It is not sufficient to maintain a load of control on the banking system alone. Rate of turnover of the money supply is of equal or greater significance. It is not an adequate answer to maintain that there is no risk of inflationary pressure if funds are borrowed by one intermediary from another and returned to the banking system without any increase in the total volume of money. There has been ample illustration in recent Australian experience, that the volume of bank money can be maintained so that it shows very little expansion. But the economy, at the same time, can be in a period of strong inflationary pressure through the activities of financial intermediaries outside the banking system and the general expansion of trade credit in industry and commerce.

WIDER CREDIT SUPERVISION

The Radcliffe Committee referred to the "diffused difficulty of borrowing" following the limitation of bank lending in 1955. This same diffused difficulty of borrowing has been all too apparent for a much longer period in Australia. In Australia we have had a succession of restraints imposed through banking controls and fiscal policies in the successive periods, which, in broad terms may be designed as 1952-53, 1956-57 and 1960-61.

Australian policy has been imposed against the inexorable pressure of the balance of

*Courtesy: A. N. Z. Bank Quarterly Survey, July 1961.

payments, which has been of great significance in each of these three periods. We have seen a major variation in the application of the 1960 policy through the broad-sword approach of freeing imports and the more positive application of the control of interest rates, in addition to the previously heavily exploited controls over the banking system and through fiscal policy.

We may not yet have reached the stage where it is desirable or practicable to supervise in any clearly definitive way the extension of trade credit, but there are pressing arguments to assert that the approach to monetary policy of the period of 1930-60 may not be relevant for the post-1960 era. The period of the 'fifties has seen material extension of trading bank spheres of influence, not only in Australia, but in the United Kingdom as well.

LONG TERM CREDIT

Trading banks now cover a greater range of financial territory than previously, although perhaps in some respects, particularly in Australia, the range has been narrowed in other directions, most notably in the field of medium to long term credit. But at a time when this withdrawal from the last-mentioned field, previously occupied by the trading banks, has been required under official policy in Australia, doubts are stirring in the older established United Kingdom banking system. In the United Kingdom, the extension of medium to long term credit by banks has traditionally been frowned upon, but it is now being asked whether trading banks should not, in rendering a full service to industry and commerce, be engaging in longer term loans in such fields, particularly, as shipbuilding and heavy construction.

The growth of the trading banking field has been largely in the direction of what might be termed retail banking. The spread of branches in the search for deposits, extension of the banking habit through wider sections of the community, provision of massive accounting services to cope with the growing demands of share register work and nominee services and investment requirements, extension of trading banking activity into hire purchase business, either direct or through subsidiaries, establishment of savings bank subsidiaries, unit trust investment, and development of personal loans are further examples of the spread of banking into wider, more diffused fields.

EXTENSION OF SCOPE

It is perhaps not too much to envisage that the development of economic thought, as exemplified on the report of the Radcliffe Committee, may well lead to a still further extension of banking into the wider field of credit. Hitherto the tight controls imposed over trading banks by strict adherence to the quantity theory of money, have restricted and limited the volume of their credit facilities, inhibiting them from rendering an expanded banking service in their traditional sphere, and thus opening the way for "fringe institutions".

While, technically, the quantity theory of money would argue that such fringe institutions do not stimulate inflationary pressure, the experience of the past decade in Australia refutes such arguments.

Just as the closing years of the 1950s saw a forward step in monetary theory in the publication of the report of the Radcliffe Committee, so the start of the 1960s saw, in Australia, the first steps towards what could

perhaps be regarded as the extension of direct controls beyond fiscal policy and monetary control in the banking sense, to embrace credit in the wider sense envisaged by the Radcliffe Committee. The November credit restrictions, with their extension of controls in the financial and monetary spheres outside the activities of the trading banks, introduced a new concept.

What is the basis of this current approach? Is it to control the fringes of the financial system in such a way as to limit their activities and force back into the banking system much of what it has lost in recent years? There is perhaps much to commend such a policy from an official point of view, because the banking system is one which can be controlled from day to day, and controlled far more effectively than other sectors. Or is this new policy evidence of the acceptance of the fact that control of the volume of money in the sense of "bank money" is not enough.

There can be little doubt that "velocity of circulation", in the widest sense of the term, does play an important part. If current moves are a realization and acceptance of this, the fringe financial institutions, as they are called, can expect a continuance of some system of control, extending into that wider segment of the credit structure embraced by the Radcliffe Committee.

The recent changes are an indication that the 1960s could well see some containment of the fringe institutions and the outside credit market, accompanied by some strengthening of the banking system, with a restoration of the traditional role of the trading banks as the major contributors of credit, both for working capital and for medium term purposes.

Key to Planning & Prosperity

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

Pronounced Trend of Deposit Growth

Eluding of counterpart funds with the State Bank, in the period between the beginning of 1957 and the end of June 1960, served to exaggerate the trend of growth in bank deposits; in the period since then, the repayment of the funds by the State Bank has cured the full magnitude of the continuing trend in Deposits, a phenomenon which was further aggravated by the fact that, for the first time in many years, the second half of 1960 witnessed a net fall in Deposits. An attempt is made here to analyse trends in bank Deposits from 1956, and also to isolate counterpart fund transactions.

Inclusive of counterpart fund transactions, Table I shows, the most prolific half-year Deposit growth was the six-months period June 1959, when the rise for all Scheduled Banks amounted to Rs 161.00 crores. January/February 1957 was the best half-year for the State Bank, and January/June 1959 the most "lucrative" for other Scheduled Banks. In the half-year to December 1960, banks "lost" Deposits worth Rs 78.34 crores, of which Rs 63.75 crores were traceable to the State Bank; and in the best six-month period, Scheduled Banks increased their Deposits by Rs 35.22 crores despite a loss of Rs 43.56 crores by the State Bank.

On the base of Deposits as at 28 December 1956, the rise registered in the figures of Scheduled Banks other than the State Bank, expressed as a percentage of the base figure of Rs 859.73 crores, in the half-years are then as follows:

Half-year to	Rise in Rs Crores	Rise as %age*
28-6-57	85.24	9.9
27-12-57	57.53	6.7
27-6-58	76.57	8.9
26-12-58	22.83	2.7
26-6-59	97.36	11.3
25-12-59	49.69	5.8
1-7-60	84.26	9.8

Percentage of base figures of Rs 859.73 crores.

Deposits of Scheduled Banks other than the State Bank rose from Rs 859.73 crores on 28 December 1956 to Rs 1,333.21 crores on 1 July 1960, that is, a rise of 55.1 per cent. Over the same period, Deposits of the State Bank rose from Rs 242.02 crores to Rs 637.03 crores. If we have to bear in mind the fact that the latter figure includes counterpart funds. Mr. C. Bhattacharyya, the State Bank Chairman, revealed last week that, after repayment of counterpart funds amounting to Rs 144 crores since July last year, the amount of such funds still remaining with the institution is now Rs 30 crores. Thus, Deposits of the State Bank on 1 July 1960 included Rs 304 crores of counterpart funds. Net of counterpart funds, Deposits of the State Bank are seen to have risen, between 28 December 1956 and July 1960, by Rs 91.01 crores. That is to say, the rise in non-counterpart fund Deposits

of the State Bank over the period has worked out to 37.6 per cent. This compares with the rise, over the same period, of 55.1 per cent in the case of other Scheduled Banks. The rate of growth of "normal" Deposits with the State Bank has therefore been correspondingly lower. For the seven half-year periods, the percentage rise in "normal" Deposits of the State Bank can be calculated as follows:

Half-year to	Percentage rise in Deposits of Other Scheduled Banks	State-Bank of India
28-6-57	9.9	6.8
27-12-57	6.7	4.6
27-6-58	8.9	6.1
26-12-58	2.7	1.8
26-6-59	11.3	7.7
25-12-59	5.8	4.0
1-7-60	9.8	6.7

Further calculations show that normal Deposit accrual with the banking system are as under:

	State Bank of India	Other Scheduled Banks	Total Rise in Deposits
1957 first half	16.46	85.24	101.70
second half	11.13	57.53	68.66
1958 first half	14.76	76.57	91.33
second half	4.36	22.83	27.19
1959 first half	18.64	97.36	116.00
second half	9.68	49.69	59.37
1960 first half	16.22	84.26	100.48
second half	8.25	14.59	-6.34
1961 first half	28.44	78.78	107.22

It will be seen, consequently, that, net of counterpart fund transactions, the first halves in 1959 and in 1961 have recorded the highest rises in Deposits.

BANK RETURNS

Impact of IMF Transaction

The purchase of \$250 million of currencies is reflected in the latest returns of the Reserve Bank, but it is intriguing to find that, though there had earlier been asseverations that outstanding liability to repurchase rupees for \$127.5 million had been or were being completed, the relevant transaction has taken place only now. That is to say, India's purchase is \$250 million less the repurchase of \$127.5 million. Accordingly, foreign assets as shown in the returns of the Reserve Bank have improved, not by over Rs 120 crores, but by just over Rs 54 crores.

As is the custom, non-negotiable securities have been handed over to the Reserve Bank which is a depository of the International Monetary Fund. But it is again intriguing to find that Other Deposits, under which head it is that the credit to the IMF would be shown, have risen, not by around Rs 55 crores, but by nearly Rs 90 crores. We are consequently disposed to think that there is more than meets the eye in the last week's IMF transactions; we intend a study at greater length in the next week's Indian Finance.

TABLE I.
DEPOSITS OF BANKING SYSTEM (In Rs Crores)
(inter-bank borrowings omitted)

	As on Friday and Change	All Scheduled Banks	State Bank of India	Other Scheduled Banks

1-7-60	...	1970.24	637.03	1333.21
Change	...	+142.06	+57.80	+84.26
30-12-60	...	1891.90	573.28	1318.62
Change	...	-78.34(a)	-63.75(a)	-14.59
30-6-61	...	1927.12	529.72	1397.40
Change	...	+35.22(b)	-43.56(b)	+78.78

(a) State Bank "lost" Rs 72 crores of Deposits owing to repayment of counterpart funds in this period. Hence net of counterpart fund transactions Deposits of all Scheduled Banks fell by roughly Rs 6 crores, whereas Deposits of State Bank rose by about Rs 8 crores.

(b) State Bank "lost" Rs 72 crores of Deposits owing to repayment of counterpart funds in this period. Hence net of counterpart fund transactions Deposits of State Bank rose by about Rs 28 crores, whereas Deposits of all Scheduled Banks rose by over Rs 107 crores.

Beginning of the month disbursements have disturbed the even tenor of the 1961 slack season. Active Note Circulation has expanded by Rs 13.22 crores to Rs 1,903.98 crores, and there has been outflow of Rupee Coin for Rs 1.06 crores. Foreign Securities, by dint of the purchase of currencies from the IMF, have been marked up by Rs 23.85 crores to Rs 116.86 crores. Hence, currency has been contracted against Rupee Securities for Rs 24 crores, and the Reserve Bank's cash in the till has moved down from Rs 31.15 crores to Rs 16.88 crores.

Owing perhaps to cash payment in respect of the maturing 2½ per cent 1961 on 1 August, the Centre's balances have dropped from Rs 77.09 crores to Rs 53.26 crores. Indeed, recourse has apparently been had to deficit financing. Investments are higher by Rs 48 crores, against which transfer from the Issue Department accounts only for Rs 24 crores; and, besides, the State Bank has bought securities for Rs 15 crores during the week. Hence, created money may be put at Rs 40 crores. (Incidentally, our estimate regarding cancellation of ad hocs in the week ended 28 July has now been proved to be entirely correct).

Banks, however, have been exposed to little strain by beginning of the month demand for money. Reserve Balances are practically unchanged at Rs 81.44 crores, and there does not seem to have been any considerable recourse to central banking assistance.

The return of the State Bank for 4 August is noteworthy for its recording a purchase of Rs 15 crores of securities. As at the latest week, after a long time, the State Bank's gilt-edged holdings exceed the total of Advances, which in the week under review have fallen by Rs 2.83 crores to Rs 248.06 crores. There is a small rise of just under Rs 2 crores

in Deposits, and the gilt-edged purchase was "financed" by running down Other Assets. As the slack season progresses, further purchase of Government securities through the Reserve Bank tap is to be expected.

New loan subscriptions have had less of an impact upon bank Deposits than we had thought would be the case. Net Demand Deposits are about Rs 6 crores lower at Rs 811.21 crores—and net Time Deposits are actually a shade higher at Rs 1,123.90 crores. But cash balances have been drawn down by a sum exceeding the Scheduled Bank's own subscriptions: Balances with the Reserve Bank have moved down by Rs 23 crores, and cash in India is lower by Rs 2 crores. The gilt-edged portfolio is up by Rs 3.75 crores, and to this we have to add the Rs 7 crores of disinvestment shown by the State Bank in the relevant week: thus, new loan purchases "consolidated" in the return of Scheduled Banks for 28 July amount to Rs 10 crores; and the return for 4 August should reveal a further rise of around Rs 25 crores—Rs 10 crores of this accounted for by other new loan subscriptions of Scheduled Banks and Rs 15 crores relating to purchase through the tap by the State Bank. The total of Advances has again moved down by Rs 10.25 crores to Rs 1,240.81 crores.

GILTEDGED

Payment of Interest

Government Promissory Notes of the following loans (Central and State Governments) interest on which falls due for payment during the months of September and October 1961 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from 16 August and 16 September 1961 respectively.

Interest falling due in September 1961

Common Market Negotiations

By Paul Einzig

ON August 3 both Houses of Parliament passed by a large majority official Resolutions approving the Government's decision to initiate negotiations with a view to joining the Common Market. The reason why resistance to this decision was comparatively weak was that the text of the official resolutions repeated the familiar assurances about safeguarding the interests of the Commonwealth, the European Free Trade Association and British agriculture. Even so, many people are anything but happy about this decision especially as, when announcing it, Mr Macmillan drew a grossly exaggerated pessimistic picture of what might happen if the negotiations failed. To do so was mistaken tactics, because it will tend to stiffen the attitude of the Common Market.

In the course of the debate information was sought whether the three Ministers who paid visits recently to the principal Commonwealth countries went there solely for the purpose of selling the idea of Britain joining the Common Market, or whether their terms of reference also enabled them to sound the Commonwealth Governments about the possibility of offering Britain an alternative solution in the form of measures to reverse the downward trend of Britain's share in Commonwealth imports. No answer was given to this question, and it seems safe to assume that even if the subject was mentioned during the course of the recent discussions at New Delhi, Canberra, Ottawa and other Commonwealth capitals, it was not unduly stressed. This is a great pity for any evidence on the part of the Commonwealth to make an effort to increase its imports from Britain would greatly strengthen the hands of those who want to resist the Government's policy of joining the Common Market. In the absence of some such gesture their resistance is almost certainly doomed to failure.

According to a report appearing in the English Press on July 31 the Governor of the Reserve Bank of India warned Britain that if as a result of her joining the Common Market Indian exports would suffer it might become impossible to maintain the service of India's sterling debts. Unfortunately, this report was given very little prominence. If British opinion were made to realise that by joining the Common Market on terms which would not safeguard the interests of the Commonwealth it would risk wholesale defaults on remittances of interest and dividend from the Commonwealth, it would go some way towards strengthening opposition to joining the Common Market. Such a destructive attitude should be however, supplemented by a more constructive attitude. As far as I know, not a single statesman in any of the Commonwealth countries has made any public pronouncement about the advantages his country would be prepared to offer Britain in return for the sacrifices involved in abstaining from joining the Common Market for the sake of the Commonwealth. The attitude of the Commonwealth in this respect is anything but helpful, and the public in Commonwealth countries would have every reason to blame their various Governments if, as a result of Britain joining the Common Market, their trade would suffer. Commonwealth Governments are doing next to nothing to prevent it, beyond uttering warnings. They are bound to be unhelpful unless supplemented by constructive promises.

—Copyright—

THE THIRD PLAN

Towards A Self-Reliant Economy

PRINCIPAL AIMS

India's Third Five Year Plan, a 770-page document, which was presented to Parliament this week, sets out the principal aims as:

- (1) to secure an increase in national income of over 5 per cent per annum, the pattern of investment being designed also to sustain this rate of growth during subsequent Plan period;
- (2) to achieve self-sufficiency in foodgrains, and increase agricultural production to meet the requirements of industry and export;
- (3) to expand basic industries like steel, chemical industries, fuel, and power and establish machine-building capacity, so that the requirements of further industrialisation can be met within a period of 10 years or so mainly from the country's own resources;
- (4) to utilise to the fullest extent possible the manpower resources of the country and to ensure a substantial expansion in employment opportunities; and
- (5) to establish progressively greater equality of opportunity and to bring about reduction in disparities in income and wealth and a more even distribution of economic power.

To achieve these aims, a certain minimum development must take place in different sectors of the economy during the next five years. The physical targets of the Third Plan have been formulated on the basis of these minimum needs.

The increase in population, the growing expectations of the people and the urgent need for attaining the stage of self-sustained growth over the next two or three Plan periods, make it essential, that there should be every possible effort to achieve these targets during the next five years. In addition, certain measures must be taken during the Plan period in preparation for the Fourth Plan. The estimated financial resources have been placed for the present at Rs 7500 crores and are distributed as follows:

SECOND PLAN						
		(Rs Crores)				
Total expenditure	Percentage	States	Centre	Union territories	Total	Percentage
530	11	919	24	125	1068	14
420	9	630	2	18	650	9
445	10	880	23	109	1012	13
175	4	137	4	123	264	4
900	20	70	neg	1450	1520	20
1300	28	226	35	1225	1486	20
830	18	863	87	350	1300	17
...	...	...	...	200	200	3
4600	100	3725	175	3600	7500	100

Out of this, investment is estimated to be Rs 6300 crores (including Rs 200 crores intended to assist the private sector) and current outlay, representing expenditure on staff, subsidies, etc. Rs 1200 crores. The private sector investment planned for is of the order of Rs 4100 crores. Thus the total Plan investment outlay is Rs 10,400 crores. The foreign exchange requirement for an investment of Rs 10,400 crores is estimated to be over Rs 2030 crores. The level of investment, public and private, is expected to rise from about Rs 1600 crores in the last year of the Second Plan to

self-reliant and self-generating within the shortest possible period. The strategy visualised for the Third and later Plans emphasises the interdependence of agriculture and industry, of economic and social development, of national and regional development, and of the mobilisation of domestic and external resources.

Development of agriculture, based on the utilisation of manpower resources of the countryside and the maximum use of local resources, holds a key to the rapid development of the country.

A FEW SELECTED TARGETS

Item and Unit	1960-61	1965-66	Percentage increase in 1965-66 over 1960-61
Foodgrains production—million tons	76	100	32
Irrigated area (net total)—million acres	70	90	29
Production of:			
Steel ingots—million tons	3.5	9.2	163
Machine tools—Rs crores	5.5	30.0	445
Petroleum products—million tons	5.7	9.9	70
Cloth:			
Mill-made—million yards	5127	5800	13
Handloom, power-loom and khadi—million yards	2349	3500	49
Minerals:			
Iron ore—million tons	10.7	30.0	180
Coal—million tons	54.6	97.0	76
Exports—Rs crores	645	850	32
Power: installed capacity—million kilowatt	5.7	12.7	123
Railways: freight carried—million tons	154	245	59
Shipping: tonnage—lakh GRT	9.0	10.9	21
General education: students in schools—million numbers	43.5	63.9	47
Consumption levels: food—calories per capita per day	2100	2300	10
Cloth—yards per capita per annum	15.5	17.2	11

about Rs 2,800 crores at the end of the Third Plan. Investment in the public sector is expected to go up over this period from Rs 800 crores to Rs 1700 crores.

APPROACH TO LONG-TERM DEVELOPMENT

Over the next three Plan periods it is imperative that all the possibilities of economic growth should be fully and effectively mobilised. For this purpose it is essential to proceed on the basis of a broad strategy of economic development which would ensure that the economy expands rapidly and becomes

Because of her natural resources, India has considerable potential for industrial growth. Her potential capacity to produce steel, electricity, fuel and other basic materials relatively cheaply and the large and growing domestic market place her in a favourable position to produce machinery and a large range of engineering, chemical and electrical goods needed for development. In turn, these will stimulate the growth of medium and small industries and expand employment both in urban and in rural areas.

POPULATION

The objective of stabilising the growth of population over a reasonable period must be at the very centre of planned development. The programme of family planning, involving intensive education, provision of facilities and advice on the

largest scale possible and widespread popular effort in every rural and urban community has the greatest significance.

RESOURCES FOR DEVELOPMENT

Among the principal conditions for building up a self-reliant economy, which can sustain a high rate of growth, are an adequate level of domestic capital formation, the maximum effort possible in developing exports, the availability of external assistance during the critical period of transition. A basic objective in the strategy of development is to create the conditions in which dependence on external assistance will disappear as early as may be possible.

OUTLOOK FOR 1961-76

Taking a broad view of the development of the Indian economy, it is reckoned that, at 1960-61 prices, the national income should rise from about Rs 14,500 crores at the end of the Second Plan to about Rs 19,000 crores at the end of the Third Plan, about Rs 25,000 crores at the end of the Fourth and about Rs 33,000 to Rs 34,000 crores at the end of the Fifth Plan. Allowing for the estimated annual increase in population of about 2 per cent, on these estimates, income per head should go up from around Rs 330 at the end of 1960-61 to about Rs 385, Rs 450 and Rs 530 in 1966, 1971 and 1976. This will require net investment as a proportion of national income to rise from about 11 per cent at present to 14-15, 17-18 and 19-20 per cent per annum by the end of the Third, Fourth and Fifth Plans. In other words, as compared to about Rs 10,500 crores postulated for the Third Plan, net investment over the Fourth and the Fifth Plan periods should be of the order of Rs 17,000 crores and Rs 25,000 crores. Domestic savings would have to rise in corresponding measure from about 8.5 per cent at present to about 11.5, 15 to 16, and 18 to 19 per cent of the national income at the end of the Third, Fourth and Fifth Plans. By the end of the Fifth Plan the economy will be strong enough to develop at a satisfactory pace without being dependent on external assistance outside of the normal inflow of foreign capital.

In the course of preliminary studies on the Third Plan the following tentative targets of capacity have been suggested for some important items for 1970-71.

These targets indicate the order of effort called for as a basis for further studies.

Steel ingots	...	Million tons	18-19
Pig iron	...	Million tons	3-4
Aluminium	...	Thousand tons	230-250
Electric power	...	Million kilowatt	21-23

APPROACH TO THE THIRD PLAN

During the past decade total investment, public and private, increased from over Rs 500 crores per annum at the beginning of the First Plan to about Rs 1600 crores at the end of the Second Plan. Investment by public authorities rose during this period from Rs 200 crores to Rs 800 crores per annum. Reckoned at current prices, investment during the First and Second Plans amounted to Rs 10,110 crores, Rs 5210 crores being in the public sector and Rs 4900 crores in the private sector.

During the First Plan, owing largely to the progress recorded in agricultural production, national income increased by 18 per cent as against original target of 12 per cent. In the Second Plan, the increase in national income was 20 per cent as against the initial target of 25 per cent. Agricultural production expanded by about 40 per cent and the output of foodgrains by 46 per cent. The net output of organised manufacturing industries increased nearly twofold. A general view of the growth of the economy over the last decade may be obtained from the selected indicators of growth given in the table below:—

Item & Unit	1950-51	1955-56	1960-61	percentage increase in 1960-61 over 1950-51
National income (at 1960-61 prices)—Rs crores	10240	12130	14500	41.6
Per capita income (at 1960-61 prices)—Rupees	284	306	330	16.2
Index of agricultural production (1949-50=100)	95.6	116.8	135.0	41.2
Foodgrains production—million tons	52.2	65.8	76.0	45.6
Nitrogenous fertilisers consumed—'000 tons of N	55	105	230	318.2
Area irrigated (net total)—million acres	51.5	56.2	70.0	35.9
Cooperative movement—advances to farmers—Rs crores	22.9	49.6	200.0	773.4
Index of industrial production—(1950-51=100)	100	139	194	94.0
Production of:				
Steel ingots—million tons	1.4	1.7	3.5	150.0

Railways: freight carried—million tons	91.4	114.0	154.0	68.5
Roads: surfaced including national highways—'000 miles	97.5	122.0	144.0	47.7
General education: students in schools—million numbers	23.5	31.3	43.6	85.5
Technical education: Engineering & technology—degree level—intake—'000 numbers	4.1	5.9	13.8	236.5
Health: Hospital beds—'000 numbers	113	125	186	64.6

The record of growth over the last ten years has not been uniform. There have been ups and downs due to natural causes, international developments, or in some cases due to deficiencies in implementation. The growth of population accentuated the problem of unemployment. While considerable progress has been made in every branch of national life, inevitably there have been, at the same time, stresses and strains. Despite failures and errors that might have been avoided and weaknesses in the economic and social structure that still persist, in every direction, new ground has been broken and valuable experience has been gained.

FINANCES FOR THE PUBLIC SECTOR

In the Draft Outline, the estimate of resources for the public sector was indicated at Rs 7250 crores, Rs 6050 crores at the Centre and Rs 1200 crores in the States. Later, in the light of discussions with State Governments and a further examination of the Central Budget for 1960-61, the estimate of total resources was revised upwards to Rs 7453 crores—Rs 6107 crores at the Centre and Rs 1346 crores in the States. This estimate, rounded to Rs 7500 crores, was submitted to the National Development Council in January, 1961. The Council noted that considering the needs of the economy, every effort had to be made to bridge the gap between the limit of Rs 7500 crores for financial outlays indicated by the estimates on resources and the requirements adding up to over Rs 8000 crores for implementing the physical programmes envisaged. It was evident that the answer to the problem depended upon how far domestic savings could be stepped up to match the larger needs. The Council appointed a Committee on Savings to study and explore further possibilities in this direction.

Item & Unit	1950-51	1955-56	1960-61	percentage increase in 1960-61 over 1950-51
National income (at 1960-61 prices)—Rs crores	10240	12130	14500	41.6
Per capita income (at 1960-61 prices)—Rupees	284	306	330	16.2
Index of agricultural production (1949-50=100)	95.6	116.8	135.0	41.2

ties in this direction. In the light of studies of the 1961-62 Budgets of the Central and State Governments and of the scope for obtaining more resources under each of the heads of domestic savings, the Committee felt that there was warrant for taking a more optimistic view of the total resources that could be raised by the Centre and the States. It was, however, not possible at this stage to set out precisely the lines along which the gap between the requirements of physical programmes and the financial provisions could be bridged. It was also necessary to bear in mind the limitations in respect of foreign exchange resources. The problem would need continuous

review in the light of the advance made each year in mobilising resources. Accordingly, while the financial outlays for Plan in the public sector are at present being retained at Rs 7500 crores, sustained efforts will be made to improve upon this and to diminish the gap through more effective mobilisation of savings.

FINANCIAL RESOURCES

The scheme of financing the public sector plan that is now envisaged is indicated in the table below. The last two columns indicate the estimates separately for the Centre and the States:

FINANCIAL RESOURCES (Estimates for the Second and the Third Plan)					
	Second Plan as initially estimated		Third Plan (Rs crores)		
	as initially estimated	now estimated	Total	Centre	States
1 Balance from current revenues (excluding additional taxation) ...	350	(-) 50	550	410	140
2 Contribution of Railways ...	150	150*	100	100	—
3 Surpluses of other public enterprises ...	..	..	450	300	150
4 Loans from the public (net) ...	700	780†	800	475	325
5 Small savings (net) ...	500	400	600	213	387
6 Provident funds (net) ...		170	265	183	82
7 Steel equalisation fund (net) ...	250	38	105	105	—
8 Balance of miscellaneous capital receipts over non-plan disbursements ...		22	170	428	(-) 258
9 Total 1 to 8 ...	1950	1510	3040	2214	826
10 Additional taxation including measures to increase the surpluses of public enterprises ...	4508	1052	1710	1100	610
11 Budgetary receipts corresponding to external assistance ...	800	1090†	2200	2200	—
12 Deficit financing ...	1200	948	550	524	26
Total ...	4800	4600	7500	6038	1462

*In addition there was a gap of Rs 400 crores to be covered by additional domestic effort.

*Inclusive of increased fares and freights.

†Includes investments by the State Bank out of PL 480 funds.

**Included in items 1 and 8 in the Table.

†This includes investment of PL 480 funds by the Reserve Bank in special securities in 1960-61.

RESOURCES OF STATE GOVERNMENTS

The review of States' resources undertaken in the light of the 1961-62 Budgets indicates that the resources picture for the States is considerably better than the one that emerged after the discussions held with them during August-November, 1960; the total of States' resources now comes to Rs 1462 crores as against the estimate of Rs 1346 crores worked out earlier. The main factor in the improvement is the larger transfer of resources from the Centre under income-tax and shareable excises. With States' resources at Rs 1462 crores and Central assistance at Rs 2375 crores, the total of the resources available for financing State Plans comes to Rs 3837 crores. This is close to the programmes costing Rs 3847 crores which have been accepted for the State Plans.

ADDITIONAL TAXATION

Additional taxation envisaged for the Third Plan is Rs 1710 crores

to be borne in mind that the different modes of raising resources are at some point inter-dependent; it is possible, for example, that while in one situation more can be secured by way of taxation, in another situation recourse to market borrowings may yield a better result. Timely availability of external assistance has also an important bearing on domestic savings and the investment effort. Considering the trend in prices over the last few years and the difficult foreign exchange situation, deficit financing during the Third Plan period will have to be on a strictly limited scale.

Rs 1100 crores at the Centre and Rs 610 crores in the States. This order of taxation is the minimum essential. In order to realise this target, it will be necessary to increase both direct and indirect taxation and to enlarge the surpluses of public sector enterprises. Direct taxation adds to the resources of the public sector by reducing disposable incomes in the hands of the community. Indirect taxation works through reduction in the quantum of goods or services that can be bought against the incomes that are spent. The choice between the two forms of taxation has to be considered pragmatically. The point to stress is that taxation should be sufficient to keep consumption down to limits consistent with the requirements of investment as envisaged in the Plan. It is inevitable that the larger part of the additional taxation effort has to be put through by the Central Government; a good beginning has been made in this direction in 1961-62. It is no less important that the State Governments also raise an adequate share for themselves. Taxation of the rural sector falls largely within their field. They have also to mobilise more effectively elastic sources of revenue, such as sales taxes.

PRIVATE INVESTMENT

Private investment draws on the same pool of savings as public investment. Considering the trends in the Second Plan period, it is felt that a total of Rs 4300 crores by way of private investment can probably be financed consistently with the public sectors' claims on savings. The break-up of this investment along with the corresponding estimates for the Second Plan period (original as well as revised in the light of later studies) are set out in the following Table:

INVESTMENT IN THE PRIVATE SECTOR* (Rs crores)			
	Second Plan original estimates	estimated investment on the revised basis	Third Plan Estimates
1 Agriculture (including irrigation) ...	275	675	850
2 Power ...	40	40	50
3 Transport ...	85	135	250
4 Village & small industries ...	100	225	325
5 Large & medium industry and minerals ...	575	725	1100†
6 Housing and other construction ...	925	1000	1125
7 Inventories ...	400	500	600
8 Total ...	2400	3300	4300

*These figures represent aggregate investment in the private sector including that financed out of resources transferred from the public sector.

†These figures do not include investment by way of modernisation and replacement, estimated at Rs 150-200 crores.

Of the total investment of Rs 4,300 crores in the private sector, Rs 200 crores will be provided by way of transfer of resources from the public sector. Part of the investment in agriculture, small scale industries and co-operatives will be financed out of assistance from the Reserve Bank. External assistance to the private sector may be of the order of Rs 300 crores.

FOREIGN EXCHANGE

The following table sets forth the balance of payments estimates for the Third Plan.

FINANCING OF FOREIGN EXCHANGE REQUIREMENTS FOR THE THIRD PLAN

(Rs crores)				
	Total Second Plan	Total Third Plan	1961-62	Annual Average Third Plan
A Receipts				
1 Exports ...	3053	3700	667	740
2 Invisibles (net) (excluding official donations) ...	420*	nil	28	nil
3 Capital transactions (net) (excluding receipts of official loans and private foreign investment) ...	(-) 172	(-) 550	(-) 133	(-) 100
4 External assistance ...	927@	2600	575†	520
5 Draft on foreign exchange reserves ...	589	nil	nil	nil
Total (1 to 5)† ...	4826	5750	1131	1150
B Payments

2 Components, intermediate products etc., for raising production of capital goods ...	4826	200	60	40
3 Maintenance imports ...		3650	746	730
Total (1 to 3)† ...	4826	5750	1131	1150

*Includes reimbursements from the USA for freight expenses on PL 480 imports initially incurred by India.

†Represents external assistance required for financing imports as shown below.

@Including net drawing on the IME

†PL 480 imports are excluded from both sides—about Rs 534 crores for the Second Plan and Rs 600 crores for the Third Plan.

FOREIGN AID

The outlook on external assistance is, on the whole, promising. At the meeting of the Consortium of friendly countries held in May 1961 under the sponsorship of the International Bank for Reconstruction and Development, India has been assured of assistance totalling Rs 1089 crores to provide immediate support to its balance of payments as well as to cover import orders to be placed during 1961-62 and 1962-63. The USSR had already authorised earlier two credits amounting to Rs 238 crores for use on Third Plan projects.

INVESTMENT IN THE PRIVATE SECTOR*

(Rs crores)			
	Second Plan original estimates	estimated investment on the revised basis	Third Plan Estimates
1 Agriculture (including irrigation) ...	275	675	850

†PL 480 imports are excluded from both sides—about Rs 534 crores for the Second Plan and Rs 600 crores for the Third Plan.

lised to the fullest benefit of the economy. From the point of view of internal as well as external resources a progressive increase in production and in savings is vital for the success of the Plan.

There has to be close scrutiny of all non-Plan expenditure, economies in expenditure, both on Plan and non-Plan items, can release some resources for financing development. Experience of the Second Plan suggests that the scope for taxation may, in fact, be larger than is foreseen at this stage. Provident funds, extension of life insurance and similar social security schemes to institutionalise savings are a potential source for further resources. There is need for a country-wide savings drive, particularly in the rural areas. In the States, steps are being taken to place greater responsibilities on local self-governing institutions. Larger resources for development can be mobilised if, through these institutions, the community is induced to take greater interest and participate in local developmental programmes.

The limit to financial resources is never an absolute one; it is related

UNION TERRITORIES: PLAN OUTLAYS

DISTRIBUTION OF PLAN OUTLAYS IN THE PUBLIC SECTOR

sale prices in the Second Plan is entirely the rising pressure of demand resulting from the growth of population and money incomes. Supply factors have also played their part from time to time. The Plan points out that although the production potential of the country has been strengthened considerably, both in agriculture and industry and the scheme for mobilising the financial resources required for the Third Plan postulates deficit financing on strictly limited scale, the possibilities of significant and even disturbing price rise cannot be entirely eliminated. Firstly there is usual uncertainty in regard to monsoons. Secondly, the various restraints on consumption implicit in the Plan may not always operate to the full extent. Thirdly, while the Plan envisages a certain balance between the rates of growth in various sectors, some imbalance is almost certain to appear from time to time. It is necessary, therefore, to keep a close watch on prices and to be prepared in advance with strategy for corrective action.

A major constituent of the price policy is fiscal and monetary discipline. Fiscal policy must be directed to mopping up excess purchasing power which tends to push up demand above the levels of available supplies. Public enterprises have an important role in enlarging public savings. They must, therefore, operate at a profit and maintain a high standard of efficiency required for their purpose.

Monetary policy has to go hand in hand with fiscal policy by regulating the pace of credit creation through banks. Commercial policy can also be used to an extent to overcome domestic shortages. Without adequate fiscal and monetary discipline other regulatory measures cannot have the desired effect. But in order to secure the right relationship between various prices or to prevent undue hardship to low and fixed income groups, it may be necessary to have physical allocations and direct control in certain sectors.

PRICES IN THE SECOND PLAN

The Second Plan was characterised by a persistent upward trend in prices though part of the rise in prices was a corrective to the earlier decline. Over the five-year period, the rise in the general index of wholesale prices has been about 30 per cent. Food articles as a group have gone up by some 27 per cent; industrial raw materials by 45 per cent; manufactures by over 27 per cent. The major explanation of the continued upward trend in the whole-

NET DOMESTIC PRODUCT BY INDUSTRIAL ORIGIN

(Rs. CRORES AT 1960-61 PRICES)

EXPORTS

The Plan emphasises that a special effort should be made to earn foreign exchange for use in developmental purposes and that domestic consumption should be held within reasonable limits. In order to create export surpluses, export industries must become competitive in order to achieve an export effort during the Third Plan period of at least Rs 3700 crores.

Action has to be taken along several directions, in particular the following:

- Domestic consumption must be held within reasonable limits in order to create export surpluses;
- Steps to increase the comparative profitability of exports are essential;

- In their cost structure and productivity, export industries must become competitive as early as possible. Industrial licensing policies should also be oriented towards export promotion, and
- Steps must be taken to mobilise public opinion in favour of exports, to enlist the efforts of industry and trade, to improve Government's own organisation for market research and intelligence and commercial representation abroad, and to enlarge facilities for credit, insurance, etc.

By far the most important condition for fulfilling the export programme is the realisation of the agricultural and industrial targets of the Plan. Restraints on the growth of internal consumption are an essential condition of a successful export drive. What is required is not ab-

solute reduction in the total or per capita consumption, but a slowing down in the rate at which consumption increases. The Plan calls for a greater public understanding of the need to step up exports and recognition that this object cannot be achieved without a degree of sacrifice which is equitably shared.

12 August 1961

The prices of what may be called basic essentials must be held reasonably stable; in regard to commodities that could be classed as comforts or luxuries, a rise in prices may have to be tolerated. The technique of price regulation will further push from commodity to commodity.

Two main objectives of price policy are:—

- to ensure that the movement of relative prices grow with the priorities and targets which are being set in the Plan, and
- any considerable rise in prices of essential goods that enter into the consumption of low income groups is prevented.

EMPLOYMENT AND MAN-POWER

Provision of adequate employment opportunities is among the most difficult tasks to be accomplished during the next five years. In the rural areas both unemployment and under-employment exist side by side, and the distinction between them is by no means sharp. In the villages unemployment ordinarily takes the form of under-employment. In the urban areas, employment is linked with fluctuations in the state of business, transport and industry.

Existing data on employment are inadequate. However, with the limited information that is available, it is reckoned that the backlog of unemployment at the end of the Second Plan is about 9 million. This increase in backlog as compared to 5.3 million suggested in the Second Plan means that while the absolute impact of the Plan on employment was significant, it was not sufficient to absorb the increasing numbers of new entrants to labour force.

It is estimated that increase in labour force in the Third Plan—in the light of data available in 1961 census—will be roughly about 17 million, one-third of the increase being in urban areas. As against this, it is estimated that the Third Plan may provide additional employment of the order of 14 million—10.5 million outside agriculture and 3.5 million in agriculture. The break-up of the non-agricultural component of employment is given in the Table below:

ADDITIONAL NON-AGRICULTURAL EMPLOYMENT

	(In lakhs)
1. Construction	23.00
2. Irrigation and power	1.00
3. Railways	1.40
4. Other transport and communications	8.80
5. Industries and minerals	7.50
6. Small industries	9.00
7. Forestry, fisheries and allied services	7.20
8. Education	5.90
9. Health	1.40
10. Other social services	0.80
11. Government service	1.50
12. 'Others' including trade and commerce at 56 per cent of total for items 1-11	37.80
Total	105.30

Thus, even for providing work for the new entrants to labour force, there should be additional employment for 3 million persons.

RURAL WORKS PROGRAMMES

It is proposed that the problem should be approached along three main directions. Firstly, within the framework of the Plan efforts have to be made to ensure that the employment effects are spread out more widely and evenly than in the past. Secondly, a fairly large programme of rural industrialisation should be undertaken with special emphasis on rural electrification, development of rural industrial estates, promotion of village industries and effective re-development of manpower. Thirdly, in addition to other measures for increasing employment through small industries, it is proposed to organise rural works programmes which will provide work for an average of, say, 100 days in the year for about 2.5

STATES: PLAN OUTLAYS

(RS. CRORES)

million persons and, if possible, more.

Rural industrialisation and rural electrification are connected programmes and are of the greatest significance for the expansion of stable employment opportunities in rural areas. In each area it is necessary to develop centres or nuclei of industrial development in small towns and centrally situated villages and link them with one another through improved transport and other facilities. In each district, through forward planning, the programme for agricultural and industrial development should be co-ordinated with the supply of power.

In recent years there has been a change in the attitude towards manual work on the part of educated persons and programmes for orienting them to the requirements of the developing economy are proposed to be taken up on a larger scale. The scope for regular and continuous employment within the rural economy for educated persons at levels of income comparable in real terms to those in the town will greatly increase with the development of cooperatives and of scientific agriculture and the establishment of democratic institutions. It should also be possible to assist fairly large numbers of young persons with education to set up small industries in rural centres at which power can be made available.

There is need for deployment of skilled personnel from projects which have been completed or are nearing completion to those on which construction is to commence. Machinery created for this purpose in the Second Plan has functioned satisfactorily. While maintaining this machinery, the problem could be more manageable in size if work on similar projects is better phased and advance planning is undertaken.

IN THE SPACE OF 10 YEARS...

the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140—100 more than existed ten years ago.

Notes

ORDNANCE FACTORIES New Frontiers

The Journal of Industry and Trade for June notices the work of the Ordnance Department in detail and indicates that the production target for Rs 26 crores in 1959-60 has been almost reached because output was valued at Rs 25.14 crores and a further increase to Rs 29 crores in 1960-61 was likely though civil work would be limited.

The Ordnance factories in peacetime also produce goods for military needs. The progress made in the last ten years proves that the increase noted during the war has been kept up. While tractors or cars made by the Ordnance factories supplement the production of the private sector, the main aim is to provide stores needed for the Army and the rise of 79 per cent in output as between 1956-57 and 1959-60 is a sign of reduction of imports due to local output going up.

The works of reference indicate that during the war the production of Ordnance factories was valued at Rs 131 crores and this average of the war years has been kept up in recent years. The production of rifles, ammunition, cordite and gun-carriages from the Ordnance

establishments was stepped up during the war in which armoured vehicles too were made in India. If a Bren-gun factory at Hyderabad was closed in 1950 the other factories have made good progress. The sale of shotguns and cartridges to authorised dealers who supply guns for sporting needs has been made possible by the expansion. In essence, a branch of engineering, the Ordnance factories have been able to use more steel and alloys.

The Eastern Group conference certainly helped Ordnance factories to call in the engineering industry and railway workshops for military purposes. Besides making bombs from 1943-44 the DGMP was able to provide the equipment for making high explosive and toluene for TNT manufacture. This was all a part of the war effort which put the Ordnance factories in a position to retain surplus capacity and to plan for steady increases for the requirements of the armed services. The output of 1,200 light trucks in 1960-61 with the help of MAN of Nuremberg represents a departure, as also the production of tractors and light trucks with Japanese aid under a special arrangement reached in 1958.

Replacing imports is the main aim and the savings in foreign exchange in 1959-60 (seven months only) amounted to Rs 11.6 crores. The Ordnance Department inspects and keeps stores (the total value in '59-60 being put at Rs 78 crores nearly) and minimises purchases abroad. Its research and development programme is in line with the general object of increasing domestic supply from the nearest sources and the use of science for defence purposes has been supplemented by the training of staff abroad. The making of scientific instruments and the provision of stores for the police and for the new mineral oil industry figure in the programme. The utilisation of used lubricants and the derusting of equipment find a place in the Ordnance research programme so that the Army also is now helping actively to limit purchases abroad.

To supplement the Ordnance work, there are major industrial establishments like Hindustan Aircraft. Electronics find a place and the Army gets field telephone equipment from local sources. Far more important is the scheme for making destroyers in India. The ship repairs programme can be enlarged by making destroyers to replace old vessels in commission. The Defence Ministry took over

the BISN's property the Mazagaon Dock which is equipped to produce marine engines and light craft for harbour work.

The manufacture of patrol vessels in the Garden Reach workshops, acquired by the Government last year, will be supplemented by the making of dredgers, needed for improving navigation on the Hooghly. With technical aid from abroad, the G. R. workshops will become both a ship repair establishment and a place for the making of small craft for civil purposes also.

The Ordnance branch represents the wing that produces equipment for the Army and Navy alike, and the Air Force also can rely on locally-made equipment because the Ordnance factories have been improved after Independence on the basis of wartime expansion and achievement. The frontier problem today will demand road-making and other equipment for defence requirements and the Ordnance branch will probably make or recondition heavy earth-moving equipment which can be used also (on contract presumably) for mining operations. The testing of supplies like cars and motorcycles for Army needs will certainly be part of the Ordnance Department's functions and the raising of standards of Indian manufacture is of real help. The wide and varied work of the Ordnance factories now includes food preservation and standardisation of stores like tools and paints, so as to save time and money. All this goes to show that the Army is helping India's industrial growth actively by adopting the rule of self-reliance.

the Moghulsarai line. While the concern for movement above the Moghulsarai line was justified in view of the acute shortage of coal experienced by industries in the UP, Punjab and Rajasthan in the early part of the year, it has been alleged that the increased movement above the Moghulsarai line has been effected by drawing from the quota enjoyed by industrial and other consumers in West Bengal, Bihar and Assam. On top of this continuing inadequacy of wagons, the failure to fulfil the target in respect of movement of coal by the sea route to the Southern ports has aggravated the difficulties of collieries. It has been revealed that against the scheduled number of sailings fixed at 30 for the month of May, the actual sailings have amounted to only 27. This has been caused by lack of requisite number of ships for fulfilling the scheduled number of sailings. Coal berths in the Madras Port are reported to be lying idle for failure to keep up the scheduled number of sailings.

