warning that has been given.

According to Mr Whitaker the threat can be met. He wants Government to consider the holding of a meeting of producer countries to examine the situation and to determine whether it will be advisable to renew the International Tea Agreement, not with the object of its immediate application, but rather with that of keeping the machinery in readiness lest the apprehensions of the FAO should prove correct.

It cannot be denied that tea's strength lies in its cheapness compared to other beverages. It is understood that the tea producers are making representation to the Government suggesting a certain degree of consolidation and reduction in the many taxes imposed. The present export duty of 44 nP per kilogram serves as a subsidy to other producing countries and probably the main reason why Plain teas are being priced out of the export market. The trade will welcome any proposal for a reduction in the tax burden or the simplification of the collection of the many individual taxes by consolidating them.

*

AIR TRANSPORT Freight Increase?

The annual reports of IAC and Air India show that both the air

corporations have achieved improved operational results during 1960-61. For the second year in succession the IAC has passed the break-even point. In spite of steep rise in wage bill and other operating costs, there was a small surplus of Rs 4.68 lakhs after meeting all expenses. The profit might have been twice as large if the entire Viscount fleet had not been grounded for 12 days in January. Apart from larger revenues, the average utilisation of aircraft also shows improvement over the previous year in spite of the drop in Viscount hours.

The major problem facing the IAC now is the replacement of its fleet of 45 Dakotas. Until the Avro project is in a position to meet the airline's requirements, the replacement has to be effected by purchase abroad according to the availability of foreign exchange. The partial replacement of the Dakotas by Friendships and two, or perhaps four, second-hand Viscounts is expected to improve the Corporation's revenue earning potential. But as costs are also expected to rise, the IAC is now thinking in terms of increasing fares and freights in order to build up its reserves and to finance capital expenditure.

The present structure of fares and freights was determined on the basis of 1957 costs and subsequently there has been substantial increase in costs on account of higher wage bill, increased provision for obsolescence of spares, higher costs of stores etc. If attention is confined to this aspect of increased costs increase in fares and freights may be unavoidable. But the IAC is a public utility service which has the obligation to make its services available to progressively larger numbers of people. Before using its monopoly position to step up fares, the IAC might examine the scope for reducing its operating costs by increasing the overall load factor, by making efforts to carry a larger volume of traffic.

While the IAC is thinking in terms of increasing its fares and has approached the Government for sanction, Air India is particularly interested in enlarging the available traffic base and will, therefore, press in IATA for lower fares on international routes. The fact that Air India, unlike IAC, cannot exercise the monopolist's prerogative is only part of the explanation of the different approaches adopted by the two State owned organisations to the consumer. However, it is gratifying to find that, in spite of having to meet the most severe competition, Air India is able to report increased revenues and profits.

Revenues for the year showed an increase of Rs 6.59 crores, from Rs 12.58 crores in 1959-60 to Rs 19.17 crores in 1960-61, while expenditure rose by Rs 5.80 crores, from Rs 12.40 crores to

Rs 18.00 crores. Operating profit during the year was Rs 117.4 lakhs against Rs 18.26 lakhs in the previous year. The expansion of jet operations has increased the total carrying capacity to a much greater extent than the actual traffic carried. While total capacity offered during the year increased by 72.7 per cent over previous year, traffic carried has increased only by 41.2 per cent. But, at the same time, jet operation has enabled a reduction of 15 per cent in the cost per unit, i.e. per available tonne kilometre, from Rs 1.33 in 1959-60 to Rs 1.13 in 1960-61.

The second stage of the Corporation's Rs 8 crore requirement programme, involving replacement of Super Constellations by jets, has been taken on hand and orders have been placed for two more Boeing 707 jets. When the two jets are delivered, the Corporation will have a fleet of six Boeings and will be among the first airlines in the world to have converted wholly to jet operation.

*

ROAD TRANSPORT Low Productivity

Addressing the twenty-sixth session of the Indian Roads Congress at Patna last week Mr R. Barua, the Chief Engineer of Assam, who is also the President of the Congress, underlined the need for facilitating the development of a coordinated, scientific and efficient road system with a view to accelerating the tempo of industrialisation and the emotional integration of the country. This suggestion is of topical interest at the present juncture while India is endeavouring to bring about large scale agricultural and industrial expansion. There is little doubt that for the successful implementation of the various development programmes expansion of transport facilities is an indispensable factor. The growing transport shortage in the country has exposed the inadequacy of the existing facilities. The movement of raw materials is more often than not adversely affected by the transport bottleneck and the coal industry has been the worst sufferer in this respect. All these factors highlight the importance of an integrated road development in the country.

Naturally enough the main problem of the Road Congress would be the evolution of ways and means for building up adequate roads all over the country for facilitating the movement of men and materials at cheaper rates. In his presidential address Mr Barua has brought to focus the various drawbacks in the existing system. Citing relevant portions from the report of the Indian Productivity Team of Road Transport, Mr Barua had drawn pointed attention to the low productivity

of the road transport in the country. The road transport, still operating within the confines of the contractionist philosophy of the thirties, has rendered the attainment of optimum mileage impossible and the imposition of a host of regulations at various levels has resulted in the low productivity of road transport. The negligently attention paid on the maintenance of existing roads has also considerably inflated the cost of operation. To tackle all these problems Mr Barua has advocated for the constitution of a Road Board at the Centre on the same lines as the Railway Board, the revision of syllabi in road engineering in the universities and an enhanced allocation for road development in the Third Plan. The apprehension that the road transport would have serious impact on the working of the railways does not hold much water for the inability of railways to meet the mounting demand particularly for the movement of coal is now an established fact. The vital role that roads play in the nation's life and economy is well recognised fact all over the world. Any relaxation in road development activities will upset the entire production and distribution programme in the country.

*

TECHNICAL EDUCATION Staff Shortage

While reviewing the progress of Third Plan Schemes of Technical Education, and approving programmes for the future, such as establishment of a Board of Post-Graduate studies in Engineering and Technology, and reform of commercial education on the lines recommended by the Rao Committee, the Advisory Council of Technical Education at its recent meeting noted that the staff position in existing institutions continues to be unsatisfactory and is likely to get worse unless adequate measures are taken in time. One of the difficulties, it appears, is that the tenure of appointment in most State Government institutions is temporary and this is not helpful in recruiting and retaining staff of suitable calibre. There seems to be no valid reason why this should be so, especially, in view of the fact new institutions under the Plan are invariably sanctioned on a permanent basis. It is true that Central assistance towards establishment and maintenance costs of these institutions is provided only for the Plan period and it is the responsibility of the State Governments to meet the expenses in subsequent years. But no institution is included in the Plan unless the State Government concerned agrees to meet the running costs after the period of Central assistance comes to an end. That being the position, it is not clear why there should be any difficulty in getting clearance from

State Finance Ministries for appointment of staff on a permanent basis.

The crucial importance of taking adequate measures in time to remove these difficulties will be clear when viewed against the magnitude of the programme for the expansion of technical educational facilities in different sectors. The Third Plan programme provides for the establishment of 19 new Engineering Colleges including seven regional institutions. Out of the 19 new colleges, seven have started functioning during the current year. The revised programme for polytechnics provides for 70 institutions of which 13 have been started in the current year. An amount of Rs 344 lakhs has been allocated to States for the purpose of ways and means advances for technical education schemes in the current financial year and a sum of Rs 150 lakhs will be sanctioned for assistance to non-governmental institutions.

The programme also includes provision for expansion of facilities for training chemical engineers. The Chemical Engineering Board has estimated that, in order to meet the demand for chemical engineering graduates (6500 to 7000) the annual admissions should increase from the present figure of 610 to 1400. The admission capacity of existing institutions is to be raised to sixty seats wherever it is less than this number. Some additional centres may also be started in the course of the next two or three years depending on the availability of staff, foreign exchange etc. These additional centres will be located in the States of Gujarat, Assam and Kerala where chemical and allied industries are developing rapidly and where there are no facilities for training in chemical engineering.

The Council of Scientific and Industrial Research has estimated that 70 per cent of the equipment required by polytechnics and 50 per cent of the equipment required by engineering colleges could be fabricated indigenously and there should be no serious difficulty in finding foreign exchange for the remainder of the equipment required by these institutions. But the staff position requires immediate attention at the highest policy making level.

*

ICMF

Removing the Fetters

The Indian Cotton Mills Federation, in a memorandum submitted to the Tariff Commission, has entered a strong plea for a complete reshaping of the Government of India's textile policy and urged for the lifting of the fetters placed on the growth and development of the cotton mill industry and the various restric-

tions imposed on price and production. There is little doubt that the doctrinaire approach of the Government has more often than not precipitated difficulties to the industry. The competitive ability of the cotton textile industry in the international markets has been considerably weakened by the imposition of curbs on the rationalisation and modernisation programme, which had even telling effects on the growth of the industry. The Federation's plea for the immediate implementation of the modernisation programme is timely in view of the foreign exchange problem and the difficulties experienced by the country in maintaining its exports to traditional markets. Further worsening of the position is apprehended on the proposed entry of Britain in the European Common Market.

The Federation has also pointed out the failure of price control to bring the desired benefit to the consumer on account of the host of varieties produced and half the supplies of which does not fall under the purview of control. In the circumstance the maintenance of quality standards has been rendered impossible. The Federation, therefore, suggested that the authorities should stipulate upper and lower limits within which prices may be allowed to fluctuate. The memorandum also indicated that in view of the frequent fall in prices in the market the mills should be allowed to charge higher rates on such varieties which are in wide demand so that the mills will be ensured of a fair return.

The Federation has also underlined the need for exempting industrial fabrics and yarn like tyre canvas, tyre cord, filter cloth, belting duck, padding cloth and shoe canvas which are utilised as raw materials by other industries from controls.

The industry's problems, as is evident from the memorandum, are fourfold: supplying quality goods to domestic and foreign markets; paying higher wages to labour; contributing sizable revenue to the Government and providing fair deal to the investor. The only solution, as suggested by the Federation, is to gear textile economy to the medium of production on modern lines. The memorandum is of special value to the Federation which has recently conducted a probe into the affairs of the industry, and the suggestions embodied in it will offer food for thought to the Commission.

A realistic appraisal of the factors that are inhibiting the rapid and healthy growth of the industry can and should be made by the Tariff Commission. As a fact-finding body of acknowledged technical authority, its views will be particularly helpful to Government in its final formulation of policy that should govern the

industry in the next five or ten years.

*

ARCHAEOLOGY The Financial Side

The financial side of archaeology or its political side has hardly been mentioned though the history of archaeology has been written up by curators of museums. It was Schliemann who created a strong interest in Turkey and it was Lawrence who made Britain see that the Crusaders' castles represented a link between London and the Levant. Archaeology helped to make even Musolini popular abroad and the continuous interest of scholars has helped Greece to get more than sympathy. The permanent schools kept up in Athens and Rome to study classical antiquity may be due as much to Macaulay's Lays of Rome as to the continuity of Western culture.

The foreign archaeologists made the ties between India and Greece or Bacteria apparent and the stone monuments have proved more durable than the chronicles of some regions. The preservation or restoration of monuments has an economic aspect. But more important is the film producer's interest in ancient and mediaeval art. The film tries to conjure up the past in spite of known lapses or distortions. Historical advisers have not appeared in Indian studios though an American film about Alexander relied on professors to reveal the Greek view of life.

The financial connection with tourism is what matters and lightening up the Pantheon is a clear postwar trick to bring the European tourists back to Greece. The opening of resthouses or canteens at Mahabalipuram is derived obviously from a desire to get the tourist business going and the idea of making capital out of history is based on Italian precept and example. The Tourist Institute may teach India a trick or two and visit India slogans may be reinforced by a useful notice of what to expect at most places of historical interest. The old guides prepared before partition are useless and new ones may be required for the Indian tourist who wants to see India for himself. Trained guides who know art and archaeology may be needed. Men who look beyond tips to trips with a sense of the past may be needed, but a fear of trouble on the frontier may limit the foreigner's interest in India's past.

*

ELECTION

The DMK Promises

The DMK in 1960-61 has prepared an election programme that envisages nationalisation of

the cinema, banking and transport industries. The grouping suggests that in asking for State control of the cinema industry the party hopes for rehabilitation of film-making. The depression in Tamil film production may be one reason: the other may be that by acquiring all theatres the State may become the patron of the arts and letters of Tamil Nad. However, film production is risky and the regular profits from banking or transport may be eaten away by the State turning to films. The party looks beyond nationalisation to synthetic rubber canning and minerals. There is no ore export at present. The development of leather in place of hides and skins is also demanded by the manifesto issued recently. In fact, the goatskin export trade earns dollars for India and Indian tanners are a long way behind foreign tanners so that the export of semi-tanned skins for a long period is held desirable by the exporters. The DMK is convinced that leather goods can be made but the manufacturing industry is hardly organised and small scale business will not pay. In regard to leather only business on a worldwide scale like Bata can be made to yield profits.

The Leftist leanings of the DMK are plain in the demand for minimum wages for all including agrarian labour. The party may get Communist support in some constituencies; informal pacts are proposed. It has not made any pact with the Swatantra party but hopes to enlist the sympathy of the Muslim League. The party likes the ceilings on land but it seems to favour nationalisation of transport in spite of the limited success of the nationalist bus-transport in Madras City. Perhaps the support long given by bus magnates to the Congress party explains the attitude. As regards nationalisation, the party has forgotten that banking is a subject that cannot be touched by the State Governments. And in fact, it was quite unnecessary for State Ministers to talk about the difficulties experienced last year or about the soundness of any bank.

PUMPS

A Wide Range of Sizes

Inaugurating the symposium on pump industry in New Delhi Mr K. K. Jajodia, the Chairman of the Indian Pump Manufacturers Association, highlighted the progress registered by the industry in the country during the past few weeks. Founded as an affiliated body of the Engineering Association, the Pump Manufacturers Association was mainly responsible for the development of the industry by safeguarding the interest of

pump manufacturers and extending technical informations to them. The symposium will concern itself with technical and general developmental research in the field of pump industry, which will guide all the future activities. The need for organising a National Institute of Pump Research, similar to one existing in the United Kingdom, has been voiced by the members of the Association for tackling all the important problems of research and design work. The benefit to the industry by the establishment of such an institute will be manifold. Apart from developing the technical know-how, the institute will throw open opportunities for research and design development for the small producers also which, left to themselves, will be beyond reach.

The progress made by the industry can be gleaned from the annual report of the Executive Council of the Association. The industry today undertakes manufacture of pumps of various types in a wide range of sizes. At present there are about 48 registered units engaged in the production of various types of power driven pumps with a rated capacity of 117,600 units annually. The Planning Commission has fixed the capacity for power driven pumps at 184,000 units and estimated the production target at 150,000 units for the Third Plan. As the demand for power driven pumps in the current Plan is likely to exceed the target of production laid down by the Commission, fixing a more realistic target will be justifiable.

Diversification of production to cater to the requirements of various types of pumps and incorporation of adequate changes in design suitable for industries like paper, cement, chemical and petroleum confirms the progressive outlook of the industry. Mr Jajodia was critical of the Government's policy in permitting imports of pumps which can be procured from indigenous sources. In the light of the tight foreign exchange situation and of the need for encouraging domestic enterprise this seems a rather odd complaint to be allowed to be made. The Development Wing must put an end to this grievance at once.

AT THE FAIR The US Pavilion

The Industries Fair, which is now more than a month old continues to be the biggest draw in the capital. Perhaps, the greatest show ever got up in the country, the Fair provides a glimpse into the various aspects of life of the participating countries and also of their achievements in diverse fields. Gate no 4 which leads along a pathway partly paved with pebbles and flanked by fountains and gardens and with

towering golden domes takes one to one of the brightest and most educative of pavilions viz, that of the US. Here is kept on view hundreds of machines and equipments ranging from the giant material handling machine to the intricate electronic device used as teaching aids. The exhibits provide only a sample of the industrial life in the US and have been selected mainly for their utility to Indian industries in the context of the development programmes envisaged by the Third Plan. The fork-lift trucks, the chain and cable hoists and tractors, the retreading shop and the giant earth-moving machines are items of practical interest. The potentialities of silicon and the versatility of plastics have been most effectively brought out in one enclosure. The printing enclosure displays modern presses, engraving cameras and plate making machines. An item of curious interest was the miniature space capsule used by America's first spaceman Allan Shepherd. By far the most attractive item on display was the aeromobile. Somewhat flat in shape, it has neither wheels nor wings but rides on a cushion of air a few inches above the ground, and is also capable of being moved on all sides. The most effective use of it would seem to be to negotiate snow clad terrain though, in view of its present rudimentary stage, further refinements are necessary.

The most impressive thing about the entire US show is that it has been designed and put up in the manner of a producing factory. Most of the exhibits are operative and the machines installed in the enclosures turn out useful products. Compared with other pavilions, it is a somewhat simple affair: The Russian pavilion, for instance besides industrial items and the inevitable sputnik and other items of space gadgetry, displays china, watches and other consumer goods including the Russian Vodka. In comparison, the US exhibits are narrow in range. But the theme of the US pavilion is "industry in the service of man" and this purpose has been admirably served by the exhibits.

US

The Outlook

A wide ranging examination of the US economic position has come from a man in particularly good position to undertake it. He is Dr Walter W. Heller, Chairman of President Kennedy's Council of Economic Advisers, and his vehicle is a copyrighted interview just published in the weekly magazine "News And World Report."

Here is this able and articulate economist "On Gross National Product"—Total output of goods and services will be at a rate of about \$540,000 million a year for

this final quarter of 1960, and a rate of better than \$565,000 million for the second quarter of next year. This will mean, in current price, a rise of nearly \$70,000 million from the beginning of the recovery in early 1961 to the second quarter of 1962, or a substantial growth of 13 per cent in little more than a year.

"On Productivity": Industrial productivity, or output per man hour, has been increasing this year at an annual rate of nearly ten per cent. This compares with the earlier long-term trend of about two to three per cent a year.

"On Employment": The brisk economic expansion will bring down the unemployment rate to about five per cent of the US labour force of 72 million by the middle of 1962. (The latest report, for November, showed the rate falling to 6.1 per cent from October 6.8 per cent.) The goal after that is four per cent, and through the improvement of skills and labour market conditions the target can be reduced to below four per cent.

During the present decade, expansion in the US labour force will require more than one million new jobs annually, on the average. Total output will have to keep rising—as it has, historically—to create the needed new jobs. That is the way to make use of rising productivity, which is the prime path to lower costs and higher living standards.

"On Inflation": The price stability record has been excellent. Despite this year's economic advance, wholesale industrial prices are below their level at the trough of recession, and retail prices have gone up only about seven-tenths of one per cent since the beginning of the year.

This indicates a playing out of some of the post-war inflationary forces, and a good outlook for price stability in the future. It is President Kennedy's intention to get both labour and management to co-operate in preventing a renewal of the price and wage spiral of the past. However, this does not imply controls over prices and wages.

"On the business cycle: Some cyclical swings are to be expected in a market oriented economy. But the business cycle can be moderated, and the many built-in stabilizers in today's US economy make a depression almost out of the question. The US has been reaching much higher plateaus of economic activity, with much shallower and shorter dips than in the past, and it can do even better.

"On the balance of payments: The United States has taken on vast obligations on world leadership—military obligations, involving \$3,000 million of overseas expenditures a year; foreign aid

Indian Finance

23 December 1961

obligations, involving another \$3,000 million to \$3,500 million; obligations for the private export of capital, adding several thousand millions more to the annual out-flow.

Even after subtracting net earnings abroad, including a substantial trade surplus, the US still is shy close to \$2,000 million this year in its balance of payments. This, however, represents a considerable improvement over last year's payments deficit of \$3,900 million.

A competitive position which has resulted in a large surplus of exports on goods and services over imports strongly suggests that American industry and labour have been holding their own. In this sense, the US has been doing a good job in this sphere, but one that still is not good enough as it seems to continue improving its long-term balance of payments position.

There still is much to be done on the export front and on conserving foreign exchange. However, the United States does not want its military defences and world economic leadership to be dictated by balance of payments considerations, but rather by basic political and military concerns and by underlying economic strength.

UK MOTOR INDUSTRY In Slow Gear

The British motor industry last month was examined critically by experts not because of the motor show, but on account of the fall in output and exports. The survival of some motor manufacturers is in doubt and entry into ECM is regarded as likely to spoil prospects abroad. The BMC results were viewed with misgivings and totes' labour redeemed any problem was taken as a symptom of excessive employment in a declining industry whose home market has been already spoilt by credit restrictions. The mergers continue and if Jaguar is regarded as fully prosperous being able to buy up Guy motors the bigger firms like BMC are regarded as ill-exposed to risks. The position in India may be different, it is also evident that British motor firms or component manufacturers must rely on sale of technical knowledge more than their products in future since the outlook is difficult and obscure.

That two of the biggest motor firms in the UK happen to be subsidiaries of big US manufacturers is not so relevant as the case of European car makers—in France and Sweden as well as in Italy. Export figures 1960 have made it clear that the British motor industry now is different from the one studied by PEP in 1958 opportunities abroad

seemed great. The same experience is shared by the British aircraft industry. Fewer firms are in the field because of mergers. Defence orders are down and civil aviation is not a source of big profits. The craze for aircraft shares belongs to the prewar period even as in the case of motor shares and the European rivals enjoy advantages derived to the UK industry. The 'sick' industries include ship-buildings. Perhaps that needs mention when Indian ship-building is regarded as essential and promising by those who feel that the second shipyard must be got ready, even if the first has shown poor results.

GENERAL TYRES An Optimistic Note

While briefly reviewing the progress registered by the auto-

mobile industry in the country in his address to the first Annual general meeting of the General Tyres Limited, Sir A. Ramaswami Mudaliar struck an optimistic note on the future of the industry in general and of the company in particular. The automobile tyre industry has fully kept pace with the remarkable increase in road mileage and the number of commercial vehicles during the past decade of planned growth and the manufacture of tyres registered a notable rise to 1.35 million in 1960-61 from 0.9 million in 1959-51. Considering the enormous expansion of transport envisaged in the Third Plan the target for the manufacture of tyres has been fixed as high as 3 million and it is reported that the authorities are considering a further upward revision of the target. To meet this production target the Government has granted licences to various industrial undertakings for either expansion of capacity or for establishing new ventures for the pro-

duction of tyres and tubes. A. Ramaswami Mudaliar, who appreciating the Government's gesture, underlined the importance of regulating licensing policy with view to enabling the new entrants in the field to attain economic production and establish themselves on a firm footing.

Referring to the affairs of the company the Chairman pointed out the loss of Rs 1.05 lakhs during the year under review incurred largely due to the expenditure on the construction of the factory in West Bengal. The work at factory is progressing at a commendable rate and the plant expected to commence trial production by the middle of the next year. The initial capacity of the new plant will be of the order of 15,000 tyres and tubes a month. The company has also decided to expand its activities and has requested the Government to accord sanction for expansion of capacity and diversification of its output. The Chairman also referred to the

ASHOK LEYLAND COMETS
hold aloft the life-line for man and industry

INDIAN OXYGEN LIMITED
HEAD OFFICE
40/1, DIAMOND HARBOUR ROAD,
CALCUTTA-27.

Dear Sirs,

We operate 4 Nos. of Leyland Comet trucks and have ordered two more chassis. The Comets are used for the carriage of liquid oxygen from the producing factories for local distribution as well as for supplying to depots remote from the factory. As an operator of a large number of trucks, our main considerations are reliability of transport consistent with economy of operation and Leyland Comets have met these requirements to our satisfaction.

Yours faithfully,
T.P.L. Saha
Production Manager

9/12/60

This is one among the many letters we are receiving from satisfied users asking for more Comets. The exacting standards of precision combined with fine craftsmanship make Leyland the most wanted vehicle in over 50 countries.

port supply of natural rubber within the country and a substantial quantity of both natural and synthetic rubber had to be imported to meet the requirements of the industry. The industry is so dependent to a great measure, foreign countries for raw materials like tyre cords, bead wires, laces and carbon black. Nevertheless there is no room for despondency, for, arrangements for manufacturing these materials in India are well under-way and it can be safely anticipated that by the end of the Third Plan the industry will be nearer self-sufficient in its requirements of tyre manufacture.

COAL problems restated

A press note issued by the joint working committee of the Indian Mining Association, the Indian Miners' Federation, the Indian Colliery Workers' Association, and the MP and U.P. Coal Miners' Association, lists again the problems of an industry that is fast becoming a problem industry. It draws attention to the tempo of progress in coal production during the last six months and the adverse significance this has achieved in the level of production stipulated by the Third Plan. Total production during the first six months of the Third Five-Year Plan has been running at a level of 26.36 million tonnes, which is only 0.67 million tonnes more than the production in the corresponding period of last year. The rate of production is substantially less than even the target of 60 million tonnes set for the industry in the Second Five-Year Plan. The slow progress in production is put down to various difficulties, experienced by the coal industry which the more important are transport difficulties, shortage of labour and explosives, delays in the issue of import licences and an invariable price policy for coal which leaves little margin for the industry undertaking expansion programmes.

The transport shortage has assumed grave dimensions which should be apparent from the fact that while the industry requires 7,183 wagons per day during 1961-62 the present supply is only of the order of 4,700 wagons representing a shortfall of 2,483 wagons per day. The transport shortage would seem to account substantially for the loss in the tempo of coal production. Frequent power cuts and periodic shortage in the supply of explosives have also been an important factor which has affected coal production during the last six months. It is evident that the over-dependence of electric power has a very serious effect on mechanised mining while at the same time it acts as a brake on expansion projects.

