The Pattern of Ownership

IT is learnt that the New York Stock Exchange has written to the Indian Stock Exchanges asking for information about the distribution of shares among the community of investors, to find out whether concentration obtains in any group or whether diffusion has proceeded as expected after the acceptance of economic equality as an ideal to be pursued consciously. No definite answer can yet be given to this very relevant query, as the pattern of ownership of share capital in joint stock companies has been investigated only tentatively. It is known that the middle class has emerged into view of late, and the beginnings of financial democracy have been encouraged by legal protection. Yet full data about the occupation or income of owners of shares are not available.

Many company reports furnish data about the big blocks of paid up capital and the small scattered holdings. It is known that Tisco has thousands of shareholders. So have Associated Cement and Scindia Steam Navigation. The distribution of Indian Copper shares on a very large scale among a large body of Indian investors preceded the advent of independence and the transfer of control to India. The gradual erosion of the managing agency system is reflected already in the passing of large blocks into many hands. Voting control does not rest with the managing agent. While this may help a change of control in the case of a company whose assets and income invite either jealousy or cupidity, the existence of many small shareholders who can use their proxies to good purpose, when required, is a brake on the vaulting ambitions of industrial magnates bent on diversification.

The rise to power of the institutional investor, notably the LIC, deserves notice. The LIC, habitually inclined to be neutral, is yet in a position to influence votes at company meetings, avert sudden and drastic changes in the Board and promote continuity of policy in regard to dividends. The last is the most important consideration for small investors whose plea at meetings for generosity is seldom regarded with sympathy. But the conservation of resources required for development of a business is a major aim of corporate enterprise and the attitude of managements is not always unreasonable.

The State-controlled companies in which State Governments hold a big part of the issued capital do not err on the side of liberality and it is significant that shares of companies in which Government is the predominant shareholder are not popular with the average investor today. The general view prevailing today is that when State aid was taken and Government nominees came on the board, the individual shareholder ceased to count for much. This view probably explains the limited interest taken in FACT shares even after the welcome evidence of progress in production was furnished. The prospects for fertiliser manufacture do not impress the optimists who turn away to other chemical shares, for instance, Alkali and Chemical because of the progress in management and

the important connections that support hopes of improved distribution on enlarged capital in the future.

The formal analysis of holdings can be made not only from the incometax figures but from the company registers. The Company Law Administration can usefully undertake the duty of discovering if the expansion of joint stock enterprise in recent years has resulted in the wider distribution of shares among classes other than the well-to-do capitalists whose investment income is only a means to secure accretions to capital.

The shareholders' associations existing in some cities may retain and furnish some data. But the stock exchanges can do more to secure much essential information about the Indian rentier. Nobody now subscribes to the view that the investor is functionless. He is the main source of risk capital and the success of new issues, coming in quick succession, depends on his willingness to take a view. The requirements about giving particulars regarding birth, occupation, and residence may help companies to find out if actual ownership is increasing. The companies can also indicate the ratio of women to male shareholders. The stock exchanges can, if they think it expedient, withhold names but they can ascertain easily whether family control is supreme or whether trained executives are on top, so as to energise managements. Companies too can give data about the number of small shareholders, their attitude towards management generally and the degree of vigilance shown in attending annual meetings or sending votes by proxy when called upon to do so.

The fact that the big investor is inclined to speculate and is not willing to tie up his capital for too long a period in companies that are not under his direct control may be a circumstance favourable to the small shareholder who looks to dividends and tax refunds to supplement a modest income. The preponderance of the small middle class investor today is an accepted fact because of the social and economic changes propelled by the events of 1947.

The princes and big landlords have been displaced by the entrepreneur who creates a fortune from commercial or industrial success or even success in speculation in the stock or commodity markets. The strategic control of financial institutions may be an element in the assumption of authority over varied enterprises but it may be noted that the law frowns upon accumulation of power and public policy is directed towards a dispersal of influence. The problem of reconciling ownership with control has not emerged and the managerial revolution is incomplete. But there is no doubt about the arrival of the organisation man who uses resources for industrial development and for personal power. That is perhaps as significant in its way as the distribution of shares among a large number of individuals whose stake in the company is small.

My choice
of a truck P
DODGE
of course

Bhaiya, I have been a truck operator long enough to know that there can be no two opinions about the superiority of Dodge trucks. For instance take Axles. A Dodge vehicle is fitted with Timken axles now known as Rockwell-Standard which have a world-wide reputation. These axles have great load carrying capacity and are absolutely dependable—which means a great deal to us truck operators.

There are several other superior features besides. Taken together they lead to only one conclusion, namely, that the Dodge is a great truck. It is great in hauling power, great in endurance, great in earning capacity. You'll make Dodge your truck, too, I am sure.

MACHINE-BUILDING INDUSTRY Progress and Targets

THE programme of manufacture announced at the inauguration of the Development Council for the Machine-Building Industry is a revelation of the striking progress already achieved in this field of crucial importance for rapid industrialisation. A few years ago the machine-building industry in India was practically non-existent; now, there are 1,100 units engaged in the production of industrial machinery and related equipment. The total output, covering nearly twenty categories, in 1960 was valued at Rs 160 crores. The progress of the industry can also be evaluated by reference to the trend of imports.

Imports of machinery and equipment amounted to—

Rs 308.8 crores in 1957
Rs 248.4 crores in 1958
Rs 266.6 crores in 1959 and
Rs 200 crores in 1960

The steady reduction of imports during a period when the pace of industrialisation was stepped up is a measure of the growth of

indigenous manufacture. But imports still account for the larger portion of requirements of machinery and equipment.

Though imports have been steadily substituted by indigenous manufactures, there is still a wide gap between production and requirements. This will grow wider, unless special efforts are made to step up the pace of progress. The Third Plan, which the Minister for Industry has described as a 'Heavy Industries Plan,' has accorded the top-most priority for the development of the manufacture of machinery and industrial equipment.

The aim is to increase output of 23 categories of industrial machinery (other than electrical) from Rs 114.3 crores in 1960 to Rs 448.3 crores in 1965; and of five categories of electrical machinery and equipment from Rs 45.9 crores in 1960 to Rs 170.5 crores in 1965. The figures of production in 1960 and tentative estimates for 1965 in respect of particular industries are given in the table alongside.

Mr Manubhai Shah has spoken with enthusiasm of the progress already achieved and with confidence of the programme that lies ahead.

Discussions at the inaugural session of the Council, which the Minister for Industry described as the most important of the chain of 16 Development Councils so far set up by

Government, indicate the requirements for success. These are adequate supplies of working finance, electric power, raw materials like pig iron and coke, of standard quality; establishment of capacity for manufacture of high-quality castings; tariff protection for indigenous manufactures.

The Minister for Industry has given the assurance that applications for licences and those relating to foreign technical collaboration would be speedily processed and disposed of. There would also be a more flexible licensing procedure in this field, providing for bulk tonnage of goods etc., to allow scope for diversification and maximum utilisation of capacity. He has also emphasised the need for joint endeavour by the public and the private sectors for the achievement of the common objective.

A brochure brought out on the occasion of the Council's inauguration gives details of the production and targets for various types of machinery and equipment, as well as particulars of firms, engaged in their manufacture, that are on the list of the Development Wing. The detailed statistics of imports give an indication of the ground yet to be covered. But it is as well to recognise that imports will have to continue even after the development programme envisaged is successfully accomplished. As the Minister has pointed out: "Self-suffi-

ciency in these products is a far and foolish cry." The high rate of obsolescence will ensure a high level of imports until machines are not only manufactured but are also designed in the country.

country, had no provision for consumers' co-operative stores. This defect was however removed by the Act of 1912. But, in the subsequent quarter of a century, the movement made but slow progress. In 1938-39, there were just 396 consumers' cooperative societies in the whole country with a membership of 43,000. The movement found the opportunity for rapid expansion in the shortage of essential commodities during the war years, when the Government used the cooperative societies, either exclusively or on a preferential basis, for distribution of controlled commodities. The number of societies rose from 396 in 1938-39 to 9,757 in 1951-52 and the turnover from Rs 57.15 lakhs to over Rs 82 crores. The forced growth of the period of control could

	1938-39	1949-50	1951-52	1955-56	1933-49
Number of Primary Societies	396	8940	9757	7359	6857
Membership (lakhs)	0.43	21.55	18.46	14.14	13.76
Owned Funds (Rs lakhs)	2.46	449.46	552.70	490.00	504.87
Sales (Rs lakhs)	57.15	7045.41	8215.69	1448.00	2708.65
Profit	...	101.00	80.87	29.00	49.84
Loss	...	20.70	37.64	46.00	40.73

The Committee which was set up by the National Cooperative Development and Warehousing Board last February, to suggest measures for effective implementation of the programme, has attributed the slow progress of the movement to the following factors:

1. Weak organisational structure.
2. Small uneconomic size.
3. Dependence to a large extent on controlled commodities.
4. Inadequacy of funds and heavy working costs.
5. Lack of business knowledge or experience on the part of the managing committees.
6. Inadequate loyalty on the part of members; and lack of interest in management.
7. Lack of properly trained and equipped staff and inadequate supervision.
8. Keen competition from private traders and very low margin of profit.

The Committee has found that primary stores, by and large, are rickety organisations with a high incidence of mortality. Out of 6,857 primaries in existence in 1958-59, only 2,460 were working at a profit. Out of 1,880 stores in the States of West Bengal, U.P., Bihar, Rajasthan and Delhi, only 864 (46 per cent) were in working order. The cooperative stores are not able to retain the loyalty of the members as they are not able to meet the demand for a wide range of consumer goods. The primary stores also find difficulty in getting supplies as there are only a few well organised wholesale stores and that too only in certain States. In 1958-59, there were in all 62 wholesale stores of which 55 were in the States of Madras, Gujarat, Maharashtra, West Bengal, U.P. and Punjab. The movement has yet to develop a well-knit organisational structure at district, regional and apex levels. The societies, as the Working Group on Cooperation had noted, also find difficulty in getting working capital from financial agencies set up for the purpose, as the funds earmarked by the Reserve Bank for development of Cooperation cannot be loaned to consumer cooperatives.

The recommendations of the Committee are designed to compensate the obvious defects from which the consumers' societies are suffering. It has recommended Government participation on a matching basis in the share capital, of consumer co-operatives, and subsidies and loans for construction of godowns, as well as managerial subsidies. It has also set up standards of minimum membership and turnover for various kinds of stores to make them viable units. The Committee has also recommended that Government should bear 50 per cent of the cost of additional staff

not continue after the relaxation of controls on essential commodities. It will be seen from table A, that the year in which the First Five Year Plan was launched was also the peak year for the consumer cooperatives. The subsequent period was one of steady decline, in spite of the special emphasis on cooperation in the two Five Year Plans. Many societies ran into heavy losses and were obliged to close down. Both the First and Second Five Year Plans had stressed the need to encourage consumers' cooperatives. But up to the end of the Second Five Year Plan, no precise programme with targets had been worked out and no provision had been made for financial assistance to consumer cooperative societies.

appointed by the State Governments and give a subsidy, of up to Rs 1,800 for a primary store and Rs 12,000 for an apex wholesale store, to selected institutions, for a period of three to five years. The subsidy, which will be equally shared by the Central and State Governments, will be progressively reduced over this period. Other recommendations include help in securing shop accommodation, exemption from payment of sales tax by wholesale stores on sales effected to their primary members, concession in income-tax, assistance to Government Departments and undertakings for promotion of consumer stores amongst their employees. The Committee has also suggested that it should be obligatory on private industrialists to encourage, and assist the organisation of consumer stores for their employees as part of their welfare programme.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

UBP-10-3-61

IDA

\$60 Million for India

The International Development Association (IDA), an affiliate of the World Bank, has extended a development credit amounting to the equivalent of \$60 million to India for highway development. This is IDA's third, the first and second were granted to Honduras and Sudan respectively. The credit will finance half the amount which will be spent on the National Highways during the first 3½ years of the Third Five Year Plan which began on April 1, 1961. The funds will be used mainly for the construction of about 660 miles of highways, including 19 major bridges, which will open up some of the less developed parts of India, improve connections between important agricultural and industrial centres, and relieve traffic congestion in the vicinities of the two principal cities and ports, Calcutta and Bombay.

This credit constitutes part of the funds which will be provided by IDA to help meet the external financial requirements of the Third Five Year Plan. It is for a term of 50 years, interest-free. It is repayable in foreign exchange, amortization to begin after a 10-year period of grace. Thus, the first payment will be due on August 15, 1971. Thereafter, 1% of the principal will be repayable annually for 10 years and 3% will be repayable annually for each of the final 30 years. A service charge of ½ of 1% annually on the amounts disbursed and outstanding will be made to meet IDA's administrative costs.

Demand for rail and road transport rose very rapidly with the growth of agricultural and industrial production during the Second Five Year Plan, when freight traffic on the railways increased by about 50% and passenger traffic by 15-20%. During the same time, the proportionate increase in the volume of road traffic was even greater for both freight and commercial passenger traffic.

This trend will continue during the Third Five Year Plan and substantial further investment in transport facilities will have to be made. While the railways must be expanded

to meet the growing demand for long distance and bulk movements of freight, there is also pressing need for an improved road network to enable motor vehicle transport to make the shorter hauls and to move high-value goods.

At present, India has 393,000 miles of roads consisting of National Highways, State, District and village roads. The 15,000 miles of National Highways constitute a network of main roads connecting the centres of population. About 80% of the National Highways are one-lane roads built to standards that require heavy maintenance. Numerous unbridged river crossings, congestion around cities, and the poor condition of many of these roads hamper efficient road transport.

The road works for which the IDA credit is being extended will eliminate some of the major deficiencies in the National Highways system. All the works are located in the region of the Gangetic Plains in northern India, and in coastal areas around Calcutta and Bombay where the density of population is the highest and which account for 40% of India's total vehicle registration.

The congested approaches from the two main roads into Calcutta will be completely relocated outside the thickly populated suburban areas and a new access will be opened from their point of junction at Joypurbeel to the Vivekananda Bridge into Calcutta. Complementary works will provide improved connections between Calcutta and neighbouring industrial centres. A new highway will be built to serve the fertile coastal area of West Bengal which up to now has been without road connection with neighbouring Calcutta and to link Calcutta with the rapidly growing industrial centres at Jamshedpur and Ranchi. A new road will run from Calcutta south to Cuttack in the State of Orissa, filling in a missing link in the east coast highway running south from Calcutta through Madras; this road will cross an underdeveloped area where one of the retarding factors has been the absence of adequate trunk roads.

Construction of a bridge across the, Sone River will fill in the one remaining gap in the Grand Trunk Road which runs from Calcutta westward all the way across northern India.

In North Bihar the works include two new roads under construction in a densely populated area which, until a bridge was built over the Ganges two years ago, was entirely cut off from direct communications southward to the rest of the country.

Two roads to be built in and around Bombay will relieve serious traffic congestion. One of them will be an expressway running east out of the city and the other will provide a new connection north along the coast toward Ahmedabad, opening in the immediate vicinity of Bombay a new area for industrial and agricultural development. In view of the traffic congestion in downtown Bombay, a small part of the IDA credit will finance a study of this problem by foreign consultants.

The Joypurbeel-Vivekananda Bridge access road into Calcutta and the Eastern Expressway at Bombay will be four-lane highways. All the rest of the roads will be two-lane. Improved construction standards will result in lower maintenance costs than is usual in India.

The Roads Wing of the Ministry of Transport and Communications of the Indian Government will be responsible for the design of the roads and for the supervision of their construction. The Public Works Departments of the four States concerned, Bihar, West Bengal, Orissa and Maharashtra, will be in charge of construction. The construction work will be carried out by contractors using equipment which will be leased to them by the Roads Wing. The proportion of manual labour to be used in the construction will be higher than is usual in other countries—more than 80,000 people will be employed on these road works at the peak of construction. This will result in low unit costs.

Consumer Cooperatives

THE chronic weaknesses of consumers' co-operatives in this country are highlighted by the report and, even more, by the recommendations of the Committee which was set up last February to suggest measures for their rapid development. Consumers' cooperatives share the handicaps of the other branches of the movement; in addition, they have peculiar disabilities of their own. Compared to credit societies, consumers' cooperatives had a later start and their subsequent progress has been uneven. The Cooperative Societies Act of 1904, which started the movement in the

World of Finance

SLACK SEASON

Record Fall in Advances Likely?

THE index for industrial production, with 1951 as base and seasonally adjusted, improved slightly to 183.6 for January 1961 against 182.3 for December 1960, but was nevertheless lower than the 183.9 recorded in November 1960. That the figures signify a slowing down

SECURED ADVANCES OF SCHEDULED BANKS.

Classification of Security	Variations of		1960 slack season contraction	1959 slack season contraction
	end March 1961 over end October 1960	end March 1960 over end October 1959		
Food Articles	+ 78.21	+ 69.70	-57.26	-55.12
Industrial Raw Materials	+ 88.33	+ 34.24	-53.16	-52.02
Plantation Products	- 2.26	- 2.08	+ 2.26	- 2.37
Manufactures and Minerals	+ 10.36	+ 28.09	+ 69.35	+ 10.99
Other Securities	+ 39.17	+ 50.51	+ 16.95	+ 8.62
Total Secured Advances	+ 213.81	+ 180.46	-21.86	-89.90

It will be seen that the seasonal contraction in Advances against Food Articles and Industrial Raw Materials was more or less the same in the 1959 and 1960 slack seasons; but that (Plantation Products being left out, because they are in such small amount) other types of secured Advances tended to expand in the slack seasons. Moreover, when the rise in Advances against Manufactures and Minerals was a small one (as in the 1959 slack season) the slack season was prominent in that contraction in total Advances was placed at a considerable figure. If, therefore, the rise in what may be termed industrial Advances tends in the period up to October 1961 to be a small one, the 1961 slack season should witness easy money conditions.

Again, the seasonal expansion in Advances has been larger in the 1960-61 busy season than in the previous one. As against a total expansion of Rs 104 crores in the five months ended March 1960, secured Advances in the corresponding period ending March 1961, against Food Articles and Industrial Raw Materials, increased very sharply by Rs 166 crores. Hence, it may be inferred that there is a larger quantum of seasonal finance which ought to be repaid by October 1961. That is to say, the contraction in Advances of Scheduled Banks is likely to be sharper in the 1961 slack season.

We are of the view, consequently, that the slack season contraction in Advances this year may well exceed Rs 100 crores; and if, as we suspect it has, the rate of growth in industrial production has slowed down, the fall may be even larger. Indeed, it is worth noting that Loans, Cash Credits and Overdrafts of all Scheduled Banks (excluding Advances due from banks) have declined from Rs 1,110.96 crores on the last Friday in March to Rs 1,096.32 crores on 17 June 1961. In 1960, on the other hand, Advances (excluding bills but including those due from banks) rose from Rs 951.29 crores on the last Friday of March to Rs 974.84 crores on the last Friday in June.

in the rate of growth of industrial production, we have little doubt. Though figures for subsequent months are not yet known, it seems to us strongly possible that the index has since been stagnant. For, the trend in the secured Advances of Scheduled Banks is such as to suggest that credit extended to or obtained by industry has, in the months that have elapsed thereafter, at best been stationary. Data contained in the May issue of the Reserve Bank of India Bulletin, in respect of secured Advances of Scheduled Banks, are worth studying for the light they throw on trends in production.

Money should be easy; and the call money rate, in Calcutta, did go below the 4 per cent mark. Borrowings of Scheduled Banks are below the Rs 20 crore level, and the Treasury Bill rate has declined to 2.65 per cent. But there are no indications as yet of States' borrowing programmes, which should be expected to be put through before the Government announces its second tranche; and the timing of the second tranche is linked with the maturing on 1 August 1961 of the 2½ per cent 1961.

What are money market conditions likely to be, before the next busy season starts in November? It may be stated that there is an inevitability about contraction in Advances, and, we repeat, the slack season return of funds will be pronounced if, in fact, industrial production does not soon pick up. Meantime we expect also an increase in the Deposit resources of the banking system. Soon, the new and freed resources cannot be used to reduce borrowings—since the banking system should be practically out of debt with the Reserve Bank within a month or so. Banks should then begin to feel anxiety about investment of their costly Deposits.

Already, in the latest return of the State Bank, and as we had foreseen in last week's Indian Finance, there is evidence of purchase on a considerable scale from the Reserve Bank tap. Banks other than the State Bank may hold out a little longer; and their reluctance stems of course from their apprehension that, if they should now invest in Government securities, they might be compelled to borrow at penal rates in the next busy season. But it is also inevitable, we submit, that the banking system should soon begin to evince great interest in the gilt-edged market. For a start, they would be content to put their idle resources in Treasury Bills; and this phenomenon will probably occur in July. Thereafter, a hesitant approach to the Reserve Bank tap seems more than likely.

The shrinkage in Advances may mean that banks' earnings will be somewhat cut into,

Indian Finance

especially since, at the same time, a rise in Deposits is being experienced. Although, with the Reserve Bank's directive of last autumn, banks are today earning at a higher rate of interest on their Advances, we think it unlikely that they will be content to add to their cash balances (on which their earning is nil) by as much as Rs 100 crores before the beginning of November.

BANKS

Snippets

AGGREGATE Deposits of Indian Scheduled Banks rose by almost exactly Rs 13 crores as between the last Fridays of March and April; this is net of the State Bank's loss in Deposits owing to repayment of counterpart funds, and hence the gross rise in Deposits of Indian Scheduled Banks must have been around Rs 25 crores.

In the same period, Deposits of Foreign Banks rose sharply by just under Rs 18 crores to Rs 235.76 crores.

Borrowings of State Co-operative Banks from the Reserve Bank, which are shown under the latter's portfolio of Other Loans and Advances, were placed at Rs 84.74 crores on the last Friday in April, the total of the Reserve Bank's Other Loans and Advances as on that date being Rs 125.47 crores; and all Scheduled Banks accounted for Rs 38.16 crores of the balance.

Savings Deposits of Scheduled Banks rose over the month to the last Friday in April by Rs 3.97 crores to Rs 285.78 crores.

There were 4,170 offices of Scheduled Banks in India at the end of April 1961, a rise of 7 offices over the previous month. Indian Scheduled Banks accounted for the increase and were placed at 4,100 offices; State Bank at 908 offices; and Foreign Banks at 70 offices.

In the fortnight ending 31 March 1961 secured Advances of Scheduled Banks rose by Rs 27.75 crores to Rs 1,150.17 crores. Advances against Food Articles accounted for Rs 10.45 crores of the rise; against Industrial Raw Materials for Rs 6.46 crores; against Plantation Products for Rs 2.95 crores; and against Other Securities for Rs 8.21 crores. Advances against Manufactures and Minerals (the "industrial" Advances) went down fractionally from Rs 415.84 crores to Rs 415.5 crores.

In brief, therefore, with the 1961 slack season almost certain to produce extremely easy money conditions, both because of return of seasonal funds on a larger scale and because of stagnation in industrial production the prospect is for gilt-edged to rule ver firm—and for interest rates to be pushed down.

BANK RETURNS

State Bank Buys Through RBI Tap

A further sharp contraction in currency as the first of the new tranche of State Bank purchases of gilt-edged through the Reserve Bank tap highlight the latest banking statements.

According to the returns of the Reserve Bank for 23 June, Active Note Circulation

1 July 1961

steeply lower by Rs 23.24 crores at Rs 1,945.75 crores, and there has been inflow of Rupee Coin in the considerable amount of Rs 1.52 crores. Foreign Securities are unchanged at Rs 108.01 crores, and currency has been contracted against Rupee Securities for Rs 10 crores by transfer to Investments in the Banking Department. As a result, the Reserve Bank's cash in the till has shot up by Rs 14.73 crores and is placed at the unusually high level of Rs 41.78 crores.

In the Banking Department, with Investments higher only by Rs 8.43 crores at Rs 223.09 crores and accounted for by transfer from the Issue Department, there is the implication that the Centre has avoided recourse to deficit financing. But there is clear evidence of the Centre making large payment to the States in the form of loans, advances and grants. State Governments' balances have improved by Rs 9.19 crores to Rs 14.63 crores, and their indebtedness has, at the same time, been reduced by Rs 5.59 crores to Rs 77.43 crores. Despite such payments, the Centre's Deposits are shown practically unchanged—lower by Rs 0.68 crores—at Rs 82.05 crores. Of course it is scarcely possible that Government revenues were so buoyant that the payment to the States was put through without the help of created money. In this context, we have to have regard for the fact that, in the week under review, the State Bank has figured as a purchaser of Rs 17 crores worth of securities. Hence, this magnitude of deficit financing resorted to by the Centre has correspondingly been concealed. Reserve Balances of member banks are lower by Rs 5.98 crores at Rs 80.37 crores, but this is because of the substantial drawing down by the State Bank for the purchase of gilt-edged. Therefore, banks other than the State Bank have clearly added to their Reserve Balances. Moreover, the gathering free funds with the banking system are indicated by its ability, on top of the improvement in Reserve Balances, to reduce indebtedness to the Reserve Bank, whose Other Loans and Advances are down by Rs 2.53 crores at Rs 115.71 crores. We suspect that the magnitude of loans liquidated by Scheduled Banks is somewhat larger, since the Reserve Bank's advances against usance bills are seen to have fallen by Rs 5.30 crores to Rs 8.48 crores. It now appears possible that, in the week ended 23 June, borrowings of Scheduled Banks from the Reserve Bank will be placed at a level lower than Rs 15 crores.

Lastly, Balances Held Abroad are again lower by Rs 3.13 crores at Rs 12.65 crores. Foreign Exchange reserves, held in both Departments, are now scarcely above the Rs 120 crore mark.

With no liability, in the immediate future, in respect of return of counterpart funds, the State Bank has, as revealed in the return of the institution for 23 June, bought substantially of gilt-edged from the Reserve Bank tap. Partly, resources became freed; partly, amounts in "suspense" under Other Assets have been used; and cash in hand and with Reserve Bank has been drawn on, in the aggregate such that the State Bank's holdings of gilt-edged are sizably higher by Rs 17 crores at Rs 219.61 crores. Deposits have risen by Rs 2.10 crores to Rs 522.27 crores; the total of Advances, reflecting the slack season conditions, has contracted by Rs 4.66 crores to Rs 262.48 crores; Other Assets have been reduced by Rs 9.81 crores to Rs 34.08 crores; and cash in hand and with Reserve Bank has been drawn down by Rs 9.65 crores to Rs 19.64 crores. We may confidently expect that the State Bank will, at least twice in each month, utilise its accruing and freed resources (by way of rise in Deposits and contraction in Advances, respectively) for adding to its gilt-edged portfolio. We anticipate that State

Bank purchases through the Reserve Bank tap will amount to not less than Rs 50 crores during the rest of the 1961 slack season.

Though, as shown in the return for 16 June, net Deposits of Scheduled Banks appear to have gone down, consideration must be had for the fact that, in the week under review, the State Bank made over its June (and final, at least for the present) instalment of counterpart funds, entailing automatically a loss of around Rs 12 crores in its own Deposits. Thus, Net Demand Deposits of Scheduled Banks were up by Rs 6.54 crores at Rs 803.60 crores, and net Time Deposits lower by Rs 16.50 crores at Rs 1,096.69 crores, involving a net fall of Rs 9.96 crores, against which the State Bank's reported fall in Deposits was Rs 11.77 crores. Hence, other Scheduled Banks experienced a rise in their resources amounting to Rs 1.81 crores. The contraction in Advances continues, with the total lower by Rs 4.19 crores at Rs 1,284.29 crores. Consequently, Scheduled Banks have been able to reduce debt to the State Bank by Rs 1.40 crores to Rs 10.66 crores, and indebtedness to the Reserve Bank has fallen by Rs 1.53 crores to Rs 19.82 crores. The rise of Rs 4.88 crores to Rs 81.64 brores in Reserve Balances is wholly accounted for by the State Bank, with other Scheduled Banks indeed drawing upon their statutory Deposits for repaying loans taken from the central banking institution. Gilt-edged holdings of Scheduled Banks have fallen by Rs 8.21 crores to Rs 528.91 crores; but the State Bank, for making over the June instalment of counterpart funds, disinvested in gilt-edged for Rs 10 crores. So, it would appear that other Scheduled Banks have begun, as a result of accruing free resources with them, to add to their gilt-edged portfolio. The current week's rise of a little under Rs 2 crores is most probably in respect of Treasury Bills.

The Canadian Dollar

By Paul Einzig

THE Canadian Government, confronted with a fundamental disequilibrium, decided to take the line of least resistance by abandoning the rigid defence of the dollar. This was in accordance with the recommendation of the Macmillan Report of 1931, according to which, when disequilibrium is so pronounced that its elimination would require unduly heavy sacrifices, "the game is not worth the candle". Hence the dismissal of Mr Coyne, Governor of the Bank of Canada who was in favour of restrictionist policies. The Government over-

ruled him and decided to allow the dollar to depreciate—indeed to cause it to depreciate if necessary. This decision cannot be described as a "devaluation" because that term implies a change of parities, and since the Canadian dollar is a floating currency the question of such a change does not arise. Up to the time of writing, the extent of the depreciation of the exchange in Montreal has been very moderate and it is highly doubtful whether such a small depreciation could make the desired difference to the Canadian imports and exports. Moreover, the uncertainty about the eventual extent of the depreciation is far from being helpful.

A straightforward devaluation of some magnitude would have produced the salutary shock that is needed in situations such as the one into which the Canadian economy has drifted. Such psychological effect cannot be achieved by a moderate and hesitant depreciation. This experience provides yet another argument against the much advocated system of floating exchange rates. When in 1934 the United States devalued the dollar its action had every appearance of finality and the dollar inspired confidence at its reduced value. On the other hand, between 1936 and 1939 France depreciated the franc again and again. After each depreciation the prevailing feeling was expressed by Mr Paul Reynaud's words "too late and too little." If the operation can be carried out too easily, there is strong temptation to try to keep its extent to a minimum. If it is to be a devaluation proper, the chances are that the Government concerned will allow itself a safety margin so as to avoid having to repeat it again. One might well ask whether it was worth while at all to make such a small change in the Canadian dollar. Having decided to make a change, the Government might as well have made a thorough job of it.

The Canadian decision was followed by an increase of pressure on sterling. There is no reason why the United Kingdom should follow Canada's example, and the pressure merely expressed the general uneasiness about Britain's growing economic difficulties. Unless the Government faces up to the situation and adopts more effective measures than those announced so far, the pressure is likely to remain continuous.

Notes

WORLD ECONOMY

Stagnant In 1960

With the United States in the grip of a recession and the under-developed countries recording heavy losses in the balance of payments account, world economic developments during 1960 have belied hopes of an uninterrupted progress for the free economies. Reviewing the developments during 1960, the United Nations World Economic Survey underlines the fact that while there was a gratifying increase both in the world economic activity and in the world trade, by the second quarter of the year, the rate of expansion declined in one industrial country after another. In the Western Europe, there was an initial decline in the rates of growth, though subsequently, this gave way to a tendency toward stabilisation. The net increase for production and trade for the private enterprise economies, the Survey states, was of the order of 4 per cent and 10 per cent respectively. This rate of expansion was, however, out-paced in the Centrally planned economies which registered greater increase especially in industrial production.

For the under-developed countries, the developments as recorded

in the United Nations Survey were anything but satisfactory. All these countries were subjected to heavy pressure on the foreign exchange front. By the end of 1960, it is stated, the index of export unit values for these countries had fallen below the corresponding 1959 level to a point of about 8 per cent below the 1957 average. Consequently in many under-developed countries, there was a rise in the foreign trade deficit which amounted to as much as 50 per cent. In this background, the Survey underlines the need for stepping up exports by these countries and cautions that "unless there is a marked and sustained improvement in their export earnings, underdeveloped countries are likely to find the burden of international indebtedness accentuated rather than diminished in the 1960s."

The Survey also deals at length with the factors involved in the economic development of these countries and draws particular attention to the importance of stepping up domestic saving, through various measures. It is stated that of 28 under-developed countries for which data are available only nine registered an increase in domestic saving from the beginning to the end of the 1950s and of these only three recorded such an increase in excess of two per cent of gross domestic product. The Survey suggests a variety of means for augmenting internal resources required for accelerated economic progress of these countries, and among these taxation figures as the most important. It is pointed out that with the growth of domestic economic activity it should be possible to increase revenue through appropriate taxes on the production and sale of goods and services, particularly those which do not impose undue burden on lower income groups. While equal importance is attached to direct and indirect taxes, the Survey notes the failure of the direct tax system in many of these countries to cover a sufficient portion of incomes, owing to exemptions being set at too high levels, low tax rates and excessively liberal deductions. The Survey lists agriculture as one of the most promising fields for higher taxation in the under-developed countries. The Survey bases its observations in respect of potential increases from agricultural taxes on the facts that land assessments in these countries have not been revised for many years and also that in many instances they do

not even reflect the increases in land values resulting from improvements made by the Governments themselves through the provision of irrigation transport and other facilities. The legitimate conclusion is therefore drawn that "appropriately devised agricultural taxes, represent an important potential source of increased revenue in many countries."

In view of the emerging public sector as the agency for development in the under-developed countries, the Survey also suggests possibilities for increase in revenue to the States through appropriate price structures for these enterprises. It also mentions the need for promoting enterprise saving through a climate of economic expansion and through the establishment of basic public facilities.

*

THE COLOMBO PLAN

Happy Anniversary

A systematic attempt to associate the more fortunate nations with the tackling of the economic problems of the countries of the South and South-East Asia originated with the Colombo Plan, which was inaugurated on 1 July eleven years ago. Today all the countries in this part of the world have a long-term development programme of one kind or another. It will be, however, misleading to deem that the idea of development programmes germinated in this region only with the Colombo Plan, for ever before the conference of the Consultative Committee was held, India was busy with its development plans. As far as other countries of the area are concerned this claim holds true. The idea of long-term planning which took firm root in 1950 gained greater strength since then. Thereafter all the development policies and activities of the South and South East Asian countries have been subjected to close study and in many cases better planning techniques and procedures have been adopted.

Technical co-operation under the Colombo Plan plays a remarkable role in the economic development of this region. Assistance under this programme flows in three forms, viz. the supply of the services of experts, the provision for training facilities and the supply of equipments required for the successful implementation of the various development programmes. The immense benefit from the technical programme can be easily gauged from the fact that since 1950 more than 25,000 Asians received technical training and the services of over 12,000 experts have been made available to the Asian countries by the members of the Colombo Plan and the agencies of the United Nations. The expenditure borne by the countries providing the training and supplying technicians since the inception of the Plan upto 1960 totalled £46.7 million.

The objective of the Plan being the raising of standard of living of the people of this region by accelerating

the pace and widening the scope for economic development in this area, it was only in the fitness of things that agriculture was accorded an important place. To modernise agriculture in these countries grants and loans, fertilisers, agricultural implements and other assistances have been provided.

The development expenditure incurred by the countries of this region amounted to £1,309.8 million in 1959-60. It may be noted that assistance under the Plan comes for the most part from member countries outside the region, viz. Australia, Canada, Japan, New Zealand, the UK and the USA and their contribution aggregated £2,875 million. Over and above this, the Export-Import Bank has sanctioned an amount of \$468 million for financing the development programmes of the countries covered by the Plan. Private investments in these countries till the end of 1959 totalled approximately \$800 million.

Apart from these the Rockefeller, Ford and other Foundations and private organisations in the USA rendered considerable assistance to education, medicine, rural development and other activities in these countries. These Foundations contributed nearly £12 million in 1959 alone.

The advancement made by these countries in economic, social and cultural fields has ultimately set at rest all the uncertainties that were raised before the implementation of the Plan. In fact the Colombo Plan has turned out to be a fine experiment in international co-operation and partnership. Above all the Plan has fostered among the less developed countries in this part of the world a sense of mutual co-operation and understanding and the benefits they have accrued to the participant countries are immense.

Indian Finance

1 July 1961

CALCUTTA

A Metropolitan Authority

Development of Calcutta has become a problem sorely exercising the West Bengal Government. The conditions of living in this metropolitan city have deteriorated to a point, where, it is conceded, the State Government by itself would not be able to make any improvement. The problems, the more important of which are acute unemployment, especially among the educated, extreme shortage of housing and transport, and festering insanitary conditions, present a most formidable combination and call for great efforts for their solution. In a pointed reference to the problem, in the course of her inaugural address to the last Budget Session of the State Legislature, the State Governor, Mrs Padmaja Naidu, observed that "the continued neglect of Calcutta's problem is one of the most dangerous weaknesses of the Third Plan." The State Government's own answer to these problems is a master plan for the betterment of Greater Calcutta and its hinterland. A brain-child of Dr B. C. Roy, the master plan is only in the process of formulation. But as a preliminary step, the State Government set up in May the Calcutta Metropolitan Planning Organisation to which has been entrusted the task of preparing the master plan. A resolution throwing light on some of the important aspects of the work connected with the city's development, was published last week by the Health Department of the State Government.

The resolution lists a number of factors that have to be considered in the preparation of the master plan. Among these are land planning, economic and social development, research, housing, traffic, transportation, municipal engineering and sanitation, fiscal planning and administrative planning. The importance of regional metropolitan and urban land analysis, long and short-term planning, demography and migration, regional and urban economic base, traffic studies, road circulation and mass transit by bus rail and river has been stressed. The plan is expected to be a comprehensive one with provisions regarding location, character, extent and development of streets, roads, rights of way, viaducts, bridges, waterways, and waterfront development parkways, thoroughfares, parking facilities, playgrounds, schools and public buildings, forests, parks, air ports, and other public grounds buildings and spaces. Other important factors mentioned for the consideration of the Metropolitan Board are development of utilities, and terminals for water, light, power, sanitation, transport transit communications, regulation of the height, area, bulk location and

uses of the buildings distribution of population utilisation of land for trade, industry habitation, recreation, agriculture, forestry soil and water conservation, slum clearance etc.

It is evident that the master plan is being worked to the minutest detail. In the wake of the setting up of the Metropolitan Organisation, the Government has also placed a sum of Rs 20 lakhs at its disposal for expenditure during 1961-62. The Government has, besides, sanctioned a separate head under the development budget to cover its expenses during the Third Plan. The Organisation will function as a limb of the State Government with powers to administer the funds placed at its disposal and frame its annual budget as prescribed by the Government.

How, in the face of the formidable financial calls, the implementation of the master plan will fare, it is not possible to say with any certainty. The suggestion to divert part of the counterpart funds accruing to the Central Government under the US PL 430 agreement has not found favour with the Central authorities. But the State Government has been able to interest world bodies in the peculiar problems confronting the city. There is offer of assistance from the Ford Foundation and from the Special Fund of the UN. The WHO has also conducted a survey and offered some suggestions with a view to ensuring a practical administrative set-up. The State Chief Minister Dr B. C. Roy has expressed himself as being determined to go ahead with the implementation of the master plan in the face of the severest odds. Public opinion in the State and the more influential part of it represented by private sector industrialists has also rallied to the viewpoint of Dr Roy in respect of finding an early solution to the riddling problems of the city. This last provides the most propitious factor for the launching of the master plan.

CIVIL AVIATION

Flying Colours

Both the Air India International and the Indian Airlines Corporation bettered in the second half of 1960, their performance in the first half. This particularly applies to the number of passengers as well as cargo and mail carried. The following statements present a comparative picture of performance for these two organisations as measured by a number of indicators.

It is evident that there has been improvement in every direction. Other important highlights in the working of these two bodies during the second half of 1960 were the introduction of a weekly service on the route Bombay-Karachi-Bahrain-Kuwait, and the introduction of a cargo service to London with their Super-Constellation aircraft by the

Air India International on the one hand and the introduction of non-stop services between Delhi and Kathmandu, and Calcutta and Kathmandu and a direct service between Delhi and Rajkot by the Indian Airlines Corporation on the other. The period also witnessed important changes in the service schedules of the Indian Airlines Corporation which in all cases resulted in an increase in the frequency of flights.

The performance of the night air mail service for the second half of 1960 also shows improvement. The figures for passengers, cargo and mail carried for this period were 24,344, 934,326 kgs and 903,376 kgs respectively and compares with 24,959, 839,256 kgs and 924,051 kgs for the first half of 1960.

Apart from the AII and the IAC, at the end of the second half of 1960, seven air transport companies and 17 flying clubs held permits for non-scheduled services. It is stated that on such non-scheduled services, Indian air carriers flew 5,185,429 kilometers, carrying 38,747 passengers and 21,813,283 kilograms of cargo as against 4,776,758 kilometers flown and 48,278 passengers and 19,952,426 kilograms of cargo carried during the corresponding period of 1959. The comparable figures for the first half of 1960 were 4,728,499 kilometers flown, 48,957 passengers and 17,097,262 kilograms of cargo carried.

The number of aircraft holding current certificates of registrations at the end of 1960 is shown to be 526, of which 196 held current certificates of airworthiness. While 13 aircraft were registered in the name of the AII, the number of aircraft registered in the name of the IAC is shown to be 89. In respect of aeronautical telecommunications it is stated that during this period greater emphasis was laid on the modernisation of the services. At the end of the period under review, there were 81 Aeronautical Communication Stations providing 139 radio aids to navigation and 541 aeronautical communications channels.

In respect of international relations, two agreements were signed one with Iran and another with Czechoslovakia for the operation of air services with these countries. The discussions with the United States in respect of various matters arising under the bilateral Air Transport Agreement are

still in an inconclusive stage. Part of the difficulty seems to be American unwillingness to concede Air India International greater traffic rights in the US. Unhappily, this has been the experience of other foreign air-lines also in the US. Indeed, some thing like a war of nerves among world air-lines is going on for sometime now. Pan American and the Trans-World Airlines which in the early post-war years enjoyed almost exclusive run of the US air traffic are now, not ununderstandably, cut up about their share being reduced to something like 40 per cent. But in an era of ever expanding air travel and declared faith in the freedom of the air, there should be enough to go round for all. It is to be hoped that further negotiation between the US and Indian authorities would make possible an early and happy conclusion of this issue.

*

TEA

Eight Pre-requisites

Mr S. M. Mohta has made a lucid analysis of the problems facing the Indian tea industry in the course of his presidential address at the fifth annual general meeting of the Tea Association of India held this week in Calcutta. The Indian tea industry has been steadily losing ground in the world market and its production too does not show a regular upward trend. For instance, production last year has declined to 705 million lbs from 719 million lbs in the previous year. Export performance is no more satisfactory as total exports in 1960 amounted to only 430.1 million lbs as compared with 472.4 million lbs in 1959. One of the reasons for the present difficulties of our tea in world markets is the growing competition from other producers like Ceylon and East Africa. The fact that production is outstripping demand has further aggravated the situation. It is now generally accepted that if Indian tea is to increase progressively its share in world demand, concerted measures to promote exports have to be

adopted. It cannot be said that Government is indifferent to the industry's problems. If for no other reason, export of tea has assumed crucial importance in a situation in which the solution to a number of current problems lies in greater export earnings. It is significant to note that the Tea Board is sponsoring a conference of tea consumers all over the world to be held in Calcutta in November with a view mainly to bringing into personal contact the tea producer and the tea buyer. But much more than such conferences will be required to achieve the desired result of making Indian tea popular overseas.

That there is not much time to lose in tackling the problems facing the tea industry will be seen from the fact that according to an estimate of the Food and Agricultural Organisation, world production of tea is increasing at a much quicker pace than that of the expansion in demand. It is expected that there will be an

excess of tea to the tune of not less than 50,000 metric tons by 1965. Under the Third Plan, the target for tea export is fixed at 610 million lbs and it will be evident that in the context of the growing competition from other producers, no ordinary effort will suffice to reach the stipulated target. Mr Mohta thinks that the targets of production and export are somewhat ambitious, but he is also of the opinion that they could be hit if the industry was given the necessary incentives, a list of which he has himself provided. In this connection, it will be rewarding to find out how other producers have been faring. Take, for instance, Ceylon. This country's experience last year has been much more satisfactory than ours. As a matter of fact indications are that Ceylon is slowly usurping the place so long held by India in most foreign markets. Mr Mohta seems to think that the reason for Indian tea's decline is to be largely sought in Government policy.

Ceylon is able to outbid Indian tea because of its comparatively lower cost of production brought about by lower wages and exemptions from certain duties which Indian tea has to bear. Mr Mohta lists eight pre-requisites for making Indian tea reign supreme once again in world markets. Four of these pertain to the promotion of production such as supply of fertilizers, coal, loans for replantation and rehabilitation of old plant and machinery and supply of power and irrigation facilities. Transport is costing the industry quite a bit because tea is to be hauled over long distances to the port cities and a sizable reduction in this regard, which is not impossible, will greatly relieve the financial burden on the industry. Now that a wage board for the tea industry has been established the industry is naturally anxious that the award should be related to productivity. There is need for improving both the quantum and quality of tea propaganda over-

seas. The pattern of world tea consumption in recent years will show that there are areas which have not been adequately covered by our tea propaganda. Last in the list of incentives enumerated by Mr Mohta is the removal of taxes of all types on exportable teas. The justifiability of continuing an export duty on tea has been questioned for a long time but Government has been reluctant till now to do away with the duty completely. A reduction was made in the last Budget but the duty even at the present reduced rate has not brought any relief as the gain has been offset by an increase in the excise duty.

★ NIGERIAN MISSION Welcome for Many Reasons

The visit of a Nigerian mission to Delhi to consult the Government on trade matters will be welcomed for many reasons. Block buying of tin from Nigeria may provide a remedy for the new crisis due to higher prices and Nigeria as the largest of the new African States may become a better market for Indian textiles. If Indian prices are reasonable there is a good chance for manufactures like electric fans, sewing machines and bicycles in Nigeria which may ship palm oil to India in order to help overcome the high price of vegetable oils at present. As French West Africa has a guaranteed market in the Inner Six Countries, the Nigerian policy in future may be one of increasing trade with the Commonwealth and buying more textiles especially handloom goods from India rather than Hongkong which may buy less cotton than India. The Nigerian market for cheap goods may involve a new view about cost and prices in relation to rival like Pakistan.

The opening up of new tea or rubber plantations in Nigeria may not pose a threat to India, but the Indian Government by ascertaining capital goods requirements may be able to find a customer in the Nigerian Government railway provided terms of delivery etc. are satisfactory. The Nigerian mission may see for itself how Muslim fare in India today and judge whether the secular State is as good as the Islamic republic or Commonwealth for which some still plead. The political aspect cannot be missed by the visiting mission. And for India it may be advisable to think of West Africa rather than East Africa and think of recovery in the Congo rather than Kenya. Opportunities for Indian traders who may buy cocoa or palm oil and indent Indian goods to sell in Nigeria may even be improved by the divergence of views as between Ghana and Nigeria about certain matters. The British firms that have developed oil may pro-

good customers for some Indian products like ropes or hardware and the closer analysis of trade may rest on the favourable balance of trade maintained over many years by India which may divert its trade from the Sudan or Egypt, in case Nigeria can sell raw cotton or buy sugar on special terms.

★ WBFC Steady Improvement

The steady improvement of its financial position is reflected in the fact that the West Bengal Financial Corporation in its eighth year of working is asking the State Government for a subvention of only Rs 37,520 to add to its disposable profit of Rs 3.12 lakhs in order to pay the guaranteed minimum dividend of 3½ per cent to its shareholders. This is the lowest subvention asked for since its inception and it is confidently expected that next year it will not be necessary to ask for any subvention at all. The strength of the Corporation flows from the growing realisation of its importance by the small and medium entrepreneurs. From the classes of loan applications, it is evident that a wide variety of industries seek the services of the Corporation. It is also gratifying to note that the loan assistance is to a very great extent well utilised. There has been only a solitary instance of a case which has required the institution of legal measures for the recovery of dues. Other loanee-concerns have been quite prompt in their payments of instalments indicating that assistance from the Corporation has rarely been fruitless.

It is however felt that the time has now come for a reassessment of the financial needs of the small and medium scale entrepreneurs. Since the formulation of the rules and regulations governing the limit of loans, much water has flowed under the bridge. The cost of putting up new enterprises has considerably gone up during the past seven or eight years and some medium sized industries may not be able to manage within the limit of Rs 10 lakhs now set for the State Financial Corporations' loans. Bigger loans are of course given by the Industrial Financial Corporation but it may not be worth the while of the medium-size entrepreneurs to approach this institution for their comparatively small requirements. The idea of doubling the limit of loans that can be granted by the State Financial Corporations has been already mooted and it has been revealed by Mr B. M. Birla, Chairman of the West Bengal Financial Corporation that a suggestion backed by a number of State Financial Corporations to revise the limit upwards to Rs 20 lakhs is now under the consideration of the Reserve Bank of India. This is no doubt a welcome move

and deserves sympathetic consideration. But a close examination of the actual disbursements of loans by the West Bengal Finance Corporation does not reveal an altogether happy position especially with regard to meeting the financial requirements of the small entrepreneur. It is true that there is nothing to complain as regards the number of applications approved but one finds that disbursements of loans are far from satisfactory. For reasons that are not made available, the small borrowers are either unwilling or unable to receive the loan money. This is unfortunate.

★ AUSTRALIA Wooing The Asian Market

Australia too follows Japan in trying to interest Asian markets in its manufactures. The trade mission this year means to culti-

vate Singapore, Malaya, Ceylon and India as markets for exports. Though only Bombay will see the trade ship, presenting graphically the dynamic development of Australia, it is perhaps useful for India to see how Australia has grown industrially and is not dependent wholly on exports of wool or wheat. Of course, vast mineral resources, including gold and oil are the base of the industrial growth and the ability to attract foreign capital has been a factor. But the home market is limited and Australia therefore must try to export in future vehicles as well as metals, fruits as well as tallow or wool tops. The Straat Bank's visit is an exercise in export promotion arranged by the business leaders of Australia. The S. E. Asian markets may be an outlet for agricultural and other machinery but only Ceylon is likely to buy sugar offered by Queensland.

The big British firms that are established in Australia may find that India too is able to satisfy

home demand for paper or chemicals at present along with automobile parts made locally. The overseas subsidiaries of Australian firms operating in Singapore represent a new development in trading. The ability to meet special demands for spares or stores may create an opening and it is well to remember that the Hume Pipe Company helping urban cleanliness in India is an Australian concern whose processes are adopted for the local production of reinforced concrete pipes. The Colombo Plan has made Asian countries aware of Australia's rapid growth as an industrial nation able to use and export mining equipment. But it is doubtful whether banks or insurance firms coming in newly can find opportunities in India today, though industrial chemicals may be saleable. One thing is patent: a prosperous Malaya gives Australia a good market and Ceylon by boosting its tea exports may even be willing to buy more goods from Australia, now able to supply cars and machinery.

Just right...

Those trousers with the 'Italian cut'—just the thing for him until they were laundered... For a while he thought he was putting on weight—but no, the trousers that looked so smart in the display window had shrunk! If only he had looked for the label 'Sanforized'...

Busy hands laying down rail tracks of steel, steel lines penetrating into the heart of the wilderness, steel bringing civilization to the doorsteps of isolated villages and homes without number.

In this land with its 410 million people and vast distances, there is need for swifter and more efficient transport, be it by road or rail. And transport needs steel—from bicycle to aeroplane every modern vehicle is shaped from STEEL. Soon, even the remotest outpost on this great subcontinent will be a part of the national network of transport. Soon all these benefits will be ours, as there is a little more steel for us.

STEEL IS BETTER TRANSPORT FOR YOU

Towards this end, HSCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

THE INDIAN IRON AND STEEL COMPANY LIMITED

RESEARCH

A New Source of Vanaspati

The extraction of oil from safflower has been common for long and Madhya Pradesh has been a major source. It is hoped that output can be raised from 50,000 tons a year to 500,000 tons. In the USA it is used as an oil for drying and not for edible purposes but in India, as safflower oil is consumed in the kitchen it is suggested that hydrogenation can be attempted successfully. The results of the experiments conducted in the College of Science and Technology in Calcutta are recorded in the Journal of Scientific and Industrial Research last month. It has been ascertained that vanaspati made from safflower seeds is as good as any vegetable product and commercial exploitation is regarded as feasible. It is known that raw oil can be refined and bleached by treatment with alkali and Fulmont earth in addition to activated carbon.

The acids found in the oil from safflower are the same as those in other vegetable oils like cotton seed, oil and groundnut oil and it is claimed that vanaspati prepared from safflower oil is as resistant to deterioration as other commercial products. The local use of safflower oil, now available in Andhra Pradesh, Mysore and Maharashtra also, may lead to saving on groundnut oil consumption at home and enable India to export more. This is probably the main object of experiments carried out in the hope of making safflower a source of vanaspati soon.

SINGAPORE

New Banking Regulations

While Malaya has a central banking institution, there is none yet in Singapore but safeguards are held desirable and hence rules about licensing have been framed. The four Indian banks that have set up branches should not be affected by the rules insisting on investment locally, so as to ensure complete safety for local depositors. It is quite likely that the banks may have already approved assets to the value of Rs 30 lakhs equal to 2 million dollars and the time allowed for building up may not be required for it is known that the Indian Overseas Bank has long held Singapore or Malayan Government securities among its investments. The return available from the securities held may be modest as compared with the interest received on advances but the acceptance of local regulations will make the Indian banks sche-

duled in India to stand forth as locally scheduled banks.

The advantage may not be inconsiderable, though British or other banks will remain far ahead of Indian banks in Singapore in point of business importance. It is not likely that other banks from India or elsewhere will be eager to start branches in an Island that may be said to have even an excess of banking facilities at present. The new rule may prevent the opening of the branches of private banks that are not governed by Indian banking law. But the conditions regarding paid up capital or local investment cannot be a burden of any sort, for the four banks, Bank of India, Indian, I.O.B. and U.Co. are already endowed with larger capital to match the considerable increase in deposits achieved during the Fifties. In fact, the Singapore ordinance may help the four banks to approach their shareholders confidently and to obtain more deposits in Singapore itself by furnishing proof of their increased resources and higher standing. The ordinance will perhaps hit new Chinese banks and reduce competition from private banking firms that still compete with modern institutions run on Western lines. The immediate prospects for the Singapore branches in close contact with the Federation are probably improved by the regulation which may accentuate competition for suitable premises in Singapore.

KUWAIT

Sudden and Shocking

The Iraqi claim to Kuwait seems sudden and shocking. The fact that the principalities on the Persian Gulf are part of what is called Arabistan, with Arabia more closely interested than Persia, helped the UK to establish authority connected with the suppression of slavery and the control of arms traffic towards the N. W. frontier of India. The fact that Iraq was created by a successful Arab revolt against Turkey and a new dynasty was planted in Baghdad may be one reason for arguing that the claim of General Kassem to Kuwait is not well-founded. Since an alliance ensuring the security of Kuwait has replaced the protectorate the rights or power of Britain may be asserted. Gen. Kassem will not get the backing of Russia for his territorial claim which comes soon after the demand for exclusive control of the Shatt-el Arab. The confusion in Persia may help Iraq but it is fairly clear that until, and unless, the UAR extends support, General Kassem cannot make a move.

It is not unlikely that Britain may seek the help of Saudi Arabia by winding up quickly the argument over the Burakri Oasis and in trying to get the USA interested in the dispute which threatens the most prosperous oil company in the East

today. The Abadan dispute was somewhat different: nationalisation of the AIOC by a new dynasty was unavoidable. In the case of Kuwait, the claim of Kassem seems to rest on the authority of the Caliphs and many troubled Arabian Nights are in store for both Britain and Baghdad. One result may be a rise in gold prices in the Middle East with immediate reactions in Bombay where the new contract will not deter the bulls from taking the view that alarm in Kuwait will really reduce the supply of gold for smuggling via Goa. The Iraq Petroleum Company will find it harder to get an agreement signed with General Kassem whose regime has been recognised. If oil royalties are abruptly stopped, the properties may be lost. That is part of the new dilemma in the Middle East. But a settlement of the Cold War is required, for the reason that Russia must be induced to stay neutral in the dispute over Kuwait's status.

USA

Widening Job Opportunities

At a time when significant improvements are evident in the US employment situation, the Kennedy Administration is asking Congress to approve proposed legislation to expand the nation's unemployment compensation system, provide special job training for the youth, and retain workers who have been jobless for a relatively long period of time.

This underscores the Administration's continuing concern with widening employment opportunities as a long-range economic goal, whatever the current gains.

These gains are pointed up in three areas generally indicative of underlying trends—more industrial workers were employed last month, they worked a longer week and they earned more money. Labour Department officials see in these advances further signs that the US economy is rising faster than normal for this time of year.

The number of workers on non-farm payrolls rose by half a million last month to a total of 52.5 million—nearly double the customary increase for May. Particularly encouraging was the sharp rise of 150,000 to a total of 15.7 million in manufacturing employment, which normally shows a small decline in May.

Employment upturns, moreover, were reported throughout the durable goods sector, with steel and automobiles leading the way. This is the sector hardest hit by the last recession, with employment dropping by nearly 900,000 between February 1960 and March 1961.

The factory work week, which also dwindles during recessionary periods, rose again in May for the fourth consecutive month to a seasonally adjusted average of 39.8 hours. It had dipped as low as 38.3 hours toward the close of 1960.

An average one cent increase in hourly earnings combined with the longer work week to give the average factory worker a substantial boost of \$1.09 a week in his wages. This brought the average weekly wage to an all-time high of \$92.66.

These specific gains occurred against the backdrop of a general employment picture that also showed considerable improvement in May, but not of sufficient proportions to reduce the unemployment rate to any appreciable degree. Unemployment fell by 200,000 to a total of 4.8 million, while total employment rose by a full million to 66.8 million. This still left unemployment, on a seasonally adjusted basis, at close to 6.9 per cent of the labour force—just about where it has been for some six consecutive months.

According to the Labour Department's calculations of normal seasonal expectations, unemployment may rise noticeably in June, as students seek vacation work. After that, however, it should decline steadily and be down to about 4.1 million by September. Employment, meanwhile, may well continue on the upgrade.

But this probably would still leave the jobless rate at a level well above that deemed desirable by the Administration. Unemployment is considered a particularly pressing problem among the very young, many of whom may lack the education and training to handle today's highly skilled jobs, and among those who have been out of work for some time because of job obsolescence or industry change. These groups would be benefitted by two of President Kennedy's recent proposals.

One is a recommendation to provide Federal money to help retain and relocate workers suffering from long-term joblessness. The last Government report showed that of the 4.8 million unemployed in May, 1.9 million were jobless for 26 weeks or longer.

The other is a three-year "pilot" programme to set up a youth conservation corps, in which young men would work on outdoor training in new skills for young men and women; to work out with State and local Governments opportunities for young people to train in public jobs.

The third Kennedy proposal in this field would mean a significant overhauling of the Federal and State unemployment compensation systems. It would bring three million more workers, including employees of very small companies and non-profit organizations, under the jobless benefits programme for the first time. Some 45 million American workers already are covered.

The proposal also would provide a permanent set-up during recessionary periods for special extension of unemployment compensation to workers who exhaust their regular benefits. This would do away with the need for new legislation, with its related time lag, to accomplish this, as was the case in 1957 and 1961.

There is no guarantee, of course, that Congress will approve all of these proposals at this time. Some feeling has been expressed that the

Indian Finance

1 July 1961

may be too costly or not necessary in view of the current improvement in the US economy. But the Kennedy Administration is strongly urging their adoption, not merely as short-term palliatives but as long-range socio-economic advances.

*

OIL

Need For Flexibility

Ever since the Oil Advisory Committee at its meeting last May placed the estimate of inland demand for petroleum products at 13.55 million metric tons and the total demand including the provision for international bunker at 14.14 million tons, speculation has been rife as to the manner in which Government is going to meet the additional demand. Usually knowledgeable circles believe that the actual demand for petroleum products by the end of the Third Five Year Plan will be much higher than the present estimate of the Oil Advisory Committee. As against this potential demand, it has been estimated that oil refinery capacity in the country by the end of the Third Plan will rise to about 10.75 million metric tons. As Government, at least for the time being, seems to have decided against any expansion of capacity in the private sector, such additional refinery capacity that further detailed study of the trend of demand may bring to light will have to be provided by the public sector. Assuming that self-sufficiency in crude oil will be reached by 1966, there will still remain the problem of putting up the additional refinery capacity by the public sector. Considering the time that will be taken and the enormous expenditure, that will have to be incurred, (considerable portion of which will be in foreign exchange), this may well turn out to be the central 'oil-problem' of the Third Plan.

The prospects, at the moment are frankly problematical. They may however become brighter if the other alternative is considered. How the private sector refineries, particularly the Burma Shell refineries, will be able to undertake the task of building up additional refinery capacity comparatively easily and cheaply has been explained by Mr L. D. Mudie, Chairman at the annual general meeting of the shareholders of the company held this week. He has pointed out that "an increase in consumption of 7 million tons over the Third Plan period calls for a capital investment of some Rs 400 crores if this increase alone is assured" on the basis that a capital expenditure of approximately Rs 60 crores will be needed "to find, produce, refine and distribute to the consumer one million tons of oil." It will be evident that a substantial portion of this outlay

will be absorbed by the construction of the refinery. Burma Shell Refineries have already submitted a proposal for building up an additional million tons of refining capacity which will cost only Rs 2.83 crores. Another proposal of theirs refers to a project costing Rs 6.47 crores to manufacture 100,000 metric tons lubricating oil per annum. These proposals have not been approved by Government, on the ground that further expansion of refining capacity in the private sector is not considered necessary. This decision, however, was taken before the Oil Advisory Committee arrived at its revised estimate of total demand of 14.14 million metric tons.

It will be puzzling to not a few that Government should have turned down these obviously advantageous offers. There can be no doubt that there will be a sizable gap between demand and the refining capacity as at present

envisaged. It is equally certain that putting up more refineries in the public sector to meet the increased demand is going to be extremely difficult and time-consuming. It stands to reason, therefore, that Government should accept the alternative proposed by Burma Shell refineries. The time factor, which seems rarely to enter in Governments' reckoning,—"we are in no hurry" Mr Malaviya said sometime ago—is of the essence of the situation. If there is not to be any scarcity in petroleum products in the later stages of the Third Plan, arrangements to meet the potential increase in demand have to be taken on hand as early as possible. Those in charge of shaping our oil policy—Mr K. D. Malaviya in particular—have shown themselves hard bargainers, but they have no doctrinaire inhibitions. The refusal to allow expansion of private refining capacity need not therefore be taken as the last word on the subject.

METAL BOX

Containment

Mr K. C. Mahindra's speech at the 28th Annual General Meeting of the Metal Box Company of India Ltd, was notable for the emphasis it laid on the growing importance of the container industry. The country has set its efforts at stepping up exports of all kinds of goods to earn more foreign exchange, and at increasing the availability of consumer goods in the home market to meet the anticipated growth in demand arising from improved living standards. While these considerations should have called for a corresponding emphasis on enlarging the scope for the indigenous container industry, it is rather disappointing as Mr Mahindra has pointed out, that the Government's policy should be directed toward restricting the future development of the container industry. For, in terms of the new policy enunciated last year, applications for manufacturing licences for tin containers, collapsible and rigid tubes

UNION CARBIDE INDIA now offers from its Trombay plant

These four synthetic organic chemicals now being produced at Union Carbide India's Trombay Plant serve as raw materials and intermediates in the processing and manufacture of a whole host of products for industry and the home—from dyes, textiles and drugs to automobiles, leather cloth, foodstuffs and photographic films.

For your requirements of these organic chemicals write to your nearest Union Carbide India Office.

RESERVE BANK OF INDIA

Applications are invited for the following posts in the Bank:

(A) POSTS AND SCALES OF PAY

- (i) Banking Officers: Rs. 375-55-815 E.B. 55-925-60-1045
- (ii) Probationary Assistants: Rs. 250-25-450 E.B. 25-650.

Note:—Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) QUALIFICATIONS:

(i) Banking Officers:

- (a) Applicants should have a minimum of five years' commercial banking experience out of which not less than three years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy, or
- (b) They should be Chartered Accountants with a minimum standing of 5 years.

Preference will be given to those who have passed the examinations of the English or Indian Institute of Bankers.

(ii) *Probationary Assistants:* Applications should have a good academic record and a first or high second class Master's degree of a recognised Indian or foreign University with Economics, Banking, Commerce or Accountancy as a special subject and should also have some proficiency in drafting. Educational qualifications may be slightly relaxed in the case of candidates who have passed the Institute of Bankers' examinations and/or possess practical banking experience in a supervisory capacity in a commercial bank.

Candidates who have applied for these posts in response to previous advertisements issued in 1960 need not apply again.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) AGE LIMITS AS ON 1st JULY 1961:

(i) *Banking Officers:* Candidates should not ordinarily be over 35 years of age, but the age limit may be slightly relaxed in the case of candidates with exceptionally good experience of value to the Bank.

(ii) *Probationary Assistants:* Between 21 and 25 years.

In the case of (ii) the maximum age limit is relaxable, but not beyond 30 years in the case of:

- (i) candidates possessing special qualifications and experience of value to the Bank;
- (ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;
- (iii) personnel retrenched from Government offices after at least one year's service applying through Employment Exchange, and
- (iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate applications fees and should clearly indicate the post for which they have applied.

3. Applications for the posts of Banking Officers and Probationary Assistants must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a Scheduled Bank payable at Bombay or by Postal Order. The application fee is in no case refundable. Bonafide refugee candidates not in employment applying through Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate degree examinations and two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before 22nd July, 1961.

5. Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so with what result.

6. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected, at the time of their appointment in the Bank's service.

7. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

8. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post-Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing will be regarded as a disqualification.

will be rejected unless the fabrication is to be done by the packer himself. Mr Mahindra has made it clear that the provision for allowing packers to create additional and new capacity will not serve the purpose of development in the container industry for the reason that the packers would hardly be in a position to instal the requisite machinery. The development of the industry would involve the installation of complex and specialised machinery, and it is doubtful whether the granting of licences to the packers will ensure its development on the specialist lines. Mr Mahindra has pointed to the example of Japan where the container industry has established itself as a flourishing business able to meet that country's entire requirements. The exacting standards of world export trade are a special consideration which has to be taken into account in any decision in respect of developing the container industry as a specialist business. It has been proved that high quality is achievable only by the use of complex and mechanised methods. But the introduction of such methods will be hardly advantageous if production is to be dispersed in too many units which would only result in needless diseconomies and higher costs of production. In the light of the above, Mr Mahindra's plea for the revision of the Government's licensing policy with reference to the container industry gains considerable validity.

As the leading firm engaged in the manufacture of packing materials. The Metal Box Company of India occupies an important position. The expansion in business turnover and exports reported by Mr Mahindra can, for this reason, be considered gratifying. There was a rise in sales from Rs. 8.30 lakhs to Rs. 9.70 lakhs which is of the order of 17 per cent. Mr Mahindra has taken credit for considerable achievement in respect of extension of the range of products of the company and especially of plastics, introduction of new products, and improvement of manufacturing methods and designs. But there is cause for concern in the outlook for the coming year in view of the adverse developments in respect of availability of the important raw materials. Supply of tinplate is considered to be a source of anxiety in view of the planned closure of their billet mill by the Tatas and the expected delay in the commissioning of the production capacity for tinplates at the Rourkela Steel Works. Uncertainty also envelops the outlook for the supply of deep drawn mild steel. Mr Mahindra has stressed the need for ensuring sufficient supplies from DLF credit or through barter basis.

RUBBER

Expanding

The past few years have been a period of expansion for the rubber manufacturing industry as they have been for a large number of other industries. Considering that transport plays a vital role in the planned development of the country, it is not surprising that the

around development of the rubber manufacturing industry is getting all the attention it needs. Quite a few units have been formed recent months and the tremendous support to some of the new units in this category from investors is an indication of the sizable unsatisfied present and potential demand for rubber products in the country. It is gratifying that Government have taken good care that the several new units that will start production in coming years are not starved of raw materials. It is estimated that the demand for rubber is likely to go up to 93,800 tons by 1965-6. The present aggregate consumption of rubber in the country is 56,200 tons but indigenous production of natural rubber is no more than 24,794 tons. The deficit is now being met from imports. During the period of Third Plan it is proposed to increase sizably the total availability of rubber by increasing the production of natural rubber to 40,000 tons and producing synthetic rubber to the extent of 50,000 tons. It is also proposed to obtain something like 15,000 tons as reclaimed rubber.

A significant feature in the development of the rubber industry in recent years is that it has already found a place on the export list. Rubber manufactures of Indian origin have increased the export earnings to Rs. 50.6 lakhs in 1960 from Rs. 40.1 lakhs during the previous year. Mr K. Mookerjee, Chairman of the National Rubber Manufacturers Ltd thinks that with real export incentives in the form of reasonable tax relief on export earnings and quick refund of excise and customs duty on exported commodities and imported materials used in the production of the export commodities, greatly improved results can be obtained.

The industry is somewhat handicapped by the rising trend of raw material costs. It is feared that the increase in customs duty made effective in the last Budget coupled with the enhancement of cost on raw rubber will further increase the cost of production in the current year. Mr Mookerjee has done well to draw attention to the continued neglect of an important aspect of the industry. As he has pointed out, there can possibly be no complaint as regards effort toward making the country self-sufficient in rubber and other raw materials needed for the indigenous rubber manufacturing industry. But what about the plant and machinery estimated cost about Rs. 20 crores that will be required by the industry? The arrangement so far seems to have been made for the indigenous production of rubber machine. Probably it is not considered worth while to attempt to produce the machines locally at the present juncture. Be that as it may, a beginning may be made with the manufacture of some of the common types of machinery required by the industry.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

"THE censors are paid to have dirty minds." In a controversy last year, this statement was attributed (wrongly, as it turned out) to an official of the British Board of Film Censors defending censorship. But avowed or not, this does not appear to be an unfair definition of an official censor's tasks. Some of us may prefer to be allowed to do our own spiritual scavenging: but that perhaps is an extreme stand and I am realistic enough to concede that a film censor performs an unpleasant but necessary duty. (This, incidentally, disposes of the red herring that the President drew across the trail the other day in Bombay.) But even if the case for socialising spiritual conservancy is granted, one has a right to expect it to function intelligently. As it is, the Central Board of Film Censors resembles nothing so much as the Calcutta Corporation: it continually surprises me as much by what it leaves about as by what it puts out of sight. Week after week, tawdry sex, wrapped in diaphanous respectability that deceives none is vended all over the country with the Board's leave and some of it to little children. And yet a film like *Ashes and Diamonds*, which has won wide critical acclaim is to be prevented from being shown during the forthcoming Polish film festival. The alleged reason for this confirms our worst fears about the mind the Board brings to bear on these questions. It seems that the censors' objection to the film is that some of the characters in it have unconventional views about extra-marital relations. The objection is not, as you see, the hoary one of obscenity with "its tendency to corrupt and deprave the minds open to such influences." The Hicklin test which a Bombay Magistrate invoked the other day to keep us uncorrupted by Constance Chatterley's odd notions on marriage—not to mention Mellor's language—is nowhere in the picture. It is just that the film censors seem to think that characters in a film ought to behave in a particular way and if they don't, the film ought not to be seen, even by adults with (since this is an exhibition film) serious interest in film. If unconventional notions about marriage were decisive, it is difficult to see

how the Board passed Anna Karenina and Madame Bovary. One is tempted to say that it was because they—the films, I mean—were artistically nowhere near *Ashes and Diamonds*. But the silliest part of the whole business is that marital morals, proper or improper, are not the central theme of the film at all. The film is really about the gnawing doubts of an once-ardent communist in the troubled times of post-war Poland and how he paid for them with his life in circumstances that have become symbolic of our tormented times. Surely, the censors must have looked pretty hard for locating subversion of the moral basis of marriage in a film whose central preoccupation was so far removed from it. My complaint is not that censors are old-fashioned. It is the far more serious one of moral insensitiveness. It is not the dirty mind I mind. It is the frivolous mind that gets my goat.

★

If the reports appearing in the press are correct, the UPSC has taken an odd decision and an odder moment to announce it. As from 1963, candidates for competitive examinations held by the UPSC are to be permitted to use Hindi as an alternative medium. First, regarding the timing of the announcement: surely, the UPSC cannot be unaware that quarrels over languages, simmering for a long time, have recently come to a boil in various parts of the country. Everyone is worried about the progressive estrangement between neighbours who lived in amity all these days. And it is such a moment that the UPSC chooses to rouse other linguistic (at the moment) sleeping dogs. And as for the merits of the idea, it is difficult to be moderate about a move which has such immense potentialities for mischief. The non-Hindi speaking parts of India have never been free from the most lively anxiety about the devious ways in which Hindi was being accorded a special position. Whenever a more than usually blatant example comes to public notice, assurances are given at the highest level to the effect that the interests of the other linguistic groups are perfectly safe. But in practice, these assurances are

being quietly flouted. What precisely are the implications of the right to use Hindi as a medium by a section of the candidates for government posts? It is, first, that the Hindi-speaking people have a choice that others don't have. This is wrong in principle. Secondly, the answer-books written in Hindi can be examined only by a man who knows the language. It is difficult to resist misgivings about the rigour of standards likely to be applied by him, especially when the atmosphere is charged with linguistic chauvinism. Thirdly, there is bound to be an inescapable difference in the standards likely to be applied to a candidate answering in English and a candidate answering in Hindi. This difference will be there even if my earlier fears about the examiners' impartiality were unfounded. The fact is—and it is a fact that all impartial observers have testified to—the degree of precision and felicity of expression intrinsically possible in Hindi is far less than in English. At any rate that is so at the present state of development of the two languages. The paradoxical consequence of this is that the intellectual deficiency of a candidate stands out far more glaringly when he expresses himself in English than when he does so in Hindi. And such exposure of relative native endowment or the lack of it has nothing to do with the mastery over either the language or the subject of the two hypothetical candidates we are comparing. It is therefore quite likely that a man who is obviously the better of the two may fail to be adjudged as such, if he answered in English and his rival in Hindi. In any event, there is scope for complaint about double standards, intrinsic or extrinsic. Moreover such forcing of the pace of making Hindi the principal official language as is implied by the UPSC decision is also against the spirit, if not the letter, of assurances recently given by the Prime Minister and the late Mr Pant. I think the UPSC will be well advised to have second thoughts on the subject.

★

How fast can you read? However fast, I am sure you feel that it is not fast enough to keep you ahead of the flood that threatens to overwhelm you. It isn't the bad writing I am thinking of: I am not indulging in the familiar highbrow game of nagging Ella Wheeler Wilcox and Ruby M. Ayres. The quantity of good writing that awaits your pleasure and leisure or "what the well-read man's library ought not to be without" is appalling. Americans have buckled down to tackling

this problem, as they have, in their time, to tackling others. (It was Adlai Stevenson, I think, who once said that Americans believe that, given brains, brawn and plenty of red corpuscles, there is nothing that you cannot lick.) Newsweek reports that a Mrs. Evelyn Neilsen Wood has set up in Washington what she calls a Reading Dynamics Institute. I have heard about such institutions before—Mr James Cowley wrote some two years ago in the Statesman about some British attempts. But the claims made on behalf of the RDI are, if true, breath-taking. One Senator reportedly claims that after twelve two-and-a-half-hour sessions at the RDI he is able to read at the rate of 20,000 words per minute. Another Senator's score is 7,000 words per minute and Mrs Gilpatric, wife of the Under Secretary of Defence is reported to have said that she read through Dr Zhivago (710 pages in the American edition) in twenty minutes. President Kennedy himself is more modest with a reported claim of 1,200 words per minute in consequence of a short course in fast reading he took in Baltimore. Some of the more extravagant claims may put off many from trying out methods of speeding up their reading. But I must say that Mrs Wood is very persuasive. In her own words. "We first show students how to use their hands to help guide their eyes quickly down the page. Then we try to show them how to see the printed page as a whole, not in a series of single words, sentences or even paragraphs." She also says that we must not "sub-vocalise" what we read. By this expression she means the unconscious hangover we carry from our nursery days when we were taught to read aloud. In other words, most of us still read by the ear and once "we stop listening in our minds to what we are reading, our eyes can move along the printed page much more quickly than we ever thought possible." I am sure there is a lot of sense in all this. Bernard Shaw once said of Sidney Webb that while in Holland, Webb just kept on idly turning over the pages of a Railway time-table. And days later, he was able to give correctly the timing of a train on an obscure branch line. This, of course, was meant as a tribute to Sidney Webb's enormously retentive memory, but I suppose the two skills of fast reading and long retention are complementary. There is hardly any point in reading so fast that you cannot retain even a part of it. The champion Senator who claimed to have gobbled up 20,000 words a minute is reported to have naively admitted to remembering nothing except the title of the book he read so fast. He might as well have saved himself the trouble and expense of taking the course if this was all there was to it at the end of it.

EAVESDROPPER

Olympus

Outlay on Industry and Minerals

AN increase in the total outlay on public sector projects, and greater emphasis on programmes of import saving, are, it is learnt, among the principal features of the Plan for industry and Minerals as it has been incorporated in the final draft report. A total outlay of Rs 2,500 crores on industrial and mineral programmes—Rs 1,500 in the public sector and Rs 1,000 crores in the private sector—was indicated in the Draft Outline. The figure for the private sector did not include the expenditure on meeting arrears of replacement and modernising in certain old-established industries, estimated at about Rs 150—200 crores or the figure of Rs 50 crores transferable to private enterprise through institutional agencies and included in the provision for industries in the public sector. The total private sector outlay, therefore, was expected to be about Rs 1,200 crores. The final Plan estimates, it is learnt, have provided for a total outlay of Rs 1,528 crores on programmes in the public sector. This marks a small increase of Rs 26 crores over the level of outlay envisaged in the Draft Outline. There is practically no change in the estimate of total outlay by the private sector.

With this order of investment, industrial production is expected to increase by about 70 per cent during the Third Plan period. The Index of Industrial Production (base year—1950-51) is expected to be 342 in 1965-66 as compared with 195 in 1960-61 and 139 in the last year of the First Five Year Plan. The share of the public sector in organised industry is also expected to increase from less than 10 per cent at the end of the Second Plan to 25 per cent by 1965-66.

No changes, it is learnt, have been made in the objectives or

priorities of the plan for industries and minerals, as set forth in the Draft Outline. The main emphasis will be on the development of capital and producer goods industries, with special attention to machine building industries. In this connexion it may be noted that manufacture of alloy and special tool steels has been accorded the highest priority in the Third Plan.

In the field of essential consumer goods industries, such as cloth, sugar, paper, oils, housing materials etc., the emphasis is on intensive utilisation of existing capacity rather than on creation of new capacity. In pursuance of this policy, the Government, it is learnt, has adopted a rule that in the existing conditions of shortage of foreign exchange, further development will not be encouraged in seven industries (of which five come under the category mentioned above) which are considered to have reached a stage at which they can be said to be well-established. The industries involved are: Cotton Textiles, Jute Textiles, Viscose Rayon Yarn and Staple Fibre, Cement, Paper Caustic Soda and Soda Ash. It is, however, learnt that exceptions to the rule may be made and licences may be granted for special reasons such as avoiding undue concentration of industries in a few hands.

In drawing up the programmes of development, special consideration has been given to the prospects of import saving. The trend of imports in recent years underlines the need for detailed examination of industrial programmes for their impact on future imports. The following table shows imports under different categories in recent years as percentages of total imports.

	1958	1959	1960
	(Jan/Oct)	%	%
Capital Goods	15	14	13
Industrial Goods	57	60	66
Consumer Goods	28	26	21

Industrial policy in the past was mainly directed to achieve reduction of imports of consumer

goods through development of indigenous manufactures. A large bill for imports of capital goods was regarded as inevitable till capacity for manufacture of industrial machinery and equipment was established in the country. Accordingly, machine building was emphasised in discussions on planning, strengthening the bias towards heavy industry. What was not foreseen, and provided for, was the magnitude of the increase in the import of industrial raw materials and intermediate products required for effective utilisation of the industrial capacity already established in the country. These imports now account for nearly two-thirds of total imports. It almost appears as if programmes of industrialisation, pushed through at great cost, have only resulted in confirming and aggravating the dependence on imports and at a time of grave shortage of free resources of foreign exchange to pay for such imports. A determined effort is, therefore, to be made in the Third Plan to halt, if not to reverse, this trend. It is expected that the dependence of important sectors of the economy such as Railways, Agriculture, Motor Transport, etc., on imported materials and equipment would be substantially reduced. Imports required for the maintenance of a number of industries are also expected to be reduced to a substantial extent.

There are no major changes in the distribution of the total outlay over different groups of industries, except in the case of metallurgical and engineering industries. The development programme for iron and steel included in the Draft Outline comprised expansion of the plants at Bhilai, Rourkela, Durgapur and Bhadravati and establishment of a new steel plant at Bokaro. The increased provision for industries in the public sector, it is surmised, is in respect of a new steel plant in the South based on Neiveli lignite, which has now been included in the Plan.

The five categories under which public sector projects were grouped in the Draft Outline have been reduced to three. These are:

- Projects under execution and carried over from the Second Plan;
- New projects for which external credits are already assured;
- New projects included in the Plan for which foreign credits have not yet been arranged.

The remaining two groups of Draft Outline, namely, "Projects on which preparatory work should continue with a view to decision in due course," and "Projects of a contingent nature," have been merged in item (c) above, that is, "Projects included in the Plan for which foreign credits have not been secured." This reflects the change in the approach to planning implied in the adoption of two sets of targets, physical and financial.

It is considered advisable to have a number of alternative projects ready for implementation as soon as foreign credit have been assured. Preliminary work will be undertaken on all the projects in the last category, and priorities will then be determined by the availability of foreign exchange.

Company promoters have been reminded by the Department of Company Law Administration, that they should devote some care to selection of the names under which they apply for registration. It has been observed, says the Department, that in a number of cases, promoters of new companies apply for registration of their companies under particular names after obtaining, in those names, licences under the Industries (Development and Registration) Act and consent orders for issue of capital from the Controller of Capital Issues. If for any reason the company cannot be registered under the proposed name, all the labour spent is wasted and the entire dreary procedure for obtaining Industries Act licence and consent from Controller of Capital Issues has to be completed once again under the new name. Company promoters are therefore advised that they might consult the Registrar of Companies beforehand.

Under section 20 of the Companies Act, a name cannot be allowed for registration, if it is identical with or resembles too nearly the name of a company already registered. Also tabooed, under the Emblems and Names (Prevention of Improper Use) Act, 1950, are the names suggestive of any connexion with Government or State patronage, or patronage of a national hero or any person held in high esteem and proper names which are not the surnames of directors.

Burmah-Shell Refineries Limited

Huge & Varied Increase in All Refined Products

Mr L. D. Mudie, Chairman, on Oil Demand

The following is the Statement by Mr. L. D. Mudie, Chairman, Burmah-Shell Refineries Ltd. at the Eighth Annual General Meeting held on 26th June, 1961.

Gentlemen:

The Directors' Report and Statement of Accounts for the year are before you. The crude oil intake of the Refinery was 366,035 metric tons more in 1960 than in 1959, with income from refining increasing from Rs 10.91 crores in 1959 to Rs 12.33 crores in 1960. As from 1st January, 1960, your Company ceased to benefit from the relief provided under Section 15(c) of the Income Tax Act and in consequence, has had to set aside Rs 2.61 crores for taxation on 1960 profits as compared with Rs 1.90 crores charged in the 1959 accounts.

An interim dividend of 15 p.p. per rupee was declared and paid in November 1960 on the paid-up ordinary share capital absorbing Rs 207.3 lakhs and the Board now recommend a final dividend of 5 p.p. per rupee which will absorb a further Rs 69.10 lakhs; Income Tax at 20% will be payable on these dividends.

I do not think further comments are required in respect of the details of our 1960 Statement of Accounts which are set out fully in the documents already circulated to you. I would now like to take this opportunity to give a few figures regarding the growth of Oil demand during the last five years under the dynamism of the Second Plan period and also project this picture into the Third Plan to see what contribution your Company has to make in this context.

In the process of the many-sided development through which the Indian economy has been passing, Oil has effectively played its part. Total inland oil consumption will have risen to about 7.8 million metric tons in 1961 from 4.9 million in 1956 a 59% increase during this period. The percentage rise in consumption has varied from product to product; thus, demand for High Speed Diesel Oil will have risen by 162%, while the demand for Furnace Oil will have gone up by 57%, that for Light Diesel Oil by 48%, Lubricants by 47% and Kerosine by 36%.

There appears to be much support for the view that we should provide for an annual compound growth rate of about 12% during the Third Plan period, as compared to the rate of 10%

experienced in the Second Plan. These projections will naturally require revision at regular intervals, but it is generally recognised that energy is an essential overhead of economic growth and the growing importance of oil in the Indian pattern of energy consumption has been well demonstrated during the last decade.

At the meeting of the Oil Advisory Committee held in May this year, a figure of 13.55 m. metric tons was agreed as the likely inland demand in 1966. Including the provision for international bunkers, total demand for refined petroleum products will be about 14.14 m. metric tons representing a crude oil equivalent of about 15.27 million metric tons. The Oil Advisory Committee will review their forecasts at regular intervals and experience may well show an upward revision is necessary. Your Company attaches much weight to these figures, for with such targets before us, the exchange of ideas and plans between the public and private sectors is greatly facilitated, thus leading, it is hoped, to an understanding that a full contribution from both sectors is essential, if the task ahead is to be completed in time.

While opinions may differ in regard to priorities, one incontrovertible fact emerges, namely that to meet a demand of the order of 15 m. metric tons of crude equivalent by the end of the Third Plan, investment on a large scale in all phases of the business is required not only now but as a recurring need into the long term future. The Oil Industry is highly capital intensive and experience has proved that to find, produce, refine and distribute to the consumer 1 million tons of Oil calls for a capital investment of approximately Rs 60 crores. It is apparent, therefore, that an increase in consumption by about 7 million tons over the Third Plan period calls for a capital investment of some Rs 400 crores if this increase alone is to be assured.

Investment is only one aspect of the problem. Equally important is the time factor; here, there are no short-cuts. There is no way of finding oil without drilling; the risk of failure is great and even successful ventures take many years and consume much money before the fruits of success in the form of commercial production of crude oil are ready to reach the consuming market.

From the moment of inspiration, to engineer, construct, staff, and

bring on full stream a new refinery, is the work of years.

The distribution of oil presents its own special problems in a country the size of India; here is a railway system doing a magnificent job but nevertheless unable always to cater for the full traffic. The road system is still in the development stage. An oil distribution network must therefore provide innumerable upcountry storage points to ensure the smooth flow of supplies throughout the country.

I am convinced that for prompt, effective action to meet these challenges there is need for a massive effort, attacking the problem from as broad a front as possible, and enlisting help from all who are willing to contribute, on terms which are reasonable and still in keeping with the avowed objectives of Indian economic development.

In his speech at this meeting last year the Chairman said that provided we were permitted to go ahead with our expansion proposal there might be room for further modification in the terms of the 1951 Refinery Agreement in addition to the Duty Protection which we had agreed to forego.

Arising from the above statement the Ministry of Steel, Mines & Fuel informed the Company that the question of revising the Refinery Agreement and a proposal to expand the capacity of the Refinery would have to be treated quite separately and that it would not be desirable to link them together. This letter was dated 14th September, 1960.

In February this year the Company received an official reply to its original proposal for the expansion but in this instance Government stated that they were unable to consider any proposal for the expansion of the refinery in terms of the 1951 Agreement. The letter went to state that, as the total refinery capacity likely to be available by the end of the Third Five Year Plan period would be about 10.75 m. metric tons and product demands at that date had been variously indicated as 10 to 14 m. metric tons per annum, Government had decided, subject to reconsideration in the light of a more accurate forecast of product demand by the Oil Advisory Committee, that further increase in refining capacity in the Private Sector was not considered necessary. As mentioned earlier, the Oil Advisory Committee has now estimated product demand in 1966,

including international bunkers, at about 14.14 m. metric tons.

Revised cost estimates, which have more recently been communicated to Government, show that the additional million tons of refining capacity will cost only Rs 2.83 crores, a fraction of the cost of constructing a new refinery of comparable capacity, and that the project to manufacture Lubricating Oil, now stepped up from 60,000 to 100,000 metric tons capacity per annum, will cost Rs 6.47 crores. The total cost of the two projects has therefore been reduced by Rs 2.28 crores and I would remind you that there will be no request to Government for foreign exchange, which will be provided from our own resources.

Despite the cool reception which these proposals have received so far I feel they are so sound and their acceptance is so much in the country's interest that we should be optimistic about the final outcome.

It will perhaps be useful again to refer to the sustained increase in Middle Distillate production and reduction in yield of Motor Spirit achieved by your Company between its commencement of operations and the year under review.

	1955	1960
Motor Spirit		
(% production on crude intake on weight basis)	.. 22	14.9
Middle Distillates		
(% production on crude intake on weight basis)	.. 33.5	45.1

Continued improvements in manufacturing techniques increased Crude throughput, as already stated, by 366,035 metric tons to a total of 2,843,010 metric tons in 1960, producing an additional 295,000 tons of essential Middle Distillates and only a marginal extra quantity of Motor Spirit. This represents a substantial contribution towards minimising the import of deficit products. To-day your Refinery is operating at a rate equivalent to an annual Crude intake of 3 million metric tons and this further achievement is in logical conformity with the concept of utilising the country's capital assets to the maximum—a cardinal principle in a capital hungry world.

While there will be a critical period of product imbalance with a considerable surplus of Motor

JUTE

Shortage of Jute

Although the jute and gunny markets are not displaying the wide fluctuations that were noticeable last week, the undertone continues to be steady. The factor mainly responsible for this is that the first instalment of the block closure of mills has commenced from Monday. This, the first of the two closures agreed upon between the Government and the industry, will last one week. The other closure is to be effected in the last week of next month. In the meantime, the IJMA will be closely watching the raw jute supply position. The agreement regarding the block closure has provided for such vigilance on the part of the IJMA and it is theoretically possible that the second closure may not come off at all if in the meantime the supply position of raw jute shows a substantial improvement. Of course no one expects such improvement. As a matter of fact, the general expectation is that there may be further deterioration in the supply position of raw jute. If the quantum of raw jute arrival during last month is any guide, it seems that there is very little jute left in the up-country centres. Arrivals so far this month have been quite meagre and it is not expected that total arrivals for the month will show any improvement over those of last month. On the contrary, indications are that arrivals have tended to be lower. Prospects of obtaining new crop jute early in the new season commencing next month from Pakistan are not held to be bright in view of the reported setback to the crop in that country due to two successive cyclones during the growing period and recent heavy rains in parts of the jute belt. Although small consignments of new crop jute of Indian origin have been received in the markets, bulk supplies, which only will be able to influence prices to any appreciable extent, are not expected for some weeks. That the IJMA is of the view that jute scarcity may be with the industry for another two months, if not more, is indicated by its reported approach to Government for sanction to extend the block closure for another period of one week in the month of August. It may perhaps be more difficult for the IJMA to make Government agree for a third closure than to the first two. Labour, it may be remembered, has not agreed to the closures on the plea that there is no real scarcity of raw jute. Of course, this contention cannot hold water since for months now, arrivals have been at a disappointing level. The report that the West Bengal Labour Minister has told the representatives of labour that next month's proposal

for a block closure cannot be considered inevitable is an indication of the difficulties in the way of a further block closure.

The outlook for the new crop continues to be rated quite bright even though there have been reports about some damage to the standing crop due to heavy rains in some regions. While a reliable assessment of the actual state of the crop will not be possible for some weeks to come, there is a consensus that supply will be plentiful from September onwards. The trend of prices for Assam Bottoms December futures is indicative of this general belief. It is too early to work out the total availability of jute next season; but it will perhaps be prudent not to anticipate too large an excess. In the first place, the new season will commence with little or no carry-over and adequate provision has to be made for ensuring a comfortable supply position when the 1962-63 season commences. Assurances have been given for a sizable import from Pakistan if the need arose, but these, when actually spelled out, may not mean much because of the unreliability of Pakistani policies.

But the foreign buyer is not worried about all these factors. He seems to have already made up his mind that he will enter the Indian market only when prices are further down substantially. Perhaps he can afford to wait because he has alternative sources for meeting his requirements of packaging materials. Another reason for the continued lack of foreign enquiries would appear to be that the foreign consumer is getting his requirements from Pakistan at a price lower than what he would have to pay if he had bought them from India.

TEA

Output and Outlook

PRODUCTION of tea in North-East India increased to 30.69 million pounds in May from 20.95 million pounds in the corresponding month of last year. According to estimates available in Cochin, production in South India is practically unchanged at 21.7 million pounds in May as compared to 21.9 million pounds in May 1960. In the same month, production in Pakistan rose to 4.2 million pounds from 700,000 pounds in May last year.

It looks as if the world production of tea is out-stripping consumption. The FAO has estimated that, by 1965, the world production of tea will touch 930,000 metric tons as against an estimated consumption of 880,000 tons. These estimates do not take into account the production of China. If these estimates are taken into account, as also other factors, then by 1965, the world will have a surplus of about 136,000 tons. This implies a serious problem for India.

At the annual meeting held on Monday this week, the President of the Tea Association of India suggested that consumption could not keep pace with the increase in production, resulting in an overall uncomfortable surplus. He added that the problem India would face in such circumstances could be tackled by expanding existing markets and by increasing home consumption.

He argued that the high cost of production and inadequate propaganda mainly accounted for the decline in India's tea exports. He said that, while the tea industry was exempted from various taxes by India's competitors, the burden of taxes on the industry in India was being gradually increased. He also added that, if the Indian tea industry was to achieve the various targets set for it in the Third Plan, then it should be assured of supplies in regard to its optimum requirement of fertilizers, good quality coal, financial assistance for replantation, allocation of additional land for extension of areas under plantation and freedom from the present onerous system of taxation. It is to be hoped that, in view of the importance of the tea industry, the authorities will pay their due attention to these matters.

Meanwhile, the Tea Board is organising in November this year an International Tea Convention—the first of its kind in Calcutta. A large number of foreign countries will be participating in the convention, which will provide an opportunity for Indian producers and exporters and their foreign counterparts to discuss the demand and supply of tea. World prospects for tea, tea research, the role of the State in promoting the Indian tea industry and the outlook for tea in the UK, USA and the USSR will be some of the subjects that will be discussed at the convention.

In the Export Sale held in Calcutta this week, offerings were 23,605 packages. There was a good general demand. Darjeelings with good quality were sold well at dearer

rates; but those from lower elevations were very irregular and generally easier with some withdrawal in this category. Prices for the plainer orthodox teas were generally firm to dearer, while the better descriptions met with good support at about valuations, the main interest being centred on Broken. Tippy teas were in demand and prices for these were generally dearer.

Teas of CTC manufacture were rather irregular with better liquoring sorts selling at rates which were dearer with quality. Medium and poorer kinds also were sold readily with Broken Pekoes generally fetching prices above their Fannings. Legg-cut descriptions met with a good enquiry and can be quoted firm to dearer. Whole Leaf grades were well supported and prices were dearer. Stylish BPSs were strong. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.10 to Rs 5.20; Plain BP Rs 4.70 to Rs 4.80 and Plain Fannings Rs 4.60 to 4.65.

In the Internal Sale, offerings consisted of 13,144 packages of Dusts of which 12,395 packages were of new season's manufacture. Demand was good and general. CTC descriptions were keenly competed for with the exportable and better liquoring types advancing in price. Green and thin liquoring teas were, however, a little easier.

Orthodox teas opened on an easier note; but strengthened as the sale progressed. At the close, they were fully firm to dearer with the brighter lines receiving better support. Legg-cut varieties, though a little irregular, met with useful enquiry. Brighter kinds were generally sold at firm to dearer rates. The poorer descriptions, however, tended to be up to 10 nP per kilo easier. Darjeeling teas met with good support and more flavoury types were sold at dearer rates. Following rates were quoted: Plain Orthodox Dust Rs 4.20 to Rs 4.35; Medium Assam Dust Rs 4.50 to Rs 5.00 (nominal); Legg-cut Dust Rs 4.45 to Rs 4.90; Medium Assam CTC Dust Rs 5.70 to Rs 6.20 and Good Assam CTC Dust Rs 6.30 to Rs 7.00. A total of 152 packages of Leaf grades was offered for internal consumption. There was a good general demand and the teas were readily absorbed.

At the auction held at Ernakulam this week, offerings were 744,000 kilograms of Leaf tea for export. Against a good general demand, plain and low medium broken were fully firm and occasionally dearer by 5 nP a kilo, while similar Fannings were barely steady. Medium and good medium sorts were steady. Nilgiri teas were irregular and easy.

In the Colombo market, offerings were 7,170,778 pounds. There was a good general demand. A few best liquoring Dimbula/Dikoya Broken were in strong demand at firm rates; but other kinds were generally easier. There was good demand for medium broken at around firm rates for plainer sorts; but better kinds were about 5 to 8 cents per pound lower. Low-grown teas were in strong demand at firm to dearer.

The quality of tea on offer at the London tea sales continues to be small and will remain so until the

1 July 1961

new North Indian crop starts arriving in sizable amounts. Interest at the auctions has, therefore, been on a rather small scale and with quality lower in some instances, prices have tended to decline.

Tea stocks in London, as on 16 June, were 131.61 million pounds as against 135.84 million pounds in the previous week. Total afloat was 21.51 million pounds including from Calcutta 3.46 million pounds from Chittagong nil; from Cochin 6.35 million pounds; from Ceylon 9.68 million pounds and from Jother Ports 2.02 million pounds. The average price realised at the auction during the week ended 16 June was 49.38d per pound as against 50.97d in the previous week and 46.85d in the corresponding period of last year.

COTTON

Steady Conditions in Cotton Market

The cotton futures market in Bombay depicted steady conditions during the past week. Prices of Jarilla August contract moved both ways in as wide a range as nearly 12 points between Rs 587 and Rs 575.25 due to alternative spells of bull liquidation and short term covering and renewed support. The market suffered a sharp drop in the early part of the week due to sustained bull liquidation. Prices, however, staged a partial recovery following the announcement made by the Textile Commissioner to appoint a technical committee to determine fair price and to assist the purchase and sale of the accumulated stocks in Gujarat. Enthusiasm was also fanned by renewed cheers from the principal spot markets in the country. Jarilla August contract attracted fresh bull support at lower level and staged a smart rally toward the close of the week.

Activity in the spot market for the large part of the week was fairly brisk. However, this had no appreciable effect on prices during the week under review. Mill showed keen interest in Vijay, Digvijay, Laxmi, L 147 and CO 2. Upcountry markets also displayed cheerful conditions. However, toward the close of the week the market received a slight set back following the reports that the Government of India was purchasing the stocks left with the cooperative societies in Gujarat only at floor prices. According to the reports the accumulation of cotton with the societies is slowly dwindling and it is estimated approximately at 65,000 bales as against nearly 0.18 million a few weeks ago.

In the import section good demand was visible for African and Sudan growths. Throughout the week interest in American short staple cotton was well maintained. Many of the mills were prepared to purchase large quantum of Sudan, Egyptian, American, African and Syrian cotton due to the growing scarcity of higher grade CO 2.

No fresh development was reported in the export section. Shippers were disappointed at the silence of the

Government of India on the release of export quotas.

The UAR Government's decision to nationalise cotton trade in Egypt created grave concern in the Indian cotton market. Consequently business in the Egyptian growths came to a standstill for a period as traders were reluctant to deal with the Egyptian style without fully understanding the real implications of the latest development. Meanwhile reports that emanated from Alexandria indicated that the Egyptian Cotton Commission would in the immediate future fix prices for the current and new season's crop. Speculations about the effect of nationalisation of cotton trade in the UAR were strife in the trade circles here. A section of the trade confidently feels that after the nationalisation India would get Egyptian cotton even at lower rates. If such a turn takes shape Sudan will also be compelled to reduce the prices of cotton exported from that destination.

Consumption of cotton by the Indian mills from 1 September to 31 March, according to the statistics of the East India Cotton Association Limited, amounted to 3,054,643 bales as against 3,009,363 bales in the corresponding period last season.

Description	1959-60.	1960-61.
Indian	2,706,820	2,353,896
Pakistan	3,963	16,276

USA	7,238	5,256
Other Countries	1,258	335
Total	165,586	215,602

Piecegoods:

The cotton piecegoods market in Bombay during the period under review depicted better conditions. The market was bustling with activity thanks mainly to the renewed

demand for many of the varieties from the upcountry centres to cover their immediate requirements. Overseas traders also evinced keen interest in the usual varieties. The turnover, however, failed to reach up to the expectations.

In the domestic sector Andhra, UP, Kerala and Delhi figured as prominent consuming centres. The demand from Malabar flowed on an encouraging level presumably due to the approach of the festival season. Business with other centres were done on a limited scale and that too was confined to longcloth, shirtings, drills, prints and dhoties. Forward deals turned out to be comparatively insignificant.

The undertone was rather easy and no appreciable change in prices was noted. It was reported that some mills disposed of their stock even at low rates.

Export front, after the lapse of a pretty long time, showed signs of liveliness and the demand showed an uptrend. The UK accounted for a small quantum of grey cloth. The question of issuing licences for export was taken by the meeting convened under the auspices of the Cotton Textile Export Promotion Council during the past week. No decision has been arrived at so far regarding the policy to be followed in future.

Singapore was satisfied with a small quantity of bleached long-cloth and mulls. East Africa accounted for a limited quantum of sheetings. All other destinations for all practical purposes remained inactive.

Boom In Tin

Tin has been witnessing violent upward fluctuations in prices during the past few weeks. On the London Metal Exchange, the spot rate has already pierced the ceiling of £880 per ton, fixed by the International Tin Council. At one stage, the rate touched £920; and the Buffer Stock Manager of the Council was forced to sell the metal from the stock to prevent prices going any higher.

It is stated that, in the course of only a few weeks, the Council has disposed of something like 10,000 tons of tin; but has still failed to satisfy the buyers. Where the present boom in the metal will stop is, therefore, anybody's guess.

In the Singapore market, the price of tin jumped up by 13.50 dollars to 480 dollars (Malayan per picul of 133 pounds), as Malayan minders expressed concern over the present shortage of the metal in the market.

According to a brief statement issued by the Malayan Tin Industry, the present tin shortage is creating a situation imperilling a reliable supply. The world boom in tin has naturally placed the Bombay market in a precarious position. Though, of course the market has not moved up as much as Singapore, still the rise has been quite impressive. The market authorities were, therefore, obliged to effect another special clearing in the June contract. As things stand at present, the July contract will attract margin on purchases from the very start unless its limits are revised.

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Fifteenth Annual General Meeting of the members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on 26th July, 1961, at 3 p.m. for the following purposes:—

- To consider the Profit & Loss Account for the year ended 31st December, 1960, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
- To declare a Dividend on the Ordinary Shares.
- To appoint Auditors and to fix their remuneration.
- To elect Directors in the places of two Directors retiring.
- AS A SPECIAL BUSINESS to consider and if thought fit to pass with or without modification the following two Resolutions, of which two Notices have been received by the Company from a Member under Section 257 of the Companies Act, 1956, which will be proposed as ordinary resolutions:
 - "That Mr. C. M. A. Bathurst be and is hereby appointed a Director of the Company"
 - "That Mr. J. L. Capper be and is hereby appointed a Director of the Company"

EXPLANATORY STATEMENT:

With regard to Item No. 5 above it is pointed out that Messrs. C. M. A. Bathurst and J. L. Capper were appointed as additional Directors. In terms of Section 260 of the Companies Act, 1956, they now vacate their offices and in view of their vast experience of the affairs of the Company, your Directors recommend the adoption of the resolutions in the best interest of the Company.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 17th July to 26th July 1961, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
D. A. HOUGHTON
Calcutta Director and Secretary

4, Bankshall Street, Calcutta.
Dated 26th June, 1961.

The price of Copper, after slipping down to £230, has recovered to £236 a ton. This improvement is due to improved offtake in New York where dealers are reported to be worried about the repercussions on copper supplies due to the political unrest in Rhodesia and the Congo. In the Bombay market, conditions have remained dull with Conductors quoting Rs 303 and Brass Sheets at Rs 518 in the absence of demand.

In the London market, Lead and Zinc have shown only minor changes at around £64 and £78 a ton respectively. In Bombay, Lead does not appear to have shown any apparent reaction in comparison to copper. Zinc is ruling steady at Rs 154 per 100 kgs.

SUGAR

Conditions in the Sugar markets have remained generally steady. Export prospects to the USA, Pakistan and other Middle Asian countries have influenced sentiment. In the Hapur market, the rate for the commodity is quoted around Rs 107.25 per bag.

According to the figures released by the Indian Sugar Mills Association, production of sugar, till the end of May, was 2,906,000 lakh tons as against 2,399,000 tons in the corresponding period of last season. Total despatches, including despatches for exports, up to 31 May, 1961, were 1,234,000 tons as against 1,130,000 tons by the same date last year. The closing stock, as on 31 May, 1961, was 2,213,000 tons as against 1,411,000 tons on the same date last year.

India's offering of 10,000 tons of refined sugar to the US market has been indefinitely postponed as technical details have not yet been finalised. The dealers in New York state that the Indian Government has not yet determined the "subsidy" to be paid to Indian mills on the sale, and that no agreement has been reached with labour and shipping interests regarding bulk loading of the commodity in Calcutta. When finalised, this will be India's first sugar sale in the American market against a 225,000-ton allotment in the recent reallocation of the Cuban quota.

CLOVES

The Government decision to allocate an import quota for betel-nuts and spices to the State Trading Corporation for the current licensing period has resulted in a sharp fall in the prices of Cloves and Cinnamons. Prices of Cloves have slumped from Rs 410 to Rs 375 and those of Cinnamon from Rs 350 to Rs 325 per 10 kgs.

Although the possibility of the STC's entry into the import trade in spices was rated high recently, the actual decision has induced dealers to unload supplies in view of the announcement that the total imports by the trade and the Corporation will be maintained at the previous period's levels.

GOLD & SILVER

After an easy start, bullion prices in the Bombay market reacted to

record lower levels following the commencement of trading in quarterly contracts, viz, Bhadrabad delivery. The trade was also given some relief in the matter of free trading limits in both gold and silver.

With the introduction of the three monthly contract in bullion from 26 June, the FMC has relaxed the special margins payable by "longs" in respect of both the metals. The rates of margins payable in respect of gold and silver are Rs 20 per 10 grams and Rs 300 per bar of 10 kgs whenever their prices rule above Rs 115 and Rs 195 respectively. The margin is payable on an "export basis", i.e. on the net open position held by the member on his own account including the appropriated business of the clients and on account of the long open position held on account of each of his constituents.

The free limits given to the members have also been liberalised. In respect of gold, every member is given a free limit of 60 kgs and it can be availed of by those members who held an open position up to 90 kgs. Similarly, in the case of silver, the liberalised free limit is 320 bars which can be availed of by an operator holding an open position up to 480 bars. A section of the trade believes that the bullion trade will not, in future, face quick, wide and irregular price movements. Normal forces of demand and supply will decide the prices.

Meanwhile, Gold receipts totalled 6,000 tolas as against an offtake of only 4,000 tolas. Silver arrivals amounted to 40 bars against an offtake of only 10 bars. Silver ready (below 996) changed hands at Rs 202.40 and Rs 203.25 and Gold ready at Rs 120.50 to Rs 120.95. Sovereign ruled quiet at Rs 94.50.

OILS & OILSEEDS

The commencement of monsoon in Western India had a bearish impact on the prices of oils and oilseeds. Favourable weather reports from Khandesh, Karnataka, Andhra and Saurashtra induced some bull unloading, resulting in an easier tendency in prices.

In the Castorseed section, trading was quiet in the absence of demand from overseas buyers for castor oil. Ready was quoted at Rs 35.87 and Castor oil, commercial quality, at Rs 15.10.

Linseed, however, attracted a good deal of speculative attention with the operators from Uttar Pradesh and Calcutta shaping the market. Although the start of the monsoon and lower North Indian advices regarding rapeseed imparted an easy tone early in the week, it was proved shortlived due to renewed speculative support. Linseed ready was quoted at Rs 40.15 and Linseed Oil at Rs 17.25.

Reports of rains in the producing areas tended to reduce the pressure on the available supply of Groundnut and Groundnut Oil. Vanaspathi manufacturers and crushers were in

the market for their immediate requirements and the inflow was relatively limited. Groundnut ready Bold was quoted at Rs 55.50 and Groundnut Oil at Rs 23.05.

In the Calcutta market, the price of Linseed hardened further to Rs 30 a maund for ready delivery on reports of a decline in arrivals from upcountry centres. The price of oil

has also increased; but there is virtually no business in view of small stocks. Although there is little activity in the Oilcake market, prospects for foreign enquiries are considered to be encouraging. Prices are relieved to have increased in foreign centres. The local market, therefore, expects foreign buyers to enter the market shortly.

BURN AND COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the sixty-seventh Ordinary General Meeting) of the Company will be held on Friday, the 28th July, 1961, at 11 a.m. at the Registered Office, 12 Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the audited accounts for the year ended 30th April, 1961, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend on the ordinary shares. The dividend, if declared, will be paid on or after the 7th August, 1961, to the Shareholders whose names are on the Company's Register on the 28th July, 1961, or to their mandatees.
3. To appoint a Director in place of the retiring Director, Mr. T. C. Hornby.
4. To appoint auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass the following resolutions as Special Resolutions.

5. Special Resolution No. 1. That Article 114 be deleted and the following substituted therefor.

"114. Unless otherwise determined by the Company in general meeting each Director shall receive the sum of Rs. 250/- for every meeting of the Board of Directors attended by him. The Board of Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Board of Directors may be held and who shall come to that place for the purpose of attending such meeting such sum as the Board of Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his remuneration as specified above."

6. Special Resolution No. 2. That subject to the approval of the Central Government pursuant to Section 360 of the Companies Act, 1956, the Company do hereby approve of a contract between the

Company of the one part and Mr. Sitendu Gupta, an associate of Martin Burn Limited, the Managing Agents of the Company, within the meaning of the Companies Act, 1956, of the other part the material terms of which are:

- (a) Mr. Sitendu Gupta, who is an Assistant of the Company, at Howrah Works, shall continue to be such assistant for a period of five years with effect from the 1st December, 1960; during this period he shall enjoy the same privileges, amenities and perquisites and be subject to the same liabilities and obligations as are applicable to other assistants of the Company in the same grade of employment and with the same status.
- (b) Mr. Sitendu Gupta's basic monthly salary will be on the scale Rs. 900-1000-1100-1200-1300 during the first and successive years of service, plus dearness allowance at the rate allowable under the Company's rules from time to time, medical expenses and, at the discretion of the Company, an annual bonus.

He will be entitled to two months leave on full pay and will be paid return railway fares for himself and his wife after completing the second and fourth year of his contract of service.

The Ordinary Share Register of the Company will be closed from the 20th July, 1961 to the 28th July, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board
MARTIN BURN LIMITED
S. GUPTA
Managing Director
Managing Agents

Calcutta,
1st July, 1961

An Explanatory Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

Company Reports

Larsen & Toubro Fares Well

THANKS to the rise in earnings, Larsen & Toubro Limited has announced satisfactory results for the year ended 31 March, 1961. While the total sales invoiced by the company have risen from Rs 3.20 crores to Rs 3.51 crores, the gross profit has gone up from Rs 49.04 lakhs to Rs 55.53 lakhs, and the income from commission, compensation, engineering fees and other sources from Rs 17.17 lakhs to Rs 19.48 lakhs.

Allocations include Rs 11.51 lakhs for Depreciation (Rs 7.09 lakhs); Rs 4.81 lakhs for Development Rebate (Rs 4.56 lakhs); Rs 3.77 lakhs for managing agents' commission (Rs 4.17 lakhs) and Rs 17.40 lakhs for Taxation (Rs 16 lakhs). Allocations to Dividend Equalisation Reserve and General Reserve have been maintained at Rs 1 lakh and Rs 2.50 lakhs respectively. A sum of Rs 1.27 lakhs has been transferred from the provision for taxes (Rs 1.02 lakhs). The directors have proposed to maintain the dividend at Rs 1.80 per share, subject to deduction of tax.

The directors state that the Powai workshops of the company worked satisfactorily during the year, turning out an increasing volume of high quality engineering goods complementary to the company's imports from overseas suppliers. The production of equipment for dairies, refrigeration plant, food processing plant and chemical plant, is further developed. The manufacturing units for electrical switchgear, motor starters and petrol dispensing pumps have gone into regular production and are operating satisfactorily. The directors consider that the future prospects of the company and its subsidiaries are sound and promising.

Production Maintained by Ahmedabad Advance

The working of the Ahmedabad Mills Limited, for the period from 1 July to 31 July, 1960, has resulted in a profit of Rs 9.39 lakhs after providing Rs 21.645 for managing agents' commission, Rs 48.651 for secretaries and treasurers' commission, Rs 3.82 lakhs for Depreciation and Rs 1.00 lakh for Development Reserve. The company earned a profit of Rs 11.01 lakhs for the year ended 30 June, 1960. The directors have recommended a dividend of Rs 6 per share, taxable for the period of six months ended 31 December, 1960. A dividend of Rs 10 per share, taxable, was declared for the full year ended 30 June, 1960.

Sales of cloth amount to Rs 1.30 crores as compared to Rs 2.81 crores during 1959-60. The allocation to the General Reserve No. 2 amounts to Rs 6.73 lakhs (Rs 9 lakhs) and a

sum of Rs 20,638 is transferred from General Reserve No. 1 for part payment of the proposed dividend against Rs 65,000.

The directors state that, compared to the previous year, the production during the period under report, was well maintained. New plant and machinery of the value of about Rs 5 lakhs was installed during the period.

More Profit for Svadeshi Mills

The Svadeshi Mills Company has produced encouraging results for 1960. The gross profit has gone up substantially from Rs 44.32 lakhs to Rs 67.65 lakhs. The dividend is proposed to be raised from Rs 14 to Rs 17 per share, subject to tax.

Sales of cloth have gone up from Rs 4.18 crores to Rs 4.30 crores and those from waste from Rs 8.70 lakhs to Rs 10.69 lakhs.

Allocations include Rs 4.61 lakhs for managing agent's commission (Rs 2.70 lakhs); Rs 18.49 lakhs for Depreciation (Rs 15.31 lakhs); Rs 6 lakhs for Development Reserve (Rs 2.75 lakhs) and Rs 17.50 lakhs for Taxation (Rs 10.50 lakhs). The General Reserve No. 2 has been allotted Rs 2.84 lakhs against nil and the transfer from General Reserve No. 1 is nil against Rs 1.75 lakhs.

The directors state that the improved financial results are largely due to full utilisation of the company's productive capacity, better demand for cloth and higher realisation because of more diversification of production. New plant and machinery of the value of about Rs 31 lakhs were installed during 1960. At the end of the year, additional machinery of the value of about Rs 4 lakhs was awaiting installation. Since then, orders have been placed for machinery of the value of about Rs 6 lakhs.

Encouraging Results of Tata Mills

The Tata Mills Limited has reported encouraging results for 1960. The gross profit is more than doubled at Rs 44.21 lakhs against Rs 20.62 lakhs. Sales of cloth, yarn and waste have risen from Rs 3.85 crores to Rs 4.06 crores.

After providing Rs 2.38 lakhs for managing agents' remuneration (Rs 50,000); Rs 10.09 lakhs for Depreciation (Rs 12.61 lakhs) and Rs 7.25 lakhs for Development Rebate Reserve (Rs 6.50 lakhs), the net profit for the year has risen sharply from Rs 1.01 lakhs to Rs 24.49 lakhs. A sum of Rs 21.65 lakhs is provided for General Reserve No. 2 (Rs 1.01 lakhs). The directors have recom-

mended a dividend of Rs 5 per share, subject to tax, on the Ordinary shares.

During the year, new plant and machinery of the value of about Rs 38 lakhs was installed. At the end of the year, additional machinery of the value of Rs 7 lakhs was awaiting installation. Since then, orders have been placed for machinery of the value of Rs 10 lakhs.

During the year, the company applied to the Government for permission to instal 20,000 additional spindles to enable the mill to balance production facilities. Owing to the imbalance between spinning and weaving sections; the mills are unable to operate all the looms in the third shift. There has been no reply from the Government for these additional spindles.

Bombay Burmah Trading Pays More

The Bombay Burmah Trading Corporation has increased the interim dividend for the second year in succession. The directors have proposed an interim dividend of Rs 12 per fully paid share of Rs 125 each, subject to tax, for the year ended 31 May, 1961 as against Rs 11 per share, taxable, in the preceding year. They have declared an interim dividend of Rs 4.80 per partly share of Rs 50 each for 1960-61 against Rs 4.40 taxable, for the previous year and Rs 240 taxable in respect of 100 original shares of Rs 2,500 each against Rs 220, taxable, in the preceding year.

The increase in the interim dividend suggests that the company has fared well during the year and that the accounts for 1960-61 will reveal an increase in the profit.

Basmatia Tea to Issue Bonus Shares

The Basmatia Tea Company, Limited has decided to capitalise Rs 2.55 lakhs out of General Reserve to issue bonus shares in the ratio of one for every two shares held. In this connection, a meeting has been convened on 19 July to consider the necessary resolution.

Meanwhile, the accounts for 1960 reveal a slightly higher net profit of Rs 2.59 lakhs as against Rs 2.38 lakhs. Apart from maintaining General Reserve at Rs 70,000, Depreciation is raised to Rs 74,810 from Rs 55,300 and Taxation to Rs 1.63 lakhs from Rs 1.49 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 8,689 against Rs 12,087. The dividend is raised by 50 pP to Rs 3.50 per share, subject to tax.

Metal Box Maintains its Position

The Metal Box Company of India Limited has another satisfactory year with a rise in sales from Rs 8.45 crores to Rs 9.91 crores and in net profit, after providing for Depreciation and Taxation, from Rs 60.79 lakhs to Rs 64.74 lakhs for the year ended 31 March 1961. A substantial expansion in exports was achieved by the company following vigorous promotional efforts. Calcutta No. 2, a factory devoted to foreign exchange saving products, achieved an 85 per cent increase in turnover. For the rest of the business, the net increase was 8 per cent, reflecting the steadily growing demand for packaged goods.

In respect of allocations, General Reserve is maintained at Rs 15.00 lakhs, while the Depreciation amount is raised to Rs 16.10 lakhs from Rs 14.78 lakhs and Taxation to Rs 60 lakhs from Rs 51.00 lakhs. The provision for Development Rebate Reserve is slightly lower at Rs 3.00 lakhs against Rs 3.25 lakhs. The dividend is maintained at Rs 2.50 per share on the increased ordinary capital.

The directors state that the new factory at Faridabad commenced production in October; but its efficiency was seriously hampered by the shortage of power. In Bombay, there have been some extensions to the office and factory; but working conditions are still too crowded. At Calcutta No. 2 factory, there are proposals to increase the range of machines manufactured, thus saving valuable foreign exchange.

The directors add that, due to lack of foreign exchange and insufficiency of home production of tinplate, the company is unable to expand and diversify its production of containers using this metal as base. Until a really substantial expansion of production capacity is put into effect, the import bill for tinplate will be heavy, notwithstanding the considerable efforts being made to utilise alternative packaging materials.

Lower Profits for Calcutta Jute

The working of the Calcutta Jute Manufacturing Company, Limited, for 1960, has resulted in a lower profit of Rs 2.13 lakhs as against as much as Rs 4.89 lakhs for the preceding year, after providing Rs 1.12 lakhs for Depreciation (Rs 78,124). Sales of finished goods have risen from Rs 55.07 lakhs to Rs 58.23 lakhs, while the sale of loom-hours is placed at Rs 3.26 lakhs against Rs 2.20 lakhs. The Development Rebate Reserve claims Rs 79,200 against nil.

After taking into account the debit balance of Rs 1.47 lakhs brought forward and making sundry adjustments, a debit balance of Rs 38,936 is carried forward.

The directors state that machinery of the value of about Rs 4.48 lakhs was installed during the year.

will set up a plant near Anand, Gujarat, for the manufacture of sheet and wired glass. It is claimed that the company's project will be the first of its kind in the country to manufacture sheet and wired glass simultaneously. The company will be issuing a capital of Rs 72 lakhs in 72,000 ordinary shares of Rs 100 each. The directors and their friends will take up 27,745 shares and the ICIC will subscribe for 7,000 shares. The balance of the issue amounting to Rs 37.25 lakhs is now offered to the public.

Parrys Confectionery

Parrys Confectionery Limited has decided to issue 5,00,000 ordinary shares of Re 1 each at a premium of Re 1 per share, both to residents and non-residents. Latest date for splitting is 30 June, 1961. Latest date for acceptance, renunciation and registration is 15 July, 1961. Latest date for allotment is 31 July, 1961.

INVESTMENT NOTES TELCO

The Tata Engineering & Locomotive Company, Limited has been granted consent to the issue of 50,000—5 per cent per annum, Debentures of Rs 1,000 each, repayable on six months' notice on or after 1 October, 1970 at the option of the company, but not later than 30 September, 1975. The consent is valid for twelve months. The company will utilise the new issue for financing the schemes of expansion in the existing lines of manufactures.

Premier Fertilizers

At the first annual meeting held recently, the Chairman of Premier Fertilizers indicated that the contract for civil work had been finalised and that the actual execution of work would start in the next few days. It is stated that one shipment consisting of two instalments of machinery due has been despatched from Germany and the same may be received within the next few weeks. The indigenous items ordered are also getting ready. It is anticipated that the target set for commencement of production by next January can be adhered to.

Premier Automobiles

The Premier Automobiles Limited has announced that it has selected a site near Kalyan for its new factory. The construction work will be undertaken soon after the monsoon. With the addition of the Kalyan factory, the total production capacity of the company is expected to be raised to 15,000/20,000 Fiat cars and 15,000/18,000 Dodge and Fargo trucks per year. The new capacity will be almost three times the present annual production of the Kuria plant.

Alcock Ashdown

The Chairman of Alcock, Ashdown & Company, Limited has stated that the company is considering two or three firm proposals for the manufacture of suitable products in colla-

boration with well-known foreign companies. By the end of this year, the company will have concluded agreement for the production of one or more of the proposed items. The production may be undertaken either in Bombay or at Bhavnagar. The overall outlook for the current year is considered to be better than for 1960.

United Dyestuff

Recently, a well-known European company has expressed its desire to make available to the United Dyestuff Industries Limited the technical know-how for the manufacturing range of the company's dyes production and negotiations have been going on sometime. The Gujarat Government has passed orders to hand over the possession of the land to the company at Cambay. It is expected that the necessary formalities will be completed very shortly, so that the company's construction programme may start in the next few weeks. The company has further purchased a Diesel Generating set which will be erected at site as soon as the necessary buildings are ready, so the company's production programme may be implemented as soon as possible.

STOCK EXCHANGES Once Again Subdued

Watch-Dog Writes—

Sentiment in stock markets continues to remain subdued. Lack of any support coupled with renewed offerings has caused a further sharp setback in equity prices during the week under report. The main factor contributing to the sustained weakness of the market is the fear that the Government may announce shortly measures to curb excessive speculation.

Except for one or two scrips which tried to maintain their best levels, interest on the Calcutta Stock Exchange was generally at a low ebb.

On the Bombay Stock Exchange, operators turned cautious due to settlement considerations on Friday.

Due to lack of stimulating news, operators on the Madras Stock Exchange were keeping on the sidelines.

CALCUTTA

Calcutta, Friday Evening.

The week's trading in the local stock market was generally of a dull character. Although the market started on a promising note due to stray rumours that the Government would not bring any measure in the immediate future to check speculative activity, the support was of a halting nature. As the week progressed, there were again talks that the Stock Exchange Committee had been advised to maintain a careful watch on the activities of speculators and impose stricter margins whenever necessary.