The entire question of coal movement would thus seem to need re-examination particularly in the light of the problem posed by coal movement in the Third Plan. With a target of production of the order of 97 million tons, the quantity of coal that would have to be moved in the Third Plan period would be about 84.5 million tons which compares with 49.5 million tons in the Second Plan. The focal point for transport will continue to be the West Bengal-Bihar region which is expected to provide coal traffic of about 62.0 million tons.

While there is absolute inadequacy of wagons for movement of coal, it does not seem that this alone has contributed to the present heavy accumulation of stocks

★ COAL MOVEMENT Continuing Confusion

The recent meeting of the Coal Transport Advisory Committee held in Calcutta has served to highlight the continuing confusion in respect of coal movement. That the railways have failed to fulfil their obligations in respect of coal movement has been proved by reports of heavy accumulation of coal at pitheads. The coal mining associations of the eastern region have in a recent note revealed that such accumulation has been of the order of nearly 5 million tons. Though in view of the promise by the Railway Ministry the number of wagons available for movement of coal was expected to increase from July onwards in the West Bengal-Bihar region, the actual number of wagons in use in this region has remained static at about 4,700. It has now been brought to light that this situation of tardy movement of coal in the West Bengal-Bihar region has been brought about by the Railway Ministry concentrating its attention on movement of coal above

S. T. SADASIVAN

2 August 1961

At the meeting of the Transport Advisory Council, it has been brought to light that there are grave shortcomings in the system of distribution of wagons. While wagons were being placed at collieries not in a position to load, huge stocks were accumulating with collieries where transport was not available. And in this matter of wagon allotment, the low grade collieries seem to have suffered worst. The authorities have indicated measures such as the introduction of block rake operation, and the coupon system etc, for facilitating easy transport of coal. Action would also seem to be needed on other lines to ensure more systematic movement. One particular question that arises is the transport of coal by road for consumers situated near the coal field. The enforcement of this principle in respect of the railway sheds in the coalfield areas which consume approximately 1,000 tons daily is alone estimated to release nearly 100 wagons for serving the needs of consumers situated distant from the coal fields. The suggestion put forward by the Federation of the Indian Chambers of Commerce and Industry to revise the schedule and rates of coal permissible to various classes of consumers on the basis of the distance involved is also calculated to ensure better movement of railway wagons. If consumers situated distant from the coal fields are provided higher grades of coal, the resultant demand for railway wagons would also be reduced to a significant degree. Further, since the objections arising from higher transport charges for sea-borne coal have now been overcome by the Government's decision to subsidise sea-borne coal, the problem of movement by sea has also to be handled more efficiently than seems to be the case now. While the primary need is to increase the turnaround of ships which is at present low on account of the shortage of ships, the importance of ensuring adequacy of wagon allotments for clearance at ports cannot also be overlooked.

★ FOREIGN TRADE Short-term Trends

Of only academic interest is the recent press note on US coffee imports in relation to export quotas fixed by agreement. The increase in US imports this year will not help India, though the surplus will be smaller because of floods in Mysore, Kerala and Madras too. Drinking of coffee is rising because of moderate prices and a ready inflow from all exporting countries. The chances of selling instant coffee are rated bright and central America seems to be the main supplier. Among exporting countries, Brazil and Columbia hold the lead. The stoppage of exports from Cuba or the fall in supplies from Angola will not

really affect the supply position because Mexico and Kenya may ship more to the USA. Stabilisation of coffee prices at a lower level spells some danger to the exporter of superior coffee like India. A remedy already suggested is the blending of Indian coffee for sale in the internal market and a reduction in excise duty on Robusta coffee which has now strong rivals in the European market though it is known that Switzerland prefers Indian coffee.

The Indian Trade Journal records the passage of a Bill for protecting shrimp producers in the USA. The exports from India of prawns in cans may suffer from a duty of 35 per cent and quota regulation. The main object is to help the US processing industry by letting in only raw shrimp upto a fixed limit. This may mean that Burma is a safer market for the Indian canners who have in recent years increased exports of prawns—called shrimp in the USA. The US intake of cashew is apparently rising and the expansion of cashew-processing factories in Kerala is clearly due to the rise in exports during 1960.

Of more interest to India is the report that Czechoslovakia means to buy cowhides and calf from Cuba. The prospect of large supplies from Brazil also may hit Indian exports of hides and skins in future. The trade prospects in Burma may be called better, because plant for local manufacture is being imported and there are chances of selling chemicals and pharmaceuticals. Pakistan is now reported to be keen on selling textiles, cement, etc. and importing rice, teak, lead and other items. The UAR intends to sell textiles in Burma as well as the Sudan and this will probably arouse the attention of Indian exporters who are aware that India's trade with Burma is not exactly flourishing. Anyway, Pakistan is trying to push sales abroad of soap, blades and woollen fabrics.

★ Imports Up

India's imports from North America rose sharply in 1960-61 according to a detailed analysis of foreign trade which shows how the adverse balance went up. The large imports of iron and steel as well as raw cotton led to a rise of over 11.3 per cent in the value of imports. This may not mean that import restrictions have been ineffective. It may be taken to mean that machinery and raw materials needed by India for industrial development are being got in quantity and stocks are being built up. Increased output at home led to reduced import of both chemicals and fuel and lubricants. The latter accounts for the reduction in imports from Arabia and Iran last year.

The major items of import into India in 1960-61 were wheat but not rice, cotton but not jute, iron and steel and copper and alloys.

The import of machinery rose sharply as also road vehicles, and only raw film imports recorded a decline. The increase in raw rubber imports is due to the shortfall in Indian production. Benefits from replanting, as Mr J. K. Hopkins told the T.R. & T. annual meeting, will be available only after some years. The increase noted in imports of copra or hides and skins might be called inescapable, for Indian industries require supplementary supplies. Reduction under rayon yarn, synthetic fertiliser and rubber tyres can be easily foreseen in view of expansion schemes under way.

The more significant inference from the rise in India's imports in 1960-61 is that rupee payment agreements have enlarged takings and credit arrangements also have influenced the course of import trade. The UK as before, improved its share and the belief that the sterling area is buying less from Britain is not supported by figures available. The rise in India's imports from African countries may help exports though it is clear now that the Sudan wants to follow Egypt in developing local industry like soap-making or flour milling and means to sell iron ore to Yugoslavia and shipping from Port Sudan. A reduction in imports may help engineering industry whose chief problem so far has been power supply. The Third Plan power programmes for self-sufficiency in plant and equipment are apparently due to the increase in India's own imports last year.

Nearer home, trade by land with Nepal, Tibet, Sikkim and Bhutan fell away last year. And the fall in imports was as pronounced as the drop in exports. Though figures are said to be provisional and incomplete, they indicate that political factors govern trade and the Chinese occupation of Tibet has led to a drastic curtailment of Tibetan imports because silver coil cannot be offered to India. And India is forced to see a diversion of Tibetan exports of wool, hair and borax because Indian traders are being forced out of business. Nevertheless, it has been suggested that the trade agreement of April 1954 will be reviewed after it expires, because India does not want to lose touch with Lhasa. Of course, Peking must be prepared to agree and the frontier dispute will probably influence its decision.

The rise and fall of Indian influence in Tibet is now a matter for historians but far more ominous is the decline in trade with Nepal which seems to lean towards China because China is obviously the more powerful neighbour today.

★ INCENTIVES

Gesture from Madhya Pradesh

The decision of the Madhya Pradesh Government to offer a series of concessions and facilities

to the private entrepreneurs with a view to expediting the pace of industrial development in the State during the Third Plan period will be widely acclaimed. These concessions announced by Mr B. A. Mandoli, the Minister for Industries, range from the allotment of land to Government participation in the share capital and cover various phases of small scale and medium sized industries. The new entrants in these spheres stand to gain a substantial quantum of incentives. One of the most attractive features of the new policy relates to the concessions that will be granted on power. Electricity will be made available to the new industrial units at rates ranging from 6 nP to 9 nP for a period of five years from the date of the commencement of production and for the existing industries from October next onwards. In the case of those units that will be required to install their own generating sets due to non-availability of power, the Government has expressed its readiness to subsidise the generation cost to the tune of 10 nP per unit for a period of three years from the day they go into full production or until electricity is made available to them by the Electricity Board, whichever is earlier.

Other concessions announced relate to aspects like sales tax, water supply, octroi, raw materials and other obstacles that stifle the growth of industries in the State. In order to arrive at co-ordinated and quick decisions the Government has set up two high power committees, one at the ministerial level headed by the Chief Minister and the other at the secretariat level.

It is well known that Madhya Pradesh is blessed with abundant mineral resources, power potential and man-power. But factors like the lack of adequate power supply, insufficient transport facilities, non-availability of requisite facilities for scientific and technological education are dampening the pace of industrialisation in the State. The elimination of these hindrances can go a long way in accelerating the tempo of industrial development. The concessions and other facilities allowed by the Government throw up a challenge and opportunity to industrialists.

★ STATE BANK Branch Expansion

The State Bank of India has accepted the suggestion of the Karve Committee to open 300 branches during 1960-65. This rate is slightly less rapid than what it was called upon to achieve during 1955-60 when the target was fixed at 400. Mr P. C. Bhattacharya, the Chairman, stated the other day in Bombay that of these the State Bank itself will open 120 branches and the balance will be entrusted to its

subsidiaries numbering eight. The Karve Committee has advised caution while proceeding with the expansion plan for ensuring relative respite during 1961-63 and to accelerate the pace of expansion during the last two years. The slower pace recommended during the two years is intended to improve the organisational method and provide adequate training to the new recruits to the branches. It has been estimated that the Bank and its subsidiaries require approximately 300 supervisory staff, 300 head-cashiers, 700 cashiers and 700 clerical staff to manage the business of the branches. Considering the immense task of training and organisation of the staff the cautious approach in the initial stages is certainly justified. To expand the training facilities the Bank proposes to start a new training institution in Hyderabad toward the close of this year. This institution will impart the requisite training for the new recruits. Besides, the Bank is also contemplating to set up training centres in each circle.

In selecting the locale of the new branches the Committee has urged the case of rural and semi-urban areas. It may be recalled that the Reserve Bank of India has pointed out in its latest report on banking conditions in India that there are over 1,400 townships without any banking facilities. As many of the commercial banks are reluctant to open their branches in those areas perhaps the whole burden will devolve on the State Bank. The State Bank's crucial role in this matter has been accepted policy even during the Second Plan.

KUWAIT A Santa Claus for the Arab World

Kuwait remains independent and has got into the Arab League in spite of General Kassem's demand for including the Gulf principality in the Vilayet of Basra, one of the three provinces that constitute Iraq, a succession State created from the collapse of the old Turkish Empire. The Arab States' goodwill as much as British arms have helped the dynasty in Kuwait. But British Petroleum must remain rather nervous because of what may happen to its holdings in Iraq. And Gulf Oil too must be worried by the rude intrusion of high politics into the oil business. That is inevitable, as Hergesheimer's TAM-FICO proved long ago. And Kuwait must assimilate the immigrants and look out for something better than guns or gold to preserve her independence. Qatar, Bahrain and Abu Dhabi are all exposed to the designs of bigger neighbours. There are troubles in Persia to give them a respite and Saudi Arabia has got her own problems at present.

The Gulf principalities to which the Indian Foreign Office devoted great care, say in 1910 cannot be preserved except by the Arab League getting a share of the oil income in future. The Have-not States like Jordan or Yemen will have to get assistance from the newly rich but small States. For, one thing is plain: Kuwait cannot afford to be like Brunei—rich and self-sufficient though protected, collecting royalties and incometax from Royal Dutch-Shell. The Sheikh cannot always hope that Iraq would be kept at bay. Nor can she hope that present Arab quarrels with Israel will guarantee her position forever. The problem is really one of Socialism coming up in the desert winds. It may be that Kuwait can enjoy free trade (except for taking liquor at 50 per cent), buy Indian vanaspati or rayon goods or even Benares brocades. Kuwait may have to go in for more food and a better water supply by using her big sterling balances for popular welfare, not princely display. The creation of a fund for the good of all Arab States may bring in claims from Egypt and Algeria, but Kuwait may have to promote a foreign aid programme for the use of Iraq as well as Jordan. It was easy to sit back before 1952 and refer everything to the British Adviser, but the rush of tankers to Mena-el-Ahmadi and the big new oilfield opened up in 1957 have changed the political outlook besides bringing down Gulf prices for oil, helping India to ask for reduced prices for imported crude oil. Kuwait has no monopoly and must act in concert with Saudi Arabia, the UAR and others to protect her economic interests. Her political interests also require Arab help, especially, if Britain is going to cut overseas military expenditure as a luxury that must be forgone.

PHILIPPINES Pointers to Progress

Mergers in the textile industry, in the expansion of flour mills using imported wheat, and the construction of a cold rolling mill in Philippines are pointers to industrial progress in an undeveloped area. The rise of a chemical industry, as also plans for making optical glass locally suggest that political troubles do not hamper industrial growth. The Philippines Republic like India, operates strict import control owing to the shortage of foreign exchange. High prices help local manufacturers who are, however, handicapped by shortage of trained labour and the scarcity of capital, foreign capital included.

Capital and earnings cannot be repatriated: so direct US investment must long remain limited. But the trade outlook is regarded

as promising and the export of minerals may become more important than shipment of copra or sugar in the future. Investment in a big steel mill at a cost of 116 million dollars on Mindanao island may change the outlook if 2,66,000 tons of finished steel products are available. The Philippines may prove a good market for US second-hand machinery, especially, as sales of machinery have risen steadily. But most trade is in the hands of the Chinese, despite the growth of a Government trading agency, designed to help Filipino merchants. The chances for India in the Philippines may depend largely on local Chinese goodwill. But Hongkong may be regularly preferred and the USA may be the main supplier of such capital goods as are required. But if ore shipments to Japan fall off, the prospects for Indian iron ore may improve from the circumstance of economic change in the islands that are now turning away from playing politics to business. The political connection with the USA may even be an advantage for Indian shippers of jute fabrics, though local fibres provide material for making bags. In one respect, there is similarity. Prices have risen in spite of tight monetary controls in the Philippines. As a coffee processing plant is getting ready, bulk sales of coffee beans may be tried by India. The present surplus must stimulate a search for new markets.

CEYLON The Growing Public Sector

The entry of the Ceylon Government into banking was only the climax of developments creating a public sector. The Ceylon Government has set up companies to handle vegetable oils, leather and ceramics. Both trade and industry are covered by the State-owned enterprises which now include a textile corporation and a film company. The sugar company could not get going in 1960 owing to shortage of raw materials.

Joint ventures in which private capital finds a place are common and Ceylon is now trying to make glass, electric bulbs and hardboard. There is now a local plywood-making company. Of course, the nationalisation of oil and State control of petroleum imports has evoked more notice abroad. There is an industrial policy resolution of sorts to regulate development. Fertilisers, chemicals and salt as well as mineral sands fall wholly in the public sector and the field of private enterprise is limited largely to consumer goods.

The Government outlay in the public sector in 1960 was by no means large and the need for foreign capital is known to be acute. However, economic and fiscal policy is now tempered by

a preference for socialism. This also explains the plan for a People's Bank in which co-operative societies will hold shares to the tune of Rs 6 millions. It will replace the Co-operative Federal Bank, so that it is not a brand new venture. It will function as a commercial bank while assisting industrial co-operatives and developing rural credit through co-operative societies. The entry of a State Bank, that has an edge over its foreign rivals including Indian, will perhaps help the People's Bank to attract deposits. But the emergency is one obstacle to the revival of confidence that promotes regular savings. However, what matters is the creation of local companies, meant to eliminate foreign concerns operating in Ceylon. A beginning has been made with an industrial estate also.

STANVAC Sizable Saving in Foreign Exchange

The Standard-Vacuum Review of 1960 highlights some interesting facts about the activities of the Standard Vacuum Oil Company in India during 1960. There was a rise both in the quantity of crude oil processed at the Company's refinery and also in the sales volume recorded. The refinery processed an average of 38,876 barrels of crude oil per day in 1960 as compared with 33,812 barrels per day in 1959 reflecting an increase of nearly 15 per cent. Total sales were also at an all time high of 473.6 million gallons representing an increase of 17 per cent over sales in 1959. However, the financial results of working in 1960 make less impressive reading since the accounts show a drop in the combined profitability of the refining and marketing organisations. The net profit from refining operations in 1960 was Rs 121 lakhs which compares with Rs 126 lakhs for the previous year. The net profit for the marketing organisation in 1960 was Rs 68 lakhs against Rs 82 lakhs for 1959. Even these nominal profits are shown to have been offset by the write-off of expense incurred in the abortive search for oil in the West Bengal region.

A review of the financial results for the company for a ten year period discloses a drop in profits of great magnitude and also the inverse proportion of profits to sales volume. Thus in 1951 when the company sold only 249.9 million gallons, the return on capital was 13.38 per cent. Five years later when the sales volume reached 458.7 million gallons, the return was 5.55 per cent. In 1960 when the total sales exceeded 640.0 million gallons it had declined further to 4.26 per cent.

The review also underlines the benefits in terms of foreign exchange savings and foreign ex-

change earnings accruing to the country by the manufacturing programmes undertaken by the Company's refinery. It is observed that the net saving and earnings of foreign exchange after paying for crude imports etc from the time the refinery went into operations in 1954 upto the end of 1960 were more than Rs 18.44 lakhs. Attempts have also been made to secure modifications in the plant and other technical devices to reduce the yield of gasoline of which there is already surplus production in the country. It is stated that

during 1960, the Company was able to reduce the gasoline yield to 23 per cent of the crude processed against 32 per cent in 1955. As a result the production of kerosene and diesel oil has gone up from 28 per cent of crude processed to 39 per cent.

A significant event of the year was the absorption of the Company by Standard Oil Company as a wholly owned subsidiary. An important benefit from this development will be to give more direct access for the Standard Vacuum Company to the expe-

rience and research of the associate Company.

SCIENCE Indigenous Source of Sulphur

Recent investigations by the Indian Bureau of Mines on the technical and economic aspects of utilizing the private deposits of Amjore in Bihar for the production of sulphuric acid are reported in

the current (July) issue of Research and Industry, a monthly periodical published by the Council of Scientific and Industrial Research.

In India, almost all the units producing sulphuric acid are based on elemental sulphur which is now entirely imported. The projects for producing sulphur locally assume considerable importance in view of the rapidly mounting requirements of sulphur for the production of sulphuric acid. By 1965-66, it is estimated, India would be importing 400,000 tons

Cottons labelled 'Sanforized' will not shrink out of fit

Our technical experts keep a constant check on all mills licensed to use the internationally-known label 'Sanforized'. Such vigilance ensures that material bearing this label is up to specifications laid down by us, and that it will not shrink even after many, many washings.

Month after month and throughout the year, these experts visit the licensees, carefully examining fabrics both from the warehouses as well as off the processing machine

From each mill, they take an extensive random sampling of various fabrics. Each must be a quality fabric before it can be stamped with the label 'Sanforized'

These samples are catalogued; measured and submitted to rigorous wash and minimum shrinkage tests both here and in the U.S.A. in fully equipped technical laboratories

The catalogued samples are then re-examined and re-measured. The results of our experts' findings are recorded, each mill having its own dossier

A copy of these reports, together with their samples, are sent to the home office in New York. This multiple checking ensures that all cottons marked 'Sanforized' will not shrink out of fit

Make certain you get the full measure of value of the material you buy—

Look for **SANFORIZED** on the label

and your clothes will never shrink out of fit!

Issued by Chert, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95 Marine Drive, Bombay 2

of sulphur for production of sulphuric acid.

Studies have shown that the production of elemental sulphur by the Norwegian Orkala process would be economical in India if the pyrites is made available at Rs 35 per ton. Another possibility examined is the setting up of pyrite burning units as an adjunct to a steel project. The resulting iron oxide could be utilized for the manufacture of pig iron and steel.

Taking into consideration all factors the study report recommends the installation of chemical plants within a radius of 200 miles from Amjore to derive maximum advantage from the pyrite deposits there. The Ajmore pyrite deposits form the most promising source of sulphur in India. This locality is estimated to have a reserve of about 384 million tons of sulphide ore in an area of 48 square miles. About 78 million tons of these are proved reserves containing on an average 40 per cent sulphur.

INDUSTRIAL INDIA Basic Instrumentation

Mahindra Engineering Co. Ltd., a wholly owned subsidiary of Mahindra & Mahindra Limited, has begun the manufacture of basic instrumentation, the first of its kind in India. Present import of instrumentation costs Rs 2 crores per annum.

Mahindra Engineering were formerly distributing and servicing the products of Electroflo Meters Co. Ltd., UK, when their scheme for progressive manufacture of these products was approved by the Government of India. These products will strictly conform to the technical specifications and standards laid down by Electroflo Meters Co. Ltd. also a member of the Elliot-Automation Group, largest such group outside the USA.

Products under manufacture will include Pyrometers, Flowmeters, Co2 Meters, Draught Gauges, etc.

The plan envisages the expansion of the Manufacturing Programme to cover complementary range of instrumentation to the basic range now under manufacture. It is understood that over the next three to five years the entire demand of basic instrumentation can be met from indigenous sources: provided the Import Licence for the raw materials and Proprietary items are made available by the Government.

The indigenous content by value in the first year will be about 70 per cent. In the second year it will go upto roughly 58 per cent. The balance 12 per cent are specialised proprietary items like Sintered Magnets, Fractional horse

power motors, Jewels, Pivots, Hairsprings, Compensating Cable etc. and raw materials like Beryllium-Copper, Nickel-Silver, Pivot Steel etc.

A substantial foreign exchange saving of Rs 10 lakhs is anticipated in the first year and this is expected to go upto Rs 25 lakhs in the second year.

NEWS IN BRIEF

The National Coal Development Corporation has decided to raise its Third Plan target from 17.0 million tons to 18.5 million tons of coal per annum to provide a cushion to its various schemes.

India registered a favourable balance of trade with the UK to the extent of £2.10 million in February 1961.

A co-ordinated 5-year programme for economic development of Bhutan involving an outlay of Rs 17.5 crores has been accepted by the Government of India and the Government of Bhutan.

The third machine tool factory estimated to cost about Rs 8 to 10 crores will be set up near Pinjore in the Punjab with the technical collaboration of the German Democratic Republic.

The Ford Foundation has announced grants totalling \$1,400,000 to help carry out a master development plan for the city of Calcutta.

The all-India final estimate for sugarcane crop for 1960-61 shows that the area under sugarcane during 1960-61 was 5,734,000 acres while production in terms of cane was 85,045,000 tons.

The Central Warehousing Corporation has opened ten warehouses in the first four months of the current financial year. It has now 50 warehouses in the country. The new warehouses are at Amritsar, Abohar, Mansa, Karnal, and Sonapat (Punjab) Rajamundry, Tadepalligudem and Duggirala (Andhra Pradesh) Quilon (Kerala) and Morena (Madhya Pradesh).

The University Grants Commission has decided to set up at least a score of centres of advanced study in selected subjects in Universities in various parts of the country. The Commission has appointed an expert committee of seven members with Prof. A. R. Wadia as Chairman to examine in detail the subjects of study and other aspects of the programme.

The International Monetary Fund has announced an agreement to make available the equivalent of \$2,000 million to help UK's

balance of payments position. Britain would make an immediate drawing of the equivalent of \$1,500 million in nine currencies held by the Fund.

Sardar Swaran Singh, Minister for Steel, Mines and Fuel, has announced that an agreement for a World Bank loan for the private sector of the coal industry will be signed soon. Contrary to earlier expectations, the quantum of this loan will be Rs 17 crores and not Rs 30 crores.

Imports of machinery and transport equipment into India during 1960-61 cost Rs 326.7 crores compared to Rs 279.3 crores in the previous year, showing a rise of Rs 47.4 crores or 17 per cent.

With the recent acquisition of a tanker of over 20,000 GRT by the newly formed Indian shipping company, the Jayanti Shipping Co., of Delhi, the total tonnage of Indian shipping has exceeded 900,000 GRT. The Indian merchant fleet now consist of 176 vessels and aggregate 908,000 GRT.

A factory manufacturing cine equipment is to be set up at Ootacamund, the South Indian hill station.

The Government of India has decided to constitute a Direct Taxes Advisory Committee to suggest measures to promote understanding between the tax-payers and the Government. The Minister of Finance will be the Chairman and the Deputy Minister of Finance the Vice-Chairman of the committee. The committee will have ten non-official members and three official members. The following non-official members have been nominated to the first committee.

Mr C. R. Pattabhiraman, Member, Lok Sabha, Mr Mool Chand Jain, Member Lok Sabha, Shrimati, Mafida Ahmed, Member Lok Sabha, Mr I. T. Lohani, Nawab of Palampur, Member Rajya Sabha, Mr G. Basu, Chartered Accountant, Calcutta, Mr G. N. Joshi, Advocate Bombay, Mr Arvind N. Mafatlal, Bombay, Mr Neville N. Wadia, Bombay, Mr S. S. Vasan, Madras. The tenth non-official member will be nominated in due course.

The UP Government has decided to install three thermal plants in the State with a total capacity of 355,000 kw during the Third Plan period. These plants would be set up at Haridwar (90,000kw) Odra (250,000 kw) and Kanpur (15,000 kw).

A sub-committee of the Central Advisory Council of Industries has been constituted with Mr Hridaynath Kunzru as the Chairman, to review all licences issued, refused, varied, amended, or revoked from time to time and to advise the Government on the general

principles to be followed in the issue of licences for establishing new undertakings or substantial expansion of the existing undertakings. The other members of the committee are Messrs V. P. Poddar, A. Ramaswami Mudaliar, D. C. B. Pilkington, N. D. Sahukar, Karam Chand Thapar, N. Stenhouse, S. R. Vasavada and S. A. Dange.

The Union Government will shortly issue a licence for the establishment of a factory in Kerala in the private sector for the manufacture of certain types of electrical equipment such as medium size transformers. The factory will be set up in collaboration with Hitachi of Japan, the biggest manufacturers of heavy electrical equipment in the Far East.

PERSONAL

Mr K. S. Sundarajan, Joint Secretary to the Department of Economic Affairs, Ministry of Finance has been appointed a member of the Indian Airlines Corporation as also of the Air India International Corporation.

Mr S. Bhootalingam, Secretary, Ministry of Finance, has been appointed a member of the University Grants Commission in place of Mr N. N. Wanchoo who has ceased to be a member of the body.

General K. S. Thimayya, Formerly Army Chief of Staff, has been appointed Deputy President of the UPASI.

Mr M. N. Sambamurthi, at present Accountant Member, Income-tax Appellate Tribunal, has been appointed President of the Tribunal in place of Mr S. C. Manchanda, who has become permanent Judge of the Allahabad High Court.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

OUT in Space for just a day, Major Titov was smitten with what, in the circumstances, might have seemed to many an odd emotion—nostalgia. Having just shaken the earth's dust off his feet, one would have thought that he would have been exalted by a Nietzschean sense of power over new worlds. Instead, he was overcome with "earth-sickness". No, it was not ennui with Space, which would have been a trifle early, considering that he had just, so to speak, set his foot in it. It was that he felt that "nothing was fairer in the world than the earth on which one can stand, work and breathe the air of the fields". It warmed my heart to see that even in the moment of his triumph, Major Titov had a thought to spare for poor earth. And what a thought! People are so out of love these days with this earth of ours that they think nothing of blowing it up. Though I personally am not disposed to rave about it, I think like Touchstone, that it is "an ill-favoured thing" but mine own. It was given to Major Titov to make us all ashamed of ourselves and take a little decent pride in this "goodly frame". And there is a principle of romanticism involved here. The farther you get away from the earth the more tied to it you become, and that is the basis of all nostalgia. As Chesterton once remarked the essence of romantic adventure is that at the end of it all you come back home and live happily in dowdy domesticity. And in a deeper sense, the earth you stand on and the fields you plough are more important than the planets you colonise, and the man who raised two ears of corn where one grew before would still be doing a more important job than one who gads about in Space. Of course, at the rate things are moving, "earth-sickness" may certainly be due to less exalted reasons. In an age in which we may soon be vacationing in the Moon to "get away from it all", it is just possible for us to get sick of the delights that the night-life of the gods has to offer and hanker after some honest-to-God sub-utopian boredom. One can fancy, on a cosmic scale, the futility that Mathew Arnold deplored,—that of man trying to get away from himself by rushing from ugly and unsightly London to ugly and unsightly Brighton. But then, there is time enough to worry about all this. Maybe we may not have to worry at all, if Earl Russell's worst fears about a helpless drift towards war prove right.

The psychology of persuasion has me baffled all the time and I am not being helped any by the Packards and Dichters of the world. There appears to be two distinct and opposite theories holding the field. On the one hand, there are those who act on the premise of the bird in T. S. Eliot's poem: "Go, Go, humankind cannot bear very much reality". and wrap up whatever they have to sell in candyfloss. On the other hand, there are those who profess to speak the truth and leave it at that. These latter quote the example of the flower girl who spurned the usual sob-stuff about poor Nell. She put up a placard in front of her basket announcing that she was not starving and did not have seventeen children at home and sold flowers merely because she loved them. She is reported to have emptied her basket in fifteen minutes. This may well be a case of truth paying dividends: but, if a girl was really poor and sold flowers and proclaimed her poverty, and failed to sell, what is the position? Or take the weirder case of a person who is actually starving and having seventeen children, putting up this particular front, as a kind of double-bluff that gets at the sucker who imagines he is nobody's fool. What then?

Among the more amusing examples of the "blunt-truth-theory" are the real property ads of E.H. Brooks and Son that appear in the personal columns of Observer. Here are some samples quoted by Newsweek: "A dreadful working class terrace house of sinister aspect in one of the meaner streets at the bitter end of Cheyne Walk . . . The wall paper hangs dankly down in shreds. . . . The gaping holes gnawed at the edges of the basement floor may not have been done by rats, but merely large mice. . . ." Here is another: "A wonderful buy: a thoroughly scruffy period house, ought to be sound in wind and limb, except for a spot of wet rot". What will Dr Dichter say about this kind of selling? Of course, between the imaginary flower-seller's placard and the real estate ads, there is a difference. The former's assertions are strictly irrelevant to the act of buying. But even so, they are not irrelevant to the act of being persuaded and it cannot be denied that truth cheats a little more blatantly in both cases than half-truth or even falsehood in the opposite kind. There are all sorts of masochistic satisfactions to be

had in falling for this kind of sales talk. But even as I am getting convinced that this is a better kind of sales approach, I am confronted by the figures of sales promoted by the opposite kind of advertisement. The same difficulty arises about theories of salesmanship. Do I make the customer feel like a worm and buy in a dither of inferiority complex the whole shop, or do I suck up to him, make him feel important and expansive and unload on him the unsaleable stock? It is difficult to decide. Or does it depend upon the kinds of goods you have to sell? Haute Couture would seem to favour the former technique. How often have we not seen photographs of supercilious models viewing with faint distaste the ungainly customers they model for and reducing them to abject surrender? Other trades may call for the soft soap and the big handshake. Moral? It takes all kinds of suckers to make this world and they cancel each other out. And in a world of suckers who is the wise guy?

I find that the Government, acting on a sensible recommendation of the Uppal Committee on waste lands, is to set up a model co-operative farm in Mysore for landless labourers. I have always been rather intrigued by the fact that advocates of co-operative farming have been slow to get on to the possibilities of an idea that appears to me to knock the bottom out of much of the opposition to it. As I understand it, even the Swatantra Party is not opposed to co-operation as such even in farming. What it objects to—and I must say I find it a weighty objection—is the huddling together of a number of small farmers into a co-operative mould and asking them to merge their individual identity in the larger entity. This, if I know anything of psychology, especially of a small peasant, is a wholly unrealistic programme unless, of course, pressure direct or indirect is permitted. On the other hand, there is no reason why waste and reclaimed lands, lands declared surplus by the operation of ceiling legislation and Bhoodan gifts should not be straightaway used for experiments in co-operative farming with landless labourers as members. The idea has several virtues. First, it does not involve any needless exacerbation over existing proprietary rights and sentiments. The landless farmer has, by definition, no rights to surrender or sentiments of ownership to be outraged. All that will happen in his case is that he would continue to be rewarded for his labour as before with the added right of qualified ownership. In his case, it is a right acquired

whereas in the case of landed proprietor joining a co-operative farm, it would be a case of surrendering of part of an existing right. And as British constitutional history has demonstrated, reforms based on enlargement of rights have a greater chance of enduring than those that involve expropriation. Secondly, in all compromises currently made by Authority, a member continues to keep his rights of ownership in tact even when he merges his land in a co-operative farm. This means that two modes of sharing the fruits of the co-operative endeavour will, in all fairness, have to be devised: one that will go with rights of ownership and another that will bear some relationship to the services rendered by the members. The equity of this kind of sharing will always be a matter for argument and is bound to cause heartburn of various sorts. In an atmosphere of socialist frowning on ownership, even of a pitiful three acres and a cow, the chances are that ownership rights will be subject to slow attrition. None of these conflicts can possibly arise in a homogeneous co-operative farming society in which the very stake in the land is created for the first time by the labour of the members. There would again be no problem of any member suddenly saying that he would take himself and his land out of the co-operative farm, a right now allowed him, in order to prove good faith to those who base their objections to the idea on its alleged coercive nature. Above all, this mode of arranging affairs has the virtue of eliminating the other great bane of Indian agriculture—fragmented and uneconomic holdings. In all the current enthusiasm for land reform based on indignation at alleged disparities in agricultural wealth, a somewhat ersatz emotion, this, if the census of holdings given in an appendix in the Third Plan is correct—this fact gets forgotten. Otherwise it is difficult to understand policies designed to distribute lands rendered surplus by ceiling legislation to landless labourers. One would have thought that the almost providential juxtaposition of landless labour and "owner-less" land would have been seized upon for a socialist experiment without gratuitously duplicating the historical impediments to such a consummation. Instead, it seems to me, Authority has been creating new and wholly unnecessary difficulties for itself. It is vaguely hoped that subsequently, these beneficiaries of land reform can be persuaded to join a co-operative farm and cultivate their lands jointly. I for one, believe that, it will be more difficult to persuade this new class of helot-turned-petit-bourgeois to surrender ownership rights than those who have held to their barren patch for much longer periods. That is why I welcome the Mysore experiment.

PARLIAMENT Questions and Answers

A heavy barrage of questions relating to the Ministry of Commerce & Industry was a distinctive feature of the opening of monsoon session of Lok Sabha. Mr Kanungo, Mr Manubhai Shah and Mr Satish Chandra between them had to answer as many as 79 questions ranging from financial assistance to village soap industries to the impact of the European Common Market on Indian exports, not to mention the Small Car which is now very much in the news. The answer to the question relating to the small car has been fully reported in the newspapers; but the same is not the case with the wealth of information supplied in written answers and statements laid on the table. Among these are the following:—

US COLLABORATION

It may be recalled that a team of US businessmen will be visiting this country in October to assess the prospects of further collaboration—was elicited by Mrs Renu Chakravarti (Com). During the Second Plan period, consents had been given to 24 new issues of capital in which participation by US companies was proposed. This does not, however, include cases of technical collaboration only between US and Indian Companies approved by the Government of India. The activities of the new companies started with US capital participation cover a wide field, including manufacture of automobile ancillaries, surgical and pharmaceutical products, pulp and paper, ferro-manganese and other alloys, aluminium, cement, synthetic rubber, tyres and tubes, artificial silk or rayon, Forge shop, carbon black, anti-biotics, electrical equipment etc. The structure of capital participation between American and Indian interests varies from company to company, but generally US participation has been on a minority share-holding basis: in a very few out of the 24 cases mentioned above, the US firms hold majority shares. Before approving of the arrangements for collaboration, the different aspects of such arrangements are carefully scrutinised in Committees specifically set up for the purpose. In this scrutiny importance is attached to the arrangements proposed for the training of Indian technicians and executives in all aspects of production and management. Further, where a phased programme of manufacture is proposed, emphasis is placed on the rapid build-up of indigenous production. It was also

vested in any of these joint collaboration firms.

CEMENT

A statement placed on the table of the House, in answer to a question on cement supplies and prices, conceded the existence of serious shortage and gave the further information that, in order to meet the demand, several new schemes, both for establishment of new units and for expansion of existing factories, had been approved for a further annual capacity of 6.174 million tons. Besides, assistance is provided to existing factories to maximise production.

While the actual production of cement during the current quarter has been estimated at 22.50 lakh metric tonnes, the demand had increased to 39.78 lakh metric tonnes during this period from the level of 21.84 lakh metric tonnes in the first quarter of 1960. Cement allocations for every quarter are made by the Government of India in advance of its commencement, after taking into account the estimated production in that quarter. In making the allocations, due regard is given to the priority and essentiality of requirements like Defence etc. and plan projects. Bulk allotments to central co-ordinating sponsoring authorities and State Governments are made and detailed distribution of the quantity thus allotted amongst various consumers, projects under the Plan or otherwise is made by them.

The requirements of cement of all the State Governments from April, 1960 to September, 1960 were met in full. Allocations during the quarter October-December 1960 were made in consultation with the Planning Commission and in a meeting with the representatives of State Governments. It was decided that allocations of cement for the quarter January-March 1961 should be made on the basis of the average of allotments and despatches in the past four quarters and the allotments were made accordingly for the quarter January-March, 1961.

While the F.O.R. railhead destination price of unpacked cement and the packing charges are fixed by the Central Government, the retail selling price in a State is fixed by the concerned State Government after taking into account factors like handling and transportation charges from rail-head to the dealer's shop, dealer's commission, central sales tax and other incidental charges. The enforcement of the price is exercised by the States under their respective Cement Control Orders. Thus it is for the State Governments to take steps to check black marketing in cement, if there be any. The present F.O.R. railhead destination price of

unpacked cement, as fixed by the Central Government is Rs 104.60 per tonne. The packing charges for the quarter July-September are Rs 19.00 nP per tonne.

TEA

The inadequacies of arrangements of transport for the Indian Tea industry and of the measures for publicity abroad were raised in another question. In answer it was stated that, while the Tea Board had not received any major complaint about the difficulties in the despatch of teas to Calcutta from West Bengal or Assam, the Railways had introduced a system of guaranteed delivery of tea traffic from Siliguri district to Sealdah, Chitpur, Howrah and Calcutta port area within 8 or 10 days of booking. Apart from this scheme, which, it was stated, had proved to be very popular with the planters in general, the North-East Frontier Railway authorities had this year issued orders to their officers at Katihar, Alipur-duar Junction, to make available wagons for loading teas within two days from the date of registration. More than 80 per cent of the tea is sent by the special steamer services which deliver consignments at Calcutta within 8 days of booking.

As regards publicity it was stated that the following measures have been taken by the Tea Board:

1. Participation in Exhibitions sponsored by the Government of India;
2. On suitable occasions pure Indian blends have been presented to those likely to influence the consumption of Indian tea;
3. Presentation of Indian tea through Offices of Air India International;
4. Supply of free tea to industrial canteens in Switzerland to serve tea to their workers;
5. Steps to appoint its Officer on the Continent to look after the interests of Indian tea in Europe are being taken;
6. Tea Advisers have been appointed in the UK, Australia, USA and Egypt; and
7. A Tea Centre has already been opened in Cairo; all the activities in this sphere are surveyed by the Board's Export Promotion Committee assisted by Regional Panels which include members from the tea trade also, who give expert advice.

Figures given in answer to another question however show a declining trend of expenditure on promotional works both within India and abroad. The expenditure on internal promotion of tea has declined from Rs 32,21,188 in 1958-59 to Rs 24,01,707 in 1959-60 and further to Rs 18,22,948 in 1960-61. The corresponding figure of total expenditure on promotional works abroad are Rs 43,25,581 for 1958-59; Rs 45,72,771 in 1959-60 and Rs 32,00,078 in 1960-61. (Figures for 1960-61 are provisional). It was, however, explained that the figures of tea promotion outside India do not in fact reflect any curtailment

of activities. The reduction in expenditure has been mainly due to reduced contributions to the Tea Councils of USA, Canada and West Germany consequent on the revision of the basis on which contributions were made by the participants. As regards internal promotion, a new orientation has been given to activities which accounts for the reduced expenditure. A large number of internal promotion staff has been switched on to advisory services in canteens in large industrial establishments. These canteens bear a substantial part of the salary and allowances of the staff.

A NEW HOTEL FOR THE CAPITAL

The Ministry of Transport, Tourist Division, has estimated that the present hotel accommodation in New Delhi is 900 rooms and that an additional 1,100 rooms are needed to meet the present demand.

A new venture in the offing will partially meet this demand. East India Hotels Limited and Intercontinental Hotels Corporation of New York have announced plans for the completion of a new \$5,000,000 airconditioned 350-room hotel in New Delhi.

Financing of the new hotel is being done by the Export-Import Bank, the Finance Corporation of India, and private sources in India and the United States. The Export-Import Bank is financing the project in dollars and in foreign currency.

The hotel, owned by East India, will be a member of the Intercontinental group of hotels and will be named the Oberoi Intercontinental. Intercontinental, a whollyowned subsidiary of Pan American World Airways and one of the largest operators of hotels outside the United States, will provide technical assistance for the completion and furnishing of the new hotel.

The new hotel in New Delhi will include a banquet room, grill room, night club, coffee, soap, swimming pool, and large public room facilities for conferences and meetings. The hotel is in a residential area of the capital, adjoining the golf course, and a mile from the Central Secretariat and the business and shopping areas of the city at Connaught Circus.

The Government also feels that new hotels would contribute to facilities being provided for the nation's growing tourist business.

★

The State Trading Corporation has negotiated a barter agreement with a Swiss firm for the import of automatic looms against the export of cloth and commodities, the Minister of Commerce stated in answer to a question from Mr Morarka. The agreement provides for the import of Rs 3 crores worth of automatic looms against exports of cotton textiles and other products over a period of two years. Mr Kanungo also informed the House, in answer to another question, that, so far this year (up to 10-7-61), forty-four firms have been black-listed for indulging in malpractices in obtaining export and import licences.

are you a victim of executive fatigue?

at the end of a working day
are you tired, listless,
completely done-in?

If so, you are possibly a victim of executive fatigue and you need Smiths **SUPER FORTE**—the tonic that fights executive fatigue. An exhausting day's work uses up more vitamins than your daily food intake can restore. **SUPER FORTE's** 10 vitamins and 9 minerals adjust this deficiency.

What results can you expect of **SUPER FORTE**? Nothing dramatic. It wouldn't be fair to suggest that **SUPER FORTE** works wonders overnight. But take two tablets daily for 30 days and you'll get results—added vitality, strength, staying power—all the additional physical reserves you need to cope with the stress and strain of modern business.

Smith, Stanistreet & Co., Ltd., Calcutta

Indian Copper Corporation Limited

Record Production and Another Successful Year

Mr Patrick E.G.W. Parish, O.B.E., the Chairman, on New Project

Presiding at the Annual General Meeting of the Company for the year ended 31st December 1960, held on the 9th August 1961, Mr Patrick E.G.W. Parish, O.B.E., the chairman, said:—

Gentlemen,

The Report of your Directors and the Accounts for the year ended 31st December 1960 have been in your hands for several weeks. This meeting gives me a suitable opportunity to give you some more details of the progress which your Company has made during the year, a review of Copper prices and, perhaps, an indication of what lies ahead.

GENERAL REVIEW

As I have explained before on similar occasions, the prices at which our products are sold must inevitably follow the trend of prices of Copper in the world markets. During 1960 the world price opened at about £253 per ton, rose to £279 in February, fluctuated rather sharply between £279 and £237, with an average of about £250 from March to August, whereafter it fell to about £220/230 for the remainder of the year. So far this year world prices have remained steady around £220/240, with an average of about £228 as compared to £266.6 for the whole of 1960. In comparison with some years, these fluctuations have been relatively small.

World production of Copper could very easily exceed world consumption, but during the year there have been a number of strikes in producing countries and some of the major producers have at times voluntarily reduced output in order to avoid flooding the market. These factors have had a stabilising effect on the price which consumers would pay.

After a year of relatively stable prices but in an unstable world it is impossible to predict what eventualities may occur to influence prices during the next few months. The world price at the end of last month stood at about £230 per ton.

WORKING REVIEW

Production of Copper in 1960 was 8,789.30 long tons, which is a record for the Company and 1,216 long tons higher than last year. This satisfactory figure is partly due to the fact that the annual shutdown at the Works for overhaul was postponed until January 1961 so that more days were worked in 1960.

Besides mining, producing and rolling Copper, your Company

rolls Brass and Yellow Metal Sheets and Circles. This requires a mixture of Copper and Zinc, of which the latter metal has to be imported. During 1960 sufficient import licences were issued by Government to maintain supplies of our requirements, but I must tell you that in 1961, owing to the serious foreign exchange position, we have not been able to obtain our full quota of Zinc with the result that output has been adversely affected in recent months and there are little prospects of any improvement at present.

Active prospecting throughout the property has continued during the year and although no startling discoveries have been made, your new small mine at Surda is contributing towards our efforts to increase production. Prospecting, as you well know, is a very expensive business, but it is essential for the future of the Company and is vital if we are to increase production of this metal with a view to reducing the amount of Copper which has to be imported and thus save valuable foreign exchange.

Ore reserve increased by 88,695 short tons and at the end of the year stood at 4,292,242 short tons, which is a sound and satisfactory position for a Company mining deep copper ore deposits.

Although during 1960 we suffered no ill effects from Electric Power shortage, this is a matter which, since the power cuts in the early months of this year, is causing us some anxiety; but it is hoped that the substantially increasing offtake we shall need in future will be available.