Special attention is drawn to the question of the present price structure for coal and of the absence of

incentive elements in it to sustain an expansion programme. Cost of production of coal is shown to have increased considerably owing to increases on account of higher electricity tariffs, enhanced price of stores, plant and machinery. But Government's reluctance to sanction corresponding rise in price to neutralise the rise in costs has adversely affected the level of profits in the coal industry. The matter is necessarily of crucial importance in view of the expansion plan projected for the Third Plan period. The policy of keeping coal prices at an unrealistically low level is short-sighted and will only lead to shortages in coal supply and arising from this to inflationary conditions.

NEWS IN BRIEF

The Coffee Board has released for export to any destination 882,600 kg of coffee out of the 1960-61 crop consisting of 715,800 kg of Arabica cherry coffee, 142,800 kg of Arabica monsooned coffee and 24,000 kg of Robusta monsooned coffee.

The Government of Madhya Pradesh has sanctioned loans and subsidies of Rs 9.75 lakhs to co-operative societies for minor irrigation (tasks and dams) works, included in the agricultural sector of the current Plan. The loans will carry an interest of 5 per cent with provisions for a penal interest upto 8 per cent.

The Government of India has declared the Delhi Milk Scheme to be a public utility service, under the Industrial Disputes Act, for a further period of six months from 22 December 1961.

The Pakistan Government has increased tea export quota to 12.5 million lbs from 10 million lbs in view of the good crop in the country had this season. The export quota has been fixed after leaving a comfortable carry-over into the new season, and a reserve to meet any possibility of next year's crop facing adverse weather conditions.

The biggest malt extract plant in the country was inaugurated in Ghaziabad by Mr N. N. Mohan, the Managing Director of Dyers Meakin Breweries Limited. The plant has a production capacity of nearly 11 tons of malt per day and has been constructed at a cost of about Rs 12 lakhs.

The Government of India has sanctioned a loan of Rs 3.10 crores to the Andhra Pradesh Government for financing expenditure on the Nagarjunasagar project in 1961.

India and Hungary have signed an agreement in Budapest providing for a ten per cent increase in trade in 1962.

The Manganese Corporation of India Limited has earned a net

profit of Rs 4.84 lakhs during the year ended 30 June 1961 against Rs 4.20 lakhs in the previous year.

Mr Rasiklal Parikh, Gujarat's Home Minister, has announced that over 85,000 kilowatts of additional power would be made available in Saurashtra by the end of the current Plan.

The production of iron ore during January-October amounted to 9,767,000 metric tons which is higher by 9 per cent compared with the output during the corresponding period in the previous year. Orissa was the leading producing State with an output of 437,000 metric tons, followed by Madhya Pradesh which registered a record production of 226,000 metric tons.

Despatches of iron ore for consumption in the iron and steel plants in the month of October totalled 722,000 metric tons and despatches for export aggregated 162,000 metric tons.

The Government of Rajasthan has decided to carry out the Palana lignite project under public sector in accordance with the Industrial Policy Resolution of 1956.

According to the International Trade and Industry Ministry Japan's imports in November amounted to \$357.753 million, an increase of 9.9 per cent over those of the previous month. The monthly average for the current fiscal year is estimated at \$500 million.

The Life Insurance Corporation of India has decided to give a loan of Rs 87 lakhs to various cooperative housing societies in Vidarbha region of Maharashtra State to construct houses for the flood-stricken people.

The Pakistan Government has approved a scheme sponsored by the Pakistan Industrial Development Corporation for setting up a 500 loom jute mill at Bhatiali, Chittagong, at an estimated cost of Rs 3 crores. The project is expected to be completed within two years.

According to the provisional figures released by the International Rubber Study Group, the world consumption of natural rubber showed little change in September at 172,000 tons compared with 170,000 tons in the previous month. Production of natural rubber in August was placed at 202,500 tons, the highest since December last year.

The Union Government has sanctioned a loan of Rs 75 lakhs to the Rajasthan Government for financing expenditure on the Chambal Project of the second and third quarters of the financial year 1961-62.

Indian Finance

PERSONAL

Mr Shriyans Pradesh Jain, Vice-President of the Indian Chamber of Commerce and Industry, was elected President of the Afro-Asian Organisation for Economic Co-operation for the next two years. Mr Gul Mohammed of Pakistan and Mr Dossolo of Mali were elected Vice-Presidents.

Mr F. E. H. Goddard, the Manager of the Chartered Bank, Bombay, has been elected President of the Bombay Chamber of Commerce and Industry for the year 1962-63.

Mr G. W. Lall, former Manager of Stanvac in New Delhi, will take over as representative of Socony Mobil Oil Company in India from 1 January 1962.

The Governor of West Bengal has appointed Raja B. N. Roy Chowdhury of Santosh to be the Sheriff of Calcutta with effect from 20 December 1961.

The Government of India has appointed Mr S. T. Raja, at present Managing Director of Hindustan Antibiotics, Pimpri, as General Manager of Rourkela Steel Plant.

Mr Indrajit Singh, Director of O and M Division and Joint Secretary, Ministry of Finance, has been appointed Director, Finance, Hindustan Steel Limited.

Mr Arun Banerji has been appointed Deputy Chief Officer of the Industrial Finance Department of the Reserve Bank of India.

Mr Ratan Lall assumed charge as General Manager of Central Railway on 18 December, in succession to Mr D. R. Khanna, who retired after 31 years of service on the Indian Railways.

Mr A. R. Bhatt, MLC (Poona), was re-elected President of the Federation of Associations of Small Industries of India at the annual general meeting held in New Delhi last week. Mr T. Ghose (Calcutta) and Mr D. C. Khanna (Delhi) were elected Vice-Presidents and Mr S. J. M. L. Thambi (Jaipur) as Honorary Secretary.

Mr D. N. Sroff and Mr Shantilal M. Mehta have been re-elected as the President and Vice-President respectively of the Silk and Art Silk Mills' Research Association for the year 1961-62.

Mr V. B. Kadam, an officer in the Economic Department of the Reserve Bank of India, left for Bangkok to take up an assignment.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

'CHRISTMAS is once again round the corner and here is wishing my readers a merry one; and since this will also be the last issue of the year, here is also wishing a happy New Year. Some obscure ambivalence is responsible for the odd legend on some greeting cards that convey the "season's greetings". I tackled my stationer about it and he hazarded two reasons: one, a neutral reference to the season enables the use of the cards for other occasions and other seasons—say the Puja or the Diwali. This indeed is thrifty! Thrift of another sort is the second reason—that of the man who wants to be done with the New Year and Christmas greeting for the price of one card. Austere and astringent persons like Shaw have deplored the fact that Christmas has become the adjunct of Commerce: Shaw, if I remember right, once sent a Christmas card to a friend saying "Don't despair, Christmas comes but once a year and it will soon be over." The greeting card business can be particularly harrowing: trying to remember those to whom it must be sent and trying to make out who the devil it was who sent a particular card and to whom reciprocity is due in common decency is an yearly ordeal with me. Mercifully, I have solved another problem connected with Christmas and the business of greeting. The UNICEF cards have saved me from the bother of having to make up my mind between "Ye Olde Inne" and the Ajanta belle who defies anatomy. The artistic merit of UNICEF cards is beyond question and I have the further satisfaction of not having assisted at pushing up the sales figures of one who is cashing in on Christmas. On the other hand, my kind thoughts are Christian in another sense: they contribute anonymously to a cause that is truly Christian in its comprehensive compassion.

One is slightly taken aback to learn that the Central Bank is just celebrating its Golden Jubilee, for one always felt that the institution was much older than that. I suppose it is because of the circumstances in which Central was born, the challenges it had to face, the obstacles it had to overcome that one has this impression that Central's birth must surely have been some time in the last century. But, no: spearheading or pioneering the Swadeshi move-

ment in the economic sphere 50 years ago, the Central Bank was established thanks to the initiative taken by Sir Sohrab Pochkhanwala and a coterie of friends. Off to a reasonably good start, the bank was then called upon to weather the storms let loose by the waging of World War I, while the institution was still cruelly susceptible to that typical Indian ailment, infant mortality. The Indian executives (Central has from its inception been a sort of "Indians only" show) new to banking as they were (there was little opportunity offered then to us for entering the field) manfully did their best, and their best fortunately was enough not merely for ensuring survival but also for fostering sure and steady growth. The end of the war brought some relief, but more trials were to follow in the early twenties. Runs were experienced, and then Sir Sohrab used to engender confidence, by himself acting as teller and giving cash for the flood of cheques that were handed in. Tata Industrial was then merged with Central, and after that landmark, Central steadily grew to be what it is today, the largest joint stock bank in India.

What contributed to Central's success? Undoubtedly, the giants associated with it. Sir Pherozeshah Mehta, Sir Sohrab, Sir Homi Modi, Mr C. H. Bhabha, Mr H. C. Captain and Mr N. K. Karanjia are the men who have tended to the affairs of the bank with jealous and efficient care. Indeed, it was this very prudence that, in 1951, was responsible for the last of the challenges that it had to face. Central's gilded portfolio was kept at a rather more than "average" ratio of Deposits. Hence, when bank rate was raised in 1951, and gilded prices came tumbling down, the depreciation in Central's holdings was considerable—the shortfall as compared with book value exceeded reserves: Of course this "loss" was only on paper, since on maturity face value (often exceeding book value) would be received.

The "Swadeshi" Bank (if I may so call Central) is today participating enthusiastically in India's industrialisation. One does not congratulate a bank on achieving a Golden Jubilee: here's to the next fifty years of service to the nation.

The UN is having house-keep-

ing worries on the top of its other difficulties. It is true that it has always had them, but the situation now is pretty desperate. Mr U Thant, the acting Secretary General announced the other day that the UN was on the verge of bankruptcy and begged of its members to do something quick. His own suggestion is that the UN should raise 200 million dollars which will be just about sufficient to wipe out all deficits upto September next, assuming, rather pessimistically, that the present commitments in the Congo will continue to exist and the present defaulters will remain unmoved. The amount asked for is about three times the annual budget of the UN and Mr Thant suggests that the bonds should have a maturity of 25 years and the rate of interest 2 per cent per annum. Unfortunately the UN has added considerably to its difficulties by not making, for some inexplicable reason, special expenditure like that on the UN Forces in the Congo, part of its annual budget. For theoretically it would then become possible to deal with members who, on some pretext or the other, are refusing to pay the special expenditure incurred. For example, the USSR is not paying towards the cost of the UN operations in the Congo. Nor did it pay for the UNEF sent to Egypt in 1956. The UAR did not pay either for the UNEF though it probably saved Egypt from being overrun by the French and British troops on the specious ground that

the "aggressors" should pay for it. And now France, Belgium and South Africa are not for obvious reasons paying for the UN action in the Congo. Had these special items of expenditure been made part of the regular UN budget, it would have been possible to invoke the rule that takes away the voting rights of member countries that are in arrears of their dues to the UN for more than two years. Whether it would have been possible to do this when it came to the sticking point, is a different question. But it has not risen in this form, with the result that the better behaved nations, like their counterparts in personal life, have the chagrin of seeing the recalcitrant ones get away with it. The US has particular cause to be peeved because it has the largest share in the UN expenditure. But that does not mean that it is tenable to argue, as has been done by a writer in the New York Times recently, that the fact that the US which pays 32.51 per cent of the UN expenditure and the 33 Asian and African nations which pay only 0.04 per cent each of the UN expenditure have only one vote each, "constitutes a dangerous problem for the United Nations." I can understand a person wanting to call defaulting nations to order and asking them to pay up. But to say that the votes at the United Nations should have some relationship to the money they pay in and that the absence of such a nexus poses a "dangerous problem" is to make nonsense not only of the basis of the United Nations but also of democracy. In American mouths such arguments are particularly grotesque.

AFRASEC Resolutions Passed

THE AFRASEC Conference concluded its five-day session in New Delhi last week after adopting a number of resolutions on the topics on its agenda. While indicating the specific measures for facilitating the growth of intra-regional trade that are immediately practicable, the Conference has also directed the Secretariat to undertake further study and investigation of the more far-reaching proposals of regional co-operation. In fact it is the larger objectives that provide the rationale for the existence of the Organisation and there is no conflict between measures to increase regional co-operation in trade and economic development and the growth of international trade. The objectives of the Organisation and the resolutions adopted at the annual Conference are completely in accord with the GATT declaration on promotion of trade of less developed countries. This declaration says: ".....it is recognised that there are important possibilities for encouraging sound economic development in the less developed countries through increased trade among themselves and that these countries should keep this in mind in formulating their tariff, commercial and economic policy measures. Lest the development of this important trade potential be prevented or unduly delayed, they should strive to attain and preserve liberal access to one another's markets in the same manner as they now seek to secure improved access to the markets of the economically advanced countries".

Apart from the resolution on the Secretary-General's report, the other four resolutions concern the topics on

which the Secretariat had prepared competent working papers. They deal with the Arbitration Arrangements in the Region, External Market Groupings and their Impact on the Trade and Economic Development of Afro-Asian Countries, Development of Intra-Regional Trade and, lastly, Mutual Aid and Investment. The value of these studies, the Secretary General, Dr Mohamed Ali Rifaat, said, does not lie so much in the concrete proposals they advance as in throwing light on the problems and difficulties which need urgent attention. He also expressed the hope that suggestions made in these studies may be followed up by serious efforts by responsible agencies.

The main resolution on the Secretary-General's report, which reaffirmed, the determination to foster economic co-operation and collaboration and to provide the institutional basis for such co-operation, also drew attention to the special responsibility of the more established countries of the region to offer, whenever so requested and wherever practicable, moral and material help to the less developed countries of the region to develop their resources. On the question of external assistance, the resolution affirmed its belief that effective and lasting aid could only be brought about through expansion of trade which, while assuring reasonable stability of raw material prices, provides at the same time the manufactures and products of the developing countries access to the markets of the industrialised countries. It may be recalled in this context that the problem of the obstacles faced by less developed countries in expanding their export trade was one of the important topics discussed at the recent meeting of the Trade Ministers of the Contracting Parties to the GATT. A declaration to the effect that every possible effort would be made to remove barriers in the

shape of quota restrictions, high protective duties, fiscal and other internal charges which barred access to the markets of the industrialised countries to the exports of the developing countries, was accepted by the signatories of the GATT at this meeting. The Ministers also agreed on a specific programme for the implementation of this declaration.

The resolutions on the Impact of External Market Groupings and on the Development of Intra-Regional Trade cover more or less the same ground in parts of their operative portions. But it is necessary to draw attention to the fact that the resolution on External Market Groupings views measures for greater collaboration among countries of the Afro-Asian region in the larger setting of the movement for economic integration throughout the world. The resolution appeals to the Governments of the countries concerned to take immediate steps for collaborative effort to ensure greater economic solidarity and co-operation between countries of the region, and directs the Secretary-General "to study and pursue the possibility of evolving specific policies that will bring about, to start with, an increased flow of trade in specific commodities in this region within the present economic set up, and to suggest measures for increased trade through schemes of regional tariff preference leading up to a common market for certain commodities, initially among proximate nations, and in the not distant future, for the region as a whole".

For the realisation of the objectives broadly indicated above, the resolution on Development of Intra-Regional Trade offers the following suggestions:

(a) a scheme be devised by which the countries of the region may mutually exchange their foreign exchange resources and without upsetting their present trade arrangements;

(b) the countries of the region may consider gradual extension of most favoured exports and imports tariffs and quotas applicable to any country in the world to the Afro-Asian countries as well;

(c) the question of free trade being evolved in certain selected commodities between the Afro-Asian countries be examined; and (d) ways and means which will help guarantee satisfactory terms of trade to the raw material producing countries be examined.

The resolution on Mutual Aid and Investment notes that external assistance has to be supplemented by mutual assistance among countries of the region and urges studies on:

(a) co-ordination of industrial and agricultural production plans;

(b) technical assistance and exchange of technical personnel on a sub-regional basis in the form of specific and ad hoc projects;

(c) development of transport facilities and encouragement of means of transport within the region over and above international means of transport; and

(d) establishment of semi-permanent working Commissions among AFRASEC members to discuss the needs and to plan the im-

plementation of certain specific programmes of each country;

(e) encouragement of investment by countries of the region through elimination of double taxation, tax incentives, and arrangements for dissemination of information through Investment and Information Centres; and

(f) formation of an Afro-Asian Development Bank.

A resolution of immediate practical significance to the growth of trade is the one relating to Arbitration Arrangements in the Afro-Asian region. (The Working Paper on the subject had suggested the establishment of an Afro-Asian system of arbitration attached to the AFRASEC including provisions for conciliation. The Working Paper had also suggested that the Secretary-General should be authorised to examine the possibility of concluding agreements with other national and international arbitration organisations so that the Afro-Asian arbitration system will be extended outside the boundaries of the Afro-Asian countries.

Handloom Display

The Handloom Pavilion at the Industries Fair presents an eye-filling display of the weaver's art with emphasis on the export potential of handloom fabrics. In the section devoted to exports are displayed varieties which are exported to non-traditional markets, mostly to the USA and European countries. Various successful experiments in production and processing carried out by the Weaving Centres set up by the Handloom Board, which are displayed in another section, show that the industry, though a most ancient one, is alert to take advantage of new opportunities and techniques.

During 1960 exports of handloom textiles had slipped down to Rs 50.14 million from the peak of Rs 65.91 million reached in the previous year. The disillusion in the United States over "Madras Bleeding" was one of the main reasons for the sharp decline. It is gratifying to learn that "Madras Bleeding" has survived the crisis and is regaining its lost markets. Total export of handloom textiles during January to April 1961 amounted to over Rs 18 million.

In drawing up the programme for handloom exports, it is necessary to take into consideration a major change in the direction of the trade. Our exports to traditional markets in Africa and South East Asia are declining and the trend cannot be reversed, as it is the result of the efforts made by these countries to develop their own textile manufactures. But, on the other hand, handloom products are finding expanding markets in the USA and in Europe. Manufacture for export should, therefore, be geared to the requirements of the new markets with emphasis on aesthetic appeal and quality control. It is heartening to note that both these aspects are receiving attention at the hands of the Handloom Board and the Handloom Export Organisation which has been set up under the State Trading Corporation to explore the possibilities of exports to the non-traditional market.

Markets

Jute Firm Trend in Fannings

STEADIER undertone has developed in the jute markets during the last few days. Although raw jute still done around the minimum prices, mill buying is steadily increasing. Gunny has profited from sustained bear covering in ready delivery position coupled with fair overseas enquiries and purchases on behalf of the Government of India. The improvement in sentiment in raw jute is largely due to the effort initiated by the Indian Mills Association to support the jute market. Member mills are required to purchase increased minimum quotas by the end of the current week. The total purchases are to be completed by member mills this week is about 10 lakh bales. The quotas are on the basis of stocks and undelivered balances of the mills and in terms of weekly consumption. The allotments are in the following manner: To be with stocks and undelivered balances representing (a) not more than 12 weeks' consumption—2½ weeks' consumption; (b) over 12 but not more than 14 weeks' consumption—2 weeks' consumption; (c) over but not more than 16 weeks' consumption—1½ weeks' consumption; (d) over 16 but not more than 18 weeks' consumption—1 week's consumption; and (e) over 18 weeks' consumption—½ week's consumption. Member mills have been asked to buy at least 50 per cent of their quotas on contract for near delivery. Special consideration is being given to jute growing areas in which cultivators are experiencing difficulty in disposing of their crop of jute for various reasons. Mills with buying agencies in Bihar where jute prices are said to have declined rather sharply are requested to take up as much jute there as possible and store it for despatch as and when wagons are available.

If in spite of the increased purchase quotas there has been no marked improvement in raw jute prices, it is perhaps because sellers are keen for business under the pressure of heavy arrivals. Arrivals of raw jute during last month have been at a record level, highest for any month in the past three years. Arrivals of raw jute into Calcutta and mill stations last month increased to 835,410 bales from 657,280 bales in the corresponding month of last year. While arrivals of Indian jute rose to 785,830 bales from 604,180 bales in November 1960, imports from Pakistan fell from 53,080 bales to 49,580 bales. Total raw jute arrivals in the five months ended

November, 1961 were also higher at 2,544,270 bales compared to 2,072,370 bales in the similar period in 1960. Arrivals of Indian jute increased from 1,845,050 bales in July-November 1960 to 2,357,480 bales in July-November 1961, whereas imports from Pakistan declined from 227,320 bales to 186,790 bales.

Sentiment in the jute goods market has been aided by a number of factors. Speculative transactions especially in ready delivery position has been responsible in a large measure for the upsurge in price levels. But some encouragement has been provided by actual enquiries from the Government of India and buyers in USA and Europe. The trend was somewhat easy in early dealings on political news but with favourable reports about the Gna situation later in the week steadier conditions returned to the market. From midweek prices are ruling firm.

The rise in jute goods prices may be partially due to the higher burlap consumption in November and the substantial improvement recorded in jute goods despatches last month. Total jute goods despatches in November were placed at 92,100 tonnes comprising 36,200 tonnes hessian, 47,900 tonnes sacking and 8,000 tonnes other varieties. Total despatches in the previous month and in the corresponding month of last year were 75,000 tonnes and 82,400 tonnes respectively. Last month's total despatches were made up of 64,000 tonnes for export purposes and 28,100 tonnes for internal consumption. Despatches for

export purposes in October 1961 and November 1960 were placed at 55,800 tonnes and 58,200 tonnes respectively. Despatches for internal consumption last month totalled 28,100 tonnes compared with 19,200 tonnes in the previous month and 24,200 tonnes in November 1960. The fact that burlap consumption in US during last month has recorded a rise by 5 million yards to 70 million yards while stocks at 219 million yards are higher by 13 million yards as compared with the previous month indicates that US consumers may be steadily increasing their offtake of hessian.

TEA Centenary Auction

This week's Export Sale commenced with a short ceremony in which Mr A. S. Bam, Chairman, Tea Board, auctioned the first lot from each brokers' catalogue. Offerings amounted to 74,765 packages. There was a strong general demand. The market opened at fully firm to dearer rates; but prices eased slightly in the second half of the sale. Plain broken were generally firm to dearer; but similar Fannings were barely steady. There was keen competition for "teas for prices" which were sold readily.

Better liquoring orthodox Assam broken and fannings were generally dearer with quality, while medium descriptions in this category were

DON'T CARRY CASH CARRY BANK OF BARODA TRAVELLERS CHEQUES!

Keep your money safe as in a bank with Bank of Baroda Travellers Cheques! They can be cashed easily, conveniently at any branch of the Bank of Baroda, State Bank of India, Bank of Rajasthan, and some branches of the Punjab National Bank. Only your counter-signature will enable them to be cashed!

Bank of Baroda Travellers Cheques are available in denominations of Rs 25, Rs 50 and Rs 100 at any of the Bank's branches!

fully firm. CTC types were sold at firm to dearer rates. Any secondary grades with useful liquors were dearer; but there was less support for the plainer liquor offerings. Legg-cut teas were generally dearer.

Darjeeling teas met with quite good support around last rates, while Tippy teas were dearer. Whole Leaf grades were in demand, particularly the cheaper varieties and prices were generally dearer. Following rates were quoted: Clean Plain Pekoe Rs 3.80 to Rs 4.10; Plain BP Rs 3.50 to Rs 3.65; Plain Fannings Rs 3.50 to Rs 3.70; Medium Assam CTC BP Rs 4.80 to Rs 5.10; Medium Assam CTC Fannings Rs 4.60 to Rs 5.00; Best Assam CTC BP Rs 5.40 to Rs 5.70 and Best Assam CTC Fannings Rs 5.40 to Rs 5.80.

In the Internal Sale, offerings consisted of 24,651 packages of Dusts

and 313 packages of Leaf grades. There was a strong and general demand for Dusts. CTC types were sold irregularly; but the smaller and brighter liquoring descriptions were often dearer. Fibrous kinds were also well supported. Orthodox varieties, although a little easier for the poorer sorts, met with useful enquiry and those with bright liquors were sold at generally enhanced rates. Legg-cut teas were also in demand and were dearer. Following rates were quoted: Plain Orthodox Dust Rs 3.65 to Rs 4.00; Medium Assam Dust Rs 3.85 to Rs 4.20; Legg-cut Dust Rs 4.30 to Rs 4.60; Medium Assam CTC Dust Rs 5.50 to Rs 6.00 and Good Assam CTC Dust Rs 5.50 to Rs 6.00 and Good Assam CTC Dust Rs 6.40 to Rs 7.00. Leaf grades met with a fair demand. The 42 package of Green teas, which were on offer, were a little easier.

Meanwhile, the Indian Tea Board has decided to start a campaign in the UK and particularly in Scotland to further the export of Indian tea. A delegation, headed by the Chairman of the Tea Board, will visit USA and Canada in February next year to study the consumption of Indian tea in these two countries and suggest measures for expansion. The Tea Board has also decided to extend transport subsidy to the Tripura gardens where transport is costly on account of which tea gardens face great problems.

According to trade sources, direct shipments of North-East Indian tea to the UK, in the six months ended September 1961, increased substantially to 76.96 million pounds from 53.78 million pounds in the 1960 period despite the shortfall in exports in September.

In the Cochin market, 381,000 kilogrammes of dusts were offered for internal consumption, there was no change in the quality of teas offered and the market met with a useful general demand. Plain and Low Medium teas were sold readily at fully firm rates. Medium and Good Mediums were well competed for and advanced irregularly by 10 nP a kilo. There was good support for high-grown, which were fully firm. Buyers showed keen interest for Clean Black Grainy descriptions, which were the strongest feature of the sale. CTC types and legg-cuts also shared in the upward trend of the market.

It may be added that more than an average of one rupee per pound has dropped in the prices of tea over four sales in the Cochin market in the last six weeks. Tea circles in entertain little optimism that prices can be held at this level with the crop running at 113 million pounds higher than last year at this time. Producers expect prices to fall further and find the withdrawal of the export quota system of little consequence to the market or to them.