With the result, operators turned extremely cautious in extending commitments and indulged in liquidating a part of their holdings, while the continued lack of support was

also there to stand in the way of any recovery in prices. Taking advantage of the situation, bears turned aggressive and hammered down the market. The only relieving feature of trading was, that there were some exceptions to the general trend. Apart from the miscellaneous group of shares which presented a comparatively steady front, even sections like tea and coal had each a handful of shares which emerged steadier ignoring the general dullness of the market.

The Giltedged market was dull with business on a very restricted scale. Demand for short-dated issues was well maintained; but scrip was in short supply and transactions were few. 3 per cent 1986 Conversion Loan, after opening at Rs 71.65, eased off towards the close to Rs 71.40.

Bank shares displayed a steadier tendency. Punjab National were enquired up to Rs 22.75 from Rs 22.62, while United Commercial remained firm at Rs 91.

After a long interval, Jute shares attracted scattered interest. Anglo-India were enquired up to Rs 187 from Rs 185; Howrah up to Rs 20.50 from Rs 20.44 and New Central up to Rs 19.50 from Rs 19.37. Birlap, after being done up to Rs 27.62, eased off at the close to Rs 27.37 due to profit-taking. Ganges were well maintained at Rs 16.69 with Nuddea changing hands at Rs 44 to Rs 44.25 and Nations at Rs 19.50 to Rs 19.62.

Except Burrakur which moved irregularly between Rs 20.19 and Rs 20.37 due to alternate buying and selling. Coal shares were generally well maintained on the view that the representative team of the coal industry, which would shortly be leaving for Washington, might finalise the terms and conditions of the proposed World Bank loan. Bengal had buyers at Rs 385 to Rs 387; Central India at Rs 13.31 to Rs 13.44 and Western Bengal at Rs 9.94 to Rs 10.25.

With the onset of the seasonal slackness in cotton textile trade, Cotton Mill shares met with some profit-taking at the recent high levels. The only firm feature were Kesoram, having sustained support up to Rs 35.12 from Rs 34.75. Jay Shree were at one time marked up to Rs 15.75; Dunbar up to Rs 26.06 and J. K. Rayon up to Rs 19.37, to finish slightly lower at Rs 15.62; Rs 25.75 and Rs 19.06 respectively. Cawnpore were a steady feature at Rs 8.94.

Tea shares turned rather quiet on lack of fresh support. The only exceptional feature were Jay Shree, which met with sustained enquiry up to Rs 23.75 from Rs 23.56. Method were slightly easier at Rs 18.62 against Rs 19.44; Tezpor at Rs 17.94 against Rs 18; Brooke Bond at Rs 16.12 against Rs 16.44 and Bishnauth at Rs 26 against Rs 26.05.

Sugar shares came in for selective enquiry. There was, however, an anxiety to know whether and how the industry would be compensated for export losses. Carew met with good support up to Rs 13.75 from Rs 13.25 and Ramnugger Cane up to Rs 10.12 from Rs 9.87. Raza Buland were, however, on offer at Rs 11.62 against Rs 11.87.

In the week's dealings, speculative issues were the worst affected under

the lead of Indian Irons on rumours that the dividend decision might be delayed as the announcement with regard to the closure of Transfer Books of the company had not been yet made, not to speak of the fact that the technical position of the market was not as healthy as it was a few days ago. After opening steady at Rs 28.22, the scrip was marked down gradually to Rs 27.44, to finish the week at Rs 27.52. TEXMACO touched a low of Rs 19.80 from Rs 20.55; Guest, Keen, Williams Rs 41.12 from Rs 41.37 and Marshalls Rs 1.69 from Rs 4.87, to finish better at Rs 20.10; Rs 41.25 and Rs 4.75 respectively. The only exceptional feature were J. K. Steel, which were keenly sought after up to Rs 35.06 from Rs 30.37 on good corporate rumours.

The Miscellaneous section provided a few firm sops. While certain speculative shares showed a remarkable recovery from the initial setback, reports of floating stocks being in short supply and rumours of the possibility of a bonus issue induced certain other shares to make a sharp spurt. Following were the price trends of a few selected shares:

	As on 23 June	As on 29 June	Rs	Rs	Rs
Orient Paper	35.25	34.20	34.20

DESIGN... for finest performance

Of all aspects of industrial endeavour the most intriguing is thermo-dynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story...a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is tailor-made to give optimum performance under varying local conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally, low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities

of waste material in the form of bagasse for fuel; again in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will tailor-make not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

ACC-VICKERS-BABCOCK LTD.

16, Queen's Road Estate, Bombay 1

(Calcutta Office: Ilaco House, 1 & 3 Brabourne Road, Calcutta 1)

Works: Durgapur, West Bengal

TRADING on the stock markets during June was on a mixed pattern, showing most equities in the first half in a steady course and the second half in an easier trend. The reactionary trend became well pronounced in the last week of the month with pivotal shares all along the list recording substantial losses from earlier levels. The main reason for the selling pressure especially in the more speculative counters noticeable toward the end of the month appeared to be the growing apprehension that Government was contemplating the imposition of more curb measures with a view to eradicating what it suspected to be unbridled speculation. The fact that a branch office of the Stock Exchange Division, Ministry of Finance, Government of India, had been opened at Calcutta was evidently responsible for the renewed fears about further curb measures. Bears were not slow in exploiting the situation by circulating all kinds of conjectures about the significance of the opening of a branch office of the Stock Exchange Division. The office will be concerned with the administration of the Securities Contracts (Regulation) Act, 1956, mainly in so far as it relates to Calcutta and Madras. But the bears had their own interpretations and it would appear that their tactics were quite successful. One of the rumours that was circulating in the market soon after the opening of the Branch office of the Stock Exchange Division in Calcutta was that already the stock exchange association had been asked to keep a close watch on the trend of prices. From the lack of interest on the part of buyers and the retreat of many a prominent counter during the last two or three days of the month, it is to be inferred that the belief was widely shared that in future the fact that a supervisory authority would be functioning close at hand would not be quite conducive to aggressive buying support.

The fear of tighter Government control on the stock market has been not a little aggravated by the behaviour of Dalal Street where the last week of the month witnessed some nervous selling. Unlike the Calcutta Stock Exchange, its counterpart in Bombay was troubled for some time by the margin system. Persistent demand for reducing its rigours had led to a reference being made of the matter to a sub-committee of the Stock Exchange Association appointed for the purpose. Speculation over the outcome of the committee's labours held sway over the market for some time and when it was known that its recommendations had been considered by the Association, market-men were alternatively optimistic and pessimistic according as whe-

After Steady Start Equities Turn Subdued in June

ther the reaction of the Stock Exchange Association was said to be in favour of reducing the margin or otherwise. Finally, early in the last week it was confirmed that the decision was in favour of a status quo. That brought some

was that although the authorities had not opposed the decision of the Stock Exchange Association, they were by no means convinced that speculation has been rooted out. They were therefore seriously considering the imposition of fur-

cheer to the market as most operators expected something worse on the report that the Stock Exchange Division would not have any relaxation and was asking for more restrictions. The prevailing rumour at the end of the month

ther curb measures and rumour had it that an announcement detailing further restrictive steps was imminent. With Dalal Street almost jittery, it was only to be expected that Lyons Range too would be subdued, if not easy.

The steady trend that characterised trading during the first half of the month stemmed from a number of quite favourable developments, developments which dispelled some of the uncertainties that were facing the massive planning effort that has been formulated in the Third Plan. Perhaps the major bullish impetus came from the firm commitment of the Aid India Club of a substantial amount of foreign aid for the first two years of the Plan. Loan assistance to the tune of \$2,225 million has been promised with the indication that at the appropriate stage the Club will authorise the grant of further loans for the rest of the Plan period. With the uncertainty as regards this important aspect of the Plan resolved, it was not surprising that operators were encouraged to take an optimistic view of the investment situation in the country. In the meantime, corporate news continued to be good and consequently demand outstripped supply in a number of scrip. The speculative counters became active under the leadership of the steel shares which gained special importance following rumours of an early announcement of the increased retention price as well as a likely increase in the dividend distribution to the shareholders.

Sectionwise, steel shares were quite prominent in the first half of the month deriving strength from their leader, Indian Irons which was pushed up by speculative interest on favourable news. Toward the close of the month, Indian Irons suffered a setback on fears of further Government control on speculation in the stock markets.

Although a few selected shares appeared to attract attention in later dealings, jute shares were generally subdued. The lack of interest in the section was presumably due to the belief that with raw jute continuing to be in shortage and the prospect of a further block closure of mills in August in addition to the two periods of closure already agreed upon, the jute mill industry would be hard pressed.

Coal shares were selectively better almost throughout the period under review following encouraging indications about the availability of foreign aid for the expansion of the private sector collieries. Later in the month, it was confirmed that aid would be forthcoming in sufficient measure.

The trend of trading in tea shares, alternatively steady and quiet, reflected the rather obscure outlook for tea exports. Although it was expected that demand in the next few months would be satisfactory, the overall position was not considered to be encouraging.

(k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess provision.

(m) After transferring Rs 119,825 from Development Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(p) After transferring Rs 5,27,512 from General Reserve.

(q) After transferring Rs 400,000 from General Reserve.

(r) Includes Rs 100,230 being provisions made in previous years written back.

(s) After transferring Rs 3,22,599 from General Reserve and Rs 75,000 from Depreciation Reserve.

(t) After transferring Rs 9,80,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 50,000 from Dividend Equalisation Reserve.

(x) After transferring Rs 890,580 from General Reserve.

(y) After transferring Rs 255,000 from General Reserve.

(z) After transferring Rs 525,000 from General Reserve.

(a1) After transferring Rs 1,075,000 from General Reserve No. 1.

(a2) After transferring Rs 9,00,000 from Reserve for taxation.

(a3) After transferring Rs 351,420 from General Reserve.

(a4) After transferring Rs 380,000 from General Reserve and Rs 168,000 from Machinery Rehabilitation Reserve.

(a5) After transferring Rs 4 lakhs from Reserve fall in place.

(a6) After transferring Rs 109,648 from General Reserve.

(a7) After transferring Rs 780,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

(a8) After transferring Rs 271,942 from General Reserve.

SET FOR A BIG JOB

The Britannia — D.P.E.
'JOBBER', manufactured
for the first time in India
in collaboration with Dawson,
Payne & Elliott Limited,
England has been specially
designed for economy, efficiency
and minimum of maintenance.

Powered by a simple constant
speed motor with 3 quick-change
pulleys for variable speeds,
it has a single lever on the
operating side which does the
Starting, Inching and Braking.

Strengthening the Base

FURTHER steps are to be taken to strengthen the banking system. It has been proposed, by the Reserve Bank, that it should assume the power to require banks to build up the aggregate of capital and reserves such that they amount to 7½ per cent of Deposit liabilities. Secondly, the statutory reserve is to be made uniform at 5 per cent of Deposits, instead of 5 per cent of Demand liabilities and 2 per cent of Time liabilities. Thirdly, the central banking institution would be empowered to raise the statutory reserve ratio to 15 per cent of Deposits. Fourthly, the liquidity ratio, comprising cash and balances with the Reserve Bank and unencumbered holdings of Government securities, would be raised to 27½ per cent of Deposits from 20 per cent.

The intention of course is laudable; and the Reserve Bank has not shirked its duty to safeguard and strengthen the banking system. But, just as the three-tier Bank rate, which it introduced last year, has been a mixed blessing, it appears to us that small modifications may be necessary in the proposals circulated last week for banks' reactions and views.

The most important of the suggestions is that which relates to the raising of capital and reserves to 7½ per cent of Deposits. That banks are under-capitalised, there can be no gainsaying; that their reserves are inadequate, there is also no doubt. But the question is, are the conditions in which banking operates today such that a target of 7½ per cent can be hit?

There are three courses open: banking companies with uncalled capital may now exercise their right; rights issues could be made; and transfers to reserve could be effected. In the first two cases, there is an implied, though not explicit, liability in the sense that the additional capital would be subject to dividend payment, and at a rate which in due course would be equivalent to the distribution at the present. It is in respect of the third alternative that the Reserve Bank would wish to amend the Banking Companies Act, so that banks would be called upon to transfer 20 per cent of their net profit (before taxation) to reserve until such time as the reserves and capital add up to 7½ per cent of Deposits. Can banks afford so to set aside 20 per cent of the net profit? The answer would seem to be no, since the distributable surplus would be sharply reduced, and the rate of dividend would suffer, thus adversely affecting the worth of a bank share in the Stock Exchanges. In our view, a 7½ per cent target smacks too much of a Micawber; and in the sense that, meantime, Deposits would—or should—be consistently rising, a target that could never be hit. A more reasonable ratio, in Indian conditions, would be 6 per cent. Secondly, we would suggest that, akin to the concession afforded to industry in the form of Development Rebate, transfers to Reserve should be exempt from tax. Such a concession would reduce the hardship for the bank and its shareholders, by enlarging the distributable surplus. The intention of Development Rebate was that industry, which at the time the concession was introduced could not easily secure its capital requirements from the market, would

be enabled to plough back profits for expansion. The intention of the Bank Reserve Rebate would be that, since banks would find it relatively difficult to approach the shareholder, the banks should in this wise be helped to strengthen themselves.

Then, if 5 per cent of total Deposits are to be "immobilised" by the statutory reserve requirements, earnings of banks would be correspondingly affected. It would be helpful if, for a specified period after the amending measure is enacted, one per cent of the statutory reserve is deemed to be invested in Treasury Bills, for which the banks would be recompensed interest at the prevailing rate. Such a modification would not merely aid in offsetting the loss in earnings entailed by raising of the reserve requirement; it would also serve to foster the habit of investing in Treasury Bills—and this is a habit which the banking companies would do well to acquire.

The power to raise the statutory reserve ratio to 15 per cent of Deposits is unexceptionable; and so, for that matter, is the decision to raise the liquidity ratio to 27½ per cent. It needs to be recognised that, in effect, the liquidity ratio could go up to 37½ per cent, if and when the statutory reserve ratio is put up to 15 per cent.

We may add at this stage that no special emphasis is necessary for the transfer to a published, rather than an inner, reserve. What matters is whether a bank is suitably strengthened; indeed, a case can be made out for transfers being effected to inner reserves in preference to published reserves. We reckon that, in the new ordering of affairs, a bank will any way have little to spare for transfer to inner reserve. Is it really necessary that the size and magnitude of reserves in relation to capital, or reserve plus capital as a ratio of Deposits, should be public knowledge? If, on the other hand, a bank is permitted to transfer to inner reserve, then comparisons are rendered impossible. Moreover, banks would feel encouraged to seek more capital and not rely purely or mainly on transfers to reserve for complying with the new requirements. Thus, confidence in banking would be better fostered, and a too narrow assessment of a bank balance-sheet, in the matter of links between reserve, capital and Deposits, would be avoided.

One important implication of the suggested measures needs to be stated. More interest will presumably be shown by the banking system in gilt-edged, in view of the projected higher liquidity ratio. Government's borrowing programme will automatically benefit. If our suggestion, that one per cent of the statutory reserve ratio be invested in Treasury Bills, finds acceptance, another method of securing funds from the banking sector, for the short-term financing of Government expenditure, will have been discovered and put to use.

It is encouraging, thus, that active steps, and mostly in the right direction, are sought to be taken. The road to banking strength is in sight; whether the journey thereon will be smooth or rough will depend upon whether or no modifications such as we have suggested are incorporated.

One who did not waver...

Jamshedpur's latest blast furnace needed a 'big bell'—a 20-ton component requiring highly skilled casting and machining. A difficult operation even if the right machine tools were available, but in 1958 they were not, and import seemed the only solution to all but one determined and resourceful young engineer, N. P. Naik.

Working on this problem in his leisure hours, Naik gradually crystallised his ideas into mathematical formulae and blue-prints. He developed, at the same time, a new machine tool to do the job by remodelling a small boring machine, stage by stage. Then started the casting and intricate machining, until, in a short time, Naik and his colleagues succeeded in producing a

'big bell', fully meeting the technical specifications to the last detail. As a tribute to Naik's fine endeavour, Tata Steel gave him an award of Rs. 10,000, the highest made under a ten-year old scheme to encourage initiative from the shop floor.

Men like Naik are carrying forward a fine Jamshedpur tradition, recalling Jamsetji Tata's exhortation: "Let the Indian learn to do things for himself."

ALUMINIUM CONDUCTORS

Problems of Excess Capacity

STUDIES of the growth of demand for electric energy undertaken by the Planning Commission and other authorities have underlined the fact that, during the phase of development that India is now passing through, the increase in demand for electricity tends to outstrip the growth of national output. Throughout the Second Plan, demand for power was running ahead of supply, while the start of the Third Plan has been hampered by repeated breakdowns resulting in chronic shortage of power in the Calcutta area and other industrial centres. Inadequate capacity is recognised as one of the main reasons for repeated breakdowns, for the generators are worked continuously without periodical shut-downs for repairs and overhaul. The development of generating capacity to an adequate level has been hampered by the shortage of foreign exchange for imports of essential machinery.

It is not difficult to understand the necessity for imports of equipment for which adequate manufacturing capacity has yet to be set up. But the continued import of items like conductors for which there is adequate manufacturing capacity shows scant regard for the major imperative of planned development. Throughout the Second Plan period, output of copper conductors has been less than half the assessed installed capacity. But imports are negligible for it has been the established policy of Government to promote switchover from copper to aluminium in the Cables & Wires industry. This policy finds its justification in the country's resources of basic raw material. While India's resources of electrolytic copper are insignificant, it is expected to become self-sufficient in respect of aluminium towards the end of the Third Plan. The target of capacity for aluminium is 82,000 tons and production for the last year of the Plan is estimated at 75,000 tons. Therefore, on considerations of cost and other advantages, a programme of gradual switching over of all lines, from the lowest to the highest voltage, for transmission and distribution of power to all aluminium conductors in the low and intermediate ranges, and ACSR in the higher ranges, has been adopted and is being implemented. But the aim of the policy will not be fully achieved unless the programmes for development of power are designed to make the fullest utilisation of the capacity both existing and prospective. Otherwise, both existing and Prospective. Otherwise, the shift from copper to aluminium would only result in a double loss. What is distressing about the experience of the Second Plan is that it has not been found possible even to make full use of existing capacity, not to speak of expansion.

During 1957 to 1960 installed capacity for ACSR conductors (on double shift) had increased from 12,720 tons to 19,300 tons per annum. The following table gives the figures of output and imports for the years 1957 to 1959.

	Indigenous production	Imports (tons)
1957	.. 15,366	5,837
1958	.. 14,740	1,902
1959	.. 16,646	4,511
Jan/June 1960	.. 9,797	1,220

According to the spokesmen of the manufacturers, they could have produced a larger proportion of the total requirements if there had been adequate supply of raw material.

The Tariff Commission has estimated the demand for ACSR and All Aluminium Conductors, by 1963, at 30,000 tons, while the capacity available on double shift will be about 31,000 tons. But allowing for breakdowns, stoppages etc., the Commission considered that this might not be adequate for annual production of 30,000 tons of conductors, of various sizes and, therefore, suggested that Government might consider the question of expediting the establishment of additional capacity in tune with growing demand. In this context it may also be noted that according to the spokesmen of the industry, capacities very much in excess of those declared under the licences (which are based on two-shift working) exist in the country, for the industry could without difficulty go on to three-shift working. If that is done, the existing capacity will be sufficient to meet the entire demand except for special grades, if steps are taken in time to ensure full utilisation of capacity. In these circumstances it should be possible to cut down imports if there is proper co-ordination of the power development programmes of the States and the Centre with the manufacturing programmes of the industry and the latter is assured of adequate supplies of raw materials.

The Cables & Wires industry is at present hampered by two major difficulties: (a) shortage of essential raw materials such as aluminium ingots and rods, high tensile galvanised steel wire etc., and (b) inadequate attention to the phasing of orders.

According to the spokesmen of the industry, most of the units are not even getting sixty per cent of their requirements for full utilisation of capacity, and as a consequence, execution of orders accepted on firm delivery dates is delayed leading to delays in the projects in question. Licences for import of part of the requirements of galvanised steel wire from the USA against DLF credits have been issued and licences for the balance of requirements were given for import from East European countries against payment in rupees. But manufacturers who had been given licences for import from East European countries have been obliged to surrender their licences as necessary supplies are not available from these sources, and these licences have not been replaced by new licences for imports from the USA. On account of short supplies of ingots/billets, the capacity of many units for rod-rolling has not been fully utilised.

The manufacturers are also handicapped by the fact that the orders come in a bunch. It has been represented that, during the period November 1960 to May 1961, the various purchasing authorities, such as State Electricity Boards, departments etc., about 20 in number, have called for tenders for ACSR and AAC totalling about 30,000 tons.

The representatives of the industry are understood to have urged the following suggestions for Government's consideration:

- (1) Import of finished ACSR and All Aluminium Conductors should not be encouraged when adequate capacity for their fabrication exists in the country.
- (2) Indentors all over the country may be instructed to plan their requirements of conductors for the next five years and order them in a phased manner so that the full demand may be met from within the indigenous capacity enabling full utilisation of available capacity.
- (3) Industry must be supplied with full requirements of raw materials such as

aluminium metal and high tensile galvanised steel wire.

- (4) Units in the industry which have equipment for wire drawing and rod rolling may be supplied with extra quantities of metal to enable them to meet the requirements of small scale manufactures, thus facilitating the switch-over from copper to aluminium.

As regards ban on imports, one difficulty that trade agreements with East European countries provide for import of power cable aluminium conductors etc. While it may not be possible in all cases to exclude these items from the schedule of imports, Government might, as suggested by the Tariff Commission, take care to ensure in allowing imports of finished conductors that the interests of the indigenous industry are not adversely affected.

Phasing of demand as suggested by the industry presents greater practical difficulties. The programmes for development of electric power have to be phased not only to the manufacturing programme of the Wires & Cable industry but to the growth of the demand for power. In drawing up the programmes, taking saving in foreign exchange that may be effected by waiting for indigenous supplies has to be balanced against the loss sustained through shortage of power. But subject to this limitation, it should be possible to effect a greater degree of co-ordination of the demand and supply of conductors. The co-ordination can be more easily effected if the call for tenders is centralised. (Nearly twenty different authorities have come forward with tenders during the last six months). The legal requirements of the Statutes under which the State Electricity Boards or of other indentors may be met if the central organisation dealing with tenders acts as the agent of the ultimate purchasers. Co-ordination will also be considerably facilitated if the manufacturing units form a consortium to undertake large contracts. Issue of licences for import of materials required for full and effective utilisation of capacity should present no serious difficulty, especially in view of the new US credit of \$20 million from the DLF for import of non-ferrous metals from the USA.

A Successful Experiment

THE small-scale community development project set up by the Indian Cooperative Union in the Mehrauli area of Delhi covering about 15 villages was an experiment in rural development which departed in some important ways from the principles of the working of the community development programme elsewhere in the country. The results of the working of the project have now been made available by the ICU and provide a stimulating study of what the community development programme implemented in the proper way can do to increase agricultural production and benefit the cultivators and particularly small farmers.

The ICU was led to experiment with such a project by the growing volume of criticism of the working of the community development programme. The assessment of the progress made by the community development programmes by the Programme Evaluation Organisation at the end of the First Plan I revealed glaring weaknesses in the working of the movement. The more important of these were the absorption of benefits mainly by well-to-do landowners, the inadequacy of technical and other services provided, unsatisfactory credit policies, the wrong manner in which new cooperatives were promoted and lack of timely and sufficient assistance.

able credit policies, the wrong manner in which new cooperatives were promoted and lack of timely and sufficient assistance.

In formulating its programmes relating to the experimental project, the ICU avoided the features of policy that were known to militate against maximum results. The programme launched by the ICU was principally designed to serve the small farmers. This was done to ensure that the benefits were reaped by small farmers only. In respect of the credit policies for meeting the needs of the farmers covered by the project area, the ICU departed from current practices. The ICU project, for example, sought to meet the entire credit requirements of the farmers for any productive purpose and laid great emphasis, on swift delivery of aid. The most novel feature of the credit policies laid down by the ICU was the absence of provision for security for the loans granted by the project. The project also provided composite services which a multipurpose society is ordinarily expected to provide. These included provision of seeds, fertilisers, insecticides, agricultural tools and implements etc. The ICU project also laid great stress on the provision of adequate technical services and to make it more effective sought to coordinate the provision of such services with provision of credit facilities.

The study of the impact on production and income of the project made by the ICU, reveals that on the whole the experiment has proved a great success. Among other things, the study shows, that as a result of the implementation of the scheme, there was a substantial increase in the marketable surplus of the majority of cultivators, as also an increase in the gross farm income and off farm income of a great majority of the cultivators. A large proportion of the cultivators are also shown to have altered their cropping pattern during the period changing from single grain crops to mixed crops and cash crops. Progressively higher per acre yields are also claimed as one of the notable results. A measure of the improvement that has followed the implementation of the project is provided by the net increase in the income obtained for the whole project. It is stated that from 68 acres, a total gross income of Rs 41,270 was achieved in one crop season whereas in the best years the farmers could not get more than Rs 13,065 as the crop previously consisted of gram and barley only.

The working of the pilot project by the Indian Cooperative Union and the results that have attended it, have some object lessons to offer for future progress of the community development programmes in the country. Most importantly, the project has successfully demonstrated that with suitable institutional measures, it is possible to make the community development programme benefit the small farmer, who in the past has been excluded from its benefits for want of proper orientation. Secondly it has proved that unless and until there is effective linking up of credit and technical advice, resources employed for the progress of the movement may tend to become wasteful. The ICU experiment has shown that such combination of credit and technical help is possible. The most important reform called for by results shown by the ICU project lies in the field of agricultural credit policies. The ICU experiment with the provision of credit on mere trust without personal security has been found to work well and the recovery of amounts due against loans advanced has been satisfactory, being 80 for medium term loans, 90 for short term, 100 for long terms in percentage terms. The ICU study also underlines the importance of other principles for ensuring beneficial utilisation of the credit granted to the cultivators. These are the provisions of credit in kind designed mainly to reduce risk, provision of credit on the basis of actual needs instead of status and the need to relate repayment period to production plan and potentiality. Non-observance of these principles in the general cooperative movement in the country is responsible for the continuing poor performance in the agricultural sector of the community development programme.

sation of the credit granted to the cultivators. These are the provisions of credit in kind designed mainly to reduce risk, provision of credit on the basis of actual needs instead of status and the need to relate repayment period to production plan and potentiality. Non-observance of these principles in the general cooperative movement in the country is responsible for the continuing poor performance in the agricultural sector of the community development programme.

Industrial Production in Asia

THE Secretariat of the Economic Commission for Asia and Far East of the United Nations has been regularly publishing valuable surveys of the economic developments in this region but, for want of reliable data, we do not get a clear and complete picture of the situation. Statistics relating to the centrally planned economies such as China, North Korea and North Viet-Nam are particularly unsatisfactory and even in the case of other countries of this region, the availability of data is subject to serious limitations in many respects. Even so, judging from the figures furnished by the ECAFE Secretariat it appears that the countries of this region are by and large making some progress.

Confirming ourselves to the private economies of the region, the growth of industrial output in the first half of 1960 was 11 per cent over the level in the second half of 1959. Production increased in all countries, Japan taking the largest stride. The industries which made encouraging progress in 1960 were steel, chemicals and cement. So far as steel is concerned, it should be remembered that except in Japan, China and India the development in other countries is still in its early stages. In Japan, the monthly average production rose from 1.25 million tons in the first half of 1959 to 1.75 million tons in the first half of 1960. In China steel output in the last year was estimated at about 18 million tons—that is to say a monthly average of 1.5 million tons. In both Japan and China greater attention is being devoted to keep costs down and improve the technical efficiency. In India the production increased from a monthly average of 206,000 tons in the first half of 1959 to 255,000 tons in the corresponding period of last year. In the other countries of the region like Burma, Ceylon, Formosa, Indonesia, Iran, South Korea, Pakistan and Philippines the steel industry is in its infancy and is confronted with "numerous difficulties due to lack of trained personnel, inadequate supplies of raw materials, smallness of the domestic market and on clear prospects of exports."

The chemical industries achieved a high rate of growth in 1960. In Japan new products have been developed such as petrochemicals, organic synthetic chemicals and synthetic fibres: in China emphasis has been laid in the small-scale production of chemicals notably sulphuric acid and pharmaceuticals from indigenous raw materials; in India on basic chemicals and fertilisers and in other countries on oils; pharmaceuticals, batteries etc., based on imported semi-finished products.

The boom in construction activity gave an impetus to the cement industry, the average monthly production in the region rising from 2.6 million tons in the second half of 1959 to 2.8 million tons in the first half of 1960. Here also Japan has a dominant share, its average monthly output being 1.6 million

tons in the second half of 1959 and 1.8 million tons in the first half of 1960.

But in respect of other industries, progress in 1960 was rather disappointing. Stagnation of demand and shortage of raw cotton affected the growth of cotton textiles while scarcity of raw jute handicapped the jute industry. Efforts are being made to modernise the equipment in both these industries but the progress has been rather slow.

Among other industries, mention may be made of the substantial increase in the production of copper in the Philippines, of aluminium in Japan and India, of durable consumer goods such as television sets, radios, automobiles, motor cycles, bicycles, electrical goods and other household appliances in Japan and of capital goods like machine tools, diesel engines, transport equipment and also of light industry products like bicycles and sewing machines in India.

Although speaking generally the increase in production in the region is satisfactory and there has also been a good deal of diversification, it is obvious that a great leeway has yet to be made in many countries in the matter of industrial development. There are many important industries which have hardly made any appreciable progress. Paper is a typical instance. It is pointed out that only Pakistan and Japan have developed the paper industry commensurate with their domestic needs, the production in Japan accounting for more than 85 per cent of the weight in the regional index. It is expected that in view of the increasing foreign aid and technical advice being made available from the advanced nations of the West, production in the ECAFE region in the current year will be able to record a substantial improvement.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

EXCHANGE RESERVES

Approach to IMF Imminent?

THE current level of India's foreign exchange reserves is barely equal to the cost of one month's imports and is scarcely above the minimum which statutorily has to be maintained with the Reserve Bank. The monetary authorities are no doubt seized of the problem, and we are confident that they would not, as a result of the under-writing of the foreign exchange needs for the first two years of the Third Plan by the Aid-India Club, have fallen prey to complacency. For, the fact of the matter is that a critical situation is building up, and not all of the efforts of the Aid-India Club can help in the solution of the short-term emergency. In the first place, by its very nature, foreign assistance though committed takes some time to be negotiated and agreed upon. In the second place, the bulk of the assistance will be for and against specific projects. That is to say, by and large, foreign aid will not be available for covering the balance of trade deficit: maintenance imports are the problem, not capital or developmental imports. There are three ways in which we can hope to narrow the gap between the cost of maintenance imports and earnings of foreign exchange.

The first method is to augment earnings from exports. Much though we have striven in recent years, our efforts have been paltry and unavailing. In the long-term, perhaps, we may be able to diversify the range of our exportable commodities that we can look forward to a sizable contribution from new export earnings. For the present, however, unless we rely on exports of iron ore to help us out, it would be wise to recognise that very little of the trade gap can be met from enlarged export earnings.

The second method is to impress and persuade our foreign friends that maintenance imports are an integral part of foreign exchange expenditure during the Third Plan. Without such imports, while additional capacity would be in process of being created, the rate of growth in industrial production would fail to be satisfactory for lack of industrial raw materials which are not available indigenously. So India must make efforts to secure some assistance at least from abroad that is not linked up to or tied up with specific projects. Though negotiations and discussions in this regard have undoubtedly long since commenced, it may be a matter of a few months more before in fact we are vouchsafed such "untied" loans. We place a turn for the better in the foreign exchange situation around September 1961, when seasonally exports are on the upswing and when we may expect to receive the first parcels of untied loans.

Our problem, thus, is confined to what has to be done in the next three months. Our requirements of foreign exchange, over this period and in order to maintain reserves at least over the Rs 100 crores mark, are likely

to be of the order of Rs 50 crores. Our suggestion is that recourse to the International Monetary Fund's facilities are inevitable—and imminent. The difficulty is that we already have an outstanding commitment of \$127.5 million, in respect of currencies purchased from the IMF in 1957. Does this mean that we shall not now be able to approach the IMF and that we have to do the best we may through other efforts?

Not quite; firstly because, in any case, we have had occasions when the IMF has permitted a member country to draw up to 100 per cent of its quota, and we are nowhere near that level; secondly because India is a member in good standing, having repurchased in February last year \$72.5 million of rupees, representing the standby credit we availed of in 1957; thirdly because the first tranche is normally repayable in between three and five years, and we have therefore just under one year to effect repurchase of \$127.5 million and fourthly and most importantly because, since we last approached the IMF, our quota with that institution has been raised, and we are at least eligible to draw upon the balance of the first tranche of our quota.

The IMF helps a member country by allowing it to use its currency for the purchase of convertible currencies; it normally permits not more than one transaction, equivalent to one-fourth of its quota, in any twelve-month period; but it has been known to waive this rule; the first tranche is repayable in three to five years time; the extent of assistance may be equivalent to a member country's quota.

In 1957, India purchased a total of \$200 million of currencies, representing half its quota. Since then, India's quota, along with that of other members, has been raised. Meantime, repurchase has been effected as to \$72.5 million, and India's quota is now \$600 million. Thus, it would appear that we are eligible, practically as of right, only to draw the first tranche of \$150 million, against which there is already an outstanding liability of currencies purchased, amounting to \$127.5 million. The implication is that all we can immediately get from the IMF is only \$22.5 million.

But, as a publication of the IMF, "First Ten Years", makes clear, "its assistance is available to help a member meet a deficit in its balance of payments on current account. Under the Fund Agreement, current transactions are described as including all payments in connection with foreign trade, other current business including services, and normal short-term banking and credit facilities. They also include interest on loans and net income from other investments, and payments of moderate amount for amortization of loans or for depreciation of direct investments."

Secondly, "while a member may purchase the currencies of other members to an amount that would not cause the Fund's holdings of the purchasing members' currency to increase by more than 25 per cent of its quota during the period of 12 months ending on the date of the transaction", there is provision (Article V) for the IMF to waive this limitation. Another IMF publication, "International Re-

serves and Liquidity," points out in this respect that "the granting of waivers has recently been more the rule than the exception." However, the same publication adds that "the principle has been established that for the next (i.e., second) 25 per cent (of drawings) members are required to show that they are making a reasonable effort to solve their own problems." At the same time, "First Ten Years" contains a sentence to the effect that, "with respect to drawings beyond the first credit tranche, the Fund has said that members need not doubt that, given the need and justification, such drawings would be permitted."

If assistance is going to be secured for maintenance imports; and if that aid is going to be available from September onwards; if the developmental projects we have on hand are going to help in diversifying and enlarging exports; and if our payments problem is really a short-term disequilibrium between export earnings plus untied loans and import costs; and if, finally, the IMF can be satisfied that India is determined to prevent an erosion in the rupee's value, to increase exports and in due course to be able to quit ourselves of the loans we have taken, are taking and will take; then we shall have made out a case for approaching the IMF for and receiving from it facilities for purchase of another \$172.5 million of currencies—completing, that is, the second tranche of our quota with that international financial institution.

RBI PROFIT

Departure from the Norm

The Reserve Bank appears to have jumped the gun in the matter of the disposal of its profit for the year ending 30 June 1961. Firstly, the changes have been recorded in the returns for the last week of June, instead of the first Friday in July as heretofore. Secondly, the profit has not been transferred, as has been the practice all these years, from Other Liabilities to Other Deposits, but made over immediately to the Centre. Thirdly, also as a departure from the norm, it would appear that a remnant portion of the net profit continues to figure under Other Liabilities. All these facts are to be found in the returns of the Reserve Bank for the week ended 30 June 1961.

One thing has remained constant, and that is the transfer to the two Agricultural Credit Funds. The Long-term Operation Fund has been credited with Rs 10 crores and is now placed at Rs 50 crores; and the Stabilisation Fund is now higher by Rs 1 crore at Rs 6 crores.

Other Liabilities, in the Banking Department, have fallen by Rs 48.13 crores to Rs 14.24 crores; and it is likely that this reflects the making over of Rs 50 crores gross of profit, from which has to be deducted the Rs 11 crores representing the transfers to the Funds. It follows that the net receipt of the Central Government, in the week under review, was around Rs 39 crores. Since the Centre took credit for Rs 45 crores as RBI profit in its Budget for 1961-62, the inference is that Rs 6 crores of profit remain to be made over. Perhaps the balance will be paid after completion of audit—the practice of the Reserve Bank in the past was to hold the profit, net of transfers, in suspense under Other Deposits until the audit had been completed in the third week of August. Here, too, there appears to be new methodology.

Why has there been this haste in paying over the RBI profit? One possible explanation is that the Centre is feeling some embarrassment in its cash position because no cash loan has been issued so far this year; and the Centre wants to avoid deficit financing; in the previous week, it may be recalled, recourse was had to created money for Rs 20 crores. So, it may be that, with a view to replenishing the Centre's balances, the formality of waiting for the audit has been, at least for this year, done away with.

The result of net receipt by the Centre of Rs 39 crores has been cancellation of ad hoc Treasury Bills for around Rs 45 crores. Rupee Securities in the Issue Department, are lower by Rs 5 crores; Investments in the Banking Department have fallen sharply by Rs 33.66 crores; the State Bank is known to have purchased securities for Rs 6 crores during the week; and the sum total of these—Rs 44.66 crores—may be said roughly to represent the magnitude of reverse ad hocs instituted during the week.

Nevertheless, the Centre has been able to make very large payments to the States, which have been able drastically to reduce, by Rs 43.13 crores to Rs 34.30 crores, their ways and means borrowings. These payments have entailed a decline of Rs 22.37 crores to Rs 59.63 crores in the Centre's balances. The Centre has also perhaps received some payment under US Embassy account, in respect of re-lending or granting of counterpart funds. Such is the inference we may draw from the fall of Rs 13.22 crores to Rs 115.27 crores in Other Deposits.

The onward progress of the 1961 slack season is evident in the further decline of Rs 12.34 crores to Rs 1,933.41 crores in Active Note Circulation and in the inflow of Rs 1.05 crores of Rupee Coin. After a transfer of Rs 5 crores from Foreign Securities to our waning Balances Held Abroad, as shown in the return for the Banking Department, currency has been contracted against Rupee Securities for Rs 5 crores, and the Reserve Bank's cash in the till is better by Rs 3.41 crores at Rs 44.81 crores.

Half-yearly closing of accounts for banks has apparently involved some window-dressing. Banks have borrowed more, the Other Loans and Advances of the Reserve Bank rising by Rs 14.70 crores to Rs 130.41 crores, in order to improve the cash position. Reserve Balances of member banks are alone higher by Rs 14.36 crores at Rs 94.73 crores, and of the rise Rs 8 crores odd are traceable to the State Bank.

Lastly, Balances Held Abroad continue to dwindle at an alarming rate. Including the Rs 5 crores transferred from Foreign Securities, the drop during the week has amounted to Rs 6.87 crores. Our foreign exchange reserves have now fallen below Rs 114 crores, and the seriousness of the situation, as well as the method to cope with it, have been discussed in the leading article in this section.

The return of the State Bank for 30 June shows that the institution is continuing to experience a freeing of resources and that, consequently, there have been purchases of securities through the Reserve Bank tap for the second week in succession. Deposit resources are higher by Rs 7.45 crores at Rs 529.72 crores; Advances have declined by Rs 1.75 crores; and the gilt-edged portfolio has been added to by Rs 6 crores. Other Assets have been drawn down by Rs 5 crores to be placed at Rs 29.09 crores, and cash in hand and with Reserve Bank has improved by Rs 8.55 crores to Rs 28.19 crores. Intriguingly, the total of counterpart funds as at the end of

June has not been given, but we may safely assume that it is Rs 150 crores or so.

The return of Scheduled Banks for 23 June discloses that, fully as we had anticipated, the 1961 slack season is causing free resources of banks to grow at a considerable rate. Net Demand Deposits are higher by Rs 2.31 crores at Rs 805.91 crores, and net Time Deposits by Rs 7.91 crores at Rs 1,104.61 crores. This totals Rs 10.21 crores, against which the State Bank's share of rise in Deposits worked out only to Rs 2.10 crores. Again, the total of Advances has shrunk by Rs 10.06 crores to Rs 1,274.23 crores, the share of the State Bank being Rs 4.66 crores. Borrowings from the Reserve Bank have been sizably reduced by Rs 8.23 crores to Rs 11.59 crores, and there is a nominal reduction in indebtedness to the State Bank. The fall of Rs 8.00 crores in Reserve Balances is fully traceable to the State Bank, the drawing down being presumably in order to purchase gilt-edged. Even so, the rise of Rs 16.48 crores to Rs 545.39 crores in Gilt-edged Investments is wholly as a result of State Bank purchases.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 4 July 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.335 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.650 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday 10 July 1961. Successful tenderers should make payment on Thursday, 14 July 1961. Other conditions are as usual.

During the week ended 30 June 1961 Government of India Treasury Bills for Rs 95,65,00,000 were sold in favour of Reserve Bank of India.

Pressure on Sterling

By Paul Einzig

THERE can be no doubt that adverse pressure on sterling is on the increase. The spot rate can no longer be regarded as a barometer, because it is determined to a very large extent by official operations. Even though there are from time to time official operations also in the forward market, on the whole it is allowed nevertheless to express the

trend. The discount on forward sterling has been widening lately and has long passed a figure at which outward arbitrage has become profitable. There is a certain amount of hedging for the first time since 1957 by American branch factories anxious to safeguard the dollar value of their sterling investment against the possibility of a devaluation.

There are two main reasons for this new wave of distrust in the stability of sterling. The one is the realisation of the adverse change in invisible items on the balance of payments in addition to the persistent deficit on visible trade. The other is the growing pressure for higher wages, which reduces the chances of correcting the balance of payments. Once more the number of unfilled vacancies has exceeded the number of unemployed, and once more the monthly cost of living index shows a persistent rising trend. Wildcat strikes are a frequent occurrence and many of them gravely interfere with Britain's capacity for export.

Notwithstanding all this, it would be foolish to anticipate a devaluation of sterling this year. The Government is unwilling to apply effective measures for its defence, but is equally unwilling to admit unwillingness to defend sterling effectively. So it resorts to external aid which in all probability will be sufficient to meet any conceivable contingency that may develop this year. There would be everything to be said in favour of gaining a respite that would give time for the adoption of effective measures. There is everything to be said against securing a breathing space solely for the purpose of deferring the day when realities have to be faced.

Economics is a science of uncertainties. But there is one thing which is reasonably certain and that is that unless the Government is willing and able to correct the fundamental disequilibrium into which it has allowed Britain to drift sterling will become sooner or later indefensible. The new devices are bound to fail because they are built on fallacious economics. It will take some time before their failure will be realised and meanwhile the delay in the adoption of more effective measures is likely to aggravate the situation.

This is a matter which concerns the entire Sterling Area and it is to be hoped that there will be some plain speaking on the occasion of the meeting of Commonwealth Finance Ministers in September. Unfortunately, most Commonwealth Governments are not in a very strong position to preach sound economics to the UK Government, because their own policies are far from being above reproach. Nevertheless, evidence of a realisation on their part that effective action is needed for the defence of sterling might help towards creating an atmosphere in which Whitehall would become receptive to sound advice.

Notes

COMMON MARKET Indian Fears

A detailed examination of the effects of Britain's entry into the European Common Market on India's export trade has been undertaken by officials of the Government of India in consultation with representatives of the FICCI in preparation for the forthcoming discussions with Mr Peter Thorneycroft, British Minister for Aviation, who is arriving here next week. Mr Nehru stated at his press conference last week that it was not for India to advise the British Government on what action they should take in the matter. But the repercussions on India's exports to Britain is one of the matters which will influence the decision of the British Government, for the effects will also extend to Britain's exports to India. India's trade with the UK over the last few years has been more or less balanced. On the other hand, trade with the EEC shows a growing deficit. The question to be examined is whether this position will be aggravated by British membership of EEC. The adjustments that India will seek will be designed not so much to safeguard preferential arrangements as to ensure that

the overall trade with the enlarged EEC is not thrown further out of balance.

The Prime Minister's remarks have left the impression that he was concerned not so much with the economic consequences as about the political implications of the European Community including the UK. He said that, apart from economic matters, it was necessary to see how far British membership of the Common Market might lead to closer political co-operation in dealing with underdeveloped countries in Africa and Asia and added that it might well become a rather more powerful way of controlling underdeveloped countries. This aspect of the problem seems likely to dominate the discussions next week overshadowing economic matters. As regards the latter, apart from very general statements, it is not possible to arrive at definite conclusions, in the absence of any clear picture of the concessions which Britain may be able to secure in negotiations with the EEC.

On this point it is extremely doubtful if Mr Thorneycroft will be able to throw any light apart from conveying the hopes of the British Government regarding the concessions it may be able to get. It is relevant in this context to recall that negotiations between the British Government and the EEC have been stalled so long because of the point-blank refusal of the latter to discuss terms and conditions in the absence of a prior commitment by the British Government to join the EEC.

In the meantime, Indian reaction has been generally unfavourable. The twelve member FICCI delegation that met the officials has expressed grave concern of the Indian industry and trade at the prospect of the UK joining the Common Market. In its view, experience has shown that the countries of the Common Market are in no mood to foster an increased absorption of Indian manufactures and other items of exports in their regions as they continue to maintain high rates of tariffs and quota restrictions on imports of goods from India. It is therefore feared that, should UK join the Common Market, India's exports of manufactured and semi-manufactured items to the UK and other common market countries would be adversely affected. This does not mean that India's export trade wants to have a preferential treatment. It is only anxious to en-

sure that it gets a fair opportunity to compete on equal terms in world markets. It is not to be denied that the repercussions on India's exports in the immediate future will be quite considerable. The total value of Indian exports to UK is placed at Rs 180 crores of which Rs 75 crores and Rs 16 crores are accounted for by tea and cotton textiles respectively. The value of the exports of Indian jute goods to UK is Rs 6.37 crores. It will be seen that exports of tea, the principal Indian export to the UK, will suffer a serious setback because, there is no import duty on Indian tea in Britain but an import duty as high as 35 per cent is payable by Indian tea entering the Common Market. Considering how heavily the Third Plan leans on exports, particularly of tea, the upset this will cause in our calculations is obvious. But Mr Nehru has pointed out that the question of whether Britain might or might not join the Common Market is for it to decide. And if the press in that country is any guide, influential opinion is in favour of the UK becoming a member of the Common Market, but hard bargaining is advocated. In the circumstances, our emphasis should be on the need for the UK asking and getting such freedom of action as will be necessary to help India and other Commonwealth countries in securing a transition that will not hurt their economies.

PRODUCTIVITY Sum of Tangible Achievements

The National Productivity Council was started three years ago with the object of spearheading the campaign for industrial productivity in the country. The general industrial backwardness of the country was, undoubtedly, a circumstance that prevented traditions being developed in regard to methods and techniques of productivity. Even in the established industries, the existence of a sheltered internal market has tended to blunt the incentive for raising efficiency of production. But with the country launched on the course of industrialisation and with the implications of this development for export prospects and internal marketability, it has become necessary that the ground should be broken in this important field of industrial performance.

Though the NPC has completed three years of working, it would be premature to seek for the effects of its working during the last three years in any rise in general industrial productivity or in performance within particular industries. The basic problem which the Council had to face and tackle was the insufficient appre-

ciation of the importance and role of productivity on the part of business community in general. The Council's primary task, in the circumstances, was to kindle productivity consciousness at all levels of industrial working and to initiate and help the progress of the movement in some of its important aspects. The Council's activities, during the last three years, have, therefore, been mainly concerned with preparing the ground and creating a favourable atmosphere by setting up productivity councils at local levels, institution of training programmes, and holding of seminars and conferences designed to disseminate knowledge of productivity techniques and methods. As the Annual Report of the NPC for 1960-61 points out, the successful launching of these activities represents the sum of the Council's tangible achievements during the three year period.

The Council has so far set up 43 Local Productivity Councils which have an aggregate membership of about 3,000 and an aggregate amount of Rs 2,75,000 as membership fees from industrial undertakings. The Model constitution drawn up for these LPCs by the NPC provide as important objectives, increase of productivity in all spheres of industry, promotion and stimulation of productivity consciousness by disseminating information regarding productivity techniques through various media, and encouraging and assisting implementation of programmes designed to increase productivity.

An important aspect of the working of both the NPC and the LPCs has been the holding of seminars and conferences on

8 July 1961

several aspects of productivity. Such conferences and seminars go a long way in awakening productivity consciousness in the industry and in carrying the productivity techniques to the plants. During 1960-61 the LPCs organised as many as 107 seminars, conferences and symposia on subjects bearing on industrial productivity. The more notable of these were the series of three-day Seminars for the Top Managements conducted under the joint auspices of the LPCs and Local Institutes of Management organised at Kanpur, Bombay, Madras, Cochin, Calcutta and Delhi, the 4-week Advanced Managements Programme organised at Bangalore during November-December 1960 and the Industrial Leaders' Conference at Delhi.

The training programmes organised by the LPCs provide for two types of courses namely, appreciation course and application course. While the appreciation course is intended to awaken interest in productivity techniques, under the latter course an attempt is made to impart intensive training in productivity techniques for subsequent application in the plants. The NPC has so far organised 230 training courses with the participation of 3,972 persons. The training programmes sponsored by the NPC also provide facilities for foreign training. Corresponding to the appreciation and application courses of internal training these foreign programmes are also of two types. The NPC has so far sponsored abroad 20 productivity teams consisting of 203 members. A substantial expansion of the foreign training programmes is envisaged during 1961-62. Under the aid provided by the TCM 12 productivity teams are expected to be sponsored. The NPC operates through a variety of media including books, publications, the press, audio-visual aids, etc. The Council has a central library with a comprehensive collection of books, publications and other productivity literature. Further each of the five Regional Directorates also runs subsidiary libraries containing 1,000 books each. The NPC Productivity Journal is the only one of its kind.

Thus, it is evident that the NPC has taken strong roots on the organisational side and has also been able to develop in other directions. While it may be true that the activities of the organisation may allow of scope for further expansion, it should bear mention that the ultimate benefit of rise in productivity will be possible only if there is proper follow-up action by individual industrial undertakings to apply productivity techniques in their establishments. And in the growing association of industrial establishments with the schemes sponsored by the NPC, there is incontestable evidence of this understanding.

MARKETING As Important As Production

The report of the Indian Productivity Team sponsored by the National Productivity Council, to the UK, the USA and West Germany provides an interesting collection of facts regarding the methods and techniques of marketing employed in these countries which the Team visited. The central theme of the report is the importance of marketing as an economic function on the same footing as production. Marketing is conceived in a comprehensive way as tending to promote trade and employment, and coordinating finance, production and distribution.

A study of the report enables a knowledge of the diverse techniques that are employed by the commercial and business houses in these countries. Mention may be made of the retail audit which figures prominently in the marketing operations of the Beecham Group in England, and the methods employed by the Glaxo Laboratories to create an image of the company in the minds of the consuming public. The report draws particular attention to the surveys and seminars conducted by the British Institute of Management and observes that this could be profitably copied by the Indian businessmen to stimulate exports of Indian goods.

On the question of the marketing methods in America, the report refers to the importance attached to motivational research. The characteristic features of the American market, according to the report, are its dynamism and the relatively greater volatility of consumer tastes, products of the material affluence enjoyed by the people. In this connection, the report refers to the case of Chick Electric Razor Company which, by a simple change of slogans and advertising, recorded an increase in sales within 30 days. The report also refers to the practice of some of the American firms to provide full information about themselves and suggests that such an attitude on the part of the Indian businessmen would tend to build up an informed public opinion. The fact that in the US, distribution and services account for 53 per cent of the total employed labour force as compared with 23 per cent 75 years ago provides a measure of the change that has taken place in regard to the relative significance of marketing and production.

In respect of the scope for Indian exports to these countries the Team perceives fairly good prospects. While it does not discuss the subject with reference to particular goods, it has shown that in all these countries, there is a great proportion of disposable income for discretionary spending and this fact would warrant a greater probing of these markets for increasing our exports. There is considered to be particularly good scope for increasing exports of Indian art

goods, but at the same time cautions that efforts to push up sales call for careful study of habit and fashion goods. Among these goods, the Team lists light sandals, stair carpets and raw silks as having potentialities for greater sales in England.

The most important feature of the American market from the point of view of Indian exports noted in the report is the existence of a large teen-age and gifts market. At the same time, the report says that there is at present a very incorrect image of India in the minds of the American people who are shown to associate India mainly with monkeys, brahmanic bulls and sacred cows. The report underlines the need for effort for creating a more modern image of India.

LAND REFORMS Inchoate Thinking

The compromise on land reforms envisaged by the Planning Commission proves that the idea of ceilings is not so strong as once supposed. The tenants' protection must not hit small owners, it is realised, and comments on tenancy laws have apparently induced fresh thinking although the desire for co-operative farming has not been renounced. The zamin abolition laws have hit intermediaries. The payment of compensation has been delayed. The tenants are now owners but the landlords are in difficulties, and this may force the States to avoid getting involved in issues of fresh compensation by acquiring ryotwari land for distribution to the needy. There is at last welcome recognition that the immediate need is for consolidation of holdings. But progress so far has been limited, though all economists have long advocated the consolidation of holdings as the means to agricultural improvement.

There will be some objection to the Planning Commission's proposal that the rent paid by the cultivating tenants should be only one-fourth of the produce and not one-third. It will be agreed that regional variations justify the adherence to the sharing of produce which in future must be related to the net return secured by the landlord at current prices on the basis of the current value of land. This is certainly desirable for encouraging landlords who seek to improve lands and extend irrigation facilities. While it is obvious that the nationalisation of land remains remote, there is no criticism of the proposal to convert factory-owned farms managed by sugar mills into small private holdings though the disadvantages have been frequently referred to by the sugar mills in Maharashtra this year. It is a pity that the Madras proposals have not been adopted in other States, so that the proper distinction is made between land sustaining industrial activity and ordinary land growing subsistence crops. The Third Plan seems to ignore the criticism put forward in Bombay and, to that extent, may be regarded as timid. The Planning Commission has not yet accepted the view that sugar mills can do more to raise the average yield than small cane growers and perhaps

a comparison with the results attained by new co-operative sugar mills will make the State Government see reason.

CAPITAL ISSUES Scope of Exemptions

The procedure regarding consent for capital issues in India has been modified to some extent, and a list of exemptions, apart from that already available in respect of capital issues to the value of less than Rs. 10 lakhs has been furnished in a notification recently. But it is now declared that in the case of bonus issues involving less than Rs 10 lakhs, the exemption will not be available. That is mainly because there is a tax of 12½ per cent and bonus issues amounting to less than Rs 10 lakhs are also liable to the bonus tax. When subdivision of existing shares into smaller denominations is undertaken, the capital issue is purely formal and when no increase in capital takes place consent is not required. When two banks are amalgamated under Government orders, there may be a formal change in capital but that too does not come within the scope of capital control.

In regard to debentures placed with the official credit institutions like the Industrial Finance Corporation, there is a capital issue in name only and this is distinguished from an issue made to the public through subscriptions. Guarantees given by financial institutions in respect of borrowers fall within the same category. When borrowing from a bank by means of a debenture deed takes place, the transaction is one between the borrowing company and the bank, or institution, and this kind of issue is also declared exempt, if it does not exceed Rs 10 lakhs.

Charges created on property by mining companies are essentially loans and the borrower does not make an approach to the public for capital and hence exemption is extended in respect of mortgages or rental and royalty agreements under mining leases. In regard to securities issued before May 1943, the question of consent does not arise and in native States where securities were issued to the public, the law, obviously could not apply. When securities which were floated or issued without consent are in circulation, their character is not at all affected by the lack of consent, because it is presumed, as also in the case of breaches of the control order condoned subsequently, that the absence of formal consent for a capital issue does not affect either negotiability or the title to profits or dividends due under the securities. This may also imply that in regard to issues made before 1943, no claim is made by Government for the fee payable now in respect of capital issues.

MACHINE-BUILDING Integration of Small Units

The Third Plan outline confirmed that local machinery making was a major objective of the Government. The details of the new programme are such as to convince many that additional steel output will soon be used at home and the existing industries will obtain renewals and replacements from domestic sources in future. Nothing is said about tariff protection but machinery imports will be greatly curtailed, if the indigenous output goes up. Extra electric equipment also will be soon needed and the justification for new cable companies is now afforded by the new programme. Designs and patents will have to be paid for and collaboration arrangements will probably increase, if foreign suppliers offer technical aid.

The import of non-ferrous metals will be really unavoidable and foreign aid will become crucial in regard to copper or tin. The production of boilers by the engineering industry will become more important than ever, and the Plan outline assured one that AVB at Durgapur will make a great contribution to the supplies of heavy equipment. The major basis of the engineering industry will be Durgapur and Ranchi. The demand for machine tools will certainly increase and the private sector will be called upon to supplement the factories at Bangalore and Ambarnath. The Commerce and Industry Ministry noted that import of plant for the paper mills required substantial foreign exchange and many other industries also demanded release of foreign exchange in 1960 for development programme. If local manufacture of plant is undertaken in future, imports will be reduced and the liability for deferred payments to foreign suppliers will also be limited.

The engineering industry's prospects are certainly improved but the power supply problem will have to be dealt with promptly. The demand for electric energy in the D.V.C. area will go up and it may be noted that a new survey of power requirements is called for by the proposal to make most of the machinery for mining and other industries within India. The growth of engineering may even call for the amalgamation of smaller enterprises. It is the larger concerns that must arrange a takeover of small companies in order to avoid any argument over quotas and certificates. The trends towards integration or combination will continue because it is evident that India cannot escape groupings, similar to those in Britain where Victor's producers aircraft as well as railway wagons. This may entail new issues of capital rather

than borrowing for approved purposes, and it is right to urge that the small enterprise cannot but lose its identity in a larger firm hereafter. The machinery making plan should stimulate thinking about reorganisation of the engineering industry which in its present pattern appears confusing, owing to the number of small units. It may be even asked if the mergers arranged in banking of late should not find a place in the engineering industry because of the brave new plans for diversification and expansion. The problem is one for the Engineering Association and the Export Promotion Council also. A degree of rationalisation is inescapable and labour too may benefit directly from the creation of larger and better firms.

THE NEWSPRINT A Consortium for Manufacture

The victory won by the Indian and Eastern Newspaper Society in regard to allocation, the building up of stocks and import on rupee account by actual users of newsprint has not stood in the way of a general protest against the continuance of control on newsprint. The plea is, of course, made in the name of freedom of press and it has been argued that the publication of news items has suffered through the restrictions placed on consumption. It has already been suggested that imports should take into account the presumed growth of 10 per cent in news paper circulation every year and import quota should be adjusted accordingly. But the question why newspapers should not start independent manufacture of newsprint on their own account does not even appear to have been asked. The big newspapers in the world have their own independent sources of supply and operate without anxiety. The right long-term solution for this endemic shortage of newsprint is the formation of a consortium by Indian newspapers for acquiring a paper mill either in Scandinavia or Canada and to secure supplies on the basis of cost without regard to fluctuations in world prices. It may be even considered advisable for the more affluent newspapers in India to buy out the Government holding in NEPA in order to prevent delays in distribution and irregularities in working about which reference has been made.

If these appear impossible at present, a suggestion that may be made is that the newspaper industry should maintain permanent liaison with the Commerce and Industry Ministry, furnish figures relating to consumption and prices and secure import licences. In the last report of the Organisation and Methods division of the Central Secretariat a reference is made to

the desirability of preventing wasteful delay by direct arrangements. It is noted that the Indian Mining Association in order to safeguard or promote its interests is associated with the official machinery and the Indian Engineering Association also, owing to its concern over imports and exports, is associated with an official committee dealing with licences and certificates. While the Press is eager to create public relations officers to justify its ways, it should be aware of the need to keep an adviser at Government headquarters in order to explain its needs and problems and to overcome difficulties arising from the fact that it is dependent on imported raw materials to a large extent.

ANDHRA CHAMBER Current Problems

At the recent annual general meeting of the Andhra Chamber of Commerce, its outgoing president, Mr. Emburmanar Chetty, brought to focus some current problems facing the country and the business community, especially in the southern region. Among the local problems mentioned by him was the shortage of wagons for moving surplus rice from Andhra Pradesh to Madras. He called attention to the hasty inception of new industrial units when the older enterprises were not operating to capacity. The gap between actual production and installed capacity is a feature of current statistics. There are power shortage and other reasons to explain the shortfall but expansion in some consumer goods industries must be halted. This applies as much to electrical equipment as to pencil manufacture because of the surplus capacity. Another point made by Mr. Emburmanar Chetty was that increase in indirect taxation must rest on a rise in national income and to talk about the level of taxation, higher in West Germany than the UK, is not to take into account the prosperity ensured by competition and the eagerness of foreign countries to sell to Germany at present. The export drive requires more study of foreign markets and even business tours are necessary. Foreign exchange is required by businessman for some essential trips abroad, but that is not readily provided.

The Andhra Chamber which, has been vitalised since the war, has been recognised as a body acting in public interest by the High Court. It obtained exemption from income tax in respect of revenue realised from subscription. The High Court ruling in February, which is a matter of great interest to all chambers of commerce, may force the Joint Select Committee to define the position of commercial organisations under the new income tax law. The Chambers by

helping trade and making representations have already established their bona fides and the law has come to see that defence of sectional interests is a legitimate activity, — a clue to the public status of a private body.

IDA The Fourth Loan

The World Bank and its affiliate, the International Development Association (IDA), today joined in providing the equivalent of \$ 25 million to Chile for the improvement of road transport. IDA is extending a development credit of \$ 19 million for the construction, rehabilitation and consolidation of the main secondary roads in 10 southern provinces of Chile, the country's most important agricultural region. The Bank is making a loan of \$ 6 million to finance imported equipment required for road maintenance operations throughout the whole country.

This is the second IDA credit in Latin America; one of \$9 million was extended last month for highway development in Honduras. Today's IDA credit is for a term of 50 years, interest-free. It is repayable in foreign exchange, amortization to begin after a 10-year period of grace. Thus, the first payment will be due December 1, 1971. Thereafter, 1% of the principal will be repayable annually for 10 years and 3% will be repayable each year for the final 30 years. A service charge of 3/4 of 1% annually on the amounts withdrawn and outstanding will be made to meet IDA's administrative costs.

The Bank loan is for a term of nine years and bears interest of 5-3/4%, including the 1% commission which is allocated to the Bank's Special Reserve. Amortization will begin 1 December 1964. The Bank of America NT & SA, The Marine Midland Trust Company of New York, and The First Pennsylvania Banking and Trust Company are participating in the loan, without the World Bank's guarantee, for a total amount of \$250,000 representing part of the first maturity.

Because of its unusual geography, Chile is particularly dependent on good transportation facilities. It lies between the Andes and the Pacific Ocean in an area about 2,500 miles long, and averaging about 110 miles in width. The road system comprises the Pan American or Longitudinal Highway extending 2,200 miles from north to south, and about 33,000 miles of transversal roads.

The work to be undertaken with the assistance of IDA credit will improve the transversal road system in the 10 provinces of Southern Chile, where the large number of dirt roads become im-

8 July 1961

passable during the five-month rainy season each year and where damage caused by the earthquakes of May 1960 has been only partially repaired. About 600 miles of roads will be newly built or relocated and 1,600 miles of existing roads will be improved. These roads form the basic framework of the transversal road system in these southern provinces providing connection between the main producing areas and consumption and processing centres. When the work is finished, the Southern zone will have an integrated all-weather road system.

The benefits to be derived from good road transport in the southern zone will strengthen the whole Chilean economy. This region already produces some 3.2 million tons of agricultural products annually, representing about 53% of total Chilean output. In 1959 the value of this output reached the equivalent of \$206 million. In the same year Chile imported \$72 million worth of agricultural products. Of this total \$50 million was spent on sugar, wheat, meat, fresh fruits, milk and oils, all of which are produced in the road project area. Improved road communications will not only result in direct economies in road vehicle operation and enable present production to be marketed throughout the year without undue spoilage in transit, but will be an inducement to further agricultural development. This is particularly true of Arauco Province where large tracts of land have remained undeveloped despite their undoubted potentialities and proximity to the large and expanding market of the industrial area of Concepcion.

The total cost of the road construction and maintenance projects is estimated at the equivalent of \$62.5 million. The \$25 million from the IDA credit and Bank loan will cover the foreign exchange requirements. The remaining funds will be provided by the Chilean Government.

IAC Fares to Go up

The decision of the Indian Airlines Corporation to make an upward revision of its fare and freight rates from October next will not be a sweet pill to swallow to those who have experienced delight in air travel and that section of the public who depend on the speed of airways to transport their goods from one destination to another. The steady rise in operational costs has probably made such a decision unavoidable any longer. The new scheme has been submitted recently to the Finance Ministry for scrutiny. It has been announced that the new fare schedule will be made applicable within a couple of months.

Under the new scheme the charges on long distance travel

(trunk routes) covered by Viscount, Friendship and night air mail services will be increased by ten per cent and an increase of five per cent in rates of short distance travel (regional routes) covered for the most part by Dakotas will be effected. The contemplated move will not, however, affect the air passengers in Assam, Manipur and Tripura regions whose sole means of transport is the aeroplane.

The additional income to the IAC from the proposed measure is expected to be to the tune of approximately Rs 1 crore per annum. It is not known whether the new revenue will be sufficient to meet the high operational costs brought about by a combination of factors like the high costs of spares, increase in fuel rates and rise in wage bill. It may be noted that Dakota is not found in much use in other parts of the world and the spares of this type of aircraft have become rare commodities. The idea of replacing Dakotas to avoid the heavy loss incurred on this count will have to be shelved for the moment for two reasons. Firstly the precarious position in India's foreign exchange reserves does not allow the authorities to go in for other brands and secondly Dakotas have been found suitable for the northern Indian terrain and weather.

OIL & OILSEEDS Unanimity on Forwards

In his address to the 34th annual general meeting of the Bombay Oilseeds and Oil Exchange Limited, Mr. Ramdas Kilachand stressed the paramount importance of stepping up the production of oilseeds in the country and evolving a more favourable policy for stimulating the exports. The target of 0.97 million tons fixed for oilseeds in the Third Five Year Plan is considered as insufficient for the requirements of the country by the trade which wants it fixed at 1.10 million tons. But even for attaining the lower target, greater efforts are needed, for the per acre yield in India is notoriously low. For instance the yield of groundnut per acre in the country in 1959-60 was only 643 lbs as against 1,401 lbs in China, 1,137 lbs in Brazil, 1,003 lbs in Nigeria and 1,002 lbs in the United States. The wide leeway India has to make is, therefore, quite evident. As the scope for bringing more land under the plough for oilseeds cultivation is not vast, the obvious step will be to resort to intensive farming by employing scientific methods.

The Government of India's attitude toward exports is disappointing. For instance the trade's repeated requests for the constitution of an Export Promotion Council to launch an export drive were simply ignored by the Government. Apart from setting up such a council the Government should provide some incentives offer-

ed by other countries for promoting exports in the interest of the country in general and the trade in particular.

The Forward Markets Commission while enlisting the cooperation of trade representatives for evolving a policy on new crop contract, also approached the Exchange for its suggestions and many of the suggestions made by it found easy acceptance by the Commission. In the Conference convened by the Commission on 26 June the views of various associations were brought to a common platform and the decisions taken there got the unanimous support of the representatives. The most important decisions requiring special mention are the following. There shall be four contracts for groundnuts, cottonseed, and groundnut oil and three contracts for castorseed and linseed. No ordinary or special margins or ceilings was fixed. Two contracts in each commodity shall run simultaneously and there shall be daily fluctuation limits in the case of groundnuts, cottonseed and groundnut oil only when prices tend to ride above the specified levels.

ANDHRA PRADESH An Absurd Venture

Why Andhra Pradesh should go in for coffee-growing when there is a surplus and exports are difficult is one of the questions raised by the reported Rs 10 crore programme in four districts. It has been said often that in the hilly forest areas in Agency tracts land can be put under coffee. But it seems absurd adding 30,000 acres to the area under coffee, (perhaps Robusta) when the growers in Mysore and Madras are alarmed over a record crop and the trend of prices realised this year for exports. The All-India Coffee Board experts who may be aware of the very limited success of experiments in the Araku Valley may not be aware of the difficulty of raising money for new coffee estates. To argue about self-sufficiency in coffee for Andhra Pradesh at present is to miss the point that the best area for coffee is Coorg and the heavy rainfall there is a vital factor in successful cultivation. There are obviously other crops that can replace coffee in the areas surveyed and the Central Government at least must refrain from extending financial assistance, when it is known that many coffee estates in Mysore have large reserve areas to be opened up and the Malnad is far more suited for development than the Agency areas in Godavari or Vizagapatam districts.

The increase in the coffee crop, the high price ruling at home, and the falling return to the grower are commonplaces for the Coffee Board which may be quite right in telling States that now wish to start growing coffee "Don't." Commercial crops like turmeric or

tobacco may not do well in the hills, but the least suitable from every angle, including the period of waiting for a crop on the trees, is coffee. If the trouble is over sales tax on supplies from Mysore, adjustments are easy. To invest in coffee is unsafe, to go by current market form—a fact evidenced by coffee shares being a drag on the Madras Stock exchange at the moment.

PRICE OF PATENTS Deductible

The purchase of industrial property like a patent for local exploitation may be deemed capital outlay. In reply to representations made about payment of royalties and the expenses usually involved in securing patents, the Central Board of Revenue has lately issued a circular allowing the licensees of patents to write off the expenditure on patents as consolidated revenue expenditure over a fixed period of fourteen years. It is evident that a patent is not taken to be a capital asset on which regular depreciation can be charged. The interests of the revenue are safeguarded, because the purchase price paid or royalty and incidental charges are not to be treated as deductible revenue expenditure incurred in one year but as an item of expenditure valid over the life of the patent acquired. If a patent is superseded or replaced some questions may inevitably arise regarding the loss incurred but the idea is that the patent acquired by purchase is property with a limited life and the amortisation of the outlay is correct.

Some relief will be obtained by assessee while the National Research Development Corporation may find it easy to sell its inventions or processes on the instalment plan by giving buyers the option to pay the sum due for a patent in fourteen years, so that the actual user of the patent pays just the sum allowed under the tax rule and the relief available is equate with the payments made. This is likely to encourage the NRDC to negotiate locally in respect of processes available for licensing for commercial production. The NRDC will be then assured of a regular and larger income, though it gives information to industry free of charge at present. The same term of payment in 14 instalments may be offered to foreign buyers. Indian patents and the NRDC can avoid a loss on its operations like that sustained in 1959-60 when carried forward a debit balance Rs 7.8 lakhs. There is an indication that supplementary outlay not only the payment made to the owner of a patent, will be lump with the cost of acquiring industrial property of a special nature under the CBR ruling which permits the user of a patent to pay

a just claim for deduction in the actual computation of taxable profits.

SINGARENI

A take-over Bid by Centre

The Central Government's take-over bid for the Singareni collieries is not unexpected. The increase of paid-up capital made last year to Rs 3 crores, put the Central Government in possession of Rs 1.2 crores' worth of shares equal to 40 per cent of the paid-up capital. The Central Government has the right to nominate three directors in what is now a State-owned private company under an agreement to give a loan for Rs 2.95 crores in addition to the purchase of shares. The private shareholders have been bought out gradually after the bonus issue made by capitalising reserves. If it is a question of voting rights with four nominees of the AP Government on the Board at present, it is clear that the Centre cannot succeed in its bid. The non-assenting private shareholders who held only 12 per cent of the Singareni Collieries' capital of Rs 63.21 lakhs before the reorganisation are in no position to object.

The AP Government in view of its offer to private interests to set up a big fertiliser plant at Kothagudem is perhaps committed to the retention of control. But the Centre has advanced Rs 6 crores for the development of the field. That gives leverage, as it were, for making the Centre's voice dominant in the AP coal mines. Of course, there is the parallel of Neyveli but the AP Government acquired the collieries from the Nizam's government which bought out the Hyderabad (Deccan) Trust during the last war. That the AP Government stands to make a profit as Singareni shares quote at Rs 11.75 per 10-rupee share is not a strictly relevant consideration at present. The AP Government cannot disregard opinion in Telengana or the view that other take-over bids in respect of Nizam Sugar, Allwyn Metal, etc. may easily follow.

The fact that local labour leaders are opposed to the take-over proposed may be given weight by some. The risk of substandard labour practices coming in and welfare work suffering is not unreal. Hindustan Steel, on the recent admission of Mr L. N. Mishra, is not an example to Indian employers. And even if output were to rise to the target of 4.5 million tons of coal, a year the private sector in coal mining will always preponderate.

In the outline of the Third Plan the expansion of the Singareni Collieries finds a place, but the demand for non-coking coal in the Peninsula may not be fully met, if the Centre displaces the State Government in its control of the collieries at Tandur and other places. There can be no appeal to the Company Law Administration (or to the Jenkins Committee in the UK) in this case but shareholders can state a case for the Supreme Court to examine, (as was done in regard to the transfer of the

Berubari enclave) with the AP Government providing a degree of moral support for the dissentients. There may be quite good grounds like mechanisation schemes for the Central Government's move. But it may be yet contended that enough was done last year to satisfy the Centre, helped by the declaration of a dividend, so that it may be said that the investment has begun to pay for itself from the outset.

PAKISTAN BUDGET

No New Taxes, Many Concessions

The Pakistan Budget for 1961-62 presented last week, deviates in significant ways from the pattern of the country's previous Budgets. There is a singular absence of fresh taxation in the Budget for 1961-62, which is remarkable since this has been coupled with a host of new tax concessions. That in spite of the loss of revenue inherent in these steps, the Budget should disclose a revenue surplus of the order of Rs 23.63 crores reflects the considerable improvement that has taken place in the revenue position. The Budget estimates place revenue receipts for 1961-62 at Rs 215.53 crores and expenditure at Rs 191.90 crores. Comparable figures for revised estimates for the last year are Rs 198.74 crores and Rs 174.21 crores, while the Budget estimates for the same year are Rs 178.32 crores and Rs 169.86 crores for revenue receipts and revenue expenditure respectively.

The tax concessions announced in the Budget apply to a strikingly large number of items, though a majority of them falls under Customs. Lower rates of duty have been announced for the industrial items and parts of machinery such as insulating tapes, articles of glass, leather, asbestos or plastics used as parts of machinery. For these items, the rate of duty has been fixed at 12½ per cent. Reduced rates have been extended also to chemicals, infants' and invalids' food, and imported film. Other concessions provided in the Budget relate to the removal of sales tax from a large number of items, abolition of excise duty on such items as electric fans, and spares and salt manufactured in East Pakistan, reduction of the highest marginal rate of tax on personal income and raising of the investment allowance rate. The tax holiday for industries has been extended from four to eight years.

An important feature of the Budget is the special consideration shown to East Pakistan which has been nursing a sense of isolation and neglect by the Central Government at Rawalpindi. Apart from the abolition of excise duty on salt manufactured in East Pakistan, the Budget also provides

for lower rates of duty on machinery and spare parts imported into East Pakistan. While the general rate of duty on these fixed in the Budget is 12½ per cent, the duty for East Pakistan has been further reduced to 7½ per cent.

The capital expenditure in the Budget for 1961-62 is estimated at Rs 229.94 crores, and capital receipts at Rs 239.62 crores. A part of the surplus in the capital budget is proposed to be utilised for retiring ad hoc treasury bills.

The white paper on the Budget also reflects improvement in the state of the Pakistan's economy during 1960-61. The increase in industrial production is shown to be considerable, and with exports touching a peak level, there was notable improvement in the reserves of gold, dollar and sterling to the extent of Rs 6.68 crores. Larger contributions to export earnings were made by raw jute, raw cotton and wool. But in spite of the increased earnings from exports and mainly owing to the liberalisation of imports, the balance of payments on current account showed a deficit of Rs 62 lakhs. The improvement in the foreign exchange reserves is, in the circumstances, ascribed to an increase in the net inflow of foreign capital.

Apart from these indicators, the general improvement in Pakistan's economy can also be traced in what the Finance Minister has claimed as the improvement of the supply situation for goods in general and the progressive abolition of price controls on many articles. One important exception to this satisfactory trend, is provided by the food situation. Though the food situation has remained under control, dependence on imports, specially from the US has not been reduced in any significant proportion.

SOUTH VIETNAM

Export Potentialities

An official report from Saigon refers to the grant of funds by the I.C.A. to permit imports of commodities like textiles and machinery. There will be tight import control but the present regime is entrenched and US interest in S. E. Asia may lead to a larger measure of economic aid. French interests are negotiating for starting a big fertiliser plant. Rice output will certainly go up after two years, when the plant is ready and Indo-China may produce calcium carbide in addition to urea. Long-established trade ties may help India to sell textiles but South Vietnam means to improve her three cotton mills for producing white calico and printed cloth. The USA will certainly help to provide plant, even for the use of imported cotton,

Indian Financ

and the takings from India may be hit by supplies from Hong Kong. The demand for pump motors, etc. for minor irrigation is expected to improve and the purchase authorities have expressed a desire to buy steel all from India. There is a mark for trucks and the question is whether Australia can supply easily but whether India can offer vehicles at a proper price. The demand for plastic goods small as Vietnam means to encourage the use of locally grown rubber and permit only import of chemicals for plastics manufacture.

The recent trade mission was told about the poor prospects for plastics at present. The S. E. Asian markets are generally better on increasing local production—for instance, of coffee or jute bag and India must concentrate on traditional items including tamarind and chillies, though export prospects are compromised by the advance in prices in India.

KUWAIT

An Irony of History

In the news today is the Sheikh of Kuwait owing to the Iraqi plea that the State is a part of the Turkish empire that should belong to the Vilayat of Basra. The Kuwait Oil Company formed in 1934 by British Petroleum and Gulf Oil has made Kuwait a small State with a big income. The royalties paid till 1951 were converted into a 50 per cent share for the Ruler in the profits. A great oil tanker port was built at Mena El Ahmadi along with a six million tons refinery to deal with the rising output of the Burgan field. A new rich, field at Randhain has supplemented it since 1959. Kuwait accounted for 68 million tons of crude and the refinery exported half its output. The entry of Royal Dutch-Shell group in 1960 for offshore drilling operations for a price of £30 million with a guarantee of a share in the profits for Kuwait made Kuwait loom longer. More important is the trade with Kuwait which buys one-fourth of its imports from the UK while half of Britain's oil imports are derived from Kuwait. The usefulness of Kuwait was fully proved when the Anglo-Iranian oil dispute developed. And Shell has arranged to let Kuwait buy shares in the new local company formed for the extraction of oil.

That the Turkish Government, an emergency regime in name and fact, is invited to mediate may be described as one of the ironies of history. The Arab principalities on the Persian Gulf were detached from the Turkish empire gradually and it was only German interest in Turkey that prevented the Indian empire from extending from Bombay to Ormuz. The utter defeat of Turkey in 1918 led to the rise of succession States like Syria and Iraq, but the principalities were left intact under the

8 JULY 1961

supervision of a British Resident. A probable outcome of the present dispute may be the revival of Iran's claim to Bahrain, today the island of oil rather than of pearls. The Sheikh enjoys British protection and has resisted Persian claims successfully. But the claim is not withdrawn, and if the UK fails in Kuwait, because Russia does not recognise the UK claims under treaty though Egypt and Arabia do, the Sheikh of Britain may feel that, even if Britain intervened successfully on behalf of the Sultan of Oman against an insurgent chief aided by Saudi Arabia, there is no prospect of Britain helping the small State to stand up to Persian demands in the future. It may be easy for Gulf Oil to negotiate new terms with Persia for Bahrain oil, but the loss of face for Britain will be considerable and the midge kingdoms on the Gulf will have to look to the Arab League and not to the British Navy for protection against designing neighbours.

THE CONGO

Unusual Reasons for Rejoicing

The Congolese have unusual reasons for rejoicing on the occasion of the first anniversary of their independence. Even four months ago, it would have been ironical to talk of the blessings of independence in a Congolese context. The last few months however, have given reasons, if not for happy memories, at least for cautious hopes. The return of Katanga to the fold follows the release of Mr Tshombe. It proves that the latter has a hold on the province, also that the promise of a constitutional assembly has helped Katanga to give up the idea of secession. Mr Kasavubu's authority is reinstated, the pro-Lumumba partisans are defeated, and the unity of the Congo republic repaired. All this may be viewed as a result of UN intervention, gradual and circumspect. Within a year, the Congo has seen many upsets, but as Katanga has abandoned the idea of a revolt, mainly because Belgium cannot give support to one party in a civil war against the directions of the United Nations Assembly, it may be said that Katanga has been forced to see reason by the Belgian withdrawal. The Katanga rebellion may go down to history like the Whisky rebellion faced by the USA in the first decade of its career. That revolt was not due to a taxpayer's objection but was a conflict between the federal government and citizens of some States who felt that the State alone was entitled to their allegiance. A major result of the pacification is that Katanga will give up her own franc currency and the Congolese francs will be stabilised by the assurance that Katanga's export surplus will reinforce the exiguous reserves. The Congo

issues in the Brussels stock exchange should recover: the slump in the Congo frame should also end, since the receipts from the big mines should be available to the Congo Government and the Belgian shareholders as before. The happy outcome will probably lead to the withdrawal of UN forces soon, though emergency relief operations must continue. Exports of minerals across the Atlantic may be helped by the present UN control of Matadi Port. And the Union Minière will not be the only beneficiary. The return of peace will help North Rhodesia to settle down, in spite of the argument over constitutional changes going on between Lusaka and London. The developments in Katanga may force even Portugal to think about the need to appease Angola where the African movement is getting stronger. The UN may be called in to help and advise the Colonial authorities so that the whole fiction of Angola being a part of Portugal will break down once for all.

STEAMER FARES

Half A Loaf

In recommending the quantum of increase in freight rates that may be charged by the Joint Steamer Companies operating services from Calcutta to Assam, the Inland Water Transport Freight Rates Enquiry

Committee has followed the principles and practices adopted by the Tariff Commission for fixation of reasonable prices for commodities. The Committee was set up in May, when differences between the Government of Assam and the Joint Steamer Companies over the increase of 10 per cent charged by the latter from March 1961, were referred to the Government of India in the Ministry of Transport. On the suggestion of the Government of India, the Steamer Companies agreed to reduce the freight increase to six per cent pending the finding of the Committee which was asked to examine "the traffic handled by the Joint Steamer Services in the past three years on the river routes from Calcutta to Assam, the freight rates prevailing in 1960 and the anticipated traffic and operational results in the immediate future on the basis of the freight rates in force prior to revision in March 1961 and recommend whether any increase in freights is justified and if so to what extent". The Committee has answered the question in the affirmative and recommended an increase of five per cent on the rates prevailing prior to March 1961, which will be applied to all traffic other than tea from Cachar and foodgrains. The Committee has estimated that on the basis of this increased rate, the Companies will be able to make a provision of about Rs 9 lakhs per year for purposes of rehabilitation after making due allowance for taxes, dividend, depreciation, interest, etc. The Committee has rejected the proposition put forward by the Companies that their ways and means position be treated

as the controlling factor for working out the permissible rate of freight increase. In this connexion, the Committee has pointed out that, by utilising for their current requirements the amounts allocated toward dividend, taxes and depreciation, in addition to the special allowances of about Rs 9 lakhs per year for rehabilitation, the ways and means position of the Companies will permit of their meeting nearly all their commitments during the two-year period, including those on account of the vessels under construction. The freight increase recommended by the Committee will operate for two years from July 1, 1961. The Committee has not found it a practicable proposition to project working result beyond two years and has, therefore, suggested that early in 1963 a further investigation should be undertaken to assess what rates would be appropriate under the altered condition expected to prevail thereafter.

The proprietors of Indian Patent No. 43263 "Fire Extinguishers" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-numbered Patent.

Book Reviews

TAXATION IN INDIA (WORLD TAX SERIES)—By Walter Brudno, Charles K Cobb, Jr & Nani A. Palkhivala—Published in India by N. M. Tripathi Private Ltd., Bombay, for The Law School of Harvard University. Price Rs 37.50.

The volume under review is a brilliant example of international co-operation in a constructive activity. In August 1951, the Economic and Social Council of the United Nations passed a resolution requesting the Secretary General of the UN to consider the publication of a World Tax Series providing a "continuous service of information on national tax laws and administrations". The resolution stated that in view of the increasing importance of trade and investment between member countries, it was necessary to have a comprehensive and authentic picture of their different tax systems. The resolution also wanted the possibilities of co-operation from universities in this undertaking explored by the Secretary General. The Harvard Law School offered to co-operate in this very important task and in 1952 an international programme in taxation studies was made part of the programme of international legal studies in the Harvard Law School. The Ford Foundation provided a grant and at the end of the present volume is given a long list of countries which also have provided generous financial assistance for making possible this important programme of research. Already the tax systems of Brazil, the United Kingdom, Mexico, Australia and Sweden have been covered.

The present volume on taxation in India follows broadly the scheme that has been adopted for the earlier volumes in the series. Very considerable thought and ingenuity have gone into the evolving of the scheme itself by which uniformity of treatment, arrangement, terminology and cross-references has been ensured. This greatly facilitates comparisons between the various tax systems of this world. Such a comparison is not only of academic interest: authorities of various countries can get fruitful ideas for reform of their own tax systems by the study of these volumes.

Under the general scheme, each volume is divided into three parts. Part one gives a description of the tax system of the country in the broadest terms. Part two gives a detailed analysis under topic headings of its income-tax law in its own legal and administrative terms. Part three deals with any other taxes that may require detailed treatment. In the first part is also given much useful background information. It serves as an introduction to the detailed analysis that follows in the subsequent parts. Confining our-

selves to the present volume, we find an amazing amount of material on the legal, economical and historical background. There is a competent summary of the general tax structure, Constitutional provisions, legislative process and administrative details relating to taxation. Part two is devoted to a detailed analysis of the Indian Income-tax Act. It is a masterpiece of compression. No detail of significance has been omitted, but there is no sense of padding or of the authors' eking out a few ideas with verbiage, as is not uncommon in certain Indian treatises on the subject. The whole thing is workman-like, and the style is terse and precise and refreshingly free from jargon. It has none of the fussiness of the text-writer and has a comprehensive sweep. The relevant case law is quoted with discretion and is used to illustrate rather than to impress.

The discussion is under broad conceptual heads, like classes of income and of taxpayers, income from business, income from services, income from capital and taxation of non-residents, etc. There is a separate chapter on the international aspects of taxation gathering within it taxation of non-residents, treaties for avoidance of double taxation, etc. An useful chapter on tax calculation is also included. Foreign readers will also find discussion of topics like exemptions on new undertakings and on dividends therefrom, and development rebate, of special interest.

The law stated in this book is the law as it stood on April, 1960. Since then certain important changes have been effected by the Finance Act of 1961—some, of significance to foreign investors. Moreover, a comprehensive recodification of the law relating to income-tax is on its way. A bill to consolidate the present law has already been presented in the Lok Sabha. Extensive procedural changes like the procedure for submission of returns, imposition of penalty and collection of taxes are being contemplated. Though the basic structure of the old Act is left intact, changes in substantive law like criteria of residence, vicarious liability of directors of private companies under certain circumstances and taxability of charities are in the offing. Not all these changes are to the tax-payer's detriment. For instance, a non-resident partner of a resident firm is now to get the benefits of double income-tax relief which was not available to him under the old Act. But to the extent to which these changes are ultimately found acceptable by the Indian Parliament, the volume under review will be obsolete. But this is a hazard that any book on tax law will have to reckon with in these days of frequent amendments to fiscal statutes. Since the programme of the World Tax Series includes

the publication of supplements, it is quite likely that we shall be having a supplement next year giving the changes that will have overtaken Indian Income-tax law by then. Together with the supplement, this book will be of inestimable value to anyone who is interested in Indian taxation. At Rs 37.50, it is much better value for money than many things we pay for these days.

★

A SURVEY OF CONTEMPORARY BANKING TRENDS—By S. K. Basu, M.A., Ph.D., Second (Revised) Edition, Published by D. M. Roy, 217 Cornwallis Street, Calcutta. Price Rs 18/-.

This is a revised edition of the book written by Mr Basu in 1957 and incorporates the latest developments in banking. It is arranged in three parts dealing respectively with the trends in the theory and practice of central banking, and commercial banking and the role of international financial institutions. In dealing with the trends in central banking, Mr Basu discusses the traditional techniques of control such as legal reserve requirements, open market operations, variable minimum reserve ratios, selective control and also the role of interest rate policy. Since the publication of the first edition, momentous developments in banking have taken place. These include the increasing importance of non-banking financial institutions, firmer evolution of central banking policy in under-developed countries, opening of new pathways in banking business etc. The official study of the banking problems and developments in England by the Radcliffe Committee has also provided fresh points for discussion for bankers in all countries. On all these the book offers a wealth of information.

A striking point which emerges from the study of comparative practices, is that the under-developed countries instead imitating the practices of the West are evolving techniques suited to their own requirements and needs. The powers vested in the central banks of some of these countries to create their own securities for purposes of open market operations, the fixing of critical international reserves to mitigate repercussions of adverse balance of payments and the conferment of wider powers for selective credit controls are quite extensive,—in some cases, more extensive than those vested in their counterparts elsewhere.

The more important among the fresh material added in the revised edition are the study of the Radcliffe Committee Report, the growth of non-banking financial institutions, and the developments in respect of hire purchase finance and personal credit. The growth of non-banking finance companies, like hire purchase finance companies, personal and sales finance companies, and building societies attracting deposits from the public and holding large

slices of Government securities not only creates problems for the ordinary commercial banks but also introduces an uncertain factor in the effectiveness of State monetary policies which are presently designed to reach only the commercial banking system. Mr Basu discusses some of the proposals advanced for bringing these institutions within the ambit of Central banking control. Notable of these is the proposal for a minimum reserve ratio for them. The Radcliffe Committee in England has also made out a strong case for extension of central bank control over these. Granted that, with proper devices, these institutions could be made amenable to central bank control, this does not dispose of the question of the inroads that will be made into the business of the commercial banks. It is, in this connection, that the new trends in commercial banking discernible in some of the advanced countries in the direction of bank participation in hire purchase financing, provision of personal credit and term money, assume significance. Mr Basu discusses these trends in the US and the UK and points out the very close affinity between hire purchase financing and the overdraft facilities offered by banks which therefore establishes the suitability of this new type of business to the commercial banks. One important consideration in favour of such business being made part of commercial banking business is that in the hands of banks, the amenability to control by central bank of such business is greater and in times of inflation, this is an important consideration.

Mr Basu also examines banking trends in India and offers some interesting comments in respect of some important aspects of recent legislation. He points out a serious weakness in the legislation regarding the power of the Reserve Bank to vary minimum reserve ratio for the commercial banks in that it does not provide for sufficient advance notice and observes that this might lead to considerable shock effect on bank working. Mr Basu also points to the limited effect of the enforcing of the special deposit reserve by the Reserve Bank on the commercial banks in March and May 1960 and observes that though the peak level of advances was halted the traditional slack season contraction was small. However it is a point for consideration whether what Mr Basu suggests as the relative failure of advances to contract proved the failure of the mechanism of special reserve requirements or reflected the secular tendency toward a blurring of the distinction between the slack and busy seasons.

Banking in India at present is in a phase of consolidation and reorganisation,—a fact emphasised by the most recent proposals by the Reserve Bank for higher liquidity ratio and related reforms.

Indian Finance

8 July 1961

SEMINAR ON COST STUDIES IN AGRICULTURE: Published by the Indian Society of Agricultural Economics, Bombay. Pp 177+vii, Price Rs 8.00.

This book comprises the proceedings and reports of discussions and the Papers submitted at the seminar at Matheran held in October-November 1960 on the method of collecting data on farm costs and the uses to which they may be put. This seminar is an offshoot of an earlier one held in 1958 in India under the auspices of the Food and Agricultural Organisation of the United Nations by the nations in the ECAFE region for the purpose of discussing problems of stabilization and support of farm prices and incomes. The Matheran seminar has been jointly sponsored by the Indian Society of Agricultural Economics and the Indian Society of Agricultural Statistics with the support of the Directorate of Economics and Statistics of the Ministry of Food and Agriculture.

Indian agricultural statistics are woefully inadequate for supporting anything like scientific costing. But if our professions of devotion to planning have any substance, we should make good this omission. It is hardly possible to increase farm efficiency or to frame suitable price policy for agricultural products—to take two random considerations—without a reasonable system of costing. So far as India is concerned, this kind of data has never been obtained, except, as Professor Nanavati says, in the Punjab in a small way, where the whole thing had been disrupted on partition. Some stray studies in the economics of farm managements in six typical regions were attempted in 1954-55. But the machinery for such work is still to achieve a permanent status. Examples of American farmers who did their own accounting and presented their government with concrete proposals have no immediate relevance in India where the farmers are mostly illiterate.

A danger that needs to be guarded against is the evolving of too refined and too delicate a set of tools, which will be found useless in Indian conditions. The discussion in the seminar, as was not to be unexpected on an academic occasion, was mainly concerned with methodology and conceptual problems of definition and so forth. Both for what Dr Dantwala called the "macro purposes of policy and analysis" and for the "micro purposes" of individual farm economics, the tools have necessarily at the moment to be rough and ready and above all available early. The present volume discusses the methodology involved in the attempt at farm costing and some of the papers, and more particularly the discussion that followed them have thrown useful suggestions in this regard. There is a wealth of material in the book from which fresh lines of inquiry can be usefully started. It would be a good idea to wean aspirants for Ph. Ds from sterile preoccupations with theoretical model-making and set them the more useful task of working out a rough and ready method of costing, applying them to particular communities and publishing the results.

INSURANCE IN INDIA—By Dr A. N. Agarwala, Allahabad Law Journal Press, Allahabad: Price Rs 27.50.

The title of Dr Agarwala's book is somewhat misleading, leading one to expect that it deals with insurance as such. But the sub-title explains its true scope as the insurance aspect of Social Security in India. Thus Dr Agarwala's pre-occupation is both wider and narrower than what the title leads one to expect. Insurance enters the picture only in so far as it qualifies as an agency of social security. Indeed, it has been almost the only kind of social security that many under-developed countries have had for a long time until the more sophisticated ideas culminating in the Beveridge plan came to gain wide acceptance all over the place as the minimum that civilised nations should aim in discharging their duties to their citizens. Indeed a high degree of social security, assured largely by a system of joint social insurance by employer and employee, has become a hall-mark of a developed nation.

Though social security is a matter of burning importance at a time when we are consciously dedicating ourselves to the ideal of welfare in the widest commonality spread, the literature on the subject is somewhat scrappy. Ideas have to be pieced together from official reports on the subject. The dearth is partly due to the slow growth of practices relating to social insurance. Though the Royal Commission on Labour focussed attention on the need for social insurance as an effective means of ensuring labour efficiency, as early as 1931, the necessary institutional framework did not come into being till much later. Since a modicum of objective data is necessary before anything useful can be said on the subject, the absence of a comprehensive account of social insurance is not surprising.

The book abounds in statistical tables which greatly enhance its value. The research worker as well as the policy maker will find it an invaluable guide. Dr Agarwala's approach is both historical and analytical. The book is conveniently divided into four parts. Part II which comprises nine chapters deals in a detailed manner with life insurance while Part III in eight chapters deals with social insurance. Part I and IV are respectively introduction and conclusion.

Life insurance still continues to be the most important form of social security. The aim of nationalisation was not only the utilisation of the vast funds for nation-building, but also the extension of the benefits of life insurance to the rural population. Dr Agarwala doubts if nationalisation of life insurance would have been decided upon if the setting up a life insurance investment corporation on the basis of voluntary co-operation between the different insurance companies, with their separate identities intact, had been seriously considered. He outlines the organisational set-up of the proposed investment corporation. Though this proposal is discussed hypothetically in relation to a situation no longer obtaining, the idea is nevertheless worth consideration even

now, for the question of deployment of the funds of the LIC is once again agitating the public mind. In the changed set up Dr Agarwala suggests an investment department (presumably this is to replace the present committee which advises the LIC in the matter of investments) comprising experts whose "advice will be seriously heeded by the executives of the Corporation, if not always unquestionably accepted". Considering the fact that the LIC Investment Committee also comprises experts and that its advice, atleast after the Mundhra Affair, seems to be not ignored, it is rather difficult to understand what improvement there can be brought about by merely replacing it with a department which also seems to be more or less similar to it.

The book deals exhaustively with Social Insurance in its two well-marked phases, 1948-54 and 1955-59. The neglect of social insurance till well after independence is traceable to many causes. One of them is the slow pace of industrialisation. But even after industrialisation has made strident progress, social insurance is lagging behind. The Employees' State Insurance Act was passed in India in 1948, but the phased implementation of the scheme has brought to light many defects and shortcomings, but by and large the scheme has gained general approval. Its full significance will be realised only when it is extended to cover the families of insured persons. Dr Agarwal is not merely content with showing the defects of the scheme. He has shown how these can be remedied and the scheme made to work effectively and efficiently.

The Employees State Insurance and the Employees Provident Fund schemes, however, mark only some of the initial steps on the road to full social security. In industrially developed countries of all political hues, workers' conditions are being continually improved through the formulation of ever expanding social security measures. In India we have only made a beginning and much remains to be done. While it is to be admitted that a rapid progress of social security measures can go hand in hand with a progressively increasing prosperity of the nation as a whole, it is incumbent on Government to do its utmost to minimise uncertainties caused by loss or absence of employment, sickness, permanent disability and the like. In the chapter on the future of social insurance in India, it is clearly indicated how a complete social insurance system for India can be set up.

It will be wrong, however, to think that a complete social insurance system in India can be had the moment a clear cut plan is got ready. For the financial implications of a complete scheme in India are almost insuperable at least at the present stage of the development of its economy. Facing his calculations on the Beveridge Plan, Dr Agarwala estimates that a complete social insurance system will cost in an under-developed country nearly 13 per cent of the national income. Besides the financial difficulty, there are other obstacles in the way such as the widespread illiteracy of the people, the lack of trained personnel, etc. It

would therefore appear that it is idle to look for a rapid upsurge in social security measures in India. This is not to say, however, that things have perforce to continue in much the same way as obtaining at present. It should be our constant endeavour to work efficiently such of those social security schemes as have already been implemented, in the meantime keeping in readiness other well-thought out schemes to be implemented when conditions become conducive.

★

SOCIAL INSURANCE FOR THE INDIAN WORKING CLASS—By M. A. Chansarkar. Published by Vora & Company Publishers Private Limited, 3, Round Building, Bombay—2. pp. 224. Price Rs 12.00.

A systematic attempt to introduce social insurance in India was made with the passing of the Employees State Insurance Act in 1948. The implementation of the provisions of the Act was delayed because of extensive criticism voiced against it in many parts of the country. In order to plug the loopholes contained in the Act, an amendment bill was introduced in the Parliament on 19 March 1951 and was passed on 6 October 1951. Employees State Insurance covers workers and clerical staff working in factories which utilise power and employ twenty or more persons, whose monthly salary do not exceed Rs 400. Those who are covered by the Act contribute a nominal sum as insurance premium varying with their wages and are to get free medical advice and treatment from doctors specially allotted for that purpose at stipulated dispensaries.

India has accepted the principle of a Welfare State through economic planning and one of the most important ingredients is an assured protection against sudden illnesses and disability. Dr Chansarkar has reviewed the working of the Employees State Insurance Corporation at great length after narrating briefly the growth of ideas on social insurance in the country. Though chiefly descriptive, the book sheds much critical light on the different aspects of the scheme and compares it with similar schemes in foreign countries. The comparative study proves beyond doubt that we have made only a beginning with limited coverage, and the scope for improving on the present state of affairs with an integrated scheme of social insurance appears vast.

The author reviews the Employees Provident Fund Scheme in chapter XIII. In the succeeding chapter he discusses the problem of integration of social insurance and examines the suggestions of Menon Committee constituted in August 1957 and other recommendations made from time to time. To those who are interested in the working of the social insurance in India the book is a valuable guide.

Microvee

AIR, FUEL AND LUBRICATING OIL
FILTERS FOR INTERNAL COMBUSTION
ENGINES

Microvee oil bath air cleaner. The illustration shows one of a complete range of oil bath air cleaners which are fitted as standard equipment on many prime movers.

This range of lubricating oil filters is designed for mounting off a machined bracket and to filter oil carried in external piping. Each filter employs the unique Microvee by-pass system which ensures a continuous flow of oil should the insert become choked for any reason.

Microvee

DRY FABRIC, 3 PLY OR 5 PLY (DRY OR OIL WETTED)
PANEL TYPE INDUSTRIAL AIR FILTERS

MICROVEE K.600 'KOMPAK' FILTER

For air conditioning in large buildings, hospitals, factories, etc. removes dust down to 5 microns in size at a guaranteed efficiency of 99.91%. This filter is also available with a composite element which offers even higher filtration efficiency.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE pun comes easily—Europe is at sixes and sevens. In consequence, the EFTA and the Commonwealth have many problems to sort out. Great Britain wanting to have its two feet not only in these two but also in the EEC has a contortionist turn that many circus artists may shy at. But the EEC has its problems too. Everybody, at least in India, is so worked up about Britain's prospective membership of the EEC that the fact that the present members of the community are not behaving exactly like buddies over particular questions tends to be obscured. Except over the question of a progressive reduction of tariffs and quota restrictions on non-farm goods, there is as yet absent the necessary consensus that will make an "Integrated European Economy" a reality even among the inner Six. There are many areas where no progress has been made. The image of a prosperous ECM which has made mouths water in the UK is a true enough projection. Average monthly intra-market trade in the EEC has gone up from something under 600 million dollars in early 1959 to something under 900 million dollars in mid-1961. But on vital related questions like the prevention of growth of cartels and monopolies, free mobility of labour and capital and choice of location and above all the removal of restrictions on farm products as in the case of industrial manufactures, there is no unanimity and some quiet sabotage. France and Netherlands which have large quantity of cheap food to sell find the policies of West Germany and Italy extremely irksome. Indeed, there is some bitterness that tariff concessions over industrial manufacture wrung out of them in tacit return for promised reduction of obstruction to the free movement of farm products have been in vain. In fact this particular intransigence of West Germany can make the whole thing come unstuck, for the much-advertised progressive reduction of tariffs by 50 per cent by the end of this year appears, at the moment at any rate, unlikely of fulfilment. For France has just refused to commit itself to the last ten per cent cut at the end of the year. The relevance of all this to Indian fears about Britain's joining the Common Market is obvious. The Six are in no position to cast the first stone at people who want exceptions to the concept of an economy integrated in every sense. Britain can without embarrassment ask

for special treatment in respect of its preferential trading partners in the Commonwealth, at least as a transitional measure. After all, there is a certain element of hypocrisy in a regional association pretending to be a champion of unfettered free trade, and when members of such an association have other skeletons in their cupboard, its self-righteous style is bound to be somewhat cramped. This circumstance may not exactly be Britain's trump card, but it certainly provides an opportunity for a squeeze.

★

Herr Stubinger, Minister for Viticulture of Rhineland-Palatine must be a popular man today with the officers and men of the Bundeswehr. He has recently come out with the suggestion of a daily ration of wine to supplement whatever victuals that are being now allowed the German soldier. In his recommendation to this effect to Herr Strauss, the West German Defence Minister, he has cannily enlisted the support of the doctors, who are quoted as saying "wine, taken regularly in moderate doses, is very beneficial to health." Not what one would consider a startlingly original finding, though it is perhaps a little ambiguous about the relative importance of regularity and moderation. But these are days of absurd subservience to expertise and Herr Stubinger can say, if assailed by puritan pressure groups, that this was what the doctor ordered. He has also quoted the example of the French, naturally the most knowledgeable in these matters, who issue to their soldiers a wine ration card along with the regulation uniform. Many would feel that Herr Stubinger had gone to needless trouble to defend in advance so excellent a suggestion. As the wise man said,

"If all be true that I think,
There are five reasons why we
should drink;
Good wine, a friend, or being dry,
Or lest we should be by and by;
Or any other reason why."

Indeed, civilian employees all over the world may wish that so pleasurable a medicine is administered to them as part of their lunch ration. Employers may perhaps be willing to consider the suggestion if their tax advisers would assure that it was deductible. Unhappily for us in India, this seems most unlikely, especially if the Income-tax Bill now before Parliament goes through in

its present form. An expenditure will henceforth qualify for deduction only if, besides being "wholly and exclusively" for the purpose of the business, it is also "necessarily" so incurred. Even if your present ration of wine is moderate, you may find the distinction a little difficult to grapple with. Let me put it this way. A rather extreme interpretation of the "necessity" of the expenditure can not only deny you the ration of wine you long for, but may even knock the lunch off your mouth! For though the lunch your employer provides you may be wholly and exclusively for the purpose of his business, it may yet not be necessarily so, since you wouldn't have starved if he didn't provide it. Tax authorities may not go to these lengths in practice. But I rate hopes of even a moderately bibulous lunch at company's expense (unless, of course, wine masquerades as meat in accounts) as rather dim.

Reverting for a moment to the good man, Herr Stubinger, honesty obliges me to tell you that his sudden solicitude for the German soldier is not wholly disinterested. As Minister of Viticulture, he is more worried about the wine surplus in Rhineland than about the health and happiness of the German army. The army itself may not be inclined to inquire too closely into Herr Stubinger's ulterior motivation, but it is better to be forewarned. There is need for a similar warning nearer home. At Bangalore the other day, Mr Thomas, the Union Deputy Minister for Food was trying to make people "more sugar-minded", as the jargon has it. In sugar in particular, past history of alternating periods of glut and scarcity is so notorious that I would resist

the temptation of developing a sweet tooth, merely because Mr Thomas is embarrassed at the moment by excess sugar stocks. When scarcity rears its head, as it no doubt will, Mr Thomas will be ready enough with the medical opinion that sweets are bad for the teeth.

★

It is symbolic of our troubled age that one of its major imaginative writers should have held up physical courage, endurance and plain guts as its only possible value and inarticulate-ness as its truest eloquence. Hemingway's search for the true emotion was unrelenting but he found it elusive and fugitive. Like Gide, he found counterfeiters busy debasing the spiritual currency of mankind. But unlike Gide, he could desiderate finally only courage, and curiously, cowardice as the only emotions that mankind was still capable of feeling without hypocrisy. Santiago, that tough weather-beaten Old Man of the Sea and Harry contemplating the Snows of Kilimanjaro are Hemingway "heroes" par excellence. The hair on Hemingway's chest was not, as Max Eastman once averred acidly, false. Time and again, Hemingway defied death and on all such occasions it was only the dread summoner's incredible incompetence that made Hemingway escape almost literally by the skin of his teeth. In Africa, his air-craft crashed twice in quick succession and Hemingway lived to comment on his wife's snoring after the event. The doddering Methuselahs of Shaw could die only by accident. There was greater appositeness in a similar death for Hemingway. To have died of hypertension in a hospital would have been wholly out of character for one who was literally and intellectually needing Death all the time. Death could defeat such an opponent only by cheating.

IFC

Strong and Effective

Mr K. R. K. Menon, who retired as Chairman of the IFC on 30 June, after thirty-seven years' service in the Government of India, parried insistent questions about his immediate plans by correspondents at a press conference on the eve of his retirement. But these have only strengthened the rumours that he will soon be back in the capital as the Chairman of the NIDC. Mr Menon was appointed Chairman of the IFC soon after that institution had passed through an investigation by a parliamentary committee and became the target of scathing criticism. He leaves it at a time when there is practically no adverse criticism of the working of the IFC, which has now grown into a strong and effective instrument for implementing Government's policies of financial assistance to industry. The NIDC, which has had a similar recent history, may benefit by Mr Menon's rejuvenative abilities.

The IFC has excelled all previous records last year (that is the year ended 30 June 1961) in all branches of its activity. It has also in recent years considerably extended the range of its functions. Apart from loans in rupees and foreign currency, it also engages in underwriting issue of shares and guarantees deferred payment credits. Till last January the IFC was not empowered to hold equity shares except those left on its hands out of what it had underwritten and that too for a maximum period of seven years. Legislation passed last January empowered the IFC to hold shares, though so far it has not acquired any equity holdings. The Corporation has yet to reach a decision on two items which have remained on the agenda of its Board of Directors since last January.

Loans:

No. of applications received ...
No. of applications sanctioned ...
Amount of loans sanctioned ...
Deferred Payment Guarantees:
No. of applications received ...
No. of applications sanctioned ...

Amount of deferred payments guaranteed ...
Underwriting:
Shares underwritten ...

Under the scheme of deferred payment guarantees which was introduced in 1957-58, the Corporation has so far guaranteed credits for a total of Rs 25.47 crores. The total amount of shares underwritten amounts to Rs 4.20 crores.

namely whether the Corporation should assume power to convert loan capital into share-holdings and also whether it should participate in the profits of the loanee concerns in addition to charging interest on loans, as is the practice of institutions performing functions similar to those of the IFC in other parts of the world. A decision is expected in the course of the next two months.

Total loans disbursed by the Corporation now stand at about Rs 106 crores. Up till now, the record of repayment has been excellent. Mr Menon said that the percentage of defaults was very small, and stands comparison very well with the experience of any credit institution in India and abroad. Mr Menon also expressed satisfaction at the small number of applications—not more than three or four in a year—that the Corporation was obliged to reject on merits. Other rejections were mostly of applications that did not come within the four walls of the IFC Act.

In the course of processing the loan applications the IFC has to come into contact with a representative cross section of industrial leaders and executives. Mr Menon's favourable assessment of their entrepreneurial ability is welcome augury for the future development of Indian industry. Recalling his experience of Advisory Committee meetings—there are five (one for each group of industries) every month—at which representatives of the industrial units applying for loans are put through a gruelling cross-examination by the IFC's technical experts. Mr Menon spoke in terms of the highest appreciation of the general alertness and technical competence of the up and coming generation of business executives.

The following table summarises the record of the IFC last year, with comparable figures for the previous year. The figures for the current year are provisional as accounts have not been finally closed:

	Year ending 30 June, 1961	Year ending 30 June, 1960
No. of applications received	76	38
No. of applications sanctioned	57	29
Amount of loans sanctioned	Rs 21.21 crores	Rs 17.92 crores
Deferred Payment Guarantees:		
No. of applications received	14	5
No. of applications sanctioned	9	6 (including one relating to previous year)
Amount of deferred payments guaranteed	Rs 13.29 crores	Rs 7.87 crores
Underwriting:		
Shares underwritten	Rs 2.33 crores	Rs (25 lakhs)

Out of the loans granted last year, the largest amount (Rs 4.65 crores) was given to co-operative sugar factories. Mr Menon made the point that the loans to co-operative sugar factories have indirectly helped to build up sugar machinery manufacture in the country.

The break-up of the loans given last year according to industries is given below:

	Rs Crores
Sugar	4.65
Paper	3.50
Glass and ceramics (including refractories)	2.42
Chemicals	1.49
Cotton Textiles	2.16
Mechanical Engineering industries	0.82
Plywood	0.80
Hotel	0.19
Metallurgical (non-ferrous)	1.30
Electrical Engineering industries	0.57
Mining	0.20
Iron & Steel	0.60
Miscellaneous	2.51
Total	21.21

A guarded assessment of prospects of US assistance for a public sector steel plant at Bokaro was made by Ambassador Galbraith at his press conference in New Delhi recently. He found the response encouraging when he discussed the matter with the Eximp Bank and DLF authorities. The basic decision to have the steel plant in the public sector is recognised in the USA and is not likely to prove a stumbling block to the provision of US assistance. This marks a clear advance on the position last year when US steel interests were said to be allergic to this proposition.

While Mr Galbraith was hopeful about the prospects, he added the proviso that aid for the steel plant was subject to the passage of the Aid Bill through Congress, negotiations with contracting firms in US and also the priorities of the Indian Government. There is nothing special about the first two conditions which apply to assistance for all categories of projects. But the last is of crucial importance. Following his press conference Mr Galbraith also had discussions with the Minister for Steel, Mines and Fuel.

The aid promised by the World Bank Consortium will be just sufficient to meet commitments during the first year of the Plan. For the second year there is a shortfall of about 15 per cent in the requirements of free foreign exchange. The deficit will be increased by tying up aid to the steel plant. When the three steel plants in the public sector are working far below rated capacity, the case for diverting part of the funds available during the first two years of the Plan for establishing a fourth steel plant, must be much stronger than it is, if the project is to have top priority.

Though the project has been included in the Plan, and preliminary investigations may be carried out, the prospects are that actual construction will not be taken up till late in the Plan period, depending on aid prospects at that time that is, unless foreign assistance is specially earmarked for the Plan by the donor. Mr Galbraith's reference to the Government of India's

priorities may be taken as a pretty clear indication that, while US aid for the project may be readily forthcoming, there is no intention to influence Plan priorities by tying up part of the aid promised for the first two years to this project. In fact, Mr Galbraith deprecated the tendency to identify aid with fixed investment in particular projects. He said that provision of working capital was just as important for a developing country as provision of capital for investment. He also indicated that \$200 million out of the \$545 million dollars promised for 1961/62 will be in the form of "untied" loans available for balance of payments support.

The Ministry is also understood to be considering how far it will be possible to build up the plant with Indian resources of men and material. The preliminary project report has been prepared by an Indian firm of consulting engineers. The young technicians of Hindustan Steel are said to be eager to be given a chance to show their paces under more favourable auspices than at Rourkela. It is hoped that the Heavy Engineering Corporation at Hatia will go into production by the third year of the Plan and be in a position to supply a good part of the equipment for the steel plant. If the Heavy Engineering Corporation is able to keep to schedule—there is no reason why it should not, for all projects with Soviet assistance have come up in time—it should be possible to effect substantial economies in the foreign exchange required for the steel plant. This is also one of the main considerations which may delay start of work on the project.

Another point emphasised by Mr Galbraith was that the terms of the individual loans are as important as the total quantum of aid committed. The US view was that long-term development required that loans should be for long period, with low rates of interest or no interest, and that there should be an initial period without repayment obligations. But many countries participating in the Consortium do not share this view.

Mr Galbraith underlined the fact, that, while the total quantity of aid promised was adequate, there were also unsatisfactory features. Considerable part of the funds promised by some countries was for relatively short terms and at high rates of interest. This means that in the period immediately ahead, there will be a substantial increase of claim on foreign exchange for debt services, and, at this rate, the burden of debt would become intolerable. Warning that aid for development should not be confused with commercial credits, Mr Galbraith suggested that, apart from intensifying the export drive, it was also necessary to keep constant watch over the debt position and pay special attention to rates of interest and terms of repayment in future negotiations of foreign loans.

THE ASSOCIATED CEMENT COMPANIES LIMITED
The Cement Marketing Company of India Limited

ACC-568 EVEREST

Selected Satgram Collieries Limited

Addressing the shareholders of the Selected Satgram Collieries Ltd., at the Sixteenth Annual General Meeting, the Chairman said:

Ladies and Gentlemen,

I take pleasure in welcoming you to the sixteenth annual general meeting of the company. May I have your permission in taking as read the Audited Statement of Accounts and the Directors' report for the year ended December 31, 1960.

At the very outset I have to make a sad announcement of the demise of Mr L. Hirji, a Director of your company for a very long time, and whose services would be ever remembered.

TRADING & PRODUCTION

Raisings during the year under review were 283,851 tons, nearly 23% increase in the previous year's output, as against 10% increase in the country's output. This was achieved by scientific planning and efficient execution in the face of heavy odds. Despatches have come up by 43,161 tons to 263,931 tons—a record figure so far. This manifests in higher sales figures and ultimate increase in trading results. The profit before taxation being Rs 5,17,915/- against Rs 4,54,758/- last year. The ratio of profit to raising is slightly lower, for the reasons I shall deal with later in my speech. After providing Rs 1,89,000/- for taxation and transferring Rs 1,03,000/- to reserves, your Directors have recommended a final dividend of Rs 8/- per share on 13,000 old ordinary shares and pro rata Rs 2/62 on 6,500 newly issued ordinary shares, i.e. 16% gross dividend as declared last year on increased capital.

Contingent liabilities in the shape of tax matters mentioned in the accounts of last year have been removed, owing to your company's appeal being upheld in the Income-Tax Tribunal.

DEVELOPMENT WORK

The raising in the collieries in 1960 was obtained by development work requiring continued dose of capital investment resulting in comparatively higher cost. In the New Satgram Colliery expectations were not fully realized owing to the Satgram seam being declared gassy by the Department of Mines towards the end of the year. More expenditure, both of revenue and capital nature, had to be incurred in taking extra precaution as required by the Mines Act. The reflection of this in the cost was apparent. In the Sripur seam, one level stone drift through the faults, which, as had been reported last time, was stopped by the Department of Mines, has now been taken up. After a couple of months on its completion, the output there would go up. This year Sripur seams might also be entitled to the Coal

Increase in Output and Despatches

Mr S. D. Shethia, the Chairman, on Prospects During the III Plan Period

Board's subsidy of Re 0.60 per ton similar to the Satgram seam.

Electricity had come to South Joyramdanga Colliery towards the end of 1960 when the increase in output recorded a new level. In last two months of the year 5,000 tons were raised, as against that 6,500 tons on an average have been raised from January 1961. The coal was upgraded from Gr II to Gr. I resulting in an increase of Re 1/- in the sale price approximately per ton.

Manoharbahal seam has been fitted with required machinery and is capable of yielding 6,000 to 7,000 tons per month, subject to the pilot capacity and transport position. An application for grading this coal was made to the Coal Board on September 5, 1960 and their decision is awaited. Loading accommodation for this colliery has been increased to 25 wagons and every effort is being made to increase the pilot capacity from 65 wagons to 85 wagons.

The workings of the New Jamuria Colliery during the year under review, I am afraid, did not yield expected results owing to the thinness of the seam and extremely bad roof conditions. The machine mining having not succeeded resulting in high cost, pick mining method has been adopted. This colliery is also entitled to the Coal Board's subsidy of Re 0.50 per ton on its output.

The output per man shift of our group of collieries is 91 as against 72 of the all-India figure. We are making every attempt to improve this.

HOUSING & AMENITIES

Most of the construction work taken in hand during last year have now been completed. Having obtained further sanction for 100 more houses at all our collieries, the construction has been started in the face of the shortage of construction personnels. Houses under the cheap housing scheme have been sanctioned for the New Jamuria Colliery. The cooperation received from the Housing Board and the Office of the Labour Welfare Commissioner has been spontaneous and now to some extent acute accommodation problem has been solved. Adult Education Centre, Canteen, Creche, Pithead Bath and Multi-purpose Cooperative Society, Open Air Cinemas are showing satisfactory results. Distribution of sweets to labourers and special confectionaries to children under seven years is also continued.

In the field of sports your company has maintained its standard and the New Satgram Colliery

has again retained its zonal championship, stood well in the Raniganj Central Sports and participated actively in the all-India coalfield events.

In honour of Mr Jagan, your company's old and loyal Sardar of the surface trammers who retired during the year under review, Pit No. 1 at the New Satgram Colliery has been named after him as "Jagan Pit".

At the New Satgram Colliery the residential colony is fast coming up and it has been decided to name it Devchand-Nagar to commemorate the sacrifices and services of the Late Mr Devchand D. Shethia J. P., the first Chairman of your company who guided it capably during his tenure.

Labour Management Relations, despite the labour unrest in the neighbourhood, have remained cordial.

TRANSPORT SITUATION—A BAFILING PROBLEM

The second Five Year Plan target of 60 million tons about which I had expressed my doubts has fallen short by 8 million tons, the share of the private and public sectors in the shortfall, according to figures available being 8 million tons and 7.2 million tons respectively. However, one must say, there has been tremendous efforts on the part of the industry as a whole to come up nearer to the target level. Little those who were behind this herculean task realized that a most critical situation would develop in the country due to acute transport shortage. One wonders whether this was the reward for all sacrifices and tightening of the belts. As against the total daily requirement of 6,000 wagons for coal loading in Bengal/Bihar coalfields and 5,000 wagons committed by the Railways only 4,694 wagons on an average are loaded from January 1961 causing shortfall and short supply of 1,306 and 306 wagons per day respectively. The accumulation of pithead stocks amounts to over 5 million tons, locking up a huge capital. A high power committee was appointed by the Union Government to find out the solution. Change in the allotment system, more movements by railcum-sea routes, increased use of road transport, two tons extra loading in wagons and the proposed increase in the above Mughalsarai movement, are expected to somewhat relieve the acute shortage. Further, suggestion has been made to find out the possibility of the movement of coal to down country by the Durgapur Canal. It would not be

out of place to suggest the expeditious construction of the proposed Express Highway between Durgapur and Calcutta, and taking of coal by road by all priority consumers within a 100 miles radius to further relieve the bottleneck. This movement might also be subsidized from the increased excise duty recently imposed. In any case, I am glad that this acute problem is receiving the attention it deserves by all concerned and with efforts made in all spheres it should not be incapable of solution.

With all the force at one's command, efforts must be made to relieve the bottlenecks mentioned above and prevent consumers from hand-to-mouth stock position and ultimate closures and ever increasing heavy accumulation of pithead stocks exposed to quality deterioration and spontaneous combustion. This might otherwise be a main obstacle in the coal production.

THIRD FIVE YEAR PLAN

The target fixed by the third Five Year Plan of 97 million tons is no less ambitious than the second Five Year Plan's target and to fulfil it very careful planning in all its spheres and its expeditious execution with frequent reviews from time to time would be necessary. Our experience for all these years, particularly for the last five years, must be carefully remembered. The target of the private sector can be achieved with unstinted support of the Government in removing all the obstacles.

A FEW OBSTACLES

As is well known the correct dose of finance supported by realistic price policy for which the industry had been clamouring is the condition precedent to the achievement. Recent increase in coal price from June 1, 1961 by Re 0.06 nP per ton against the industry's demand of Re 0.40 nP per ton has been made to meet the increased incidence of labour wages. An appeal has been made to the Government in this connexion by the industry.

The foreign exchange requirement of the private sector for the third Five Year Plan period is estimated at Rs 28 crores. The Government as well as the Joint Working Committee of the industry are sending a delegation to finalize the World Bank loan. The word 'loan', I must, however, point out, is a misnomer for the industry as this loan is to the Government and not to individual collieries.

OUR NEXT FIVE YEAR PLAN

The company's target is 44,000 tons per month from the existing units excluding the Dishergarh seam which has finally been explored and is expected to yield selected grade of blendible coal of

good use for metallurgical purpose. Negotiations are afoot with foreign experts for its final exploration. Between 25/30,000 tons per month can be obtained from this mine. Thus the total target fixed would be at least 700,000 tons annually. This substantial increase has necessitated increasing our authorized capital from Rs 50,00,000 to Rs 2 crores and subscribed capital from Rs 19.50 lakhs to Rs 40 lakhs. Necessary permission has been obtained from the Government for this purpose. Your Directors are considering a proposal for purchase of a colliery in Chanda Coalfield in Maharashtra State presently mining Gr. III coal for which there is heavy and persistent demand. This colliery consists of 40 lakhs tons of coal, out of which approximately 12 lakhs tons can be obtained by development scheme and would be able to raise about 30,000 tons per month during the third Five Year Plan. The proposal for engineering works referred to in my last speech has encountered serious legal hindrances not being specifically provided for in the object clause of the company. Alternatives are being considered by your Directors.