Coal supplies, partly utilised for augmenting electric power requirements, have in recent months, owing to transport difficulties, been erratic, which has resulted in stocks at times falling below a safe working level.

Despatches of finished products, which have a direct relationship to profits, were maintained at a satisfactory level in 1960, but this year, owing to transport difficulties, heavy stocks have accumulated at the Works. However, provided the required number of wagons from the Railway are forthcoming, the shortfall in despatches can be made good.

The satisfactory financial result for 1960 is due to higher output and a reasonable and stable World copper price level. Expenses, however, continue to rise partly as a result of increased labour costs and partly because we are now mining

at greater depths. I think, however, you will agree that the Company has had a successful year in 1960.

Last year I outlined the additional plant and machinery that will be required during the next few years for the processing of the expected increased output of ore from the Mine. Although investigations concerning the most suitable and up-to-date equipment have not as yet been finalised. I am pleased to report that a start has been made by the completion of modifications to the Aerial Ropeway to carry the anticipated output from the Mine to the Works.

It is pleasing to report that on the whole relations with labour have been satisfactory. In November 1960 a settlement was reached with the joint Mines and Works Unions increasing basic pay and Dearness Allowance, which has been favourably received.

KYANITE

Although we cannot assist in the country's export drive so far as our Copper is concerned, our efforts do help to conserve considerable sums of foreign exchange which would otherwise have to be spent on importing copper. On the other hand, the export of Kyanite is a useful foreign exchange earner and we are doing our best to increase sales abroad. Despatches abroad during 1960 amounted to 21,242 long tons. I must mention, however, that our efforts are frequently thwarted for lack of railway wagons from the Mine to Calcutta docks.

The appeal in the Supreme Court still remains pending, but attempts are being made to arrive at a compromise settlement.

ELECTROLYTIC PROJECT

Work has now started on the foundations of the new buildings and satisfactory progress made on the ordering of equipment. At the moment we are delayed by the shortage of cement, which is chronic throughout the country, but it is hoped that this will not prevent completion of the Project on schedule.

ACCOUNTS

The Profit for the year before providing for Taxation, Depreciation and Reserves amounts to £1,307,982 as compared with a profit in 1959 of £1,202,259. Income Tax and Super Tax on profits amount to £500,477. Your Directors have decided to place £175,000 to Depreciation and £200,000 to General Reserve.

£50,625 goes to Development Reserve.

There is a balance available of £489,991 and your Directors are recommending that the same Dividend as last year, i.e. 27% subject to tax, be maintained absorbing £370,251, leaving £118,750 to be carried forward.

BONUS SHARE ISSUE

A number of Shareholders have written to us suggesting that the Company should issue Bonus Shares and there have been rumours in the market from time to time that your Directors were about to make such an issue. We have, of course, considered this matter, but our opinion is that for the present there is no advantage in so doing. On the contrary, it would involve the Company in paying tax of 12½% on the Bonus Shares, which we do not think is justified as we require all the money we have got for the various expansion plans which lie before us. It is true that in this year's Budget the tax on Bonus Shares was reduced from 30% to 12½%, but even this tax is, in our opinion, unreasonable when Reserves, which have been built up out of taxed profits, are converted into Bonus Shares. Let us rather conserve our funds for improvements and extensions which will earn increased profits in the future.

The matter of a Rights Issue has also been discussed by your Directors, but the Company has sufficient cash for its immediate plans. In due course if further funds are required the question of making a Rights Issue will again be considered.

I am fully aware of the reasons which prompt Shareholders to hope for a Bonus Issue, but unless profits are increased there can be no benefit of a better yield and, as I have said, to pay out 12½% in tax when the money can be profitably used in extension projects seems to us unjustifiable.

STAFF

It remains for me to thank the General manager, Mr. N. A. B. Hill, and the staff both at the Mines and at the Works, and the workers. I am sure that I speak on your behalf in expressing our appreciation of their work which has led to another year's successful results.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

12 August 1961

Bombay Suburban Electric Supply Limited

Investment in Electric Supply Industry

Factors That Depress Equity Values

Mr A. N. Haksar on the Company's Expansion Plans

The following is the text of the speech delivered by Mr. A. N. Haksar, Chairman of Bombay Suburban Electric Supply Limited, at its Annual General Meeting held on 9th August 1961:—

The Report and Accounts already before you reflect a satisfactory record of operations during the year ended 31st March 1961. Increase in sales energy has kept up the trend of the past average of 20%. The pace of increase in the coming year should, if anything, be steeper; this is, of course, assuming that bulk power in sufficient quantity will be available to meet the needs in the Company's area of supply.

From a preliminary study of the power requirements in the Company's System, it is estimated that the demand by 1976 would be in the region of 200 MW. In this context studies are, therefore, now under way to formulate a 15-year development plan. This involves appraisal, both technical and financial, of the future design of the whole system. Substantial progress in the study of the problem is expected to be made during the current year.

All these future developments involve considerable investment; but investment in the Electric Supply Industry is being impeded by the financial regulations governing it. The fact that the return at present prescribed by the Electricity (Supply) Act, namely, 2% over the Reserve Bank rate of 4%, which again is subject to deduction of tax, is definitely inadequate, has been obvious for some time, and persistent efforts are being made to obtain a measure of relief. This involves important amendments to the Electricity (Supply) Act.

Indications at present are that the proposals to amend the Electricity (Supply) Act may be brought into effect from 1st April 1962, and I earnestly hope that this expectation will materialise. In the meantime, in some of the States, including Maharashtra, the State Governments have permitted undertakings, as a special appropriation, the tax saving represented by the difference between the pre-1959 tax rate of 51.5% and the new rate of 45% based on the Finance Act of 1959. This interim relief, is, I think, an earnest of the authorities' acceptance of the Industry's case for a fair deal.

I would now like to make some comments on the extent of relief required to rehabilitate the Indus-

try, and enable it to raise capital for development. Two primary factors have tended to depress equity values in Electric Supply Industry. These, in broad terms, are—

1. The change in the tax pattern introduced by the Finance Act, 1959, whereby the grossing up of dividends in the hands of shareholders was abolished, and in addition the law provided for deduction of tax at source at the prescribed rate (currently 30%). While this is a common feature affecting Industry at large, the Electric Supply Industry is placed in a position of not being able to take advantage of the tax relief offered by the Finance Act in other directions, in that whereas in other industries this relief has accrued to the benefit of the investor, in the case of the Electricity Supply Industry this has not been so. This certainly is not in conformity with the scheme of the Electricity (Supply) Act. One would have thought that with the Electricity (Supply) Act providing for all taxes on income and profits being charged up to the consumer's account, taxation in all forms on the Electric Supply Industry would have automatically become the consumer's liability. As things have shaped this position has not been achieved. The priority from the Industry's point of view, therefore, is the need for such changes in the Electricity (Supply) Act as would make the return free of all tax liability, be it to the undertaking or to the investor.

2. The second issue has directly arisen out of the official Bank Rate (to which is linked the return permitted to the investor in the Industry) lagging behind the realistic interest rates. In a capital intensive Industry like Electricity Supply, greater reliance has to be placed on long term finance as the Industry's requirements for development finance are, by and large, insatiable. Consequently the return fixed from time to time should be at such level as would firstly arrest

dis-investment and secondly continue to attract capital for expansion. The recent change in the Reserve Bank's lending rate to Scheduled Banks as an instrument of the credit squeeze involves three-tier interest rates: first Rs. 50 lakhs at 4%, follow on Rs. 50 lakhs at 5% and the balance at 6%, producing a resulting average lending rate of about 5%. This, by itself, has put the official Bank Rate out of focus in relation to money market conditions. Another aspect which has significant relevance is that inflation has had its effect in diluting the limited return permitted to the investor in the Industry. In the light of these considerations it is only proper that the permissible return should be upgraded suitably.

I have in my opening remarks referred to your Company's expansion being dependent on the quantum of bulk power which would be available in the years to come. For the present the power supply position is far from easy, and releases of power to consumers is subject to control under the Bombay Electricity (Special Powers) Act. A measure of decontrol is, however, in existence in that the Licenses in the area have been empowered to connect up small demands upto 20 kW for industries and domestic connections are permitted freely up to 5 kW. These decontrol measures provide a degree of normal growth. To what extent relief will be available after the commissioning of the first set of the Koyna Hydro Electric Project early next year is too early to say. At one stage it was thought that the bulk of the power from the Koyna Project would be available for use in Bombay/Poona area, but currently there are indications that a sizeable portion of the Koyna power will be reserved for use in Western Maharashtra. This has led to the possibility of the Tata Hydro Companies being permitted to extend their Trombay Thermal Station and, in addition, the Maharashtra Electricity Board considering installation of a new thermal station. This trend emphasises that the power needs of the Bombay/Poona area on which base area must perforce depend industrial development elsewhere in the State, will be met. Your Company's plans for expansion should therefore proceed on the

basis that it, along with other Licenses in the region, will be able to obtain sufficient bulk power releases.

From this premise will arise the question: How best the Company can finance its future development? For the present development has been sustained by Bank finance and before the current financial year is out the need for raising further finance will arise in all seriousness. By that time the proposals to modify the Electricity (Supply) Act will, we hope, have reached finality and I hope will produce a measure of incentive to the investor in the Industry. Your Board will then be in a better position to consider this matter further.

The large scale development in the Company's power system, involving massive investment in the coming years, will pose the problems as to whether the rates for supply now in force will produce a sufficiency of earnings to service adequately the capital employed, and meet in addition the enlarged operational expenses inherent in development. While there is no doubt that the enlarged scope of operations will tend to spread overhead costs, one must reckon with the flatatory factor. One way to hold the price line in electric supply is to diversify the sale so as to obtain a higher load factors, that is, secure the beneficial utilisation of the power facilities more fully. There are, of course, limitations in this direction, as consumer choice is not a thing which can be rigidly endorsed. A strict watch on expenditure is yet another remedy to control operational costs, but here again there are limits beyond which a public utility cannot go. For example, in a basic service like electric supply, continuity of supply overshadows all other considerations, and no undertaking can risk diluting its service facilities for economic considerations which are marginal. The need to supply power at the lowest economic cost must therefore be circumscribed by the greater need to maintain reliability and continuity of supply. This assumes greater importance in your Company's area of supply which has to contend with regorous monsoon weather and unfavourable atmospheric conditions. A higher standard of maintenance of the Company's supply system is, therefore, necessary.

In the immediate years ahead the distributing Licenses in the Bombay/Poona area may have to face an increase in the bulk sup-

ply rate consequent to the injection of the Koyna power into the System. There is also the likelihood of higher fuel costs applicable to bulk power supply which might tend to curtail net earnings as the Company's rates for supply do not contain an escalator clause to take care of adjustments in fuel prices. This has been so because until recently bulk supply in the area has been from hydro sources, but this situation has been altered by the coming into being of a larger thermal component than existed before. To what extent the first cause may have its impact on your Company's overall earnings is too early to visualise at this stage. The second cause is the more immediate one to be reckoned with, and your management are now considering how best the situation can be met. It is possible that your Company may have to consider introducing a fuel adjustment clause to ensure that the rise or fall in fuel costs applicable to bulk supply will automatically be on account of the consumer.

Dealing with the Accounts, I would like to clarify the Reserve created to augment production facilities, and the appropriations so far made to the Reserve. The first instalment of appropriation to this Reserve was made in the year 1959-60 consequent to the Maharashtra Government permitting the Company, along with other Licensees in the State, a special appropriation of 6½% of the tax

saving about which reference has been made earlier. When the accounts for 1959-60 were finalised, it was not certain as to what form the relief available would take. It was then thought that the amount permitted as special appropriation would be available for distribution to shareholders, but as events developed the scope of the sanction was limited to ploughing back the sum into the business without deduction from the Capital Base. It was in this context that the sum of Rs 1,01,656 was taken into the Dividend Equalisation Reserve in the Accounts for 1959-60 and which amount has since been transferred to a Reserve to augment production facilities in the light of the subsequent Government sanction. This Reserve now stands at Rs. 2,06,130 taking into account the sum of Rs 1,04,474 appropriated for the year under review, for which the sanction of the State Government is yet to be secured. Although the amount standing in this Reserve is not available for distribution, the benefit which will be derived by the shareholders is not slight, as the assets acquired will remain the property of the Company and the return on the amount ploughed back will also be available for the benefit of the shareholders.

Note: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

Markets

JUTE

Prices Ease on Stock Figures

WHILE the extent of the dislocation caused to the industry by the shortage of raw jute during the current month will not be known perhaps before the first week of September, there are already signs of growing difficulties in keeping some mills running. It was stated by the IJMA last week that some mills outside West Bengal and one mill in Calcutta had been forced to close down completely owing to lack of raw material. It would appear that during the past few days some more mills have been obliged to seal an additional 13 per cent looms while one or two have reduced working hours to 40 a week.

In a statement last Thursday the IJMA have pointed out that the "the position in which the industry now finds itself can only be rectified by individual mills making further cuts in production consistent with their actual stocks of jute." Referring to the allegation that there is ample jute offering on the market, the statement has said that it is belied by the fact that arrivals of raw jute are far below normal for this time of the year. Secondly, mills have unutilized jute purchase quota averaging about three months consumption. The reason for the non-utilization of the quota is said to be the non-availability of jute. Moreover, there is no arrival of old crop. Another important point to which attention has been drawn by the statement is that considerable difficulty in working is experienced by the mills because of the serious imbalance in regard to qualitywise distribution of the stock of raw jute with them. In the absence of suitable qualities of fibre for mixing purposes, the quality of production will deteriorate, with the result that substandard goods will get into the export market. The consequences of this will be serious for the future export of jute goods. The statement also seeks to correct the impression that block closures will be profitable to the mills and points out that "it is more expensive for the mills to curtail rather than to continue in production."

The controversy over raw jute supply position has however by no means closed. While some are hopeful of proving the IJMA wrong in its estimate of the supply of old crop jute there are others who think that with the quickening of the tempo of new crop jute arrivals that is confidently expected in the coming weeks in view of the substantial rainfall received in the growing areas recently, there will be enough jute

soon to feed the mills. It would appear that arrivals have shown improvement lately but the fact that preparation of the fibre for the market had been greatly hampered in July because of the unusually hot weather during the month is to be reckoned with. It still remains to be seen that new crop jute will be moving in bulk into the markets in the course of the next few days. If the hopes about a substantial increase in the arrivals materialise soon, then perhaps one will be justified in entertaining the hope that no serious setback to production will result during the current month.

In the meantime, the jute markets are ruling easy. The reactionary tendency was mainly brought about by the news about the stock of jute goods at the end of July. Total stocks have declined only by 6,400 tons to 71,200 tons. Hessian stocks have come down by 5,900 tons to 23,400 tons while other varieties have also come down by 1,700 tons to 9,700 tons. Stocks of sacking however are higher by 1,200 tons at 38,100 tons. The decline in stocks is however much below market expectation. It has been generally expected that in view of the block closure of mills for one week during the month, the stocks at the end of the month would be much smaller than at the end of the previous month. Presumably the market has derived the inference that with stocks not appreciably run down, foreign buyers will continue to adopt a wait and watch policy. The fact that Government has refused permission to mills for a block closure during the current month is another factor in favour of the foreign buyer. The conflicting theories about raw jute supply in the next few weeks and the consensus that after a couple of months raw jute will be in plentiful supply have made the prospective buyer entertain hopes of an early downward break in prices. Even so, there are indications that burlap users in the US are fast getting impatient with this packaging material because of the wide price fluctuations and the high price at which it has been quoting for some months now. It is reported that already a large number of burlap users had turned to substitutes.

*

TEA

Exports and ECM

THERE is now a growing feeling among the planting community that the British entry into the ECM is not going to have any serious adverse effects on the exports of plantation crops. The latest argument is that, even if Indian tea has to bear an import duty in the UK on account of the new development, offset to that country is not going to be minimised, because consumer preference has well developed in that country.

Other exporters of tea like Ceylon and East Africa are also out of the ECM and are not going to have any additional benefit. The difference is that, in East Africa, there is no export duty on tea and the tea produced in that country will continue to enjoy the present advantage. India, Ceylon and Pakistan may be compelled to think in terms of dropping the export duty to make up for the fresh impost. A section of the planters is also hopeful that, with the UK's entry into the ECM, its other members will be compelled to reduce the penal rates of duty on imported goods.

Meanwhile, offerings in the Export Sale held in Calcutta this week, consisted of 69,855 packages. Although the market opened to a poor demand, it strengthened as the sale progressed. Prices for all descriptions were easier and there were a number of withdrawals. Plain orthodox broken declined by 5 nP to 10 nP with similar Fannings some 10 nP to 15 nP easier. The remaining orthodox descriptions were very irregular and generally easier with medium BOPs often selling one rupee below last rates.

Medium and best CTC types were very irregular and easier by up to

50 nP and sometimes more, particularly where quality showed a decline. The poorer and fibrous kinds were, however, selling only a little below last rates. The few leg-cut Doars teas on offer were some 20 nP easier. There was only a fair enquiry for Darjeelings and prices were irregular and easier with a few withdrawals in this category.

Whole Leaf grades registered a decline in prices, while Tippy teas were in demand at easier rates. Following rates were quoted:—Clean Plain Pekoe Rs 5.05 to Rs 5.15; Plain BP Rs 4.70 to Rs 4.80; Plain Fannings Rs 4.45 to Rs 4.55; Medium

COUNTRIES WE EXPORT TO...

THE UNITED STATES OF AMERICA HAS FROM JANUARY TO JUNE 1961 PURCHASED 590000 PAIRS OF FOOTWEAR

FROM **Bata** INDIA

Assam CTC, BP Rs 5.70 to Rs 6.10; Medium Assam CTC Fannings Rs 5.80 to Rs 6.20; Best Assam CTC BP Rs 6.70 to Rs 7.00 and Best Assam CTC Fannings Rs 7.00 to Rs 7.50.

In the Internal Sale, offerings were 25,906 packages of Dusts. There was a good general demand, which strengthened as the sale progressed. CTC types opened on an irregular note, but steadied considerably and closed fully firm to dearer except for a few plain teas. Plain orthodox teas met with good support; but they were generally easier by up to 10 np per kilo. The bright Assam teas were sold well, particularly the smaller teas. Legg-cut descriptions were irregular, but generally dearer with quality. Following rates were quoted:—Plain Orthodox Dust Rs 4.35 to Rs 4.55; Medium Assam Dust Rs 4.90 to Rs 5.50; Legg-cut Dust Rs 4.85 to Rs 5.50; Medium Assam CTC Dust Rs 6.40 to Rs 6.80 and Good Assam CTC Dust Rs 6.90 to Rs 7.30. Also, 97 packages of Leaf grades were offered for internal consumption. There was a good demand for these.

According to tea sources, stocks of tea at the Calcutta warehouses were higher at 395,032 chests at the end of last month as compared to 336,761 packages at the close of July last year. Stocks in public warehouses rose from 182,759 chests at the end of July 1960 to 204,145 chests as did those in private warehouses from 154,002 chests to 190,887 chests. There were no teas afloat at the close of last month as compared to 8,910 chests at the end of July last year.

Exports of North-East Indian tea rose sharply to 14.16 million pounds in June from 7.63 million pounds in June last year. This put the total shipments, in the first half of the current year, higher at 104.1 million pounds as against 92.36 million pounds in the corresponding period of last year. Exports from South India rose to 10 million pounds in June from 8.36 millions in June last year. Total exports, in the first quarter ended June 1961, were higher at 20.64 million pounds.

In Chile, Ceylon's tea has gained increasing popularity over the Indian tea in spite of the fact that the latter is superior in both quality and blend. The reason for this is comparatively low price of the Ceylonese tea and the publicity undertaken in favour of it by the importers. In this connection, the World Trade Bulletin of the Indian Chamber. Calcutta, suggests that efforts should be made by the exporters individually or jointly with the Tea Board to make commercial publicity in favour of Indian tea in Chile. This is the practice generally adopted by exporters from Japan, the US and the UK to boost the exports of their products.

In Pakistan, tea production is expected to be 57 million pounds during the current year—an increase of nearly 15 million pounds over last year. The situation in the industry appears to have improved considerably and it is expected that the total production of tea, by the end of the crop year 1961-62, will exceed the earlier forecast of 57 million pounds to nearly 67 million pounds. With

this encouraging picture, the Government has announced a quota of 5 million pounds of tea for export Auctions for this will be held by the middle of next month. The quota is likely to be increased, depending on the production and internal demand.

COTTON Irregular Price Movements

TRADING in cotton futures during the past week turned out to be a dull affair and the price movements in both the distant and near contracts were narrow and irregular. As the operators were disinclined to make any fresh commitments the trading was restricted. The attention of the operators was chiefly confined to the weather and crop developments, for the general outlook of the next season's crop will have a great say in the pattern of trading in cotton. The incessant and heavy downpour in some of the cotton growing areas during the past few days has already caused grave concern to the trade circles and it has cast its spell in the market as a consequence of which the price of Jarilla March 1962 shot up to Rs 592.50 from Rs 589 per three quintals in spite of the sharp drop in ready cotton prices. The contract, however, lost some ground and on Tuesday last was quoted at Rs 585.50. The maturing contract ruled quietly steady and on Tuesday it was transacted at Rs 583.00.

Conditions in the spot market at Sewri were far from encouraging. The prices of almost all the varieties available in the market declined by about Rs 30 per candy on account of the protracted lack of mill and investment support. Stockists are worried over the none too happy development in the market and even their endeavour to dispose of their stocks at reduced prices met with failure.

The announcement of the export quota of 60,000 bales failed to cheer up the export front. The response to the new export quota was insignificant due to the absence of enquiries from foreign countries for the exportable varieties. In the absence of export enquiries Bengal Deshi and other short staple varieties lost further ground. Meanwhile the Union Minister for Commerce and Industry has given assurance that he will do away with the compulsory surveys and dispense with the quota system of Indian cotton to the indigenous mills if the next crop turns out to be encouraging. He has also given some indication that an announcement of a new export quota will be made either in September or October.

The import section continued to depict listless conditions. Only the East African growth met with some satisfactory demand. Stray business was transacted in Sudan and Egyptian varieties.

The Indian Cotton Mills' Federation, at their meeting held on 31 July, 1961, decided to request the

Government of India to continue for 1961-62, the quota system for distribution of indigenous cotton to the textile mills in the country.

Mr Bharat Ram, the Chairman of the Federation and Mr Neville Wadia, the Chairman of the Cotton Textiles Export Promotion Council had held talks with the UK Cotton Board about India's desire to transfer from Britain to India the licensing arrangements for the export of Indian cotton textiles to the UK under the Indo-UK Trade Agreement. Mr Wadia has, soon after his return from the UK, submitted a report to the Committee on the stage which these negotiations had reached and the Committee of the Federation has decided to constitute a sub-committee to give further consideration on this matter.

The area under cotton crop in Pakistan during 1960-61, according to the Department of Agricultural Economics and Statistics, will amount approximately to 3,242,000 acres as against 3,370,000 acres in the previous season. Despite the small acreage the production of cotton is, however, estimated higher at 1,711,000 bales compared to 1,658,000 bales in the previous season. The factors attributed to the small acreage are the dry weather, inadequate supply of water and the unfavourable conditions at the time of sowing in East Pakistan.

PIECEGOODS

Thanks to a revival of demand in both domestic and export sectors, trading conditions in the Bombay piecegoods market changed for the better during the past week. Though the volume of business transacted in the domestic sector failed to reach upto the expectations, it has indicated the true picture of the activity in the market.

Upcountry centres were found active in the market to cover their requirements for the nearby position on a slightly moderate scale. However, they were not inclined to enter into contracts for distant positions presumably due to the anticipation of a further fall in prices in the coming days. But it appeared that the mills were, on the contrary, adamant not to make any downward revision of the prices.

North Indian consuming centres figured prominently in the market. The offtake was not encouraging. UP, Punjab and Madras evinced keen interest in a number of items. Seasonal goods like longcloth, shirtings and drills met with renewed demand. Stray purchases in coatings, medium shirtings and gadlapat were also reported.

The export front appeared to have been emerged out of the fog and displayed cheerful conditions. Demand from a variety of foreign countries flowed on an encouraging level. The UK showed keen interest in the usual qualities, though the business transacted was moderate. The scope for stimulating the export of piecegoods to that destination is rated high as there are ample indications to suggest that the quota system under the voluntary agree-

ment will commence to operate from India.

Sudan fancied grey sheetings of lower weight and accounted for a small quantum of that variety. Stray enquiries from Iraq for grey goods were reported. East Africa was satisfied with a moderate quantity of sheetings, drills and processed goods. West Africa accounted for a good quantum of bleached longcloth. Ethiopia showed interest in numerous goods and Singapore purchased a small quantum of bleached longcloth.

Sugar Markets Depressed

CONDITIONS in the Sugar markets have continued to remain depressed, as to easy supplies following the further release of a two-lakh tons quota by the Union Government. The all-time record production of sugar at 2,980,000 tons, during the current season has created a major problem; and measures are under consideration to step up exports and internal consumption. In the Hapur market, the rate is quoted at Rs 105.75 a bag.

It is feared that stocks may be more than 1,500,000 tons when the next crushing season starts in about three months' time. In the face of such big stocks, many factories may be forced to cutback production in the coming season. Moreover, there are indications that sowings of the next cane crop will be a bumper one. It is, therefore, clear that, unless factories produce according to their capacities, there can be excessive supplies of cane, reducing the price to an uneconomic level during the next season.

As far as exports are concerned, some quarters do not take an enthusiastic view. Apart from adequate supplies of the commodity in the world markets, Indian prices are not competitive. The industry has put forward several proposals for facilitating the export of some 200,000 tons of sugar over and above what may be shipped through the special agreement with the United States and the International Sugar Agreement. This additional quantity has to be subsidized, as export prices are higher than domestic cost prices.

Mainly contributing to the accumulation of stocks is slow consumption, which does not seem to have increased in response to the higher production. It is felt that the present high price of the commodity has discouraged consumption. This besides, despatches to the consuming centres have been interrupted by official formalities. There is, therefore, a general feeling that, by improving transport facilities and lifting distribution restrictions on the mills and the trade, the Government can immediately improve the lot of consumers, if it is so minded. In fact, in the context of ample stocks, retail prices may well decline through competition on the part of sellers and those, who are likely to benefit most, are the consumers in the deficit areas.

GUR

Gur markets have also remained depressed. The all-time record production of sugarcane at 85,045,000 tons or 8,690,000 tons in terms of gur during the 1960-61 season has also contributed to the fall in prices. In the previous year, sugarcane production was 75,201,000 tons or 7,671,000 tons of gur. The increase in production is reported mainly from Uttar Pradesh, the Punjab, Maharashtra, West Bengal, Rajasthan and Bihar due to favourable weather conditions during the growing period of the crop. In the Hapur market, the rate for the commodity is quoted at Rs Rs 17 a maund for the dry quality and Rs 15.50 for the dry-wet quality.

CHEMICALS & DYES

Divergent trends were noticed in the Bombay market for Dyes and Chemicals. While dyes were generally dull with no marked change in prices, the Chemicals section was featured by sharp changes in certain items.

The spotlight was on Menthol. The Chinese variety touched a new high of Rs 147 due to persistent support from Calcutta. There was a proportionate rise in the French variety to Rs 142. On the other hand, the popular items of the previous week had a sharp fall. Caustic Soda led the downward path. ICI solid toppled down to Rs 50 and the indigenous variety to Rs 49 under the pressure of heavy arrivals and meagre demand. Reports of the import of a fair quantity of the material by the STC depressed the market. Arrivals of fresh stocks from the overseas countries were the main bearish factor in the case of Rongalite, the German quality being quoted at Rs 3 against Rs 4.40 and others Rs 2.120 against Rs 4.00.

In the Dyes section, there were only few enquiries for particular items. Prices, however, remained unchanged.

YARN

Irregular price trends characterised trading in the Bombay Yarn market. Although prices shot up early in the week on reports that the Government of India had decided to reduce the allocation of indigenous art silk yarn to powerloom factories, there was a sagging tendency towards the close due to selling pressure at the higher levels. Moreover, the possibility of manufacturer-exporters of art silk fabrics' stop getting import licences for yarn was also a contributory factor to the easier trend of prices.

Prices of Staple-Fibre Yarn, also showed a decline on reports that the Textile Commissioner would soon meet the members of Yarn Merchants' Association to enquire about the staple-fibre yarn prices, were far above stampel levels.

Nylon yarns also turned easy in the absence of support. Acetate yarns were, however, in good demand.

In the Cotton yarn section, listless conditions continued to prevail. Prices moved within a narrow groove and the daily business put through was limited.

RUBBER

The proposed commissioning of synthetic rubber plant in India next year has caused some anxiety among natural rubber growers in Malaya. The Malayan Government has, therefore, in view certain steps to prevent possible adverse effects of the starting of this plant on Malaya's rubber supplies to India. Steps to make it easier for India to buy high-grade natural rubber to meet the demands of her expanding industries are now under consideration. This subject will figure in discussions to be held by a Malayan trade delegation when it visits India in October.

Last year, Malaya sold 23,195 tons of natural rubber to India as compared with 1,000 tons ten years ago.

COFFEE

It is generally felt that the June estimate of the Coffee Board on the 1961-62 crop may be revised. There are reports that some of the heaviest-producing areas like Chikmagalur, Hassan and Coorg districts have suffered very badly by the recent rains.

The effect of Britain joining the ECM on Coffee is not still clear to many. India is at a great disad-

vantage in the ECM countries where the duty on Indian coffee has long been heavy and discriminatory. The ECM has a highly-developed coffee market and any reduction of duty and removal of discrimination will help Indian coffee; but both tea and coffee will require well-planned propaganda drives.

According to reports from London, Uganda, the largest producer of African Robusta, may revise her "floor" price. Uganda is finding difficulty in disposing of heavy stocks at the current floor price of 126sh per cwt. Brazil's 1961-62 crop, which has just begun to be picked, is estimated at over at 36 million bags or well above last year's crop. Despite the improvement noticed in the export market recently, the long-term prospects continue to be uncertain.

PEPPER

Sentiment in Pepper markets remains subdued owing to the protracted apathy of the US buyers. Support from the Bombay market was also lacking. In the Kozhikode market, the rate is quoted at Rs 410 per quintal for the Country variety and Rs 420 for Wynad quality. In

the Cochin market, the rate for August contract has declined from Rs 449 to Rs 428 per quintal.

The main contributory factor to the weakness of the market is the report that Brazil, though a small producer, has resumed offering to the US. Brazil has hardly an annual exportable surplus of 2,000 tons. Offerings from this destination in the normal course have little effect on the Indian market. This season, sales by Brazil have been influencing the price trend in India as well as Singapore. In addition to the Brazilian offers, the reluctance of the US buyers to buy from India in spite of the low inventories has been causing concern to the export trade.

It is, however, reported that stocks with the USA can hardly last two months. In the last fortnight, the US had purchased about 75 tons from Brazil and 150 tons from Sarawak. It is, therefore, felt that the USA may have to enter the Indian market in the near future.

Floating stocks of the old crop, are placed at 4,000 tonnes in Kerala. The new crop, which, in the normal course, moves by the end of October, is expected to be delayed by about a month owing to the recent heavy rains there. A section of the trade

Visualising TOMORROW'S NEEDS Today

Progress is not achieved in a day. It is the result of Forethoughts, Sweat, Toils and Tears and when one plan is executed you have to think ahead of future plans so that progress could be continuous.

J.K. visualises the Country's need in years ahead and are continuously planning to fulfil the needs as they arise.

believes that the crop in the new season will be smaller by about 25 per cent owing to the damage caused by floods. All these factors do not suggest any noticeable fall in pepper prices before the new crop moves in.

CASHEW

The Cashew Export Promotion Council has recommended to the Government of India not to issue licences for the import of raw cashewnuts from Africa under the export promotion scheme 1961, and to postpone the issue of import licences under the regular licensing schedule for the period October 1961 to September 1962. The Council has taken this decision in the wake of reports of crisis in the cashew industry.

The Secretary of the Council has explained that the proposed step is designed to provide relief to the cashew industry in the country which is at present facing a crisis of price recession and facilitate the sale and disposal of stocks now held by manufacturer-exporter at economic prices.

NON-FERROUS METALS

A two-sided tendency was noticed in the Bombay Non-Ferrous Metals market. After ruling initially quiet due to offerings from Madras and lower advices from Singapore, there was a slight recovery towards the close following better conditions prevailing in the ready market.

Copper prices were affected due to speculative selling. Absence of outside incentives caused a smaller volume of trading.

Zinc, however, ruled comparatively firm due to persistent backing by speculative interests, being guided by the paucity of stocks and enquiries from the uncountrv centres.

No change was noted in the Lead section.

Tin began the week on a quietly easy note due to selling pressure induced by easier foreign advices. In the ready section, however, demand was reported to be quite satisfactory.

BANGALORE SILK

During the week under review, the prices for all qualities of raw silk remained at the same levels as in the previous week. The prices for flature raw silk 20/22 dr. continued to be quoted between Rs 80.43 and Rs 83.23 per kgm. and those of cottage basin raw silk between Rs 72.75 and Rs 77.16 per kgm. The prices for Charka silk were quoted between Rs 52.91 and Rs 71.65 per

kgm. The supply of raw silk was reported to be fairly satisfactory and the demand was moderate.

Prices of reeling cocoons from Sidlaghatta area rose from Rs 4.25 to Rs 5.50 per kgm. Reeling cocoons from Channapatna area were quoted between Rs 3.00 and Rs 4.70 per kgm. and reeling cocoons from Mugur area between Rs 2.80 and Rs 4.34 per kgm.

Mysore race seed cocoons maintained a steady trend and the rates were quoted between Rs 3.50 and Rs 4.50 per thousand. Foreign race seed cocoons showed a rise by Rs 3.00 to Rs 4.00 and the rates were quoted between Rs 6.00 and Rs 12.00 as against Rs 3.00 and Rs 8.00 per thousand quoted last week.

GOLD & SILVER

Prices on the Bombay Bullion Exchange buoyed up during the week. Higher upcountry advices, heavy speculative buying in gold coupled with nervous bear-covering and reduced receipts of gold were the main factors for the sharp rise in the prices of the yellow metal. Gold receipts totalled 300 tolas as against higher offtake of 6,000 tolas. Ready rates moved between Rs 120.80 and Rs 121.15, while Sovereign was quiet at Rs 94.

Despite continued higher receipts and poor offtake, Silver also moved up in sympathy with gold. Arrivals amounted to 28 bars as against poor offtake of only 9 bars. Silver ready (below .996) moved between Rs 202.10 and Rs 202.80. Adjustment rates of gold and silver were Rs 120.90 and Rs 202.80 respectively.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange displayed an easier tendency under speculative selling, being influenced by the weaker trend in the ready section and lower advices from the terminal markets.

In the Groundnut section, the setback in prices was attributed to nervous unloading by bulls, especially Saurashtra operators, on expectations of a larger crop. Also, vanaspati manufacturers were disinclined to make any fresh purchases as they were carrying adequate supply, not to speak of the fact that the weakness in groundnut oil had discouraged them from extending support. Ready Bold was quoted at Rs 51.50 and Groundnut Oil at Rs 21.65.

Activity in groundnut extraction, however, continued to be quite impressive with exporters buying nearly 15,000 tons from Saurashtra dealers. Shippers were reported to

be able to put through business for about 8,000 tons for immediate and distant shipments. As foreign rates of groundnut expeller moved down from Rs 33.50 to Rs 32.10, local prices of groundnut extraction dropped from Rs 383 to Rs 370 and those of expeller from Rs 332 to Rs 322 per ton.

The export trade in castor oil continued to be dull. Only 250 tons of BSS oil were reported to have been sold to the UK at prices varying from £133 to £131 per ton; but demand from the Continent and the USA continued to be absent. Against this background, prices in the castor-seed section sought lower levels in the absence of support. The weakness in groundnut also exercised a bearish impact. Castor ready was quoted at Rs 34.12 and Castor Oil, commercial quality, at Rs 14.10.

In the Linseed section, little or no interest was shown and price movements were mostly influenced by the behaviour of other oilseeds. With reports of larger sowings of groundnut, the demand for linseed oil for mixing with groundnut oil was expected to shrink in future. Buyers were, therefore, cautious. Pakistan was stated to be making small purchase of linseed oil occasionally; but otherwise the export trade was virtually at a standstill. Linseed ready was quoted at Rs 38 and Linseed Oil at Rs 16.35.

In the Calcutta market, the price of Linseed Oil has reacted to Rs 29.50 a maund for ready delivery. Although there are still shortages of supplies, crushers are not much interested, as many of them have stopped crushing. It is expected that the trend will become softer in due course when bigger supplies of seeds become available. There has been small trading in Oilcakes; but there is no foreign business as Indian prices are higher than overseas rates.

The easier tendency in the seeds and oil market persisted for the third week in succession though the decline in prices due to accumulation stocks was not very substantial. Groundnut kernel remained comparatively steady with a difference of a rupee or even less at the lowest levels. Summer crop arrival in southern centres continued at 400 to 500 tons daily. In these centres a majority of the crushers bought their requirements. Only small crushers went in for their daily requirements in the City.

Calcutta continued to stay at the sidelines watching the trend. Initially they tested the price-effect with a little buying of oil. Even this small transactions had some effect on the quotation of the price of groundnut oil.

Local arrivals of kernels remained the same at 20 to 30 tons.

Since last week the price of groundnut oil in the City had not varied very much though the tendency appears downward. Last Wednesday's rate was Rs 208.10 per 100 kgs. At this rate not much business could be transacted and sellers brought it down by another rupee the next day. Some goods moved at this price. So there was an addition of ten nP to

this price but there was the buyers' resistance on Friday evening. The price came down still lower to Rs 206.80. A few deals of a parcel-like nature materialised and sellers were inclined to discount the rate further to Rs 205 per 100 kgs.

In the January 1962 valde, dealings were not much. Initially quoted at Rs 186 per 100 kgs, the position went down to Rs 183 and still down to Rs 182.75 by the weekend.

Regarding kernels both the coromandel and peanut variety did not respond too much to the lowering of the prices of groundnut oil. Coromandel variety remained around at Rs 85. The peanut variety also did not lose much in value and only at onetime it was available at Rs 82.50.

In the upcountry markets the daily arrivals are getting larger. It is expected that by this week-end the quantity little about 600 tons in those markets. Price of kernels also went down appreciably in these areas. In certain areas like Panruti, Tindivanam and Villupuram due to delayed arrivals of the stock, the price was not very low.

According to trade circles it is that expected between 45,000 to 50,000 tons of groundnut kernels will come from Pollachi area from September first week. Coromandel variety would show up later than the Red Natal or peanut qualities.

In the case of gingelly oil also due to good arrivals from nearby areas, the price had been quoted lower. The Tunj/Rajahmundry quality was quoted at Rs 87/88 per bag of 165 lbs.

Local varieties were at Rs 90/91 per bag. Cuddappah and Rajampeta quality was also at Rs 91/92.

Regarding foreign market prices of oils and seeds, it is reported a slight decline had been recorded.

The prices of groundnut oil and kernel in the southern centres last week varied between Rs 465 at Vridhachalam and Rs 505 per candy of 500 lbs at Guntur or Bezwada. That of the kernels varied between Rs 83 to Rs 89 per 80 kgs.

In Bezwada for instance the oil price event went up to Rs 510 per

Indian Finance

12 August 1961

candy due to paucity of stock and meagre arrivals. In the midweek it dropped five rupees and the price still went down this week to Rs 495 per candy. In Vridhachalam the fluctuation did not vary further than a rupee. The maximum was Rs 465 per candy and it went down to Rs 464 by the week-end and suffered another loss of a couple of rupees to be quoted at Rs 462 by this week.

As in other Andhra centers the Nandyal price of groundnut oil was also high at Rs 500, but it came down by Rs 10 by the week end. There was no stock of kernels in this center. In Villupuram kernel prices

came down to as low as Rs 82 per 80 kgs. The opening quotation last week beginning was as much as Rs 86 per 80 kgs. Stocks begin arriving in good quantities and the price was depressed to Rs 84 or Rs 85 per 80 kgs. In Tanjore the kernel price was steady at Rs 85 last week and came down to Rs 83 this week beginning. In Salem the kernel quotation went upto Rs 88 per 80 kgs. Even here the price had to come down to Rs 85 by this week opening. Price of groundnut oil in both Tanjore and Salem did not change much. Per candy oil was quoted at Rs 480 at the beginning of the week, went

down to Rs 475 as the week wore out and this week beginning it was quoted at Rs 473.

HIDES & SKINS

Several contributory factors including holidays in UK made up for the low prices of tanned cow hides. Arrivals of the commodity were also only moderate in anticipation of lower offtake. There was however fair demand for market quality of cowhides. No price reduction was offered by shippers who were holding

good stock of premium and semi-premium of cow hides.

In tanned cow calf also there was no marked change. Arrivals were negligible with unchanged price. No change was reported in either tanned buff calf or tanned buffalo hides.

Tanned goatskins too did not offer speculation and price remained unaltered except for the lower qualities. Similarly tanned sheepskins also remained quietly the same. There was demand for fair average weights and negotiations were closed for these at 14/6d, 11 and 9/9d for 6/7 lbs run, fifth and inferior fifth.

...And all you do is turn the key!

TURN-KEY JOBS are a speciality of LARSEN & TOUBRO LIMITED. From the design and construction of buildings to the supply, erection and commissioning of plant and equipment, L & T can do the job for you.

LARSEN & TOUBRO LIMITED represents some of the world's foremost manufacturers of plant and equipment in every branch of engineering. L & T's own manufacturing

programme at its Powai Works embraces a wide variety of equipment. The Company's qualified engineers and first-rate service stations ensure effective after-sales service.

With its ten Divisions and several subsidiary companies, LARSEN & TOUBRO LIMITED is in an excellent position to undertake turn-key jobs, including all design work, civil engineering, and the supply and erection of equipment.

For the Investor

INVESTMENT GOSSIP

Bearish Trend

THE easy trend noticeable in the stock markets since the beginning of the week has become pronounced in Friday's dealings. Leading the downtrend is Indian Iron which has come under heavy selling pressure. It is evident that the speculative fraternity is not very hopeful, at least for the time being, of the outlook for equities. In the first place, what is considered to be a formal affair—the publication of the final draft of the Third Five Year Plan—has been made into an occasion for discussing anew the consequences of a large tax effort and the increasing importance of the public sector. Considering the fact that the Draft Outline of the Plan had been discussed threadbare during the past several months, it is rather strange that the publication of the final documents which does not differ from the Draft Outline in its essentials should have caused so much depression in the markets. Perhaps operators are worried that the quantum of tax effort proposed in the final Plan is higher at Rs 1710 crores while the Draft Outline had envisaged only Rs 1650 crores.

Even so this increase need cause no undue misgiving because it has been emphasised that the major portion of this amount is to come from indirect taxation. The apprehension that the growing importance of the public sector will be detrimental to the interests of the private sector or that with the public sector squeezing away resources by higher and high direct and indirect taxation, there will be little left for private sector seems rather exaggerated. While it cannot be denied that the depletion of resources from public by taxation will make it difficult for private sector to find adequate finance for its expansion, it is not as though it is left to look after itself entirely. Government has set up a number of financing bodies whose main purpose is to provide a part of the finance required by private sector enterprises. Moreover, with the sizable increase in plan expenditure there will be a considerable amount finding its way into the capital market during the plan period.

It would appear however that the present bearish phase of the market is largely due to other adverse factors. The TISCO Chairman's statement that the full rated production of 2 million tons of his company is not likely to be attained for another two years has dampened enthusiasm in steel shares. Although Mr Morari Desai has said that the difficult foreign exchange position has been satisfactorily tackled so far, he has made it clear that strenuous efforts especially in maximising export are urgently required. Imports will be-

come further difficult and should the situation deteriorate, even imports of essential raw materials will be affected resulting in rendering productive capacity idle. Another deterrent to bullish activity is the

Excellent Results of IISCO

The Indian Iron & Steel Company Limited has produced excellent working results for the year ended 31st March, 1961. While sales are substantially higher at Rs 53.90 crores against Rs 48.36 crores, the net profit, after providing for Depreciation but before Taxation, amounts to as much as Rs 7.66 crores as against Rs 7.07 crores for the previous year, reflecting the improvement in the tonnage of iron and steel produced. The rise in profits would have been still more, but for the loss of output occasioned by rail transport restrictions due to the strike of Government employees in July 1960. The profit figures include Rs 66.59 lakhs (Rs 1.03 crores) written back from General Development Reserve being allocation made this year for Statutory Development Rebate Reserve in excess of actual tax.

In respect of allocations, the Depreciation amount is lowered to Rs 2.96 crores from Rs 3.00 crores. After transferring Rs 15 lakhs (Rs 13 lakhs) from Taxation Contingency Reserve, Taxation provision is raised to Rs 1.66 crores from Rs 64.28 lakhs, while Plant Rehabilitation Reserve is maintained at Rs 51.15 lakhs.

The provision for Development Rebate Reserve is, however, lower at Rs 1.67 crores against Rs 2.59 crores. In view of the necessity for conservation of the resources of the company against repayment of the heavy indebtedness on loan account as also against expenditure on extensions account and on general capital works, General Reserve is raised to Rs 1.75 crores from Rs 1.11 crores. The dividend on the Ordinary shares is raised from 15 per cent to 16 per cent, taxable. The amount carried forward is higher at Rs 16.42 lakhs as against Rs 11.50 lakhs brought in.

According to the directors' report, all major items of plant under the expansion programme were completed with the commissioning of the new Bar and Rod Mill on 10 June 1960. Efforts are now being concentrated on the provision of the many items of subsidiary services designed to improve the efficiency of the expanded plant. Work has commenced on the modernisation of the 34" Mill stands by the provision of new manipulators and roller tables.

feeling (shared by most marketmen) that Government has not abandoned its idea of imposing further curbs on speculation.