Some idea of the severity of the fall in prices can be had from the Cochin auction average of Rs 4.15 per kilo at the end of October as compared to Rs 3 by the end of November. As the month closed, brokers were quoted Low Medium at Rs 3.00 to Rs 3.30 as compared with Rs 4.80 to Rs 4.95 per kilo in the previous year. Some of the estates have reported sales of their tea even at a loss. With a shipment of 7.46 million pounds in October, total exports of tea from South India, during the period April to October this year, were lower at 41.86 million pounds as against 44.18 million pounds in the corresponding period of last year.

The Ceylon Government has decided to open up new land with tea. The Minister of Agriculture has ordered six tea plantations of 1,000 acres each be started immediately. With shipments of 33.93 million pounds in September, total exports of tea from Ceylon, in the first nine months of the current year, were higher at 323.61 million pounds as compared to 318.25 million pounds in the corresponding period of last year.

The Pakistan Government has increased the tea export quota from 10,000,000 pounds to 12,500,000 pounds in view of the good crop the country has this season. The production is estimated at 59 million pounds for the period April 1961 to March 1962 - the highest ever. The crop yield during the year 1960-61 amounted to 42 million pounds. The current year's crop represents an increase of 40.50 per cent over the last year's.

In the auction held at London this week, offerings were 23,306 packages including 18,397 packages of Northern India teas. The best Assams again ruled easier and prices showed advances of up to 3d per pound. For all other descriptions, the market remained fully firm at last week's rates.

COTTON Futures Easy

AFTER initial steadiness the Jarilla March contract steadily declined to touch a low level during the past week. The buoyancy in cotton futures seems to have been abated and the sustained requisitioning of cotton by the authorities induced some of the powerful bulls to liquidate their holdings and the market closed on a quiet tone.

The Jarilla March after commencing the week at Rs 675 gradually moved up to Rs 680 and reacted to Rs 668 before closing at Rs 669.50 per three quintals. With the imposition of heavy margins, business, mostly of a squaring up nature was at low ebb and the average daily turnover amounted only to 3,000 bales. No fresh buying or selling was reported during the week under review. Ahmedabad, Akola and some of the spot houses exhibited a tendency to book profits at bulges. The encouraging arrivals of new crop coupled with the prospects of adequate import of foreign cotton to meet the requirements of the domestic cotton textile industry has relegated the fears of a further spurt in cotton price to the background.

Meanwhile the Federation of the Indian Cotton Mills has requested the Government of India to consider the question of utilising more quantum of staple fibre and man-made fibre. As the prospects for enhancing the acreage under cotton cultivation is rated gloomy, the

Federation has drawn the attention of the authorities to the need for stimulating the manufacture of man-made fibre in the country.

The slow and continued drive of the authorities to requisition cotton from the holders led to dull trading conditions in the spot market at Sewri. According to the latest reports the Government has so far requisitioned 4,000 bales of Khandesh cotton alone. Mill interest hovered around the available lots, of 1960-61 crop and also new crop 197/3 from Khandesh and Berar, L-147, Buri 0394, Kalyan, Vijay, Digvijay and Punjab styles. The scope for obtaining cotton from the requisitioned stock induced the mills to adopt a slow policy in covering their requirements and this led to a general fall in demand.

The Gujarat co-operative societies are reported to have informed the Government of their readiness to supply to the cotton textile industry Gujarat growth at ceiling prices. At the same time they recorded their protest at the system of regional survey committee of Gujarat cotton.

The prices of Bengal Deshi, in the import section, moved up on account of the emergence of Japan as a buyer at 2d higher per pound compared with the previous indications and the heavy mixing of this crop with staple varieties.

In the import section, spinner interest was pronounced in African Sudan and Egyptian cotton obviously due to the reduced rates at which they are offered. According to the

International Cotton Advisory Committee, the total production of cotton of free world will be considerably low this season, despite the increase in the acreage of cotton cultivation. The main reason ascribed to the reduced output was the low yield in India and Egypt. The Committee has estimated this season's crop at 33.3 million bales, about 0.2 million bales less than the previous year's production. The yield prospects in the United States has been brightened and production has been tentatively fixed at 14.5 million bales. However, the Committee reports, that the probable decline in production would be more than offset by the increase in opening stocks and supply would be at a higher level since 1956-57. The Committee has also indicated that the aggregate cotton exports are expected to go down steeply by comparison with the past two seasons.

In view of the desirable level of cotton reserves and mill needs, about 1.2 million bales of cotton will have to be imported next year. The scarce of shortages could not have much effect on prices if speculative forces in the cotton market is voluntarily checked and the mill purchases are properly organised. Although the Government is concerned with reactions of present trend in cotton market on textile production and prices, it is gathered the Government has no plans to tighten cotton control.

PIECEGOODS:

The Bombay cotton piecegoods market displayed divergent trends during the past week. The offtake

in the domestic sector was slender largely due to the stringent conditions prevailing in the money market and the absence of upcountry demand. The export front, on the other hand, depicted fairly encouraging conditions.

The merchants were found anxious to sell their goods even at reduced prices in order to honouring their obligations to the banks. But the buyers were hesitant to enter the market as the banks have tightened up their loan policy. All these led to the restricted turnover. The flow of funds from upcountry centres was far from satisfactory. It was even reported that a few upcountry parties failed to discharge their financial obligations in the Bombay and Ahmedabad markets. The power loom goods continued to command higher rates on account of the inflated cost of production.

Trading in the export sector during the week under review, showed signs of looking up. Business on a moderate scale was transacted with the United Kingdom in the usual varieties at slightly reduced rates. There are indications that the business is likely to improve after the Christmas holidays. Fairly good business in grey sheetings was done with Sudan, Ethiopia and Eritrea were satisfied with small quantum of chaddars, sheetings and drills. Ceylon showed interest in some of the available varieties. Enquiries from Burma for the usual varieties flowed on an encouraging level and that destination accounted for a fair quantity of grey sheetings, voiles, dhoties and saris.

His costs will go up this month...

Because he has had a machine breakdown and has had to replace costly parts which were ruined by faulty lubrication. This didn't have to happen—a Caltex Lubrication Survey could have spotted the trouble—solved the problem.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

This service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

Copper and Tin Prices move up

Copper and Tin prices have been showing a rising tendency during the last few days. In the Bombay market, the rate for copper electrolytic coil has climbed up from Rs 312 to Rs 316 per cwt, while Wire Bar prices have hardened by Rs 2 to Rs 306 per cwt and Blisters from Rs 285 to Rs 288. The rise in prices has been mainly caused by the fears that the imports may be delayed and become costlier due to the restriction kept on imports.

The imports of the metal have to be made only from the USA. Prices in America are much higher than the price prevailing in other parts of the world. Hence, the import of this metal will be costlier for India.

Sentiment in the market has also been influenced by the worsening situation in Katanga. The reports, that the fighting in this area has affected copper production, has led to some strengthening of prices on the

London Metal Exchange where the rate has moved up by about £4 per ton.

Among other non-ferrous metals, Tin has also recorded a sharp advance, as bulls have pushed up the levels under the inspiration of several bull points. Increased consumer demand in the local as well as up-country markets, inadequate volume of stocks, poor arrivals and the restriction on the movement of wagons have induced hopeful "long" buying coupled with nervous shortcovering.

A special clearing has, therefore, been introduced in the December contract as a result of the persistent rise in prices. The special clearing has been enforced at Rs 100 per 10 kg, while the last clearing was fixed at Rs 164.50 on 7 December.

*

SUGAR

Sugar markets have been displaying a quieter tendency, thanks to the comfortable supply position. In the Hapur market, the rate is quoted at Rs 106.50 per bag.

*

The international sugar talks came to a very rapid end. It was clear from the start that there was no hope of reaching an agreement on Cuba's export quota for next year and the talks were quickly brought to a close. Thus, the international Sugar Agreement has now, to all intents and purposes, broken down.

There will be no control over sugar exports next year and the countries will be free to ship as much as they like. The sugar markets have already fallen in recent weeks in anticipation of something of this sort of happening; but the news of the breakdown of the talks was followed by a further drop to yet another new post-war low. What will happen now remains to be seen. Fortunately, the Cuban crop this season is much smaller than last year. Any further fall in prices may not, therefore, be too big.

*

FOODGRAINS

Conditions in the Hapur Food-grains market remained quiet during the week under review. Wheat

prices hovered around Rs 16 a maund for the average quality and Rs 18 for the better farm produce. The market for Rice continued to remain depressed following fresh arrivals of the new produce and the slack consumer demand and rising stocks. Gram was slightly lower at Rs 15 a maund for the Punjab variety owing to easier Punjab advices. The market for Maize remained also depressed. Among Pulses, Peas drifted lower as loading facilities for the South were not available and the stocks were heavy. The Arhar section was quiet in the absence of any incentive, while other pulses were steady.

The Bombay foodgrains market also presented a quiet appearance. Popular varieties of indigenous Rice looked up initially by about a rupee per quintal; but the improvement could not be sustained for long due to the subdued retailer interest. Trading in wheat was featured by an improvement of Rs 2 per quintal and this was attributed to the difficulties in obtaining adequate railway bookings by the wholesalers in the Punjab. But the market lost the initial gains towards the end of the week with the reported resumption of the railway booking in the Punjab. The possibility of the release of the Australian wheat at fair price shops also tended to act as a bearish factor.

In the Coarse grains section, trading was of a routine nature. Jowar looked up by Rs 2 per quintal due to smaller arrivals; but the prices receded gradually towards the close for want of adequate retailer interest. Traders reported a shortage of Bajra of good quality due to the damage suffered by the new crop. After the all-round improvement in the previous week, prices of Pulses tended to move down. The demand was somewhat subdued.

*

CHEMICALS & DYES

Listless conditions prevailed in the Bombay Chemicals and Dyes markets. The demand from the up-country centres was at a low level and the turnover was very poor. The deteriorating situation on the border areas, especially on the Goa front, affected adversely the volume of business. There was also no material improvement in the railway bookings for some of the uncountrv centres. To make matters worse, approaching end of the year and the paucity of funds also restrained the turnover.

The only exception to the general trend of the market was Bleaching Powder. The drastic fall in its price in the previous week attracted some support from the consumers and merchants. With the result, there was an appreciable recovery in prices. The small packing moved up by Rs 5 to Rs 80 and the big packing to Rs 78. Other popular items remained more or less unchanged.

In the Dyes section, price movements were confined to narrow limits. Naphthols were subdued on good arrivals of fresh materials and the prospects of further arrivals from abroad. In scarlet RC, the German quality was quoted around Rs 9-8-0 and the Japanese around Rs 8-0-0.

Indian Finance

23 December 1961

PEPPER

Despite fair buying support from East European countries, Pepper prices in the Cochín market have shown a further decline from last levels. The rate is quoted at Rs 317.50 per quintal for the ready position and Rs 319 for the December delivery. The steady decline is attributed to the increased arrivals in the terminal markets. Alleppey has reported an average arrival of about 250 candies, which have exerted a strong bearish pressure with sellers anxious to dispose of existing stocks. American buyers have continued to show apathy at the prevailing rates and are reluctant to enter into the market for making their purchases.

*

WOOL

Production of wool in the world, during 1961-62, is estimated at the record level of 5,680 million pounds as compared to 5,573 million pounds in the previous year. Out of the estimated increase of 87 million pounds, Merino wool accounts for 55 million pounds with the production rising from 2,276 million pounds in 1960-61 to 2,331 million pounds in the following year. Production of the Crossbred variety and other kinds of wool has also increased from 2,041 million pounds and 1,257 million pounds to 2,069 million and 1,260 million pounds respectively.

All the major producing countries, except the Communist nations, have shared in the improvement in production. Production of wool in Australia and New Zealand, which together account for about 40 per cent of the aggregate world wool output, has increased substantially from 1,632 million and 588 million in 1960-61 to 1,679 million and 589 million pounds respectively in the year under review. South African and Uruguay have also increased their output from 305 million and 181 million to 322 million and 195 million pounds respectively. On the other hand, wool production in the Communist countries has declined to 1,090 million pounds, from 1,106 million pounds.

In the Bangalore Silk market, prices of flature raw silk of 20/22 dr. continued to be quoted between Rs 84.80 and Rs 85.99 per kgm during the week ended December 15, 1961. Rate of charka raw silk as well as cottage basin silk registered no change when quoted between Rs 46.30 and Rs 68.60 per kgm and Rs 71.05 and Rs 78.06 per kgm respectively.

Prices of reeling cocoons were also steady during the week. While reeling cocoons from Siddaghatta ruled between Rs 3.25 and Rs 4.50 per kgm, reeling cocoons from Channapatna were quoted between Rs 3.50 and Rs 5.00 and Mugur between Rs 3.32 and Rs 4.00 per kgm.

There was a slight decline in the rates of foreign race seed cocoons which were quoted between Rs 4.00 and Rs 10.00 per thousand.

In the Bhagalpur Silk market, prices of tassar raw silk rose to Rs 79.97 and Rs 108.00 per kgm as against the rates of Rs 61.73 and Rs 83.77 per kgm quoted last week.

Prices of reeling cocoons also improved to Rs 72.00 and Rs 170 per kahan and pierced cocoons to Rs 160.00 per kahan. Silk waste was however, steady between Rs 22.04 and Rs 26.46 and spun silk yarn between Rs 30.86 and Rs 48.50 per kgm.

Landed cost of Japanese raw silk of 20/22 dr. was Rs 82.36 per kgm as on November 4, 1961.

*

GOLD & SILVER

Prices on the Bombay Bullion Exchange displayed a firmer tendency although higher levels could not be retained till the close. The firm trend in Silver was due to higher overseas advices. Local buyers also lent good support to the market, being influenced by the news of the surrender by the Portuguese troops. Arrivals amounted to 45 bars as against an offtake of only 10 bars. Ready Silver (below .996) changed hands at Rs 211.40 to Rs 211.50.

Prices of Gold also moved up following the fears that smuggling of the metal would end due to the Goa problem being solved. Arrivals amounted to 6,000 tolas as against an offtake of 5,000 tolas. Ready gold changed hands at Rs 119.80 to Rs 119.90, while Sovereign ruled quiet at Rs 99.

*

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange showed a mixed trend. Sentiment in the Castorseed section brightened visibly following a brisk revival in the overseas interest in castor oil. After prolonged dullness, shippers reported an encouraging response from the UK buyers. With the result, they were able to sell about 225 tons of BSS castor oil at a favourable price of £127 per ton c.i.f. Although the revival of the foreign buying interest was welcomed by the trade, observers were not confident that the export outlook had undergone any fundamental change in favour of India. It was felt that the flutter caused by the purchases made by the UK may prove short-lived. American's continued silence also nudged the traders to take a cautious view of the future. Castor ready was quoted at Rs 33.25 and Castor Oil, commercial quality, at Rs 14.40.

In the groundnut section, trading revealed a gradual softening of the trend of spot prices. The demand from crushers and vanaspathi interests tended to fall off at higher levels and the inflow from upcountry centres was quite good on most days. Groundnut ready Bold was quoted at Rs 46 and Groundnut Oil at Rs 18.35.

In the Linseed section, prices displayed an easier tendency, as the North Indian operators continued to press sales at the higher levels. The subdued local demand for linseed and linseed oil also accounted for the absence of speculative support. Linseed ready was quoted at Rs 43.25 and Linseed Oil at Rs 17.85.

In the Calcutta market, too, prices showed an easier tendency with the rate quoting around Rs 31 a maund for ready delivery despite the fact that arrivals from the uncountrv centres were small. The price of oil was also easier, as crushers were not inclined to do any forward business

at lower prices. Turnover declined also in Oilcake and the price has fallen.

In the Madras market, there has been a steady decline in prices. This has also stretched to other seeds and oils like castor oil, gingelly oil, coconut oil and gingelly seeds. Both Calcutta interests and the local buyers are not quite eager to buy anticipating further loss in values due to heavier arrivals of groundnut seeds. While in the southern centres seeds arrivals had been reported around 150 tons, the City itself has been getting daily 100 tons. This arrival is also consistent for the last week. In the interior the seeds harvest had begun and more is expected to arrive. Crushers are waiting for the lowest prices possible and the hesitancy of buyers had contributed to the depressed values in oil.

In forward positions too there had not been much trading. Only in the nearer deliveries like that of December last week or January first week some commitments to be fulfilled were negotiated. Since the past one week the average lifting up groundnut oil has not exceeded 25 candies per day. The basis of price was about Rs 179 per quintal last week.

Ready oil commodity was consistently quoted at Rs 183.40 during the latter part of last week. This price was maintained till almost Friday evening, but there was a sudden fall the next day, when the sellers quoted Rs 178.60 per quintal. Even for this price, there were no buyers. There was no market on Monday due to Valakunta Ekadesi, and today the quotation went down by another rupee or so.

But the January position was unchanged. It is maintained at Rs 178.00 per quintal.

As regards kernels the fresh crop remained at the price of Rs 69/70 without any change. But today there has been a slight decline due to further fresh arrivals and the buyers hesitancy continuing. Local crushers bought a few candies for immediate needs.

The following are the closing prices of oils and seeds here on Tuesday:

Groundnut oil per quintal ex-Madras Godown expeller Ready 3% BFA Rs 177.70; January Rs 176.00.

Groundnut kernels per 80 kgs fresh crop Rs 68 to Rs 68.50.

Castor oil per quintal Rs 158.70.

Coconut oil per tin Rs 39.75 per tin.

Gingelly oil per maund Rs 24.30.

Gingelly seed per bag Rs 68.50. (Arrivals have been good).

Groundnut cake Rs 28 per bag of 160 lbs.

*

HIDES & SKINS

The position in tanned cowhides in the market is a bit changed and that relates only to fifth and inferior fifth. Tanned cowhides are not coming in lot and prices have not changed. In view of the overseas surplus position, it is reported enquiries from abroad are next to nothing. Also tanned cow calf skin remained in the same position with little arrivals. Enquiries from abroad also proved no better.

Both tanned buffalo hides and tanned buffalo calf skins continued

to be in good inquiries. There have been heavy dealings of raw buff hides and in the coming weeks the position at present may change in regard to prices.

Tanned goatskins as well as tanned sheepskins remained unimproved. No overseas demands exist despite a reduction in shippers' prices.

*

WHOLESALE PRICES

Decline by 1 per cent

The official wholesale price index (with the year ended March, 1953 as 100) declined by 1.0 per cent to 123.2 during the week ended November, 25, 1961 as compared with 124.5 (revised) for the previous week. The index was also lower by 1.2 and 1.7 per cent respectively when compared with the corresponding week of the earlier month and that of a year ago. The monthly average for November, 1961 worked out to 124.2 as against 124.4 (revised) for October, 1961 and 125.9 for November, 1960.

Lower prices of Oranges (—32%), Milk (—8%), Tea (—7%), Urad and Potatoes (—4% each), Rice Mung, Groundnut oil and Turmeric (—2% each) and Black Pepper and Cardamoms (—1% each) brought down the index for "Food Articles" by 1.4 per cent to 118.7 as compared with 120.4 (revised) for the earlier week. The prices of Cashewnuts (+10%), Wheat at Chandausi and Gram (+5% each), Betelnuts (+4%), Arhar (+3%), Harley and Gur (+2% each) and Jowar, Bajra, Maize, Masur, Onions, Gingelly oil, Mustard oil, Coconut oil, Eggs, Meat and Chillies (+1% each), however, moved up.

The index for 'Tobacco' declined by 1.0 per cent to 93.3 due to a fall in the prices of raw Tobacco (—1%).

The index for the 'Fuel, Power, Light and Lubricants' group remained stationary at its earlier week's revised level of 122.4.

The index for 'Industrial Raw Materials' receded by 1.0 per cent to 136.6, as compared with 138.0 (revised) for the previous week due to a decline in the prices of Tanning Materials (—5%), raw Jute and raw Silk (—4% each, Groundnuts (—3%) and Gingelly seed (—1%), although the prices of Lac (+3%), Cottonseed (+2%) and Rapeseed (+1%) showed advances.

The prices of Aluminium (—7% and Rayon yarn (—3%) moved down, while those of Zinc and Lead (+2% each) and coir yarn (+1%) showed a rise and, in the result, the index for 'Intermediate Products' fell by 0.4 per cent to 139.9 as against 140.5 for the earlier week.

The index for 'Finished Products' also declined by 0.6 per cent to 128.6 due to a fall in the prices of Jute manufactures (—1 per cent). The prices of Glass (+2%), however, moved up.

hamare bhai
ko le jao

It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam.

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, re-

fused to go. "Do not take me away", he said. Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: "Hamare bhai ko le jao." As Keenan recalls, "The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother."

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

THE STEEL CITY

Company Reports

Bharat Sugar Earns More

Thanks to a record crush of 29,87,596 maunds against 24,98,561 maunds, the Bharat Sugar Mills Limited has shown a net profit, after providing for Depreciation and Taxation, of as much as Rs 4.67 lakhs for the year ended 30 June 1961 as against only Rs 2.52 lakhs despite a decline in sales to Rs 68.58 lakhs from Rs 83.39 lakhs.

Apart from providing Rs 1.00 lakh for General Reserve; Rs 80,000 for Contingency Reserve and raising Development Rebate Reserve to Rs 9,492 from Rs 3,165, the provision for Depreciation is lowered to Rs 84,500 from Rs 1.05 lakhs and Taxation to Rs 1.25 lakhs from Rs 4.85 lakhs. The dividend on the Ordinary shares is, however, maintained at Rs 1.50 per share, subject to tax.

During the current year, a crushing of about 32 lakh maunds of sugarcane is expected.

Excellent Results of Gobind Sugar

The Gobind Sugar Mills Limited, in the same managing agency group, has produced excellent working results for the same year. While sales have risen to Rs 1.48 crores from Rs 1.01 crores, the net profit is more than doubled, at Rs 10.12 lakhs against Rs 4.35 lakhs for the preceding year.

All allocations have been raised:—Depreciation to Rs 3.14 lakhs from Rs 2.46 lakhs; Taxation to Rs 6.98 lakhs from Rs 2.86 lakhs; General Reserve to Rs 5.25 lakhs from Rs 1.25 lakhs; Development Rebate Reserve to Rs 2.08 lakhs from Rs 95,000 and Renovation and Renewal Reserve to Rs 1.00 lakh from Rs 55,000. The dividend on the ordinary shares is, however, repeated at Rs 2.00 per share, subject to deduction of tax.

During the year under review, the company crushed 45,32,188 maunds against 43,62,459 maunds. During the current year, a crushing of about 46 lakh maunds is expected.

Lower Sales and Profits for New India Sugar

Although the quantity of cane crushed by the New India Sugar Mills Limited during the year ended 30 June 1961 is substantially higher at 52,77,557 maunds against 42,70,529 maunds, the recovery percentage is lower at 9.11 against 9.16. As such, sales have declined to Rs 1.10 crores from Rs 1.41 crores, while the net profit, after providing for Depreciation and Taxation, amounts to only Rs 3.65 lakhs against Rs 5.60 lakhs.

Apart from providing Rs 9.193 for Contingency Reserve, the Depreciation amount is raised slightly to Rs 2.50 lakhs from Rs 2.42 lakhs. The provision for Taxation is, however, lower at Rs 45,000 against Rs 4.45 lakhs and Development Rebate Reserve at Rs 31,977 against Rs 1.08 lakhs. No allocation is made for General Reserve against Rs 75,000. The dividend is, however, maintained at Rs 3.65 per share, taxable.

During the current year, a crushing of about 55 lakh maunds is expected.

Dividend Repeated on Increased Capital by Balrampur Sugar

Although the Balrampur Sugar Company Limited has reported a substantial rise in sales from Rs 69.09 lakhs to Rs 90.42 lakhs for the year ended 30 June 1961, the accounts reveal a slightly lower net profit of Rs 1.23 lakhs as against Rs 1.90 lakhs for the preceding year.

In respect of allocations, Depreciation is raised to Rs 1.58 lakhs from Rs 1.12 lakhs and Taxation to Rs 52,000 from Rs 10,000. The provision for Development Rebate Reserve is lowered to Rs 56,500 from Rs 1.31 lakhs. The directors have, however, maintained the dividend at 20 nP per share, less tax, on the increased capital.

The directors state that the phased programme of extensions and reconstructions has already been taken in hand. The company has been granted a licence by the Government to raise its crushing capacity to 1,200 tons per day.

Globe Auto

Globe Auto Electricals Limited has proposed to manufacture prestolite dynamos and starter motors. An agreement has been concluded with the Electrical Autolite Company of the U.S. which will participate in the expanded structure of the company. The existing paid-up capital of Rs 20 lakhs is being raised to Rs 50 lakhs. Autolite will take up Rs 15 lakhs worth of shares. It is proposed to offer the balance of Rs 35 lakhs to the existing shareholders, at a suitable ratio, subject to the consent of the Controller of Capital Issues.

Paper Products

The Paper Products Ltd., Delhi, has been given consent for the issue of bonus shares of the total value of Rs 8 lakhs on capitalization of its reserves to a like extent. The company's paid-up capital is Rs 16 lakhs.

A. V. Thomas & Co.

A. V. Thomas & Co., Ltd., Kerala, is to issue capital of Rs 2,35,100 in equity shares of Rs 10 each to be issued as bonus shares on capitalization of share premium and reserves to a like extent.

Panama

Panama Private Limited, Calcutta, which is engaged in business as dealers in blades and cosmetics, has been allowed to issue bonus shares of the value of Rs 86,250. Its existing paid-up capital is Rs 69,000.

Ennore Foundries

Ennore Foundries Ltd., Madras, is to issue further equity capital of Rs 60 lakhs. The proceeds will be used for buying plant and machinery from the company's collaborators, Leyland Motors Ltd., U.K.

Papchemi Corpn.

Papchemi Corporation Ltd., Bombay, a new company, has been authorized to issue capital of Rs 30,00,000 divided into 30,000 equity shares of Rs 100 each for cash at par. The capital will be used for manufacturing pulp and paper.