The last issue of 6,500 ordinary shares was oversubscribed manifesting the confidence of the public over the company's management.

Your company's staff, both at the collieries headed by Mr J. Singh, General Manager of the collieries, and its registered office has shown a good deal of efforts and commendable earnestness to cope up with problems arising out of the expansion work taken in hand. Lectures film shows, demonstration by the foreign technicians and short courses organized by the Productivity Council and British Institutes are affording both the technical and administrative staff with the opportunity for enhancement of ideas and their practical applicability. I take this opportunity in according our sincere appreciation to them and to your Managing Agents who have forthwith arranged for much required finance during this year and for successfully negotiating for enhancement of credit facility for supply of machinery and equipment.

Last, but in no way the least, mention must be made of the very able and mature guidance given by the Board of Directors from time to time who have, I am sure, our hearty thanks. Let us hope we shall have their continued assistance and cooperation in future.

With your permission I now propose that the Audited Statement of Accounts and the Reports of the Directors for the year ended December 31, 1960 be hereby approved and adopted.

Note: This does not purport to be a record of the proceedings of the annual general meeting.

Markets

JUTE

Steady Trend

IN marked contrast to the mood prevailing last week, the jute and gunny markets have been ruling fully steady for the past few days. The improvement in sentiment in the gunny section is obviously due to the revival of interest in both the categories of goods. It has been reported that some business in hessian has been put through with the US while there has also been good news for the heavy goods in the shape of a Government of India enquiry for 20,000 bales of B Twills and the possibility of business from Japan. In the meantime, bulls in raw jute section have derived considerable encouragement from the indication that contrary to expectation, prices in Pakistan are ruling fairly high in spite of the reports of a bumper crop. It is evident that the fears of disruption of jute traffic in Pakistan consequent on heavy rains in parts of the jute growing areas have come true. It is argued that before deciding to approach the Government for permission to embark on a third closure of mills in August, the IJMA will have satisfied itself on the point of raw jute supply. It is evident that in its well considered opinion the prospects of a rapid improvement in the raw jute supply position in the immediate future are rather gloomy. This is not, however, to say that the long-term outlook for jute supply has also received a setback. Notwithstanding the fact that there has been some adverse developments in regard to the crop in Pakistan, it is generally accepted that the supply from Pakistan will be considerably larger this season than last year. As far as the crop in India is concerned, the adverse factors so far could not have any appreciable effect on the crop. By and large the weather has been quite favourable throughout the period of growth of the jute plant and up to now there have been no reports of serious disruption to jute traffic. That expectations in regard

to the Indian jute crop have largely materialised is borne out by the fact new crop jute in fairly sizable quantities have started arriving in the markets. It is generally believed that arrivals of raw jute may become quite heavy once the season gets into its stride. It may be noted that the IJMA is already working on a price support scheme in consultation with the Government of India with a view to assuring the cultivator that he may rest assured that he will get an equitable return for his labours. Such an assurance is considered essential because if prices are allowed to find their own level during a season of large raw jute production, the cultivator will invariably be reducing his acreage under jute in the succeeding season.

But it is not with this highly desirable state of affairs that the jute industry and trade are wholly concerned at present. There are problems to be satisfactorily solved in the meanwhile. The supply of raw jute continues to show no marked improvement. The first instalment of the block closure of mills has been completed and despite the continuing protest by labour, it is hardly doubted that the second instalment will be implemented as programmed at the end of the current month. It is on the proposed third closure that attention is centred. The fact that jute prices in Pakistan instead of showing a downward trend are steadily moving up seems to confirm the apprehension that import from that country in the early months of the current season will not be of any material assistance at improving raw jute supply to our mills. If the third closure is to be averted arrivals should show a sizable uptrend during the next few weeks. In the event of continued scarcity of raw jute, however, a block closure of mills at the end of August as is reported to have been proposed by the IJMA may become inevitable.

Jute goods prices spurted on Thursday following the rumour that Pakistani Mills were also considering a block closure on account of an acute shortage of raw jute.

Northern Bottoms ...	46.50	48.00	48.00
Dalsee Bottoms ...	49.00	50.50	50.50

The jute goods market ruled steady most part of the week, the uptrend having been helped partly by revival of overseas interest especially in hessian and partly by the hardening tendency noticeable in the raw jute section. Although the trend of raw jute arrivals some days ago appeared to confirm the view held by some that there is still a sizable quantity of old crop jute to come to the market, there has been no further improvement in arrivals during the past week. As for the improvement in sentiment in the goods section, it would appear that operators interpret the revival of interest in hessian as an indication of the foreign buyer's realisation that he may not be able to get his requirements at a level of price which he calculates as reasonable, for some time yet. Although it is not doubted that within the next few months there will be enough jute for the mills to resume normal working, it is rather difficult to assert at least at the present juncture that prices will be substantially lower at the same time. For one thing, indications of new crop jute prices are quite high.

TEA

Trends in Sales

THE Chairman of the Nilgiri Planters' Association has recently stressed the need for the formulation of a realistic policy in the matter of export promotion and also the provision of incentives with a view to obtaining quality production, so that the country will derive the maximum benefit. He has said that the production of tea in the area covered by the Association is nearly 22 million pounds as against just over 17 million pounds in 1959.

The crop in the first four months of 1961 is estimated to be over 3 million kgs or 7 million pounds. The average yield per acre in several estates approximates to 1,000 pounds, which is very creditable indeed for this elevation which is usually associated with relatively lower yields.

Satisfaction over the market performance of Nilgiri tea in 1960 is, however, tempered by the thought that it was aided to a considerable extent by the fall in production in North-East India due to drought and Russian purchases. If the first five months of 1961 are any indication, there is no room for satisfaction, but only deepening apprehension. The "high-growths" are not fetching the price they should and the average so far is more than a rupee less per kilogram than in the corresponding period of 1960.

In the Dust sales held at Cochin, the quantity offered from Anamalais was twice as much as last year; but the average price fetched was 34 nP per kilo higher. Nilgiris, which offered 50 per cent more than last year, fetched 14 nP per kilo lower. What is more significant is that the Nilgiri average was 22 nP more than

Anamallais last year. This year, it was 26 nP lower. On export sales, Anamallais average improved by 36 nP per kilo, while that of Nilgiris dropped by 69 nP.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 18,347 packages. There was a strong general demand. Prices of orthodox descriptions could be quoted generally firm to dearer with keen competition for any teas with improved quality. Darjeelings were again very irregular. The several invoices with flavour received good support; but the remainder were generally easier and sometimes difficult of sale.

Best CTC descriptions were irregular and sometimes easier. Medium and poorer kinds met, however, with keen competition and were generally sold at dearer rates. Legg-cut descriptions were also dearer. There was a good support for whole Leaf grades. Tippy grades were sold readily, but at about last rates. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.20 to Rs 5.30; Plain Broken Pekoe Rs 4.75 to Rs 4.85 and Plain Fannings Rs 4.70 to Rs 4.75.

In the Internal Sale, offerings were 7,633 packages of Dusts of which 7,356 packages were of the new season's manufacture. There was a strong and active demand at dearer rates for all descriptions. CTC types were keenly competed for at considerably enhanced prices, particularly for the brighter lines. Dusts of orthodox manufacture were readily absorbed and were generally dearer by 10 nP to 15 nP per kilo and sometimes more. Legg-cuts were a strong feature and were taken up at much dearer rates. Following were the rates (per kilo) were quoted:—

Plain Orthodox Dust Rs 4.35 to Rs 4.50; Medium Assam Dust Rs 4.60 to Rs 5.00; Legg-cut Dust Rs 4.60 to Rs 5.20; Medium Assam CTC Dust Rs 6.00 to Rs 6.50 and Good Assam CTC Dust Rs 6.60 to Rs 7.30. Also, 28 packages of Leaf grades were offered for internal consumption and these were sold at irregular rates.

In the Colombo market, offerings were 6,988,501 pounds. Dimbula/Dickoya brokens were irregular; but useful liquoring sorts were generally dearer. Ova teas were in good demand with prices closely following quality. Medium teas were in strong demand at firm to dearer rates. Better demand was noted for high and medium-grown BOPs Fannings grades, which were dearer. Low-grown teas were in strong demand at firm to dearer rates.

There has been a steady increase in the space requirements of tea shippers, particularly for the UK and one or two vessels are reported to have received very good cargoes. These shipments can now be expected to increase steadily as the season progresses.

In the Cochin market, offerings were 274,000 kgs of Dusts. Against a strong general demand, low mediums and mediums were 10 nP a kilo dearer. Residuals, which were the strongest feature of the sale, were sometimes quoted at 20 nP to 25 nP a kilo dearer.

In London, stocks were estimated at 128.67 million pounds as on 23 June as against 131.60 million pounds in the previous week. Total amount to be landed on the same date was 10.58 million pounds. Total afloat was 17.70 million pounds including from Calcutta 3.40 million pounds; from Chittagong nil; from Cochin 3.53 million pounds; from Ceylon 9.42 million pounds and from other Ports 1.36 million pounds.

COTTON Futures Easy

THE cotton futures market in Bombay which ruled steady in the previous week depicted easy conditions during the past week due mainly to the long liquidation and lack of fresh incentives. After resuming on a firm note at Rs 584.00 the Jarilla August contract receded under selling pressure stemmed from the favourable reports of monsoon from the cotton growing centres and the listless conditions prevailed in the cloth market and on Tuesday last, it was quoted at Rs 577.75.

Trading in the new crop contract is likely to commence by the middle of this month. The Board of East India Cotton Association is reported to have accepted the by-laws pertaining to the new crop contract. These by-laws will be tabled before the general body shortly for approval. The sanction for trading from the Forward Market's Commission is expected to be made available before the end of the third week of this month.

Dull conditions prevailed in spot market at Sewri during the week under review. Mill demand exhibited a downtrend. Mill interest was mostly confined to Gujarat varieties, CO 2 and Laxmi. Certain mills were reported to have accounted for a small quantum of Vijay, Digvijay, Surti and Kalyan.

Conditions on the import front were encouraging. Mill demand mostly hovered around American short staple cotton. Mills which were expecting an extension of shipment period, which, of course, did not materialise, were found busy in the market to complete their quotas within the stipulated time. Fairly good enquiries were reported in African and Sudan varieties. On the contrary demand for Egyptian cotton was restricted. Mills have presumably preferred to wait and watch the development that are taking place in Alexandria cotton market after the nationalisation of cotton trade in that country. Earlier expectation of a decline in the price of Egyptian cotton was belied since no such turn was visible. Import houses also reported that the prices of the Egyptian growths were left unaltered.

The progress of crop in Rajasthan and Punjab was reported to be quite satisfactory. Reports that emanated from Gujarat and Saurashtra were, on the other hand, distressing. Many of the cotton growers in those regions have decided to shift from cotton to oilseeds cultivation.

The inordinate delay in arriving at a decision by the Government of India about the release of an additional export quota has created grave concern to the shippers who were anxiously waiting for such an announcement. It appears that some representatives of the shippers have approached the Textile Commission to plead for an immediate release of export quota.

The stocks of cotton with the mills in India at the end of April this year totalled 1.52 million bales as against 0.99 million bales in the corresponding period in the previous year.

Consumption of Indian cotton by the mills in April this year was

placed at 0.36 million bales, the relevant figure for the previous month being 0.35 million bales. The consumption of Indian cotton in the current season till the end of April stood at 2.71 million bales as against 3.05 million bales in the same period in the previous season. Consumption of foreign cotton in April, 1961 was placed at 82,000 bales which showed an increase by 1,000 bales over the previous month's total. Consumption of imported growths in April, 1960 amounted only to 60,000 bales.

ALEXANDRIA

Exports sales during the first half of June, according to official information, aggregated 35,829 bales of 720 lbs. Sales of new crop registered during the period under review totalled 13,707 bales as against 6,786 bales in 1960. Thanks to the favourable weather conditions new crop in both Upper Egypt and Lower Egypt is progressing satisfactorily.

TANGANYIKA

In the third auction held on 20 June, 15,000 bales of New Crop AR Mwanza were sold. Total sales upto the said period amounted to 45,000 bales. In the next auction an equal number of bales of New Crop will be offered for sale.

PIECEGOODS

Trading in the cotton piecegoods market in Bombay during the period under review turned out to be a colourless feature. The market was actually in the grip of seasonal dullness. Demand from both the upcountry and local traders was restricted.

Offtake in the domestic section was pronouncedly meagre. Business was cabinised to goods for the cold season. Some attention was also focussed around drills, flannels, and mercerised coatings. Varieties like long cloth and poplins seem to have lost the favour of consumers. Some manufacturers are reported to have decided to curtail the production of such varieties to a considerable extent.

In spite of the slackness in demand the textile industry does not appear to be prepared to reduce the prices and they preferred not to dispose of their goods below the ex-mill prices. The demand for piecegoods from the upcountry consuming centres were practically negligible. The only exception to this was Kerala which was eager to cover its requirements for the "Onam" festival. That destination showed interest in almost all the seasonal goods. Even though Bihar Kanpur, UP and Madras traders were active in the market only limited business was transacted.

The export front was featureless throughout the week with only stray inquiries from overseas customers. The United Kingdom was interested in the usual varieties but only a limited business was done with that destination. The general apathy shown by the foreign traders was presumably due to the disparity in prices and the keen competition from other countries in Europe and Asia.

France showed some interest in grey cloth while Germany was satisfied with a small quantum of voile and calico prints. East Africa focused its attention on bleached long cloth and cotton head cloth. Iraq

Indian Finance

8 July 1961

showed some fancy on dyed sheetings, khaki and bleached drill. It was reported that Philippine Government has decided to import a large quantum of textiles including grey sheetings and it is expected that destination will be active in the market in the immediate future.

World Sugar Production and Prices

ACCORDING to the US Agriculture Department, Washington, world production of sugar reached a record figure in 1960-61. By a phenomenal one-year increase of 7.3 million tons, world production overcame the 1959-60 interruption in the rapid rise of recent years, and placed the world total in line with the upward trend of more than 3 million tons increase per year in the last five years.

Sugar prices in the world, during the past 30 years were subjected to wide fluctuations due to the change in supply and demand and political factors. The maximum price of 8.05 cents per pound was reached in 1951. The average price was also the highest at 5.67 cents per lb in the year. The lowest price in 20 years was 0.55 cents per pound due to world-wide depression when prices of almost all primary products were reduced below the cost of production.

After 1952, the average prices were ruling between 3 and 4 cents per pound excepting in 1957 when the prices shot up to 5.16 cents per pound and, in 1959, when the prices came down to 2.97 cents per pound. In 1960, the maximum price reached was 3.40 cents per pound and the lowest was 2.85 cents per pound and the annual average was 3.14 cents per pound.

Meanwhile, prices in Indian markets have been ruling quiet. A major part of the sugar quota allotted for the month just ended had been cleared by the last week-end. Large quantities of sugar had moved from the factories to the Punjab destinations by road transport following permission given by the government in view of the unsatisfactory booking position from the railways. This resulted in a sharp decline in sugar prices at the destinations.

With the closure of Hargaoon sugar factory, the crushing season in the Uttar Pradesh State has ended for the season and about 40.11 crore maunds of cane was crushed during this season as against 34.28 crore maunds during the past year. In the Muzaffarnagar market, the rate for the sweet commodity is quoted at Rs 107.50 per bag for the dry quality.

GUR

In the Nagpur market, Gur prices have registered modest gains, as the demand for dry selected kotha quality has been brisk from the consuming areas of Gujarat, Madhya Pradesh and Rajasthan. Stocks are reported to be fast decreasing as, despite leading restrictions, gur is being removed out to Meerut and other stations for despatch to Rajasthan. Dry No. 1 is quoted at Rs 16.75.

KHANDSARI

Prices of Khandsari have improved further on a good consumer demand. Stocks at the producing centres are fast depleting as the overall producing of khandsari this season has been much lower than last year. Superior quality is quoted at Rs 35 to Rs 37 per maund, according to quality.

FOODGRAINS

Despite poor arrivals of "Rabi" grains, the Hapur market for Foodgrains is ruling quiet due to slack

demand. Wheat prices are stagnant at Rs 14 to Rs 14.50 a maund for the average quality. Although some demand is reported from East Uttar Pradesh, despatches are being hampered due to the non-availability of loading facilities. Rice prices are, however, ruling steady. The market for Gram is quiet. Among Pulses, the prices of Peas and Arhar have shown a downward trend.

COFFEE

With world Coffee prices slumping fast and the Indian coffee industry

being charged with the mission of earning foreign exchange, at any cost, the future of the industry appears to be in grave jeopardy unless remedial measures are taken to resolve the marketing crisis before it is too late. In this connection, the Chairman of the Nilgiri Planters Association has appealed to the Coffee Board for a complete re-orientation of the current marketing policies and for the promotion of coffee propaganda abroad.

At the beginning of June, there were, 45,000 tonnes of coffee in the Board's Pool. Out of this, 15,735

Today, through the Five-Year Plans, the country is striving to create such a unity of effort to build a new India where all will have enough.

It is our privilege to participate in this historic adventure of building a new India.

MAHINDRA & MAHINDRA LTD.
BOMBAY · CALCUTTA · DELHI · MADRAS

tonnes were already sold to the export market and some further sales took place early in June.

East European countries are not active on the coffee market, one reason given being the shortage of rupee credit for the intending buyers.

RUBBER

According to the figures released by the Rubber Board, the output of Rubber has shown a rise to 1,002 metric tonnes in April from 1,625 tonnes in the previous month. Consumption has, however, declined to 3,812 tonnes from 4,419 tonnes. Stocks with the states and dealers have risen to 2,988 tonnes from 2,330 tonnes against 7,545 tonnes.

Adding the opening stock of 9,875 tonnes as on 1 April 1961 and the imports of 1,533 tonnes, there was an available quantity of 13,508 tonnes. After deducting the consumption of 3,812 tonnes, there is an available balance of 9,696 tonnes. To this must be added the stock of 2,811 tonnes of synthetic rubber, making total of 12,507 tonnes available at the end of April.

TIN

Tin has encountered some profit-taking after the recent increase in prices, which followed the announcement that the Buffer Stock supplies of the metal were exhausted. Cash tin rose at one stage to £940 a ton as compared with the supposed tin agreement ceiling of £880.

Dealers in London feel that the immediate supply position for the metal is reasonably comfortable, as consumers have been rebuilding their stocks, while dealers are also holding a fair amount of metal which they will want to dispose of when a suitable opportunity occurs. The long-term position is, however, viewed with considerable uncertainty.

The 15,000 ton deficit of tin forecast for this year can turn out to be a considerable under-estimate. Some people feel that the price may go to \$1,000 per ton before long.

YARN

In the Bombay market, Staple-Fibre yarn prices recorded a further advance in prices last week, thanks to keen speculative support. Although the supply was normal, prices shot up following reports of an excellent export demand for staple-fibre cloth woven out of 2/40 yarn.

Rayon yarns showed a fresh rise in prices. The unofficial premium for licences continued to be as high as 190 per cent. Nylons and acetate yarns also presented firm conditions on reports of an acute shortage of ready goods.

India's rayon and other synthetic fibres exports, during 1960, touched an all-time high mark, at 33.96 million yards, representing a rise of 15.28 million yards over 1959 and 7.77 million yards over 1958. This export constituted 24.83 million yards of rayon fabrics and 9.13 million yards of other synthetic fibres. India imported 45.31 million yards of both rayon and other synthetic fibre yarns, whereas the fabrics production jumped to 413.67 million yards during the same period.

The market for Cotton yarn, however, presented listless conditions with coarse and medium counts showing a small recession in prices. The demand from the upcountry centres continued to be limited.

CHEMICALS & DYES

Divergent conditions were noticed in the Bombay market for Chemicals and Dyes. With a few exceptions, the overall tendency in Chemicals was steady and that in dyes was subdued. The political developments in West Asia had made stockists cautious and so offerings were limited in chemicals. On the other hand, the demand was low in the dyes section, especially from the textile industry, on account of the outbreak of monsoon.

In general, the market for Chemicals was working on the feeling that there would be further imports through the State Trading Corporation. The steady trend in caustic soda was due to a moderate demand. Menthol gained about Rs 12 during the week on account of consumer and speculative demand. Camphor, too, was dearer due to persistent demand and lack of selling.

In the Dyes section, Vat colours were in demand with a slight improvement in the prices of certain varieties. Among direct dyes, Turquoise blue declined on lack of support at higher levels. Base colours were again neglected. In scarlet RC, the German quality was available around Rs 10.75 and Japanese around Rs. 10.25.

GOLD & SILVER

Prices on the Bombay Bullion Exchange displayed an easier tendency, the decline in Silver being sharp. Opening lower, silver dropped further due to heavy selling, prompted by the steady increase in arrivals. Advices from upcountry advices were also discouraging. Even stray short-covering at lower levels failed to arrest the decline in prices. Arrivals were heavy at 85 bars as against an offtake of only 12 bars. Ready silver (below .996) changed hands at Rs 200.50 and Rs 200.80.

Gold opened lower in sympathy with silver. Prices thereafter hovered narrowly on lack of support. Arrivals amounted to 5,000 tolas as against an offtake of only 3,000 tolas. Ready rates moved between Rs 121.90 and Rs 122, while Sovereign was quiet at Rs 94.25.

OILS & OILSEEDS

The market for Oils and Oilseeds displayed a weak tendency with prices suffering an all-round decline under the lead of groundnut. Reports of beneficial rains in Western India provided a major bearish influence to the market. Saurashtra figured as a consistent seller on account of the weakness in the prices of groundnut and groundnut oil at the terminal centres. The weakness in groundnut spread to castorseed, linseed and cotton seed.

Favourable weather in Saurashtra gave rise to hopes that the output of groundnut would be larger this

year. Dealers were, therefore, keen in getting rid of their stocks. Moreover, vanaspathi interests did not show any interest in their purchases especially in a week market. In the circumstances, Groundnut Bold ready was on offer at Rs 54.25 and Groundnut Oil at Rs 22.55.

Although the Castorseed section presented initially a firm front with buyers being encouraged by the decision of the Forward Markets Commission to allow trading in the new crop futures without any margin and ceiling, higher levels could not be retained till the close in the absence of any foreign enquiry for castor oil. Limited interest shown by crushers was also a contributory factor. Castor ready was quoted at Rs 35.50 and Castor Oil, commercial quality, at Rs 14.95.

The Linseed section displayed a slightly firmer tendency following the announcement of favourable terms and conditions for futures trading in the new crop. Linseed ready was quoted at Rs 39.25 and Linseed Oil at Rs 16.70.

Shippers reported a moderate activity in groundnut extraction with the JK making purchases around £29-2-6d per ton for June and £29 for July delivery. East Germany was reported to be in the market for linseed oilcake. Business done was estimated at about 500 tons. The price fetched was Rs 360 per tonnes f.o.b. on the basis of July delivery.

In the Calcutta market, the price of Linseed improved further to Rs 30.25 a maund for ready delivery. The commodity is reported to be in short supply due to restricted arrivals from the upcountry centres. The price of oil is also ruling firm, but business is reported to be limited due to small stocks. The market for oilcake remains very steady in the light of good local enquiries.

BANGALORE SILK

The Bangalore Silk market reflected the trend of the previous week in respect of prices of raw silk. Prices of filature raw silk of 20/22 Dr continued to be quoted between Rs 80.43 and Rs 83.23 per kgm. Cottage basin silk as well as charka raw silk ruled at the last week end quotations between Rs 73.85 and Rs 78.26 per kgm and Rs 56.22 and Rs 73.85 per kgm respectively.

Rates of reeling cocoons however registered a declining trend possibly due to easy supply position. While cocoons from Mugur area were quoted between Rs 3.25 and Rs 4.50 per kgm, Sidlaghatta cocoons fetched between Rs 4.50 and Rs 6.00 per kgm. Rates of Channapattana reeling cocoons ranged between Rs 4.25 and Rs 4.75 per kgm.

Mysore race seed cocoons declined further to be quoted between Rs 4.25 and Rs 4.75 per 1000 and foreign race seed cocoons between Rs 4.00 and Rs 8.00 per 1000.

HIDES & SKINS

Arrivals of tanned cowhides in the Madras Market were moderate with no change in prices last week and

this. No offer emanated from U.K. in the c.i.f. position due to high prevailing prices of cow hides. However a few deals were put through at 72d, 62d and 52d for 5/5½ lb but a few more deals are possible at a still lower price level.

As for semi-premium some business was reported in 5/5½ lb at 77d, 67d and 57d. Inferior fifths continue to get good demand at 45d for 5/5½ lb and 8/8½ lb and 10/12 lb at 39d while 10/12 lb was quoted at 36d/37d.

Tanned cow calf price remained unchanged. The same was the case with tanned buff calf.

Tanned goatskins had poor demand this week and continued easier. Demand for midweight tanned goatskins continues.

GOVT. PURCHASES

Rs 151.5 Crores from Indigneous Sources

Over Rs 151.5 crores of goods, the bulk from indigenous sources, were purchased by the Government through the Directorate-General of Supplies and Disposals in the period beginning April 1960 to January 31, 1961.

The value of purchases made from the indigenous manufactures amounted to Rs 122.76 crores, of which the small scale industries' sector accounted for Rs 5.93 crores.

The value of leather goods purchased from small scale industries in this period was Rs 84.70 lakhs, of ten'tago items Rs 67.19 lakhs. The woollen hosiery Rs 41.48 lakhs. The total value of khadi purchased during the period was Rs 76.38 lakhs. The question of supplying woollen and khadi uniforms to some categories of Government employees was under examination.

Other important items purchased from the small scale industries in the period were: tarpaulin and waterproof goods Rs 31.73 lakhs; paint and varnish—Rs 18.55 lakhs; cotton waste—Rs 23.58 lakhs; and bandages—Rs 22.32 lakhs.

IRON ORE

Trend of Production

The production of iron ore during April 1961 was 944,000 metric tons, according to the Indian Bureau of Mines.

This brings the total output during January-April 1961 to 3,838,000 metric tons which was higher by about 8 per cent compared to the output during the corresponding period of the preceding year.

Orissa was the leading producing State with an output of 321,000 metric tons followed by Bihar with 264,000 metric tons. The production from Madhya Pradesh, Mysore and Maharashtra was 169,000, 122,000 and 45,000 metric tons, respectively.

During the month, despatches for consumption in the iron and steel plants totalled 678,000 metric tons while despatches for export totalled 184,000 metric tons.

DESIGN... for finest performance

Of all aspects of industrial endeavour the most intriguing is thermo-dynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story...a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is tailor-made to give optimum performance under varying local conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities

of waste material in the form of bagasse for fuel. Again in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digesters in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will tailor-make not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

Company Reports

Expansion Plans of Hindustan Motors

IN order to achieve the manufacture of maximum number of components of cars and trucks in India, the Hindustan Motors Limited has approached the Government of India for allowing the import of capital goods. The Government has already forwarded the company's application to the US Development Loan Fund. If this capital goods licence is received soon, it will make the company almost independent of imported components.

The Government of India has accepted the main recommendations of the Jha Committee on the basis of which it has sanctioned to the company the manufacture of Bedford Diesel Engines as well as trucks of all types of wheel bases and capacity. Bedford Diesel Engines will not be allowed for fitment until the company is in a position to manufacture 80 per cent of the components. This, the directors, hope will be effective from 1 April 1963, provided the licence for capital goods is received in time. Thereafter, all restrictions will be removed.

The Government of India has also agreed to allow manufacturers to expand their existing capacity. Accordingly, the company has approached the Government for such sanction to expand as also to grant import licence for capital goods. On receipt of this sanction, the work of expansion will start.

Meanwhile, the company has produced excellent working results for the year ended 31 March 1961 despite a considerable increase in the prices of raw materials, salaries and wages items and other expenses, thanks to the rise in production and the indigenous content of the vehicle having increased. Although the production of cars and trucks was interrupted during the first half of the year due to shortage of raw materials and components, production increased during the latter half, reaching a figure of 2,027. Sales have shown a marked rise to Rs 30.45 crores from Rs 21.77 crores, while the net profit, after providing for Depreciation and Taxation, is almost doubled to Rs 172.21 lakhs as against Rs 99.10 lakhs for the preceding year.

Apart from providing Rs 50 lakhs for General Reserve, all other allocations have been raised:—Depreciation to Rs 63.07 lakhs from Rs 51.80 lakhs; Taxation to Rs 1.14 crores from Rs 68 lakhs and Development Rebate Reserve to Rs 36 lakhs from Rs 30 lakhs. The directors have recommended a taxable dividend of Rs 1.20 per ordinary share. This gives a net dividend of 84 p per share, payable on or after 25 July

to those shareholders whose names are registered as on 27 June 1961.

Bagalkot Cement Skips Dividend

The Bagalkot Cement Company Limited has reported a higher net profit, before providing for Depreciation and Development Rebate, of Rs 21.93 lakhs for 1960 as against Rs 16.36 lakhs for the previous year. As it was decided to provide full depreciation in respect of new machinery, the charge under this head is sharply higher at Rs 20.59 lakhs against Rs 7.37 lakhs. The transfer to Development Rebate Reserve is also higher at Rs 18.68 lakhs against Rs 24,000. Preliminary expenses and other intangible items were written off to the extent of Rs 1.32 lakhs on the last occasion.

As a result of the heavy provisions towards depreciation and Development Rebate Reserve, there is a large debit balance of Rs 17.34 lakhs, which is carried forward. It has, therefore, been decided to omit the dividend on the ordinary shares. The dividend for 1959 was 8 per cent.

Even though the second kiln was commissioned in May last year, there is only a slight increase in production. The actual output of clinker is 134,645 tons and of cement 134,901 tons. The increased capacity could not be fully utilised on account of the shortage of coal.

The Company has been granted a licence to raise its production to 4 lakh tons from 2 lakh tons; but the directors do not feel justified in implementing the additional capacity when its existing plant is not being fully utilised. The company has, therefore, informed the Government that it has to defer its decision to proceed with the expansion programme until the coal situation has eased and supply of power from Sharavati becomes available. This clearly indicates that there is no great anxiety to create new capacity in the present circumstances.

Balasubramania Mills Repeat

The net profit of Balasubramania Mills Limited is slightly higher at Rs 7.84 lakhs for 1960 as against Rs 7.54 lakhs for 1959, thanks to the rise in sales from Rs 63.56 lakhs to Rs 69.67 lakhs. The provision for Depreciation is Rs 2.27 lakhs against Rs 1.93 lakhs and for Development Rebate Reserve Rs 1.20 lakhs against Rs 71.453. The charge on account of Taxation is Rs 2.05 lakhs against Rs 2.23 lakhs. A sum of Rs 50,000 is transferred to General Reserve against nil, while the Contingency Reserve got Rs 55,000 and Machinery Replacement Reserve Rs 4,273 on the former occasion. The dividend

on the Ordinary shares is maintained at 15 per cent, subject to tax.

The results for the current year is expected to show better showing as the installed capacity has risen from 25,712 spindles to 30,967 spindles at the close of 1960. Besides, the old spindles have been reconditioned, renewed and modernised.

Cannanore Spinning Pays More

Thanks to a net profit of Rs 14.85 lakhs against Rs 10.34 lakhs, the Cannanore Spinning and weaving Mills Limited has recommended a final dividend of 11 per cent for the year ended 31 March, 1961. This gives a total dividend of 20 per cent, taxable, for the year as against 17 per cent, taxable, paid for the previous year.

In respect of allocations, a sum of Rs 2.26 lakhs (Rs 2.28 lakhs) is provided for Depreciation; Rs 5.00 lakhs (Rs 3.60 lakhs) for Taxation and Rs 85,777 for Development Rebate Reserve (Rs 12,414).

The blow-room machinery, imported from Switzerland, has been erected and has commenced working. An application has been made for installing additionally 6,000 spindles. The necessary permission from the Government is awaited.

TOMCO Pays Rs 5.75 Per Share

The working of the Tata Oil Mills Company has resulted in a profit of Rs 20.31 lakhs for the year ended 31 March 1961 as against Rs 24.71 lakhs for the previous year after providing Rs 17.10 lakhs for Taxation (Rs 25.75 lakhs) and Rs 2.85 lakhs for Development Rebate Reserve (Rs 2.00 lakhs). The directors have proposed to maintain the dividend of Rs 5.75 per share, subject to tax. The total turnover for the year amounts to Rs 10.02 crores against Rs 8.31 crores in the previous year.

The allocation to General Reserve amounts to 53,000 (Rs 1.00 lakh) and the Plant Modernisation and Development Reserve absorbs Rs 2.50 lakhs (Rs 5.00 lakhs). After providing for the dividend, a sum of Rs 28,609 is carried forward against Rs 46,303 brought in.

Improved Results of Lakshmiratan Engineering

The Lakshmiratan Engineering Works Limited has announced improved results for the year ended 30 September 1960. The profit has gone up from 7.19 lakhs to Rs 12.23 lakhs. Sales have increased from Rs 59.03 lakhs to Rs 66.47 lakhs. The closing stock is placed at Rs 8.80 lakhs against Rs 4.84 lakhs.

The provision for Depreciation amounts to Rs 4.47 lakhs against Rs 3.37 lakhs. The provision for Depreciation in respect of previous year of Kanpur and Faridabad assets amount to Rs 6.08 lakhs. The Developer Rebate absorbs Rs 73,261. After adjusting the surplus of Rs 93.78 against the brought forward loss, there is a debit balance of Rs 2.2 lakhs, which is carried forward.

Ishwar Industries Fare Better

The Ishwar Industries Limited, New Delhi, has earned a net profit of Rs 1.96 lakhs for 1960 as against Rs 1.61 lakhs. A sum of Rs 88,000 (Rs 62,000) is provided for Taxation and Rs 3,606 (Rs 26,428) for Development Rebate Reserve. The directors have proposed a dividend of 9 per cent on the Ordinary shares; 11 per cent on the Deferred shares and 7 per cent on the Preference shares.

The directors state that a major part of the machinery and equipment required for modernising the plant at Niwar has been received at the Port. The new plant is expected to go into production by the end of this year.

Lower Profits for Cheviot Mills

It would be recalled that the Orient Jute Mills Company Limited was amalgamated with this company with effect from 30 July 1960. A such, the company's ordinary capital has increased from Rs 15,95,000 to Rs 38,56,250 and that the excess of the book value of the Orient assets and liabilities at 31 July 1960 over the face value of the shares issued to the Orient shareholders has been shown as Capital Reserve.

Orient Mill was closed down at the date of amalgamation and the trading of the Orient Mill up to 3 July 1960 resulted in a loss of Rs 39,434. Although the transfer to Cheviot Mill was effected very smoothly, the subsequent working of the mill has been below the desired level of efficiency. A period of such unsettlement had been expected in view of the major upheaval involved. These are naturally reflected in the working results of the company for the year ended 3 November 1960.

Although sales have risen to Rs 1.27 crores from Rs 89.33 lakhs, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 2.15 lakhs as against Rs 4.5 lakhs for the preceding year. The Depreciation amount is raised to Rs 2.64 lakhs from Rs 1.07 lakhs and Development Rebate Reserve to Rs 1.47 lakhs from Rs 4,426. No provisions are made for Taxation on General Reserve against Rs 1,500 and Rs 1.50 lakhs respectively allotted in the previous year.

Apart from recommending a supplementary dividend of 2.1 per cent on the Preference shares for the year ended 30 November 1959 and a total of 9.1 per cent for the year under review, the directors have passed over the dividend on the Ordinary shares as against 12½ per cent, taxable, paid for the preceding year. The directors state that the prospect for the current year are poor.

For the Investor

INVESTMENT GOSSIP Revival of Interest

THE stock markets have witnessed a moderate revival of buying interest this week. It is evident that both operators and investors have found new incentives in the fact that contrary to general expectation the last week-end has passed without any curb measures from Government and in corporate news and rumours. Although there has been no definite indication to show that Government will not embark upon any further curb measures, it would appear that confidence is slowly returning consequent on the report that all the principal Stock Exchanges in the country are united in their representation to the authorities that any further curb measures will be unwarranted.

While favourable rumours about the TELCO dividend and later on the announcement of an increased dividend kept marketmen in Dalal Street somewhat enthusiastic, Lyons Range also provided some cheer in the shape of a persistent rumour about an impending bonus issue from Dunlops.

Steel shares were once again in the limelight. Indian Irons were sought after following the publication of encouraging output figures for the month of June. Renewed hopes of a higher dividend distribution is an important influence sustaining interest in TISCO.

Even so, operators are moving quite cautiously. At other times when the activities of the operators were under no great restraint, such incentives as have come their way during the past few weeks would have brought about a wild upsurge in the stock markets. The outlook for industries both old and new is quite good notwithstanding such temporary setbacks as power shortage, transport difficulties etc. With the firm commitment by a number of friendly foreign countries, the problem of foreign exchange for the Third Plan is no longer the bug-bear it was till recently. The indication that the private sector collieries will be getting foreign aid for their expansion has helped maintain interest in coal shares while sustained enquiry has been forthcoming for selected miscellaneous shares.

It is clear, however, that bullish fervour will not get much encouragement and it would appear that operators realise more than ever that Authority will not be slow in crushing a runaway boom in shares. It seems an open secret that Government is considering a number of measures to make the stock markets safe for the genuine investors. Each

day brings a crop of fresh rumours about official thinking in this regard and it is no wonder that operators have thought it prudent not to extend commitments.

NEW ISSUE NOTES Volkart

Volkart (Bombay) Private Limited, a new company, has been granted consent to issue capital of Rs 25 lakhs in equity shares of Rs 1,000 each, at par. Of this, shares worth Rs 10 lakhs will be issued to Sarvasri J. P. Patel and Shavak Patel of Patel Cotton Company, Private Limited, Bombay, for cash and the balance of Rs 15 lakhs to the partners of the partnership firm of Volkart Brothers, Bombay and/or their nominees in consideration of assets taken over from the partnership. The company will take over the activities of the Bombay Branch of Volkart Brothers regarding import and export of cotton staple fibre and other products and also acting as shipping and insurance agents.

Patel Cotton

The Patel Cotton Company Private Limited, with a paid-up equity capital of Rs 25 lakhs, has been granted consent to issue capital of Rs 23,25,000. The entire issue will be made to the partners of Volkart Brothers, Bombay. Of this, Rs 6,50,000 in equity shares of Rs 500 each will be issued for cash at a premium of Rs 300 per share and the balance of Rs 16,75,000 in debentures carrying interest at 4 per cent per annum in consideration of the properties taken over from the partnership concern. The company will take over and carry on the domestic business of the Bombay Branch of Volkart Brothers in cotton and cotton waste. It will also take over the ginning and pressing factories of Volkart Brothers, Bombay.

Rajasthan Wool

The Rajasthan Wool Industries Limited, a new company, has been granted consent to the issue of capital of Rs 50 lakhs divided into 14,000 cumulative redeemable preference shares of Rs 100 each and 3,60,000 equity shares of Rs 10 each. The company proposes to set up a factory at Kotah in Rajasthan for the manufacture of wool tops, wool spinning and wool knitting equipment. The total capital cost of the scheme will be Rs 1 crore.

Goodyear

The recent offer of Goodyear India Limited to the public of 4,00,000 equity shares to raise Rs 68,00,000 is significant from three

aspects. It has produced the second largest number of shareholders of any public company in the private sector in India. Secondly, no prior allotments were made to Directors, friends or employees, all the shares being offered to the Indian public. Although the issue was oversubscribed by about 25 times, letters of allotment and regret with balance of refunds to unsuccessful applicants, were all posted within two months of the closing date. Offering equity shares of Rs 10 each at a premium of Rs 7 per share, the Company received applications totalling Rs 17 crores against the requisite subscription of only Rs 68 lakhs. 89,000 applicants were reviewed and processed, representing a total of about 10 million shares from which 49,231 applicants were allotted shares.

Goodyear India Limited, which is setting up a factory at Ballabgarh, near Delhi, has been granted a licence to expand substantially its production capacity of tyres and tubes. The increased annual capacity of the factory (on three-shift basis) will be:—Passenger tyres 61,600; motor cycle and scooter tyres 20,000; truck/bus tyres 200,000 A.D.V. tyres 3,500; Wheelbarrow tyres 1,400; tractor tyres 12,500; Aeroplane tyres 1,600; automobile tyres 326,600 and camelback 2 million pounds.

Hindustan Wired Glass

The Hindustan Wired Glass Manufacturing Company, Limited has proposed to offer, at par, for public subscription, 23,520 equity shares of Rs 100 each. The subscription list will open on 14 July and close on 21 July or earlier at the discretion of the directors, but not before 17 July. The company proposes to establish a factory to manufacture wired, figured and rolled glass. The plant will be located in the vicinity of Baroda. The issued capital is Rs 60 lakhs, while the capital already subscribed amounts to Rs 10 lakhs. The company's foreign collaborators, Mississippi Glass Company, St. Louis, Missouri, USA, have agreed to take up 12,000 equity shares of Rs 100 each. The directors and their friends have agreed to take up 9,480 equity shares. The ICIC has agreed to subscribe for 5,000 shares. The balance of the issue amounting to Rs 23.52 lakhs is to be offered for the public.

Satgram Collieries

The Selected Satgram Collieries Limited has decided to raise its equity capital by issuing 20,500 shares of Rs 100 each. It has been proposed to issue 19,500 equity shares to the existing shareholders in the proportion of one new equity share for one old share. The balance of 1,000 shares will be disposed of by the Board of Directors at par in such manner as they think most beneficial to the company. The new equity shares will have the right to any dividend declared for the year ended 31 December, 1961. An amount of Rs 50 per share is payable with the application; Rs 25 on allotment and the balance of Rs 25 as and when the directors think it necessary.

Usha Spinning

The Usha Spinning & Weaving Mills Limited, a company proposed to be incorporated in Delhi, has been granted a consent to the issue of capital of Rs 35 lakhs divided into 2,80,000 equity shares of Rs 10 each and 7,000 Cumulative Redeemable Preference shares of Rs 100 each carrying dividend of 9.3 per cent, free of company's tax, but subject to deduction of tax at source. The capital is required for the establishment of a cotton mill in Badrapur, Gurgaon district. The consent is valid for twelve months.

Cambatta Ferro Manganese

The Cambatta Ferro Manganese Private Limited, Bombay, has a paid-up capital of Rs 85,05,500 divided into equity shares worth Rs 35,05,500 and preference shares worth Rs 50,00,000. It is now proposed to be converted into a public limited company. The company has been granted consent to issue capital of Rs 1 crore to the public in equity shares of Rs 10 each for cash, at par. The proceeds of the issue will be utilised for repayment of loans and working capital.

International Instruments

The International Instruments Private Limited, Bangalore, has been allowed to issue further capital of Rs 6,34,400 divided into 1,364 equity shares of Rs 100 each and 5,000 preference shares of Rs 100 each carrying a dividend of 9.3 per cent, at par. The consent is valid for twelve months. The proceeds of the fresh issue will be utilised for the development of the manufacture of automobile dash board instruments.

Flender Macneill Gears

Flender Macneill Gears Limited is a new company promoted by Messrs. Macneill & Barry Limited, Calcutta. A West German company has been granted a consent to the issue of capital of Rs 25 lakhs for undertaking manufacture of gears and couplings. The capital will be subscribed equally by Macneill & Barry Limited and the West German firm. The cost of the project is estimated at Rs 25 lakhs in the first phase. The consent is valid for twelve months.

INVESTMENT NOTES IISCO

According to the figures released by the Indian Iron & Steel Company for June, the output of all categories has shown a rise except for a decline in pig iron from 100,815 metric tonnes to 96,921 tonnes. The production of Steel Ingots has risen to 74,229 tonnes from 70,912 tonnes; semi-finished steel to 13,576 tonnes from 11,065 tonnes and finished steel to 36,513 tonnes from 31,100 tonnes. Despatches are substantially higher at 51,410 tonnes against 39,812 tonnes.

DENA Bank

The Wankaner Bank Limited, which was under moratorium from 7 May, 1961, has been taken over by Devkaran Nanjee Banking Company Limited on 17 June 1961, under the scheme of amalgamation sanctioned by the Government of India. Under the scheme, all the depositors of the Wankaner Bank have received full credit for their deposits from the DENA Bank.

Sifco Limited

Sifco Limited, a new company, has secured a licence to manufacture 10,000 alarm clocks a month. The company will produce 85 per cent of the components in the first two years and up to 95 per cent from the third year onwards. Besides alarm clocks, it also proposes to manufacture other precision instruments. Arrangements for technical and financial collaboration have been finalised with the French company, Messrs. Jaz S. A. Favre Leuba & Company of Geneva.

TEXMACO

The Textile Machinery Corporation Limited, Calcutta, has plans to produce seamless iron and steel pipes and tubes. The company is understood to have been granted a licence to manufacture these pipes and tubes with a capacity of 30,000 tons a year on a three-shift basis.

Sarangpur Cotton

The Sarangpur Cotton Manufacturing Company, Limited, Ahmedabad, has been accorded consent to the issue of 3,988 bonus shares of Rs 250 each on capitalisation of reserves and allotment in the ratio of one bonus share for every four equity shares held.

Perfect Pottery

The Perfect Pottery Company Limited has been granted consent to the issue of bonus shares of the value of Rs 7.59 lakhs dividend into equity shares of Rs 50 each in the ratio of three bonus shares for every four shares held.

Vikram Mills

The Vikram Mills Limited has been given consent to the issue of 5,500 equity shares of Rs 100 each as bonus on capitalisation of reserves to the extent of Rs 5.50 lakhs. The bonus shares will be offered to the existing shareholders in the ratio of one share for every equity share of Rs 500 each held. The consent will be valid for a period of one year.

Karam Chand Thapar

Karam Chand Thapar & Brothers Private Limited, Calcutta, has been allowed to start a new project for the production of steam-generating plants. The firm has been granted a licence to manufacture plants up to 20 T.H. worth Rs 1.20 crores in the first year of production; plants from 20 to 70 T.H. worth Rs 2 crores in the second year and plants of more than 70 T.H. worth Rs 2.70 crores in the third year.

Indian Finance

restrictions on speculative trading as was originally feared.

Thus, the feeble recovery in equity prices, that was noticed towards the previous week-end, was carried a stage further due to the emergence of bull support, being influenced by the satisfactory performance as revealed by the production figures released by the Indian Iron & Steel Company for last month. Encouraging advices from Bombay following the liberal dividend policy adopted by the TELCO directors, imparted further strength to the market, resulting in some of the shares scoring sizable gains on balance. There was, however, a general disposition to restrict commitments and book profits at bulges due to fears that the banks might raise further their lending rates in order to discourage borrowing.

There was hardly anything of interest passing in the Gilt-edged market. Conditions were more or less similar to those prevailed in the previous weeks, with the volume of business transacted being negligible. In the Central Loans section, the demand continued to be confined to shortdated issue.

Bank shares were a steady feature on expectation of higher earnings for the half-year just ended. Punjab National changed hands at Rs 22.50 to Rs 22.75 and United Commercial at Rs 90.50 to Rs 91.

Even the scattered interest shown in the Jute shares during the past two weeks seemed to have subsided. This was mainly due to reports of the IJMA's proposal for a third block closure some time in August which, it was feared, might lead to further loss of income to the mills.

Birlas were on offer at Rs 27.25 against Rs 27.50, while Ganges were slightly better at Rs 10.81 against Rs 10.69; Howrah at Rs 20.75 against Rs 20.50 and Chitavalsah at Rs 11.50 against Rs 11.31. New Central were, however, supported up to Rs 20.62 from Rs 19.50 from interested quarters.

Coal shares were generally steady on the news that the representative of the industry would be going shortly to Washington to finalise the terms and conditions of the World Bank loan for expansion. Bengal were enquired up to Rs 391 from Rs 385.50, while New Beerbhoom and Western Bengal were almost maintained at Rs 24.25 and Rs 10 respectively. Burrakur were a narrow market, moving between Rs 20.12 and Rs 20.44.

The support for selected Tea shares was well maintained due to better prices obtained at the week's auction. Dhunseri changed hands at Rs 16.37 to Rs 16.50; Grob at Rs 11 to Rs 11.12; Hasimara at Rs 26.12 to Rs 26.31; Hattikhira at Rs 10 to

Rs 10.31; Jay Shree at Rs 23.75 to Rs 24.06 and Tezpore at Rs 18.37 to Rs 18.56.

Except for renewed interest shown in Carew up to Rs 13.50 from Rs 13.31, Sugar shares were generally dull. Balrampore were on offer at Rs 2.50 to Rs 2.56 against Rs 2.62. There was an anxiety to know how the factories would be compensated for the export losses.

Textiles shares remained generally firm on hopes of higher production by the industry. Kesoram had buyers at Rs 35.06 to Rs 36.75 and J. K. Rayon at Rs 19.06 to Rs 20.62. Elgins came in for business up to Rs 20.12.

In the week's dealings, the lead to the general recovery was mainly given by the speculative issues. Indian Irons, after opening steady at Rs 27.66, receded at one time to Rs 27.54. But, the news of the satisfactory production figures released by the company for last month coupled with higher Bombay advices induced a sharp recovery to Rs 28.44—the highest level. In sympathy, TEXMACO moved up to Rs 20.30 from a low of Rs 20.15, closing on the ex-dividend basis at Rs 19.80. Guest, Keen, Williams changed hands at Rs 41.25 to Rs 41.50; Escorts at Rs 23.75 to Rs 24.75 and J. K. Steel at Rs 34.87 to Rs 36.12. The newly-enlisted Binani Metals forged ahead to Rs 13.56 from Rs 11.81 due to continued support. Jay Engineering were rather sticky at Rs 29.06 and so also Dalmia Iron at Rs 10.12.

Of all the sections, the Miscellaneous fared exceedingly well and provided a few bright features. Dealings were very prominent in Dunlop Rubber and Indian Copper. Dunlop Rubber scored more than Rs 3 at Rs 53.87 due to persistent rumours of a right or bonus issue before the week-end. Indian Copper were keenly sought after at one time up to Rs 5.84 from Rs 5.73 on rumours of the possibility of a bonus issue. Following were the price trends of a few other selected shares:

Facts & Figures

FOREIGN AID

The US Contribution

US economic assistance to India consists of both grants and loans. The total commitments of the United States under various agreements with the Government of India now stand at \$3,872.6 million (Rs 1,843.3 crores).

GRANTS are gifts. They do not involve any repayment. For instance, the rupee equivalent of \$788.2 million and the rupee equivalent of the sale proceeds of agricultural commodities supplied to India under Public Law 480, Title I, will be grants made to the Indian Government for economic development. So is a sum of \$334.6 million provided under the Indo-American Technical Cooperation Programme. Grants total \$1,122.8 million.

LOANS, involve repayment. The Wheat Loan of 1951 and loans made by the Export-Import Bank—totalling \$427.7 million—are to be repaid in dollars. Loans made by the Development Loan Fund (\$493.4 million), under the Technical Cooperation Programme (\$156.1 million), and from the sale proceeds of agricultural commodities supplied under PL-480 (\$1,086 million) totalling \$1,735.5 million—can be repaid in either dollars or rupees at the option of the Indian Government. Repayment in rupees does not involve the utilization of India's foreign exchange earnings or the export of goods from India. It will be noted that 80% of US loans to India (\$2,163.2 million) are repayable in rupees.

Under Title I of PL-480, the United States has entered into agreements with India for the supply of large

quantities of wheat, rice, coarse grains, cotton, dried milk powder and tobacco. The total value of the commodities covered by these agreements amounts to \$2,337.3 million. Of this, the rupee equivalent of \$300.8 million is reserved for US Government use; \$162.3 million will be given in loans to private enterprise under the Cooley amendment; \$788.2 million is to be granted to the Indian Government for economic development and the balance (\$1,086 million) is to be loaned to the Indian Government for the same purpose. Thus 80% of the value of agricultural commodities supplied under Title I of PL-480 will be utilised in financing irrigation dams, power projects, the expansion of educational and research facilities, the malaria eradication programme, and similar development projects in this country.

Title II of Public Law 480 enables the US President to furnish emergency assistance to foreign countries in meeting famine or other urgent or extraordinary relief requirements. Under this title India has received agricultural commodities worth \$4.9 million. The US International Co-operation Administration sent supplies valued at \$5.5 million to meet a food emergency. Thus India received famine relief grants totalling \$10.4 million.

Under Title III of Public Law 480, \$113.1 million worth of dried milk, wheat, rice, corn, cotton seed oil and other such commodities have been distributed in India through voluntary agencies.

The Cooley amendment to Public Law 480 (named after Congressman Harold D. Cooley, Chairman of the

Committee on Agriculture of the US House of Representatives) provides that up to 25% of the local currency proceeds from the sale of American agricultural commodities shall be made available to the United States Export-Import Bank for lending in the private sector to two categories of borrowers: 1) American firms or their subsidiaries operating in the host countries or indigenous firms having an affiliation with an American firm; 2) Indigenous firms of the host countries with no American affiliation but which are facilitating the disposal of American agricultural products, e.g. local private warehouses storing grain or flour mills processing the grain etc. The five agreements between India and the United States under PL-480 provide for \$162.3 million to be given in loans to private enterprise under the Cooley amendment.

Breakdown by Commodities and Services

US aid to India has been extended through different agencies of the American government such as the Development Loan Fund and the Export-Import Bank.

The terms and conditions under which assistance is given by the different agencies vary. But what India ultimately receives consists of commodities and services. For instance, steel shipments have been made, available to India through credits extended by the Technical Co-operation Mission and the Development Loan Fund. Capital equipment for industries in both the public and private sector has been bought with loans given by the Export-Import Bank and the Development Loan Fund.

In the following table is listed the commodities and services received by India from the United States aid programme as a whole.

Some of the items below are grants some loans, and others include both loans and grants.

The following list covers only grants and loans in foreign exchange. A number of projects in India have been given loans and grants from the sale proceeds of agricultural commodities supplied to India under Public Law 480 and Section 402 of Public Law 665. These rupee grants and loans are not included in the tabulation which follows.

	DOLLARS (Million)	RUPEE equivalent (Crores)
Agricultural Commodities:		
These include the Wheat Loan of 1951, the three Titles of Public Law 480, and Section 402 of Public Law 665. These provide for a total supply of approximately 30 million tons of wheat, 1.4 million tons of rice, 1.4 million bales of cotton, 600,000 tons of corn and sorghum, 3,000 tons of tobacco, and 4,000 tons of soybean oil	2,718.3	1,294.4

HIGHLIGHT OF THIS ISSUE

A study of the behaviour of the Stock Market during the first half of 1961, this week's Leading Articles section.

Indian Finance

Founded in

1928

by

C. S. Rangaswami

An important product of the Light Castings Foundry, IISCO cast iron stove tubes are manufactured from controlled quality materials and are hydraulically tested for complete soundness.

A vital component for tea drying machines, IISCO stove tubes are the first choice for strength and performance.

India, Britain and the EEC

AT the moment of writing, the discussion between Mr Morarji Desai and Mr Peter Thorneycroft and the teams of officials on both sides has concluded, though no formal communique has yet been issued. Mr Thorneycroft has also had a meeting with Mr Nehru, who, it is reported, has communicated to him some of his concern over the wider issues involved in the eventual British decision to become a member of the European Community. This is an enlargement of perspective that was badly needed, for in most recent discussion in India, the EEC has been naively equated with the ECM. If that was all there was to it, it would be, as Lord Goldwyn put it, "pathetic to oppose it, just because it might put up the price of a British sausage." Lord Goldwyn himself indicated one of the wider issues involved by linking Britain's membership of the EEC with the "defence of the free world." These are ominous overtones. Moreover, in discussing the political implications of the EEC, too narrow an interpretation of the "surrender of sovereignty" is given, as though all that was involved was a membership of another UN body. Speeches made—notably by M. Faure—in the European Parliament last March and quoted at length in the EEC bulletin show that a fundamental realignment of political forces is implicit in the EEC and will eventually be made explicit. M. Faure spoke about "upholding the torch, handed down from their ancient history, for the sake of their very being. That is what makes our task so difficult, perilous, and onerous but also exalting." M. Faure also thought that unless Europe united, anything may happen in a world in which "the Europeans were outnumbered by three to one now and may soon be by seven to one." In the US the other day, Dr. Hallestein, Chairman of the European Commission put it bluntly by saying that "we are not in business at all, we are in politics." It is possible that these various undercurrents may be unavailing against ingrained habits of centuries in which European nations have thought in terms of balance of power and interests. But such consolations are the specious tranquilisers of a Job's comforter. On the other hand it is hypocritical, in the light of the thinking quoted above, to pretend that the United States of Europe is a precursor of the United States of the Globe. It is also necessary to remember that even in the narrowly economic sphere, there is more to it than mere tariffs and quotas. The kind of fear that Mr Nkrumah expressed somewhat hysterically the other day may be exaggerated in the face of the abundant evidence of goodwill that the developed nations of the West have shown. But the dangers inherent in a political and economic integration of some of the most powerful nations of the world, especially when there are military overtones to it, cannot be dismissed as unreal.

These are important considerations. But the immediate task is to assess the long and short term implications to our plans of development of an almost certain decision of Britain to join the EEC. Here again, abstract considerations like the rights and wrongs of protectionism and free trade, and consistency

with past professions on the subject are somewhat remote. It is nothing to the point to say that the Indian National Congress opposed imperial preference as enunciated in Ottawa in 1932. Logically, there is much that is untenable in our demand for special treatment. Even in our plea for commonwealth preference, there is no reciprocity, for we have probably very little to offer in return for low tariff and almost complete absence of quota restrictions on our exports to Britain. Special tie-ups with aid funds and our precarious balance of payments position make any meaningful reciprocal gestures to the UK out of the question.

Our plea for special consideration is thus based on nothing more pretentious than mere expediency. The most important consideration—and this is one to which Britain is willing to give due weight—is the immediate impact of Britain's decision on Indian exports. Our unenviable predicament is that we are not able to take too distant a view of the prospects of increased trade with the EEC countries. These may well be bright, provided we are able to rid ourselves of our chronic weaknesses like a narrow range of exports, low productivity, uncompetitive costs and phlegmatic and unenterprising marketing. But our programming of export earnings for the next five years is so oriented that it involves a heavy dependence on duty-free entry of vital export earners into the UK. The need for some safeguards for ensuring that the assumptions behind these calculations are not entirely knocked off is obvious.

It is perhaps possible to argue that in the context of our total volume of export trade which is getting more and more diversified, losses may be minimal in the long run. It is also possible to build a plausible case that what is now being demanded by trade is not so much equality of trading opportunities as perpetuation of preference in our favour, feather-bedding of our inefficiency and a protective armour even against equal or weaker competitors. But when all allowances have been made for these, it remains true that our export earnings from tea, cotton textiles, woollen textiles and jute goods will fall because of consumer resistance to higher prices in the UK, competition from the present members of the EEC and their associated territories who will have then the kind of preferences we now enjoy from Britain. There is also the paraphernalia of quota restrictions that the EEC now has which will get automatically extended to Britain.

Two developments may help to mitigate the rigours of a contingency that is now almost taken as inevitable. One is the adoption of a voluntary global division of labour by which cheap manufactures from under-developed countries will be allowed to supply the needs of all. This doubtless involves the curbing of the autarkic grandiosity of some of the under-developed nations, who want steel mills as well as safety-pins of their own. Secondly, India should seriously buckle down to the job of increasing production, reducing cost and generally making our products preferred in foreign lands on their intrinsic merits.

STOCK MARKET

Continued Firmness
in Second Quarter

EXCEPT for somewhat shaky and erratic conditions in the last two weeks of June, when there was the fear that the Stock Exchange Directorate might take fresh measures to enforce stiffer margins and minimum brokerage regulations, the half-year just ended witnessed a fresh rise in equity values from the levels touched at the end of the first quarter, suggesting that the bulls had retained their mastery over the market. Although many industries had a hard time on account of acute raw material shortage, delay in getting import licences and a drastic cut in power supply, the basic sentiment was not materially affected, reflecting the market's optimism that these difficulties might prove to be temporary. The market, therefore, took a favourable view of the long-range outlook for the economy as a whole and leapt forward, with fresh high levels marked up each month. Indeed, peak levels in most industrial groups were touched in the closing month of the half-year.

While the speculators were largely responsible for a sharp spurt in select shares, investors, too, were inclined to pick up growth stocks. As a matter of fact, the runaway enthusiasm for the new issues, which was reflected in a rush for allotments and fantastic premiums in 1960, gave place to a more realistic assessment of the prospects of each issue. But, the somersault from premiums to discounts, which was staged by several shares, reflected the market's disappointment at the post-issue performance of some of these new issues. In some cases, there was manipulation of shares and in others there were disagreements. The sense of selectivity displayed by some of the investors was, however, significant. This was indicated by the fact that the new issues of industrial ventures with good foreign collaboration, financial and technical, had a good response from investors, although the overall response to capital issues was not as overwhelming as in the previous year. (Table I).

The confidence amongst the professional operators as well as investors sprang from various factors. First, the flow of company reports showed how the profitability of various industries had been helped by the expansion of activities. Secondly, it was thought that the severe restriction on imports might enable the domestic industries to flourish under the advantages of a protected market. Thirdly, most of the scrietal were held by the LIC, which appeared never to sell shares it had once bought, or by individual holders who were reluctant to sell and attract the tax on capital gains. Lastly, there was a general hope that companies, having large reserves, might issue bonus shares in order to raise their capital. In the circumstances, investors found it comparatively cheaper to invest their funds in good new shares, especially when companies making new issues often had an assured demand due, among other things, to import restrictions.

With the result, almost all popular shares sought new peak levels, as will be clear from the price trends of a few selected shares in each counter (Table II). The only weak spots were Jute, Sugar and Paper. In the case of Jute, the present position in the industry is scarcely satisfactory. It was feared that the industry might experience a further loss due to a cut in production following the decision made by the IJMA for a block closure

TABLE I

Company.	Type of Issue	Issue Price	Details of Issue
1. Madras Aluminium.	Offered to public	Ord. Rs 100 Pref. Rs 100	Authorised capital is Rs 10 crores. Issued capital is Rs 6 crores comprising 4,50,000 equity shares and 1,50,000 preference shares. The entire public issue of Rs 1,86,50,000 is underwritten.
2. Usha Martin.	Offered to public	Ord. Rs 100 Pref. Rs 100	Issued capital is Rs 28 lakhs in 1,80,000 equity shares and 10,000=9.5 per cent Cumulative Redeemable Preference shares. The ICICI has subscribed for 30,000 equity shares. The balance of the issue amounting to Rs 25 lakhs in equity shares and 10,000 preference shares was offered to the public. The applicants for the ordinary shares got partial allotment and those for the preference shares in full.
3. Travancore Electro Chemical.	Offered to public	Rs 100	The authorised capital is Rs 1 crore, while the paid-up capital is Rs 13,78,800 in shares of Rs 100 each. Offered to the public 10,000 shares.
4. Indian Oxygen Limited.	Rights Ordinary	Rs 10 at a premium of Rs 8	Issued 6,00,000 new ordinary shares of Rs 10 each.
5. Bombay Oxygen Corporation.	Offered to public	Rs 100	Out of the authorised capital of Rs 3 crores, the issued capital is Rs 1.50 crores, consisting of 1,50,000 equity shares of Rs 100 each. Out of this 73,500 shares was offered to the public.
6. Belsund Sugar.	Offered to public	Rs 7.50	Issued 1,29,935 new shares, at par, in the proportion of one new share for every two existing shares.
7. K.C.P. Ltd.	Rights Ordinary	Rs 10	Issued 1,00,000 equity shares at par in the proportion of 17 shares for every 100 shares held.
8. Mysore Kirloskar Ltd.	Rights	Ord. Rs 100 Pref. Rs 100	Capital is raised by the issue of 15,000 ordinary shares and 25,000 preference shares.
9. Thakur Paper Mills.	Offered to public		The authorised capital is Rs 1 crore out of which equity shares of the value of Rs 40 lakhs were issued. The amount offered to the public was Rs 25 lakhs. The entire public issue was underwritten.
10. British Paints (India), Ltd.	Offered to public	Rs 10 at a premium of Rs 5	Raised additional capital. Out of the new issue of Rs 21,63,000, a sum of Rs 2 lakhs was reserved for subscription by the directors and their friends and the employees of the company. The issue was oversubscribed by eight times.
11. Mahendra Electrics.	Offered to public	Rs 100 each	Issued 23,000 equity shares.
12. Swastik Rubber.	Offered to public	Rs 100 each	Raised additional capital. Issued 15,500 equity shares to the existing shareholders. Out of the shares not taken by them, the managing agents and their friends agreed to take up shares worth about Rs 10 lakhs. The balance of the shares was offered to the public.
13. Madras Cements Limited.	Offered to public	Ord. Rs 100 Pref. Rs 100 both at par	Raised additional capital by Rs 70 lakhs. The entire issue was underwritten. The capital offered to the public was 17,211 equity shares and 7,050 preference shares.
14. Rajaramka Pulp and Paper.	Rights Ordinary	Ord. Rs 100 Pref. Rs 25	The authorised capital is Rs 50 lakhs of which Rs 40 lakhs were in equity shares and Rs 10 lakhs in preference shares. The issued capital was Rs 25 lakhs in equity shares. The public was offered only 12,250 equity shares, the balance being taken by the promoters and their friends.
15. Travancore Chemical.	Rights Ordinary	Rs 10 at par	Issued 20,000 equity shares in the ratio of two shares for every thirteen shares held.
16. Ballapur Paper.	Rights Ordinary	At par	Issued right shares for Rs 85.82 lakhs in the proportion of three new shares for every two existing shares.
17. Blue Mountain Estates Ltd.	Rights Ordinary	Rs 2 at a premium of 45 p	Issued 10,50,000 equity shares in the proportion of one share for every three shares held.
18. Jay Engineering Company	Rights Ordinary	Rs 10 at a premium of Rs 7.50	Issued 6,07,500 equity shares to the existing shareholders in the proportion of 2: 3.
19. South India Viscose Ltd.	Offered to public	Rs 100 at a premium of Rs 5	Issued right shares for Rs 1.40 crores in the ratio of 2:5.
20. New Central Jute	Offered to public	Rs 10 at a premium of Rs 3.25	Issued new ordinary shares in the ratio of one for two shares held.
21. Southern India Industrial Corp.	Offered to public	Rs 10	Issued 90,000 equity shares out of which 16,500 shares were allotted on a firm basis. The balance of the issue of 73,500 shares was offered to the public. The issue was over-subscribed by nearly three times.
22. Bhagwan Devi Paper	Offered to public	Rs 10	Issued 1,50,000 equity shares.
23. Fit Tight Nuts	Offered to public	Rs 100	Raised fresh capital for Rs 25 lakhs in 25,000 ordinary shares. The amount offered to the public was Rs 14,70,000.
24. Amalgamated Electricity	Rights Ordinary	Rs 10 at par	Issued 84,375 equity shares in the proportion of one for every ten shares held.

15 July 1961

of the mills for a week each in June and July. As regards sugar shares, there was an anxiety to know how the factories would be compensated for the export losses. In the case of paper shares, concern was expressed over the unremunerative price obtained.

But the steady rise in values in a number of shares had taken them to such dizzy heights that scope for any further advance was extremely restricted. While the professional operators were inclined to book their profits, investors were completely out of the market as they seemed to be busy effecting the necessary adjustments in their holdings in order to find the required additional resources for making payments in respect of calls from new companies and subscribing to issues of right shares by established companies. If there was any other factor, that could be interpreted to have an effect on the sentiment of operators, it was the talk in Dalal Street of changes in the margin system. Thus, with the bulls inclined to lighten their burden and the bears tending to be somewhat aggressive, there was a steady drift in share values. But for these factors, the market would have

(a) Issued right shares in the ratio of one for four held, at par.					
(b) Issued right shares at a premium of Rs 6 per share in the ratio of one for every two shares held. Also issued bonus shares in the ratio of one for every four shares held.					
(c) Issued right shares at a premium of Rs 12 per share in the ratio of 3 for every 10 shares held. A sum of Rs 5.50 was payable on application and the balance of Rs 15.50 in one or more instalments as and when called for.					

TABLE I—(Contd.)

Company.	Type of Issue	Issue Price	Details of Issue
25. Pesticides Ltd.	Offered to public	Rs 100	Issued 5,00,000 equity shares. The amount offered to the public was Rs 24,50,000.
26. Tube Suppliers Ltd.	Offered to public	Rs 10	Issued Rs 8,70,000 in equity shares. The actual offer to the public was Rs 6 lakhs.
27. Kirloskar Oil Engines Ltd.	Offered to public	Pref. Rs 10 at par	Issued 2,50,000 Redeemable Cumulative Preference shares. The whole issue was underwritten.
28. Ceat Tyres Ltd.	Rights Ordinary	Rs 100 at a premium of Rs 25	Raised additional capital by issuing 1,61,000 new equity shares in the proportion of 7 shares for every 6 shares held.
29. Aruna Sugars	Offered to public	Rs 10	Issued 8,50,000 ordinary shares. The amount offered to the public was Rs 35 lakhs.
30. Jaipur Udyog Ltd.	Rights Ordinary	Rs 10 at par	Proposed to issue 5,00,000 Ordinary shares in the ratio of one for every four existing shares.
31. Enfield India Ltd.	Rights Ordinary	Rs 10 At par	Issued 2,33,300 equity shares. Of this, 33,300 shares are reserved for foreign collaborators. The balance 2,00,000 shares was issued to holders at four shares for every five shares held.
32. Emerald Valley Estates	Rights Ordinary	Rs 5 at par	Issued 50,000 equity shares in the ratio of one share for two shares held.
33. Lynx Machinery.	Offered to public	Rs 10 at par	Authorised capital is Rs 2.50 crores, while the issued capital is Rs 60 lakhs of equity shares of Rs 10 each. Out of this, Rs 30 lakhs is subscribed by the promoters, directors and their friends. The balance of Rs 30 lakhs is now offered to the public.
34. Goodyear Tyre.	Offered to public	Rs 10 at a premium of Rs 7	The authorised capital is Rs 2 crores. Four lakh Ordinary shares were offered to the public. The issue was oversubscribed by 25 times.
35. Baroda Electric.	Offered to public	Rs 100 at par	The authorised capital is Rs 1 crore and the issued capital Rs 40 lakhs comprising 40,000 Ordinary shares of Rs 100 each. The promoters, directors and their friends have subscribed for shares worth Rs 20 lakhs.
36. Indian Firebricks.	Offered to public	Ord. Rs 10 Pref. Rs 100	The issued capital is Rs 1 crore comprising Rs 75 lakhs in equity shares and Rs 25 lakhs in 7½ per cent Cum. Redeemable Preference shares. Offered to the public 4,75,000 equity shares and 15,000 Preference shares. The entire public issue was underwritten.
37. Fuel Injections.	Rights Ordinary.	Rs 100 at par	Issued 10,000 equity shares in the ratio of two for every three shares held.
38. Vijayalakshmi Mills.	Rights Ordinary.	Rs 100 at par	Raised an additional capital of Rs 6,91,500 by the issue of equity shares in the ratio of one share for every two shares held.
39. Binani Metals.	Offered to public	Rs 10 at par	Raised Rs 21,50,000 by the issue of 2,15,000 equity shares. After allotting 19,000 shares to the directors and their friends, the balance of 196,000 shares was offered to the public.
40. United Wire Ropes.	Offered to public	Ord. Rs 100 Pref. Rs 100	Issued 25,000 equity shares and 10,000 9½ per cent taxable Preference shares. The entire public issue was underwritten.
41. Madras Rubber.	Offered to public	Rs 10 each at par	Offered 5,00,000 equity shares. The issue was oversubscribed by 11 times.
42. Aeronautical Services.	Offered to public	Rs 10 at par	Issued 1,00,000 equity shares
43. Structural Engineering.	Rights Ordinary.	At a premium of Rs 30	Raised capital by the issue of right ordinary shares to the existing shareholders in the ratio of one share for every two shares held.
44. Associated Industries (Assam).	Offered to public	Rs 10 at par	Raised new capital amounting to Rs 50 lakhs comprising 3,50,000 equity shares of Rs 10 each and 15,000-9.3 per cent taxable Redeemable Cumulative Preference shares of Rs 100 each. The Government of Assam agreed to subscribe for the entire issue of the Preference shares. The directors and their friends took up 29,100 equity shares; Rallis India 30,000 equity shares and the Assam Government 40,000 equity shares. The balance of the issue of 2,50,900 equity shares was offered to the public.
45. Urmi Cheese.	Offered to public	Rs 10 at par	Out of the total issue of Rs 50 lakhs, the directors and their friends took up Rs 25 lakhs worth of equity shares. The entire public issue of 2,50,000 shares was underwritten.
46. Rayon Pulp.	Offered to public	Ord. Rs 100 at par	Raised capital of Rs 45 lakhs consisting of Rs 35 lakhs of equity shares and Rs 10 lakhs of Preference shares. The directors and their friends took up Rs 15 lakhs worth of equity shares. The balance of Rs 30 lakhs were offered to the public.

finished around the highest levels for the half-year under review.

Although the year started without any inspiration for marketmen, sentiment showed a distinct improvement from the middle of January, being influenced by a number of factors. The rise in equity values was more striking during the post-budget period due to renewed activity of the bulls, reflecting the market's satisfaction over the Budget proposals. It also indicated the general feeling that the overall burden of taxation proposed by the Finance Minister, though higher than anticipated, being by and large indirect, could be passed on to the consumers in the present context of a seller's market. It looked as if most of the operators had even shed their caution and were extending their commitments, so that the trend was more or less a one-sided movement.

The real fillip to the steady rise was the continued flow of encouraging corporate news, which enabled the market to accelerate the pace of movement, reflecting the brilliant performance of corporate undertakings and the impact of expansion in different units. Another piece of news, that heartened the market, was a favourable allocation of foreign exchange to the export industries. But a feeling amongst certain operators that there was very little prospect of any further big rise in prices induced profit-taking. It was thus that there was a tendency for a reaction in prices from the middle of March.

From the beginning of the second quarter, prices were generally on the downswing though, at every bottom, desperate attempts were made to reverse the trend. It was thought that, with a large number of new issues entering the market in the coming weeks, substantial funds would be diverted for this purpose and thus the holding ability of the bull operators would seriously be limited. Another factor, which disturbed the trend of the market, was the shortage of fuel and power. It was feared that there might be a possible disruption of industrial production. Again, certain other developments puzzled operators. The deteriorating position in the supply of raw jute induced the fear that it might lead to a total stoppage of working of the mills. The accumulation of stocks of sugar posed a problem of finance for that industry. As for the coal industry, wagon supplies were considered to be inadequate. The cement and paper industries were reported to be having a disquieting time of it due to unremunerative controlled prices. The tea industry was reported to be in a depressed state of affairs. It was feared that the working of the engineering industry might have been affected by the power-cut. It was thought that the electric companies, having a low supply, might have a low-income phase. Despite these adverse factors, it was encouraging to note that the technical position of the market remained healthy; but there was none to exploit the situation.

Thanks to industrial performance being maintained at a very encouraging level, the market presented a cheerful outlook from the third week of May. Although this sudden turn in sentiment was mainly influenced by the near-boom conditions that prevailed in Dalal Street, indications that steel companies would be given more favourable treatment with regard to retention prices reinforced confidence in the market. High hopes were also entertained in respect of the forthcoming dividends of the two steel companies. It was felt that, as the refunds from the recent new issues had started to come in, there would be a greater flow of money into stocks and shares. Again, holders of certain good shares were reluctant to book profits due to the capital

TABLE I—(Contd.)

Company.	Type of Issue.	Issue Price.	Details of Issue.
47. Bihar Cable and Wire.	Offered to public	Ord. Rs 10 Pref. Rs 100, both at par	Issued capital is Rs 10 lakhs in 70,000 equity shares and 3,000-7 per cent tax-free Preference shares. The actual issue for the public was Rs 7.20 lakhs.
48. Polychem Limited.	Rights Ordinary.	Rs 50 at a premium of Rs 75	Issued 32,000 equity shares of the face value of Rs 50 each, at a premium of Rs 75 a share. The issue amounting to Rs 40 lakhs is offered to the existing shareholders in the ratio of two for every five shares held.
49. Escorts Limited.	Rights Ordinary.	Rs 10 at Rs 3 premium	Issued in the ratio of one share for every share held.
50. Amar Dye-Chem.	Rights Ordinary.	Rs 100 at par	Raised the capital by Rs 10 lakhs by issuing 10,000 new equity shares.
51. Dr Paul Lohmann.	Offered to public	Rs 10 at par	The issue is for Rs 30 lakhs. The directors and their friends have taken up Rs 6 lakhs, while the foreign collaborators have subscribed for Rs 4 lakhs. The balance of the issue for Rs 20 lakhs is offered to the public. The issue was oversubscribed by 3½ times.
52. Hindustan Glass.	Offered to public	Rs 100	Issued Rs 60 lakhs in equity shares. The directors and their friends have taken up shares worth Rs 24 lakhs and the foreign collaborators for Rs 12 lakhs. The public issue is for Rs 24 lakhs.
53. Birla Jute.	Rights Ordinary.	Rs 10 at a premium of Rs 6	Issued 4,56,300 new ordinary shares in the ratio of one for two shares held
54. Orient Paper.	Rights Ordinary.	Rs 10 at a premium of Rs 12	Issued right shares in the ratio of three for every ten shares held.
55. Tensile Steel.	Offered to public	Rs 100 at par	The authorised capital is Rs 1 crore. The issued capital is Rs 45 lakhs in equity shares. The public is offered shares worth Rs 14.73 lakhs.
56. J. K. Synthetics.	Offered to public	Rs 10 at par	Offered 5,23,750 equity shares. The present subscribed capital is Rs 72,62,500 dividend into 7,26,250 equity shares of Rs 10 each. The issue was heavily oversubscribed.
57. Sahayak Finance.	Offered to public	Rs 10 at par	Issued 77,700 equity shares.
58. Hindustan Electric.	Offered to public	Rs 100 at par	Issued 20,000 equity shares.
59. Universal Cables.	Offered to public	Rs 10 at par	Raised new capital of Rs 70 lakhs in equity shares of Rs 10 each. Of this issue, Rs 34.97 lakhs is offered to the public in the ratio of one for every share held. The balance of the issue of Rs 35.02 lakhs is offered to the public.
60. Indian Rubber Regenerating.	Offered to public	Rs 100 at par	The authorised capital is Rs 1 crore in equity shares. Of the proposed issue for Rs 35 lakhs, the directors and their friends have taken up shares worth Rs 17.85 lakhs. The actual offer to the public is Rs 17.15 lakhs.
61. Aluminium Corporation of India.	Rights Ordinary.	Rs 10 at par	Issued 3,12,500 right shares in the ratio of one for every two shares held.
62. Thamarapally Rubber.	Rights Ordinary.	Rs 10 at par	Issued 37,500 equity shares in the ratio of three shares for every two shares held.
63. India Forge and Drop Stampings.	Offered to public		Offered Rs 40 lakhs in equity shares and Rs 10 lakhs in Preference shares
64. Britannia Engineering.	Rights Ordinary.	Rs 10 at par	Issued Rs 50 lakhs in 5,00,000 equity shares of Rs 10 each.
65. Associated Rubber.	Offered to public		Raised the equity capital from Rs 7.50 lakhs to Rs 10 lakhs by issuing new equity shares in the proportion of one new share for every three shares held.
66. Kothari Cables & Electricals.	Offered to public		Out of the proposed capital of Rs 65 lakhs, Rs 40 lakhs will be in the form of equity capital and Rs 25 lakhs in the form of loans. The foreign collaborators provided Rs 12 lakhs out of Rs 40 lakhs and Rs 28 lakhs was raised by Kothari & Sons.
67. Acme Pig Iron.	Offered to public	Rs 100 at par	Out of the issued capital of Rs 20 lakhs in equity shares of Rs 100 each, shares worth Rs 10 lakhs was offered to the public.
68. Colour-Chem Limited.	Rights Ordinary.	Rs 100 at par	Capital raised by the issue of 25,000 new equity shares. Of this, 14,000 shares were issued to the shareholders in the ratio of one share for every five shares held.
69. Star Paper Mills.	Rights Ordinary.	Rs 10 at par	Offered 5,00,000 equity shares to the existing equity and preference shareholders in the proportion to the capital paid-up on the shares held by them.
70. Kesoram Cotton Mills.	Rights Ordinary.	Rs 10 at par	Offered to the shareholders in the ratio of one for every four equity shares held.
71. Mandya National Paper.	Rights Ordinary.	At par	Raised additional capital for Rs 80 in equity shares.
72. Shree Vallabh Glass.	Offered to public	Rs 100 at par	Out of the issued capital of Rs 72 lakhs in ordinary shares, the public was offered shares worth Rs 37.25 lakhs. The issue is over-subscribed by three times.
73. Parrys Confectionery.	Rights Ordinary.	Rs 1 each at a premium of Rs 1.	Issued 5,00,000 ordinary shares both to residents and non-residents.

gains tax. Above all, the news that the Aid-India Club, comprising six nations and the world Bank, had agreed to give India more than \$2,000 million for launching its Third Five-Year Plan provided further encouragement to the bulls, who became more and more aggressive and succeeded in rigging up prices.

Activity in the market, however, showed signs of flagging from the middle of June. Apart from the fact, that a sharp and successive rise in values evoked corrective profit-taking, some circles entertained fears that measures might be taken by the authorities to check speculative activity. As a matter of fact, the market was almost in a panicky state. While the continued impasse over the imposition of stiffer margins and minimum brokerage induced the operators to be extremely cautious in extending their commitments, some of the measures proposed by the Reserve Bank for strengthening bank finances caused a good deal of anxiety. Some quarters thought that these were only a prelude to a further tightening of monetary policy. There were also other restrictive influences, such as the TELCO debenture issue, the forthcoming loans of the Central and State Governments and the reports of adverse developments on the international front. The only relieving feature was the fact that the sharp fall in prices attracted some replacement buying at the lower levels, resulting in a feeble recovery at the end of the period under review.

Sectionwise, Engineering shares came in for a good deal of attention in the belief that the scope for the engineering industry, during the next few years, was good as development in the Third Plan would take place mainly in this sector of the economy. It was thought that expansion was likely to be facilitated by the prospects of increased supplies of steel from the expanded existing steel companies and the new steel plants of the public sector and, as a result of larger supplies of steel, it was possible that the fabricating industries would also be given a new boost. In the case of Indian Irons, hopes of an early announcement with regard to steel retention prices and of the possibility of the company enhancing the rate of distribution as a gesture of goodwill to investors were utilised by the speculators to keep the price movement fairly upward during most part of the period.

Except for scattered interest shown towards the end of the period following the stable conditions prevailing in the gunny market, Jute shares remained generally neglected with more sellers than buyers in evidence. It was feared that the high prices paid for raw jute, the increased labour emoluments and the cut in production due to the block closure might squeeze the mills' profitability.

If there was any section which did not show much reaction at any stage, that was Coal. Almost all the shares enjoyed sustained support at rising levels on the view that the production would rise when foreign loans became available for expansion. Top levels were, however, not maintained till the close due to anxiety with regard to the shortage of wagons as well as explosives.

Till the end of February, dealings in the Tea section were few and far between. Professional operators as well as investors could not but be shy until they could properly assess the result of working of the tea companies in 1960. But the Budget proposal to reduce the export duty induced a broadening of enquiry from the beginning of March. Although it was gradually realised that the net effect of the changes in the export and excise duties would be very little, the news of the proposals made by a few companies to issue bonus shares set the ball rolling in the direction of buying of shares of other companies having bonus possibilities. Shares of

good dividend-payers and those companies with large disposable reserves attracted the best attention.

Sugar shares were subjected to frequent selling pressure due to fears of excessive supplies and the consequent accumulation of stocks with the factories. It was felt that the surplus production of the commodity had brought neither prosperity to the industry nor relief to the consumer. Again, there was an anxiety to know how the factories would be compensated for the export losses. There was also a general feeling that the import quota given by the US was too small to be of much use.

Textile shares were initially subdued due to the fresh burden imposed on the industry following the announcement of an increase in the excise duty on yarn. Sentiment, however, turned bright, resulting in an actual boom from the beginning of the second quarter. This was inspired partly by large-scale modernisation and diversion in production undertaken by many units and partly by the flood of bonus issues and higher dividends proposed by certain Bombay and Ahmedabad mills. A favourable cotton supply position also aided sentiment.

Despite the highly promising outlook for the paper industry, the performance of the shares was far from encouraging, mainly on account of the cut in paper prices with effect from 1 January 1960.

Cement shares, however, looked up following a sizable increase in consumption and a resultant shortage. The promise of substantial expansion in consumption during the Third Plan period was the main bullish factor behind the rise in prices, although the ex-factory price of the commodity, fixed by the Government, continued to be uneconomic.

Prospects of bonus or right issues, the flow of encouraging corporate results and the sustained support for certain shares from influential quarters—all these factors kept up sentiment in other Miscellaneous shares. Generally speaking, this section received constant attention on the belief that the companies which were engaged in the newer lines of production were doing very well.

Bank shares showed a marked improvement in prices on the belief that the demand for banking credit would be accentuated further as the economy gathered momentum under the stimulus of the Third Plan outlays. It was also thought that the banks might consider the possibility of increasing their resources by issuing fresh shares in order to correct the imbalance between the share capital and deposit liabilities.

COMPANY LAW

Plural Directorships

CORPORATE activity which is at various stages of growth in different countries, has, in recent times, been marked by increasing governmental legislation, aimed everywhere at assisting its healthy growth in the face of the complexities of form it has come to assume. A vital part of such legislation relates to the position and powers of the directors, who in the eyes of the law are the locus of legal responsibility of the company. The objective of the law as it applies to company directors is to secure efficiency in the management of business enterprise and particularly to protect the interests of the shareholders who provide the legal personality to corporate business. Though efficiency in the wide sense is not purely a matter of law, it

is indisputable that there are objective factors in the working of companies which if left outside the purview of law may lead to inefficiency and mismanagement. From this point of view it is fundamental that the law should take into account opportunities for abuse of power by company directors in a way detrimental to the interests of the shareholders. Depending upon the form of management, the Companies Act 1956 provides a wide measure of safeguards intended to help the healthy growth of the corporate sector. The most important of the provisions are those which seek to restrict the role of the managing agents with a view to their ultimate elimination. But as recent statistics relating to forms of company management reveal, the managing agency system is already getting decadent while there has emerged a definite trend towards the directoral type of organisation. It is worth noting that of the 1,683 new registrations during 1960-61, as many as 1,062 had the board type of management, while 596 were formed with the managing director type of organisation. How far the objectives of the Companies Act 1956 are being fulfilled is a question that assumes importance in the context of the increasing size of the corporate sector in the country. A pilot study undertaken by the research and statistics division of the Company Law Administration, provides some interesting facts regarding the pattern of company directorships in the country.

Two aspects of company working that have a bearing on efficiency of management by the directoral board, are the existence of nominal directors on the one hand and the growth of inter-locking directorates or multiple directorships. The existence of directors who are directors only in name and participates very little in the management of the company is a feature common to all countries. In India, the managing agents introduced the practice of putting their nominees on the boards of companies, and in view of the undesirable effects of this practice on the working of companies, the Companies Act 1956 has laid down restrictions with respect to the number of nominee directors permissible within a company.

Inter-locking directorates or multiple directorates relate to a situation in which one person holds directorships on the boards of several companies. While it is true that the growth of such multiple directorships only serves to emphasise the scarcity of managerial talent—a scarcity not peculiar to our country—a tendency toward excessive pluralism leads to concentration of power and other undesirable results associated with such concentration. The Companies Act has taken note of the undesirable feature represented by multiple directorships and section 275 of the Act lays down that no person, save as otherwise provided in Section 276 could hold office at the same time as director in more than 20 companies as determined by the provisions of Section 278 of the Act. The pilot study conducted by the Company Law Administration provides a general idea of the degree of multiple directorships prevailing in the country after the enactment of the new Companies Act.

The pilot study is in the nature of a sample survey and is confined to the position in respect of 117 big-sized companies having their registered offices in the Western region and having a paid-up capital of Rs 50 lakhs and more. It is revealed that the total number of directorships of the 117 big-sized companies of the Western region total 917 held by 546 persons. On the average, thus, a person who served as a director in any of these companies held in rounded terms 2 directorships in the 117 companies. It is further shown that on an all-India basis, the aforesaid 546 persons held a

No. of Directorships	No. of persons holding the directorships	Total No. of directorships held
1 ..	113	113
2-10 ..	294	1,541
11-20 ..	95	1,421
21 and more	44	1,999
Total ..	546	4,174

On the basis of the figures given in the table it is clear that nearly 80 per cent of the directors of the big-sized companies covered by the study were plural directors while single company directors constituted only 20 per cent of the total. In view of the possibility that the 40 persons holding more than 20 directorships would be covered by the exceptions provided in the Companies Act, it is clear that the predominant type is represented by directors holding between 2 and 10 directorships. The relative position in India in this connection as compared with the USA and the UK is brought out in the following table.

No. of companies in which director- ships are held	Indian Cos. included in the pilot study	Large British Cos.	large American Cos.
One to five	77	70	72.5
Six to ten	..	17	17.5
Over ten	23	13	10.0
	100.0	100.0	100.0

The table establishes the prevalence of a greater degree of plurality in India as compared with the USA and the UK, which is attributed to the acute shortage of qualified candidates and also to the dominance of certain business houses and managing agency firms and companies.

The pilot study has also gathered material in regard to the age pattern of the directors and the composition of the board by young and old directors.

Age Group		
(as on 31 March, 1957)		No of Directors
Upto 30 years	..	36
31 to 45	..	142
46 to 55	..	172
56 to 65	..	92
Above 65	..	63
Total ..	..	505

There is a greater representation of the middle aged in the directorships of Indian companies than of old and young blood. It is in this connection interesting to note that while the average age of Indian directors is shown to be 49.5, the average age of directors in the UK and the USA are 55.2 and 65 respectively. The great difference between the average age of the American and Indian directors is explained as reflecting the peculiarity of the American administrative structure on the one hand and of the limited longevity in the case of the Indian directors on the other. Though the question of age is a point of great importance to the working of the directoral board, as the study makes it clear, it is difficult to claim any clear-cut advantage for any parti-

cular age group. A blend of youth and old age may appear to be more advantageous than exclusive composition by one group alone.

Orissa's Industrial Outlook

THE resounding victory of the Congress in the Orissa elections and the assumption by Mr B. Patnaik of the Chief Ministership have encouraged the hope that the State can now look forward to a bright industrial future. Orissa is endowed with vast mineral and forest resources which properly exploited can make it one of the most prosperous States in India. It has made fairly rapid progress under the first and second Five Year Plans but so great is its backwardness that its achievements in the last decade have hardly made any appreciable impact on the conditions of the people. Orissa, therefore, has to make systematic and determined efforts in the next few years in order to provide decent living standard to its population. The comfortable majority of the Congress and the industrial background of its energetic Chief Minister are favourable factors which augur well for the economic future of Orissa.

To what extent Orissa has industrially developed has been interestingly brought out in a brochure recently issued by the Tata Iron & Steel Company. In 1945, it is pointed out Orissa's entire industry consisted of a paper mill, one sugar mill, a glass factory, a soap works, a few oil mills and a few rice mills. In 1957 Orissa's industrial position vis-a-vis the rest of India is shown in the following table:—

	Orissa	India
Number of factories ..	137	7,754
Total production capital employed (Rs lakhs)	1,492	1,06,260
Total number of persons employed ..	19,630	18,13,322
Total salaries and wages paid (Rs lakhs) ..	181	25,831
Gross ex-factory value of output (Rs lakhs) ..	1,595	1,64,017
Value added by manufacture (Rs lakhs) ..	425	4,44,461

These figures are from the Census of Manufactures for 1957. In the last three years further strides have been made in industrialisation. The steel plant at Rourkela with an annual production capacity of 1 million tons of ingot steel or 720,000 tons of finished steel will give a fillip to the establishment of a number of ancillary industries. A fertiliser factory with an annual capacity of 50,000 tons of nitro-limestone is being set up in the neighbourhood of the steel plant and a Rs 4 crore pipe mill with an annual capacity of 1,20,000 tons of large-diameter pipes is also coming out. The ferro-manganese industry has also made a good beginning. There are already two ferro-manganese plants at Joda and at Rayagada and it is proposed to put up another at Kashipur in Kalahandi. The State has already two new refractory units and two more plants are going to be set up. The Kalinga Tube Works which produce about 36,000 tons of tubes ranging from $\frac{1}{4}$ " to 2" nominal bore are now implementing an expansion programme to produce tubes upto 6" nominal bore and to step up capacity to about 1,00,000 tons of tubes and 3,00,000 poles per year.

Other notable developments in the industrial sphere are the expansion of the output of the cement factory at Raigangpur from

3,50,000 tons to 7,25,000 tons per year and the establishment of a new factory with a capacity of 4,95,000 tons in the Sambalpur district; expansion of the Indian Aluminium Company's smelter from 10,000 tons to 20,000 tons; the establishment of a new sugar factory in Garjam with a crushing capacity of 1000 tons per month; the erection of a new paper mill with an annual capacity of 12,000 tons by Titaghur Paper Mills and another new mill by the Orient Paper Mills for producing paper and boards from both straw and bamboo. In addition, the State Government has set up new industries—a weaving mill at Cuttack, a chlorine and caustic soda factory at Brajrajnagar and a foundry at Jatui. In the private sector licences have been issued for several light engineering industries such as the manufacture of simple sheet metal machinery, grinding machines, sluice gates, twist drills, wood working tools, steel wire ropes, bicycle chains, spokes and nipples etc.

The increasing availability of electricity from the Hirakud, Machkund and the Duduma transmission schemes will be an important factor which will help to accelerate the process of industrialisation. The development of roads, railways, and inland waterways is also being pursued actively.

Orissa's Third Plan outlay is fixed at Rs 160 crores of which the Centre's share is Rs 132 crores. The State will additionally get Rs 10 crores as the Centre's share to meet certain schemes not included in the State Plan. In any case finance is unlikely to be a serious handicap. If the State Government improves its administrative efficiency and if it is prepared to extend reasonable facilities and incentives to entrepreneurs from other States, its industrial development can certainly proceed at a much faster rate than hitherto.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY

Unlendable: Banks' Predicament

MONEY is unlendable, and what are banks going to do? Borrowings from the Reserve Bank have possibly been reduced to their nadir, for, it is unlikely, though possible, that the banking system gets wholly out of debt with the central banking institution. Borrowings from the State Bank can be repaid somewhat, but the amount involved is not large. Inter-bank borrowings can be brought down but in many cases these may just be book entries. Cash balances can be increased, but they would then be sterile assets. Meantime there is conclusive enough proof that resources are piling up. In the last week of June, the contraction in bank credit is of sizable proportions, and although it is barely possible that, in the return for the first Friday of July, month-early disbursements may cause an increase, the declining trend in Advances has been established beyond all possible doubt. The fall from the busy season peak, touched on 31 March, and as at 30 June 1961 is placed at the considerable figure of Rs 58 crores.

Meantime, too, almost unnoticed, Deposits of banks have been steadily rising. Though concealed to the extent of Rs 72 crores, owing to the making over of counterpart funds in such amount by the State Bank, the rise in Deposits of Scheduled Banks since the first Friday in January this year, and as at 30 June, adds up to Rs 44 crores.

The first thing that banks obviously had to do was to stop paying penal interest on borrowings. Almost without break, week-by-week falls in indebtedness to the Reserve Bank were registered. The first thing done, there is no attractive second method left for banks profitably to utilise their resources.

For a matter of a few weeks, the inter-bank money market offered interesting opportunities: the rate hovered distinctly over the 4 per cent mark, though very temporarily, in Calcutta, it had gone below that level. But now, picture the predicament of banks, with their high-costing Deposits that they just cannot lend.

We have before examined the causes of banks' affluence of such nature, already apparent and even more strongly emerging, during the current slack season. What matters now is the embarrassment that banks are suffering from, a plethora of riches that seem destined merely to swell cash balances.

As a hedge against the cost of Deposits, and if money is not taken up in the inter-bank call market, and furthermore if the demand for Advances which banks would at all consider satisfying does not arise, all that banks can do is to buy more of Government securities. Preference would doubtless be shown for Treasury Bills—but the present rate of 2.65 per cent, and prospectively a rate as low as 2.4 per cent, is hardly good enough cover, when banks are paying 3 per cent on savings Deposits. If the cost of Deposits is to be covered, the yield earned by banks has to exceed that 3 per cent.

So, automatically, but reluctantly, too, banks are being compelled, as they were in 1957, first to begin, and later on to step up, purchases of giltedged from the Reserve Bank tap. The automatic nature of the buying transactions arises from the anxiety to maintain bank profits; the reluctance stems from the very real apprehension that, should demand for money again make itself felt in the next busy season, banks would be forced to borrow at penal rates from the Reserve Bank, or in the alternative to sell at a loss the giltedged that they had but lately bought.

It is time that both Reserve Bank and the banking system did something to prevent or at least minimise the erosion of earnings in the rest of 1961. The factor most responsible

for inhibiting bank purchase of gilt-edged is the continued existence, at least on paper, of the three-tier bank rate. We call upon the Reserve Bank, interested as it surely is in both an orderly structure of interest rates and the sound health of the banking system, without further delay to announce the repeal of the three-tier rates.

For, what good does a three-tier rate now do? It will not be until the end of the year (save perhaps for Puja and Diwali weeks) that banks will need to be assisted by central banking credit. Then, and only then, is it at all possible that the penal rates will become applicable. Meantime, because the three tiers exist in theory, banks are deterred from purchases of giltedged. As a result Government's borrowing programme feels the adverse repercussions of banks' abstinence; and, too, bank earnings are going to be eroded, precisely at the time when the Reserve Bank is taking other steps to strengthen banking. So, firstly because a 5 per cent or a 6 per cent bank Rate is unnatural vis-a-vis the current money market conditions, secondly because it is reducing banks' appetite for giltedged, and thirdly because it is weakening banks' earnings, we suggest that the three-tier bank Rate ought to be repealed.

That, however, is only a part solution. A forewearing of the three-tier system will merely enable banks with greater confidence to purchase dated securities and so to enlarge the profitable utilisation of idle (but high-costing) resources. Earnings can in such fashion be improved; but expenses must also be reduced.

We admit that the raising of interest rates has somewhat contributed to the luring of new Deposits into the banking system; we concede that banking interest rates, in relation to those on small savings schemes of Government are on the relatively low side; but we do not grant that money that would have been deposited with a bank will be diverted to small savings on the consideration alone of a higher interest available. On the contrary amounts put into a bank most often are never destined for small savings; and vice versa. So, banks would do well to realise that it is absurd for them to compete with small savings in the matter of rates of interest offered. Instead they would do well to concentrate on improvement of services and facilities, so that the banking habit can spread.

We believe that banking interest rates are too high; we believe that a lure of 3 per cent on savings bank Deposits is unnecessary. We urge a revision of the inter-bank agreement on interest rates. It would be most unfortunate if the experience of 1958-1959 were repeated, when time and again the rates were revised too little and too late. On each occasion, in that period, the new rates were enforced from a date just on the eve of the busy season. Surely, the time when rates should be reduced is during the slack season. We therefore emphasise the need for a revised schedule of rates to be operative from 1 August 1961.

If the banks fail to agree amongst themselves in this regard, we fear it may devolve upon the Reserve Bank to issue suitable directives. There is already the precedent of last autumn, when the central banking institution prescribed maxima of rates of interest on certain kinds of Deposits; and therefore it is that we herein enter a plea for appropriate and timely Reserve Bank action, should there be inaction on the part of the banking system itself; what is at stake is banking earnings—and therefore banking strength.

BANK RETURNS

Further Fall in Foreign Balances

Beginning of the month disbursements have made their deep impress upon the returns of the Reserve Bank for the week ended 7 July, though it would appear that the strain has not amounted to much for the banking system. Active Note Circulation is sharply higher by Rs 15.85 crores at Rs 1,949.26 crores, and there has been outflow of Rupee Coin for Rs 1.50 crores. There has been a transfer of Rs 10 crores from Foreign Securities (which are now placed below the Rs 100 crore mark at Rs 93.01 crores) to bolster the daily dwindling Balances Held Abroad, as shown in the Banking Department; and this has been offset by transfer of equivalent amount from Investments to Rupee Securities. As such, the Reserve Bank's cash in the till has been drawn down by Rs 17.35 crores to Rs 27.46 crores.

The Centre, no doubt owing to month-early disbursements, has experienced a drop of Rs 5.17 crores to Rs 54.51 crores in its Deposits; and State Governments, for the same reason, show a fall of Rs 6.22 crores to Rs 8.96 crores in Deposits as well as a rise of Rs 2.86 crores to Rs 37.16 crores in ways and means borrowings from the Reserve Bank. Member banks, on the other hand, do not seem to have been greatly put out: the Other Loans and Advances of the Reserve Bank have declined by Rs 6.82 crores to Rs 123.79 crores, with advances against usance bills dropping by over Rs 4 crores. Similarly, though Reserve Balances appear to have been drawn on, with the relative figure moving down from Rs 94.73 crores to Rs 91.69 crores, it needs to be noted that, in the same week, the State Bank has reported a fall of nearly Rs 7½ crores in its own cash in hand and with Reserve Bank. It is possible, thus, that constituents met their requirements, for beginning of the month disbursements, from out of Deposits rather than from borrowings from banks.

Balances Held Abroad, despite transfer of Rs 10 crores from the Issue Department, are higher only by Rs 5.76 crores: net drain during the week is thus to be placed at Rs 4.24 crores—and reserves have fallen below Rs 110 crores.

The return of the State Bank for 7 July shows how little banks have felt the strain of month-early demand for funds. The total of Advances has risen only by Rs 0.76 crores to Rs 261.49 crores, and Deposits have actually increased by Rs 2.12 crores to Rs 531.84 crores. Nevertheless, some disinvestment in gilt-edged, for about Rs 2 crores, has been disclosed. Cash balances, including money at call, have fallen by over Rs 8 crores, but this has gone

to swell Other Assets by Rs 12.14 crores to Rs 41.23 crores. Undoubtedly tap purchase of securities is likely to be recorded in the next return of the State Bank for at least Rs 10 crores.

The return of Scheduled Banks for 30 June contains changes which are the result of window-dressing, but is most importantly noteworthy for the sharp rise it registers in Deposit resources. Net Demand Deposits have moved up very considerably by Rs 26.34 crores to Rs 832.75 crores, while net Time Deposits have shrunk by Rs 10.24 crores to Rs 1,094.37 crores. The net rise is thus to be placed at Rs 16.60 crores, of which Rs 7.45 crores is traceable to the State Bank. In order to improve cash balances, borrowings from the Reserve Bank have been increased by Rs 4.10 crores to Rs 15.69 crores. Cash in India is marked up by Rs 6.94 crores at Rs 54.56 crores; Reserve Balances by just under Rs 14 crores at Rs 87.62 crores; and balances with other banks by Rs 5.33 crores at Rs 21.72 crores. However, money at call has moved down from Rs 53.44 crores to Rs 50.85 crores. The gilt-edged portfolio shows a rise of Rs 3.63 crores to Rs 549.01 crores, but, with the State Bank in that week reporting purchase of roughly Rs 6 crores of gilt-edged, it is to be inferred, clearly, that other banks have sold a small parcel. Lastly, the total of Advances has risen slightly by Rs 1.73 crores to Rs 1,275.96 crores—the first expansion recorded in almost exactly a month.

Bank Profits

The Bank of India Limited has reported a net profit, before providing for Taxation, of Rs 47.85 lakhs for the half-year just ended as against Rs 42.65 lakhs for the corresponding period of 1960. The directors have declared a higher dividend of Rs 4 per share, taxable, for the period as against Rs 3.75 per share, taxable, for the corresponding period of 1960, presumably with a view to compensating the shareholders more fully for the loss sustained by them on account of tax deducted at source. A dividend of 20 per cent, taxable, was paid for 1960.

The net profit of Devkaran Nanjee Banking Company Limited, for the half-year ended 30 June 1961, including the sum of Rs 7.36 lakhs brought forward from last year's account, amounts, subject to audit, to Rs 22.95 lakhs as against Rs 15.87 lakhs, including a carry-forward of Rs 5.69 lakhs, for the corresponding period of last year. The directors have proposed to raise the ad-interim dividend by 14 p to Rs 2.00 per share (net dividend raised from Rs 1.30 to Rs 1.40).

The Hongkong and Shanghai Banking Corporation has declared an interim dividend of

5/- a share on its paid-up capital of 3,161,845 shares (£4,940,383). This interim dividend is a distribution of £790,461 and is unchanged from that declared in July 1960. The Hongkong and Shanghai Banking Corporation is the parent company in a group comprising the Mercantile Bank Ltd and The British Bank of the Middle East.

More Fool's Paradise Economics

By Paul Einzig

Mr. SELWYN LLOYD promised the House of Commons to announce measures in support of sterling before Parliament rises at the end of this month. It may well be asked why he is proceeding at such a leisurely pace. Week after week the Treasury loses more gold and dollars, and in addition to the actual losses the short-term liabilities represented by foreign Central Bank holdings of sterling also increase. The widening of the discount on forward sterling has made outward interest arbitrage increasingly profitable, and holders of sterling outside the Sterling Area are certain to take advantage of it to an increasing extent. In spite of this, the Government thinks it can afford to wait before adopting long-overdue measures. Possibly it may mean that Mr Selwyn Lloyd wants to announce these measures simultaneously with the application of the new surcharge and payroll tax, the authorisation of which measures has not yet reached the Statute Book. Or possibly he intends to do nothing else than adopt surcharge and payroll tax. If that is the intention, the Government and the country are in for a major disappointment. For the natural, logical and inevitable consequence of these measures will be an accentuation of the rise in the cost of living index, leading to a stepping up of wage demands.

The fact that even the Government has failed to realise the urgency of taking effective measures in defence of sterling shows the extent to which it lives in its fool's paradise economics. How can the Government expect to arouse the country to the consciousness of the imperative need for self-restraint in order to check the growing pressure on sterling? Surely the natural reaction to the casual way in which the situation is being handled is for trade unions and everybody else to be equally casual about it. The only effect of Mr Selwyn Lloyd's grave warnings is to accentuate the pressure on sterling and the declining trend on the Stock Exchange, without impressing employers, employees, and consumers with the need for making sacrifices for the sake of avoiding a crisis. It is actions and not words that are needed, and right now, not in a few weeks' time.

Other members of the Sterling Area, too, appear to have failed to realise so far the imperative need for self-restraint. Yet unless they accept their share of the necessary sacrifices they will share with the British Government the responsibility for the development of the biggest crisis of the post-war period. Unfortunately the external support to sterling under the Basle arrangement and in the form of the increased drawing right on the International Monetary Fund has encouraged further this fool's paradise economics. A statement offering American aid to sterling is believed to be imminent. Realities are not likely to be faced until all this external aid has been exhausted, and meanwhile the fundamental position will continue to deteriorate.

Notes

NON-FERROUS METALS
Joint Venture
Possibilities

The twelfth annual general meeting of the Indian Non-ferrous Metals Manufacturers' Association, held in Calcutta last week, has focussed attention on the importance of developing the non-ferrous metals industry in the country. While there has been considerable progress in production in recent years, there is still a great leeway to be made up in meeting the entire consumption requirements from internal sources. It is anticipated that by the end of the Third Plan, consumption of non-ferrous metals would increase by nearly 100 per cent. Consumption of copper is expected to go up from 85,000 tons to 170,000 tons, zinc from 85,000 tons to 187,000 tons, aluminium from 50,000 tons to 100,000 tons, tin from 7,000 tons to 10,500 tons, lead from 35,000 tons to 65,000 tons and antimony from about 800 tons to 1,000 tons. The gap in production is of different size for the different industries, but it is in respect of copper supplies that grave concern is entertained about the adequacy of the country's reserves. The Khetri deposit is perhaps the only

large source and for this reason it would be desirable that the area round the Khetri deposit is intensively prospected. In view of the limited reserves of the country in copper, it is also necessary that proper conservancy measures should be adopted in the utilisation of the copper ore for industrial purposes. In the course of his address, Mr Manubhai Shah, Union Minister for Industry has suggested the substitution of copper by aluminium in the electrical cables and wire industry. There can be no doubt about the practicability of such a proposal as the case of France would illustrate.

The Third Plan envisages substantial expansion of the non-ferrous metals industry and provides Rs 80 crores for the development of the primary metals and another sum of Rs 13 crores for the manufacture of cables and wires. The problems posed by development of these industries are, as Mr A. C. Dutta, the President of the Association pointed out, diverse. Prospecting done so far in the field of non-ferrous metals had not been extensive enough. To enable extensive drilling and prospecting work, Mr Dutta has suggested the creation of a revolving fund through the Indian Bureau of Mines. The proposal of Mr K. D. Malaviya, Union Minister for Mines and Oil, for the setting up of mixed ventures in mineral prospecting and mining through the industry associating itself with the Government either through collaboration or through capital participation will be welcomed as eminently well conceived. The most important thing that deserves consideration is the creation of an atmosphere in which entrepreneurs will be encouraged to put their investments in the non-ferrous metals industry. With this view, Mr Dutta, has suggested several proposals including the facility of charging prospecting and development expenses against future profits, adequate provision for depletion of ore reserve, and most importantly a tax holiday in the initial years to enable the mine to recover the capital cost for the development of mines and installation of the processing equipments before any tax becomes payable. A flexible policy with respect to the role of the public and private sectors should also prove helpful. The establishment of the machinery side of the industry is also a question that assumes importance in view of the need not only for rapid development but also for conservation of foreign exchange.

SMALL INDUSTRIES

A Catalogue of Woes

It was a long and in some ways formidable list of grievances that Mr A. R. Bhat, President of the Federation of Association of Small Industries in India presented the other day in Madras. Chief among them is the absence of a steady supply of raw material, especially of steel and non-ferrous metals. Others besides small industrialists have complaints of the same kind to make, but Mr Bhat's special grievance was of discrimination vis-a-vis bigger units who were able to have their cases heard more effectively. The little man was in effect out-bidden and his resources did not make it possible for him to obtain his needs by dubious means. The substance of Mr Bhat's grievance is difficult to resist, to any one who is aware of the distress among the smaller units in and around Calcutta. Despite the declared aim of decentralising and dispersing economic power, the practical consequences of a free-for-all rush in a period of shortage is that the small man goes to the wall. Lack of coordination of policy between the Centre and the States is also responsible to some extent for this state of affairs. There is apparently no uniformity in the matter of assessing essentially, for some States attach more and others less to the needs of the small industrialists.

The other handicap that the small industrialist has to contend with is lack of finance. Here again, good intentions and even a considerable amount of practical action have not caught up with the needs. The Reserve Bank's initiative in this matter has been of considerable importance. Recently, it extended the scheme of credit guarantee to more districts. The State Bank has been specially wooing the small industrialist as part of the official policy in this regard. The Madras Minister for Industries announced at the very conference addressed by Mr Bhat that the Madras Government had intentions of starting cooperative industrial banks to provide credit for small industrialists. It has asked the Centre to consider the idea of underwriting the Madras venture by taking over any loss that might arise. Despite all this, the present position would appear to be that the credit needs of the small industrialists are not taken care of as best as they ought to be. Mr Bhat estimates the total advances from all sources to the small industrialists at Rs 65 crores during 1960. The Working Group on Industries of the Planning Commission has estimated the credit needs of the small industries during the Third Plan at Rs 300 to Rs 360 crores.

Mr Bhat complained about alleged niggardliness of commercial banks in the matter of credit to the small industrialists and their general attitude of dubiousness towards the probability of success of small ventures. This may be somewhat exaggerated, since banks have to depend as much on the small bor-

rower as on the small deposit these days. But the tight monetary conditions of last year or so may have been responsible for the banks' inability to lend more to the small man at rates he could afford. When banks themselves were obliged to borrow at penal rates from the Reserve Bank, they may not have been able to find the money in adequate measure for the small man at reasonable interest rates. Mr Bhat's suggestion of a compulsory allocation of 15 per cent of deposit resources of scheduled banks to advances to small industrialists is impractical. Banks may legitimately complain that if they are to be compelled, as was urged recently at the NDC meeting, to meet the need of public sector undertakings and small industries as now urged by Mr Bhat they may as well hand over the deposits they collect to Government instead of being in the banking business. Mr Bhat's request that the State Finance Corporation should be more sympathetic and make less rigorous demands in the matter of margins, however, deserves consideration. Mr Bhat's contention about the crucial importance of the small banks with local affiliation is undoubtedly well founded and is a pity that the general tendency for them to get swallowed is making matters more difficult for the small entrepreneur.

COAL

The Problem of Price

Record raisings and despatch have characterised the working of the Selected Satgram Colliery Limited, during 1960-61. Raisings at 283,851 tons reflect a per cent increase as compared with output in the previous year.

while despatches were higher by 43,161 tons representing a new record at 263,931 tons. The consequent increase in sales has contributed to better trading results and the profit before taxation at Rs 5.12 lakhs compares with Rs 4.55 lakhs during the previous year.

While highlighting the bright performance of the Company, in the course of his speech at the sixteenth annual general meeting of the Company, Mr S. D. Shethia, Chairman, referred to the problems faced by the coal industry in reaching the target which the Third Plan has set for it. As Mr Shethia has stated, the Third Plan envisages the development of the coal industry on a more ambitious scale than in the Second Plan, and if the Plan schemes are to be fulfilled without leading to shortfalls in production as had happened in the Second Plan, it is necessary that there should be careful planning in all spheres. One of the important prerequisites for the smooth progress of the development schemes is the availability of finance. Investment in coal production in the private sector is expected to be of the order of Rs 60 crores of which Rs 18 crores will be in foreign exchange. In view of the negotiations scheduled to be carried on with the World Bank, chances of obtaining the foreign exchange requirements can be rated high. There is also the problem of price policy adopted by the Government which has an important bearing on progress of production in the private sector. While there can hardly be any agreement between the Government and the industry on the amount of weightage to be given to incentive elements in pricing, it is necessary to emphasise that the price fixed by the Government should at least bear a reasonable relation to costs of production in the light of all the factors involved and particularly of the increased incidence of labour costs. Mr Shethia is confident of the private sector being able to reach its target if Government encouragement in the form of a realistic price policy could be assured to the industry.

Blast It!

A new crisis has emerged, and it is evident that the Government which seems anxious to develop minerals, has missed the point that explosives are needed for regular mining operations. The closure of collieries may lighten stocks and give relief to railway transport but consuming industries are bound to be affected and the coal owners are naturally apprehensive about reaching planned targets. A substantial increase in the production of powder, dynamite fuses etc., may be needed, though it may be suspected that the sole manufacturer of explosives being an associate of the Government is likely to give pri-

ority to Government requirements. Since foreign exchange reserves are low, the chances of importing explosives quickly may not appear very bright. However, there are many manufacturers in America and a loan from the Development Loan Fund may help India to buy explosives from the USA. In any case, the USA has promised to help the coal-mining industry and US assistance can take the form of essential materials as well as machinery. More prosperous coal-mining companies, might well undertake the establishment of a new unit for the manufacture of commercial explosives and the example of South Africa where the gold-mining industry has sustained the large-scale local manufacture of chemicals and explosives alike, cannot be overlooked. A co-operative venture launched by the organisations representing the coal industry should prove successful, and it may be claimed that in spite of the Government's attitude to armaments manufacture in the private sector, a distinction may be drawn between blasting powder required for quarries and the ingredients used for making bombs. The crisis in the coal mining industry may compel some firms to start production, if licence can be obtained for not only roadmaking on the border areas but extraction of coal for not only road making on the really described as urgent. Foreign assistance on approved terms can be secured only with Government permission, but it is clear that Atlas Powder or Hercules Powder would welcome an opportunity to set up an Indian affiliate.

CAPITAL ISSUES A Few Surprises

Capital issues have increased in number and variety, and the official review for the last quarter of 1960 indicates that only a few applications were rejected. The borrowings of local authorities are not included in the capital issues. Some surprise will be occasioned by the inclusion of an aircraft firm that sought to raise Rs 2 crores. It is evident that a Government company is involved. If it is the Avro manufacture scheme at Kanpur, it is perhaps an offshoot of the Defence Ministry. Probably it is HAL, that got formal permission to raise extra capital.

The expansion of fertiliser production stands out in the detailed analysis of new ventures. In fact it is the branch of the chemical industry which shows the greatest increase in capital by over Rs 40 crores. The paper industry comes a long way behind, but aluminium production takes the third place. New industries, rather than the old, account for much of the new capital authorised in Oct-Dec. 1960. The refusals are indicated in a summary fashion. A new bank could not start, as it could not raise funds by seeking support. An insurance company engaged in fire and marine insurance (the inclusion of life is probably an error) could not add to its capital by raising Rs 22.6 lakhs, as the proposal was not considered

to be in the public interest. The amount of loan capital raised is shown at Rs 15.15 crores but no figure is available as regards preference capital raised or to be raised by the new companies. That the Bengal Coal Co., got consent for a debenture issue may be easily inferred from the classified analysis. A point that needs mention is that no separate classification of bonus issues is made by the analyst. But one point stands out: only four applications for bonus issues by industrial concerns were made because of the 30 per cent tax levied on capitalisation of reserves by bonus issues. Only a few planting companies were permitted to issue bonus shares owing to the size of the reserves built up out of past profits. Some surprise too will be caused by the consent given to a Government-owned cotton mill asking for Rs 2.5 crores to start operations. Whether it is necessary at all when India has over 400 cotton mills at present, is a question that is sure to be asked. The analysis also indicates that the merger of Sindri with the Nangal fertiliser factory was carried out last year, and the formal announcement came only this year.

HMT Brilliant Performance

The annual report for 1960-61 of the Hindustan Machine Tools Ltd, is replete with evidence of the strident progress being made by the Company in all directions. The fact that the Company has been able to report a return of 13.9 per cent on the share capital against 1.02 per cent in 1956-57, 5.54 per cent in 1957-58, 7.15 per cent in 1958-59 and 8.22 per cent in 1959-60 provides a measure of the financial improvement that the Company has achieved since it started working. It is also noteworthy that during 1960-61, the Company registered a net profit of Rs 74 lakhs against Rs 37 lakhs during the last year.

The HMT represents an integrated project with an industrial estate and watch project as the notable features. The industrial estate, has features of a pioneering endeavour in as much as it is intended to serve as a feeder industry to the machine tools factory. The watch factory for which Japanese collaboration has been obtained is only in the process of being set up, but it is reported that orders for the machinery required for the factory have been placed.

Progress in production and diversification has also been more than satisfactory. Production of 1,002 machines during the year 1960-61 represents an increase of 250 per cent over the Plan target of 400 machines and compares with 702 machines during the previous year. In respect of diversification, 16 types of Cylindrical Grinding Machines have been added to the

list of items. The Company has also made a beginning in the manufacture of the heavy duty Turret Lathes. Technical collaboration agreements with Messrs Regie Nationale Des Usines Renault of France for the production of Special Purpose Machine and another one with Messrs Limex, G.M.H., of the German Democratic Republic were signed during the year under review. Further it should be mentioned, that in the manufacture of the Cylindrical Grinding Machines, the HMT has secured the technical collaboration of Messrs Officina Meccanica Olivetti of Italy.

Construction of the second machine tool factory has been completed ten months ahead of schedule in May 1961 and is designed to double the output of machines to 2,000 valued at Rs 7 crores per annum. It is remarkable that the factory was built without any financial contribution from the Government or the shareholders and entirely with the internal financial resources built up by the Company during its first five years of operation.

This picture of progress is however marred by the state of rivalry between two labour unions for recognition by the management. The matter of recognition of one of the unions is pending with the Labour Ministry of the Mysore Government. It is however comforting that the disquietude in the labour front has not affected production as is evident from the record figures for the year under review.

SHIPPING Unrealistic Targets

Speaking from the chair at last week's annual meeting of the National Shipping Board, Mr G. L. Mehta has reiterated that the Board's indication as regards the shipping target for the Third Plan is the absolute minimum. It may be recalled that the National Shipping Board's recommendation has been for a financial allocation of Rs 104 crores over and above Rs 14 crores that the private sector shipping companies will be able to spare from their own resources. This outlay has been arrived at on the basis of a provision for a modest expansion at the rate of 100,000 GRT annually during the period of the Third Plan. A painful surprise was in store for the Board as the financial outlay envisaged by the Third Plan outline is no more than Rs 55 crores. Of course recently the Minister for shipping has indicated that the outlay may be increased by another ten crores or so. There is also the vague assurance that the outlay may be revised up-

wards provided increased resources become available.

Shipping interests have been expressing anxious concern at the apparently unrealistic attitude of the Planning Commission and Government to one of the vital aspects of national life. Government spokesmen are still waxing eloquent over the urgent need for building up a merchant fleet of a size commensurate with the size of the country. Even in the present context of the acute shortage of foreign exchange, it is rather difficult to understand why shipping development has been given a low priority in the national plan. Shipping is perhaps the one industry that can pay its way within the shortest possible time and an increase in shipping tonnage can bring about an immediate saving of foreign exchange in the shape of diminished freight payable to foreign ships which are still carrying the bulk of the cargo to and from Indian shores. In protesting against the decision to provide for a net addition of a little less than 200,000 tons against the Board's proposal of 500,000 GRT during the Third Plan period, Mr Mehta is only echoing the general sentiment in the country.

Government's intinsigence is also responsible for the unenviable state of our coastal shipping. Here again there is no dearth of lip-sympathy for this sector of the Indian shipping industry from Authority, but when it comes to a question of looking carefully into coastal shipping's malaise and initiating steps toward remedying the position, one finds no clear-cut policy. While on the one side its costs are going up, on the other coastal shipping has not been able to get adequate cargo to carry. It would appear that in the matter of rehabilitation and expansion, coastal shipping has been left to shift for itself as best as it can. Thus with no foreign exchange earning to its credit and without much Government assistance its pace of expansion has slowed down considerably. Although the target for coastal shipping for the Second Plan was 412,000 tons, the actual attainment is only of the order of 268,000 GRT. If the overall target of 0.9 million GRT has been reached (875,000 GRT actual tonnage in operation at the end of the Second Plan plus about 60,000 GRT under construction), it is because much of the headway has been accounted for by overseas tonnage. Overtaken by the crisis in the movement of coal, Government has now turned to coastal shipping for help. It has been announced that one million tons of coal will be moved by sea and even though the problem of costs will continue to remain very much with the coastal shipping companies, there is some consolation to be derived from the fact that there will be adequate cargo. But in view of the slow progress

it has made in the two Plan periods, it is doubtful if coastal shipping will be able to cope with a sudden increase in the demand for cargo space.

Mr Mehta has pointed out that export of sugar to America may go some way toward solving the problem of increasing Indian tonnage on the overseas trade, especially on the India-US route, as it will solve, to a limited extent, the problem of return cargo to Indian ships engaged in the transport of foodgrains from America.