NEW ISSUE NOTES

Ritz Continental Hotels

Ritz Continental Hotels Limited, Bombay, has been given consent to issue capital for Rs 50 lakhs for cash, at par, divided into 3,60,000 equity shares of Rs 10 each and 14,000—10 per cent cumulative Redeemable Preference shares of Rs 100 each, for running a first class and de-luxe western style residential hotel in Calcutta.

Fuel Injections

Fuel Injections Limited, Bombay, will be issuing Rs 15 lakhs in equity shares of Rs 100 each for cash, at par, for expansion of the company's business. Out of this issue, shares of the value of Rs 10 lakhs, will be offered to Messrs Bryce Berger Limited of the UK.

Hemant Paper

Hemant Paper Mills & Industries Private Limited, Surat, has proposed to issue further capital of Rs 21 lakhs in equity shares of Rs 100 each, at par. Out of this, shares of the value of Rs 12 lakhs will be offered for public subscription. The proceeds will be utilised for installing a paper mill plant.

Indian Aluminium Cables

The Indian Aluminium Cables Limited will issue Rs 20 lakhs divided into equity capital of Rs 15 lakh and preference capital of Rs 5 lakhs, for cash, at par.

Star Textile

Star Textile Engineering Works Limited will be offering Rs 20 lakhs in equity shares of Rs 100 each. Of this, Rs 7.75 lakhs will be subscribed privately and the balance offered to the public for subscription. All the shares will be issued at par after the company has been converted into a public company.

Steelcrete

Steelcrete Private Limited has a proposal to offer Rs 17.50 lakhs in equity shares of Rs 1,000 each, at par, for the purchase of equipment, stores and expenses connected with the construction of four more berths in Visakapatnam Port.

Sri Mayuram Bank

Sri Mayuram Bank Limited, Madras, will be entering the market for a capital of Rs 49,280, divided into 300 "A" class shares of Rs 100 each and 3,856 "B" shares of Rs 5 each, at par, for opening the bank's branch at Peralam and for strengthening its capital base.

National Insurance

The National Insurance Company Limited has decided that the issued and subscribed capital of the company be increased from Rs 15 lakhs,

divided into 15,000 ordinary shares of Rs 100 each, to Rs 25 lakhs, divided into 25,000 ordinary shares of Rs 100 each. A sum of Rs 10 lakhs out of a sum of Rs 19,72,202, received from the LIC as compensation for the nationalisation of the company's life insurance business, will be capitalised and 10,000 equity ordinary shares of Rs 100 each will be allotted as fully paid-up to holders of the existing equity shares in the proportion of two new ordinary shares for every three existing ordinary shares, held as on 28 August 1961.

Darbhanga Sugar

The Darbhanga Sugar Company Limited has received the sanction of the Government for the issue of right shares in the ratio of one share for every two shares, at par. The present paid-up capital of the company is Rs 26 lakhs and the issue of right shares will raise it to Rs 39 lakhs. The additional capital will be utilised to finance the rehabilitation of the company's plants.

Chamundi Chemicals

The subscription list for the public issue of Chamundi Chemicals and Fertilizers Limited will open on 21 August and will close on 28 August or earlier at the discretion of the directors, but not before 23 August 1961. The authorised capital of the company is Rs 1 crore, made up of 10,00,000 equity shares of Rs 10 each. The issue capital is Rs 40 lakhs of which the promoters, the directors and their friends have taken up Rs 6 lakhs and have agreed to subscribe another Rs 6 lakhs. The ICICI and the LIC will each subscribe Rs 4 lakhs. The entire public issue has been underwritten. A sum of Rs 2.50 per share is payable on application and another Rs 2.50 per share on allotment. The balance of Rs 5 per share is payable in two calls.

Steel Structural & Pressings

A licence has been granted by the Government to Messrs Amin Chand Payare Lal, Calcutta, to instal a steel structural plant at Panagarh, West Bengal, to design and fabricate, through welded process, steel structural for buildings, sheds, bridges, containers, pressure tanks, chemical industry tanks and other similar things in technical collaboration with Messrs Cekop, Warszawa, Poland. The initial output will be 9,000 tons of fabricated steel structural per annum.

Permission has been obtained by Messrs Surrendra (Overseas) Private Limited, Calcutta, to undertake pressing of steel sleepers to IRS specifications for the Indian Railways. The plant, which will have an initial capacity of 60,000 tons of pressed steel sleepers per annum, to be increased later to 1,00,000 tons, will be installed at Kumhari, near Bhilai, Madhya Pradesh. The plant will be supplied by Messrs Hendry Berry & Company Limited, UK, who supplied a similar plant to the Durgapur Steel Works of Hindustan Steel Limited.

Indian Finance

12 August 1961

Thus, Messrs Amin Chand Bayare Lal, promoters of the structural plant, and Messrs Surrendra (Overseas) Private Limited, promoters of the steel sleeper pressing plant, have proposed to incorporate a public limited company under the name and style of Steel Structural & Pressings (India), Limited, with its registered office in Calcutta and having an authorised capital of Rs 1 crore for the purpose of financing both the projects. Application for sanction to issue capital has already been made to the Controller of Capital Issues. The estimated capital outlay for both the projects will be Rs 1,37,20,000.

*

INVESTMENT NOTES

J. K. Steel

J. K. Steel Limited has a proposal to raise the subscribed and paid-up capital of the company from Rs 30 lakhs (divided into 2 lakhs ordinary shares of Rs 10 each and 10,000—7 per cent tax-free cumulative redeemable preference shares of Rs 100 each) to Rs 50 lakhs (divided into 4 lakhs equity ordinary shares and 10,000 preference shares). The directors have, therefore, proposed to capitalise Rs 20 lakhs out of Rs 30 lakhs lying to the credit of General Reserve and issue 2,00,000 equity ordinary shares of Rs 10 each to the existing shareholders in the ratio of one for one held. These new shares will rank in all respects *pari passu* with the existing equity ordinary shares save and except that these will be entitled to dividend out of the earnings for the year ended 31 July 1961. In the above respect, the directors have convened an extraordinary general meeting on 31 August. Transfer Books will be closed from 21 to 31 August, 1961.

Godavari Sugar

The Godavari Sugar Mills Limited has been given consent to capitalise reserves to the extent of Rs 20 lakhs and issue equity shares, fully paid-up, in the proportion of one share for every two shares held.

ORIENT PAPER MILLS LIMITED

Regd. Office: Brajrajnagar (Orissa)

NOTICE

The Share Registers and Transfer Books of the Company will be closed from the 29th August to 14th September, 1961, both days inclusive, for the purpose of payment in due course of dividends on Shares in the Company for the year ended 31st March, 1961. The dividends when declared, will be paid to those Shareholders whose names appear on the Company's Register of members on the 14th September, 1961, or to their mandatories.

By Order of the Board,
B. K. Vyas.
Secretary.

"Eastern House"
14, Radha Bazar Lane,
Calcutta, the 6th August, 1961.

Shivrajpur Syndicate

Shivrajpur Syndicate Limited, Bombay has also been allowed to capitalise Rs 10.50 lakhs out of reserves and issue bonus shares in the proportion of one share for every share held.

Simplex Mills

Simplex Mills Limited, Bombay has proposed to capitalise a sum of Rs 10.08 lakhs from Reserves and issue bonus shares to the existing shareholders in the ratio of one share for every five shares held.

TISCO

The production figures released by the Tata Iron & Steel Company Limited for July show an improvement over those of the previous month. The output of Saleable Steel has improved to 107,900 metric tons from 101,200 metric tons. While semi-finished steel produced is lower at 29,200 metric tons as against 30,600 metric tons, the output of finished steel is higher at 78,700 metric tons against 70,600 metric tons. The production of Pig Iron is better at 133,900 tons against 131,800 metric tons and Steel Ingots at 137,200 metric tons against 124,700 metric tons.

Asian Oil & Paints

M/s. Asian Oil & Paint Company (India) Private Limited, Bombay, has been granted consent to issue bonus shares of the value of Rs 5,00,000/- in the ratio of one bonus share for every two equity shares held. Its paid up capital is Rs 10 lakhs all in equity. It is engaged in the business of the manufacture of paints, oils and synthetic resins.

Belvandi Sugar Farm

The Belvandi Sugar Farm Private Limited, Bombay with a paid up capital of Rs 4,02,000/- (Rs 2,52,000/- in equity and Rs 1,50,000/- in preference) has been granted consent to issue bonus shares of the value of Rs 20,16,000.

New Consolidated Construction

The New Consolidated Construction Company Limited, Bombay, has a paid-up equity capital of Rs 2,50,100. It has been granted consent to issue bonus shares of the value of Rs 1,25,000/- in the ratio of 1 bonus share for every 2 equity shares held. The company carries on business as civil engineers and building contractors.

Imperial Tobacco

The Imperial Tobacco Company of India Limited has reported a net profit, after deducting all charges and expenses and after providing for Taxation, of Rs 1.87 crores as against only Rs 1.43 crores for the previous year. Two interim dividends, each

of 2½ per cent taxable, in respect of the year, were paid earlier. The directors have now recommended a final dividend of 4 per cent, making a total of 9 per cent, taxable, for the year. This compares with 8 per cent, taxable, paid for the previous year. The directors have also proposed a taxable first interim dividend of 2½ per cent for the year ended 31 March 1962. Transfer Books of the company will be closed from 4 to 28 September, 1961.

*

BALANCE-SHEET BRIEFS

Greaves Cotton & Company Limited has reported a higher net profit of Rs 50.63 lakhs for the year ended 31 March 1961 as against Rs 46.32 lakhs for the preceding year. The directors have proposed a taxable dividend of Rs 13 per share as against Rs 11 per share, taxable, for 1960-61.

Enfield India Limited has shown a net profit of Rs 8.49 lakhs for 1960 as against Rs 6.98 lakhs. The dividend on the ordinary shares is just maintained at 5 per cent, taxable.

Chembra Peak Estates Limited has reported a jump in the net pro-

fit from Rs 7.36 lakhs to Rs 12.28 lakhs for the year ended 31 March 1961. The directors have recommended a taxable dividend of 20 per cent on the capital increased by the issue of bonus shares.

The working of the Jeeyajirao Cotton Mills Limited has resulted in a net profit of Rs 35.60 lakhs for the year ended 31st March 1961 as against Rs 42.64 lakhs. The directors have proposed a taxable dividend of 30 nP per ordinary share.

Thanks to the slight rise in the net profit from Rs 2.49 lakhs to Rs 2.80 lakhs, Saran Engineering Company Limited has raised the dividend from 35 nP to 40 nP, less tax, for the year ended 31 March 1961.

Following a sharp decline in the net profit from Rs 23.03 lakhs to Rs 15.66 lakhs, the India Paper Pulp Company Limited has reduced the total distribution from Rs 1.50 to Rs 1.30 per share, less tax, for the year ended 31 March 1961.

Karanpura Collieries Limited has raised the ordinary dividend from 7½ to 10 per cent, subject to deduction of tax, for the year ended 28 February 1961 in view of the rise in the net profit from Rs 3.70 lakhs to Rs 5.16 lakhs.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE

Notice is hereby given that the Annual General Meeting (being the Forty-fourth Ordinary General Meeting) of the Company will be held at the Royal Exchange Hall of the Bengal Chamber of Commerce & Industry at 6, Netaji Subhas Road, Calcutta-1, at 3 p.m., on Tuesday the 5th September 1961, for the following purposes:

- To receive and adopt the Audited Accounts for the year ended 31st March 1961, and the Directors' & Auditors' Reports thereon.
- To declare a dividend for the year ended 31st March 1961, on the Ordinary Share Capital.
- To appoint a Director in place of Maharajadhiraja Sir U. C. Mahtab Bahadur of Burdwan who retires by rotation and is eligible for re-appointment.
- To appoint a Director in place of Maharaja Sir P. C. Bhanj Deo of Mayurbhanj who retires by rotation and is eligible for re-appointment.
- To appoint a Director in place of Maharajadhiraja Sir Kameswara Singh of Darbhanga who retires by rotation and is eligible for re-appointment.
- To appoint Auditors and fix their remuneration.

- Special Resolution
That pursuant to subsections (4) and (7) of Section 309 of the Companies Act 1956 and subject to the limitation imposed by Clause 113 of the Articles of Association of the Company each of the Directors be and is hereby authorised to continue to receive in respect of each of the five financial years of the Company up to and including the financial year ending on the 31st March 1966 a share in a commission of one per cent of the net profits of the Company computed in the manner referred to in subsection (1) of Section 198 of the said Act.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office:
12, Mission Row,
Calcutta-1.
10th August, 1961.

Note:—An Explanatory Statement is annexed to the convening notice issued to Members of the Company.

STOCK EXCHANGES Rally Bid Fails

Watch-Dog Writes:

STOCK markets have recorded fresh declines in prices from the last week's levels. Operators seem to have taken a bearish view of the proposals contained in the Third Plan document to the raising of resources through additional taxation. Sentiment is also affected by the disappointing statement made by the TISCO's Chairman with regard to capacity production in the next two years.

Although the optimism, expressed by the Finance Minister about the prospects of obtaining adequate foreign aid for the Third Plan, induced a mild recovery in prices, it has been proved to be short-lived due to lack of follow-up support. Advices from Bombay are also not encouraging.

The Calcutta Stock Exchange witnessed another featureless session and, with the speculative issues losing fresh ground, there was an allround recession in equity prices.

The Bombay Stock Exchange finished the week on a weak note with widespread appreciable declines in prices.

Although activity on the Madras Stock Exchange was only moderate, selective buying was seen in the Planting section.

CALCUTTA

Calcutta, Friday.

BY and large, there was no change in the week's trading conditions on the local stock exchange, which continued to remain depressed. Even attempts at recovery proved elusive and the market finished the week with major losses on balance.

Various factors contributed to the persistent weakness of the market. First, the need for large additional taxation, emphasised in the Third Plan, came in handy for the bears to push down prices. Secondly, the statement of the TISCO's chairman that the company's production was not likely to reach the rated capacity for the next two years was also considered to be a bearish factor. Finally, there was an apprehension that intensified armament expenditure and fresh complications relating to the Berlin situation might prejudice the prospects of liberal foreign assistance for prosecuting the Third Plan.

All the above factors created a feeling of nervousness in the minds of the operators, resulting in a bout of selling and rapid decline in prices. Although the statement, made by the Union Finance Minister in the Lok Sabha with regard to the prospects of getting adequate foreign aid for the Third Plan, induced a mild recovery in prices, lack of follow-up support

and the sustained selling pressure on Bombay account, caused again a setback in prices. Moreover, operators did not consider it safe to follow the recovery move unless motivated by any strong bullish news.

The Giltedged market was highlighted by a keen demand for short-dated issues. The long-dated issues were, however, on offer at the quoted rates. 3 per cent 1986 Conversion Loan changed hands at Rs 72.18 to Rs 72.60, to finish the week at Rs 72.35.

Bank shares displayed a slightly easier tendency due to profit-taking at the recent high levels. Punjab National remained unchanged at Rs 24, while United Commercial was marked back to Rs 90.25 from a high of Rs 93 quoted early in the week.

Sentiment in the Jute section remained subdued due to uncertain conditions prevailing in the industry. The only exceptional feature were Birlas, having sustained support up to Rs 26.97 from Rs 26.50 due to diversification of the company's activities. Ganges were enquired at one time up to Rs 11.44, to recede towards the close to Rs 11.09 on profit-taking. Howrah were on offer at as low as Rs 19.56 against Rs 19.81; Kanknarrah at Rs 63 against Rs 70 and New Central at Rs 18.19 against Rs 18.62. National were slightly better at Rs 18.40 against Rs 18.25.

The Coal section was devoid of interest on reports that the loan, to be sanctioned by the World Bank, was lower than expected. Central India changed hands at Rs 13.25 to Rs 13.47; South Karanpura at Rs 8.56 to Rs 8.69 and Western Bengal at Rs 9.44 to Rs 10.06. Burrakur fluctuated rather irregularly between Rs 18.87 and Rs 19.50 on alternate buying and selling, to close finally at Rs 18.87.

Even Tea shares, which had been meeting with selective support, turned quiet on reports of the possibility of an increase in production during the current year. There was also a general anxiety to await the effect of the UK joining the ECM. Basmatia met with business at Rs 25.75 to Rs 26.12; Bishnauth at Rs 25.62 to Rs 26.37; Hasimara at Rs 24.62 to Rs 24.81 and Huldibari at Rs 26.12 to Rs 26.25.

Reports of the possibility of decontrol of the sweet commodity at an early date and the prospects of improved earnings in view of the higher production during the current season imparted some strength to the Sugar section early in the week. Higher levels could not, however, be retained till the close due to profit-taking in view of the obscure outlook for exports. The only two firm features were Balmampore at Rs 2.56 and Dyer Meakin at Rs 35.82. Carew were, however, on offer at Rs 14.25 against Rs 15.94 and SKG at Rs 11.00 against Rs 11.25. Ramnugger were nearly maintained at Rs 30.37.

Textile shares showed an indecisive trend. Bowrah were at one time

enquired up to Rs 31 from Rs 24.87; Dunbar up to Rs 28.06 from Rs 26.87 and J. K. Rayon up to Rs 19.81 from Rs 19.44, to recede towards the close to Rs 30.94; Rs 27.62 and Rs 19.19 respectively. Kesoram were rather quiet at Rs 29.25 against Rs 30.25 with Elgins having some support upto Rs 20.08 from Rs 19.25. Cawnpore met with some enquiry up to Rs 8.62 from Rs 8.47.

In the week's dealings, speculative issues were the worst affected under the lead of Indian Irons. After opening the week at Rs 26.70, Indian Irons receded gradually to Rs 25.70 due to selling pressure, before finishing the week at Rs 25.84. In sympathy, TEXMACO moved down to Rs 18.00 from Rs 18.50; Guest, Keen, Williams to Rs 39.50 from Rs 40.12; Jessop to Rs 19.75 from Rs 20 and Jay Engineering to Rs 28.60 from Rs 29.

Binani Metals were, however, a steady feature at Rs 12.37 while Kumardhubi came in for some support up to Rs 6.37 from Rs 6.19 on reports of the dividend being maintained despite a decline in net earnings for last year. Escorts closed quiet at Rs 24 against Rs 24.12 and so also J. K. Steel at Rs 39.25 against Rs 40.50. Braithwaite firmed up to Rs 39.12 from Rs 38.87 on reports of excellent working.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing
Orient Paper	34.65	33.90	34.00
Shree Gopal	25.00	24.50	24.50
Sirpur	14.69	14.25	14.31

IN BRIEFS

Gwalior Rayon & Silk Manufacturing Company Limited has raised the dividend from Rs 2 to Rs 2.25 per share, taxable, for the year ended 31 March 1961.

Mamallay Tea has reduced the dividend from 15 to 14 per cent taxable, for the same year.

Among Electric Supply Companies, Kumbakonam has proposed a dividend of 12 per cent (10 per cent); Negapatam 12 per cent (10 per cent) and West Coast 14.2 per cent (15 per cent), all for the year ended 31 March 1961, subject to deduction of tax.

CENTRAL AID

For Kosi Project

A loan of Rs 2,00,00,000 has been granted by the Central Government to the Bihar Government for financing the Kosi Project for the first quarter of the financial year 1961-62.

The total loans sanctioned since 1954-55 to the State Government for this project so far amount to Rs 28,68,91,000.

METALS

Electrolytic Engraving

A quick and economic method for engraving trade-marks, figures or letters on hard metals and alloys in their finished condition has been patented by the Council of Scientific and Industrial Research and released free to industry.

The new process has been developed at the National Physical Laboratory, New Delhi.

Etching can be completed in about 20 to 30 seconds by this process. It makes use of a 12-volt battery for electricity supply. Alternating current can also be used.

The process requires a heavy-duty stencil (waxed tissue paper) on which the trade-mark is stamped or typed, and a woollen felt pad in which electrolyte is booked. The articles to be etched it placed alongside the stencil, felt pad and the metal plate which complete the circuit. The available methods such as stamping or spark erosion induce undesirable stresses or involve lengthy operations.

Details of the process are given in the Shraavan issue of *Vigyan Pragati*, a monthly science periodical in Hindi, published by the Council of Scientific & Industrial Research.

WHEAT

Record Production

An all-time record in production and an increase of 8.2 per cent in yield per acre over last year's figure are features of the 1960-61 all-India Final Estimate of wheat.

According to the Directorate of Economics and Statistics of the Ministry of Food and Agriculture, the area covered by wheat and the production of this cereal in 1960-61 were 31,751,000 acres and 10,648,000 tons, respectively. Compared with the Partially Revised estimates for 1959-60 of 32,542,000 acres and 10,089,000 tons, the estimates for 1960-61 show a decrease of 791,000 acres in area, or 2.4 per cent, but an increase of 559,000 tons, or 5.5 per cent, in production. The yield per acre works out at 751 lbs as against 694 lbs last year.

Decreases in area in 1960-61 were reported mainly from the States of Rajasthan, Madhya Pradesh and Gujarat, while increases occurred in Uttar Pradesh, Maharashtra, Punjab and Mysore.

Production rose mainly in Uttar Pradesh and Punjab due to increase in area and to favourable weather conditions during the growing period of the crop. It fell in Madhya Pradesh and Rajasthan.

Company Reports

Excellent Results of Birla Jute

THE Birla Jute Manufacturing Company Limited has produced excellent working results for the year ended 31 March 1961. While sales have risen sharply to Rs 8.41 crores from Rs 6.29 crores, the gross profit has gone up to Rs 1.41 crores from Rs 1.31 crores. The dividend on the ordinary shares is maintained at Rs 1.50 per share, subject to deduction of tax.

Except Development Rebate Reserve the provision for which is lower at Rs 12.77 lakhs against Rs 15.66 lakhs, all other allocations have been quite liberal. The Depreciation amount is raised to Rs 64.86 lakhs from Rs 42.27 lakhs; Taxation to Rs 21.30 lakhs from Rs 16.10 lakhs and General Reserve to Rs 10 lakhs from Rs 7.50 lakhs. The carryover for the next year is substantially higher at Rs 1.83 lakhs against Rs 93,079 brought in.

According to the directors' report, the company has proposed to instal 28 wide looms for the manufacture of wide hessian cloth for export to the US. Orders for the plant have already been placed and production is expected to commence by December 1961.

The company's Cement plant at Sutna worked smoothly, producing 184,920 tons of clinker and 173,289 tons of cement. The company has obtained a licence for expanding the daily capacity from 750 tons to 1,750 tons. Orders for the plant have been placed.

The expansion programme is to be completed by about the middle of 1963. The capacity of the staple-fibre spinning section has now been raised to 30,000 spindles and the working is satisfactory. In view of the introduction of control on the price of staple-fibre yarn on a voluntary basis, the directors have, however, stated that the profits for the year may be affected to some extent.

The Calcium Carbide section is working efficiently with a daily output of 25 tons. The company has received a licence for the manufacture of oxygen and acetylene gas. This is a new line in which the company is diversifying its activities.

The directors, however, state that the prospects for the immediate future are far from encouraging. The working for the first three months of the current year (April to June 1961) has resulted in a large loss and further substantial losses are anticipated in the second quarter.

The Reliance Jute Mills Company Limited has reported a substantial decline in the net profit from Rs 16.83 lakhs to Rs 4.10 lakhs for the year ended 31 March 1961, reflecting the fall in the sale of loom-hours from Rs 23.91 lakhs to Rs 13.52 lakhs. The Depreciation amount is raised to Rs 36,000 from Rs 26,000 and Taxation to Rs 1.27 lakhs from Rs 69,000. The sum provided for Contingency Reserve is substantially lower at Rs 98,000 against Rs 9.32 lakhs. The dividend on the Ordinary shares is skipped again. After making the above allocations, there

Less

The difficult conditions generally experienced by the jute industry are fully reflected in the working results of the Howrah Mills Company Limited for the year ended 31 March 1961. Although sales are higher at Rs 4.60 crores against Rs 3.40 crores, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 12.43 lakhs as against Rs 14.06 lakhs for the preceding year.

The provision for Taxation is substantially raised to Rs 5.05 lakhs from Rs 62,527 apart from maintaining the Debenture Stock Sinking Fund at Rs 1.00 lakh. The Depreciation amount is lower at Rs 9.82 lakhs against Rs 10.94 lakhs; General Reserve at Rs 1.50 lakhs against Rs 2.50 lakhs and Development Rebate Reserve at Rs 1.50 lakhs against Rs 2.50 lakhs and Development Rebate Reserve at Rs 17,494 against Rs 37,340. The dividend on the Ordinary shares is reduced by 25 nP to Re 1.00 per share, subject to tax.

The company's arrangement with the Reliance Jute Mills Company for the purchase of loom-hours of the latter, which was entered into in July 1959, was extended from time to time. In February 1961, the company was authorised the purchase of 5,312 current loom-hours per week for a period of 14 weeks from 27 February to 3 June 1961. This arrangement was terminated on 3 June 1961, as it was found not possible for the company to renew it on the same terms (at 40 nP per current loom-hour being the market rate) in view of the existing market conditions.

Accordingly, a revised agreement was entered into with the Reliance Jute Mills, under which the company offered to work 6,417 current loom-hours on a payment of 25 nP per current loom-hour for a period of 17 weeks ending 30 September 1961.

The directors are fully satisfied that the working of the loom-hours will result in saving of fixed overheads greater than the loss anticipated in the sale of increased production. It will also avoid disruption, both at present and in the future when it should be profitable again to pay and work current loom-hours of the Reliance Jute Mills.

The directors, however, state that the prospects for the immediate future are far from encouraging. The working for the first three months of the current year (April to June 1961) has resulted in a large loss and further substantial losses are anticipated in the second quarter.

Reliance Jute Incurs Loss

The Reliance Jute Mills Company Limited has reported a substantial decline in the net profit from Rs 16.83 lakhs to Rs 4.10 lakhs for the year ended 31 March 1961, reflecting the fall in the sale of loom-hours from Rs 23.91 lakhs to Rs 13.52 lakhs. The Depreciation amount is raised to Rs 36,000 from Rs 26,000 and Taxation to Rs 1.27 lakhs from Rs 69,000. The sum provided for Contingency Reserve is substantially lower at Rs 98,000 against Rs 9.32 lakhs. The dividend on the Ordinary shares is skipped again. After making the above allocations, there

is a balance of Rs 3.12 lakhs which is adjusted against the previous year's debit balance of Rs 31.44 lakhs, leaving still a debit balance of Rs 28.31 lakhs.

Contracts for the sale of loom-hours to the Howrah Mills, Kamarhaty Company, Kanknarrah Company and the Barnagore Jute Factory terminated on 3 June 1961. The market conditions are also unfavourable and the losses being incurred by the mills are such that none of the above companies is prepared to purchase loom-hours from this company. In the circumstances, the directors are arranging that the company's loom-hours will continue to be worked by the other companies named on the basis that this company makes payment to those other companies by way of compensation for the loss which appears likely to be sustained by their working these loom-hours. This arrangement will remain in force until 30 September, 1961.

The position regarding the possibility of re-opening the mill remains unchanged. The current market conditions preclude any possibility of re-opening a mill, which has not been modernised. The company's financial position, although it continues to improve slowly, does not yet, in the opinion of the Directors, justify them in undertaking the large-scale modernisation programme, which will be necessary to render the mill profitable.

Standard Vacuum Sets Records

The Standard-Vacuum Refining Company of India Limited has set new records for crude oil processed and sales volume during 1960; but the gross profit has suffered a slight setback. The company processed, on an average, 38,876 barrels per day as compared with 33,812 barrels in 1959, resulting in a production of 471.4 million imperial gallons.

Sales have risen by 20.41 per cent from 397.5 million imperial gallons to 478.7 million imperial gallons. The increased production is reflected in the gross income from Rs 30.07 crores to Rs 34.41 crores. The gross profit has, however, declined from Rs 3.47 crores to Rs 3.29 crores on account of the rise of more than Rs 2 crores in excise duty and of the rise in production costs.

A sum of Rs 91.86 lakhs is set aside for Depreciation as against Rs 87.12 lakhs and the provision for Taxation is also raised to Rs 105.69 lakhs from Rs 100.84 lakhs. The net profit amounts to Rs 131.23 lakhs, representing a fall of Rs 27.65 lakhs over the previous year. Only a small sum of Rs 2.25 lakhs is provided for Statutory Development Rebate Reserve against Rs 21.84 lakhs. The allocation to Self-Insurance Reserve has been raised slightly from Rs 3.07 lakhs to Rs 3.26 lakhs.

The directors have recommended a dividend of Rs 2.40 per share of Rs 20 each on the Ordinary shares as against nil for 1959.

Since the refinery went into production in 1954, the total foreign exchange savings, including export earnings, are estimated at Rs 18.11 crores. With effect from 15 November 1960, the company has surrendered duty protection on all fuel products, which was available to the company in terms of the agreement with the Government until 1964.

New Dooars Tea Pays More

Thanks to the rise in the net profit from Rs 4.93 lakhs to Rs 5.66 lakhs, the New Dooars Tea Company Limited has been able to raise the Ordinary dividend from Rs 32.50 to Rs 35.00 per share, less tax, for 1960. Apart from maintaining General Reserve at Rs 50,000, the Depreciation amount is raised to Rs 1.54 lakhs from Rs 1.04 lakhs and Taxation to Rs 4.10 lakhs from Rs 3.60 lakhs. The provision for Development Rebate Reserve is slightly lower at Rs 3,025 against Rs 3,365.

The crop outturn is higher at 22,384 maunds against 20,049 maunds and so also the average price at Rs 5.28 against Rs 5.11 per kg.

Sarugaon Tea Repeats

Despite a decline in the net profit from Rs 2.03 lakhs to Rs 1.93 lakhs, the Sarugaon Tea Company Limited has maintained the dividend at Rs 4.00 per share, subject to tax, for 1960. After providing a sum of Rs 1.00 lakh for General Reserve, the Depreciation amount is raised to Rs 41,762 from Rs 32,819. Taxation provision is lower at Rs 1.22 lakhs against Rs 1.50 lakhs. The crop outturn is lower at 8,056 maunds against 9,337 maunds, while the average price realised is higher at Rs 4.79 against Rs 4.45 per kg.

Sutna Stone Raises Distribution

Following a rise in sales from Rs 26.44 lakhs to Rs 28.33 lakhs and in the profit from Rs 2.11 lakhs to Rs 3.30 lakhs, the Sutna Stone & Lime Company Limited has been able to raise the dividend from 20 to 27.5 per cent, less tax, for 1960. In respect of allocations, Depreciation is raised to Rs 1.27 lakhs from Rs 95,023; Taxation to Rs 2.20 lakhs from Rs 1.72 lakhs; General Reserve to Rs 50,000 from Rs 480 and Dividend Equalisation Fund to Rs 50,000 from Rs 30,000. A sum of Rs 75,000 is provided for Contingency Reserve, while the provision for Development Rebate Reserve is lower at Rs 25,000 against Rs 80,000.

The directors state that the programme of expansion, both at the factory and the quarries, is proceeding satisfactorily. To finance the scheme, the directors had already issued right shares, at par, in the proportion of two shares for each share held as on 8 May 1961. They have called only Rs 5 a share in the first instance. The balance of Rs 5 a share will be called later when further funds are needed.

DESIGN... for finest performance

Of all aspects of industrial endeavour the most intriguing is thermo-dynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story...a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is tailor-made to give optimum performance under varying local conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities

of waste material in the form of bagasse for fuel; again in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will tailor-make not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

Managing Director.

His costs will go up this month...

Because he has had a machine breakdown and has had to replace costly parts which were ruined by faulty lubrication. This didn't have to happen—a Caltex Lubrication Survey could have spotted the trouble—solved the problem.
Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.
This service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

Procedural Reforms for Export Promotion

EXPORT promotion is a slogan that is in some danger of becoming a soporific. Once the need for it is avowed in suitably unctuous tones, it is assumed that the problem will solve itself. It is necessary to remember that export promotion involves a hundred decisions at all levels and an orderly coordination of these decisions by an intelligible policy one part of which does not cancel out another. Above all, it is on matters of detail that attention needs to be directed. A Committee under the chairmanship of Sir A. Ramaswami Mudaliar is examining the whole question and the chairman's well-known grasp of details may be expected to see to it that the Committee's recommendations offer guidance on this rather neglected aspect of the question.

A rational export policy involves a rational import policy. If maintenance imports and imports of certain essential machinery are important from the point of view of the entire economy, they are more urgently so from the point of view of exports. In a general scramble for raw materials, the claims of export industries deserve special treatment. So, somewhat paradoxically, policy and procedure in imports need gearing up for the sake of export promotion. Various steps are necessary for ensuring the steady supply of the needs of the various exporting industries. As a first step in ensuring this, not only should the Development Wing of the Industries Ministry but also trade associations like, for example, the Indian Cotton Mills Federation, should be associated with the control procedure. With the output target raised to 9,300 million yards, economic units will be required and existing mills must be given the chance to extend and improve plant. That is accepted in the Plan presented formally on 7 August to Parliament. A long-term programme will assist in the domestic manufacture of machinery, even if some components have to be imported. The maintenance of operations up to installed capacity is a major requirement for raising consumption and securing a growing surplus for export. Licensing of imports for actual users must be connected with satisfactory performance of the industry. The margin of profit earned must ensure additions to reserves required for development.

The concentration of imports may be required and sources of supply, for instance, under machine tools must be enlarged. The ideal of self-sufficiency must yet be modified to some extent and it is perhaps necessary to look at import figures in order to ascertain what imports can be always pruned or supplemented. Given an assurance of external aid for further development, the country must settle the volume of imports needed as much for increasing exports as for restraining prices. A good point to remember is that import houses are in touch with foreign buyers and export too is very much a concern of the established importers. The barter agreements relating to manganese or other ores may be distinguished from the regular transactions in which the State Trading Corporation engages and a strict demarcation of the field may be called for in view of complaints about the undue advantages conferred on the STC.

The utility of giving out small import licences to a large number has been doubted and the consolidation of licences must be undertaken so as to give established trade bodies like the art silk mills a voice in determining the volume of imports in relation to domestic requirements. Improvement in licensing procedure may follow the maintenance of liaison with the Ministry of Commerce by appropriate trade organisations like the Indian Mining Association. Assimilation of the rules under the customs tariff to the trade control procedure has been commended for the sake of making decisions intelligible. It is not difficult to consult the Tariff Commission as and when required. Delays even in confirming repeat licences have been mentioned in complaints and the Mudaliar Committee inquiry must lead to a positive practice approximating to the best business (not official) standards for prices and delivery dates are as important for maintaining normal production. Procrastination has been a source of discontent and the interests of Central Revenue too may suffer from such delay as has been noticed by applicants for licences.

Though no committee of inquiry can produce a miracle to order it is just possible that export trade will in future enjoy priority needed in transport. The removal of export duties is urgent, though so far pleas of producers or shippers of tea have not received all the consideration they deserve. Export trade or re-exports through a free port may help but the Committee in its questions has made no specific mention of a free zone in relation to the regulation of foreign trade. The opening of Karaikal as a free port to push trade with Ceylon or Malaya has been often suggested but the de jure transfer of former French territory is delayed. The continuance of export incentive schemes may be justified by the retention of surcharges on import duties. But the more important need is freedom to produce more for export markets, for instance yarn and cloth without conforming to official prescriptions as to categories. The cheapening of price is perhaps less urgent than the gradual raising of quality, for instance, in confectionery meant for export, and token imports to upgrade standards of manufacture might find favour with some.

Meantime, industry can show some resourcefulness in spotting new export possibilities especially in under-developed countries. To take an example that occurs readily, it is possible to export small plants for paper making or soapmaking and a good trade in second hand machinery may be built up under certain conditions with Burma or Thailand. Of course, Australia too is in the field, investigating trade opportunities available to SE Asia. But India can attempt construction of plants for cement or sugar and the export of skill to East Africa or Middle Eastern countries may be a legitimate object of trade promotion. And our traditional items are far from being spent forces as export earners. A determined effort at reducing cost and a well-thought out scheme of sales promotion will yield rich dividends.

Coir Exports: Prospects and Problems

INFORMATION presented to the recent meeting of the Consultative Committee of Parliament for the Ministry of Commerce and Industry draws attention to the unsatisfactory state of coir exports. (*Coir is used as a generic term to include the hard, water-resistant and rot proof fibre extracted from the outer husk of the coconut as well as the products made from it such as coir yarn, rope, mats, mattings, rugs, carpets and so on.) While the exports of all categories of coir products have remained practically stagnant, the decline in exports of coir manufactures, particularly coir matting and rugs is described as alarming. This trend, which is disturbing for an industry mainly dependent on exports, offers little encouragement to the development programme under the Third Plan which places the main emphasis on stepping up of exports. About 55 per cent of total annual production is currently exported; in the case of manufactured products, over 90 per cent is exported. The average annual value of exports of coir fibre and yarn over the last six years is about Rs 5.63 crores and of coir manufactures about Rs 3.16 crores.

Because of a combination of special qualities, coir products have long established a position for themselves in the export markets. But the industry so far has not been able, for a variety of reasons, to extend its hold on foreign markets. While total exports have remained more or less stationary over the last decade, it is apprehended that exports of manufactures, such as matting, rugs etc., have fallen to a level not touched before.

The average annual exports of all types of coir and coir products which stood at 64,000 tons during the five year period 1931-32 to 1935-36 dwindled to 57,462 tons in the subsequent quinquennium and further to 37,392 tons during the five years 1941-42 to 1945-46. Exports picked up after the war; the annual average for the period 1946-47 to 1950-51 stood at 75,500 tons. This improvement in the early post-war years was the result more of the back-log of demand which remained unsatisfied during the war years rather than of any permanent improvement in export prospects; for there was no significant improvement in the succeeding decade covered by the two Five Year Plans, when the average yearly exports were stagnant at about seventy to seventy-five thousand tons. On the other hand, there has been a noticeable decline in the export of coir products. Exports have dwindled from 548,631 cwt. in 1939-40 to 430,430 cwt in 1959-60. The following table, which gives the figures of exports of matting and rugs in the post-war years from the Ports of Alleppy and Cochin, the principal exporting centres for coir products, will show the extent of ground lost since 1946.

	Cwts.
1946-47	3,62,477
1947-48	1,79,079
1948-49	2,54,614
1949-50	2,96,318
1950-51	1,75,619
1951-52	2,16,000
1952-53	1,24,806

Since 1953-54 there has been a steady and continuous fall in exports of these items which

are understood to have touched a new low in 1960-61.

The fall in exports is attributed to two factors: the growth of coir manufacture in European countries and changes in tastes that have occurred in the affluent societies of the West. Many European countries, particularly Holland and West Germany, import coir yarn from India in considerable quantities for manufacture into matting and other products. But in regard to matting we have lost markets not only in these two countries but also elsewhere. Whatever might have been the case before the war, it is no longer correct to say that coir matting is the article of preference as floor covering in the UK. Because of the growing taste for more costly and attractive floor coverings, following steady improvement in standards of living, the prospects of recapturing lost markets for matting, coir carpets etc. cannot be rated very high.

As in the case of many other export commodities, the United Kingdom has been so far the largest buyer of coir products. But in post-war years offtake of mattings and rugs has steadily declined from the peak level of 2,39,970 cwt. reached in 1949-50 to 1,20,876 cwt. in 1955-56 and further to 46,194 cwt. in 1959-60. The sharp decline in the UK offtake has in recent years been balanced to some extent by substantial purchases by the USSR which entered the market for coir mattings for the first time in 1958-59. Comparative figures for major importing countries are given below:

	1958-59	1959-60
	Cwt.	Cwt.
UK	56,103	46,194
USSR	44,817	31,462
USA	10,544	9,674
Iraq	9,873	15,834
Australia ..	5,088	5,176
Canada	3,938	4,200
Germany ..	1,152	3,545

If Britain enters the European Common Market, India will be hard put to maintain exports of coir manufactures to that country even at the reduced level of recent years, for Indian products will have to compete with coir manufactures from Holland and West Germany on very unequal terms. Considering all circumstances, stepping up the export of coir manufactures, particularly matting, is an extremely difficult undertaking. It will therefore be advantageous to concentrate attention on coir exports as a whole and to take the necessary measures to achieve that end, in the meantime supporting the indigenous manufacturing industry through the expansion of domestic market for the manufactured products which are faced with the problem of dwindling exports. In this context it may be mentioned that large fluctuations in prices have exerted an unsettling effect on exports. For the stabilisation of the industry, it will be necessary to build up a large domestic market for coir products. The figures of exports of coir products classified into two groups, "Fibre and Yarn" and "Manufactured products" are given in the following table.

India is in a specially advantageous position for developing the export of coir products.

Year	Fibre and Yarn		Manufactured Products*		Total	
	Quantity cwt lakhs	Value Rs crores	Quantity cwt lakhs	Value Rs crores	Quantity cwt lakhs	Value Rs crores
1955-56	11.17	5.86	4.02	3.23	15.19	9.09
1956-57	12.81	6.76	3.73	3.05	16.54	9.81
1957-58	10.54	5.22	3.88	2.90	14.42	8.12
1958-59	10.57	5.03	4.15	3.19	14.72	8.22
1959-60	11.00	5.47	4.30	3.39	15.30	8.86
1960-61	9.99	5.46	3.97	3.21	13.96	8.67

*Manufactured products include mats, matting, rugs, carpets, ropes, etc.

Though coconut is grown in several countries in the world such as Philippines, Indonesia, Ceylon, Malaya, etc., India is the sole producer of coir in the world. But there is also the limitation that, as coir is extracted from a by-product, namely the coconut husk, it is not easy to adjust the supply to the demand or to implement a programme for planned increase in production. In this context it may be mentioned that inelasticity in supply has led to large fluctuations in prices. These in turn have exerted an unsettling effect on exports. For the stabilisation of the industry, it is considered necessary to build up a large domestic market for its products. With the growing industrialisation of the country and the anticipated improvement in living conditions, this should not present any difficult problem. Increased domestic consumption may be automatically achieved. But, if we are to maintain the present level of exports and improve on it, as well as to cater to a growing domestic market, it will be necessary to make arrangements to increase the production of fibre and yarn. Output of both at present is limited by the availability of coconut husk in the area where the industry has been long established.

Although coconut is grown in most States of India, the industry is concentrated in Kerala and the adjacent districts of neighbouring States. The facility of retting the husk provided by the numerous backwaters in the State is advanced as the reason why the industry has been developed only in Kerala, where it now provides employment to about five lakhs of workers.

The total outputs of coir fibre and yarn were estimated at 130,000 and 120,000 tons respectively by the Ad Hoc Committee of Coir Yarn in 1955. Since then there has been some increase in production. Coir manufacture is being developed in the Kanyakumari District of Madras State. Production at present is estimated at about 150,000 tons. Like production of fibre and yarn, manufacture of coir products is also concentrated in Kerala where it provides employment to about 15,000 factory workers. Annual production is estimated at 24,000 tons valued at 3.5 to 4 crores of rupees. Since production of fibre and yarn is carried out as a cottage industry spread over a wide area, statistics of production given above are in the nature of broad estimates.

As indicated earlier, the volume of production is limited by the availability of coconut husk in Kerala. The total production of coconuts in India is estimated at about five million nuts. Out of this not more than two million nuts are used for the extraction of fibre. The output of fibre for domestic use and export can be stepped up in a short period if it is found practicable to devise an implement measures to utilise the husks which are now thrown away or burnt as fuel in other States. Lack of waterspreads suitable for retting has already been mentioned as the reason why the coir industry has not been developed in areas outside Kerala.

Of all the States in India, West Bengal appears to offer the most favourable conditions for the creation of facilities for processing of husks, especially in the 'depressed' areas

of the Sunderbans where extensive areas under rice have been rendered unfit for cultivation on account of periodical influx of salt water through breaches in the embankments. The heavy loss on this account can be compensated to some extent if it is found practicable to establish a coir industry in this region. For a number of years we have been hearing of a Coir Centre to be set up in Uluberia. It appears that the project has been making deliberate progress. The Consultative Committee of Parliament was recently told that the work of construction of buildings etc for the Research Station is nearing completion and that arrangements are in progress for procuring laboratory equipment, office furniture, and for recruitment of staff etc. The Centre is expected to start functioning at an early date.

While research certainly has its place, what is required to establish the industry in suitable localities in West Bengal is effective extension work designed to familiarise the villagers with the methods of processing of the husk, extraction of fibre and its conversion into yarn. This is a field of activity to which the Community Development movement can turn its attention with advantage. A team of village leaders selected from areas selected for development of the industry may be sent to Kerala to observe and learn the process at first hand. Or, in the alternative, a small number of families of coir workers from Kerala (75 per cent of coir workers are women and children) may be induced to settle in central localities in the Extension Blocks to demonstrate the processes by actual working. Either way development of the coir industry in West Bengal can be of substantial assistance in dealing with the residual problem of refugee rehabilitation. Research can be profitably directed to finding commercial uses for the husks of tender coconuts which are consumed in much larger numbers in West Bengal as compared to other States. Only the husks of the nuts which are three-quarter ripe are suitable for extraction of fibre. The husks of the tender nuts cannot be used for the purpose.