Ghazipur Paper

Ghazipur Paper Mills Ltd., a public company proposed to be registered in U. P., has been given consent for the issue of capital of Rs 25 lakhs divided into two lakh equity shares of Rs 10 each and 5,000 9% (taxable) preference shares of Rs 100 each for cash at par.

Aluminium Manufacturing

The Aluminium Manufacturing Company Private Ltd., Calcutta, has been authorized to issue capital of Rs 24 lakhs in 24,000 equity shares of Rs 100 each of which Rs 5.5 lakhs will be issued for cash and Rs 18.5 lakhs in repayment of the loan from the British Aluminium Co., Ltd. The consent has been given on the understanding that the company will convert itself into a public company in 1964 when shares of the value of Rs 30,00,000 will be offered for Indian participation.

Thanjavur Textiles

Thanjavur Textiles Ltd., Madras, is to issue equity capital of Rs 20 lakhs for cash at par. The proceeds will be used for establishing a cotton textile mill in Madras.

Etawah Paper

Etawah Paper Mills Ltd., a public company, proposed to be registered in U.P., has been given consent for the issue of capital of Rs 20 lakhs divided into 150,000 equity shares of Rs 10 each and 5,000 9% (taxable) redeemable cumulative preference shares of Rs 100 each for cash at par. The company will manufacture pulp and paper.

NBCC

National Buildings Construction Corporation, Ltd., Delhi, a Government undertaking, has been given consent for the issue of further capital of Rs 13 lakhs divided into equity shares of Rs 1,000 each for cash at par. The Corporation which has a paid-up capital of Rs 21 lakhs, is engaged in the construction of buildings, roads and other civil works throughout India.

Adarsh Chemicals

Adarsh Chemicals and Fertilizers Ltd., Udhna in Gujarat, has been authorized to issue additional capital of Rs 12 lakhs in equity shares of Rs 100 each for cash at par. The new capital will be used for financing the increased cost of the manufacture of superphosphate and sulphuric acid.

INVESTMENT NOTES

Modi Spinning

Modi Spinning & Weaving Company Limited will set up at acetate rayon plant at Yamunanagar in the Punjab with a daily capacity of 10 tons. The Punjab Government has agreed to provide the necessary land and about 7,000 kw electric power and 6 lakh maunds of molasses a year. It is also stated that the Punjab Government will render financial assistance to the company in setting up this project. The company has been negotiating with an American firm for the necessary technical collaboration. The capital outlay on the project is estimated at Rs 10 crores of which 50 per cent will be provided by the foreign collaborators. The Punjab Government has also agreed to provide the necessary facilities for the company to instal a distillery which, along with cotton linters, will form the basic raw material for the manufacture of cellulose acetate flakes. The distillery is expected to go into production in about a year.

Nylon Plant

A nylon plant is to be set up in Bulsar (Gujarat State) with a production capacity of 4.03 million pounds of nylon yarn and 5,000 tons of caprolactum - an intermediate raw material. The capital outlay on the project is estimated at Rs 7 crores and the plant is expected to go into production in the latter half of 1962. The promoters are seeking collaboration from a well-known Dutch firm.

Andhra Scientific

Andhra Scientific Company Limited has plans for expanding to a considerable extent its capacity for production on account of the growth of scientific instruments and the need to import large quantities from abroad. The company has been granted a licence to increase its output up to Rs 68.60 lakhs. It is already having a turnover of about Rs 30 lakhs and is unable to meet the demand for various instruments for want of adequate machinery and building accommodation. Import licences for necessary machinery are under consideration by the Central Government and are expected to be received shortly. Arrangements are being made to secure a substantial loan from the Andhra Pradesh State Financial Corporation.

BALANCE-SHEET BRIEFS

Andhra Scientific Company Limited has nearly maintained its profit of Rs 6 lakhs for the year ended 30 June 1961. The dividend on the ordinary shares is, however, raised from 6% to 20 per cent, taxable.

The net profit of Hemalatha Textiles Limited is higher at Rs 5.97 lakhs for the year ended 30 June 1961 as against Rs 2.30 lakhs. The dividend is raised from 4% to 8 per cent, subject to tax.

The Standard Batteries Limited has reported lower earnings for the year ended 30 June 1961. The net profit works out to Rs 21.86 lakhs against Rs 27.12 lakhs. The dividend is, however, maintained at Rs 15 per share, less tax.

The Associated Cement Companies Limited has earned a net profit of only Rs 132.19 lakhs for the year ended 31 July 1961 as against as much as Rs 145.66 lakhs. The dividend is, however, maintained at Rs 12 per share, subject to deduction of tax.

STOCK EXCHANGES

Feeble Rally

Watch-Dog Writes:

EXCEPT for sporadic attempts at feeble rally, conditions in stock markets have remained generally dull. While it can be said that the markets have emerged out of the recent depression following the encouraging news of the complete occupation of Goa, there is no preparedness on the part of the bull operators to push up prices. There is a general disposition to restrict commitments and square up transactions in view of the approaching holidays for Xmas and the New Year.

With the speculative issues encountering good support, prices on the Calcutta Stock Exchange showed minor improvements over last levels.

Budia considerations on account of the settlement on Friday curbed fresh interest on the Bombay Stock Exchange where dealings were mostly of a squaring-up nature.

The Madras Stock Exchange witnessed steady conditions. There was, however, a tendency to wait and see, as the holiday mood seemed to slowly getting into stride.

CALCUTTA

Friday Evening. CAUTION was the key note of the week's trading on the local stock exchange where prices moved both ways within narrow limits. While scattered support was at all times in evidence at any setback, higher levels attracted profit-taking.

Fears were initially entertained that military action in Goa might lead to complications and that the operations of the Indian Army might not be completed in a short period. The apprehensions in this regard were, however, belied. The reports of the initial success of the Indian Army induced a cheerful sentiment on the opening day of the week and the recovery in prices was carried a stage further on Tuesday following the subsequent report of the Portuguese surrender.

But, the approaching settlement and a general disposition to book profits at higher levels caused a mild setback in values in mid-week. Offerings, however, decreased at the lower levels and prices recovered again towards the close due to short-covering and the revival of fresh buying in selected stocks.

Whatever transactions done, however, appeared to be of a squaring-up nature, as the operators were not inclined to enlarge commitments in view of the approaching holidays for Xmas and the New Year. Moreover, sentiment was upset, to some extent, by the hostile Western reaction to the Indian Government's action in Goa. Again, the uncertainty over future US collaboration schemes, following the reported decision made by an American firm not to start the proposed watch factory in India protesting against the Goa action, also appeared to have disturbed sentiment in the market.

There were also other factors contributing to the restricted activity in the market. Apart from the fixation of higher budia charges for the next settlement, there was a growing evidence of a credit shortage. It was also feared that, with the year approaching its end, money conditions might become more tight due to the possibility of the bank reducing their advances and increasing their liquidity for "window-dressing". For obvious reasons operators preferred to move very cautiously.

Conditions in the Giltedged section continued to rule quiet and the volume of business was small. There was virtually no support from the institutional investors in view of the advent of the busy season. State Loans also claimed sellers at the quoted rates. 3 per cent 1986 Conversion Loan, after opening at Rs 70.95, improved towards the close to Rs 71.20.

Bank shares showed considerable improvement over last levels. The main factor for the sudden change in sentiment in this section were the rumours of the possibility of some banks raising their capital by the issue of right shares or by calling further capital on their partly-paid shares. (The rise in UCO was more pronounced, the scrip being keenly sought after up to Rs 103 from a low level of Rs 94.25. Punjab National also firmed up to Rs 20.62 from Rs 20.25).

Jute shares, after a long time, came in for some buying enquiry at improved levels. Reports of better shipment of jute goods, firmer advances from the gunny market and the revival of rumours with regard to the possibility of a further unsealing of looms from the New Year were the main contributory factors. Birlas were enquired up to Rs 28.06 from Rs 27.12; Ganges up to Rs 13 from Rs 12.25; Nuddea up to Rs 64.50 from Rs 62.75 and New Central up to Rs 16.69 from Rs 16.44. Fort Williams were fancied up to Rs 29 from Rs 28.12 following the company's decision to raise further capital by the issue of right shares. Howrah met with business up to Rs 20.25 from Rs 19.94.

Coal shares remained dormant despite some progress about the World Bank Loan. This was mainly due to the reports of difficulties still experienced by the industry with regard to transport and power. Bengal were rather sticky at Rs 350 with Western Bengal hovering narrowly around Rs 9.31 and so also Central India around Rs 12. Burrakur fluctuated between Rs 18.12 and Rs 18.37, to close finally at Rs 18.25.

Tea shares came in for selective enquiry, thanks to a further improvement in the prices obtained at this week's auction. There was, however, no inclination to enlarge commitments in view of the bigger crop during the current year and the competition expected from other producing countries. Dhelakhat met with business at Rs 20.94 to Rs 21.12; Hantapara at Rs 117.50 to Rs 118.50; Jay Shree at Rs 18.69 to Rs 18.81 and Grob at Rs 9.44 to Rs 9.56.

Sellers continued to predominate in the Sugar section. Operators seemed to be worried about the prospect of a further decline in the price of the commodity due to over-production. Carew ruled comparatively steady at Rs 13.25 against Rs 13.37, while SKG eased off further to Rs 10.31 from Rs 10.50. Balrampore were neglected around Rs 2.56. The only exceptional feature were Dyer Meakins which improved to Rs 41.25 from Rs 40.12, thanks to the support from special quarters.

Textile shares remained generally depressed on the fear that raw cotton supplies might not be adequate. There were also reports of difficulties experienced by the piecegoods trade in exporting their goods due to increased competition in foreign markets. Cawnpore were quiet at Rs 9.00 against Rs 9 and so also Kesoram at Rs 29.06 against Rs 29.25. Elgins were 'slightly better' at Rs 22.50 against Rs 22. An exception to the general trend were J. K. Rayon, which were pushed up gradually to Rs 20.12 from Rs 17.75, thanks to the reports of the company's proposal for further expansion.

In the Engineering section, price movements were rather irregular due to the speculative activity in Indian Irons. Against the previous week-end closing of Rs 24.10, Indian Irons opened better at Rs 24.32 and advanced further to Rs 24.82—the highest touched for the week. TEXMACO were, in sympathy, pushed up at one time to Rs 21.55 from Rs 21.30 and Guest, Keen, Williams to Rs 39.12 from Rs 38.87, to close finally at Rs 21.55 and Rs 39.12 respectively. Dalmia Iron changed hands at Rs 10.50 to Rs 10.69; Jessop at Rs 19.94 to Rs 20.31 and Kumardhubi at Rs 7.12 to Rs 7.50.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:

Consultants and Contractors

We are not only consultants but also constructors who have been associated with the step by step building of several of the plants shown in the above map right from design stage all the way to plant commissioning.

Our highly qualified staff of experienced engineers both in U.K. and in India can translate your ideas into an actual production plant.

"IT SHOULD BE LIKE THE ONE
I BOUGHT FROM YOU
LAST YEAR!"

This is one of the oldest and most commonly used of standards. But it is certainly vague. And when you use it, you are never sure of getting your exact requirements.

This is where Indian Standards come in useful. Developed by the Indian Standards Institution, each standard helps you to easily specify your requirements, ensures quality of the product and good value for the money you spend.

ISI prescribes standards for industrial and consumer goods. Under its certification marking scheme, goods produced to relevant standards qualify for carrying the ISI Certification Mark. This is a third-party guarantee of the products' continuous satisfactory performance and service. The next time you buy anything, look for the ISI mark.

**For those
you leave
behind**

DO you realise that you expose those who depend on you to grave risks, by failing to make immediate arrangements for their welfare, when you are no longer there to look after them yourself?

If you haven't yet done so, please make a will — or execute a Trust in their favour — *now!*

The administration of estates is a highly complicated matter these days, and it would be difficult to find a better Executor or Trustee than a bank which is always accessible, and which can be depended on to act with prudence, sympathy and impartiality. A bank is human — but it never dies.

The State Bank of India accepts appointment as Executor and Trustee, solely or jointly with any other person — and its services are at your disposal.

Why not call on your nearest Bank Agent or send for a copy of the Bank's Booklet on Executor and Trustee business?

The State Bank's local head office at Calcutta, one of more than nine hundred offices waiting to serve you throughout India.

A "PACKAGED" COAL CLEANING PLANT TO REMOVE INCOMBUSTIBLE IMPURITIES

SIMPLY ADD THE McNALLY-PITTSBURG "PACKAGED" COAL CLEANING EQUIPMENT TO YOUR RAW COAL PLANT. GAIN ALL THE ADVANTAGES OF THE SAME WASHING PRINCIPLES, THE SAME REJECTION PRINCIPLES AS LARGER PLANTS WITH COAL HANDLING CAPACITIES OF UP TO 2000 TONS PER HOUR! MOVE UP TO PRODUCE WASHED PREMIUM FUEL!

The complete unit is practically made to order and the architectural design of the Housing Unit will invariably match the style of the building that now exists.

The fully automatic McNally Unit Washer embodies the unique Baum jig principle of separating coal from incombustible impurities. This Washer is designed to handle coal between 5" and 0, and between the tonnages 25 and 90 per hour. This unit is delivered complete, ready for erection.

Manufactured here, the McNally Unit Washer will also save a good deal of foreign exchange.

For those in the Coal Industry with larger requirements is offered the McNally Giant Coal Washer which handles 750 to 1000 tons per hour. This is one of the latest additions to McNally-Pittsburg's range of coal processing equipment.

The Challenges Facing Coal

THE coal industry did not fail or falter in the Second Plan. Shortages there were, but none so serious that they greatly impeded the growth of industrial production. However, the Second Plan target of coal production was not hit, mainly owing to the inability of the public sector to develop new fields. As a result the field of operations of the private sector in coal, which had been restricted in terms of the revised industrial policy resolution, was at a late stage permitted to be enlarged. There is now reasonable hope that coal, so long in the doldrums, is now in sight of making good headway.

It is unfortunate that doctrinaire considerations at one time threatened industrial progress, in that the outlook for output of coal was very bleak indeed. And coal, together with power, transport and steel, constitute the basic raw materials for industrial advancement. Years had to elapse, and some of them direful in the prospect that they conjured up, before the authorities could bring themselves to relaxing restrictions imposed upon the private sector in coal.

But problems there still are. Transport is one of them. We have already had production affected because stocks at pitheads were too high; there have been accusations of discrimination in the allocation of railway wagons; and there are recurrent complaints about inadequacy of wagons.

Another is finance for the Third Plan projects in coal. Both rupee finance and foreign exchange are involved, though it would now appear that negotiations with the World Bank will bear fruit as to the latter. But nonetheless rupee finance may be hard to come by, and thought will have to be paid to the formation of a special agency for providing the necessary resources.

We ourselves favour an even larger contribution, in the form of additional production, from the private sector than is at present envisaged in the Third Plan. This is mainly because, necessarily, the public sector in coal will be tardy in achieving production targets; not, it may be emphasised, for the reason that State-owned enterprise is less efficient, but owing to the fact that the bulk of additional output by the public sector will be from fields newly opened up. Thus even before the Third Plan is well under way we need to apprehend a coal scarcity toward the end of it. It is better now to plan for higher output from the private sector, than belatedly, two or three years hence, to call upon existing collieries considerably to step up production.

For, the fact remains that gains in industrial production would have been even more dramatic and remarkable if only there had not been a shortfall in coal availability and difficulties in the distribution of such supplies as there were. Moreover, the added trouble has been that there has been a gradual deterioration in the quality of the coal allocated to non-priority industrial consumers. The waste involved is obvious. Firstly, there is the loss implicit in the carriage of inferior coals over long distances by the railways, with wagons already in all conscience scarce enough. Secondly, the per-unit cost of production of such industrial units naturally increases, and affects not merely the internal price level, but what is worse, renders such goods less competitive in the export markets. Thirdly, a consequence to the use of inferior coal has been that boilers and similar equipment have tended to be damaged, however slightly, and so enhancing maintenance costs.

The problems which coal still faces are manifold. But the most important ones bear repetition. Much more coal has to be raised by the end of the Third Plan than is envisaged in the Plan itself; and the finances therefor, internally and externally, have to be found. Coal movement has to be more expeditious than we have known it to be; and it is the railways which have to assume the responsibility, since the use of trucks is uneconomic. In the light of the known deterioration in the quality of coal, greater attention has to be paid to beneficiation; and work on washeries and the planning of more washeries have to be taken on hand urgently.

We trust that this Supplement will serve in some detail to focus the challenges ahead of the Coal Industry and also to indicate what the likely difficulties are, with suggestions for their speedy removal.

IN THE SERVICE OF THE COUNTRY FOR NEARLY THREE DECADES

COAL IN THE THIRD PLAN

By
M. DAS

COAL will undoubtedly retain its position of pre-eminence for many years to come in the rapidly expanding economy of the country owing to its importance as a basic source of power for the development of key industries like iron and steel and the variety of subsidiary industries. The Government has therefore quite appropriately laid strong emphasis on the stepping up of coal production to 97 million tons per year at the end of Third Plan period which is about 76% over the production achieved at the end of the Second Plan period.

The target of coal production in the Third Plan has been fixed at 97 million tons per annum by the end of 1965-1966 representing an additional production of 37 million tons over the target fixed for the Second Plan and of 45 million tons over the actual production of 52 million tons in the year 1960. The requirement of coal for the Third Plan has been assessed mainly on the basis of the target of 10.2 million tons of steel ingot, 1.5 million tons of pig iron, the additional production for Thermal Power and the requirements of the Railways, which are the largest consumers of coal. The existing steel plants in the public sector, namely, Bhilai, Rourkela and Durgapur will be expanded and a new steel plant will be established at Bokaro with a capacity of 2 million tons of steel ingot. Out of this additional production of 37 million tons, the production of 20 million tons has been allocated to the public sector and 17 million tons to the private sector. The additional production of 37 million tons comprises 11 million tons of coking coal, 2 million tons of blendable coal and 24 million tons of non-coking coal. The Third Coal Plan envisages a production of 20.90 million tons from the Bengal-Bihar fields, 10.93 million tons from Madhya Pradesh, 1.50 million tons from Kamptee in Maharashtra, 2.00 million tons from Talcher in Orissa and 3 million tons from the Singareni coalfields in Andhra Pradesh. Out of the additional production of 17 million tons in the private sector, 11 million tons will be from the existing mines and the balance from the new sinkings in existing lease-hold areas. Most of the additional production of 20 million tons in the public sector will come from new mines. It has, however, been made clear that the limits of production allocated between the public and private sectors are not meant to be rigid and that either sector might be called upon to undertake additional production whenever necessary.

It may be recalled that although coal production was to have reached the level of 60 million tons a year of which the shares of the public and private sectors were to be 15 million tons and 45 million tons respectively, the actual production for the year 1960 was only 51.78 million tons thus registering a shortfall of about 7 million tons from the target. If we take into account the production of the first half of the current

year, i.e. January to June, which is 29.2 million tonnes, the rate of annual production comes to 58.4 million tonnes, which means a shortfall of about 2 million tonnes. Considering the above shortfall in the Second Plan period, a target of 97 million tons at the end of the Third Plan sets a formidable task indeed. It may be of interest to note from the following table how far the two sectors have carried out their assignments upto June, 1961:

Year:	(In million tons)		
	Private Sector.	Public Sector N.C.D.C. Singareni.	Total
1955	33.83	2.86	38.21
1956	34.76	2.99	39.43
1957	38.20	3.38	43.50
1958	39.54	3.66	45.31
1959	40.33	4.48	47.03
1960	43.34	5.95	51.78
1961	15.68	3.88	20.42 (tonnes)
(Upto April) 1961	15.68	3.88	20.42 (tonnes)
(Upto June)	—	—	29.20 (tonnes)

The vast industrial expansion programme now in the process of implementation however rules out any controversy over the shares of the private and public sectors, for both of which there is sufficient scope to play their due roles in building up the country's economy. It has to be admitted that coal policy should not be influenced by doctrinaire considerations and it is encouraging to note that coal policy has recently been a realistic one to some extent.

It has been emphasized on several occasions by the Coal Industry that there will be no cause for anxiety for adequate production of coal by the private sector provided the basic requirements of the Industry for the attainment of the objective are fulfilled.

I should mention in this connexion an important factor amongst others that the Industry has been deprived of development finance urgently required for the expansion plans for additional production allocated to the private sector in the Third Plan in the absence of an economic price-structure of coal. The position of the coal shares in the Stock Market clearly indicates that the prospects of getting new investments are almost insignificant in view of the uneconomic price-structure of coal and small returns on investment. It will, therefore, be a difficult task for the private sector of the Coal Industry to raise additional capital from internal resources to meet its additional commitment of 17 million tons unless it is placed on a healthy financial footing and returns on investment in the Industry are made attractive enough to draw fresh capital. The effect of the expansion envisaged by the private sector of the Coal Industry during the Third Five Plan on the selling price of coal should be taken into account to make viable the expansion of the Industry. It

has therefore been emphasized by the Industry that the effect of a heavier capital outlay which will be required in the Third Plan should be carefully studied so as to enable the industry to earn a fair return on the capital invested in the industry.

It has been estimated that for an additional production of 17 million tons allocated for the private sector of the Coal Industry in the Third Plan, an additional investment of

be badly shaken. Coal being a wasting asset, the achievement of coal production target is almost wholly dependant on the availability of rail transport. It is a known fact that coal not moved is coal lost to the country.

I would like to mention herein some factual statement about the production and movement of coal during the year 1960. Out of the total production of coal of 51.78 million tons during the year 1960. Out of the total production of coal of 51.78 million tons during the year 1960, 2.59 million tons or 5% of the gross output was used for colliery consumption, 2.94 million tons moved by means other than rail, and about 0.93 million tons were lost in coke making at the collieries. The net production available for movement by rail at the pitheads of collieries was therefore 45.32 million tons. Out of this about 44.6 million tons were moved by rail and the balance of about 0.72 million tons added to the stocks.

The average daily movement from the various coalfields during the year 1960 against the demand for wagons is shown below:

Field.	(BG).	
	Average daily Loading	Demand for Wagons
Bengal & Bihar	4336	5167
Korea & Rewa	435	500
Pench & Chanda (includes MG movement)	373	420
Singareni	276	330
Talcher	40	42
Assam	55	55
Total	5515	6514

It will therefore be seen that the Railways did not provide all the transport required and demanded for as a result of which the pithead stock of 2.68 million tons on 1-1-60 increased to 3.40 million tons on 31-12-60.

The wagon supply position has further deteriorated to an alarming extent and this has been indicated by the stocks of coal which have been mounting year by year and which has now reached the figure of 5.34 million tonnes, the highest ever stock in the history of coal trade.

How the tempo of coal production which reached the figure of 5.52 million tonnes in March 1961 has received a serious set-back by a drastic fall in production from the month of April 1 onwards will be evident from the following figures:

January, 1961	5.13 m. tonnes
February, 1961	5.22 m. tonnes
March, 1961	5.52 m. tonnes
April, 1961	4.54 m. tonnes
May, 1961	4.80 m. tonnes
June, 1961	4.18 m. tonnes

The production for the month of June is as low as 4.18 million tonnes against 5.52 million tonnes in March. This shows how coal production is being seriously affected by the shortage of transport the situation is alarming indeed!

CO-EXISTENCE IN COAL

By PRAN PRASHAD
Chairman
Indian Mining Association

IT will be recalled that when the principles for expansion of India's industrial potential were being finalized before the adoption of the Second Five Year Plan, a clamour was raised in certain circles for the nationalisation of the Coal Industry. The controversy then created was set at rest by Government's Industrial Policy Resolution of 1956. The Resolution provided that all new developments in certain specified industries including coal would from then onwards be undertaken by the State. It envisaged the expansion of privately-owned units within certain limits, and also joint participation of both the State and Private Enterprise where necessary or desirable in the national interest. It set the pattern for a mixed economy in which both Sectors have been given definite spheres of operation and targets of production.

Whilst in recent years the Public Sector of the Coal Industry has come into prominence and is now the largest single producer of coal in the country, it must be remembered that a nucleus of State-owned mines has been in existence for a considerable period. After the adoption of the Industrial Policy Resolution and with it the underlying principles laid down in the Second Five Year Plan, an autonomous and statutory body known as the National Coal Development Corporation was entrusted with expansion of mines in the Public Sector.

In 1955 on the eve of the Second Plan, the State-owned mines were producing 3.0 million tons out of the country's total production of 38 million tons of coal per annum. The Second Plan envisaged a production target of 60 million tons in which the Private and Public Sectors were required to produce 45 and 15 million tons respectively by 1960-61.

The Private Sector was confined to its existing workings and in theory to contiguous areas. The Public Sector was to attain its target by developing new mines and also by expanding output from the older State-owned collieries which in 1956 were taken over by the Corporation. At the end of the Second Plan all-India coal production reached the level of 55½ million tons, of which the Private Sector produced over 44 million.

According to the planners, the most important objective of the Third Plan is to ensure that the necessary quantities of coking and blendable coals are made available to the Steel Plants and merchant cokeries and of superior grades of non-coking coal to the Railways and other industries which require them. The additional raisings of

these classes of coal will have to come mainly from the Jharia and Ranigunge coalfields, with the Public Sector taking a more active part than hitherto. In drawing up the programme and more particularly in deciding how much of the additional production should come from the private sector and how much from the public sector, the following factors have been kept in view, viz:

- The capacity of the private sector to expand production from its existing mines and areas nearby; and
- Government's policy which reserves to the public sector the establishment of new mines.