In order, however, to enable a large number of Indian ships to participate in the transport of foodgrains from America, some sort of subsidy has to be given because even if the sugar deal materialises many of the ships will perforce have to go empty one way. As for coastal shipping, a reliable indication of the quantum of cargo that will be available to it over a period of years will, help remove more than anything else some of the more intractable obstacles in the way of its growth.

trade and industrial production. Stated in a general way, the problem in the field of foreign trade is one of balancing imports against exports in the context of the development schemes envisaged in the Third Plan. While the aid promised by the World Bank Consortium has solved the problem of development imports at least for the first two years of the Plan, the outlook for maintenance imports is still clouded by uncertainty. Referring to the importance of providing for maintenance imports, Mr G. V. Puranik, Chairman of the AIMO asked whether it would not be practicable for the Government of India to prevail upon the Consortium to provide a fair proportion of foreign exchange aid for maintenance imports. The question has become important in view of the urgency of the problem and it was pointed out, that if such agreement could be secured it would enable the country to finance maintenance imports through the foreign exchange aid received from the Consortium. A question that arises in this connection is the relative priority that is to be accorded to maintenance imports as compared with developmental imports. The indiscriminate licensing of industrial units in the early years of the Second Plan and the serious crisis in foreign exchange which it precipitated, have brought this problem into sharp focus. Mr Puranik has suggested that maintenance imports of essential raw materials, spare parts, components etc., required by existing industries should be given precedence over developmental imports of capital equipments unless the industries to be started were based on indigenous raw materials or were planned for production of essential raw materials and components which had to be imported at present. It cannot be denied that the lack of adequate provision for maintenance imports by leading to idle capacity will aggravate the inflationary potential and this should be a decisive consideration in settling the extent of importance to be accorded to maintenance imports.

While stressing the need to provide for sufficient maintenance imports, Mr Puranik did not fail to emphasise the role of a dynamic policy in respect of export promotion. In this light, he welcomed the establishment of export houses and referred to the prospects for greater exports through measures of expanded credit facilities provided by the Government on the lines existing in Australia, Canada, Japan and West Germany. In the final analysis, only progressive reduction in the prices of manufactured exportable goods would provide the basis for continuous expansion of exports. The problem of stimulating export consciousness in the Indian businessmen who have been prone to be apathetic

in this matter in view of the existence of a sheltered market within the county has also to be faced in a realistic way. It was suggested at the meeting that further efforts in export promotion could be considerably stimulated by a variety of measures including tax concessions on exported goods, supply of raw materials at low prices, proper link between wages and labour productivity, and abolition of sales tax and octroi on industrial raw materials.

TECHNICAL EDUCATION Inadequate Finance

The decision taken by the All India Council for Technical Education at its annual meeting last week to establish 19 additional engineering colleges and 67 additional polytechnics and expansion of the capacity of the existing technical institutions means that facilities for technical education during the Third Plan will be greatly increased. The programme for expansion of technical education must necessarily be taken on hand well in advance as it will take well over five years for an entrant to become a full-fledged engineer. The Planning Commission has estimated that additional training facilities have to be provided in the Third Plan for about 18,000 engineering graduates in different categories and for about 26,000 diploma holders. This will mean an increase in existing intake for degree courses by 5,000 and for diploma courses by about 10,000 in regular institutions. It is proposed to increase further the intake for degree courses by 1,000 and diploma courses by 5,000 through part-time and correspondence courses.

As a result of the new expansion decided upon, the annual admission capacity of technical institutions will increase to 19,130 students for degree courses and 37,390 students for diploma courses by the end of the Third Plan period. But these estimates appear to be unrealistic, in the light of the financial provision that the Planning Commission has found it possible to make for technical education. Originally the working group on technical education had drawn up a programme involving a total outlay of Rs 201 crores. The State Plans for technical education as finally approved by the Planning Commission provide for an outlay of Rs 71.33 crores. At the Centre the Ministry had suggested a programme of Rs 96.15 crores which has been reduced by stages to Rs 70 crores. But funds, even for this reduced programme, are not fully assured. What the Planning Commission has done is to indicate "a programme limit" of Rs 70 crores with a financial provision of

Rs 45 crores. In the circumstances it remains to be seen how many of the technical institutions approved by the Council actually come up during the Third Plan period. According to the Ministry's estimates, it will be extremely difficult, within the provision, to complete even the schemes undertaken during the Second Plan. No wonder that Dr Humayun Kabir spoke in bitter terms of the parsimony of the Planning Commission and expatiated on the folly of building costly industrial establishments without adequate provision for trained personnel to man them.

The annual intake in 1960-61 in degree courses was 13,850 and in the polytechnics the intake was 27,750. The total number of colleges and polytechnics in that year was 100 and 198 respectively. In 1960 the outturn of degree holders and diploma holders were 5,310 and 10,397 respectively. The tremendous expansion in the facilities for technical education that has taken place in the past one decade will be evident from the fact that in 1950 there were only 49 colleges and 86 polytechnics with the annual outturn of degree holders and diploma holders at 2,198 and 2,498 respectively. It is expected that the supply of engineering personnel will be adequate during the Third Plan. An estimated surplus of 6,200 degree holders and a deficit of 4,100 diploma holders is expected. The surplus and deficit, being only marginal, may not present any great problem.

But the actual position as it may finally emerge may not be as heartening as the impressive estimates. Disturbing trends have been noticed in the matter of admission to both the colleges and polytechnics. Considerations other than merit often come to determine entry and this seems to be common to both types of institutions. An increasing number of entrants failing to pass the first year in degree courses testifies to this. The All India Technical Education Council itself has expressed serious concern over the position in respect of admission to polytechnics. While students of a decidedly inferior quality are given admission, there are many seats left unfilled in a number of institutions. The Council has suggested a detailed investigation into the matter. An obvious remedy is to make selections purely on merit. Another drawback to which pointed attention has been drawn by the Council is the lack of proper equipment in many of the polytechnics. This is largely due to want of foreign exchange allocations. The Council has done well to emphasise first that Government should make available adequate foreign exchange to these institutions and secondly that no new institutions should be started till existing ones are properly equipped. Since the technicians will be entrusted with valuable

machinery often obtained at great expense of foreign exchange, they have to be of a fairly high calibre. Ill-trained technicians will not only make the plan costlier by damaging equipment and machinery but will also slow down industrial progress as replacements and repairs will be time consuming.

IBRD Loan for Calcutta Port

The Executive Directors of the World Bank have approved a loan equivalent to \$21 million to the Commissioners of the Port of Calcutta. The loan will help to finance dredges and other floating craft to maintain navigation on the Hooghly River approach to Calcutta, and equipment and works to improve the efficiency of the Port. The loan will also finance the foreign exchange costs of a hydraulic study of the Hooghly River to help solve the problem of siltation in the river and to determine the feasibility of establishing a deep-water satellite port farther down the river at Haldia to accommodate bulk cargo vessels.

The greater part of the current Bank loan will be used for the purchase of about 20 floating craft, of which four will be large dredges and six, auxiliary dredging vessels. With this addition to their dredging fleet, the Commissioners should be able to achieve their objective of maintaining access to the Port the year round for vessels of 26-foot draft. The works to be undertaken to improve the Port itself include the extension of the western arm in King George's Dock to provide holding space for four ships and four dolphin berths for ships undergoing repairs; the installation of a water recirculation scheme in Kidderpore Docks to help eliminate the siltation problem in the Docks, and the replacement of a 70-year old swing bridge. Cranes, fork-lift trucks, tractors and trailers will be added to the mechanical cargo-handling equipment of the Port. Repair and maintenance facilities are to be improved by the installation of modern plant and machinery in the Port's work-shop and ship-yards.

The Commissioners of the Port of Calcutta and the Bank attach great importance to the hydraulic studies to be undertaken of the Hooghly River. In order to assure that these studies are promptly initiated, and carried out on a continuing basis, the Commissioners will establish a Hydraulic Study Department manned by Indian hydrologists and assisted by foreign experts supported by the leading hydraulic laboratories abroad.

The total cost of the equipment, the study and works included in the project is estimated at the equivalent of \$31 million. The Bank loan will cover the foreign exchange requirements and the local currency costs will be provided by the Commissioners of the Port of Calcutta.

BANK CREDIT TO GOVT. No Special Treatment

Whether commercial banks should finance State-owned enterprises when a big nationalised institution exists is a moot point. Bank directors who are aware of the increased demands of the private sector and the hardening of interest rates in 1960 and after are probably justified in asking for higher rates in spite of the Finance Minister's recent suggestion that public enterprises could open accounts with joint-stock banks. The fact that the balance sheets and reports of State-owned enterprises are not impressive enough to justify loans at a low rate has not been mentioned specifically so far though the plea is that an extra half per cent was demanded for a loan sought by a State enterprise. It is a fair enough demand that if commercial banks are to finance a State enterprise, its credit rating must be made on a commercial basis. It can claim no special exemptions from the usual procedure. Books of account must be open for inspection by the Bank staff as a routine auditor's certificate will not do. It must be also remembered that the money of private depositors cannot be lent to State-owned enterprises at a low rate, when there are competitors prepared to borrow at the current market rate. It is, of course, open to the State enterprises to rely on the State Bank of India and the ten minor institutions taken over last year. But the shareholders of the latter will probably feel that sacrifices are being made at their expense for the benefit of State-owned enterprises. And a fixed dividend of 5 per cent is not going to help them when shareholders of other banks are able to enjoy better dividends. The rise in operating expenses is one reason for banks asking for higher rates of interest especially when short-term rates tend to be higher than the bank rate. Further, banks competing keenly for deposits from the public at present are paying more to encourage deposits and this point deserves mention as also the fact that regional disparities in interest rates as between Madras and Madhya Pradesh warrant the joint-stock banks' demand for half a per cent more. The State Bank of India enjoys unusual advantages and has access to many sources for deposits. Any concessions it now offers to State enterprises may be approved tacitly by the Government. But commercial banks have to earn profits, add to reserves, and pay out dividends to merit the confidence of depositors and shareholders alike because there is really no distinction between the two classes.

USA

Better Cities and Improved Housing

President Kennedy has signed into law one of the most comprehensive and far-reaching housing bills ever approved by Congress. Congressional debate on the measure was prolonged and sharp in both the Senate and the House of Representatives. But in the final analysis, the legislation that emerged accords pretty much with the recommendations offered by the President some months ago.

In general, the legislation makes it easier for Americans to buy and repair their own homes and to enlarge them by the federally subsidised public housing programme. It expedites urban renewal and slum clearance; provides federal funds to help finance construction of public facilities in local com-

munities and makes available federal financial help for such projects like college dormitories, farm housing, local mass transit facilities, parks and recreational areas, and housing for elderly citizens.

Already, some of the measure's major provisions are being put into effect. The Federal Housing Administration (FHA), for instance, has invoked the new schedule of home mortgage terms made possible by the legislation. The schedule permits lower down payments—initial cash payments—on mortgages insured under FHA's programme, and extends the maximum maturity of these mortgages to 35 years from 30 years. The FHA, which was established in 1934, does not itself make loans or build and repair homes, but it insures loans made for these purposes by private institutes.

In practical application, the new FHA schedule means that a family can now buy a new home costing

up to \$15,000, generally considered in the low to middle-price range in most parts of the United States, for a mere \$450 down payment. Over a 35-year period, the repayment on the mortgage would be at \$81.84 per month at the prevailing FHA-insured interest rate of 5.25 per cent. In special "hardship" cases, the mortgage repayment period for a house in that price range can be spread over 40 years, which would further reduce the monthly payment to \$78.64. Cash requirements and monthly payments would be proportionately higher on higher-priced houses, though terms on these dwellings have also been liberalized considerably.

In addition, FHA offices are busy spelling out the details of the programme for insuring home improvement loans. The new law now allows as much as \$10,000, repayable over a period of up to 20 years, for repairing and modernizing older houses. Previously,

ADVENTURES INTO TUBELESS

TIMES

I, Time Master Tubophile...that's my name...Chairman, Tube Time Inc., am venturing into the tubeless times on my tubular time machine. Journey fraught with some danger but more hardships...hardships unimaginable even by the imaginative Wells (he with the Martian mania)...for Wells, a scientific man, couldn't conceive of a time without tubes. But tubeless times there have been (I, Time Master Tubophile, Chairman, Tube Time Inc., should know) and 'tis to these unhappy tubeless times I go in my time machine, so I can tell you of the hardships of a life without tubes.

Look for the next instalment.

The Indian Tube
Company (1953) Ltd.

A Tata-Stewarts & Lloyds Enterprise

he limit was \$3,500 over a five-year period.

It takes little imagination to see what this could mean to the improvement of housing conditions in urban neighbourhoods threatened by physical deterioration. Economists believe that this programme can make for substantial rehabilitation of such neighbourhoods, thereby averting the growth of unsightly and unhealthy slum districts which would have to be cleared eventually under large urban renewal projects.

Urban renewal has not been overlooked in the new law. Some \$2,000 million has been authorized for grants to cities conducting such slum clearance projects—an amount that equals the total provided previously for this programme in all the years it has operated.

Up to now, federal urban renewal money has been used in nearly 500 cities and towns for projects in various stages of completion and advance planning is under way in more than 250 other areas. Officials believe that the new law will not only help expedite completion of all these, but will make funds available shortly or initial planning grants to at least 70 more localities.

The bill also authorizes construction of an additional 100,000 units of federally subsidized low-rent public housing. Under this programme, the federal government pays rental subsidies over 40 years.

With these various provisions, and all the other features contained in this comprehensive, or "omnibus," measure, the new four-year housing law is expected to cost an estimated \$5,600 million. Some estimates place its eventual cost at closer to \$9,000 million.

But the amount of money involved may in the long run be identical to the significant gains he measure promises to bring to the American people. It has been estimated, for instance, that about 40 per cent of American families already own their own homes, including those in the process of paying off mortgages. This legislation obviously would bring home ownership within the financial reach of millions of other Americans.

Beyond that, as President Kennedy pointed out in signing the new housing legislation, it "provides an opportunity for a giant step toward better cities and improved housing."

A New Study on Money and Credit

Back in the summer of 1958, a 25-man group of leading American citizens began a comprehensive study of national fiscal and monetary policies, and how they can best serve the cause of economic growth and stability. Now, after three years of intensive effort, this group—the Commission on Money

and Credit—has published its findings in a 300-page report which is being hailed as a landmark in its field.

The report, titled, "Money and Credit: Their Influence on Jobs, Prices and Growth," represents the first full scale review of this subject since the Aldrich Monetary Commission made a report in 1911 which is credited with laying the basis for the creation a few years later (in 1913) of the US Federal Reserve System—in effect, the nation's central banking system.

The latest report proposes no such ambitious undertaking as a complete overhaul of the US financial structure. Its problem has been to study ways in which the Government's basically sound financial mechanisms can be improved and made more responsive to socio-economic requirements of the modern day.

With this in mind, the Commission has set as its goals three principal elements: an adequate rate of economic growth, high levels of employment and reasonable price stability. These goals, it believes, are compatible and mutually reinforcing, and can be materially influenced by government action in the field of fiscal and monetary management.

With this established, the Commission has gone on to recommend improvements in existing governmental machinery, in statistical economic indicators, and in policy-making coordination to help bring about the desired ends more efficiently. Throughout, there is evidence of a strong belief that federal authority and regulatory power should be increased. At the same time, the need is recognized for greater private participation, if only on the advisory level, in government economic decisions.

In all, the Commission has offered more than 80 recommendations. Many of them are routine or technical, involving such matters as relations between federal and state bodies and the make-up or regulatory agencies. Several of the proposals, however, stand out as somewhat more controversial or as offering significant opportunities for further progress in this vital area of public activity.

The report proposes, for instance, shifts in personal income tax rates as the quickest way to stimulate demand during a recession or to control it during a boom. These shifts would not be subject to the normal, and usually time-consuming legislative action, but would be made by the President, subject to veto by the Congress.

Government spending on socially useful projects to help cushion recessions, the report says, should be planned well in advance of such events.

Organizationally, the report urges a greater degree of centralization and coordination in economic policy-making. Along these lines, it would have the Employment Act of 1946 provide clearer guide lines on national aims. That Act makes it the formal responsibility of government to help create conditions conducive to high levels of employment, production and incomes.

On national growth, the Commission has declined to set any specific targets, although stressing that economic growth rates can be accelerated and employment opportunities expanded. It notes that in addition to government action, high levels of private capital formation and research and development efforts are important to these endeavours.

In a wide-ranging section on international policy, the report offers suggestions for reducing short-term capital shifts and for widening the sphere of activities of the International Monetary Fund. At the same time, it maintains that the price of gold should be held at \$35 an ounce.

This report is not official, having been drawn up by a private group chosen by the private committee for economic development. Also, there was wide latitude for dissent among Commission members, who were drawn from many different fields—finance, industry, labour, government and education.

Nevertheless, the report as published appears to represent in many of its proposals a reasonable consensus of American economic judgment today. It is likely to be studied, and perhaps become the basis for future action, in both governmental and private quarters. President Kennedy himself has commended the Commission for its work, and has urged all Americans to study its recommendations carefully, whether they agree with them or not.

Already, the Joint Economic Committee of Congress is talking of holding hearings on the Commission's findings in the near future. As time goes by, it is possible that public discussion of the report may become rather lively and debate rather sharp—all of which could help throw additional light on the entire subject of monetary and fiscal policy.

MANGANESE Sorry Predicament

The sharp decline in manganese exports from India in recent years is unfortunate especially when one of the country's urgent needs now is foreign exchange. From Rs 32 crores in 1957, foreign exchange earning from manganese exports have fallen to as low as Rs 14 crores in 1960. This combined with the fact that quantitatively also there has been a steep fall from 1,715,000 tons in 1957 to 1,262,000 tons in 1960 indicates that foreign consumers' interest in Indian manganese is diminishing. During the period 1957-60 the trend has been quite irregular as exports fell to 960,000 tons in 1958 and then improved to 1,239,000 tons only to decline again in the next year to 1,162,000 tons.

A close examination of the working of the manganese ore industry will show that the present stagnant conditions are by no means common to its counterparts in other countries. A fairly detailed analysis of the problems and

prospects of the Indian manganese industry is to be found in a pamphlet issued this week by the World Trade Department of the Indian Chamber of Commerce, Calcutta. It is perhaps to be conceded that the fall in export of manganese may have been caused in some measure by factors such as that the rise in world production of manganese has been at a relatively faster rate than steel output, development of mining areas in regions close to consuming centres as in Brazil, increasing competition from Russia which is the world's largest producer and the declining dependence of steel production on manganese ore on account of technological advances. But, even all these factors put together will not be able to account for the steep decline in Indian manganese exports. For with almost all these adverse factors in operation, other producing countries have in the same period been able to increase both their production and exports. World production of manganese ore in 1953 stood at 4,800,000 tonnes and but for a decline in the next year the trend has been upward, the figure standing at 4,900,000 tonnes in 1958. During this period important producers like Russia, South Africa and Brazil have progressively stepped up their output. India is conspicuous by its poor performance, output showing a steep decline in 1954 from 892,200 tonnes in the previous year to 668,600 tonnes. The next three years show some improvement but in 1958 output has declined again sharply to 545,100 tonnes.

How is it that India, which is the second largest producer of manganese, and which has been able to carry on a flourishing overseas trade in this commodity has come to lose ground in world markets? The Indian Chamber pamphlet suggests that much of the blame for the present sorry predicament of Indian manganese industry is to be apportioned to the State Trading Corporation, with whose advent in the manganese trade, the depression in exports has coincided. For various reasons, and mainly because of its unbusinesslike ways, many a foreign buyer is unwilling to deal with the STC. Though things have improved greatly, it still remains a valid objection in many cases that foreign buyers would prefer not to deal with it.

From the trend of world production and consumption of manganese, it would appear that despite adverse factors, world demand for manganese will continue to show progressive improvement at least for considerable time to come. In this view, provided we take concerted steps, Indian manganese can once again be quite popular in world markets. Some steps have been initiated by Government recently toward this end but in view of the severe competition that Indian manganese is meeting from other producers, the

whole question of manganese industry and trade will bear a thorough examination. Two of the suggestions made by the pamphlet in this regard are the giving of free scope for the private sector in exports and the rendering of Indian manganese competitive in world markets. Both are worth serious consideration for the stakes involved are large.

ANGOLA A Crack in Tyranny

The American attitude to Portuguese colonialism may account for the detailed explanation given about Portuguese policy in Africa. Repression is now termed reprisal, and it is, even argued that protection of peaceful citizens is the main object of the authorities at home. The increase in taxation may alter the economic prospect, but the situation in Portugal was described as not very discouraging and English capital perhaps feels reasonably confident about Portugal's economic future, because Mr Alister Roger at the Anglo-Portuguese Telephone meeting in May reviewed the situation in trade and industry and mentioned the historic connection between London and Lisbon. That, of course, was due to the views of British politicians, as made known in recent weeks and it is fairly clear at present that the crack in the Empire is inevitable because of the many changes felt all over Africa.

The plantations and mines in Angola have been run for long by a system of indentured labour, hardly different from slavery. In 1912 Lord Cromer describing Portuguese colonialism in a celebrated essay mentioned the evidence of British Consuls about the conditions in the islands off Angola and made it clear that a modern slavery existed. The revolution that put Dr Salazar in power has made no difference to the colonies and it is noteworthy that in London the attack on the methods of dictatorship are led by British missionaries with experience of West Africa. Self-determination may be difficult in view of recent happenings in the Congo, but the more far-sighted will probably agree that some form of association with the Congo Republic might be expedient in the future.

While British capital in Portuguese East Africa is known to be considerable, the outside investment in Angola does not appear to be great. Portuguese East Africa is more dependent on export of men than materials, but there has been some kind of trouble on account of the prevailing unrest in Rhodesia, and it is clear that before long the remnants of empire will be discarded by Portugal although the pre-requisite is the end of the Salazar regime which, after 30 years, has shown no signs of willingness to renounce power. Mr Nehru's remarks about terrorism show that apart from adding the enclaves in Gujarat to Indian territory, the Indian Government is not willing to adopt diplomatic re-

straint in discussing the methods and results of repression.

INDO-PAK RELATIONS Accord on Banks

The decision of the Pakistan Government to issue a notification declaring Indian banks in West Pakistan as non- evacuee property bids fair to end one of the more important disputes between the two countries. Attempts to recover movable assets left behind by Indian Banks had been made as early 1949. An agreement in this regard was signed in that year but it has remained dormant for over 11 years due to lack of agreement on details. Renewed attempts during this period to work the agreement met with no success and to the repeated plea of the Government of India for the convening of the Implementation Committee of the Banking Agreement. The Pakistan Government replied in 1958 by apply-

ing the Pakistani Evacuee Property Administration Act to the movable assets left behind by Indian Banks. The effect of this is to nullify practically the 1949 agreement as one of the essential prerequisites for the repatriation of assets is that they should have non-evacuee status.

The new agreement will enable Indian banks to transfer bank accounts and funds from en-bloc areas—Punjab (India) and PEPSU in India and Punjab (Pakistan) and Bahawalpur in Pakistan—along with the funds as decided under the Banking Agreement. Joint accounts of individuals and accounts of sole proprietary concerns will be treated like individual accounts. The mode of the repatriation of the surplus assets of Indian banks which do not wish to function in Pakistan or are not permitted by the Pakistan Government to operate in that country is to be decided by the Finance Ministers of the two countries. What makes last week's agree-

ment a hopeful development is the fact that a time limit has been specified for transfer of some categories of movable assets. The date of exchange of lockers, safe deposits, bank accounts and funds will be 30 September this year. Full details of the agreement is given in a joint communiqué issued at the end of the meeting of the Implementation Committee held in Calcutta last week. It is to be hoped that when Mr Morarji Desai and his counterpart in Pakistan meet to tackle the question of the repatriation of surplus assets of Indian Banks they will be able to conclude their labours as satisfactorily and as quickly as the Implementation Committee did in Calcutta last week. The fact that a date has been fixed for implementing the Calcutta agreement on the exchange of lockers etc., seems to indicate that the Pakistan Government has at long last decided to end the long impasse in implementing the Banking Agreement.

The mighty roll of the drums seethes to the climax of a wild rhythm...and the dancing Wapis have danced their traditional Fish Dance, cleansing themselves of the anger of the Great Fish of the river.

BINNY's fabrics are shipped to this exciting land of New Guinea to help the people discover the wonderful new world of modern clothes.

BINNY's fabrics are exported to 49 other countries, too. Superb materials made only from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

From palm leaves to TUSSORES

BINNY's manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirting · Khaki Drills · Bleached & Dyed Drills
Towels · Anticrease Suitings · Tussore
Union Fabrics · Silk Saris etc. etc.

POWER New Thermal Stations

The Madras Government has given further evidence of its complete freedom from doctrinaire affiliation to socialist slogans. Some time ago, it came to realistic terms with the power shortage in the State by agreeing in principle to the establishment of thermal stations by private entrepreneurs to augment their supply. What was even more remarkable was its offer to buy any surplus power thus generated for being used for general consumption. The first fruits of the idea have now been announced. A new thermal power station is to be set up in North Madras with a capacity of 60,000 KW to meet the needs of the new industrial complex that is developing in that area. Associated with this venture is a British firm. The capital expected to be of the order of Rs 5 crores is to come mainly from firms like Ashok Leyland, Carborandum Universal and Tube Investments etc. The project is to be completed in two years, and power will be made available from about the middle of 1963.

RESEARCH New Instruments

The current issue, June 1961, of the Journal of Scientific and Industrial Research contains descriptions of seven new scientific instruments developed in Indian laboratories.

Three of the instruments are useful for research in meteorological and allied fields. The first, an electronic salinity meter, developed at the Geophysics Department of the Andhra University helps in the quick determination of the saline content of rainwater. The data obtained are of value in fundamental studies on the mechanism of precipitation in clouds leading to rainfall. A special feature of this instrument is that it enables the simultaneous recording of variation in salinity and the approximate intensity of rainfall.

A simple and highly-sensitive lightweight electrical thermometer, useful in oceanographic studies, also developed in the same Department of Andhra University, measures differences of the order of 0.03°F. in the temperatures of turbulent layers in the ocean up to the depth of 300 metres. Data on these minute temperature differences are of value to the biologist in determining the plankton population at different levels and to the oceanographer in evaluating the characteristics of the water masses. The instruments currently in use cannot detect temperature differences below 0.5°F.

A low-cost instrument for accu-

rate determination of the concentration of air under conditions of high turbulent flow is reported from the Department of Civil and Hydraulic Engineering, Indian Institute of Science, Bangalore. The working of the instrument is based on the measurement of variations in electrical conductivity as a result of varying the ratio of air to water in the atmosphere. With slight modifications the instrument can be used for quick measurement of the air content in different sections in a flow.

An improved design of a scintillation detector useful in the detection of nuclear radiation is reported from the Atomic Energy Establishment, Bombay. Two interesting instruments have been developed as a result of research sponsored by the Hyderabad Science Society. One is used for measuring bullet velocities and the other for measuring short intervals of time of the order of 1/100000th of a second.

The Technological Research Laboratories of the Indian Central Jute Committee, Calcutta, have designed and fabricated an instrument for use in the textile industry which enables the measurement of the hardness modulus of individual filaments of textile materials.

NEW HORIZONS Prestressed Concrete Factory

Prestressed concrete, the latest and most economic structural material, is to be produced in a factory opened a few days ago in Bhandup, Bombay. It will also produce bituminous waterproofing products for use in connection with prestressed concrete structures and waterproofing generally. This factory which belongs to Shalimar Tar Products (1935) Limited of Calcutta, has been set up in record time. The plant was entirely designed and fabricated in India. In the past, waterproofing materials have had to be transported across India. This new factory will therefore, satisfy a very real need in Maharashtra and Western India for materials essential to the development of new projects and the expansion and maintenance of existing establishments. Ample scope has been allowed for expansion of production capacity as demand in Western India increases.

PRICE INDEX Slight Decline

The official wholesale price index (with the year ended March 1953=100) receded by 0.3 per cent to 124.5 during the week ended 10 June, 1961 when compared with 124.9 for the earlier week. The index was lower by 1.0 per cent when compared with the corresponding week of the previous month, but was higher by 1.3

per cent than that of a year ago. (See Table on page 142)

CORRESPONDENCE IAC Fares

Dear Sir,

Comments have recently appeared in the press on the proposed increase of fares on IAC. Most of these have bracketed the proposal with the increased wage-bill since IAC's pay-scales were revised. What seems to have been generally ignored is the fact that the cost of operations and maintenance has been rising as well.

For years now the Corporation has been doing its best within the limitations of extraordinarily high fuel costs (possibly the highest paid by any airline) and a fare structure that is about the lowest in the world. Normal increases in expenditure can be, and are, offset by increasing revenues due to increased traffic, but even here IAC is faced by the limiting factor of the near-maximum capacity already offered. IAC's revenue-earning potential is now levelling off while unavoidable expenditure continues to rise.

Since 1957, the price of Aviation Turbine Fuel used by Viscounts and Friendships has gone up by about 4.5 per cent, and that of High Octane Gasoline consumed by piston-engined aircraft by nearly 17 per cent. The impact of the latter increase is very considerable as the IAC fleet is made up largely of piston-engined aircraft. Fuel alone accounts for nearly one-third of our total expenditure.

Aircraft and engine spares have also been going up in price. Items:

- (1) Dakotas. The main source of supply for Dakota spares has been the war surplus market in USA. The pool of unused spares manufactured years ago has almost dried up, and whatever is available sells at a higher price. In the last five years alone, Dakota spares have gone up by over 150 per cent on an average, with some regularly replaceable parts costing five times as much. As the spares position becomes more difficult we are forced to buy newly manufactured parts, which cost a lot more.
- (2) Viscounts: Modern though the Viscount is, the prices of its engine and aircraft spares have gone up by varying degrees in the last four years. Aircraft spares now cost at least 18 per cent more, and vendor items (such as radio equipment) between 4 per cent and 50 per cent more. Engine spares which are changed at every overhaul have gone up by nearly 97 per cent.

To these must be added higher duties on some items, increased

cost of freight and the increased incidence of Sales Taxes on local purchases.

Despite all these added costs, the fares and freight rates on IAC have been static since 1958, but for a few minor adjustments. Even with the proposed increases IAC will continue to offer fares that are lower than almost anywhere else in the world.

Yours Etc.,
P. C. LAL
General Manager.

New Delhi

Pattern of Ownership

Sir,

It is intriguing to note that the New York Stock Exchange should be anxious for information about the distribution of shares in India among the community of investors. Your leading article is interesting and you have therein suggested several ways of collecting the information e.g., company registers, income tax records, shareholders' Association.

The most reliable way of getting the information and in a way the simplest is, as you have observed, to require all companies to furnish this in their Annual Reports as some of big companies are already doing. But not many of them are furnishing the information, nor on a uniform basis nor from year to year so as to enable comparisons to be made.

The above is a burden which the Government may as well lay on the companies like so many others. It has already laid down meticulous rules on the manner in which applications for shares in new companies should be dealt with. It also ensures that its orders are complied with. If the information now under discussion is also obtained and set side by side, it should be possible incidentally to test the practical advantages of the Government orders on allotment of shares. The information may be required of companies with a subscribed capital of Rs 50 lakhs or Rs 1 crore and over and under certain categories say Rs 100 and less of subscribed capital, over Rs 100 to Rs 500 and less and so on.

In the absence of sufficient data argument can be carried on inconclusively. It might be argued that the orders of the Government bring about an effective dispersal of shares among the public: equally can it be urged that the applicants who apply for shares in a new floatation and receive a meagre 5 or 10 or even 25 shares of the face value of Rs 10/- are a floating crowd who sell their allotments forthwith and clear out with what small profit they can make.

Yours Etc.,
K. V. IYER.

Madras

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

PRESIDENT Ayub Khan is once again on the rampage. His psychology is rather like that of the elder wife in the Arabian Nights who finds herself displaced by a younger favourite in the affections of her husband. I believe the standard behaviour on such occasions is to whine and bluster, conspire with the servants and spread slander about the rival and claw her eyes if possible. First the whine: India, the ostentatious neutral, is treated more respectfully than Pakistan who has stuck to the US through thick and thin. Then the bluster: if the US does not change its policies, Pakistan will itself become a neutral. In a TV interview in the US last Monday, President Ayub Khan is reported to have said that "Pakistan will adopt neutralism if it was necessitated by the force of circumstances." And then the slander and the blackmail: India is expansionist and all her neighbours, Pakistan, Nepal, Bhutan, Burma, Malaya and Ceylon are scared of her. In a television interview recorded in London for the American Broadcasting Company, he is reported to have said, "You say these countries and India are friendly. It (Sic) is not. They all have their apprehensions. Just imagine that as a result of this development programme—the creation of military power and so forth—India gets more powerful. Do you mean to say that these are going to feel more secure? In fact they would be looking for protection elsewhere and my belief is they will seek protection under China's system." The hysteria behind this farago of nonsense extenuates its pathetic logic. And if it really came to that, of all the countries listed by Pakistan's President, the only country likely to act on the assumption that it is better to be under China's wings than under India's is Pakistan. And Pakistan will do this not because the choice was a wise one, but because Pakistan will apparently hurt itself to the utmost if by so doing it feels it can cock a snook at India. What besides stirring trouble between India and her neighbours President Ayub Khan hopes to gain, it is difficult to see. Certainly he cannot be so naive as to imagine that by all this he can frighten President Kennedy into abandoning his policy towards India. But then the compulsions of hysteria are wholly irrational.

neutrality quoted earlier provided an occasion for an oblique illumination of the controlled democracy now in operation in Pakistan. The Pakistani Law Minister asked to comment on the President's statement is reported to have said, "If the President said so, his views reflect the views of the entire cabinet." A queer mirror this that provides the object it reflects: The qualification, "if the President said so" is altogether delicious. If the President had said that his cabinet was a pack of servile yes-men, no doubt the Pakistani Law Minister would promptly have said, "if the President said so, it reflects the view of the cabinet."

Incidentally, the remark about Pakistan's possible conversion to

For as far back as I can remember, Stuart Chase has been debunking the modern habit of literally not knowing what one is talking about. What is perhaps more important, he has been exposing, in his unemphatic, sweetly reasonable way, the dishonest tricks of those who deliberately use highly emotive words to extort the response they want. Crusading is an inappropriate word for anything so suave and civilised as Chase's writings, but there is some justification for using it to describe an activity that has such single-minded intensity behind it. His demand is so simple and reasonable that it comes as a shock that our practice should be so much at variance with it. All he asks is that the "language we use should correspond to the objective reality around us" and as reasonable men and women, we must understand words in the same way if we are to derive any benefit from discussion. His is a plea for greater awareness of the meanings of words and for greater care in avoiding confusion by unintended and unsuspected overtones in the words one uses. In a brilliant article he wrote recently, he has quoted the finding of a sample survey of opinion that revealed that 30 per cent of the persons questioned could not give a passable definition of "Free enterprise." Quite a few thought that it referred to something given away at sales! And yet the expression probably crops up within seconds of our starting to discuss the American economy and is used either approvingly or pejoratively a dozen times in a page in magazine articles on the subject. (The fact, by the way, that so many people were so wildly wrong about the expression is hopeful, paradoxically. For it is a measure of the

ineffectiveness of all the patter that the newspapers serve up!) If you check, he says, the expression with "the operating reality of the Main Street"—the protective tariffs, fair trade laws, price fixing (often collusive) by manufacturers, and government regulations and price subsidies,—you will see how far removed from Say's model of competition modern American economy is. Examples nearer home are easy enough to find. Mr Nehru who never tires of holding up to ridicule the obsolescence of the thinking of the right and the left extremists, himself clings illogically to "the socialist pattern of society." Surely, it would make for clarity if we could discard it, for in Mr Nehru's mouth it is hardly definitive. It is what Chase calls a "purr word" making one feel rather pleased with oneself exactly as it is a "slur word" in the mouths of his opponents who imply a whole world of regimented terror by it. Democracy is another word that is bandied about, with or without the redundant qualification "free" or "people's." Their use can be justified only by the fact that they stand, quite fortuitously, for well understood entities. There is thus no incongruity in talking about liberating free democracies of the world! "The free world" is another portmanteau word that describes an area that contains some of the most shamelessly tyrannical regimes. At lesser levels too, words are used in a variety of dubious ways. But their illegitimacy is shrugged off as when the tooth paste manufacturer markets it only in two sizes—large and giant-sized. Governments of the world have long been wrapping up their indecision in language that is comfortably woolly. A recent example is the masterly performance of Mr Edward Heath, Lord Privy Seal in the British House of Commons during a debate on Foreign Affairs. Britain's joining the European Common Market was an "urgent matter". It was also "bound to take time". "Exploratory talks" were going on. But "Negotiations cannot even start unless we can see the prospect of successful outcome". He could not enlighten the House further because the situation was what he called "evolving", whatever that may mean. Doubtless the House of Commons will wait for the day when the situation will come to a biological dead-end, so to speak, when it will know the worst.

Examinees are in the news once again—this time in France. The announcement of the results of the baccalaureat—roughly corresponding to our matriculation or the British eleven plus in its crucial importance—occasioned a

minor riot in Paris, for about 500 candidates were found to have been ploughed wrongly. Further inquiry has revealed shocking incompetence. Some candidates received 87 marks out of 60 in History and Geography and Latin papers had been sent for marking to examiners in Spanish. (It is not known whether the examiners noticed the difference.) Excuses are being made for them. Among other things, it is said that they had to examine over a million answer books in three weeks besides doing their normal amount of teaching. But considering how candidates in India sometimes kill themselves—the papers reported the other day the case of a girl who killed herself, needlessly as it turned out, since she had passed—for failing in the examination, it is difficult to be very charitable. Of course, if every boy followed the example of the Bombay lad who became a stowaway until his parents traced him to Australia and begged him to come back, such mistakes may not do much harm. Nearer home, enterprising girls have other remedies. One who was caught out in what is euphemistically described as "malpractice" and was hauled up before an inquiry committee promptly offered her gold earrings and bangles to a University employee if he would help her out of her predicament. The same man had earlier been approached by another girl who had failed, for similar assistance in consideration for her earrings. She also threatened to kill herself by throwing herself from a thirteen-storeyed building if he refused to help. The papers are tantalisingly silent on the question whether the good man obliged in both cases. If what one hears about the affairs of the University is at all anywhere near the truth, it shouldn't have been too difficult. Advocates of reform of the examination system will find additional grist to their mill in all these unsavoury events. There is perhaps something to be said for mitigating the ordeals of the rat race that begins at fifteen. But let us not get issues mixed. Efficiency and honesty have a place even in a society that has not abolished examinations.

Floods have been more than usually destructive this year and normally well-behaved rivers have caused anxious days and widespread misery. The Cauvery, which I have known to be the kindest and gentlest of rivers, almost destroyed a thousand year old monument to Chola engineering skill, the Grand Anicut. Kerala, Mysore, Orissa and Maharashtra have also suffered. It has been suggested that vast dams that have no suitable safety valves, so to speak, may be responsible for these floods. It is necessary that timely expert action is taken. It would be tragic if dams built for increasing prosperity merely spread misery.

EAVERSDROPPER

Olympus

CO-OP. PROCESSING

Perils of Targetmanship

THE Third Plan targets for Co-operative Processing draw attention to the important contribution expected of this sector both for the growth of the co-operative movement as well as for the economic development of the country in general. Standing between the primary agricultural credit societies on the one hand and marketing societies on the other, processing societies are strategically situated to render assistance to either sector. Processing is an indispensable preliminary of successful marketing, and marketing societies generally find themselves handicapped when they have to get their processing done by private parties. Processing units can help credit institutions even more effectively, in the recovery of the loans advanced by the latter to their members. The significance of co-operative processing in the scheme of planned development is clearly brought out by the agricultural production programme of the Third Plan which leans heavily on the success of co-operative credit and marketing.

While underlining the strategic role of co-operative processing, the Committee set up by the National Co-operative Development & Warehousing Board has clearly indicated the drawbacks under which they labour at present as well as the conditions for establishment and proper functioning of co-operative processing units. Up to the end of the Second Plan, co-operative units had made significant progress in the processing of sugarcane and of cotton. Progress in respect of other commodities has been less even. Two co-operative sugar factories were already in existence at the beginning of the First Five Year Plan. Licenses for 39 additional units were granted during the First and Second Plan periods, of which 29 had gone into production before the end of the Second Plan. The co-operative sector is expected to contribute four lakh tons of sugar, or 15 per cent of the total production of the industry, during the current year. The Third Plan target for sugar is to be achieved mainly by the thirty additional co-operative sugar factories which are expected to be set up during the current year.

In respect of the other processing units, reliable and complete data are not available for the whole of the Second Plan period. Against target of 106 processing units (48 cotton gins and 118 others) 97 had been organised during the first three years of the Second Plan. The annual plans of the States for the remaining two years provided for the establishment of 281 additional units, including 42 cotton ginning and pressing units. The Third Plan has set up the following targets for co-operative processing other than sugar.

Cotton Processing ..	48
Rice Mills ..	36
Rice Hullers ..	411
Jute Baling Units ..	29
Oil Crushing Units ..	33
Decorticators ..	63
Fruit Canning Units ..	3
(i) Large ..	3
(ii) Small ..	74
Other Units ..	86
Total ..	783

While the co-operative sugar factories have, except in one instance, been established by separate, specially organised processing societies, a large number of other processing units have been set up by marketing societies as adjuncts to their normal operations. Conceding the need for elasticity in the matter of organisation, the Committee has pointed out that separate processing units will be advisable where large investment in fixed assets is called for, as an independent processing society may find it easier to raise block capital from credit institutions.

The programme of co-operative development envisages that the processing societies will be owned, largely by member producers. But in a number of cases the number of non-producer members is fairly large. It is emphasised that processing societies should consist essentially of producer members. In addition, primary village credit societies located in the area of its operations, it is suggested, may also be admitted as members to establish a link between co-operative credit and co-operative processing. Strict observance of this condition will be necessary to justify the exemption from sales tax on sales of produce by members to the processing society, which is one of the recommendations made by the Committee. The membership of sugar co-operatives as on 30 June 1960 consisted of

Producer members ..	109,016
Individual non-producer members ..	6,913
Co-operative institutions ..	9,337
Total ..	125,265

Where heavy investment is required, as in the case of sugar factories, the bulk of the funds is provided by loan capital. Loans given by the Industrial Finance Corporation amount to more than 65 per cent of the block in the case of sugar factories. Up to end of June 1960, IFC loans amounted to Rs 18.88 crores against the total capital of Rs 12.72 crores. The contribution of different categories of members to the share capital is as follows:

	(Rs in lakhs)
Producer members ..	562
Non-producer members ..	24
Co-operative institutions ..	132
State Governments ..	552

The Committee's report affords an indirect indication of the rather haphazard manner in which processing societies have been set up in the past without adequate investigation of their economic viability. Even in the case of sugar factories, where the requirements of the Industries (Regulation & Development) Act ensure preliminary scrutiny of plans before grant of licence, the Committee has noted several cases of inadequate planning. In such cases co-operative sugar factories have come up in places which were not able to provide enough sugarcane, so that full installed capacity of the plant could not be utilised in the initial years.

In regard to other processing units, the position is even less satisfactory. The requisite planning and investigation, the Committee says, "has been conspicuous by its absence," and that some of the units were established "in circumstances under which their subsequent failure was almost inherent." In others the economics of operation were not carefully worked out, with the result that right from the beginning the units have been incurring losses every year. The Committee has, therefore, recommended that detailed investigation into the following aspects should be made, before setting up new processing units in the co-operative sector:

- (1) Extent of availability of agricultural produce to be processed within the area of operation of the proposed society.
- (2) Extent to which the need for the proposed processing units is felt by the growers and the prospect of attracting their loyalty.
- (3) Examination of the estimates of recurring income and expenditure (including interest and depreciation charges) so as to consider the overall economics of the proposed unit.

- (4) Facilities for transport of raw materials and disposal of finished products.

That the Committee should have found it necessary to stress these points shows how elementary economic considerations have been ignored in the past in the enthusiasm to set up co-operative units. To curb this tendency, the Committee has recommended a check-up of plans before releasing Central assistance.

The Committee has warned that the programme of Processing Cooperatives should not proceed on the basis of attainment of certain targets. It has observed that in some cases, processing units have been established for no reason except that a District Assistant Registrar was allotted a certain target, and even though his area was not suitable for establishment of the processing units, he was obliged to organise them for sake of reaching the target. The perils of targetmanship will be aggravated by the expanded programme for the development of cooperative processing under the Third Five Year Plan.

Prospects of growing trade with South American States and the progress of mechanisation of Soviet farms were the strongest impressions brought back by Mr S. K. Patil from his 54 days Odyssey of 14 countries, which included four in Eastern Europe and four in South America. But his main business, as he told pressmen in New Delhi, last week, was in the United States, where he had gone for the annual review of the working of the PL 480 agreement, as well as to create the background for the sale of Indian sugar. India's sugar surplus, Mr Patil explained, was not a temporary phenomenon. For many years to come we will have to reckon with a surplus ranging from half a million to one million tons which will have to be sold at a loss in a buyers' market. The loss will be less if we are able to sell to the United States. For this year, the US has granted an ad hoc quota of 225,000 short tons valued at about \$25 millions, the largest quota allotted to any country. We can do with a larger quota this year and India's case has been put to the US Administration. But, as Mr Patil explained, the prospect of getting an additional quota this year depends on the rather unlikely event of any of the other countries that have been allotted quotas being unable to utilise them. His main concern was to secure a place for India on the permanent list for export of sugar to the USA, which has to wait on legislation due to be enacted towards the end of this year. An astute politician, Mr Patil appears to have done some timely lobbying to swing the powerful farmers' lobby in Congress in India's favour. His discussions in Washington were not confined to the Administration. He also met Congressmen, special members of the congressional committees, including Mr Cooley whose name is well known in India.

Markets

JUTE

Prices Continue Firm

The firm trend noticeable in the jute and gunny markets during the week ended Wednesday is the result of the cumulative effect of a fall in stocks as at the end of June, continued rumour about a third closure of mills during August and indications of raw jute shortage continuing for another six or eight weeks. It has been noted in this column that a bumper crop this season need not necessarily mean a sharp decline in prices of raw jute and consequently of jute goods, on account of a number of factors such as the need for having a comfortable carry-over for next year, the general anxiety to ensure that the cultivators get a reasonable price even during seasons of bumper crops with a view to obviating a contraction in jute acreage etc. The latest Jute Bulletin of the Indian Central Jute Committee points out that the latest assessment "does not dispute the generally accepted view that both India and Pakistan are going to produce their biggest crops since Independence. At the same time it firmly rules out any possibility of a fibre glut of the type that played havoc with jute prices in 1958-59." The tendency for mills after last year's famine will be to take somewhat more than their requirements and whatever surplus that will be left over will go into the proposed buffer stock. The recognition of the need for ensuring an equitable return for the jute grower indicates that it is idle to look for any sharp decline in raw jute prices. Anyway, from the look of things, it does not seem that there will be an early downward break in raw jute prices.

The effect of the first block closure of mills during the last week of June is reflected both in produc-

tion and month-end stocks. Output of jute goods during June has naturally sharply declined to 66,206 tons from 78,300 tons showing a decline of 12,100 tons. Production of hessian has declined by 4,200 tons to 24,300 tons, that of sacking by 7,500 tons to 30,700 tons and other varieties by 400 tons to 11,200 tons. The fall in output is of course due to the decline in the number of hours worked to 144.5 in June from 178.5 in May.

Stocks of jute goods at the end of June show a fall of 15,300 tons to 78,700 tons as compared with the previous month. The stocks of hessian have declined by 5,700 tons to stand at 28,800 tons while sacking stocks have fallen by 7,700 tons to 36,500 tons. Other varieties are lower by 1,900 tons at 11,400 tons.

The sharp fall in stocks, though not entirely unexpected, imparted firmness to the market from early in the week. Since a second block closure is to come off at the end of the current month, the availability of jute goods will be considerably reduced. There are also indications that the foreign buyer may consider it prudent to enter the primary market for his requirements as prospects for a fall in prices are not rated very encouraging in view of the continued shortage of raw jute. It is also now generally believed that a third closure as proposed by the IJMA may become inevitable. Another cut in production in August will mean reduced goods on offer and perhaps foreign buyers may not be able to wait for another two or three months to replenish their dwindling stocks. Moreover it is not certain that even when raw jute supplies become plentiful price will fall to such an extent as to make jute goods prices much cheaper than what they are at the present juncture. The jute goods market on Wednesday recorded rather wide fluctuations following the rumour that a third closure of mills would be approved.

TEA

Rise in Output

THE Tea crop in Northern India has made good progress. Production has again risen by 4.4 million pounds to 68.2 million pounds in June as compared to the corresponding figure of the previous year. Total crop is, therefore, 16.7 million pounds higher at 118.1 million pounds up to the end of June 1961 as compared with the corresponding period of 1960.

A further increase in the crop outturn is not considered to be unusual, especially when production was seriously hampered last year by drought, although the possibility of excessive supplies developing in the coming months cannot be ruled out. It is generally expected that, in the light of the prevailing good weather, the output in the current month will be still higher, not to speak of the fact that August and September are heavy-producing months.

Meanwhile, there has been increased support at the export auctions during the past few weeks. This is mainly due to the fact that apart from increased interest by the local buyers, foreign countries including the UK and Russia have been buying fairly good quantities. Of course, internal buyers are showing interest only in cheaper grades and they are likely to remain active until their stocks are replenished adequately.

There is a general feeling that the present firmness in prices will continue during the next few months and the market may develop a slightly easier tendency as soon as the weight of heavier crops is felt later in the season. World markets expect to have sufficient supplies this year as the output in other producing countries has also been on the increase. As a bigger produc-

tion of the output will consist of Common grades, the prices of these types are expected to decline in future.

In the Export Sale held in Calcutta this week, offerings were 29,665 packages. There was a strong and general demand. Orthodox descriptions came in for a strong enquiry and prices, particularly for the better liquoring kinds, were generally dearer. Better liquoring CTC types were sold readily, but were irregular and generally tended easier. Medium and poorer descriptions were, however, strong and generally sold at dearer rates.

Darjeeling teas met with a good enquiry. There was a better demand for those from medium and lower elevations where quality showed an improving tendency. The best types were again sold well at rates according to quality. Whole Leaf grades met with good support and tended dearer. There was a good enquiry for the increased quantity of Tippy teas. Following rates (per kilo) were quoted:—Clean Pekoe Rs 5.25 to Rs 5.35; Plain Broken Pekoe Rs 4.85 to Rs 4.95; Plain Fannings Rs 4.70 to Rs 4.80; Medium Assam CTC BP Rs 6.40 to Rs 6.80; Medium Assam CTC Fannings Rs 6.50 to Rs 7.00 and Best Assam CTC BP Rs 7.50 to Rs 7.80 and Best Assam CTC Fannings Rs 7.70 to Rs 8.50.

In the Cochin market, offerings were 564,000 kilogrammes of Leaf tea for export. Against strong and active demand, Plain and Low Medium teas were 10 nP to 15 nP per kilo dearer, while Good Medium teas were quoted at 5 nP to 10 nP a kilo higher. Nilgiri ports were fully firm and dearer where quality showed improvement.

Exports of tea from Cochin in April and May declined by over 676,000 kilogrammes as compared to the figures of exports for these two months last year. Against 6,249,989 kilogrammes of tea shipped from Cochin during April-May, 1960, only 5,573,878 kilogrammes had been shipped during April-May this year. While exports to the UK declined by over 484,000 kilogrammes, offtake by the USA increased by over 472,000 kilogrammes during this period.

The United Arab Republic, which had imported only 127 kilogrammes during April/May last year, had improved over 170,000 kilogrammes during these months this year. Iraq was the other Middle East country to increase imports of Indian tea from Cochin from just over 11,000 kilogrammes to over 45,000 kilogrammes in April/May this year. Slight increases had been recorded in respect of exports to Canada and Holland this year.

According to the administration report of the Tea Controller, Colombo, Ceylon's production of tea in 1960 was a new record and the figures for the year represent an average yield of 147 lbs per acre as compared with 713 lbs per acre in 1959. The average price for all varieties of tea sold at the Colombo tea auctions during 1960 was Rs 1.88 per lb as compared with Rs 1.85 in 1959. The export duty remained unchanged at 33 cents per lb throughout the year.

COTTON

Moderate Recovery in Futures

Trading in the Bombay cotton futures market during the past week was confined to two days only, the market being closed for the remaining days on account of the demise of Mr Purshottamdas Thakurdas, who was President of the East India Cotton Association from 1922 to 1956. The cotton trade paid its tribute to the meritorious services rendered by him when trading was resumed after the three day/s closure.

With the market remaining closed for three days there was not much transaction in the cotton futures during the week under review. During the opening days of the week Jarilla August contract slipped down to Rs 575.50. However, when trading resumed after the closure the tendency steadied up and the price shot up to Rs 582.25.

The spot market at Sewri also remained closed for three days following the death of Mr Purshottamdas Thakurdas. Trading was not quite encouraging due to the withdrawal of mills from active buying who are expecting a much larger crop in the new season consequent to the favourable monsoon in the cotton growing areas and the sluggish conditions prevailed in the piecegoods market. Prices fell down by about Rs 5 per candy. Spinners were reported to have accounted for a sizable quantum to cover the 20 per cent additional quota issued to them by the Textile Commissioner. Mills evinced keen interest in Vijay, Digvijay, Laxmi, L-147 and CO2 and the prices of these varieties ruled steady.

No special activity was visible in the import section. Mill interest was confined to American staple of 1" and below, Sudan and African growths.

The export front remained once again featureless. The prospects of an export quota for Bengal Deshi cotton do not appear to be quite encouraging as the Government's attitude to the repeated representations of the trade do not provide room for optimism.

The reports from the cotton cultivating areas indicate that the acreage under the 1961-62 season will show a further decline. The acreage according to latest estimates will approximate to 18.2 million acres as against 18.8 million acres in the previous season. It is feared that the acreage will decline further due to the recent shift to other cash crops like groundnuts, tobacco and sugar canes.

A development of interest to the trade interests was the announcement of the Forward Markets Commission of the permission for trading in the new crop contract. It has been generally agreed that the amendments that have been incorporated in the new contract should make it a more realistic than its predecessor. The concessions agreed to by the

Commission will be purely on an experimental stage. For the Commission has already warned the trade that it would not hesitate to reimpose the margins should the behaviour of the market provide an occasion for it.

NEW YORK

No development was noticeable in the New York cotton futures market during the past week. On account of the small demand from domestic mills the market depicted listless conditions. Export sales during the week showed a downtrend.

ALEXANDRIA

Trading in the Alexandria market was restricted due to the reluctance of the overseas traders to enter the market who are inclined to await further elucidation of the new official programme. Exports during the current season upto 21 June totalled only 806,104 bales as against 999,953 bales in the previous season.

PIECEGOODS

Conditions in the Bombay piecegoods market continued to be sluggish. The turnover in the market slipped down to a mere trickle.

The transactions were restricted mostly to seasonal goods like flannels, drills and coatings. Saris met with some enquiries. Longclothes, prints, voiles and dhoties also attracted some interest. The prominent consuming centres were Kerala and Madras. Traders from Delhi and Punjab were not much in activity in the market.

Despite the listless conditions in the market, the prices of all varieties ruled steady. The upcountry buyers were reluctant to enter the market anticipating a decline in prices. However, the wholesale dealers are not perturbed by this for they are expecting a revival of demand in the coming weeks.

The only relieving feature was the slight improvement seen on the export front. Pakistan accounted for a small quantum of mulls. Stray business in longcloth and lenos was transacted with Aden. African countries focussed their attention in the usual qualities, while the UK was satisfied with a small quantity of grey drills and sheets. Holland's attention hovered around printed goods and traditional Indian designs and Canada's fancy turned to all kinds of cotton textiles.

★

Hedge Trading in Oils and Oilseeds

THE Bombay Oilseeds and Oils Exchange has decided to permit hedge trading in Groundnut January and April 1962 deliveries; Castorseed March and June 1962; Linseed March and June 1962; Cottonseed January and April 1962 and Groundnut Oil January and April 1962 deliveries from 7 July.

The Forward Markets Commission, in an order issued in this connection to the Exchange, has directed that trading in hedge contracts shall be prohibited in the manner stated below:—

(1) When the closing price of the April 1962 delivery in hedge contract in groundnut exceeds Rs 225 per

250 kgs., trading shall be prohibited during any day in the said delivery at a price which is higher than the closing price of the said delivery on the previous business day by more than Rs 4 per 250 kgs.;

(2) When the closing price of the April 1962 delivery in hedge contract in groundnut exceeds Rs 250 per 250 kgs., trading shall be prohibited during any day in the said delivery at a price which is higher than the closing price of the said delivery on the previous business day by more than Rs 3 per 250 kgs.;

(3) When the closing price of the April 1962 delivery in hedge contract in groundnut oil exceeds Rs 20.80 per 10 kgs., trading shall be prohibited during any day in the said delivery at a price which is higher than the closing price of the said delivery on the previous business day by more than Rs 0.35 per 10 kgs.; and

(4) When the closing price of the April 1962 delivery in hedge contract in groundnut oil exceeds Rs 23.15 per 10 kgs., trading shall be prohibited during any day in the said delivery at a price which is higher than the closing price of the said delivery on the previous business day by more than Re 0.25 per 10 kgs.

Business commenced in the new contracts on Friday last. Besides dealings in current contracts in castor, linseed and cottonseed, operators appeared to be active only in Groundnut January, Castor March, cottonseed January and Groundnut Oil January contracts. Trading in all the new contracts was, however, a quiet affair in view of the fact that the seeds crop, as a whole during 1962, would be satisfactory.

Exports of oils and cakes, during the half-year just ended, have not been encouraging. Exports of oils like groundnut, linseed and castor have been much lower during the period as compared to the same period in the previous year. Even exports of groundnut oilcake, groundnut meal and Linseed oilcake showed considerable decline.

The new crop contracts, therefore started lower than the current ones and registered a further decline. The new crop contract in groundnut, which was placed in unofficial deals at about Rs 217.50 towards the end of the previous week, began officially at Rs 221 and moved up to Rs 225 on bull support, induced by fears that excessive rains might affect sowings adversely in some producing areas. A brisk foreign demand for groundnut extractions also aided sentiment. The contract closed at Rs 221.75 on Tuesday.

Activity in the spot section was moderately good. The market appeared to be recovering from the initial bearish impact of the commencement of monsoon. Crushers and vanaspathi manufacturers were in the market for their immediate requirements. Groundnut Bold ready was quoted at Rs 55.50 and Groundnut oil at Rs 22.75.

Groundnut meal was once again in limelight with shippers reporting brisk demand from East Germany and the UK. Prices in the UK rose by about £1 to £30 per ton for July shipment and the August position gained 10sh at £30 per ton.

Trading in Castor futures was devoid of fresh interest. Some shippers reported Czech enquiries for castor oil; but traditional buyers, such as the UK and USA, continued to keep out of the market. In the circumstances, trading was mostly of a local nature. The September contract began at Rs 179.25 and eased off gradually to Rs 176.50 on Tuesday. In the ready section, castor was quoted at Rs 35.50 and Castor Oil, commercial quality, at Rs 14.85.

Linseed was steadier on trade support, inspired by firmness in groundnut. Paint manufacturers lent periodical support to linseed oil. The September contract started at Rs 39.44 and shot up to Rs 40.37 on speculative support before closing on Tuesday at Rs 40.12. In the ready section, Linseed was quoted at Rs 39.25 and Linseed Oil at Rs 16.90.

Cottonseed futures moved within a narrow range in stray transactions. The September contract commenced at Rs 94.75 and, after touching a high of Rs 96, finished at Rs 95.

★

SUGAR

Thanks to the release of 200,000 tons for free sale, conditions in the Sugar market remained quiet. In the Hapur market, the rate for the commodity was quoted at Rs 107 per bag.

It is learnt that the State Trading Corporation has been entrusted with the export of about 150,000 tons of sugar to countries other than the USA, such as Pakistan, Malaya, Iran and Afghanistan during the current year. The losses, that will be incurred in exporting Indian sugar due to its high price as compared to world prices, will be made up by the Corporation by marking up prices of certain commodities which it will be specially importing. The nature of the commodities to be imported by the STC is now under the consideration of Government.

In regard to the export of 225,000 tons of sugar to the United States, this will be done by the Indian Sugar Manufacturers' Association. Details of the mechanism of these exports and the manner in which part of the losses of the industry will be met are being worked out by the Central Government in consultation with the ISMA.

The Government of India has also decided that licences for the export of sugar of 203,210 metric tonnes, released on 26 June this year, will be issued to the STC. The Government had earlier issued licences to the Indian Sugar Mills' Association.

★

FOODGRAINS

Divergent trends in prices were witnessed in the Hapur Foodgrains market. While wheat advanced on good demand in the face of poor arrivals, Coarse grains drifted lower. The market for Gram was depressed, as arrivals from the Punjab still averaged 440 maunds a day. In the Pulses section, Peas remained steady. Although loading was not available for the Madras side, the week's off-take was eight wagons to East Uttar Pradesh and Bihar.

Rice prices continued to be steady due to good demand in the face of

poor stocks. Prices in world rice markets continue to rule firm despite the virtual certainty that production from the 1960-61 season outside the Communist countries will top the previous record total of 134 million tons. The continued firmness of prices indicates that demand continues despite the higher availabilities.

On the production front, the final estimate of Rice for India's 1960-61 harvest puts it at nearly 50 million tons (paddy equivalent)—about 9 per cent above the previous year. Reports from Latin America indicate expansions in Chile and Paraguay, while the new season crop in the USA — which should start becoming available around August — also shows a slight increase.

★

CHEMICALS & DYES

Fairly active conditions prevailed in the Bombay market for Chemicals. On the other hand, Dyes continued to be subdued. Most of the popular items among Chemicals received fair support, especially from upcountry centres in view of the uncomfortable supply position. In Dyes, demand was at a low ebb, especially after the heavy floods in the South where stockists were reported to be anxious to liquidate their holdings.

In the Chemicals section, shortage of stocks and the revival of demand accounted for a rise in the prices of Caustic Soda, bleaching powder and Rongalite. There were buying enquiries from Ahmedabad and other centres in view of the higher prices of the chemical in Madras and Delhi. It was also stated that there would be some delay in the import of the material through the STC. Camphor and Menthol were, however, easy on lack of support at higher levels.

★

RUBBER

Reports from Cochin indicate that the unofficial premium for indigenous raw Rubber has shot up to Rs 7 per 400 pounds due to the acute shortage of rubber at the terminal markets. The main factor contributing to this upsurge in prices are the reports of heavy floods in Kerala and the consequent damage caused to the rubber plantations. This has caused some concern to the tyre industry. It is feared that the scarcity of rubber may affect the production programmes of tyre companies and other rubber goods manufacturers.

Assuming that the production of rubber in the country will be maintained at 25,000 tons, tyre companies point out that the gap between production and demand for raw rubber will go up from 17,000 tons to 35,000 tons this year. Suggestions have, therefore, been made to the Government to liberalise imports. The Rubber Board is also reported to have made suitable representations to the Centre.

CASHEW

The West Coast of India-Pakistan-US Conference has allowed member lines to quota "open" freight rates for shipments of cashewnuts from India to the USA. The "open rate" system will continue till the end of this month. Cashewnut is the third item to be placed on the "open rate" basis of freight, the other two items being cotton and cotton waste. The "open rate" policy in respect of

cotton and cotton waste will be valid till the end of September.

The Conference is stated to have been obliged to modify its freight policy in respect of the above items to meet the increasing competition from non-member lines. Meanwhile, the sharp fall in freight rates for cashewnut has accentuated the downward trend in the export prices of the commodity, the current US quotation being placed at about 50 cents per lb as against 53 cents quoted a fortnight ago. The business put through, during the past one month at prices ranging from 50 to 53 cents, is estimated at about one lakh cases.

★

YARN

A spurt in Rayon Yarn was the main feature of trading in the Bombay Yarn market. The spurt was attributed to the official policy of distributing indigenous production of rayon yarn among all users, including hosiery manufacturers and upcountry handloom weavers. Silk mills in the City rushed to buy ready stocks of rayon yarn on fears that their normal quotas of yarn would be drastically cut in the revised distribution system. Among imported varieties, 120/D Japan gained 16 nP and 120/D Italy 19 nP per pound.

The Committee of the Indian Cotton Mills' Federation has fixed the following prices for various counts of staple-fibre yarn:

Counts	Ex-mill price of hank yarn per bundle of 10 lbs	Rs nP
20s ...	...	28.55
21s ...	...	28.80
22s ...	...	29.05
24s ...	...	29.55
26s ...	...	30.05
28s ...	...	30.55
30s ...	...	31.05
32s ...	...	31.65
36s ...	...	32.85
40s ...	...	34.05
42s ...	...	34.65
44s ...	...	35.25

Differentials for yarn on cones:	Count Group	Differentials
20s to 26s ...	...	2.85
27s to 36s ...	...	3.20
37s to 44s ...	...	3.50

These are net ex-mill prices. These ex-mill prices should be stamped on bundles. The above schedule of prices would take effect from 7th July, 1961.

Conditions in the Cotton yarn section remained, however, dull. Reports from the upcountry centres have suggested that some powerloom weavers are trying to switch over from fine and superfine cloth to coarse and medium varieties. The demand for 60 and 80 counts are, therefore, limited.

★

BANGALORE SILK

During the week under report, prices for all qualities of raw silk remained steady. Filature raw silk of 20/22 Dr. was quoted between Rs 80.43 and Rs 83.23 per kgm. Cottage basin silk as well as charka

raw silk ruled between Rs 73.85 and Rs 78.26 per kgm, and Rs 55.12 and Rs 73.85 per kgm respectively. There was moderate demand for charka and cottage basin silk, while the demand for filature silk was understood to be dull.

Reeling cocoons declined due to unfavourable weather conditions. While Mugur cocoons were quoted between Rs 3.00 and Rs 4.50 per kgm., Sidlaghatta cocoons ranged between Rs 4.25 and Rs 5.62 per kgm. Rates of Channapatta reeling cocoons ranged between Rs 3.80 and Rs 4.50 per kgm.

Mysore race seed cocoons declined and were quoted between Rs 3.75 and Rs 4.75 per 1000 whereas foreign race seed cocoons ruled between Rs 4.00 to Rs 10.00 per 1000.

★

HIDES & SKINS

Tanned cowhides were arriving in larger numbers this week. Prices did not change. No c.i.f. inquiries were also made and it looks as if the offering rates should have to be further lowered in view of the previous large shipments in June. Inquiries were made for shipping on the basis of 71d, 61d and 51d for 5/5 lb. A few deals were confirmed on the basis of 53d, 43d and 42d for 8/8½ lb. A few more were accepted at even lesser quotations.

ORIENT PAPER MILLS LIMITED

Regd. Office: Brajrajnagar (Orissa).

TO ALL SHAREHOLDERS,

NOTICE is hereby given that separate meetings of the holders of 5½% Taxfree C. R. Preference Shares, 5½% Taxable C. R. Preference Shares and Ordinary Shares in the above Company will be held at Brajrajnagar, the Registered Office of the Company, on Friday, the 11th August, 1961 for the purpose of approving with or without modification the variation in the dividend payable to the holders of Preference Shares as follows:—

(a) The rights attached to 5½% Taxfree C. R. Preference Shares aggregating to 1,20,000 Shares will be so modified as to confer on them right to a dividend @ 7.86% per annum, subject to deduction of tax under the Income-tax Act instead of 5½% per annum tax-free and will be deemed to have been so modified with effect from the dividend payable for the year ended 31st March, 1961 and onwards.

(b) The rights attached to the 60,000—5½% Taxable C. R. Preference Shares will be so modified as to entitle them to a dividend @ 5½% per annum without deduction of tax on Company's account but subject to deduction of tax under the Income-tax Act and will be deemed to have been so modified with effect from

Internal absorption of inferior fifths were poor. Prices of these remained unaltered. Both the 8/8½ lb and 10/10½ lb also remained un-inquired at a better price.

As for tanned cow calf better demand was maintained for its inferior qualities. The superior remained unaltered in price. Domestic demand remained small this week for tanned cow calf. In tanned buff calf prices remained unchanged with not much of a demand locally.

For tanned goatskins, shippers were not ready for higher rates. Both the middle and inferior weights did not command much inquiries and they were neglected.

For tanned sheepskins, there was much demand. Sizeable business was reported in all qualities, except in the heavier sections.

The following were the prices of tanned skins and hides per lb. Tanned cow prime: 5/5 lb Rs 3 to Rs 3.12; 6/8½ lb Rs 2.75 to Rs 2.85; 10/12 lb Rs 2.12 to Rs 2.25; Inferior fifths 4/4½ lb Rs 2.44 to Rs 2.53; 5/5½ lb Rs 2.37; buffalo 12/13 lb Rs 2 to Rs 2.06; cow calf 1½/2 lb Rs 4.12 to Rs 4.37; buff calf 1½/2 lb Rs 3 to Rs 3.25; goat prime 8/9 lb Rs 10 to Rs 10.50; sheep ordy. 6/7 lb Rs 7 to Rs 7.25; 5/6 lb Rs 9 to Rs 10.50; sheep prime 6/7 lb Rs 11.50 to Rs 13.

the dividend payable for the year ended 31st March, 1961 and onwards.

The meetings will be held at the times mentioned hereunder:—

- Meeting of the said holders of 5½% Tax-free C. R. Preference Shares at 4-00 P.M.
- Meeting of the said holders of 5½% Taxable C. R. Preference Shares at 4-15 P.M. or immediately after the conclusion of the meeting of the said holders of 5½% Tax-free C. R. Preference Shares.
- Meeting of the said holders of Ordinary Shares at 4-30 P.M. or immediately after the conclusion of the meeting of the said holders of 5½% Taxable C. R. Preference Shares.

By Order of the Board,
B. K. VYAS,
Secretary.
14, Radha Bazar Lane,
Calcutta, the 4th July, 1961.

- N.B.: 1. A member entitled to attend and vote is entitled to appoint a proxy and the proxy need not be a member.
2. Explanatory Statement as required under Section 173 of the Companies Act, 1956, has been forwarded to the shareholders along with the notice.

Company Reports

TELCO's Excellent Performance

IT had been anticipated for some time past that the working results of the TELCO would make encouraging reading for the year ended 31 March 1961 and there would be an increase in the Ordinary dividend. These expectations have turned out to be correct. The directors have proposed a taxable dividend of 14½ per cent as against 12½ per cent taxable previously. The shareholders will receive relief from income-tax under Section 15C in respect of Rs 31.25 lakhs utilised for payment of dividend for 1960-61. The net dividend will, therefore, be much higher.

The turnover has increased sharply to Rs 37.55 crores from Rs 28.26 crores. This is, to a certain extent, due to the higher taxes collected from purchasers; but there is also an expansion in turnover. The net profit, before providing for Development Rebate and Taxation, amounts to as much as Rs 312.68 lakhs against Rs 221.57 lakhs for the preceding year. The provision for Taxation is Rs 122.23 lakhs against Rs 93.30 lakhs and Development Rebate Reserve Rs 44.88 lakhs against Rs 14.04 lakhs. The transfer to General Reserve No 1 is Rs 20.99 lakhs (nil) and General Reserve No 2 Rs 75,000 (nil). Deferred Taxation Reserve gets Rs 8.40 lakhs against Rs 6.00 lakhs. A sum of Rs 10.55 lakhs being Section 15C tax-free profits, included in earlier Reserves, has been transferred to the Profit and Loss Account for disbursing the dividend.

Even though it was recently announced that Debenture capital for Rs 5 crores would be raised for financing partly the expansion programme, there is speculation over the possibility of issue of new equity shares. The higher dividend perhaps rules out an immediate issue of equity capital.

Indian Copper Profits Go Up

Thanks to the substantial rise in net sales from Rs 23,323,037 to Rs 23,467,418, the Indian Copper Corporation Limited has produced excellent working results for 1960. The net profit, after providing for Depreciation and Taxation, is substantially higher at Rs 632,505 against Rs 587,310 for 1959.

Apart from maintaining Depreciation amount at Rs 175,000, Taxation provision is raised to Rs 500,477 from Rs 439,949 and General Reserve to Rs 200,000 from Rs 125,000. The provision for Development Rebate Reserve is slightly lower at Rs 625,625

against Rs 562,250. The dividend is maintained at 27 per cent, subject to tax.

According to the directors' report, production of refined copper at 8,789 long tons against 7,553 long tons constitutes a record. The output of rolled products is also higher at 10,923 tonnes against 9,419 tonnes. The average price realised for Copper Ingots is shown higher at Rs 266.60 against Rs 250.61 per metric tonne; Rolled Brass at Rs 277.56 against Rs 271.36 and Yellow Metal Circles at Rs 304.30 against Rs 298.00. The price obtained for Rolled Copper is nearly the same, at Rs 356.64.

In the report, no mention is made with regard to the possibility of any bonus issue as has been expected by the market circles so far.

Shaw Wallace Repeats

Shaw Wallace & Company Limited has been expanding its activities, particularly in the fertilizer field. The tea and coal companies under its management have fared better, while a new factory has been started in Madras for the manufacture of agricultural and spraying equipment. The company has acquired a majority holding in the Hooghly Flour Mills, while the entire capital of Rajnagar Tea has been acquired by a subsidiary of Shaw Wallace.

Sales for the year are higher at Rs 7.59 crores against Rs 6.38 crores; but the net profit is slightly lower at Rs 31.82 lakhs as against Rs 34.34 lakhs. The Depreciation amount is raised to Rs 12.36 lakhs from Rs 8.56 lakhs; Taxation to Rs 25.76 lakhs from Rs 22.32 lakhs and Development Reserve to Rs 10.50 lakhs from Rs 10 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 1.08 lakhs against Rs 5.32 lakhs. The dividend on the Ordinary shares is maintained at 15 per cent, subject to deduction of tax.

Burn Maintains Distribution

Despite a decline in sales from Rs 11.42 crores to Rs 9.47 crores, Burn & Company Limited has reported increased earnings for the year ended 30 April, 1961. The net profit, after providing for Depreciation and Taxation, amounts to Rs 48.54 lakhs as against Rs 33.59 lakhs for the previous year. Apart from providing Rs 16,645 for Capital Profits, the Depreciation amount is raised to Rs 23.73 lakhs from Rs 18.74 lakhs; Development Rebate Statutory Reserve to Rs 2.54 lakhs from Rs 2.46 lakhs; Works Reconstruction and Expansion Reserve to Rs 5 lakhs from Rs 2.75 lakhs and the Salem Project Reserve to Rs

14.54 lakhs from Rs 2.24 lakhs. The dividend on the Ordinary shares is maintained at 28.5 per cent, subject to tax.

The directors state that, although the volume of work booked is large, there is little improvement in the supply position of steel. The reconstruction and modernisation of the various refractory works in Bengal and Bihar continue. Progress is somewhat slow as it is considered essential that the expansion work should not interfere too greatly with production.

The mines at Salem is reported to give a steady output and measures are being taken to produce the increased quantities that will be required when the new magnesite brick-making factory goes into production. Progress on the construction of the new factory is steady, but not as fast as was originally planned.

Bhartia Electric Pays Less

The substantial decline in sales from Rs 2.89 crores to Rs 74.74 lakhs is reflected in the working results of the Bharatia Electric Steel Company Limited for 1960. The directors state that the order position of steel castings was not good and this remained up to the end of October, resulting in low production. They, however, add that the order position for steel castings has much improved now and, at present, the company is fully booked up to the end of 1962.

The net profit works out to only Rs 2.45 lakhs for the year as against as much as Rs 13.23 lakhs for the preceding year. The Depreciation amount is reduced to Rs 3.49 lakhs from Rs 6.00 lakhs and Development Rebate Reserve to Rs 2.05 lakhs from Rs 2.67 lakhs. No provision is made for Taxation against Rs 9.00 lakhs. The directors have been able to recommend a dividend of Re 1 per share, subject to tax, after making a transfer of Rs 1.00 lakh from General Reserve. The dividend paid for the previous year was Rs 1.50 per share.

The manufacture of Centre Buffer Automatic Couplers and Draft Gears has been finalised and the delivery has already commenced although on a restricted scale. The mass production of these items is likely to take a few months more.

Steps have been taken to modernise and replace plant and machinery. Heavy and costly machineries have been installed in the Machine Shop for the machining of Roller Bearing Axle Boxes. The directors state that they are holding large orders for this item and hope that, in future, this will be also a regular item of manufacture. They add further that, when the modernisation programme is completed, the company can look forward with confidence to the future.

National Tobacco Fares Well

The National Tobacco Company of India Limited has reported a increase in sales from Rs 9.35 crores to Rs 9.64 crores for 1960. The company was not able to get its due share of the increase in consumption of cigarettes, as it lost ground in some areas due to stiff competition.

The net profit, after providing for Depreciation and Taxation, is however, higher at Rs 34.32 lakhs as against Rs 33.98 lakhs. Except for a higher provision of Rs 3.00 lakhs against Rs 1.56 lakhs for Development Rebate Reserve, all other allocations have been reduced: Depreciation from Rs 6.10 lakhs to Rs 5.91 lakhs; Taxation from Rs 26.27 lakhs from Rs 25.38 lakhs; General Reserve from Rs 5.00 lakhs to Rs 2.83 lakhs and Reserve for Capital Expenditure from Rs 15 lakhs to Rs 10 lakhs. The dividend on the Ordinary shares is, however, maintained at 16 per cent, subject to deduction of tax.

Additional equipment is now being installed, which will enable the factory to work on a double-shift basis instead of 24 hours presently. An additional vacuum leaf-conditioning plant and a second-cleaning classifying line, both of higher capacity than the existing units, have also been installed. The prospects for the current year are, however, not considered to be satisfactory, because it has not been possible for the company to pass on the incidence of the increase in taxes in the last budget to the consumer.

Bengal Potteries Raise Dividend

Despite a small decline in the net profit from Rs 13.46 lakhs to Rs 12.44 lakhs, the Bengal Potteries Limited has been able to raise the dividend from 14 to 15 per cent, subject to tax, for 1960. Sales are shown higher at Rs 1.93 crores against Rs 1.86 crores.

In respect of allocations, a sum of Rs 11.22 lakhs (Rs 10.67 lakhs) is provided for Depreciation; Rs 12.03 lakhs (Rs 7.16 lakhs) for Taxation; Rs 3.80 lakhs (Rs 2.00 lakhs) for General Reserve and Rs 48.070 (Rs 3.40 lakhs) for Development Rebate Reserve.

There has been a steady increase in the production of the products at Factory No 1. In factory No 2, production has increased although there was a shortage in the supply of gas to furnaces. Steps are being taken to import a third Gas Generators and the necessary import licence is obtained the delivery of which is expected some time in the beginning of next year. As soon as there is sufficient gas for all the furnaces in the new factory, the fully capacity of production is expected to be achieved. The company has also signed a Technical Collaboration Agreement with a foreign firm for the increased manufacture of High Tension and Low Tension Insulators for a period of ten years, commencing from 1 January, 1961.

For the Investor

INVESTMENT GOSSIP Prospects for the Investor

Prices on the Stock Exchanges have been remarkably steady in the first half of 1961. Partly the new issue boom, which gathered fresh momentum during this period, may be held to have been responsible for the firm behaviour of share prices. Partly it has been the renewed activity of speculators, who in the incipient stages of the new issue boom were left quite out of the picture. So much so, there has this year been a tendency for more discussion than we have had in recent years as to the need for some form and element of control over stock exchange activity. In Bombay margins at times had to be imposed. Does this presage a returning predominance of the speculator?

I don't believe so, and I certainly hope not. It continues to be the day of the investor. But there have been stray attempts by the gambling fraternity to partake of the profits that almost every new issue offers. Hence in some cases the record and unprecedented over-subscriptions. By and large, however, even the two months' wait, which is the interim between application for and receipt of allotment of shares, proves to tax the patience of the speculator. But, heartened by the performance of engineering and "miscellaneous" companies, and encouraged by the spectacular response of investors and shareholders to new offerings and rights issues, jobbers on the Stock Exchanges have increased their activity in the forward scrip. The behaviour of cash shares and cleared shares has thus been such as to confirm a trend of steady prices.

We should not make the mistake of judging the new issue boom to be an index of investors' preparedness to support every worth while enterprise that is started. While undoubtedly opportunities are being opened up by plan disbursements of Government for the manufacture and supply of goods ranging from the most basic of consumption articles to the most specialised sort of components for industry, it is the psychological impact of Government's tax policies, which has served to nurture and emphasise the good health of the new issues market. The investor today cares little for yields, and in this attitude he is at one with his counterparts in England or America. The most important consideration is growth potential, since on yield at current rates of taxation the Exchequer takes a large and almost unconscionable bite. Capital gains is what the investor is after, and more often than not the emerging enterprises vouchsafe such a profit for him. It is only

if particularly spectacular issues, by their trend in earnings after they go into production, fail to meet the expectations (at time of issue) of the investors, that the new issue boom will be allowed some pause.

There was the possibility, early in the year, that Government might feel the premia obtaining on new issues to be so high as to warrant some corrective action. As a result there was the apprehension, at Budget-time, that capital gains might attract a higher rate of taxation. Fortunately for the capital market, though the new levels were not in considerable amount the rate of the gains tax was left at its status quo. However, Government has moved in the matter, and the insistence that rights issues (and some new issues as well) must be offered at a premium is one form of preventing windfall profits being made, especially by a class of investor who was not interested in holding on to his purchases, but was out for a quick profit. It seems to me scarcely possible that the authorities will do anything to curb the new issue market as such, though of course an assumption of control over wide fluctuations or violent movements is inevitable.

What are the prospects for the investor? A study of the first half-year on the Stock Exchanges (published on an earlier page) indicates that he should have emerged with a clear book profit; and recent developments and present conditions in the economy are such as to hold out the hope of a steady appreciation in share values during the rest of the year.

Easiness in the money market, which has made itself manifest in the 1961 slack season, has served to ginger up values of Government securities; and it appears likely that yields will be pushed down. "Sympathetic" appreciation of equities should be automatic. Besides, the freer availability of money should itself ensure a keener interest in the Stock Exchanges and consequently higher prices should be anticipated. The price situation is now better than it has been in many a year, the index for industrial materials having moved down from 153.2 on 20 May 1961 to 148.1 on 17 June. Thus the profitability of industrial units should improve during the current year. However, the crisis on the foreign exchange front may be a bear factor. On the one hand, raw materials which have to be got from abroad may be in short supply, and could affect the working of enterprises so dependent. On the other, licensing of companies which have to import the bulk of plant and machinery is likely to become stricter.

It is quite possible, then, that there should be a slowing down in new company formation, in the sense that foreign exchange will be increasingly hard to obtain for import of equip-

Indian Finance

ment from abroad. But against this has to be set the fact that the greatly improved indigenous availability of basic raw materials, in particular steel, as also the rising demand for goods of all descriptions should encourage the growth of small industry on a larger scale.

There should therefore be an accent on two kinds of new issues and enterprises. Firstly, the large corporations, with foreign collaborators underwriting or arranging the foreign exchange expenditure involved, will continuously be on the market; but the amounts sought may not be large, arrangements possibly being made for loan capital of various descriptions. Secondly, there should be the mushrooming of small industries utilising raw materials available within the country; and amounts sought from investors, for this category, may be in the environs of Rs 25 lakhs each.

There is money enough seeking investment, we believe, for the new issue boom to continue uninterrupted. But the investor would be wise to be selective in the issues he henceforth supports. Industries which rely on imported raw materials are naturally somewhat vulnerable. And caution is again called for, with 1962 an election year and its possibilities of "political" taxation.

McNally-Bird Engineering

THIS is a joint Indo-British-American collaboration. A licence was issued on 11th May, 1961, to Bird & Company (Private) Limited to set up a Company in collaboration with McNally Pittsburg Manufacturing Corporation, Pittsburg, Kansas, USA for the manufacture of Coal Washeries and Coal Handling Plants. McNally-Bird Engineering Company Private Limited will have an authorised Capital of Rs 2 crores and the first call-up of Rs 50 lakhs has already been sanctioned by the Controller of Capital Issues. The major portion of the finance will be provided by the American partners. From the very beginning, it is proposed to manufacture 70% of a Coal Washery in India and, in about five years time, it is expected, depending on the equipment that can be purchased locally, to manufacture Washeries almost entirely in the country. This will save valuable foreign exchange as all the Washeries required in the Third Plan could now be manufactured in India. It is estimated that the saving in foreign exchange could be of the order of Rs 45 crores over the Third Plan period. In addition to this advantage, this new undertaking will provide opportunities for employment and training. The plant will be located at Kumardhubi in Bihar where all the facilities of the existing industrial complex will be available to the new company. With American know-how and engineering skill, the plant will be capable of serving basic industries with a variety of engineering services. The plant is expected to go into production in about a year's time and will have a manufacturing capacity equivalent to producing Coal Washeries aggregating 1,000 tons per hour.

15 July 1961

With the specialised knowledge and experience that is being imported into the country, it will be possible now to cater for the requirements of the Colliery Owners, Steel Mills, Thermal Power Plants and other coal consumers requiring Coal Washeries and Coal Handling equipment ranging from 25 to 1,000 tons per hour.

* NEW ISSUE NOTES Raneegunge Coal

The Raneegunge Coal Association Limited has proposed to raise the paid-up capital by issuing 95,980 shares of Rs 10 each, at par, in the proportion of two shares for every five shares held. Transfer Books of the company will be closed from 29 July to 5 August, 1961. Meanwhile, the company has announced an interim dividend of Rs 1.70 per share, subject to tax, for the year ended 31 March 1961. This will also be the final dividend for the year, payable to those shareholders whose names are registered as on 5 August 1961.

Globe Auto Electricals

A new company, Globe Auto Electricals Limited, has been formed in Maharashtra for the manufacture of auto electrical equipment. The capital outlay on the project will be Rs 30 lakhs. The necessary licence has been received from the Government. The company has entered into technical collaboration agreement with Magneti Marelli of Italy. The company has approached the Industrial Credit and Investment Corporation for a loan of Rs 8 lakhs to meet the foreign exchange cost of machinery and plant. The issued capital of the company will be Rs 17 lakhs divided into 17,000 equity shares of Rs 100 each. Offering to the public will be Rs 10 lakhs. The entire public issue has been underwritten. The factory will be situated in greater Bombay and the necessary land and power have been assured by the Maharashtra Government.

THE INDIAN IRON & STEEL COMPANY LIMITED.

NOTICE

The Ordinary Share Register and Transfer Books of the Company will be closed from Saturday the 5th August, 1961, to Monday the 28th August, 1961, both days inclusive for the purpose of payment in due course of dividend on Ordinary Shares in the Company for the year ended 31st March, 1961. The dividend when declared will be paid to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 28th August, 1961, or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta-1.
11th July, 1961.

Chemicoat Limited

Gujarat will have a new metalized packing industry. A new company under the name and style. Chemicoat Limited, has been formed with an authorised capital of Rs 50 lakhs. The issued capital is Rs 20 lakhs. The factory will be situated in Baroda. The company has already obtained an industrial licence from the Government for this production to be undertaken in technical collaboration with a Dutch firm. The ICICI has agreed to provide a foreign exchange loan of Rs 12.75 lakhs to meet the cost of plant and machinery. The promoters hope to enter the market in the near future for raising the necessary capital.

Shree Vallabh Glass

The Rs 37.25 lakhs equity issue of Shree Vallabh Glass Works Limited, the list for which opened on 6 July, has been thrice over-subscribed.

Baroda Rayon

The issue of 1,40,000 right shares of Rs 100 each, offered by the Baroda Rayon Corporation Limited, at a premium of Rs 5 share, has been fully subscribed. The company has received a good number of applications for additional shares.

It is understood that the Baroda Rayon Corporation Limited has plans to manufacture caustic soda. The company has recently approached the Government for the necessary industrial licence. The production capacity of the proposed plant will be 20 tons a day. According to the preliminary estimate, the project will involve a capital expenditure of about Rs 1.50 crores. Meanwhile, the progress in connection with the company's rayon yarn project has been quite satisfactory. It has already received permission to increase the production capacity by another 2½ tons of rayon yarn per day on the basis of 150 deniers.

Indian Oil Company

The Indian Oil Company, which is a Government company, has been granted consent to issue further capital of the value of Rs 150 lakhs in equity shares of Rs 1,000/- each for cash, at par. The proceeds, of the issue will be utilised for marketing and distribution of petroleum products by taking over the entire production of the two public sector refineries which are being set up at Gauhati and Barauni. The IOC has a subscribed and paid up capital of Rs 57,25,000/-. The consent order is valid for 12 months.

Dodge & Seymour

Dodge & Seymour (India) Private Limited, Bombay, has been granted consent to issue shares in lieu of cash dividends after deduction of tax of the total value of Rs 54,000/- in 540 equity shares of Rs 100/- each. The company's business includes the sales and service of certain specialised engineering products, pumping equipment for petrol etc. It has a paid up capital of Rs 1,10,000/- The consent order is valid for 12 months.

INVESTMENT NOTES

IISCO

The Ordinary share register and transfer books of the Indian Iron & Steel Company Limited will be closed from 5 August to 28 August, 1961, both days inclusive, for the purpose of payment of dividend on the Ordinary shares for the year ended 31 March, 1961.

TISCO

The production figures of the Tata Iron & Steel Company Limited for June have not made encouraging reading. The output of Pig Iron was lower at 131,800 tons as against 142,000 tons in May and Steel Ingots at 124,700 tons against 136,800 tons. There was only a small decline in the share of finished steel to 70,600 tons from 70,900 tons. As a result, the production of semis dropped significantly to 30,600 tons from 34,900 tons. On account of a shorter working month, a lower level of output would have been permissible; but the drop in some categories has come about somewhat unexpectedly, especially as IISCO has done well during the same month.

Mukund Iron

Mukund Iron & Steel Works Limited has got under consideration the setting up of a continuous casting plant, which will turn out billets without entering the stage of production of ingots. It is understood that negotiations are being carried on with a British firm for installing the plant. There is also a plant to set up a unit for producing rolling wire rods. In this connection, talks with an Italian firm are in progress.

East Anglia Plastics

East Anglia Plastics (India) Limited, which has received sanction for the manufacture of Cellulose Acetate Moulding Powders and PVC Compounds, has now received an industrial licence to establish a new industrial undertaking in Andhra Pradesh for the manufacture of Cellulose Acetate Flakes, (Di-acetates and Tri-acetates) which are the raw materials for Acetate Moulding Compounds, Acetate Fibres, and raw film. This Licence also includes the manufacture of Organic Chemicals, such as Acetic Acid and Acetic Anhydride required in the manufacture of Acetate Flakes. It is also learnt that a world famous Company has agreed to collaborate and give the technical 'know-how'. The Company's factory at Dum Dum for the manufacture of Acetate Moulding Powders and PVC Compounds is nearing completion. All machineries relating to this project have been imported and are under installation. It is expected that this unit will go into production before the end of this year.

Delhi Cloth

The Delhi Cloth & General Mills Company Limited has proposed to set up a factory for the manufacture of rayon tyre cord yarn and fabrics at Kotah in Rajasthan. The capital outlay on the project is estimated to cost Rs 7 crores. Agree-

ments for the supply of know-how and plant and machinery are proposed to be entered into with two reputed firms of the United States. The company will also negotiate for a loan of about Rs 4 crores from the Development Loan Fund to meet the foreign exchange requirements of the plant. The plant is likely to go into production by the end of 1962 or in early 1963.

Mandya Paper

The factory of Mandya National Paper Mills Limited is under erection and is expected to go into production towards the end of October. The company has now drawn up expansion plans to double the production capacity to 70 tons a day and sanction has been obtained from the Government. Negotiations for the purchase of extra machinery and technical collaboration are under progress. It is likely that an offer will be made to the public some time at the end of this year. There is also a proposal to establish another paper mill, with a production capacity of 100 tons of superior grade paper a day, at Panipat near Delhi with the collaboration of Messrs Parsons and Whitmore. This new concern may go into production two to three years hence.

IN BRIEFS

The Bombay Suburban Electric Supply Company Limited has recommended a final dividend of Rs 5.50 a share, making a total of Rs 8.50 a share, for the year ended 31 March 1961, subject to tax, as against Rs 8.00 a share paid in the previous year.

UNITED INDUSTRIAL BANK LIMITED

SAFE DEPOSIT LOCKERS
available at Ballygunge, Dum Dum and Shambazar Branches.

Shri JADU NATH ROY, V. G. PAI,
Chairman, General Manager.

The Cochín Malabar Rubber has proposed a final dividend of 11 per cent, making total of 20 per cent, taxable for the year ended 28 February 1961 as against 17½ per cent paid for the previous year.

The Periakaramalai Tea has declared a final dividend of 12½ per cent, making a total of 20 per cent for the year ended 31 March 1961, taxable, as against 13½ per cent paid for 1959-60.

★

BALANCE-SHEET BRIEFS

Indian Dyestuff Industries Limited has reported a higher gross profit of Rs 60.75 lakhs for the year ended

ORIENT PAPER MILLS LIMITED.

Regd. Office:

BRAJRAJNAGAR (ORISSA)

★

NOTICE is hereby given that an Extra-ordinary General Meeting of the Orient Paper Mills Ltd. will be held on Friday the 11th August, 1961 at 3-30 P.M. at Brajrajnagar, the Registered Office of the Company, to consider and if thought fit, to pass, with or without modification the following resolution is a Special Resolution:—

"RESOLVED that the existing Article 75 of the Articles of Association of the Company be deleted and the following new Article 75 be substituted therefor:—

"75 If at any time the Share Capital is divided into different classes of shares, the rights attached to any class (unless otherwise provided by the terms of issue of the shares of that class) may, subject to the provisions of Sections 106 and 107, and whether or not the Company is being wound up, be varied with the consent in writing of the holders of three-fourths of the issued shares of that class, or with the sanction of a Special Resolution passed at a Special Meeting of the holders of the shares of that class and all the provisions contained in these presents as to General Meetings shall, "mutatis mutandis", apply to every such meeting. This Article is not by implication to curtail the power of modification which the Company would have if this Article were omitted!

By Order of the Board,
B. K. VYAS,
Secretary.

14, Radha Bazar Lane,
Calcutta, the 4th July, 1961.

N.B.: 1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.
2. Explanatory Statement as required under Section 173 of the Companies Act, 1956, has been forwarded to the shareholders along with the notice.

31 March 1961 as against Rs 54.23 lakhs for the preceding year. The company has maintained the dividend at 6 per cent, subject to tax, on the increased capital.

Kesoram Cotton Mills Limited has earned a profit of Rs 96.64 lakhs for the year ended 31 March 1961 as against Rs 47.11 lakhs. An Ordinary dividend of Rs 1.20 per share, taxable, is recommended against Rs 0.50 nP per share, taxable, previously.

The Cauvery Spinning & Weaving Mills Limited has shown a net profit of Rs 10.94 lakhs for the year ended 31 March 1961 as against Rs 9.51 lakhs. The dividend on the ordinary shares is raised from 13 to 15 per cent, subject to deduction of tax.

★

STOCK EXCHANGES

A State of Indecision

Watch-Dog Writes:

STOCK markets have become a little unsettled due to various rumours with regard to the TISCO dividend and the announcement of fresh measures by the Government to check unhealthy speculation. It is also expected that the Government may soon announce its new loans for subscription by the public to mop up the available savings. For obvious reasons, there is a general tendency to bring commitments to within their capacity to hold by realising profits.

[At the time of going to Press, it is announced that the Tata Iron & Steel Company Limited has recommended a dividend of Rs 6.80 per share net and a bonus of 45 nP per share net on the ordinary shares. Last year, the company had paid the dividend of Rs 6.80, free of tax, on the ordinary shares. This increase in dividend seems to have no effect on sentiment, as the operators had been expecting a still higher dividend.]

A mixed pattern of trading was noticed on the Calcutta Stock Exchange. While some shares appreciated due to support from institutional investors, others suffered small losses on stray liquidation.

After opening steady, the Bombay Stock Exchange developed weakness on sustained bull liquidation.

Trading was restricted in all the sections of the Madras Stock Exchange.

★

CALCUTTA

Friday Evening.

TRADING on the local stock exchange was a dull affair and, except for a few firm spots here and there, prices generally displayed an easier tendency due to sustained bull liquidation, being influenced by various factors.

First, rumours of further official restrictions on speculative trading acted as a damper; and leading operators thought it prudent to reduce commitments. Secondly, earlier hopes of an enhanced distribution by the TISCO seemed to have receded.

Thirdly, adverse corporate news was also a bearish factor. Although the industrial outlook was encouraging, considerable anxiety was shown over the depleted foreign assets position. Finally, it was expected that the Government of India might soon announce the second instalment of its borrowing programme which, it was feared, would siphon off investible funds.

With the result, the market was in a state of indecision to move either way. The only relieving feature of the week's trading was the sustained support lent to a few selected shares at every setback in prices on hopes of bonus or right issues, or on a long-term view of the growth that was likely to take place under the impact of the Third Five-Year Plan.

Giltedged securities, which had been ruling dull during the past many weeks, developed a steadier tendency, thanks to the suspension of the open market sales by the Reserve Bank. Business was, however, restricted in the absence of declared sellers. Short-dated issues continued to be in request, while the medium and long-dated issues found sellers with hardly any buyers in evidence. 3 per cent 1986 Conversion Loan, after being taken up to Rs 73 from Rs 72.65, finished the week at Rs 72.96.

Bank shares remained very firm following the publication of excellent working results for the half-year just ended. Punjab National were quoted at Rs 22.81 and United Commercial at Rs 91.

Scattered interest was shown in Jute shares. It was assumed that the worst phase of the industry was on the way to being over and, with the prospect of a bumper crop ahead. Investors lent some support to the shares of the reputed concerns.

Alliance, Anglo-India, Champdany, Kamarhaty and Kelvin were well maintained at the previous levels. Ganges had buyers at Rs 11.31 to Rs 11.50; Birlas at Rs 27 to Rs 27.25; New Central at Rs 19.94 to Rs 20.25 and Nuddea at Rs 46 to Rs 47.75. Howrah, however, came in for offer at Rs 20.37 against Rs 20.75 following the announcement of a reduction in the dividend from Rs 1.25 to Rs 1.00 per share, taxable, for the year ended 31 March, 1961.

Coal shares, which had been ruling very firm on prospects of foreign loans for expansion, turned rather quiet on reports of accumulation of stocks at various pit-heads due to shortage of wagons. New Beerbhoom were offered at Rs 24.06 against Rs 24.25; Western Bengal at Rs 9.91 against Rs 10.06 and Central India at Rs 13.50 against Rs 13.81. Burrakur fluctuated irregularly between Rs 20.19 and Rs 20.37 to finish the week at Rs 20.31.

Better prices obtained at this week's auction and the prospects of increased buying by foreign countries in the coming weeks helped maintain interest in select Tea shares. Brooke Bond were taken up to Rs 16.69 from Rs 16.44; Killcott up to Rs 19.85 from Rs 19.62; Tezpur up to Rs 19.31 from Rs 18.62 and New Doars up to Rs 32.8 from Rs 32.5. Dhunseri were a shade quieter at Rs 16.25 against Rs 16.44 and so also

Hasimara at Rs 25.62 against Rs 26.12 due to lack of fresh support.

Sugar shares, however, continued to be a neglected counter due to uncertainties concerning exports. Carew were offered further lower at Rs 13.19 against Rs 13.37, while Belsund and SKG were almost maintained at Rs 11.19 and Rs 11.62 respectively. After a long time, Cawnpore came in for business at Rs 12.44.

In a dull market, Textile shares attracted sustained support on prospects of higher production and reports of good cloth off-take. Higher levels could not, however, be retained till the close due to general profit-taking. J. K. Rayon were at one time pushed up to Rs 21.25 (from Rs 20.12 and Bowreah up to Rs 23.81 from Rs 23.75, to close finally at Rs 20.56 and Rs 23.44 respectively. Kesoram were, however, keenly sought after upto Rs 37.62 from Rs 36.50 on prospects of diversification of its activities. Cawnpore were enquired at Rs 8.59 and Jay Shree at Rs 16.37.

There was cheerful trading in the Engineering section, early in the week. Indian Irons moved forward to make substantial headway on the feeling that the company might raise the dividend by at least 15 nP a share or so. After opening at Rs 28.05, the scrip moved irregularly between Rs 27.62 and Rs 27.98 on alternate buying and selling, before closing finally at Rs 27.80. TEXMACO changed hands at Rs 19.45 to Rs 19.75 (Rs 19.45); Binani Metals at Rs 12.31 to Rs 13 (Rs 12.37); J. K. Steel at Rs 34.50 to Rs 35.56 (Rs 34.75), and Dalmia Iron at Rs 10.25 to Rs 10.31 (Rs 10.31). Marshalls and Kumardhubi were almost steady at Rs 4.75 and Rs 6.50 respectively. Jay Engineering were, however, a firm feature at Rs 29.25 and so also Guest, Keen, Williams at Rs 41.37.

Miscellaneous issues presented a mixed trend. Alkali & Chemicals were wanted up to Rs 39.62 from Rs 38.19 and Indian Oxygen up to Rs 40.25 from Rs 39.12 on prospects of further expansion. The newly-enlisted Goodyear were keenly sought after up to Rs 39.50 from Rs 38.44. General Tyres had buyers at Rs 6.31 to Rs 6.62, while Bengal Paper scored Rs 2 at Rs 88.50 following the publication of encouraging results. Dunlop Rubber were, however, marked back to Rs 52.12 from Rs 53.37, due to receding hopes with regard to a bonus issue. Similarly, Indian Copper were pushed down to Rs 5.59 from the recent high of Rs 5.83 as no mention was made in the directors' report with regard to the long-awaited bonus issue. Following were the price trends of a few other selected shares:—

	Week's High	Week's Low	Week's Closing
	Rs	Rs	Rs
Orient Paper	36.10	35.00	35.90
Shree Gopal	26.00	25.50	25.69

Facts & Figures

HINDUSTAN STEEL

June Output

The production of Iron & Steel during June, 1961 at the three Steel Plants of the Hindustan Steel Limited was as follows:—

Bhilai Steel Plant produced 78,610 tonnes of Pig Iron and 55,747 tonnes of Steel Ingots during June, 1961 as against 72,564 and 48,832 tonnes respectively during May, '61. Production of Pig Iron for Sale was 31,732 tonnes as against 33,026 tonnes in May, 1961. Salable Steel Production rose from 27,869 tonnes to 43,091 tonnes in June, 1961. This consisted of 21,089 tonnes of finished Steel and 22,002 tonnes of Semi-finished products for Sale as against 16,258 and 11,611 tonnes respectively in May, 1961.

Lurgapur Steel Plant produced 55,750 tonnes of Pig Iron and 23,170 tonnes of Steel Ingots during June, 1961, as against 54,042 tonnes and 24,421 tonnes respectively during May, 1961. The Production of Salable Pig Iron was 32,781 tonnes as against 28,239 tonnes in the previous month. Production of salable Steel amounted to 20,582 tonnes which consisted of 3,106 tonnes of finished Steel and 17,476 tonnes of Salable semis.

Rourkela Steel Plant produced 29,542 tonnes of Pig Iron and 22,808 tonnes of Steel Ingots during June, 1961. Production of Salable Pig Iron stood at 7,433 tonnes. Total Salable Steel produced at the Plant amounted to 10,160 tonnes consisting entirely of finished products.

US AID TO INDIA

Augmenting Power Capacity

The United States has given assistance totalling \$486.6 million (Rs 231.6 crores) for the development of India's power resources.

The foreign exchange component of US aid is in the form of dollar loans and grants by the US Techni-

cal Co-operation Mission and the US Development Loan Fund. Local currency (rupee) costs of certain projects are met by loans and grants from the sale proceeds of agricultural

commodities supplied to India under Public Law 480 and Section 402 of Public Law 665.

Eight projects with a total installed capacity of 1,197,000 kilowatts are financed in part by US loans and grants. In addition, the US Development Loan Fund has given a credit of \$10 million for the purchase of power generating equipment.

US assistance to India's power development is as follows:

Dollar grants	...	\$ 15.0 million	=	Rs 7.1 crores
Rupee grants	...	\$ 9.9 million	=	Rs 4.7 crores
Total rupee & dollar grants		\$ 24.9 million	=	Rs 11.8 crores
Dollar loans	...	\$ 147.1 million	=	Rs 70.0 crores
Rupee loans	...	\$ 314.6 million	=	Rs 149.8 crores
Total rupee & dollar loans		\$ 461.7 million	=	Rs 219.8 crores
Total of loans and grants		\$ 486.6 million	=	Rs 231.6 crores

A. Projects whose entire anticipated costs (both in foreign exchange and rupees) is met by the United States.

Thermal:	Capacity (Kwts.)	DLF loan to meet foreign exchange costs (Million \$)	Rupee loans from sale proceeds of US agricultural commodities supplied to India to cover local costs. (Crores of Rs)
1. Chandrapura Thermal Power Station (Damodar Valley) ...	250,000	30.0	20.5
2. Durgapur Thermal Power Station Extension (West Bengal State Electricity Board) ...	120,000	20.0	3.4
3. Barauni Thermal Power Station (Bihar) ...	30,000	3.8	1.3
4. Kanpur Thermal Power Station Extension ...	15,000	1.6	1.0
5. Talcher Thermal Power Station ...	250,000	33.0	8.5
6. Amlai (Birsinghpur District) Thermal Power Station ...	60,000	8.4	6.6
Total Thermal ...	725,000	96.8	41.3
Hydro-electric:			
1. Barapani Hydro-electric Power Project (Assam) ...	27,000	2.5	6.2
2. Sharavathi Project Stage II ...	445,000	21.5	17.2
Total Hydro-electric ...	472,000	24.0	23.4
Total Thermal and Hydro-electric ...	1,197,000	120.8	64.7
		(equal to Rs. 57.5 crores)	(equal to \$135.9 million)
Total cost of 8 projects entirely financed by US aid ...		\$256.7 million = Rs 122.2 crores	

B. Projects, the Partial Cost of which is met by the United States.

Name of Project	Capacity (Kilowatts)	Approximate proportion of US aid to total cost of project	TCM Grant (Million \$)	TCM or DLF loan (Million \$)	Loans and grants from the sale proceeds of US agricultural commodities supplied to India (Crores of Rupees)
Thermal:					
1. Delhi Thermal Plant Extension ...	30,000	60%	...	4.0*	...
2. Ahmedabad Electricity Company ...	30,000	...	...	3.9	...
3. Rajasthan Power Facilities ...	7,700	18%	1.0	...	...
Total Thermal ...	67,700	...	1.0	7.9	...
Hydro -electric:					
1. Rihand ...	250,000	40%	6.0	...	15.8
2. Sharavathi Stage I ...	178,000	48%	...	8.4	7.0
3. Chambal ...	92,000				
4. Hirakud ...	232,000				
5. Damodar ...	104,000				
6. Nagarjunasagar ...	187,500	15%	8.0†	...	67.0
7. Bhadra ...	33,200				(of this amount 93% is loan, 7% grants)
8. Tungabhadra ...	45,000				
9. Kundah ...	180,000				
10. Koyna ...	240,000				
Total Hydro-electric ...	1,541,700	...	14.0	8.4	89.8
Both Thermal and Hydro-electric:					
DLF loan for purchase of equipment for power development projects ...	...	...	...	10.0	...
Total Thermal and Hydro-electric ...	1,609,400	...	15.0 (Equal to Rs 7.1 crores)	26.3 (Equal to Rs 12.5 crores)	89.8 (Equal to \$188.6 million)

Total US aid to projects listed on this page

\$229.9 million = Rs 109.4 crores.

* This loan is being granted from funds of the US Technical Co-operation Mission. The other loans in this column were made by the Development Loan Fund.
† Figure includes grants made to the following other river valley development schemes also: Mahi Right Bank Canal, Kakrapar, Kosi and Mahanadi Delta Irrigation Projects which have no power potential at present.

New Ready—An indispensable book

**GUIDE TO
COMPANIES ACT**

As Amended by Act LXV of 1960

SECOND EDITION

(Revised & Enlarged)

By A. RAMAIA, (Advocate)

Though the book is called a Guide it is really a comprehensive book, dealing fully with all the sections of the Companies Act giving the relevant provisions and useful and practical notes to the various sections. A detailed study of the changes introduced by the Companies Act I of 1956 and the Amendment Act LXV of 1960 is made in the Introduction. Useful Appendices and all prescribed Rules & Forms as amended up-to-date are included.

So many changes have been made affecting even the day-to-day administration that a thorough knowledge of the various provisions is necessary for every person connected with the administration of companies.

Order for a copy immediately.

Printed on Foreign printing paper and attractively got up.

Price Rs. 25. Postage extra.

Pre-publication offer of Rs. 17.50.

Open till the end of August, 1961 only.

Foreign Exchange and Export Prospects

AS anticipated by Indian Finance, we have had no alternative to approaching the International Monetary Fund for purchase of currencies in order that we may bolster our dwindling foreign exchange reserves. It was last week officially announced that the IMF had agreed to sell India \$250 million of currencies on 1 August 1961. The foreign assets held by the Reserve Bank, in consequence, may be expected to exceed at that date a level of Rs 200 crores. But quite clearly this is a short-term measure for tiding over our payments problems. The anticipation of course is that we shall soon begin to receive the assistance that we have already been promised for the first two years of the Plan. But it would be wise to recognise that even foreign assistance, such as has been vouchsafed to us, is not really going to solve the payments dilemma.

Our difficulty does not really relate to payments for import of capital and developmental goods. Negotiations over foreign aid have consistently sought to cover the foreign exchange component of plan projects. But maintenance imports, by which are mainly meant industrial raw materials, need to be paid for, and their costs can be met only from trade earnings, since foreign loans generally tend to be "tied" to specific projects. Unfortunately, in the field of exports the progress that has been achieved is niggardly; even the target that has been set is far too low. Hence, of late, in the recognition of the need for finding the resources to pay for maintenance imports, discussion on foreign exchange has taken the form of persuading our foreign friends that "untied" loans are as necessary for putting through planned endeavours. By all accounts, some small success has been achieved in such cajoling.

We cannot reduce the tempo of imports, whether they relate to maintenance or to development; we cannot long depend upon "free" foreign loans that could be diverted to pay for maintenance goods. It follows that more energetically than in the past we have to concentrate on enlarging export earnings.

The prospect of the United Kingdom joining the European Common Market serves as it is to affect Indian exports; it is therefore more than ever before necessary that we pay attention to quality, to standards and to performance, not to speak of propaganda and publicity, in our export programmes. It is not too late to start, if our aim is so to augment exchange earnings as to be in a position from our trade surplus to meet the cost of a higher bill for maintenance imports. The question is, where are we going to start? And what are the commodities or articles whose export we must seek to step up, and considerably as that?

One of India's most important exchange earnings, tea, suffers from inadequate publicity. America, a market in which our tea appeared to get a cup-hold, has practically been lost to us, and Ceylon rules supreme. In the UK, too, there appears to be a perceptible gain in the popularity of Ceylonese teas, at the expense of Indian teas. In the Middle East alone, we appear to have lost little ground. Lack of the right kind of propa-

ganda is perhaps partly responsible, and in the matter of quality, some tea chests are said to leave much to be desired. While, at the moment, we have not quite completely been priced out by East Africa in plain teas, the fact remains that in the long-term we shall mainly be exporters of quality teas; and to sell them at good prices, in increasing quantities, attention has to be paid to packaging, tea chests and publicity.

Secondly, it is surprising that the offtake of jute goods has not kept pace with the rise in world industrial or agricultural production. Hessian or sacking is no longer the tried and true packaging material: but, if competitors are able to get the packaging "rights" for the new manufactures, or if, in agriculture, there is increasing resort to bulk handling, it is because the fluctuations, in recent years, have been so wide in the prices of jute goods. Off and on, we have had schemes for ensuring stability in the jute goods market—but to our knowledge few, if any, have materialised. Here, too, more enterprising research and propaganda as to the uses that jute goods can be put to will pay off—in dollars and marks, pounds sterling and yen.

We concede that, on the whole, our textile manufacturers are export minded—on counts of quality and performance they have fared exceedingly well. We admit that a little windfall may happen our way, if the much-talked about sugar exports to the USA should in fact be effected. We grant that new products, especially small engineering goods, are making appreciable headway. And we allow that, conceivably, we may figure as an exporter of pig iron or steel. But how is it that we have not set about exporting iron ore in a really big way? Japan and some of the east European countries, are presently customers for iron ore. With the world's rapid industrialisation, the demand for iron ore, particularly for the high quality that we have in such rich abundance, is almost incalculable—potentially. With but little expense, and ensuring simultaneously a labour-intensive enterprise, we could meet the full cost of maintenance imports, if only we shook off the inertia that Government apparently suffers from whenever it considers iron ore exports. Although India is a developing country, for some years yet it will have to depend upon primary products for exchange earnings. If this simple lesson is borne in mind, the how of enlarging our exports suggests itself.

Our record thus far with the International Monetary Fund is above reproach; on each occasion when we had purchased currencies, we have effected repurchase of rupees before the stipulated date. Indeed, it would appear that, in the last week of June, we completed repurchase of rupees, relating to a moiety of the currency purchase transaction of 1957; we could scarcely draw on the foreign assets held by the Reserve Bank; therefore, Government's trading balances outside the country have been utilised, in a sum of around Rs 30 crores. It may be noted that the commitment to repurchase rupees for \$250 million (the assistance we are now obtaining from the IMF) would fall before August 1966, or around the beginning of the Fourth Plan period.

Future of Commonwealth

IN the recent discussion in India and elsewhere regarding Britain's proposal to join the European Common Market, the view was expressed that this might ultimately result in the break-up of the Commonwealth. It is of course not possible to form a definite opinion at this stage. But it will be worthwhile to consider to what extent the Commonwealth has been playing a useful role in the economic development of its members.

It may be mentioned at the outset that the Commonwealth is a loose organisation of several countries belonging to different regions and races. It has no written constitution and its affairs are regulated by customs and conventions. The members of the Commonwealth are the UK, Canada, Australia, India, Pakistan, Ceylon, Ghana, British East Africa, Malaya, New Zealand, Nigeria, Rhodesia and Nyasaland, West Indies, Aden, Hong Kong and Borneo. There are also a few minor territories like British Guiana, Mauritius and Sierra Leone.

From the political point of view, the Commonwealth has played an important part in promoting peace and in preserving democratic institutions although in some countries (like Pakistan) democracy for the time being is not much in evidence. Relations between some Commonwealth countries (as for example between India and Pakistan) have been rather strained, and recently one member namely South Africa had to quit for pursuing a policy of racialism. But in spite of its being a loose organisation and the lack of political homogeneity among some member-countries, the Commonwealth has exerted a powerful influence in world policies. The periodical meetings of the Commonwealth Prime Ministers and the practice of mutual consultation on major issues have been of great value to its members. The Queen's recent visit to many Commonwealth countries has also helped to strengthen the organisation.

From the economic angle also membership of the Commonwealth has been of great benefit to the countries concerned. There has been a considerable amount of cooperation among the Commonwealth countries in aiding one another in promoting economic development. Thus India has been receiving capital and technical assistance from the UK, Canada and Australia. Moreover, the preferences that Commonwealth countries enjoy in the British market have been of great value. The importance of the Commonwealth from the trading point of view has been well summed up in the following paragraph from a study issued by the Intelligence Unit of the Economist: "The Commonwealth is the world's largest preferential trading organisation. Its exports including those of the UK are now of the order of £8,000 million annually. Its imports which considerably exceed £10,000 million, approach 80 per cent of world imports. The Commonwealth's share in the trade of primary produce and exports is still larger. If the imports and exports of the true industrial powers—the European twelve, the USA and Japan—are excluded from world trade, Commonwealth countries provide between 40 and 45 per cent of the remainder, both exports and imports."

So far as preferences are concerned, it should be noted that there is a great deal of imbalance. For instance, Ghana, Kenya,

Uganda and Tanganyika, Nigeria and Aden give no preference to Britain but receive preference on over 70 per cent of their exports to the UK. Countries like India, Pakistan and Malaya and Singapore give very limited preference, but receive it in a substantial measure from Britain.

So far as India is concerned, its major exports like tea, textiles, jute goods, vegetable oils, shellac etc., enter the UK duty-free. It is feared that in the absence of adequate and effective safeguards, Indian exports may be affected adversely by the UK joining the Common Market. The tariff of the Common Market is quite high—18 to 23 per cent for tea, 23 per cent for Jute, 17 to 19 per cent for cotton textiles, 23 per cent for coir carpets and matting, 32 per cent for woollen carpets, 30 per cent for tobacco and 8 per cent for castor oil. Most of these are in the category of traditional items, which are the mainstay of our foreign exchange earnings. It is obvious that even a small decline in the export of these items will result in a great fall in earnings.

Most other countries of the Commonwealth like Canada, Australia, Ceylon New Zealand and Ghana have also forcefully expressed themselves against a precipitate decision by the UK, without providing for suitable safeguards, and the UK cannot afford to ignore their points of view. At the same time, the UK also cannot remain aloof from the European Common Market for an indefinite period. It is recognised generally that both from the political and economic angles, the UK's entry into the Common Market will be of considerable advantage to Britain as well as to Europe. But since the UK is the keystone of the Commonwealth, caution is necessary before it takes the final decision. The countries of the Commonwealth do appreciate the delicate position of the UK and with goodwill on all sides it should not be difficult to arrive at a mutually satisfactory solution. Britain has done well in sending its senior ministers to the Commonwealth capitals to explain its point of view. Perhaps, it will now be worth while to follow these talks by a full-fledged Commonwealth Conference. In any case, it is very important to ensure that nothing is done which will result in the break-up of this unique family of nations.

LATIN AMERICA Restoring Confidence

SENDING Mr Adlai Stevenson out to South America was an action dictated by the fiasco in Cuba. The USA had to explain and to even excuse itself. The sympathy shown for Cuba in parts of Latin America was one reason for the mission. The other was to survey the opportunities for aid even while economic unity as envisaged by the treaty of Montevideo signed last year was taking shape. The problem of Latin America is mostly one of foreign exchange shortage. It is not peculiar or temporary and to give food grains on special terms under PL 480 to importing nations is not a complete or final solution. There is not much competition in aid at present, and any observer will conclude that political instability hampers development whether it is in Haiti or Paraguay. The major problem for Chile is to keep the US market for copper and obtain maximum prices possible. For Brazil, it is rapid industrialisation so that dependence on coffee exports can end. There is frustra-

tion over inflation in Venezuela as well as Argentina where the civilian regime has to deal with labour problems. The economic revolution except in Brazil has been arrested and that is the issue facing the USA which desires to exclude the Communist Bloc still in the name of the Monroe doctrine. The doctrine was meant to exclude royalism in the last century. It has been extended and used to alter regimes and acquire bases abroad. The rethinking now in evidence is due to the repudiation of US influence by Cuba as well as the mistrust of Latin American liberals.

Under-population is not a handicap except in Brazil and the USA cannot encourage emigration when Latin Americans like Mexicans enter the USA eagerly as the land of unlimited opportunity. The lack of skill that affords a contrast between Canada and Mexico is one reason for economic difficulties that cannot be cured all at once or quickly. But the ideal of equality is a new force for Latin America and concession-hunting is ruled out for the USA. Latin America has long ceased to be a colony. Its economic independence must be affirmed in positive terms and made known to Europe. The absence of a middle class is an obstacle, so is the lack of domestic saving and capital. The dictatorship endemic for a century has made investment risky. And it is now Latin America's turn to promote confidence. Argentina and Brazil have to secure money from abroad for new major enterprises without mortgaging the future. Underdevelopment can be dealt with only by industrial growth and the USA has not so far been interested except in oil. International agencies are helping to put in roads and improve ports, but there is a lack of communications. A cut-back in defence outlay will help. Cruisers and aircraft are a luxury that the ten republics cannot afford just now. And only recently has it been realised that a keen political life can be the enemy of good, honest administration in Brazil or Peru. A new faith in economic planning, as in Chile, for example, is burgeoning though natural disasters have held up progress. There is an Indian problem in the American republics, and an immigrant problem in Argentina. But there is happily no colour problem, below the Equator and the Church has helped to root out racial prejudice.

It is to be seen if South America will attract capital as South Africa did in the last century. There can be no dream of empire, and the hope of big, sudden profits must be carefully restrained. That is why the US Government, rather than free enterprise, is taken to be the instrument of economic progress in future. There is a load of debt, and imports cannot be paid for by exports on the usual scale. The USA must accept meat, wool or minerals. But there is a tariff wall to be scaled. Latin America's needs underline the need for a liberal economic policy for the USA more than others. The Democrats in Washington believe in an alliance for progress. But Latin America must remodel tax systems and improve education, looking less to Europe and more to the USA hereafter. The readiness to imitate Puerto Rico in its transformation must also come, if Latin America is to achieve its object of economic independence. Remedial measures like land reform are inescapable and even confiscation may not be a catastrophe, if there is a fair distribution of income and property.

For India, there are some lessons from Latin American history apart from keeping the Army out of politics for good. The control of a growing bureaucracy is one. There is also a need to avoid temptation to buy

out foreign enterprise for mere reasons of prestige. There is further the paramount need to maintain essential imports in the face of domestic inflation. And there is again the over-riding need to step up exports, particularly, to the USA. The need for social justice under conditions of economic growth so as to brake the Communist advance is common to India as well as Latin America and it is agreed that a self-supporting continent alone will help to meet the challenges of Mr Khrushchev.

Absorption in current domestic problems marks off Latin America like India. Latin America, unlike India or Burma, is not embarrassed by a powerful and designing neighbour. The USA has no ambitions except to do good, and it has probably had, through the recent Cuban mis-adventure, a lesson about the limits of well-meant intervention. The real need today, as Mr Stevenson has sensed already, is to give aid liberally without strings and to excite no passions. There is no need for military alliances, and the dramatic end of Trujillo has eliminated the odd man out in Latin American politics. There may be other areas for ICA's work but there is little doubt that Latin America comes first for Americans who have to repel Cuban charges about Gringo imperialism. The success in an alien country like Japan may stimulate US policy which must, however, see that military aims are less important than convincing the people of these regions that the USA is not out for power or profit. The Republicans, in spite of Dr Milton Eisenhower's report, missed the opportunity to assist South America quickly and gracefully. Mr Kennedy has to do the work in his own way, accepting the rule that the Latin Americans know their problems best, and it is rash to think of them merely as poor relations who have no views of their own. The contacts with Europe have gradually diminished over a century and neither Spanish nor Portuguese political forms and methods hold any appeal for the South Americans who have accepted both Presidential rule and federation as part of the republican tradition brought from Philadelphia.

PETROLEUM PRODUCTS Import Bill

IMPORTS of crude petroleum and petroleum products will cost over Rs 500 crores in foreign exchange during the Third Plan period, according to the revised estimates made by the Planning Commission. This estimate is based on projections of demand for petroleum products over the next five years, and takes into account additional production from the two State-owned refineries which will draw their entire requirements of crude from Naharkatiya.

The total demand for petroleum products was estimated in the Third Plan Draft Outline at 9,960,000 tons by 1966. The Oil Advisory Committee has estimated, on the basis of figures supplied by Oil Companies, that the demand will be about 9,655,000 tons. In view of the rising trend of consumption, the Planning Commission is of the view that a larger margin should be allowed in the estimates and has arrived at a figure of 10,619,000 for the last year of the Third Plan period.

Between 1948 and 1958, aggregate demand for petroleum products has been growing at an annual average rate of 10.5 per cent. The consumption of High Speed Diesel Oil has increased at a rate of 30 per cent, Kerosine and Fuel Oil at 11 per cent, Motor Spirit at 5 per cent and Bitumen 19 per cent. The

total consumption of petroleum products in 1959 was round about 6.7 million tons of which about half was accounted for by High Speed Diesel Oil and Kerosine. It is not expected that rural electrification will make any appreciable difference to the total consumption of Kerosine, for what is saved in lighting will be balanced by increasing use of Kerosine in the kitchen. Dieselisation of transport, which is responsible for the spurt in the demand for HSD, is assumed to have passed the peak; a slowing down of the rate of increase of consumption has been noted in recent years. The increase in 1959 was about 16 per cent as against 27 per cent in the preceding two years.