In other States where coconut is grown and where facilities for processing the fibre are not available, the husks can be utilised for making mattress fibre and bristle fibre for which there are export prospects. The Government of India has undertaken to provide the necessary foreign exchange for the import of defibering plants for manufacture of bristle and mattress fibre, and steps are under way to set up such plants in some coconut-growing States. In this connexion it may also be mentioned that the investigations conducted by the Coir Technologist have indicated new uses for 'coir waste' and 'coconut pith' as fillers for thermosetting plastics of the phenolic type. It has been observed that 'coir waste' and 'coconut pith,' which are presently being discarded as materials of little value, if suitably processed, could be utilised in the preparation of phenol formaldehyde moulding powders which could be hot-pressed into articles of desired shapes by using appropriate moulds. These products have been termed 'coirrolite' regarding which the Coir Board has released a pamphlet.

The full utilisation of the export potential of coir depends on increase in production and diversification of the products so as to take advantage of changing trends of demand in foreign markets. The Coir Board, it is understood had submitted schemes for a total sum of Rs 5.77 crores for the development of the industry. The Planning Commission has approved programmes costing Rs 9 crores. Out of this Rs 75 lakhs is earmarked for Central Schemes to be implemented by the Board?

while the sum of Rs 228.4 lakhs has been provided for States as shown below:—

	Rs. lakhs
West Bengal	5.00
Gujarat	2.40
Maharashtra	2.00
Andhra	10.00
Mysore	16.00
Orissa	3.00
Madras	15.00
Kerala	175.00
Total	228.40

It has been observed that exports have been adversely affected because of uncontrolled and unregulated exports of substandard materials. Rules regarding registration of producers and licensing of exporters under the Coir Act were brought into force on 22-2-1958. The Rules enjoin that no person shall work a coir spindle or an industrial establishment, unless it has been registered and that no person shall export coir fibre, coir yarn or products unless he has been registered as an exporter and has obtained an export licence. Provision has also been made in the Rules that, in the event an importer in a foreign country required that goods supplied should conform to specific standard, the necessary arrangement should be made by the Coir Board for pre-shipment inspection of the consignment. It is learnt that 317 exporters (fibre 36; yarn 88; and products 143) had been registered under the Coir Industry Rules, up to 31-7-1961. Spindles registered as on that date numbered 17,305 and industrial establishments manufacturing coir products 932. Enforcement of standards is a difficult task in the case of articles manufactured by cottage industries. Nevertheless Standards have been formulated in collaboration with the Indian Standards Institution grades of fibre. Standard specifications for some manufactured products have been laid down and draft specifications for some others are in the process of finalisation. Apart from work at the manufacturing end to regulate exports and to enforce standards, the Coir Board has also arranged for market surveys in Holland, Sweden, Denmark, Finland, Norway and the UK. The surveys have already been completed in Holland, Sweden and Denmark.

The Income-Tax Bill—II

CHARITIES

THE Select Committee has made extensive changes in the provisions relating to exemption from tax of the income of charities. Some of these changes, like the liberalisation of the extent and conditions of tax-free accumulations, are distinctly changes for the better. Others like the denial of exemption to "denominational" charities created after the commencement of the new Act are less defensible either on general principles or in the light of their social implications in the present state of public opinion and feeling. These provisions have had a sufficient airing in the public and in Parliament and need not detain us. But certain other changes of a fundamental character that seem to go against what seemed crystallised thinking on the subject need a closer attention than what they have so far received.

BASIC DEPARTURES

Before going into detail, it would be convenient to summarise these basic departures

from the cumulative consensus that had culminated in the provisions of the Bill. These are:—

1. The position of a religious or charitable institution that is not the creature of a trust has, contrary to the position envisaged in the Bill, become definitely worse.
2. On the other hand, a religious or charitable trust (whether such a trust operates through an institution or not) has been freed from some of the restrictions that the Law Commission and the original Bill had considered it expedient to impose on it.
3. The definition of charitable purposes has been narrowed down in an important respect. Purposes so far recognised as charitable would no longer be regarded as such if they "involved the carrying on of any activity for profit". At the same time, contrary to the recommendations of the Law Commission and the express provision in the original Bill, the scope of "property" held under trust has been enlarged to include a "business undertaking".
4. Income from property held under trust "in part only" for religious or charitable purposes will not, "if such a trust has been created after the commencement of the new Act," qualify for exemption even to the limited extent that such trusts now do. Even in respect of such trusts created before the commencement of the Act, certain concessions regarding the maximum permissible accumulations or setting apart available for a trust wholly for charitable purposes will not be available.

A HISTORICAL BACKGROUND

In order to appreciate the first two of the four propositions listed above, a brief excursion into the history of the tax law relating to charities is necessary. That the charitable impulse deserves fiscal nudging was recognised early enough. But in the spacious manner of those days, there was no pettifogging about the precise nature of the agency for such benevolence. Thus the Act of 1888, provided simply that "any income derived from property solely employed for religious or charitable purposes" was exempt. There was no reference to trusts or similar legal instruments of charity. By the time the amending and consolidating Act of 1922 was passed, this simple provision had grown substantially into the existing section 4(3) (i) by which income from property held under trust wholly for charitable purposes was exempt.

A LOOSE EQUATION

Even after this, it would appear, as much subsequent litigation and legislative action showed, the expressions used in the section were understood in a vague and inclusive fashion. Thus, there was a loose equation between a charitable trust and a charitable institution, which led to a lot of difficulties later. It was departmentally assumed (as seen by the instructions in the official manuals before 1939) that the expression "property" held under trust should be taken to mean not only immovable property but also such things like securities, business and share in a business.

This departmental view received the imprimatur of judicial authority when the Privy Council declared itself on the same terms in the famous *Tribune* case. (7 I.T.R. page 415). Recently the Supreme Court has also set its seal of approval on this view in the *J. K. Trust Case*. (32 I.T. page 535). But as will be seen from the Ayers Committee's report and subsequent legislative action to give effect to the recommendations of that Committee, there seems to have prevailed an impression that business in the context of a charity must necessarily be an activity associated with an institution. It does not seem to have occurred that a charitable trust can engage "commercially" in a business with a view to using the profits therefrom for indubitably charitable purposes. Consequently, in giving effect to the Ayers Committee's recommendations, the amending Act provided by a separate clause that "income derived from business carried on, on behalf of a religious or charitable institution" should be exempt if it was solely applied for the purposes of the institution and if the business was carried on in the course of carrying out the primary object of the institution or if the work in connection with the business was mainly carried on by the beneficiaries of the institution. After this amendment, it was imagined that section 4 (3) (i) would no longer govern businesses carried on by charities since separate provisions had been made for business by another clause. Indeed, the earlier departmental instruction regarding the scope of the word "property" in section 4 (3) (i) was altered to exclude "business".

THE FINGER ON THE FALLACY

But the Lahore High Court put its finger on the fallacy of this equation of a charitable institution with a charitable trust. In the case of *Gadodia Swadeshi Stores Vs C.I.T. Punjab* (12 I.T.R. page 385), it said in effect that even if an institution does not fulfil the conditions for its business to qualify for exemption, it will be exempt from tax on such business income by virtue of Section 4 (3) (i) if its property (which expression included a business) was held under trust for charitable purposes. In other words, only a business, which was not the subject matter of a trust carried on by an institution had to conform to the stringent provisions newly added in 1939 in order to qualify for exemption.

This led to the amendment of the section in 1953, by which the new provision regarding the business carried on by a charitable institution was made a proviso to section 4 (3) (i). The idea was that, as a proviso, the "scooping" out of business from the expression "Property" in the substantive provision would meet the objections successfully raised in the *Punjab* case. But even this change created unintended complications, as pointed out by the Law Commission. For instance, a charitable institution, not subject to a trust was left high and dry, since a proviso cannot enlarge the main provision and main provision in this case talked only of a trust. (Incidentally, this will be also be the

consequence of the Select Committee's amendment as we shall presently see.) Secondly, whereas an institution subject to a trust can have its business income exempted only if it satisfied the conditions regarding the mode of carrying on of the business, a trust, which is not an institution can carry on its business without any restrictions and may yet qualify for exemption of its business income. (Incidentally the consequence of the acceptance of the Select Committee's changes, will be that this freedom from restrictions will be available to institutions which are creatures of trusts.)

To sum up, the Law Commission wanted to make legislative intentions clear in respect of the following matters:—

"(1). Exemption under section 4 (3) (i) is (in the case of a business) subject to the conditions given in Proviso (b), irrespective of whether the business is carried on by a trust or an institution.

(2). The exemption is also available to institutions not subject to trust, (subject to the same conditions.)"

SET AT NAUGHT

These principles were incorporated in the Bill, but have been completely set at naught by the Select Committee's changes. In the first place, it has amended the explanation to Section 11 in the original Bill to make "Property" held under trust to include a "business undertaking". By this, the laborious attempt over two decades to separate "business" from other forms of charitable property has been nullified. Secondly, section 12 in the Bill dealt with the income from business of both institutions and trusts and the income of both were to be exempt only if the trust or the institution spent the income solely on the purpose of the trust or institution and the business was carried on in carrying out the primary purpose of the trust or institution. The Select Committee has completely deleted these conditions. Indeed the marginal heading of clause 12 in the original Bill read as: "Income from business carried on by trust and institutions for charitable purposes." As amended by the Select Committee, it reads: "Income of trusts or institutions from voluntary contributions."

NON-TRUST INSTITUTIONS TAXABLE?

The combined result of these changes and making the word "property" include a business undertaking is:

(a) A business carried on by an institution which is not also a trust will not be exempted from taxation. To take a hypothetical but by no means unusual case, the profits from the sale of the handicrafts made by a blind school children, if such a school has simply been endowed without the formality of a trust, will now apparently become taxable. This would be so even if the business was carried on in the carrying out of the primary purpose of the institution and the profits were wholly used for the school, since both these conditions simply do not find a place in the amended section.

(b) The only income of an institution that is not a creature of a trust that will be exempted under the Bill as amended will be the income from voluntary contributions. But even such an exemption is subject to the conditions regarding accumulations.

(c) A charitable trust can carry on business, not necessarily in the course of carrying out its primary object and yet be eligible for exemption.

UNINTENDED HARDSHIPS?

Almost the only thing to be said in favour of these results of the amendment is that they

have removed needless restrictions on a trust carrying on a business. But the hardships likely to be caused to institutions which are not also trusts are serious and need immediate parliamentary consideration. Surely it would be ironical if the one entity that alone was originally considered worthy of fiscal support in its charitable activities viz.—a charitable institution—were to become the only entity to suffer under the new Act.

POSSIBLE WAY OUT

Almost the only escape from this predicament within the four corners of the amended sections that we can think of is probably from the definition of the word "trust" in the Bill. In the explanation to section 13, it has been laid down that the word trust in sections 11, 12 and 13 will include "any other legal obligation".

It is perhaps arguable that the business of an institution not the creature of a trust, may yet be properly held under a legal obligation for charitable purposes. In other words, every institution for charitable purposes, may be said to be holding its property under a legal obligation for charitable purposes whether such obligations have been spelt out in the form of a trust or not. But the legal obligations attaching to a "property" simply "endowed" as contrasted to a "trust property" is not easy to determine. The real remedy would therefore, appear to be to make the business income of a non-trust charitable institution explicitly exempt. If considered necessary, the conditions of such exemptions in the present Act may be retained.

The other aspects of the provisions relating to charity will be discussed in a subsequent article.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

STATE LOANS

Greater Support From the Banks?

THE subscription lists for the State Government loans open next week. We sense some doubt and diffidence as to whether the borrowing programme will be a success. For the general impression seems to be that the second tranche of the Centre's new loan was a flop, and so inescapably the State loans too will fail to succeed. We do not agree with such an assessment of the State loans' prospects.

What, we may first seek to clarify, constitutes the clientele for State loans? Until 1957, banks were reluctant purchasers; indeed, in 1956, when the States sought what then was a record amount, and pressure was reportedly exerted upon the banking system, it happened that the banks sold the State loans as soon as they could. Of course 1956 was an unfortunate year in which to have compelled the banks to extend their support. There was no slack season in that year, and with industrial production rising dramatically, banks were already in an over-extended position even before the 1956-57 busy season started. Hence there was nothing strange in banks' attempts to divest themselves of State loans. But the selling pressure pushed down prices of gilt-edged generally. So much so, in the next year, it was gently suggested to the States that they should abstain from the market, and all but two heeded the advice of the Reserve Bank. It was at the time not perhaps the best kind of advice, since already the gilt-edged market had greatly improved. In the 1957 slack season banks were a week-by-week purchaser of gilt-edged; and in that year it was found that the banking system had absorbed no small parcels of State loans. Both in 1958 and 1959 State loans continued to be attractive as far as banks were concerned. In 1960 the interest of banks in State loans tapered off.

But it is wise to remember that banks are not the only, not even the main, customers for State loans. The higher coupon offered, vis-a-vis Central Government loans, makes the State loans especially sought after by entities particularly interested in the running yield. Provident funds and the Life Insurance Corporation tend naturally to prefer State loans. We surmise that by and large not more than one-fourth to one-third of total subscriptions for State loans emanate from the banking system. In a year when the slack season is pronounced, the absorption by banks is larger; and vice versa.

It is clear of course that the 1961 slack is particularly pronounced. The weekly progress of the slack season is being recorded in table published in this section, and the latest figures disclose:

- (a) that net Deposits of Scheduled Banks other than the State Bank have improved by Rs 51.22 crores;
- (b) that the total of Advances of the other Scheduled Banks has contracted by Rs 38.28 crores;

- (c) that the Reserve Balances of member banks are higher by Rs 24.80 crores;
- (d) that the central banking institution's Other Loans and Advances, largely comprising assistance to banks, have fallen by nearly Rs 21 crores;
- (e) that Advances of the State Bank have dropped by Rs 37.88 crores;
- (f) that cash balances of the State Bank have risen by Rs 3.60 crores; and
- (g) that cash balances of other Scheduled Banks are higher by Rs 13.58 crores.

Such "affluence" has enabled the State Bank to put by Rs 14.81 crores to gilt-edged while other Scheduled Banks have added to the same portfolio by Rs 19.58 crores. And yet cash balances are higher, while indebtedness is nominal. The prospect is one of further contraction in Advances and sustained improvement in Deposits. The inference therefore is that, with the 1961 slack season being so easy, the banks may very likely evince greater interest in the State loans. For our part we believe it entirely possible that the banks should earmark, say, Rs 20 to Rs 25 crores for the State loans.

We have secondly the Life Insurance Corporation. The LIC quite obviously did not put into the Centre's second tranche anything like the amount that had been expected of it. Perhaps a smaller subscription was still sufficient to make the loan a success; or perhaps the LIC was biding its time for the State loans. In either case the implication is that a greater quantum of support should emanate from the LIC for the State loans. The amount involved should certainly not be less than Rs 15 crores; and it may be as high as Rs 25 crores.

Still to be accounted for are the subscriptions and the demand from the other institutional investors such as the provident funds. The balance of Rs 45 crores or less should be well within their capacity.

It is such assessment of the capacity to invest in the State loans which impels us to believe that the State loans, 1961, will be an unalloyed success.

Classification of the States

As we have reasoned, the State loans should be a success this year; but some of the loans are likely to be more successful than others. Some of the loans should be over-subscribed; others will be fully subscribed and to the extent of attracting the 10 per cent surplus that the States retain the right to hold on to; and the third category of States will presumably experience full subscription but no surplus.

The classification is as to:

- (a) the "strong" States which will get their money without effort, and which show their strength by normally issuing their loans at par;
- (b) the "developing" States which will be putting in some work, and which rely on the discount in the issue price and the rich potential they possess for industrialisation to attract the subscriptions; and
- (c) the relatively "weak" States which are, again relatively, industrially backward and are consequently compelled to increase the size of the discount.

Till yesteryear, as it were, there were two strong States: Bombay and West Bengal with their bountiful industries. The bi-furcated Bombay is still strong enough, and both Gujarat and Maharashtra are resting confident—quite rightly so—with the issue prices at par, the former seeking Rs 6 crores and the latter Rs 10 crores.

It is to be surmised that West Bengal this year seeks to entice money without relying wholly on institutional investors. Hence perhaps the decision to fix the issue price at a discount of 25 nP, though properly speaking West Bengal should be classified as a "strong" State.

The "developing" States are Andhra (in the market for Rs 10 crores), Madras (also Rs 10 crores) and Mysore (Rs 7 crores). The discount is a nominal 25 nP, and subscriptions attracted by these three States should add up to about Rs 30 crores.

We would have classified Orissa, too, as a "developing" State, but it has preferred to fix the issue price at a discount of 50 nP, with the amount sought at Rs 5 crores. We fancy that worthwhile support will be extended to this loan.

The "eliminated" States are in the market for a total of Rs 19 crores, and Assam is abstaining. Some Rs 20 crores should find their way into the five loans issued at Rs 99.50.

Note: State Bank figures are distorted by Rs 24 crores loss in Deposits owing to repayment of counterpart funds.

ANK RETURNS

The 1961 Slack Season Marches On

Pronounced slack season trends are revealed in the latest banking returns (see table according progress of 1961 slack season). According to the returns of the Reserve Bank for 25 August, Active Notes have contracted by Rs 22.47 crores to be placed at Rs 877.39 crores, and Rupee Coin has returned to its circulation in the unusually large amount of Rs 1.80 crores. With Foreign Securities unchanged at Rs 116.86 crores, currency has been contracted against Rupee Securities for Rs 20 crores, with the portfolio declining to Rs 1,533.55 crores. The Reserve Bank's cash in the till is marked up by Rs 4.33 crores at Rs 16.57 crores.

The return for the Banking Department suggests that inter-governmental transactions have occurred. Though the sharp drop in the Centre's Deposits, coupled with a rise of only Rs 10 crores in Investments despite transfer of Rs 20 crores from the Issue Department, could suggest cancellation of ad hoc Treasury bills, the fact (as borne out by the statutory statement of the State Bank) is that Rs 10 crores of securities have been sold by the Reserve Bank. Thus, the fall of Rs 18.43 crores to Rs 64.60 crores in the Centre's balances is to be linked with the improvement of Rs 6.76 crores to Rs 19.93 crores in the Deposits of State Governments and the fall of Rs 3.65 crores to Rs 48.75 crores in the Advances and means advances extended by the Reserve Bank to the States.

Banks' affluence is categorically suggested: Reserve Balances of member banks have risen sharply by Rs 15.03 crores, and somewhat less than one-third of the rise is attributable to the State Bank. Besides, the Other Loans and Advances of the Reserve Bank are lower by Rs 1.16 crores at Rs 115.71 crores, with accommodation against usance bills declining to a negligible and nominal Rs 11 lakhs. Scheduled Banks other than the State Bank may be keeping away from the Reserve Bank tap in order to subscribe to the loans of the State Governments.

As already noted, Investments are higher, roughly Rs 10 crores (Rs 9.94 crores, to be exact) at Rs 284.51 crores; and the balance transfer from the Issue Department is to be counted for by sales of securities to the State Bank.

Balances Held Abroad are again lower, declining during the week by Rs 2.91 crores. The foreign Assets held by the Reserve Bank and both Departments now aggregate Rs 143.47 crores.

The return of the State Bank for 25 August shows a sharp drop of Rs 6.54 crores to Rs 238.45 crores in the total of Advances—clearly a slack season phenomenon. Deposits are nominally higher by Rs 0.19 crores at Rs 525.18 crores. Giltedged has been purchased for Rs 11 crores, raising the portfolio to Rs 252.28 crores. For the purpose Other Assets have been "utilised" to the tune of Rs 7.57 crores, and in the result cash balances, including money at call, have been marked up by Rs 4.28 crores at Rs 31.47 crores.

The statutory statement of Scheduled Banks for 18 August records a further not inconsiderable improvement in Deposit resources. Net Demand Deposits have risen by Rs 7.25 crores to Rs 815.36 crores, while net Time Deposits are higher nominally by Rs 0.10 crore at Rs 1,127.89 crores. Of the rise of Rs 7.35 crores in net Deposits, less than half a crore is traceable to the State Bank. (Since the first Friday in January, the rise in net Time Deposits works out to Rs 22.43 crores, despite the "loss" suffered by the State Bank, to the extent of Rs 72 crores owing to repayment of counterpart funds; and over the same period net Demand Deposits have risen by Rs 37.52 crores). The rise of Rs 1.97 crores to Rs 18.51 crores in indebtedness to the State Bank is almost exactly offset by the fall of Rs 1.92 crores to Rs 1.54 crores in borrowings from the Reserve Bank. Cash balances including money at call, are higher by Rs 6.21 crores. The rise of Rs 1.34 crores to Rs 585.85 crores in giltedged holdings is on account of Scheduled Banks other than the State Bank. But the fall of Rs 3.65 crores to Rs 1,238.21 crores in the total of Advances is wholly on account of the State Bank.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 29 August 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.400 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.400 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 11 September 1961. Successful tenderers should make payment at all centres on Friday 15 September 1961. Other conditions are as usual.

During the week ended 25 August Government of India Treasury Bills for Rs

18,45,50,000 were sold in favour of the Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 30 August to 9 September 1961 at Rs 99.416 per cent. Sales from 23 to 26 August 1961 amounted to Rs 1,28,75,000.

The Vienna Conference

By Paul Einzig

THE annual meeting of the International Monetary Fund which will open in Vienna on 18 September, will be of considerable interest, because it will have to consider the various proposals put forward to increase international liquidity and to relieve sterling and the dollar of the burden of serving as international reserve currencies. Although drawing rights have only been increased recently, it is conceivable that further increases will be decided upon. The solution of that problem is simplicity itself, however, compared with the solution of the problem of relieving Britain and the US of their role as international bankers. Even a few years ago it would have seemed incredible that either of these countries would be willing to be relieved of that role. But on the basis of recent experience a large section of British and American opinion has come to the conclusion that to have a currency used for international reserves is more trouble than it is worth.

The international banking role of London and New York has been made the scapegoat for the difficulties which both countries had to experience in recent times. Yet in both instances the fault lay not in that role but in the inflationary wages spiral as a result of which Britons and Americans have imported too much and have not exported enough. Thus even if it were possible to relinquish the risky role of world bankers the problem of disequilibrium would remain.

As a matter of fact, to relinquish that role is easier said than done. We could only do so if we paid out in gold or foreign exchanges short-term holdings amounting to some £3½ milliard. The United States is in a better position to pay out foreign holders of dollars, but it would leave her with highly inadequate gold holdings. In any case, holders of sterling or dollars have something to say about it. They may prefer to hold sterling or dollars rather than some newfangled IMF currency, unless and until all international trade comes to be transacted in terms of such a currency.

To some extent the sterling-dollar duopoly has already weakened, because the IMF now grants drawing rights in terms of a number of currencies. But it would take long before this policy could be carried to its logical conclusion. And the solution would raise more problems than it would solve. The additional reserve currencies would be exposed to attacks, and some of them would be in a much worse position than sterling or the dollar to withstand them.

The right solution lies in the adoption of an intelligent forward exchange policy with the aid of which it would be possible to mitigate pressure on reserve currencies. There is a fair scope for the IMF to assist by encouraging the adoption of such policies and assisting it with advice and through serving as a channel for an interchange of technical and statistical information.

Notes

ROAD TRANSPORT Inadequate Provision

Addressing the annual general meeting of the Calcutta Branch of the Indian Roads & Transport Development Association, Sir L. P. Misra, Chairman, underlined the great importance of developing road transport. Under both the First and Second Plans, the transport policy of the Government has suffered from a bias toward railways which has invariably operated against the interests of road transport development. In the Second Plan railway development was provided with an outlay of Rs 900 crores against only Rs 280 crores for road transport. The railways also accounted for 182 million tons out of the originating long distance traffic of 182 million tons in 1960-61. It is a disappointing feature of the Third Plan that it has repeated the mistake of inadequate provision for road transport development during the next five years. The total provision for road transport is only of the order of Rs 325 crores which is deplorable considering that the Plan assessment of transport capacity to be handled reveals gap of a considerable order. Thus out of the total lift

estimated at 320 million tons at the end of the Third Plan railways are expected to meet transport needs to the tune of 250 million tons. This leaves a balance of 70 million tons, most of which will fall to the share of road transport. Doubts however, arise in respect of the ability of the road transport system with the meagre allocation provided in the Third Plan, to carry freight traffic to the extent of nearly 70 million tons. According to Sir L. P. Misra, annual lift by motor vehicles on roads still remains below 20 million tons.

Development of road transport has so far been crippled by the policies adopted by the Government which have marked out road transport for a number of fiscal levies. If road transport is therefore to cover the gap in transport capacity during the Third Plan, it is necessary that Government should adopt a more sympathetic policy towards its development.

Sir L. P. Misra has suggested some very practical steps for enabling road transport to handle the balance of 70 million tons during the Third Plan. These include increasing the mileage of roads to open up new neglected tracts developing under the impetus of the plans, improving the capacity of existing roads by better surfacing, strengthening of weak bridges, increasing the use of trailers, quicker disposal of applications for registration of new commercial vehicles and increasing the output of the existing automobile factories needed to meet the country's requirements. The Centre has recently announced a scheme for financing of transport operators through Transport Finance Corporations to be set up in each State. At the same time it is also necessary to revise the financial outlay for road transport in the Third Plan so as to enable road transport to meet the expected capacity. Sir L. P. Misra has suggested that the funds could be obtained out of the lapses of funds allotted for various schemes, by reappropriation. Failing such a device, Sir L. P. Misra suggests provision of funds from the normal revenue yield from the new motor vehicles which will have to be put on the road. The average contribution of a commercial vehicle towards taxes comes to between Rs 5,400 and Rs 6,000 per vehicle. And estimating that nearly 3 to 3½ lakhs of more vehicles have to be put on the road during the Third Plan period, it should not be a difficult proposition to finance the road development pro-

gramme to carry nearly 70 million tons.

A revision of road transport policy according greater importance to road transport would be warranted not only by the need to cover the gap in transport capacity during the Third Plan, but also by the comparative advantages for road transport in relation to other forms of transport. Flexibility, scheduled delivery, and greater speed are factors which give a decided superiority to road transport as the best method of transport. During the last 30 years, the trend in transport even in the industrialised countries has turned definitely in favour of roads as against railways. It has been calculated that the traffic handled by road transport constitutes nearly 103 per cent of the traffic handled by railways in the UK while in Italy the proportion is even greater. In our country, on the contrary, freight carried by roads constitutes only about 40 per cent of the railways traffic which provides a measure of the backwardness of the Indian road system.

OIL TRANSPORT

A Notable First

The acquisition of a super oil tanker by the Jayanti Shipping Company, marks a noteworthy achievement for the Indian shipping industry. It marks the first entry of the country in the overseas oil trade. Development of shipping in the past decade has not been commensurate with the needs of the country, and though the ostensible object of shipping policy has been to carry a larger volume of overseas and coastal trade in Indian ships, the performance so far has not been very remarkable. While more than 50 per cent of the coastal trade is now accounted for by the Indian shipping industry, the proportion of overseas trade is pitiful at 10 per cent. While tramp and liner vessels are greatly important for overseas movement of bulk commodities, tankers have their own place and in so far as India is concerned the scope for saving of foreign exchange through greater participation in tanker trade is considerable.

The acquisition of the new super oil tanker can therefore be considered very timely and auspicious for the fulfillment of the Third Plan target for shipping. It also has demonstrated how shipping could be enabled to expand by a flexible policy in respect of the role of the private and public sectors in the shipping industry. The Jayanti shipping company is one of the new latest entrants into the shipping industry and the acquisition is therefore proof of the enterprise which private sector could bring on the development of shipping. It is noteworthy that the oil tanker has been acquired without paying any foreign exchange. On the other hand, it is expected

to bring in £18,000 in foreign exchange. The greatest advantage of the new enterprise was that it had been set up on credit without expanding any capital. It is expected to pay as it earned. The enterprise has been helped by the Burmah Shell Company which has chartered the tanker for 12 years till 1973.

LAND REFORM

Sanity in Madras

Views in the Congress Party on land ceilings in Madras have been revised and the Bill as reported oh JSC is marked by improvements. Exemption of religious and other trusts from the scope of expropriation is in response to public feeling and the Bill has distinguished between land put to agricultural use and industrial purposes. Factory extension will not be hampered by prohibition of transfers, and if a ceiling on ownership of land is imposed, dowry by way of land can be given.

One question raised is whether Stridhana approved by the Committee runs counter to the new Dowry Act. The groom taking wet land in place of hard cash may encounter legal penalties if not social opprobrium and the Bill may excite comment. The standard acre is rather elastic—it may go up to 4 acres, which really means that a family can retain or cultivate 120 acres for itself. The Bill is not calculated to acquire much surplus land for distribution. If it encourages consolidation of holdings, it may prove beneficial. Few, in the light of the Socialist ideal, will care to call it extremist. After all, English dis-

GOVERNMENT OF UTTAR PRADESH FINANCE DEPARTMENT

Dated Lucknow, August 14, 1961

PRESS NOTE

4½ per cent Uttar Pradesh State Development Loan, 1972

The Government of Uttar Pradesh are floating a loan of Rs. 6 crores in order to finance development schemes particularly those relating to electricity, irrigation and industries. The loan will open for subscription on September 4, 1961 and will close on September 9, 1961 unless closed earlier. The main terms of the loan are that the issue price will be Rs. 99.75 for every Rs. 100 of the loan applied for; the loan will have a currency of 11 years from September 4, 1961 and will be repaid at par on September 4, 1972; the loan will carry interest at the rate of 4½ per cent per annum from September 4, 1961, payable half-yearly on March 4 and September 4, the payments being subject to tax under the Indian Income Tax Act, 1922. Subscriptions for the loan can be made in the form of cash or cheque or securities of 2½ per cent U. P. Loan, 1961 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department notification no. B-7879/X-88-1961, dated August 14, 1961, copies of which, along with the application forms are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh.

Revenue position—The revenue receipts and expenditure and the surpluses for the last ten years are as follows:

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus (+)
1951-52	5,596	5,550	+ 46
1952-53	6,483	6,483	0
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,553	8,423	+130
1956-57	8,996	8,984	+12
1957-58	10,483	9,942	+541
1958-59	11,723	11,614	+109
1959-60	12,955	12,816	+139
1960-61	14,794	14,437	+357

The major portion of the revenue surpluses was put into various reserve funds. During 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on Development Schemes and the gap in that year was covered by withdrawal from the Revenue Reserve Fund.

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1960-61 were 380 lakhs in the U. P. Road Fund, 17 lakhs in the Hospital Fund, 21 lakhs in the Famine Relief Fund, 1,428 lakhs in the Revenue Reserve Fund, 2,237 lakhs in the Zamindari Abolition Fund, 198 lakhs in the Depreciation Reserve Fund—Irrigation, 339 lakhs in the Depreciation Reserve Fund—Electricity, 21 lakhs in the Contingency Reserve Fund—Electricity and 187 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 5,249 lakhs.

Debt Position—On March 31, 1961, the debt of the Uttar Pradesh Government amounted to 27,374 lakhs consisting of 925 lakhs representing the consolidated debt due to the Central Government, 19,598 lakhs taken from that Government for development purposes and 373 lakhs for Relief and Rehabilitation Schemes plus 5,895 lakhs representing the amount of public loans floated by this Government from time to time. 142 lakhs as Uttar Pradesh Encumbered Estates Act Bonds; 206 lakhs from the Reserve Bank of India, 109 lakhs from the Life Insurance Corporation of India, 43 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies and 83 lakhs from the Khadi and Village Industries Commission. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds and Rehabilitation Grant Bonds, the outstanding balance of which on March 31, 1961 amounted to 8,195 lakhs. Sinking Funds have been constituted for all the public loans and the balances at the credit of these funds which amounted to 2,133 lakhs on March 31, 1961 are mostly invested in Government of India Securities. Besides this a sum of 1,958 lakhs is also available in the Sinking Fund, built up for the amortization of loans obtained from Government of India, which are repayable in lump sums.

Assets of the Government—Against the outstanding debt of 27,374 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tubewells, Cement Factory, Government Bus Services and Electricity Schemes, in which about 22,100 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 13,161 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

Footnote—The accounts for 1960-61 have not yet been closed finally. The figures for 1960-61 mentioned in the Press Note are based on the March (Supplementary) 1961 Accounts.

encashment may create problems for payees. They may also lead to queries about the commission charged for M.O.s. at present, if payment is made by cheque, which cannot be called legal tender. The P.O. will only be issuing bank drafts paid for by remitters and competing without a licence with scheduled banks. The idea that remittances by cheque should be credited to savings bank accounts to stimulate small savings may be a bright one, but that too means intensified competition with private banks which will also point out that delay in payment will result if the P.O. offers or undertakes to pay by cheque to those who receive money orders. A far better thing would be to enlarge sales of postal orders but help should be given in their encashment at counters.

That postmen should be relieved of risk or responsibility may appear quite laudable but if remittance in the fashion adopted by banks for mail transfers is adopted, questions will be asked about unhealthy competition and undue influence on the part of a revenue department which is only incidentally a commercial establishment. Banks always spend money to win and keep clients and if the m.o. system is used as a trick to divert business to the P.O. savings bank, the banking industry including its workmen may register alarm. The more important question is if the P. & T. staff unions have been consulted; also, if the procedure is acceptable to the customers who may prefer the banks in future for sending small sums to distant places by draft or cheque. The T.M.O. business may rapidly fall away, if customers resort to T.T. facilities made available. Of course, the workload will be reduced on the average postman's beat. But the P.O. Act which confers monopoly may not envisage diversification that threatens banks' business or interests at present.

PRICE-FIXING

The Anti-Monopoly Strain

The US Government's decision to prosecute three leading manufacturers of antibiotics proves only that success in preventing price rings among electrical manufacturers has induced the Attorney-General to look for his next target. Pfizer or American cyanamid will perhaps enter a defence but the anti-monopoly strain in the Administration will prove too strong. The present inquiry into UK firms price policy vis-a-vis the Health Service may influence the US Government's action against the big manufacturers who, by means of patents, put up prices, and enhance profit margins. The action is a sign that private enterprise cannot abuse its freedom under a democratic government and the usual search for

profits must always be restrained by deference to the public interest.

The outcome of the case against the General Elec. and other Companies proved that the US Government had no objections to deal with the big concerns boldly. The action may lead to a general review of prices paid by the Public Health Service and the price to be paid for the fruits of medical research. A fear that big profits encourage take-over bids has been in evidence for a year in the UK because of renewed competition for acquiring a company like British Drug Houses. The control of vested interests is also the purpose of the US Government, because it is felt that competition is vital and private agreements to preserve profits at a high level are incompatible with consumer interests. The full working of the industrial system, without interruption or dislocation is compromised by restrictive agreements that regulate supplies and appropriation quotas. Some may think that the UK monopolies Act has influenced US policy up to a point and due restraint of profits earned by private business. There must be a limit to free income because consumption must be freely encouraged, as Veblen noted in one of his essays and industrial progress must be measured only in larger supplies and lower price for the consumer.

COFFEE

Research Pays Dividends

The Coffee Board's annual reports to increasing expenditure on research and development schemes. Tribal delegates from Assam visited the stations to study coffee cultivation. This may lead to an extension of cultivation even though a surplus of coffee presents a problem at present and the world is concerned with withdrawal of stocks and maintenance of prices. It is interesting to find that in spite of strained relations the Indian Coffee Board receive samples of seed from Portugal through the FAO. The seeds are said to be resistant to Honei Vastatnx. The research station supplied selected seed to man estates to more planters.

Extension of coffee-growing in Andhra Pradesh and Orissa hilly areas has been mooted but it is certain that Mysore remains the area most suitable for development of coffee. The opening two co-operative tea factories turn green leaf into black tea with State aid was certainly anticipated by the opening of two pulp units. Small planters are no ready to turn fruit into parchment and new pulpers have gone into operation. Coffee-growing in Palni Hills has not been a great success but in 1959-60 a crop

tons was expected. This means that Bodinayakanur becomes a centre for coffee sales as cardamoms. The use of artificial manures on a balanced basis for coffee is being extended. Green manure also has been used for coffee cultivation. Efforts are being made to produce superior Ethiopian coffee. Mysore as the seeds are resistant to leaf disease. India has lied seed to the Philippines, Laos, and even China.

The report indicates that minor variations in temperature and a well-distributed rainfall of 100 inches per annum are ideal for coffee growing and rainfalls in suitable areas can start only when these conditions are present. Assistance in control of pests is perhaps the force of help given by the research agency which in 12 years helped to raise the yield of coffee substantially. That means coffee revenue, though the export duty has been abolished years ago.

TILES

Attaching to Grips with Export Problems

Some concern has been expressed about a setback to Indian exports of cotton textiles at the meeting of the National Consultative Committee of Ministry of Commerce and Industry. India's showing in respect of ports in this field has not been par with performance in earlier years. With the exception of 1958, exports of cotton textiles recorded in 1959 were lower than exports for any year since 1956, when total exports of cotton textiles stood at 743,842,000 yards. Exports touched an all-time low in the next year with a total of 723,687,000 yards compared with 850,182,000 yards for 1959.

Regarding the fact that cotton textile exports constitute a source of foreign exchange for the country, the decline in 1960 should be a matter of concern. It should be more so in view of the adverse signs that are visible in the outlook for Indian cotton in the context of the world's movements in cotton textile exports.

There is strong and emerging competition from China, Japan and Germany against Indian cotton exports. Japan particularly has the list of world exporters and the most efficient and orderly marketing structure which places it in a considerable advantage in competition against India.

Another source for concern is the move of the UK, traditional largest market for Indian cotton, to join the European Common Market, a step which will hit Indian export to the UK in view of the loss of duty-free entry of Indian

goods into England. The Common Market countries, particularly France and West Germany maintain a high level of import duty on exports from low wage producing countries and Britain's entry without compensating arrangements will have severe repercussions. Though the recently held Geneva Textile Conference of 16 producing and importing countries sought to evolve ways and means of stabilising the world export trade in cotton textiles, a permanent agreement acceptable to all countries has proved hard to arrive at. While the European countries have been persuaded to increase the quota for imports from low wage producing countries, from the Indian point of view, the arrangement has not eliminated the danger to Indian exports constituted by competition from new countries and from Japan.

Though the Government seems to be seized of the question of stimulating cotton textile exports, there is no evidence of attempts to get to grips with the real issues involved in securing larger exports of cotton textiles. At the meeting of the Consultative Committee, Mr K. C. Reddi, has announced that as a measure to increase Indian exports of cotton textiles, the Government would license 5 model mills with modern machinery and having a capacity of 500 looms and 25,000 spindles each, with the idea of exporting the entire production of these mills. This obviously will touch only the fringe of the problem. The most important requirement that arises in connection with promotion of cotton textile exports is the need to provide the industry with sufficient funds for modernisation of machinery, so that cost of production could be brought down. Such requirements for modernisation have been estimated at Rs 800 crores of which nearly 75 per cent will be in Indian rupees for replacement by machinery manufactured within the country. The assistance from the National Industrial Development Corporation has proved of relatively paltry dimensions compared to actual requirements. Up to the end of last year the NIDC has granted only Rs 18.48 crores for the cotton and jute textile industries.

Allocation of additional spindles that is envisaged for raising cotton textile production in the Third Plan should also be geared to export requirements. One of the prime considerations should be to raise efficiency of production particularly by enabling the uneconomic mills to add to their capacity. Achievement of the Plan target for exports assumes the maintenance of proper relationship in the production of various kinds of cloth and the allocation of cotton with reference to these production needs.

BANKS

Earn More in 1960

Banking trends last year were somewhat obscured by the failure of the Palai Central Bank and the subsequent chain reaction on the entire banking system of the country. At one stage it was even feared

that public confidence will take considerable time to restore. Although no serious dislocation has been brought about, some damage has nevertheless been done. Deposits were not flowing as freely as before and the banks were hard put to it to meet the ever increasing demand for funds.

A complete picture of how scheduled banks have fared during last year as well as much useful information is as usual now available in the Statistical Tables relating to Banks in India, 1960, just published by the Reserve Bank. During the year deposits of scheduled banks were accumulating at a rather slow pace. As a matter of fact they were much smaller than in 1959, even after taking into account the phased transfer of PL-480 funds from the State Bank of India to the Reserve Bank at the rate of Rs 12 crores per month from July 1960 onwards. On the other hand loans and advances recorded a sharp increase to Rs 860.36 lakhs in 1960 from Rs 701.06 in 1959. This is indeed a sharp upturn as in 1958 the figure stood at Rs 628.78 lakhs. The banks were obliged to run down a part of their investments in Government securities in order to meet this sharp increase in the demand for funds.

However, the total earnings of banks were larger in 1960 than in the previous year mainly owing to a marked increase in the level of advances and partly to a rise in their lending rates. Indian scheduled banks' earnings in respect of loans and advances showed an increase of Rs 6.0 crores to Rs 45.9 crores as compared to a rise of Rs 3.0 crores to Rs 39.9 crores in 1959. On the other hand, earnings from investments remained more or less static in contrast to a rise of Rs 6.2 crores in 1959. Total current operating earnings rose by Rs 9.2 crores to Rs 82.4 crores, as compared to a rise of Rs 11.4 crores in 1959. Their current operating expenses showed an increase of Rs 5.0 crores to Rs 74.2 crores as compared to a rise of Rs 8.1 crores in 1959. As a result, their profits increased by Rs 3.8 crores to Rs 17.4 crores in 1960 as compared to an increase of Rs 3.2 crores to Rs 13.7 crores in 1959. As regards foreign scheduled banks, their current operating earnings showed an increase of Rs 2.5 crores to Rs 18.0 crores as against a small decline of Rs 0.7 crore in 1959. Their current operating expenses rose by Rs 1.2 crores to Rs 14.1 crores as against a decline of Rs 1.2 crores in 1959, resulting in an increase in profits by Rs 1.2 crores to Rs 3.8 crores in 1960 as compared to a rise of Rs 0.4 crore in 1959.

The number of scheduled banks' offices in the Indian Union increased by 223 to 4,149 as compared to a rise of 297 in 1959 and 358 in 1958. The number of offices of non-scheduled banks, however, continued to decline. The net increase in the offices of the State Bank of India was 78 as compared to 111 in 1959 and 90 in 1958. The offices of scheduled banks located in places with population of less than 25,000 stood at 1,572 in 1960, having increased during the year by 139, as compared with 156 in 1959.

It has also been suggested that to enable banks to increase profits, for the purpose of building up reserves, and to limit lending commitments of banks, the Reserve Bank should issue a directive to all banks

A Strong Base

In the light of the discussions by the leading bankers toward the middle of the month on the recent proposals of the Reserve Bank regarding capital funds, statutory reserves and liquidity of banks, the Indian Banks Association is understood to have formulated certain recommendations on the Reserve Bank proposals. The Association has expressed the view that the banks should raise the ratio of paid-up capital and reserve fund to deposits to the target of five per cent for the present, and raise it further to 6 per cent in due course, when circumstances become favourable. However, the Association has pointed out that the ratio of paid-up capital and reserve fund to deposits should not be laid down by statute, but should be reached by each bank in consultation with the Reserve Bank of India.

It has also been agreed that every bank should transfer 20 per cent of its declared profit to its published reserve fund until the reserve fund equals the paid-up capital and the paid-up capital and reserve fund are five per cent of its total deposits. Bankers are, also in favour of a convention among themselves that the declared profit should be arrived at after provision for taxation in addition to their casual and necessary provisions. As regards the transfer of funds to the inner reserves the Indian banks are of the opinion that they must transfer 10 per cent of their declared profit to inner reserves until they reach three per cent of the risk assets (to be defined in consultation with the Reserve Bank of India) of the banks.

Another recommendation of the bankers is that the statutory reserve should be five per cent of the public deposits provided the Reserve Bank of India pays interest at bank rates thereon. The bankers have, however, pointed to the need for including in the statutory reserve the balances of banks with the State Bank of India and with notified banks. The Reserve Bank, may, according to the Bankers, acquire power to raise the statutory reserves of Banks from 5 per cent up to 15 per cent of their public deposits.

In respect of the question of liquidity ratio, the bankers have pleaded that in view of the increase in the liquidity ratio, the bill market facilities given by the Reserve Bank to the commercial banks should be liberalised and sanctions of fresh limits should be communicated to the banks preferably three months, but at least two months prior to the expiry of the previous limits. It has in this connection been pointed out, that if fresh bill market limits cannot be made available two or three months before the expiry of the previous limits, the Reserve Bank should grant advances to the banks against Government securities at bank rate upto unspecified amounts, outside of the borrowing quota of banks under the three-tier lending rate schemes.

It has also been suggested that to enable banks to increase profits, for the purpose of building up reserves, and to limit lending commitments of banks, the Reserve Bank should issue a directive to all banks

it obligatory upon them to levy a commitment fee on all limits granted by them for advances. It is considered that the commitment fee should be half a per cent per annum. The minimum paid-up capital for banks to be floated hereafter should be Rs 25 lakhs.

The recommendations of the Indian Banks' Association are intended to enable the increase in the reserves and liquidity ratio of the commercial banks without imposing needless strains on the Banking system. That the implementation of the original recommendations of the Reserve Bank will present considerable diffi-

culties to member banks, seems to be admitted even in official circles. In the light of this knowledge, the Union Government is expected to modify to some extent the scheme formulated by the Reserve Bank. It is suggested that to mitigate the adverse effects on banks of the implementation of the Reserve Bank scheme, the Government would spread over the changes over a reasonable period of time and also grant suitable exemptions wherever necessary in the case of any bank which may find it practically difficult to comply with the new changes immediately.

4½ PER CENT

ANDHRA PRADESH STATE DEVELOPMENT LOAN, 1972.

Issue Price Rs. 99.75 Per Cent

Open on the 4th SEPTEMBER, 1961.

The Loan will be closed without notice as soon as the subscriptions amount to Rs. 10 Crores approximately, and in any case not later than the close of the business on the 9th September, 1961.