When the draft outline of the Third Plan relative to the Coal Industry was considered by Parliament, concern was expressed, firstly, because the private sector had been given a share of 62 million tons out of the total production of 97 million envisaged and, secondly, because for achieving this target by the Private Sector certain new sinkings were to be permitted. The fears then expressed were to some extent allayed by the statement made in the House in November 1960 by the Hon'ble Minister for Steel, Mines and Fuel when it was affirmed that the basic policy in regard to coal production as adopted at the start of the Second Plan remained the same. In other words, the pattern laid down by the Industrial Policy Resolution of 1956 would continue to apply. Thus the Private Sector, with a few exceptions, is now in the main to be confined to vertical expansion and expansion within the limits of each colliery's confines, whereas horizontal expansion will mainly fall within the scope of the Public Sector.

In conforming to the pattern of expansion on this basis both Sectors have their problems. The private sector must employ greater technical skill to tackle the several mining problems which arise as a result of mainly vertical expansion. This involves the modernisation and revitalisation of its pits. Apart from technical "know-how", foreign exchange and finance are the first pre-requisites for such modernisation. In regard to foreign exchange the outlook is brighter. The World Bank has already granted a loan of Rs 17

crores to Government to provide for expansion from privately-owned units. The problem of finance, however, is not so easily solved. For years the Coal industry has had to operate on an uneconomic coal price structure, which does not allow a reasonable element for rehabilitation. It is appreciated that the problem here is one of maintaining a price structure, which will not give rise to a chain reaction of increased prices of the end-products of every coal-based industry. It must, nevertheless, be realised that no single industry should be called upon to subsidise others if its own economics justify an increase in selling prices. It should also be understood that merely keeping coal prices in check will not prevent inflation, for, in the result the effect will be that production of this vital commodity will fall short. This in turn will create inflationary trends in every industry which for want of coal may find it difficult to attain its own production targets. The Private Sector's financial stability must be ensured if it is to fulfil its task of delivering 63% of the coal output required by 1965/66.

The Public Sector also has its problems in these spheres. Independent arrangements have been made to ensure that their requirements of foreign exchange are met. They too require modern mining equipment though of a different type from those needed by the Private Sector. The Public Sector also requires large sums to finance their expansion. Being an integrated unit, costs of production in their comparatively easy and shallow pits and costs in the more difficult and expensive pits can be integrated so that in the net result their overall cost of production can be met from the existing price structure. Nevertheless, they still require Rs 132 crores for a production of 20 million tons. In this circumstance, the Public Sector would also welcome a price increase from which a part of their expansion cost could be met.

Shortages of Power and Transport are problems common to both Sectors. Much has been said in the past about transport availability not being able to keep pace with production and demand. Both the Public and Private Sec-

tors in the coal industry have been experiencing severe shortage of railway wagons, consequent on which production has had to be curtailed. Shortage of power, also presents a problem to both the sectors. To the Private Sector it becomes a matter of survival in the context of its vertical expansion. More power is required by the Private Sector for working the deeper pits, which involve longer hauls and winds, more pumping, increased ventilation, electrification and mechanisation.

Basically there is no conflict of interests between the two Sectors in the coal industry. In all matters pertaining to labour relations, technical "know-how", and even their approach to Government and Quasi-Government bodies the two Sectors consult each other and act in close collaboration in meeting the problems facing the industry as a whole.

In the context of the gigantic increase in production capacity required, it seems futile to engage in controversies over the "Private" and "Public" Sectors. There is sufficient scope for both to expand and play their respective roles in building up the country's economy. There are vast new fields waiting to be developed—in Madhya Pradesh alone the speedy working of its coal deposits can bring into being a vital new coalfield which can eventually be as large as the Jharia or Ranigunge Field. These and many other enormous tracts of virgin lands in the Singrauli Field of U.P. and elsewhere are waiting for development. In the older fields where the Private Sector has been operating for many years, and where its units have reserve areas in the vicinity of the existing collieries, Private Sector should be allowed unrestricted scope for development. When production and more production is the vital need of the hour there should be room for expansion in both the sectors. Within the frame-work of the Industrial Policy Resolution a broad pragmatic approach should be found possible. The scope of that policy should not be whittled down by restrictionist interpretation. The country's coal target stands at an impressive altitude. It is essential to create a climate in which the production potential of both the Sectors can be employed to their optimum extent.

The principle of co-existence must be accepted as a way of life, especially in a key industry such as coal, for it is in the spirit of "get-togetherness", in the coparcenary endeavour towards the fruition of a common ideal that the private and public sectors of a resurgent India will discover the very essence of co-survival.

COAL AND INDUSTRIAL PROGRESS

By
K. KHOSLA

Coal is one of those things one takes for granted. We never pause to reflect on the influence it exerts, and exerted, on the course of civilisation. To the modern world, there is hardly any other element in nature, except air, or soil, which is as important as coal. A lump of coal is a miniature potential dynamo, lying within its dark bosom, a store of energy drawn from the hundreds of millions of years. One pound of coal burnt in a modern engine can produce as much work as a man with bare hands can do during a whole day. Though there is dependable geological evidence to show that coal was used by mankind as early as three to four thousand years ago, it is only from the 18th century that it has become a major element in world's industries. Earlier, coal was mainly used for domestic purposes or by individual craftsmen or groups of craftsmen.

There are three factors which led to the increasing importance and widespread use of coal in human life. These are (1) the depletion of forest resources on which mankind were earlier dependent for fuel and charcoal; (2) the introduction of the use of coal in the production of iron and steel; and (3) the introduction of the steam engine in the year

1769, the second discovery which led to the industrial revolution. It was an epoch-making one, the first time that iron, which had been hitherto a rare and expensive metal, was brought into an article of common use in the western world.

It was, however, the invention of the steam engine that led to the phenomenal increase in the demand for mineral products, particularly coal. By cheapening steam, it opened energy and, consequently, anything manufactured with the help of mechanical energy. The engine revolutionised transport. Made of iron or steel, the steam engine depended both on coal for its manufacture and operation.

As early as 1824, Carnot in his "Motive Power of Heat" stated that iron and fire are recognised as the sustenance and support of all industrial activities. . . . if England were to be deprived of steam engines, she would also be deprived of her coal and iron; all sources of wealth would be lost and all her means of development would be destroyed.

What Carnot said in the beginning of the 19th century is true today when we are talking

about atomic energy and its development for peaceful uses and synthetic materials to replace iron. Indeed, our modern industrial civilisation is unthinkable without coal and iron. Without iron, there can be no modern machinery or steel rails. Without coal and iron, modern industries and transportation can hardly exist. No wonder, then, that coal has been called as one of the prime-movers of our civilisation.

It is true that coal no longer holds the almost exclusive position as a source of heat and power that it occupied in the 19th century, there being three other competitors, namely, gas, oil and hydro-electricity. Coal, however, still remains the most important source of power. After petroleum and natural gas, coal ranks second in the world in value and output, and first in the number of workers employed. For instance, in 1949, coal accounted for nearly one-third of the value of the total mineral production of the world, \$9.4 billion out of a total of \$30.2 billion, at the prevailing American prices, while coal mines the world over engaged 4.5 million workers before World War II—probably as many as all other branches of mining put together.

Turning from generalities to the concrete realities in India today, we find that coal is one of the most important factors in our bid for planned industrialisation. Without it, our transport would not move, factories would not work, and the blast furnaces would not produce the stream of molten iron which is converted into steel on which our industrial growth under the Five Year Plans must depend.

The great necessity, therefore, is to plan the production and distribution of coal so that it can be fully utilised in the national effort for speedy industrialisation of our under-developed economy. There must be coal in plenty, of the right qualities, and where they are needed.

There is, no doubt, that our planners are aware of the need to step up the production of coal to meet the increasing needs of our fast developing economy. In the Second Five Year Plan, the

objective was to raise the annual coal production to 60 million tons by 1961, of which 45 million tons were to come from the private sector, and 15 million from the public sector. In the Third Plan, the target fixed for the last year of the Plan is 97 million tons, on the basis of the targets for steel, thermal power and railways, which are the major consumers of coal.

"A target of this magnitude", says the Draft Outline of the Third Five Year Plan, "will require production to be stepped up by 37 million tons over the target of 60 million tons set for the last year of the Second Plan". In fact, the stepping-up will have to be more, as the actual performance of the coal industry in 1960 was of the order of 51 or 52 million tons—8 million to 9 million tons below the target. While the private sector produced 43.5 million tons or so, in 1960, a shortfall of about 1.5 million tons, the public sector attained a production of only about 8.5 million tons, which was 6.5 million tons below the set target. The production of coal, therefore, will have to be raised by nearly 45 million tons a year over the 1960 figure, and not 37 million tons, by the end of the Third Plan, to fulfil the target. This means that the private sector will have to raise its production from 43 million tons to 62 million tons and the public sector from 9 million tons to 35 million tons. While it is not unlikely that the private sector will be able to achieve its task provided that favourable measures enable it to mobilise its resources, it is not clear how the public sector will step up its production by 400% within a period of 5 to 6 years.

COAL AND STEEL INDUSTRY

In the mean time, the coal shortage has seriously affected industry in general, threatening the very base of our economy. Some public utility concerns and manufacturing industries have had to curtail production periodically to adjust themselves to the fuel shortage. The railways and the steel industry have also been hard hit. The steel industry has, over the past few years, been facing a

grave shortage of good quality coking coal, and has been forced to accept large quantities of poorer varieties of coal with a higher ash content, resulting in operational difficulties. While the ash content is generally over 20%, it was stated by Indian Iron that in some shipments of coal, in 1960, the ash content ran as high as 32%. The high ash coals are leading not only to a curtailment in production but also to an increase in costs which are estimated to go up by about Rs. 3 per ton with every one per cent increase in ash.

Needless to add, the shortage of good quality coking coal was not unforeseen, and the Second Plan very wisely made provision for the establishment of five new washeries to be set up in the public sector, three of which, unfortunately, have not yet materialised. It is now known that the two washeries at Bhojudih and Patherdih, which were earmarked for supplying washed coal to the two steel plants in the private sector—Tata Steel and Indian Iron—are not likely to go up in the immediate future. The problem of an adequate supply of suitable coking coal will have to be given serious attention and remedies immediately devised; otherwise, the country will not be able to reap the full fruits of the colossal investment in the steel industry under the Third Plan.

IDEOLOGY AND COAL CRISIS

It appears that ideological considerations have contributed not a little to the present coal crisis. For instance, coal production falls in the 'A' schedule of the Industrial Policy Resolution of 1948, which laid down that new undertakings in coal would be reserved for the public sector. This resolution failed to take note of the fact that coal is a wasting asset, and it is only natural that entrepreneurs should be chary of putting in capital and efforts in a field in which there was virtually no scope for expansion.

Despite representations, private collieries were not allowed to open new mines, although that would have led to a substantial increase in the production of high grade non-coking coal. However, there are indications that Government is now ready to tone down its doctrinaire policy and to permit, under special licence, private companies to work new mines which are contiguous to their existing mines. Indeed, in view of the compelling need to increase the coal production in the Third Plan, Government would do well to steer clear of doctrinaire considerations. The

primary object should be to raise more coal, a task to which the private sector by virtue of its experience, know-how and organisation can largely contribute.

TRANSPORT PROBLEM

Mr. R. H. Wright, in his speech as Chairman of the Indian Mining Association, last March, quoted a telegram sent by a coal-man in Raniganj, on 18th June 1857, reading "YOU SAY, SEND COAL, I SAY SEND MORE WAGONS". The position, if anything, has worsened today, 104 years since the telegram was sent. Railways still fail to provide the wagons on which the coal industry is almost entirely dependent for the movement and distribution of its output, as there are practically no alternative means of transport. There has been a good deal of bickering between the Railway Ministry and the Ministry of Steel, Mines and Fuel as to the responsibility for the present shortage in coal supplies. In his reply to a motion in February this year, the Minister of Steel, Mines and Fuel attributed the shortage to inadequacies of

movement rather than production. The Railway Minister has similarly claimed that the railways supply many more wagons than the collieries can load. While it is true that more coal could be carried by the railways if loading and unloading of wagons were speeded up and wagon-movement better planned, the Railway Minister's claim that "all demands of the Coal Controller who determined movement of coal to different areas, were being met" cannot be said to be factually valid.

On the basis of the current production, the daily wagon requirements for West Bengal and Bihar are estimated at around 7,000 wagons, while the actual supplies are around 4,700. Consequently, the coal stocks lying at pitheads were much larger in 1961 than in 1960. Collieries hold that the accumulation of stocks at pitheads forces them to cut down their output. The American Coal Mission after studying the working of collieries some time ago, came to the view that the coal output could be stepped up by at least 20 per cent if only the transport

position improved. Suggestions have been made to explore alternative means of transport such as a greater use of the road transport and the despatch of coal by steamer to South and West India. As a matter of fact, since March last, over three million tons of coal are stated to have been moved by sea to South and West India. To make the traffic permanent, it will be necessary to increase the handling facilities at the Calcutta Port and elsewhere, and the problem of finding cargo for the ships on their return voyage will have to be solved. In the mean time, it has been decided to move annually 2 million tons of coal by sea to Madras and other ports on the west coast.

Not only is it necessary to tackle immediately the transport problem that presses on us with the urgency of a fire alarm, it is also essential to plan ahead if our Third Plan is to succeed. The dimensions of the task facing the railways will be realised when it is noted that by the end of the Third Plan, the requirements of the Bihar and

Indian Finance

West Bengal collieries alone are estimated to rise to 10,000 wagons a day.

It would be fitting to end this section by quoting the warning of the World Bank experts who came to study our transport problems in 1960. "Insufficiency of railway resource", the experts stated, "is likely to cripple coal and other industries, and in order to meet the needs of India's advancing economy, the rate of development of rail transport should be many times greater than envisaged at present".

COAL PRICES

The coal industry differs from most other industries in that to maintain the same level of output it has to increase continually its expenditure. This is so, mainly because, as the work in a mine proceeds, the working face becomes deeper and deeper, calling for increasing quantities of rolling-stock, plant and equipment, thus adding to its costs. The problem concerns largely the working of the mines yielding better grade coals, and mostly affects the private sector. For, although the public sector's share in the total production has currently increased to about 17%, they produce only about 2% of the better grade coals while the private sector accounts for 98%.

To meet the increasing costs, the coal industry needs a greater inflow of capital, the condition precedent for which is a reasonable margin of profit. At the present level of prices, the return is said to be inadequate. In February 1959, the Bulletin of the Reserve Bank revealed that the paid-up capital in 39 coal companies increased by only about 1.9%, as compared with the year before, while the same figures for iron and steel and cement were 27.3% and 21.5%. This means that for whatever little expansion it can undertake, the coal industry has to rely mainly on its reserves, particularly as new capital is difficult to obtain in the present conditions of the industry. Fortunately, at this writing, a Rs 30/- crore World Bank loan for the private sector of the Indian coal industry is now almost assured. This money, which will be routed through Government, is to be used exclusively for the import of machinery and equipment needed by the coal industry to fulfil its expansion programme.

It would appear that the present price level needs to be reviewed. The quantum of price increase for coal sanctioned in 1959 was admittedly inadequate and has been more than offset by the increase in costs of production in the last two years. The pressing need, therefore, is for Government to see if the existing price of coal is fair and economic, and, if not, to make such revision as would enable the industry to earn a reasonable margin of profit and to rehabilitate and modernise itself.

Coal Supplement 1961

The general argument against any rise in the price of coal has been the danger of a cost-push inflationary pressure being generated by the increase as coal enters the cost of production of so many

industrial products. It should, however, be noted that the cost on account of coal is generally a small percentage of the cost of production of industrial goods, as will be evident from the table reproduced below:

DATA RELATING TO COST ON VARIOUS FUEL ITEMS AND ELECTRICITY CONSUMED BY DIFFERENT INDUSTRIES (1952) FIGURES.

Industries	Ex-factory value of products & by-products (Rs. crores)	Expenditure on coal and electricity (Rs. crores)	Expenditure on fuel and electricity (Rs. crores)	Cost expressed as percentage of the gross ex-factory value of products and by-products.	
				Coal & coke.	Fuel & electricity.

Source: Census of the Indian Manufacturing Industries.

The danger of a cost-push inflationary pressure being initiated by the price-rise of coal is, therefore, a remote one. In support of

this contention, it may be stated that the reversal in November 1949 of the rise allowed in July 1947, a measure allegedly pur-

porting to initiate a downward trend in the general price level, did not produce any effect. Thus, between 1947 and 1957, the index of wholesale price went up from 287 to 427, i.e. by 48% whereas the price of coal rose by a mere 15% to 16%.

NATIONAL COAL COMMISSION

In the foregoing sections, attention has been focussed on some of the more important problems besetting the coal industry that are acting as brakes on our industrial progress. These problems, as has been shown, cry for immediate remedial action which raises the deeper question of the adequacy of the present administrative machinery.

Many responsible critics have, time and again, pointed out that although Government has been participating increasingly in every sphere of our economic life and our economy is on the threshold of the 'take-off' stage to become self-sustaining, our administrative machinery remains atavistic by western standards. There is no harmony between our 'economic ends' and the 'administrative means'.

This criticism, true of the entire economy, applies to the coal industry also. As early as 1946 the Coalfields Committee recommended the setting up of a national coal commission, with

adequate authority to tackle the problems of the coal industry with the assistance and expertise needed in the changed context of the economy. Unfortunately, Government has not yet seen its way to setting up the high-powered autonomous national coal commission. There is no doubt that many of the problems that afflict the coal industry, such as the lack of co-ordination between coal production and coal transport, would not have existed, at least not in their present aggravated form, if a suitable authority, armed with adequate power, had come to function earlier.

CONCLUSION

Time does not wait and life does not stand still. We are resolved to develop our economy to the fullest potential but the native hue of resolution is sicklied over with the pale cast of ideological thought. The lifeline of our economy is coal, and all is not well with it. Much care and attention is needed to bring the coal industry back to health. Considering the economic leeway that has to be made up, this is a task that brooks no delay. Let us hope that a realistic approach would help remove the ills of the industry and enable it to play its proper role in the furtherance of industrial progress of which we dream so much.

The history of coal in India is lost in antiquity

The word 'Coal' is believed to have originated from the Sanskrit 'Kal' meaning black, and in ancient India, coal was known as the 'Burning Rock' and was believed to possess supernatural powers. However, it was not until 1774 that the first attempt was made to mine this mineral when John Sumner and Suetonius Grant Heatly discovered coal in Bengal and applied to Warren Hastings for permission to mine it. Enclosing a short but clear memorandum of their intentions and requests, the oldest document in history of the Coal Trade dated, Calcutta, 11th August 1774, may well be quoted as the initial impetus to the vital Coal Industry of today:

"Hon'ble Sir and Sirs,—I have the honour to present to you in the name of Mr. Suetonius Grant Heatly and myself, 'Proposals for working coal mines and selling coal in Bengal in consequence of our having discovered certain coal mines in Pachete and Birbhoom and I assure you, Gentlemen, that in case you will be pleased to grant us the indulgences we request that we will endeavour to prevent all disputes with the country people, and in general to render the execution of what we undertake, subservient to every good purpose the nature of work will admit.

I am, etc.
JOHN SUMNER
for Sumner and Heatly.

But it was only in 1814 that the Industry came to be established with the opening of the first mine at Renigunj in Bengal.

The Bengal Coal Co., Ltd., producers of quality coal since 1843, were the first of existing Coal Companies to be formed and their collieries can trace their descent right back to the first coal mines ever to be opened in India.

COAL WASHING CONSERVES INDIA'S COAL RESOURCES

The coal washery illustrated here, a unique feature of the Durgapur Steelworks, was designed and erected by Simon-Carves.

The washery is a part of the coal preparation plant. Already in operation, this plant, capable of handling 360 tons of 3"—0 raw coal an hour, is washing, blending and preparing coal for the coke ovens at the Steelworks.

The Simon-Carves coal preparation plant at Durgapur is helping India to upgrade inferior coal for metallurgical purposes—conserving India's rapidly dwindling high-grade coal resources—
• helping to get uniform quality coke for the finest iron and steel.

AMALGAMATION OF SMALL COLLIERIES

By D. B. RAVEL

Dy. Secretary
Indian Collieries Association
Dhanbad

THE Scheme of Amalgamation of small and irregularly shaped collieries in the Jharia-Raniganj fields as recommended by the Balwant Rai Mehta Committee in 1956 has had a rather chequered career. It was as early as 1920 when the Coalfields Committee had taken serious notice of the "small dimensions and fantastic shapes" of many of the then existing leasehold-lands and suggested some appropriate remedies. The Coal Mining Committee of 1937 and later on the Indian Coalfields Committee of 1946 made further studies on the subject and evinced much more interest in it on a realisation of the urgent necessity for an orderly development of the coal areas, for extraction of the maximum amount of coal through an economic and systematic working on the basis of a planned programme and for—avoidance of waste by securing amalgamation and by adjustment of irregular and fantastically-shaped boundaries.

Whatever the reasons, these recommendations were not given effect to until 1955 when the said Mehta Committee was appointed to study and submit a report on the subject. But the mines and the coalfields had undergone many changes during the period of 35 years and the remedies suggested by the Coalfields Committee were no longer available for effective application. Even during the five years since the Mehta Committee's submission of recommendations, Government could not reach any definite conclusions and their present trend of thought is best reflected by the decisions of the Mineral Advisory Committee to the effect that "compulsion was not desirable for the amalgamation of uneconomic holdings but wherever lessees voluntarily agree to it, the State Governments should offer all possible facilities". The Board concluded its two-day meeting at Bombay on May 2 last. From the beginning the Coal Industry as represented by the three major producers' Associations/Federation has made its views known to the authorities on the Committee's proposals and in fact their representatives signed the Committee's report, subject to its acceptance of those views.

The Industry's views as submitted to Government through a memorandum in 1957 were inter alia that the scheme of compulsory amalgamation as recommended by the Mehta Committee and embodied in their report, if hastily carried out, would definitely delay and hamper coal production at a moment when such production was of utmost importance and a supreme necessity for the success of the Five Year Plans, that the economic and technical factors involving re-organisation of ownership and operation of Indian Collieries were extremely complicated

and were calculated to frustrate a maximum mobilisation of the coal resources and also to lead to a major upset or dislocation of the productive capacity of the industry and that these inherent difficulties made it imperative that the scheme of compulsory amalgamation should be abandoned for the present. It may be noted that these views were shared by the Indian Chamber of Commerce,

Calcutta as also by the Federation of Indian Chambers of Commerce and Industry, New Delhi, who addressed separate representations to the Government on the subject.

In July, 1958 when the Industry represented to the Ministry of Steel, Mines & Fuel and acquainted it with the Industry's views and the inherent difficulties of a compulsory amalgamation, the Officials of the Ministry were

convinced about the unwisdom of enforcing compulsory amalgamation and subsequently a Committee was constituted to promote voluntary amalgamation with specific terms of references. It was decided to invite and initiate proposals for voluntary amalgamation and adjustment of boundaries on the basis of the conditions laid down and official assistance as agreed to in the terms of reference. A proforma was prepared and sent out to all collieries wishing to amalgamate voluntarily.

The scheme of voluntary amalgamation has not received good response so far for variety of reasons, the main reason being that the Owners of the small collieries who have been carrying

COAL PRICES IN RETROSPECT

By

B. M. VARMA

THE statutory price of coal was for the first time fixed under the Colliery Control Order in 1944 at a time when prices of coal rose as high as Rs 60/- per ton and when more production was needed to meet the exigencies of the demand arising out of the Second World War. The price of coal unlike other commodities is therefore not governed by the normal force of supply and demand. Before the control of coal prices came into existence for the first time in 1944, prices fluctuated widely over a number of years. In 1922, the price of coal stood on an average at Rs 8/- per ton; in 1935 the average coal price fell to the lowest level of Rs 2/8/- per ton. With the outbreak of war in 1939 the international demand for coal began to rise and prices gradually rose to Rs 4/7/- per ton in 1942, after which they registered a speedy increase to Rs 11/7/- per ton in 1943. With the steep rise in the demand for coal, the coal situation became critical in 1943. The necessity of keeping production costs at the lowest level during the war years began to be felt. But attractive wages and congenial surface work offered by large scale military and other works, better price for agricultural produce and other factors combined to take labour away from the coalfields. All these factors brought about a fall in raising in 1943. The requirements of the Railways and other consumers however rose very considerably. Prices as high as Rs 60/- per ton were demanded in many cases and paid.

In October 1946 the colliery owners in the Bengal and Bihar Coalfields voluntarily gave certain wage increase on the suggestion of the Government. In spite of all these increases the labour situation assumed an acute form and a Conciliation Board was set up by the Government under the Trade Disputes Act, 1929, for a revision in the wage-structure. The first labour award in the history of coal mining in India was given in May 1947, which considerably increased the wages and amenities to workers. The Government then increased coal prices by Rs 3/8/- per ton to compensate the cost of collieries in implementing the C. B. Award. In 1949, the Government reduced the controlled selling price of coal by -9/- per ton for steam coal and -10/- per ton of slack coal with the object of preventing inflation. The Industry was however assured at that time that the price-cut would be restored but it was never redeemed in any manner. As a result of labour agitation for further rise in wages and other emoluments, an All-

India Labour Tribunal known as "The Majumdar Tribunal" was set up in 1954 by the Government. In 1956, the Award of the All-India Industrial Tribunal (Colliery Disputes) was published, in 1957, the decision of the Labour Appellate Tribunal in India, both of which awarded a considerable increase in wages and other benefits to labour. Coal prices were increased to the extent of Rs 3/- per ton in July 1956 in Bengal and Bihar fields and a further increase of Rs 1.50 per ton in July 1957, so as to enable the collieries to implement the above award and decision. Further small increases in the coal prices were subsequently allowed only to compensate the cost of allowing variable dearness allowance as awarded by the Tribunal as a result of rise in the Consumers Price Index Numbers. It will thus be evident from the above facts that whatever increases in coal prices were given by the Government, they were all to cover the rising labour costs from the various Tribunal Awards and compensate the collieries against their costs. But the Coal Industry was never granted adequate increase in the prices of coal to the extent it required to implement labour awards. Since 1947, no account has been taken of the steady rise in operating costs due to increased prices of stores, plant and equipment, the introduction of additional mining legislation, new rates of electricity charges, cesses, increase in railway freight and passenger fares, additional stowing costs and the effect of rising costs on rehabilitation.