The revised estimates of the demand for the different products have been worked out on the basis of increase in consumption of Kerosine at 5 per cent, HSD 15 per cent, Light Diesel Oil 6 per cent, Bitumen 10 per cent and Lubricants 8 per cent. As indigenous production of Motor Spirit is in excess of requirements, it can be left out of the import estimates. The consumption of Motor Spirit is expected to increase by 4 per cent in the first three years of the Plan and by five to six per cent in the remaining two. The switchover to jet plans by international airlines has altered the pattern of demand for aviation fuel. The demand for Aviation Spirit, Air Turbine Fuel and Jet Fuel is estimated at 65,000 tons, 128,000 tons and 130,000 tons respectively.

The aggregate capacity of the refineries in the private sector is 5.3 million tons and their requirements of crude oil are met by import of five million tons together with indigenous production of 0.3 million tons. The Nummati refinery is expected to go on stream in 1961-62 with a throughput of 0.4 million tons which will be raised to 0.75 million tons in the following year. The Barauni Refinery will be commissioned by the end of 1962 with initial capacity of one million tons which will be raised to two million tons by the middle of 1963. The total capacity of all the refineries is expected to rise from 5.3 million tons at the start of the Plan to 8.05 million tons by 1964-65, and the estimated output to 8.02 million tons of which 0.45 million tons of petroleum products from 5.07 million tons of Motor Spirit will be surplus to our requirements. On the basis of the estimates of demand, it will be necessary to provide for import of petroleum products as shown below for each year of the Plan period.

	Quantity	Value*
1961-62	..	2.35 56
1962-63	..	2.59 62
1963-64	..	2.44 59
1964-65	..	2.33 57
1965-66	..	3.02 72
Total		Rs. 306

(§=million tons), (*=Rupees crores)

The foreign exchange required for import of crude oil for the five years is estimated at Rs 200 crores. In making these estimates production from additional refineries that may be set up or from reserves other than those at Naharkatiya have not been taken into account. If reserves are proved and it is found possible to start production in other oil fields, the import of crude petroleum may be reduced. But additional refineries are not expected to have any appreciable impact on the supplies of petroleum products during the Third Plan period. Government policy in regard to new refineries is that these should be established in the public sector. But the Government will be prepared to consider schemes of collaboration if the parties are

prepared to accept minority participation in share capital.

The scope for variation in the estimates of requirements given above is limited. Economy in imports depends on the possibility of varying the pattern of production of refineries to bring it more in line with the pattern of consumption and the expediency of adopting fiscal measures to change the pattern of demand to achieve better balance with production.

The estimates of requirements for petroleum products at 9,655,000 tons, may be seen to err on the low side as compared with the estimates made earlier by the Oil Advisory Committee at 14 million tons, excluding the quantum which the oil refineries would require for their internal use. In many of his public utterances regarding oil consumption during the Third Plan, Mr K. D. Malaviya has also given the impression of the Government fashioning its Third Plan oil policy on the assumption of total demand for petroleum products rising to 14 million tons. How there has happened a pruning of estimates of requirements is not known. It is also to be noted that corresponding to the reduced estimates of requirements, the estimates of installed capacity that would be available by the end of the Third Plan also show a significant shortfall as compared with earlier projections. While originally it was expected that by the end of the Third Plan, the capacity of refineries in the public sector would reach a level of nearly 5.75 million tons, the latest estimates take credit for only 2.75 million tons. Evidently, the projected refinery in Gujarat which was intended to be set up with a capacity of nearly 3 million tons has been left out of reckoning in calculating availability of total capacity in the public sector.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

NEW LOANS

Hint of Dearer Money to Come?

IS it the Reserve Bank or the Government which is in favour of dear money? For, the terms of the two new loans, comprising the second tranche of the Centre's borrowing programme during the current fiscal year, are so markedly out of line with prevailing gilt-edged prices, that in their framing can be discerned an overt attempt to set a pattern of higher gilt-edged yields. Does this presage a decision by Government (or the Reserve Bank) to increase bank Rate at some time in the future?

We cannot for our part hide our disappointment at the evidence of borrowing from inordinate weakness. The 4 per cent 1980 has been quoting remarkably steady at Rs 99.90; and now a 4 per cent 1981 is issued—with the issue price a full Rs 1.40 lower at Rs 98.50. Again, the 3½ per cent 1969 is quoting at Rs 98.65, but the re-issue of the loan is to be at Rs 98.40. With the amount sought at Rs 100 crores (Government reserves the right to hold on to 10 per cent more if there are excess subscriptions), and on the assumption that subscriptions to each of the two loans are more or less the same, at Rs 55 crores, the loss to Central coffers is quite considerable: 25 nP per cent on Rs 55 crores and Rs 1.40 per cent on another Rs 55 crores add up to over Rs 90 lakhs.

Surely, the current slackness in the money market, with call money declining even in Bombay to 2½-2¼ per cent, does not suggest that, in order for the new loan to be a success, the terms to the public had to be made more attractive: on the contrary, with surplus resources weekly gathering with the banking system, we now have the process (rather, we had the process) of a hardening of gilt-edged prices. Precisely at such a juncture, the new loans are announced, and whether so intended or not, the result is going to be a general marking down of values.

Depreciation in gilt-edged prices costs doubly dear: banks may be compelled to draw on inner reserves, in order that their portfolios may be shown at or below market value; and the seepage in confidence resulting therefrom reduces the appetite for gilt-edged.

We wonder whether the issue prices, originally planned to be higher, were not on the eve of the announcement revised downward. For, for some weeks prior to the new loan announcement, the Reserve Bank was active in the market, and it was consistently putting up tap rates. It is inconceivable that the central banking institution, with full foreknowledge of issue prices lower than quoted rates, would nevertheless have persisted with sales of gilt-edged at steadily higher prices; that would have been breach of faith. It is just possible that, when we approached the International Monetary Fund for purchase of currencies for \$250 million, we were advised that money rates within the country were too low, and therefore it could have been a

political, and not economic, reason for the issue prices being pitched so low.

Hence the possibility that the terms of the two new loans were framed by Reserve Bank but revised by Government: and the intention was not so much to make the new loans thereby more attractive to institutional investors but to persuade our foreign friends that our money rates were being brought to levels that in their view were more desirable.

If there is some substance in our conjecture, the deliberate depressing of gilt-edged values is what we are being called upon to bear in order that we may avoid a de jure increase in bank Rate. Possibly, not great harm will ensue. There is always the possibility that institutional investors, laying greater store by the current and prospective easiness in the money market, will gobble up the new loans, pocket the profit—and then proceed to wait gleefully for further windfalls. For, except with a de jure raising of bank Rate, it is unlikely that any steps to put up the general structure of interest rates will succeed.

While on the subject of success, will the new loans be one? The amount sought is a maximum of Rs 110 crores. The Hyderabad loan and the 2½ per cent 1961 are both eligible for conversion. It may be recalled that conversion facilities in advance were offered for these two loans on the occasion of the first tranche of Government's borrowing programme. At the time, total outstandings of three loans, eligible for conversion into 3½ per cent 1957, were placed at around Rs 139 crores; and total subscriptions were of the order of Rs 93 crores. We have no knowledge of cash payments made to holders of 3½ per cent 1961 who did not opt to convert; but obviously the maximum of conversion applications for the 3½ per cent 1969 and the 4 per cent 1981 is around Rs 46 crores. Conjecture alone is now possible, and we would place conversion of the two maturing loans into the two new loans offered at, say, Rs 30 crores. It follows that Government hopes to secure not less than Rs 70 crores, and may be as much as Rs 80 crores, in the form of cash applications.

Can the gilt-edged market, in present conditions, support a cash loan to the tune of Rs 80 crores? The State Bank can be expected to put in anything between Rs 10 crores and Rs 25 crores—its portfolio of Other Assets, at Rs 37 crores or so, could spare Rs 15-20 crores, and Rs 5-10 crores could be drawn from cash balances. Hearsay is that the Life Insurance Corporation has earmarked another Rs 25 crores for the 4 per cent 1981. Remnant institutional investors are thus called upon to extend support for around Rs 30 crores—a by no means impossible undertaking.

The limiting factor is that it is an eight-year loan and a twenty-year loan that are being offered. Banks can get what they want of 3½ per cent 1967 from the Reserve Bank tap, so why should they bother about the medium-dated now being made available as a re-issue? Provident Funds, the LIC and other investors may be attracted by the 4 per cent 1981; but, save for the LIC, why should they bother about a twenty-year loan with a four per cent coupon, when they can now confidently expect the States to make an even more attractive offer?

MONEY MARKET

Snippets

THAT the peak of the 1960-61 busy season was touched in March is suggested by data relating to cheque clearances. Cheques passing through clearing houses managed by the Reserve Bank amounted to Rs 1,011 crores, and at other centres (managed by State Bank of India, State Bank of Hyderabad and Sangli Bank) to Rs 201 crores. The relative figures declined to Rs 944 crores and appreciated to Rs 212 crores respectively.

+

Outstandings of Small Savings rose in March 1961 by nearly Rs 23 crores to Rs 770.80 crores; net collections in the fiscal year 1960-61 have amounted to Rs 97.31 crores as against Rs 82.91 crores in 1959-60. This total excludes Prize Bonds, outstandings of which at the end of February 1961 were placed at Rs 13.81 crores.

+

The yield (tax-free) on the 3 per cent 1986 was placed at 2.85 per cent in April; the average tax-free yield on 3½ per cent 1962, 3½ per cent 1967, 3 per cent 1970-75 and 4 per cent 1979 worked out to 2.67 per cent. The tax-free yield on debentures declined fractionally to 4.15 per cent, while the return on Preference shares went up slightly from 5.32 per cent to 5.40 per cent. The tax-free yield on variable dividend industrials also fell fractionally from 4.71 per cent to 4.70 per cent, which level is still somewhat higher than the 4.62 per cent registered in August 1960.

+

In the week ended 8 July, the index number of security prices (base year: 1952-53) was unchanged at 101.0 for Government and semi-Government securities; at 101.3 Debentures were also unchanged; the index declined slightly from 83.6 to 83.2 for Preference shares; and rose from 183.2 to 183.8 for variable dividend industrial securities.

+

The index number of wholesale prices for all commodities (base year: 1952-53) moved up to 126.9 in the week ended 24 June from 126.0.

+

As a consequence of the Canadian dollar devaluation decision, the exchange rate fell from Rs 472.50 per \$100 Canadian on 26 June, and further on the next day to Rs 468 before recovering partially on 29 June to Rs 468.25. Subsequently the rate declined to Rs 466.50 on 8 July, but recovered to Rs 467.00 on 14 July.

+

The last paragraph in the Review of Financial and Economic Conditions, as contained in the Reserve Bank of India Bulletin, analyses trends in industrial production. The June issue of the Bulletin, just to hand, remarks herein that production was more or less unchanged in January; but the relevant table of the index of Industrial Production published in the statistics section of the Bulletin, contains full data for February and reveals a sharp drop.

22 July 1961

Therefore, it appears as though, as in previous years, the Reserve Bank will have to take up the bulk of the new loans—though in due course it may hope to pass on holdings to the banking system. But, so long as the Reserve Bank succeeds, in the rest of the current slack season, in substantial sales of 3½ per cent 1967 through the tap, Government's borrowing programme need not be termed a failure technically.

So, as usual, the borrowing programme is going to be a success, thanks to the Reserve Bank; institutional investors are being given a windfall which in the aggregate will exceed Rs 90 lakhs; States' new loans will perforce have terms and conditions which favour the investor even more; and by the show of attempting to usher in an element of dear money, our foreign friends will have been satisfied. All entities will have little cause to complain—except the investors who have recently bought 3½ per cent 1969 and 4 per cent 1979 or 1980 from the Reserve Bank tap.

+

BANK RETURNS

Sharp Impress of Slack Season

The latest banking statements bear the sharp impress of the 1961 slack season, notwithstanding the fact that the return of Scheduled Banks relates to the first week of a month.

According to the returns of the Reserve Bank for 14 July, Active Note Circulation has fallen by Rs 11.28 crores to Rs 1,937.98 crores, and there has been inflow of Rupee Coin for Rs 1.06 crores. Foreign Securities are unchanged at Rs 93.01 crores, and currency has been contracted against Rupee Securities for Rs 20 crores by transfer to the Banking Department; Rupee Securities are now placed at Rs 1,626.98 crores. In the result, the Reserve Bank's cash in the till has dropped from Rs 27.46 crores to Rs 19.85 crores.

Reserve Balances of member banks have improved by Rs 4.39 crores, only part of which being ascribable to the State Bank, to a level of Rs 96.08 crores. Moreover, it would appear that borrowings of Scheduled Banks from the Reserve Bank have fallen to a nominal figure, the latter's portfolio of Other Loans and Advances dropping by Rs 6.27 crores to Rs 117.52 crores. Outstandings against usance bills are shown substantially lower at Rs 3.42 crores as compared with Rs 6.54 crores in the previous week's returns.

There has, however, been recourse to deficit financing by the Centre. Investments are higher by Rs 30 crores (in round figures) at Rs 213.45 crores, whereas the transfer from the Issue Department was for Rs 20 crores. But the deficit financing is seen to be a countervailing operation, in that, during the week, Rs 10 crores of Treasury Bills purchased and discounted by the Reserve Bank have apparently matured. Nevertheless, the Centre's cash position is somewhat strained, its balances declining by Rs 4.68 crores to Rs 49.83 crores. On the other hand, the States report a rise in Deposits by Rs 4.41 crores to Rs 13.37 crores, but this is balanced by the rise of Rs 4.57 crores to Rs 41.73 crores in their ways and means borrowings from the Reserve Bank.

Once again there has been a drain on the foreign assets held by the Reserve Bank. Balances Held Abroad have dropped by Rs 6.65 crores to Rs 9.89 crores, and the foreign reserves shown in the Reserve Bank returns,

at Rs 102.90 crores, are barely above the Rs 100 crore mark. Thus, it is not a mite too early that purchase of currencies is being effected (on 1 August) in an amount of \$250 million from the International Monetary Fund.

The State Bank's return for 14 July shows that Deposits are slightly higher by Rs 0.51 crores at Rs 532.35 crores, and that Advances have contracted by Rs 1.82 crores to Rs 259.67 crores. There is a small addition of Rs 2 crores to the gilt-edged portfolio, raising it to Rs 225.54 crores. Perhaps for this purpose Other Assets are lower by Rs 3.48 crores at Rs 37.75 crores—still a high level. It is possible that the State Bank is "saving up" for subscription to the second tranche of Government's borrowing programme for 1961-62. Cash in hand and with Reserve Bank is higher by just under Rs 4 crores at Rs 24.68 crores.

The return of Scheduled Banks shows that the seasonal return of funds has more than offset the rise in the demand for money owing to month-early disbursements. Thus, Deposits have not been drawn on, though there has been a switch from Demand to Time; and the total of Advances has contracted. Net Demand Deposits (exclusive of inter-bank borrowings) are lower by Rs 5.39 crores at Rs 827.36 crores, and net Time Deposits higher by Rs 5.05 crores at Rs 1,099.94 crores. The total of Advances is lower by Rs 3.62 crores at Rs 1,267.94 crores. Borrowings from the Reserve Bank have been repaid to the tune of Rs 6.15 crores and are now placed at Rs 9.44 crores, though indebtedness to the State Bank has somewhat risen from Rs 9.30 crores to Rs 11.78 crores. The fall of Rs 1½ crores in the gilt-edged portfolio is wholly on account of the State Bank.

+

Bank Profit

"The net profit of the Indian Overseas Bank Ltd., for the half year ended 30th June 1961, subject to audit, including the sum of Rs 1,92,434.52 brought forward from the last year's account, amounts to Rs 19,97,365.95".

The Common Market Commonwealth Deadlock

By Paul Einzig

THE outlook for finding a formula that is likely to be acceptable both to the Governments of the Common Market and those of

the Commonwealth as a basis on which Britain would adhere to the Common Market seems to be anything but promising. The negotiations conducted by the three British Cabinet Ministers sent out to visit the Commonwealth countries disclosed in most countries an uncompromising attitude. Evidently Commonwealth Governments are primarily concerned with the immediate adverse effect on their exports of any conceivable arrangement acceptable to the Common Market. They showed little inclination to submit to such disadvantages in return for the vague and distant indirect benefits they may derive through any direct benefits that might be gained by Britain from an increase of its export to the European Continent.

As far as has been possible to ascertain, however, the attitude of Commonwealth countries has been purely negative. While firmly objecting to being victimised, they showed no inclination to do anything to make it worth while for Britain to sacrifice the advantages to be derived from joining the Common Market. During the recent years the system of Commonwealth preference appears to have worked increasingly in a unilateral sense. The relative advantages derived from it by the United Kingdom have been declining. This trend must be reversed in order to make the British public realise that it is to their interest to oppose joining the Common Market on terms unacceptable to the Commonwealth. It is true, even, in the absence of material advantages there is a strong case in favour of preventing at almost any cost a disintegration of the Commonwealth. The psychological appeal of the Commonwealth idea has been very largely supplanted, however, by the psychological appeal of Western European unity. Added to this is the feeling that even though at present British trade with the Commonwealth is several times larger than British trade with the Common Market the latter is capable of a spectacular expansion that would considerably more than compensate for a decline of the former.

It is up to the Commonwealth countries to counteract this impression which, if it should gain popularity, give rise to irresistible pressure to force the Government in favour of joining the Common Market. There is a great deal each Commonwealth country could do to make British opinion realise that the maintenance of existing relationship with the Commonwealth is worth sacrifices. In recent years other countries have been gaining ground in Commonwealth trade to a much larger extent than Britain. To some extent this was inevitable because of competitive prices and delivery dates. It is to the interest of Commonwealth countries, however, to stretch the point to the utmost limit to ensure that Britain's position in their trade is maintained and expanded.

are you a victim of executive fatigue?

at the end of a working day
are you tired, listless,
completely done-in?

If so, you are possibly a victim of executive fatigue and you need Smith's **SUPER FORTE**—the tonic that fights executive fatigue. An exhausting day's work uses up more vitamins than your daily food intake can restore. **SUPER FORTE's** 10 vitamins and 9 minerals adjust this deficiency.

What results can you expect of **SUPER FORTE**? Nothing dramatic. It wouldn't be fair to suggest that **SUPER FORTE** works wonders overnight. But take two tablets daily for 30 days and you'll get results—added vitality, strength, staying power—all the additional physical reserves you need to cope with the stress and strain of modern business.

Notes

RAW MATERIALS

Planned Purchases

Mr C. D. Deshmukh in an address at Bombay on 16 July, referred to the importance of careful and regulated purchases of raw materials in order to keep down prices and limit consumption. Since very large outlays under the Third Plan are contemplated, economy must be the watchword and something like wartime practice, as regards purchase of materials and machinery, must inevitably be adopted. It has been suggested that as much as Rs 4,500 crores in the next five years would be spent on buying various materials and how the sum should be spent wisely is a problem for planners. If savings are effected, the country will gain. It has been pointed out that considerable economies are effected in the USA by bulk purchase of raw materials at home or abroad.

One important requirement may be the elimination of forward trading in India, so that consuming industries like jute or cotton can obtain their essential requirements at reasonable prices. This is demanded also by the nature of export trade, now overshadowed by the fears of Britain putting up import duties by abolishing preferences. Large consumers may have to negotiate long-term contracts through trade organisations, and any reduction in prices will probably help to keep down

export prices for jute manufactures or coal. The practice of big companies like Unilever or Imperial Tobacco will have to be followed by State organisations which have found that price control measures in force are not enough to help them over shortages.

As was to be expected, Mr Deshmukh made a reference to the problem of corruption. He indicated that the right type of people with commercial morality should be entrusted with the work of purchasing raw materials, machinery and accessories from local or foreign sources. This is necessary to avoid the mistake, which produced not only abnormal profits for fortunate enterprises during the war, but to improve the conduct of public servants who would find a place in the State-managed enterprises. The Industrial Commission in 1918 pleaded for a separate service consisting of trained engineers, to staff the State-owned enterprises. Large savings can also be secured through elimination of notices and tenders and negotiating contracts on a cost plus fixed fee in respect of industrial equipment.

As regards textiles for exports, the State Trading Corporation, whose scope is being enlarged, might turn away from mineral ores to items like piecegoods and obtain goods for export at special prices because of the export incentive scheme. Development work will probably entail buying for stock in slack seasons with appropriate adjustments of prices. The Ordinance factories may be brought into use for engineering work if local supplies are made available so that there is no shortage, for example explosives for mining. Financial controls will probably have to be tight because a review of costs at every stage is vital for commercial success. The Government as a big buyer will also have to compare prices for comparable goods in foreign countries, after allowing for export duties like those levied in Burma, Malaya or the Sudan in regard to raw materials.

What is really desirable is the avoidance of feather-bedding which leads to inefficiency and high prices. Mr. Deshmukh's hint to purchasing executives may well suggest that management in the highest grade will have to consider separately the problem of purchases in quantity for specified period, in order to secure the best possible terms. This is as vital for the public sector as for the private sector and while monopoly practices must be discouraged, the encouragement of large, efficient units will become inescapable. The country will have to move gradually towards integrated enterprises that can achieve large turnover, keep down prices, and assist in boosting exports. This may be regarded as an ideal as much for the

public sector as for the private sector.

*

PANCHAYAT RAJ Three kinds of Democracy

Started in 1952 as a wholly Government sponsored and directed programme, Community Development has moved on to the stage of Panchayat Raj. The next stage according to Mr S. K. Dey, the originator of the programme in India, is to create the atmosphere in rural areas for establishment of the Socialistic pattern. Speaking to pressmen in Delhi last week, Mr Dey defined the Socialist pattern as the balanced blending of Panchayats, Sahakari Samaj (Cooperatives), the Public and the Private Sectors of Industry. These he equated, in that order, to 'political democracy', 'economic democracy', 'industrial democracy' and 'ethical democracy'. While such schematic arrangements are no doubt intellectually stimulating, the topic of immediate interest is the programme of Panchayat Raj. According to Mr Dey, before the middle of the next year, Panchayats would be working in all the States except perhaps Kerala and West Bengal which have special problems of their own. Though it is too early for a detailed assessment of Panchayats in the States where they have been in operation, Mr Dey spoke with satisfaction of their achievements and with enthusiasm about the future. The happiest feature of the programme was the growth of self-reliance among the people. The tendency to blame the Government for everything was disappearing. The people were coming to realise that the responsibility for development as well as the power were in their own hands. Fears that political, communal and caste pressures would influence elections, and scorch democracy at the grass roots, have been shown to be greatly exaggerated. The actual results, said Mr Dey, were much better than his hopes. By and large, candidates have come up on merits, irrespective of political or caste affiliations. Answering a question on the impact of Panchayat Raj on the law and order situation, Mr Dey said that, though there was some fighting here and there on the whole the position had improved. The progress of the Panchayat Raj programme and the problems calling for urgent attention will be reviewed at the conference of Development Commissioners of States in Hyderabad. While the main item on the agenda is improvement of agricultural production—Mr Dey said that the Third Plan had set a "spine-breaking target" for those responsible for administering the agricultural programme.

ly important item concerns development of village industries. This is a field in which the CD programme so far has not been able to make perceptible progress. It will be the task of the Hyderabad Conference to identify and suggest measures overcoming the obstacle to the agro-industrial programme.

*

EXPORTS

Gains and Losses

A rise of half a per cent in the value of India's exports in 1960 may be due mainly to larger exports of manufactured goods. The fall in tea exports was offset by rises noted under castor oil and tobacco. The continued rise in shipments stands out as a feature so also the increase under cashew and pepper owing to higher prices realised by exports to Rs 4 crores from Rs 3.3 crores in 1959-60. India is again exporting iron and exports in 1960-61 were valued at Rs 2.4 crores. The improved performance of minor items like coir, footwear, silk and domestic utensils in the export field will suggest that trade missions have been able to interest foreign buyers in Indian products. The analysis of export trade indicates that the volume of exports and sacking shipped in 1960-61 was lower. The fall in textile exports may be due to the shortage of cotton and the rise in prices in India. But handloom goods also suffered a fall of 21 per cent as compared with 1959-60.

High prices affected the export of linseed oil as well as groundnut oil. The direction of trade also showed some changes. Exports to the USA went up 16 per cent year by 6 per cent. The total ex-

rts to the UK fell by 0.5 per cent because the textile shipments 1 away along with hides and ins. Increased exports to Cuba y cause surprise, but the rise der exports to Italy and Egypt y prove that new outlets are ailable. The political dispute 'ected India's export trade with ina and North Korea. Encour-ement will be derived from e recovery in exports of ica and lac. India is now ex-orting soap as well as paints. rther increases under electric ns and sewing machines point

to a general acceptance of Indian manufactures. Bicycle exports went down because the Indian-made cycle is dearer than its rivals in neutral markets. The fall noted under cement or hardware will cause less anxiety than the decrease of 32 per cent shown under coal with shipments valued only at Rs 3.13 crores. One may presume that rail transport difficulties hit the traditional export to adjacent countries. And it is possible that Natal coal will soon take the place of Indian coal in Burma or Singapore.

Venomous?

What is quaintly described as the export of potential Haffkine Institute is mentioned in the last issue of the Journal of Industry and Trade. It is pointed out that the research institute in Bombay can supply for export some of its preparations including vitamin and sulphur tablets. It is evident that the pharmaceutical industry in India faces competition from an unexpected quarter and its development prospects are threa-

tened by sales for export from an institution that is not commercial in character. (While private exporters are expected to buy from the Institute and ship goods the prices quoted appear rather low. Of course, specialities like snake venom would find a market easily and the private shipper might be ready to take off the surplus venom. But in the case of quinine or other tablets, the prices quoted by the Indian manufacturers will have to be taken into account before exporters in India would be prepared to accept what is offered.

That the Institute is offering for sale glucose solution and even distilled water will probably provoke complaints from private manufacturers who will, however, rejoice that the Institute is not trying to place its surplus production in the home market. There used to be complaints in the past from the trade about competition from Medical Stores Depots which tried to sell tinctures and mixtures to wholesalers and even estate dispensaries, thereby preventing the independent chemist and druggist from approaching regular local customers. The Haffkine Institute's example may even be copied by other research institutes. This should probably lead to a complaint from the medical profession which will not be disposed to encourage export sales when domestic supplies are not abundant. It is one thing for the Indian subsidiaries of big foreign manufacturers to export their products to countries like Ceylon or Burma. It is quite another for a State-owned establishment to engage in export trade to the disadvantage of indigenous manufacturers, who may be helped presumably by import restrictions but would not approve of competition from a State-owned institute, quite different from a manufacturing enterprise like Hindustan Anti-Biotics. In any case, the manufacturers will not miss the significance of the reference to the export potential of the research institute in Bombay.

★

CEMENT In the Doldrums

The Tariff Commission which is presently inquiring into the question of cement prices has actually a much bigger task assigned to it. It has also been asked to make a comprehensive review of the industry in all its aspects such as production, price, distribution and development. A thorough probe into the working of the industry is definitely indicated for the consuming public is fast getting tired of the periodical shortage of cement with the attendant shooting up of prices. Whatever might have been the trend of demand a year

22 July 1961

or so ago, the present position is that in most parts of the country the commodity is not available, and if available, the consumer is obliged to pay very much in excess of the official scheduled price.

The Tariff Commission has estimated that the aggregate rated capacity of the 34 factories now in operation is 8.85 million tons. At the time of the last enquiry the capacity was estimated to increase to 12.03 million tonnes by 1960 on the assumption that 16 of the then existing factories would extend their capacity and 16 new factories would be established. The expectation in regard to increase in capacity has not fully materialised since only 10 of the old factories have increased their capacity and only six new factories have come into existence. Production of cement in 1960 is placed at 7.60 million tonnes whereas demand in that year has been something like 9 million tonnes. According to the Planning Commission the demand may reach 13 million tonnes by 1965-66. As against this potential demand, Government has issued licences for considerable expansion of the industry both by way of expansion of capacities of existing units and by way of establishment of new factories. It is estimated that the number of factories will go up to 44 with the annual capacity aggregating to 11.7 million tonnes by 1964. When all the licensed programme is completed, the number of factories is expected to increase to 49 with the rated capacity aggregating 14.62 million tonnes.

In the course of his speech at last week's public enquiry, Mr K. R. P. Aiyengar, Chairman of the Tariff Commission has pointed out that there is acute shortage of cement at present in wide areas and cement is sold at more than double the controlled price. There can be no doubt that during the Third Plan period the rate of increase in consumption will be much higher than at present as the supply position in steel will considerably improve. No doubt the expansion programme of the cement industry has provided for a capacity of about 15 million tonnes, but the trend of progress of the industry during the past two three years engenders justifiable misgivings as to the requisite rated capacity being achieved.

The industry has represented to the Tariff Commission that the slowing down of expansion since 1958 is due to a multiplicity of causes, the more important of which being the present price and distribution systems. Mr K.R.P. Aiyengar also has referred to the reports about forced stoppages and shut-down of factories for lack of coal and shortage of wagon for movement of raw materials. It is contended on behalf of the producers that the prices they get for their product are too low to enable them to put by anything from

their earnings toward meeting the cost of expansion. The current ex-works prices of cement are based mainly on the recommendation made by the Commission in 1958. The prices which were applicable upto the end of June this year have since been extended pending the fresh recommendation of the Commission. The distribution control has been extended for 3 years from 1 July 1961.

The urgent task that faces Government is to ensure that production of cement catches up with the growing demand. Now that an export market in cement has been laboriously built up in howsoever small a measure, (The export totalled 54,162 tonnes during 1958, 189,305 tonnes during 1959 and 157,043 tonnes during 1960), the aim should also include the attainment of a sizable surplus. It is clear that cement policy as at present pursued has failed to produce the desired result. If production does not pick up soon, we will be having a first class crisis in cement before long; and then Government will have only itself to blame. Though quite willing to undertake expansion, producers are unable to move forward for lack of resources. By themselves they can mobilise little because of the present uneconomic prices at which they are obliged to sell their production. While they are not free to increase their selling price, their cost of production is going up what with the Wage Board award and the like. With their earnings marginal, cement companies are not able to attract fresh investment. So, the primary objective of the cement policy must be to make the industry attractive both to the entrepreneur and the investor. A suitable price increase will certainly go a long way toward ending the present stagnation in the industry. It was time Government realised that its aim of protecting the interest of the consumer is as distant as ever. If the authorities have any reliable way of knowing the views of the consumer they will perhaps be surprised to find that he will gladly pay a little more than the so-called controlled price provided he is assured of regular supplies which can be obtained without undue hardship.

★

COTTON TEXTILES Confused Policy

The report that the plea of the mill sector of the cotton textile industry for an upward revision of its target of production in the Third Plan is not likely to find favour with Government does not augur well for an adequate supply of cloth during the next five years as well as for maximising of exports. As at present proposed, the Third Plan target for mill cloth production is 5,800 million yards while that for handloom is

3,500 million yards. The performance of the latter sector during the Second Plan however does not inspire confidence in its ability to reach the substantially increased target that is given to it now. It is no doubt true that both sectors were not able to attain their respective Second Plan targets. But whereas the mill sector attained a production of 5,075 million yards out of its target of 5,200 million yards, the handloom sector accounted for only 2,145 million yards as against its target of 2,650 million yards. It is not clear by what miracle Government hope to make the handloom sector fulfil its onerous responsibility now sought to be thrust upon it.

It would appear that even in regard to devising ways and means of attaining an increase of 800 million yards in mill production Government seems to be influenced by considerations which cannot be said to be quite realistic. Mr Naval H. Tata has recently pointed out that the proposed increase in production of the mill sector can be attained by the existing units in the industry themselves. The other alternative of establishing new units to take care of the additional production is not only time consuming but must be deemed to be too expensive also in the present context of the acute shortage of foreign exchange. The country can ill afford to divert valuable foreign exchange toward building up of redundant capacity, for setting up new units will amount to exactly that. The existing units with suitable adjustments and the addition of some more equipment at a fraction of the cost of new mills can easily take care of the additional production. This is not to say that the setting up of new mills with a view to correcting the imbalance in regional distribution of cotton mills is all wrong. What is to be noted is that at the present juncture the most important consideration is foreign exchange.

Cotton textiles are still one of our important earners of foreign exchange but the trend in cloth exports from this country in recent years is not encouraging. While world exports of cotton piecegoods continued to expand in 1960 (11 per cent over 1959) Indian exports have recorded a decline. Exports of cotton piecegoods (including handlooms) have again declined in 1960 as compared with the previous year. Total exports last year were 721.89 million yards as against 850.16 million yards in 1959. Part of the decline may be attributed to the fact that during 1960 there was a severe shortage of raw cotton which resulted in making Indian piecegoods uncompetitive in world markets. Even so, Indian cloth is not likely to have markets waiting for it. Last year Japan has been able to increase its exports of cloth considerably from 1263.00 million yards in 1959 to 1424.60 million yards. It is poor

consolation that India is still the second largest supplier of cotton piecegoods to the world. Other countries are making strenuous attempts to increase their exports of cotton piecegoods and according to the latest Texprocil Bulletin, France which is India's closest rival with a share of 200 million sq. yards less than that of India, may in due course outstrip India. If Indian piecegoods are not to lose ground in the international markets, it is essential that they are competitive in price and of course in quality. The export incentives now in force no doubt help mills to increase their exports but a lasting solution is to be found in enabling the mill industry to become strong enough to withstand temporary setbacks, and to embark upon a programme of rehabilitation and modernisation of its equipment.

PLANTATIONS Real Problems Ignored

The organisation of a special corporation to help plantations extend acreage or outturn may seem superfluous when the export outlook for coffee and tea too is not bright at present. Mr Sriman Narayan's scheme for loans ignores the real problems. Companies can raise extra capital if needed from the shareholders or obtain loans from State Financial Corporations. But finance is not so much of a problem as efficient modern transport, adequate supply of fertilisers or the provision of power and fuel. Perhaps the object is to help planters with small holdings, below 50 acres, but these can make little contribution to the enlargement or cheapening of exports.

Since there is a replanting subsidy scheme for rubber and the big estates can replace old areas by high yielding varieties, rubber does not need much help, unless it be in the form of a minimum price related to the higher cost of production. The Reserve Bank has funds for sustaining agriculture but the question is whether it cannot be put to better use than advancing loans to weak or small estates. The desirability of combining small estates into large groups, centrally administered, has seldom been canvassed and it is the arrangement of mergers that seems desirable now in the case of coffee or tea. Probably the UPASI meeting next month will offer comments on the idea put forward by Mr Narayan who should be aware that the large agency houses do not need capital so much as the reinstatement of facilities and the minimum of official interference.

Production in the last decade has gone up steadily, as Mr

Industrial growth of a country depends on its ability to manufacture products for its requirements. And products require plants to manufacture them. To this end, Simon-Carves' contribution is truly impressive. The above map shows only some of the plants designed and engineered by Simon-Carves. The total capacity of coke oven plants installed by Simon-Carves is approximately two-thirds of the entire carbonisation capacity of the country. Likewise the

total capacity of sulphuric acid plants built to Simon-Carves design is about half the entire acid production of the country. Apart from the specialities, some of which are shown on the map, Simon-Carves engineers and builds plants based on clients' know-how. At any industrial centre in India, be it Jamshedpur, Burnpur, Durgapur or Ennore, to mention only a few, Simon-Carves is there—helping India attain self-sufficiency.

STANDARD BUILDINGS, 12, DALHOUSIE SQUARE, SOUTH, CALCUTTA 1

Wilson Mayne mentioned last year, and the peculiar problems of tea in Cachar can be dealt with by the banks that can really judge the potentialities of those asking for credit. The plantation industry's problem is really one of levies like agricultural income tax in South India and the transit duties in Assam. The planters also face the prospect of higher wages after awards are made and the whole issue will be soon one of raising income, not of getting loans. The Commodity Boards have not

helped the industry and coffee exports to Europe are compromised by the policy of pool sales without reference either to quality or familiar outlets.

FLOOD CONTROL Need for Fresh Thinking

Flood control has posed one of the most baffling problems for the Government. The recent floods that submerged large areas of South

India and Orissa have furnished a grim reminder of their unflinching seasonal regularity and have also underlined the need for intensifying measures for more effective flood control. It has been claimed that since 1954, the Government of India has approved 877 flood control schemes at a total cost of Rs 53.38 crores exclusive of an allocation of Rs 12.5 crores for the flood control schemes being part of the Kosi project. The schemes included construction of embankments, town protection works, raising the level of villages,

drainage works etc. However, the magnitude of devastation caused by this year's floods in the South and Orissa has been such as to cast doubts on the effectiveness and adequacy of the flood control programme of the Government. There may be some irony in the fact that the South which has been relatively free of floods for long should have been visited by floods this year. This may also possibly explain for the lack of protective measures and the extent of the damage caused by the recent floods. It may further be said in extenuation that a countrywide programme of flood protection is a doubtful proposition at the present time when we have to take into account the financial and resources limitation to the implementation of a thorough-going programme of flood control.

Notwithstanding all these, it will be agreed that a review of the flood control programme of the Government is urgently called for, especially in the light of the recent floods in various parts of the country. In particular, the Third Plan outlay and schemes for flood control may call for revision. The detailed report to be submitted by the State Governments affected by recent floods regarding the causes for the occurrence of floods and the extent of the damage caused may provide the basis for such revision of the flood control programme as may be necessary for ensuring greater protection. While the Third Plan schemes provide for drainage, anti-sea erosion and anti-water logging measures, an important aspect of flood control programme has been brought to light by the floods caused by the overflowing in the Hirakud river in the Orissa State. While the floods that swept the Orissa State are considered to be of an abnormal type, it is now admitted that the extent of the damage could have been avoided by more rational planning of the schemes connected with the construction of the dams over the Hirakud. The original scheme for flood control over the present dam, construction of another dam across the Mahanadi at Tikkerpara. It is now pointed out that if such a dam had been constructed the problem of flood control for Orissa would have been considerably eased. This is only an instance of a problem that has to be tackled over various other parts of the country.

A rise in Bank rate may not be so conspicuous as stiffer indirect taxation, applied suddenly by raising purchase tax, for instance, on cars or refrigerators. The restraint of consumption to help export trade is not a new idea. But the British Government has to think also of encouraging some imports for the sake of larger exports though tobacco, cotton and wine will not qualify. Great Britain's entry into the Common Market may entail some measures to limit private spending, reinforce saving and to bring down prices. If that is not done, some capital may move out of Britain and that is the real reason for anxiety especially if big enterprises prefer to expand abroad in order to reach the German market and to improve their own competitive capacity. The protection of agriculture at home may call, not only for State subsidies, but higher prices from the domestic consumer.

The Treasury is now authorised to deal with a situation mainly to prevent an autumn crisis. Thinking on the political problem in Europe may also acquire a new dimension in the study of the economic aspects of defence. The immediate problem will not be one of letting German machinery in or French aircraft but one of restoring prosperity for shipbuilding, so that Holland or West Germany does not capture foreign orders. The austerity measures in view may not pull down prices and permit Britain to quote lower rates for ships or electric equipment in future. But it will make money cheap and help to finance trade and industry, as generally desired. The question of labour costs must worry the trade unions. The Labour Party has its own programme but nationalisation is not on the cards. The major industries like coal and transport will require new treatment and the British Coal Board may have to put machinery in and also permit Belgian coal to enter under the Common Market arrangements in future. The retreat from protection will have to be undertaken by reducing the home market and it is Mr Lloyd's job to restore the work of Cripps, first by raising taxes, and then by expanding export credits. The Russian exhibition in London will have shown that formidable trade rivals have already emerged and the UK, if it joins the ECM, will have to rely on Europe in the face of competition from Italy and France.

The advent of US capital may help but much really depends on efficiency. Competition in selling to undeveloped countries may also become keener in view of the US plan for an extended alliance in giving economic aid. The export of UK capital must assuredly increase but that too

implies reduced spending at home in order to invest abroad. The oil companies may welcome the prospect, but the makers of TV sets will not. However, the electrical industry in a lean period has undergone some reorganisation by many mergers already. More can be expected.

CANADA

The End of an Affair

Since Mr Coyne as Governor of the Canadian Central Bank provided what is perhaps a Canadian occasion, the outcome of the dispute will demand notice abroad. The Conservative Government brought in a special bill to remove him from office, as Mr Coyne was unwilling to resign. The bill was passed, and Mr Coyne could not count on the support of the Liberal majority in the Senate to continue in office. The resignation anticipated the Liberals' disapproval of the forcing tactics of Mr Fleming who was blamed by Mr Coyne for devaluing the Canadian dollar against the wishes of the experts. That a pact made with the IMF was broken was the gravamen of Mr Coyne's charge. But it is the IMF which must call the Canadian Government to order, not Mr Coyne, who assumed that the Government had erred in its own measures to check the recession. The devaluation undertaken last month is nominal. And Canada by dealing with China in wheat has shown proper independence.

The clash suggests that the Treasury must be supreme and no banking institution can dictate policy to a Government that knows its own mind and retains a majority in Parliament. The Governor is mainly a civil servant, not quite equal to the Auditor-General. The supervision of banking does not really imply control of economic policy and the position held by the Bank of France which in 1937 sapped the Popular Front cabinet led by M. Leon Blum is merely a matter of history. The Bank of France or the 200 Families could stop Government in its trade or wage measures. That was the pre-war position, but conditions have changed greatly, across the Atlantic Ocean also, as Mr Coyne too has discovered by experience. The episode will only suggest that the Opposition could not exploit Mr. Coyne as a political lever against the Diefenbaker cabinet which has to think of the consequences of ECM after Britain's proposed entry, rather than Mr. Coyne's clashes with Mr. Fleming since April. The forced resignation ends the argument as Quebec or Ontario is not going to back Mr Coyne on the score of provincial rights.

PAKISTAN Increase in Industrial Production

With an increase in industrial production of the order of 12.4 per cent during 1960, Pakistan has got off to a flying start in the implementation of the country's Second Five Year Plan. This result, largely of better utilisation of installed capacity, compares with the increase of 11.6 per cent witnessed during 1959. The increase for the two years 1959 and 1960 at 25.5 per cent marks a considerable improvement over the rise of 13.2 per cent for the preceding two years. Official circles in Pakistan have welcomed the rise in industrial production recorded during 1960 as providing a good augury for the fulfilment of the target of 60 per cent increase in industrial production for the entire Second Plan period.

While the 12.4 per cent rise in industrial production marked a record performance by the Pakistan industries, it is to be noted that there were marked quarterly variations in production. While in the first quarter the index shot up to 202.6 from 186.8 in the quarter ending December 1959, the second quarter of 1960 witnessed a decline of the order of 9.1 points reflecting mainly the seasonal contraction in production in certain industries. In the subsequent two quarters the index moved up again by 3.2 and 20 points respectively and the index at 217.2 in the final quarter of 1960 represented an increase of 30.4 points or 16.3 per cent over the corresponding quarter of last year.

The increase in industrial production is shown to have been shared by both the manufacturing and mining sectors. While the index for manufacturing showed a rise of 12.5 per cent to 204.7 during the year, that for mining moved up by 11.0 per cent to 168.7.

What gave such a pronounced impetus to industrial production during 1960 was mainly the complete reorientation of the Pakistan Government's industrial policy which allowed full scope to the private industrial sector for the expansion of its activities. The import policy was also geared to the requirements of increased industrial production. It is also to be mentioned that the last Budget of the Pakistan Government had provided a number of fiscal incentives intended to stimulate industrial production. Most important of these was the lower basic rate of corporate taxes and customs duties on industrial raw materials.

Industry-wise, textiles are revealed to have recorded all round improvement. While the output of cotton yarn rose from 386.8 million lbs to 408.7 million lbs, the pro-

duction of woollen and worsted yarn is shown to have gone up from 5.5 million lbs to 6.4 million lbs. The production of cotton cloth was higher by 1.4 per cent at 628.8 million yards and of art silk fabrics by 34.7 per cent at 26.0 million square yards. The output of jute manufactures at 264,700 tons represented a rise of 13.8 per cent. Notable increases are also claimed for sea salt, cigarettes and vegetables as also for the mining industry and particularly for limestone. Among the industries, which registered decline in production, tea, sugar, and steel ingots were conspicuous.

ELECTRIC FANS

Exports to Aden

A survey of the market for electric fans in Aden undertaken by the Commission for India has brought to light great potentialities for stepping up sales of Indian electric fans in that colony. The most important factors favouring better prospects for sales of Indian electric fans in that area are the hot and humid climate of the place, the existence of a prosperous trading community and high rates of wages. Presently the UK and Hong Kong are the leading exporters of electric fans to Aden. During 1960, the UK exported 2,373 fans to Aden valued at £24,167 while comparable figures for Hong Kong were 3,795 and £29,822. During the same period Indian exports of electric fans to Aden amounted to 1,312 and were valued at £11,440. Japan is also better placed in the matter of exports to Aden and during 1960 accounted for 2,418 fans valued at £14,713. Among all these countries, it is Hong Kong which has been making steady headway in the export of electric fans to Aden. It is worth noting that Hong Kong was able to step up its exports from 692 in 1959 to 3,795 in 1960 mainly through lower prices, and quick and regular deliveries. Japan has also built up its market on the basis of lower prices for its electric fans, and also by offering a wide range of prices to suit the purchasing capacity of the different income groups in the colony of Aden.

In view of the proximity of India to the market in Aden, there would seem to be greater scope for export of Indian electric fans provided the Indian industry could turn out products comparable in quality and price with those of other countries. In respect of price, it is gratifying that some reductions have been effected in the prices of Indian electric fans in recent time. There are also other factors involved in competition with other countries such as regularity in supplies, the attractiveness of packing for fans etc which should not be overlooked from the point of export promotion.

Pan Am gives you the priceless extra of experience...

Pan Am has more million-mile pilots than any other airline

and the most frequent jets from Europe to the U.S.A.!

Choose Pan Am... relax with the world's most experienced airline

When you fly Pan American, you're in the world's most experienced jet hands. Pan Am's hospitality and courteous, efficient service are sure to make your trip an enjoyable and memorable one.

Pan Am has carried over thirty million passengers during its 33 years of international flying. Pan Am Jets can now take you to any of 84 cities on all 6 continents.

This year, Pan Am offers the most frequent jet service between Europe and the U.S.A. By this summer there will be 72 Pan Am Jets a week

—serving 21 cities in Europe... 11 in the United States. Your choice of first-class *President Special* or low-fare *Rainbow Economy Service* on every flight.

For reservations see your Travel Agent or call your nearest Pan Am office in

The Conservative Party is being disciplined and the ideas of the Cabinet are being pressed home. The current economic trend causes anxiety and to avoid devaluation of sterling remedies are being canvassed.

CINEMA

The Lost Week-End

A quiet week-end was enjoined on Calcutta by the strike of cinema employees. The loss arising is not merely that of Government or of the film distributors. It is that of employees also who asked only for minimum wages. It is a peculiarity of the film industry and the trade that rewards at the top are enormous, while the vast majority of workers are ground down by low pay and high prices. The Government in asking for minimum wages did not go out of its way to impose burdens. That many theatres have agreed to pay and could remain open during the strike proves only that the others were not unwilling to share rising prosperity with their employees. The contest may seem unequal, but the money power has not proved decisive. The Tribunal's awards in Madras have not led to bonuses but have ensured overtime pay for cinema employees who have to work harder on holidays, in contrast to those who enjoy leisure in the cinema. Strikes have occurred in cinemas before but a large scale shut-down has been rare though it took place after due notice in Calcutta. The cinemas cannot make up for time lost for what is offered as entertainment is ephemeral, shadows perhaps with sound added. And the capitalists too may be aware that polite ushers add to the pleasure of patrons. The simultaneous closure of suburban houses also deprived the employers of

making any money on the side and the obvious lesson may be that Greater Calcutta is an economic entity and the Government is not induced to back the owners who have been told that box-office clerks require a living wage to maintain normal efficiency. The contrast between theatres showing English films and the houses that show Indian films may not be a great point, but it is evident that some theatres saw reason betimes. The takings of taxis, buses and trams too may have suffered through the strike which was an indication that even the weaker sections of the working class can rely today on direct action to ensure essential concessions.

TELCO All Round Progress

The speech of Mr J. R. D. Tata, Chairman of the Tata Engineering and Locomotive Co Ltd, on the occasion of the annual general meeting of the Company this week, provides an insight into the important features of the working of the Telco during last year. The most important point stressed by Mr Tata was the maturity attained by the Telco in the several sectors of its manufacture. In this connection, Mr Tata referred to the leading position occupied by the Tata-Mercedes-Benz in the automobile industry and the expiry of the agreement between the Telco and the Railway Board for the purchase by the latter of the locomotives manufactured by the

Telco. The Governmental protection accorded by the commitment to purchase the Telco locomotives was the sole factor behind the development of locomotive production at the Telco. That the Telco should now be in a position to meet the Railway Board's requirements of steam locomotives at a price cheaper than any the Railways could get elsewhere should be reckoned an achievement justifying the earlier protection granted to locomotive manufacture at the Telco.

The popularity achieved by the Tata-Mercedes-Benz is a point for mention in the working of the Automobile Division of the Telco. Mr Tata has referred to the short-fall in production capacity in relation to demand and the expansion schemes this has entailed. It has been stated that the expansion plans now approved by the Government will double the rate of output and will take nearly 3½ years for completion during which period production and the percentage of indigenous contents would be progressively increased each year.

Mr Tata left no doubt about the all round progress made by the Company during the last year in production, sales and profits. It was revealed that gross profits during the year were Rs 1,10.41 lakhs higher than in the previous year, and after provision for depreciation, development rebate reserve and taxation, the dividend on ordinary shares is 18 per cent higher than in the previous year. While highlighting this performance, Mr Tata also underlined the many benefits that have accrued to the national economy

as a result of the working of the Telco. Among these he included the production of Rs 33 crores worth of transport equipment of the highest quality, the provision of direct employment to 13,000 men and women, the earnings of Rs 4 crores that accrued to them in the form of wages and bonuses and the revenue of Rs 7 crores to the Government by way of taxes and duties. The record of performance and benefits conferred is such as to lend point to Mr Tata's observation regarding Telco being an example of what private enterprise properly organised and financed and provided with the necessary scope for initiative can do for the country in its plans of industrial development.

An important feature of working of the Telco during last year was the increasing extent to which it has been making plants and equipments for its own use. The Telco has developed manufacturing capacity for a number of items including special machine tools, materials handling equipments, presses, furnaces cranes etc. The project for the manufacture of heavy excavators is also reported to have got into its stride.

CORRIGENDUM

In the Balance Sheet of the Punjab National Bank Limited, for the year ending 31st December, 1960 appearing in Indian Finance issue dated 15th April, 1961 on page No 659, under Capital & Liabilities item: No 6 (4) payable in India, the amount should be Rs 12,15,84,291.53 instead of Rs 12,15,24,291.53.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

WINSTON Churchill once referred exasperatedly to the Soviet Union as a riddle wrapped in mystery inside an enigma. And yet part at least of the bafflement arises from our morbid absorption in every act of the Soviet Union, however trivial. We are rather like the hypochondriac who takes his temperature every third minute and draws conclusions about the improvement or deterioration in his health. If Mr Khrushchev is rude and unpleasant at a party, people tend to conclude that the cold war is hotting up. If, on the other hand, he is charming and gets himself photographed hugging little girls, everybody relaxes. Even if we are to assume that the Soviet leader has no personal frustrations to work off or personal inadequacies to get compensated, he must, like politicians elsewhere, have problems that have nothing to do with a desire to make Mr Kennedy lose his sleep. A Dutch cartoon reprinted in the New York Times Weekly shows Mr Khrushchev, his foot enchained by Stalinism and his back weighed down with assorted burdens like Mao, Agriculture, Armament, Titoism, and Berlin saying with a grin, "Look at Kennedy perspiring under his burden!" Even as he is getting tough with the West over Berlin, evidence of his quarrels with Mao coming to a boil is piling up. It is possible to read too much into these ideological sparrings. But the friction between the Byzantine version of communism as preached in Peking and the other kind in Moscow that tries to come to terms with the reality around is daily becoming more and more obvious. Isaac Deutscher's recent article in the London Sunday Times has referred to a letter written by Mr Khrushchev to fraternal parties in other countries accusing Mao of "disloyalty, subversive agitation, and incitement to world war." Whether the particular document is genuine or forged, there is no getting away from other evidence of the fact that China regards Khrushchev's theory of co-existence as dangerous heresy. There have been some other recent indications of friction between the two. Russia's ostentatious notice of the fourteenth congress of the Outer Mongolian Communist Party was in marked contrast to the lack of ardour with which the fortieth congress of the Chinese Communist Party was treated in the Soviet Press. (This fact gains edge because of the equivocal historical

status of Outer Mongolia as a separate entity). Again, the Soviet trade ministry has suddenly thought it expedient to inform the public that China owed 300 million dollars to the Soviet Union in consequence of failure to meet export commitments. There are signs of polarisation within the communist world, in which Albania alone is conspicuously on the side of China—a fact underlined by the Soviet Union's recent giving up of a submarine base it had long maintained there. These and other facts do certainly point to a family quarrel of major significance, but they are not of a kind that lend themselves as foundations for hopes of an early disintegration of the communist bloc. For both China and Russia must be knowing that an open break between them will be the end of world communism of either kind. Indeed, it is the hope of this happening that lends an element of wishful thinking to much western speculation of an imminent ideological showdown between the two.

I have not yet seen a copy of the sample survey of reading habits in India made by the National Sample Survey Organisation, but Professor Madhava has recently discussed its findings in an extremely interesting article in the Hindu. The period covered is September 1957 to May 1958 and Professor Madhava, who ought to know, assures that every technical care has been taken to ensure a high degree of reliability for the findings recorded. Sampling was done of 7,417 reading households (i.e. households that contains in each at least one person who generally reads books of general interest other than text books, newspapers etc) comprising 42,102 persons of whom 12,808 were literates (i.e. persons who can read in at least one language.) The proportion of such households in rural areas was 4.4 per cent and in urban areas 11.4 per cent. This finding, depressing in all conscience, is even more saddening when you discover that of the readers thus defined only two-thirds in the villages and three-fourths in the towns are "habitual readers" (i.e. persons who read one book of not less than 100 pages in the course of a month.) I must add that, in strict accuracy, the last set of figures relate to readers in their mother tongues. But I think it is safe to presume that most readers

in India are readers in their mother tongues, though this may not be true of readers in the city. Professor Madhava also draws the interesting conclusion that people whose mother tongue is Bengali, Malayalam and Punjabi—Tamil is curiously absent in this list—"read a good deal in (sic) other languages than in their own mother tongues." The finding that Hindi books are not very popular among non-Hindi speakers does not come as a surprise, though the relative preference between English and Hindi is surprisingly low in favour of English. The report is quoted as saying that in "the urban sector among persons whose mother tongue is not Hindi, there are roughly two readers in English for every reader in Hindi." My own impression is that non-Hindi readers (in the sense defined) of Hindi books (in the sense defined) are much smaller in number and non-Hindi readers of English books (in the same sense) are far larger than implied by the above finding.

Figures of book-buying among the public are also very unflattering. 100 average rural households buy 72 books in their mother tongues, 36 in Hindi (of which 29 are by speakers of Hindi) and 25 books in English in three months. The corresponding figures for the cities are 90, 38 (of which 27 are by speakers of Hindi) and 51 respectively. Books borrowed averaged for all languages 535 for the rural areas and 932 for the urban areas. Besides books bought and borrowed, there is a third interesting category of "books otherwise obtained." In this category is presumably included persons of whom I have some personal experience—those who borrow books and forget to return them. They average two in the rural sector and thirteen in the urban sector. (No doubt, the thirteenth man is my "friend" who borrowed my Shaw's prefaces and forgot to return it.) A rather interesting fact—to which also I can personally testify—revealed by the survey is that the Tamils are inveterate borrowers and obtainers of books otherwise. Preferences among the various genres of books revealed by the survey confirm general impressions. "The Novel or some kind of fiction" is the most common choice and "religion" has as many adherents in the rural sector and about half as many in the urban sector. This would not have been true even twenty years ago, especially the relative importance of religion and fiction. This is a sociological phenomenon of some significance. The consolations of faith are apparently yielding place to those of the candy-floss world of make-believe.

I have always felt there was an element of hypocrisy in the claim of the "po papers" that the jury verdict Regina Vs Penguin Books Ltd established that, when it came literary propriety, the stout British heart was in the right place as sound British commonsense would assert itself. I sometimes wonder what the result would have been if the twelve good men and true (actually there were nine men and three women) were not intimidated by the most massive mobilisation of literary opinion in judicial history. In his book on the trial, Mr C. H. Rolph himself partially concedes this. He says: "they (the jury) may have found themselves outmatched by the thirty-five experts some of whom they had seen on the television... It is rather difficult to see, in the case of a man who knows himself to have no literary judgment, what else he can do; and futile to tell such jurymen, at least, that you alone are the judge, as if the opinion of the experts were a kind of side-show put on to relieve the tedium." Be that as it may, there has been more recent evidence of the level at which the British Public, as represented by the readership of the popular papers, normally weighs these matters. The Sunday Pictorial—The Sunday version of the Daily Mirror, ("largest circulation in the Universe") is currently editing its readers with a new masterpiece: Lady Chatterley's Daughter. The first instalment is such that I simply can't wait for what is to follow. Let me quote Francis Williams, in his column on the Fleet Street in the New Statesman: "This literary sensation... introduces us to the daughter of Lady Chatterley and Mellors in the somewhat inappropriate guise of a 'calf and lovely nurse' who avoids 'the company of any man she discovers has (sex) as his object.' However, when we leave her at the end of the first instalment, after a passionate, if accidental, embrace from a wounded soldier ('pull yourself together, Mellors' she told herself), it seems likely that all those nights in the woodshed will assert themselves before many issues of the Sunday Pictorial are out." I now ask you how a public that apparently laps up this kind of thing could ever have understood what Richard Hoggart meant when he said in his evidence that Lady Chatterley's Lover was puritanical and the opposite of obscene. I don't want to be misunderstood. I consider the eventual jury verdict as entirely sensible. All I question is the claim of a popular imprimatur on the book on literary and rational grounds. Indeed, I cannot see how a country that allows the sort of rubbish like Lady Chatterley's Daughter to be read by all and sundry can dare ban a book that deals with human relationship with such subtlety and imagination as Lady Chatterley's Lover. GOVERNMENT OF INDIA

**3½ per cent Bonds 1960 ISSUE PRICE Rs. 98.40 PER
Rs. 100 (NOMINAL). REPAYABLE ON 1st of July 1969.**

**4 per cent Loan 1961 ISSUE PRICE Rs. 98.50 PER
Rs. 100 (NOMINAL). REPAYABLE ON 24th of July 1961.**

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 100 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 2½ per cent Loan 1961 or 3 per cent Hyderabad Loan 1951-61 which will be accepted for conversion at par.

Interest on the securities tendered for conversion will be paid upto 31st July, 1961 inclusive.

The new bonds and loan will bear interest from 24th of July, 1961. Interest on the bonds will be paid on 1st January, 1962 for the period 24th of July, 1961 to 31st of December, 1961 and thereafter half-yearly on 1st of July and 1st of January. In case of the loan interest will be paid half-yearly on the 24th of January and 24th of July.

Subscription lists will open on 24th July, 1961 and close on 26th July, 1961 or earlier without notice.

Applications for the bonds and loan will be received at:—

(a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;

(b) Branches of the State Bank of Hyderabad conducting Government work, and those at Bhainsa, Jaggaipet, Mancherial, Nagarjunasagar and Sirpur Kagaznagar in Andhra Pradesh, Manwath, Fuli-Vajinath and Salu in Maharashtra State and Shahabad in Mysore State.

(c) Branches of the State Bank of Mysore in the State of Mysore except those at Bangalore, Mangalore and Gulbarga; and

(d) Branches of the State Bank of India at Mangalore and at other places in India, except at the places specified in (a), (b) and (c) above.

For full particulars please apply to any of these offices, branches or treasuries.

Olympus

COMMON MARKET Inconclusive Parleys

NEITHER the formal communications issued from New Delhi, on Mr Thorneycroft's discussions with representatives of Government and Business nor his candid and forthcoming answers at last Friday's press conference provide a firm basis for assessment of the prospects of Britain joining the Common Market or of the consequences for India's exports if the British Government takes a positive decision. The latest indications only add to the uncertainty. Though Mr Thorneycroft did not attempt to disguise his own preferences, he also emphasised that a decision has yet to be taken, and that a decision either way was fraught with serious difficulties. Nevertheless many experienced commentators appear to have drawn the conclusion that an informal decision on principle had already been taken by the British Cabinet before Mr Thorneycroft and his two colleagues set out on their tour of the Commonwealth. If that is correct and if the mission of British Ministers to Commonwealth countries was one of persuasion rather than of consultation, Mr Thorneycroft had an easier task than either Mr Sandys or Mr Hare.

Government of India had already taken the position that a decision on the question was entirely a matter for Britain. This has been reiterated in the communications issued from New Delhi as well as those from Melbourne and Wellington, incidentally disposing of the claim that a Commonwealth Prime Ministers' Conference should have a say in the matter. Government representatives have however discussed with the British Mission the repercussions on India's trade if Britain were to join the Common Market without securing agreement on special measures necessary to safeguard it.

India's case has been presented with greater fervour by the delegations of the FICCI and the ACC who also met Mr Thorneycroft after the conclusion of the official discussions. On this point Mr Thorneycroft had little to offer except the vague assurance that the interests of India would be kept fully in mind in any negotiation for entry into the EEC. At his press conference he also emphasised the

with a Common Market of which Britain will be a member. While Britain could not possibly join the Common Market without accepting its basic principles, he has also made clear that Britain's influence will be exerted towards turning it into an 'outward-looking' body. In fact, prospects of success in that direction would be one of the major considerations determining the British Government's decision in the matter.

The discussions have brought to light a new risk that Indian exports may have to face if there is differentiation as between Commonwealth countries in the application of safeguards, as for instance, treating some countries as 'overseas territories' entitled to tariff-free entry for their goods into the Common Market. Mr Thorneycroft is understood to have assured the FICCI delegation that, while it may be necessary to consider special arrangements to safeguard the vulnerable economies of countries which depended on the export of one or two primary commodities, any safeguards would be applied on a commodity-wise basis, so that the same safeguards would be available to other Commonwealth countries exporting these commodities.

The estimates of the loss that Indian exports may suffer consequent on Britain's entry into the Common Market vary from Rs 30 to Rs 40 crores. However, a firm estimate cannot be made without knowing more about the conditions on which Britain finds it possible to gain admission to the EEC. But, as far as India is concerned, it should not be necessary to wait for that to take the necessary measures for diversifying our exports and export markets. The compulsion to do so exists, irrespective of what action Britain may take in regard to the Common Market.

The aluminium cable manufacturers who had made representations to Government regarding their difficulties are now assured of adequate supplies of raw materials at least in so far as aluminium is concerned. In making allocations of this metal, the Ministry of Commerce and Industry, it is learnt, have been giving the highest priority to the requirements of ACSR and AAC manufacturers. Less than one-fourth of the requirements of conductor grade aluminium is met from indigenous production. Licences for import of the balance are allocated on a half-yearly basis.

Half-yearly allocations in the past have averaged about Rs 1,67

lakhs of which Rs 1,37 lakhs was for import from Canada under the Colombo Plan and Rs 30 lakhs for imports from other sources. The original allocation for the current half year (April-September 1961) was Rs 1,30 lakhs under Colombo Plan and Rs 38 lakhs against DLF credits. This has been subsequently increased by Rs 112 lakhs (Rs 90 lakhs under DLF and Rs 20 lakhs under Colombo Plan). The increased allocation, it is expected, will ensure a supply of 12,000 tons of imported metal for the half-year, which, together with indigenous supplies, should enable the industry to make full use of installed capacity.

The production programme for electrical grade aluminium envisages increase in output from 5,000 tons in 1960 to 8,600 tons in 1962, ten thousand tons in 1963 and fifteen thousand tons in 1964. But the capacity of the conductors industry, according to the estimates of the manufacturers, will be 44,000 tons by that date, so that the necessity for imports will continue throughout the Plan period, and at a far higher level than the Tariff Commission's estimate of 10,000 tons per year.

The Planning Commission is understood to have agreed to an upward revision of the overall target of aluminium production to 88,000 tons for 1966, on the basis of proposals already included in the Plan. In addition, it is learnt that proposals for expansion of the capacity of the Rihand factory and for establishment of a new unit in the Sharavati area by a Bombay industrialist are under scrutiny.

Between the inauguration of an Institution with all the attendant hoopla and the start of actual work, the interval, in this country, is usually long enough to enable the public to forget its existence. Or the public's teeth are set on edge by constant tales of teething troubles. The Indian Investment Centre has however made a welcome break with this dreary tradition. The Centre, it may be recalled, was inaugurated last February and immediately got down to work. The main office in New Delhi which was set up last April is now not only fully equipped for its work, but is also in a position to report on work actually accomplished. This was done by Mr G. L. Mehta at a news conference last week, when he explained the progress made during the first three months of working.

It was encouraging to learn that a large number of Indian and foreign entrepreneurs have already approached the Centre for information as well as for the formulation of terms of technical and financial participation. Among those who have asked for information are some very prominent foreign firms. The Indian industrialists who have approached the Centre include big as well as medium and small-scale firms. The main purpose of the Centre,

Mr Mehta pointed out, is to help the medium and small unit which, unlike big firms, do not command the facilities for establishing direct contact with foreign collaborators.

So far the Centre has received about fifty proposals of which about 25 have been formulated and of these ten have already been sent abroad to the Centre's representatives who will approach the parties on the Centre's panel for technical collaboration or financial participation, as the case may be. The wide range of proposals is matter for satisfaction when viewed against the prospect of offers of development on a broad front. The industries covered by the proposals include Alloy and Tool Steel, Cast Iron Pipes, Steel Tubes, Malleable Castings, Industrial Ceramics, Paper and Pulp, Automobile Tyres and Tubes, Fine Chemicals, Machine Tools, Hand Tools, Scientific Glassware and Plastics. The financial participation involved varies from \$2,00,000 to over two million dollars.

Inquiries from foreign industrialists are at present received by the Centre through representatives of the firms who happen to be visiting this country. But the Centre has plans for establishing branches abroad, and especially in New York and in Tokyo. The only obstacle to their immediate establishment is shortage of foreign exchange. But an institution which is intended to prospect for foreign collaboration to speed up development of the country, should not be hampered in its work for this reason. When the branches are established in the major capital exporting centres, it is reasonable to look forward to rapid growth of the constructive activities of the Centre. Even as it is, the type of enquiries received are very encouraging. Some very prominent industrial companies from the United States are understood to have approached the Centre with interesting long-term plans. These inquiries range over important industries like Basic Chemicals, Construction Equipment, Industrial Ceramics, Steel Tubes, Electrical Equipment, Pharmaceutical and Drug Industries, as well as Processed Foods.

The Centre's activities will not however be limited to securing collaboration from the United States. It will also be extending its activities to Europe and to Japan. Nor is the Centre's interest confined to proposals seeking foreign collaboration. It is also prepared to assist few entrants to business who do not seek foreign collaboration, but need guidance in setting up their business.

Apart from providing information to Indian and foreign investors on Government policies, laws and regulations, the Centre has also to process the applications for technical or financial collaboration. The success of the Centre in its two-fold task obviously depends on the calibre of its technical staff.

Tata Engineering & Locomotive Co., Ltd.

Statement of the Chairman Shri J. R. D. Tata

THE following is the statement of Shri. J. R. D. Tata, Chairman of Tata Engineering & Locomotive Co. Ltd. for the year 1960-61:

The year that has passed has been a good one for this Company. As shareholders will see from the attached Report and Accounts, we made all round progress in production, in sales and in profits.

2. The Company's performance in the past year has brought substantial benefits to many sectors of the economy. The rail and road transport industries were provided with Rs. 33 crores worth of Indian made transport equipment of the highest quality and performance; 13,000 men and women were provided direct employment and earned from us over Rs. 4 crores in wages and bonuses. The Company paid Rs. 7.7 crores in taxes and duties.

3. Ordinary shareholders, assuming they approve of the Directors' recommendation, will have received Rs. 1.16 crores as dividends and added Rs. 3.92 crores to their assets.

4. In addition to the above benefits, which can be expressed in money terms, we made intangible, but not less real, contributions to the nation's economic development: for instance, in the training and additional experience imparted to our staff at various levels, in the continued building up of the managerial and technological skills of our organisation; in the stimulus which our operations will have given to the development of ancillary industries and to road transport.

5. The results we have achieved and the manner in which we have conducted our affairs in the past year demonstrate what private enterprise, properly organised and financed and given the necessary scope for initiative, can do for the country in its plans of industrial development.

6. It should be noted that it took the Company some fifteen years of hard work to achieve its present stage of maturity and efficiency. There is a tendency in our country to believe that the establishment of new industries requires little more than the provision of the necessary buildings, plant and equipment, and to criticise the lack of immediate results. We have ourselves had our share of such criticism. Enterprises such as ours are not, however, made up merely of buildings and machines. These are the mere bones of industry; the flesh, muscles, blood and nerves essential to productive effort, which in industry are represented by materials and money, management and staff, take nearly as long to build

up as it takes for a child to develop into a grown and productive human being. Productivity and efficiency can be achieved only step by step with sustained hard work, relentless attention to details and insistence on the highest standards of quality and performance. I trust that this important aspect of industrial growth will not be ignored in the implementation of the great plans of industrial development on which the country has embarked.

7. Now that the Company has reached maturity, by which I mean not only the ability to pay its way but also the capacity for self sustaining growth, I would like to thank the shareholders for their support and continued confidence during the ten weary years they waited for a dividend. When so much is so often said with so little understanding about the inadequacies of private enterprise and the inequities of the profit motive. I trust the record of this Company will not be overlooked nor the fact that its shareholders and management bore with patience this long period of waiting for some return on their investment of money and effort.

8. I would, on your behalf, also like to thank all those responsible for the Company's progress over these past fifteen years; our workers and staff at Jamshedpur and elsewhere for the skills and productivity they have acquired (I am glad that they are now getting tangible evidence of the value of the training and experience they have been given in the Company's employment and the opportunities available to them for advancement and higher standards of life); the supervisory staff, and particularly the higher echelons of management, for the unremitting and at times thankless work they have put in; our past General Managers who laid the foundations for the present progress of the Company; Mr. da Costa, our present General Manager; Mr. Stoehr, head of our Automobile Division, who has been mainly responsible for building up this Division to its present high state of efficiency and productivity; Mr. Broacha, head of our construction and engineering activities; and finally our technical associates, Messrs. Daimler-Benz, Krauss-Maffei, Henricot, Harnischfeger, and Johnsons for their invaluable assistance in our various projects.

9. Our thanks are also due in no small measure to the Ministry of Commerce & Industry, particularly the Development Wing of the Ministry, for their realistic and constructive policies and sound decisions on the problems of the Automobile Industry.

10. Very much against his own wish, I must also mention my

colleague, Mr. Moolgaokar, Director-in-Charge of the Company, who, through the dedicated application of his outstanding technical and managerial talents and an immense capacity for work, has contributed more than any other single person to the growth, efficiency and success of the Company.

Profits and Appropriations

11. As you will see from the Directors' Report and Accounts, the gross profits accruing from the past year's operations were Rs. 110.44 lakhs higher than in the previous year. After providing an additional Rs. 19.33 lakhs for depreciation, Rs. 30.84 lakhs for development rebate reserve, and Rs. 28.93 lakhs for taxation, the Directors were able to recommend an increase of 16% over the previous year in the rate of distribution on ordinary shares which, if approved by you, will be Rs. 14.50 gross or Rs. 10.15 tax-free per share, subject to tax relief under Section 15C of the Income Tax Act. In order to ensure that the shareholders obtain the full benefit of such relief, a part of the dividends on ordinary shares will be paid out of the undistributed balance of 15C profits earned in previous years and the whole of such 15C profits earned in the year under report. As a result of this treatment of appropriations and dividends, the tax on dividends borne by the shareholders will be reduced from 30% to 21.9%, subject to finalization by the Income Tax authorities.

Automobile Division

12. As in the past year, the operations of the Automobile Division produced the bulk of revenues and profits. Tata-Mercedes-Benz vehicles have maintained and in fact further enhanced their leadership in the industry, and the demand for our vehicles continues greatly to exceed our capacity to produce them even after expanding our output to 1000 units a month. I mentioned to you last year, that in order to meet this unsatisfied demand, we had decided to embark on a further scheme of expansion of our capacity intended to double once again our rate of output. I am glad to report that our proposals have been approved by the Government of India and that the necessary initial steps have already been taken to implement this important project which is estimated to cost about Rs. 18 crores, including its share of the expansion of capacity for castings, forgings and other components. It is planned to complete the programme over a period of about three and a half years during which production and the percentage of indigenous content will be progressively increased each year.

13. In my statement I discussed at some length a project for an economy car regard to which we had put forward to Government proposals for the manufacture of the DKV Junior under licence from Messrs. Auto-Union, an associate company of Messrs. Daimler-Benz. Nothing has come of this scheme nor is it likely to materialise in the future as the Government of India seem to have decided, on grounds which are yet to be justified publicly, to manufacture such a car themselves. It remains to be seen whether the public will in due course get from the Government project a good durable and economical small car at a price anywhere near Rs. 5,000 or Rs. 5,500 as indicated by Government.

Locomotives

14. On the expiry of the sixteen year agreement between the Railway Board and the Company in May, 1961, the Railway Board's obligation to place regular order for locomotives on the Company and the Company's obligation to supply them, have come to an end. Although this agreement caused headaches to both sides and brought us hardly any profit, we may be grateful for the part it played in enabling the Company to come into existence and to create the initial industrial base from which we developed into other more profitable fields making possible our subsequent progress. We are grateful to the Railway Board for the support extended to us during the last sixteen years.

15. Although we are no longer legally obliged to supply locomotives to the Railway Board, we have readily agreed to meet their further requirements on an ad hoc basis and have received orders for the supply of about sixty-five locomotives a year on an average for the next five years, at a price which, while yielding us only a very small profit, will enable the country to secure its requirements of metre-gauge steam locomotives more cheaply than, we believe, the Railways could secure from any other source.

Tata-P&H Excavators

16. Since I reported to you last year, the project for the manufacture of excavators and similar equipment under licence from Messrs. Harnischfeger of Milwaukee, U.S.A., has got into its stride and is being energetically pursued. Subject to the availability of foreign exchange, the shortage of which, incidentally, was responsible for delaying the start of the project, we shall be in regular production of these heavy machines essential to the

struction and other industries. Initial batch of twenty 2 1/2 hp yard power shovels has been put into production. Although, naturally, the number of units manufactured initially will be relatively small, I believe that the Tata-P&H power shovels, cranes and similar machines will establish for themselves the same high reputation for performance and quality as has characterised our Tata-Mercedes-Benz trucks and buses. **Manufacture of Plant & Equipment**

17. An important activity of the Company which has grown considerably in the last year and which is not specifically reflected in the Directors' Report or Accounts, is the increasing extent to which we have been making plant and equipment for our own use. Amongst such items may be mentioned special machine tools, materials handling equipment, presses, furnaces, cranes, etc. This development is of great value, both to ourselves and to the country. It assists development of design talent, enables expansion activities to be better co-ordinated, and not only reduces capital expenditure but also saves a good deal of foreign exchange of which, as you know, there is a critical dearth today.

18. I have little further to add to the Directors' Report and the annexed Accounts which give a clear picture of our operations during the past year. We can, I think, view the future with sober confidence in our ability to surmount such obstacles and difficulties as we may find on our road to further growth and achievement. I can safely assure you that with the equipment, the financial and human resources, the knowledge and experience now at our disposal, and given reasonable freedom of initiative and action, we should do at least as well, if not better than any similarly placed enterprise in the country, and in the process satisfy some of the most vital needs of the country as well as the legitimate aspirations of the shareholders.

19. In closing, I wish on behalf of the Directors and yourselves, to refer to the great loss suffered by the Company, the industrial and business community, and the country as a whole by the death of Sir Purshotamdas Thakurdas on the 4th of July, 1961. A man of outstanding intellect and ability and unrivalled experience of business and industry, Sir Purshotamdas has rendered valuable services to the Company of which he had been a Director since its inception.

20. The Directors have placed on record their sorrow at the passing of Sir Purshotamdas, and I am sure you will wish to join them in conveying our deepest condolences to Lady Thakurdas and other members of the family.

J. R. D. TATA
Chairman

Markets

JUTE

Prices Improve on fresh Buying

Interest in the jute markets is now centred on the prospects for further block closures of jute mills. It is reported that the Indian Jute Mills Association now thinks that it will be necessary to have block closures for a period of a week each in August and September. Indications are that the supply position in raw jute will not show any marked improvement till late in the month of September. Arrivals upto now are meagre and there is a consensus that almost all old crop jute has already reached the markets. New crop jute has no doubt started arriving but the quantities are still small to make any appreciable difference to the total availability of the fibre. It is not doubted that the new crop is going to be a bumper one but many believe that it will take some weeks still for the crop to move into the market in bulk. It is explained that there has not been adequate retting water in some regions and the floods in Assam will further delay the movement of the crop. It is however admitted that the outlook for supplies some two months hence is quite good. While the licences issued for the import of 1 lakh bales of cuttings from Pakistan, if supplies become available from Pakistan very soon, will go some way toward improving the supply position, much larger quantities will be required to fill the gap between supply and demand if the industry is to avert further closures.

It is believed that the question of a third closure will come up for discussion at Friday's meeting in New Delhi between the representatives of the IJMA and the officials of the Union Ministry of Commerce and Industry. Indications available in Calcutta however go to show that to get the approval of the State Government for a third closure is going to be very difficult if not impossible. Actually there was a strong rumour in the market on Tuesday that a third closure would not materialise leading to heavy selling pressure in the forward market.

The steadiness of the jute goods market noticeable around mid-week is presumably due to reports of fresh business both in sackings and hessian. It was reported on Monday that there were inquiries from Argentina for early delivery hessian. This coupled with the persistent rumour that the IJMA was asking for two more closures in the course of the next two months imparted a firm trend to the market. The figures pertaining to despatches of jute goods from mills during June 1961 released on Monday also show that in spite of the higher prices ruling during that month despatches have been higher. Despatches for export have recorded a rise to 59,860 tons as compared with 52,900 tons in the previous month. Of this total hessian accounted for 27,500 tons as compared with 19,600 tons in the previous month. Despatches for export of sackings were lower at 22,100 tons compared with 23,800 tons in May 1961 while those of other varieties were slightly higher at 10,200 tons. Despatches for local consumption were lower at 21,900

tons comprising 2,500 tons of hessian, 16,700 tons sackings and 2,700 tons other varieties. Total despatches were thus 81,700 tons as compared with 78,700 tons in the previous month.

Encouraged by the trend of exports in June, improved enquiries during the early part of the week and the prospect for further block closure of mills, operators ignored the bearish influence from the burlap consumption figures for the month of June. Consumption of burlap during June in the US declined further to 55 million yards from 57.4 million yards in the previous month. The fact that during the corresponding month of last year consumption totalled 70.5 million yards gives an idea of the fall in consumption. Stocks showed a slight increase at 220 million yards. These figures clearly show that the US consumer is still not prepared to buy his requirements in full and the obvious reason for his reluctance is the present high price.

TEA

Continued Demand

In the Export Sale held in Calcutta this week, offerings were 29,422 packages. There was again a strong and general demand. Orthodox descriptions met with keen competition and were generally fully firm to dearer with quality. Improved BOPs were a strong feature.

Better liquoring CTCs again found ready buyers at slightly easier rates and this trend was also general for the medium descriptions. The poorer fibrous kinds were, however, fully firm. The few leg-cut teas on offer, were generally sold at above last rates.

Darjeeling teas continued to move with useful support; but prices were

irregular with quality. The few flavoured teas, on offer, were sold at appreciably dearer rates. Stylish whole leaf grades were strong and tended dearer. There was also active support for Tippy types and these were often appreciably dearer. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.25 to Rs 5.35; Plain BP Rs 4.85 to Rs 4.95; Plain Fannings Rs 4.70 to Rs 4.80; Medium Assam CTC BP Rs 6.40 to Rs 6.80; Medium Assam CTC Fannings Rs 6.50 to Rs 7.00; Best Assam CTC BP Rs 7.50 to Rs 7.80 and Best Assam CTC Fannings Rs 7.50 to Rs 8.20.

In the Internal Sale, offerings were 13,995 packages of Dusts. There was once again a strong and general demand. Medium CTC types opened on an irregular note, but strengthened as the sale progressed and they were often taken up at 30 nP to 40 nP above last rates. The good CTC types were, however, a little irregular although the smaller varieties received useful support.

Orthodox dusts came in for keen competition with the smaller and brighter lines selling well. Legg-cut dusts with improving quality were sold at much dearer rates, while the few thin plain teas were irregular. Following rates were quoted:—Plain Orthodox Dust Rs 4.45 to Rs 4.70; Medium Assam Dust Rs 4.60 to Rs 5.30; Legg-cut Dust Rs 4.80 to Rs 5.50; Medium Assam Dust CTC Dust Rs 6.40 to Rs 6.70 and Good Assam CTC Dust Rs 6.80 to Rs 7.20. Also, 67 packages of Leaf grades were offered and these were sold at irregular rates.

Ceylon has almost lost two big tea markets, which have been fetching a total income of Rs 6.70 crores annually. The United Arab Republic has halted purchase of Ceylon tea, while Iran has banned tea imports from Ceylon. Iran has been buying Rs 4 crores worth of Ceylon tea a year. Today, Ceylon is only selling small quantities of tea to merchants of Syria.

Total exports from Ceylon, in the first four months of the current year, were lower at 130.52 million pounds as against 135.63 million pounds in the corresponding period of last year. The short-fall was due to lower off takes by the UK, the USA, Australia and Africa, the important outlets for Ceylonese tea.

In the Cochín market, offerings were 290,000 kilogrammes of tea dusts for internal consumption. Against strong demand, residuals and low medium sorts were 15 nP to 20 nP per kilo dearer, while mediums and good mediums were 10 nP to 15 nP higher. High-grown teas were irregular, but fully firm. Unorthodox types were slightly dearer.

Among the main features of Pakistan's tea policy for 1960-61 are the earmarking of 45 million pounds of tea for internal consumption out of an expected total production of 57 million pounds with a generous export quota fixed for the balance of 12 million pounds. The new policy continues to maintain quotas for buyers at the tea auction, so that there is no monopolistic tendency in the form of a few buyers cornering the bulk of tea supplies.

Producers have the right to withdraw teas from auction if the price

offered is in their opinion unreasonable although the Government has fixed the prices for various grades and qualities produced. The producers may also sell up to 10 per cent of their production or 10,000 pounds, whichever being less, directly to the purchasers. There has been no change in the excise and export duties, which remain at 62 nP and 37 nP a pound respectively.

In London auction, good general demand was noticed for Ceylon teas with prices showing little change, while a dearer tendency was seen for BOP Fannings and coloury medium BPs. Competition for South Indian growths was only fair and values turned easier. North Indian and other miscellaneous growths found a quieter market. Stocks in London, as on 7 July, were slightly higher at 138.10 million pounds as against 137.90 million pounds in the previous week.

COTTON

Trading in ICC March Commences

A significant development in the cotton market in Bombay during the past week was the commencement of trading in the new crop contract ICC Jarilla March 1962 on a cheerful note on 13 July. The new contract came on the Board at Rs 604.50 and at one stage its premium increased upto Rs 24 induced by a combinations of factors like the inherent bullish nature of the contract, the possibility of the immediate release of fresh export quota, expectation of improved offtake in the piecegoods market and the bright outlook of new crop in the next season. The premium at the close of the week, however, narrowed down to Rs 17 due mainly to the selling pressure from upcountry centres. This was largely attributed to the congenial weather reports from the cotton cultivating areas and the inordinate delay in issuing additional export quota. The contract receded further and on Tuesday last was quoted at Rs 596.00.

The ICC August, on the contrary, after an early set back staged a gradual recovery due presumably to the proximity of the delivery period. But after some period the contract exhibited a downtrend on account of the reduced activity in the spot market and beneficial rainfall in the cotton growing centres and on Tuesday last was quoted at Rs 580.50.

Activity in spot market at Sewri was considerably restricted. Prices of most of the varieties declined. Spinner interest hovered mainly around good quality cotton available for spinning 28/30s and 18/20s. A moderate quantum of Dig Vijay, Surti, and Kalyan was purchased by the mills during the week under review. Mill consumption remained steady but mills were reluctant to replenish their stocks for the present due to the arrival of US cotton of 1" and below, the reduced offtake in the cloth market and the stringent monetary conditions.

ATLANTIC GLASS LIMITED (Incorporated in England)

On the import section only moderate business was transacted. Mills purchased small quantum of Egyptian, Sudan and East African growths at low prices.

No fresh development was visible in the export front. Though the trade circles were optimistic of an immediate release of fresh export quota, no announcement to that effect was made by the authorities. The trade will make another attempt to convince the Government of India of the necessity of issuing more quotas for Bengal Deshi and other varieties

stapling 24/32" and below. According to recent estimates the stock of Bengal Deshi in Bombay and upcountry centres amounts to 56,000 bales. The export trade was very much disappointed in the delay of releasing additional export quota for Bengal Deshi. That variety failed to attract any interest during the past week. Apparently disappointed in their attempts to persuade the Government for export of Bengal Deshi, a section of the trade has found it expedient to form a separate body shortly to press their demands.

The outlook for new cotton crop is rated high. Sowings in many areas have been completed. If nothing untoward happens the output of cotton in India is likely to aggregate 5 million bales in the next season.

NEW YORK

According to the estimates of the Crop Reporting Board of the United States Department of Agriculture, the acreage planted for the 1961-62 season is likely to exceed 1.65 million acres. Exports of US cotton to foreign countries during this season upto 6 July totalled 6,419,712 bales as against 6,622,100 bales in the corresponding period last season.

SUDAN

The Sudan Gezira Board during the past week sold 2,686 bales of various types of Nuba mountain cotton. The stock of 1961 crop lying with the Board amounts to 220,000 bales.

ALEXANDRIA

The Government has announced the selling prices of the new crop on 9 July. Mills from India showed interest in the Egyptian cotton, but the wide disparity between the existing prices and the offers from shippers failed to produce any appreciable result.

UGANDA

The Lint Marketing Board has disposed of 317,680 bales of AR cotton by auction. The stock of AR cotton left with the Lint Marketing Board for sale amounts to 25,445 bales. The Board has also auctioned 20,604 bales of BR quality in this season.

PIECEGOODS

The Bombay piecegoods market depicted quietly steady conditions during the past week. Turnover in the domestic sector was moderate. Demand from upcountry and local centres turned out to be an insignificant affair. The heavy rainfall in recent days and the floods in many parts of the country cast a depressing spell on the market.

The low enquiries from upcountry centres were attributed mainly to the cautious attitude adopted by the dealers. Calcutta, Delhi and Bihar accounted for a small quantum of goods. However, the prices remained more or less unchanged. The wholesale dealers were not at all worried at the low demand in the market. They were not anxious to liquidate their stock at reduced prices for they are anticipating a revival of demand in the coming months.

Export front displayed listless conditions. The possibility of Britain joining the European Common Market weighed heavily with the traders who are serious about the repercussions on textile exports from India to the UK. Business transacted with that destination during the past week was negligible. Sudan made some enquiries for grey sheetings at reduced rates.

Singapore booked a small quantum of bleached long cloth. Ethiopia was satisfied with moderate quantity of grey chaddars and sheetings. East Africa purchased small quantum of sheetings and processed goods.

Other destinations, for all practical purposes, remained inactive.

The downtrend in cloth export has been viewed with grave concern by the Government of India. With a view to stimulating our exports the Government has announced a number of export incentives for textiles. But they have not produced any substantial result among the trade circles.

Sugar Quota and Exports

INDIA'S total Sugar production is estimated, this year, around 3,000,000 tons with an exportable surplus of 950,000 tons. Indian sugar can be sold in the markets other than the US; but the main difficulty is the low price in world markets and the total loss which will have to be incurred by the industry in shipping the surplus. Apart from the small outlets that can be found in the neighbouring countries, a permanent solution depends solely on the US market.

In the above connection, the Union Food Minister has stated that there is little possibility of India securing, this year, a further quota for the export of sugar to the US in addition to the "ad hoc" quota of 225,000 tons already announced. According to the US Department of Agriculture, the world production of centrifugal sugar has reached a new high of 60,937,000 short tons in 1960-61 season, representing a phenomenal increase of 7.3 million tons. Non-centrifugal production has risen slightly over the previous season, principally because of an increase in India's production. The US sugar production itself has increased substantially over 1959-60 in all the major areas except for the Continental cane areas and Puerto Rico, where increases are slight.

For obvious reasons, any hope of getting a bigger quota at this stage is just visionary. The Union Food Minister has stated, in this connection, that he is more interested in securing for India a permanent sugar quota from the US than any additional quota for the current year. He feels confident that ultimately, India's plea for a permanent quota of 600,000 tons a year will be approved by the US Senate and the House of Representatives.

World sugar markets continue to be dominated by reports of this year's record crop in Cuba. But, London market sources are now speculating that the Castro Government will deliberately clear some of its sugar fields next season in an effort to diversify the economy. This added weight to the feeling that the 1961-62 season will see world production lower than the record output of 1960-61.

Whatever the final results from Cuba, the country will have a substantial carryover into next season. This factor has brought sugar prices tumbling and remains the underlying factor depressing world markets. Market sources in London hold out that there is no hope of any significant recovery in the near future, although there is a feeling among certain circles that the statistical

position will not worsen next winter. In India, markets have continued to remain depressed due to comfortable supply position. In the Hapur market, the rate is quoted below Rs 106.50 a bag as against the controlled rate of Rs 107.69. There is abundance of sugar in the country and the position calls for everything to be done to stimulate domestic consumption by relaxing the existing distribution restrictions. The authorities should take a realistic view of the position and liberalise the distribution system in keeping with the changed sugar situation.

GUR

The resumption of railway booking on the Eastern and Western Railways and a shortage of available stocks have been responsible for smart rise in dry Gur prices in the Hapur market. Large quantities of the commodity are reported to have been despatched by road and rail to the regular importing centres. A further rise in prices is expected due to the paucity of stocks at 1,000,000 maunds as against 1,800,000 maunds during the corresponding period of last year. Chakku Kotha dry quality is quoted around Rs 19.75 a maund.

FOODGRAINS

In the Hapur market, steadier conditions were noticed in the Foodgrains market as daily arrivals had dropped due to rains. Wheat recorded modest gains to the quoted at Rs 14.50 to Rs 15 a maund for the average quality and Rs 15.50 to Rs 16.25 for the farm quality. Daily arrivals were reported to be poor, partly due to rains and partly due to the tendency among producers to withhold. The Rice section continued to remain steady for the better quality. Gram prices showed a firmer tendency on the Punjab advices, while arrivals, too, were small. In the Pulses section, Peas continued to rule steady due to good demand in the face of small arrivals at an average of 100 maunds. The entire arrivals were picked up by grinders.

RUBBER

The Chairman of the Mundakayam Planters' Association has stated that the rubber-growing industry has an assured market at its door-step and it need not have any apprehension about over-production. In his address to the annual meeting of the Association, he has said that, in the context of India's integrated economy, the rubber planting industry enjoys a particularly favoured position.

Natural rubber requirements of the manufacturing industry have far outstripped anything the planting industry can produce. Moreover, the Planning Commission's working group for rubber estimates consumption to go up to 54,300 tons in 1965; 107,000 tons in 1970 and 173,000 tons in 1975.

PEPPER

Pepper prices have shown a smart rise of Rs 4 per 50 kg during the past few days, thanks to the bright prospects for exports. In the Cochin market, the rate is quoted at Rs 420.75 per quintal for the ready pos-

ition. In the Singapore market, the price of black pepper has hardened by 5 dollars per picul on reports that the Indonesian Government has decided to export the commodity directly to the USA, Russia and other consuming countries instead of selling via Singapore. This has pushed up Singapore prices to 46 cents per pound, which is about 2 cents lower than the ruling prices in India. It is hoped that the USA may revise her buying ideas in view of the rise in Singapore rates.

According to the Pepper and Spice Trading Association, India's exports of black pepper, up to the end of June this year, totalled about 14,000 tons, while internal consumption had reached 7,000 tons. This leaves a carryover stock of about 3,000 tons out of about 24,000 tons of the 1960-61 season's crop, with four months left for the arrival of the new crop in November.

The IPSTA has added that the new season's pepper crop is not likely to exceed 20,000 tons in view of the large-scale damage to the vines by the recent floods in the State.

CHEMICALS & DYES

In the Bombay Dyes and Chemicals market, prices of some of the items have registered fresh rises in prices. For instance, Rongalite has shot up to Rs 4.50 per pound, while Caustic Soda has been pushed up to Rs 54.50 for ICI manufacture and Rs 51 for indigenous manufactures.

The rise in prices of these items is mainly due to a shortage of supplies in the face of keen demand from the textile units of Ahmedabad. Even at the higher levels, stockists are not anxious to release their stocks in anticipation of a further rise in prices. A section of the trade feels that the STC will import only half of the quantity announced earlier. Under such conditions, consumers have no other alternative than to pay fancy prices quoted by the stockists as well as the selling agents.

YARN

Concern is expressed over the sharp rise in Staple-Fibre yarn prices in the Bombay market. Because of the extreme scarcity of supplies in 2/40 counts, the basis of the newly-started August contract has been changed by the Bombay Yarn Merchants' Association whereby 2/42s and 2/44s have also been made tenderable. In order to circumvent the Textile Commissioner's decision to enforce the squaring up of transactions in 2/40s June delivery at Rs 771, the spinners, who produced 2/40s, have switched over to 2/42s and 2/44s. Since then, this has resulted in an acute shortage in the supply of 2/40 counts the prices of which have shot up to above the officially-fixed prices.

The indigenous production of staple-fibre yarn is about 50 tons, which is distributed in the ratio of 2:1 between the staple-fibre yarn spinning mills and the composite mills respectively. This is considered to be much below the actual need of the country and, as a result, prices of 2/42s and 2/44s have shot up. If the runaway prices has to be

checked, the remedy lies in securing more supplies for the industry.

BANGALORE SILK

The Bangalore Silk market presented a steady trend in respect of prices of filature silk during the week ended 14 July, 1961. Filature silk of 20/22 Dr was quoted between Rs 80.43 and Rs 83.23 per kgm. There was a slight downward trend in the prices of all qualities of charka silk and cottage basin silk by Re 1.10 nP per kgm. Cottage basin silk as well as charka raw silk ruled between Rs 72.75 to Rs 77.16 and Rs 54.01 to Rs 72.75 per kgm respectively. The supply of raw silk was reported to be fairly satisfactory.

The prices of reeling cocoons also showed a downward trend on account of fairly good supplies of reeling cocoons. Mugar cocoons were quoted between Rs 2.50 and Rs 3.50 per kgm, Sidlaghatta cocoons ranged between Rs 4.31 and Rs 4.75 per kgm. Rates of Channapatna reeling cocoons ranged between Rs 2.00 and Rs 3.50 per kgm.

Mysore race seed cocoons declined by 25 nP per thousand and were quoted between Rs 3.50 and Rs 4.75 per thousand. The prices of foreign race seed cocoons ruled between Rs 2.00 and Rs 10.00 per thousand.

TIN

After a prolonged spell, Tin prices, both ready and forward, have suffered a sizable reverse during the past few days. The rate for the July position is presently placed at Rs 169.50 as against Rs 178 quoted in the previous week. Ready prices are quoted at a discount of about Rs 5 per 10 kgs.

The fall in prices is mainly attributed to weaker advices from Singapore where prices are reported to have progressively declined. Against a price of 460 Straits dollars per picul, the rate has fallen now by \$5 per picul. In London, there are buyers around £905 a ton.

According to market circles, stocks of tin in Bombay are placed around 3,500 tons against 2,000 tons estimated some time back. About 50 tons are expected to arrive from Singapore during the current month. Half of this consignment has already arrived in the harbour awaiting clearance, while the rest is expected to arrive by the month-end. A section of the trade feels that the fall in the international price will be temporary.

SHELLAC

Exports of Lac were slightly higher at 730,690 maunds in the financial year ended 31 March, 1961 as against 730,270 maunds in the previous year; but earnings from such exports declined to Rs 6.32 crores from Rs 6.37 crores. The slight improvement in the quantum of exports was due to increased offtake of buttolac and shellac from 379,800 maunds to 419,130 maunds. Shipments of seedlac and other varieties declined from 308,910 maunds to 272,200 tons.

Meanwhile, conditions in the Calcutta shellac market remained quiet with Pure TN quality shellac quoting Rs 124 per package. Shipments during the current month till 7 were 3,746 packages of shellac; 1,500 packages of seedlac; 25 packages of buttolac and 2,111 packages of other varieties.

GOLD & SILVER

Prices on the Bombay Bullion Exchange continued to display an easier tendency in the absence of any buying interest.

Silver bore the brunt of liquidation. The continued pressure of "katcha" silver, offered by the upcountry markets demoralised sentiment. Prices, therefore, reacted and the decline was further accelerated due to continued liquidation by bulls and some short selling. Arrivals were estimated at as much as 127 bars as against an offtake of only 10 bars. Ready rates moved between Rs 119.95 and Rs 200.10.

In the absence of any buying support, price movements in the Gold section were confined to narrow limits. The seizure of contraband

gold in the City had little effect on sentiment. Arrivals were 9,500 tolas as against an offtake of 6,000 tolas. Ready rates moved narrowly around Rs 120.55 while Sovereign was quoted at Rs 94.

OILS & OILSEEDS

Trading in the Bombay Oilseeds market was notable for a sharp rise in the export prices of groundnut extraction. About 10,000 tons of groundnut oilcake were reported to have been sold to the UK and the

prices, as a result, moved up from £20.15sh to £30.12sh for July-August delivery and up to £31 for shipments further ahead. Local prices moved up by Rs 10 to Rs 320 per ton. The prices of other oilcakes remained steady.

Trading in the Groundnut section was dull due to hopes of a better crop. Ready Nizam Bold quality was quoted at Rs 55.25 and Groundnut oil at Rs 22.90.

Although prices in the Castorseed

section opened steady there was heavy selling pressure towards the close, being influenced by the activity of bears who made full use of the proposed entry of Britain into the European Common Market. Castor ready Madras small quality was

quoted at Rs 34.87 and Castor Oil, commercial quality, at Rs 14.50.

In the Linseed section, price movements were narrow in the absence of buying interest. Ready was quoted at Rs 39.25 and Linseed Oil at Rs 16.90.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the One Hundred and Fourth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta at 11-30 a.m. on Wednesday, 23rd August, 1961 for the following purposes:

- (1) To receive and consider the Audited Accounts for the year ended 31st March, 1961 and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To appoint a Director in place of one retiring and in this connection to consider the following resolution which will be proposed as a special resolution:

"That Mr. John Valentine Jardine Paterson, an Associate of the Managing Agent of the Company, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation."

Special notice of the intention to move this resolution as a special resolution in conformity with the provisions of sections 190 and 261 of the Companies Act, 1956 indicating that Mr J. V. Jardine Paterson is an associate of the Managing Agent by reason of his being a Director of the Managing Agent's Company, has been received by the Company.

- (3) To appoint Auditors and to fix their remuneration.

- (4) As special business) To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz:—

"(a) That the action of the Board in having agreed on 29th May, 1961 to dispose of, under the Working Time Agreement of the Indian Jute Mills Association, 6,417½ current loom hours per week to Kankarrah Co. Ltd. and 1,445 current loom hours per week to The Barnagore Jute Factory Co. Ltd., in each case on payment of 25 naya Paise per current loom hour, for a period

of 17 weeks ending on 30th September, 1961 be and the same is hereby approved and confirmed.

- (b) That the Board be and is hereby authorised to extend the foregoing arrangement for a further period not exceeding 14 weeks from the date of its expiry, viz. 30th September, 1961, provided that the sum of the compensation to be paid by the Company shall not exceed the amount of lay-off compensation estimated to be payable to the Company's work people in respect of that period if the loom hours are not worked.

- (c) That the authority previously conferred on the Board by special resolution adopted by the Company in general meeting on 4th July 1958, whereby the Board was empowered to sell current loom hours to Howrah Mills Company, Limited, Kamarhaty Company, Limited and Kankarrah Company, Limited pursuant to the Working Time Agreement of the Indian Jute Mills Association on the basis set out in the said special resolution be and the same is hereby confirmed and further that the Board be and is hereby authorised similarly to sell current loom hours to The Barnagore Jute Factory Company, Limited on the same terms and conditions."

NOTICE is also given that the Share Transfer Books of the Company will be closed from the 9th August to the 23rd August, 1961, both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

HOWRAH MILLS COMPANY LIMITED

NOTICE OF ANNUAL GENERAL MEETING.

NOTICE is hereby given that the One Hundred and Thirtysixth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta at 12 o'clock noon on Wednesday, 23rd August, 1961 for the following purposes:

- (1) To receive and consider the Audited Accounts for the year ended 31st March, 1961 and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To declare dividends.
- (3) To appoint a Director in place of one retiring.
- (4) To appoint Auditors and to fix their remuneration.
- (5) (As special business) To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz:

"That pursuant to the provisions of Section 370 of the Companies Act, 1956 approval be and is hereby given to the making of such contributions which the Company has made or may make towards partnership capital in the firm styled 'Jardines Mills Agencies'; provided always that the net balance of partnership capital as contributed by the Company shall not at any time exceed Rupees thirty lacs."

- (6) (As special business) To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz:—

"(a) That the action of the Board in having undertaken on 29th May, 1961 to work under the Working Time Agreement of the Indian Jute Mills Association 6,417½ current loom hours per week on behalf of The Reliance Jute Mills Co., Ltd., (Managing Agents: Jardine Henderson, Ltd.) in consideration of a payment to be made by the said The Reliance Jute Mills Co. Ltd. on the basis of 25 Naya Paise per current loom hour, payment of which to be received by the Company within one month of the first working day of the week to which the hours worked

relate, for a period of 17 weeks ending on 30th September, 1961 be and the same is hereby approved and confirmed.

- (b) That the Board be and is hereby authorised to extend the foregoing arrangement for a further period not exceeding 14 weeks from the date of its expiry, viz. 30th September, 1961, provided that the rate of compensation to be received by the Company will provide a sum which is not less than any loss or, as the case may be, any additional loss which in the opinion of the Directors is likely to be incurred by the Company as a result of working the additional loom hours which are the subject of the said arrangement.

- (c) That the authority previously conferred on the Board by special resolution adopted by the Company in general meeting on 4th July, 1958, whereby the Board was empowered to purchase current loom hours from The Reliance Jute Mills Company Limited pursuant to the Working Time Agreement of the Indian Jute Mills Association on the basis set out in the said special resolution be and the same is hereby confirmed."

Notice is also given that the Share Transfer Books of the Company will be closed from the 9th August to the 23rd August, 1961 both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

By Order of the Board
JARDINE HENDERSON, LIMITED
D. FORDWOOD
Secretary,
Managing Agents.

4, Clive Row,
Calcutta-1.
7th July, 1961.

Note: Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, being sent to all Members.

In the Calcutta market, however, the price of Linseed firmed up to Rs 30 a maund for ready delivery. Crushers found it difficult to obtain their requirements as sellers were inclined to be reserved in view of short supplies. The price of oil also hardened in sympathy and business was restricted due to shortage of stocks. The price of Oilcake was also firm due to broadening enquiries from domestic and foreign buyers. Only limited business was possible in the absence of declared sellers.

In Madras, the groundnut kernels and the oil markets this week were easier. The firmer tendency shown till almost the middle of last week eased up a little due to arrivals of larger kernel stock in South Arcot centres. But despite liberal arrivals, the sellers of kernels were not prepared to part with their stocks except at their own prices, and therefore groundnut continued still at a higher level. The groundnut stockists continue to enjoy all facilities to resist buying pressure, and are prepared to hold on till they get their own prices. But the oil position was different. Unloading of stocks was sometimes due to lack of finance and they had to sell at lower levels when buyers took the chance to dictate their own terms.

Oil rate continued at the higher levels last week at Rs 508 per candy. But when offerings came forth in quantities more than the expected, the price eased a couple of rupees for candy.

Only one or two Calcutta operators were actively seen in the market. August deliveries were also bought by Calcutta in sizeable quantities, but by July last week deliveries came up also for offerings at the same price.

Groundnut oil was quoted at 222.80 per 100 kgs. from the middle of last week hardened still further to Rs 224 per 100 kgs. But with the opening of this week's rate by a rupee lower due to better offerings the oil position eased to some extent.

But coromandel variety of kernels was at Rs 92 per 80 kgs. at the middle of last week. Due to better arrivals the price came down to Rs 90.75 per 80 kgs. From this rate, the quotation for coromandel did not change due to sellers' resistance.

Also the peanut variety quoting at Rs 88.50 last week, came down only by about 75 nP and the price of this quality was well maintained at Rs 87.50.

Arrivals of summer crop were on the increase in the South Arcot market centres. On an average, 300 to 400 tons are now received, while in the City the receipt is merely 35 tons. There is competition among crushers and so the price of kernels had not come down in this area.

Demand for Indian groundnut extractions from UK and Eastern European countries continues. In groundnut oil Argentine has been selling sizeable quantities to Rotterdam and other areas.

HIDES & SKINS

Prices of tanned cow hides whose inflow were better than last week did not change much this week. Export business was fair with some firm orders but still there was not confidence in view of the still high prices. Buyers were holding back in this section. It was stated in the domestic market that African hides were being offered at a workable rate than Indian. This might also have contributed to the buyers' reluctance.

The medium weights of 8/8½ lbs were quoted at 42d. Fourths in this quality were rated at 46d. In the lower weights of 5/5½ lbs there was no change. In guaranteed marks the price quotation was at 72d, 62d and 52d. Other varieties in the same category were available at 2d less.

Premium marks in tanned cow calf did not change this week. A few deals at 68d for 1½/2 lbs were dealt with.

There was no change in tanned buffalo hides. In tanned buff calf it was reported all the season's stocks had been cleared away and what remained was of poor quality.

In the tanned goatskin section buyers preferred to wait due to high prices still remaining. Inferior fifts could be had in any number due to reported accumulation of this variety. No change was reportable in market quality goatskins.

Prices of tanned sheepskins also did not change this week in all varieties.

The following are the prices of tanned skins per lb:

Cow Prime 5/5½ lb Rs 3 to Rs 3.12: 6/6½ lb Rs 2.75 to Rs 2.81: 8/8½ lb Rs 2.31 to Rs 2.38: 10/12 lb Rs 2.12 to Rs 2.28: Inferior fifts 4/4½ lbs Rs 2.40 to Rs 2.47: 5/5½ lb Rs 2.28 to Rs 2.31: Buffalo 12/13 lb Rs 2 to Rs 2.01: Cor calf 1½/2 lb Rs 4.12 to Rs 4.37: Buff calf 1/1½ lbs Rs 3 to

COPRA

The hope, that there might be an enlargement of trade in beedis has its origin in Ceylon's difficulty in selling Copra to India. Besides,

Ceylon is reported to experience a shortage of beedis. Market circles feel that, if Ceylon liberalises beedi imports from India, some efforts may be made in this country to enlarge the offtake of copra from Ceylon, the parity whereof is high as compared to world prices.

It is also said that the Ceylon Government will urge the US Administration to go slow in soyabean oil exports which seem to hit Ceylon's exports.

TEZPORE TEA COMPANY, LIMITED

Notice is hereby given that the Forty-third Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Friday, the 18th August, 1961, at 3-30 P.M. for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.
- (2) To declare Dividends.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.
- (5) As Special Business:

To consider and if thought fit to pass with or without modification the following resolutions:—

- (i) (As a Special Resolution). "Resolved that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of the contract entered into between the Company and its Managing Agents, Shaw Wallace & Company Limited, in respect of sales of teas made by the Company to the Managing Agents during the financial year ended 31st December, 1960, at market prices amounting in aggregate to Rs 42,849/-."

- (ii) (As a Special Resolution). "Resolved that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a contract (in terms of the draft placed before the meeting and initialled for identification by the Chairman of this meeting) being entered into between the Company and its Managing Agents, Shaw Wallace & Company Limited, for the period of five years therein mentioned in respect of sales by the Company to the Managing Agents of teas required by the Managing Agents not exceeding in price Rs. 1,00,000/- in the aggregate in any one year on terms that the price of each sale shall be

determined on the basis of market rates and shall be payable by the Managing Agents to the Company within one month of each such sale aforesaid."

- (iii) (As a Special Resolution) "Resolved that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and in supersession of the contract dated 15th May 1955, the Company hereby approves of a contract being entered into between the Company and its Managing Agents, Shaw Wallace & Company Limited effective for five years from the date of passing of this resolution, for the purchase by the Company from the Managing Agents at market rates of (1) Fertilisers (2) Hessian Cloth, (3) Fungicide Insecticide and other chemical Preparations, (4) Sprayers and sprayer parts, (5) agricultural implements, (6) machinery spares and accessories, (7) stationery, store, and belting and (8) paint on the terms and conditions set out in the draft agreement placed before the meeting and initialled by the Chairman for identification."

The Transfer Register will be closed from the 10th August 1961 to 18th August 1961 both days inclusive.

By Order of the Board,
SHAW WALLACE & CO. LTD.
Managing Agents.
Calcutta, dated 18th July, 1961.

Note:—(i) A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

(ii) An explanatory statement under Section 173 of the Companies Act, 1956, is being sent to the members of the Company by post.

Podar Mills

The Podar Mills Limited has announced that the shareholders, having their names on the company's register on 16 September, 1961, will get two new ordinary shares for every nine old ordinary shares, at par. The shares will be quoted ex-right with effect from 19 September, 1961.

Hindustan Wired Glass

The recent public issue of the Hindustan Wired Glass Manufacturing Company, Limited is reported to have been heavily over-subscribed.

J. K. Synthetics

In conclusion with the Calcutta Stock Exchange, the directors of J. K. Synthetics Limited have allotted 5,23,750 shares as follows:—applications for 50 and below 100, 15 shares; for 100 and below 150, 25 shares; for 150 to 250, 50 shares; for 300 to 350, 75 shares; for 400 to 450, 100 shares; for 500 to 700, 150 shares; for 750 to 900, 200 shares; for 950 to 1,050, 350 shares; for 2,000, 500 shares; for 2,100, 550 shares; for 2,500, 650 shares; for 5,000, 1,250 shares; and for 10,000, 2,500 shares. An interesting feature of this issue is that the shares have been allotted to all the applicants.

INVESTMENT NOTES

Basmatia Tea

The Basmatia Tea Company, Limited, Calcutta, has been granted consent to the issue of 25,500 equity shares of Rs 10 each as bonus shares credited as fully paid on capitalisation of the company's reserves to a like extent. The shares will be allotted to the existing shareholders in the ratio of one bonus share for every two shares held. The company's present paid up capital is Rs 5.10 lakhs in equity shares.

Rajgarh Tea

Rajgarh Tea Company, Limited, Calcutta, has been given consent to the issue of 20,000 fully paid equity shares of Rs 10 each as bonus shares on capitalisation of the reserves to a like extent. The shares will be allotted to the existing shareholders in the ratio of one bonus share for every share held. The company's present paid-up capital is Rs 2.00,000 divided into equity shares.

Associated Auto

The Associated Auto Parts Private Limited has a paid up equity capital of Rs 7,00,000. It has been granted consent to issue capital of Rs 3,50,000 as bonus shares in the ratio of 1 bonus share for 2 shares held. The company is dealing in motor accessories and spare parts.

Capsulation Services

Capsulation Services Private Limited, Bombay, which has a paid up capital of Rs 2,52,000 in equity shares

of Rs 10 each, has been granted consent to issue bonus shares of the value of Rs 2,52,000 in the ratio of one bonus share for every share held. It is engaged in the business of the manufacture of one-piece soft gelatine capsules.

J. K. Steel

J. K. Steel Limited, Calcutta, has been permitted to issue 200,000 equity shares of Rs 10 each as fully paid bonus shares in the ratio of one bonus share for every share held.

Convst (Private) Ltd.

Convst (Private), Limited, Bombay, will capitalise Reserves of the value of Rs 3 lakhs in the ratio of one bonus share for every share held. The company, which deals in motor spare parts, tyres and tubes, has, at present, a paid-up capital of Rs 7 lakhs.

Max-Designs

Max-Designs and Press Works (Private), Limited, Bombay, is allowed to issue bonus shares of the value of Rs 1,72,500 in equity shares of Rs 100 each, in the ratio of one bonus share for every equity share held.

Simplex Concrete Piles

Simplex Concrete Piles (India), Limited, Calcutta, is permitted to issue 19,327 equity shares of Rs 10 each as fully paid-up bonus shares on capitalisation of its Reserves to the extent of Rs 1,93,270. The company does business as contractors for piling driving and RC works.

Girdhardas

Harivallabdas Mills

The Girdhardas Harivallabhdas Mills Limited, Ahmedabad, has decided to issue bonus shares at the rate of one bonus share for every four ordinary shares held.

India Cements

It is announced that India Cements Limited has been given permission for erecting a new unit in Salem. It is already engaged in erecting a new unit in Visakapatnam district. Ultimately, it is the objective of the company to have a production capacity of over one million tons. There may not be any immediate issue of capital for financing these expansion plans.

Mysore Paper

The Mysore Paper Mills Limited has been successful in arranging part of the required foreign exchange for implementing the expansion programme. It has now been announced that the company has received permission from the Controller of Capital Issues for raising Debenture capital. It is proposed that Debenture stock certificates, carrying a rate of interest at 7 per cent, subject to Indian taxes, should be issued for Rs 78 lakhs in favour of the Commonwealth Development Finance Company, Limited, UK in respect of a loan of £5,25,000 to be granted to the company.

Rohit Pulp

Rohit Pulp & Paper Mills Limited is reported to be making good progress. The main factory building is ready and erection of machinery will be started shortly under the supervision of the Japanese collaborators. Orders for subsidiary equipment from indigenous sources are being finalised. The company hopes to go into production by the end of this year. It has sought Government permission to raise the present capacity of 10 tons to 20 tons a day.

Shivrajpur Syndicate

The Shivrajpur Syndicate Limited has decided to issue on equity bonus share for every share held.

Simplex Mills

The Simplex Mills Limited has recommended a bonus of one equity share for every five shares held. This decision is subject to the sanction of the Controller of Capital Issues. Perhaps, as a result of this decision, it has been decided to omit the ordinary dividend for 1960-61 as against Rs 7.50 per share paid for the previous year.

STOCK EXCHANGES Selective Support

Watch-Dog Writes:

THE week's trading in stock markets has been generally a dull affair. Except for prices responding to selective support, conditions have remained weak. Prices have fallen largely due to tired long liquidation, as operators are unable to take a view of the immediate future. With the announcement of the TISCO dividend being over, speculation is now rife with regard to the size of the forthcoming dividend by the Indian Iron & Steel Company.

Apart from a slight recession in the speculative issues, conditions in other sections on the Calcutta Stock Exchange remained fully steady.

The Bombay Stock Exchange experienced dull trading with only selected counters moving both ways.

Fairly steady conditions prevailed on the Madras Stock Exchange. Turnover was very poor. The only bright spot was Travancore Rayon, which staged a smart rally due to short-covering.

CALCUTTA

Calcutta, Friday Evening.

AFTER resuming the week on a dull note, prices on the local stock exchange displayed a steady downward trend due to scattered liquidation. While the speculative issues were the worst affected due to renewed offerings, prices in other counters remained generally steady, being influenced by the flow of encouraging corporate news. There was, however, a general disposition to restrict commitments and book profits at bulges.

There were a number of factors contributing to the depressed sentiment in the market. Prominent amongst these were the fears that the Government might take stringent measures to check the speculative

tendencies, the reported shortage of working funds for speculators, saturation of investment demand, reports of heavy floods all over the country, the drop in the level of foreign assets, shortage of power and raw materials and the strained Indo-Pak relations.

On balance, bulls had to experience rough weather, which was being exploited by the professional operators. But, a striking feature of the week's trading was that, in spite of the weakening of the speculative issues, prices of a few selected shares were well maintained, thanks to the shortage of floating stocks and the improved outlook for corporate working.

The Gilt-edged market ruled dull with enquiry mainly confined to short-dated issues. Medium and long-dated issues were neglected. 3 per cent 1986 Conversion Loan was nominally quoted at Rs 72.75.

Bank shares were not slow in responding to the profit-figures released by some of the banks for the half-year just ended. Punjab National forged ahead to Rs 24 from Rs 23.12 following the announcement of a right issue at a premium of Re 1 in the ratio of three shares for five shares held. United Commercial changed hands up to Rs 91.50 from Rs 91.25.

Jute shares were practically neglected. It was feared that most of the mills might show substantial losses during the current year. The only relieving feature was the scattered interest shown in a few selected shares. Prominent amongst these were Birlas changing hands at Rs 27.25 to Rs 27.89; India at Rs 15.75 to Rs 15.94; Nuddea at Rs 46 to Rs 46.25 and New Central at Rs 19.50 to Rs 20.06. Kankannarrah were better at Rs 72 against Rs 69.50 with Howrah neglected around Rs 20.37.

Coal shares turned quiet due to an anxiety to know how the World Bank loan would be given to the industry for expansion. New Beerbhoom met with some business at Rs 24.12 to Rs 24.50; Central India at Rs 13.69 to Rs 13.87 and Western Bengal at Rs 10.37 to Rs 10.62. South Karanpore were nearly maintained at Rs 9.19, while Burrakur fluctuated irregularly between Rs 20.12 and Rs 20.31, to close finally at Rs 20.19.

As usual, selected Tea shares came in for a good deal of attention. Apart from the fact that there was a further improvement in the prices obtained at the week's export auction, it was thought that the tea market might continue to remain active during the next few months till the heavier crop was felt.

Bishnauth had buyers at Rs 26 to Rs 26.25; Dhunseri at Rs 16.19 to Rs 16.50; Hasimara at Rs 25.06 to Rs 25.44; Jaysree at Rs 24.62 to 24.81 and Killcott at Rs 19.62 to Rs 19.75.

Only little interest was shown in the Sugar section where price movements were confined to narrow limits. Carew moved between Rs 13.06 and Rs 13.19 and Cawnpore between Rs 12.75 and Rs 13.12. Raza/Buland were a steady feature at Rs 11.62 and so also SKG at Rs 11.56.

Textile shares staged a smart rally on prospects of higher production and diversification of activities. Dunbar had buyers at Rs 26.62 to

Rs 27; Bowreah at Rs 24.87 to Rs 25.62 and J. K. Rayon at Rs 20.69 to Rs 21.06. Kesoram changed hands on the cum-dividend-cum-rights basis at Rs 37.37 to Rs 37.62, while Jay Shree were rather quiet at Rs 15.81 against Rs 16.25 due to lack of fresh support.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. An exceptional feature in this section was J. K. Steel, which showed a sharp spurt to Rs 40.00 from Rs 35.25 following the announcement of a bonus issue. After opening at Rs 27.80 and improving at one time to Rs 28.08, Indian Irons receded gradually to Rs 27.84 due to settlement considerations, before finishing the week at Rs 28.02. The settlement rate was fixed at as high as 28 nP in view of the company's decision to close its Transfer Books from 5 August to 28 August.

Among other engineering issues, Jessop changed hands at Rs 20.81 to Rs 20.94; Binani Metals at Rs 12.25 to Rs 12.50; Jay Engineering at Rs 28.62 to Rs 29.25; Guest, Keen, Williams at Rs 41 to Rs 41.12 and TEXMACO at Rs 19.37 to Rs 19.50.

Miscellaneous issues generally showed a mixed trend. Alkali Chemicals and Indian Oxygen were keenly sought after at enhanced levels on prospects of expansion. The newly-enlisted Goodyear met with keen support up to Rs 39.75 from Rs 38.37. Indian Aluminium forged ahead to Rs 35.84 from Rs 34.81 on rumours of LIC interest, to close finally at Rs 35.50. Following were the price trends of a few other shares:—

	Week's High	Week's Low	Week's Closing
	Rs	Rs	Rs
Orient Paper ...	38.50	35.85	35.90
Shree Gopal ...	25.62	25.50	25.62
Sirpur ...	15.12	14.87	14.87
Titagarh ...	37.12	36.62	37.12
Rohtas ...	19.81	19.69	19.75
Dunlop ...	53.06	52.44	52.31
H. Motor ...	22.62	22.25	22.37
Asso. Battery	35.00	34.50	34.81
Alkali Chem.	40.37	39.87	40.12
Alumn. Corp.	16.94	16.50	16.50
I. Oxygen ...	39.87	39.75	39.37
I. Cable ...	37.94	37.37	37.37
I. Steamship	8.69	8.56	8.57
I. Copper ...	5.65	5.60	5.63
Isaac Holden	19.31	19.06	19.06
Usha Martin	7.37	6.85	7.37

IN BRIEFS

The Hindustan Wires Limited has extended the final date for the payment of the first and final call to 15 August, 1961.

The first call of Rs 25 on the preference shares of the Hindustan Aluminium Corporation Limited is payable on or before 10 August, 1961 and not on 10 October as announced earlier. Similarly, the final call of Rs 50 will be payable on or before 15 September, 1961 and not on 10 October as announced earlier.

Mahendra Electricals Limited has announced that the first call of Rs 25 on equity shares is payable on or before 23 August, 1961. Call notices for bigger lots can be had split up into the requisite lots. Duplicate call notices will be issued by the company on request.

Facts & Figures

COMMODITY PRICES

1.3 per cent Fall in April

Wholesale prices as measured by the official index (with the year ended March 1953=100) registered a fall of 1.3 per cent to 125.8 during the month of April 1961 as compared with 127.5 (revised) for March, 1961. The index was, however, higher by 4.5 per cent when compared with 120.4 for April 1960. During the month under review, 'Tobacco' declined by 1.4 per cent to 109.2, 'Fuel, Power, Light and Lubricants' by 0.1 per cent to 122.8, 'Industrial Raw Materials' by 3.8 per cent to 153.0 and 'Manufactures' by 2.0 per cent to 126.8 while 'Food Articles' rose by 0.1 per cent to 117.6.

'FOOD ARTICLES'

Lower prices of wheat, jowar, barley, and maize brought down the sub-group index for 'Cereals' by 0.9 per cent to 99.3, although the prices of bajra and ragi exhibited advances. The index for 'Cereals' was lower by 4.3 per cent when compared with that of a year ago. The sub-group index for 'Pulses' also moved down by 5.6 per cent to 87.6 as a result of a fall in the prices of gram, arhar, mung and masur; there was, however, a rise in the prices of urad. A rise of 7.3 per cent to 116.3 in the sub-group index for 'Fruits and Vegetables' was caused by higher prices of potatoes, oranges, bananas and cashewnuts; the prices of onions, however, witnessed a fall. Prices of both milk and ghee went up and the sub-group index for 'Milk and Ghee' rose by 0.5 per cent to 116.4. 'Edible Oils' receded by 1.6 per cent to 161.2 due to a fall in the prices of mustard oil and coconut oil despite a rise in the prices of groundnut oil, gingelly oil and vanaspathi (dalda). Higher prices of eggs and meat raised the index for 'Fish, Eggs and Meat' by 1.2 per cent to 125.1 notwithstanding a decline in the prices of fish. An advance in the prices of

gur pushed up the sub-group index for 'Sugar and Gur' by 1.0 per cent to 118.5. The sub-group index for 'Other Food Articles' went up by 2.6 per cent to 171.1 as a result of a rise in the prices of tea, coffee, chillies, cloves, cardamoms and betelnuts, although the prices of black pepper, turmeric and salt witnessed declines.