The applications will be received at the Offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore; at the branches of the State Bank of India and the branches and Treasury Pay offices of the State Bank of Hyderabad within the State of Andhra Pradesh, and the the Government Treasuries and sub-treasuries in the State of Andhra Pradesh at places where there is no branch of the State Bank of India or branch or Treasury Pay Office of the State Bank of Hyderabad.

FULL PARTICULARS CAN BE OBTAINED at any of the Offices or Branches mentioned above or at any Treasury or sub-Treasury in the State of Andhra Pradesh.

Indian Finance

COAL Expert Advice

The visit of British coal experts to help the Indian Government mines under the Plan may prove that complaints had a basis. But in view of the British Coal Board's own indifferent performance advice may not have much value as compared with Polish advice for Poland exports coal while the UK imports coal. The permanent deputation of experts to advise the coal controller may help to enlarge supply but the transport problem will remain. And a nationalised sector will have to compete with privately-owned mines for wagon space. However, the difficulties in Bengal's consuming industries may induce a different but hopeful view of expert aid. The Indian Mines Department may require to be reinforced like the Geological Survey if the mineral programme is to go through as expected. And the Colombo Plan may provide the necessary basis. The expansion of coal output per annum to 97 million tons may call for more mechanisation and expert help in making mining machinery locally may be more urgently needed. The Bihar coalfield may require extra consideration because of the steel plants' demands. That steel-making has suffered owing to the coal industry's failure to deliver the goods has been made plain more than once. The welfare of miners rather than mines has been long upheld and the country has already paid a high price in power shortage, this year particularly.

INVENTING Indians only Moderately Active

The annual report of the Patent Office for the year 1960 shows that Indian inventors have been only moderately active last year. It is true that the total number of applications for patents made in 1960 was 4,503 as compared with 3,965 applications made in the previous year. Out of this total, only 721 applications originated in India and even among these 58 applications were received from residents other than Indians. Considering that applications originating in India in the previous year totalled 728, it appears that inventive genius taken for the country as a whole has received a setback. Statewise analysis of the applications shows that Maharashtra is responsible for the largest number of applications with its figure at 204. A proper comparison is not possible in regard to the two new States of Maharashtra and Gujarat as they came into existence only last year. The number of application in 1960 for undivided Bombay has considerably increased to 307 as compared with 252 in the previous year. Next in the list comes West Bengal with its figure at 159 as against 156. There has been a decline in patent applications in Delhi where the number for 1960 is only 86 as against

128 in the previous year. On the other hand there has been an improvement in Madras, which has increased its share from 32 to 45. Among other States except Madhya Pradesh which has accounted for 8 applications against 3 in the previous year, all others have recorded a decline.

The increase in the total number of applications is due solely to applications from abroad. As compared with the previous year, there has been an appreciable increase in the number of applications originating from the USA, Germany, Switzerland, the Netherlands, Italy, Sweden and Japan. The number of applications originating from the United Kingdom, Canada, France, Czechoslovakia, Poland, and certain other European and Latin American countries also recorded a slight increase. The number of applications originating from the UK increased to 1,032 from 1,016 in the previous year. Other Commonwealth countries show a decline to 60 from 64. European countries show a considerable increase with 1,700 applications as compared with 1,389 in 1959. Out of a total of 880 applications originating from the Americas, the United States alone accounted for as many as 875. Among the Asian countries, Japan tops the list with 89 applications out of a total of 98 for the whole group of countries.

The trend of inventions shows that a majority of applications for patents during last year related to chemical industries. This is not a new development as in the previous years also this group had received the special attention of inventors. The iron and steel industry contributed a fairly large number of inventions most of which, however, were from foreign countries. This perhaps reflects the increasing attention that is being paid to the development of this industry. Patent applications relating to textile technology originated mainly from foreign countries. Inventions of Indian origin were small in number. Other fields in which patents were applied for were food and agriculture, health and sanitation, civil engineering, mechanical engineering, electrical engineering and miscellaneous. While Indian inventors have evinced interest in all the above mentioned fields; it would appear that research based inventions are still few and far between. Perhaps this is due to lack of widespread research facilities so far. This position is fast changing in the country and since more and more research institutions are coming up the coming years may well witness a notable increase in the number of applications for patent as well as a shift toward industries in the trend of inventions.

INDUSTRIAL INDIA A Detonator Factory

India will have its first detonator factory established at Hyderabad in the private sector with Hungarian collaboration. The agreement for the establishment of the factory has

2 September 1961

been concluded between the Indian firm and the Hungarian Organisation "Komplex". According to the terms of the agreement, Hungary will supply the plant and equipment for the factory in Rupee payment and there will be no royalty or know-how price. The Hungarian factory will also pass on the benefit of continuing research and development to the Indian counterpart from time to time.

The project is a pioneer venture. The company with the name of Indian Detonators Limited, has already been registered at Hyderabad and land measuring 72 acres is in the last stage of acquisition. The first phase of the factory is expected to be completed by the middle of next year and the second phase, which will be the last phase, within 12 months from then.

Though production of civil explosives and safety fuses is fairly well advanced in the country, the requirements of detonators are being met through imports which involve an annual drain of Rs 1 crore in foreign exchange. When the factory gets into full production, it would enable foreign exchange saving of this order since all the raw materials are expected to be supplied from within the country itself. The licensed capacity of the new unit is 64 million detonators, including both plain and electric detonators.

EAST AFRICA Federation Prospects

Kenya's views on joining a federation, including Uganda and Tanganyika, are changing. Mr. Kenyatta's release has influenced a profound change to the old scheme proposed; so also the decline and fall of the Kabaka of Buganda. The East African Federation that might cancel out the eclipse of the Central African Federation may get foreign aid on a larger scale, and immigrant capital too may be soon satisfied with assurances. Sir Alan Kirby has described the very limited progress of local industry because tropical agriculture is still underdeveloped in East Africa and the plantations are mainly European-owned. The main task is one of promoting work on the land, not land itself, and the exit of British planters may give a chance to Africans to try scientific farming, just as the big co-operatives in Uganda have done. The dependence on export trade must be ended, and the home market for textiles or food stuffs got ready. Because overseas capital may be anxious, few can forecast any increase in tea or coffee, but more maize will be needed and the killing of surplus cattle may lead to better farming in dry zones.

The political changes in Kenya may lead to UN aid or US aid but it is from the few mines that foreign trade must be built up. Confusion in the Congo and alarm in South Africa may bring the

big mining interests into Kenya if the release of Kenyatta is followed by a right degree of political stability.

Economic unity, or at least the framework necessary, exists and the hopeful outlook may be in part due to the Boer triumph in South Africa. The chances of Portuguese East Africa joining up a new African Commonwealth may be deemed small but the eagerness of Nyasa land to throw in its lot with Kenya or the prospective Federation is apparent. The protectorate may not be self-supporting, but it can count on a subsidy, if it breaks away from South Rhodesian control. The impossible may happen, if North Rhodesia also decides to leave the Federation and the main point is that Federation will bring nearer an agreement with Ruanda-Urundi or Zanzibar from which rich Arabs may move off to faraway places or to the Sudan where big opportunities may be grasped easily, because of the military regime. European groupings today may turn the tide in favour of Federation in Africa and it is not unlikely that emigration of some Britons to South Africa will encourage Dr Verwoerd to go on his own way. There is little doubt that Mrs Indira Gandhi's trip to East Africa is timely. Contact with emergent States may help trade and old commercial connections may be strengthened with Africa.

OIL New Depths to Plumb

Mr K. D. Malaviya, Union Minister for Mines and Fuel, has followed up the understanding reached with the French Petroleum Institute regarding oil exploration in the Jaisalmer area with the announcement of an agreement of wider scope with ENI, the Italian Government-owned oil undertaking. Negotiations with the ENI for oil exploration and processing had been going on since July last year. Mr Enrico Mattei, President of the ENI, came to the country on the invitation of the Government of India in December last for discussions on technical and credit assistance for the development of the oil industry. The details of the agreement were further discussed during the visit of Mr Malaviya to Italy last June. The agreement, which is the first arrangement for collaboration with Italy for the development of the oil industry, was signed last Tuesday. Making the announcement in Lok Sabha earlier in the day, Mr Malaviya expressed the hope that it would be the forerunner of many more to come in the future.

The agreement will provide for a 100 million dollar credit being given by the ENI for public sector petroleum projects in two categories:

The first category includes projects for which the general provision has

already been made in the Third Five-Year Plan, such as, transport pipe-line for petroleum products from Barauni to Delhi and Barauni to Calcutta, Gas Fractionation Plant, Liquid Petroleum Gas Bottling Plant and distributing facilities, Lubricating Oil Plant, supply of crude oil production equipment and also distribution equipment. Among the list of projects is also included contract drilling for any areas specified by the Oil and Natural Gas Commission. In the second category come additional projects like Petro-chemicals and some others for which the

Planning Commission and other Ministries have further to be consulted for concurrence and for which consultations have also to be made with ENI in the course. The time schedule for projects under the first category is such as to enable them to be executed within the Third Plan period.

Conclusion of the agreement, it is understood, was stalled so long pending clearance of terms of repayment with the Finance Ministry. As a general rule the Finance Ministry is not keen on development credits which would involve a heavy

burden of repayment in the short run. And ENI could not see its way to extend the period of repayment to the extent considered appropriate for development loans. It may be mentioned that while announcing the conclusion of the agreement in Lok Sabha Mr Malaviya did not refer to the terms.

The effect of the credit for non-Plan projects on the total funds that may be made available for Plan projects through the Aid India Club also requires further clarification. This will depend upon the source from which the credit for new oil development projects will be forthcoming—whether out of the funds of the ENI or from the Italian Government. According to the understanding with the World Bank Consortium, all assistance received from whatever country on a Government to Government basis for project, whether included in the Plan or not, will be set off against the total foreign assistance that India requires for implementation of the Plan projects according to the estimate presented to the Consortium. This means that if new projects are included in the Plan at this stage for which it is now found possible to make special credit arrangements, this will necessitate a reordering of Plan priorities. That is why Mr Malaviya in his statement mentioned that in regard to the second category of projects, further consultations will have to be held with the Planning Commission and other Ministries concerned to secure their concurrence.

Mr Malaviya also mentioned that ENI have now made an additional offer of 20 million dollars for collaboration with ONGC in oil exploration which is still under the consideration of the Government of India. The collaboration contemplates among other things supply of specialised services including equipment for exploratory programme in the Cutch area. If the proposal does not go through, there is every prospect, said Mr Malaviya, of new proposals for a participatory venture for exploration and production of oil being re-negotiated. ENI had made a proposal, as far back as July 1960, for a participatory venture for exploration and production of crude oil in the Cutch area. Following talks during the Minister's visit to Italy last June, this proposal has been substituted by the additional credit offer.

WHOLESALE PRICES

Small Decline

The official wholesale price index (with the year ended May 1953 as 100) declined by 0.9 per cent to 127.5 during the week ended August 12, 1961 as compared with 128.6 (revised) for the previous week. The index was lower by 1.5 per cent when compared with the corresponding week of the earlier month but was higher by 1.8 per cent than that of a year ago.

The prices of Rice at Kotma (-6%) and at Jayanagar (-5%), Salt at Cuttack (-8%), Groundnut Oil (-4%), Fish (-3%), Jowar, Arhar, Gingelly Oil, Tea and Black Pepper (-2% each) and Barley,

Maize, Masur Urad, Milk, Ghee, Coconut Oil and Dalda (-1% each) moved down, while those of Rice at Sambalpur (+8%) and at Tirunelveli and Balurghat (+5% each), Oranges (+8%), Onions (+7%), Bajra at Rajkot and Salt at Tuticorin (+5% each), Eggs and Gur (+4% each), Cashewnuts ((+3%), Potatoes, Bananas, Coffee and Turmeric (+2% each) and Wheat, Mung and Chillies (+1% each) showed advances and as a result the index for Food Articles stood at 124.0 as against 124.1 (revised) for the earlier week.

The index for Tobacco remained unchanged at the previous week's revised level of 96.6.

The index for the Fuel, Power, Light and Lubricants group also stood unchanged at the earlier week's level of 121.5.

Lower prices of Raw Jute (-9%), Groundnuts (-4%), Tanning Materials (-3%), Raw Silk, Linseed, Manganese Ore and Lac (-2% each) and Raw Cotton, Raw Wool, Castorseed and Copra (-1% each) brought down the index for 'Industrial Raw Materials' by 2.9 per cent to 146.1 as compared with 150.5 (revised) for the previous week. The prices of Cottonseed (+3%) and Raw Hides (+1%), however, moved up.

The index for 'Intermediate Products' fell by 0.9 per cent to 140.5 due to a decline in the prices of Rayon Yarn (-4%) and Linseed Oil (-2%).

A substantial fall in the prices of Jute manufactures (-7%) and lower prices of Oil Cakes (-1%) brought down the index for 'Finished Products' by 1.2 per cent to 123.7 as compared with 125.2 (revised) for the earlier week.

CORRIGENDUM

Iron Ore Export

In last week's report on the subject in the Notes Section, an omission had crept in in regard to the country-wise distribution of export contracts for iron ore. The correct figures are given below.

Poland: 0.6 million tons (1961-1963); East Germany: 0.3 million tons (1961-63); Yugoslavia: 1.33 million tons (1961-65); Japan: 7.2 million tons (1957-58 to 1961-62); 0.45 million tons (1959-60 to 1961-62); 20.0 million tons (1964-65 to 1973-74) and 80.0 million tons (1966-67 to 1980-81); Rumania: 2.7 million tons (1962 to 1966) and Czechoslovakia: 1.17 million tons (1960-61).

NEWS IN BRIEF

Money supply with the public at the end of June 1961, was practically unchanged at Rs 2,872.6 crores compared to Rs 2,872.7 crores at the close of the previous month. While currency with the public fell from Rs 2,010.6 crores at the end of May 1961 to Rs 1,968.8 crores at the close Rs 862.1 crores to Rs 903.8 crores. of June, deposit money rose from

Total world supply of tea during 1960 was 702 million kg. while total absorption was 701 million kg leaving a surplus of 1.0 million kg. accord-

ing to provisional estimate prepared by the International Tea Committee.

Iraq has the highest per capita consumption of tea in Asia, according to statistics released by the Tea Board. The per capita consumption in Iraq in 1959 was 2.35 kg against 0.48 kg in Iran, 0.49 kg, in Saudi Arabia, 0.28 kg in India, 0.22 kg in Pakistan and 1.34 kg in Ceylon. Among European countries, the per capita consumption is highest in the UK and Eire amounting to 4.34 kg and 3.56 kg respectively. In the USA it was 0.28 kg, in Canada 1.16 kg and in Chile 1.20 kg. Consumption in Australia was 2.66 kg and in New Zealand 2.98 kg.

India will receive a Japanese yen credit worth eighty million dollars (over Rs 38 crores) for the first two years of the Third Five Year Plan under an agreement signed in Tokyo recently.

The tentative production targets for the Fourth Plan are: steel ingots—18 to 19 million tons; electric power—23 million kw. Coal—170 million tons; oil refining 18 to 20 million tons; foodgrains—125 million tons; machine building output worth Rs 1,600 crores and exports Rs 1,300 to 1,400 crores. The investment for the Fourth Plan might be of the order of Rs 17,000 crores and for the Fifth Plan Rs 25,000 crores. This information was given by the Prime Minister in the course of the Lok Sabha debate on the Third Plan.

Six States—Rajasthan, Andhra Pradesh, Assam, Madras, Mysore and Orissa—have implemented the scheme of democratic decentralisation popularly known as Panchayati Raj.

The oil-producing wells already completed in Ankleshwar can yield about 650 tons of crude oil every day. The first lot of five-tank wagons of 20 tons each is proposed to be despatched to the Burma Shell refinery from 31 August.

India earned foreign exchange worth nearly 4.5 crores during 1960-61 by exporting handloom cloth. The countries where handloom cloth was exported were Malaya, Ceylon, Singapore, Aden, Nigeria, Sudan, Britain, and the United States.

India earned nearly Rs 26 crores worth of foreign exchange between December last year and July this year, by exporting goods through the State Trading Corporation.

The total output of steel in the country during the first six months of this year was over 1.3 million tons.

The programme of the National Water Supply and Sanitation scheme and rural areas during 1961-62 has now been finalised. Nearly Rs 172 crores would be spent under the scheme in the Urban areas and Rs 39 crores in the rural areas.

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the area and

production of gram for 1960-61 are placed at 23,483,000 acres and 6,207,000 tons respectively. Compared to the partially revised estimate of 25,372,000 acres and 5,502,000 tons for 1959-60, the estimate for 1960-61 shows a decrease of 1,889,000 acres or 7.4 per cent in area but an increase of 705,000 tons or 12.8 per cent in production.

Net collections under the small savings scheme in the country during the period April-July this year, has touched an all time record figure of Rs 18.82 crores, according to Mr R. G. Khedkar, Assistant National Savings Commissioner. Collections for the corresponding period of last year had amounted to Rs 17.17 crores. Maharashtra led among the States with net collections of Rs 4.93 crores, followed by West Bengal with Rs 3.38 crores and UP with Rs 2.30 crores.

PERSONAL

Mr P. C. Bhattacharyya, Chairman of the State Bank has been appointed Governor of the Reserve Bank. Mr Bhattacharyya, will take over his new appointment on 1 March, 1961. Mr S. Ranganathan, at present Secretary, Ministry of Commerce and Industry has been appointed as Chairman of the State Bank and will join his new post on 1 March 1961.

Mr K. B. Lal, Additional Secretary, Ministry of Commerce and Industry, will take over as Special Secretary in the Finance Ministry on 1 September.

Mr T. Swaminathan, at present India's Commissioner-General for Economic Affairs in Europe, will return to India to take Mr Lal's place in the Ministry of Commerce and Industries.

Mr Lala Bharat Ram, chairman of the Board of the Delhi Cloth & General Mills has been unanimously elected chairman of the Indian Society of Advertisers.

Mr P. N. Sarma, Senior Artist of Bomax Ltd, Bombay has been appointed as Director of the company. Mr Sarma is the first Indian to be appointed to the post.

Mr Jayantilal Ojha, Chairman of Messrs Jayantilal Ojha & Co and also Managing Director of India Crucibles (Private) Limited has been elected President of the Geological Society of India for the current year.

Mr P. K. Sen, DIG of Police (Traffic) West Bengal and additional Commissioner Calcutta will represent India at the ECAFE conference on traffic engineering and highway safety to be held in Manila.

The Executive Committee of the International Academy of Management which met recently in Paris, has elected Dr K. S. Basu as a fellow. Dr Basu, who is the first Indian to receive this distinction, has been closely associated with the management movement in India. He is the President of Bombay Management Association and a director of Hindustan Lever.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

SIR Biren Mookerjee's statement to the shareholders of Indian Iron and Steel Company lacks none of his usual punch and this time the aim is surer. Obviously Sir Biren had in mind a wider audience for his thoughts than the IISCO shareholders and it must be said that never did a speech deserve it more. Authority, in particular, should read it, not superciliously, but with becoming willingness to learn. First the grouses; but most of them are old. Difficulties of production caused by coal with a high ash-content are not new. Nor is the failure of the transport system to cope with the demands made on it a recent tribulation.

These, as I said, are familiar themes. But the special importance of Sir Biren's speech this year consists in his lucid analysis, supported by detailed figures, of the prospects for exports. At least since the time the Third Plan officially commenced, people do mouth the slogan "Export or Perish" as though they did believe in the starkness of the alternatives. Therefore there is a chance that Sir Biren's persuasive case for reducing cost to make our steel competitive in the world market will fall on sympathetic ears. After all, Authority thinks nothing of subsidising sugar export and the circumstances that forced us to become sugar exporters are not too creditable to our planning techniques. And unlike sugar, steel does not ask for subsidy but mainly for an opportunity to reduce cost. It does sound odd that the C & F price of Indian steel (even after adjusting drawbacks on excise duty for exports) at Rs 588 per metric ton of light bars and at Rs 572 per metric ton of structurals should be higher than that of British, German, Belgian and Japanese steel even at destinations nearer to us than to any of these countries. And none of these countries enjoys the natural endowments that make us probably the world's most automatic producers of steel: the best kind of ore in the world and unrivalled economies of location are no small advantages. And yet we are outpriced in the world market. The reasons for these have been listed with a certain inexorable cumulativeness by Sir Biren. And constructively, he has also suggested the steps to overcome the difficulties. These include, "improvement of transport facilities, establishing of coal washeries, stabilisation of labour costs, and regularisation of supply of raw materials". How these

solutions repeat themselves! Sir Biren also suggests reduction in labour cost by increase in productivity, a plea with which it is difficult to quarrel, though Sir Biren's now familiar inveighing against the system of yearly increments is a little forlorn. Besides he advocates other positive incentives like rebate on freight, remission of certain levies and taxes imposed by State and Central Governments, reduction in Port Commissioner's charges, quicker inspections and reasonable allowance for the play of the profit motive. These, in their sum, don't sound too unreasonable a demand to make, when it is realised that each ton of steel exported will earn the country foreign exchange to the tune of about 45 pounds sterling.

★

President Kennedy has need of all the resilience he is famed for. He must be feeling a sorely tried man, for despite his tremendous efforts, the US Congress—the two houses in their different ways—has chosen to clip the wings of his idealism over foreign aid. The timing must have been particularly frustrating, for almost at that very moment, at Punta del Este, Mr Dillon was committing the US to an "Alliance for Progress" with Latin America which involved a promise of a ten billion dollar aid from the US over a decade. Aid-receiving countries have not exactly been helpful: for example, Mr Nehru, who in Lok Sabha threaded with skill and understanding the tangled skein of the Berlin issue, chose to read from an official brief in Rajya Sabha about the legal issues surrounding access to West Berlin. He has since made his position clearer and said in so many words that access to West Berlin cannot be denied with any international propriety. But his original statement has created, to put it mildly, a certain amount of misunderstanding in the US.

The present position about American aid is briefly this: The President had asked for two things: one, an authorisation for the current year and another, an authority to borrow for a period of five years from the Treasury to enable the Administration to make long-term commitments to the aid-receiving nations. The latter request was the more important, of course. As regards the first, the President's request for Congress approval for a 4.76 billion dollar appropriation for

aid (including military aid) for the current fiscal year has been partially granted. The Senate pared it to 4.1 billion dollars and the House of Representatives to 4.4 billion dollars. But the more important request for long-term authority was completely rejected by the House (by 197 to 185 votes), whereas the Senate was kinder and merely cut down the size of the appropriation to 8 billion dollars. The House merely authorised a year's appropriation of 1.2 billion dollars. The differences between the President and the Congress (and the differences between the Senate and the House) will now have to be ironed out in a Senate-House-Conference Committee, where again, Mr Kennedy is sure to exert his influence. The Administration is prepared for a compromise of a shorter period of authorisation—say three years for a sum of 5 billion dollars. But the House had rejected this. Senator Fulbright, who successfully steered the bill through the Senate by having Senator Byrd's amendment of yearly appropriations rejected, may be able to exert some influence and convert Representatives in the joint meeting. The Dirksen amendment in the Senate by which Congress was to have some say on the way the money was to be spent by making every appropriation above 5 billion dollars subject to prior Congressional approval, may be seen now as a sufficient homage to the amour propre of the Congress. But the issue is still open.

★

On his eightieth birthday, the Establishment in England has, to its infinite credit, made decent amends to P. G. Wodehouse for the rather scurvy way it had treated him. The BBC which had denounced him for his alleged treasonable broadcasts in 1941, recently enlisted Evelyn Waugh to expiate its past and he has done it with a characteristically felicitous tribute. The Sunday Times has called for an "act of homage and reparation." To us in India, who were not so deeply involved in the emotional storm the broadcasts set off, and who owe many hours of unalloyed pleasure to Wodehouse, the act of homage comes more spontaneously. (In fairness to the British, I am bound to say that I cannot answer for how my countrymen would behave in a similar predicament.) But reading the text of the broadcasts in the Encounter a few years ago, I was struck by the innocuousness of the whole thing. I do, however, feel that Wodehouse acted rather like his own Lord Emsworth in accepting the invitation to broadcast at all. It simply

does not appear to have occurred to him that it was his name and not the contents of his broadcasts that would constitute the tremendous propaganda scoop it did become. In extenuation of Wodehouse's rather odd misjudgment, it must be said that the broadcasts originated from an American request. The US was then not at war with Germany and the Berlin representative of the Columbia Broadcasting System asked Wodehouse whether he would broadcast to his American readers. Wodehouse, not realising that the broadcasts will go over the German Radio, accepted. But there was nothing in what he spoke that could be construed as treasonable. In an article in the New Statesman, Malcolm Muggeridge has revealed that the matter was gone into thoroughly from the legal angle and a barrister appointed by the Government for the purpose came to the conclusion that there "was nothing that Wodehouse has done that could be regarded, in any real sense, as treasonable or dishonourable."

Muggeridge records an amusing and unintended contribution to the British war effort by Wodehouse. The Nazis, in their humourless way, had taken the lunatic adventures of Wodehouse characters at their face value. (In this, they resembled the communists: I have in my time read quantities of solemn nonsense from critics who try to break the Wodehousean butterfly on Marxian wheels.) From Bertie Wooster's addiction to spats, the Germans drew the conclusion that all upper class Englishmen wore spats and dropped a spy in the Fen country wearing spats. With such an outlandish garb to give him away, he did precious little spying. The incident is not without its relevance to the literary merit of Wodehouse. Wodehouse characters are timeless, except in the elementary sense of every character, as a mortal, has to have a temporal frame assigned to him. Wodehouse's milieu was dead long before he got into his stride as a writer. (Indeed, Evelyn Waugh fixes it as that of the Garden of Eden.) Wodehouse is in the central tradition of the comic spirit, not in the priggish Merdithian sense of "thoughtful laughter", but in the uproarious rowdy sense of Commedia dell'arte. Bertie's pal who punches the policeman on the boat-race night and pinches his helmet is a modern variant of Punch (Elizabethan, not Victorian, vintage). Bertie and Jeeves are in direct line of succession to Don Quixote and Sancho Panza and Pickwick and Sam Weller. The convention of the daft master and the comic servant is as old as laughter and storytelling. They are archetypes rather than men in flesh and blood. The Drones Club is as imaginary as the Shangri-la. No wonder the German got caught on his way to it.

CRAFTSMEN FOR INDUSTRY

The Apprentices Bill, 1961

A BILL to provide the legal framework of a scheme for training craftsmen for industry was introduced in Lok Sabha on 19 August by Mr Gulzarilal Nanda, Minister for Labour. The requirement of skilled craftsmen for the Third Plan programmes has been estimated at about 1.1 million (7,50,000 in the Engineering Trades and 3,50,000 in non-Engineering Trades). A scheme of apprenticeship training of limited scope, run on a voluntary basis, was introduced during the Second Plan. An expert committee of the National Council for Training in Vocational Trades had recommended legislation to make it obligatory on employers in 'designated trades' to provide in-plant training for a prescribed number of apprentices. This recommendation was endorsed by the National Council at its third meeting held in August last year. The Apprentices Bill, 1961, seeks to give legal sanction to this recommendation. The legislation will apply to establishments in both private and public sectors.

The Bill provides for training of two categories of apprentices: (1) those who will undergo full-length training; and (2) those who have passed the trade tests conducted by the National Council for Training in Vocational Trades, after undergoing the prescribed institutional training, and have to undergo a further course of short term in-plant training for qualifying themselves for the grant of the National Trade Certificate. Employers are also divided into two categories according to the number of workers employed, with different scale of obligations in respect of the facilities they are expected to provide and the financial commitment they have to undertake for the purpose.

The Bill seeks to provide for the setting up of the Authorities for the implementation of the scheme and defines their powers and functions. The different Authorities in the Central and State sectors are: The National Council, The Central Apprenticeship Council, The State Councils, The State Apprenticeship Council, The Central Apprenticeship Adviser and State Apprenticeship Advisers. The Act will extend to the whole of India except the State of Jammu & Kashmir and come into force in different areas on such dates as the Central Government may, by notification in the Official Gazette, appoint. The provisions of the Act shall not apply to any area, or any industry in any area, unless the Central Government by notification in the Official Gazette specifies that area or industry as an area or industry to which the said provisions shall apply with effect from such date as may be mentioned in the notification. Any graduate or diploma apprentice undergoing training in accordance with any scheme framed by or with the approval of the Government, or any special apprenticeship scheme for imparting training to apprentices in non-designated trades, are also exempted from the provisions of the Bill.

The obligations of the employers under the main provisions of the Bill are briefly indicated below:

For each designated trade, the ratio of apprentices to workers other than unskilled workers in that trade will be determined by the Central Government, after consulting the Central Apprenticeship Council, by order in the Official Gazette. Every employer in the 'designated trade' will be under an obligation to engage such number of apprentices, within the ratio determined by the Central Government, as required by the Apprenticeship Adviser by notice in writing, and also provide them with the necessary facilities for training in the trade in accord-

ance with the provisions of the Act and rules framed thereunder. The employer may also be required to provide for training of additional number of apprentices, if the Government concerned makes available such additional facilities and such additional financial assistance as are considered necessary by the Apprenticeship Adviser. It is also provided that the employer may, if he chooses, engage a number of apprentices in excess of the ratio without seeking additional assistance of Government. Employers could also make joint arrangements for purpose of providing practical training to the apprentices in their respective establishments.

Under the Voluntary Scheme in force during the Second Plan, the cost incurred by the employers in engaging apprentices and providing them with facilities for training, including payment of stipends, was reimbursed by the Government up to a certain limit. The Bill provides that such recurring costs including stipends shall be borne by the employer, if such an employer employs five hundred workers or more. Where the number of workers employed is less than five hundred, the cost will be shared by the employer and Government in equal shares up to a prescribed limit and beyond that limit by the employer. It is also provided that cost incurred by an employer in connexion with practical training imparted to apprentices who have undergone institutional training and have passed trade tests conducted by the Council, shall in every case be borne by the employer. The Financial Memorandum attached to the Bill points out that the existing voluntary scheme would have cost the Central Government Rs 112 lakhs for an identical number of trainees as against an expenditure of Rs 98 lakhs expected to be incurred under the proposed scheme. The total expenditure on the part of the Government on apprentices who undergo the full-length course of training will be about Rs 184 lakhs during the Third Plan period, out of which the liability of the Central Government will be about Rs 98 lakhs, the balance being met by State Governments.

Provision for basic training of the apprentices as have not undergone institutional training in a school, or other institution recognised by the Council, has to be made by the employers who employ five hundred or more workers. Where the employer employs in his establishment less than five hundred workers, the basic training will be imparted to the apprentices in Training Institutes set up by the Government. The Bill also provides for imparting of "related instruction" in the theoretical aspects of their trades to the apprentices, at the cost of the appropriate Government. The employer, however, will be required to afford facilities for

imparting such instruction. Time spent by an apprentice in attending classes on related instruction shall be treated as part of his paid period of work.

The employer is required to pay every apprentice during the period of training such stipend at a rate not less than the prescribed minimum rate as specified in the contract of apprenticeship, at such intervals and subject to such conditions as may be prescribed. Payment of apprentices on the basis of piece-work or their participation in any output bonus or other incentive scheme is forbidden. The hours of work of the apprentices shall be such as may be prescribed and no apprentice shall be required or allowed to work overtime except with the approval of the Apprenticeship Adviser, who shall not grant such approval unless he is satisfied that such overtime is in the interest of the training of the apprentice or in the public interest. The apprentices under the scheme will not be regarded as workers and provisions of Labour Legislation will not apply to or in relation to them. But the Bill provides for the application of the provisions of the Factories Act/Mines Act, dealing with health, safety and welfare, to the apprentices as if they were workers within the meaning of the Acts. In case of personal injury caused to an apprentice, the employer will be liable to pay compensation in accordance with the provisions of the Workmen's Compensation Act subject to modifications specified in the Schedule.

Where a contract of apprenticeship is terminated for failure on the part of the employer to carry out the terms and conditions of the contract, the employer will be required to pay to the apprentice such compensation as may be prescribed. Where the contract is terminated for failure on the part of the apprentice, the apprentice or his guardian shall refund to the employer as cost of training such amount as may be determined by the Apprenticeship Adviser.

Unless otherwise provided in the contract of apprenticeship, there is no obligation on the part of the employer to offer any employment to any apprentice who has completed the period of training in his establishment and has secured his certificate of proficiency in trade after passing tests conducted by the National Council; nor will it be obligatory on the part of the apprentice to accept an employment under the employer, unless the contract so provides. The period and remuneration of such obligatory service as provided in the contract may be revised by the Apprenticeship Adviser if he considers that such change is necessary to make them reasonable. The Bill also provides for penalties for contravention of its provisions ranging from fine to six months imprisonment with fine.

General Assurance Society Limited

India on Threshold of Self-Sustaining Economy

Sri B. L. Jalan on Stability of Prices

The following is an extract from the speech of the Chairman, Mr. B. L. Jalan, at the Annual General Meeting of the General Assurance Society Ltd., held on the 28th August, 1961:—

The proposed entry of the U.K. into the European Common Market, when seen in the background of the economic power enjoyed by Great Britain during the 18th and 19th centuries, seems to be a rather curious, amazing, development. We may recall that only last year, the U.S. gold-drain had assumed an alarming proportion and the dollar had become so weak that its devaluation was considered imminent. In the course of the last few months, the things have changed a lot. The U.S. economy has staged a recovery and the sterling has become weaker than ever before. The situation has been temporarily saved by the IMF loan of the order of 2,000 million dollars to the U.K.

Nevertheless, these events are not isolated problems and the repercussions which they produce on the economies of other countries have also to be reckoned with. Thus, while it has, perhaps, become necessary for the U.K. to join the European Common Market, it will have very adverse effects on the Commonwealth trade, and in particular on our exports of tea, cotton textiles, and others. The U.K. continues to be by far the largest single supplier of our imports and consumer of our exports. The withdrawal of the preferential treatment, if not properly phased and counterbalanced, will be a set-back to our exports, foreign exchange earnings and eventually development programmes. This may be viewed in the light of the very encouraging foreign assistance exceeding \$2 billion promised by the Aid-India Consortium led by the U.S.A. Foreign exchange was perhaps the most important impediment in our scheme of resources for the Third Plan. The promised aid has largely solved the problem in one sweep so that the bold, although essential, goals set by the planners for the next five years, appear to be within reach. Any deterrent which might jeopardise this position has to be avoided.

EPOCH-MAKING EXPERIMENT

As you are aware, we have, in last March, completed ten years of our planned growth. Meanwhile, the Third Plan has commenced functioning. The rates of progress achieved during the last ten years and the pointers of the future show that India has

been successful in launching a new epoch-making experiment in economic growth. An accelerated rate of growth has been achieved under democratic framework.

During the first two Plans, the National Income of the country increased by 42 per cent. The rate of growth in the United States, in real terms, was also of the same order during the same period. While it should be realised that rate of growth in the U.S.A. is bound to be slow as she has already attained a high degree of maturity and the progress is measured from a very high level of economic advancement, the low standards of living, consumption and savings prevailing in India have also to be reckoned with. This does not, however, overlook the fact that other countries like Germany, Japan, France, Turkey, secured a higher rate of growth during the last decade.

It is not merely a question of quantitative increases in productivity and gross or net product. Revolutionary transformation has been brought about in the institutional framework while adhering as far as possible, to democratic methods. The regulated economic operations have left some indelible marks on the basic structure of our economy. While the economy is still vulnerable to severe operational jolts, it is well geared to an accelerated growth rate.

These results have brought the country to the threshold of a new era of self-sustaining economy which we should be able to achieve by the end of the Fourth Plan. It might take another decade to achieve a fair degree of maturity. We might say, in other words, that over a perspective of 30 years, we will have passed through three stages of economic growth—laying the foundation for a growth economy, organisation of a self-sustaining economy, and attainment of a degree of maturity. In the context of our population growth at a rate of 2 per cent per annum, this would be an accomplishment of which the country and its leaders could be well proud. The projection, no doubt, of the past into the next two decades, is dependent on an assumption that the country will continue to be committed to hard work and austerity.

FINANCIAL RESOURCES

The paramount problem is of finding enough capital resources. The problem, again, is not one of the availability of total quantum as that of the means to be employed to raise such resources.

The capital market, having manifested a few new bullish features during the last two years or so led to a misleading impression about its vitality and intrinsic strength. What is ignored is that it witnessed equally alarming periods, as at present, of bearish tendencies. There is no doubt about an increasing interest being taken by the foreign investors specially from the U.S.A. in new industrial ventures in India. It is left to us either to make the best use of the opportunity or to frighten them away once again. Many new features of our Indian Companies Act and the remodelled Indian Income Tax Bill need modification when seen from this perspective. In our zeal for orderly growth, the objective of rapid industrialisation should not be sacrificed. If we need regulatory devices it is in respect of price movements such as those witnessed by the jute industry and in food grains. The prices in jute industry can be very well regulated by operating buffer stocks through the mills by encouraging buying of raw jute by means of reduction in bank margins.

There have also been some other disquieting features affecting the new confidence which has been built up. Recently, the Reserve Bank, following certain bank failures, has been considering measures by which the capital base of banks is sought to be raised and advance-deposit ratio reduced appreciably. Considering the rate at which deposits are growing and, therefore, also the requirements of industries, this will further restrict bank credit and facilities available to industry. The measures may not be necessary in view of the deposit insurance being very rightly sponsored by the Reserve Bank and the Government.

INCENTIVE-BASED REGULATED GROWTH

The history of industrially advanced economies has a lesson for us. We might even look at the spectacular advances made by countries like Western Germany after the War. What is desired is a policy of "incentives-based regulated growth". It is possible, perhaps, to work out mathematically by means of forecasting and projections that a given amount of incentives such as relief in taxation, subsidisation of exports, and similar other measures would be more than off-set by a higher rate of national product and thus not only not reduce the total revenues to the national exchequer but in fact raise it. Planning does not simply mean a diversion of resour-

ces to more economic uses; may be from consumption—by means of indirect taxation—to productive channels on the basis of a catalogue of programmes and projects. It is something more. This additional function of planning is to contemplate and provide for conditions of more rapid and more balanced economic development. A lot has been achieved by means of diversion of resources—say from the private to the State sector. A lot also has been achieved by instituting a system of regulated development by a scientific cataloguing of plans and projects. But, we are constrained to believe, a lot remains to be achieved by deliberate and purposive creation of incentives consistent with and leading to a higher rate of national productivity and prosperity at the least cost possible.

Assuming the public sector investment as 100 units, the investment in the private sector in First Plan was 100 units, in the Second 85 units and will be only 65 units in the Third. What is more important is the fact that the change is more spectacular in the industrial sector with the result that while the Government is taking a larger and larger share in programmes which could well be taken care of by private industry, development of basic sinews of progress in the form of economic overheads does not receive the attention it deserves. I believe there is a unanimity of opinion that our progress would have been faster and smoother if transport bottlenecks were avoided, supply of cheap power was more adequate and the governmental machinery for regulation of economic activities was more efficient and speedier.

STABILITY

Another objective to be gained by means of planning is a kind of stable, steady, system of economic operations. One serious aspect which is generally ignored about the rise in prices is the fact that as and when such rises outstrip the international price movements, the international value of rupee is undermined, which in turn affects export and foreign exchange earnings. Exports, in fact, have not kept pace with the growth in the economy. Thus, while the National Income increased by 42 per cent and industrial production by 94 per cent, exports remained constant. Many industrial proposals had to be or are being abandoned since the same could not satisfy certain assumed foreign exchange criteria. You are aware

JESSOP & CO. LTD.

MANUFACTURING ENGINEERS

Structural and Bridge Steel Work, Electric Overhead Travelling Cranes, Level Luffing Wharf Cranes, Sluice and Crest Gates, Builders of All Types of Railway Wagons, Electrical Multiple Unit Coaches, Passenger Coaches and Diesel Road Rollers, Importers of Electrical Plant and Control Gear.

that not long ago it was necessary to justify import of capital equipment to obtain some kind of deferred credit arrangements. Later on five years credit arrangements were insisted on. This period was gradually lengthened. Today, not deferred credits, but direct capital participation by foreign parties is considered imperative. Foreign exchange regulations and requirements of our industrial policy have thus become one of the principal impediments to our industrial expansion.

It is necessary, I would believe, to have now an independent commission to review the progress, assess the achievements and suggest ways and means to rectify and regulate unbridled trends in our economic operations. While this has to be independent of both the Planning Commission and the Government, this would function in close collaboration with both. This Commission will become the watch-dog of our planned progress.

GENERAL INSURANCE

Coming to our own General Insurance Industry, in my address to you in September last, I had made a plea for the appointment of a high-powered Commission of Inquiry to assess the results of the Code of Conduct and to suggest new ways and means to curb the internecine competition. I reiterate that the need of such a Commission is greater today than ever before. In elaborating the suggestion I had also pointed out the need for doing away with the irksome controls and to initiate effective ways for mutual cooperation and understanding. I am glad to say that the industry in Bombay has initiated such a move in the form of an agreement for non-division of business. I believe that this is a welcome move which the industry needed, for a long time. If the move is implemented in the right spirit, it will usher in an era of prosperity for the industry. However, it is necessary that all companies operating in India, whether Indian or foreign, should be made to join the consortium. The agreement perhaps needs certain revisions and modifications. Thus the provision for surrendering all business in excess of 20 per cent of the previous year's business to a common pool will be harsh for those companies which have not caught up a self-sustaining level of business from the point of view of cost. So long as such companies do not attain an economic level of business, they should not be required to cede business secured by them even in excess of 20 per cent of the previous year's business. I hope that amendments like these will be made and all companies will join the agreement and will demonstrate that the industry left to its own, could, by means of self-government, introduce means of healthy regulation and growth. The one big malady which has afflicted the industry is cut-throat competition.

ALUMINIUM CORPORATION OF INDIA LIMITED

NOTICE IS HEREBY GIVEN that the Twenty-third Annual General Meeting of the members of THE ALUMINIUM CORPORATION OF INDIA LIMITED, will be held at the Registered Office of the Company at 7, Council House Street, Calcutta, on Thursday the 28th September, 1961, at 4-30 P.M., for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1961 and the Directors' Report and Auditors' Report thereon.
2. To declare dividends.
3. To elect Directors in place of those retiring by rotation and in this connection to consider and, if thought fit, to pass, the following resolutions in respect of which special notices have been received by the Company and relative explanatory statements have been annexed hereto.

(a) AS SPECIAL RESOLUTION

RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956 Sri Hari Shankar Singhania, a Director of the Company who is an associate of J. K. Industries Private Limited the Managing Agents of the Company and who retires by rotation be and is hereby re-appointed a Director of the Company.

(b) AS ORDINARY RESOLUTION

RESOLVED that Sir A. Ramaswamy Mudaliar, K.C.S.I. D.C.L. (Oxon) a Director, retiring by rotation, who has attained the age of 74 years be and is hereby re-appointed a Director of the Company and it is specifically declared that the age limit prescribed under Section 280 of the said Act shall not apply to him.

4. To appoint Auditors and to fix their remuneration.

AS A SPECIAL BUSINESS:

5. To consider and, if thought fit, to pass, with or without modification, the following as a Special Resolution. RESOLVED THAT in accordance with the provisions of Section 360 of the Companies Act, 1956, the Company do sell its products to and purchase the products from the following companies who are or are deemed to be, associates of the Managing Agents of the Company on terms and conditions that the rates receivable or payable for the transactions shall be not less favourable to the Company than the rates prevailing in the market for the time being or they shall otherwise be reasonable and

payments in respect of each transaction shall be received or paid, as the case may be, within one month of the respective supply.

- (a) J. K. Steel Limited
- (b) Hoyle's Paints Limited.
- (c) Bihar Mines Limited.
- (d) Straw Products Ltd.
- (e) Madhya Pradesh Industries Limited

6. To consider and, if thought fit, to pass, with or without modification, the following as an Ordinary Resolution:

RESOLVED THAT the Board of Directors be and they are authorised to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with moneys already borrowed by the Company apart from temporary loans obtained from the Company's Bankers in the ordinary course of business will exceed the aggregate of the Paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose provided the total amount remaining outstanding at any time on account of principal shall not exceed Rs. 5 (five) crores.

7. To consider and, if thought fit, to pass, with or without modification, the following as an Ordinary Resolution:

RESOLVED THAT the Board of Directors be and they are hereby authorised to contribute to charitable and other funds, not directly relating to the business of the Company or the welfare of its employees, such amounts up to a total of Rs. 2 (two) lacs, in any financial year notwithstanding that such amounts in any financial year will exceed Rs. 25,000 (Rupees twenty five thousand) or 5% of the Company's average net profits as determined in accordance with the provisions of the Companies Act, 1956 during the three financial years immediately preceding, whichever is greater.

8. To consider and, if thought fit, to pass, with or without modification, the following as an Ordinary Resolution:

RESOLVED THAT the Board of Directors be and are hereby authorised to contribute to any political party or for any political purpose, to any individual or body, any amount or amounts which are the aggregate of which will, in any financial year not exceed Rs. 25,000 (twenty-five thousand rupees) or 5% of the average net profits of the Company as determined in accordance with the provisions of Section 349 and 350 of the Companies Act, 1956 during the three financial

years immediately preceding, whichever is greater.

The Registers of Members and Transfer Books of the Company will be closed from 11th to 28th September, 1961, both days inclusive.

By Order of the Board,
J. K. INDUSTRIES PRIVATE LIMITED, Managing Agents
B. H. SINGHANIA
DIRECTOR.

7, Council House Street, Calcutta, the 28th August, 1961.

NOTE:

- (1) Dividend as recommended by the Directors, if approved at the Annual General Meeting, will be paid to those members whose names are on the Company's Registers on the 28th September, 1961 or to their mandatees. Payments will be made on or after 26th October, 1961.