As a matter of fact the problem of an adequate price for the various grades of coal is lying heavily for a long time on the shoulders of the Industry. The question assumed an acute form in May, 1957, when the Coal Prices Revision Committee was constituted to make recommendations to the Government in this regard with a direction to submit their report within two months. These two months stretched into two years. Nineteen months after its appointment, the Coal Prices Revision Committee submitted its report towards the end of the year 1958. But instead of taking immediate action on the report, the Government appeared to put it in

cold storage. This was really too much for the Industry which had been moving heaven and earth since the appointment of the Committee to get the question promptly settled for reasons which require little explanation. After a good deal of agitations and repeated representations over this issue, the Government announced on 25 August 1959 a niggardly price increase of half a rupee per ton for different grades of coal above Grade III in the Bengal, Bihar and outlying fields only against an expected price increase of Rs 3/8/- per ton which was considered to be essential to cover the increased cost of production. This fact only shows that the Coal Industry, the most basic of all industries, has never been treated with consideration and sympathy it deserves.

It is needless to mention that in the absence of an economic price structure, the Industry is deprived of the development finance urgently required for the expansion plans for additional production allocated to it in the Third Plan. It is difficult to understand why the Government is so reluctant to apply the principle of auto-financing in the case of such an important industry as coal and it is time that the Government adopted a rational and realistic policy in this regard. The position of the coal shares in the Stock Market clearly indicates that the prospects of getting new investments are practically insignificant in view of the uneconomic price structure of coal. The production cost has been steadily going up as a result of larger amenities being given to labour owing to a gradually soaring price index and also owing to an increase in the cost of machinery, stores, iron and other materials as hereinbefore stated. It will, therefore, appear that the existing uneconomic price-structure of coal allows hardly any scope for further development work and even for maintaining the existing production of the collieries.

It is now a well accepted principle that in any price fixations particularly in industries of national importance a certain margin must be provided for rehabilitation. The Coal Industry is one of the oldest industries and most of its block is purchased either during or before

the war. The present prices are about three times higher than the prices during the war period and considerably higher than those ruling before the war. Depreciation reserves cannot exceed the purchase price of such assets and the Industry therefore is confronted with a very serious difficulty in having to meet the difference between the war or pre-war purchase prices and the present prices. Unless therefore a certain margin is provided in the price structure it may be difficult for the Industry to replace the existing block not to say of adding to it for increasing production or maintaining it. The steel, textile, cement and sugar industries are examples where a margin of such rehabilitation has been provided wherever price fixation has been done. The case of the Coal Industry is particularly important because of the huge investments in what are called "wasting assets". Unless therefore, reserves are created, which can only come from out of the profits, it will be impossible for the coal companies to meet or write off the wasting and other assets with consequent disencouragement to the investor.

Under the Third Five-Year Plan the private sector of the Coal Industry has been asked to increase output by 17 million tons which involves a very heavy capital outlay to the extent of about Rs 60 crores and that Rs 27.5 crores approximately will be met from plough-backs and new equity floatation and the balance of about Rs 30 crores will have to be raised by borrowing from banks, finance houses etc.

A fraction of this amount may be met from plough-backs and new equity floatations and the major portion will have to be raised by borrowing from banks, finance houses, etc. Because of the small returns on the investment of the coal companies, it will not be possible for the Industry to attract much fresh capital from the market to meet the expansion plans of the collieries.

The position of the Industry and the economy of the country being what it is, the price-structure should be such as to allow the small and medium-sized collieries to be able to function economically and that is possible only if a fair margin of profit is allowed to the capital employed and also if the price-structure is based on the cost of working of such collieries. If these collieries are forced to close down there will be a wide repercussion on the production of coal required under the Third and future Plans.

Public Sector in the Coal Industry

THE emergence of the public sector in the coal industry and the growth of production to its present level are recent developments. It has come as a result of two factors, namely, the Statement of Industrial Policy Resolution of 1956 and the Second Plan schemes for expansion of coal production. The Industrial Policy Statement reserved basic and strategic industries for development in the public sector. The application of this principle to the coal industry meant reservation to the public sector of coal mining in new and virgin areas, the scope for the private sector being restricted to existing collieries though this was subsequently enlarged to include contiguous areas also. While the Industrial Policy Statement provided the ideological rationale for the public sector, it was the Second Plan schemes for expansion of coal production which gave the impetus to development of coal production in the public sector. The Second Plan laid down a target of coal production at 60 million tons representing an increase of 22 million tons as compared with production at the end of the First Plan. This was distributed between the private and public sectors in the proportion of 10.0 million tons and 12.0 million tons respectively. At the beginning of the Second Plan the public sector in the coal industry hardly existed except in a skeletal form being represented by the 11 State collieries which had been taken over from the Railways during World War II, but production from these collieries was of an insignificant order being only 2.0 million tons. This circumstance, expansion of coal production in the public sector reached the target of 12.0 million tons was admittedly a task of stupendous magnitude which entailed a number of problems and difficulties. The manner in which these difficulties were faced and overcome and the target nearly realised, unfolds an enterprising chapter in the story of Second Plan achievements.

The first problem that had to be faced and tackled in planning production in the public sector was the creation of the organisational machinery that could deal with every aspect of coal production and development in a competent and adequate manner. This led to the creation of the National Development Corporation towards the end of 1956 with its registered office at Ranchi and an authorised capital of 50 crores solely contributed by the Government.

The 12 million tons of target for public sector comprised 1.5 million tons to be raised by the State collieries in the Andhra Pradesh and the balance of 10.5 million tons was left to be taken up by the NCDC. The task

of the NCDC was rendered formidable by the requirement that 10 million tons out of its total target of production was to be achieved by the opening of new mines in virgin areas. Only 0.5 million tons was to be raised by increasing production from existing collieries. Raising production of the order of 10 million tons from new mines was a problem that would have put under severe strain the resources and skill of any organisation. The difficulties were considerably magnified to the NCDC by the fact that it was a new organisation which had yet to acquire the necessary resources in men and money. The initial planning required in the development of new mines was itself beset with many difficulties and problems. To mention a few, careful and thorough prospecting of possible coal bearing areas has first to be undertaken. Then land and mining rights have to be acquired. Prospecting has to be followed by drilling to ascertain the commercial prospects for coal production. On the basis of all such data, a workable plan has to be prepared. In the early period of its life, the NCDC was concerned purely with work of such preparatory character.

The most difficult problems which the NCDC had to face in implementing its development programmes, however, related to its requirements of resources in machinery and technical personnel. Such requirements of the NCDC were of an order which called for enormous investment and prompt measures. Development of production from new areas being a difficult proposition in the course of a few years, mechanisation pointed to the only way out, but mechanisation was a new development in the Indian coal industry. The NCDC required machinery and equipments both for open cast mining and deep shaft mining in underground. The former included heavy earth moving machinery such as shovels, dumpers, dozers, blast hole drills etc, while equipments for deep shaft mining included coal cutting machines, loaders, conveyors etc. As an offshoot of such imports of equipments and machinery, the supply of spare parts had also to be provided and this entailed imports and drain on foreign exchange. Arranging for imports of these machinery and their spare parts in the midst of an acute shortage of foreign exchange was particularly a source of constant worry to the NCDC.

When the NCDC was set up, the resources in terms of technical personnel available to it was meagre. Existing facilities for training were also far from being adequate and satisfactory. This set the Corporation a two-fold problem. On the one hand, it had to make a fairly reliable and

approximate assessment of its needs of technical personnel according to different grades and categories. Then facilities had to be set up for the training of such personnel within the country. One of the results of the development of the public sector in the coal industry has been that it has provided the occasion and opportunity for creation of such technical institutions for raining of technical personnel in the coal industry. It is noteworthy that the NCDC has opened up five training schools at Talcher, Kargali, Kurasia, Giridih and Bhurkunda collieries, which are intended for meeting the Corporation's requirement of junior technical personnel. Besides, for meeting its requirements of personnel of superior grades, the NCDC instituted a scheme under which mining engineers were sent abroad for training.

The working plan drawn up by the NCDC for raising the 10 million tons of coal envisaged opening of 7 new mines in Bihar, 4 in Madhya Pradesh and 1 in Orissa. The collieries selected in Bihar for development were Kathara, Gidi 'A', Saunda, Bachra, New Bhurkunda 11, Gidi 'C', and Sayal. In Madhya Pradesh, the NCDC drew up plans for developing production at four places, namely, Korba, New Kurasia, Korea, and Bismampur. For each colliery, the NCDC fixed a target of production. Work relating to development of the mines was conditioned by the provision of facilities for transport and for meeting needs of power. Work in all the mines gained gradual momentum and before the end of 1958, commercial production had started in two collieries viz, Korba in Madhya Pradesh and New Bhurkunda 11 in Bihar. Three more mines were added to the list before the end of 1959, and before the end of the Second Plan all mines were in commercial operation with the exception of Bismampur in Madhya Pradesh and South Balanda in Orissa. Both these projects were originally included in the Second Plan but by reason of special difficulties encountered in their development during the Second Plan period, were shelved for implementation during the Third Plan period.

As a result of the implementation of the Second Plan schemes, the public sector in the coal industry has grown to great size. With the development of new mines production from which is of a substantial order, the NCDC also figures as one of the largest employers. The total strength of the workers employed by the Corporation is placed at nearly 40,000. Apart from the provision of employment opportunities to such large number of workers, the benefits that have flown from

the growth of the public sector in the coal industry are the development of new and virgin areas and the institution of pioneering work in mechanisation.

The Third Plan envisages a more rapid development of coal production than witnessed under the Second Plan and lays a target of production for coal at 97 million tons, representing an increase in production of the order of 37 million tons as compared with the targeted production under the Second Plan. The shares of the public sector and private sector in this target are 20 million tons and 17 million tons respectively. The public sector programmes are of greater magnitude than those involved in its Second Plan target and consequently the demands in terms of technical personnel and other things are likely to be higher. The main problem will be finance. While it has been estimated that the public sector programmes will entail an expenditure of Rs 107 crores, the provision made in the Plan is only Rs 57.0 crores.

Long in advance, the NCDC has started work on schemes connected with coal production in the Third Plan. It has already undertaken a programme of drilling in the coalfields which it proposes to exploit during the Third Plan and has also earmarked areas for intensive prospecting and drilling. On the organisational side, the Corporation is seeking to set up a full-fledged planning and production departments. The production department is expected to co-ordinate the work of the chief mining engineers while the planning department is designed to make a thorough survey of all mines and chart out a definite programme of production week by week. The main emphasis in the programmes of the NCDC during the Third Plan will be on the development of coal mines in the Ramgarh and Jaramdih area of Bihar. These mines are credited with considerable deposits of high grade metallurgical coal and the needs of Bokaro have imparted an element of urgency to the question of their development. For the major portion of its production target, the NCDC will have to depend on its own resources, but foreign collaboration and help are expected to be available in significant measures. Both the US and the USSR are expected to develop one mine each in the public sector and Polish help is expected to be available for the development of the Jharia mines. Help from the UK and the USA is also being sought for the development of the high grade deposits of Ramgarh. The implementation of the Third Plan schemes for coal production in the public sector would provide a further

(Continued on page 34)

SUPPLY AND MOVEMENT OF COAL

By
B. P. AGARWALLA
Chairman,
Indian Mining Federation

There is a large gap between the demand and availability of rail transport for movement of coal. On the assumption that the availability of wagons in Bengal and Bihar coalfields is 4,750 wagons on an average per day, the surplus of production over wagon availability will be about 6 million tons per year as detailed below:—

	Wagons
Wagon Availability:	
Assume daily supply ...	4,750
	Millions
4750 wagons ...	38.0
Less: NCDC Movement ex-Karanpura ...	4.0
Balance for Private Sector ...	34.0
Production:	
Assume production ...	45.0
Less outlying fields ...	2.5
	42.5
Less Road Movement ...	2.5
	40.0
Balance to be moved by rail ...	40.0
Surplus of production over wagon availability ...	6.0

The following statistical information provides an interesting study:—

COAL PRODUCTION (in Tonnes)

1960 (January to December) ...	52,613,312
1961 January ...	5,136,761
February ...	5,225,493
March ...	5,524,018
April ...	4,540,237
May ...	4,211,212
June ...	4,182,192

DESPATCHES (in Tonnes)

1960 (January to December) ...	46,326,840
1961 January ...	4,190,909
February ...	3,186,408
March ...	4,308,190
April ...	4,172,832
May ...	4,636,553
June ...	3,997,546

STOCKS (in Tonnes)

1960 As on 31 December ...	3,458,255
1961 January ...	3,885,710
February ...	4,808,146
March ...	5,567,000
April ...	5,423,000
May ...	5,374,989

AVERAGE DAILY LOADING (Bengal & Bihar Coalfields)

1960 ...	4335
1961 January ...	4370
February ...	4735
March ...	4679
April ...	4809
May ...	4625
June ...	4507
July ...	4757

About half a million ton of coal is being added to Pithead stocks in each month and the present stocks have been the highest ever known in the history of coal industry. It will also be evident from the above that as a result of the widening gap between production and despatch, the coal production from April, 1961, has considerably gone down. It may also be added in this connection that in the middle of 1960, the Railway Board gave an assurance that 5030 wagons would be made available daily in the West Bengal and Bihar Coalfields for movement of coal but even in the month of July, 1961, the actual daily wagon supply in the Bengal and Bihar Coalfields has been only 4757 wagons. How unsatisfactory the wagon supply position has been during the current year will be evident from the above figures of wagon supply and the gradually mounting stocks of coal lying at the pitheads which are deteriorating in value day by day. The increase in stock from January to May 1961 over 1960 is to the extent of about 55.3%.

Having regard to the acute shortage of adequate rail transport for movement of coal to meet the rising demands, the question automatically arises how to make best use of the available transport with a view to secure equitable distribution thereof. The authorities have been experimenting with various possibilities of improving the utilisation of available transport but unfortunately

West Bengal and Bihar fields.

	E. Rly.	S. E. Rly.	Total

Wagons not D/Noted ...	191	87	278
			311

If these wagons would have been supplied to Dhanbad area, as also a further lot, they could have been easily utilised.

The Collieries in their own interest indent for wagons for their consumers and they always endeavour to indent up to the highest loading capacity of the Collieries, because unless the indents are submitted, wagons cannot be expected. This procedure, they have been following, at least for the last 50 years.

On the basis of the consent letters, issued by the Collieries, sanctions are issued by the Dy. Coal Controller (D). He maintains records of the produc-

tion and despatch of each Colliery and therefore, it should not be difficult for him to refuse to issue a sanction on a Colliery, which is already overbooked in relation to its output. The remedy, therefore, in such cases lies with the Coal Controller's organisation.

A colliery has to submit indent for its requirement of wagons in relation to its output and the orders held. If the indenting procedure is abolished, as suggested in some quarters, it is not possible for the Railways or the Coal Controller to assess the daily requirement of each individual Colliery in relation to its

consumers and the procedure of indenting is applicable in respect of other industries also in the country. A scheme of Central Marketing of Coal as suggested by the Coal Controller is not without its difficulties, because such a Central Organisation will have to undertake distribution of about 5,000 wagons a day with attending financial responsibilities.

With regard to a proposal for rationing the supply to every consumer in accordance with the availability of coal or coke and the availability of rail transport, it is already being done by the Coal Controller by placing restriction on the grade-wise consumption of coal as also by issuing sanction for every single ton of coal required by a consumer, but if the issue of the sanctions are limited to the availability of rail transport after earmarking a minimum share of wagons for the producers of lower grade coal (Gr. II and Gr. III), much of the present crisis can be solved. The producers of high grade coal (Selected and Gr. I) can take 80 to 85% of the available rail transport, which in turn can go to higher priority consumers. The producers of lower grade coal (Gr. II and Gr. III) may be satisfied for the present with the balance 15 or 20% of the available transport to cater to the requirements of low priority consumers viz. brick, soft coke, small scale industries, and small factories. Although there was no hard and fast division on percentage basis on the above lines, the pre-October 1960 system of allotment was functioning more or less as such and thereby although the average daily availability of wagons in 1960 was 4335, the consumers as also the producers were more happy than at present, because most of them were getting some share. Therefore, at the discussions held at Dhanbad with the Hon'ble Shri Jagjivan Ram, Minister for Railways, Government of India, New Delhi, by the Joint Working Committee of the Indian Mining Association, the Indian Mining Federation, the Indian Colliery Owners' Association and Madhya Pradesh Mining Association on 20th July, 1961, representatives of the Industry pointed out to the Hon'ble Minister the defects of the present bulk allotment system and asked for reversion to the pre-October 1960 system of wagon allotment.

The creation of coal dumps is not likely to solve the transport inadequacy, rather it may lead to increased cost to the consumer, mixing of different grades of coal at the Coal Dumps, and subsequent difficulty in transport thereof to the consuming points. If on the other hand, the consumers including Railway and Govt. a/c. situated within a short distance of the producing centres of coal are asked to take at least a portion of their requirements by road, the resultant release of Rly. wagons will add to the availability of wagons for longer distance consumers.

The target of 97 million tons for Third Five-Year Plan is a big target over the present figures and therefore, the Railways in order to move the coal will have to make special efforts in time to be able to cope with the traffic.

The Grade-wise consumption of coal should be reviewed from time to time in the light of availability of coal, by the Fuel Efficiency Committee on which there should be some representatives of the Producers as also of the consumers. At present it is more or less a Departmental Committee.

At present most of the available transport is utilised for high priority consumers from higher grade Collieries with inequitable distribution of wagons as pointed out above. The Producers of lower grade coal and low priority consumers are generally suffering more, but if the suffering is allowed to continue much longer, it will affect the country as a whole with resultant repercussions on the economy not only of the Coal Industry but other industries as well.

We are already receiving reports of shortage of bricks even in places like Bombay, where the price of brick has gone to Rs. 90 per 1000 bricks. Most of the small scale industrial workshops are suffering for want of supply of coal and coke and there is often complaint of shortage of Soft Coke in big Cities. Therefore, a method should be evolved which is more rational to reduce the hardships. In an expanding economy with a rising demand, we should keep our mind open and apply proper correctives instead of trying to shift the responsibility or to endeavour to find a scape-goat. Rather the efforts should be directed to find a solution because if the coal production drops, the entire expansion plan of the country may be in jeopardy.

The Railways should also be advised to consider the following points:—

(1) Loaded wagons remain stalled at Marshalling Yards for considerable periods. The period can be reduced.

(2) On an average, a goods wagon moves only for a few hours a day and remains stationary for rest of the day. Its movement should be prolonged.

(3) The average speed of a goods train which was 10.8 miles per hour during 1950-51 is said to have gone down to 10 miles per hour during 1959-60. The total number of wagons on lines which was 146,713 during 1950-51, has only increased to 194,339. The Railways have not added significantly to the number of wagons on lines in relation to increase in demand. The Railways have been able to add 51,720 wagons only in the course of the last ten years in so far as broad gauge wagons are concerned. If these figures are correct, they call for improvement.

(4) The total number of locomotives had increased from 5256 in 1950-51 to 6240 in 1959-60. Further increase in the number of locomotives should therefore be arranged.

The target of 97 million tons for Third Five-Year Plan is a big target over the present figures and therefore, the Railways in order to move the coal will have to make special efforts in time to be able to cope with the traffic.

COAL MINING INDUSTRY—

Requirement of Mining Personnel

RASIKLAL WORAH

President

Indian Colliery Owners Association

It is indeed a difficult task to assess precisely the requirement of trained personnel in the Coal Mining Industry unless the phased programme of its development is determined well in advance. During the period of Second Five-Year Plan, this aspect of correlation was not considered very seriously as a result of which the Coal Mining Industry have had to experience an acute shortage of trained personnel, particularly in lower categories of mining staff. The shortage still exists with resultant effects on efficiency.

A Committee was set up by Government to assess the requirement of trained personnel in the Coal Mining Industry during the Third Plan period. Its findings are as follows:

Mine Managers ...	3,750
Electrical Engineers ...	2,000
Mechanical Engineers ...	2,000
Mine Surveyors ...	1,000
Overmen ...	7,000
Sirdars ...	12,000
Shot-firers ...	17,500

Assuming that this assessment will more or less meet the requirements of the Coal Industry, the question arises how this vast number of qualified mining personnel can be trained and absorbed in consonance with phased development to be undertaken by the Coal Industry during the Plan period.

The problem of training adequate number of mining personnel has assumed much importance to-day for two main reasons—(1) Safety and (2) Production. The tragic accidents in some of our big mines during recent years have focussed attention once again on the dangers of coal mining. Some people have naturally begun to wonder if all is well with the State of Safety in our coal mines. It is not surprising, therefore, that the news of a big colliery explosion should evoke a great deal of public sympathy and anxiety. As the explosions take place in the mysterious underground workings of a coal mine which is beyond the knowledge and experience of ordinary people, they lead to all sorts of speculations. To add to the confusing knowledge, explosion comes like a bolt from the blue. When all seems safe and sound one moment, there is utter tragedy and turmoil at the next. In an instant, a number of lives are lost. It is not surprising that such tragedies get great publicity and attract public notice though actually explosions account for far

less number of fatal accidents than by other causes, such as, subsidence, roof fall, etc.

Yet the fact remains that the accident risk in coal mines is high and that mining is a perpetual battle against great natural forces. Unlike other industries, mining has to contend with a series of natural phenomena, such as, the occurrence of harmful and explosive gasses, falls of the roof and sides of the pits, inrushes of water, occurrences that spring from a variety of sources and are difficult to guard against.

It is well to remember that no coal mine can be made one hundred per cent safe. But the accident rates can be minimised and our Government have not only set high standards of safety in mining practice through a voluminous code of safety rules but also are convinced that if success is to be assured in reducing the accident rates to the minimum, then the workmen, officials and managers should all be adequately trained and must play an active part in the promotion of safety. It is agreed, therefore, that in our drive for greater safety, all categories of workers must be given proper training and education without which no man can become a safe miner or mine worker. An unskilled and untrained worker is a danger not only to himself but to his fellow workers too. It is also realised to-day that apart from the research, constant vigilance and strict enforcement and observance of safety rules, in the long run, whether a pit is as safe as it ought to be, depends very largely upon the extent to which the individuals in it, workers and engineers, want it to be safe and are prepared to see that it is safe. In this unfortunate country of ours where most of the mine workers are illiterate, it is a very difficult task to properly educate and adequately train up individual workers to make them responsible and safety conscious. And yet this must be done at any cost because, after all, the accidents in mines do not just happen, they are caused. However, incredible it may seem, some people are so utterly irresponsible as to risk their own and other men's lives by smoking in a place where dangerous and inflammable gasses may suddenly appear.

As regards training of higher categories of mining personnel the managers and other mine officials, the Government seem to be conscious of the need to create expanded facilities and to make a new orientation in the existing system for the purpose of such training through expansion of the present institutions and establishment of an adequate number of new ones. Thus the two mining institutions in the country, the Banaras Hindu University and the Indian School of Mines at Dhanbad which, prior to the Second Plan had a total outturn of about 40 mining graduates annually have progressively expanded their scope to produce about 70 graduates by the middle of 1959 and are now producing about 150. At the same time, six new institutions have opened mining engineering courses at the degree level, the Indian Institute of Technology, Kharagpur, the Bengal Engineering College at Sibpore, the Osmania University at Hyderabad, the Madras University, the College of Mining at Raipur, the Engineering College of Jodhpur and the Higher Technological Institute at Bombay. With the opening of these new courses, the total number of graduates in mining are perhaps over 200 annually to-day. As for training of other categories of mining personnel, several institutions have recently been established all over India where regular theoretical and practical training courses are provided. The Coal Industry also affords full co-operation by extending training facilities at the collieries. A number of apprentices work in the collieries where they get practical training and such training will be conducive to fulfilling the requirements of the mining personnel in the Coal Mining Industry.

From the production point of view, training of a larger number of mining personnel has become an imperative need. From annual output of about 32 million tons in 1950 to a production of 60 million tons by the end of the Second Plan period and to about 97 million tons by the end of the Third Plan period, the programme represented ambitious targets to be reached. The successful attainment of these targets was inevitably preconditioned by large-scale or partial mechanisation, skilled workmen, trained technicians, technologists and specialists for manning the various services. Anyway, it is a tremendous task to train as large an army of technical personnel of such quality and variety as is required for the production of the planned mineral wealth under the development schemes. This task has got to be faced and overcome with more radical and dynamic approach in the larger interest of our country.

Girimint Colliery—a photograph taken some years ago when the colliery was developing.

Part view of a screening plant showing a slack coal conveyor.

Indian Coal Industry in Pictures

A Coal Mine in Jharia (Photo Courtesy—I.C.O.A.)

Workmen loading coal on a conveyor on a longwall face. The seam is 16 ft. thick and is worked at a depth of over 1500 ft. Longwall faces are laid out and solid sandstowing is employed in the bottom 7 ft. of the seam. The upper portion of the seam is recovered by Bord and Pillar methods. This system of working is adopted in order to avoid Bumping.

Chinakuri Incline. A good quality seam crops out on the surface here and work was being done in this area in 1817. Close to this Incline deep shafts are sunk to the Disergarh seam 1900 ft. below.