'TOBACCO'

The index for 'Tobacco' went down by 1.4 per cent to 109.2 as a result of a decline in the prices of raw tobacco.

'FUEL, POWER, LIGHT AND LUBRICANTS'

A fall of 0.1 per cent to 122.8 in the index for this group was caused by a decrease in the prices of kerosene oil and castor oil.

'INDUSTRIAL RAW MATERIALS'

Lower prices of raw cotton, raw jute and raw hemp brought down the sub-group index for 'Fibres' by 7.9 per cent to 164.7, although the prices of raw wool and raw silk showed advances. The sub-group index for 'Oilseeds' declined by 1.6 per cent to 157.2 owing to a fall in the prices of linseed, castorseed, rapeseed and copra, despite a rise in the prices of groundnuts, gingellyseed and cottonseed. The sub-group index for 'Minerals' remained unchanged at its earlier month's level of 95.2. A fall of 1.3 per cent to 126.6 in the index for 'Other Industrial Raw Materials' was brought about by a decline in the prices of raw hides, raw skins, rubber, logs and timber and lac. The prices of tanning materials and bamboos, however, witnessed increases during the month under review.

'INTERMEDIATE PRODUCTS'

The index for 'Intermediate Products' declined by 0.9 per cent to 138.0 due to a fall in the prices of linseed oil, coir yarn, zinc and tin notwithstanding a rise in the prices of cotton yarn, rayon yarn, brass, copper and lead.

'FINISHED PRODUCTS'

A sharp fall in the prices of jute manufactures (—12.0 per cent to 142.2) and a slight decline in the prices of silk and rayon manufactures (—0.3 per cent to 116.8) brought down the index for 'Textiles' by 3.6 per cent to 129.1. Among cotton manufactures, both mill-made and handloom cloth, remained unchanged at their earlier month's level of 129.7 and 117.4 respectively. The sub-group index for 'Metal Products' stood stationary at its previous month's level of 146.9. Increased prices of general chemicals raised the index for 'Chemicals' by 0.4 per cent to 105.5. The prices of paints, soap and drugs and medicines also exhibited a rising tendency during the month under review. 'Oilcakes' registered a fall of 1.2 per cent to

143.6. The sub-group index for 'Machinery and Transport Equipment' remained constant at its earlier month's level of 112.6 despite a rise in the prices of cycles. Higher prices of cement raised the index for 'Other Finished Products' by 0.1 per cent to 118.6, although the prices of bricks and tiles and glass witnessed a fall. On the whole, the index for 'Finished Products' declined by 2.3 per cent to 125.3 during the month under review.

AGRICULTURAL RESEARCH

212 Schemes

The Advisory Board of the Indian Council of Agricultural Research, which has concluded its three-day session in New Delhi, has approved recently 212 schemes of research. These schemes involve a total expenditure of about Rs 45 crores spread over a period of five years, of which the share of the ICAR will be Rs 1.5 crores.

Among the agricultural schemes approved are those for breeding of non-lodging and non-shedding varieties of rice as also cultivation of rice under deep water and hilly conditions for the States of Kerala, Andhra Pradesh, UP and Madhya Pradesh. Projects for the improvement of buck-wheat in the Lahaul and Spiti Valleys in the Punjab and for the establishment of a high altitude exploratory research farm in Jammu and Kashmir State have also been recommended for sanction.

VIRUS DISEASE

A scheme for intensifying measure for controlling the kattee virus disease of cardamom in Mysore and Kerala States and another for the constitution of an expert committee to go into the question of betel-vin wilt disease, which is becoming increasingly severe in States like Madras, were also approved. A survey of brown rot disease of potato which is prevalent in Maharashtra is proposed to be conducted.

IMPROVED IMPLEMENTS

A number of proposals, especially by the States of Kerala, Gujarat, Mysore, UP and Punjab, relating to the trial and improvement of existing agricultural implements and devising of suitable new ones have been accepted. Of particular interest at the investigations into the adaptability of garden or walking tractor suitable for rice lands and the designing of a cowdung gas plant for use in the colder regions of the country.

ANIMAL HUSBANDRY

Among research schemes in animal husbandry is the evolving of a new breed of dairy cattle by crossbreeding local cattle with the Jersey breed. This work will be taken up in West Bengal where at present the milk yield of local cattle is poor. A similar scheme for the area around Nasik in Maharashtra was also accepted.

Schemes for eliminating yellow colouration of Indian wool and finding out methods for the quick fattening of lambs and several projects on animal nutrition and for the control of animal diseases have also been approved.

The Board has recommended the sanction of a scheme for developing a technique for evaluating the economic impact of various improvement measures undertaken for increasing agricultural production.

★

TEXTILE MACHINERY

Progress of Industry

The textile machinery industry in India is of very recent origin. Although the textile industry is over a century old, the manufacture of textile machinery in India on any appreciable scale started only during the Second World War.

A beginning was made with spinning ring frames and looms while carding engines and some other items were added later on.

The existing capacities can meet the requirement of a number of items of spinning, weaving and processing machinery such as carding engines, ring frames, looms and conventional types of processing machinery.

Fresh schemes for the manufacture of new items of machinery such as blow-room machinery, draw frames, speed frames, open width bleaching plant, pneumatic mangles, hot air stenters, mercerisers, polymerisers and sizing machines are under implementation.

With the implementation of these schemes, it is expected that the indigenous textile machinery manufacturing industry would be in a position to meet 75 to 80 per cent of the requirements of the industry within the next few years.

The production of cotton textile machinery during 1960 was worth Rs 11 crores. The estimated production by 1965-66 based on schemes already approved is expected to be about Rs 21 to Rs 25 crores.

At present only one type of automatic loom is available in the country from indigenous sources.

The total average annual requirement by value of cotton textile machinery during the Third Plan period has been estimated at Rs 25 to Rs 30 crores.

★

Trends in Oil Industry

World oil consumption has doubled every ten years from 1880 to 1960. Since 1950, world oil reserves have risen more than three-fold, and much faster than consumption. They stood at 40,000 million tons at the close of 1959. These figures are for proven reserves, recoverable by applying today's techniques; the ultimately recoverable reserves of oil in the world will undoubtedly be higher.

The production-reserve ratio gives some indication of the reserve strength of a producing region and the average production of a well gives a rough idea of the relative production cost. At present, the proved world oil reserves are equal to about 40 years' production at the 1959 rate, but this world average includes a production reserve-ratio of 12 years in the United States, 108 years in

the Middle East, 18 years in Venezuela, 70 years in Indonesia and 30 years in Russia.

The average annual production of each producing well is 690 tons in the United States, 3,300 tons in Russia, 7,600 tons in Indonesia, 15,500 tons in Venezuela and 184,500 tons in the Middle East as a whole, rising to almost 500,000 tons a well in Iran and Iraq.

The Middle East has both the highest production-reserve ratio and the greatest output of a well and, additionally, the oil there is located close to deep water, whereas in the United States, more and more costly drilling is required for technical and other reasons and the wells are often in comparatively inaccessible places.

The world market prices, to which newer oil regions were geared, were those set by the United States, a high cost area with Government sponsored price maintenance. Although the companies did compete—essentially they did not compete on price—their prices were geared to the level of high cost crude oils without direct reference to their own lower cost.

★

Miscellany

Successful Breeding of Forage Grasses

Researches carried out on forage breeding at the Indian Agricultural Research Institute in recent years have provided information of considerable practical value.

The grasses mainly suited for the arid and semi-arid regions of the country are chiefly under study. In addition, work is also being carried out on cultivated fodder grasses.

By careful selection of Indian as well as foreign material it has been possible to isolate a large number of distinct varieties differing in character; forage yield, leafiness, nutritive value, resistance to heat or cold and seasons of active growth. Differences have also been observed within single species in chromosome numbers and some of those intra-specific chromosome races have shown many desirable features which are considered essential for good strains of forage grasses.

The hybrid Pusa Giant Elephant grass resulting from crossing of Elephant grass with cultivated Bajra, it is found, can be propagated vegetatively by means of 'slips'. It yields twice as much forage as Elephant grass and has high protein content as also the leaves are softer and more palatable than Elephant grass. Similarly by crossing an Indian species of anjan grass and related American species, a high yielding hybrid Pusa Giant Anjan has been produced.

New Experiments on Methods for Removal of Coconut Kernel from the Shell

In experiments carried out by the Central Coconut Research Station, Kasaragod, on steaming husked nuts to facilitate removal of the kernel from the shells it was found that this treatment proved very useful without

causing any adverse effect on the copra and its oil content.

Experiments on the effects of temperature, humidity and air velocity on the drying rate of coconuts in the cup form revealed that the drying rate was a factor only of the rate of moisture diffusion to the outer surface and therefore on the temperature of drying. The other two factors apparently have little effect. Flow drier appears to be better suited than the cross flow drier for the drying of coconuts in the cup form. Above an air temperature of 60°C there was a tendency to get charred.

However, it was found that by employing an initial higher temperature at 70°C for first eight hours and then completing the drying at 60°C it is possible to reduce the total drying time considerably without affecting the quality of the product. The milling quality of mechanically dried copra compared to sundried copra is now being studied at the Research Station.

★ ★ ★

Bhopal Clay Suitable for Use in Lightweight Aggregates

Investigations conducted at the Central Building Research Institute, Roorkee, indicate that Bhopal clay is suitable for producing a sintered type lightweight aggregate.

Lightweight aggregate is used in all types of concrete construction where weight reduction, thermal insulation and fire resistance are desired. Of late, such aggregates are being produced with clay as a binder in place of cement. Also bricks bonded with clay develop, after firing, high compressive strengths and are more economical.

Little attempt has been made so far to exploit Indian clays for making lightweight aggregates. After extensive trials, a process has been developed at the Institute, which eliminates the use of sulphite lye and is applicable to a large number of clays.

★ ★ ★

Radio-Active Isotopes for Tracing Underground Water Movement

Scientists in Israel have tried out radio-active isotopes for tracing the movement of underground water and assessing underground water resources.

The reservoirs of underground water constitute about two-thirds of Israel's total supply and therefore contribute vitally to the development of Israel's industry and agriculture. Better than the method of "marking" water with a dye or easily detectable chemical label such as salt or starch for tracing the flow of water below ground, isotope labelling and mapping its movement with Geiger counters proved effective.

Cheap, long life isotopes, non-injurious to the health of animal and plant life, were found to be radio-active iodine, cobalt and iridium charged chemical form.

The negative charge was repelled by the soil generally and therefore stood a far better chance of breaking through the positively charged soil. Small scale tests with radio-active iodine in the Carmel Range was successfully traced to neighbouring

boreholes and established that water tracing by isotopes could be conducted over a considerable distance.

★ ★ ★

Electricity from Tidal Power

The ocean wastes 36,000 million kilowatt-hours every day in the tides. This lost energy corresponds approximately to all the power used by the earth's population in twenty-four hours—electrical, mechanical or animal power. Harnessing the sea is, therefore, a very tempting prospect.

The dreams of the pioneers of tidal power have become reality, says a UNESCO news report, after twenty years of research and experimentation. The Rance 'tidal trap', capable of forcing the sea to lend a few crumbs of its colossal power, will supply an average of 544 million kilowatt-hours per year. The decisive element in this victory of science has been a strange, pot-bellied machine weighing eighty-nine tons, with a four-bladed propeller at one end. It resembles a huge airplane engine.

The construction of the world's first tide-driven electric power plant, begun at the end of last year, will be completed in the spring of 1966 at the mouth of the Rance River, near St Malo, in France. It will take six years to close the estuary of this river in Brittany with a dike 2,000 feet (800 meters) long. Then twenty-four turbo-generator sets will go into service. Each of those sets, composed of a generator driven by a turbine in the form of a ship's propeller, will be housed in a submerged water-tight shell. Driven by water flowing at a rate of 635,000 cubic feet per second, this "battery" of turbo-generators will feed 240,000 kilowatts of current into the French power grid, both for industry and domestic purposes. (The kilowatt is a unit of electric power corresponding to 1.36 horsepower. As an example, a light bulb can consume 100 watts, or one-tenth of a kilowatt).

If all goes according to plan, even more daring undertakings will become possible. For example, the huge neighbouring Bay of Mont St. Michel could be closed off. Then the sea would provide from ten to fifteen million kilowatts per second—that is, fifty to sixty times more than the Rance tidal power plant.

Astronomists, however, warn us that there may be a few pitfalls on the road to electricity from the sea. Tides are of astronomic origin because they are the result of the influence of the sun and the moon upon our planet. That tidal energy which is going to transform into electricity must be taken from somewhere. It is taken from the kinetic energy of the earth's rotation. The more tidal power plants are built, the more the earth's rotation speed will be slowed up.

This breaking will not be very serious. If we harness the equivalent of 1,000 million kilowatts of power, we will end up by losing about ten hours over 2,000 years. We have lost just about this much since the birth of Christ without generating electricity during that time. The energy was simply frittered away in the breakers.

Company Reports

Right Issue by Kesoram Cotton

THE Kesoram Cotton Mills Limited has decided to issue 4,00,000 equity shares of Rs 10 each, at par, in the proportion of one new share for every four existing ordinary shares. These will be offered to those shareholders whose names are registered as on 22 July 1961. The application form will be despatched by the company during the last week of July and the applications must reach the company along with the requisite money on or before 31 August, 1961.

Meanwhile, the company has produced excellent working results for the year ended 31 March 1961, thanks to the substantial rise in sales from Rs 6.28 crores to Rs 9.12 crores. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 98.66 lakhs as against only Rs 47.11 lakhs for the preceding year.

Apart from providing Rs 6.67 lakhs for Taxation in respect of the previous year; Rs 51 lakhs for General Reserve and Rs 11.37 lakhs for Contingency Reserve, the Depreciation amount is raised to Rs 71.51 lakhs from Rs 2.16 lakhs. The provision for Development Rebate Reserve is, however, substantially lower at Rs 3.47 lakhs against Rs 47.20 lakhs. The directors have raised the dividend from 50 p to Rs 1.20 per Ordinary share, subject to deduction of tax. This gives a net dividend of 8.4 per cent.

According to the directors' report, the Textile section has shown a substantial improvement as compared with the preceding year. Due to the increase in the internal demand, the quantity of cloth exported by the company has been somewhat less. The company is proceeding satisfactorily with its modernisation programme.

The production of Rayon is being steadily maintained at about 7 tons per day. The scheme of expansion of the rayon plant is making good progress. It is expected that the new machines will go into production before the end of the financial year of the company.

The erection of the first Transparent Paper Casting Machine has been completed and trial production was started on 8 June 1961. The second machine is expected to go into production before the end of the financial year.

Despite the efforts made by the company, it has not been possible

for the company to obtain import licence for the Steel Tube project. It is hoped that the company will secure the import licence within a reasonable period. In anticipation of the same, provisional orders for machinery have already been placed.

The company has received permission for a plant to manufacture 30,000 tons of Spun-Pipe per annum. Efforts are being made to secure the necessary import licence for this project.

Efforts are also being made to diversify and enlarge the company's activities. The spinning plant of Bharat Kala Bhandar Limited—a 100 per cent subsidiary of the company—is expected to go into production before the middle of 1962.

In view of the efficient and satisfactory working of the present units and the new proposals mentioned above, the directors state that the shareholders can look forward to the future with optimism.

Bengal Paper Repeats

Despite a rise in sales from Rs 3.07 crores to Rs 3.17 crores, the Bengal Paper Mill Company Limited has reported a slightly lower net profit, after providing for Depreciation and Taxation, of Rs 22.62 lakhs for 1960 as against Rs 25.73 lakhs for the previous year, mainly due to the rise in manufacturing costs.

In respect of allocations, Depreciation is raised to Rs 10.05 lakhs from Rs 4.84 lakhs and Development Rebate Reserve to Rs 2.69 lakhs from Rs 2.10 lakhs. Taxation provision is, however, lower at Rs 18.17 lakhs against Rs 18.48 lakhs and General Reserve at Rs 4.00 lakhs against Rs 7.00 lakhs. Capital Reserve is maintained at Rs 10,000. The dividend on the Ordinary shares is maintained at 32 per cent, subject to tax.

The smooth working of the mill is reflected in the increase in production to 18,105 tons from 15,927 tons. The expansion and modernisation scheme of the company to increase its production to 100 tons per day is making satisfactory progress.

Orders for a new paper machine of a latest design have already been placed with a UK firm, shipment of which is expected to commence from the second half of 1962.

Negotiations for the purchase of machinery from the USA, for

which import licence has already been received, are also in advanced stage and orders will be finalised as soon as approval of the Development Loan Fund is received to the company's dollar loan application.

Belvedere Jute to be Absorbed by Delta Jute Mill

According to a circular letter issued recently, the directors of the Delta Jute Mills Company Limited were of the opinion that the profitability of the Belvedere Jute Mills and the Delta Jute Mills would be increased by concentrating the working of the two mills in Delta Mill. It was thought that this should be done under a scheme of arrangement whereby the Belvedere Mill would be absorbed by the Delta Mill.

The Delta Mill has received the consent of the Controller of Capital Issues to the issue of shares, necessitated by the proposed scheme and the members of the Delta Mill have approved the scheme and have authorised the Board of that company, subject to the consent of the Calcutta High Court, to issue shares in that company to the holders of Belvedere shares. The petition to the Court for its sanction to the scheme of arrangement will be filed shortly.

Meanwhile, the Belvedere Jute Mill has reported a substantial decline in the net profit from Rs 6.32 lakhs to Rs 24,162 for 1960 despite a rise in sales from Rs 1.31 crores to Rs 1.50 crores. The Depreciation amount is nearly maintained at Rs 1.84 lakhs. After transferring a sum of Rs 2.04 lakhs from the Dividend Equalisation Reserve and Rs 6,300 from Contingency Reserve, the directors have set apart Rs 1.15 lakhs (Rs 5.80 lakhs) for Taxation and Rs 743 (Rs 1,782) for Development Rebate Reserve and recommended a taxable dividend of Rs 5.00 per share against Rs 13.50 per share on the Ordinary shares.

Gondalpara Mill Reports Lower Profits

The unfavourable trading conditions generally experienced by the jute industry are reflected in the working results of the Gondalpara Mill Limited for 1960. Although sales have risen to Rs 2.31 crores from Rs 2.08 crores,

the net profit is nearly halved to Rs 4.10 lakhs as against Rs 8.03 lakhs. Depreciation is raised to Rs 5.28 lakhs from Rs 4.60 lakhs and Taxation to Rs 3.73 lakhs from Rs 2.00 lakhs. The provision for Development Rebate Reserve is lower at Rs 17,585 against Rs 4.68 lakhs. The dividend is, however, maintained at Rs 4.00 per share subject to tax.

The company has started installation of machinery for the manufacture of wide carpet-backing cloth. It is expected that the mill will go into production from September.

Katras Jherria Coal Fares Well

Despite the rise in sales from Rs 73.38 lakhs to Rs 78.10 lakhs, the working of the Katras Jherria Coal Company has resulted in a decline in the net profit from Rs 6.72 lakhs to Rs 6.24 lakhs for the year ended 31 January 1961. But, all allocations have been increased. Depreciation from Rs 1.24 lakhs to Rs 1.39 lakhs; Taxation from Rs 5.52 lakhs to Rs 6.01 lakhs and Development Rebate Reserve from Rs 21,993 to Rs 57,118. The directors have proposed a final dividend of Rs 2.50, making a total of Rs 4.00 per share, taxable, on the increased ordinary capital as against Rs 0.50 per share, taxable, paid on the original capital. Raisings have risen to 350,356 tonnes from 342,488 tonnes and despatches to 360,222 tonnes from 352,525 tonnes.

Mukund Iron Disappoints

Market circles have been rather disappointed over the decision made by Mukund Iron to maintain the dividend at 12 per cent, subject to tax, for the year ended 31 March 1961, though on an increased capital. Earlier, rumours were current that the company was seriously considering the proposal to raise the ordinary dividend as it had done exceedingly well during the year.

Preliminary figures indicate that the gross profit of the company, after providing for Depreciation but before Taxation, has gone up to Rs 46.66 lakhs from Rs 31.49 lakhs for the previous year. Taxation has absorbed Rs 25 lakhs against Rs 13.25 lakhs; Development Rebate Reserve Rs 1.7 lakhs against Rs 2.50 lakhs and General Reserve Rs 10 lakhs against Rs 8.00 lakhs. Capital Redemption Reserve at Rs 10 lakhs against nil in the previous year consists of a part of the profits and of the amount collected by the company out of redemption of preference shares during the year. The company's turnover is reported to have increased considerably during the year.

INDEX NUMBERS OF SECURITY PRICES (1952-53=100)

Week ended	9-7-60	1-7-61	8-7-61
Government and semi-Government securities—All-India			
Total	101.2	101.0	101.0

STATE BANK OF INDIA (In 000's of Rupees)

Steam...

Industry's greatest power

SINCE 1782, when the first Rotative Steam Engine enabled the use of steam power to motivate machinery, steam has played an ever increasing part in industry throughout the world.

Not only is steam today's most important source of power for the civilised world, but it must remain so for many years to come. Even atomic power is yet in its infancy and can only be applied as an alternative source of heat. Steam is indeed the real power of industry.

While this is but an outline of the extensive and continually growing part that steam plays in power generation and industry throughout the world, it indicates quite clearly the unparalleled importance of steam power in the industrial growth of India... and, therefore, the urgent need to manufacture vital steam-raising plant in this country to meet the demands of expanding industry.

This is one of the needs which has led to the formation of a new and powerful industrial group, ACC-Vickers-Babcock Limited (AVB). The vast technical knowledge and extensive practical experience available to it will enable the new company to make an important contribution to Indian industry—and help Indian engineers overcome some of the difficulties which have faced them for so long.

The new AVB plant is nearing completion on a 700-acre site at Durgapur. The workshops, designed on modern lines, will have built into the structure electric overhead travelling cranes with 70 tons lifting capacity. All workshops have been designed to allow for progressive expansion so that it will be possible to lift 200 tons without making structural alterations. Up-to-date machine tools are being installed. When completed, they will include a 3000 ton hydraulic press capable of bending steel plates up to 5" thick for use in the manufacture of high pressure boiler drums, and pressure vessels required for the fertiliser, chemicals and oil refining industries. The new plant will make it possible to manufacture steam-raising equipment in the high pressure range—for the first time in India.

ACC-VICKERS-BABCOCK LTD. offers the industrialist his best chance to ensure a fully integrated installation comprising the boiler plant itself and a wide range of equipment from the fuel handling and preparation plant to the ash plant and dust disposal installation.

Besides, the industrialist has the confidence that he will get after-sales service of the highest quality from AVB!

...a Powerful Partnership for Progress

Now Ready—An indispensable book

**GUIDE TO
COMPANIES ACT**

As Amended by Act LXV of 1960

SECOND EDITION
(Revised & Enlarged)

By A. RAMAIIYA, (Advocate)

Though the book is called a Guide it is really a comprehensive book dealing fully with all the sections of the Companies Act giving the relevant caselaw and useful and practical notes to the various sections. A detailed study of the changes introduced by the Companies Act I of 1956 and the Amendment Act LXV of 1960 is made in the Introduction. Useful Appendices and all prescribed Rules & Forms as amended up-to-date are included.

So many changes have been made affecting even the day-to-day administration that a thorough knowledge of the various provisions is necessary for every person connected with the administration of companies.

Order for a copy immediately.

Printed on Foreign printing paper
and attractively got up.

Price Rs. 20. Postage extra.

Pre-publication offer of Rs. 17.50.

Open till the end of August,
1961 only.

TRAVEL TALK IN TUBELESS TIMES

'A tube, a tube, my kingdom for a tube',
quoted Time-Master Tubophile getting his
Shakespeare all mixed up.

'Listen', said the coachman. 'You ain't
got a kingdom to give and we ain't got
a 'tube' to travel in...so now we walk,
see!'

'Zounds, Sir', thundered Time-Master
Tubophile, still Shakespearean, 'you don't
have to remind me that this is a tubeless
land in tubeless times. Full well do I,
Chairman, Tube Time Inc., know it. Not
a car, train or plane for conveyance...not
even a bicycle to take the ache out of
travelling. Nothing to take you from
here to there save a horse...and that
too run away. Such is tubeless travelling.
Comforting, though, to think, there is
my tubular time machine to take me
back to my own well-tubed time. And
back I'll go after I have seen more of
these tubeless times.'

'Coachman! forward—No!'

Mr SELWYN LLOYD'S much-discussed shock treatment for the ailing British economy has, in the event, come as an anti-climax. Of the dozen cures he outlined last Tuesday (detailed elsewhere in the issue), most are old items in the British economic pharmacopoeia, if not, as some aver, old wives' nostrums. A few, like the ten per cent increase in excise and customs levies on luxury items, are the first trial of a new anti-biotic, designed to reduce the fever in a hurry. But of the drastic surgical treatment that had been widely anticipated, there is no inkling. Thus Britain's sixth Post-war economic crisis has been, despite brave words that were spoken in the last few days, treated in much the same way as before.

There can be no doubt that the remedies outlined will solve some of the more immediate problems facing the British economy. The speculative pressure on Sterling has already been arrested, because of the measures announced. The rise in the Bank Rate to 7 per cent has undoubtedly been helpful in this. It will also ease the flow of some hot money into Britain and by making money dearer at home, it will curb the spending spree. Obviously all the incidental disadvantages of such drastic blood-letting will be there. But there was probably no alternative to Mr Lloyd and The Economist, which was keeping its fingers crossed and asking week by week why the Bank Rate was not being raised may now breathe easier. The application of the new fiscal device of increase in excise duty is expected to withdraw an annual 200 million pounds from the purchasing power of the nation. Reduction in government expenditure at home promised—which has involved the denial of a rise in pay demanded by teachers—will help reduce inflation as will the cut-back in production by dearer money in the private sector. Of more immediate impact on the balance of payments is the decision to reduce overseas spending, especially on defence. With the clouds gathering over Berlin, the scope for this may be doubted, though, the call on West Germany to increase contributions for British troops stationed may find a readier ear now. Mr Lloyd had resisted the temptation to dip deep into funds that go out in the form of aid. But earlier hopes of steadily increasing aid from Britain will have to be abandoned, at least temporarily, for Mr Lloyd proposes to take steps to 'contain the increase in assistance to under-developed countries and see that it did not rise much above the present level.' In all, Mr Lloyd hopes for a reduction of 20 per cent in foreign spending, to be achieved by reduction of overseas defence commitments, expenditure on diplomatic services and containment of foreign aid.

Probably the most controversial proposal of Mr Lloyd is the clear announcement of a policy of holding the line in wages and salaries. This, however inevitable in a situation of cost-inflation, is sure to create wide-spread resentment, especially when a corresponding

austerity in the matter of dividends is left to the goodwill and good sense of the industry. This is particularly indefensible, for only the other day Mr Lloyd's colleague, Mr Maudling, was quoting figures that supported the view that while wages have risen disproportionately to rise in productivity, dividends have done so even more strikingly. According to the Financial Times, wages rose by 7½ per cent last year whereas dividends rose by no less than 26 per cent. According to Mr Maudling, the latter figures should be 23 per cent, but even so, he is surely right in saying that while the rise in wages was "faster than can possibly be justified by rise in productivity", the rise in dividends was "far too high by any reckoning whatever." The point that the Labour party is sure to seize upon is that a Conservative Chancellor (whose reduction of surtax earlier in the year despite impending crisis has not been forgotten) has made no bones about a wage freeze, while he has been mealy-mouthed about a dividend-freeze at a time when dividends had increased at a pace thrice that of wages. Already Mr Cousins had said that in a situation of "free-for-all", labour is not going to stand on the side lines. Of course, Mr Lloyd can choose to rely on Lord Hailsham's figures rather than on Mr Maudling's and say that "between the first quarter of 1960 and the first quarter of 1961 profits actually fell by as much as 6½ per cent while wages and salaries during the same period rose by 8½ per cent." But such figure-juggling is merely likely to exacerbate Labour, which is understandably sore that a government that got to power on the crest of the "never-had-it-so-good" wave has its embarrassments at a time when the general elections are some two years away.

Britain's chronic economic ills have been, by and large, left alone by Mr Lloyd in his present set of prescriptions. Not that there was any difficulty in diagnosis. Production is stagnating being in early 1961 very much where it was in early 1960. (The latest figures are slightly encouraging. In April and May 1961, the index of industrial production is put at 122. Base year: 1954). Britain's share of world exports is falling, the ground being lost to West Germany principally. Its export cost is increasing whereas that of West Germany is steady. Most importantly, Britain's invisible earnings have been steadily declining from a net surplus of £340 million in 1951 to a mere £22 million in 1960. British shipping in particular has fared badly over the years, slipping from the position of a net earner of foreign exchange of £132 million in 1951 to being a drain on foreign exchange to the extent of £25 million in 1960. This had added an economic poignancy to the political irony (after Suez) of the slogan "Britannia rules the waves". Vigorous action to combat these problems has not been outlined in Mr Lloyd's proposals. The imminent announcement by Mr Macmillan that Britain will start negotiations with the ECM countries for joining them is probably the only step that can be described as such.

COMMODITIES

Mixed Trend in the First Half-Year

A BROAD picture of commodity prices for the half-year just ended conceals some important fluctuations in individual groups. The prices of some commodities are at levels at which producers are actively expressing their discontent and this is reflected in the recent moves to strengthen existing or create new international commodity agreements, intended to stabilise or improve prices. But, it seems to be established that the expansion in business activity, that is taking place in many parts of the world, is boosting the demand for commodities used in industrial production.

Agricultural commodities are not benefiting from any such increase in demand. Some of this group of commodities—foodgrains, sugar and coffee—have registered further price declines in the second quarter of the year. This has been offset by the improvements registered in the commodities, such as non-ferrous metals and certain categories of spices.

It is also the case that those commodities with an effective form of international control have done better than those that have no such organisation. Where it has been possible to reduce supplies to levels appropriate to the current demand, prices have been generally held at lower levels. But, by and large, the commodity price structure and the general supply-demand position are regarded as satisfactory. What is more remarkable is the air of stability that is becoming steadily more apparent in some of the markets.

Commodity-wise, prices of Non-ferrous Metals showed a steady upward movement from the beginning of the year. In the Bombay market, Tin was in the forefront with reports of cornering by some parties. The rise in prices had been hectic and unprecedented in recent times. This was attributed to aggressive bull buying, inspired by the paucity of supplies. The firmness of Tin did not fail to arouse sympathetic response from other metals. Copper rallied for a time, while Lead was pushed up on reports of voluntary cutbacks in world production.

On the London Metal Exchange, Tin witnessed violent fluctuations in prices. As the current surplus to world demand continued to run about 10 per cent ahead of world production, the spot rate pierced the ceiling of £880, fixed by the International Tin Council. At one stage, the rate even crossed the £930 mark and the Buffer Stock Manager was forced to sell the metal from the stock to prevent prices going up further. Copper, too, showed a sharp recovery from the low level touched at the end of the first quarter. The main cause was a better demand from the USA where consumption appeared to have picked up. As stocks in the USA declined due to heavy buying by Japan, the US smelters increased the price to 30 cents a pound, not to speak of the fact that many American buyers had to shift their attention to the London market for obtaining the metal. Zinc prices, however, showed a steady decline from the first quarter level due to the continued pressure of the US metal on the London market. In the case of Lead, the effects of voluntary cutbacks in production this year coupled with the United States barter deals to relieve the pressure of surplus stocks helped the market to bring about a moderate rise in prices.

The following table shows the price trends of a few selected commodities:—

	31-12-60	31-3-61	Increase or Decrease % (3)	30-6-61	Increase or Decrease of (4) over (1) (5)

Among Spices, the market for Pepper remained generally weak in the absence of sustained foreign demand throughout the first quarter. The USA was keeping away from the market as it got the supplies at lower prices from Singapore where the market was itself in doldrums in view of the sizable stocks in Indonesia and Sarawak. Weakness in Rubber also proved to be a discouraging factor and brought forth some liquidation in white pepper. Again, dealers in Singapore were offering daily in competition with India, while same was the case with Indonesia where the exporters were the willing sellers below the replacing parity for attracting buyers. But, the important factor contributing to the persistent weakness of Malabar pepper was the tight conditions prevailing in the money market, as five banks in Kerala were under moratorium by order of the Reserve Bank.

Things were, however, looking up since April. Distressed selling with a view to avoiding double sales tax in the Kerala State having been finished on 31 March, the market became steadier though business continued to be thin owing to lack of foreign enquiries. In the Singapore market, too, prices of black pepper developed a hardening tendency on reports that the Indonesian Government had decided to export the commodity direct to the USA, Russia and other consuming countries instead of selling via Singapore. This pushed up prices in Singapore to 46 cents per pound, which was about 2 cents lower than the ruling prices in India. Thus, with the narrowing disparity between Indian and Singapore prices, prospects of exports were brightened as it was hoped that the USA might revise its buying ideas in view of the rise in Singapore rates. Above all, it was believed that the new

season's crop in India was not likely to exceed 20,000 tons in view of the large-scale damage to the vines by the recent floods in the Kerala State.

There was a strong and general demand for Tea throughout the period under review. The auction trends till the end of February indicated that teas with outstanding quality were in good demand on the general view that prices might not slip back in the near future in view of the strong support from the domestic buyers. It was also thought that, as exports had been maintained at a high level, there might not be enough tea for the domestic market. As a result, exporters operated strongly, while the internal buyers continued to support the lower-priced tea. But, the ebullience, which was noticed after the announcement of the export duty, abated on second thoughts. The increase in the excise duty counteracted the favourable effect of the cut in export duty, because all teas in the gardens had to pay the excise duty which was not refunded even when tea was exported. Nevertheless, the final export sale for the 1960-61 season finished on a stronger note than it had done for many years.

Although bidding at the first export auction, held on 15 May, for the new season's tea was not so encouraging as was expected earlier, there was strong support for plain Assam and Dooras teas, presumably due to keen buying of internal dealers who were short of the commodity. It was thought that the outlook for the industry for the current year was favourable though a larger crop in North-East India might lower the price level to some extent and this would be compensated by a lower cost of production and increased exports. The overall statistical position also indicated that there was little surplus of tea in the world. This led to a feeling that the possibility of shortage could not be ruled out, especially when consumption in India was expanding. Even the tea trade held the view that India should raise her production as rapidly as possible, as otherwise, with internal consumption forging ahead and prices tending to rise, there would be less and less for export.

The Bullion market maintained a steady front. While higher levels induced profit-taking, support was forthcoming at every small decline. Apart from the approach of the busy season, the main factors contributing to the steadiness were heavy covering by bears and the manipulation by the bull operators.

The markets for Art Silk and Staple-Fibre Yarns remained generally firm during most part of the period. Art silk yarn prices showed an upward tendency from the beginning of the year, as the availability was stated to be tight and would continue to be so for some years to come. Although a number of new plants had been established during the last few years, the position in regard to supplies had not improved, while the demand was on the increase. But, prices suffered a sharp fall after announcement of the increase in excise and custom duties in the 1960-61 Budget. The reports, that the Government was about to issue to actual users import licences worth about Rs 1 crore for the October/March period and considering barter proposals involving export of surplus commodities such as sugar against import of rayon yarn, also aided the downward tendency in prices. There was also a move to import yarn on rupee payment basis. In these conditions, the scramble for yarn tended to subside with buyers awaiting lower prices. But, the scarcity of ready goods and a good upcountry demand caused again an upward tendency in prices from the beginning of June. In the

Cotton yarn section, however, trading was dull due to the easy supply position of raw cotton.

In the case of Oils and Oilseeds, the firmness of Groundnut was more pronounced. The groundnut section took a bullish tone from the commencement of the year due to the receipt of the commodity falling short of demand and as such crushers and vanaspati manufacturers emerged as consistent buyers. Even the increase in excise duty on vanaspati seemed to have no effect on sentiment. The steady demand for groundnut oil encouraged the crushers, who readily lifted the receipt of groundnut from upcountry centres at advancing prices. Above all, reports of rains in the producing areas tended to reduce the pressure on the available supply of groundnut and groundnut oil.

Although the sustained strength in groundnut had a favourable effect on prices, the market for Castorseed lacked strength of its own due to the obscure outlook for the commodity. The demand for castor oil from abroad remained negligible, with the USA and Communist countries keeping out of the market. Business with UK was also slack. The inflow of the new crop from the major producing areas was also reported to be fairly good.

Except for a slightly better turn noticed towards the end of the period under review due to some speculative buying by the Uttar Pradesh and Calcutta operators, the Linseed section presented generally a listless appearance. Price movements were, therefore, shaped by North Indian operators and upcountry advices regarding rapeseed.

Irregular price movements characterised trading in the Jute Goods market. Conditions akin to a boom were witnessed at the end of January when the ruling high prices did not even discourage foreign buyers who were being forced to take their requirements in the absence of any other alternative. Regular purchases of goods by the Government of India also became a feature, while internal consumption had also been rising faster than exports. But, from the beginning of March, prices suffered a steady setback due to selling pressure following the uncertainty created by the Jute Licensing and Control Order and the reactionary tendency in raw jute prices. Even the marked decline in prices failed to attract overseas buyers, who preferred to wait till the fibre position became clear. Again, the uncertainty about the future seemed to worry buyers and sellers alike, while the trade was in the dark as to what was likely to be the ultimate outcome of the block closure move. While the IJMA favoured the block closure of mills for only a specific period with a view to overcoming the shortage of jute, the Government thought it too early to contemplate any such move due to its possible impact on labour. There was even a tendency in the market to take rather an alarmistic view, as the decline in prices had been so rapid that the possibility of any immediate recovery had been discounted unless there was a further fall in raw jute prices. As a matter of fact, till the middle of June, the market was almost dead with virtually no enquiry from foreign buyers and the internal offtake being adversely affected due to the prevailing uncertainties.

Thanks to the resumption of forward trading on 15 June, the jute trade saw the turning point in its fortunes and the price slide, which threatened to develop into a total collapse of the market, had been halted. With the selling pressure off, prices steadied all along the line, sparked by broadening foreign enquiries and brisk shipper covering. There was a growing feeling that the prices of raw jute might not fall appreciably as sup-

ply and demand were evenly balanced. The steadiness of the market was also influenced by the reports of the decision made by the IJMA to close the mills for a week in June and July to correct the existing raw jute stock position.

Prices of Raw Jute displayed a firmer tendency during the major portion of the period. The only reaction to the announcement on 10 March of the promulgation of the Jute Licensing and Control Order under the Essential Commodities Act was, that fibre prices settled down to the controlled rate of Rs 62 a maund for Assam Bottoms. Even then, the number of sellers, prepared to sell at this level, was very small due to the general belief that it would take at least six months for the industry to turn the corner. The reports of some damage done to the crop in Pakistan by the recent cyclone had also a steadying effect on the Calcutta market. But, prices developed a reactionary tendency from the third week of May following the maximum prices fixed by the IJMA being revised from 22 May. The price was revised to Rs 58 from Rs 62 a maund. Even the lowering of the maximum price did not appear to have evoked much interest from the mills. No anxiety was shown by them to lift even a part of their quotas on the belief that prices might come down further, especially when reports about beneficial rains had continued to flow from various jute-growing areas. The market, however, took a remarkable turn in the middle of June when hopes of getting some early deliveries of Pakistani jute were receding due to reports of adverse effect on the coming jute crop.

In the Sugar market, conditions remained generally weak. Unweildy sugar stocks became a drag in the market. From the beginning of the year itself, it was feared that the problem of plenty confronting the industry would become serious in the months to come, especially when the factories were crushing cane at a high speed with consequent higher production. The problem of distribution of surplus sugar, therefore, assumed serious proportions, resulting in prices developing an easier tendency. The export outlook for the commodity also continued to be uncertain. The industry was anxious to sell sugar abroad; but it was not prepared to bear all the losses. There was also a general feeling that India could not sell the commodity in foreign markets except at substantial losses when the commodity was already in surplus in world markets and there was keen competition. The worry was the greater, considering that cane prospects were very good during the next season. But for the decision of the US to import 225,000 tons of sugar and the efforts taken by India to become a member of the international Sugar Council, the situation would have become extremely dangerous to the industry and farmers alike.

Except for a slight improvement in prices noticed from the beginning of June following the announcement of additional quotas to the indigenous mills to the extent of 20 per cent of their previous season's consumption and the Government decision to enhance the floor price from Rs 139 to Rs 168.57 per three quintals for the 1961-62 season, conditions in the Bombay Cotton market remained generally weak during the period under review. As a matter of fact, panicky conditions prevailed in the beginning of February when growers were anxious to dispose of their stocks, while the mills preferred to keep away from the market on expectation of a further fall in prices, not to speak of their reluctance to increase their stocks due to financial difficulties. The situation was aggravated by the reports of accumulation of stocks

with the traders of Gujarat and Saurashtra. To make matters worse, the reported entry of the Indian Cotton Mills' Federation into the market led to a fear that the bulk buying by the Federation would wipe out completely the trade and the growers in as much as the Federation would be able to squeeze both of them by sheer dint of collective bargaining power. Even the subsequent statement that the Federation was only a buyer at the instance of the Textile Commissioner to support a sagging market and it might withdraw at any time failed to bring the desired improvement in the trading conditions.

The market for foodgrains also ruled weak with prices showing a steady setback. A comfortable stock position and sufficient imports contributed to a feeling of confidence among the traders. The removal of zonal restrictions on wheat movement and the prospects of heavy arrivals of the new crop were also responsible for the sharp fall in prices towards the end of the period.

Finances of State Governments

THE Reserve Bank of India Bulletin for June 1961 has assembled in a compendious form figures relating to the finances of all the State Governments. These figures, collated from the various budget papers relate, for the most part, to the last ten years, and provide copious material for meaningful generalisations of various kinds about the trends in the finances of the various constituent units of the Union. It will, for example, be worth while to investigate by the performance of the various States, especially in the matter of efficient use of resources, their relative sense of financial discipline and regard for solvency and viability in financial matters. It should also be possible to compare progress made in particular directions, say, the creation of new social assets, tangible and intangible, the progress in social services and allied schemes of welfare. But the most interesting light thrown by the study is on the financial relationship between the Centre and the States in a decade of planning.

As will be evident from the accompanying table, the States have become increasingly dependent on the Centre for their requirements of finance. The proportion that receipts of all kinds (i.e. share of Central taxes, grants and loans) from the Centre bear to the total expenditure (on both capital and revenue accounts) of the States has progressively increased from 20.4 per cent in 1951-52 to 50.9 per cent in 1960-61. Looking at it from another angle, it is seen that the contribution of the Centre other than by way of loans (which is by convention related to capital account) is about 41.5 per cent of the total revenue expenditure of the States. The dependence of the States on the Centre for financing their capital expenditure is even more complete. The percentage of Central loans to capital expenditure works out to 51, 51, 79.5, 75 and 69 for the years 1956-57, 57-58, 58-59, 59-60 and 60-61 respectively.

Another way looking at the figures is to compare the Centre's contribution to the Plan outlays of the States. It will be seen that the total outlay on the Plan by the States for the five years of the Second Plan period was Rs 30, 346, 402, 471 and 573 crores respectively. The Centre's contribution to the States for these years were Rs 373, 519, 588, 641 and 770 respectively. In other words, the Centre has

(TRANSFER OF RESOURCES FROM THE CENTRE TO THE STATES)

*The figures are as shown in the Central Budget.

†Excluding transfers to funds.

‡Excluding appropriations to contingency and other funds. State Trading transactions and all debt and all deposit items except loans and advances by States.

§Due to reorganisation of States, only budget estimates for 1956-57 and revised estimates for 1955-56 are available.

¶These are actuals and hence their percentages to the expenditure of the States, which relate to budget estimates for 1956-57 and revised estimates for 1955-56 are not given.

been not only financing wholly the States' plans, but also providing a substantial part of the non-Plan expenditure of the States. And this tendency has increased with the years. Again, increases in revenue expenditure year by year have been looked after for the major part by increases in the receipts from the Centre by way of share of taxes and grants. The relative figures are given below:

(In crores of Rs)

	56-57	57-58	58-59	59-60	60-61
Increase in revenue expenditure	27.1	53.4	81.2	104.7	127.1
Increase in share of Central taxes and grants	13.6	71.6	68.3	42.0	68.8

A further point in the context of relationship between the States and the Centre needs mention. The quantum of borrowing from the Centre by the States is substantial. Total borrowings of the States from the Centre for the period 1951-52 to 1960-61 is Rs 2,343 crores. Of these the total repayments for the same period comes to only Rs 422 crores. In other words, of the loans taken since the beginning of the planning era, over Rs 1,900 crores or roughly 82 per cent is still to be paid back. And since, presumably, the States are going to draw heavily on the Centre by way of loans for the Third Plan, one wonders when the repayment of these loans are going to take place. By any kind of normal ordering of things, it should be the States that should be providing funds for the Centre by way of repayment of loans. The Second Finance Commission had some caustic things to say about the air of unreality of this kind of accountancy. We are also familiar with the kind of psychology that reckons on the possibility of these loans being quietly written off. The really unhealthy part of the whole arrangement is that the quantum of borrowing and owing bears little relation to the resources and potentiality of particular States. Here again, loose criteria like needs and regional demands rather than financial solvency in the strict sense of the term, have guided the relationship. The psychology is not unlike that governing the distinction between physical targets and financial targets in the context of overall planning, and the result is a similar air of unreality about the financial aspects of the situation. Moreover, such dispensation of loan-bounty, without relationship to financial discipline at the State level, has led to a kind of Micawberism on the part of the States. The absence of strict financial criteria has also led to the suspicion that if

you can put on the right kind of screws to the Centre, you can get what you want however improvident you may be.

These inescapable inferences from the figure add up to a picture of pathetic dependence of the States on the Centre. The political consequences of such financial abjectness in federal set up must cause worry on several counts. The acquiescence in Central planning for valid economic reasons must not be allowed to become a tacit and helpless assent to the corrosion of the federal principle. The political arguments in favour of a federal set-up in India with its well-defined regional characteristics are overwhelming.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

NEW LOANS

Successful: So Third Tranche to Come?

THE lists for the second tranche of the Government's borrowing programme for 1961-62 were duly closed, the loans being fully subscribed. Subscriptions totalled Rs 108.57 crores, or just a trifle short of the loans being over-subscribed. Conversion applications were placed at the paltry figure of Rs 3.72 crores, but the implication is that cash came in to the tune of a very satisfactory Rs 104.85 crores. Unexpectedly, the 3½ per cent 1969 proved less attractive, bringing in Rs 42.94 crores as compared with Rs 65.63 crores anticipated by the 4 per cent 1981. All subscribers are to receive full allotment.

Has the second tranche been more than a technical success? The answer cannot now be categorical. For, the greater drawing power of the 4 per cent 1981 would suggest that institutional investors (other than banks, of course) have been feeling relatively starved of gilt-edged. It is also possible that the banks amongst themselves have accounted for the bulk of the subscriptions to the 3½ per cent 1969. And it is just barely possible that, this year, the Reserve Bank has had occasion to tender less support than has been its practice in recent years. On these grounds, the second tranche is undoubtedly a success.

But...as against something like Rs 139 crores of loans maturing in the current year, conversions have totalled only around Rs 97 crores. Holders of as much as Rs 42 crores of maturing securities opted for cash: the refinancing operation this year therefore has been a success only to the extent of 69.7 per cent of maturities. Secondly, after allowing for cash repayment to holders of maturing loans who did not convert, the net borrowings of the Centre so far this year have added up to merely Rs 63 crores. Thirdly, even after the second tranche, the money realised by Government from borrowings falls short of the Budget expectation by nearly Rs 35 crores.

Once again, however, there is a saving grace: the State Bank of late has been a voracious purchaser of gilt-edged through the Reserve Bank tap. Despite purchases of gilt-edged by the Reserve Bank from the State Bank in April/June quarter, when the latter institution was making repayment of counterpart funds, the central banking institution is likely to emerge at the end of the fiscal year as a net seller of securities. That means that the net absorption of gilt-edged by the market is likely to be a rather larger figure than suggested by subscriptions to the new loans alone.

The money market of course is witnessing extremely easy conditions. The latest banking returns again confirm the gathering of free resources with the banking system. Indeed, on the eve of the lists being opened for the new loans the call money rate in Bombay had declined to as low as 1.5 per cent. A momentary strain was occasioned by the drawing upon the banking system of

such entities as the Life Insurance Corporation and other institutional investors: on the day the lists opened the call rate rose to 4 per cent. But the pressure upon banking system proved ephemeral, and the following day the rate slipped down again to the 2 to 3 per cent range.

We foresee for the immediate future a continuance of easy conditions. We believe consequently that a third tranche is in the offing, possibly in the form of a created issue which in the first instance would be sold to the Reserve Bank for sale through the tap to banks. Since the third tranche would be directed specifically at the banking system, we would suggest here that it should be a 3.4 per cent 1966, for say Rs 50 crores, at par or a modest premium and to be made available as from the middle of September.

BANK RETURNS

Intensification of 1961 Slack Season

The returns of the Reserve Bank and the State Bank for 21 July and that of Scheduled Banks for 14 July indicate that the 1961 slack season is producing extra-ordinarily easy money conditions.

Active Note Circulation has, in the latest week, contracted by Rs 26.03 crores to Rs 1,911.95 crores—the lowest such figure since the week ended 27 January and showing a drop of Rs 128 crores as compared with the peak touched on 7 April. Rupee Coin has also returned from circulation, in the week under review, in an unusually large amount of Rs 2.10 crores. Currency has been contracted against Rupee Securities for a little under Rs 30 crores, and the portfolio is now placed at Rs 1,597.05 crores. In the result, cash in the till marks a fall of Rs 1.80 crores to Rs 18.35 crores.

Indications of slackness are also contained in the return for the Banking Department. Reserve Balances of member banks have gone up by Rs 7.38 crores to Rs 103.46 crores, with the State Bank in the relevant week probably reporting a small drawing down. Simultaneously, borrowings from the Reserve Bank, on the part of the Scheduled Banks, have been reduced practically to nil: As compared with Rs 4.85 crores outstanding on 14 July, the Other Loans and Advances of the Reserve Bank have fallen in the latest week by Rs 3.91 crores to Rs 113.60 crores; that the bulk of the decline is on account of Scheduled Banks is suggested by the fall of Rs 2.41 crores to a nominal Rs 1.01 crores in the Reserve Bank's advances against usance bills.

However, the Central Government has had recourse to deficit financing, for perhaps as much as Rs 25 crores; the reason for the Centre seeking to replenish its resources lay in the commitment to the States in respect of ways and means advances and grants. The States have obviously received payment from the Centre, their Deposits rising by Rs 17.99 crores to Rs 31.35 crores; and their borrowings from the Reserve Bank are marked down by Rs 1.08 crores to Rs 40.65 crores. In the result,

BANKS

Snippets

Aggregate Deposits of all Scheduled Banks in respect of their business in India improved by Rs 30.89 crores between the last Fridays of March and April 1961 to a level of Rs 1,766.93 crores. The share of Indian Scheduled Banks in the rise was Rs 13 crores despite the loss of about Rs 12 crores by State Bank owing to making over of the April instalment of counterpart funds. In May, however, aggregate Deposits of all Scheduled Banks receded slightly by Rs 4.23 crores to Rs 1,762.70 crores, with Indian Scheduled Banks showing a drop of Rs 13.13 crores and roughly corresponding to the instalment of counterpart funds made over by the State Bank in that month. Foreign Banks, which had reported a rise in April amounting to nearly Rs 18 crores, showed a further improvement of Rs 8.89 crores to Rs 244.63 crores in May.

Reserves of all Scheduled Banks maintained with the Reserve Bank exceeded the statutory minimum, as on the last Friday in May, by Rs 12.42 crores.

Savings Deposits with Scheduled Banks improved further by Rs 1.95 crores in the month to the last Friday in May to a level of Rs 287.73 crores.

Seven new offices of Scheduled Banks were opened during May, of which one was on account of the State Bank and the rest by other Indian Scheduled Banks.

Secured Advances of Scheduled Banks against food articles rose in the fortnight to 28 April by Rs 4.39 crores to Rs 145.26 crores; against Industrial Raw Materials, they declined by Rs 4.22 crores to Rs 150.39 crores; against Plantation Products, they were slightly higher by Rs 70 lakhs at Rs 52.19 crores; against Manufactures and Minerals they were practically unchanged at Rs 411.06 crores against Rs 411.00 crores; and fell by Rs 3.49 crores to Rs 376.17 crores against Other Securities.

Cheque clearances at centres managed by the Reserve Bank fell from the April figure of Rs 944.30 crores to Rs 857.32 crores in May; at other centres also a drop was registered from Rs 212.24 crores to Rs 198.80 crores.

The Centre's cash position shows a nominal rise of Rs 0.19 crore to Rs 53.02 crores.

Investments are higher by Rs 35 crores at Rs 248.88 crores, of which Rs 30 crores is by transfer from the Issue Department. Moreover, the State Bank is known to have purchased Rs 19 crores worth of securities. Hence the inference that money was created by Government during the week in an amount of around Rs 25 crores.

There has been a moderate fall of Rs 1.42 crores to Rs 8.47 crores in Balances Held Abroad; and merely ten days remain before credit of \$250 million worth of foreign exchange is available for buttressing exchange reserves.

In its return for the week ended 21 July, the State Bank has shown a fair-sized drop of Rs 4.84 crores to Rs 254.83 crores in Ad-

The Recipe

Britain has announced a host of new austerity measures to get itself out of its present critical economic situation. These include (1) an increase in the Bank rate from five per cent to seven per cent (2) a surcharge of 10 per cent on all purchase taxes and customs and excise duties (3) firmer control on loans for instalment buying (4) a hold-the-line policy on wages and salaries (5) a moderated form of capital gains tax to discourage stock market and real estate speculation (6) tighter control on home building loans and all forms of construction (7) a reduction in foreign spending by 20 per cent and (8) a 10 per cent reduction in spending for Britain's diplomatic service abroad.

The measures are intended to achieve economy in Government expenditure at home and abroad, stimulate exports of British exports abroad at competitive prices and bring down the level of internal consumption and prices. The surcharge, it is estimated will by affecting spending on cigarettes, wine, beer, liquor, autos and all luxury goods withdraw purchasing power from the national economy at the rate of 200 million sterling a year. Increase in the Bank rate, apart from its direct effect on flight of sterling, will be the principal weapon for putting a curb on expansion of Bank credit. As a further supplementary measure, the Bank of England has called upon the London Clearing Banks to lodge a further one per cent of their liquid assets with the Central Bank. The UK's resources will further be fortified by substantial drawing on the International Monetary Fund.

In respect of Government expenditure, which is presently running at a high rate and which is further expected to increase to about 480 million sterling in the next year, Mr Selwyn Lloyd, has expressed the desire to hold it down to 400 million sterling in 1962-63. The UK has already appealed to the NATO authorities to consider possibilities of reducing British expenditure in the NATO. As a further measure, a hold-the-line policy in respect of aid to under-developed countries is also being considered.

vances, and the decline since the busy season peak touched on 7 April works out to just under Rs 38 crores. Deposits, however, are a mite lower by Rs 1.04 crores at Rs 531.31 crores. The State Bank has run down its

Other Assets by Rs 11.26 crores and purchased gilt-edged for Rs 19 crores. It is possible, therefore, that accordingly the bank's capacity for the new loan will be rather less. Cash in hand and with Reserve Bank is lower by Rs 0.62 crore at Rs 24.02 crores

The statutory statement of Scheduled Banks for 14 July shows that there has again been a switch from Demand to Time Deposits, and again a net rise in Deposit resources. Net Demand Deposits have fallen by Rs 6.79 crores to Rs 820.57 crores, but net Time Deposits have shot up by Rs 12.05 crores to Rs 1,111.43 crores. Thus, the net improvement over the week is Rs 5.26 crores, of which only half a crore is traceable to the State Bank. Since the first Friday in 1961, net Demand Deposits have risen by about Rs 43 crores, whereas net Time Deposits are higher by around Rs 6 crores. If regard is had for the fact that, over the period, the State Bank lost Rs 72 crores of Deposits on account of counterpart fund repayments, it will be seen that the actual improvement in Deposits (net of counterpart fund transactions) exceeds Rs 129 crores. In the latest week, Advances have further contracted by Rs 8.87 crores to Rs 1,263.38 crores, and the net increase over the first Friday in 1961 is less than Rs 64 crores. Indeed, the contraction in Advances from the busy season peak registered on 31 March is placed at the considerable figure of Rs 76 crores. The improvement in the resources situation has enabled Scheduled Banks to reduce indebtedness to the Reserve Bank by Rs 4.59 crores to Rs 4.85 crores, though borrowings from the State Bank are higher by about Rs 1.50 crores. The gilt-edged holdings show a rise of Rs 3½ crores, of which Rs 2 crores is ascribable to the State Bank. However, new loan week may impose some strain on the banking system—call money rate, which had declined to 1½ per cent on the eve of the new loan, went up on the day the lists were opened to 4 per cent, but has since declined to 2 to 3 per cent.

Bank Profit

Subject to audit, the net profit of the Punjab National Bank Ltd., for the half year ended 30 June, 1961 after providing a sum of Rs 5.90 lakhs for payment to the Gratuity Fund Trust and making necessary provisions amounts to Rs 75.96 lakhs as against Rs 45.37 lakhs for the corresponding half year in 1960. After adding a sum of Rs 4.23 lakhs carried forward, the amount available for appropriation is Rs 80.19 lakhs.

The Directors have decided to pay an interim dividend for the current year at the rate of Re 1/- gross per share amounting to Rs 12.50 lakhs leaving a balance of Rs 67.69 lakhs to be carried forward to the next half year's account.

A Rival to the Sterling Area?

By Paul Einzig

IT has become evident during the last few weeks that acceptance of the Rome Treaty by Britain without adequate safeguards would endanger not only the Commonwealth but also the Sterling Area. To counteract the deterrent effect of the latter possibility, the Common Market is engaged in elaborating a plan which would provide an alternative to the Sterling Area. The idea is to establish a Western European Monetary Union whose members would pool their resources for the mutual defence of their currencies. It is difficult to see how Britain could participate in such an arrangement and continue to remain at the same time the centre of the Sterling Area, unless the Common Market is prepared to admit also the other members of the Sterling Area, which seems to be utterly unlikely. Britain would be confronted not only with the choice between Commonwealth Preference and free trade with Western Europe but also with the choice between the Sterling Area and the Western European Monetary Union.

The Sterling balances of the Outer Sterling Area are incomparably larger than those of the Common Market, or even those of the whole continental Western Europe. From this point of view the change would mean an increase of the potential pressure on sterling. On the other hand, sterling would have the benefit of the psychological and material support of the large and increasing gold and foreign exchange reserves of Germany, France, Italy and the Benelux countries. The question is to what extent those reserves would be actually available if needed for supporting sterling.

It seems probable that Governments, Parliaments and public opinion in the Common Market countries would not be willing to underwrite sterling to any appreciable extent unless Britain is prepared to sacrifice her sovereignty as far as monetary and economic policy is concerned. Tempting as it is to receive the support of the Common Market reserves, there would be strong resistance to subordinating vital policies to the decision of an inter-European body. And even if the British Government and Parliament were prepared to do so there is no reason to suppose that the British trade unions would not disregard the decisions of such a body to the same extent as they now disregard the policy declarations of the British Government. To make those decisions effective would necessitate drastic steps, and there is no reason to believe that such steps would be any less unpalatable if imposed by an international body than they would be if imposed by the democratically elected British Government.

A stage would be reached sooner or later at which the Common Market would insist on such measures as the condition of continued support to sterling. Yet if measures are adopted that would deal with wage inflation there would be no need for sterling to shelter behind the defences of Common Market reserves. In the long run its fate will depend on the Government's willingness and ability to enforce the necessary measures, whether or not Britain will join the Common Market and the Western European Monetary Union.

Notes

LICENSING

Erratic

In the course of his address to the Central Committee of the All India Manufacturers' Organisation at Coimbatore a fortnight ago, Mr G. V. Puranik, Chairman of the AIMO drew attention to a rather odd feature in the industrial licensing policy of the Gov-

ernment. It is that in most of the industries covered in the development schemes for the Third Plan, a substantial portion of the capacity to be created during the Third Plan period has already been licensed, even before the Second Plan had ended. A general idea of the extent of target capacity covered by licences already sanctioned would be obtained from the following table which gives figures for capacity for some representative industries.

Name of Industry.	Unit.	Third Plan capacity targets.	Total capacity licensed as on 1-1-1961.	Existing capacity as on 1-1-1961.	Existing capacity plus capacity covered by foreign exchange
Steel Castings ...	'000 tons	200.00	167.93	39.60	75.61
Ferro-manganese ...	'000 tons	220.00	260.40	126.00	200.40
Aluminium ...	'000 tons	87.50	87.50	17.50	62.50
Copper ...	'000 tons	18.40	15.60	7.20	15.60
Watches ...	'000 Nos.	360.00	670.00	Nil	670.00
Wagons ...	Nos.	33,500	31,420	26,000	29,420
Power Driven Pumps	'000 Nos.	180.40	142.97	116.42	132.45
Diesel Engines ...	'000 Nos.	72.00	55.83	35.83	47.98
Ball & Roller Bearings	Mill Nos.	8.00	9.08	0.90	3.07
Sulphuric Acid ...	'000 tons	1,500.00	1,316.20	475.50	1,046.95
Carbon Black ...	'000 tons	30.00	33.60	Nil	10.00
Dyestuffs ...	Mill Pounds	22.40	26.40	13.50	25.00
Automobile Tyres ...	Mill Nos.	3.70	2.94	1.46	2.24
Synthetic Rubber ...	'000 tons	30.00	50.00	Nil	30.00
Paper & Paper Board	'000 tons	820.00	1,140.00	400.00	804.46
Cement ...	Mill tons	15.00	15.15	8.88	12.33

The table makes it clear that the licensing policy in respect of individual industries does not follow any uniform pattern. In respect of some industries the capacity licensed is already in excess of the Third Plan targets and this is true of watches, ball bearings, carbon black and cement. For a large number of other industries, the capacity licensed is very near the target fixed for the Third Plan. The fact, testified in the last column of the table, that foreign exchange offers already cover a large part the capacity licensed may explain for what seems to the liberal licensing record in the table. While the licensing policy may be justified on considerations of the time lag between licensing and the actual materialisation of the schemes, the very pertinent question arises: in giving licences has the Government taken into account the prospects for the supply of raw materials for the working of the industrial units when they are erected and start functioning? In many industries there is already idle capacity ranging between 25 to 60 per cent precipitated by lack of essential raw materials, components and balance-

ing plants. In the circumstances unless the provision for maintenance imports is enlarged, the competition for the limited supplies of raw materials would be dangerously accentuated. Already in respect of such industries as cotton textiles, cement, sugar, jute, paper, etc., the Government has suspended further licensing of additional capacity in view of what is recognised to be the excess capacity presently existing in these industries. In the light of the experience of the Second Plan when indiscriminate licensing in the earlier years led to serious crisis of foreign exchange for raw materials it does not need stressing that the accent in industrial policy should be on fuller utilisation of existing capacity. The import of larger quantities of capital goods without ensuring the supply of raw materials will lead to considerable waste in investment.

COMPANY LAW

Exemptions in Special Cases

Important exemptions from procedural formalities for companies engaged in the promotion of art, commerce, science, religion charity or any other useful object have been announced by the Government. The absence of profit motive in the cases of these companies has made the elaborate protections of the Companies Act redundant. Government have had many representations in this connection and their decision has been prompted by the desire to remove needless restrictions.

Under the orders now issued, these companies will now be able to hold their annual general meetings not only at any place within the country, but also on a public holiday and even outside the normal office hours. They need not file with the Registrar every year, along with the annual returns mentioned in Section 160 of the Act, the names of their members and the respective dates on which they became members and the names of persons who ceased to be members since the date of the annual general meeting of the immediately preceding year. It will not be necessary for the companies to publish their names strictly in terms of Section 147 of the Act; they will be free to indicate their names in a manner suited to their needs.

Fourteen days' notice, instead of the twenty-one days' notice which normally is required, would suffice in the case of these companies for the purpose of calling their annual general meetings. Similarly it will hereafter be enough if such companies preserve in good order their books of accounts for four years, instead of eight years as prescribed in the Act.

By virtue of another exemption, a person intending to stand for

election as a director or any member intending to propose him for election as a director will not have to leave at the office of the company any notice signifying his candidature for the office or the intention of such member to propose him as a candidate for that office. For the same reason, a candidate for the office of a director in any of the companies will not be required to signify this consent in writing to act as a director, if appointed. He will, however, have to file with the Registrar, within thirty days of his appointment as Director, his consent in writing to act as such.

Persons who have attained the age of sixty-five years will henceforth not be ineligible for appointment as directors of these companies in terms of the exemptions from the provisions of Sections 280 and 282 of the Act.

The boards of the companies, by whatever name called need not meet once in three calendar months, as provided in Section 285. It would be enough if they hold at least two meetings in a year. The quorum for a board meeting for such companies has been fixed at either eight directors or one-fourth of the total strength of the board, whichever is less, provided that it must not fall below two members in any case.

It will also not be necessary for these companies to notify the changes in their boards of directors, manager or secretaries at any time during the year. The names of the members of the board, managers, secretaries, etc. are however required to be filed with the Registrar once every year along with the Annual Returns as provided in Section 160 of the Act.

UNDERWRITING

Recent Trends

The Indian Institute of Public Opinion recently made a study of the underwriting business done in India which sheds considerable light on recent trends in underwriting business done and other allied questions such as the proportion of business accounted for by various institutions engaged in the business and the industrywise proportion of the underwriting business done. As an integral aspect of the functions connected with raising capital funds for industrial ventures in the private sector, the subject of underwriting is of obvious importance. The study made by the IIPSO serves to bring out the dominant role of underwriting in the success of new capital floatations and in the stimulation of corporate activity in the private sector.

The most important point that emerges from the study of the IIPSO is the great increase in the underwriting business done since 1956. In absolute terms there has been a seven-fold increase between 1956 and 1960, the total amount having gone up from Rs 2.11 crores in 1956 to Rs 14.64 crores in 1960. But, as a proportion of the total amount offered to the public the amount underwritten has declined in significance. There has been a gradual fall from the high level of 100 per cent in 1957 to 83 per cent in 1960 while the figures upto April 1961 reveal a further decline in the proportion. While conditions in the monetary market are an important factor affecting the volume and manner in which company floatations are underwrit-

TABLE I
Percentage of Amount Underwritten to Amount Offered to the Public.

	(Rs Crores)		
	Amount Offered to the Public.	Amount Underwritten.	Percentage of (2) to (1).
	(1)	(2)	(3)
1956 ...	2.63	2.11	80
1957 ...	3.65	3.65	100
1958 ...	8.02	7.75	97
1959 ...	11.69	10.57	90
1960 ...	17.60	14.64	83
Jan.-March 1961 ...	5.38	3.62	67
April 1961 ...	5.75	4.11	71
Total ...	54.72	46.45	85

Figures are exclusive of firm allotment made to underwriters from July 1960 onwards.

Amounts underwritten exclude firm allotment to underwriters.

ten, one may possibly discern, in this declining proportion, signs of the confidence of the company promoters in the investment consciousness of the public.

The break-up of the underwriting business done by the institu-

tions, discloses the dominant role of Brokers and Investment Companies. The proportion of the business underwritten by this group varied between 74 per cent and 19 per cent, but the overall share during the period 1956 and

April 1961 stood at 41 per cent which compares with 26 per cent being the share of Banks which rank second. There are variations in the proportion of the amount underwritten by Banks also, but it is noteworthy, that they accounted for a larger proportion of the amount underwritten in 1960 than Brokers and Investment Companies. The Industrial Credit and Investment Corporation of India also did underwriting of a considerable order, but since 1959 there has been both an absolute and proportionate decline in the amount underwritten by this institution. The share of the ICICI in the total underwritten values works out to 16 per cent which compares with 10 per cent and 7 per cent being the shares of the Life Insurance Corporation and the Industrial Finance Corporations. Industry-wise it is engineering which accounts for the larger part of the underwritten shares followed by paper. The value of shares underwritten in the engineering industries was Rs 4.45 crores against a total of Rs 11.25 crores while in the paper industry the relevant figure was Rs 3.02 crores.

RURAL ENDEAVOUR Hopes Belied

Minor irrigation and multiplication and distribution of improved seeds had constituted two

major planks in the programme of intensive cultivation which the Five Year Plans have sought to popularise among cultivators for improving agricultural performance. That the results that have followed the implementation of schemes in these two fields should have belied the great hopes laid on them should therefore be disappointing. This is the conclusion that is forcibly brought out by the reports recently published by the Programme Evaluation Organisation of the Planning Commission on the problems relating to schemes in these fields.

In the field of minor irrigation, the PEO was concerned with examining the nature, use and growth of minor irrigation works and facilities, to analyse the problems of utilisation and extension of the existing facilities, their maintenance and administration and to assess their impact on the use of water and the cropping pattern since 1955-56. The study of these aspects of the problem by the PEO has revealed grave shortcomings in the implementation of the development schemes. Most importantly, the report has brought to light, gross under-utilisation of irrigation potential of the minor works. It is stated that the proportion of minor irrigation works in use to the total number of works in the sample was 83 per cent for kacha wells while in the case of tube wells and pump-sets the proportions are shown to be 92 per cent and 95 per cent respectively. But the shocking revelation is that about 54 per cent of irrigation potential of the works remained unutilised in the kharif crop of 1959-60 as compared to 31 per cent in the Rabi. The two important factors that have led to under-utilisation are according to the report poor physical condition and locational disadvantages. About 65 per cent of the tanks in the sample are shown to be in poor physical conditions.

In the background of such gross underutilisation of the minor irrigation potential, it is somewhat paradoxical that there should be complaints of inadequacy of water. The report of the PEO states that nearly 80 per cent of the respondents complained of inadequacy of water. And among the causes for such shortage of irrigation water, the failure to maintain irrigation works figures as the most prominent. Such failure would clearly constitute lack of responsibility on the part of the Panchayats. The report is explicitly critical of some aspects of the irrigation policy adopted and pursued by the State Governments. Most fundamentally there has been an inadequate appreciation of the importance and magnitude of efforts implied in the priorities attached to the implementation of the minor irrigation programme. For, while it was laid down in 1960 that two-thirds of the provision for agriculture, minor irrigation and land improvement in the budgets of the community de-

velopment blocks should be generally earmarked for minor irrigation, it is pointed out in the report, that the provisions fell short for these schemes in Assam and Kerala throughout the Second Plan period while in West Bengal even a smaller provision was not fully utilised. Another count for indictment of States policy in respect of minor irrigation is provided by the suspension of minor irrigation extension programmes within the command areas of the major projects, which the report observes has resulted in the neglect of the

work even though the cultivators there have genuine need for irrigation water from these. One factor that has led to slowing down of the pace of progress of minor irrigation works is the insistence on the part of the State Governments on a certain percentage of costs as people's contribution. This, as the report points out, is patently anomalous in view of the reason that such a condition is generally waived in the case of irrigation works undertaken as part of the Grow More Food Campaign.

In the light of the conditions of working of minor irrigation works brought to light in the report, the prescriptions in respect of future policy emerge almost automatically. As a primary measure, the report calls for regular review of the existing arrangements for achieving administrative coordination in the field of execution, improvement and maintenance of minor irrigation works, particularly in respect of the technical preparation of the scheme, its scrutiny and sanction, control over staff, the fixation of jurisdictions of diffe-

As you need two hands to clap, so the country needs the combined efforts of man and machine to bring about industrial growth and prosperity.

Today, through the Five-Year Plans, the country is striving to create such a unity of effort where all will have enough.

It is our privilege to participate in this historic adventure of building a new India.

THE ECONOMIC TIMES

rent agencies in respect of supervision of works and disbursement of funds. It is also pointed out that there is considerable scope for giving further help to the cultivators in extending minor irrigation by making available to them machines and equipment and facilities for servicing and supply of spare parts of tube wells and pump sets.

In respect of the programme relating to multiplication and distribution of improved seeds also, a grossly unsatisfactory state of affairs is disclosed in the PEO report. It is stated that nearly 90 per cent of the seed farms were running at a loss in all size groups. Some of the major deficiencies noted in the report are continuing low levels of yields per acre in the Government seed farms, inadequate coordination between the management of the Government seed farms and the block extension agency, high proportion of improved seeds not being used for sowing purposes, and lack of proportionate emphasis on production of improved seeds as on its distribution. The similarity in the pattern of distribution of improved varieties in the blocks before and after 1955-56 and the lack of change in the quality composition of varieties between the two periods to which the report refers, are proof of the relative stagnation that has overtaken the implementation of schemes in this field. Further the fact that nearly 61 per cent of the sample cultivators and 41 per cent of the knowledgeable farmers had not used improved paddy seeds at any time, with the proportion being 48 per cent and 67 per cent in the case of wheat also provides a sad commentary on performance.

The report discusses a number of measures for strengthening the programme of seed multiplication and distribution. It is stressed that plans should be drawn up every year taking into account the quantities required from year to year. The importance of including foodgrain crops other than paddy and wheat in the plan for extension of improved seed is also emphasised. The report also calls for a sense of urgency and an emphasis on the technical side in the implementation of seed programmes.

TEXTILES

Agreement at Geneva

The agreement reached on 22 July by the delegates at the international textile conference in Geneva augurs well for providing an equitable chance for all Far Eastern producer countries to participate in world markets. The credit for the success of the conference should in a large measure go to President Kennedy who has been instrumental in bringing together all the interested parties. Some, however, may not accept

that Mr Kennedy's endeavours in this regard have been motivated entirely by unselfishness. It is even suspected that the whole move is made with the ultimate aim of affording tariff protection to American textiles. It is not to be denied that the American Administration is concerned about the trend of textile imports into the US. Consequent to the admission of Japan into the GATT, the US has allowed free entry of Japanese textiles into its territory. Now the dumping of cheap textiles from Japan is posing a problem for the Administration as pressure is being brought upon it by the indigenous producers. A way out of the difficulty is sought in the cooperation of the European countries to reduce the pressure of textile exports into the US. By liberalising the imports of foreign cloth, European countries will be able to lessen the pressure of exports into the US as well as help the exporting countries.

The agreement reached in Geneva last Saturday by the 16 participating countries—India, Australia, Austria, Belgium, Britain, Canada, France, Germany, Italy, Japan, Netherlands, Pakistan, Spain, Sweden and the US—provides for stabilisation of world textile trade as also a long term solution. Pending further negotiations which are likely to start in October, some temporary arrangements have been agreed to, subject of course to the ratification of the 16 Governments. These arrangements will be in force for a period of one year beginning from 1 October 1961. Under one of these arrangements a signatory can ask a country whose textile shipments are disrupting the signatory's markets to limit shipments to a certain figure, provided this figure is not below the level of shipments in the 12 months ending 30 June 1961. In the event of the exporting country failing to comply with the request, the importing country concerned will be free to take unilateral action. An agreement for increasing the import quotas is to be evolved by 1 January 1962.

Japan, India, Hong Kong and Pakistan are the four countries which will be affected most by any arrangement with regard to textile trade. Just as the American cotton textile producers are adversely affected by Japanese imports of cloth, the UK textile interests are worried about the dumping of cloth from Hong Kong. Under the emergency export-freeze plan, these two countries will not be able to expand their exports to the US and the UK, their two principal markets. With the increase in the quotas by the European countries, Japan can sell more in Europe. The position of Hong Kong may be somewhat different because it is already enjoying some preference in the European markets also. As far as India is concerned the agreement should be quite satisfactory, because of the prospect of increased quotas in the European markets.

CHEMICALS

A Decade's Progress

The inorganic chemical industries have made considerable progress during the last one decade under the impetus given by the national programme of planned economic development of the country. Self-sufficiency has been attained in respect of many basic chemicals while surplus capacity has been built up in a number of others such as bichromates, hydrogen peroxide, ammonium chloride, alum and aluminium sulphate, bleaching powder and chlorine. As many of these chemicals are in demand in the neighbouring countries, there is good scope for developing an export market in these. The domestic demand for chemicals during the Third Plan is bound to go up and the higher targets are fixed in accordance with the estimated increase in internal requirements. Thus caustic soda and soda ash have been given a production target of 3.4 lakh tonnes and 4.5 lakh tonnes respectively. The production of liquid chlorine is to be increased to 1.5 lakh tonnes while that of bleaching powder is to reach a level of 15,000 tonnes. The targets of production for hydrogen peroxide, aluminium sulphate, ammonium chloride and copper sulphate are 8,000 tonnes, 1.2 lakh tonnes, 1.05 lakh tonnes and 6000 tonnes respectively.

In his inaugural speech at the Development Council for Inorganic Chemical Industries, Mr Manubhai Shah, Union Minister for Industry, has pointed out that the contemplated capacity of one million tons per year of nitrogenous fertilizers will be covered by the end of the Third Plan. The total effective capacity of nitrogenous fertilizers at present is 2.5 lakh tons and it will be raised to 5 lakh tons per year by 1963. More units have been licensed and it is expected that by 1966 another 5 lakh tons of capacity will be brought into commission. The target for superphosphate is 1.2 million tons of which 3.5 lakh tons have already been reached.

A drawback of the sulphuric acid industry is that it is dependent on imports of sulphur. This item alone is costing Rs 3 crores in foreign exchange annually and since consumption of sulphuric acid is progressively increasing requirements of sulphur is estimated to increase to 6 lakh tons by 1966. The outlay in foreign exchange will also be considerably increased. This is certainly not a very encouraging position in the present context of the extreme shortage of foreign exchange. It is however gratifying to note that Government is actively exploring the possibility of indigenous production of sulphur. Fairly extensive resources of pyrites are available in the country and the Pyrites

and Chemical Development Corporation especially formed for the purpose of winning sulphur from pyrites is already carrying out investigations in association with a Norwegian firm for setting up a smelter.

One however should not be complacent about the progress of the chemical industry. Even when dependence on outside sources is reduced to the minimum, expansion projects may not gain the requisite pace. For, the industry is still looking to outside sources for machinery and equipment. Mr Shah has rightly emphasised the need for initiative on the part of the chemical manufacturers whom he exhorts to come forward independently as well as collectively to take up fabrication of plant and equipment needed by them. If existing industrial units, not excluding the chemical companies, have not diversified their production, it is because Government has been reluctant to permit such kind of expansion presumably on some mistaken notion of concentration of economic power. The change in Government's attitude toward diversification by existing units is welcome.

COAL

The Problem Mineral?

Although industrial organisations for the past several months have been drawing the attention of the authorities to the critical situation in regard to coal supplies, prompt and adequate steps have not been taken yet to ensure effective co-ordination among the different departments connected with the transport of coal. This will be evident from the fact that while heavy stocks lie piled up at the pit-heads of certain collieries, there are others which have hardly any stocks. Similarly, some consumers have adequate stocks of coal while its acute scarcity has led to the closure of some industrial units. It is obvious, therefore, that the system of distribution of coal is not being worked satisfactorily. The correspondence that recently passed between the Coal Controller and the Federation of Indian Chambers of Commerce and Industry reveals the existence of considerable confusion in handling this vital matter. The main points emphasized by the Federation are that the creation of dumps would be undesirable for the higher priority consumers; that the higher grades of coal should be allowed to consumers over a distance of 500 miles from collieries; that the new arrangement would increase the cost of fuel and thereby the cost of production; and that the transport of coal by the rail-cum-sea route should be a temporary measure as the landed cost of coal would thereby become considerably higher than if movement takes place by the all-rail route.

29 July 1961

Referring to the creation of dumps, the Coal Controller points out that the Federation may discuss the subject with the Railway Board. But the Federation observes: "We have all along been under the impression that it is the responsibility of your organisation to ensure equitable distribution and allocation of coal to various consumers and to coordinate the same with the railways in order to reduce operational difficulties. And since the railways seem to have absolved themselves of the responsibility for any shortages, we feel that it is only your organisation which can solve the difficulties of the users of coal on an overall basis." It is surprising indeed that nobody seems to be clear as to who exactly is responsible for the creation of coal dumps.

Regarding the suggestion that consumers situated at a distance of 500 miles from the collieries should be allowed higher grades of coal, the Coal Controller recalls that the Fuel Efficiency Committee which considered this matter about two years ago did not favour this proposal because adequate quantities of higher grades of coal were not available for implementing it. To this the Federation replies that the rigidity in the present system should give place to flexibility and that the distance from the coal fields should be the major determining factor in the allocation of grades to the various consumers. By supplying coal of a lower ash content to distant consumers, unnecessary haulage and wastage of limited transport capacity can be avoided.

As regards the incidence of the increased cost of production, the Coal Controller points out that this involves elaborate examination which his office cannot undertake to carry out. The matter may therefore, be referred to the Tariff Commission, if necessary. He also says that the movement of coal by the rail-cum-sea route is unlikely to be a temporary feature as it would probably take a very long time for the railways to move coal of the order raised even in 1960 or of the order demanded by the consumers in the light of the growing industrialisation of the country. The Federation in its reply has observed that while the question of cost involves elaborate examination, "as the chief body determining the supply and movement of coal, your organisation should give due consideration to this question, for it is of such importance that it cannot be isolated from the general problems of the supply and movement of coal."

Coal has become a problem mineral during the Second Plan period. Unless the different aspects of the problem are tackled with a sense of urgency and realism, the success of the Third Five Year Plan will be in jeopardy.

CAPITAL STRUCTURE

High Gearing and Low Owing

The capital issues advisory committee is evidently convinced that no fixed ratio as between borrowed capital and equity capital should be prescribed for joint-stock companies. The theory that high gearing helps equity shareholders and leads to better dividends has been long current. It is, of course, Government's aim to draw out more equity capital from shareholders and to limit demands for bank credit or debenture issues in the case of companies that can raise capital independently. The fact that rights issue are made at a premium successfully by big companies may explain the preference for equity capital in the case of industries, still growing like rayon or chemicals.

The Stock Exchange saying "the higher the gearing, the greater the pace" in regard to profits-improving may condition official thinking. But it is a fact that debentures are more easy to place with institutions that look for safety and a regular, if modest, return on capital. Big coal companies have sought extra capital this year by debentures: so also the Aluminium Industries that has followed Indian Cable by raising debenture capital for Rs 45 lakhs. The Delhi Cloth Mills—a large, composite concern today—is also raising big money by debentures. Interest and redemption charges can be met from increased income; to that extent, shareholders will be gratified.

That debenture liability in a depression proves a burden is familiar and new debentures are hard to place, when money is known to be dear. The Government's own requirements may lead to restrictions on the issue of debentures acceptable to the

institutional investors. To forecast the demand on the capital market may be rather difficult though there has been steady expansion of activity since 1960 also and the capacity of the market may be greater as the 'hidden funds may be coming in for lack of employment in other fields. The licensing procedure and the screening of new issues may be widely viewed as adequate safeguards against a recurrence of the disasters of 1946-50 and the Government may like more risk capital to come in, particularly, from abroad. But that should be matched by efforts to secure risk capital locally and hence the desire for a formula. But circumstances may vary from industry to industry. Jute mills cannot raise new share capital easily: they must extend the term of debentures or borrow from the NIDC. The rayon industry can raise new equity capital on the strength of its prospects. These difficulties explain the objections

to a cut and dried formula. But it may be said that new floatations are largely dependent to some extent on both debenture capital and preference capital. In fact, the success of an appeal for ordinary capital depends on the acquisition of borrowed capital and to prescribe proportions may be difficult because conditions differ from industry to industry, like the objects of the new issues. There are definite restrictions on borrowing by companies and deposits from outside sources are no longer important. To that extent, shareholders are called upon to provide additional working funds. And it is obvious that with the banks directed to increase their paid-up capital in proportion to deposits held, the demands on investors will increase. To ban or limit borrowing would in any case impose extra strain on private investors generally.

TOURISM

Rolling the Red Carpet?

America is inviting British tourists in a year in which the eager Orient invites Americans. The economics of tourism studied by the late Sir F. W. Oglivie may be remote from the folders and publicity, but the economic benefits are widely and readily appreciated. That the nearest countries invite the largest number of tourists is obvious. US citizens find it easy to visit Mexico or Canada. And Australians like to take their vacations in New Zealand. On that reasoning, Pakistan or Ceylon should tempt Indians but neither country is inviting enough. And Pakistanis are discouraged from travelling to India. However, tourism is an industry of sorts, and tourists are welcomed usually for business reasons.

The International Chamber of Commerce has mentioned obstacles like the continued insistence on tax clearance certificates though UNESCO had pleaded for dropping some formalities at frontier ports. In the view of the International Chamber of Commerce, the development of tourism in Africa is desirable, though Egypt alone had in the past attracted tourists. The Chamber has also asked for precise and full data on tourist schedules, travel agents, advertising and hotel management. The last in particular is important, as most hotels live off tourists. The free import of publicity material and liberal treatment to tourists' personal effects have been again strongly recommended and access to a country with spas and resorts must be made easy. Exchange facilities are approved, so as to prevent loss to tourists. Internal currency regulations often hamper tourists moving from one country to another. The abolition of landing, embarkation, visitors' fees, etc.

for foreigners is advocated, because tourism cannot be made a source of revenue. A question that will crop up is with reference to the present tax on railway fares. Is it right to tax foreigners in transit? The levy of passenger service charges at airports has been deprecated, and it has been said that, with growing air traffic, the checks on baggage etc. must be made easy and regular. The ideal has been set out, and practices in countries that thrive on tourists like Italy may even be mentioned to show that India has to grow up to international standards.

HEAVY INDUSTRIES

Choice of Sites

Earnest inquiry into the suitability of sites for new State-owned factories is largely the result of claims put forward on behalf of one State against another. The Third Plan Outline contains a reference to the manufacture of machinery for steel and chemical plants as also to coal-mining industry. An instrument factory to work from 1965-66 is also in the scheme. But a heavy plate and vessels works is assigned greater importance along with the production of machinery for existing industries including cement, paper and sugar mills.

The offer of aid by Czechoslovakia for Rs 40 crores settled the issue to some extent. But the decisions are clearly governed by other factors like power supply. The inadvisability of relying on DVC power after the growth of Durgapur as an industrial centre may go to explain the choice of Trichy and Ramchandrapuram for the mechanical and electrical plants respectively. The recent floods cannot affect the argument that Trichy is suitable, because it can be reached by two lines from two ports on the coast. There is an industrial tradition due to the location of the SIR headquarters for long.

The late Prof. Lilian Knowles' view that railways in India represented the beginning of engineering enterprise is not without value. And textile and other units have worked well for years. The advantages of Tiruchi, which may obtain power from the Grid easily and can count also on supply from Neyveli power station to supplement it need no special pleading.

The target for structural needs for programmes is put at 900,000 metric tons and development on a regional basis was promised in the Draft Outline. Though six firms are now authorised to produce industrial boilers, a big State plant to produce pressure vessels, heat exchange and other equipment was included in the Outline for producing yearly Rs. 30 crores worth of machinery required. The heavy engineering project at

Ranchi with Soviet aid will be supplemented by the new unit at Trichy.

In regard to the heavy electricals, the plant set up already at Bhopal is to be reinforced by one for making motors, transformers, etc. That Andhra Pradesh put in a plea that has been now met is perhaps due to the fact that no large Central project has been assigned so far to AP which may claim that thermal power supply available from Vijayawada will be supplemented by power from new projects and from Machkund in future.

The distribution of new projects will not provoke complaints, since big schemes in Maharashtra and Bengal are already complete, and the only surprise is that Rishikesh has been chosen for an electrical equipment factory. The UP Chief Minister's pleading may not be the only factor governing the choice. The distant hills may demand special attention for various reasons. The Uttarkhand is now viewed as a promising region because water power may be got easily for industrial development, just as it was got from Mandi for the Punjab.

SANDAL WOOD

The Pagoda Tree?

The average price of sandalwood has gone up to Rs 10,027 per ton says a report which mentions that the Mysore Government oil factory bought 500 tons at a sale in North Arcot. The Forest Department realised over Rs 50 lakhs by sales of 500 tons offered. The close control maintained over sandalwood has not prevented the persistence of spike disease in many districts of Madras and Mysore. The control of the disease has proved difficult and the high prices realised may be due to the limited supply now available. The sandal tree found mainly in the hilly tracts with light rainfall is now conserved carefully: only dead trees are removed according to official prescription and as it has been found difficult to start plantations or regenerate dead areas, the Forest Department has to rely on Nature. In 1958-59 the Forest Department in Madras secured only 1,183 tons of sandalwood as distinguished from other timber. The Department's receipts from sandalwood in 1958-59 totalled over Rs 48.75 lakhs nearly as much as that obtained from timber, fuel and bamboos. A small income from fines is realised also because of the tight State monopoly. The idea of a State factory for extraction of oil has been given up as the supplies of sandalwood are falling off. The cost of extraction is small, but the improvement in price will enlarge the Department's surplus as the average price in 1958-59 was about Rs 4,800 per ton and the cost of production was Rs 855 per ton in the main pro-

ducing area. It should be added that the Forest Department's revenue in 1958-59 amounted to over Rs 130.62 lakhs and the sales of sandalwood from the two State depots yielded over Rs 51.4 lakhs. This only means that the most important asset of the Department is sandalwood though output per year runs to about 1,000 tons only but its value seems to be going higher which means that the oil also will go up in price.

PRODUCERS' COOPS.

Need for Caution

Co-operative marketing and processing units like rice mills are held desirable but in the Outline of the Third Plan there is no mention of industrial co-operatives. In fact, there is much about co-operative farming and little about consumers' co-operatives except in terms of targets. But the Planning Commission is now said to be busy because co-operative sugar mills have sprung up. The main object is to start societies endowed with big loans made available at 2½ per cent. Whether this is desirable when there is acute demand for funds may be asked but there are some who are convinced about the need for village industry resting on small capital and needing State aid.

Co-operatives have come to be thought of as an alternative to capitalism and the argument is that economic democracy can be promoted only by co-operation. The abundance of labour and the scarcity of capital are also called in, in favour of industrial co-operation. There is no idea of syndicalism but it is held that co-operatives will be able to provide for a progressive increase in wages because of increased output and regular addition to reserves. That, of course, is the theory based on the assumption that co-operative mills owned by cane-growers for example, are able to get more cane and get greater yield per acre.

A large number of small, scattered units has been described as the ideal but in major industries the trend is definitely towards bigger units which can diversify output. The States will perhaps be eager to assist co-operatives like oil-crushing units, though the revenue might suffer. The assumption is that workers as partners in new, small enterprise will do their best for themselves. But experience does not justify the view that in co-operatives, self-government yields the desired results and supervision, therefore, can be at a minimum. The capacity to pay even minimum wages is doubtful, and that is why the Third Plan should not make the mistake of setting aside crores for managing the type of organisation that may suit only a few craftsmen producing specialities for export.

LAW

Libel an Expensive Luxury

The Daily Telegraph has been asked to pay a large sum as damages after a court action. Libel is the most expensive form of tort and newspapers as defendants are seldom shown consideration by juries which take the view that free speech is a luxury for which due payment must be made. This circumstance explained the late Sir Valentine Holmes' view that newspapers must settle quickly claims for loss of reputation out of court and must not ordinarily risk a trial by jury. The allegations of fraud against a company of which an MP was Chairman provoked a complaint that led to the action. What seemed fair comment some years ago has turned out to be actionable so that a huge sum has to be paid out as compensation for outraged feelings.

The new owner of the Daily Telegraph certainly got an unpleasant contingent liability included when he bought the paper but that is the luck of the game. Anyway, the Daily Mail has also been dealt with for having caused hatred, malice or contempt of a company director. All this goes to show that newspapers stand on a different footing. A shareholders' association can issue a memorandum advertising to suspicious proceedings by a company's managing agents and can be excused as having acted in good faith to defend shareholders' interests placed in jeopardy. But a daily newspaper cannot do so as the Daily Telegraph has discovered. The Yo-Yo case in which a stockbroker put in a claim for damages failed because no loss of reputation arose on account of the Evening Standard's skit. And Miss Helen Ashton's reference in a novel (People in Cages) to a dubious financier did not convince a jury that an existing person could be identified, as it was in the celebrated case arising out of the MGM film Rasputin. The amendments to the law of libel have not saved the London newspapers from being tried for libel and the affluence of the papers has led to a liberal view of the damage sustained by Mr John Lewis. The one query that may arise is whether the sum received from the defendant in the recent case by the plaintiff is liable to tax. If so, the High Court Judge's annual salary of £8,000 would be quickly recovered from the successful plaintiff.

SINGAPORE The Odd Man Out

The crisis in Singapore, where the Chinese are in a majority and leftist elements active, will only

suggest that the island is the odd man out in S. E. Asia. The crisis makes merger with Malaya necessary if difficult. The Malayan Government thinks of association with Borneo and Brunei to make Malaya reach out to the islands. But Mr David Marshall's return to politics complicates issues, even if Chinese Communist influence has been reduced. The foreign capitalists who look upon the economic future as hopeful will perhaps change their views if the People's Action Party goes in for strikes owing to trade union pressure. If there is sudden intervention by the British Government, as in Malta, new charges will be made readily and the Malaysians will expect adequate protection from Kuala Lumpur as a minority threatened by troubles. The Singapore constitution provides safeguards but to apply them often or quickly means trouble. And Indonesia may register disapproval quickly for unrest may spread to other islands. The trade and industry of Singapore render the rapid withdrawal of foreign interests unlikely and the maintenance of law and order may be deemed a problem for the SEATO, especially, if Thailand makes any move.

The course of tin and rubber exports may be affected, but Malaya will rely on Malacca and Penang and the diversion of pepper exports from Java may not be permanent, as Indonesia too is not safe. If there is trouble, pepper prices may go up but rubber cannot, as the world surplus is large and production is rising, in Africa too of late. The repatriation of Indian capital via London may be accelerated while India's trade in manufactures may suffer some-

what. The Straits dollar is strong as against the rupee, but the position may change, if there is big trouble especially after the reverse sustained in Laos by the Western powers. It is easy to speculate on what Australia might ask for in the event of trouble or how Malaya would react to any breakdown. But it is rash to think Singapore will prove another Cyprus, for business interests will perhaps prevail over political standards. The party purge has put Mr Lee again in control of the situation.

USA

Lost Ground Made up

In terms of the total output of goods and services, or Gross National Product (GNP), the United States economy in the past three months has more than made up all the ground it had lost during the recession of the previous nine months.

Pending the release of official statistics, preliminary estimates by government economists indicate that the GNP may have soared to a record-breaking annual rate during the second quarter of this year of about \$512,000 million. This outpouring of goods and services, the greatest ever achieved in any three-month period, was \$7,000 million above the pre-recession peak of \$505,000 million a year, reached during the second quarter of 1960, and \$12,000 million above the \$500,000 million annual rate of the first quarter of 1961. It represents quarterly gain since the \$14,000 million

advance of the third quarter of 1958, also the first full three-month period following a rather brief and moderate recession.

The speedy pace of the current upturn has caught many of the experts by surprise. It tends to confirm some of the more optimistic appraisals of the past few months, and to confound the popular economic theory that a mild downturn invariably is followed by a mild upturn. The 1960-61 dip was the mildest of postwar record.

It will take a careful look at the detailed data—which are not yet available from official quarters—to arrive at any definite conclusions as to the causes of the second-quarter spurt. It appears, however, to flow from two principal sources.

One is a renewed upswing in business spending, with a reversal of inventory policy playing a particularly important role. Businessmen had been cutting their inventories at an annual rate of \$5,000 million early in the year. But from the evidence now at hand it appears that they stopped reducing their holdings during the second quarter, and began adding slightly to them.

The other is an expansion of activity in the public sector of the economy. State and local governments have planned an important supporting role by continuing to increase their spending on public services and facilities—schools, roads, hospitals and the like.

In addition, it appears that federal spending also may have gone up somewhat, largely under the impetus of the Kennedy Administration's programmes to accelerate the pace of economic activity and improve economic

Opening 29th July

HUNDRETH BRANCH

In conformity with our policy of making our banking services increasingly available to industrialists, businessmen and the general public, we are opening yet one more branch, our hundredth, on 29th July.

structure. Of course, many of these federal programmes, such as the recently approved housing, highway and social security measures, have not been in effect long enough to make their stimulating influences fully felt as yet. They thus are likely to constitute growing sources of economic strength as the year progresses.

Interestingly enough, the weakest link in this chain of rising economic activity seems to have been the American consumer—usually the strongest. Consumer buying has been on the rise, but it has been inching up rather than leaping ahead, and has not yet reached a rate calculated to add substantially to the demand for goods. Purchases of durable goods, in particular, have been moving up at a relatively slow pace.

Further complicating the picture is an evident slowing down of the economic rebound in the past few weeks. But this is considered a normal seasonal expectation at this time of year, as workers go on summer vacations and many plants curtail or even shut down operations temporarily.

A heartening sign that the economic expansion rests on a solid foundation is the fact that advance steel orders for August delivery, which would be in time for the usual autumn production rise, are running 20 to 25 per cent ahead of May and June. In addition, automobile inventories are relatively low, compared with a few months ago. This should help sustain future automobile production schedules, which are beginning to be cut back now as manufacturers start changing over to the new 1962 models due to make their appearance in the next few months.

As for the consumer situation, economists are quick to point out that consumer spending historically has tended to lag behind the general pace in the early stages of a business recovery. Significantly, a study just published by the University of Michigan Survey Research Centre found a rising optimism among the American people about the business outlook, and a step-up in their plans to buy automobiles and houses.

Furthermore, the income and the savings of the American people are both at an all-time high, in the aggregate. This should provide them with a strong and substantial base for increased purchases of consumer goods, along with their steadily rising outlays for such service as education, housing, transportation and medical care.

★ WHOLESALE PRICES Slight Rise

The official wholesale price index (with the year ended March 1953 as 100) rose by 0.7 per cent to 126.9 during the week ended June 24, 1961 as compared with 126.0 (revised) for the earlier

week. The index was higher by 1.4 and 3.3 per cent respectively when compared with the corresponding week of the previous month and that of a year ago. The monthly average for June 1961 worked out to 125.9 as against 125.3 (revised) for May, 1961 and 123.0 for June 1960.

Higher prices of Jowar at Hubli (+14%) and at Mohal (+5%), Masur and fish (+8% each), Potatoes (+7%), Eggs (+6%), Rice at Shimoga and Oranges (+5%), Chillies (+4%), Mung and Milk (+3% each), Barley, Gingelly Oil and Black pepper (+2% each) and Gram, Urad, Bananas, Ghee, Groundnut Oil and Salt (+1% each) raised the index for 'Food Articles' by 0.7 per cent to 121.8 as against 121.0 (revised) for the previous week. The prices of Jowar at Ujjain (—10%) and at Jhansi (—5%), Cloves (—9%), Bajra and Erode (—6%), Arhar (—2%) and Maize (—1%), however, moved down.

The index for 'Tobacco' receded by 1.0 per cent to 95.0 due to a fall in the prices of raw Tobacco (1%).

The index for the 'Fuel, Power, Light and Lubricants' group remained unchanged at its earlier weeks revised level of 121.5.

An advance in the prices of Jute, raw (8%), Cottonseed (+3%), Silk, raw and Linseed (+2% each) and Rapeseed (+1%) was responsible for bringing about a rise of 1.7 per cent to 150.6 in the index for Industrial Raw Materials as compared with 148.1 for the earlier week. Copra and Lac (—2%), however, showed a fall.

The index for 'Intermediate Products' fell by 0.2 per cent to 140.7 due to a decline in the prices of Rayon Yarn and Lead (—4% each) and Zinc (—2%), although the prices of Tin (+8%), Copper (+3%) and Linseed oil and Coir Yarn (+2% each) showed advances.

The index for 'Finished Products' rose by 0.5 per cent to 123.4 as compared with 122.8 (revised) for the earlier week as a result of an increase in the prices of Jute manufactures (+3%) and Oil Cakes (+1%).

★ CONSUMER PRICE Rises in Seven, Falls in Five

The working class consumer price index number (base shifted to 1949-100 except where otherwise indicated) increased in 7 centres during May, 1961, according to the Labour Bureau of the Union Ministry of Labour and Employment.

The maximum rise of 2 points each was recorded by the index numbers for Cuttack and Satna (base: 1953—100) which stood at 132 and 99 respectively. The index numbers for Berhampur, Jabalpur, Delhi, Ajmer and Mer-

cara (base: 1953—100) appreciated by 1 point each to 125, 110, 120, 112 and 136 respectively.

In this group of centres, the food group index numbers appreciated at 6 centres the clothing group index number at 4 centres.

FALL IN 5 CENTRES

The index number for Bhopal (base: 1951—100) declined by 4 points to 111. The index numbers for Dehri-on-Sone and Monghyr receded by 2 points each to 107 and 94 respectively and for Silchar and Akola by 1 point each from 107 and 94 respectively to 104 and 110.

The this group of centres, the food group index numbers declined. In this group of centres, the at all centres the fuel and lighting group index number at 1 centre and the miscellaneous group index numbers at 2 centres.

STATIONARY AT 4 CENTRES

The index numbers for Jamshedpur, Jharia, Kharagpur and Tinsukia showed only fractional variations and stood at 120, 102, 112 and 118 respectively.

The provisional indexes for Ludhiana stood at 104.

The provisional all-India index appreciated by 1 point and stood at 124 during May 1961.

★ CORRESPONDENCE Banks: Their Capital and Reserves

Dear Sir,

Recent events in the Indian banking world, viz: moratoria, failures, and amalgamations should not drive us into a panic. Of such a nature appear some of the recommendations made by the Reserve Bank of India.

For instance it has recommended that—

- (i) 20 per cent of the gross income (i.e., before deduction of taxes) should be set aside for the reserves.
- (ii) this process should continue till the total of the capital and reserves come up to 7½ per cent of the deposits and
- (iii) in order to arrive at this consummation early, fresh additional capital should be raised and/or calls should be made on the partly paid share capital.

Take for consideration the top ranking Indian joint stock banks (say half a dozen) about whose sound working no doubts can be raised. They have built up reserves almost equal to or more than the paid-up capital, have been distributing uniformly a reasonable rate of dividend and have not been adding, of late years, appreciably to their reserves. If additions to their reserves are to be made as proposed i.e., to the extent of 20 per cent of the gross profits, there will be a reduction

in the rate of dividend with the result that market value of the shares will go down—hardly a condition to encourage issue of fresh capital or to make calls on the existing shares.

In respect of the above banks so far as the figures are readily available, their capital plus reserves as on the 31st Dec. '60 range from 2.7 per cent of the deposits and only in one case does the percentage exceed 7 per cent. It will thus be seen that it will take many years to bring up the percentage to 7½ per cent; meantime, the deposits will be going up and a sort of race, whose end is hard to see, will be inevitable.

The position of the State Bank of India is no better than that of the joint stock bank already dealt with. The position of the other State Banks subsidiary to the State Bank of India, is no better.

A comparison with the like figures relating to English banks will be instructive. According to *ECONOMIST* (London) (vide issue dated 15/7/61) the ratio of capital funds (apparently inclusive of reserves) to deposits as a percentage was as follows as at the end of 1960:—

Barclays ..	..	3.7
Lloyds ..	..	4.4
National Provincial ..	..	4.1
Westminster ..	..	4.0

Add to these the figures relating to the English banks operating in India viz:

Chartered Bank ..	..	3.6
National & Grindlay ..	..	3.7

And let us further remind ourselves that these banks are more than a century old.

From the above it will be seen that the recommendations of the Reserve Bank will have to be considerably pondered and modified before they are brought into force.

Yours etc.,
K. V. Iyer.

PERSONAL

Mr M. Ct Muthiah, Chairman of the Indian Overseas Bank Limited, left on 24 July for Bombay enroute to the Continent, UK, and USA on a business trip.

Mr B. K. Nehru, Commissioner-General of Economic Affairs, has been appointed India's Ambassador to the USA.

Mr S. Bhoothalingam took over on 24 July as Secretary Ministry of Finance, Department of Expenditure.

Mr Shivram Nair, senior-most Indian executive of J Walter Thompson Company Private Limited, Bombay, has been elected a Director of the Company.

Mr G. K. Vij, Deputy Irrigation Secretary has been appointed Chief Engineer of the Indus Section and will be the Principal Adviser to the Commission for Indus Waters.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

GROWTHMANSHIP is the latest in high-brow one-upmanship. Growth models, input-output ratios and the rest of the mumbo jumbo are wielded to intimidate the timider among us. To such, an economist of unquestionable academic authority dealing with these problems on a common-sensical level is an answer to a prayer. In two lectures at Madras and Calcutta, Professor Galbraith spoke with his customary lucidity and wit and brought a much needed freshness to a subject that had become stuffy with jargon. Problems of national development are, in essence, not unlike those that beset the working out of personal ambitions. The rat race is there, in ever so disguised a form and so is the strenuous attempt at keeping up with the Joneses which is called "the demonstration effect" in some literature on the subject. There are natural and normal limits to the pace of advancement and the modes of achieving it. A country that is just at the bottom of the development ladder has not much use for physical capital or for sophisticated technological or managerial skills. Its needs are, a reasonably efficient administration and second, a minimum of educational opportunities. Then alone can even a desire for development arise. When this stage is reached, capital, machinery and technical and organisational skills are felt as desiderata and a hunger for them arises. But the danger here is of falling for the glamour of the more advanced countries and a desire to impress the rest of the world with one's modernity. Such a desire may take the most plausible forms and the temptation to fall for it should be firmly resisted. In any event uncritical adoption of techniques that have served elsewhere is the most abject kind of surrender of one's judgement. Thus a technology that has been perfected in an economy of expensive labour has little relevance in an economy where the problem is idle hands as well as hungry stomachs. There are skills that we don't need and can't use and there are again skills for which we have our own sources. On both these counts it is necessary to examine how many of the tax-holidaying experts in Asian and African countries have any real contribution to make to the solution of the problems of the area. This is particularly urgent in the "Organisational sphere", where much dubious expertise is being exported by the developed countries. If the truth were told, such expertise

would be found to be the product of the operation of Parkinson's Law even in the exporting country. In his book on American capitalism, Professor Galbraith himself dismissed such superfluities somewhat complacently as the extravagances of an economy "too well off to care". It is doubtful, as Mr Galbraith himself indicated in his later books, whether even the US can support such waste when there are large pockets of public squalor. Under-developed countries certainly cannot.

★
In Calcutta the other day, Mr S. P. Jain expressed himself disappointed at the rate of growth of our economy, which, at about 3½ per cent per annum, compared unfavourably with that of many other countries. The hazards in such comparisons were explored with expert ease by Mr H. V. R. Iengar in the B. F. Madon Memorial Lecture he delivered in Bombay last Wednesday. Comparisons with rates of growth of advanced countries can be misleading in two ways. Germany's rate of growth is undoubtedly faster than India's but that of the US (at 3.3 per cent) and of the UK (at 2.5 per cent) is slower during the same period. Can we draw flattering conclusions about our economy *vis a vis* that of the US and the UK? It would be silly for the simple reason that their percentages are of absolute quanta of a far higher order than ours. The comparison is misleading in a different way when it comes to India and Germany. In all the wide-eyed wonder at West German prosperity, the greatest single asset of the Germans tends to get forgotten. It is the congeries of skills, the technological tradition and even temperament that the Germans possessed that were mainly responsible for the miracle.

There is a certain, almost Lamarckian principle of biology involved here. Modern biologists, who have a wider awareness of the implications of their discipline have not been slow to recognise that tradition is nothing but the transmission of acquired characteristics. The noted biologist, Professor Medawar goes so far as to say that such a process is biological. In "The Future of Man", originally broadcast as Reith Lectures over the BBC in 1959, he says: "Society changes; we pass on the knowledge and skills and understanding from one person to another and from one generation to the next; . . . I want to put the matter in a way which shows that we must not distinguish a strictly biological evolution from a social, cultural or technological evolution: both are biological evolutions the distinc-

tion between them is that the one is genetic and the other is not.

The environment cannot imprint genetic information upon us but it can and does imprint non-genetic information which we can and do pass on. Acquired characteristics are indeed inherited. The blacksmith was under an illusion if he supposed that his habits of life could imprint themselves upon the genetic make-up of his children; but there is no doubting his ability to teach his children his trade, so that they can grow as stalwart and skilful as himself."

What is the relevance of this biological excursus to German productivity? It is only that, technologically speaking, we are Neanderthal men and the Germans are men who have learnt the use of the wheel. And, as Professor Medawar has shown, this is not just a metaphor but a biological fact. No wonder they are able to produce more and better things and we fumble our way through with all the consequences that follow from the initial disadvantage. The time to compare us with them will be twenty years hence, or as Mr Iengar does, a hundred years ago, when they were where we now are. It is true that as late comers in the technological scene, we have certain advantages. But these are neutralised by the political and humanitarian inhibitions by which the earlier technological nations were not unduly troubled. Comparisons with rates of growth of advanced nations are, therefore, except for hortatory purposes, pointless.

★
Dr Gallup goes (metaphorically) to Moscow and what more conclusive evidence of Russia catching up with the US do you want? Soviet Union's Public Opinion Institute has so far conducted three surveys of attitudes. The first was devoted to attitude to war and peace, the second to living standards and the third to views of the younger generation about

itself. Experts consider the methods and techniques used somewhat crude—in the living standards survey, questionnaires were distributed to travellers in a single carriage of each of the 65 trains leaving Moscow—but I believe that it is always possible to suggest refinements even to the most sophisticated tools of evaluation of public opinion. The important thing is that it has been considered necessary to ascertain popular opinion at all. One hopes that, with Stalin safely dead eight years, answers were less circumspect than in his time. (A joke that once did its round during his time put him in the role of Harun Al Rashid, going about in disguise ascertaining public opinion. It would appear that he ran into some one of whom he was doubtful in a restaurant. After himself slating Stalin more than somewhat, he asked his companion what he thought of Stalin. The poor devil looked this way and that and took Stalin in disguise some distance away and whispered into his ears. "I think Stalin is the greatest man that ever breathed.") These surveys have not revealed anything startling. But two answers to questions addressed to the youth of the country are worth quoting. A twenty-five year old carpenter from Stalingrad said, "A year ago, I had the happiest day of my life—I was accepted to membership in the CPSU. . . . Our Communist Party and Soviet Government have given to us, to youth, all essential conditions. Work! Study! Dare!" There is no reason whatever to doubt the sincerity of the emotion and I for one would wish for similar fervour in our own youth for our country. The other reply is from a nineteen year old working girl in Moscow: "Money, that is everything. Luxury and well-being, love and happiness. . . . If there is money there are friends and comrades, there is everything you want. You condemn those who don't work. . . . But surely they can only be envied, since they know how to make use of life—we live only once." Oh! No, Mr Khrushchev, don't let your gorge rise, Russia is a free country, isn't it?

PRODUCTIVITY DRIVE US Team in Action

THE productivity movement launched by the NPC three years ago has now moved on to a stage where it can make a definite impact on industrial operations in the country. In the initial stages the activities of the NPC and local councils were concentrated on efforts to stimulate an urge in industries to know about and seek utilisation of productivity techniques. These have been followed up by the organisation of systematic training courses in specific productivity techniques for persons drawn from industries. The subjects covered include work study, incentives, management practices, personnel management, human relations, employees selection and placement, workers' role in productivity, sharing the benefits of productivity, cost reduction, job evaluation, industrial psychology and statistical quality control. These training programmes are being organised under the guidance and with the active participation of the Experts assigned to the NPC by the Technical Co-operation Mission of the United States and the ILO.

The last NPC report (covering the year 1959-60) had pointed out that the full implementation of the training programme was hampered on account of the delay in securing the services of the full complement of experts and technicians. This difficulty has now been largely overcome.

Under contract with the United States Government's Technical Co-operation Mission in India, Messrs George Fry & Associates, well-known American Firm of Management Consultants in Chicago, had arranged to send a team of fifteen (15) specialists to work with the NPC. Seven members of the Team have been in this country since the middle of last year. At present ten members of the team are working with the NPC on their training programme. Five more are expected to arrive shortly, and the entire team will be here by 15 August.

The team is led by Mr Omar L. DeWitt, who is Vice-President of

George Fry & Associates. Mr DeWitt has had broad experience as an industrial engineer in executive posts, including such firms as Oldsmobile Division of General Motors and with the Murray Corporation of America. His work in India, in addition to handling his team's operations, will be to make special studies of Industry and Business for the NPC. Under a previous contract Mr DeWitt spent several months in Chile on a productivity project. Mr DeWitt has been in India for one year and has completed studies for the Madras State, the Central Water and Power Commission, and the Small Industries Institute, besides organising numerous seminars.

Other members of the team: now in India are Messrs Wilbur G. Eklund, Robert A. Jackson, Kenneth C. Jasper, Duane R. Kinas, John R. O'Hearn, Hugo E. Remke, Gordon G. Barnwell Theodore Hill and Harold J. Inch (Jr.). Mr Eklund is an industrial relations specialist, while the others have long experience in all aspects of industrial engineering such as organisation, plant layout, methods analysis, time and motion study, wage incentives, production control and planning, supervisory training, job evaluation, merit rating, budgetary control, material handling and store keeping, cost control etc.

The try Contract Team has so far completed twenty training programmes, of duration varying from three to fifteen weeks, and also organised 31 seminars each lasting a week, in different parts of the country. A seminar on Personnel Management is scheduled to start on New Delhi on 31 July.

The NPC had drawn up 300 programmes for training five thousand persons during the two years 1960 and 1961. The participants are drawn from industrial units both in the public and the private sector, and represent different levels of management from top management to the level of supervisor and foreman.

The training imparted in productivity techniques is followed up by the participants undertaking specific projects based on their training and with the assistance of the TCM specialists. The project reports submitted by the participants provide the date for precise assessment of the tangible

benefits that may be realised by adopting new productivity techniques.

The NPC's last annual report referred to the difficulties experienced on the account of the inadequacy of case data picked up from Indian industries. As a result, training programmes, by and large, had been relying on case data collected from other countries which are not in all cases applicable in Indian conditions. The specific projects inspired by Mr DeWitt's team go far to fill this gap. With the participants sending in reports on their projects in increasing numbers, training programmes in future can draw on ample data based on Indian experience.

Within the limited space available it is not possible to do more than indicate the results achieved or expected from the implementation of these projects. The benefits are striking in the field of workshop practice of engineering industries. Through the application of proper methods and design of the tooling, a firm manufacturing bicycles and accessories in the Punjab has found that it was possible to reduce the number of operations from 13 to 7, while improving accuracy and quality of the item manufactured. Productivity was raised by 61 per cent, resulting in estimated annual saving of Rs 2,645 for a tool cost of Rs 1,200.

Another engineering firm (also in the Punjab) raised productivity by 88 per cent, with annual saving of Rs 78,552 for a cost of Rs 40,000 in respect of new installations. Another firm reported 302 per cent increase in productivity in the manufacture of lathes, and annual savings of Rs 6,732 for tooling cost of Rs 275. Another project undertaken in the same firm showed productivity increase of 178 per cent. A project for reprocessing of manufacturing methods undertaken by a firm making bicycle parts showed increased productivity of 67 per cent, leading to annual savings of Rs 36,480 for a tool cost of Rs 7,560.

The firms in the Punjab which have participated in the projects mostly belong to the category of small scale industries which have made tremendous headway in the Punjab. The projects under different programmes undertaken in Bombay, Madras and Calcutta show similar encouraging results, on a larger scale.

A company manufacturing cycles in Bombay estimates saving of 51 per cent in labour cost, 91.75 per cent in inventories and 37 per cent in floor area from the adoption of new methods. The report on the training course in Madras describes it as a very successful one, on a par with the results achieved in Bombay. One of the participants in Madras had savings of over Rs 400,000 on the project.

A well-known firm of battery manufacturers in Calcutta reported reduction of storage area by 30 per cent, handling time by 40 per cent, while a public sector undertaking manufacturing scientific instruments reported savings of 84 per cent in man hours, the value for one year being estimated at Rs 13,700. A project undertaken by one of the Government telegraphic workshops reported that, through the adoption of improved methods, there should

be increase in production of 27 per cent.

While describing, in the course of an interview, the encouraging results of the projects inspired by members of his team, Mr DeWitt emphasised that his team was not in this country to tell Indian producers to adopt American methods. American methods may not necessarily be the best ones for them, but there must be some method best suited to their needs and means. It was for the Indians themselves to find the method. What they were trying to do was to show the methods that helped to increase productivity and reduce costs in America. It was for Indian producers to adopt or adapt them as suited their circumstances.

Asked about the response of Indian industrialists in general to the new productivity techniques, Mr DeWitt said that the executives who had the opportunity to participate in the training courses were enthusiastic. But industrial engineers, he added, had their own problems, such as that of convincing top management of the efficacy of new ideas that they come up with. On the whole the response of small and medium industries so far had been very encouraging. He was greatly impressed by the methods of operation of small scale industries in Madras.

With the accumulating evidence of the reports on the projects taken up under the guidance of the TCM experts, it will not be long before Top Management of Big Business get over their natural tendency to dismiss the Productivity Drive as just a new gimmick and begin to take an interest in new techniques in a really big way. The process can be speeded up if the NPC will bring to their notice the record of tangible and demonstrated benefits.

Roads

Calcutta and the surrounding industrial area will be the principal beneficiary of the road works financed out of the IDA credit of \$80 million negotiated last month. These projects, which are outside the Rs 47.5 crore programme approved earlier by the Planning Commission for inclusion in the Third Plan, are designed to eliminate some of the major deficiencies in the National Highways system. The works are located in areas of high pressure of population such as Calcutta and its environs, coastal Bombay and the Gangetic plain. These areas also account for 40 per cent of India's total vehicle registration. New alignments to the two main road approaches to Calcutta will take them outside the congested industrial suburbs. Complementary works will improve communications between Calcutta and nearby industrial centres. The coastal areas of West Bengal which are now without road links to Calcutta will be provided with a new highway. Calcutta will also be linked with Ranchi and Jamshedpur by National Highways while the missing link in the Eastern Highway to Madras will be filled by a new road running South from Calcutta to Cuttack. The one remaining gap in the Grand Trunk Road will also be filled with the construction of the road bridge over the Son.

Markets

JUTE No Further Cut in Output?

THE rejection by the West Bengal Government of the Indian Jute Mills Association's proposal to seal 18 per cent of the looms will perhaps set at rest only temporarily speculation about a further curtailment of mill production during August. Mr Abdus Sattar, West Bengal Labour Minister, who made the announcement on Wednesday has also pointed out that the State Government's decision in the matter has the support of the Union Labour Minister. Two main reasons seem to have influenced the State Government in their decision to reject the LJMA proposal. Firstly, labour is already bearing a heavy strain on account of a reduction of working hours and the two block closures one in June and the other which has commenced from Monday. It will, therefore, be unfair to ask labour to suffer further privations. Secondly, Mr Abdus Sattar is reported to have said that raw jute (evidently the reference is to new crop jute) is flowing into the market and hence it will not be difficult to get adequate supply to run the mills without any further upset in respect of the raw material.

If the problem before the industry is so simple, why then was it allowed to be presented to the public as though it was quite critical? For the principal topic of discussion in the Indian World of jute is the growing belief that raw jute shortage will be felt for another one or two months. The LJMA seems to think that it will be safe to assume that new jute will be arriving in quantity into the market only toward the end of Sep-

tember if not even later. This explains its earlier proposal to the Government to allow the industry another block closure extending for a week in August. It would appear that the LJMA was even thinking in terms of yet another closure in September. As is to be expected this arrangement did not meet with the approval of labour, and the LJMA has since modified its proposal from a block closure to one involving the sealing of more looms. The new plan envisaged the sealing of a further 18 per cent of looms in August. As already 12 per cent of the looms remain sealed, the proposal, if accepted, will result in putting out of commission a total of 30 per cent of the looms. No time limit has been specified for the sealing of the additional looms but the idea seems to be that action can be taken on a weekly assessment of the position. The State Government's stand seemed to be that a proposal for a curtailment of production to be acceptable should not affect the existing level of employment in the industry. Even though the new plan is ostensibly aimed at keeping reduction of labour to a minimum, there is no doubt that further sealing of looms will adversely affect quite a large number of workers. How difficult a decision on this matter was going to be for the State Government was seen from the strong opposition voiced to the new LJMA proposal by labour leaders at Tuesday's meeting of the representatives of the four central trade union organisations convened by the State Labour Minister. Labour allegation is, as it has all along been, that the whole scare of raw jute shortage is a put up affair and the scarcity-mongering is deliberately indulged in by interested parties with several ulterior motives, one of the more important of them

being to influence the Jute Wage Board in the favour of the industry. It is to be noted however that it has been reported that the Union Ministry of Commerce has given a qualified approval to even the LJMA proposal for a block closure.

TEA Favourable Outlook

THE outlook for the Indian tea industry is considered to be favourable for the current year. It is felt that, though a larger crop in North-East India may lower the price level to some extent, it will be compensated by a lower cost of production and increased exports. Moreover, the current overall statistical position indicates that there is little surplus of tea in the world and the possibilities of shortage cannot be ruled out.

In India itself, the consumption of tea is expanding. Even the trade holds the view that India should increase her production as rapidly as possible as otherwise, with internal consumption forging ahead and prices tending to rise, not only will Indian tea be priced out in the world market, but there will be less and less teas for export. The Third Five-Year Plan has set a target of 408 million kg for tea. If this is to be achieved, it is of the greatest importance that replanting of the old areas and replacement of worn-out machinery should be taken in hand on an extensive scale.

Meanwhile, in the Export Sale, held in Calcutta this week, offerings were 31,565 packages. There was a strong general demand. Orthodox descriptions, particularly the medium and plainer sorts, met with keen competition and were sold readily. BOPs were the strongest feature and were generally dearer. Similar BPs were fully firm to dearer, while their Fannings were sold readily, but at rates a little below last week. Better and medium CTC descriptions were again sold well as slightly easier rates, while the poorer sorts remained fully firm.

There was a strong enquiry for legg-cut descriptions and these were generally fully firm to dearer. The few flavoury invoices of Darjeelings, on offer, were generally sold at dearer rates. The remainder, however, declined in price and a number of teas in this category were withdrawn without a bid. Stylish whole Leaf grades were well supported at about last rates; but the poorer kinds were easier. Tippy teas again met with active support at firm to dearer rates. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.25 to Rs 5.35; Plain BP Rs 4.85 to Rs 4.95; Plain Fannings Rs 4.65 to Rs 4.75; Medium Assam CTC, BP Rs 6.20 to Rs 6.60; Medium Assam CTC

Fannings Rs 6.40 to Rs 6.80; Best Assam CTC BP Rs 7.40 to Rs 7.60 and Best Assam CTC Fannings Rs 7.30 to Rs 8.20.

In the Internal Sale, offerings were 14,659 packages of Dusts for which there was a good general demand. CTC types were rather irregular with the brighter lines selling well. Plain Orthodox descriptions were generally taken up at a discount of 10 nP, while the bright liquoring Assams, particularly the small types, were often dearer. Legg-cut teas met with a good demand and the small bright liquoring descriptions were generally dearer. Following rates were quoted:—Plain Orthodox Dust Rs 4.40 to Rs 4.65; Medium Assam Dust Rs 4.60 to Rs 5.40; Legg-cut Dust Rs 4.70 to Rs 5.50; Medium Assam CTC Dust Rs 6.40 to Rs 6.70 and Good Assam CTC Dust Rs 6.80 to Rs 7.20. Also, 24 packages of Leaf grades were offered for internal consumption and these were sold at irregular rates.