- (2) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

An explanatory statement is annexed to the Convening Notice issued to Members of the Company.

THE INDIAN CABLE COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Members of the Company will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Wednesday, the 27th day of September, 1961, at 10.45 a.m. to consider and, if thought fit, to pass, with or without modification, the following resolution which will be proposed as a special resolution:—

"RESOLVED that subject to the sanction of the Central Government under the provisions of the Companies Act, 1956, being received, the Articles of Association of the Company be altered in the manner following:—

- (1) The word 'seven' in Article 88 be substituted by the word 'nine'.

- (2) After Article 90 the following Article numbered 90A be inserted:

"90A. So long as any moneys borrowed by the Company from the Industrial Credit and Investment Corporation of India Limited shall remain outstanding, the Industrial Credit and Investment Corporation of India Limited shall be entitled to appoint one director acceptable to the Board of Directors of the Company and to remove any director

so appointed and appoint another in his place or in the place of a director so appointed who resigns or otherwise vacates his office. Such director shall be an ex-officio director within the meaning of these Articles and shall not be required to hold any qualification shares."

- (3) The following proviso be added to the first paragraph of Article 95:

"Provided that the director appointed by the Industrial Credit and Investment Corporation of India Limited shall not be entitled to participate in any commission hereinbefore mentioned."

By Order of the Board,
P. S. SHAVAKSHA,
Managing Director.

Registered Office:
9, Hare Street, Calcutta, 18th August, 1961.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

NOTICE

NOTICE is hereby given that the Forty-second Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Wednesday, 27th September 1961 at 11 O'clock in the forenoon for the following purposes:

- (1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1961.
- (2) To declare Dividends.
- (3) To re-appoint a Director who retires by rotation.
- (4) To re-appoint the firm of Messrs. Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remunerations.

As Special Business

- (5) To consider resolutions in relation to the following matters and things:

- (a) In pursuance of Section 228(1) of the Companies Act, 1956 to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Factory at Tata-nagar and the Branch Offices of the Company at Bombay, Ahmedabad, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad, and to fix their remuneration.

- (b) In pursuance of Section 228(1) of the Companies

Act, 1956 to appoint the firm of Messrs Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch Offices of the Company at Madras Bangalore and Coimbatore, and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 12th September, 1961 to 27th September, 1961, both days inclusive.

Dividends, if any, declared at this meeting will be payable on or after 30th October, 1961 to Shareholders registered on the Company's Books on the 27th September, 1961 or to their mandates.

On behalf of the Board,
J. D. K. BROWN,
Chairman.

9, Hare Street, Calcutta, 27th July, 1961.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE INDIAN STEEL & WIRE PRODUCTS LTD.

NOTICE

Notice is hereby given that the Twenty-sixth Annual General Meeting of the Shareholders of The Indian Steel & Wire Products Ltd. will be held at its Registered Office, No. 7, Wellesley Place, Calcutta-1 on Friday, the 29th September, 1961, at 11-30 A.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account of the Company for the year ended 31st March, 1961.
2. " declare dividend on Ordinary Shares of the Company.
3. " appoint Director in place of Mr. B. B. Ghose, who retires by rotation and being eligible, offers himself for re-appointment.
4. " appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS:

5. " consider and if thought fit, to pass with or without modification, the following resolution which will be proposed as special resolutions:—

(a) RESOLVED that in lieu of the Directors' monthly remuneration of Rs. 125/- provided in clause 109 of the Articles of Association of the Company, the existing fee of Rs. 200/- payable to a Director for each meeting of the Board,

or a committee thereof, attended by him, be increased to Rs. 500/- with effect from 1st October, 1961, subject to the approval of the Central Government.

- (b) RESOLVED that necessary application for obtaining the approval of the Central Government be made.

- (c) RESOLVED that the Articles of Association of the Company be altered or amended by substituting the following clause for Clause 109.

"109. Unless otherwise determined by a resolution passed by the Company in General Meeting each of the Directors shall with effect from the 1st October, 1961, be paid out of the funds of the Company, by way of remuneration, a fee of Rs. 500/- for each meeting of the Board or a committee thereof attended by him. A Director shall be paid all travelling, hotel and other expenses properly incurred by him in attending and returning from meeting of the Board of Directors or any committee thereof or in connection with the business of the Company."

The Transfer Books of the Company will be closed from 14th September, 1961 to 29th September, 1961, both days inclusive.

By Order of the Board
INDRA SINGH & SONS
PRIVATE LIMITED.
A. Singh,
DIRECTOR
MANAGING AGENTS.

Registered Office:
7, Wellesley Place, Calcutta-1.
29th August, 1961.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll to vote instead of himself and that a proxy need not be a member.

The relevant Explanatory Statement in respect of item No. 5 of the Notice of the Annual General Meeting to be held on the 29th September, 1961, will be sent to the shareholders along with the Notice of the meeting. It can be inspected at the Registered Office of the Com-

pany, No. 7, Wellesley, Place Calcutta-1, during the usual Office Hours on any working day.

If the dividends on share as recommended by the Directors are passed at the meeting, the payments will be made on or after the 13th October, 1961, to those shareholders, whose names are on the Company's Registers on the 29th September, 1961.

Life Insurance Corporation of India

Phenomenal Growth After Nationalisation

Systematic Expansion of Business in Rural Areas: Mobile Insurance Office

Mr P. A. Gopalakrishnan, Chairman, Reviews Progress during 1960

"In a world of ever increasing commodity prices, life insurance policies in India cost less today than at any time during the last fifteen years or so", says L. I. C. Chairman.

Statement by Shri P. A. Gopalakrishnan, ICS, Chairman, at the 64th Meeting of the Life Insurance Corporation of India, held in Bombay on 28th August 1961 to discuss Annual Report and Audited Accounts for the year 1960.

Gentlemen, I have great pleasure in welcoming you all to this fifth anniversary meeting of the Corporation. We have assembled here today to consider the draft of the Annual Report and Audited Accounts of the Corporation to be submitted to Government under Section 27 of the Life Insurance Corporation Act. These have already been circulated to all the Members.

NEW BUSINESS

2. The Corporation is now five years old. During this period, the second Five Year Plan of the country has come to a close and considerable progress has been made in all fields of economic activity. The national income at current prices has risen from Rs. 8,980 crores in 1955-56 to Rs. 12,840 crores in 1959-60. On the other hand, the general price level has also increased hitting middle-classes with fixed incomes. These classes form the bulk of our policyholders and we have been finding it extremely hard to get business from them. To add to our difficulty, there were in 1960 widespread floods in Punjab, Uttar Pradesh, Bihar and Orissa, drought in Mysore and Andhra Pradesh, and linguistic disturbances in Assam. Our business in these areas was adversely affected by these factors. We had also to contend with rival demands made by the various forms of savings propagated by banks and the Government.

3. In spite of all the above factors, our new business last year was Rs. 498 crores covering 1.26 million policies as compared with Rs. 429 crores in 1959 covering 1.15 million policies. The premium income increased from Rs. 84 crores in 1959 to Rs. 97 crores in 1960 and the total income exclusive of refund of tax from Rs. 105 crores to Rs. 122 crores. In 1955, the

year immediately preceding nationalisation of life insurance, the premium income of all the companies was only Rs. 58 crores and the total income Rs. 74 crores.

RURAL DEVELOPMENT

4. We have been able to achieve these results and hope to improve upon them during the current year owing to our policy of systematically expanding business in the rural area. Field Officers have been allotted exclusive rural territories in which they are building up a net-work of agency force. In some States, we have been utilizing the agency of Panchayats and Co-operative Societies for securing rural business. Rural publicity has been intensified and life insurance literature is now distributed through Community Development Blocks and village panchayats, in addition to our normal channel of distribution through our own branch and sub-offices. Jeeps have been supplied to all Divisions and a mobile publicity van equipped with projector and films has been provided to each zone as an experimental measure. These vans visited over 3,400 centres in 1960 and secured spot business of about Rs. 37 lakhs. Approximately, 26 lakhs of people attended the meetings convened by the officers-in-charge of these vans. Seeing the future prospects for rural business revealed by this mobile van publicity, we have supplied an additional van to each Zone during the current year. The spot business secured by these vans during the first half of 1961 is as much as Rs. 61 lakhs. In the Southern Zone, we have gone a step further by converting the mobile publicity van into a mobile insurance office. This Office underwrites business and issues policies on the spot. The experiment has been recently extended to the Northern Zone also and will be extended to other areas if it proves a success.

NON-MEDICAL BUSINESS

5. Another significant step that we have taken in the current year is to extend non-medical business, i.e., insurance without me-

dical examination, to all those within certain age groups whose total insurance does not exceed Rs. 2,000. This will help us to secure more and more business from the rural areas. Non-medical business to special categories of persons in civil employment has been increased upto a limit of Rs. 5,000 and to category 'A-1' of the Commissioned Officers in the Armed Forces upto a limit of Rs. 10,000.

FOREIGN BUSINESS

6. In the foreign countries, where we operate, conditions were not quite favourable for life insurance business in 1960. Political uncertainty in East Africa led to a flight of capital and fall in the business secured from the Indian community. In 1960, however, we started insuring African lives and we got a certain amount of business from this source. There was considerable damage in Mauritius by a cyclone and in Fiji Islands by a prolonged strike of cane growers. Nevertheless, we completed in all Rs. 9.7 crores of new business during the year as against Rs. 9.47 crores in the previous year.

FOREIGN EXCHANGE EARNINGS

7. Although our foreign business is very small compared to the business that we are doing in India, it is very important from the point of view of foreign exchange. Our net earnings of foreign exchange per year amount approximately to Rs. 2.5 crores.

BUSINESS IN FOREIGN

8. The total business in force at the end of 1960 was Rs. 2,285 crores covering 7.7 million policies as compared with Rs. 1,958 crores covering 6.9 million policies at the end of 1959. These figures include the business outside India which increased from Rs. 103 crores in December 1959 to Rs. 109 crores at the end of 1960. In this connection, I would like to refer to the phenomenal growth of life insurance in India during the last ten years and, particularly, after nationalisation of the industry five years ago. The life business in force in India has almost trebled during this period. To this remarkable increase, the contribution made by the private

sector companies during 1950-55 was Rs. 380 crores. During the following five years, the increase has been as much as Rs. 1,048 crores. Expressed as a percentage of the national income, life business in force has increased in the country from about 11% in 1955 to 17% at the end of 1960. As these figures do not include the comparatively small amounts of business on the books of the Postal Department and a few State Governments, the percentage of business in force at the end of 1960 should be more than 17.

YIELD FROM INVESTMENTS

9. The income from interest, dividends and rents before deduction of income-tax rose to Rs. 23.96 crores from Rs. 20.98 crores in 1959. During the five years from 1955 to 1960, the income from this source has more than doubled. The gross interest yield on the Life Fund was 4.58% as compared with 4.54% in 1959 and 4.52% in 1958. This steady increase in the yield on our investments has been brought about mainly by the judicious manner in which we are making investments from year to year.

LIFE FUND AND ASSETS

10. The Corporation's Life Fund has registered a significant increase from Rs. 495 crores in 1959 to Rs. 560 crores in 1960. The total assets have similarly increased from Rs. 554 crores in 1959 to Rs. 622 crores in 1960. Net investments of all kinds made in 1960 amounted to Rs. 63.62 crores as compared with Rs. 35.04 crores in the previous year. The total Stock Exchange investments as on 31st December 1960 had a book value of Rs. 471 crores. Their market value on the same date was higher by nearly a crore of rupees. There is, moreover, a reserve of Rs. 13.41 crores to offset any future fall in the market value of these investments and it is proposed to keep this reserve intact for the present.

HOUSING

11. Owing to the acute housing shortage in the country, the Corporation decided to build its own staff and officers' quarters at different places and step up housing loans to State Governments, Co-

2 September 1961

operative Housing Finance Societies and other institutions. Besides, in granting mortgage loans against the security of buildings, the Corporation shops special consideration to applicants wanting loans for constructing or completing residential buildings for their own use. From the commencement of these schemes within the last two years up to March of this year, the total housing loans sanctioned by the Corporation amount to Rs. 23.05 crores. These loans have not yet been fully utilised by the agencies which received them. According to information available with us the State Governments have so far sanctioned loans for the construction of 3,859 middle class houses and 4,238 State employees' houses. The Co-operative Housing Finance Societies and other institutions have disbursed loans for the construction of 2,795 houses and the Corporation itself has constructed 264 quarters in India besides sanctioning loans to its employees' Co-operatives for building 116 houses. The number of houses, for whose construction or completion mortgage loans have been sanctioned is, 95. Thus, the total number of houses constructed or under construction in the country with the aid of L.I.C. funds is 11,367. The Corporation has also indirectly helped the relief of housing shortage by putting up or completing office buildings worth Rs. 3.91 crores during the last five years.

EXPENSES OF MANAGEMENT

12. Turning to expenses of management, 1960 was a difficult year. The cost of administration has been going up owing to various reasons such as increase in the prices of stationery and printing and of conveyances and their maintenance. Higher rates of conveyance and travelling allowances had to be sanctioned for certain categories of touring officers. The penetration of the rural area and organization of publicity in the villages are costing more than the procurement of business in the cities and towns. Above all, we had to sanction from 1st April 1960 an ad-hoc increase of Rs. 15/- in the dearness allowance paid to all our officers and staff drawing upto a salary of Rs. 500/- per month. This alone increased our expenditure in 1960 by Rs. 46.44 lakhs. However, by effecting economies, wherever possible, and keeping a strict control on recruitment of staff, it has been possible for us to keep down our expenses of management. The overall expense ratio of the Corporation fell from 28.7% in 1959 to 28.4% in 1960, but the renewal expense ratio, which is the real indicator of economy of management, remained practically constant at 12.9%. Had it not been for the factors mentioned above, the renewal expense ratio might have been nearer 12% than 13%.

CLAIMS PAID

13. Maturity benefits to owners of policies amounted during the year to Rs. 23 crores and death benefits to Rs. 8 crores. The total claims during the year thus amounted to Rs. 31 crores as compared with Rs. 28 crores during 1959. During the four years and four months ending with December 1960, the total benefits to our policyholders and their beneficiaries by way of claims amounted to Rs. 113 crores.

PREMIUM RATES

14. There has been a suggestion in certain quarters that since competition has been eliminated after nationalisation of life insurance and overheads have been reduced, the Corporation should examine the possibility of reduction in premium rates. I would like to point out in this connection that the premium rates charged by us are much lower than those charged in the past by Indian companies. For example, the rates charged by the Oriental Government Security Life Assurance Co. Ltd. from 1947 to 1953 under main insurance plans were 5% to 35% higher than the Corporation's rates. In 1954, there was a drastic reduction in premium rates by all the Indian companies, including "Oriental", and these reduced rates continued upto the date of nationalisation. In spite of this drastic reduction, the 'Oriental' reduced rates were higher than the Corporation's rates by Rupee 1 per thousand sum assured or anything from 1% to 5% under various plans. Thus, while the price of every other commodity has been increasing, life insurance policies cost less today than at any time during the last fifteen years or more. It is true that our mortality experience has been showing steady improvement and death claims have been going down as compared with the volume of business in force. While these factors should enable premium rates to be reduced, inflation and the resultant increase in the cost of administration and the higher cost involved in the expansion of rural business work in the opposite direction. All these problems are constantly under study in our Actuarial Department and if and when we find it possible, we shall certainly consider further reduction of premium rates.

LAPSE RATIO

15. During the Second Plan Period, the general price level is estimated to have increased by 30% and the working class cost of living index by 24%. Inflationary pressures thus generated have begun to be reflected in the net lapse ratio of the Corporation. The lapse ratio which was 9.1% in 1958 came down to 6.4% in 1957 and to 5.1% in 1958. In 1959, it rose to 6.0% and in 1960 to 6.6%. The abnormal drop in the ratio of 1958 is partly accounted for by a necessary alteration

in our system of treating policies as lapsed. Even so, it is clear that the net lapse ratio which gradually fell after nationalisation, has begun to rise again. There are also certain other disquieting signs which show that some policyholders with fixed incomes and increasing commitments are finding it difficult to save enough and keep their policies alive. Loans to policyholders, which used to increase by roughly Rs. 1 crore per year till 1959, increased by Rs. 3 crores in 1960. Outstanding premium, which similarly used to increase by Rs. 1 crore per year, have increased in 1960 by Rs. 2.5 crores. If inflationary pressures increase during the period of the Third Five Year Plan, it is bound to accentuate these tendencies and make it extremely difficult for the Corporation to keep down its lapse ratio. The only gratifying fact is that the 1960 lapse ratio of 6.6% is still well below the lapse ratio of 7.6% in the last year of life insurance management by the private sector companies.

ADMINISTRATIVE EFFICIENCY

16. The efficiency of our administrative offices has been steadily improving as a result of our training programmes and better supervision and control by the officers-in-charge. Practically, every Divisional Office has one or more instructors to train newly recruited assistants and also existing assistants who need training. Our Officers' Training College at Nagpur has already trained 536 officers and supervisory personnel. As more and more of our administrative staff are trained at these institutions, further improvement of the efficiency of our offices may be expected to take place. The improvement that has already resulted is evident from the big drop in the number of complaints received and also from the increase in the average output of our offices. In 1959, the monthly average of the number of complaints received in our various Divisional Offices and major I.H.O. Units was 3,274. In 1960, the number fell to 2,171 representing a fall of 33.7%, despite the increase in the number of policies. Similarly, the increased output of our offices will be evident from the fact that, while between 1957 and 1960, the number of new policies increased by 55% and the total number of policies on our books increased by 36%, the total staff of the Corporation increased only by 30%. Further steps are being taken to improve our systems and procedures for more expeditious despatch of business and also to assess the minimum staff requirements of each office on a more scientific basis than hitherto. These steps are bound to bear fruit in future years.

FIELD EFFICIENCY

17. The Development Training Centres which we have started in

all the Zones have been systematically training our field officers and agents. The number of persons trained so far is 5,214 field officers and 4,844 agents. This training as well as the experience gained by the field officers during the last five years have enabled them to increase their average output of new business from year to year. The average output in 1957 was Rs. 4.1 lakhs and it has increased by 60% to Rs. 7.8 lakhs in 1960. The average output of an active agent has increased by 55% from about Rs. 31,000/- in 1957 to about Rs. 47,900 in 1960. This improvement in average output is only partly accounted for by a 14% increase in the average size of a policy issued between 1957 and 1960.

INCOME-TAX

18. The Corporation pays tax to Government just as the life insurance companies in the private sector used to pay in the past. Assessments upto the end of 1958 have been completed and the tax assessed amount to Rs. 4.36 crores. During 1959 and 1960, tax deducted at source amounted to Rs. 10.19 crores which will be adjusted against future tax assessments.

DIVIDEND TO GOVERNMENT

19. The capital invested by Government in the Corporation is Rs. 5 crores and, under Section 28 of the Life Insurance Corporation Act, upto 5% of the surplus that emerges at each valuation may be utilized for such purposes and in such manner as the Government may determine. The Government have indicated that in respect of 1957 & 1959 valuations the entire 5% should be credited to them. At the 1957 Valuation, the share of Government was Rs. 1.45 crores. Deducting from this figure an amount of Rs. 71.5 lakhs which Government have agreed to contribute in respect of the policies of deficit companies taken over by the Corporation, the return to Government amounts to 11% per annum on their capital. In respect of the 1959 Valuation it is estimated that the Government's share of the surplus would give them a dividend of 13% for each of the years 1958 and 1959.

BONUS ANNOUNCEMENT

20. Our policyholders have been making anxious enquiries about the bonuses that would attach to their policies as a result of the 1957 and 1959 Valuations. Our field officers and agents have also been experiencing difficulty in securing with-profit proposals since bonuses have not yet been declared by the Corporation. I had hoped that it would have been possible for us to declare bonuses on the different groups of policies on our books by the middle of this year. The work involved took a slightly longer time, but everything was finalised sometime back and the

regulations framed in this respect were submitted to Government for their approval. As soon as the approval is received, it will be possible for the Corporation to make its bonus announcement.

21. Five years is too short a period in the life of a new institution but we can be justifiably proud of what we have achieved during this period. We are aware of our deficiencies and are con-

stantly trying to overcome them. If we persist in our endeavour in a spirit of dedication, a day will soon come, much sooner than we expect, when we will be able to announce that we are much nearer the goals promised at the time of nationalisation than we are today. All that I can say is that we must hope and strive.

22. Before I close this statement, I sincerely thank all the

Members of the Board and of the Investment Committee for their unstinting co-operation during the last three years and more that I have been Chairman of this organization. My thanks are also due as Chief Executive of the Corporation to all the senior officers who have loyally co-operated with me and performed their duties. Above all, I am indebted to the thousands and

thousands of our field officers and agents, without whose unrelenting efforts, the Corporation would not have been able to show such remarkable results during the last five years. Last but not the least, I am grateful to all those steady workers in the Corporation's offices who have not only kept up but improved upon the efficiency of the Corporation. 28th August, 1961.

Markets

JUTE From Paucity to Plenty

ANXIETY over shortage of raw jute has now yielded place to anxiety over a plethora of supplies. At last week's meeting of the representatives of the Central, and West Bengal Government and the Indian Jute Mills Association, the future course of action seems to have been broadly decided. On its part Government is to devise the machinery for fixing a minimum price for raw jute at an early date along with steps to build up a buffer stocks. The IJMA on its part is reported to have agreed to advise its member mills to unseal the 9 per cent additional looms sealed by mills on an individual basis during last month. It is also to abolish the quota system for the purchase of raw jute by mills. The details of the manner in which the proposed buffer stock is to be built up are not yet available but the idea has received wide support. It may be recalled that the IJMA has sometime ago indicated that it was working out a scheme in this regard in conjunction with Government. It

would appear that whatever the composition of the central authority which will be entrusted with the task will perforce have to use the storage and other facilities available with mills. It is said that this authority will also enter into agreements with cooperative marketing bodies and warehousing corporations to purchase and store raw jute.

Although Government seems to be committed to fixing a floor price for raw jute, it is not going to be an easy task. While it is accepted on all hands that if jute production is not to be subjected to frequent uncertainty, the jute cultivator should feel confident that he will not be left in the lurch. The jute cultivator is quite naturally sensitive to the trend of prices from season to season. Paddy is jute's rival and as has been recently pointed out by the Chief Minister of West Bengal, the additional advantage in paddy cultivation is that if the worst comes to the worst the cultivator can use rice for his own consumption. Past experience has clearly shown that unless the cultivator is assured of an equitable return on his jute production, he is apt to switch over to the crop which has a better chance of yielding a higher profit at the time

of sowing. But it is not the cultivator only whose interests are involved. There is the equally important question of the reactions of the foreign buyer. For the jute goods industry is predominantly an export industry (nearly 75 per cent of its production is sold abroad). And it is not as if the overseas buyer has perforce look to India or any other jute goods manufacturing country, for that matter, for his requirements of packaging materials. If he was once solely dependent on jute goods, he is no longer so. He has devised a number of ways of reducing his dependence on jute goods and one of them is bulk handling. Moreover, substitute packaging materials are always there ready to take the place of jute. So while fixing a minimum price for jute, Government can ill afford to ignore its possible repercussions on the exports of jute goods. It should have become clear by now to all concerned that it is idle to expect the foreign buyer to support the market whatever the price level. He will be interested only when the prices are reasonable and this has been made abundantly clear this year. Mr Nityananda Kanungo, Union Minister for Commerce has himself pointed out that since Indian jute goods are meeting with increasing competition in world markets, prices for raw jute cannot be fixed only on the basis of a good price for the jute grower.

TEA Supply Prospects

THE softer trend, noticed in the export auctions, during the past few weeks is not surprising in the light of the substantial rise in the North Indian output. Total production, till the end of July, amounts to as much as 213.8 million pounds as against 173.7 million pounds in the corresponding period of last year. As the weather continues to be favourable, it is expected that the crops during the current month and in September will also be substantially higher.

World supplies up-to-date are also running at a higher figure of 656.6 million pounds as against 599.2 million pounds for the corresponding period of last year. Although it is difficult to estimate at this stage the extent to which world supplies can exceed demand, it is reasonable to expect that there will be adequate supplies during the current year.

For instance, production in British East Africa rose to 5.3 million pounds in June 1961 from 4.8 million pounds in the corresponding month of 1960 although total production, during the first half of the current year, is slightly lower at

44.2 million pounds as against 45.8 million pounds in the corresponding period of last year.

In Pakistan, more than two-fold increase in production has been recorded. Of a total production of 21.31 million pounds during the period from 1 April to 31 July 1961, 3,555,089 pounds were reported to have been sold at the internal tea auctions of Chittagong at an average price of Rs 2.02 per pound.

Under the circumstances, buyers are not expected to take their requirements in a hurry. When the weight of bigger supplies are felt to an increased extent during the coming weeks, the trend should naturally be downwards rather than upwards. In this connection, it will be interesting to note that the annual review, released by the Tea Board states that the world supply and consumption of tea will be fairly balanced and there is little possibility of any serious imbalance arising in the current year or the next.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 77,950 packages. There was a good demand at easier rates, though, to some extent, this reflected a fall in quality. Plain orthodox broken were 10 nP to 15 nP per kilo easier with similar Fannings 15 nP to 20 nP easier and sometimes more. The remaining orthodox descriptions shared in the decline with better BOPs often up to one rupee easier and sometimes more.

CTC descriptions were irregular and lower by up to 70 nP and sometimes more, while any teas with fibre present in the leaf were heavily discounted by buyers. Towards the close of the sale, the demand for CTC teas weakened and there were a number of withdrawals. Legg-cut teas were up to 20 nP easier.

Darjeeling teas met with fair support at easier rates, whole Leaf grades were again weak, while selective buying for Tippy teas also resulted in easier prices. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.50 to Rs 4.70; Plain BP Rs 4.35 to Rs 4.50; Plain Fannings Rs 4.15 to Rs 4.25; Medium Assam CTC BP Rs 5.00 to Rs 5.30; Medium Assam CTC Fannings Rs 5.00 to Rs 5.40; Best Assam CTC BP Rs 5.40 to Rs 5.70 and Best Assam CTC Fannings Rs 5.40 to Rs 6.00.

In the Internal Sale, offerings were 27,287 packages of Dusts. Demand was less general than of recent weeks. CTC varieties met with fair support; but they were easier by 60 nP to 80 nP per kilo and sometimes more. The small and powdery descriptions, however, realised better prices. Plain orthodox dusts were absorbed at a discount of 20 nP to 30 nP, while Assams were

a weak feature of the sale and much easier to buy. Legg-cut teas followed the general trend of the market and were easier by up to 40 nP. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.10 to Rs 4.40; Medium Assam Dust Rs 4.40 to Rs 5.00; Legg-cut Dust Rs 4.50 to Rs 5.20; Medium Assam CTC Dust Rs 5.60 to Rs 6.00 and Good Assam Dust Rs 6.40 to Rs 6.70. Also 219 packages of Leaf grades were offered for internal consumption. These met with quite good demand, but at prices which were much lower.

According to the Tea Board, the quantity of tea sold at the Calcutta auctions fell to 136.04 million kgs in the fiscal year 1960-61 from 150.23 million kgs in the previous year and 149.25 million kgs in 1958-59. Teas sold for export fell sharply from 110 million kg in 1959-60 to 98.83 million kg in the year under review as did those for consumption in India from 40.23 million kg to 37.21 million kg.

Arrivals of tea in the Calcutta Port increased to 506,333 chests in July from 374,589 chests in the corresponding month of last year. This put the total arrivals in the four months ended July 1961 higher at 829,286 chests as compared with 642,248 chests in the corresponding period of 1960. Arrivals by river rose from 349,080 chests in April-July 1960 to 454,232 chests in the period under review as did those by rail from 208,621 chests to 232,145 chests. Arrivals by road and air, too, increased from 56,783 chests and 29,784 chests to 111,646 chests and 31,263 chests respectively.

In the Cochin market, offerings were 487,000 kilogrammes of Leaf teas for export. Against fair demand, plain and low medium broken were 10 nP to 15 nP easier and similar fannings about 5 nP lower. Better medium sorts were steady, while Fannings were 10 nP to 15 nP easier. High-grown teas were irregular; but the best quality teas in this sort were dearer.

The export allotment of tea for the fiscal year 1961-62 has been fixed at 5.00 million pounds by the Pakistan Government. This is done in consultation with the Pakistan Tea Board.

COTTON Favourable Outlook for Cotton

A notable development in the Bombay cotton futures market during the last week was that the Jarilla August, the last futures contract of 1960-61 season, after a rather uneventful and subdued career, went off the board on Wednesday at a cut rate of Rs 645 per three quintals. After a very promising and encouraging start at Rs 588 on 27 February, the contract shot up to Rs 604.50 on 20 March, but later slipped down to Rs 561 on 18 April following the decision of the Government of India to import 0.3 million bales of short staple American cotton. Jarilla August, thereafter, fluctuated irregularly between Rs 561 and Rs 589 before closing at Rs 586. However, it is significant to point out that despite

the bumper crop of about 5.4 million bales during the current season, tenders received against this contract were insignificantly at a low of 1,750 bales, comprising 550 bales of Laxmi "A", 500 bales of Ankleswar, 300 bales of Jarilla, 100 bales each of Surti, Cambodia "B" and "C" and 50 bales each of Buri American and Jayadhar "A".

Meanwhile the outlook for cotton has started showing signs of change for the better. According to recent estimates the new season (1961-62) will start on 1 September with a heavy carryover of approximately 2.3 million bales as compared to nearly 1.4 bales in the current season. The supply position will also be comfortable if the indigenous crop is near about 5 million bales in which case distribution to the mills can be carried out without confronting much difficulty.

The pattern of trading in the Jarilla March 1962 was somewhat quiet. But as the week progressed the apprehension of a slight reduction in the cotton crop during the coming season and the reported

damage to the crops in Vidarbha, Gujarat and Moglai areas created an upward trend in the price and at one time the contract was quoted at Rs 595 per three quintals. However, the price again receded and on Tuesday last it was quoted at Rs 592.50.

The conditions in the spot market at Sewri were steadier and a revival of mill demand was visible. Spinners' interests hovered around CO2, L-147, Vijay, Laxmi and Digvijay. The intervention of holidays restricted, to a great extent, the activity in the market. Foreign cotton failed to attract much attention during the week under review. Stray business was done in East African growths, but the prices showed signs of decline. A small quantum of superior quality of Sudanese growth was transacted. Egyptian and American cotton failed to catch the interest of purchasers.

No fresh development in the export section was reported during the past week. The Government of India's decision to extend the shipment period for the export quota of 30,000

bales of cotton of 3/4" staple and below other than Bengal Deshi upto 30 September was gratefully greeted by the market. The trade is not, however, optimistic of the outcome of this gesture on the part of the Government since the conditions in foreign countries were not at all encouraging and the demand for short staple Indian cotton is reported to be at a low ebb.

According to the East India Cotton Association, consumption of cotton by the Indian mills from 1 September to 31 May totalled 3,944,972 bales. Consumption of cotton during this period showed an increase of 116,650 bales from that of the corresponding period in 1959-60.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

NOTICE OF MEETING

Notice is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 p.m. on Friday, the 29th day of September, 1961 for the following purposes:

- To consider and approve the Profit and Loss Account of the Company for the year ended 31st March, 1961, the Balance Sheet as at that date and the Directors' and Auditors' Reports thereon.
- To declare Dividends recommended by the Directors.
- To appoint Directors in the place of the retiring Directors.
- To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS

- As special business to consider and, if thought fit, to pass the following resolutions including (a) which will be proposed as a special resolution:—
 - (As a special resolution) "That, in conformity with Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956, authority be and is hereby accorded to the continuance of a payment to the Directors of the Company other than the ex-officio Directors appointed by the Managing Agents and a Director appointed by The Industrial Credit and Investment Corporation of India Limited of a commission of 1% of the net profits of the Company in excess of Rs. 20 lakhs in each financial year over the period of five years extending up to and including the financial year of the Company ending on 31st March, 1966, such commission to be divided between them in such manner as they shall from time to time determine."
 - (As an ordinary resolution) "That the South India Export Company Limited of Madras be and is hereby reappointed Sole Selling Representative of

PIECEGOODS

The cotton piecegoods market in Bombay depicted mixed patterns of trading during the past week. The domestic sector presented a picture of subdued trend while no noteworthy shift in trading conditions was visible in the export section. The upcountry purchasers were conspicuously absent. It appears that lack of demand from the consumers coupled with the expectation that the prices may fall down further constrained them to adopt a holiday mood. Only Assam, UP and Bihar were active in the market whose trading was con-

fined to cover their immediate requirements.

Mills and merchants who have large stocks with them, on the contrary, seem to have gone panicky at the depressing conditions in the market. Even the endeavour of some of them to liquidate at least part of their holdings at a discount failed to attract buyers. Popular varieties were in short supply. Seasonal goods during the period under review remained featureless.

Transactions in the export section too were not heartening. Moderate business with the United Kingdom in the usual qualities was reported. Sudan purchased small quantum of grey sheetings at mill prices. Stray business with Singapore in bleached longcloth was transacted. Burma's fancy hovered around superfine voiles and that destination accounted for moderate quantum of that variety. Australian demand was confined to lower weight sheetings.

East Africa was contented with limited quantity of sheetings and processed goods. Eritrea and Ethiopia were also in the picture although their dealings were confined to grey sheetings and bleached longcloth.

Foodgrains — Output Highest in 1960-61

FOODGRAINS production in India has reached a total of 79.3 million tons in 1960-61, the highest ever. This represents an increase of 4.6 million tons over the partially-revised estimate of 74.7 million tons for 1959-60. It exceeds the previous record of 75.5 million tons in 1958-59 by 3.8 million tons.

According to the all-India final estimates, released by the Directorate of Economics and Statistics, the increases registered in important crops are Rice 2.7 million tons; Wheat 0.6 million tons; Jowar 1.1 million tons and Gram 0.7 million tons. Bajra has fallen by 0.4 million tons and Ragi by 0.3 million tons. Records have been achieved in the production of rice, jowar and wheat. Among the States, which have contributed to the increase in production, are West Bengal, Uttar Pradesh, Bihar, Punjab, Maharashtra and Madras.

India has also agreed to buy 400,000 tons of rice from the open market to fulfil one of the clauses of the American PL-480 food assistance programme. The US Government is giving 1,000,000 tons of the rice to India under the Food Aid Programme. At the same time, India has represented to the US Government that her annual quota of 400,000 tons of wheat, which she must buy from the open market under the PL-480 food agreement, should be reduced to 200,000 tons. India is also expected to buy her requirements of wheat from Australia. Last year, she bought 400,000 tons of wheat from that country.

For obvious reasons, conditions in the Hapur Foodgrains market have continued to remain quiet with prices displaying an easier tendency.

Average wheat prices are stagnant at Rs 15 to Rs 15.25 a maund as demand is slack. The Rice section is also ruling quiet; and the standing paddy crop is reported to be progressing well under favourable weather conditions. Gram prices have eased fractionally due to selling pressure from stockists and weak advices from the Punjab. Pluses have developed an easy trend owing to lack of demand in the face of heavy stocks.

SHELLAC

Conditions in the Calcutta Shellac market have remained generally quiet with Pure TN quality quoting around Rs 126 per maund as against Rs 132 quoted early in the month. Shipments, during the current month till 19, were 8,670 packages comprising 6,887 packages of shellac; 1,250 packages of seedlac; 155 packages of buttonlac and 378 packages of other varieties.

The reported decision of the Government of India not to modify the new price policy for shellac has resolved the deadlock, created since the adoption of the policy in August 7 by the Indian Exporters Association. The measure is stated to be of an *ad hoc* nature and will be effective only until the Government evolves a more broad-based policy in September.

In spite of the uncertainty about the final shape that the policy might take eventually, the decision will help exporters to effect shipments already contracted under the new price policy and thereby maintain the continuity in the export of shellac. While the authorities are keen on fixing the minimum price at a higher level to ensure a fair return to growers, exporters plead for a lower level in order to make Indian shellac prices on a par with international prices. It is pointed out by exporters that the current prices have induced some of the importers to go in for substitutes.

Indian shellac is exported to the UK, Russia, America, China, Brazil, West Germany, France, Italy and Japan. The export has been steadily increasing since the enforcement of the price policy. Against the shipments to the extent of Rs 5.9 crores in 1958, exports improved to Rs 6.1 crores in 1959 and Rs 6.41 crores in 1960.

CHEMICALS & DYES

In the Bombay Chemicals and Dyes markets, prices showed a mixed trend. There was fair activity in Chemicals, while Dyes continued to be listless.

Active conditions in Chemicals were generally attributed to Caustic Soda and Menthol, which met with sustained demand. In the case of caustic soda, earlier expectations of an improvement in the supply as a result of imports by the STC had not materialised. Prices, therefore, improved with the ICI quality quoting around Rs 51 and the indigenous variety around Rs 47.

Menthol registered a sharp rise in prices due to paucity of stocks and higher advices from Calcutta. The price for the Chinese variety went up to Rs 154 from Rs 147 mainly due to cornering of stocks by the

Calcutta dealers. The stock position in Bombay was also stated to be tight, as import licences for the current period were allowed only on the basis of 5 per cent for the whole year, which was considered to be very low as compared to the demand. It was felt that, in view of the stringent exchange position, any liberalisation of the import policy for the forthcoming October-March period should be remote.

Except for stray enquiries, Dyes were generally dull with no change in prices.

YARN

In the Bombay Yarn market, price movements were rather irregular on alternate bouts of buying and selling. Turnover was limited. The unofficial premium for import licences remained almost unchanged around 150 per cent.

Rayon yarn moved irregular with 150 DNRC having buyers around Rs 6.98 and 120D around Rs 8 per pound. Trading in Acetate yarn was featureless, while the prices of Nylon yarns came down further by about 50 nP per pound in the absence of any ready demand.

According to the figures released by the Bombay Yarn Merchants' Association, imports of Art Silk yarn into Bombay amounted to 6.86 lakh kg in July, while those of synthetic yarn amounted to 90,101 kg and of staple-fibre yarn 374 kg. The US was the main supplier of art silk yarn, shipments from this country being of the order of 4 lakh kg. Other important suppliers were Germany, Holland and the UK.

In the Cotton Yarn section, there were no fresh developments. Prices remained practically unchanged.

PEPPER

At a time when great stress is laid on increasing India's exports with a view to earning as much foreign exchange as possible, it is unfortunate that exports of certain important dollar-earners like pepper, should be declining. Apart from the higher price obtained in the home market, the fall in exports has also been brought about by the withdrawal of Russia from the Indian market. Moreover, Brazil has recently emerged as an important competitor in the American market.

Pepper exports for the month of June are placed at 7.72 lakh kg against 13.75 lakh kg in May. The aggregate decline for the season from November to June is 27.79 lakh kg as compared with that in the corresponding period of the previous season.

GINGER

In the Bombay market, Ginger prices have developed a hardening tendency in the wake of the firmness noticed in Cochin. The fact, that there has been no slackening in the demand from overseas buyers in the face of the rising price levels, is a pointer to the continuance of the creditable export performance.

On sustained demand mainly from the UK, Germany and some European countries, exports have been generally running at a distinctly higher level as compared with the previous season. In keeping with this

trend, exports for June stood at 5,01,280 kg, representing a steep rise of 2,47,421 kg.

Since the commencement of the current season in November up to the June-end, dry ginger exports have totalled 48.86 lakh kg—a new high level—as against 25.32 lakh kg in the corresponding period of the previous season. At the rate at which the tempo of exports has so far been maintained, it is felt that, at the end of the season, ginger exports would have reached an all-time high.

RUBBER

In Ceylon, production of Rubber last month was good for this time of the year, with a marked increase in arrivals of all types, especially crepe and scrap crepe. The improvement in output is attributed to favourable weather although, in the last week of July, occasional heavy showers of rain interrupted tapping operations in certain planting areas.

Total offerings of latex and scrap crepes at the public auctions in July 1961 amounted to 2,468 tons, showing an increase of 1,006 tons over the previous month and about 574 tons over the quantity offered in July last year. Offerings of smooth sole crepe at four auctions last month totalled 41½ tons, showing an increase of 15½ tons as compared with the previous month.

According to official statistics issued from Singapore, exports of ribbed smoked sheet rubber from Singapore and Malaya, during July this year, amounted to 53,806 tons. In the first seven months of this year, exports amounted to 372,143 tons as compared with 346,809 tons for the same period last year.

GOLD & SILVER

After ruling initially firm, prices on the Bombay Bullion Exchange displayed a slightly reactionary tendency towards the close due to heavy bull liquidation and profit-taking. With increased arrivals from the interior due to higher price levels and lack of fresh support, they lost much of the gains.

The weakness in Silver was more pronounced than in the yellow metal and this was due to several factors. First, while arrivals picked up from about 15 bars per day to about 40 bars, the offtake continued to be poor at about 10 bars. Secondly, stocks mounted up to about 1,300 bars. Thirdly, there were no indications of any appreciable improvement in demand. Lastly, the backwardation continued to be in favour of bars. Silver (below .996) changed hands at Rs 204.20 to Rs 204.70.

Gold ruled comparatively steady. Contrary to the general expectations of a rise in arrivals on account of seasonal factors, the inflow has remained very thin. The daily average arrivals of about 4,000 tolas were readily absorbed, South India being the major buyer. As the authorities are said to be exercising a strict vigilance on the activities of the smugglers, the supply of contraband gold this year is expected to be much smaller. Gold readily changed hands at Rs 124 to Rs 124.25, while Sovereign ruled steady at Rs 94.75.

OILS & OILSEEDS

Conditions on the Bombay Oilseeds Exchange remained generally weak with prices showing an all-round decline due to nervous bull

unloading. There was a landslide in the prices of Groundnut and its by-products. The bumper crop expectations, following the favourable turn in weather, induced the operators to believe that there might be a further fall in prices. Moreover, the crop in Saurashtra was expected to be a bumper one this year. Ready Bold was quoted at Rs 49.75 and Groundnut Oil at Rs 20.50.

The crop position all over the country is considered to be very favourable this year. Trade circles estimate the total crop in India at around 31.25 lakh tons, less 10 per cent to be kept for sowing of new crop next year. Thus, the total supply, expected for marketing in the new season, is placed at 28 lakh tons. After allowing for a consumption of about 25 lakhs, a net surplus of 3 lakh tons is expected to remain by the end of the new season.

The market for Castor took bearish turn due to lower foreign advices in respect of castor oil in the absence of new business. Castor ready closed at Rs 33.87 and Castor Oil, commercial quality, at Rs 13.91.

Linseed was featured by a sharp fall in spot as well as forward price. The weakness in groundnut was also a contributory factor. Ready Linseed was quoted at Rs 38.50 and Linseed Oil at Rs 16.50.

In the Calcutta market, the price of Linseed has declined to Rs 29.7 a maund for ready delivery. The reaction appears to have taken place in sympathy with the softer trend of other seeds. Arrivals from the upcountry centres are being maintained at a low level. The oil market also quiet and routine business being transacted for ready delivery.

Company Reports

Expansion Plans by Mettur Chemical

The expansion scheme by the Mettur Chemical & Industrial Corporation Limited to step up production of Caustic Soda from 20 to 40 tons per day has been making good progress and the directors expect to complete the erection of the plant and start higher rated production by October this year.

With the increasing requirements of caustic soda in the Third Plan period and the target of 3,50,000 tons per year which has been set for the Third Plan, most of the existing caustic soda factories are effecting substantial expansion. Two other South Indian caustic soda factories have been licensed to increase the capacity - one from 80 to 180 tons per day and the other from 40 to 100 tons per day.

In line with such expansion and in pursuance of the programme, the company has applied for and has secured a licence to expand its capacity of caustic soda from 40 to 100 tons per day. This expansion of caustic soda production and the manufacture of new lines of organic chemicals will entail a further capital expenditure of about Rs 2.5 crores.

To expedite matters, the directors are sending a delegation abroad to negotiate with prominent industrial firms in Europe and USA and to secure the necessary foreign exchange for the expansion through the Development Loan Fund or World Bank. It will, therefore, be necessary to find, in the near future, part of this capital by the issue of shares, equity and/or preference, besides loan capital.

The production of the main chemicals has been maintained at a satisfactory level, as will be clear from the following figures:

	1959-60 Tons	1960-61 Tonnes
Caustic Soda	5,066	5,760
Bleaching Powder	4,489	5,535
Liquid Chlorine	1,142	1,207

The working of the bleaching powder plant for the previous eight months was at an uneconomic level. However, owing to the commencement of production of potassium chlorate and satisfactory returns from lime and vegetable products, the directors are able to make up for the shortfall in the working of the stable bleaching powder section.

Meanwhile, the net profit of the company for the year ended 31 March 1961, after providing for Depreciation, amounts to Rs 18.78 lakhs as against Rs 17.06 lakhs for the preceding year. In respect of allocations, the Depreciation amount is raised to Rs 9.47 lakhs from Rs 6.96 lakhs. After transferring Rs 1.50 lakhs from Deferred Taxation Reserve and Rs 1.30 lakhs from provision for taxes made in prior years, the provision for Taxation is increased to Rs 6.60 lakhs from Rs 4.75 lakhs and General Reserve to Rs 1.00 lakh from Rs 80,000. Development Rebate Reserve is slightly lower at Rs 2.50 lakhs against Rs 2.70 lakhs. The dividend on the ordinary shares is maintained at 12½ per cent, subject to tax.

The issued and subscribed capital is Rs 1 crore divided into 8,00,000 equity shares and 2,00,000-0 per cent tax-free cumulative preference shares both of Rs 10 each. Against this, reserves and surplus are shown at Rs 26.54 lakhs. The gross block at Rs 1.56 crores is depreciated by Rs 81.57 lakhs, leaving a net block of Rs 74.61 lakhs.