Disergarh seam collieries at depths exceeding 1000 ft. are gassy and owing to the thickness of the seam and the quality of the strata there is danger of Bumping. The areas from which the coal has been removed are solidly stowed with sand by hydraulic methods. The sand is obtained from the bed of the River Damodar by various methods. This, and the following photograph show some aspects.

Representatives of labour.

CENTRAL RAILWAY MOVES COAL

IN the general pattern of movement of coal in India, the part played by the Central Railway is indeed notable. It moves its own originating traffic in coal besides the traffic which it has to carry from other Railway systems. The Pench and Chanda valley collieries on the Nagpur Division and the Singareni group of collieries at Bhadrachalam, Yellandu and Kothagudem on the Secunderabad Division are two important clusters of collieries situated on and served by the Central Railway. It will be interesting to note that out of the total loading of originating traffic on the Central Railway (including coal intended for consumption on the Railway) coal constitutes a little over 20 per cent of the traffic. The number of wagons utilised for loading of coal for the public is a little more than that utilised for loading coal for the Railways. During the year 1960-61, we loaded on the Central Railway, on an average nearly 342 wagons per day under the category of Revenue—Earning and 283 wagons for departmental consumption. The following figures will show that the despatches of coal at the originating points on the Central Railway—from the Singareni group and the Pench and Chanda valley—have shown a progressive increase during the last few years:

	Singareni.	Pench & Chanda valley.
1955-56 ...	65384	88158
1956-57 ...	72101	99708
1957-58 ...	81385	111460
1958-59 ...	88694	115012
1959-60 ...	96184	115163
1960-61 ...	104143	122346

(In No. of wagons).

The Central Railway moves substantial quantities of coal from the Central India coal fields which are situated on the neighbouring Railway system viz. the South Eastern Railway. This traffic is made over to this Railway for movement mainly at Katni, with a small proportion at Ajni (Nagpur). Coal moves into the Central Railway from the Bengal and Bihar coal fields also and we take over this traffic at Chheoki (Allahabad), Kanpur and Agra for onward movement across the Central Railway system to the consuming points in the areas served both by the Central and Western Railways. 50 per cent of the total number of loaded wagons received from the Northern Railway at these three junctions is coal traffic. The percentage of the number of wagons of coal received at Katni and Chheoki (Allahabad) in comparison with the total number of wagons

By
D. R. KHANNA
General Manager, Central Railway

received at these two interchange junctions is as high as 80 per cent. The following figures will bear impressive testimony to the steady increase in the quantum of coal traffic flowing into this Railway both from the Central India coal fields and the Bengal and Bihar group of collieries.

Year.	Average daily receipts (No. of wagons)	Chheoki	Katni. (Allahabad-Kanpur bad).
1955-56 ...	305	230	120
1956-57 ...	326	235	129
1957-58 ...	321	284	141
1958-59 ...	342	304	128
1959-60 ...	341	305	134
1960-61 ...	408	341	154
1961-62 ... (upto June)	428	340	178

It will be readily appreciated that this heavy increase in coal traffic is correspondingly reflected in the traffic density of the important traffic channels radiating from Katni, Chheoki and Kanpur.

As is well known, the entire movement of coal traffic from the Bengal and Bihar and the Central India coal fields to the highly

industrial areas in Western India and the substantial portion of the coal requirements of the Western Railway, has to take place across the Chheoki-Katni and the Bina-Bhopal sections of the Central Railway. This important stream of coal traffic from the East merges at Bina with the other heavy stream of traffic—in grains and pulses from the North to the South and adds to the pressure of movement on the Bina-Bhopal section, which till recently was a single line section and whose capacity for movement had been tapped to the saturation point. The coal emanating from the Pench valley has to move over the Amla-Itarsi, Itarsi-Bhopal and Itarsi-Bhusaval sections of the Central Railway.

As for the traffic from Belampalli and Yellandu and Kothagudem group of collieries, the pressure of this traffic is felt mostly on the Balharshah-Kazipet, Kazipet-Secunderabad and the Kazipet-Vijayawada sections of the Central Railway. The most important stream of coal traffic from the Singareni group of collieries is towards South India via Vijayawada.

Marshalling Yard at KATNI (C. Rly.).

There then is the general pattern of coal movement on the Central Railway. Faced with this progressive increase in the demand of coal movement, the question arises:—How did the Central Railway set about the task of moving this additional coal traffic? The various steps the Central Railway took to move this increased traffic in coal could be placed under two heads:—

- (1) steps for resolving the physical bottlenecks;
- (2) measures of improving operational efficiency.

So far as coal movement is concerned, by far the most important development in the Second Plan period was the completion of the project of the partial doubling of Bina-Bhopal section, which as already mentioned, carries the heavy streams of traffic from North to South as well as the coal traffic from East to West. A distance of 39.12 miles on this heavily worked single line section was doubled and 18 station yards were remodelled on this section; extensive remodelling of the marshalling yard at Bina was also undertaken at a cost of Rs 25 lakhs during this period. The entire project of doubling of Bina-Bhopal costs approximately Rs 3.47 crores. In order to carry the pressure of additional traffic both from the Chheoki end and the Katni end, a number of additional operational facilities had to be programmed over the Itarsi-Jabalpur, Jabalpur-Chheoki and the Bina-Katni sections of the Jabalpur Division. This programme included extension of loop lines, provision of additional crossing stations and additional loop lines. The loops on the Jabalpur-Katni and Satna-Chheoki sections limited the number of wagons per train. By increasing the loop lengths to 2250 ft., it was possible to derive a greater advantage from the operating capacity of the engines and thereby effect a substantial increase in the number of wagons taken over from the Northern Railway at Chheoki without a corresponding increase in the number of trains. On the Itarsi-Jabalpur section, additional crossing stations were opened in order to break the long block sections and thereby increase the capacity for movement.

In respect of the Bina-Katni section, on which the impact of the heavy coal traffic from the Central Indian coal fields across Katni is felt most, a number of measures had to be taken to increase the capacity. This is a heavily graded section with limitations on the load and five addi-

Coal Supplement 1961

tional crossing stations had to be provided for increased capacity.

This, however, was not a complete remedy. The pressure on the Katni marshalling yard, the gateway for the coal traffic from the Central India coal fields, was fast increasing and it was therefore decided to build a new yard at Katni at a cost of nearly Rs 90 lakhs. The new marshalling yard at Katni was declared open on 17th April 1961 by Dr. Kailashnath Katju, Chief Minister of Madhya Pradesh. The substantial increase in the traffic passing over the Chheoki-Katni and Jabalpur-Itarsi sections also created serious terminal troubles at Jabalpur. It was therefore decided to construct a new "through yard" near Madan Mahal—2 miles away from Jabalpur where block trains could be handled without having to touch the Jabalpur yard. This is calculated to give considerable relief to the Jabalpur yard.

Itarsi yard has assumed considerable importance. With the increasing tempo of traffic from the four channels—from the Pench valley coal fields, from the Jabalpur Division, from the Jhansi Division and the Bhusaval Division, the remodelling of the Itarsi yard became inescapably urgent. A new marshalling yard is being constructed at a cost of Rs 65.5 lakhs. Extensive remodelling of the Central Railway's No. 1 marshalling yard at Bhusaval has also been undertaken—as all these increasing movements over the various traffic channels have been added to the pressure on the Bhusaval yard.

The improvements to signal and interlocking arrangements on the important traffic routes have also been an important aspect of the work done by the Central Railway to increase the line capacity on those traffic channels. The Itarsi-Nagpur section which carries the bulk of the coal from the Pench valley the Wardha-Balharshah section which besides general merchandise carries the coal traffic of the Chanda valley and the Balharshah-Kazipet-Vijayawada sections which carry coal traffic from Belampalli and the Kothagudem group of collieries—all these important sections on the grand trunk route have been improved with the installation of the multiple upper quadrant signalling which helps fast movement.

In respect of the Balharshah-Kazipet-Vijayawada section, which has been bearing the brunt of the increased coal movement from the Singareni group of collieries, particularly towards the South, a number of line capacity works were undertaken during the Second Plan period—introduction of new block stations, additional loop lines etc.

The future is being duly taken care of for increasing the capacity

The Box Wagon which is now used extensively in the Indian Railways for haulage of Coal.

for movement, particularly in respect of coal. The partial doubling of Itarsi-Jabalpur, Itarsi-Bhusaval and Dornakal-Vijayawada sections is already in an active stage of execution. By virtue of its central geographical location, the Central Railway will feel much more than ever the full impact of the increase in coal traffic in the

Third Five Year Plan. The acceptance of loaded coal wagons from the Northern Railway at Chheoki (Allahabad) and from the South Eastern Railway at Katni, would be stepped up to 650 wagons and 800 wagons per day at the end of the Third Plan period. The coal production in the Pench valley collieries is also likely to increase from the present level of 2.50 million tons to 6.4 million tons and the Singareni Collieries are expected to step up their coal production from the present level of 3 million tons to 6 million tons. Apart from the doubling of tracks over certain important sections already mentioned, the Central Railway hope to raise the standard of interlocking at 83 stations, apart from other works to increase the line capacity. The electrification of the Igatpuri-Bhusaval sec-

tion, which is now a double line section under steam traction and which has been worked to saturation, is one of the major projects in the Third Five Year Plan of the Central Railway. This would help the Central Railway to haul long and heavier trains on this important traffic channel.

So much for measures to break the physical bottlenecks. Operation, too has had to be streamlined. Now a word about measures to improve operational efficiency particularly in the context of coal movement. On some important sections which are worked to saturation capacity, Crack Specials have been introduced and the working is particularly watched so that the utilisation of rolling stock is kept at optimum conditions. On the Bina-Katni section, which carries heavy coal traffic from the Central India coal fields to Western India, WG class engines have been introduced with a view to carrying heavier loads per train and the double heading of trains has also been resorted to in order to increase the throughput of wagons.

BOX WAGONS

In the context of intensive utilisation of movement capacity, the introduction of Box wagons for coal movement is one of the important developments in recent years.

COAL DUMPS

In order to help in the bulk movement of coal in block rakes and creation of buffer stocks at convenient points to ward off possible pockets of shortages, proposals are being developed in consultation with the State Governments, the trade and industry to establish coal dumps at convenient points. For many years now, this Railway has maintained a dump at Hotgi (a transshipment station from Broad Gauge to Metre Gauge with the Southern Railway) where the number of wagon loads dumped at a time has been as high as 140. The other dumps that are now proposed will be: In Bombay (Byculla and the Stores Depot on Bombay Port Trust), Bombay (Sion), Poona, Nagpur and Akola in the State of Maharashtra; in the Madhya Pradesh region at Satna or Jabalpur, Gwalior, Bhopal, Saugor and Khandwa; and in the Uttar Pradesh region, the coal dumps will be located, possibly, at Orai and Mathura.

SUNDAY LOADING

In order to ensure intensive utilisation of wagons, collieries have been persuaded, in the national interest, to resort to loading of wagons on Sundays also so that the loading could be evenly distributed on all the seven days of the week as against the present concentration on six days. This

would help in the elimination of idling of wagons on one day in a week as has been happening so far. It is heartening to see that the collieries in the Central Railway zone have responded well to this idea.

BETTER UTILISATION OF WAGONS

As readers are aware, coal is now allowed to be loaded upto 2 tons in excess of carrying capacity of the wagons. This step has been taken to ensure the maximum utilisation of wagons at a time of scarcity. The average starting load of a coal wagon has remained quite high on the Central Railway. It used to be 22.8 tonnes per wagon in 1957-58 and this figure has improved to 23.2 in 1960-61. Coal load per wagon obtained on the Central Railway is said to be the best in India.

COAL ALLOTMENT

As is well known, the day-to-day allotment of wagons for coal is now being managed by the Railways. For many years now, we have had a coal allotment unit functioning in Nagpur in respect of Pench and Chanda valley coal fields; and in January 1960 the allotment work in respect of the Singareni group of collieries was taken over by the Central Railway. The Coal Allotment Officer

(who is attached to the railway management) makes day-to-day allotment of wagons for loading to individual industries or parties within the frame-work of the total sanctions for coal issued by the Coal Controller in their favour and follows the order of priority laid down. The merit of this arrangement is that the Railways, with their intimate knowledge of the ever fluid operating conditions, are in the best position to allot wagons and secure the best utilisation of the available transport capacity.

The Railways have an intimate role to play in the context of coal movement in India, where the sources of coal are concentrated in compact areas and the consuming industries are located at distant points involving long hauls. The assistance that the Railway could render in the matter of moving coal is of the greatest possible significance to the national economy. In recent months, public attention has been considerably focussed on the Railway's capacity for coal movement. In framing its immediate and long term requirements, the Railways have taken into their calculations the requirements of coal which is so vital to industry and I am confident that the Railways would discharge their duty adequately and well in the matter of moving coal.

INDIGENOUS MANUFACTURE OF MINING MACHINERY

S. H. PLATT

THE indigenous manufacture of mining machinery probably started, seriously, when due to the initiative of Mr V. B. Turner the factory known as Meameco was founded in the early 1950's.

In the year 1950 the author joined a big commercial house in Calcutta with the intention of founding an indigenous manufacture of coal mining machinery as it was even then quite evident that the increased demand for coal which would result from India's industrial expansion would require large quantities of mining machinery.

Alas, the path of the pioneer is always somewhat stony and it cannot be said that the progress made in nearly 15 years of effort was fully satisfactory. It may be said at once that there is sufficient engineering skill in this country to manufacture practically all the equipment which is needed but there has been some very serious difficulties standing in the way and it may be helpful if these difficulties be considered in detail as ways and means to overcome them must and will be found.

Most of the so-called 'advanced' countries of the world have got factories producing mining machinery and most of them have been formed 50 to 75 years ago and have therefore 'grown up' with the industry. Thus, in a modern coal cutting machine, for example, there have been many years of development, and improvements have been made due to past failures. This development work is quite costly and a large part of the cost of any coal mining machine is due to the 'overhead' cost of the design and development programme. A perfect example of this is the Mecmo longwall cutter loader. Matthew Moore, the inventor, struggled for years to make his brain child a success but it was not until the well-known coal cutting machine firm of Anderson Boyes Ltd. took over the development work that the machine, now called the A. R. Mecmo, became really a success. This is an example of what we call 'know-how', a most essential ingredient for success, and yet one which is very costly indeed to acquire and with which the owner parts very reluctantly.

The Indian Government recognises this and for that reason grants royalty payments or lumpsum payments to manufacturers for the right to make their equipment in India with the principal's collaboration and technical help. Unfortunately most foreign manufacturers feel that a royalty payment of 5 per cent less Indian income tax making a nett 3 per cent approx. is not sufficient compensation. However, this is the first hurdle to get over because to design new and untried indigenous equipment would be too slow and risky a process. Indian mining industry is expanding very rapidly and a sense of urgency must prevail!

The next difficulty is the fear that indigenous products may be lacking in quality either of manufacture or raw material or both. To some extent the fear is well-founded and colliery owners cannot be blamed if they want to 'play safe' and buy imported machinery of well-proved

design made by first class manufacturers.

To some extent, the Development Wing can be helpful in this respect. It is very necessary that an experienced colliery engineer should be in the Development Wing. Perhaps some old retired engineer might be

available, who can advise on the difference between industrial and mining machinery. Normally a Government officer is not allowed discretion. He 'goes by the book.' Thus, for instance, if a firm makes conveyors to handle raw material in a so factory or gravity rollers conveyors to handle boxes in a large shoe factory, that firm may be registered as conveyor manufacturers. It might be that the conveyors are totally unsuitable for use in a coal mine but, under the present import licence policy, it may be very difficult to get a licence and import a purpose mining conveyor.

Many instances could be quoted from firms in India producing equipment which was totally unsuited for underground use and it would be very helpful if the Development Wing distinguishes between industrial and mining equipment.

Another difficulty is that so far it has not been possible to produce equipment in India at the same cost as it can be produced in Europe. This is due to several reasons. Indian labour, though paid considerably less per hour than his counterpart in Europe, does not produce the equivalent production and therefore, the direct labour cost is higher in India. When the European factories have a large production, and more efficient methods of manufacture are adopted, this labour cost differential is exaggerated. Thus the combination of an inferior article costing more than the equivalent imported article makes it very difficult to sell the indigenous product unless the imported product is not available.

Here lies a danger. Once the import of an article is stopped, the manufacturer of the indigenous article may enjoy nearly a monopoly. In fact, there are one or two items in India where the indigenous manufacturer enjoys a monopoly. What

MECHANISATION

IN

COAL MINING

By
I. ROBERTS

THE main elements in mechanisation in India's underground Coal Mines are the electric drill, the coal-cutter, the conveyor and the rope haulage. In many mines the capacity of the face equipment is not utilised because of inadequate transport from the face of the shaft bottom or incline mouth, as the case may be. In addition, output is also restricted because the age-old method of loading by baskets is still employed. It is safe to say that the output from most collieries is governed entirely by lack of transport and inefficient methods of loading—in many cases the coal has to be carried in baskets for a considerable distance. Productivity can, therefore, only be increased if—

- Transport of coal from the face is improved, and
- The task of loading is made easier and a serious effort made to discard the symbol of old fashioned mining—the cane basket.

The most practical and efficient way of effecting this improvement is to use chain conveyors for transporting the coal from the face. These can in turn deliver to a belt conveyor system or a well designed mine car haulage system. In addition to providing efficient face transport, chain conveyors also make loading easier as the coal is lifted only a matter of inches and this provides a higher O.M.S. than could be obtained where tubs are loaded by hand.

The chain conveyor can be laid right to the face thereby eliminating "lead" and "lift" and the difficulties associated therewith. It provides continuous and therefore efficient transport. Any other form of face transport cannot possibly be more than 50% efficient by comparison and creates intermittent loading with obvious consequences. These remarks apply of course to hand loading in bord and pillar mining—the predominant method of coal getting in this country.

Better results can be obtained by the adoption of mechanical

loading on to chain conveyors but it is first of all necessary to improve transport from the face before considering loading by machines. With machine loading, as with hand loading, face chain conveyors have many advantages over other forms of face or gathering transport because they provide continuous transport and thus eliminate peaks. Also they enable the loaders to operate without waiting for the tub or shuttle car to be replaced. There are instances where chain conveyors are the only practical form of face transport and where they have replaced unsuccessful attempts to use other forms of transport generally considered to be more "modern."

Chain conveyors are being

progressively manufactured in India and there is no doubt that this indigenous manufacture has been, and is, of considerable assistance to the Coal Industry in achieving the Production Targets set for it.

The percentage of coal transported by belt conveyors in gates in U.K. Mines increased from 73% in 1948 to 92% in 1956. During the same period the amount of coal handled by trunk conveyors increased from 7% to 25%. This indicates the importance attached to belt conveyors for underground transport and points to the need for the use of this form of transport to be extended in India's Mines. During the Second Plan,

the Public Sector commenced several incline mines with belt conveyors for main coal transport and there is no doubt that these trunk conveyor systems delivering to the surface have contributed to the success of these mines. They have provided capacity which could not have been available with track haulage.

Longwall Method of Working

Attempts at Longwall Mining have been made by several Colliery Companies and most of these have been successful. To achieve its Target of 97 millions tons per annum by 1966, the Coal Industry will need to develop this method of mining. The first essential for longwalling is good roof support and this is best achieved by the use of friction type steel supports with link bars also of steel. The friction type of mine support is economical and efficient and trials conducted with 40 Ton capacity supports of the Twin Clamp Ring design on a longwall face at an Indian Colliery have proved most successful. The hydraulic stowing of the goaf is well established in many Collieries.

Having established good roof support, the next stage consists of installing a heavy-duty flexible armoured type chain conveyor. These armoured conveyors are designed to carry a coal cutter or cutter-loader and can be "snaked" so that

as a slice of coal is removed the conveyor can be jacked forward to hug the Coalface. Even without a cutter-loaded the armoured conveyor operating on a "prop-free" front can be used to advantage—the conveyor is right at the face and does not need to be dismantled for advancing as with other types of face conveyors. Statistics published by the British National Coal Board for the year ending 31st December 1960 show that the production from 53 Armoured Flexible Conveyors working on a prop-free front without power loading was 3.77 million tons. This provides an average output from each of these armoured conveyor installations of approx. 6,000 Tons per month from seams much thinner than those of this country.

A face O.M.S. of 25 Tons has been achieved on a longwall face in Britain using Twin Clamp Ring friction props and steel bars to provide a prop-free front, a "Python" armoured conveyor and a pneumatic pick for each coal-getter. This is proof that good results can be achieved where the task of loading is reduced to a minimum and continuous transport by conveyor is used to remove the coal from the face—even with hand-getting. In this case, most of the coal fell on to the conveyor

as it was ripped off the face with the pneumatic pick leaving only the bottom 12" of coal to be loaded by hand. It is noteworthy that cutting, drilling and blasting were not used to achieve this O.M.S. figure.

The percentage of Indian Coal output obtained by longwall mining is very small but there is no doubt that longwalling is successful and that the time has arrived when this system is necessary to increase the Nation's Coal Output. The requisite face equipment already tried and proved is available from Britain where 93% of the Coal output is obtained from longwall working. One might argue that physical conditions in Britain are most suitable for longwall working than those in India but it must be remembered that there was considerable objection to longwalling when it was first started in British Mines. The main obstacle was one of tradition and is not this the reason why longwall mining is used to such a small extent in this country?

In the past, mine operators have been content with the bord and pillar system and if one is prepared to forget the loss in coal reserves due to poor extraction and consequent roof falls and

fires, the system could (with much imagination) be called economical because it saved the cost of stowing. For the purpose of conservation stowing has been made compulsory and this has improved safety and efficiency. For the development of new mines or seams or even new districts there is no advantage to be gained by adhering to bord and pillar working where stowing cannot in any case be avoided. Briefly—if stowing is necessary then why not adopt the longwall method which makes supervision, ventilation, transport and roof control easier?

In the matters of safety and health the most interesting and profitable of recent developments are water infusion and pulsed firing. Infusion has proved most effective in allaying dust at source and the benefits of this to both safety and health are obvious. In addition, water infusion has brought about a considerable saving in explosives cost—a saving of 50% on longwall faces being quite common. With pulsed-firing, the exploding of charges under water pressure marks a tremendous advance over the old method of solid stemming with the accompanied risk of ignition via an undetected break along the length of the shothole. Certain Coal Mines in the Raniganj Coal-

fields are operating units for infusion and pulsed-firing with encouraging results. There is much scope for infusion not only in the interests of safety and health but also for economy reasons. Its application is of course simpler and more effective with longwall working than with the bord and pillar system.

To achieve its Target of 97 million tons the Industry must revolutionise its transport systems right from the face to the railway siding. It must also adopt face methods which will make the cane basket obsolete. The most practical of these is to use Armoured Flexible Conveyors on logwall faces. Where this is not possible and bord and pillar working has to be adopted, the use of the room type of chain conveyor will achieve the purpose. In both methods of working productivity can be improved by installing face chain conveyors and only when this has been done can mechanical loading be introduced. With these improved methods further safety measures need to be taken the chief of which is dust suppression by infusion of water under pressure into the seam. The infusion equipment can also be utilised for pulsed-firing—an essential measure for reducing the hazard of short-firing.

Digging Earth for Coal

Coal is taken out from the belly of the earth, generally by one of the following two methods:

- (a) Underground mining
- (b) Open-pit mining.

As open-pit mining has been given more and more attention lately in India and abroad, this article deals briefly with various types of machines used for the purpose and their relative economics.

Open-pit mining can be considered as an earthmoving operation in mass scale. However, in open-pit coal mining the purpose of moving earth is to uncover and reclaim coal. Excavating and moving earth is only a necessary evil. As the quantity of earth to be moved from the top of the coal is a factor on which open-pit miners have no control, the only other factor governing the economics would be distance of haul. The more you can cut the distance of hauling overburden, the cheaper you can recover the coal. The same factor will also govern the economical coal and overburden ratio to which open-pit mining methods can be applied.

Filling back the pit from which the coal has been recovered is essential by Law in some countries. Some countries like England seriously object to open-pit mining simply because it ruins the landscape. The operators of open-pit mining are required to fill back all holes in the ground made by them more or less level the area and plant vegetation on it. This may not be required in India as most of the sites which lend to open-pit mining system are either hills and jungles, or unproductive land.

Tournapull Scraper in action, at Sindri fertilizers

By
R. SINGH

The process of moving earth (overburden) in open-pit mining generally involves the following operations:—

- (a) to excavate
- (b) to elevate
- (c) to haul
- (d) to dump and spread.

There is a variety of machines or combination of machines which can be used for the purpose but with varying degrees of economy. Type of material in overburden and thickness of overburden will largely decide the type of machines to be used.

Knowing that 4 major operations are involved for moving every yard of overburden, it is logical to believe that if a single piece of machinery could be applied, it will move overburden at lowest net cost per yard. This is regardless of the type of material involved. Briefly discussed hereunder is the commonly used equipment for removing overburden. Each one or combination has its own field of application and could be found most economical under those conditions.

Scrapers

(a) Tractor-drawn type:

There is hardly any justification for using this combination in open-

pit mining—whether it is Crawler-tractor drawn or Rubber-tyred tractor drawn Scrapers. The Crawler-tractor Scraper would be much too slow for any mass movement of material. Travelling longer distances in high gear ruins the track system which is one of the most expensive items to replace. The Rubber-tyred tractor (all-wheel drive) Scraper combi-

Rubber Tyre Tractor in Action in one of the NCDC Mines

nation would do a better job at lower cost; the availability of self-propelled Scraper in a variety of sizes makes that combination also look out of date. Perhaps some very small operation may lend itself to Tractor-Scraper combination; but, such cases will be few and far between.

(b) Self-propelled Scraper:

If the material is suitable for Scraper application and overburden must be hauled and dumped beyond 200 to 300 feet, the self-propelled Scraper can move earth at a very low cost as compared to any other combination of machine discussed in this article. This statement is based on the reason given earlier, i.e. single machine performing all four operations involved. Although self-propelled Scraper needs the assistance of a pusher-tractor for a very brief period, in the cycle of operation, it does not add very much to the cost per yard of material moved.