In the Cochin Market, 173,000 kilogrammes of tea Dusts were offered for internal consumption. Against useful demand, prices were steady around last week's rates.

In the Colombo market, offerings were 7,566,691 pounds. There was a strong general demand with high-grown BOPs from western districts advancing by 5 to 15 cents a pound at the opening. Medium BOPs were also generally dearer but high and medium BOP Fannings grades were slightly lower. All Uva teas were in strong demand and prices rose where quality was improved. Low-grown teas were sold at firm to dearer rates.

In Pakistan, tea production is expected to reach something like 56 to 57 million pounds in this season on the basis of the present showing. This, with the carry-over of about 8 million pounds, will give a total availability for the season of some 64 to 65 million pounds against an estimated domestic production of about 55 million pounds. The Pakistan Government has, therefore, authorised the release of only 5 million pounds of tea for export this season.

Once again, the amount of tea for auction in London—54,875 packages—was only enough for two days' selling. The absence of any outstanding quality teas was reflected in the price indication of 4sh 8d to 5sh 5d as compared with 4sh 10d to 5sh 8d in the previous week. Bidding for Ceylon teas continued strong; but low-grown and low medium BOPs were generally lower. Others showed little change with the better liquoring teas, especially BOP Fannings, tending dearer.

The South Indian growths, on offer, were irregularly easier, but with a good demand at the lower level. The North Indian and other miscellaneous teas en-

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS. APPLICATIONS ARE INVITED ON THE BASIS OF PROSPECTUS

- Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.
- A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking at Baroda, Gujarat, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.
- A copy of the Prospectus together with the documents mentioned below has been delivered to the Registrar of Companies, Ahmedabad for registration as required by Section 60 of the Companies Act 1956.
- Application will be made to the Bombay Stock Exchange for permission to deal in and for official quotations of the shares of the company.
- The Subscription list will open at the commencement of banking hours on the 7th day of August 1961 and will close at the close of banking hours on the 12th day of August 1961 or earlier at the discretion of the Directors but not before the close of banking hours on 9th day of August 1961.
- Copies of the Prospectus and forms of application may be obtained from the Registered Office of the Company or from the Company's bankers or brokers.

CHEMICOAT LIMITED

(Incorporated under the Companies Act 1956 on 21st March 1961)

SHARE CAPITAL

AUTHORISED:	
50,000 Equity shares of Rs. 100/- each	Rs. 50,00,000
ISSUED AND SUBSCRIBED:	
By Directors and their friends:	
10,000 Equity shares of Rs. 100/- each	Rs. 10,00,000
PRESENT ISSUE:	
10,000 Equity shares of Rs. 100/- each	Rs. 10,00,000
payable as follows:—	
With application ...	Rs. 25 per share
On allotment ...	Rs. 25 per share
Balance by two calls of Rs. 25 each	
First call shall not be made earlier than three months after allotment and there will be an interval of at least two months between the calls.	

APPLICATION FOR AND ALLOTMENT OF SHARES:

Application for equity shares should be made on the printed form issued for the purpose, copies of which may be obtained from the registered office of the Company or from any office of the Bankers or the Managing Brokers.

Applications must be made for a minimum of five shares or a multiple thereof and in all cases must be accompanied by a remittance of the amount payable on application. Applications must be completed in accordance with the directions contained in the application form and delivered before the closing of the subscription list to any head offices or the branch offices of the Bankers at the following places—Bombay, Surat, Baroda, Ahmedabad, Rajkot, Calcutta, New Delhi, Delhi and Madras.

Remittances may be made by cheques or drafts and if it is desired to avoid payment of bank charges all cheques or drafts must be drawn either upon the branch offices of the bankers to which the application forms, cheques and drafts are being sent or upon a bank situated in the same town. If drawn on a bank elsewhere, the appropriate bank charges must be included in the remittance. Otherwise the application is liable to be refused.

Directors reserve the uncontrolled right of accepting or rejecting any application without assigning any reason therefor. Applications which are not complete or which are not accompanied with proper payment may not be considered.

Where no allotment is made, the application moneys will be returned in full within two months of the closing of the subscription list. Where the number of shares allotted is less than the number applied for, the balance of the application moneys will be returned within the aforesaid time to the applicant by cheques either through post or otherwise after deducting therefrom the amount payable on application and allotment as above.

The shares when issued, will be subject to the Memorandum and Articles of Association of the Company a copy of which is open for inspection at the registered office of the Company during office hours.

The share certificates will be ready for delivery within four months of the date of allotment.

1. OBJECTS OF THE COMPANY:

The Company is incorporated on 21st March, 1961 with the objects mentioned in the Memorandum of Association. The main objects of the Company are:—

To carry on business of vacuum metallising of paper, plastics yarns fibres, films, fabrics, packing materials, decorative materials, radio telephone, television and other electronic component parts and materials.

To carry on business of manufacturers, importers, exporters, dealer in paper, plastic films, natural and synthetic yarns, fibres and film publicity, decorations of all kinds and other materials coated with metals, chemicals and other substances.

2. COMMENCEMENT OF BUSINESS:

The Company has obtained on 27th April, 1961 certificate of commencement of business by filing statement in lieu of prospectus under Section 149(2) of the Companies Act, 1956.

3. PROSPECTS:

Vacuum metallising is a recently developed process. It helps to deposit lustrous coating of pure metals on paper, plastic, films, fabrics, etc. Both functional and decorative finishing can be obtained inexpensively by a simple method providing automatic production of large quantities. Aluminium is most naturally used and when deposited by vacuum metallising process it gives the same colour as polished platinum, radiu-

or chromium. It can be lacquered and dyed to simulate any metallic colour. Aluminium foils or aluminium foils laminated on paper are used extensively in the packing of tea, cigarettes, biscuits, confectionery and label manufacturing. The present production of aluminium foils in India is estimated at about 3,200 tons. Some quantities are also imported. The import of aluminium foils and foil stock was valued at Rs. 47 lakhs in 1957 and Rs. 65.59 lakhs in 1959. According to the estimates submitted to the Tariff Commission recently in connection with the inquiry on protection to the aluminium industry the demand for foils, etc. is expected to increase to 7000/10,000 tons by 1965/66.

The metallised paper produced by the vacuum metallising technique can effectively replace aluminium foil and aluminium foil laminated paper in the packing and labelling fields. As the metal used for metallising is only a small fraction of the metal required for manufacturing the foil, there is considerable saving of the expensive aluminium metal. The consumers will therefore have an alternative source of supply at very economical prices. In America and Europe metallised paper has considerably replaced foils in packing cigarettes, food products etc.

The same technique can be used in the production of "self-healing" type of condenser papers extensively used in radio, television and other electronic industries.

Various plastic films can be coated with aluminium gold or silver. These films have very wide application in various plastic industries. In West Germany, metallised non-woven fabrics are used for wound dressing on a large scale.

Aluminium, paper and plastic films required for metallising are available in India. The lacquers are also available in India.

The Company is expected to go in production in 1962, and it is estimated that the annual production of metallised paper will be about 1500 tons. It is reasonable to assume that the developing market in India will be able to absorb the full output of the Company's plant.

On the basis of the existing prices of aluminium foils, paper, etc. the Directors are of the opinion that in the circumstances the estimated profits after allocation to reserve are such, that the Company should be in a position to pay reasonable dividends on the issued equity shares.

4. TECHNICAL COLLABORATOR'S AGREEMENT:

The Company has entered into an agreement with Metal Coating Establishment, Vaduz, Liechtenstein, whereby the latter company will supply to the company necessary machineries and spare parts, train Indian personnel in their plant in Germany and supply technical personnel for guidance in the erection and starting of the plant. Further subject to the approval of the Government of India, it will provide technical know-how for the production of new products as and when developed and otherwise supply all information for a period of 3 years. The Company has agreed to pay technical fees of Deutsche Marks twenty-five thousand a year (about Rupees thirty thousand).

5. LOCATION OF THE FACTORY AND WATER SUPPLY AND ELECTRICITY:

The Factory will be constructed on 24 acres and 35 gunthas of lands agreed to be purchased by the Company at Baroda at or for the price of Rs. 2,00,000. No water or steam will be required in the process of manufacturing vacuum metallised paper. The requirements of electricity are small and no difficulties are envisaged in arranging for its supply either from public supply or by installation of Company's own generation facilities.

6. TAX BENEFITS:

The Company will be entitled to the special benefits under the Indian Income Tax Act with respect to Development Rebate. The Company will also enjoy the benefit of section 15C of the Indian Income-tax Act, whereby the profits upto 6% on the employed capital will be exempt from tax for the first five years of operation.

7. LOAN CAPITAL:

The Industrial Credit and Investment Corporation of India Ltd., Bombay have agreed in principle to grant a loan in foreign currencies equivalent to U.S. \$275,000 as determined by the International Bank for Reconstruction and Development for the import of machinery required for the project. The loan will bear an interest at the rate of 7 1/2% per annum repayable in 15 half yearly instalments commencing from 1st November, 1963 and ending on 1st November 1970. The loan will be secured by a first legal mortgage in favour of ICICI of the Company's immovable and movable properties, present and future, subject to the hypothecation in favour of the company's bankers for cash credit and overdraft facilities. So long as the loan or any part thereof is outstanding ICICI shall be entitled to appoint a Director on the Board of Directors of the Company who shall not be liable to retire by rotation nor shall be required to hold qualification shares.

countered only a fair general demand with the exception of African Fannings. Stocks in London, as on 14 July, fell back slightly to 136.8 million pounds from 138.1 million pounds in the previous week. Tea exports to the UK were, however, higher at 20.6 million pounds as against 14.7 million pounds in the previous week.

Tea offered through the London auctions for the first six months of this year was greater by more than one lakh chests. The price average of the sales, during the period, was also better than last year's by nearly 8d per pound. The total quantity received by the UK and retained by it during the

first five months of this year was 19 million pounds more than last year. Argentina stepped up her exports to 2.7 million pounds from 572,000 pounds during the period January/May, 1960.

COTTON Futures Quiet

BEARISH trends prevailed in the Bombay cotton futures market during the past week and both maturing contract and the distant contract suffered sharp decline. The decline in prices were the apprehension of large tenders in the The contributory factors for the

8. RESOURCES AND DISBURSEMENT:	
The total funds available with the Company will be as follows:—	
Share Capital subscribed by Directors, Promoters and Friends and Associates	Rs. 10,00,000
Capital to be raised by this issue	Rs. 10,00,000
Foreign Exchange: Loan to be obtained from Industrial Credit & Investment Corporation of India Ltd.	Rs. 13,00,000
	Rs. 33,00,000

(Industrial Credit & Investment Corporation have agreed in principle to grant this loan to the Company).

This amount of Rs. 33,00,000 will be utilised approximately as under:—	
1. Cost of land and the structures to be constructed thereon etc.	Rs. 3,50,000
2. Cost of plant and machinery, import duty, transport to site, erection and other implementative expenses	Rs. 18,00,000
3. Working capital	Rs. 8,00,000
4. Preliminary expenses including brokerage and other share issue expenses	Rs. 1,00,000
5. Pre-operative expenses including training of Indian technicians in foreign countries and for other contingencies	Rs. 1,50,000
Total	Rs. 32,00,000

Additional finance if any, required for working capital when the factory goes into production, will be obtained by way of loans from the bank and other sources.

9. MINIMUM SUBSCRIPTION:

The minimum amount which in the opinion of the directors must be raised by the issue of shares in order to provide the sum required to be provided as per paragraph 5 of the Schedule II of the Companies Act 1956 upon which the Directors will proceed to allot the shares offered by this prospectus is 10,000 equity shares of Rs. 100/- each.

10. POWERS OF DIRECTORS:

The control of the Company's affairs is vested in the directors. The powers of the directors are, however, to be exercised subject to any regulations prescribed by the Company in General Meeting.

11. RESTRICTION ON TRANSFER OF SHARES:

Subject to the provisions of section 111 of the Companies Act 1956 the Directors may in their absolute and uncontrolled discretion and without assigning any reason, decline to register any transfer of or transmission by operation of law of the right to any shares of the Company to any person whom they do not approve and in particular may decline so in any case in which the Company has a lien upon the shares.

12. LIEN:

The Company shall have no lien on its fully paid up shares. In the case of partly paid up shares, the Company shall have a first and paramount lien thereon only in respect of all moneys (whether presently payable or not) called or payable at a fixed time in respect of such shares and such lien shall extend to all dividends from time to time declared and payable in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the Company's lien on any such shares.

13. BROKERAGE:

The Company will pay brokerage at the rate of 1% on allotments made in respect of applications from the public and bearing stamps of recognised banks, certified brokers, or managing brokers. The Managing Brokers Messrs. Rasiklal Manekal & Co. will be paid commission at the rate of 1% on 10,000 shares offered for public subscription.

INSPECTION OF CONTRACTS AND OTHER DOCUMENTS:

Copies of the undermentioned documents have been delivered along with the Prospectus to the Registrar of Companies, Ahmedabad, which may be inspected at the registered office of the Company during the usual business hours until the subscription list has been closed.

- Consent Order No. R 420-CCI/60-321 dated 16th March, 1961 by the Controller of Capital Issues, Government of India, New Delhi.
- Industrial License No. L/24/(4) (8)/60-GH(1) dated 9th September 1960 approving the proposal for establishing a vacuum metallising plant.
- Copy of the draft agreement, to be entered into between Mr. M. C. Chhatrapati and the Company for his appointment as Managing Director.
- Agreement for Collaboration dated the 18th day of February, 1961 between the promoters and Metal Coating Establishment.
- Copy of the Memorandum of Association and a copy of the Articles of Association of the Company.
- Letters of consent from the Bankers, Solicitors, Auditors and Brokers of the Company.
- Heads of Agreement entered into with I.C.I.C.I. Ltd., on 24th March, 1961.

maturing contract and the anticipation of a bumper crop consequent to the congenial monsoon conditions in most of the cotton cultivating areas. The Jarilla August contract slipped down from Rs 585 to reach lower levels and on Tuesday last was quoted at Rs 572 while the newly started March contract dropped to Rs 588.25 on Tuesday from the high of Rs 606.50 on opening day. Activity in the ready market was fairly moderate and prices particularly of good qualities were well maintained. Mill demand was confined to growths like Dig Vijay, Kalyan, L 147, Laxmi and Khandesh.

The conditions in the import front were not encouraging as mill interest for foreign cotton was

conspicuous by its absence. In the initial stages East African cotton met with some demand but as days advanced the demand petered out. Egyptian and Sudan varieties also met with some interest. Sudan cotton was offered at a discount of Rs 80 per candy to the Indian mills.

Reports that emanated from Alexandria narrated that the Egyptian Cotton Commission will shortly announce official selling prices of 1960-61 crop. It was reported that the Government is anxious to limit the sales of cotton to the Eastern block approximately to 60 per cent of its total sales.

The Indian cotton crop for 1960-61 is estimated at nearly 5.4 million bales a new record since independence and it will be 1.6 million bales higher than the previous season's crop.

NEW YORK

Listless conditions were prevalent in the New York futures market during the past week. The spot market displayed better conditions and the volume of sales was well maintained. Trading in the old contract turned out to be an insignificant affair as the quantities requested were not much in supply to meet the demand and the prices quoted tended to ride high. Total exports during the current season till 15 July aggregated 6,500,829 bales as against 6,787,847 bales in the corresponding period in the previous season.

The prospects for a bumper crop in the 1961-62 season are rated bright thanks to the propitious weather conditions in the cotton growing centres. If nothing untoward happens the production during the coming season is likely to amount to 14.5 million bales.

SUDAN

Only a negligible quantum of cotton was sold by the Sudan Gezira Board in the auctions held last week. Shipments of cotton from Sudan during the current season upto 11 June totalled 194,886 bales, consisting of 175,215 bales of long staple and 19,671 bales of short staple.

Consumption of cotton by the Indian mills from 1 September to 30 April, according to the East India Cotton Association, aggregated, 5,500,542 bales as against 3,419,425 bales in the same period in 1959-60.

Description	1959-60	1960-61

PIECEGOODS

The Bombay cotton piecegoods market depicted better conditions during the past week. Signs of activity on both the export and domestic fronts were visible due chiefly to a revival in demand

though the outcome failed to reach upto the expectations.

The domestic sector showed signs of recovery from the continued spell of stagnation as the flow of demand from upcountry centres for the seasonal varieties was on an encouraging level. North Indian centres were active in the market and the Southern interests were dampened to a great extent due to the recent floods.

No change in prices was, however, noticeable. Mills were reluctant to make any downward revision in prices. The stockists were, on the contrary, prepared to dispose of their stocks even at a discount. But they were disappointed as demand tended to ride at a low ebb. Longcloth, satin patts, medium and checked shirtings and lenos were some of the items of popular varieties that attracted the attention of the local consumers and upcountry dealers.

The reappearance of some of the traditional buyers in the market made the export front lively. The UK accounted for a small quantum of grey goods. Business on a small scale was transacted with Sudan in usual quantities. Singapore was satisfied with a small quantum of longcloth and canvas. Australia's fancy was directed toward grey sheetings. Stray business was done with Ethiopia and Eritrea in grey drills. East Africa took a small quantum of processed goods and sheetings.

Other destinations were not found active purchasers as there existed a wide disparity in prices and due to the seething competition from countries like Russia and China.

Prospects for Rubber

THE relative stability of Rubber prices over the recent months has been helped by the fact that rubber estates in the Far East have been passing through their "wintering" season when the output falls below the average. As a result, the current production has fallen below consumption. Even so, it is felt in many quarters that there may still be too much rubber for comfort lying unsold in the Far East and that, as the production begins its seasonal rise again over the next few months, the prices will once more tread a downward path.

In addition, there is a lingering fear in London that this seasonal increase in supplies can be augmented at some point by heavier sales from massive US Government stockpile of rubber. Some circles believed that the quality of a part of the US stocks must now be deteriorating and that this consideration may force the Government there to make some effort to sell its rubber within a fairly near future.

In spite of an improvement in price levels, rubber dealers in London persist in taking a gloomy view of the market's prospects. They say that the improvement is the result of an

uncertainty, pointing out that the supply-demand position for the commodity is in buyers' favour. The uncertainty stems from earlier fears of political crises over Berlin and Kuwait and reports that the USSR is about to enter the market as a substantial buyer.

Although changes in world rubber prices have just an academic significance, prospects of a relatively low level of prices this year, as forecast in the May bulletin of the FAO, carry no hope of a material price relief to the consumer in India. The bulletin suggests that there is no likelihood of a big rise in global production during the current year even if the political situation in South-East Asia improved. With enough commercial stocks of natural rubber in the consuming countries and the release of rubber from the stockpiles by the USA and the UK, the prices are not likely to return to the very high levels of last year for any considerable period.

COFFEE

The Coffee Board has launched a fresh drive to popularise Robusta Coffee in the South, having been encouraged by the general acceptance of this variety. A large potential market is observed among the industrial workers concentrated in the mill areas. It is hoped that the campaign will be carried to North Indian centres ere long. As regards external publicity, the Coffee Board has made arrangements for the display of all exportable varieties of Indian raw coffee at the India show rooms and trade centres at Baghdad and Bahrain.

According to the Coffee Board, the stock held by it in the middle of last month was 42,605 metric tonnes. Nearly 18,000 metric tonnes were sold for export by that date, creating a new record for export sales. Of the total Pool stock, it is to be noted that 23,852 tonnes or the greater part of the stock consists of Robusta variety.

PEPPER

The recovery in black Pepper prices has proved to be shortlived. In fact, prices have declined by about Rs 3 per 50 kg from the top levels reached recently. The commodity is presently quoted around Rs 222 per 50 kg in the Bombay market. The trend in the Cochin market is also far from encouraging. The rate is quoted at Rs 420.75 per quintal. The fall in prices is mainly attributed to lower advices from Singapore and New York.

It is stated that Brazil is selling in the US market the new crop for August/September delivery at a price as low as 42 cents per pound. Brazil is a small producer as compared with India and Singapore. Nevertheless, at this juncture when foreign demand is absent, the above report had a bearish influence on the local price trend. The extensive damage caused to the pepper vines in Kerala, due to the unprecedented flood, cannot check the bearish mood of the market. The apathy of buyers, both in the domestic as well as foreign markets, has kept the sentiment weak.

The US has continued to quote a lower price, while Russia is out of the market. Moreover, reports from Singapore indicate that the prices there have declined from 46 to 45 cents a pound.

DRY GINGER

The revival of activity in the market for dry Ginger—after it has dipped to Rs 60 from Rs 110—has gathered momentum. Higher advices from the producing centres coupled with the reports of bulk export transactions have provided the inducement. The prices in the terminal markets are, at the moment, higher by about Rs 5 as compared with the Bombay market. In the Calicut market, the rate has improved by Rs 10 to Rs 130 per quintal. In Cochin, the rate is quoted at Rs 412 against Rs 374 per candy.

The recent heavy rains have greatly hampered the inflow of dry ginger into the Bombay market. The estimate of the damage to the new crop from floods is not available; but it is expected to be fairly big. From the reports received during the last few days, the trade feels that, if the weather does not oblige and continues to be unfavourable for another few weeks, the crop position will be serious.

SUGAR

According to the Indian Sugar Mills Association, sugar production was as high as 43,000 tons in June as compared to only 2,000 tons in the corresponding month of last year. This brings the total production for the 1960-61 season to the end of June 1961 to 2,949,000 tons as against 2,401,000 tons in the corresponding period of last year. The offtake from the factories during June 1961 was 189,000 tons. Total despatches, including despatches for exports, upto June 1961 were 1,423,000 tons as against 1,214,000 tons. The total closing of sugar with the factories, as on 30 June 1961, was 2,085,000 tons as against 1,219,000 tons on the corresponding date of last year.

Despite the fact that production has reached a record this year, there is a great deal of disappointment among consumers over the steady rise in the price of sugar in the Calcutta during the past month or so. Taking advantage of official bungling, artificial shortage seems to have been created. It is unfortunate if the price rise inflates the costs of living at a time when increases in the prices of many other items are in sight.

In the Delhi market, too, prices have remained steady as stockists have stopped sale, expecting a likely rise as a result of withdrawal of the ban on the inter-state movement of the commodity. In the Hapur market, however, the rate is quoted around Rs 106.25 per bag as against the controlled rate of Rs 107.69, thanks to the easy supply position.

FOODGRAINS

Steady to firm conditions were witnessed in the Hapur Foodgrains market as arrivals have continued to be small. Wheat has registered fractional gains, to be quoted at Rs

14.87 to Rs 15.25 a maund for the average quality and Rs 15.75 to Rs 16.50 for the farm quality. Coarse Rice has also tended to rise as stocks are reported to be poor. Gram has improved on firm Punjab advices and less arrivals during the week. Barley is continued to be quoted at Rs 11, while Jowar and Guwar have fallen sharply by about Rs 1.50 a maund due to lack of demand. In the Pulses section, prices of Peas have gone up due to support from grinders. Prices of Arhar have developed a slightly easier tendency due to loading difficulties.

MERCURY

The prices of Mercury have developed a downward trend during the past few days. In the Bombay market, the rate is quoted at Rs 2,525, showing a fall of Rs 75 per flask of 75 pounds. Sentiment has been mainly affected by the increased distribution made available by the State Trading Corporation to actual consumers through the trade bodies. The STC is reported to have imported mercury worth Rs 10 lakhs against licences obtained from the Government in the last licensing period. The distribution of these imports is not yet completed. The distribution is expected to be made equally between the consumers in Bombay, Madras and Calcutta. It is also reported that the STC has been able to obtain licences to import further quantity of mercury worth Rs 10 lakhs.

The demand for mercury has also slackened on account of disruption of transport caused by the heavy downpour and the unprecedented floods in many parts of the country. Small manufacturers of clinical equipments in the interior have been slow in their offtake, while the demand for medicinal purposes is also low. In the circumstances, stocks are inclined to liquidate. It is the opinion of the trade that the demand will not show any appreciable improvement for another month.

NON-FERROUS METALS

In the Bombay market, prices of Non-ferrous metals showed a mixed trend. Early in the week, Tin was affected by lower advices from London and Singapore, which induced profit-realising. Reports of larger arrivals and higher stock also contributed to the easiness in prices. There was, however, a sharp recovery towards the close on the feeling that no fresh consignments were expected from Singapore in August.

The new August contract in Tin started its career on Saturday last in Bombay. It started at a premium of 50 nP as compared with the current contract and the premium was mainly due to the tight supply position feared by the trade in the next month. Meanwhile, in view of the sharp setback in the prices of the metal in the last fortnight in the wake of a sharp break in prices in Singapore and London, the Bombay Metal Exchange is reported to have relaxed the margin penalties on buyers. A buyer will now have to pay a margin of Rs 2,500 when the price level of the contract crosses Rs 180 instead of the earlier limit of Rs 175.

Copper prices ruled steady at the outset on support by actual users and firmed up further due to speculative buying and smaller offerings. Higher levels, however, found a withdrawal of support towards the close.

The market for Zinc remained dull except for a temporary improvement on scarcity of offerings.

The price of Lead declined sharply due to selling orders from the stockists.

GOLD & SILVER

Irregular trends in prices characterised trading on the Bombay Bullion Exchange. The continued pressure of unrefined silver, that found its way to the city market from the upcountry centres, kept the sentiment down in silver during most part of the week. But, the strong hold of speculative bull operators induced bears to cover their outstandings. Higher advices from Delhi, Jodhpur and Rajasthan markets were also a contributory factor. Spot silver (below .996) changed hands 200.90 and Rs 201.15.

Gold ruled quietly steady. It attracted selling at higher rates due to weakness in the ready section. Ready rates moved narrowly around Rs 120.25, while Sovereign was Quiet at Rs 93.50.

OILS & OILSEEDS

Conditions on the Bombay Oilseeds Exchange remained generally quiet. Bulls in castor were unnerved by the unexciting export performance. The US, a major buyer of castor oil, has so far been unresponsive to the higher Indian price. Business with the UK and the Continent also remained poor. In the circumstances, the big bull account in castor was indicative of a sudden collapse any time before the maturity month (September) and operators considered the early levels attractive enough to liquidate. Along with this liquidation emerged bear pressure to produce a steep fall. Ready rate was quoted at Rs 34.87 and Castor Oil, commercial quality, at Rs 14.30.

**ARE YOU
ENROLLED
AS AN
EXPORTER
OF ENGINEERING GOODS**

To boost export of Indian goods—to develop confidence among foreign importers—and to build up healthy and lasting trading relationship with foreign importers—a scheme for enrolment of exporters has been introduced by the Export Promotion Advisory Council. This is with a view to setting up recognised standards and a code of conduct for the Indian export business. Manufacturers/exporters of engineering goods are hereby reminded that unless they enrol themselves under the Scheme with the Engineering Export Promotion Council before 1st October 1961 they would not be entitled to take advantage of the benefits under the various export promotion schemes.

Write immediately for full details of the scheme and application forms for enrolment to:—

Crop prospects encouraged Saurashtra operators to sell short in Groundnut. In the absence of any covering, prices moved down. Ready Bold was quoted at Rs 53.50 and Groundnut Oil at Rs 22.15.

The Linseed section, however, maintained a comparatively steady front due to the very limited stocks in the city. Besides, the world crop situation of linseed, as given by the US Department of Agriculture, was in favour of bulls. Ready rate was quoted at Rs 39.87 and Linseed Oil at Rs 17.00.

The market for Groundnut Oilcake remained generally steady due to keen overseas demand. The export prices, however, failed to advance much over the week.

In the Madras market, there is a heavy sliding down of the prices of groundnut oil and groundnut due to good arrivals of kernel stock in southern market centres. Recent rains had to some extent affected the stock arrivals, but the districts in which such arrivals are hampered are only Tanjore and Trichirappalli, while in others the groundnut summer crop had been harvested and shipped to destinations.

These centres in South and North Districts reported about 500 tons of kernels arrival daily. The weather in harvesting centers is good. Improvement of weather in other centers would help in a greater harvest. Crushers in the South were emboldened by these good quantities so that they entered into larger spot commitments. A single Calcutta operators was showing only a small interest in ready oil. But the declining market did not attract others, including a major Calcutta section. The holding power of the stockists was put to test and they have proved weak by unloading stocks at considerably reduced rates. At a lower price sizeable quantities of groundnut were lifted last week at the rate

of Rs 217.80 per quintal, but the valda deliveries did not show much interest due to an apprehension that the same prices would not hold good then for spot offers.

The oils and seeds exchange closed today at the following rates:

Groundnut oil per candy of 500 lbs ex-Madras godown expeller Ready 3% F.F.A. Rs 480: (per 100 kgs) Rs 211.60.

The price of Rs 218 per kilo quater last Tuesday came down to Rs 216.90 upto the middle of the week. There was further decline of a couple of rupees on Monday and the market opened with a still further reduction at Rs 211.60 per kilo today.

There was no business in July or August Valda and the rate quoted was at Rs 180 per kilo.

Groundnut kernels per 80 kgs. Coromandel Rs 88 and medium Rs 85. There was no change in price of kernels as much as in oil which is expected to go down still lower.

Castor oil per candy of 500 lbs Tirupattur Rs 355.

Coconut oil per tin Rs 42.

Gingelly oil per tin Rs 30.50.

Gingelly seed per bag Rs 90.91.

Groundnut cake Rs 28.25.

The arrival of groundnut locally is about 30 tons daily.

In the upcountry markets both South and North Arcot centers registered a sizeable arrival and the prices declined in those centers to Rs 87/89 per 80 kgs. In Pollachi peanuts too have been sown to some extent additionally to the Red Nal and coromandel (Rose) varieties. Between the middle of August and September, these new varieties could be expected, according to traders here.

The Government of Madras had implemented the pilot scheme of carrying out aerial spraying for the control of red-hairy caterpillar pest on groundnut in Pollachi and Coimbatore at an estimated cost of Rs 90,000. The cost will be borne by the ryots upto 50%, working out to

Rs 2 per acre. The aerial surveying operations would cost another Rs 3 per acre and all told the ryot has to pay Rs 5 per acre.

About 10,000 acres of groundnut crop in Pollachi Taluk was affected by the red-hairy caterpillar pest causing serious damage every year.

A Beaver aircraft of the Directorate of Plant Protection Quarantine and Storage, India Government, New Delhi and two "Auster" planes of Aviation Service, New Delhi, participated in the operations, despite unfavourable seasonal conditions. The spraying was found effective for small and medium sized 15 days old caterpillars while it was much less in overgrown caterpillars.

A view of the prices of groundnut kernels and ground oil in other centers show that both kernels and oil remained comparatively high. Per 80 kgs, the Guntur/Bezawada price continued between Rs 90/89 while at down South Vridhachalam the quotation fluctuated between Rs 91/90. Villupuram Centre beginning its price at Rs 90 per 80 kgs, declined to Rs 88 at which it remained while in Tanjore and Salem the price quoted was Rs 91/90.

Groundnut oil per candy of 500 lbs at Guntur/Bezawada continued at Rs 520 going upto Rs 525 once in the week. The price at Vridhachalam of this oil was comparatively easier. The highest reached was only Rs 500 per 500 lbs, and it had to decline due to slackness in demand to Rs 498. At Nandyal, another Andhra Centre, the price of groundnut oil stood firm at Rs 515, but in consonance with neighbouring centers there was a Rs 5 decline and the quotation was consistent at Rs 510 throughout the week. At Villupuram, too, there was an abrupt decline of oil quotation from Rs 500 to Rs 498. The Cuddappah market was firm however without shedding much of the strength. The decline was only Rs 5 per candy from Rs 500 to Rs 495. While the Tanjore center traded at Rs 500 per candy for some days in the week before it could come down to Rs 490, the Salem market was firmer in tone. It traded at Rs 500 and reluctantly cut down the rate to Rs 495.

In Madras the groundnut kernel price remained at 88 per 80 kgm during the week. This applied to superior quality which ruled at Rs 90.50. The medium quality kernels also ruled steady at Rs 85 during the week declining by Rs 2.50 per 80 kgs.

Per quintal of 100 kgs groundnut oil ruled at Rs 224 the higher price at a time. It came down to Rs 216 and improved to Rs 216.90 on a 2 to 3% F.F.A. basis. This was applicable to ready goods. As for August middle quotation, the price of Rs 224.00 declined to Rs 217.40 towards the midweek and rose slightly to Rs 217.80. The hedge January 1962 began to be quoted at Rs 193.50, declining to Rs 192.25 and gaining 50 nP at Rs 192.50.

★

HIDES & SKINS

There were moderate arrivals of cow hides into the market but absorption remained dull due to unchanged price conditions. Also in UK dull conditions prevailed and

probably because of coming holidays. Good demand persisted for fifts and inferior fifts in all weights. 5/5½ lb were offered and bought at 50d. 8/8½ lb at 41½d and 10/12 lb at 39d to 40d. The semi-premium and premium marks fetched between half to one penny per lb.

In the cow calf section better prices were offered for inferior cow calf and business was reported at 57d for 1½/1½ lb average. Internal demand proved very restricted.

Both in tanned buffalo calf and buffalo hide, no changes were visible.

Goat skins tanned section showed easy trend. Tanners also did not offer much in view again of the holidays in Britain. In middle quality goatskins good offers from the American importers were in evidence. Shippers expect bulk order to this country by this monthend.

In sheepskins, no price change was noticed. Topmarks in this line varied between 37½d to 38½d. Several inquiries turned up in middle class varieties.

THE SAMNUGGUR JUTE FACTORY COMPANY, LIMITED.

In view of the uncertain position of the Jute Markets the Directors have decided to defer consideration of any dividend on the ordinary shares for 1961 until the results of the full year's working are available.

The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half year ended 30th June 1961. This dividend will be paid on 25th August 1961, less Income Tax at 7/9d per £ and the Transfer Books will be closed from 12th to 25th August 1961, both days inclusive.

J. G. WALTON,

Secretary.

DUNDEE, 25th July, 1961.

Company Reports

TISCO Profit and Sales Improve

IT has been announced by the Tata Iron and Steel Company Limited that it has been successful in its representations to the Central Government for securing a revision of prices for uncommon varieties for the five-year period ending 1959-60 and that, as a result of the adjustments, it has been possible for the company to take credit for Rs 3.94 crores in its accounts for the year ended 31st March 1961. There is, however, anxiety to know how the authorities will decide about the revision of prices for steel generally and what will be the recommendations of the Tariff Commission.

The preliminary results for 1960-61 indicate that the company has earned a gross profit of Rs 19.59 crores including Rs 3.94 crores referred to above. The gross profit represents an increase of Rs 5.44 crores over the previous year's figure of Rs 14.15 crores. The directors have provided Rs 9.07 crores for Depreciation at 6½ per cent on the original cost, the corresponding sum provided in the previous year was Rs 8.47 crores.

In addition, they have provided Rs 4.85 crores for Depreciation to make up the total amount admissible under the Income-Tax Act, while, in the previous year, no such allocation was made. A sum of Rs 58 lakhs has been written off the profit, being the loss on revaluation of Deutsche Marks and Netherlands Guilders on the amounts borrowed in these currencies from the World Bank. The available balance of profit is Rs 5.09 crores, which is Rs 5.66 lakhs less than that (Rs 5.66 crores) for the previous year.

After adding Rs 8.47 lakhs being the surplus brought forward from the previous year, the directors have drawn Rs 1.27 crores from the General Reserve No. 2, whereas, in the previous year, they added Rs 1.54 crores to this Reserve. The profit thus available for appropriation is Rs 6.44 crores against Rs 4.22 crores. This entire profit has been added to the Plant Rehabilitation and Development Rebate Reserve under the Income-Tax Act and the Tariff Commission scheme, subject to adjustment. In the previous year, the amount transferred to these reserves was Rs 4.14 crores.

Since there is no profit available for distribution of dividends, the directors have withdrawn Rs 4.65 crores from the General Reserve No. 1, representing taxed profits

of previous years against Rs 3.76 crores drawn last year for this purpose. The dividend on the Ordinary shares is maintained at Rs 6.80 per share, net; but there is to be a bonus of 45 nP in addition.

Britannia Biscuit to Raise Capital

The directors of the Britannia Biscuit Company Limited have been considering the capital position of the company and have reached the conclusion that there is under-capitalisation. There is, therefore, a proposal to increase the authorised capital from Rs 50 lakhs to Rs 1 crore by the creation of 500,000 ordinary shares of Rs 10 each. It is not clear whether there will be a bonus issue as well as offer of equity shares for cash subscription. The company has ample free reserves, part of which can be capitalised. Capital Reserve is shown at Rs 2.12 lakhs; General Reserve at Rs 65.20 lakhs and Development Rebate Reserve at Rs 3.81 lakhs.

Meanwhile, sales for the year ended 31 March 1961 have risen to Rs 3.29 crores from Rs 2.72 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 31.68 lakhs as against Rs 21.97 lakhs for the preceding year. Apart from maintaining Debenture Redemption Reserve at Rs 1.50 lakhs, the Depreciation amount is raised to Rs 6.71 lakhs from Rs 5.65 lakhs; Taxation to Rs 24 lakhs from Rs 19.40 lakhs; General Reserve to Rs 12.70 lakhs from Rs 7.00 lakhs and Development Rebate Reserve to Rs 2.96 lakhs from Rs 41.700. The directors have recommended a special bonus of 5 per cent in addition to maintaining the dividend at 25 per cent, subject to deduction of tax.

Kettlewell Bullen Pays More

Thanks to the rise in sales from Rs 75,353 to Rs 1.93 lakhs and in Commission from Rs 6.07 lakhs to Rs 9.20 lakhs, Kettlewell Bullen & Company Limited has reported a rise in the net profit from Rs 6.46 lakhs to Rs 8.00 lakhs for 1960. The Depreciation is raised to Rs 28,550 from Rs 15,400 and Taxation to Rs 5.60 lakhs from Rs 3.85 lakhs. After transferring Rs 5 lakhs from Dividend Equalisation Reserve and Rs 6.00 lakhs from Investment Reserve, the directors have been able to provide as much as Rs 12.49 lakhs (Rs 2.00) for General Reserve and Rs 15,000

(nil) for Development Rebate Reserve. The dividend on the Ordinary shares is raised from Rs 8.00 to Rs 11.00 per share, subject to tax.

Clive Buildings Repeat

Although the gross rent received is higher at Rs 4.53 lakhs against Rs 4.50 lakhs, Clive Buildings Limited has reported a decline in the net profit from Rs 1.17 lakhs to Rs 94,734 for 1960, mainly due to the increased expenditure. A sum of Rs 12,017 (Rs 15,952) is set apart for Depreciation and Rs 1.34 lakhs (Rs 1.33 lakhs) for Taxation. The dividends, both on the Ordinary and Management shares, are maintained at Rs 10 each, taxable.

Higher Profits for Clive Row Investment

The rise in income from "Interest and Dividends on Investments" from Rs 16.29 lakhs to Rs 17.83 lakhs is reflected in the working results of the Clive Row Investment Holding Company Limited for 1960. The net profit works out to Rs 11.46 lakhs as against Rs 9.23 lakhs for the previous year. The provision for Taxation is raised to Rs 5.51 lakhs from Rs 5.35 lakhs. The directors have proposed a final dividend of 55 nP, making a total of 80 nP per share, taxable. This compares with a taxable dividend of 83 nP per share, paid for the preceding year.

The directors state that the dividends from the jute industry may show a decrease during the current year, while those from the coal, tea and miscellaneous companies are expected to be maintained.

Port Shipping Shows Profit Against Loss

The Portshipping Company Limited has reported a net profit of Rs 2.42 lakhs for 1960 against a loss of Rs 1.32 lakhs incurred in the previous year. This is mainly due to the higher income from freight, which is shown at Rs 29.77 lakhs against Rs 27.95 lakhs. In addition, the company's new contract with the TELCO contributed to the improvement in gross freight receipts. Depreciation is provided Rs 1.66 lakhs against Rs 1.76 lakhs, while a sum of Rs 445 is set apart for Capital Reserve against nil. The dividend is, however, skipped again.

As the assets in use during 1960 were basically the same as those

in use in 1959 and earlier year, the enhanced depreciation charge for 1960 would have resulted in the profit and loss account not showing a true and fair view of the results of the trading for the year. In the circumstances, the directors have decided to utilise Rs 20 lakhs out of the company's Fleet Reserves to write down the book value of the company's block.

Choonabhutti Tea Raises Distribution

Thanks to the rise in the crop outturn from 13,761 maunds to 14,698 maunds as well as in the average price realised from Rs 4.83 to Rs 5.15 per kg, the Choonabhutti Tea Company Limited has been able to report a slightly higher net profit of Rs 3.66 lakhs for 1960 as against Rs 3.26 lakhs for 1959. Apart from maintaining General Reserve at Rs 50,000, Depreciation is raised to Rs 1.02 lakhs from Rs 74,409; Taxation to Rs 2.42 lakhs from Rs 2.36 lakhs and Development Rebate Reserve to Rs 10,945 from Rs 2,864. The dividend on the Ordinary shares is increased from Rs 30 to Rs 32.50 per share, subject to deduction of tax.

Birpara Tea Reduces Dividend

The Birpara Tea Company Limited has reduced the dividend from 22½ to 17½ per cent, taxable, for 1960 due to a marked decline in the net profit from Rs 4.18 lakhs to Rs 2.98 lakhs. Apart from providing Rs 5,000 for Investment Reserve, all other allocations have been reduced:—Depreciation to Rs 87,276 from Rs 93,075; Taxation to Rs 2.50 lakhs from Rs 2.90 lakhs and General Reserve to Rs 1.25 lakhs from Rs 1.75 lakhs. The crop outturn is lower at 543,381 kgs against 603,301 kgs; but the average price realised is higher at Rs 5.32 against Rs 4.96 per kg.

Dividends Halved by Jaybirpara and Hoolungoorie

Following a decline in the net profit from Rs 1.14 lakhs to Rs 81,016, the Jaybirpara Tea Company Limited has halved the dividend Re 1.00 per share, taxable, for 1960. Apart from providing Rs 12,000 for Taxation, the sum provided for Depreciation is reduced to Rs 20,876 from Rs 23,490 and development Rebate Reserve to Rs 260 from Rs 600. The crop outturn is shown at 5,928 maunds against 6,711 maunds and the average price realised at Rs 4.91 against Rs 4.78 per kg.

Also, the Hoolungoorie Tea Company has halved the dividend to Rs 10 per share, taxable following a decline in the net profit from Rs 2.05 lakhs to Rs 1.06 lakhs. A

THE BANK OF RAJASTHAN LTD.

B. L. SETHI,
General Manager.

sum of Rs 1.03 lakhs (Rs 75,611) is provided for Depreciation; Rs 80,000 (Rs 98,000) for Taxation; Rs 25,000 (same) for General Reserve and Rs 2,958 (Rs 21,203) for Development Rebate Reserve. The crop outturn is lower at 12,772 maunds against 14,619 maunds, while the average price realised is higher at Rs 5.65 per kg against Rs 5.40.

Higher Profits for Bombay Suburban Electric

The Bombay Suburban Electric Supply Company Limited has reported satisfactory results for the year ended 31 March 1961. The number of units sold is higher at 144.82 million against 121.27 million, while realisation from sales of energy have risen from Rs 125.74 lakhs to Rs 147.97 lakhs. During the year, 11,567 new connections were made to the mains, bringing the total number to 91,966, representing an increase of 14.39 per cent over the previous year.

The net profit, after providing for Depreciation and Taxation, amounts to Rs 26.57 lakhs as against Rs 23.82 lakhs for the previous year. After setting aside Rs 1.02 lakhs for Tariffs and Dividend Control Reserve and Rs 1.04 lakhs for Reserve to augment production, the Depreciation amount is raised to Rs 13.04 lakhs from Rs 11.59 lakhs; Development Reserve to Rs 6.54 lakhs from Rs 6.32 lakhs and Contingency Reserve to Rs 1.42 lakhs from Rs 1.01 lakhs. The provisions for Taxation are, however, lower at 6.87 lakhs against Rs 7.38 lakhs and Dividend Equalisation Reserve at Rs 1.65 lakhs against Rs 2.50 lakhs. The directors have proposed a final dividend of Rs 5.50, making a total of Rs 8.50 per share, taxable, for the year as against Rs 8.00 per share, taxable, for 1959-60.

Minerva Mill Skips Dividend Again

The Minerva Mills Limited has reported a net profit of Rs 55,978 for 1960 as against a loss of Rs 14,285 incurred in the preceding year. These figures are arrived at after providing Rs 6.37 lakhs (Rs 3,678) for Depreciation. The directors have transferred Rs 1.09 lakhs from General Reserve and Rs 60,000 from Investment Reserve to provide Rs 2.16 lakhs for arrears of octroi duty and cess on cotton and Rs 8,632 for arrears of bonus. The dividend has been passed over again.

The company has been granted a loan of Rs 45 lakhs by the NIDC to finance the second phase of renovation and modernisation.

India Cements Pay One per cent More

India Cements Limited has earned a net profit of Rs 42.48

lakhs for the year ended 31 March 1961 after providing for Depreciation of Rs 30.10 lakhs. In 1959-60, the net profit was Rs 48 lakhs after setting aside for Depreciation of Rs 18.68 lakhs. A transfer of Rs 24 lakhs from the Mortgage Loan Redemption Reserve, no longer required, has been made to the profit and loss account. This has enabled a credit of Rs 30 lakhs to be given to the General Reserve.

Development Rebate Reserve gets Rs 2.74 lakhs. On the last occasion, the charge on this account was as much as Rs 33.37 lakhs. The Gratuity Reserve got besides Rs 50,000. There was no provision for Taxation. The latest allocation on this account is Rs 9.20 lakhs. The directors have proposed a final dividend of 6 per cent, making 12 per cent, taxable, as against 11 per cent, taxable, paid for 1959-60.

Balanoor Tea Reports Higher Profits

The tea crop of Balanoor Tea and Rubber Company Limited in the year ended 31 March 1961 was larger at 4.96 lakh pounds as against 3.38 lakh pounds in 1959-60. The rubber crop was, however, slightly smaller at 38,362 pounds against 42,719 pounds. With the realisation of better prices, the net profit, before providing for Depreciation and Taxation, is higher at Rs 3.84 lakhs as against Rs 2.54 lakhs for 1959-60.

The provision for Depreciation is Rs 39,126 (Rs 39,542) and Development Rebate Reserve Rs 3,725 (Rs 4,380). Taxation claims Rs 1.45 lakhs (Rs 40,000), while the transfer to General Reserve is Rs 13,990 (nil) and Dividend Equalisation Reserve Rs 50,000 (nil). A taxable dividend of 12 per cent is recommended on a capital increased by the issue of equity shares as against 15 per cent paid on the original capital.

Lakshmi Mills Fare Well

In its Golden Jubilee year, Lakshmi Mills Limited has reported a sharp increase in the net profit, before providing for Depreciation and Taxation, to Rs 90.12 lakhs from Rs 66.55 lakhs in spite of higher prices paid for raw cotton, higher wage costs and a cut in the prices for yarn. It is stated that the better working results were made possible on account of judicious purchases of cotton and suitable changes in the spinning programme.

The amount provided for Depreciation is Rs 18.18 lakhs (Rs 16.64 lakhs) and Development Rebate Reserve Rs 2.09 lakhs (Rs 3.75 lakhs). The transfer to Gratuity Reserve is Rs 5.50 lakhs (Rs 1.00 lakh). The Depreciation Reserve got Rs 3.20 lakhs and the Contingency Reserve Rs 1.00 lakh in 1959-60. To mark the occasion of the Golden Jubilee, a dividend of 10 per cent on the Ordinary capital

was paid in April. A final dividend of 20 per cent is to be paid, making the total distribution for the year 30 per cent as against 20 per cent previously.

The company has a large renovation programme on hand. The two units in Coimbatore are being modernised at a cost of over Rs 60 lakhs. Apart from changing the draft systems and installing other new types of machinery, it is also proposed to replace the existing 200 ordinary looms with automatic looms. Besides, a staple-fibre unit with 24,000 spindles is being constructed at Palladam, while permission has been received to establish a waste spinning unit.

In the weaving section in Coimbatore, an additional 96 automatic looms are expected to be installed before the end of 1962 at a cost of Rs 16.20 lakhs.

Devon Tea Pays 12 per cent on Increased Capital

The Devon Tea & Production Company Limited has also recorded an increase in the net profit from Rs 67,398 to Rs 2.52 lakhs for the year ended 31 March, 1961. The provision for Depreciation is Rs 27,079 (Rs 23,733) and Development Rebate Reserve Rs 1,152 (Rs 411). After providing a sum of Rs 24,000 (same) for Taxation, the directors have recommended a taxable dividend of 12 per cent on the increased capital as against a taxable dividend of 15 per cent on the original capital.

The outturn of tea is lower at 2.98 lakh pounds against 3.02 lakh pounds, while the coffee crop is weighed 111 tons against 38 tons.

Kailas Rubber Pays 25 per cent

The Kailas Rubber Company Limited has earned a higher net profit, before taxation and depreciation, of Rs 7.81 lakhs for the year ended 28 February 1961 as against Rs 6.36 lakhs. The provision for Depreciation is Rs 60,387 (Rs 51,378) and Taxation Rs 3.20 lakhs (Rs 2.25 lakhs). The transfer to Debenture Redemption Reserve is Rs 1 lakh (same). The directors have recommended a final dividend of 15 per cent, making a total of 25 per cent as against 22½ per cent, both taxable.

A rubber crop of 10.18 lakh pounds was harvested against the estimate of 9.35 lakh pounds. The estimate for 1961-62 provides for a crop of 9.35 lakh pounds.

Western India Plywoods Pay 2 per cent less

The Western India Plywoods Limited has reported a slight increase in earnings for the year year ended 31 March 1961 to Rs 18.16 lakhs from Rs 16.09 lakhs for the previous year. The provision

for Depreciation is higher at Rs 10.05 lakhs against Rs 2.02 lakhs; but the amount set aside towards Development Rebate Reserve is small smaller at Rs 35,520 against Rs 11 lakhs. There is a transfer of Rs 1.50 lakhs (nil) to the Reserves. The dividend on the Ordinary shares is reduced to 10 from 12 per cent.

THE PUNJAB NATIONAL BANK LIMITED

(REGD. OFFICE: PARLIAMENT STREET NEW DELHI),

Capital Department,

Parliament Street,

New Delhi.

July 24, 1961/Stravan 2, 1883

(Saka).

The Directors of the Punjab National Bank Limited have decided to issue 7,50,000 shares of Rs 10/- each at a premium of Re 1/- per share in the proportion of 3 shares for every 5 shares held for which consent of the Controller of Capital Issues has been received. They have also decided to pay an Interim Dividend for the current year @ Re 1/- gross per share, to its shareholders whose names appear in the books of the Bank as on 2nd September, 1961. The Share Transfer Books will be closed from 18th August to 2nd September, 1961 both days inclusive, for both the purposes.

The Interim Dividend will be payable at the registered office of the Bank at New Delhi on or after 11th September, 1961.

By order of the General Board of Directors,

A. M. WALKER

GENERAL MANAGER

Note:—Shareholders are requested to intimate change of addresses, if any, to the Bank immediately.

THE TITAGHUR JUTE FACTORY COMPANY LIMITED.

In view of the uncertain position of the Jute Markets the Directors have decided to defer consideration of any dividend of the ordinary shares for 1961 until the results of the full year's working are available.

The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half year ended 30th June 1961. This dividend will be paid on 25th August 1961, less Income Tax at 7/9d per £ and the Transfer Books will be closed from 1st to 25th August 1961, both days inclusive.

J. G. WALTON,

Secretary

DUNDEE, 25th July, 1961.

29 July 1961

For the Investor

INVESTMENT GOSSIP Fresh Doubts

Even after the announcement of a higher dividend by the Indian Iron and Steel Company, the stock market has continued to rule quiet. News came on Tuesday that IISCO has decided to raise the dividend by 10 nP per share, as compared to previous distribution, to Rs 1.60 taxable. The fact that the company has chosen to distribute a higher dividend for the second time in succession for the accounting year ending March 61 seems to have been ignored. According to the preliminary figures released along with the dividend announcement, net profit has increased to Rs 2.23 crores from Rs 2.04 crores. Some of the more important appropriations are depreciation Rs 2.96 crores against Rs 3 crores, taxation Rs 1.66 crores against Rs 64.28 lakhs and reserves Rs 3.11 crores against Rs 2.93 crores. There is still the retention price to be taken into account and when it becomes possible to do so when the appropriate announcement is made by Government, the results may show further improvement. The company's production during the past year reflects the effect of expansion as improvement is discernible in all departments. Production of pig iron, steel ingots and saleable steel has been higher as compared with the previous year. The output of pig iron has increased from 10,53,612 tons to 11,60,576 tons, that of steel ingots from 8,27,072 tons to 9,14,159 tons, while the output of saleable steel has gone up from 6,62,113 tons to 7,18,684 tons. Despatches have increased from 6,67,048 tons to 7,12,1881 tons.

If the stock market has not been able to steady up on this undoubtedly good news, it is perhaps because it has some other matters to worry about. In the first place, there is still the lurking fear that any vigorous onward march of the market will be the signal for the Government to impose some more restrictions which it is said to be keeping ready. Secondly, the austerity measures including a stiff rise of two per cent in the Bank Rate announced this week by the UK, though it is not believed that these measures will have any serious repercussion in India, are nevertheless casting their shadow on the markets presumably in view of the belief that India may have to pay an increased interest on its loans from the UK. Thirdly, the conflagration in Tunisia, the stiffening of the attitudes of both the

US and Russia on the Berlin question and nearer home, Mr Nehru's frequent reference to Kashmir in the past few days consequent on President Ayub Khan's campaign of hatred against India do not seem to augur well for world peace. Although corporate news continued to be quite good, operators perhaps are wondering what the repercussions on the country's economy of the widespread floods will be. Power shortage in some important industrial regions has also made prospects look gloomy.

NEW ISSUE NOTES

Camphor & Allied Products

A new company known as Camphor & Allied Products Limited is being floated with an authorised capital of Rs 1 crore in order to manufacture synthetic camphor. The plant will be located near Bareilly in Uttar Pradesh. It will have a capacity for producing 900 tons of synthetic camphor annually. The company also proposes to manufacture progressively 60 tons of thymol. A technical collaboration agreement has been concluded with the well-known US firm Du Pont with the approval of the Central Government and the Reserve Bank of India. An initial payment of \$25,000 will have to be paid with a royalty for a period of 8 years at the rate of 1.4 cents per lb of camphor produced. The overall capital outlay on the project is estimated at Rs 1.30 crores, which is proposed to be found to the extent of Rs 60 lakhs in the shape of paid-up capital; Rs 48 lakhs by way of long-term loans and Rs 22 lakhs as deposits and loans on raw materials from the banks. The company may come on the market for raising capital sometime next month. It has obtained sanction from the Industrial Finance Corporation for a loan of Rs 18 lakhs. Negotiations are in progress with the Industrial Credit and Investment Corporation for a loan of Rs 30 lakhs.

Air Control & Chemical Engineering

Air Control & Chemical Engineering Company, a new company, is being set up to manufacture the complete range of equipment for industrial air-control, refrigeration and ventilation. The company will have an authorised capital of Rs 5 crores, of which Rs 1.50 crores to Rs 2.00 crores is proposed to be issued. The company expects to enter the market for raising the capital in the last quarter of the current year. The total outlay of the plant, to be located at Siddhpur (North Gujarat) is esti-

mated around Rs 189 lakhs, including a foreign exchange component of about Rs 60 lakhs.

Hindustan Aluminium

The directors of the Hindustan Aluminium Corporation Limited have decided to make a first call of Rs 25 per preference share of Rs 100 on holders of such shares whose names appear on the share register on 18 July, payable on 10 August; and a second and final call of Rs 50 per share on shareholders whose names appear on the register on 21 August, payable on 15 September, 1961.

Jagajit Cotton

The Jagajit Cotton Textile Mills Limited has decided to offer 26,950 forfeited equity shares of Rs 10 each and 1,470 forfeited preference shares of Rs 100 each for reallocation, at par, to the existing equity and preference shareholders respectively, whose names appear in the company's register on 7 August, pro rata on an equitable basis.

Hindustan Wires

The Hindustan Wires Limited has extended the last date for payment of the first and final call on 4,50,000 equity shares of Rs 10 each to 15 August 1961. An interest at the rate of 9 per cent per annum will be charged if the said call is not paid on or before that date.

Blue Mountain Estates

The Blue Mountain Estates Limited has completed the allotment in respect of the issue of 10,50,000 equity shares of Rs 2 each at Rs 2.45 per share. This issue was made in the proportion of one share for every three shares held. The total number of shares available for allotment for those who applied for additional shares was 83,312. These had to be allotted, in terms of the Capital Issue Controller's order, in proportion to the original holdings of the applicants for additional shares. The share certificates will be sent to the shareholders before the first week of August, 1961.

Prakash Spun Pipes

A new company under the name of Prakash Akers Spun Pipes Limited will be formed shortly. Prakash Engineering Company and Rolling Mills, Agra, has finalised collaboration arrangements with the Swedish firm of Messrs A. B. Akers Styck bruk for the manufacture of spun pipes by a new method patented by the Swedish company. This Swedish firm is expected to subscribe to the capital of the new company. A small percentage of the share capital will be issued to the public shortly.

INVESTMENT NOTES

Chemical Plant

A collaboration agreement has been entered into with a leading German designer and manufacturer in the chemical plant industry for the manufacture in India of equi-

ment of sulphuric acid and super phosphate plant. Orders for a sulphuric acid plant have already been obtained and are under execution.

Utkal Machinery

Progress is reported to have been made with regard to Utkal Machinery Limited. Plans for the construction of the factory have been completed. Shipments of machine tools, to be imported, are under way. It is expected that the plant will commence production early next year. Larsen & Toubro Limited has been appointed as sole selling agents for the products of the company.

Audco (India)

A new company under the name of Audco (India) Limited is being formed to undertake the manufacture of lubricated taper plug valves required for the chemical industry. The initial paid-up share capital will be Rs 10 lakhs and the parent company will hold 50 per cent of the shares. The remaining 50 per cent will be held by Audco Limited, Newport, England. The plant will be located at Powel. Production is expected to commence during 1962.

Sayaji Mills

The Sayaji Jubilee Cotton & Jute Mills at Siddhpur in Gujarat is expected to be re-started after a lapse of four years. The mill is now stated to be in a position to operate economically. The Gujarat Government is reported to have accepted the recommendations for putting the mill back into commission.

INVESTMENT BRIEFS

Indian Iron & Steel Company Limited has announced a taxable dividend of 16 per cent for the year ended 31 March 1961. This gives a net dividend of Rs 1.12 as against Rs 1.05 per share for the previous year. Transfer Books will remain closed from 5 August to 28 August, 1961. The annual general meeting will be held on 5 September 1961.

Forest Industries Limited, Madras has reduced the dividend from 20 to 12 per cent, taxable, for the year ended 31 March 1961.

Puththottam Rubber has recommended a taxable dividend of only 7½ per cent for the year ended 31 March 1961 as against as much as 12 per cent paid for the preceding year.

STOCK EXCHANGES

Markets Demoralised

Watch-Dog Writes:

In general, stock markets are filled with a sense of demoralisation. There is indecision in the minds of the operators, who are inclined to restrict commitments. Sentiment, which has already been affected by various uncertainties, has deteriorated further following the dis-

appointment over the moderate increase in the Indian Iron dividend and the subsequent news about the rise in the British Bank Rate. But for some bear-covering and replacement buying at the lower levels, the markets would have witnessed a veritable landslide in values.

Renewed offerings in the speculative issues caused a sharp setback in the values of other shares on the Calcutta Stock Exchange.

After ruling weak till Wednesday, the Bombay Stock Exchange displayed a slightly steadier tendency due to some bear-covering coupled with replacement buying.

Business on the Madras Stock Exchange continued to be restricted in the absence of any incentive.

CALCUTTA

THE local stock market continued to present a sluggish front. With the speculative issues steadily losing ground on renewed offerings, other shares developed a sagging tendency due to sustained liquidation. Apart from the fact that conflicting rumours with regard to the likely announcement of Government measures to check unhealthy speculation retarded any recovery in prices, the decision to offer higher yields on the recent Government borrowing gave rise to a feeling that it would be more expensive to finance trading in stock markets. There were also indications that the Government might not announce the new steel retention prices in the near future.

Technical considerations were an additional factor to induce caution among the bull operators, who preferred to lighten commitments. With the announcement of book closing by the Indian Iron & Steel Company Limited, many operators were anxious to release a part of their holdings in preference to paying the carry-over charges. It, however, looked as if the market might taken a turn after the announcement of the Indian Iron dividend.

But, when the actual announcement of the increase in dividend from 15 to 16 per cent was made, it had only a temporary effect on sentiment, as operators seemed to have been disappointed over the increase in the net dividend by only 7 nP per share. There was, therefore, heavy bull liquidation, resulting in a steady decline in prices. The downward trend in prices was accelerated by the subsequent news of the increase in the British Bank Rate on the thought that India would have to pay more by way of interest charges for any loans that she would take in future from the UK for the Third Plan. Towards the close of the week, however, the market staged a mild recovery, thanks to some bear-covering and replacement buying.

The general tendency in the Gilt-edged market was lower, presumably as a result of the necessary process of adjustment to the new pattern of interest rate, set in motion by the new loans. Short-dated issues and State Loans, however, continued to be in demand and ruled generally

steady. 3 per cent 1986 Conversion Loan was quoted at Rs 71.90.

Bank shares continued to display a firmer tendency following the satisfactory working results released by some of the banks. Punjab National had buyers at Rs 23.50 to Rs 23.87 and United Commercial at Rs 90.75 to Rs 91.50.

In the week's dealings, speculative issues were the worst affected under the lead of Indian Irons which, in turn, were subjected to heavy selling pressure following the disappointment over the nominal increase in dividend for the year ended 31 March, 1961. After opening steady at Rs 27.82, Indian Irons slipped down to Rs 27.48. At this level, the emergence of bull support pushed up the scrip to Rs 27.80 immediately after the announcement of the dividend. But, the subsequent selling pressure brought down the scrip to Rs 26.78 before finishing the week at Rs 26.92. In sympathy, TEXMACO were marked down at one time to Rs 18.40 from Rs 19.05, to finish at Rs 18.50. Britannia were comparatively steady at Rs 12.75, while Jessop were on offer at Rs 19.69 against Rs 20.75. Thanks to the issue of bonus shares, J. K. Steel were the only scrip to remain active throughout. After being marked up to Rs 40 from Rs 38.25, the scrip closed finally at Rs 38.87.

Jute shares continued to remain depressed in view of the obscure outlook for the industry. It was thought that a long period of waiting might be necessary before the industry was able to recoup past losses and stand on its own legs. The only shares, which remained unaffected and continued to rule steady, were Anglo-India quoting Rs 183.50; Ganges Rs 11.06; Kelvin Rs 153 and Nuddea Rs 45.75. Birlas were, however, depressed to Rs 26.75 from Rs 27.06. Howrah to Rs 19.87 from Rs 20.25 and New Central to Rs 18.62 from Rs 19.00.

Coal shares turned rather quiet under the mixed impact of the Plan target, official apathy to make production remunerative and transport bottlenecks. Burrakur were on offer at as low as Rs 19.56 against Rs 19.87; Central India at Rs 13.19 against Rs 13.50 and Western Bengal at Rs 10 against Rs 10.44. The closing rates were slightly better at Rs 19.62; Rs 13.37 and Rs 10.06 respectively. Equitable had sellers at Rs 30.62 against Rs 32.12 and so also New Beerbhoom at Rs 23.87 against Rs 24.69.

Although Tea shares continued to meet with selective buying, there was not a marked increase in the volume of turnover. There was an anxiety to await the statement to be made by Mr Macmillan about the European Common Market at the end of this month.

Textile shares, which had been faring exceedingly well during the past many weeks, had to share the general trend of the market due to general profit-taking. Jay Shree eased off to Rs 15.56 from Rs 16; Bowreah to Rs 24.12 from Rs 25; Dunbar to Rs 26.87 from Rs 27.44; J. K. Rayon to Rs 19.62 from Rs 20.19 and Elgin to Rs 19.87 from Rs 20.12.

Little or no interest was shown in the Sugar section, where dealings remained restricted and prices displayed an easier tendency. Raza-Buland were quoted at Rs 11.25 against Rs 11.75; Carew at Rs 12.94 against Rs 13; Cawnpore at Rs 13.12 against Rs 13.25 and SKG at Rs 11.25 against Rs 11.50. Ramnugger Cane met with some enquiry up to Rs 30.06 from Rs 29.81.

Lack of fresh support and a general disposition to book profits at the recent high levels were reflected in the Miscellaneous section. Following were the price trends of a few selected shares:—

	Week's High	Week's Low	Week's Closing
Orient Paper	35.30	34.90	35.00
Shree Gopal	25.37	24.87	25.00
Sirpur	14.69	14.50	14.50

General Tyres	6.81	6.66	6.69
Goodyear	38.87	38.00	38.19

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

At a meeting of the Board of Directors held today the Directors have recommended payment of a gross dividend for the year ended 31st March 1961, of 16 %, or Rs. 1.60 per share, on the Ordinary Share Capital, subject to deduction of tax at the appropriate rates. This dividend awaits sanction by the shareholders at the Annual General Meeting to be held on Tuesday the 5th September, 1961.

The net profit after provision of Rs. 2,96,46,835 for depreciation, Rs. 1,66,00,000 for taxation and net transfer of Rs. 3,11,13,302 to Reserves is Rs. 2,22,68,363. For the previous year the net profit was Rs. 2,04,23,465 after provision of Rs. 3,00,00,000 for depreciation, Rs. 64,28,000 for taxation and net transfer of Rs. 2,92,92,880 to Reserves.

The Ordinary Share Register and Transfer Books of the Company, as already announced will be closed from the 5th August, 1961, to 28th August, 1961, both dates inclusive, and the dividend if sanctioned will be paid on or after the 6th September, 1961, to those shareholders whose names appear on the Register of Members on the 28th August, 1961.

By order of the Board,
MARTIN BURN LIMITED
F. G. LIVERSEDGE
MANAGING DIRECTOR
Managing Agents.

Registered Office,
12, Mission Row, Calcutta-1.
25th July, 1961.

The Grammar of Development

IN welcoming Ambassador Galbraith to these shores, this journal had expressed the hope that there will be much friendly picking of his brains for our own benefit. We are gratified to find that Mr Galbraith has met us more than halfway in this endeavour by acting on Mr Chagla's suggestion of making diplomacy an instrument of surreptitious education. In three lectures, all delivered within a fortnight at the three oldest seats of modern learning in the country, Professor—rather Ambassador—Galbraith has expounded certain first principles of development that tend to get forgotten in academic and other kinds of narcissisms. We also suspect, despite polite avowals to the contrary, a certain design in the planning of the lectures by which much in-between-the-lines wisdom has been packed for the benefit of Indian planners. Most of such wisdom has been silyly reserved for the last lecture, the first two being, more or less, the thin end of the wedge. Ambassador—rather than Professor—Galbraith may have been responsible for this innocent ruse, though we readily admit that the exigencies of the general argument may have been equally responsible for this ordering of the discussion. However that may be, these three lectures constitute in their sum an important contribution to the grammar of planning.

Professor Galbraith's argument can be briefly summarised as follows: Economic development should be conceived not as jumps across chasms, but as a linear progress along a line "along which the nations of the world are spaced, in their various stages of development." The sharp polarisation between developed and undeveloped nations with an unbridged gulf is factually wrong and psychologically damaging. At one end of the spectrum, if another analogy is permissible, there is the traditional society of the Rostowian model whose needs are—if economic development is at all considered a worth-while ideal—the nucleus of an administrative elite, a minimum programme of education that will spark the 'divine discontent' and a reasonably wayward passion for social justice. These three will lead inevitably to planning of some kind and planning need not be the dirty word it has become in some circles. Capital and technical knowledge and managerial sophistication find their optimum use in societies that are at the other end of the spectrum, where capital is accumulated without much pain, appetite for technical complexity grows by what it feeds on and new managerial skills are acquired and used without tears. In between are nations in various stages of development which need capital but do not have it; have achieved a degree of technical maturity that merely underlines its backwardness and accentuates its hunger for more technology without any ready means of satisfying it; are in a betwixt-and-between situation in managerial needs and fulfilment. These nations are best placed to be helped by imports of capital, technology and organisational techniques, though, here again, the needs and capacity for absorption vary from country to country. Lines of least resistance are a terrible temptation for nations

thus situated and thoughtless imitation of nations further along in the line of development a constant snare. From the point of view of friendly assistance, there is none so poor that he cannot give. Indeed, in many respects, it is the poor that best help the poor.

The most valuable suggestions made by Professor Galbraith relate to what he calls the "unfinished business of modern development planning." He desiderates three aspects of this lacuna in current thinking. First among these is what he calls "a strategy of economic advance." By this he means a preoccupation with the central rather than peripheral urgencies, an imperviousness to importunities of various sorts that are not part of the central strategy of development. "Pressure of individuals, departments and regions" have to be withstood and not the merely useful but the indispensable things should be aimed at. Indian planning has not always stood this test well.

The second requirement is a preoccupation with the "invisible dimensions of achievement." Targets of achievement should be not only in terms of end-products, but in terms of productivity-coefficients, that is to say, in terms of manhour productivity, and cost accounting. Such an auditing provides a more continual scrutiny of our efforts and a continual challenge to our ability. It also performs the task of locating areas of failure contemporaneously and helps efficient use of resources.

The final lack is a theory of consumption. What are the criteria that should govern the quantum and kind of current consumption that ought to be planned for? Since the market mechanism for regulating these is, for good and sufficient reasons, to be abrogated, some other frame of reference for them should be devised. On the face of it, the problem is not formidable for most poor countries. At one end, there are the necessities which are in pitiful short supply, and are easily named as of over-riding importance. But even here how much present self-denial can be demanded in lieu of future felicity is a heart-breaking question. At the other end, there are certain things—Professor Galbraith named Television—which are automatically jettisoned as belonging to another day. But in between these is an area where the choice is not so easy, even if we are unimpressed by theories of consumption as the only true begetter of production.

But any valid theory of consumption should take note of geographical, sociological and even historical factors. It is a particular weakness of Indian planning that it has not done this. Quantitative modes of reckoning growth and the rather insistent peddling of the material rewards of planning have gratuitously thrown away much aid for the Indian temperament and outlook. For instance, the ideal of self-denial and non-attachment could, with advantage, have been grafted into a theory of consumption. This would not only have helped—pace Veblen—better mobilisation of savings, but given a desirable orientation to our planning. Good life rather than good time would then have been the end of planning much to the enrichment of everybody's life.

MINOR IRRIGATION

Diminishing Returns

THE importance of Minor Irrigation, which has been recognised for a long time, has received added emphasis during the two Plan periods, perhaps as a reaction from the big multipurpose projects which take years to complete and are only partially utilised for many years after their completion. The percentage of area irrigated by minor sources has increased from 59 per cent of the total irrigated area in the year 1920-21 to 65 per cent in 1956-57. In the latter year, out of 55.68 million acres of total net irrigated area, 36.12 million acres derived their irrigation from minor sources.

Minor Irrigation sources are classified under wells, tanks, private canals and other sources. The last item includes small *anicut*s, in the South, *kuhls* in the hilly areas *bandharas* in Gujarat, Maharashtra and Mysore, *ahars* and *pyms* in Bihar and various types of lift irrigation devices. The following table gives the break-up of the area of 36.12 million acres under Minor Irrigation in 1956-57 according to their source of supply.

(In million acres)		
	Area	per cent
Wells ..	16.23	45
Tanks ..	11.10	31
Private canals ..	3.35	9
Other sources ..	5.44	15
Total ..	36.12	100

There are indications that Minor Irrigation has reached its limit and expert opinion is now swinging in a different direction. At least the study of Minor Irrigation by the Programme Evaluation Organisation of the Planning Commission (PEO) suggests the need for caution in drawing up programmes for the Third Five Year Plan.

Even during the Second Plan, Minor Irrigation had reached the stage of diminishing returns. As against the target of 11.2 million acres for Minor Irrigation in the First Plan, the target for additional area to be irrigated during the Second Plan was fixed lower at 9 million acres. But, on the other hand, against the outlay of Rs 85 crores for Minor Irrigation in the First Plan the total outlay envisaged under the Second Plan was Rs 121 crores (Rs 66 crores under agricultural programmes and Rs 55 crores under Community Development programmes.) When the Plan was reappraised in 1958, the outlay under agricultural programmes (GMF) was raised to Rs 92.64 crores, increasing the total to Rs 147.64 crores, without any change in the physical targets. This is an indication of the steady increase over the years of the cost of Minor Irrigation. The cost per acre irrigated in terms of targets of outlay has increased from Rs 75.9 in the First Plan to Rs 164 in the Second. When considering the costs, the high proportion of area under Minor Irrigation should also be kept in view. Minor Irrigation may be less costly than big and medium projects in terms of initial capital outlay. But the operating expenses amount to a substantial figure, especially in the case of wells and tubewells, and this expenditure should be capitalised, in reckoning comparative capital costs. This point is also of relevance in considering the problem of under-utilisation to which the PEO report has devoted considerable attention.

Against the target of 11.2 million acres, the area actually benefited during the First Plan

is estimated at 9.5 million acres. Under the Second Plan, it is estimated that the overall target of 9 million acres will be achieved, the shortfall of 1.5 million acres under the Community Development programmes being compensated by excess of the same order under the GMF (agricultural programme) schemes. It has been suggested that insistence on certain percentage of cost as people's contribution has held up CD programme schemes while the GMF schemes do not call for people's contribution. The rationale of this dual approach to the same problem is not very evident.

Achievement during the first four years of the Second Plan has been of the order of 86 per cent for the country as a whole; this figure covers the wide variation among the States, ranging from 31 per cent in Kerala to 176 per cent in Rajasthan. The following table shows the targets and achievement of the different States during the first four years of the Second Plan period.

State	Second Plan target lakhs acres	Achievement in 1st 4 years lakhs acres	% achievement of target
Andhra Pradesh	4.5	4.3	95.6
Assam	12.1	8.1	66.9
Bihar	17.4	18.8	108.0
Bombay	10.3	6.1	59.2
Madhya Pradesh	7.8	3.4	43.6
Madras	5.0	2.3	45.1
Orissa	3.0	1.2	40.0
Punjab	2.7	4.1	151.9
Uttar Pradesh	12.9	19.2	148.8
West Bengal	3.9	3.1	79.5
Jammu & Kashmir	1.2	N.A.	N.A.
Mysore	3.2	1.3	40.6
Rajasthan	2.0	3.7	176.2
Kerala	2.9	0.9	31.0
Union Territories	1.1	0.5	46.7
Total	90.0	77.0	86.5

(or 88.2 after excluding the target for Jammu and Kashmir)

After drawing attention to the risks of generalising on different aspects of Minor Irrigation, in view of the wide disparity in conditions from State to State as well as among the different regions of the same State, the PEO report has suggested certain issues for consideration. One of these relates to the "under-utilisation of irrigation potential". It is reported that 54 per cent of the irrigation potential of the works in the sample villages taken up for collection of field data remained unutilised in the Kharif crop of 1959-60 as compared to 31 per cent in the Rabi.

In the absence of any precise definition of the concept of under utilisation in relation to different sources, the significance of the conclusions remains largely elusive. The confusion is aggravated when we are told that one of the main reasons for under-utilisation is the lack of water in the irrigation sources. In the case of tanks that have silted up, de-silting operations may cost as much as, or even more than, the original construction. In such cases there is no point relating utilisation to a theoretical estimate of irrigation potential which has nothing to do with the existing state of affairs. The same applies to wells which have gone dry because the water table has gone down or turned saline or kutcha wells which have caved in. Another reason for under utilisation, it is stated, is inadequate rainfall. Surely it is not suggested that the cultivator should irrigate his fields by lift irrigation even during the rainy season! Nor can it be said that supplementary sources of irrigation, like wells or tanks, are superfluous in regions where the annual rainfall is more than adequate. Though the source may be

Indian Finance

utilised only for a few days or weeks, just before harvest or for raising seedlings, they play a crucial role in the agricultural economy in maintaining the level of output.

In the case of tube wells, and pumping sets which have increased to a phenomenal extent in recent years, there appears to be heavy incidence of under-utilisation and a tendency to over-capitalisation and creation of surplus capacity. Most of these are set up with loans from Block Development funds. As the PEO report points out, there is need for correlating the capacity of the pump sets and tube-wells to the irrigational needs of farmers and for a more cautious approach to the sanctioning of loans. The State-owned tube wells also present problems of their own. Most of them have been running at a loss in recent years. While the average hours worked per tube well is below the level required for economic operation, the culturable command area is fixed at too high a figure, resulting in inconvenience to farmers whose fields are situated in outlying parts of the command area. Cultivators also complain about high water charges and inadequate supervision and maintenance of field channels. The report has stressed the need for better public relations and for fixing the command area well within the limits which could be actually irrigated by it.

The problems brought out by the study underline the need for close and careful examination of the programmes for extension of Minor Irrigation in relation to possibilities and requirements of each particular region. Though the need for systematic surveys of the scope for Minor Irrigation has been emphasised by the Planning Commission both in the First Plan as well as in the Second, it is a matter for surprise that few States have undertaken or completed such surveys, or drawn up an order of priorities.

Australia's Changing Financial Structure—I*

AUSTRALIAN monetary policy in the post-war period has emphasized the need for trading banks to concentrate on the provision of working capital only. Over the years, one of the features of Australian development has consistently been reliance upon the banking system for the provision of important capital requirements of industry and commerce. While technically, overdrafts are repayable at call and are therefore of a relatively short term nature, in effect, over a very long period, the traditional position had been for the Australian banking system to provide funds on overdraft on a continuing year-to-year basis. This meant that, although there were fluctuations from season to season, the hard core of the overdraft tended to remain as a relatively long term loan. Emphasis on the need for trading banks to restrict their lending activities to working capital purposes only was a fundamental alteration in what had been a long established practice.

THE SCOPE OF BANKING

It might be argued that the modification to banking controls and the tendencies to concentrate loans on working capital were logical developments in a maturing economy. Be that as it may, the effect of these basic alterations could be seen in the limitation of the scope and activities of the trading banks, which restricted them to a narrowing sector

5 August 1961

of the financial field. This took place, and became increasingly effective, at a time when the Australian economy was expanding rapidly and demands for capital, both fixed and working, were rising dramatically.

It appeared that official policy took the view that it was only necessary to control the volume of money through the banking system and there would be little need to bother about developments outside the banking system. This argument was apparently based on a strict interpretation of the theory that "banks create credit".

In a recent article in "The Banker" March 1960, Mr Harold Rose, in analysing the report of the Radcliffe Committee, appointed in the United Kingdom to report on the Working of the Monetary System, under the heading of "liquidity", devoted some time to a discussion of the capacity of banks to create credit, in the following terms:—

"For it is evident from the tone of certain passages in the Report that the concept of 'money' itself is regarded as unsatisfactory in an advanced financial system, presumably because of the existence of highly liquid assets that, although undoubtedly not the medium of exchange, are regarded by the public as very close substitutes for money as a store of value. It is partly because of this reasoning that the Committee prefers to regard the banks not as unique 'creators of money', but rather as a highly important group of lenders, differing not in kind but only in degree from other institutions that lend by creating assets only slightly inferior in liquidity, i.e. in the facility with which they can be exchanged for the medium of exchange without inconvenience and capital loss."

The Radcliffe Committee has thus raised serious doubts as to the complete validity of the theory that banks create credit and therefore are the only section of the financial system which requires full control in the furtherance of monetary policy. Perhaps the most complete acceptance of the "creation of credit" theory has been seen in Australia in the requirement that, while banks must restrict their lending to working capital purposes, businesses must raise their fixed capital by borrowing from the market. In this way, it can be argued, the banks are refraining from adding to the total volume of "money" and the financing of business is being placed on a non-inflationary basis by raising funds from other sectors of the market. By this means, the theory runs, the borrower uses funds which have been made available to him by a lender direct, without influencing the level of bank money and therefore without adding to inflation.

SERIOUS DOUBTS

For some time, serious doubts have been held in Australia as to whether the old theory of control of the volume of money is the complete answer. There has been a growing realization of the need for some form of control of the outside money market and the fringe institutions instead of the placing of all emphasis on control of the banking system.

In his R. C. Mills Lecture, April 1958, Dr H. C. Coombs, Governor of the Central Bank in referring to the expansion of capital raisings, stated "This great flow of funds directly from those holding stocks of money was largely financed by a more frequent use of the existing money supply rather than from an increase in the volume of money itself".

Again, in his Address to the Fifth Summer School of Business Administration, University of Adelaide, 1960, Dr Coombs made the following comment: "A general limitation upon the effectiveness of monetary policy in Australia lies in its inability to exert suffi-

cient influence over the non-banking financial sector of the economy. Monetary policy is not effective in influencing substantially the rate of turnover of the money supply but only its level".

There are clear indications that the Australian pattern of controls has failed to provide the required direction for a rapidly growing economy. These controls have included; monetary control through the banking system, physical control over the balance of payments, through supervision of imports, and fiscal controls through budget and taxation policy, with concentration of the main weight rather on the latter, provided banking expansion can be held in check.

The stage of rapid growth in Australia has been accompanied, not by any dramatic rise in the volume of money but rather by an increase in its activity. This has come about through the proliferation of financial activity outside the banking system, in hire purchase finance, development finance, real estate finance, investment trusts of a multitude of types, and similar activities. This rapid upsurge of financial corporations of one kind and another appears to be no accident. It is the result of the urgent need for capital in a rapidly expanding economy, coupled with concentration on the volume of money theory in the conduct of monetary controls.

The dominance of the volume of money theory is exemplified even in the recent development of a short term money market in Australia. The market dealers obtain funds direct from the trading banks themselves, and from customers of trading banks. Such funds are lost immediately to the banking system, and represent an equivalent loss of cash to the trading banks because money market dealers bank with the Reserve Bank. Payments to these dealers through the trading banks thus involve a debit to those trading banks' accounts at the Reserve Bank, and consequently an immediate loss of liquid funds.

To the extent that the dealers obtain securities direct from the Reserve Bank in the investment of their funds, this loss of liquid resources takes on a relatively permanent nature for the trading banks. This is because there is no compensating disbursement of funds by the government with a wide spread through the community and ultimate return of the funds to the banking system to restore deposits and liquidity. It is only if the dealers purchase their requirements of government securities on the market, or invest in issues of new government securities, that the relevant funds and liquid resources are restored to the banking system. Thus, even this most recent development of the Australian money mechanism involves a measure of control over the trading banks, which the Reserve Bank can exert as and when it wishes to do so.

CANADIAN COMMENT

It would seem to be no accident that informed criticism of the monetary system and monetary controls is appearing also in Canada, another area of rapid development, such as Australia is. The address of the President of the Bank of Montreal in 1960 makes interesting reading, and particularly the section relating to monetary policy. "Last year I raised the question of how long a virtually unchanging money supply should be considered appropriate to, and sufficient for, a period of expanding business activity."

Perhaps it is not too much to state that economic thought tends to follow fashion. To an extent, these fashions may be swayed by the circumstances of the particular times. The fashion of thought that banks create credit, that control of the volume of money through the banking system is virtually all

that is required to achieve a stable monetary policy, appears to have run its course in the new countries of rapid development, and to be coming under increasing fire in such countries as Australia and Canada. There are now similar doubts arising in the older established economy of the United Kingdom where any weaknesses in such a policy might be expected to take longer to appear. These doubts have, of course, been raised in a most striking form in the report of the Radcliffe Committee.

There has been much criticism of the rather revolutionary approach of the Radcliffe Committee to the concept of money and credit, broadening the latter to embrace trade and business credit, as being of similar relevance to bank credit in the modern economy. It is therefore interesting to note some of the views of Professor R. S. Sayers, a prominent member of the Radcliffe Committee, in his presidential address to Section F (Economics) at the 1960 Cardiff meeting of the British Association.

"It is this wide concept of liquid assets that we must put, in the place conventionally occupied by 'the supply of money', as the monetary quantity influencing total effective demand for goods and services.

"When all the assets included in this class are reviewed in detail, we find that they include not only the deposit liabilities of banks but also the readily-callable liabilities of a large and widening range of other financial intermediaries. The ease with which these intermediaries enlarge their 'balance-sheet totals' is as relevant to the monetary situation as is the behaviour of those financial intermediaries we call 'banks'. Nor should we limit the range to firms ordinarily regarded as financial intermediaries."

(To be concluded)

Key to Planning & Prosperity

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

NEW LOAN

RBI Buys Rs 45 Crores' Worth?

IN the returns of the Reserve Bank for 28 July, some indications are available about the kind of success achieved by the second tranche of the Centre's borrowing effort for 1961-62. The first inference is that the Reserve Bank has been called upon to support the new loan in heartier fashion than we had anticipated. The second inference is that its subscriptions are smaller than they have tended to be in recent years. The third inference is that the Centre, its balances replenished with the proceeds of the new loan, has been able to institute reverse ad hocs in sizable sum: that is to say, ad hoc Treasury Bills held by the Reserve Bank have been cancelled before their maturity. The fourth inference relates to the subscriptions of Scheduled Banks, in so far as member banks have drawn down their Reserve Balances for this purpose. The fifth inference is in respect of the strain that the banking system has experienced as a result of Deposits being drawn on by such institutional investors as the Life Insurance Corporation. The clues are culled from the following data taken from the Reserve Bank returns:

- Deposits of the Central Government have risen by Rs 24 crores.
- Rupee Securities in the Issue Department are lower by Rs 10 crores, Investments in the Banking Department by Rs 7 crores and the Reserve Bank's portfolio of Treasury Bills purchased and discounted by Rs 12 crores. In addition, the fact must be borne in mind that, in the same week, the State Bank has sold securities for Rs 7 crores to the Reserve Bank.
- Reserve Balances of member banks stand reduced by Rs 22 crores.
- The Other Loans and Advances of the Reserve Bank are unchanged.

Cash subscriptions, in round figures, have amounted to Rs 105 crores. Of this, immediately traceable is the element of Rs 24 crores represented by rise in the Centre's Deposits. Similarly, item (b) discloses a reduction in Rupee Securities held by the Reserve Bank and relates, we may take it, wholly to Treasury Bills cancelled. The relevant item totals Rs 36 crores. What remains is Rs 45 crores, and this in our view is the magnitude of the Reserve Bank's subscriptions to the new loan. The Reserve Bank would have purchased securities in such an amount; and the Centre would have proceeded immediately to institute countervailing, reverse ad hocs. Thus, the total of ad hocs cancelled during the week may be placed at around Rs 80 crores.

In broad terms we may put Scheduled Banks' subscriptions to the new loan at Rs 20 crores. Unexpectedly, the State Bank has not subscribed; unless this has been concealed by sale of other securities and substitution by 3½ per cent 1968. In the event therefore the

support from the banks (excluding the State Bank) is of commendable proportions. We may presume that the State Bank will, as and when resources gather with it, relieve the Reserve Bank of its holdings of 3½ per cent 1968. Excluding bank subscriptions, but including cash put in by the Reserve Bank, what the public subscribed is seen to be around Rs 40 crores. Of this, the generally held view has been that the LIC would have been responsible for around Rs 20 crores, and the balance from other investing bodies. But it is clear, in any case, that the pressure upon the Deposits of the banking system may have been as high as a drawal amounting to Rs 40 crores. And yet, the banks were able largely to avoid recourse to central banking credit. Why?

The explanation lies in the "easy" conditions that banking is now seen to experience. In the week ended 21 July, net Deposits rose by Rs 9 crores, and Advances fell by over Rs 12 crores. Borrowings from the Reserve Bank were at the nominal figure of Rs 1.92 crores. The inflow of "new" Deposits would partly have offset, and now serve partly to conceal, the magnitude of decline in Deposits owing to the new loan subscriptions. For the rest, apparently cash balances were "expedient"; and temporary recourse to inter bank call money is quite possible. The experience of the State Bank in the new loan week is significant: Deposits are lower by Rs 4 crores, but Advances have declined by like sum. It is possible that the return of Scheduled Banks for 28 July reveals a fall of something like Rs 25 crores in Deposits—though drawals for subscription may have been much more at Rs 40 crores.

Since the new loan, and interrupted again by the demand consequent upon month-early disbursements, money has turned easy. As we had fully anticipated, the Treasury Bill rate at the auctions has declined to 2.4 per cent, and prospects are that it will go down further. Call money after temporarily rising to 2-3 per cent or thereabouts is in sight of finding a new low level. In the face of such easy money conditions; with the certainty that, with industrial production failing to keep up its pace of growth, the contraction in Advances during the slack season will be considerable; and in the light of the clearly discernible upward trend in bank Deposits, a hardening of the gilt-edged market can be confidently expected. Despite the Reserve Bank (or Central Government?) action to push up gilt-edged yields, it is likely that there will be week-by-week appreciation in prices of Government securities.

STATE LOANS

4 per cent 1971— or 4½ per cent 1973?

Thoughts will now be turning to the impending State loans. Their announcements can be expected around the middle of the month, with lists opening toward the end of August. In view of the favourable terms to

the investor of the Central loans, the public will expect a perhaps higher interest coupon from the States. Though a 4 per cent loan should suffice, a 4½ per cent issue is not unlikely. The choice seems to be between a 4 per cent 1971 series, at a discount, and a longer dated loan—perhaps 1973—at 4½ per cent, at a nominal discount. Maharashtra and West Bengal may be emboldened to seek their money at par, or to set their maturity two years longer than the other States. But the success of the State loans, too can be taken for granted—whether 4 per cent or 4½ per cent. And, in either case, whatever the discount, a quick climb to par is to be anticipated. For, such is the kind of easy conditions that the money market is in process of building up.

Then would follow, we expect, the third tranche of the Centre's borrowing effort for the year. Around the end of September, Government may "create" an issue, selling the whole of it to the Reserve Bank for sale through the tap. Such a third tranche would naturally be directed principally at the banking system. The present fashion is for such issues to be re-issues of existing loans. And the state of the money market might persuade the Reserve Bank to think that a short-dated is quite unnecessary. That would be a mistake. As happened in 1959, banks have been coerced into supporting the 3½ per cent 1968; their preference would be for a five—or at the most a six-year loan. We repeat here our suggestion that banks would take kindly to, and buy considerably of, a 3.4 per cent 1966 at par. With decimals part of the economic system, we are no longer compelled to space out the interest rates in intervals of quarters. Divisions of tenths are possible, and hence our suggestion that the third tranche be an innovation: just what the banks want (for a change), instead of just what the monetary authorities think the banks want; an interest coupon in alignment with the existing structure of interest rates; and an avoidance of the instrument of discounts for making the new loan attractive. We would therefore prescribe, as the third tranche, a created issue of a 3.4 per cent 1966 for Rs 40 crores, to be sold to the Reserve Bank at the end of September, and to be made available immediately thereafter from the Reserve Bank tap.

One result of relative stagnation in industrial production has been that governmental borrowing, in the first year of the Third Plan, will have got off to a good start.

SLACK SEASON

Deposits Rise, Advances Fall

According to the Reserve Bank returns for 28 July, the slack season return of funds continues. Active Note Circulation has gone down by Rs 21.19 crores to Rs 1,990.76 crores, and there has been inflow of Rupee Coin in an amount of Rs 1.75 crores. Currency has been contracted against Rupee Securities for Rs 10 crores, and as a result the Reserve Bank's cash in the till has improved by Rs 13.10 crores to Rs 31.15 crores.

Changes in the Banking Department relate mainly to the impact of new loan subscriptions. Thus, the rise in the Centre's Deposits, fall in Reserve Balances of member banks and declines in Investments and in Treasury Bills purchased and discounted by the Reserve Bank are all to be explained in terms of the

new loan. The fall of slightly over Rs 10 crores in State Governments' balances may be attributed partly at least to payments to the Centre. One point remains, and that is the further drain in foreign balances. As shown in the return for the Banking Department, Balances Held Abroad have again moved down by Rs 3.44 crores to Rs 5.03 crores, and thus, for the first time, the Reserve Bank's holdings of Foreign Balances, in both Departments, have fallen below the Rs 100 crore mark. However, the next returns should reflect the purchase of \$250 million of currencies from the International Monetary Fund.

The slack season rather than the new loan has made its impress felt upon the return of the State Bank for 28 July. The total of Advances has shrunk by Rs 4.14 crores to Rs 250.69 crores. New loan drawings have apparently caused a fall of Rs 3.82 crores to Rs 527.49 crores in Deposits. There has been disinvestment in gilt-edged for roughly Rs 7 crores, with the intention probably that parcels of the new loan will be taken from the Reserve Bank tap in the coming weeks. Thus, cash balances are practically unchanged, though Other Assets have moved up by roughly Rs 8 crores. But the State Bank, it is certain, will be making sustained purchases of gilt-edged during the rest of the 1961 slack season.

The return of Scheduled Banks for 21 July shows that there has again been some element of switch from Demand to Time Deposits. The former head shows a drop of a little over Rs 3 crores to Rs 817.51 crores, while net Time Deposits have moved up by Rs 11.81 crores to Rs 1,123.30 crores. Besides, Advances have contracted substantially by Rs 12.22 crores to Rs 1,251.06 crores. The rise of Rs 23 crores in gilt-edged holdings is mostly (Rs 19 crores) on account of the State Bank, but other Scheduled Banks have also started to put their free resources into Government securities. There is but Rs 1.92 crores of debt owing to the Reserve Bank, and balances with the Reserve Bank have shot up by Rs 9.23 crores to Rs 100.09 crores.

BANKS

Earnings Threatened?

There is, we understand, to be a meeting of the Indian Banks Association called for next week. We are of course not aware of what the agenda is. But we are hoping that, whether the agenda includes it or not, the matter of interest rates will be taken up. The evidence about the slackness of the 1961 slack season is too powerful to be disregarded. The return of seasonal money has been consistent, and already adds up to a considerable figure, with the prospect that further contraction in bank Advances will take place during the rest of the slack season. The resumption of the up-trend in bank Deposits is also clear beyond all doubt. Hence automatically, while higher-costing liabilities are on the increase, the quantum of higher-earning assets has been going down.

One hedge available to banks is investment in gilt-edged. As it is, the last week's Treasury Bill auctions has evoked sharp response, with the rate sizably pushed down. Also, the support from Scheduled Banks for the new loan has exceeded earlier expectations. Thus despite reluctance for gilt-edged banks have more or

less been compelled to hedge against the cost of their Deposits.

We would therefore call upon the next week's meeting of the IBA to revise the terms of the inter-bank agreement on interest rates. The possibility of a standing charge on unutilised limits of overdrafts should also be explored. Unless banks in such wise seek to restrict expenditure and add to earnings, the stagnation in the economy during 1961 may well mean a not inconsiderable drop in bank profits during the current year.

The prospect of earnings, during the second half of the year, is downward. There is a limit to what the banks can put by in gilt-edged. We feel banks will inevitably have to think in terms of reducing banking interest rates, particularly on Deposits. With both gilt-edged yields and call and Treasury Bill rates on the decline, banks' self-interest demands action on such lines.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Monday, 31 July 1961. Total amount offered was Rs 3,49,00,000. Tenders at Rs 99.410 per cent and above were accepted in full and those at Rs 99.400 per cent were allotted approximately 96 per cent. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.398 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 7 August 1961. Successful tenderers should make payment on Friday, 11 August 1961. Other conditions are as usual.

During the week ended 28 July 1961 Government of India Treasury Bills for Rs 23,94,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 1 to 5 August 1961 at Rs 99.416 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 24 to 29 July 1961 amounted to Rs 1,26,00,000.

Sterling is Now Safe

By Paul Einzig

THANKS to Mr Selwyn Lloyd's measures sterling may now be considered to be reasonably safe during the rest of this year. There can be no question of its devaluation, unless of course the trade unions should respond to the measures in the wrong way. It is just conceivable that they might adopt a truculent

attitude persisting in the aggressive demands and trying to enforce them by means of major strikes. A series of such strikes might more than offset the beneficial effects of the proposed defensive measures. Fortunately, thanks to the high Bank rate and the credit squeeze, the trade unions are not likely to be in a fighting mood just now, knowing as they do that as a result of the disinflationary monetary measures their chances of a victory have considerably diminished.

The adoption of the conventional monetary devices makes some difference also from the point of view of the effect of the surcharges. I pointed out in previous articles that if surcharges should be adopted against an inflationary background they would accentuate the wage-price spiral. But if the disinflationary monetary measures, in addition to the other measures, succeed in checking the inflationary trend, then surcharges would also operate in a disinflationary sense, by mopping up consumer purchasing power.

In the circumstances it seems doubtful whether the arrangement of drawing facilities with the International Monetary Fund was really necessary. If the measures taken by Mr Lloyd are effective in checking the wage inflation there is no need for such drawing facilities. On the other hand, if these measures are ineffective the drawing facilities will not be able to save sterling in the long run. It may take some months before it becomes evident whether the trade unions are prepared to respond to the measures in the right sense. Indeed borrowing from the International Monetary Fund may even weaken the chances of a success of the scheme, because the resulting increase of the gold reserve with the aid of borrowed funds will tend to maintain that feeling of complacency brought about by the influx of hot money and the special arrangement under which Central Banks have acquired sterling balances. In face of a real danger to sterling and to the national economy the trade might respond in the right sense. But if they feel that, thanks to the drawing facilities, sterling is now absolutely safe they might be inclined to persist in their present attitude.

The Government's decision to introduce some form of limited capital gains tax next year is hailed by the Labour Party as a vindication of its policy jangling that measure. Actually Socialists have no right to criticise the Government for its delay in resorting to that measure, or for its limited scope, seeing that it was not adopted between 1945 and 1951 during which period the Socialist Chancellors of the Exchequer presented nine Budgets. The fact that it is a Tory Government with a safe majority that is adopting it confirms the impression that whichever political party is in office the policy it pursues must contain a strong element of Socialism.

Notes

TORES PURCHASE Iniform Policy

The one-day conference of representatives of Central and State Government purchasing agencies held at New Delhi last week, has recommended some important measures to make the stores purchase policy of the Government a more effective instrument in fostering the growth of indigenous industries. It has been found that though the aim of gearing purchase policy to development of indigenous industries has been accepted by the Government and being put into effect within the framework of the existing policy, there were serious defects in existing practices. It was for example pointed out by Mr B. Jopala Reddi, Union Minister for Works, Housing and Supply that purchasing agencies specified different specifications for the same type of equipment, the variations being, often, of a minor character. Clearly standardisation of equipments in such cases would contribute a great deal to economies of manufacture and lower costs.

The multiplicity of rules, procedures, and conditions of contract being presently followed by the purchase organisations at the

Centre and States and semi-Government commercial undertakings had presented great difficulties to trade and industry which are called upon to supply the goods required by Government Departments. One of the important advantages of uniformity in rules and purchase procedures is that it would facilitate a greater measure of centralisation in purchasing policy and thus stimulate development of indigenous industries. The decision taken at the conference to consolidate the requirements of the various Government Departments and to enter into long-term contracts with industry will therefore be welcomed. The problem posed by the existence of independent purchasing agencies in the realm of public sector undertakings could also be solved by the enforcement of uniformity of procedures and standard specifications. It is noteworthy that a sixteen-member committee has been set up to study the purchase practices of various Government agencies and evolve as far as possible uniform procedures, terms and conditions of contracts, keeping in view the specialised nature of purchases made by certain public sector undertakings.

An important matter raised at the conference was the need for issuing global tenders presently being issued by Indian Store Department London and the Indian Supply Mission Washington, from New Delhi. It was explained that such a step would encourage foreign manufacturers to have their own agents in India with whom it would be easier for the Government to negotiate.

TEXTILES

Complex Motives

A reversal of trend in cloth production in order to increase yardage has been decided. The gradual decline of coarse cloth output has helped to raise mill profits and in fact the best mills have long held that coarse stuff does not sell. It is largely with a view to saving on cotton imports that the idea of producing more coarse cloth has been propounded. The changes in public taste are ignored so also the probable loss in excise revenue. Whether exports will not suffer by any change ordered to provide a larger domestic market for Indian cotton is hardly examined. Of course, there is a demand in Lancashire for grey goods, but thick stuff does not

sell well abroad, and the reported cloth shortage is partly due to the rise in wages and the power cuts. The Government has missed the point that the mills do not operate to capacity just because cotton prices declined only after the decision to limit exports and the US cotton surplus appearing bigger than ever.

The Geneva conference on textile problems will have a bearing on a decision to raise coarse cloth production. Defeatism is not dormant at present and a fear of reduced exports owing to quota regulations is presumably at the base of an official decision. But it may also be due to a covert desire to let the handloom industry get a bigger share of the home market for fine fabrics. The complex motives need to be analysed only to suggest that the ostensible reason may not be the genuine one. Though savings on chemicals, dyes, and colours could be secured, the export trade in textiles may not be seriously compromised and the second largest textile industry in the world will try to live mainly on its home market. In a sense, this is a return to the pre-protection position, though one difference may be noted. Cloth and yarn imports had disappeared before the war. But the deprotected industry bears an excise higher than any imposed in the past and the consumer in India can save on tax by buying coarse goods that may be reckoned cheaper. However, the change may help rayon and more rayon goods, with a bigger output of yarn in sight, are assured of a bigger domestic market. That too may help the export trade to some extent, if designs are appropriate. In any case, rayon finds a place in the export trade and what is lost on the swings may be made up on the roundabouts.

SEEDS PROGRAMME Sterile!

The Third Plan banks heavily on the programme for the multiplication and distribution of improved seeds, for the attainment of what Mr S. K. Dey had described as a spine-breaking target of food production. The basic policy in this respect, as well as the contents of the programmes, were laid down in detail at the beginning of the First Plan. After ten years of implementation, a study by the Programme Evaluation Organisation (PEO) of the Planning Commission has highlighted serious deficiencies in the formulation, implementation and achievement of the programmes. In many regions new varieties have been introduced replacing those adopted a few years earlier, without any improvement in the total yield. On the contrary, the proportion of high-yielding varieties of paddy and wheat seems to have declined during the Second Plan. The estimates of increased yield expected from the

new varieties lack a firm basis established by controlled field trials. It has also been found that in only five per cent of the seed farms were all necessary precautions being taken for maintaining the purity of the seed, and ninety per cent of the seed farms were running at a loss. And most remarkable of all, targets have been fixed for distribution of improved seed without caring to fix corresponding targets for their production! Seed farms are not receiving in many cases adequate supplies of breeding stock in adequate quantity and in a few States not even every year.

Owing to lack of comprehensive data, which by the way provides another instance of the failure of planning, this study, like other PEO reports, is based on sample surveys. The findings mentioned above are based on field data collected from 183 villages in 61 blocks selected from 32 districts in 14 States. As for the overall achievement, nothing can be more frustrating than to find, after an elaborate review of the progress under the two Plans with statistics for the concluding years of the First and Second Plans, the following statement: "The figures for the two years as well as for the different States are not comparable, because, firstly, the sources of information are different and relate to different categories. Secondly those for 1955-56 contain a large element of error and possible guess-work". After this one is prepared for anything—even the following: "The question that arises and has often been asked is whether the individual yardsticks of production potential attributed to different programmes are additive or not." Certainly there is no harm in asking!

ENGINEERING GOODS Export Prospects

One of the new lines of Indian manufactures which has also fairly quickly found an increasingly important place in the export lists is engineering goods, especially light engineering goods. Light engineering goods like fans and sewing machines have established themselves in markets not only in the East but in some of the highly developed Western markets such as the US from India. A delegation of the Engineering Export Promotion Council visited some months ago some of the West Asian and European countries and its findings are that there is ample scope for increasing sizably our exports of engineering goods even in a highly developed country like the UK. Prospects for goods like sewing machines, CI pipes, machine tools, internal combustion engines, and auto engines are particularly good. Although the UK is a highly industrialised country, it imports quite a large number of engineering goods. A fairly large export business in Indian castings can also be built up in the UK. The delegation points out that conditions are conducive to an expansion of our exports of engineering goods in the UK because there is a considerable amount of goodwill in that country toward Indian trade and industry in every possible manner. The fact that imports from India enjoy special preference in tariff will also go a long way toward making Indian goods competitive in the UK market, though this particular advantage will disappear if Britain joins the ECM.

The delegation has also found that there is ample scope for promoting the export of Indian engineering goods in each and every country visited by it—Iran, Greece, Yugoslavia, Italy, Spain and the United Arab Republic. The last mentioned country has recently embarked upon big development projects like the building of the Aswan Dam and there is a growing demand in that country for all types of light and heavy engineering goods. India is in a position to supply a number of items and with the fund of goodwill in Egypt and other Arab countries toward India, it should not be difficult to improve the position of our engineering goods in this region.

But in order to maximise the exports of our engineering goods to West European and Asian countries, concerted action is needed. There are some handicaps like the absence of regular shipping from Indian ports to Greek ports. If we are to compete with other suppliers who are nearer to Greece, our goods must be ensured regular and quick transport. Other handicaps are the high shipping freight from Indian ports to European ports, inadequate publi-

city, absence of bilateral agreements and the absence of a provision for our manufacturers to offer long term credit to importers. This last is particularly required in Iran where the general practice amongst exporters is to give credits varying from six months to six years for almost all engineering products.

The delegation also reports that good business in a number of engineering goods can be built up even in the comparatively developed countries of Europe. The fact that these countries are within easy reach of the big manufacturing centres of Europe should not discourage us from exploring the markets in these countries because, as the Delegation has found, our products have advantages which render them competitive.

COMMERCE EDUCATION A Liberal Bias

Commerce education in the country has grown apace in the course of the past seventy or eighty years. Today there are as many as 400,000 persons either taking instructions or appearing for one type or another of commerce examinations. Over and above this, about 200,000 persons are studying in private commercial institutions, while about 100,000 students are studying in the recognised commerce institutions at the school and higher secondary level and preparing themselves for examinations recognised by Government. Commerce as a subject is taught in 35 universities with an annual intake of about 22,000 pupils for the B.Com course and about 2,000 pupils for the M.Com. course. The professional institutions have over 18,500 students appearing for their examinations.

The very fact of the rapid growth of institutions imparting commerce education and the increasing number of students seeking a degree or diploma in commerce is indicative of the growing demand for persons with commerce qualifications from industrial, trade and commercial institutions. Even so, it cannot be gainsaid that the general feeling among employers is that there would have been little difference in the position if there were no commerce education as obtaining now in the country. For while a specialised education in some commerce subject is certainly considered useful, a liberal education is deemed quite essential. It will be no exaggeration to say that employers who, for all practical purposes, are the final arbiters, think that the various courses conducted especially at the pre-university and university levels are not so designed as to produce persons who will readily fit in the various cadres in business and Commercial organisations.

In recent years some attempts have been made to assess the value of commerce education as it obtains in this country. Perhaps the Radhakrishnan Report on University Education is the first to point out that the objectives of the commerce courses in the universities are not clear. The special committee for Commerce Education whose report was recently published was appointed in 1958 by the Minister for Scientific Research and Cultural Affairs in his capacity as Chairman of the All-India Council for Technical Education. This committee comprised of 16 members and was headed by Dr V. K. R. V. Rao. Two of its terms of reference were to enquire into and report on the present position of commerce education in India in all its aspects and suggest measures for its re-organisation and improvement. The aim of instituting this enquiry was to find out how to provide sound and reasonably uniform system of commerce education suited to the needs and resources of India's developing economy.

The recommendations of the committee are based mainly on this is that the primary objective of commerce education must be the imparting of liberal education of the kind as is available to graduate in other subjects. As a matter of fact it wants the B.Com. to be less of a specialised degree. Specialisation in particular subjects should begin only in the post-graduate stage. As far as the B. Com. is concerned it should be a degree "which without losing its basic utilitarian character of commerce education, increases the commerce graduate's ability to express himself lucidly and with logic and at the same time, stimulate in him initiative, confidence and analytical ability, as also build up his character and make him aware of his social responsibilities." A B.Com. degree based on a liberal education but having a strong bias toward some knowledge of business and commerce will meet the requirements of employers who are looking for personnel capable of assuming positions of responsibility. The committee has not ignored the need for the commerce education to meet the demand for clerical and other personnel at the lower levels. This demand is best met by a proper course of commerce education at the pre-university level. The Committee has rightly set its face against introducing what may be called the commerce stream in secondary education and its recommendation is that commerce as a subject should be begun only in the 11th class. For meeting the personnel requirements in the lower levels of the government administration and business the institution of a new diploma termed the National Diploma in Commercial Practice is recommended. This is not however to be competitive with or imitative of the B.Com. examinations.

SUGAR Surfeit

While the sugar mills believe that a surplus is hard to sell now, the Food Minister is pleased that India has renewed export business. The issue now is whether a target of 3.5 million tons a year is justifiable, having regard to current experience and costs of production. The expansion of capacity and the licensing of new factories has produced pessimism which Mr Patil could not remove. Three more co-operative factories in Madras are promised. But why, it has not been asked, when the State can buy the surplus sugar available from Andhra.

The point about falling consumption of sugar should perhaps be linked with the fall in jaggery prices this year and the proportion of tax to the actual cost of sugar. Consumer resistance in such cases can develop easily, and it is patent that the huge prospective carry-over has not depressed retail prices. Flood and other factors cannot be ignored nor can one fail to see that in some areas cane supplies will be larger in the season. Rationalisation in the industry by keeping down the cost of cane or using by-products to advantage is distant, for one thing is known to all. Protection has placed the cane grower in a position to limit profit margins for manufacturers and the consumer is only an object of taxation: instead of paying import duty on Java sugar, he is forced to pay excise duty and sales tax.

The Indian tariff problem once was examined from the aspect of burdens on the consumer and the finding was unfavourable to the official policy adopted after 1932. But that does not concern the Indian sugar mills which have not yet surveyed concentration possibilities by a new look at location. The more efficient and bigger units can work well if cane cultivation in unsuitable areas is reduced steadily. The sugar industry was fostered without regard to the fact that cane is wholly a tropical crop. The continual review of costs and prices can help the consumer more than the manufacturer today. But much depends on the growth of the soft drink habit and the extension of confectionery manufacture, assured of locally made essences and cordials. The solution appears to be larger offtake at home, not casual quota for export, even as in the case of groundnut oil which cannot be sold abroad at present prices.

Calculations Gone Away

The prospect for the sugar industry has become a subject of anxious concern for the country in view of the embarrassing problem of undisposible stocks which the

Manager.

industry is facing owing to the excess production of sugar during the 1959-60 season. In his address to the 28th annual general meeting of the Indian Sugar Mills association held in New Delhi, early this week, Mr D. D. Puri, Chairman of the ISMA gave pointed expression to such concern and called for adequate measures to help the industry toward stabilised growth. Mr Puri developed his theme, which was the need for a revised policy on the part of the Government toward the sugar industry, in the light of the factors that have led to excess production of sugar during the 1959-60 season and the adverse consequences that this spelt to the sugar mill industry.

Production of sugar at 2.42 million tons during the 1959-60 season represented an increase of 500,000 tons or 26 per cent against production in the previous season. As compared with the Second Plan target of 2.25 million tons, this represented excess production of the order of 170,000 tons. The extent of excess production was further enlarged by the behaviour of consumption which has remained practically stagnant. Though the consumption target fixed in the Second Plan was 2.25 million tons, it has been found that consumption during 1959-60 amounted to only 2.05 million tons.

In the light of the difficulties experienced by the sugar industry in disposing of the production of the 1959-60 season, the signs of production that are developing for the 1960-61 season have ominous forebodings. It has been estimated that at the present rate of crushing, production of sugar during 1960-61 will shoot up to nearly 3.0 million tons. Already production is estimated to have reached a level of 2.95 million tons and a further addition of 25,000 tons is expected before the year comes to a close. The problem of the carryover of stocks that is inherent in this is of graver magnitude than that posed by the record production at the end of the Second Plan. Prospects for any help from increase in consumption can, for all practical purposes, be discounted in view of what Mr Puri has stated to be the lethargic pace of current off-take of sugar from the factories. On the basis of a consumption 2.04 million tons which is considered realistic on the basis of the current off-take, the stocks with the sugar mills out of the current season's production, at the time of the next crushing season is placed at 1.47 million tons.

While the immediate problem before the sugar industry is that of disposal of this production, the manner of its emergence and the consequences it has led to, raise some vital questions about Government planning in the sugar industry. One vital defect of such planning was the erroneous basis of calculation of sugar production capacity in the mill sector. The

fact that with an officially estimated capacity of 2.15 million tons, the sugar mills should have produced sugar of the order of 2.42 million tons lends validity to Mr Puri's argument about the erroneous basis of the Government's calculation of the production capacity in the sugar industry. What seemed to have upset the calculations of the Government was the underestimate of the duration of the crushing season for the Second Plan period. It has been pointed out by Mr Puri that while the duration of the season to form the basis of the Plan calculations was fixed at 120 days, the average duration during the last five years was 136 days. In view of the embarrassing overproduction of sugar that has been experienced, there is clear need for a reassessment of the production capacity in the sugar industry.

The difficulties now being experienced by the industry in disposing of the excess production also raise questions about the validity of fixing the Third Plan target for the sugar industry at the high level of 3.5 million tons. The stagnant nature of sugar consumption has, for one thing, rendered the assumptions behind the fixation of the Third Plan target for the sugar industry extremely dubious. The Plan target of 3.5 million tons also include a quantity of 500,000 tons for export. How far exports are feasible is also a question that has to be answered in view of the high cost of production of Indian sugar and the loss that subsidised exports would involve to the exchequer.

One thing about which there can be no disagreement of views is the need to improve the cultivation of sugarcane the yield per acre of which in India compares very adversely with yield in the foreign countries. Exports of Indian sugar cannot be sustained on a permanent level without raising the competitive strength of Indian sugar in the world market. This calls for imparting greater vigour and energy into the implementation of development schemes for sugarcane.

LABOUR

An Unusual Strike

The strike last week by the employees of the oil companies in Calcutta holds a lesson for the Labour Ministry. The proposal to transfer the provident fund of the employees from Burmah-Shell to the Regional Provident Fund Commissioner was probably well-meant but the employees' reaction was definitely adverse. That a strike could arise from a change, meant to bring Burma-Shell employees into line with others contributing to provident funds, may cause surprise but for the fact that employees consider administration by an established and disinterested employer superior to Governmental control. In a sense, the

employees' strike is a real compliment to Burmah-Shell though considerable inconvenience was caused both to the Company and its customers. The remedy that may ultimately be adopted is to exempt certain categories of provident funds now administered privately, because of the employees' own well-founded objections. The employer will probably co-operate in securing such exemption at the express wish of the employees, although employees in many industries today might prefer the security of official administration.

That employees of other oil companies decided to help the Burmah-Shell Union in making a stand against the Bengal Government's proposal may prove only that trade unionism has become stronger and solidarity happens to be the watchword. Perhaps there is also a desire to secure the same advantages available from private administration of provident funds on the part of many outside the Burmah-Shell Union at present. It is now established that in regard to certain points, the assent of employers or submission is not enough and the Labour Department must be cautious in dealing with entrenched employees who are aware that in regard to getting loans or repayment of contributions, the employers achieve standards of efficiency unknown to and perhaps unattainable by Government.

The possibility of an increase in the rate of contribution was probably kept in view by the employees who have now made sure that the transfer of funds would not take place as proposed and the responsibility of private trustees in whom the employees have confidence would be retained. Other strikes in Calcutta might appear to have less justification than that undertaken by Burma-Shell employees, because the latter could cite good reasons for the continuance of private administration. Moreover, the private trustee would be able to employ the funds to the greater advantage of the contributors, as compared with the Provident Fund Commissioner and self-interest, if no other motive, goes far to explain the employees' objections to any change.

EXPANSION

Voluntary Restraint

In his address to the Indian Chamber of Commerce at its quarterly meeting, Mr S. P. Jain, the President of the Chamber, touched on the problems of unemployment and economic concentration and of ways of tackling them. These two are problems which have evoked some amount of discussion in recent times especially in the light of the policies laid down by the Government

and therefore call for some comment.

In respect of the problem of unemployment, Mr S. P. Jain was somewhat critical of the policy indicated in the Draft Outline. It may be readily agreed that the assumptions underlying the Government's policy as laid down in the Draft Outline have been rendered untenable by the findings of the 1961 census, which has revealed an increase in total population which is 7 million more than the projected estimate of 431 million which provided the basis for the Draft Outline. With the increase in the total population revealed in the census, the estimate of new entrants into the labour force given in the Draft Outline has also gone awry. It is now estimated that against 15 million of new entrants into the labour force assumed in the Draft Outline, the actual number of new entrants will be somewhere near 18 million. In these circumstances, the employment policy outlined in the Third Plan will be found to be quite inadequate to cope with the problem of providing jobs to all the new entrants in the course of the Third Plan. It may be pointed out that the employment target in the Draft Outline is of the order of 14 million including 10.5 million in the non-agricultural sector and 3.5 million in the agricultural sector. In the light of upward revision of the figure for unemployment at the end of the Third Plan, the employment policy of the Government would also call for proper revision.

In a way, the solution of this problem will be rendered somewhat less difficult by a policy of greater decentralisation in industrial growth. Mr Jain has also referred to the need for encouraging smaller entrepreneurs, though the context for this particular idea in Mr Jain's speech was provided by the Government's recent concern over concentration of economic power. Mr Jain has suggested a scheme of voluntary self-denial by big business. It should not embark upon projects in conventional industries and smaller size undertakings in areas already developed. Restraint is also desired in the development by the big business, of ancillary industries in fields which can conveniently be developed by the large number of smaller entrepreneurs. It may be pointed out that Mr Jain's suggestion in respect of the development of ancillary industries by the smaller entrepreneurs is accepted Government policy though in actual implementation there is considerable scope for improvement. The automobile industry in which the manufacturing firms still account for a major part of the automobile components may be cited as an example. Also smaller enterprises are being actively encouraged by the Government by denying licences for setting up

for example, a trend toward small sized firms is being actively encouraged by the Government in its Third Plan schemes for the industry and a major part of the plan target for additional production is envisaged to be contributed by the smaller firms.

CEYLON

An Imposing Array of New Levies

The drastic tax measures announced by Mr Felix Dias Bandaranaike, Ceylon's Finance Minister, last week could not have come entirely as a surprise to the Ceylonese and many others outside the country, as there have been ample advance warnings of the shape of things to come. One however wonders whether the Finance Minister could not have thought up more effective and generally acceptable remedies other than those he has designed. The latest Budget has disclosed a deficit of Rs 701 million which compares with the deficit of Rs 75 million in 1960-61. A glance at Ceylon's Budgets for the past few years will show that deficit has been progressively increasing. But the anticipated deficit for 1961-62 is quite enormous by any reckoning. The main trouble is that revenue is lagging far behind expenditure. And it is a pity that the Finance Minister has not been able to think up any other way of filling the yawning gap than in imposing array of taxation without due regard to the future development of the economy.

Perhaps the most startling of the new measures is the ceiling on income. The ceiling will be so fixed as to leave a single person after all taxation with a net income of not more than approximately Rs 37,000 per annum. For persons with dependents, the ceiling would vary between Rs 40,000 and Rs 54,000. It is poor consolation that half of the excess income taken away will be returned to the taxpayer in the form of development bonds bearing a tax-free interest of about 5 per cent. All wage earning and salaried persons will now have to pay a development tax of 4 per cent. Self-employed persons will have to pay a registration tax under a graduated scale ranging from Rs 50 to Rs 350 if they are Ceylonese. Self-employed Indians will continue to pay the existing rate of Rs 1,000. The surcharge of 15 per cent on income tax enforced last year continues unchanged. There is a change in respect of the level of tax exemption. The first Rs 2 lakhs of net wealth which is now exempted from the wealth tax is to go. That is to say, any person who is liable to pay wealth tax will hereafter have to pay half per cent

on the whole of his net wealth. Besides, import and excise duties have been enhanced. Import duty has been raised on tobacco, cigarettes and liquor. Beer, motor spares and some other sundry items have to bear additional import and excise duties. A tax on agricultural income from holdings above 20 acres is proposed. A kind of sales tax payable at some point of wholesale has also been proposed by the Finance Minister. The additional revenue expected from the changes in import and excise duties and income tax is Rs 52.5 million—Rs 43 million from import and excise duties and Rs 9.5 million from income tax. Other proposals are the nationalisation of the Bank of Ceylon and the placing of restriction on Ceylonese accounts in foreign banks in the country.

The fact that Indian fiscal policy has long influenced Ceylon deserves mention, though the development loan proposal, linked now with a ceiling on incomes, is unknown even to India. The withdrawal of food subsidies from certain affluent classes is not unexpected. Ceylon is going in for an agricultural incometax because Ceylonisation of estates has resulted in a new pattern of small holdings. Planting companies are not likely to be unaffected, but the Budget of Mr Bandaranaike, with its ban on Ceylonese accounts in foreign banks, is likely to cause much discomfort to sterling companies. The nationalisation of the Bank of Ceylon is a fleabite in the eyes of most, but a direction to patronise local banks only will appear as rank discrimination for which the only excuse is an emergency arising from the fall in external assets.

Whether the Ceylon rupee will depreciate is not a problem. It is whether Indian banks can maintain branches in Ceylon while depending wholly on non-Ceylonese accounts. That the Banking Inquiry Committee in India deprecated all discrimination against British exchange banks and advised Indian banks to go in for exchange banking (in 1951, it may be added) will be only of historical interest to Ceylon which hopes, perhaps, that the profits of the Bank of Ceylon will go up sharply. The welfare State is to be paid for by the wealthy; soaking the rich (especially the non-Sinhalese) is both easy and popular. The curbs on banking spell some danger to foreign capital and disinvestment may retard the rated development desired by the Ceylon Government. The problem of satisfying national aspirations with safeguards needed for foreign investors is virtually ignored by Mr Bandaranaike, because the Ceylon Government is looking towards socialism plus neutralism and means to ignore what the future may hold. The Sinhalese majority will be pleased, because the Co-operative Wholesale Establishment will get more

business and foreign firms will lose their share of the limited market. One should add here that the development levy now offered is different from what Mr C. Loganathan suggested in his scheme for promoting capital formation in Ceylon for enlarging investment.

USSR

News from Nowhere

Both bread and circuses are offered to the people of Russia by the new Party manifesto. Of course, it is a case of jam tomorrow, because free food and other benefits will be available only by 1980 and a good deal of hard work will have to be undertaken to increase the supplies of consumer goods which are known to be both expensive and of poor quality. Even the promise of a 36-hour working week after twenty years might be regarded as the Russian version of pie in the sky. But the proposals will suggest that the whole era of socialistic construction has ended and the discrimination in income as between the New Class and the masses would be withdrawn gradually. Since Mr Khrushchev spoke of very substantial tax relief even last year, the manifesto is not so revolutionary as supposed.

Comparisons between the USA and Russia are inevitable in discussing the possibilities of co-existence. But it is also clear that expenditure on defence is not likely to go down and the Russian aircraft will probably be improved when faster planes are on the stocks. Two new types have been mentioned, namely, the Bear and the Bounder, and the names alone will probably suggest that they are not meant for peaceful purposes. Another type, the Blowlamp has also been mentioned to prove that it could fulfil the purpose of quick extinction. Russia's desire for greater security explains the desire for a bigger navy and better planes. In a way, the manifesto is an answer to Mr. Kennedy's proposals for improving and extending America's defence equipment.