In the self-propelled Scraper class, there are again two types available in the market:—

- (a) Four-wheeled Scraper, and
- (b) Six-wheeled Scraper.

In open-pit mining operation, the distance of haul would be the major single factor which would govern the selection of a particular type out of the two mentioned above. The four-wheeler (Tournapull type) covers a much wider field and is a very economical machine to own and operate. If, however, the haul distance extends beyond one to one-and-a-half miles, the six-wheeler will appear on the scene.

Both types of self-propelled Scrapers are available in capacity

ranges from 7 to 40 cubic yards. This capacity per machine can be doubled or trebled by attaching Scraper units in tandem behind the same power unit (Tournapull). Tandem hooking is very easy and economical if the Scrapers are electric-controlled, as it merely means stretching a piece of electric wire across for power transmission. The outstanding advantages of increasing Scraper capacity by tandem hooking is that no increase in the size of pusher-tractor becomes necessary. A tractor which will successfully push-load any size of single Scraper will do for two or three of them in tandem.

Shovel and Dumpers

The authorities claim that this is the most expensive method of moving overburden. Here again, the basic reasoning applies to the statement. It will be appreciated that using a combination of 2 or 3

lower
your
coal
handling
costs

This trunk conveyor carrying R.O.M. coal is typical of the way in which Dunlop conveyor belting is bringing to the coal mining industry the advantage of continuous operation, large capacity and flexibility... helping, thereby, to reduce the per-ton handling cost. The annual demand for coal will reach 97 million tons by 1965-66. Production will be increasingly mechanised and Dunlop conveyor belting will play a vital part in transporting coal both under and above ground. There is a comprehensive after-sales service, and Mobile Splicing Teams undertake the splicing of endless belts on site.

Page Walking Dragline in action, at KURASIA MINES of NCDC

type of machines to move a yard of overburden is bound to add up to the cost. However, materials like rock, sandstone and shale will necessitate the use of Excavators. As there is a definite limit to the distance material can be moved by the Excavator alone—no matter how big the size—hauling units, Dumpers, come into the picture. In addition to that, Bulldozers are required to push the overburden over the edge of the dumping site and keep the place reasonably dressed for the dumpers to move on. Graders and water-sprinkling trucks will be required to keep the haul road in a shape to allow the dumpers to travel at some economical speed. In the U.S.A. Shovels of 60 to 75 cubic yard capacity are being used for stripping overburden. But, even these monsters can move the material to a maximum distance of 150 feet approximately from the digging point. To use a large Shovel for stripping overburden, the coal seam must be more or less flat so that Shovel can sit level for satisfactory operation. Most coal seams in India now being worked are found dipping at very steep angle, and if this be the case with future discoveries also, application of large stripping Shovel on Indian open-pit mining will be rather difficult. A Shovel sitting 100 feet or more below the ground level in the pit is subject to unforeseen mine disasters. A sudden fire to the coal or sliding of overburden can result in a dead loss of equipment worth crores of rupees. This single factor has to be carefully considered before deciding on the use of large stripping Shovel.

Dragline

Whether big or small, if a Dragline could be applied to any earth-moving job, it is the most economical tool for the purpose built so far. There are many

simple reasons to believe in its economy, such as:

1. Single machine will excavate, elevate, haul and dump the material.
2. Dragline sits on the ground level and digs down below. It is, therefore, comparatively less vulnerable to mining disasters.
3. Whether the coal seam is flat or inclining, the Dragline can be applied to the job of stripping overburden.
4. Dragline can also be used for reclaiming coal from the pit and loading into suitable hauling units on the surface.
5. No haul roads are to be constructed and maintained simply because they are not required.
6. Minimum amount of labour required.
7. All machinery works inside a cabin, away from dust and rain. Less wear and tear, less maintenance, longer life.

Subject to the fact that material and job conditions will permit the use of Dragline, it can be purchased at a much lower initial cost than a Shovel of comparable capacity and reach. A suitable size and type of Dragline bucket will excavate any material which other type of machines will handle. Although job conditions largely govern the size of bucket and boom, it is generally accepted that the shorter the boom within reason, the better would be results all round.

It would appear from the foregoing that digging earth for Coal is a Science in itself, and proper application of equipment will spell the difference between profit and loss. It can, however, be said that

Coal and Washeries

By J. VAIDYANATHAN,
M.Sc. Tech. AMIAM INSF.

THE need for washing inferior coal so as to reduce their ash content and make it more suitable for coking and metallurgical purposes is going to be greater in the Third Plan period. This is so because of the absolutely larger quantity of coal to be produced in the years ahead and of the expected higher proportion of inferior coal. The Government and consumers therefore anticipate the establishment of additional washery capacity to extent of 13 million tons in terms of raw coal in the Third Plan period. There was already a shortage of about 6 million tons in creation of washery capacity envisaged in the Second Plan which laid down a target of about 12 million tons. Therefore the additional capacity that will have to be actually established during the Third Plan period will come to about 19 million tons.

With the exhaustion of good quality of coal and with the increased industrial and domestic demand for clean coal, the washing of coal by mechanical means has to be adopted. A cautious approach is necessary not only in the utilisation of coking coal, but also in the utilisation of non-coking coal.

Ash content in the coal reduces coal's calorific value, but this itself would not reduce the thermal efficiency of the boiler had it not been for the fact that in removing this ash from the furnace sensible heat and a certain percentage of un-burnt carbon are lost. Further, the ash particularly if formed clinker, may lead to irregular fuel-bed and inefficient combustion. In addition, there is the loss in economic terms involved in the extra freight and handling charges and in the cost of disposal of ash. For example, a Boiler of 100,000 lbs/hour evaporation capacity will consume in one hour nearly 5½ tons of coal and produce about a ton of ash, if the coal has an ash content of about 20 per cent. Apart from the possible effect of the ash on the combustion process, handling and disposal of such a large quantity of ash is a big problem. Moreover, under the present price structure of coke, not only freight is to be paid for this additional coal as well as dust necessarily taken, but also the fixed cesses and other charges have to be taken into account on the quantity nominally consumed.

80 per cent or more of India's coal is used as fuel for fire combustion for generation of heat and power for one purpose or the other. It is possible to have a minimum percentage of ash for most types of combustion appliances and it has been found that there is a decrease in the efficiency of the boiler with increase in ash beyond 15 per cent and this loss in efficiency becomes disproportionately high as the ash in the coal increases over 20 per cent. In the case of railway locomotive which consume about 40 per cent of India's output,

ash penalty can be taken as 2 to 2.5 times actual ash for every one per cent increase and in most of the other plants this penalty is not less than 1½ times. In the metallurgical industry the penalty for ash above 15 per cent is even higher and there is a high premium for consistency in quality supplied to this class of consumers. Unfortunately the total reserves of coal are localised in occurrence and large quantities of coal are therefore required to be transported over long distance to a large section of consumers and the cost of coal delivered has less relation to the pit-head price of coal than to the transport cost. It is an admitted fact that Indian coal is difficult to wash but much of it can without doubt be up-graded by cleaning in different types of plant at some cost towards capital equipment, power and technical skill. The product thus improved can be transported at less cost and in less wagons. Considering the overall situation, it would be wiser for the nation to invest capital and skill in adopting modern technical methods of coal preparation on the basis of the present production of coal as mined, rather than providing the extra transport necessary to carry inferior coal and to invest in costly equipment to utilise inferior quality of coal produced and transport them at high cost.

Based on the data available it is estimated that the average ash in the coal produced in India has increased by about six to eight percentages in the last two/three decades. Coal production has reached by the end of the Second Plan an annual rate of 52 million tons. On the basis of one and a half penalty for each one percentage increase in the ash, the average increase in ash is equivalent to 9-12 per cent extra consumption of coal by the industry; i.e., industries are consuming about five to six million tons more than they would if the average ash content remained constant. The rejects and dirt of coal by washing will be of the same order if the average reduction of 5 per cent in ash. In addition to the extra cost for the increased coal consumption, some five to six million tons of extra coal are to be transported over long distance; locking up over 12,000 wagons valued at about fifteen crores of rupees, not to mention the extra loco-power required. The transport cost of this unnecessary load is also to be paid for by the consumer

in addition to the pit-head price of coal. The inferior coal can be washed at least at the same capital cost, as capital expenditure for new wagons. The clear savings effected in obviating the need for new wagons alone will justify cleaning of major part of production of Indian coal. On the consumers' side there will be an average saving of atleast four to five rupees a ton of coal consumed considering the average cost of coal delivered from the pit-head.

As against cost reduction to the consumers, the cost increase owing to the up-grading (consequent on a reduction of about five percentage in the average ash content of coal) is likely to be about three to four rupees a ton more for coal with the ash content ranging from 15 to 20 per cent. The majority of the consumers will gain by this increase in price of the washed coal with reduced ash content. This gain will be in addition to the gain that is likely to accrue due to consistency in the supply of guaranteed quality and size, plant performance and maintenance and lower investment because of generation unit of heat or power. The gain will be even more if consumers are located at long distances from the pit-head.

It is to be emphasised that the prepared coal will not only be consistent in quality and in ash, but also consistent in size. To many consumers size is as important as ash. We therefore feel that there is a good case for making an attempt to lower the average ash content of coal even if this means an increase in price for higher grades of washed coal. We feel that the country will ultimately gain by such a step by better utilisation of capital investment and reduction in recurring cost. Of course, this problem is to be tackled by the installation of multi-plant and improved performance washeries of large tonnages near the existing railway marshalling yards operating under a central marketing agency having a monopoly over the sale of all coal produced in India. Practically all the coal produced in India, pass through 8/10 major railway marshalling yards where an equal number of coal washeries of efficient tonnages can be located to treat major part of coal produced in the country. Nearly all the cases the feeding collieries will not be at a distance greater than 10 miles from the central washeries and there will not be any need for providing new transport facilities if the

coal even now has to pass through this base loading stations. But in many cases the disposal of middlings to existing large thermal power stations is not economically feasible but in the few cases additional facilities for such disposal will have to be followed in conjunction with electrification scheme or with the installation of low temperature carbonisation. The rejects in the washeries can be returned to the collieries for stoving. With such central washeries, the transport situation will be fully improved in addition to the savings; for transport turn-round of wagons will also be improved by loading in rake loads and the employment of uneconomical wagons as shuttles between washeries and the railheads.

Blast Furnace operations have to be carried out under difficult conditions due to extremely high and varying ash content of the coke consequent on the poor quality and erratic supplies of metallurgical coke. This affect not only the quantity and also the quality of iron produced, this latter position in turn imposes difficult production conditions on the steel melting shops.

Good coking coal suitable for the production of metallurgical coke is distributed over different regions and it has to be transported to different coke plants. The whole country today is running short of better quality coal. The working of the steel plants, and Railways and of many important industries has been seriously affected.

Based on the target for steel, Thermal power and Railways, the major consumers of coal, it is estimated that about 97 million tons of coal will be the demand during the Third Five-Year plan. It is most important that adequate supplies of coking coal for steel industry and non-coking coal for railways and other industries are ensured.

Production of inferior grades of coal can be stepped up comparatively cheaply and quickly from open cast quarries, but the transport is likely to be a timing factor. As the competition in the fuel market increases and the demand of coal shifts from one consumer to the other there are many fresh economic and technical problems which are to be solved by Coal Preparation Engineer. When there is scarcity of coal everything has to be used whether middlings or wet fines. Today the economy of mixing crushed middlings with untreated smalls or the mixing of wet fines with washed smalls have to be examined.

In the coal washing practice, every effort is made to obtain maximum yield of clean coal. The introduction of wet cleaning and the increase in fines are leading to an increased moisture in coal supplies. This additional moisture is causing concern particularly with regard to coal for carbonisation, because it makes them

more difficult to handle and the resulting lower bulk density decreases throughout.

Although the methods used in coal preparation have been modernised the object is still to deal with R.O.M. and prepare coal of the right type ash content, moisture content and size to suit the consumers requirements. The changes which have occurred in the size analysis of raw coals and the increased quantities of shale have combined with the present extensive use of water underground (to meet statutory requirements on the content of the air borne dust) to make the problem more difficult and some of the older methods less efficient.

On a modern plant there are no major difficulties for obtaining clean coal, middlings and shale and the middlings can be crushed or re-treated or disposed of as a separate product. As a consequence, there is no real problem in obtaining the desired ash content in the saleable product so that the chief difficulty with modern method is to control moisture content of clean coal.

It is known that the moisture content of a washed coal mixture depends on the size, grading of the material and the methods of removal. With graded coals, most of the moisture can be removed by drainage either on screens or in bunkers and a reasonably low free moisture content produced. For smalls not containing too much fines, centrifuge methods are reasonably successful. The main difficulties lie in the removing of moisture from the very fine portion ($-\frac{1}{2}$ mm) which contains about 30 per cent of moisture after being filtered in vacuum filters.

In order to meet the increasing demand of superior grade coal for steel industry and railways there is need for conserving such coals and also for finding alternative ways of meeting the requirements. Upgrading of lower rank coal by washing them to reduce the ash content is one of the methods successfully employed for the purpose and a large number of washeries are being set up in this country. Since the establishment of a washery involves considerable expenditure the following main factors will have to be taken into consideration while designing washeries:—

- (1) Mining method, mode of transport and handling of both at collieries and inside the washery and the effect on the size of coal fed to the washeries.
- (2) Requirements of consumers with regard to size, quality and moisture of washed products.
- (3) Washability of the coal to be treated.
- (4) Efficiency of washing units.
- (5) Capital and recurring expenses.

Throughout the world a growing interest is being taken in the preparation of slack size of coal since owing to the mechanisation of mines, the percentage of slack is increasing.

The use of dense medium process for the preparation of coal above 1" is broadly known. Many processes have been developed and a great

number of them are in operation in many countries.

(The use of dust medium process for the preparation of slack size coal is used only occasionally and the preparation is a little more difficult.

Cleaning of coal and mechanised mining will lead to deterioration in size of coal and therefore utilisation must aim either at the direct use of such fine coal or up-grading it by briquetting and/or carbonisation for production of lump fuels to be used more conveniently. With the increase in demand of coal in other section, shortage in resources of high quality coals will obviously result and it will be progressively difficult to supply the fuels necessary for rail transport for, conventional steam locos. It will pay the nation to plan well ahead for more effective utilisation of fuel in the transport section. This can be done by the production of liquid fuels from coal. Electrification of railways based on the generation of power from by-products of coal preparation is another approach. Thus an integrated approach is necessary even for maintaining energy supply for the vital transport section.

The cleaning of the Indian Coals in general is not a simple deshalting process. Owing to the comparatively difficult washing characteristic of Indian coals their economic cleaning cannot be often achieved in a single unit or plant. Due also to the varying output of coal even from the same coalfield and in view of the small production from individual mines, the problem of cleaning Indian Coals is rather different than in the U.K. or U.S.A. Therefore, production of 30 to 40% of middlings and rejects are unavoidable in washing these types of coal. Due to the fact that the requirements of washed coal for the steel industry will increase greatly during the third five year plan, it is imperative that planning of power stations and washeries should be taken up as a single integrated scheme.

The first step in the economy of transport is of course washing of the raw coal in site which leads to substantial rejection of high ash fuels as middlings and refuse.

Coal preparation is now recognised as a combination of science, art and engineering recognised in its own right as a vital link between the production and the marketing of coal. It is no longer some obscure and piece of work intended merely to remove dirt from coal to a degree that will avoid complaints from consumer. A modern installation is a carefully designed assembly of machines for handling, screening, cleaning, de-watering and blending of coal and for water clarification.

The function of the modern plant is to produce the maximum yield of clean coal of suitable quality for the consumer and at the most economic cost. The modern plant can very well run into a capital cost of anything upto two crores dependent, of course, on size. It necessarily follows that operating costs and the revenue value of the end products must receive careful consideration in the design and relation of a new installation.

THE DRAMATIC MOMENT

30 breath-taking minutes,—20 holes loaded with LOXITE cartridges, detonated—and the instant explosion shatters to pieces up to 6000 cu. yards of an opencast mine.

Liquid Oxygen Explosive has for years been enacting this dramatic moment in all major opencast mines, quarries, dams and tunnels of India and LOXITE is now invariably associated with speedy, economic opencast mining operations. Prepared on site as and when required with no storage trouble and minimum risk from misfire, LOXITE is to-day's answer to blasting problems.

Belt Conveyor—Evolution, Application and Maintenance

By
P. K. SEN

Handling of material plays a very important role in industrial industry. There have been some developments in methods of material handling machines of material handling in years that have passed since. The improvements in the construction of conveyor belts have lately been the most important. This is proved by the extended application of this type of conveyors far beyond what was formerly thought to be hardly possible. In plants producing cement, paper, chemicals etc. will function if there are no conveyors. In any industry bulk material is entirely dependent on the conveying system and there to be gradual improvements in methods of handling the material involved, when that industry is for any expansion.

Conveying by endless belts goes many years. It was in 1868 when Lyster, an English engineer, developed the idea of conveying bulk materials by endless belts made from two plies of canvas with a facing of rubber and had described his work to the Society of British Engineers. In Lyster seems to have invented many of the features of the belt conveyors of today. In America, Lyster carried on extended experiments with belt conveyors for handling grains in 1890's. Years later, Thomas Robins, apparently independently of Lyster, followed similar lines of investigation. Besides the structural part, Robins did considerable pioneering in the first belts developed by him, had two or more plies with rubber covers. Then he had increased the thickness of rubber on the underside and increased it on the carrying side to secure longer life. Gradually came the conveyor of today through varied amorphosis.

For conveying practically all granular, lumpy and pulverised materials—belt conveyors may be used, provided the capacity is large enough to warrant the investment. There are of course obvious limitations that the gradient of the conveyor should not be so steep that the material will slip. For example, belt conveyors will carry coal and ore upto a maximum inclination of 18° to 20° without the material rolling on the belt. For transporting material down a slope steeper than 6%, some form of bracing device is needed to prevent the conveyor from running away. Belt conveyors have a large capacity and can move mountains of material. Hot material must not be high speed, material can be handled by any other ways; namely, serial ways, flight and apron conveyors, screw conveyors pneumatic and hydraulic conveyors, chain conveyors. The superior-

ity of belt conveyors over all these other systems is an accepted fact today. However, at the same time it is more vulnerable to neglect and misuse than almost all the other conveyors, and therefore demands the best maintenance possible.

The belt of a conveyor is the nucleus of an expensive installation. Naturally, very much is expected of it. If a belt is worth Rs 10,000 and can be made to last ten years instead of two, the savings vindicate considerable

maintenance expenses. On many installations it has been found that such a saving is practicable at a very little extra cost in equipment alterations and maintenance time. Damage and injuries are of far greater importance to determine how long a belt is going to last, than the number of tons carried. Some injuries and damages are serious enough to bring an abrupt termination of the belt's career even though it is a fresh installation. We can understand better how to care for a

rubber belt if we bear in mind the following characteristics of the two component parts—cotton fabric and rubber. All the structural strength is supplied by the fabric. The function of the fabric is to do all the work in supporting the load and transmitting the power. The rubber supplies no structural strength. The cotton however is almost worthless to resist abrasive wear, cutting blows and atmospheric attack. The rubber with which the cotton is covered and impregnated is many times more resistant to all these damaging conditions. The two in combination—one supplying strength, the other protection—have made possible the modern belt conveyor with all its savings to industry in the economic handling of materials. Rubber can stand up in-

(Continued on page 34)

Heavy Oil or Anthracene Oil	"	7,849	5,614	207,607

INDIGENOUS MANUFACTURE OF MINING MACHINERY

(Continued from page 23)

indigenous machines makers may need some kind of protection to establish themselves, it is also very necessary, in the consumers' interest, that healthy competition be established. This poses a tricky problem as to where to draw the line in the Government policy of 'not licensing too much capacity'. The author's opinion (and he certainly has "an axe to grind") is that it is better to license a little bit excess capacity than insufficient. A seller's market encourages inefficiency and if there is a little excess capacity then, by the action of normal economic laws, the inefficient units will soon 'fold up' and go out of business.

For some years the very fine factory known as Garden Reach Workshops have been turning out considerable quantities of tugger haulages and have practically been able to meet the country's requirement of the specialised piece of equipment. They have also met a good deal of the requirements of pans and chains

for chain conveyors. The recent acquisition of this fine factory by the Government of India opens up possibilities of expanding their activities in mining machinery.

Although good progress is being made with the Government Mining Machinery project at Durgapur, it would appear that it will be a few years yet before any substantial quantity of machinery is available from the factory.

Therefore, the author would like to take the opportunity to make a plea to the "Powers that be" to take a liberal attitude towards any foreign manufacturer who will collaborate with an indigenous workshop. A half loaf is indeed better than no bread!

Whenever an application is made for a substantial quantity of equipment, the foreign maker might be asked "cannot some part of the equipment be made in India?" In

this way very substantial savings in foreign exchange could be effected without in any way affecting the quality of the finished product.

Many foreign manufacturers are interested in collaborating with Indian factories and only need a little official encouragement. It is most discouraging when masses of red-tape causes months of delay in a project during which time the interest of the foreign collaborator may have waned.

The author knows of several instances when foreign firms have spent a great deal of time and money investigating possibilities of setting up factories in India and finally given up the proposal because of delays and difficulties.

The need to increase the production of coal in India is paramount. The need to save foreign exchange and establish an indigenous manufacture of mining machinery is also urgent.

Care must be taken that the first objective is not hindered in helping the latter. On the other hand, the indigenous industry, like any other tender plant, needs to be carefully nurtured. To repeat the theme of the argument: mining machinery is essentially different even though basically similar to industrial equipment of the same type. With the setting up of the Central Mining Research Institute at Dhanbad and perhaps with the help of the Indian Standards Institute it should be possible to get the Development Wing to differentiate between one type of equipment and the other and thus encourage 'new manufacturers of mining machinery without in any way acting to the detriment of established manufacturers of similar industrial machines.

Statutory Price of Coal from 1944 to 1961

WEST BENGAL AND BIHAR
Price per Ton of 2240 Pounds.

PUBLIC SECTOR IN THE COAL INDUSTRY

(Continued from page 15)

impetus to mechanisation and such mechanisation will be marked in the realm of transport. It has been learnt that to handle the transport problem in mining, the NCDC has plans for introducing ropeways and hydraulic pipelines to haul coal over distances of less than 25 miles.

Mention must be made of the assistance already rendered by the Soviet Government in connection with the preparation of the project reports for the schemes forming part of the Korba project. These are the development of a quarry to produce 1 million tons per annum from the Jatraj seam, underground workings to produce 1½ million tons per annum from the Ghordewa coal seam, setting up of a central workshop and setting up of a coal washing and dressing plant. Action on the report prepared and submitted by the Techno-export of the Soviet Union seems to be delayed in view of the alterations being sought by the NCDC to certain aspects of the reports.

Significant among the Third Plan schemes of the Corporation are its schemes for development of coal washeries at Karanpur, Kathara, Ramgarh and Korba. Already it has set up one at Kargali in order to supply high

grade coking coal to the Bhilai and Rourkela steel plants. Built at a cost of Rs 2.48 crores, the washery has been steadily increasing its output of washed coal which during 1960 amounted to 852,427 tons against the targeted optimum of 1.6 million tons. Equally important is the Corporation's plan for the establishment of a central workshop in Madhya

Pradesh for the repair of stores with the help of the Soviet Union. The central workshop at Barkakhana has been progressing satisfactorily, and five out of the twelve sheds are known to have been completed. The central workshop when completed will not only handle major repairs and overhauls but will manufacture spare parts of the order of Rs 35 lakhs a year apart from fabricating steel and structural of an annual value of Rs 23 lakhs.

AMALGAMATION OF SMALL COLLIERIES

(Continued from page 13)

on their business for decades past do not favour the idea of merger. Even in some cases when they came forward, it was found that actual implementation of amalgamation was difficult in as much as Royalty Receivers, sometimes many in number, did not approve of the amalgamation. The Railways also do not easily accept the amalgamated unit as one for the purpose of loading before the completion of the legal documents. If separate Trade Unions are working in the two units proposed to be amalgamated, they object to the amalgamation even if the two units are under the same organisation. The adjustment of assets and liabilities of the two units also presents accounting difficulties, for both of them have worked the units in different ways.

From the mining point of view, amalgamation is easy so far as the virgin seams in two units are concerned but difficulties are manifold in respect of existing workings.

Unless these difficulties are removed, it will be very difficult to make the scheme of amalgamation a success. Most probably, due to these reasons, the Government did not intend to compel the units to amalgamate.

The Collieries Voluntary Amalgamation Committee approves simply the proposals of amalgamation and a case is yet to be known when it has helped the collieries to remove these difficulties. If Government is really anxious to make the scheme a success, this Committee should be asked to work more vigorously.

BELT CONVEYOR

(Continued from page 31)

definitely against the abrasive wear and even impact of sharp materials so long as the force involved does not distort the rubber beyond the elastic limit. The impact force is simply the weight of the material in pounds multiplied by the distance it falls in inches. For instance, a 40-pound stone falling 6 feet or 72 inches delivers 40 pounds times 72 inches or 2880 inch-pounds. Over a steel idler it takes only about 350 inch pounds to cut a grade 'A' quality conveyor cover. Thus it can be readily seen that under such conditions more damage can be done in a few days than in years of normal operation.

Some of the main advantages of conveyors are:

1. Continuous, uninterrupted supply
2. Reliability
3. High Capacity
4. Ease of control
5. Safety
6. Quiet operation
7. All-weather operation
8. Lower power needs
9. Minimum labour
10. Lowest maintenance
11. Adaptation to tension