For the outside world, the manifesto's emphasis on the international aspect of communism and the stimulation of the revolutionary impulse contains a clear indication of Mr Khrushchev's trying to keep in step with China in spite of all that has been said about Moscow's superiority to Peking. It is evident that Russia is not quite willing to let China assume leadership easily but if China were to reach a satisfactory compromise with Formosa by a promise of autonomy, one consequence might be that Peking would find a place in the Security Council at no distant date and the privilege of speaking for the Socialist sixth of the world would

go probably to Marshal Chen Yi. This possibility has its own implications for India at present and any settlement over Ladakh will probably be conditioned by the strength of China in relation to India's neutralism, even though modified by improvements to the country's defence. The manifesto may not be historically important like that of 1848, but it too conveys in unmistakable terms the purpose of Russia to remain strong and to let go no opportunity of fighting in the Cold War. From that point of view, the manifesto is unpromising, especially, when Berlin has assumed greater importance as an outpost of Western Europe.

US

The Defence Bill

President Kennedy's stepped-up defence programme to bolster the forces of freedom around the world and help meet the communist threat to Berlin presents another new challenge to the US economy. But it is a challenge which the experts, in and out of the government, believe the economy can take in its stride.

The fact is, as the President noted in his address to the American people last week, that the US economy has been in the midst of a strong, sound and essentially non-inflationary upturn. Thus, this new defence burdens, while not particularly welcome and certainly not needed from an economic point of view, are clearly sustainable.

Nevertheless, the government's stepped-up defence spending will have its effects on the economy. Its most obvious consequences will be a larger budget deficit for the government, higher incomes and more jobs for the people.

Of the \$3,500 million defence spending increase—a moderate enough sum, and a far cry from an all-out military build-up—some two-thirds, or about \$2,740 million, is expected to fall in the current 1962 fiscal year that began July 1. This would lift the government's total fiscal 1962 expenditures, including both defence and non-defence items, to \$87,723 million.

By their very nature, these added outlays also will help stimulate business activity, leading to increased private hiring, spending and incomes. The probable added government revenue from the anticipated income rise is figured at about \$1,000 million under existing tax rates. On this basis, federal budget receipts for fiscal 1962 would come to \$82,433 million. This would leave a budget deficit of about \$5,290 million under current administration programmes, a figure somewhat in excess of the deficit previously estimated.

Even this increased deficit falls within the moderate range; certainly, it is a long way from the \$12,400 million deficit run up in fiscal 1959, also a year of recovery

from a brief and mild recession. From this, it would appear that the government's financial position, present and contemplated, is sound enough.

Nevertheless, it can be assumed that the administration would not want that kind of a budget deficit to continue indefinitely. And this, in turn, has raised the question of whether to boost taxes sufficiently to cover the increase in spending.

The decision, as noted by the President has been not to raise taxes now. The theory, apparently, is that as time goes on the US economy may well be able to generate sufficient tax revenues at existing rates to match the higher spending.

Thus, the President has indicated that a balanced budget is in prospect for fiscal 1963. He has signified his intention, however to ask for tax increases if that course appears necessary to assure the budget balance he desires. In any case, the need to boost defence spending seems to have required

tighter budget planning than might otherwise have been the case, and to have shelved for the time being any thoughts about possible tax cuts next year.

Another big question mark is the possible inflationary consequences of the government's increased spending. The general feeling, as the President has indicated, is that inflation can be averted and price stability maintained. This is on the assumption, of course, that the international situation will not deteriorate seriously.

It is pertinent to note that the classic inflationary pressures are not evident in the United States today. Plant capacity is not strained, there is no shortage of goods, there is no pent-up consumer demand to satisfy, and business competition seems strong enough to hold down prices. These conditions are considered rather potent restraining forces as far as inflation is concerned, even though there is plenty of money

and credit in the hands of businessmen and consumers.

The thought is that it would take a senseless consumer spending spree of some proportions, abetted by attempts by business, and labour unions to push prices and wages up needlessly, to upset the basic equilibrium of the current US Economic scene. Neither of these eventualities appears likely now.

EGYPT

Socialism in Instalments

Colonel Nasser's faith in Socialism led to the closure of the Alexandria Cotton market last month. The State fixes prices and deals in cotton. The next instalment of Egyptian socialism is the takeover of banking, insurance and most big firms. The Egyptian Government can argue that the people's good can be secured only by the restraint of private capi-

talism and the Egyptian people approve of all proceedings after the nationalisation of the Suez Canal. Paying for the ten-year plan is a problem, even after assurance of foreign aid for neutral Egypt. And the means to pay can be found by limiting the income of rich Greeks and Copts.

After the land reforms that put the Turkish aristocracy out of the picture, it was easy for Nasser to declare that the ideals of Tito, neutralism and Socialism, suit Egypt also and the banks in Alexandria or Cairo should loyally help the State by submitting to semi-nationalisation. The nationalised Central Bank cannot object and Egypt can stop the leakage of gold to Beirut by a simple decree bringing banking like the cotton trade under strict supervision. The British or French cannot say anything, because of the Suez Canal affair and Col. Nasser can argue that many measures are needed to integrate Syria fully with Egypt, called the Southern region in official parlance. The rise of modern industry including tyres and rayon demands more money and the Minister for Economy has argued that public control is desired because economic democracy is vital. Public outlay on a large scale is held necessary because Syria is backward and the Government now means to tax the rich heavily in order to get money for the people's welfare. Respectable, if not convincing, arguments have been adduced. But Socialism in Egypt is likely to cause ferment in Arabia and the 20th century revolutions can cross frontiers easily. There is a curious parallel with Israel, a strongly socialist country and Col. Nasser may be annoyed that Israel has tried out already all his schemes from irrigation to State trading. The regulation of urban banking may cheapen credit for the Egyptian cultivator who, from the time of the Pharaohs, has toiled and never asked questions.

PERSONAL

Sir C. V. Raman, has been nominated for election to the Pontifical Academy of Sciences.

Mr Amitava Chowdhury, Assistant Editor of the Calcutta Bengali daily JUGANTAR has been named recipient of the 10,000 dollar Magsaysay Award for Journalism and Literature.

Mr G. K. Singhanla has been elected Chairman of the Committee of the Federation of Woolle Manufacturers of India. Mr V. Calloway has been elected vice chairman of the Federation.

Dr S. Chandrasekhar, Director of Indian Institute for Population Studies, Madras, has been invited to be the president of the Demographic Section of the tenth Pacific Science Congress to be held in Honolulu this month.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

THE nation has received with profound relief the news of the President's complete recovery from his recent illness. Dr Rajendra Prasad has, despite strenuous effort to involve him in constitutional controversies, given the office of the President its tone and vested it with just the right degree of mystique and practical effectiveness. In a young republic, this is the most important service that can be rendered. One has only to compare him with President Kasavubu, a by no means unusual example of an adorning of high office, to take a measure of our good fortune. Good governance, even when hamstrung (or well-defined, if you so prefer it,) by a written Constitution, is largely determined by the development of the right conventions, for politics is as much an affair of manners as of morals and the rules of the game (largely unwritten and probably continually evolving within a recognisable code) are very important. A written Constitution is easily torn: nor is, as Queen Victoria demonstrated, an unwritten one an obstacle to real and beneficent use of power by an admittedly nominal head of State. We shall never know the hundred occasions when Dr Prasad exerted his influence effectively, though unsubstantiated stories of his alleged feeling of ineffectiveness on some occasions got aired quickly enough. It owes much to the President's and the Prime Minister's sense of proportion and propriety that these ripples were allowed to spend themselves in inconclusiveness. Though the President has declared his intention of retiring from office at the end of the present term and devote himself to his first love of Sarvodayan experiments, his benign influence can never cease to be of use to those in the power game. Let us hope it will be available for many years to come.

It is remarkable how the eighties have been the seed-time of greatness in India in general and in Bengal in particular. Rabindranath, Motilal, Vivekananda, Malaviya, Ashutosh, Gokhale, Sastri and Gandhiji (in chronological order) were all born within a maximum of ten years of one another. Surely this constitutes an expense of the plan vital of staggering proportions for a decade and only the famed inexhaustibility of the Life Force makes us reconcile ourselves to

such improvidence. Not only the quantum but the versatility of the greatness sown during this decade is astonishing. Acharya Prafulla Chandra Ray whose birth centenary this week offers an occasion for piety and gratulation, was a scientist by profession and possibly by vocation, though he laid both aside for the more urgent calls of patriotism and distress. "Research can wait, Industries can wait, but Swaraj cannot wait" is a dictum that is arguable but not to Acharya Ray. But, for a man who kept science and industry waiting in the ante-room, his achievement in both spheres are truly remarkable. He chose to express himself through his students and his institutions, rather than by his own work. The Chemistry Department of the University College of Science was his home literally and figuratively and he was bachelor-father to many who were great scientists in their own right. But as a student, he readily put away his researches in Edinburgh for competing for a prize essay on "India—before and after the Mutiny", in which he was adjudged as having "indulged in many bitter diatribes against the British Rule." Equally characteristically, he plunged into flood relief work in North Bengal in 1922, and floods are very much on our minds at the moment. This won him a remarkable tribute from the Manchester Guardian:

"Hundreds of young men volunteered to go down and carry out the distribution of relief, . . . a task that involved a considerable amount of hard work and bodily discomfort in a malarious country. The enthusiasm of the response to Sir P. C. Ray's appeal was partly due to the Bengal's natural desire to score off the foreign government, partly due to genuine sympathy with the sufferers, but very largely due to Sir P. C. Ray's remarkable personality and position. He is a real organiser and a real teacher. I heard a European say: 'If Mr Gandhi had been able to create two more Sir P. C. Rays he would have succeeded in getting Swaraj within this year. . . .'" But, if the choice had been open to him, Acharya Ray would have been content to be a teacher and organiser of scientific endeavour. When as a young man with a D.Sc. from Edinburgh he went asking for a teaching job in the education department, some pompous jackass taunted him saying "If you are

such a brilliant chemist why don't you start some industries?" Acharya Ray took him at his word and did start the Bengal Chemical. We, who have come a hundred years after Acharya Ray, have a greater sense of urgency about an indigenous chemical industry and technology than his own contemporaries did and perhaps a more favourable climate of opinion. It is entirely fitting therefore that the Government of India should have offered to contribute rupees one lakh for the founding of a Chair on Industrial Chemistry at the Calcutta University in his memory.

There was a certain inevitability about Mr B. K. Nehru being named as Mr M. C. Chagla's successor at Washington. Mr Nehru's antecedents have been economic rather than political and his choice as our envoy in Washington reflects to some extent the change in emphasis in the relationship between the two countries. As Commissioner-General of Economic Affairs, Mr Nehru is no stranger in Washington, where he has spent some most useful time in shaping the Foreign Aid policy of the US. I think India can take legitimate pride in having supplied, over a period of years, the basic formulations of a world-wide policy of development aid. And in this task, the role played by the persuasiveness of Mr Nehru has been significant. In personal discussion, in speeches at the special agencies of the UN, in interviews and other public occasions, Mr Nehru has been quietly transforming the rigidities of a policy of reluctant and suspicious aid. The clearly articulated desiderata of a rational Aid policy that Mr Kennedy presented to the US Congress early this year are the culmination of the patient work of Mr B. K. Nehru spread over several years. The orderly flow of aid for the Third Plan is of crucial importance for its success and the chief initiative in this has been taken by the United States. As our ambassador to the US, Mr Nehru will be able to co-ordinate our efforts at obtaining aid from friendly countries. Mr Nehru's efforts will also be directed at interesting foreign private capital into a readier flow into India where, so far, its role has been not as spectacular as it could have been.

Mr Bijayananda Patnaik is certainly buckling down to it. He has got on to an idea that this journal has been pegging away at for years now—the tremendous possibilities of iron ore export. Characteristically, he has chosen to make it a "purely Orissa project as far as execution is concerned" and is not going to ask

for financial assistance from the Centre. At the moment of writing, details are scanty, but the broad outlines are known. The capital outlay is estimated at Rs. 41 crores and Paradip port is to be used for export of ore. Rs. 28 crores are to be spent on the road from the mines to the port and on development and mechanisation of mines and Mr Patnaik expects to get exports of the order of 2 million tons going by about 1964-65. This is to go up to nearly five million tons by 1967-68. A series of blast furnaces for producing and exporting pig iron are also part of the plan. The raising of the capital needed has, as I have already noted, been taken on by the State itself, which expects to interest foreigners in tie-up arrangements against future exports. The example of Kiruburu in which Japanese collaboration has been obtained for keeping the Japanese steel mills fed with ore is already there. The Orissan, especially, Sukinda, ore is well known for its high iron content and it is not difficult to obtain foreign collaboration on acceptable terms. The fact that the projects are outside the Plan would certainly offer some difficulties in the matter of arranging the resources, especially of the foreign exchange component thereof. But Mr Patnaik's scheme is one designed to earn foreign exchange of significant proportions—his expectations are modestly put at Rs. 20 crores annually by about 1970-71—and it is therefore something for which acceptance should be readily forthcoming. Indeed, press reports speak of official blessing from the Centre for the scheme. As one who believes that a well-thought-out scheme of ore export may be the most important answer to our problem of foreign exchange shortage, I welcome Mr Patnaik's initiative.

Rains have at long last caught up with Calcutta and once again water-logging and flooded roads are in circulation as useful coins of small talk. Inhabitants of other cities work themselves up into civic fury for lesser misfortunes, but Calcutta takes its calamities with philosophical resignation. Mr Galbraith who bestowed on it the compliment of adopting it as his home city the other day, would perhaps be inclined to regret his impetuosity if he saw Tollygunge Bridge this P.M. But then, the monsoon clouds are wonderful to watch and theurchins that play with abandon in the rain-water and the Rickshaw pullers that gather a few extra rupees reconcile you to your temporary inconvenience. And the thought that the same rains are probably an answer to a peasant's prayer, our pitiful whinnings die, so to speak, in their track. And for the opportunity, after many years, of cycling in the rain they gave me, I will be grateful.

EAVERSDROPPER

MORE PIPES to meet the nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

Priorities and Foreign Exchange

THE finalisation of the report on the Plan has taken much longer time than expected. The problem of deciding the order of priorities among the projects eligible for inclusion in the Plan is understood to have been responsible for a good part of the delay.

Priorities for the projects are intimately bound up with the pattern of foreign assistance. Though the Plan has been framed on the assurance that the foreign exchange required over the five years will be forthcoming, the picture still remains hazy. Its main features were indicated by a Finance Ministry spokesman last week.

A ceiling of \$5,500 million has been set for the external assistance that India will seek for the Third Plan. Out of this amount \$800 million represent the carry-over of aid committed during the Second Plan; \$300 million, the expected level of private foreign investment; and \$800 million, the amount of aid from the Soviet bloc that is likely to be utilised during the Third Plan period. The balance of \$3800 million has to be secured from other Governmental sources. This is the basis on which Government of India has presented its case before the World Bank Consortium.

While there is an assurance in broad terms that the balance of the requirements, after deducting the assistance obtained elsewhere, will be made available through the Consortium, the amount so far promised for the first two years of the Plan is \$2225 million. For the orderly implementation of Plan projects, it will be necessary to place orders involving a commitment of \$3285 million during 1961 to 1963. There is thus a shortfall of over \$1000 million in respect of the commitments that have to be undertaken during the first two years (the actual disbursements during this period may not amount to so much) and this introduces an element of uncertainty. But the Government does not propose for this reason to delay the placing of orders, though this will mean a change in the normal procedure followed in the past, when orders were placed for equipment for a project only after being assured of the entire foreign exchange required for it.

Government will go ahead with the execution of the Plan projects in the expectation that further

assistance to meet the balance of the commitments will be forthcoming before payments fall due in subsequent years. In this context it may also be noted that only the foreign exchange requirements of the first year of the Plan are covered in full by firm offers of assistance. Moreover the figure of US assistance indicated for the second year is conditional on matching assistance from other sources. As at present, there is a shortage of \$70 million in the assistance promised by other members of the Consortium. The Consortium will be meeting later in the year to review the position, when some other countries are also expected to join.

As regards the terms of the loans, the bulk of the loans have yet to be negotiated. A clear idea of the pattern of US assistance will emerge only after the US Congress has approved the foreign aid legislation. Only then will it be possible to say how much of US aid will be allocated to the DLF and how much EXIMP Bank. This is an important point, for the usual rate of interest on EXIMP loans is 5½ per cent and the periods are related to the particular projects. On the other hand, the DLF provides soft money. There is, however, a broad indication that the larger part of US loans will be routed through the DLF. Though these loans will be repayable in dollars, the repayment will be spread over a period of 50 years and the rate of interest (service charges) will be a nominal one per cent.

The question of terms is of vital importance for the future of democratic planning. It has been calculated that the burden of servicing such loans will be too heavy for developing economies, unless the repayment is spread over long periods, of say fifty years, and the rate of interest is nominal or nil. So far only the US Administration has appreciated this point. Government of India has met with only limited success in persuading the Governments of other donor countries to view the question from the standpoint of receiving country.

The UK loans for total \$250 million are for 25 years, repayment starting after seven years. Interest is charged at a quarter per cent over the rate at which the British Treasury is able to borrow funds for comparable periods. One West German loan of \$82½ million is for 20 years at 3 per cent interest, and two others are for 12 years and twenty years at 5½ per cent. The remainder of the West

German contribution of \$364 million is still to be negotiated. Loans from Japan totalling \$80 million (of which \$40 million is earmarked for the private sector) will be for 15 years and the rate of interest will be the same as that charged by the World Bank. The loan of \$30 million from France will be for the still shorter period of ten years. The rate of interest has yet to be negotiated. Out of the Canadian aid of \$56 million, \$36 million will be grants under the Colombo Plan. The terms for the balance, which will be mainly in the form of export credits, remain to be negotiated.

One indirect consequence of the informal understanding with the World Bank Consortium regarding the total quantum of aid for the Third Plan needs special mention. On the basis of estimates of total requirements and expectations of aid from other sources, the indication has been given that the balance required to meet the disbursements during the Plan period, namely \$3800 million, would be made available by the Consortium during the five year period. This means that, if additional aid is received from the Soviet bloc, or from Governments of countries which are not at present members of the Consortium, the amount provided by the latter will be reduced to that extent. If the additional aid, from whatever source, is for a project which is not included in the Plan, this may lead to a radical change in the order of Plan priorities. This restriction, it has been made clear, only applies to aid on Government to Government basis. If India is able to attract more private foreign investment, or is able to increase export earnings, the total quantum of Consortium aid will not be affected.

For instance, up to the time of writing, the question of including the Small Car project in the Plan is undecided. Simultaneously negotiations are also under way with representatives of Renault for technical and financial assistance. It appears that if Renault (a State-owned enterprise) provide the funds out of their own internal resources, the aid from the Consortium will not be reduced. But, on the other hand, if Renault provide the funds by borrowing from the French Government, the amount will be added to the \$30 offered by the Government of France and set off against the total Consortium aid for the Third Plan. Similar is the case of oil refineries other than those listed in the Plan. If these are set up with governmental assistance, either from communist countries or non-communist countries, it will be at the cost of Consortium assistance for other projects included in the Plan. This underlines the supreme importance of export promotion for the orderly implementation of the Plan without upsetting the order of priorities, a point which has been driven

home by the recent re-shuffle of portfolios in the Ministry of Commerce and Industry.

A stiff legislative programme lies ahead of the monsoon session of Parliament opening next Monday. Apart from amendment of the Indian Penal Code which seeks to list attempts to make disturbance of communal harmony or promotion of enmity between classes as specific offences, the Deposit Insurance Corporation Bill (to insure bank deposits), a Bill to regulate apprenticeship training in Industry and an amendment of the Indian Railways Act (to raise the maximum amount of compensation payable to victims of passenger train accidents from Rs 10,000 to Rs 20,000) are among the 16 new Bills that will be introduced during the ensuing session. The main subject of discussion will however be the Third Five Year Plan which will be presented to Parliament in the ensuing session.

The problem of effective implementation of the Third Plan schemes for promotion of tourism is the main topic on the agenda of the Tourist Development Council meeting in Chandigarh on August 4 and 5. The large number of agencies responsible for carrying out of the schemes of different types, has been responsible for the slow pace of implementation. There is clear need for setting up a co-ordinating authority in each State if the Third Plan provision for tourism is to be fully utilised within the Plan period.

The State Plans, which are largely intended for home tourists, aggregate to Rs 3.98 crores while the allocation for expenditure by the Centre stands at Rs 3.5 crores. The adequacy of the provision has to be judged against the fact that the much smaller provision in the Second Plan has not been fully utilised.

The ECAFE Seminar on Tourism, which met in New Delhi last May, has focussed attention on the vital aspects of tourist promotion; and many speakers also referred to the contribution that tourism could make to the growth of the national economy. Progress in this field is intimately bound up with the provision of adequate transport and residential accommodation. The problem of hotel accommodation in India has become very acute in recent years. While the tourist traffic has increased five-fold in the last decade, hotel accommodation has increased by barely 30 per cent. It is estimated that the present hotel accommodation of 7500 rooms will have to be increased by 50 per cent immediately, and doubled in the next five years, in order to deal with the expected growth in traffic. The main hurdle appears to be finance. So long as the hotel industry is not able to attract private investment, the targets for hotel accommodation will be reached only if hoteliers are considered eligible for loans by State lending agencies

5 August 1961

The Bengal Paper Mill Company Limited

Increase in Production and Gross Profit

Expansion and Modernisation being Implemented

Shri N. D. Bangur, the Chairman, on Price Policy

Presiding at the One hundred and thirtyseventh Annual General Meeting of the shareholders of the Bengal Paper Mill Co. Ltd., held at the Registered office in Calcutta, Shri N. D. Bangur, the Chairman, said:

I have great pleasure to welcome you to this Annual General Meeting of the shareholders of The Bengal Paper Mill Co., Ltd.

The Directors' Report, the Balance Sheet and the audited Accounts for the year ended December 31, 1960 have been in your hands and with your permission, I take the same as read.

During the year, the gross profit of your Company is Rs 50,83,093 against Rs 49,05,060 for the previous year and production also increased from 15,927 tons in 1959 to 18,105 tons during the year 1960, thus the progress of the working of your Mill can be considered quite satisfactory.

PRICE POLICY & COST OF PRODUCTION

I would like to emphasize the urgent need for the Government to review the present price structure which is followed on the recommendations of the Tariff Commission. The Tariff Commission decided that 12% would constitute a fair return on the industry's capital and stated that this return would be sufficient to cover the following items:—

- (1) Labour Bonus.
- (2) Interest on Debentures and Loans.
- (3) Managing Agents' or Secretaries and Treasurers' Remuneration.
- (4) Directors' Remuneration.
- (5) Taxation.
- (6) Reserves, including Development Rebate Reserve.
- (7) Interest on Working Capital.

After meeting the above liabilities, the surplus left with the Company will be hardly sufficient to make a reasonable return to the shareholders, and in my opinion the return of 12% allowed by the Tariff Commission is quite inadequate particularly when the new Preference Shares are being issued at 9% interest and the general tendency of the rate of interest being on the increase in the country. If the industry is to be kept in a position to meet all its liability and also provide for large scale expansion, modernization and rehabilitation involving either of ploughing back of retained profits or by attracting new capital, an allowance of a fair return to it is

not only desirable from the economic point of view but also essential for the industry's very survival.

The price of manufactured goods of those industries are regulated which are of basic importance to the national economy and it does not seem logical how the development of these industries could be promoted by the enforcement of such uneconomic prices on these industries which do not allow them to have necessary saving for their Modernization and Expansion. This matter of ensuring adequate and reasonable return to the basic industries, whose prices are controlled and regulated in the national interest, should be revised in a manner conducive to the proper growth and development of these industries.

There has been considerable increase in the cost of production due to fresh levies of excise on chemicals, viz, Soda Caustic, and Soda Ash, increase in the Railway freight, increase in the prices of raw materials and stores and a further increase in the cost of coal by way of fresh levy. Whereas the paper price has not been allowed to be increased correspondingly and the paper industry has to absorb these increases with adverse effect on its economy. It is suggested that the Government should evolve some formula whereby an increase in the cost of production due to reasons beyond the industry's control is allowed to the industry to be added to its selling prices. I may also mention that the cases of old mills whose cost of production is higher due to old and worn out machines have not been given due consideration by the Tariff Commission. Due to old and worn out machines your Mill is adversely affected. The profit level has, however, been maintained by increase in production and renovation of the machines.

A memorandum to the Government of India has already been submitted by the Paper Industry for upward revision of the price of paper. I hope the Government will give due consideration to the Industry's difficulties in deciding the new selling prices.

RAW MATERIALS

The year 1960 had been a difficult one as far as supplies of raw materials and their transportation was concerned. The widespread incidence of Bamboo flowering all over India has already affected

Bamboo supply position. The supplies of Sabai Grass were also not upto expectation and due to various development work going on in the country, the cost of exploitation also increased. Inadequate Rail transport facility resulted in depletion of Raw materials stocks at your Mills and it is hoped that the Railway will improve the wagon supply position to help the Paper Industry to attain increase in production.

Because of shortage of Bamboo and Sabai Grass, bagasse is becoming exceedingly important as a raw material for paper making. I am glad to say that your Company has successfully used bagasse in large quantity during the year and I trust the Government will make alternative fuel available to the sugar industry to enable them to release more bagasse to the Paper Industry.

SALES

I would like to point out that the increase in the levy of excise duty on certain varieties of paper is excessive. The incidence of excise duty on cheap varieties of packing and wrapping paper works out to about 32 to 35% of the prices of paper. In order to improve the general pattern of packing in the country, wrapping paper has been extensively used as raw materials by the various other industries and there should not be such a heavy excise duty on the low-graded varieties of paper.

You will be glad to know that the quality of various types of paper manufactured by your Company has been enjoying good response from the market. Your Company also undertook manufacture of special quality paper of different varieties and these special varieties too have been found quite popular with the consumers. It is the constant endeavour of your Company to maintain the high standard of quality of its products and further improvement will take place when the Multi-stage Bleaching Plant will be installed under the Expansion and Modernization Scheme.

EXPANSION

I have pleasure to inform you that satisfactory progress is being made in the implementation of Expansion and Modernization Scheme of the Mill. During the year Brown Stock Washing Plant was put into commission and in the current year a Recausticizing

Plant, Water Clarification Plant and other machines also started functioning. These new additions which have been installed at a cost of Rs 36 lakhs approximately have resulted in reducing washing losses and substantially improved Caustic Recovery.

Order for the sixth paper machine has already been placed with Messrs. Walmsleys (Bury) Ltd., of England, shipment of which is expected to begin from the second half of 1962. Orders for Multi-stage Bleaching Plant and other equipment from the U.S.A. will be finalized on receipt of approval of the D.L.F. Loan.

The Third Plan sets the industry targets of 900,000 tons and 700,000 tons for capacity and production respectively, or exactly double the targets in the Second Plan. The rate of industrial development, the growth of literacy and proposed implementation of free and compulsory education is expected to absorb the increased production.

FRESH ISSUE

I am glad to inform you that your Company has decided to issue bonus shares for Rs 9 lakhs in the ratio of 1 to 5 based on the existing equity paid up capital subject to the sanction of the Controller of Capital Issue. In due course the share of Rs 25 paid up of your Company will be subdivided into Rs 10 paid up share. To finance the expansion and modernization of the Plant additional capital will have to be arranged and further capital in the form of right shares and Convertible Loan Stock will be issued.

Messrs. Balmor Lawrie & Co., Ltd., resigned the office of Secretaries and Treasurers with effect from April 28, 1960 and I wish to place on record the valuable services rendered by them to the Company.

Our Mill Manager Dr. J. C. Aggarwala has been selected leader of the National Productivity Team on Pulp and Paper and the team is now on a foreign tour to study the development of Pulp and Paper Industry in the other countries.

The relation with the Staff and Workers remained cordial and I would like to express our appreciation of the services rendered to the Company by all of them.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Indian Sugar Mills Association

Record Sugar Production and Stocks

Sugar Industry Faces Serious Problems of Storage and Finance

President, Shri D. D. Puri's Review

In his Presidential address at the 28th Annual General Meeting of the Indian Sugar Mills Association, held at New Delhi on the 31st July, 1961, Shri D. D. Puri, President of the Association said:—

RECORD PRODUCTION AND CRISIS OF SURPLUS

On the sugar front, we are meeting under the shadow of deep crisis. Every day that passes deepens the shadow. We have moved far ahead of the times when scarcity of sugar was the order of the day. With the shift of emphasis in the Government policy from mere regulatory and distributive measures to maximising production, adopted last year, we have not only turned the corner so far as the availability of supplies is concerned, but paradoxically enough, are now in the midst of what I have called a crisis of surplus.

In the current season production has almost reached the figure of 30 lakh tons. Here is the Third Plan target in the bag, five years ahead of schedule.

STATIC CONSUMPTION TREND

The consumption of sugar on the other hand has not shown the corresponding increase. In fact, contrary to the Plan premises, there was a slight fall last year. As against 20.66 lakh tons in 1954-59, consumption last year was only 20.24 lakh tons showing a decrease of more than 40,000 tons from the previous year. It was expected that this year with increased production and better availability, consumption would pick up. But these expectations have not materialised and the current rate of off-take is practically the same as last year. By the end of June, two-thirds of the current sugar season being over the off-take from factories for internal consumption has been 13.31 lakh tons against 13.28 lakh tons for the corresponding period last year.

HUGE STOCKS CREATE PROBLEMS OF STORAGE AND FINANCE

Increased production accompanied by lower consumption last year left the industry with a large carry over stock of 8.5 lakh tons on November 1st last; against only 1.55 lakh tons a year earlier. Production this year has reached 29.5 lakh tons and with further addi-

tion of about 25,000 tons before the year comes to a close, it will have reached about 29.75 lakh tons. After accounting for the off-take during the remaining part of the year, I do not expect consumption this year to exceed 20.5 lakh tons. This will leave the industry with an unmanageable stock of 14.75 lakh tons (less the quantity exported) at the time when the next crushing operations start.

Unless some satisfactory arrangement is made to solve this problem, the future prospects are indeed bleak. Obviously, at the moment export is the only solution. Exports are possible only at a heavy loss because the World Free Market prices are much below our cost of production. Exports can, therefore, be effected only if adequate compensation for the loss involved is provided, and without exports I shudder to imagine the consequences.

We are thankful to Government for having appreciated this position, as a consequence of which the Food Minister announced in the Lok Sabha in April last that the losses involved in further exports would not be borne by the industry. On our part, we have agreed to share a part of the loss on exports to the U.S.A. Earlier, we had to meet the total loss on the first one lakh tons already sold for exports. Besides in response to Governments appeal, the industry agreed to implement the Wage Board Award even though both the export loss and increase in wages were not provided for in the controlled price of sugar.

POSITION REGARDING EXPORTS

The actual exports that we have so far been able to contract for do not, however, give much cause for comfort. We have so far exported one lakh tons to Malaya and West Asian countries. On present indications, it may be possible to export another half a lakh tons this year, besides the U.S. Quota of about 2 lakh tons, bringing the total to about 3.5 lakh tons at the outside. This will hardly touch the fringe of the problem. After providing for a carry over of 8 lakh tons, there will still be an exportable surplus of 6.5 lakh tons. This is a burden too big to be carried by the industry and is beyond its maximum financial and storage resources.

Unless a sizeable portion of it finds an outlet and quickly, the survival of the industry will be in serious jeopardy. The position is getting so serious that the industry may be forced to curtail production in the next season. The next crushing season is due to start in another three months. According to the reports now available, the sowings are even better than last year's, and, if the present favourable trend continues till harvest time, we will have a bumper cane crop to take care of. And, unless a sizeable quantity of the surplus stocks is taken off from the factories through further exports etc., it may not be possible for them to be ready to start crushing in time. Such a development will cause grievous loss to the industry as well as to millions of cane growers who have been increasing acreage under cane in the belief that there will be a readily available market for their produce. It will also deal a blow to the developing economy of the country.

LOW PER CAPITA CONSUMPTION

But while exports might help in reducing excessive stocks, as a long term solution something has to be done so that the consumption rate internally moves up. It is a well-known fact that our per capita consumption is among the lowest in the World. Against 48.6 kilos in the U.K. and 43.4 kilos in the U.S.A., our per capita consumption here does not exceed 13.9 kilos. This is far short of the level achieved in other countries and is also much less than the minimum of 20.5 kilos considered necessary for a well-balanced nutritive diet for an adult person in this country. There is, therefore, considerable scope for improving the present low rate of consumption here.

While consumption did increase, though not to the estimated extent, till 1957-58, a contrary trend developed in the last two years to which I have already referred. This is due to the increase in the price of sugar occasioned by increase in the cost of cane and high taxation. That does not mean that the Indian consumer pays a higher price than is the position elsewhere. As a matter of fact the price of sugar in India is lower than in many leading sugar producing countries. The Indian prices are also lower than in most of the

neighbouring countries like Pakistan, Ceylon, U.A.R., Cambodia, Japan, Iran and Thailand. But the fact remains that the present prices have checked the rise in consumption and a time has come when it has become necessary to reduce taxation substantially to increase consumption. I venture to suggest that if properly handled, a substantial reduction in Excise duty would not result in loss of revenue to the extent as may appear at first sight. In a great measure it would be off-set by increase in internal consumption. I commend this suggestion for the immediate consideration of Government. Besides, there exist some irksome procedures and practices which tend to discourage consumption and create pockets of artificial scarcity in the country. The removal of these is already overdue. States are raising sizeable revenues from sugar distribution. I would respectfully submit that the time for this is also over and this practice should be stopped forthwith. Another matter demanding attention is the transport bottleneck. I urge greater attention to these problems. These matters if attended to, will improve consumption. But this will solve only a part of the problem.

INDUSTRY NEEDS CONDITIONS OF STABILITY

Another factor of major importance to the industry is stability. Prices of sugar must never be allowed to fluctuate violently, for many reasons. The most notable is that cane prices must inevitably move up and down with prices of sugar, for cane is the predominant content of the sugar price. Violent fluctuations in cane price and their effect on our rural economy are extremely undesirable. We must never forget that the cane grower has to plan his crop far ahead of its delivery to the factory. Once planted, cane yield more than one crop. So the grower, once he switches over to cane cultivation is committed to it for a number of years. Any violent fluctuation in the cane price would seriously disturb his economy. Variation in cane price should be carefully planned and announced very much in advance. Another reason for steering clear of violent fluctuations is that the industry at present is carrying heavy stocks. If prices vary by Re 1/- per maund, it would mean a difference of about Rs 8 crore

on the present stocks alone. This may wipe out of existence many marginal factories especially those placed in geographically weak areas.

BACKWARD STATE OF CANE CULTIVATION

With regard to cane price, this constitutes the highest single item of cost to the production of sugar. Much of its high incidence could be reduced if the present backward state of cane cultivation could be improved. Our average yield of 1.4 tons of sugar per acre makes a poor comparison with the yield of 5 to 8 tons of Hawaii, Java and Formosa. In fact, the yield in North India is about the lowest in the World, and yet covers the largest area in the country and, viewing it from the human angle, involves the largest number of canegrowers. The low yields in the North can be rectified if cane development is undertaken on the requisite scale. We have urged repeatedly that the cane cess realised by the States should be spent entirely on cane development. We have been harping on this theme in season and out. We must state once again in clear and unequivocal terms that if cane development is not undertaken seriously and with all resources at our command the industry in the North will go down and with it the millions of cane growers who derive their sustenance from sugarcane.

REASSESSMENT OF CAPACITY NECESSARY

Along with efforts to raise internal consumption we must try to adjust our production in future to our needs so as to avoid repetition of the critical situation that the industry is presently facing. This would underline the need for reassessing the present capacity and the targets for the future. The potential of sugar production in the World today is much greater than its consumption and a vast majority of the exporting countries, and even some of the importers, have regulated and curtailed sugar production. The largest importer of sugar, the U.S., had till recently, statutory restrictions on beet and cane acreages. As a matter of fact practically every importing country plans for self-sufficiency in sugar.

The Second Five-Year Plan estimated our consumption for the current year at 22.50 lakh tons whereas, as I have already pointed out, it would hardly reach a level of 20.5 lakh tons. Statistics for the last three years show that our consumption is static. We are now in the first year of the Third Plan, the draft outline of which mentioned a production target of 30 lakh tons. Subsequently, however, Government spokesmen stated that the target was being raised to 25 lakh tons. It came to us as a rude shock, as there have been no developments in respect of internal consumption which could justify a higher target. On the contrary, the trend of con-

sumption would call for a lower target. This trend indicates that even 28 lakh tons consumption will not be achieved by the end of the Third Plan period. It will be sound policy to let the consumption develop before expanding capacity, because capacity when once installed has to be kept going. We have enough stocks and are likely to have them over the next 5 years, to afford a safe cushion for a sudden spurt in consumption. Furthermore, capacity for manufacture of sugar machinery exists within the country. We could instal additional capacity without undue delay or difficulty. There is therefore no need to instal capacity in a rush.

NEED FOR REHABILITATION ALLOWANCE

In response to the request of the industry, Government made a reference of the price question to the Tariff Commission. The Tariff Commission determined regional cost schedules which were very rigid and based on the performance of sampled factories which were above average in all the regions. On top of that the return allowed by the Commission provided, only, in the words of the Commission, "sufficient funds for each unit to meet its commitments under bonus, gratuity, interest on borrowed capital and debentures, dividend on preference shares, managing agents' commission and income-tax and finally leave a residue to a large majority of units in all the regions to declare reasonable dividends". From this it is apparent that no margin was left to cover rehabilitation or to provide for reserves.

I would confine my observations here only to rehabilitation. Rehabilitation is meant to cover the difference between depreciation which is allowed as an item of cost on the original historical costs of assets and the depreciation on the present day replacement costs. After all, depreciation is allowed to enable replacement of assets on expiry of their useful life. The replacement costs have gone up many times and depreciation allowed is quite insufficient to replace useless assets. The difference between depreciation allowed and depreciation on present day costs is a legitimate item of cost and should be recognised as such in determining the price of sugar.

Rehabilitation was disallowed by the Tariff Commission on three short grounds.

- (a) The industry had employed all available funds in expanding capacity to earn more profits.
- (b) It was socially unjust for the consumer to be burdened with rehabilitation.
- (c) Rehabilitation cost could be met by borrowings.

It was, however, not realised that reduction in costs achieved by expansion had been neutralised by

the Commission working out the schedules with reference to actual costs in 1957-58 which included the economy affected on account of expansion. And then the benefit of reduced costs on utilisation of available funds on expansion went to the consumer alone and it would have been quite in keeping with considerations of social justice, if the consumer paid for the benefit enjoyed at the cost of industry. Thirdly, if rehabilitation had to be met by borrowings, some margin should have been allowed for servicing these loans and for their repayment. I may clarify here that interest on borrowed capital and debentures allowed by the Commission does not include any additional amount to cover interest on proposed borrowings for rehabilitation.

As stated earlier, the Tariff Commission determined cost schedules on the basis of the reference data for 1957-58. Since then there have been major increases in costs which have to be provided for while fixing fair price for sugar. Ours is essentially a controlled industry and a fair price for sugar whether statutory or notional has to be determined by Government. There is thus no escape from determination of cost of production and variations therein every now and again. Because of frequent fluctuations in costs it would not be practical to entrust this determination to the Tariff Commission every time. The Commission prepared its report with reference to the cost for 1957-58 and it was already out of date when it was submitted in 1959. I would, therefore, recommend that there should be a standing body functioning all the time presided over by a person of the status of a Supreme Court Judge which should bring the cost of production data relating to sugar up-to-date. A standing body like this would ensure upto the minute availability of costs and other relevant data by an impartial body of the highest integrity and repute. This alone would meet the needs of the situation.

WHY TAKE CHANCES?

In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you can be sure if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

JUTE Outlook for Raw Jute

WHILE the West Bengal Government seems to have come to an irrevocable decision against any further sealing of looms, the Indian Jute Mills Association is continuing its efforts at persuading the authorities that the raw jute supply position admits of no other alternative, than some scheme to reduce consumption of jute during the current month also. (It is rumoured that the IJMA's latest proposal is for the sealing of 9 per cent looms and a reduction in working hours to 40 a week). The IJMA representatives have met in the course of the past few days the West Bengal Ministers of Food, Labour and Home, but it would appear that so far they have not been able to bring them round to the IJMA way of thinking. It has, however, been stated on behalf of the Government that it will consider the claim for a cut-back in production of any particular unit should it experience difficulty in procuring adequate raw jute to last it for the whole of the month.

The State Government's stand seem to be that the position obtaining from a shortage of raw material should be tackled individually by the mills. This is what happens when similar conditions obtain in other industries. It will perhaps be pointed out that some time ago when the cotton textile industry was experiencing an acute shortage of cotton, there was no question of shutting down all mills for a period. But it will be recalled that at that time it was generally regretted that the cotton textile industry had not evolved an arrangement like the jute goods industry by which production

can be suitably adjusted whenever necessary.

It is to be admitted that the working time agreement of the IJMA mills and the recent quota system and voluntary price control have been responsible for the orderly meeting of the variety of difficulties that the industry has had to face during the past few years. It is primarily with a view to obviating a dislocation to the weaker units in the industry and the consequent dislocation to the entire jute trade and industry that block closures of mills have been designed. The aim of the proposal for the sealing of an additional 18 per cent of looms is also to avoid such dislocation.

It is not clear whether before asking the mills to tackle the present situation of a shortage of raw jute individually, Government has considered the possible cumulative effect on employment of labour in the jute industry. If it so happens that quite a sizable number of mills find it difficult to procure the requisite quantity of raw jute, Government may find it difficult not to allow them to shut down perhaps for much longer than a week. If the IJMA assessment of the raw jute supply position in the immediate future is correct, many managements will soon be obliged to trek to Writers Building to tell the State Ministers that their efforts to replenish their stocks of raw jute have been in vain. The net result of permitting individual mills to seal additional looms or close down for as long as is considered necessary will be the same as sealing an additional 18 per cent of looms in all IJMA mills as suggested by the IJMA. The only important difference will be that in the former case that weaker units will have to bear brunt of the present shortage, whereas under the IJMA suggestion, the pinch will be more uniformly felt.

It would, however, appear that the State Labour Minister does not subscribe to the scarcity theory. He is reported to have said that the fact that stock of raw jute is at precarious levels in mill godowns cannot be equated to an actual shortage in the market. His view seems to be that there is adequate jute available in the market. Evidently he is also including new crop arrivals in his calculation. Even so, indications are that the flow of new crop jute into the Calcutta and mill stations is unlikely to gather momentum till after another six to eight weeks. And it appears to be still the view of a large number of people in jute circles that unless arrivals sizably improve very soon the present acute shortage is bound to persist. There is reason to believe that the movement of raw jute from the growing areas to the markets has been delayed due to the hot spell experienced during most part of last month. Till a few days ago it has been reported, there has been a shortage of steeping water following a fall in river levels and hence the preparation of the harvested crop for the markets has received a setback.

The outlook for raw jute and so for the industry after about two months, however, seems to be quite encouraging. Indications recently given by representatives of the different States growing jute go to show that this year's crop will be much bigger than that of last year. There has been a general increase in the acreage under jute, such increase ranging from 25 per cent in West Bengal to 100 per cent in Uttar Pradesh. The yield is also said to have improved and no great loss due to pest infestation is expected because timely effective remedial measures have been taken.

TEA Effect of UK Joining ECM

THE effect of a possible British entry into the European Common Market has been under study by the plantings industry. Although the official statement contained an assurance that the UK will consult the Commonwealth again before taking a final decision, it does not lessen the industry's anxiety regarding its future trade with that country. The current tentative view is that, provided an arrangement with the UK, which took Rs 75 crores worth of tea from India last year is possible, the move towards the ECM will not do any harm and may very well help the long run.

The crux of the whole question is to what extent Indian exports of tea to the UK will be affected if we have to deal with the UK as a member of the Common Market. It has been said, of course, that this will depend mainly on the concessions which the UK will be able to obtain from the ECM for Commonwealth produce. Such concessions may be similar to those that the "Six" have already allowed to the produce of their own colonies and "associated".

Another question is whether India will be able to make good some of the losses on a reduced level of exports to the UK by an increase in the level of exports to the ECM countries. This is a prospect upon which one can predict little at the present moment. Considering the relatively small extent of tea consumption and the almost total absence of propaganda for Indian tea in the ECM group, the chances are that the losses will not be made up. It is understood that the whole question will soon come up for detailed study by the Tea Board.

Meanwhile, reports from the South Indian tea estates are no better, and the July crop may be sharply less than that in 1960 and also for the first seven months. In spite of a record crop of about 13 million pounds more in 1960 than in 1959, the net export has not risen much. This trend continues to be in evidence and exports from South India may not be greater than last year.

In spite of the damage to gardens in the South by floods, India's tea output this year is likely to exceed that of last year by about 30 million pounds. The loss in the South is expected to be more than offset by the increase in the output of North Indian gardens, which have favoured with congenial weather. This year's total output is estimated to be 730 million pounds. Last year, North Indian estates recorded an increase of 40 million pounds over the previous year's figure and the gardens in the South about 17 million pounds.

According to the latest figures, North Indian export figures for the 1960-61 season show that there was a drop of just over 14 million pounds as compared with 1959-60. The most important destination, the UK, was, however, sent an extra 1.4 million pounds less. UAR was India's best lion pounds less; UAR 4.6 million; USA 2.4 million; Sudan nearly 5 million and Turkey 3.3 million pounds less. UAR was India's best market after the UK although that country accounted for only 25.2 million pounds as compared with Britain's 230.5 million pounds.

In the Export Sale held in Calcutta this week, offerings were 33,877 packages. There was a good general demand. Orthodox descriptions met with keen competition. Best broken grades were generally fully firm to dealer with quality, while plainers were a little easier. Fannings grades also followed the same trend. The CTC offerings met with a selective demand and prices were irregular with the best barely steady. Where quality showed a seasonal decline or where fibre was present in the leaf, prices eased by up to 50 nP and sometimes more. The few leg-cut teas, on offer, were sold at easier rates.

Best Darjeelings again met with good support at around last rates; but the medium and poorer kinds showed a decline in price with a number of teas being withdrawn without a bid. Buyers for stylish whole Leaf and Tippy grades were more selective and prices in this

category were generally lower. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.15 to Rs 5.25; Plain BP Rs 4.80 to Rs 4.90; Plain Fannings Rs 4.55 to Rs 4.65; Medium Assam CTC BP Rs 6.00 to Rs 6.40; Medium Assam CTC Fannings Rs 6.20 to Rs 6.60; Best Assam CTC BP Rs 7.20 to Rs 7.40 and Best Assam CTC Fannings Rs 7.50 to Rs 8.00.

In the Internal sale, offerings were 18,777 packages of Dusts. There was a good general demand. CTC varieties were irregular with the bright liquoring types being generally firm and sometimes dearer. The plainers sorts were, however, often easier. Plain orthodox dusts were well supported at a discount of 10 nP although the bright Assams were readily taken up and were much dearer with quality. Non-wither leg-cut teas were irregular, the bright lines realising satisfactory prices. Plain thin teas were generally easier.

Darjeeling dusts were considerably easier and proved difficult of sale. Following rates were quoted:—Plain Orthodox Dust Rs 4.35 to Rs 4.60; Medium Assam Dust Rs 4.90 to Rs 5.50; Legcut Dust Rs 4.70 to Rs 5.50; Medium Assam CTC Dust Rs 6.30 to Rs 6.70 and Good Assam CTC Dust Rs 6.80 to Rs 7.20. Also, 71 packages of Leaf grades were offered for internal consumption.

Arrivals of tea in the Calcutta Port during June 1961 were substantially higher at 218,547 chests as compared with 178,806 chests in the corresponding month of last year. Total tea arrivals in the quarter ended June 1961 were also higher at 322,953 chests as against 287,659 chests in the corresponding period of 1960.

Arrivals of tea by river rose from 122,606 chests in April/June 1960 to 140,639 chests in the quarter ended June this year as did those by rail from 82,146 chests to 88,854 chests. Arrivals by road as well as air transport also increased from 45,070 chests and 17,837 chests to 73,756 chests and 19,704 chests respectively.

In the Cochin market, a total of 165,000 kilogrammes of tea dusts was offered for internal consumption. Against a good demand, residuals were easy, while low mediums and medium sorts and were fully firm to dealer. High-grown teas were also often dearer.

In the Colombo market, offerings were 7,534,062 pounds. There was a good general demand. Best liquoring Dimbula-Dickoya BOPs were firm with other useful liquoring shorts dearer. Poor liquoring kinds were, however, lower. Corresponding BOP Fannings were irregularly lower. Uva teas were in strong demand, particularly those with improved quality.

The demand was very much quieter for the 18,970 packages of North Indian and other miscellaneous teas put up for sale on the London market. Prices for all kinds were irregularly lower. New season's Assam teas attracted only limited competition and a number of lots were withdrawn at six pence to one shilling per pound below brokers' valuations.

COTTON Sluggish Conditions in Cotton Market

The cotton market in Bombay depicted sluggish conditions during the past week and both the August and March contracts lost substantial grounds. Even the announcement of the release of export quota of 60,000 bales of cotton (30,000 bales of Bengal Deshi and 30,000 bales of other cotton stapling 3/4" and below) failed to provide any enthusiasm in the market. The trade greeted the announcement with mixed feelings. It came at the most unfavourable time for there was practically no foreign demand for the exportable varieties. Buyers from Japan appeared to be reluctant to augment their stocks of such varieties at the prevailing prices and their offers were Rs 25 to 30 less than the current prices.

Trade circles feel that the quota allotted for Bengal Deshi was far below the requirements as the established exportable surplus of that variety amounts to 50,000 bales. The release of quota for 3/4" cotton is likely to provide some relief to the stockists of Gujarat cotton.

According to the trade notice issued by the Joint Chief Controller of Exports five per cent of the quota will be reserved for the co-operative societies situated in areas producing that type of cotton. Licences will be granted on the presentation of shipping bills on a "first-come first-served" basis and that too is subjected to the maximum of 1,425 bales to each shipper. Shipping bills will be valid with in 15 days from their passing or upto 31 August whichever is earlier. Shipping bills will be accepted on all working days from 2 August. As the notice mentioned only the presentation of the shipping bills it can be safely presumed that there will not be any change in the export policy.

Conditions in the spot market at Sewri were comparatively better. Southern mills were reported to have entered the market to cover their requirements following the commencement of the third shifting work. Digvijay, Kalyan, Surti, Laxmi and 197/3 met with some demand. Prices, however, ruled steady.

The export section remained featureless despite the announcement of export quota as the shippers were cautious in their purchases. The import section, on the other hand, exhibited slightly better conditions. East African cotton met with good enquiries. Stray business was also reported to have been transacted in Sudan, Egyptian and American cotton.

The 1960-61 cotton season, according to the International Cotton Advisory Committee, will be remembered as a season of unusual achievements in the cotton world. Total production reached a new high of nearly 33 million bales which shows

an increase of about 2 million bales over the previous season's output.

The consumption of cotton was also maintained at the record level of 31 million bales. World trade in cotton during the current season, though considerably below the previous season's peak, was the second highest during the post war years.

New York

Trading in the New York cotton futures market tended to be slow largely due to the restricted offerings. The prices, however, ruled steady. Demand from foreign buyers tapered off to such an extent that the sales for exports were insignificant. Export registrations upto the middle of July totalled 6,443,556 bales under the 1960-61 programme and 1,219,407 bales under the 1961-62 programme. Exports of cotton in the current season upto 24 July amounted to 6,554,446 bales as against 6,943,699 bales in the corresponding period in the previous season.

The total stocks of cotton in the USA, according to recent estimates, will be in the vicinity of 7.3 million bales. Nearly 1.75 million bales will be in the possession of the CCC and the rest will be freely available. Despite the occasional showers the crop is reported to be making satisfactory progress.

Sudan

The Sudan Gezira Board sold 6,280 bales of S and L varieties of cotton at the auction conducted on 26 July. But the prices realised at the auction were less than those recovered in previous auctions. The final production of the Board's 1961 crop is placed at 297,828 bales comprising 44,091 bales of Domain Sakel, 38,687 bales of Bar and 215,047 bales of Lambert. Out of the total about 48,478 bales of cotton have been sold by the third week of July.

Alexandria

Reports that emanated from Alexandria indicated the Egyptian Cotton Commission has decided to accept applications for the purchase of cotton for domestic consumption and for export during the 1961-62 season. The applications will be considered after making an assessment of the stocks left with the Commission or the repurchase of cotton lifted from the spot market.

Piecegoods

Listless conditions prevailed in the Bombay cotton piecegoods market during the past week. The improvement in the money market failed to create any enthusiasm in trading and practically for the whole week the buyers were reluctant to make any purchases. Export demand too was riding at a low ebb.

Demand in the domestic sector dwindled into an insignificant trickle due mainly to the heavy downfall and the second attack of floods in the Southern States. Consequently only scattered business was transacted with upcountry centres during the period under review. It was also attributed that the low prices of goods were partly responsible for

the meagre business in the domestic sector. Shirts, flannels, drills, and coatings met with some attention. Grey goods failed to attract purchasers even though they were offered at a discount. Kanpur, Bihar, UP and Punjab figured as the prominent upcountry buyers and their purchases were restricted mostly to goods which were offered at low prices.

The revival of demand in the export front has already shown signs of decline. The United Kingdom kept away from the market probably on account of the credit restrictions. Business with Sudan turned down to a mere trickle and that too was confined to bleached longcloth and dyed voiles.

Stray business in canvas and bleached longcloth was transacted with Singapore. Ethiopia and Eritrea purchased moderate quantities of chaddars and bafis.

West Africa's interest hovered around domestic and Turkish towels. East Africa accounted for a small quantum of processed goods, drills and sheetings. It also showed some fancy for coatings.

Rise in Cashew Exports

ACCORDING to the Cashew Export Promotion Council, India exported 461,124 cases (each 50 lbs net) of cashew kernels valued at Rs 4.95 crores in the first quarter of the current year as against 489,974 cases worth Rs 4.34 crores in the corresponding period of last year. The improvement is mainly due to increased offtakes by the USA and the UK from 272,395 cases and 26,389 cases in the first quarter of 1960 to 314,587 cases and 46,278 cases respectively in January-March 1961. Exports to Australia and Canada have also shown a slight improvement at 12,834 cases and 11,997 cases respectively.

On the other hand, shipments to Russia have declined from 68,607 chests in the first quarter of 1960 to 26,417 cases as did those to the Netherlands from 2,580 cases to 1,987 cases. Exports to East Germany and West Germany have also declined from 16,574 cases and 17,983 cases to 9,597 cases and 11,277 cases respectively.

Cashewnut shell liquid totalling 965,042 kilogrammes, valued at Rs 9.56 lakhs, was also exported from India during the first quarter. The export of cashewnut shell liquid, however, registered a fall both in terms of quantity and value as compared to the export during the first quarter of 1960.

The Government of India has fixed the tariff value for cashew kernels for 1961-62 at Rs 440 per quintal. The net tariff will be effective from 1 July, 1961.

Meanwhile, unencouraging conditions on the export front have brought a further fall in the prices of cashewnut. Among the imported varieties, the price of Mozambique has declined from Rs 685 to Rs 680 and Porto Amalia from Rs 720 to Rs 695 per ton. The prices of the

indigenous variety have also declined by a fair margin and the present rate is placed around Rs 185 to Rs 190.

According to reports from Cochin, stocks with the factories have steadily risen to about 4 lakh cases, as the US, the principal buyer, has continued to be disinterested. The US has progressively lowered the prices from 49 cents to 47 cents per pound. Business to the extent of about 40,000 cases was reported to have been done with the USA at 47 cents for August-September shipment and about 7,000 to 8,000 cases at the rate of 46 cents for January-March, 1962 shipments. This price is considered to be below the present Indian parity. Stockists have, therefore, been quite anxious to liquidate before the new crop in Portuguese East Africa starts moving.

Mozambique, the second largest producer of cashewnut in the world, had a crop of about 80,000 tons in 1960. During the current year, conditions have further improved and the crop for the year is expected to be good. British East Africa, another major producer, is reported to have offered October/November shipments at round £50 to £52 per ton. Attempts have been made to reduce the freight by 25 per cent for the new crop shipment. All these factors indicate a bearish outlook.

COFFEE

After a long and anxious period, the Coffee export prospects are turning the corner and good sales are being reported for last month. It is not improbable that the entire quantity, allotted for export from out of the 1960-61 crop, will be sold and that price realisations also will improve for the Arabica variety.

There has been a welcome improvement at the latest coffee export sales held at Coimbatore last week. Less than 1,350 tonnes of coffee was offered and sold easily at over Rs 180 per cwt for Plantation A. Robusta, too, had a better market at slightly improved average rates. Considering that the crop was about 12,000 tonnes greater, the balance of stock, at the end of June, is only about 4,700 tonnes higher, at less than 40,000 tonnes.

As in the case of tea, there is an anxiety to know to what extent Indian exports of coffee to the UK will be affected if we have deal with that country as a member of the Common Market. But, the position in respect of coffee is more satisfactory in view of the preference always shown for good quality Indian coffee in the ECM group of countries.

The unprecedented and widespread rain in South India has affected some of the coffee plantation areas in Mysore and Coorg. With heavy rains continuing in many parts of Mysore and Kerala, planting opinion is that the next crop may fall below 50,000 tonnes.

GINGER

After a protracted spell of ease, Ginger prices have made an

impressive recovery in the course of the last few days. In the Cochin market, the rate has improved by Rs 7 per 50 kg. This improvement is mainly influenced by the reports that the crop has been badly affected by incessant rains in South India. The performance on the export front has also been promising. Although it is too premature to assess the impact of the floods on the new crop, it is widely felt that the movement of the new crop will now be considerably delayed.

On the export front, West Asia, has been very active during the last few days. Aden, the Persian Gulf countries and Europe have also shown keen interest, presumably on account of the higher prices quoted by West Africa, the only big competitor of India in the World markets.

CARDAMOM

Despite the reports of the damage to the new crop following the heavy floods in Kerala and Madura districts, prices of Cardamom have been displaying an easier tendency, mainly due to poor export demand.

It is generally felt that about 25 per cent of the crop in South India has been damaged by floods and heavy rains. The damage is not considered to be extensive, as cardamom is generally grown on the slopes of the mountains and the level of water does not affect the sowing. But, it is felt that the inclement weather will surely discolour the new crop. Presumably for this reason and the reports of deterioration in quality, enquiries from overseas buyers have been poor.

SUGAR

Conditions in the Sugar markets have continued to remain depressed, thanks to good supply position. Bulk allotments to the licencees have also weakened the market trend, as they are anxious sellers for the commodity. Heavy quantities of sugar are reported to have been despatched from Muzaffarnagar to the Kanpur market for sale, as the allottees are finding it difficult to dispose off the goods in the Muzaffarnagar market even at a rebate of 62 nP to 75 nP per bag.

The Union Minister of Food and Agriculture has asked the industry not to look upon the current situation arising from overproduction as an "insurmountable crisis". He has stated that there is every possibility of the US quota being increased by 100,000 tons. The International Sugar Agreement, which India has decided to join, may allot an export quota of 200,000 tons. If this hope materialises, India will be called upon to export 500,000 tons in all.

The all-India final estimate of sugarcane for 1960-61 puts the year's area and production of the crop at an all-time record of 5,734,000 acres and 85,045,000 tons in terms of cane. Compared with the partially-revised estimate of 5,220,000 acres and 75,201,000 tons in terms of cane for 1959-60, the estimates for 1960-61 show an increase of 514,000 acres

in area and 9,844,000 tons in terms of cane.

FOODGRAINS

Steadier conditions were witnessed in the Hapur Foodgrains market due to poor arrivals. Wheat recorded a gain of 25 nP a maund. Wheat production in 1960-61 surpassed all the previous records. Rice also advanced further due to good demand. Gram recorded fractional gains. In the Pulses section, Peas were steady.

In the Bombay grains market, prices showed a mixed trend. Indigenous wheat prices registered a sizable improvement, as heavy rains in the City tended to paralyse activity. Wholesalers were reluctant to adopt a definite attitude, pending a clear picture of the standing kharif crop, especially in the context of reports of heavy downpour and floods in various parts of the country. Sentiment was also helped by higher upcountry advices, especially from the Punjab. Reports from the producing areas indicated that prices might look up after a while.

Trading in Pulses was highlighted by a sharp decline in the prices of Moong. Traders reported the commencement of modest arrivals of the new crop from the Ahmednagar area. With the arrivals of the new crop, traders were anxious to get rid of the old stocks.

YARN

Conditions in the Bombay market remained generally quiet with prices displaying a slightly easier tendency. Reports, that the State Trading Corporation would soon release a larger quantity of rayon yarn, compelled a number of operators to liquidate their holdings. The absence of demand from the upcountry centres was another bearish factor.

The prices of Staple-Fibre yarns have also turned easy. Consumers' resistance at higher levels, sluggish conditions in the Staple-fibre cloth market and the reluctance on the part of weavers to augment their stocks of yarn were the main reasons for a fall in prices.

In the Cotton yarn section, listless conditions continued to prevail. The supply of cotton yarn to Bombay is likely to increase following the decision of the State Electricity Board in Madras to supply power to the textile mills in the State for a third shift.

Earnings from the export of synthetic fabrics, which had declined by 45 per cent to Rs 4.2 crores in 1959 from Rs 7.7 crores in the previous year, recovered slightly to Rs 4.6 crores last year. The bulk of these exports comprised artificial silk fabrics. Last year, the quantity exported was almost double the quantity exported in 1959; but the value rose only nominally to Rs 3.6 crores.

CHEMICALS & DYES

In the Bombay Dyes and Chemicals markets, turnover was reported to be fairly good in Chemicals, while

dull conditions continued to prevail in the Dyes section.

Among Chemicals, the continued reserve shown by powerful stockists has been responsible for a sustained rise in the prices of Menthol. In the course of last six months, prices have almost doubled. The Chinese variety, which was quoting Rs 78 per pound early in February, is now quoted around Rs 140. Similarly, the French variety is quoted at Rs 146 against Rs 75.

Imports from China are almost at a standstill owing to acute drought. Moreover, the prices quoted by China are reported to be much above the price of synthetic menthol offered by Brazil and France. This seems to have induced some of the powerful stockists to hold off in anticipation of a further rise in prices. Moreover, some of the stockists in Calcutta are reported to have formed a Syndicate and have successfully rigged up the prices.

Bleaching Powder is also slightly better on sustained demand. The easy trend in Rongalite, is, however, attributed to the reported arrival of unauthorised goods from overseas countries. There is an overall decline of four annas in its prices with the German quality around Rs 4.40 and others around Rs 4.10.

In contrast, conditions in the Dyes section remain dull with the turnover restricted. Lack of enthusiasm on the part of consumers is due to their expectation that the prices will come down further in view of the adequate supplies obtained under the export promotion scheme. The heavy rainfall and the consequent floods have also restricted the buying inclination. Above all, there are reports that the supplies in the market are more than the requirements of the consumers.

GOLD & SILVER

Trading on the Bombay Bullion Exchange was dull and featureless. Prices in the Silver section showed marked irregularity due to alternate bouts of buying and selling. Arrivals and offtake were estimated around 50 and 5 bars respectively. Silver (below 996) changed hands at Rs 200.25 to Rs 200.30.

Gold showed a measure of steadiness. Lower advices from the spot market led to an easier tendency; but conditions improved towards the close on favourable advices. Gold ready moved narrowly around Rs 120.65, while Sovereign was quiet at Rs 94. Arrivals and offtake were estimated around 5,000 and 3,000 tolas respectively.

OILS & OILSEEDS

Sentiment on the Bombay Oilseeds Exchange remained depressed. Groundnut futures drifted lower on reports of continued favourable weather and discouraging upcountry advices. Castorseed declined in the absence of any encouraging news, while Linseed contracts eased in sympathy.

5 August 1961

A relieving feature of trading in the market was the sustained spell of foreign demand for groundnut meal with the UK figuring as a consistent buyer. The August shipment was reported to have bought at prices varying from £31 5sh to £32 6sh. Shippers were stated to have entered into comments for shipments extending right up to February 1962. The steady foreign demand pushed up local prices from Rs 318 to Rs 335 per ton.

Trading in the Castorseed section was devoid of fresh incentives. The overseas demand for castor oil was negligibly small with shippers reporting business for only 200 tons of commercial quality around £122 per ton. The USA and the Communist countries continued to be out of the market.

In Madras, further declines in kernels and groundnut oil prices were registered from the middle of last week. Arrivals of groundnut kernels in South Arcot centres have been increasing to the tune of about 400/600 tons daily so much so there is hesitancy on the part of buyers of both the stocks, kernels and oil. It is likely still further rise is possible in the receipt of the coromandel variety of groundnut in the next fortnight so that prices of the nut in various places would not go up but go down probably. Already the tendency is for the price to go down despite steady buyers and as it is there are only sellers with hesitant buyers. Even in forward positions, the commitments had been larger and practically no business was transacted. As for the crushing mills too, they have already bought heavily. They may go about their second bout of buying in accordance to their crushing capacities later on this month.

Only local bazar interests took up groundnut oil. Calcutta interests occasionally bought small quantities but preferred to wait. The prices of the oils and seeds in the exchange today closed as follows: Groundnut oil per candy of 500 lbs ex-Madras godown expeller ready 3% FFA: Rs 479 (or Rs 211.2 per 100 klos). August midweek delivery was quoted at the same rate as spot. The vaida rates for January 1962 was quoted at Rs 188/189 per 100 kilos, with no business. Groundnut kernels per candy of 531 lbs coromandel Rs 87 per 80 kgs. Peanut Rs 84 per 80 kgs. Castor oil per candy of 500 lbs Tirupattur Rs 355. Coconut oil per tin Rs 40.50: Gingelly oil per maund Rs 30: Gingelly seed per bag Rs 91/92. Groundnut cake Rs 28.12 per bag of 180 lbs.

The groundnut oil price has been progressively declining from the middle of last week. Ready oil was quoted at Rs 213 per 100 kilos on 26 July. There was an increase by Rs 1.75 per 100 kilos the next day. On Saturday, however, a small decline of 45 nP per 100 kilos was noticeable. The price again came down when the market opened this week and the oil was quoted at Rs

213 per 100 kilos. Due to large arrivals of kernels in southern markets and the crushing mills also supplying with sizeable quantities of oil, the price declined a couple of rupees further lower at Rs 211. There was a very slight increase to Rs 211.2 per 100 kilos by the evening of today.

As for groundnut kernels the superior quality remained at Rs 87 per 80 kilos in Madras while the South Arcot price of the same quantity was Rs 83 to 85 per bag of 80 kilos.

Peanut variety of groundnut also did not change in price and remained steady at Rs 84 per 80 kgs.

Arrivals of groundnut kernels were fairly good in upcountry where crushers bought some quantities. Price however did not remain steady registering further declines. This enabled crushers to go in for good quantities in the southern areas for their Calcutta and Andhra interests. Gingelly oil price declined due to better offerings.

HIDES & SKINS

Tanned cowhides were not in much demand despite sizeable arrivals of the commodity into the market. Naturally domestic prices due to lack of demand declined. In the c.i.f. section, not much business was reported.

For tanned cowcalf skins, overseas demand remained all but quiet.

Locally too not much business was reported. No change was in evidence in respect of tanned buff calf also this week.

A reduction was available in tanned goatskins but even at this lower price by 3rd, there was little overseas demand.

Also in tanned sheepskins not much was reportable and semiprime sheep remained unchanged.

The following were the prices of tanned skins and hides today: (per lb.):

Tanned cow prime 5/5½ lb Rs 3 to Rs 3.12; 6/6½ lb Rs 2.75 to Rs 2.81; 8/8½ lb Rs 2.31 to Rs 2.37; 10/10½ lb Rs 2.12 to Rs 2.25; Inferior 5/5½ lb Rs 2.28 lb to Rs 2.31; Buffalo 12/13 lbs Rs 2 to Rs 2.06; cow calf 1½/2 lb Rs 4.12 to Rs 4.37; buff calf 1½/2 lb Rs 3 to Rs 3.25; Goat prime 8/9 lbs Rs 10 to Rs 10.50; sheep ordy.: 6/7 lb Rs 7 to Rs 7.25; 5/6 lb Rs 9 to Rs 10; Prime 6/7 lb Rs 11.50 to Rs 12.50.

PRICES

Unchanged

The official wholesale price index (with the year ended March 1953 as 100) remained unchanged at its earlier week's revised level of 127.1 during the week ended July 1, 1961. The index was higher by 1.2 and 2.7 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

(For table see page 246)

ORISSA CEMENT LIMITED RAJGANGPUR

NOTICE IS HEREBY GIVEN THAT THE ELEVENTH ANNUAL GENERAL MEETING OF THE MEMBERS OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR, on Thursday the 21st September, 1961 at 2.30 P.M. to transact the following business:

1. To receive and consider the audited Balance Sheet and Profit & Loss Account for the year 1960 and the report of the Directors and Auditors.
2. To declare Dividend.
3. To elect a Director in place of retiring Director Shri V. H. Dalmia.
4. To elect a Director in place of retiring Director Shri N. C. Roy.
5. To appoint Auditors for the accounting year 1961 and to fix their remuneration.
6. To consider and pass the following as Special Resolution with or without modification as thought fit:

'RESOLVED by way of Special Resolution that approval be and is hereby given to residential accommodation being made available to any Director or Officer of Dalmia Agencies Private Limited, Managing Agents of the Company who may be required to be stationed at Rajgangpur as and when requested on payment by the Managing Agents or the person concerned of the rent and other charges payable in respect of the accommodation on the scale as may be prescribed by the Board of Directors from time to time provided that payment of the rent and charges shall be made to the Company within one month of the expiry of the month for which the same are payable.'

7. To consider and pass the following Special Resolution with or without modification as thought fit: 'RESOLVED by way of Special Resolution that Article 10 of the Articles of Association of the Company be amended to read as follows: '10. If at any time the share capital of the Company is divided into different classes of shares, the Company is authorised to vary the rights attached to any class (unless otherwise provided by the terms of issue of the shares of that class) with the consent of the holders of not less than three-fourths of the issued shares of that class or with the sanction of a Special Resolution passed at a separate meeting of the holders of the issued shares of that class.'
8. To consider and pass the following as Special Resolution with or without modification as thought fit:

'RESOLVED by way of Special Resolution that approval be and is hereby given to residential accommodation being made available to any Director or Officer of Dalmia Agencies Private Limited, Managing Agents of the Company who may be required to be stationed at Rajgangpur as and when requested on payment by the Managing Agents or the person concerned of the rent and other charges payable in respect of the accommodation on the scale as may be prescribed by the Board of Directors from time to time provided that payment of the rent and charges shall be made to the Company within one month of the expiry of the month for which the same are payable.'

Dividend Warrants are expected to be all posted within three or four days after declaration of the dividend at the Annual General Meeting and would be payable on or after 25th September upto 31st October, 1961.

rate meeting of the holders of the issued shares of that class.'

8. To consider and pass the following as Special Resolution with or without modification as thought fit:

'RESOLVED by way of Special Resolution, in partial modification of the Special Resolution passed on 28th September, 1957, that authority be and is hereby given to the Board of Directors to have a mutual loan arrangement with Dalmia Cement (Bharat) Ltd., a Company under the same management, subject to the condition that the amount due to either Company on the loan account together with any moneys outstanding in respect of any current transactions pertaining to the supply of services, spare parts or equipment etc. shall not at any time exceed Rupees Forty Lakhs and the Board of Directors be and is hereby authorised to determine, from time to time, the rate of interest payable on such outstanding amount due to either Company in the loan account.

EXPLANATORY STATEMENT FOR ITEMS 6, 7 and 8 of the agenda as required under Section 173 of the Companies Act, 1956, ARE BEING FORWARDED TO THE MEMBERS OF THE COMPANY BY POST ALONG WITH THE NOTICE OF THE MEETING.

THE SHARE TRANSFER BOOKS OF THE COMPANY WILL REMAIN CLOSED FOR 20 DAYS FROM MONDAY THE 21ST AUGUST TO SATURDAY THE 9TH SEPTEMBER, 1961, BOTH DAYS INCLUSIVE.

EVERY SHAREHOLDER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIM/HER AND SUCH PROXY NEED NOT BE A SHAREHOLDER. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the Meeting.

Dividend Warrants are expected to be all posted within three or four days after declaration of the dividend at the Annual General Meeting and would be payable on or after 25th September upto 31st October, 1961.

By Order of the Board
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES PRIVATE LIMITED,
J. DALMIA, Director,
Managing Agents.

Dated: 23rd July, 1961.

Company Reports

Polychem Earns More

POLYCHEM Limited has reported satisfactory working results for the year ended 31 March 1961. While sales are just maintained at Rs 1.53 crores, the gross profit is somewhat higher at Rs 48.67 lakhs as compared with Rs 43.18 lakhs for the preceding year.

After providing Rs 47,437 for Plant Development Rebate Reserve (Rs 1.52 lakhs); Rs 4.88 lakhs for Depreciation (Rs 4.57 lakhs) and Rs 17.50 lakhs for Taxation (same), the net profit is higher at Rs 25.82 lakhs against Rs 19.59 lakhs. With Rs 27,844 brought in and transferring Rs 7.60 lakhs from the Dividend Reserve Fund under Section 15C of the Income Tax Act, the total comes to Rs 33.70 lakhs. From this, the directors have provided Rs 7.50 lakhs for Dividend Reserve Fund (Rs 7.50 lakhs); Rs 10 lakhs for General Reserve (Rs 12 lakhs) and Rs 5 lakhs for Dividend Equalisation Reserve (nil). The directors have proposed a taxable dividend of 7.50 per share on the Ordinary shares.

During the year, the company's plant continued to work satisfactorily. The agreement regarding styrene monomer project with Messrs Dow Chemie A.G. Switzerland, has been finalised. A contract for the complete engineering, procurement and construction of the plant has been given and work at the plant site has already started.

The company has obtained a licence for setting up a distillery unit at Nira near Poona. Arrangements have been finalised for a US dollar loan with the IFCI as also for the necessary additional rupee finance for setting up the monomer plant.

Rameshwara Jute Incurs Loss

The Rameshwara Jute Mills Limited has incurred a loss of Rs 7.51 lakhs for the year ended 31st March 1961. Taking into account the provision for Depreciation and Development Rebate, the total loss comes to Rs 9.92 lakhs. After adjusting the credit balance of Rs 20,326 brought in, the net loss, which is being carried forward, is Rs 9.71 lakhs.

In addition to the above deficit, there remains a further sum of Rs 9.37 lakhs as unabsorbed depreciation up to the end of the year, which has got to be provided for in future years. There also remains a contingent liability of Rs 2.99 lakhs in respect of arrears of preference dividend up to 1961.

The loss during the year is attributed to extremely difficult trading

conditions in the jute industry. The company's production is confined to manufacture of cement bags, which are sold to the cement industry under an open price annual contract. For this reason, the company has been comparatively more adversely affected by the steadily rising trend of jute prices.

Satisfactory progress has been made with regard to the modernisation of the company's mill machinery up to the spinning department and this is expected to be completed by April next. In view of the company's forward sales under the open price contracts for the supply of bags to the cement industry, the decline in raw jute prices this year should partly compensate for the loss which the company suffered last year.

Travancore Chemical Fares Well

There is a sharp increase in the sale of the Travancore Chemical and Manufacturing Company, Limited to Rs 50.24 lakhs for the year ended 31 March, 1961 from Rs 32.82 lakhs for the previous year. The rise in net profit, before providing for depreciation and Taxation, to Rs 9.33 lakhs from Rs 4.84 lakhs is even more pronounced. The provision for Depreciation is higher at Rs 1.73 lakhs against Rs 1.02 lakhs and Development Rebate Reserve at Rs 41,429 against Rs 38,159. The Redeemable Preference Capital Redemption Fund gets Rs 1.5 lakhs against nil. The provision for Taxation is raised to Rs 3.35 lakhs from Rs 1.40 lakhs. A final dividend of 12 per cent is to be paid on the old capital of Rs 10 lakhs making with the interim dividend, 20 per cent for the whole year. The newly-issued equity shares for Rs 3 lakhs will receive a dividend of 10 per cent for a period of six months. The dividend on the old capital for 1959-60 was 15 per cent.

During the year, the company undertook the manufacture of sodium aluminate while the output of potassium chlorate could not be stepped up at Kundara on account of the shortage of power. It is expected that the additional power required will become available during the current year.

With the issue of additional capital and allocations to reserves, it has been possible for the company to repay, in full, the loan taken from the Kerala Financial Corporation. In relation to its paid-up capital, the company has been reporting a fairly high level of profits.

Tezpor Tea Repeats

After meeting all expenses and providing Rs 1.88 lakhs for Depreciation (against Rs 1.33 lakhs in 1959),

the Tezpor Tea Company Limited has earned a lower profit of Rs 8.50 lakhs for 1960 as against Rs 10.71 lakhs for the preceding year. Deducting from this the provision for Taxation of Rs 3.58 lakhs (Rs 4.39 lakhs), there remains a balance of Rs 4.92 lakhs.

With the addition of Rs 53,844 brought forward from the previous year and Rs 13,000 provided for liabilities now no longer required, the total sum available for appropriation is Rs 5.49 lakhs. Of this, a sum of Rs 1 lakh is transferred to General Reserve and Rs 1.50 lakhs to Rehabilitation Reserve in addition. The directors have proposed a final dividend of 11 per cent, making a total of 20 per cent, taxable, as against 17½ per cent, taxable, for the preceding year.

Fall in Jaipur Metal's Profit

The Jaipur Metals & Electricals Limited has earned a lower profit for the year ended 31 December 1960 as compared to the previous year. The gross profit amounts to Rs 11.78 lakhs on a turnover of Rs 146.95 lakhs as against Rs 12.03 lakhs in 1959 on a turnover of Rs 142.56 lakhs.

The directors have provided Rs 71,611 for managing agents' remuneration against Rs 89,782. The provision for Depreciation has been raised from Rs 3.67 lakhs to Rs 3.82 lakhs. A sum of Rs 3.58 lakhs is provided for Taxation against Rs 3.60 lakhs. The dividend on the ordinary shares is raised from 8.5 to 9 per cent and on the Deferred shares from 18.9 per cent to 25 per cent, subject to deduction of tax.

The working of the company's meters division has shown a marked improvement over the previous year, the production having gone up from 100,500 meters to 134,500 metres. This is the highest output recorded by the company so far. In the metals division, production suffered a setback from 2,355 metric tons to 2,024 metric tons on account of a cut in the import quota of raw materials.

Hantapara Pays More Despite Lower Profits

Despite a sharp decline in the net profit from Rs 11.67 lakhs to Rs 6.83 lakhs, the Hantapara Tea Company Limited has proposed to raise the dividend from 12½ to 15 per cent, taxable, for 1960. The Depreciation amount is slightly higher at Rs 2.56 lakhs against Rs 2.52 lakhs, while the provision for Taxation is substantially raised to Rs 7.70 lakhs from Rs 1.90 lakhs. A sum of Rs 1.50 lakhs (Rs 4.75 lakhs) is set apart for General Reserve; Rs 60,000 (Rs 1.80 lakhs) for Investment Reserve and

Rs 15,000 (Rs 45,000), for Development Rebate Reserve.

Cochin Malabar Raises Distribution

The Cochin Malabar Estates Limited has done very well during the year ended 28 February, 1961, with a sharp increase in the net profit to Rs 20.44 lakhs from Rs 13.18 lakhs for 1959-60. The better working results are due to the jump in the output of rubber to 12.64 lakhs kg from 9.79 lakhs kg. The average price realised is slightly lower, but there is a significant decline in the all-in-cost by the over 27 cents per kg.

The amount set aside to Depreciation is higher at Rs 1.51 lakhs against Rs 1.36 lakhs and Taxation at Rs 10.47 lakhs against Rs 9.22 lakhs. A sum of Rs 2 lakhs is transferred to General Reserve and Rs 1.50 lakhs to Rehabilitation Reserve in addition. The directors have proposed a final dividend of 11 per cent, making a total of 20 per cent, taxable, as against 17½ per cent, taxable, for the preceding year.

Excellent results of Periakaramalai

The Periakaramalai Tea and Produce Company Ltd. has produced excellent working results for the year ended 31 March, 1961, thanks to a higher tea production and better prices obtained. The gross profit for the year has jumped to Rs 33.82 lakhs from Rs 18.32 lakhs, showing a rise of 84.6 per cent over the previous year.

Managing agents' commission has gone up from Rs 1.18 lakhs to Rs 2.43 lakhs. The provision for Depreciation has been raised from Rs 3.41 lakhs to Rs 4.52 lakhs, while that for Taxation has been more than doubled from Rs 6.40 lakhs to Rs 13.35 lakhs. Even after higher provisions on all essential items, the net profit at Rs 13.52 lakhs shows a substantial improvement over Rs 7.32 lakhs for 1959-60. The transfer to General Reserve is raised to Rs 2 lakhs from Rs 1 lakh; but that to Development Rebate Reserve is lower at Rs 7,468 against Rs 47,323. The directors have recommended a final dividend of 12.50 per cent, making a total of 20 per cent for the year, subject to tax, as against 13.50 per cent, taxable, for the preceding year.

CORRECTION

In our issue dated 29 July, 1960 on Page 205, the sub-heading "Dividends halved by Jaybirpara and halved by Hoolungoor" should read "Dividend doubled by Jaybirpara and halved by Hoolungoor".

The report had stated that "Following a decline in the net profit from Rs 1.14 lakhs to Rs 81,016, the Jaybirpara Tea Company Limited has halved the dividend to Rs 1.00 per share, taxable". This should read as follows:—Despite a decline in the net profit from Rs 1.14 lakhs to Rs 81,016, the Jaybirpara Tea Company Limited has doubled the dividend to Rs 1.00 per share; taxable, for 1960"

For the Investor

INVESTMENT GOSSIP Lack of Fresh Incentives

Sentiment, especially in Calcutta has displayed some improvement in the course of the trading on Wednesday and Thursday. This recovery seems to have been confined to this centre only as Dalal Street has continued to be rather hesitant. It would appear that the revival of interest in Lyons Range is mainly due to the good news from the pivotal scrip. Production of Indian Iron last month has recorded an improvement over the previous month. But with rumours about some dislocation to the market as a result of last Saturday's interim clearing in two scrips, Indian Iron and Hindustan Motors, persisting, conditions are not yet conducive for fresh interest being evinced at the lower levels. The recent shake-out has no doubt rendered the technical position of the market better but in the absence of fresh powerful incentives, prevailing uncertainties tend to be exaggerated.

As has already been noted in this column, the main impediment in the way of a bullish market being established is the fear of Government interference in the shape of restrictive measures on the course of trading in the stock market. Though talks about margins and other reforms like a reduction of brokerage have not been heard much during the past two weeks or so, these possibilities have by no means been forgotten, not by the thinking market men at least. The Damocles' sword of further stock exchange reforms is very much a reality for these people and they are unlikely to extend their commitments to any considerable extent until some authoritative indications are available as to what exactly Government wants to do in this regard.

NEW ISSUE NOTES India Carbon

ANOTHER new issue in the offing is that of India Carbon Limited. This Company has been formed to undertake manufacture of Calcedined Petroleum Coke and Calcedined Anthracite Coal required primarily by all basic Electro-Metallurgical and Electro-Chemical Industries. The requirement of Aluminium Industry is as high as 44 Tons of Calcedined Petroleum Coke for 100 Tons of Ingot production. At present, there is no indigenous production of these items and all the needs of basic heavy industries of the country, namely, Aluminium, Ferro Al-

loys, Ferro Manganese, Ferro Silicon, Calcium Carbide etc. etc., are dependent solely on imports. With India Carbon Limited going into production, the country would become self-sufficient in respect of these two basic industrial raw materials; and substantial saving in foreign exchange is expected. As a matter of fact, this unit should greatly contribute in the realisation of industrial production targets of the above-named Industries in Third Five Year Plan. The technical collaborators are Great Lakes Carbon Corporation of USA, a leading manufacturer of Calcedined Petroleum Coke and Calcedined Anthracite Coal. Apart from their seven huge plants in USA, they have a plant in England and have collaboration in Germany and Italy. Their "know-how" and continued technical assistance will prove invaluable to Indian company in respect of product quality, operating costs and profitability.

The new issue is to be for an amount of Rs 45,00,000 comprising of Preference Shares of Rs 5,00,000 and Equity Shares of Rs 40,00,000. The entire Preference Issue has been taken up by Government. Out of Rs 40,00,000 Equity, the foreign collaborators will take up Rs 16,00,000 and an equal amount will be taken up by the Promoters, Directors and their friends. The foreign collaborators will be represented on the Board of the Indian company by two Directors and would make available experts from their plants to look after the erection and operation of the plant till Indian personnel are ready after training in USA to take over the responsibilities. The Indian company has the further advantage that all the raw material available within the country from the two refineries in Assam has been committed to it and it has a ready market for its entire production as soon as it goes into operation. The value of such output, in terms of wholesale prices, is calculated to be more than Rs 1.30 crores per annum. The expected date of commencement of production is understood to be September/October 1962.

Madras Rubber

The first call of Rs 2.50 per share on the Rs 5 paid equity shares of the Madras Rubber Factory Limited is payable on or before 6 August 1961.

East India Plastics

The East India Plastics (India) Limited has announced that the amount of first call of Rs 2.50 per share shall be payable on or before 30 August 1961. On any amount remaining unpaid on that date, an

interest will accrue at the rate of 5 per cent per annum.

Mysore Paper

The Mysore Paper Mills Limited has obtained the sanction from the Government for the issue of 10,000 equity shares of Rs 10 each, at a premium of Rs 2 per share, to the holders as on 31 August 1961, at four shares for every one share held. The allotment money of Rs 2.50 and a premium of Rs 50 nP are payable on or before 16 October and the balance of Rs 9 (Rs 7.50 plus Rs 1.50 premium) is payable in calls. The new shares will rank proportionately for dividend with the existing shares to the extent of amounts paid-up and only for the proportionate period. The cum-right deals in the shares done until 19 August will be settled on 21 August. The ex-right deals can be done from 21 August and their first settlement will take place after 29 September 1961.

Canara Bank

The Canara Bank Limited has proposed to issue 50,000 equity shares of Rs 50 each at Rs 65 per share to the existing shareholders in the ratio of two shares for every five shares held.

Kerabedarf India Ltd.

Kerabedarf India Limited, Patna, to be established in collaboration with Kerabedarf of West Germany for undertaking the manufacture of all preparatory and moulding machinery for heavy-clay and porcelain industries etc., has been accorded a consent to the issue of capital of Rs 31.25 lakhs divided into equity capital of Rs 25 lakhs and preference capital of Rs 6.25 lakhs, 40% of the equity capital will be subscribed by the foreign collaborators.

Seksaria Cotton Mills

The Seksaria Cotton Mills Limited, Bombay, has been granted consent to the issue of Debentures of the value of Rs 84 lakhs of which Rs 39 lakhs of Debentures will be issued for other than cash and shall carry an interest of 4% per annum, while the balance Debentures of Rs 45 lakhs will carry 6% per annum interest and will be issued for cash. The proceeds will be utilised to implement the scheme of reconstruction of the mills approved by the High Court Bombay. The present paid up capital of the mills is Rs 40 lakhs in ordinary shares of Rs 100/- each.

H.K. Industries

H. K. Industries Private Limited, Bombay, has been granted consent to issue capital of Rs 35 lakhs, divided into 25,000 equity shares of Rs 100/- each and 10,000 preference shares of Rs 100/- each carrying a dividend of 9%, free of company's tax but subject to deduction of taxes at source at the prescribed rates. Of this, equity shares of the value of Rs 12.50 lakhs will be offered to the German collaborator,

M/s. Siegfried Schumacher KG Stehldrahtwerk, West Germany. The proceeds will be utilised for the manufacture of steel wire ropes.

Benger Laboratories

Benger Laboratories (India) Limited, Calcutta, have been granted consent to issue further capital of Rs 10 lakhs in equity shares of Re 1/- each for cash at par; out of this, shares of the value of Rs 7 lakhs will be offered to M/s. Fisons Limited of UK and the balance to the Investment Corporation of India Limited, Bombay, and their nominees. The present paid up capital of the company is Rs 10 lakhs.

Pfizer

M/s. Pfizer Private Limited (formerly Dumex Private Limited) has been granted consent to the issue of further capital of Rs 10 lakhs in equity shares, for cash at par to be allotted to M/s. Pfizer Corporation, Colon, Panama. The proceeds will be utilised for import of machinery and equipment for a process development pilot plant. The company has at present a paid-up capital of Rs 95 lakhs, Rs 65 lakhs in equity shares and Rs 30 lakhs in preference shares.

INVESTMENT NOTES Bengal Paper

The expansion and rehabilitation schemes of the Bengal Paper Mill Company Limited are making good progress. The installation of the brown-stock washing plant, the re-austicizing plant, the water electrification plant and other equipment is expected to reduce the washing losses. These schemes have cost the company nearly Rs 36 lakhs. An order has been placed for the sixth paper machine. Orders for the multi-stage bleaching plant and other equipment, to be obtained from the USA, will be finalised on receipt of the approval of the DLF loan. In order to finance the schemes, it is proposed to raise funds in the form of ordinary shares and convertible loan stocks in due course.

The company has now obtained the sanction from the Controller of Capital Issues for the issue of 72,000 equity shares of Rs 25 each, at a premium of Rs 30 per share, and 64 per cent taxable Convertible Loan Stocks of Rs 30 lakhs. The directors have considered it more convenient to sub-divide its equity capital into shares of Rs 10 each. With this in view, the company has decided, in its meeting held on 31 July 1961, to apply to the Controller of Capital Issues for the sanction of bonus equity shares, to be issued to the equity shareholders in the ratio of one share for every five shares held. After the issue of bonus shares, the aforesaid sub-division will be effected and thereafter it is intended that the right shares will be offered to the shareholders at a premium of Rs 12 per share in the ratio of one equity share of Rs 10 for every three equity shares of Rs 10 each.

IISCO

The production figures released by the Indian Iron & Steel Company for last month show an all-round rise as compared to those of the previous month. The output of Pig Iron has risen to 100,407 metric tons from 96,921 metric tons; Steel Ingots to 77,595 metric tons from 74,228 metric tons; semi-finished Steel to 14,825 metric tons from 13,576 metric tons and Finished Steel to 50,895 metric tons from 36,513 metric tons. Despatches are also higher at 53,410 metric tons against progress. The installation of the 61,410 tons.

INVESTMENT BRIEFS

Amalgamated Coffee has maintained the dividend at 10 per cent taxable, for the year ended 31 March, 1961.

STOCK EXCHANGES Mild Rally After Initial Dip

Watch-Dog Writes:

THERE are some signs of confidence returning to the stock markets, which had been ruling weak till Wednesday in the absence of any incentive or better advices from Bombay. Thanks to the emergence of bull support coupled with some bear-covering, there is a minor rally and, under the lead of speculative issues, prices have shown an all-round improvement. It should, however, be said that the operators are still hesitant to follow the recovery in the absence of any strong bullish news.

After suffering a further sharp setback early in the week, prices on the Calcutta Stock Exchange staged a marked recovery towards the close, thanks to the release of encouraging production figures of the Indian Iron & Steel Company Limited.

The easier turn in the money market, lower budia charges and the emergence of support on expectation of purchases by the LIC, induced a steady recovery in prices on the Bombay Stock Exchange.

On the Madras Stock Exchange, there was moderate activity which was spread in the Miscellaneous section. Planting shares continued to receive selective support.

The London Stock Exchange shook off the doldrums brought on by the Conservative Government's new austerity programme. There were price-advances on a broad front.

CALCUTTA

Calcutta, Friday.

EXCEPT for a mild rally in prices noticed during the closing days of the week following the fixation of normal budia charges and the release of encouraging production figures by the Indian Iron & Steel Company, the local stock exchange remained generally dull. The complete absence of any buying support even at the present low levels, the

news of the decision made by the Union to join the EMC, the strained political relations of the different nations of the world and particularly that of India with Pakistan, the inordinate delay in the announcement of the steel retention prices and the fears entertained in some quarters with regard to the payment difficulties in respect of the interim and final settlements—all these factors induced the bulls to restrict their commitments.

Taking advantage of the situation, bears dominated and depressed the market in their favour. But for the short-covering and replacement buying aided by the prospect of institutional support, the steady downward trend in prices would not have been halted. Fresh support is, however, halting due to the cautious attitude adopted by the operators.

The recent new loans had their effect on the Gilt-edged market. There was a general downward adjustment of prices in the long-dated issues so as to align themselves with the new interest rate pattern. Short-dated securities, however, continued to be in request, while State Loans came in for selective support. 3 per cent 1986 Conversion changed hands at Rs 72 to Rs 72.50.

Bank shares continued to remain firm following the release of encouraging working results for last year by some of the banks. Punjab National changed hands at Rs 23.75 to Rs 24, to close finally at Rs 23.94. United Commercial remained practically unchanged at Rs 91.

Jute shares met with a predominance of sellers on the fear that the results for the current year would be most unsatisfactory in view of the difficult conditions generally experienced by the industry. The only exceptional features were Birlas having sustained support up to Rs 26.94 from Rs 26.50; Chitavalsah up to Rs 11.31 from Rs 10.69 and Champdany up to Rs 113 from Rs 111. Howrah were, however, on offer at Rs 19.37 to Rs 20.25; New Central at Rs 18.50 to Rs 18.62 and Dalhousie at Rs 100 to Rs 106.

Although Coal shares moved up slightly in sympathy with the general trend of the market, the volume of business did not show any marked increase in the absence of any influence to enthuse the investors. Besides, reports of stocks accumulating at pit-heads due to lack of adequate supply of wagons were still pouring in and these were bearishly interpreted. New Beer-broom changed hands at Rs 23.50 to Rs 24.00; South Karanpura at Rs 8.50 to Rs 8.62; Central India at Rs 13.19 to Rs 13.47; Western Bengal at Rs 9.87 to Rs 10 and Bengal at Rs 380 to Rs 383. Burrakur fluctuated irregularly between Rs 19.19 and Rs 19.50 to close finally at the last quoted level.

Although Tea shares continued to meet with selective buying, the turnover was poor due to a general anxiety with regard to the UK's decision to join the ECM and the subsequent developments that might take place in the matter of tea exports. Bishnauth came in for business at Rs 26.06 to Rs 26.25; Dufflaghur at Rs 32.50 to Rs 32.75; Grob at Rs 11.06 to Rs 11.25; Hasimaru

at Rs 25.12 to Rs 25.25; Methoni at Rs 16.19 to Rs 17.19 and Jay Shree at Rs 24.19 to Rs 24.25.

After a long time, Sugar shares came in for selective support on the hope that the earnings of the companies might have improved due to higher production during the current season. An outstanding feature of the week's trading was Carew, which spurred to Rs 16.50 from Rs 14.25 on rumours of the possibility of declaring an interim dividend in the near future as against nil in the previous years. Ramnugger Cane were supported up to Rs 30.44 from Rs 30.19; Dyer Meakins up to Rs 35.25 from Rs 33.12 and Raza/Buland up to Rs 11.62 from Rs 11.44. Cawnpore were a narrow market around Rs 13.12.

Only routine business was done in the Cotton Mills section. Kesaram changed hands at Rs 29.12 to Rs 30.19; J. K. Rayon at Rs 19.08 to Rs 19.75; Dunbar at Rs 26.12 to Rs 26.87 and Bowraah at Rs 23.81 to Rs 24.00. Elgins were, however, quiet at Rs 19 against Rs 19.87 with Jay Shree well maintained at Rs 16.50.

After ruling initially weak, Engineering shares displayed a firmer tendency towards the close under the lead of Indian Irons following the encouragement derived from the production figures released by the company for last month. Better advices from Bombay were also a contributory factor. After opening quiet at Rs 26.60 and touching a low of Rs 26.50, Indian Irons recovered steadily to Rs 26.78 before finishing the week at Rs 26.70. Following were the production figures (in metric tons) for the past three months:—

	July	June	May
Pig Iron	100,407	96,921	100,815
Steel Ingots	77,595	74,228	70,912
Semi-finished Steel	14,825	13,576	11,065
Finished Steel	50,895	36,513	31,100
Despatches	53,410	51,410	39,812

Among other engineering shares, J. K. Steel met with sustained support up to Rs 38.75 from Rs 38.37; Braithwaite up to Rs 36.25 from Rs 36 and Jay Engineering up to Rs 29 from Rs 28.87. Jessop, however, lacked fresh support, quoting Rs 19.69 against Rs 19.94, while TEXMACO moved narrowly between Rs 18.15 and Rs 18.55 to finish the week at Rs 18.40.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:—

	Week's High Rs	Week's Low Rs	Week's Closing Rs
Orient Paper	34.75	34.00	34.50

INVESTOR'S SUPPLEMENT

Sentiment Cautious in July

The stock market commenced July somewhat hopefully. Sentiment was encouraged by the removal of uncertainty regarding the quantum of foreign aid that would be available for the Third Plan and nearer home by the higher dividend announced by Telco. But this sentiment was soon bogged down by a crop of fresh uncertainties. The result was that the initial improvement proved short-lived and the market was in a depressed mood by the end of the month.

The revival of interest noticeable in earlier dealings stemmed also from the fact that, contrary to expectations, the last week of the previous month passed without bringing any curb measures from Government. It had been generally expected that authorities, who were credited with having finalised measures with regard to the margin system and brokerage, would announce them soon enough. Operators were relieved when the week-end came and passed off without any curb measures. The delay in the anticipated announcement imparted strength to the growing feeling that since all the Stock Exchange associations in the country had written to Government that there was no need for any restricting steps on trading, Government would not be in hurry to move in the matter.

But the succeeding weeks of the month found the market in a cautious mood which deteriorated further toward the close of the month into one of listlessness. The early part of the second week was full of conflicting rumours about the TISCO dividend and thoughts about the second tranche of central loans. Strangely enough sentiment showed little change even when the announcement was made that the dividend of TISCO was higher. The Tata Iron and Steel Co., Limited recommended a dividend of Rs 6.80 per share net and a bonus of 45 nP per share net on the ordinary shares. Last year, the company had paid a dividend of Rs 6.80 (after deduction of tax) on the ordinary shares. From the behaviour of the market it was evident that a majority of operators expected the increase in dividend to be much higher. The fact that the country's foreign exchange reserve had fallen to a new low was another depressing influence during that week.

It was a mixed bag of favourable and unfavourable news that came in the third week of the month and consequently market men were unable to make a move either way in earlier dealings. Toward the close however the uncertainties in the investment situation came to gain dominance with the result trading was on a cautious note. The anxiety over the low foreign exchange reserve position was relieved by the announcement of the proposal to use the International Monetary Fund's stand-by credit of \$250 million to meet its short-term balance of payments difficulties. Operators had also derived considerable comfort from the encouraging speech of the

chairman of Telco and continued good corporate news. But as against these optimistic factors there were quite a few depressing influences. The widespread floods in the country and reports of dislocation to traffic and damage to property induced caution.

holders as the higher TISCO dividend had come from tax refunds. But strangely enough, market sentiment continued to be depressed even after the announcement of a higher dividend by the Indian Iron and Steel Company Limited. The company had decided to raise the dividend

Further, operators seemed to derive no comfort in the thought about the dividend of Indian Iron. For, it was held by many that it was not correct to expect an increase in the dividend of Indian Iron just because TISCO had chosen to make an increased distribution to its share-

holders as the higher TISCO dividend had come from tax refunds. But strangely enough, market sentiment continued to be depressed even after the announcement of a higher dividend by the Indian Iron and Steel Company Limited. The company had decided to raise the dividend

If even such good news had not been able to lift the market from its listlessness, it was because the general run of the market people were not quite sure that Government had abandoned its intention of initiating suitable measures to curb speculation in stock markets. While the generality of the investors and operators believed that transactions on the stock markets were quite orderly, there was reason to believe that government did not think so. It was this lurking fear of a sudden onslaught in the form of curb measures that kept bulls on the sidelines. Other developments like UK's austerity measures and the disturbed international situation were not also conducive to an expansion of buying interest. It was thought that the increase in the UK Bank Rate would upset calculations of the quantum of effective aid expected from that country. An additional worry was the repercussions on our exports of tea, jute goods, cotton textiles and other products in the event of Britain electing to join the European Common Market.

Sectionwise, jute shares were depressed because of the uncertain outlook for the industry. Although it was expected that the industry would be able to work profitably later in the year when raw jute supplies would be plentiful, the immediate prospects were not rated bright what with the continued shortage of raw jute and the consequent possibility of cut in production if not by a block closure of mills or a sealing of additional looms but by the closure of number of mills as and when they find themselves without any raw jute.

Although investors evinced some interest now and then in coal shares, there was no broadening of enquiry as the general tendency was to await further news about World Bank Loan to the private sector collieries. In the absence of any official indication that coal production would be made remunerative by means of equitable prices, there was no sustained support.

While selected tea shares were in request, the general trend was rather subdued largely because of the obscure outlook for tea exports to the UK in view of the British proposal to join the European Common Market.

Textile shares were in good request with selected shares rallying smartly on prospects of higher production and diversification of activities during most part of the month but toward the close they too shared the general trend of the market and met with profit taking.

Sugar shares were rather listless due to uncertainties concerning exports. Prices were marked moved within narrow limits.

Except for one or two shares which attracted sustained support, the miscellaneous section generally reflected the main trend of the market especially in the latter half of the month.

A Formal Welcome

WELCOME to the Third Plan presented early this week to Parliament has necessarily to be a formality. The subject has been discussed to near-inanition in the thirteen months since the draft outline was made public and the changes that circumstances and second thoughts have forced on the planners have been diligently plotted over the year. Elsewhere in this issue will be found a synoptic view of the Plan as it has finally emerged and a discussion of some of the important changes that have been incorporated in the final version of the Plan. In the coming weeks, we shall be returning to specific questions raised by the programmes and strategy outlined. Meantime certain general considerations may be restated.

The basic fact about the Indian economy that needs to be constantly remembered is that the decisive blow on Indian poverty is still to be dealt. To say this is not to denigrate the efforts of a decade of planning but to recall the real dimensions of our tasks. As the first chapter of the Plan, attributed to Mr Nehru's draftsmanship, puts it, the ideal of a good life for the masses of our people is still in the realm of desirable things. What has been achieved so far and what is planned for in the next five or even fifteen years are but manifold efforts at making the first tentative challenges. The aim of the Third Plan is the modest one of increasing the national income at the rate of 5 per cent per annum and the expectations in terms of per capita income are even less ambitious. The strategy to be adopted in achieving this aim has clarified itself by trial and error during the first and second plans. One of the most refreshing things about the plan is the ready admission of the mistakes of the past and though it cannot be said that the lessons learnt have been fully digested, the Third Plan shows a livelier awareness of the complexities and inter-relatedness of the various aspects of developmental effort than the earlier essays in planning did. This has tended to give it a certain inconclusiveness and a sense of loose-ends not having been gathered and neatly tied up. This has been deplored in totally different quarters for totally different reasons. But the tentativeness of the Plan in some of the most crucial points is its virtue rather than its defect. Much unkind fun has been made of the two sets of targets—a physical programme for Rs 8,000 crores and a financial expectation of only Rs 7,500 crores. But the Plan's explanation of this admittedly ambiguous situation can be rejected only by those who prefer a neat model to a clearer indication of the ambiguities of the situations. It would have been repeating the mistakes of the second plan and also plainly disingenuous, if these doubts had been concealed behind bland assumptions one way or the other.

The most crucial tangible uncertainty is, of course, over the resources available for the plan. This has been admitted by the Plan. Paradoxically, the one expectation over which we are supposed to have the least control, has been the only one about which anything can be said with a fair degree of certainty. We

refer to the expectations of foreign aid for the Plan. This gives rise to several thoughts at once, some of them not very flattering to our self-esteem. The expectations of domestic savings are the subject matter of the widest range of guesses. On the eve of the finalisation of the Third Plan, studies of domestic savings gave an optimistic picture of potentialities, but such studies, including that by the NCAER are admittedly based on several assumptions that are not easily verifiable. Even supposing that these estimates are correct, the assumption that all these savings will be available for the plan may be misplaced. The second plan's experience has been particularly painful. Against an expectation of surplus from taxes at 1955-56 rates for plan purposes of the order of Rs 350 crores, there was an actual deficit of Rs 50 crores. And though the gigantic tax effort demanded in the name of the plan was over-fulfilled (Rs 1052 crores against an expectation of Rs 450 crores and an uncovered gap of Rs 400 crores), the nibbling by non-plan expenditure on it has made government come perilously near bad faith. The Third Plan has programmed for large surpluses from current revenue (Rs 550 crores) and additional taxation and additional surpluses from state undertakings (Rs 1,710 crores). The details of these hopes are either sketchy or non-existent. Beyond general deductions from rates of possible savings and buoyancy in current revenue, there is little else to go on. And the most crucial objection to these projections of public sector expectations is that it is blandly assumed that the private sector has no need of part of the additional savings estimated and could be left to its own devices. It is a serious weakness in a plan that embraces, on principle, the whole economy, that it figuratively washes its hands off when it comes to matters for which it has no direct responsibility.

Three things, can be desiderated as essential for the success of the Third Plan. First among these is the pursuit of a rational price policy. There is every danger, with the gradual erosion of the cushions of import surplus and other aids to hold prices, of the rewards of planning being set at naught by a general increase in prices. With shortage in raw materials and rise in its prices noted recently, cost inflation is a distinct danger. Secondly the success of the plan depends to a very great extent on our export performance. Though the targets of export earnings have been arithmetically put up in the plan, the measures to be adopted to realise them are still in a state of tentative formulation. And even when they are avowed, practice varies notably from profession. The element of cost which is crucial in any programme of export earnings, is yet to be grappled with seriously. The third important imponderable of the plan is the organisational and administrative adequacy of the country for the tasks that the plan will impose. As always, this aspect of the plan is least discussed, since it involves going into details. But if we are not careful, it may turn out that the plan is hopelessly ambitious, not in its financial and physical expectations, but in its human expectations.

"WITH
THE
WIND"

...entreated the Ancient Mariner, "we must sail with the wind, Mr. Tubophile, or else we'll be all at sea".

"That's exactly where we are, Sir Mariner", retorted Mr. Tubophile warmly, "all at sea. I am bound for the shores of Cathay and you have sailed me to the coast of Australia. Rabbits and Kangaroos! I'll not sail with the wind, for the wind or by the wind. In fact, I'll not sail at all...not in these wind guided, wind powered galleons of tubeless times—deuced uncomfortable, destination uncertain and quite unreliable with or without the wind. I'll brave the high seas again in my own well tubed times, when marine boilers with tubes supply sure power to luxury liners which reach the right destination—wind or no wind. Sir Mariner, full steam ahead now. Rabbits and Kangaroos! I mean all sails up".

THE THIRD PLAN

Where It Differs from Draft Outline

WHEN Parliament discussed the Draft Outline of the Third Plan about this time last year, the complaint was heard that the word 'Socialism' nowhere found a place in all the 265 pages of the Outline. The same complaint cannot be raised against the final report on the Plan—incidentally this is three times the size of the Draft Outline with its 774 pages—which was presented to Parliament last Monday. The third section of the chapter on "Objectives and Development" is significantly titled "Progress Towards Socialism", and declares categorically: "It is a basic premise in India's Five Year Plans that, through democracy and widespread public participation, development along socialist lines will secure rapid economic growth and expansion of employment, reduction of disparities in income and wealth, prevention of concentration of economic power, and creation of the values and attitudes of a free and equal society. These are vital objectives."

If the foregoing constitutes a clarification of the objectives which was considered timely and necessary, the setting up of two targets—one for financial outlay and the other for the physical programmes included in the Plan—is a striking departure in the strategy of planning. In explanation of this double set of figures, which many who have tried to follow the course of planning found rather confusing, it is explained that the programme for development "should proceed in a connected manner in accordance with an approved scheme of priorities so that, as requisite foreign exchange and personnel become available, corresponding internal resources are also found and rapid progress is achieved." Moreover, past experience has shown that "if a Plan for a five-year period is prepared only in terms of the financial resources in sight at the time of the preparation of the Plan, the fullest use cannot be made of all the opportunities which present themselves in the course of the implementation of the Plan."

The Plan as it has finally emerged contains few departures from the estimates which were considered by the National Development Council last January and approved at the subsequent meeting of the Council which concluded on 1 June, 1961. The Plan envisages a total outlay, during the five-year period, of Rs 11,600 crores, of which Rs 7500 crores will be the outlay in the public sector, and Rs 4100 the investment expected in the private sector. The total outlay represents an increase of Rs 350 crores over the level indicated in the Draft Outline. This increase is made up of Rs 250 crores in public sector outlay and Rs 100 crores in private investment. The outlay in the public sector is made up of Rs 6300 crores investment (of which Rs 200 crores represent transfers to private sector) and Rs 1200 crores current outlays on salaries of staff, subsidies etc.

As compared with the Draft Outline, investment in the public sector shows an increase of Rs 100 crores and current outlays of Rs 150 crores. The limit for the programmes included in the Plan has been fixed at Rs 8,000 crores approximately (excluding inventories) of which the plans of the States account for Rs 3,847 crores, and of Union territories Rs 175 crores. The Plan has been drawn up on the basis that the physical programmes to be accepted for implementation over the five-year period should not be altogether limited by the financial resources in sight at the stage

of drawing up the Plan, although the outlays have necessarily to be regulated with reference to the resources actually mobilised from year to year. As indicated above, the financial limit on outlays has been fixed at Rs 7,500 crores for the public sector.

With this limit, allocations have been increased under most of the heads of development as detailed below. The most significant increases are in the fields of development of power and transport and communications. The allocations under the different heads of development of the outlay of Rs 7,500 crores, the corresponding figures of the Draft Outline and the cost of the physical programmes included in the Plan are indicated in the following table.

	(Rupees Crores)			
	Draft Outline	Third Plan	Financial outlay	Cost of programmes
(1)	(2)	(3)	(2)	(1)
Agriculture and Community Development	1025	1068	1090	43
Irrigation, major and medium	650	650	660	...
Power	925	1012	1020	87
Village and Small Industries	250	264	264	14
Organised Industries and Minerals	1500	1520	1882	20
Transport and Communications	1450	1486	1655	36
Social Services and Miscellaneous	1250	1300	1527	50
Inventories	200	200	200	...
Total	7250	7500	8298	250

The provision of Rs 1,090 crores for Agriculture and Community Development includes Rs 250 crores for Minor Irrigation which is one of the larger investment programmes in the Third Plan. It is estimated that the possibilities of minor irrigation development could be extended eventually to a gross area of about 75 million acres. The larger provisions under this head (Irrigation and Community Development) do not indicate higher physical targets. On the contrary, the physical targets in many instances have been scaled down as compared with the Draft Outline, possibly on the basis of revised estimates of cost. The estimate of gross area irrigated under the Third Plan is now 25.6 million acres 13.4 million kw of which 12.9 million kw medium works and from minor irrigation works), whereas the Draft Outline estimated 13 million acres under major and medium works and 14 million acres under minor irrigation works, a total of 27 acres of gross area irrigated. The targets of production for some major crops like cotton, jute, coconut and pepper have also been slightly lowered. The target for food crops has been set at 100 million tons. There are slight increases in the targets for oil seeds and sugar cane. The target of production for tea has been stepped up from 850 million pounds. There are no changes in respect of arecanut, cashewnut, cardamom, lac, tobacco, coffee and rubber as compared to the figures in the Draft Outline.

The target for Power (installed capacity) at 13.4 million kw of which 12.69 million kw are expected to be in commercial operation by the end of the Plan period represents a substantial increase over the Draft Outline target of 11.8 million kw. The estimated cost of the power programme in the public sector is Rs 1039 crores. This figure includes full provision for DVC power programme and Bandel thermal station; the figure of Rs 1020 crores shown in the table above does not include the full provisions in respect of these two items.

The financial provision for industries has been increased by Rs 20 crores to Rs 1520

crores, while the cost of the programmes included in the Plan amounts to Rs 1882 crores. Expansion of steel plants at Durgapur and Rourkela, Heavy Machine Tools, Basic Refractories, a new Machine Tools plant in Punjab, Gujarat Oil Refinery, Heavy Structural, Heavy Plate and Vessels, Gorakhpur Fertiliser Factory, Security Paper Mill and expansion of Hindustan Cables, Hindustan Machine Tools and Praga Tools have been included in the list of new projects for which external credits are assured wholly or partly. Also included in this list are programmes for increased production of coal by NCDC and at Singareni. Among the new projects included in the Plan may be mentioned the pilot iron and steel plant of the Madras Government.

There is no increase in the Plan allocation of Rs 890 crores for Railway development as shown in the Draft Outline. But the Railways are expected to find out of their own resources Rs 385 crores instead of Rs 330 crores, so that the total outlay on Railway programmes will be Rs 1275 crores instead of Rs 1225 crores. The only new line included in the Plan is the line to Haldia Port. It is also stated that the following lines are under consideration for inclusion in the Railway programme: Mangalore-Hassan; Bangalore-Salem; Manamadurai-Virudhunagar; rail link from Sukinda Daitar mining area in Orissa to the main line from Kharagpur to Cuttack.

The total allotment for roads and road transport has been raised from Rs 268 crores in the Draft Outline to Rs 297 crores, while the cost of the road programmes included in the Plan is estimated at Rs 324 crores. The figure of Rs 1486 under Transport and Communications includes provision, made for the first time, of Rs 8 crores for tourism, Rs 1 crores for broadcasting and Rs 8 crores for other communications. There is no change in the provision for Shipping, Ports and Inland Water Transport.

The estimates of financial resources from different sources have been continually revised. The estimate of Rs 7250 in the Draft Outline was raised to Rs 7453 crores on the basis of a review undertaken before the NDC meeting last January. The position was further revised by the Savings Committee set up by the NDC. The scheme of financial resources to the Plan as it stands at present is shown in the following table along with the corresponding figures of the Draft Outline and those considered by the NDC in January.

	(Rs Crores)		
	Draft Outline	As presented to NDC in January	Final estimates as included in Third Plan
Balance from current revenues (excluding additional taxation)	350	421	550
Contribution of Railway	150	71	100
Surpluses of other public enterprises	440	449	450
Loans from public (net)	850	850	800
Small savings (net)	550	585	600
Provident funds (net)	230	249	265
Steel equalisation fund (net)	160	160	105
Misc. capital receipts	120	208	170
Total of above 8 items	2850	2993	3040
Additional taxation including measures to increase surpluses of public enterprises	1650	1710	1710
Budgetary receipts corresponding to external assistance	2200	2200	2200
Deficit financing	550	550	550
Total	7250	7453	7500

12 August 1961

The resources of State Governments are now estimated at Rs 1462 crores, taking into account increased allocations of income-tax and Central excises, against Rs 1200 in the Draft Outline and Rs 1346 estimated last January. Together with the Central assistance of Rs 2375 crores, the total resources available for financing the State plans amount to Rs 3837 crores, against the programme limit of Rs 3847 crores. On the basis of the present estimates, the gap between the financial and programme limits has been narrowed to Rs 10 crores, so that with a little additional effort, the States should be able to implement their plans in full.

The direct foreign exchange cost of the total investment of Rs 10,400 crores is estimated at Rs 2030 crores, and the total foreign exchange requirements, including cost of maintenance imports and repayment obligations, at Rs 5750 crores against Rs 5670 crores in the Draft Outline. There is no change in the estimate of Rs 2600 crores required as external assistances. Estimates of export earnings have been raised from Rs 3450 crores to Rs 3700 crores over the five-year period.

The following table shows how the foreign exchange requirements of the Third Plan will be financed.

	(Rs Crores)	
	Third Plan	Draft Outline
A. Receipt:		
1. Exports	3700	3450
2. Invisibles	Nil	120
3. Capital transactions (net) excluding receipt of official loans and private foreign investment	(—)550	(—)500
4. External assistance	2600	2600
Total	5750	5670
B. Payments:		
1. Import of machinery and equipment for plan projects	1900	1900
2. Components, intermediate products etc. for raising production of capital goods	200	200
3. Maintenance imports	3650	3570
Total	5750	5670

The foreign exchange requirement of the investment in the private sector is estimated at Rs 510 crores which is included in the figures above. The total investment in the private sector, including Rs 200 crores transferred from the public sector, is estimated at Rs 4300 crores allocated as follows:

	(Rs Crores)	
	Third Plan	Draft Outline
Agriculture including irrigation	850	850
Power	50	50
Transport	250	200
Village and Small Industries	325	325
Organised industries and minerals	1100	1050
Housing and other construction	1125	1125
Inventories	600	600
Total	4300	4200

The increase of Rs 100 crores in estimates of investment in the private sector is equally divided between transport and organised industry and minerals.

URBANISATION

Problems and Opportunities

THE reported instruction to State Governments to discourage influx of villagers into towns may be due to the last census, pointing

to the rapid growth of most towns since 1960. The trend is unmistakable and the consequences are disturbing: hence the Centre's hint that the exodus must stop in spite of the known facts about pressure on land, rural poverty and other problems. Whether it is desirable to make more people to stay on the land is one issue. What excites the Government is the rise of shanty towns on the outer fringe of towns. They aggravate the slum problem and it is the desire for clearance and the prevention of new slums coming up that explains the Centre's now, guarded direction to the State Governments to check the growth of towns.

The inability of most municipalities to tackle the slum problem, to improve civic services and to enhance revenue may be cited as a reason for the warning. The natural disasters that hit some towns became unmanageable because of a surplus submerged tenth that could not succour itself. That refugees coming after the partition of India have contributed to the problems, especially, in West Bengal has to be recognised, as also the circumstance that the growing strain on accommodation has forced up costs of living, leading to wage demands. By preventing the further growth of industry in towns the Government could take care of many problems.

Industry, however, demands a degree of urbanisation, and it would be impossible for cotton mills in Madurai or Madras to ignore the advantages of existing location. The whole issue is not one of industrial location on a new pattern. It is rather one of creating new towns by deliberate, intelligent planning. The proper use of land in towns for both life and work so as to increase wealth may demand more than a review of licensing. Questions like power supply and transport facilities demand attention. No enterprise in India can set up a new town in the wilds as did International Nickel in Manitoba because of the cost. Of course, Hindustan Aluminium is creating a township near the Rihand Dam to make sure of power to convert the bauxite of Rewa into aluminium. But enterprises involving crores stand on a different footing: they are in a position, and probably have, to invest in infra-structures on their own. But they too must rely on major, metropolitan markets for selling their goods. That too involves the entry of labour. And a labour reserve helps to keep wages in towns low, as employers will be induced to admit today. The uncontrolled growth of big towns in which noxious trades develop is certainly not desirable. That is perhaps the object of Government, which does not apparently expect early creation in India of model industrial township like Rahim Yar Khan created by Unilever in Bahawalpur, sufficient unto itself and providing vanaspati and soap for West Pakistan.

The problem of decentralisation was examined in 1947 in Madras by a Planning Committee and nursery power stations to help new industries started away from towns were recommended. In spite of much new industry being diverted to the suburbs, the pattern of old industrial concentration persists. The visiting US sociologist sees in Ahmedabad and Bangalore new, but depressed, colonies spring up. The subnormal standards of life frighten many, but it is not realised that even life on the pavement is better than starvation in the villages. Subsidised housing provided by employers can help little, as has been found out already. The provision of essential amenities for the villages, intensive agriculture to ensure continuous employment and social reform (in the widest sense) must soon be

undertaken to check the drift of the unemployed to towns, mainly, in the hope of getting jobs.

There is no single remedy for the problem but our planners might see that not all villages desire modern industry and many prefer the slow and old way of life. The community development scheme has so far produced few model villages. Better roads, more power and perhaps schools and dispensaries may produce a desire to stay at home. But more important is the levelling up of wages in rural areas so as to secure a local supply of labour for industry in a rural setting. The UNESCO centre may give some valuable advice in this connection though only impatient idealists can hope to see Indian analogies of Bournville or Port Sunlight. The growth of industry, for instance, in Durgapur cannot be retarded and villagers will come in numbers looking for service of some sort. The public enterprise must take care of the problem by earning enough to invest in amenities for new inhabitants because the welfare of the town workers is involved. The urban complex is inseparable from modern large-scale industry to which the Plan is deeply committed. Towns provide markets, for consumers in large numbers ensure a ready offtake of most goods from tea or soaps to cycles. The villages can afford to spend little and unless rural incomes go up, they cannot support shops offering conventional necessities like shoes or umbrellas.

The existing consumption pattern influences the operations of organised industry to some extent and it is important to remember that industry must at once replace imports and enlarge exports. The impulse of towns to grow rapidly may be linked with the prevalence of unemployment, and the influx into towns is derived largely from the present lack of opportunities. Whether the State Governments can regulate the flow by conscious effort may appear debatable for adult suffrage makes even a large collection of voters desirable. But the political aspect is unimportant, as compared with the rise of property values and the probable increase in income from rents, leading to higher municipal rates. To check the trend may be inexpedient, because what most Indian towns desire is improvement needed for growth and the present handicaps can be removed only by larger income. This applies to big cities like Calcutta as well as medium towns like Ranipet because circumstances favour growth and the natural increase in towns is not yet retarded by birth control though it is apparent that the inter-censal increase in India's population is not evenly distributed.

A further point that needs notice is that internal migration is vital for relieving the pressure noted on the land in backward areas. The movement of labour must be made as easy as the movement of capital and inability may be termed a means to efficiency since outsiders work harder than local people and are less susceptible to disturbing influences. That big towns promote unrest may be one reason for desiring a diversion of industry to suitable rural areas and the Government may even hope that diversification of agriculture may be assisted by the imposition of discreet curbs on the rural exodus. The advantages of a diffusion of industry are obvious and sugar mills, for instance, may find it easier to rely on seasonal labour because they are set up well away from big towns. The movement of industry towards villages will demand extra transport facilities, as was rightly pointed out last weekend, when the foundation-stone of a new, large sugar mill near Lalgudi was laid by the Chief Minister of Madras.

Australia's Changing Financial Structure—II*

This view is directly related to certain important aspects of Australian monetary policy for the past decade, with its concentration of attention on banks as "creators of credit." Professor Sayers points out that extension of credit by banks has its counterpart in extension of trade credit by nearly all units in the vast multitude of manufacturing and trading enterprises. In the light of this thesis, which explains also the Radcliffe Committee's line of reasoning, there is no clearcut distinction between the granting of credit by banks and the extension of credit terms by other firms involving credit transactions on one side or the other. He goes so far as to maintain that this distinction "is, if not completely false, at least misleading" from the point of view of effective demand.

These statements are particularly relevant to Australian conditions and Professor Sayers went on, in his presidential address, to refer to the subject of "velocity of circulation" of money and resurrected what had become an outmoded theory.

The experiences of these years have clearly shown that it is not only bank credit which can add fuel to the inflationary fire, but that so-called "capital borrowings" can have just as great an inflationary effect if they result in a rapid enough turnover of money and other liquid assets. It is of little consequence that the volume of bank money—the total of deposits in the trading banks—has failed to rise significantly, if these deposits have been used many times over, moving from one banking account to another to finance a large volume of transactions, and cause pressure on the resources of the economy.