Soom Tea Pays 50%

Against 30%

Of all the companies in Williamson Magor group, the Soom Tea Company, Limited has produced excellent working results for 1960, thanks to the rise in the crop outturn from 141,637 kgs to 152,998 kgs and in the average price realised from Rs 6.99 to Rs 7.44 per kg. The net profit works out to Rs 3.09 lakhs as against Rs 2.39 lakhs.

Apart from maintaining Rs 25,000 for Building Reserve and a like amount for Repairs and Renewals Reserve, the Depreciation amount is raised to Rs 14,866 from Rs 14,372 and Taxation provision to Rs 1.20 lakhs from Rs 95,000. The directors have proposed a final dividend of 25 per cent, making a total of 80 per cent, taxable, for the year as against a taxable dividend of 30 per cent paid for 1959.

a day. The company has been licensed to make ball-point pens and refills for which it has secured technical collaboration of Axel C. Jensen Inc, U.S. Production of these pens and refills is expected to start within six months.

Guest, Keen, Williams

Guest, Keen, Williams Limited has proposed an expansion of its works at Bhandup, in Bombay, and to set up a new unit in the South with a view to stepping up its output of wood screws. The company has sought the Government's per-

mission to increase its annual single-shift installed capacity from 1.56 million gross to 2.25 million gross in two stages. In the first stage, the Bhandup Works will be expanded and, in the second, a new unit will be set up in the South.

Modi Sugar

The Modi Sugar Mills Limited has decided to acquire a sugar factory with a crushing capacity of 2,000 tons of sugarcane a day at Kichha, Nainital district. The construction of buildings is over and

machinery from abroad has been received.

Singareni Collieries

It is understood that the Andhra Government may agree to a proposal for the transfer of the management of the Singareni Collieries Limited to the Government of India to enable the collieries expand. Under the Third Plan, the company has been set a target of doubling its production from 3 million tons. The Government of India has conveyed to the Andhra Government that it will be able to invest Rs 20 crores, provided

the State transfers the management. The Centre and the State Governments hold shares in the ratio of four to six. The public hold about 5 per cent.

Osler Electric

The properties of Osler Electric Lamp Company, Bombay, have been sold by the Court to Messrs Phillips India Limited for Rs 51 lakhs.

Paper Plant

It is learnt that Messrs Birla Brothers and Mandya Paper Mills have applied for licence to set up a paper factory at Bodhan in Nizamabad district. The project, with an estimated 10-ton capacity, requires a capital of Rs 9 crores.

Merger of Mills

A scheme for the merger of the two mills—Vishnu Cotton and Lakshmi Cotton—is under the consideration of their respective board of directors. The scheme will be placed before the shareholders for their consent in due course.

STOCK EXCHANGES

Feeble Recovery

Watch-Dog Written:

AFTER the recent sharp decline in equity prices, stock markets have witnessed a slight all-round recovery although the turnover continues to be restricted. It looks as if the markets are still in an oversold position.

The Calcutta Stock Exchange took a slight turn for the better; but activity is slow due to lack of buying enquiries.

The Bombay Stock Exchange staged a moderate widespread rally due to heavy short-covering. Sentiment was influenced by the hope that the LIC might enter the market to make some purchases.

On the Madras Stock Exchange, turnover was meagre and prices drifted lower for several shares.

CALCUTTA

Friday Evening.

AFTER opening the week on a steady note, the local stock market suffered a sharp setback due to heavy selling pressure on reports of the failure of another member to meet his commitments. But, the subsequent recovery in prices was influenced by some covering purchases made by the bears on the fear that the LIC might enter the market to make some purchases in view of the attractive low level of prices prevailing now. Settlement considerations were also a contributory factor.

But, there was a general disposition to restrict commitments and book profits at bulges in view of the domestic and international uncertainties. Investors, too, became cautious due to the discouraging outlook for steel shares. Most of the operators, therefore, felt that unless the stock exchange authorities took simultaneous action, no isolated attempt would check the downward

2 September 1961

trend of prices in inter-market shares and the confidence in the market was not likely to return soon.

In the Gilt-edged section, there were only smaller changes in prices. The popularity of short-dated issues seemed to be over. Unlike hitherto when there were buyers of only short-dated loans in the market, there appeared some sellers of these latterly. 3 per cent 1986 Conversion Loan eased off at the close to Rs 72.65 from the opening level of Rs 72.85.

Bank shares remained unchanged with Punjab National quoting Rs 24 and United Commercial Rs 90.50.

After a long period of neglect, Jute shares came in for scattered enquiry on the hope that the fortunes of the industry might well take a turn for the better in view of the bright outlook for the new crop. Again, the move by the Reserve Bank to withdraw the curbs on bank advances jute and jute goods gave rise to a feeling that it would help the mills to hold larger stocks. Ganges were enquired up to Rs 11 from a low of Rs 10.62; Howrah up to Rs 20.75 from Rs 20.06; New Central up to Rs 17.19 from Rs 16.87 and Megna up to Rs 10.75 from Rs 10.62. Fort William were sought after up to Rs 28.50 from Rs 25.87 following the company's decision to raise capital by the issue of new shares in the ratio of one share for every share held. After nearly a month, Anglo-India met with business at Rs 170 to Rs 172.

Coal shares displayed a slightly steadier tendency in sympathy with the general trend of the market. Amalgamated changed hands up to Rs 23.12 from Rs 22.87; Burrakur up to Rs 18.31 from Rs 18; New Beerboom up to Rs 23.56 from Rs 22.94 and Western Bengal up to Rs 9.44 from Rs 8.94.

(Except for a few selected scrip which met with good demand at enhanced levels, trading in the Tea section remained generally dull and restricted on the fear that the price of the commodity might decline further due to the possibility of bigger supplies during the current year. Persistent rumours with regard to the issue of bonus shares caused Hashimara to spurt to Rs 32.62 from Rs 27.87 and Huidibari to Rs 33.62 from Rs 28.12. Jay Shree moved narrowly between Rs 17.19 and Rs 17.56 and Hantapara between Rs 120 and Rs 123.

Textile shares ruled comparatively steady although higher levels attracted intermittent profit-taking. Bowreah changed hands at Rs 29.81 to Rs 30.19; Elgins at Rs 18.69 to Rs 19.04; Kesoram at Rs 27.81 to Rs 28.50 and J. K. Rayon at Rs 17.75 to Rs 18.37.

The general belief, that the Reserve Bank was considering measures to help the industry which had to nurse large stocks, caused a steadier tendency in Sugar shares. Dyer Meakin met with business at Rs 34.12 to Rs 34.50; Ramnugger Cane at Rs 30.31 to Rs 30.44 and Carew at Rs 13.44 to Rs 13.56. SKG were rather sticky at Rs 11.00.

In the Engineering section, price movements were rather irregular due to alternate bouts of buying and selling. After opening steady at Rs

24.96, Indian Irons receded at one time to Rs 24.74 due to selling pressure. After recovering again to Rs 25.26, the scrip closed finally at Rs 25.00. In sympathy, TEXMACO moved down to Rs 16.05 from Rs 17 and Jessop to Rs 19.19 from Rs 19.25, to close better at Rs 16.20 and Rs 19.44 respectively. J. K. Steel were marked down to Rs 37.87 from Rs 38.44; Guest, Keen, Williams to Rs 37.56 from Rs 38.25 and Indian Standard Wagon to Rs 93 from Rs 96. Jay Engineering were, however, a steady feature at Rs 28.81.

After ruling initially weak, Miscellaneous issues displayed generally a firmer tendency due to the emergence of support. Following were the prices of a few selected shares:

	Week's Week's Week's		
	High	Low	Closing
Orient Paper	35.80	33.15	35.35
Shree Gopal	24.37	24.00	24.25

COMMODITY PRICES

Slight Drop in May

Wholesale prices as measured by the official index (with the year ended March 1953=100) declined by 0.4 per cent to 125.3 during the month of May, 1961 as compared with 125.8 for April, 1961. The index was higher by 2.0 per cent when compared with 122.8 for May, 1960. During the month under review, the index for 'Food Articles' receded by 0.3 per cent to 117.2, 'Tobacco' by 7.6 per cent to 100.9, 'Industrial Raw Materials' by 0.1 per cent to 152.9 and 'Manufactures' by 0.4 per cent to 126.1. The index for 'Fuel, Power, Light and Lubricants', however, remained unchanged at its earlier months' revised level of 121.1.

FOOD ARTICLES

Higher prices of rice and bajra raised the sub-group index for 'Cereals' by 0.2 per cent to 99.5, although the prices of wheat, jowar, barley, maize and ragi exhibited declines. The index for 'Cereals' was, however, lower by 6.0 per cent when compared with that of a year ago. The sub-group index for 'Pulses' drifted lower by 0.3 per cent to 87.3 as a result of a fall in the prices of gram and masur, despite an increase in the prices of arhar, mung and urad. Increased prices of potatoes, oranges and bananas pushed up the index for 'Fruits and Vegetables' by 4.9 per cent to 122.0 notwithstanding a decline in the prices of onions and cashewnuts. A fall in the prices of milk brought down the sub-group index for 'Milk and Ghee' by 2.1 per cent to 113.9; there was, however, a slight rise in the prices of ghee. The sub-group

index for 'Edible oils' moved down by 1.0 per cent to 159.6 due to a fall in the prices of groundnut oil, mustard oil and coconut oil. An advance in the prices of fish and meat caused a rise of 1.8 per cent to 127.3 in the sub-group index for 'Fish, Eggs and Meat' despite a decline in the prices of eggs. The prices of gur rose further and the sub-group index for sugar and gur, advanced by 1.4 per cent to 120.1. Lower prices of tea, coffee, black pepper and turmeric were responsible for bringing down the sub-group index for 'Other Food Articles' by 2.2 per cent to 167.4, although there was a rise in the prices of chillies, cardamoms, betelnuts and salt.

TOBACCO

The index for 'Tobacco' registered a fall of 7.6 per cent to 100.9 due to a decline in the prices of raw tobacco.

FUEL, POWER, LIGHT AND LUBRICANTS

The prices of castor oil registered a fall; the index for this group, however, remained unchanged at its earlier month's revised level of 121.4.

INDUSTRIAL RAW MATERIALS

The sub-group index for 'Fibres' rose by 0.2 per cent to 165.1 as a result of an increase in the prices of raw jute and raw wool, notwithstanding a fall in the prices of raw hemp and raw silk. Lower prices of groundnuts, linseed, castorseed, ginseng and copra brought down the index for 'Oilseeds' by 0.4 per cent to 156.6; the prices of rapeseed, however, exhibited a rise. 'Minerals' stood at 95.4 as against 95.2 for the earlier month. The sub-group index for 'Other Industrial Raw Materials' reviewed.

INDIA STEAMSHIP COMPANY, LIMITED

NOTICE OF THE ANNUAL GENERAL MEETING TO THE SHAREHOLDERS.

Notice is hereby given that the Annual General Meeting of the Members of the India Steamship Co. Ltd., will be held at the Registered Office of the Company, "India Steamship House," 21, Old Court House Street, Calcutta, on Tuesday, the 26th September, 1961, at 3-30 p.m. in order to transact the following business:

- To receive the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1961.
- To sanction payment of Dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1961.
- To appoint a Director in place of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Sec. 281 of the Companies Act, 1956 has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Sec. 173 of the Act.

Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who has attained the age of 73 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

- To consider, and if thought fit to pass the following resolution, in respect of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), a Special Notice for which as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto.

Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), a Director of the Company who is also a Director and Member of Messrs Lionel Edwards, (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company.

- To appoint a Director in place of Sir B. P. Singh, Roy, K. C. I. E., who retires by rotation and is eligible for the re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir B. P. Singh Roy, K.C.I.E., who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

- To consider and if thought fit to pass the following resolution as Special Resolution in respect of Sir B. P. Singh Roy, K.C.I.E., a Special Notice for which as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto.

Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir B. P. Singh Roy, K.C.I.E., a Director of the Company who is also the Managing Director and Member of Messrs Lionel Edwards, (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents be and is

hereby re-appointed a Director of the Company.

- To appoint a Director in place of the Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, The Rt. Hon'ble Lord Sinha of Raipur who has attained the age of 74 years and who retires by rotation be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

- To elect Mr. R. G. Abbhi, I.A.S., a Director of the Company, who retires by rotation and is eligible for re-election.
- To appoint Auditors for Head Office and Branch Office, Bombay, and fix their remuneration.

The Share Transfer Register of the Company will remain closed from Monday, the 11th September, 1961, to Tuesday, the 26th September, 1961, both days inclusive.

By Order of the Board,

A. Mukerji,
Secretary.

India Steamship Co., Ltd.

Calcutta.

The 10th August, 1961.

The dividend, if sanctioned, will be payable on and from 28th September 1961 to those Shareholders whose names stand on the Register of the Company on Monday, the 11th September, 1961.

N.B.—Member entitled to attend and vote is entitled to appoint a Proxy and the Proxy so appointed need not be a member of the Company.

Note:—The Explanatory Statement as required u/s 173 of the Companies Act, 1956, is annexed to the convening notice issued to the members of the Company.

2 September 1961

are you a victim of executive fatigue?

at the end of a working day
are you tired, listless,
completely done-in?

If so, you are possibly a victim of executive fatigue and you need Smith's **SUPER FORTE**—the tonic that fights executive fatigue. An exhausting day's work uses up more vitamins than your daily food intake can restore. **SUPER FORTE**'s 10 vitamins and 9 minerals adjust this deficiency.

What results can you expect of **SUPER FORTE**? Nothing dramatic. It wouldn't be fair to suggest that **SUPER FORTE** works wonders overnight. But take two tablets daily for 30 days and you'll get results—added vitality, strength, staying power—all the additional physical reserves you need to cope with the stress and strain of modern business.

"IT SHOULD BE LIKE THE ONE
I BOUGHT FROM YOU
LAST YEAR!"

This is one of the oldest and most commonly used of standards. But it is certainly vague. And when you use it, you are never sure of getting your exact requirements.

This is where Indian Standards come in useful. Developed by the Indian Standards Institution, each standard helps you to easily specify your requirements, ensures quality of the product and good value for the money you spend.

ISI prescribes standards for industrial and consumer goods. Under its certification marking scheme, goods produced to relevant standards qualify for carrying the ISI Certification Mark. This is a third-party guarantee of the products' continuous satisfactory performance and service. The next time you buy anything, look for the ISI mark.

Familiar Themes

THE meetings of the Export and Import Advisory Councils in New Delhi this week have been chiefly remarkable for some inconclusive variations on two themes relating to exports and imports. The first was the relative importance of maintenance and developmental imports. The second was the necessity for legislative fiat for compulsory exports. In both cases, the discussion had every appearance of escapes from sterner duties. None will assert that these duties are easy to discharge. In an economy so obviously moving in a narrow range of conflicting choices, there is little room for manoeuvre. Idle capacity irks us with a sense of waste but notable gaps in basic industrialisation urge us on towards creating new capacity. Compromises have to be improvised as we go along and domestic ingenuity and enterprise have to be pressed into service to reduce both types of imports.

As in the case of imports, there is no substitute for hard and particular thinking on exports. The Third Plan has set the target of export earnings at Rs 3,750 crores, a figure considered by some as quite inadequate to meet the foreign exchange gap that is likely to be created during the Plan period. Performance in the first seven months of this year has been better than in the corresponding period last year, the relative figures of foreign exchange earnings being Rs 374 crores and Rs 343 crores respectively. But against the expectations of an annual average of Rs 750 crores and in the light of poor performance of some of our traditional export items like textiles, this cannot be considered wholly satisfactory. And there are crucial uncertainties ahead: We are not including in these the possibility of a world war, for the simple reason that all calculations would be thrown into disarray in that event. But less catastrophic contingencies like Britain's joining the EEC have to be reckoned with.

The proceedings of the Export Advisory Council leave the impression of a tug-of-war over 'incentives' between the Government on the one hand and the representatives of business interest on the other, rather than of a concerted effort to push up the country's exports. The emphasis appears to be on export incentives rather than on exports. Since a number of incentive schemes have been in operation for some years, evaluation of the results achieved by these in stepping up exports is overdue. It is to be hoped that this question will engage the attention of the Cabinet-sub-committee that has been set up to review the progress of exports.

The Minister's reference to compulsory exports suggests that, in Government's view, incentives had reached the limit of their practical utility. Mr Reddy seems to feel that no incentives that Government could provide would be able to counteract the strong pull of a sheltered domestic market. Compulsory export implies that the responsibility for exporting the goods set apart for export by the manufacturers should be assigned to specific agencies. While we are often told of the larger role in prospect for the STC, its

record to date is not calculated to stimulate enthusiasm. On the other hand, while manufacturers may be compelled to earmark a proportion of their production for export, it is difficult to see how compulsion could call forth the initiative, enterprise and specialised talents necessary for success in selling goods, in highly competitive foreign markets. It will be necessary to place greater reliance on Export Houses that have the requisite experience, and to ensure the conditions in which they can play an effective role. The discrimination against Exporters (who are not themselves manufacturers) in the operation of incentive schemes, especially in respect of import entitlements, has been a drag on the export drive. The case for treating Exporters on the same basis as manufacturers has not so far received the favourable attention of the Government.

Import policy has a direct bearing on the level of exports that is possible to maintain, especially in view of changing pattern of the country's export trade. It may be noted with gratification that Indian manufacturers have entered into contracts with some neighbouring countries that have plans for industrial development for installation of complete industrial plants. But they experience difficulties in carrying out the contract as the full range of machinery required for the units is not manufactured in India. Government in such cases should, as suggested by the FICCI, allow the Indian manufacturers who have undertaken to instal complete plants in other countries to enter into collaboration or agreement with foreign machinery manufacturers to export those items of machinery which are not manufactured in India directly to the importing country, and the foreign exchange required for such transactions should be made available.

For successful export promotion it will be necessary to look beyond the narrow ranges of incentives that have been extended in the past. The basic condition for success is the creation of an exportable surplus at competitive prices. The Minister has referred to a proposal under consideration for tax rebate for export industries. It is to be hoped that this welcome, though belated, recognition of the extent to which tax enters into the cost of exports will be followed by early action. Sales tax, especially where it is multi-point, is another insidious element inflating the cost of exports. Drawback of tax, as in the case of excise duties, is not practicable in the case of sales tax especially when it is levied at numerous stages in the process of manufacture. Now that there is growing recognition of the importance of exports for the implementation of the Plan, State Governments should be willing to agree to the replacement of sales tax by Central excise duties over as wide a range of commodities as is practicable. Recalcitrant States must be disciplined into acquiescence. If Government is thinking in terms of compulsions in the context of export promotion, there is no reason why the Trade and Industry alone should be at the receiving end.

Future of Plantations

AT the 68th annual meeting of the United Planters Association of South India held at Coonoor this week, the problems faced by the plantation industry—especially of tea and coffee—came for detailed re-examination. The meeting drew particular attention to some of the important problems faced by the plantation industry in the light of the production and export programmes set for the industry in the Third Plan.

As an organised sector of agriculture, plantations have stood out as the only bright patch in the generally backward state of Indian agricultural economy. The value of the crops is on a comparative basis, far higher in relation to the acreage they occupy than of the other agricultural crops put together. But their preeminence rests mainly on their export orientation and they have afforded one of the important props of the foreign exchange earnings of the country. In both the First and Second Plans, plantation crops were passed over in the schemes of development with the exception of tea for which the Second Plan fixed a physical target of nearly 700 million lbs. In the Third Plan, however, the plantation crops and chiefly tea among them, figure as having significant contributions to make toward the success of the Plan. This has been rendered necessary by the compulsions of export promotion schemes envisaged in the Plan which could be fulfilled only with the help of the traditional items in which the plantation crops enjoy a pre-eminence. Alone among all the export items, tea accounts for the largest slice of the foreign exchange earnings of the country, while the other plantation crops such as coffee, pepper, cashew etc., also have a significant say in the total of foreign exchanges earned by the country.

It is on tea that the major burden of additional export earnings from the plantation crops has fallen. With this view, the Third Plan has fixed the production target at 900 million lbs and the exports target at \$10 million lbs. The practicability of these targets seems open to question having regard to the rate of growth of production in the past ten years and the performance and outlook in the export markets.

PRODUCTION OF TEA

(Figures in Thousand kgs)

	North India	South India	Total
1953	219,943	54,825	274,768
1954	232,951	58,300	291,251
1955	244,511	58,492	303,003
1956	244,997	57,578	302,575
1957	239,692	68,257	307,949
1958	252,114	71,531	323,645
1959	254,568	69,516	324,084
1960	242,039	77,226	319,265

Production has increased from about 600 million lbs to about 700 million lbs in the course of the last decade which works out to an average of about 10 million lbs per annum. The Third Plan envisages a rise in production of the order of 200 million lbs and further seeks to telescope it to a span of five years which gives an annual rate of growth of nearly 40 million lbs. While the Planning Commission wants this as the minimum the industry should aim at in the Third Plan, the latter has genuine misgivings about the adequacy of the means that could be pressed to achieve the targeted production. New plantings during the course of the Third Plan could be discounted as a source for additional production in view of the time needed for maturity and yield. The only alternative left with the industry is to concentrate on better yield from existing plants. It may be admitted that though the per acre yield of Indian tea

compares quite favourably with the yield obtained in other important countries, such as Ceylon, East Africa, and Indonesia, the scope for further increase has not been exhausted. The use of fertilisers in larger quantities may prove advantageous for raising yield and in view of the prospectively larger availability of fertilisers during the Third Plan, some credit may be taken for increasing production by this means. The availability of greater irrigation may also prove useful. Scope for increasing production may seem greater in the North since production over the past decade has gone up in this region only by about 4 per cent while in the South the growth in production has been of a spectacular order. Even after taking into account such possibilities for increasing production, the programme for increasing production to the extent of 900 million lbs seems subject to basic limitations arising from the policy of the Government toward the plantation industry and other factors connected with the economics of the industry.

Nearly 30 per cent of the tea bushes in the country are nearly 60 years old and in these bushes there is a limit to the rise in yield that could be stimulated with better culture. The fulfilment of the production target further presupposes adequacy in respect of other requisites such as equipments, manufacturing capacity, power, stores supplies etc. To handle a larger volume of production would entail expansion of manufacturing capacity and redesigning of factories with consequent need for more equipments and plants and these in turn make larger demands on capital funds. It has been one of major complaints of the tea industry that the structure of taxation applied to the industry has left it with barely enough funds or incentive to put forth the necessary efforts to effect improvements in production either by replacing old plants and modernising them or expanding manufacturing capacity. The industry has been subject to a greater variety of fiscal levies than any other agricultural product or industry. While the Centre levies income tax on the income of the plantation companies, export duty, and excise duty, the States levy agricultural income tax, land tax, and sales tax. The entry tax of West Bengal and the carriage tax of Assam were also levies peculiar to the tea industry. The impact of such penal taxation has been particularly severe on the plantations which raise their tea from old bushes and for which the price received barely covers the cost of production. The question of creating sources of funds to the industry to meet the medium term and long term requirements has also been consistently evaded by the authorities. Though as early 1956, a suggestion was mooted to create a fund out of the accumulated collection of the export cess on tea, the implementation of this proposal met with cold reception at the hands of Tea Board.

India's production during the 1960 suffered a sharp fall mainly due to steep decline in the production in the North India. From 320 million kgs. production dropped to 319 million kgs. in 1960. Consequent on this fall in production exports of tea were down by 19.2 million kgs. which resulted in the loss of foreign exchange

to the extent of Rs 5 crores as compared 1959. The fall in the export in 1960 coming on top of the fall of 1959 as compared with exports in 1958 naturally raises doubts about the feasibility of the export target set for tea in the Third Plan.

It may be pointed out that Indian tea has suffered a decline in all the important markets in the world such as the UK, the US, Australia, Irish Republic etc., while the ground it by it has been captured by tea produced in Ceylon, East Africa, and Indonesia. The on gain made by Indian tea is in some of the Middle Eastern countries and Egypt. The Ceylon tea which is subject to disadvantage similar to the Indian tea could outpace Indian tea in the continental and American markets will have to be carefully examined with a view to enabling Indian tea to hold its own against the challenge of Ceylon. However, the competition from other countries particularly from South and East Africa will be more severe. Consideration of price in view of the fact that South African tea is exported without export duty. There is also the looming challenge from China while there is serious move toward self-sufficiency in some of the producing countries in West Asia and the South America. The Food and Agricultural Organisation has on the basis of the present intentions and plans of some of these developing countries forecast a crisis in production likely to develop by the turn of 1965. It foresees that while production is being stimulated in many new countries, consumption in the large consuming countries will remain stagnant. It estimates that in the countries where tea is consumed in large quantities, population would rise by about 6 per cent by 1965, while consumption would go up less than the estimated increase in population. And with prospects for increasing consumption of tea being limited to developing countries where however, the growth of tea industry is being fostered with all assiduous care, tea industry the whole world over may be caught up in the grip of a severe crisis.

There is however immediate cause for concern in the intended move of the UK to join the Common Market a step that is likely to have some repercussions on exports of Indian tea into the UK. Though as compared with other Commonwealth countries, no serious disability may be entailed by the withdrawal of free entry to Indian tea, in respect of oil producers the result may be an equalisation of burdens and a strengthening of the competitive power of tea exported from the non-Commonwealth countries.

In the context of these developments a factors, the Third Plan targets for production and exports are likely to face insuperable difficulties in achievement. The question of production for internal consumption may pose a problem. Consumption in the country has shown a marked increase in recent years having gone up from 83 million kgs in 1953 to 109 million kgs in 1958-59 and further to 110 million kgs in 1959-60. With further increase in population and rise in purchasing power consequent on the implementation of development schemes in the Third Plan, consumption may further rise substantially. In this c

EXPORTS TO SELECTED COUNTRIES

	QUANTITY (In '000 kgs)		VALUE (In '000 Rupees)	
	1958	1959	1958	1959
United Kingdom	150,104	128,173	122,175	894,758
Irish Republic	7,191	7,463	6,241	42,337
USSR	11,466	12,405	10,248	82,998
Turkey	3,728	4,748	2,427	23,867
Egypt	11,576	11,700	14,375	53,810
Sudan	6,333	10,720	3,933	27,669
Canada	8,938	7,266	6,998	53,241
USA	11,564	10,733	8,598	65,797
Australia	3,306	2,877	2,431	16,488

instance of the rising trend of consumption failure of production to rise to the extent anticipated and provided for in the Third Plan may face the planners with a delicate problem of allocation of the internal production between internal consumption and export.

The position and prospects of coffee are no less embarrassing than that of tea, though in terms of total value of production and export earnings, coffee ranks far behind. The plantations have set considerable store for fresh shipments to foreign exchange earnings from export of coffee. While internal production has shown remarkable rise in recent years, exports have in the last year met with considerable resistance consequent on the over-extended position of the world coffee market. Present stocks at about 64 million bags are considered adequate to cover requirements for a year and half years and which preclude scope for any substantial rise in exports. The returns to the grower have been steadily declining since 1956 and over a period of nearly four years, the loss has amounted to as much as Rs 1,296 per ton. The difficulties of marketing coffee in the foreign markets have attracted drawn attention to the defects of the present marketing system for coffee. The system of closed tenders has been a deterrent to enterprising traders to venture in the trade which is concentrated in the hands of two or three traders. With a view to stimulating a sale of Indian coffee, the question of introducing open auctions has been mentioned in view of the delay entailed in the system of closed tenders, the change may seem desirable. The importance of producing quality coffee, more specifically the plantation variety, has been brought home by the difficulties in disposing of the Robusta variety which is in lesser demand as compared with the Arabica plantation variety. This calls for selective production with proper reference to the variety demand.

Commonwealth and the ECM

The ECM debate in Rajya Sabha, held on the eve of the Finance Minister's departure to attend the Commonwealth Finance Minister's Conference at Accra, has evoked an unexpectedly hearty measure of goodwill towards Britain in her difficult predicament, but added little to what is already known about the Government of India's attitude towards the British Government's move or its likely impact on India's export trade. The latter will be affected by a number of known factors. Though the most important among these are the terms on which Britain finds it possible to gain entry to the Common Market, the effects of the consequential decisions of the members of the Commonwealth have also to be taken into account in a final assessment. As regards the former we have only the following statement made by the British Prime Minister in his Television Broadcast of August 4: "Now there will, of course, be a long and probably rather detailed negotiations with ECM) and at the end of it we should be able to see more clearly what we have to gain or lose by joining." No doubt the Commonwealth Officials taking part in the preliminary talks in London to prepare the agenda for the forthcoming Ministerial level meeting, have been given a more precise indication of the terms which the British Delegation to the ECM propose to negotiate. A clearer indication of the attitudes of other members of the Commonwealth may be expected to emerge at the Accra Conference.

Great significance is attached to the venue of the Commonwealth Finance Ministers' Conference, for the attitude of the African members to the proposal of Association with the ECM, under Part IV of the Rome Treaty, is expected to occupy the centre of the stage. All the African countries are interested, but many have doubts regarding the political implications, which have been clearly enunciated by Ghana. On the other hand, it is by no means sure whether the Six would be willing to agree to their Association under Part IV as it stands. This arrangement was originally included in the Rome Treaty to bring into association with ECM overseas territories and dependencies of France, Belgium, Netherlands and Italy, on terms specially advantageous to the latter, which would enable them to safeguard their nascent industries while enjoying the benefit of free preferential entry for their exports to the Common Market. The propriety of continuing this arrangement after most of the territories concerned had attained the status of independent nations has been questioned within the Common Market, and the Community's African Association is being re-negotiated. The Indian stand has already been clearly enunciated. In the statement made by him in Parliament last month, the Finance Minister said: "It is our considered view that the less developed countries of the world should not rely on preferential treatment in industrialised countries as a basis for the development of their industries and exports. Such dependence can undermine the political independence of the countries concerned. What is necessary is that all industrialised countries should give access on specially favourable but non-discriminatory basis to their markets to products, whether they are raw materials like metallic ores and rubber or beverages like tea, coffee and cocoa or simple processed goods like tanned hides and skin, vegetable oils and grey textiles which the developing countries produce economically."

Another topic which may come up for discussion is the possibility of some form of association under Article 238 of the Rome Treaty, which would link the Commonwealth countries institutionally with the European Common Market, as suggested by Mr Lester Pearson, leader of the Opposition in Canada. This Article empowers the Community to "conclude with a third country, a Union of States or an International Organisation, agreements creating an association embodying reciprocal rights and obligations, joint action and special procedures." It is further provided that such agreement shall be concluded by the ECM Council acting by means of "a unanimous vote and after consulting the Assembly."

This proposal has aroused little interest in India for the simple reason that for a country like India whose trade with the Six, or even the Seven after Britain's entry, is less than half its total foreign trade, it will be no advantage to be associated in a grouping which erects a common tariff against the rest of the world. But the possibility that New Zealand, in view of its special difficulties, may seek association under Article 238 is not ruled out.

India's stand as defined by the Finance Minister in the statement referred to above is in consonance with the General Agreement on Trade and Tariffs to which this country, like the UK and members of ECM, is a party. The GATT is against new preferential arrangements; but has recognised that, in order not to disturb patterns of trade established through decades of preferential treatment, the preferential concessions in operation prior to the

coming into force of the GATT should be allowed to continue. The GATT has also accepted the principle that if preferences are reduced, countries which benefit from the reduction in preferences should offer tariff concessions. It was also stated that, while we would greatly regret the termination of the preferential arrangements between India and the UK, "we would acquiesce in it if we are compensated by a substantial liberalisation of import policies in the Common Market as a whole, provided suitable transitional arrangements are made so that the benefits of preferential treatment disappear only in slow, gradual stages."

As far as India's major exports are concerned, it seems likely that tea exports may be safeguarded under transitional arrangements; but exports of cotton textiles will have to find accommodation under the arrangements reached at the GATT Conference on Textiles held in Geneva on 10 July. Under the Short Term Arrangement, the participating countries have agreed to deal with immediate problems relating to cotton textiles through international action designed, at the same time:

- (1) to significantly increase access to markets where imports are at present subject to restriction;
- (2) to maintain orderly access to markets where restrictions are not at present maintained; and
- (3) to secure from exporting countries, where necessary, a measure of restraint in their export policy so as to avoid disruptive effects in import markets.

Under this arrangement, participating countries presently maintaining quantitative restrictions shall, as from January 1, 1962, significantly increase access to their markets by countries the imports from which are now restricted.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

STATE LOANS

Where has the Money Disappeared to?

WHERE has the money attracted by the State loans disappeared to? Cash subscriptions, that could be retained, were in the vicinity of Rs 80 crores; but no more than a shade under Rs 30 crores is traceable in the latest returns of the Reserve Bank. Firstly States' Deposits have risen by Rs 12 crores; secondly they have reduced their ways and means borrowings from the Reserve Bank by Rs 5 crores; and thirdly they have made some payment or repayment to the Centre, whose balances are higher by Rs 11 crores. But what has happened to the balance of something like Rs 50 crores?

As far as we can make out there is only one possible explanation. The States, replenished with the proceeds of the loans, had more money than they had immediate use for; and have in consequence purchased heavily of ad hoc Treasury Bills. If therefore the next return detailing outstandings of Treasury Bills should disclose an unusually sharp rise we shall have the confirmation of such an hypothesis. Incidentally, it is still possible that outstandings of Treasury Bills show no change; for the sale proceeds would be credited to the Centre, and the Centre would, with its cash balances satisfactory, have instituted reverse ad hocs for Rs 50 crores.

A variation could be: that the Centre in the relevant week has funded Rs 50 crores of Treasury Bills held by the Reserve Bank by creation of marketable securities; in that case outstandings of ad hocs would decline by Rs 50 crores; and at that stage the States would have invested Rs 50 crores in ad hocs; under this variation outstandings of ad hocs would again show no change.

A second variation is that the Centre has now, unknown to the public, carried through the third tranche of its borrowing programme for the year with a created issue sold in the first instance to the Reserve Bank; that the Centre then used the proceeds thereof to cancel ad hocs in an amount of Rs 50 crores before their maturity; and that finally the

States again bought Treasury Bills in such an amount, resulting in outstandings of Treasury Bills being unchanged.

All that can be said of the transactions is that they are mystifying; but if the first or second variation has been used a word of explanation to the public would surely have been in order.

RBI REPORT

Data on Tap Purchases

We have read it all—or almost all—before: that, we are afraid, is the inescapable assessment one must make of the Report of the Central Board of Directors of the Reserve Bank of India for the year to 30 June 1961. It is, indeed, only the shifts in emphases and the variations in the periods covered which serve to differentiate Trend and Progress of Banking, Report on Currency and Finance, Report of the CBD of the RBI and the Finance Minister's Budget speech, one from another. We wonder whether it should not be possible to avoid some at least of the duplication involved. Production trends, price trends, banking, public finance and the capital market are repetitively dealt with; it is true, some new facts are brought in from time to time, but surely we can well do without avoidable duplication. In our view the first 24 pages, which essentially constitute a review of economic conditions, could without loss have been pruned down to half a dozen; and we will not quarrel with the contents of the rest.

Almost the only fresh data contained in the first half of the Report relate to the open market operations of the RBI: "The increased pressure on bank resources during the year was met by substantial net sales of Government securities by Scheduled Banks." We are informed that the relevant figure was Rs 191 crores, whereas banks had effected net purchases of giltedged in the amounts of Rs 149 crores and Rs 155 crores in 1958-59 and 1957-58 respectively. This fact is qualified by the following statement:

"The decline in Scheduled Banks' investments in Government securities during the year is, however, overstated because of the transfers of PL 480 funds from the State

Bank, just as the rise in banks' investments in the previous three years was exaggerated by the accrual of these funds to the State Bank."

Banks of course disinvested; and the State Bank's sale of giltedged traceable to repayment of counterpart funds (in the year to 30 June 1961) is seen to be Rs 144 crores. Even this, however, is not the whole truth between 1 July 1960 and 30 June 1961 the State Bank sold Rs 158 crores of Government securities; and hence the magnitude of disinvestment by other Scheduled Banks is seen to be relatively small. Moreover, surely, a comparison could have been made with 1956-57, in which year also banks were compelled to disinvest substantially. In both 1956-57 and 1960-61, the expansion in Advances assumed record proportions, and in both years growth in Deposits, though for not exactly the same reasons, failed to keep pace. Hence the resort to borrowing from the Reserve Bank and hence also the sales of giltedged.

SLACK SEASON

Rude Interruption

The State loans have caused a rude interruption to the even progress of the 1961 slack season. Banks' Deposits are now lower than they were at the beginning of the current slack season; and the Other Loans and Advances of the Reserve Bank distinct (Rs 9.28 crores) higher.

Even so the return of the State Bank for the latest week places cash balances lower than they were at the start of the slack season and nearly one-third of the contraction. Advances, as at the week ended 1 September and calculating from the notional end of the last busy season, has been wiped out in the latest week.

The Scheduled Banks' return for the State loan week is of course not yet available; but it should confirm that tremendous impact has been felt by the banking system as a result of the State loans.

BANK RETURNS

Impact of State Loan Subscription

The spillover of month-early disbursement into the second week and the interruption of the 1961 slack season by the subscriptions the State loans have made their deep impact felt in the returns of the Reserve Bank of the State Bank for 8 September.

Beginning of the month disbursements responsible for a sharp rise of Rs 26.25 crores to Rs 1,898.86 crores in Active Note Circulation, as also for the outflow of Rupees (in the considerable amount of Rs 1.64 crores) Currency has been expanded against Rs Securities for Rs 15 crores by transfer of Investments in the Banking Department. With Foreign Securities unchanged at Rs 11 crores, the Reserve Bank's cash in the till has been drawn down by Rs 12.88 crores to Rs 8.93 crores.

Subscriptions to the State loans are reflected in the improvement of Rs 12.11 crores to Rs 31.95 crores in the balances of Governments. Too, the States have by ways and means borrowings from the Reserve Bank to the tune of Rs 5.20 crores, so they now stand at Rs 48.11 crores. Third would appear that the States have made

payment to the Centre, as the latter's balances have improved by Rs 10.99 crores to Rs 63.50 crores. The fall of Rs 14 crores to Rs 261.16 crores in Investments is due to transfer to the Issue Department. As another note in this section points out there is the distinct possibility of various transactions in respect of ad hoc Treasury Bills.

Heavy support from the banking system is suggested by the sharp fall of Rs 25.40 crores to Rs 75.85 crores in Reserve Balances, though part of this may be owing to the pressure arising from month-early disbursements. The drawing down of Deposits for subscription to State loans has compelled banks to seek assistance from the Reserve Bank, whose portfolio of Other Loans and Advances is sharply risen by Rs 17.97 crores to Rs 134.75 crores. That some banks (we have the State Bank in mind) may have discounted Treasury Bills, in order to purchase State loans, is indicated in the rise of about Rs 9 crores in the Reserve Bank's holdings of Treasury Bills purchased and discounted.

Balances Held Abroad, which have been falling quite sizeably from week to week, are lower only by Rs 0.86 crore to be placed at Rs 18.73 crores. Foreign Assets held by the Reserve Bank in both Departments now amount to Rs 135.59 crores.

That Scheduled Banks have borrowed from the State Bank as well is suggested by the rise, in the latter's return for 8 September, of Rs 8.73 crores to Rs 245.29 crores in the total of Advances though, again, part of the rise may be due to the demand from constituents in respect of month-early disbursements. The State Bank does not appear to have supported the States' new loans, since giltedged holdings are actually lower by Rs 2 crores at Rs 259.30 crores. But it is possible that the State Bank should have "paid" for its purchase of Rs 7 crores of State loans with Treasury Bills for Rs 9 crores, which have (or could have) been rediscounted with the Reserve Bank. Other public subscriptions have not caused much of a dent upon the State Bank's Deposits, which are lower only by Rs 2.81 crores at Rs 524.03 crores. As an end result, cash balances including money at call have moved down by Rs 3.79 crores to Rs 26.59 crores. It may be some weeks more before the State Bank resumes its tap (and slack season) purchase of giltedged from the Reserve Bank.

After some weeks a return (for 1 September) of Scheduled Banks fails to record an increase in Deposit resources. Net Demand Deposits, it is true, are higher by Rs 1.95 crores at Rs 821.87 crores, but this is more than offset by the decline of Rs 2.19 crores to Rs 1,135.55 crores in net Time Deposits. The aggregate of net Deposits consequently shows a drop of Rs 0.24 crore, and with State Bank reporting in the relevant week a rise of Rs 1.65 crores the inescapable conclusion is that the drawing on Deposits of other Scheduled Banks has been to that extent steeper. Borrowings both from the State Bank and the Reserve Bank have moved up, the indebtedness to the former institution rising from Rs 18.77 crores to Rs 19.97 crores and to the latter from Rs 1.27 crores to Rs 1.55 crores. Cash balances, including money at call, show a small drop of Rs 1.58 crores to Rs 208.10 crores, largely on account of the State Bank. The giltedged portfolio has again re-crossed the Rs 600 crore mark with a rise of Rs 9.54 crores to Rs 607.94 crores, and Rs 9 crores of the current week's increase are traceable to the State Bank. The contraction in the total of Advances is a moderate one of Rs 3.63 crores to Rs 1,227.88

crores; and Rs 1.99 crores of the fall are attributable to the State Bank.

The next week's return of Scheduled Banks should disclose considerable changes. Firstly a fair-sized drop in Deposits is to be anticipated; secondly cash balances, and balances with the Reserve Bank in particular, should have fallen steeply; thirdly borrowings from the State Bank and the Reserve Bank may in the aggregate have risen by Rs 25 crores; fourthly the giltedged portfolio should reflect banks' purchase of State loans, with the figure involved being in the neighbourhood of Rs 25 crores; and lastly the total of Advances will surely have risen by a considerable sum.

CHARTERED BANK Rights Issue

SUBJECT to the stockholders passing the resolution to raise the Authorised Capital and to London Stock Exchange granting not later than 6th October quotation for and permission to deal in newly issued shares, the Directors will offer to Stockholders on register on 21st September 1961 one one pound share for every five pound stock held at 40 shillings per share. It is proposed to post provisional allotment letters on 5th October calling payment of twenty shillings per share on 2nd November and the balance of twenty shillings per share on 30th November. The Directors have at present no intention of issuing balance of increased Capital. The Directors hope to recommend maintenance of 15 per cent per annum dividend on increased issued Capital beginning with recommendation of final dividend of 7-1/2 per cent actual in respect of year ending 31st December 1961.

Aid to Uncommitted Nations?

By Paul Einzig

There is more than a bare possibility that the Western countries will reconsider sooner or later their present attitude of indiscriminate economic assistance to uncommitted nations. Their resources are far from unlimited. Indeed the dollar scares of 1959-60 and the frequently recurrent sterling scares have been evidence that the United States and Britain have been granting external economic aid beyond their means. Moreover, Western opinion is becoming increasingly exasperated by the one-sided interpretation that some recipients of economic aid are inclined to give to their neutrality between those who want to help them and those who want them to share the fate of Tibet. The claim that "no strings must be attached to economic aid" has come to be regarded as axiomatic in undeveloped countries in urgent need of large-scale aid. In plain English they claim it as their inalienable right to bite the

hand that feeds them, before, during and after feeding, and that the feeding should continue on an increasing scale regardless of the bites. Moreover, since hostile taxation and other anti-capitalist measures effectively discourage assistance from private resources, they expect the over-burdened taxpayer of Western countries to provide all the aid, without any hope of being thanked for it.

Clearly there is a limit beyond which this attitude can be pursued without affecting the Western attitude towards economic aid. There is a growing feeling in the West in favour of confining external aid to those countries which are definitely on our side. To aid even them effectively would exhaust all the available resources, and in many quarters this is considered infinitely preferable to the present system of spreading the limited resources too wide. By trying to help everybody regardless of their attitude in the dispute between the Communist bloc and the free world, the Western countries are unable to help really effectively those on whose support they can rely in this conflict.

The argument that, unless the uncommitted nations are helped they will accept Communist help has been used so frequently that it has worn threadbare. There is indeed a growing feeling in the West that the more economic assistance uncommitted nations receive from Communist countries the better. Let the Soviet Union and its satellites use up their economic resources in external aid, in the same way as the Western countries have done. If they do so on a large scale it is bound to handicap their own progress. It is felt in the West that, once Russia will have invested hundreds of millions of pounds in underdeveloped countries, she is likely to be hated there almost as much as Western countries are hated, now, having invested there hundreds of millions. But Russia would never invest really large amounts without insisting on strings. An invasion of Soviet "technicians" would open the floodgates for subversive activities and the democratic system of the countries receiving Soviet aid would be in danger of being undermined. This would be, of course against the interest of the West. But the uncommitted countries—which would then soon find themselves committed on the side of the Communist group whether they like it or not—would be the first victims, and the West would derive at any rate some compensation from having been able to strengthen effectively the countries which are definitely on our side.

Neutrality is a matter of degree. Recent experience conveyed the distinct impression in the West that the neutrality of some of the "uncommitted" nations is biased so strongly in favour of the Soviet bloc and against the democratic bloc that they can hardly be considered to be still uncommitted.

RESERVE BANK

Annual Report for 1960-61

THE Annual Report of the Central Board of Directors of the Reserve Bank of India submitted to the Central Government in terms of Section 53(2) of the Reserve Bank of India Act, published on 11 September contains, besides a review of the working of the Bank during the accounting year ended 30 June, 1961, a brief review of the developments in the Indian economy during the year.

According to the Report, the favourable developments in the Indian economy during the year ended June 1961 were a rise in aggregate investment, an encouraging advance in agricultural output and a record rate of increase in industrial production. The more sombre side of the picture included a sharp drop, for second year in succession, in the output of raw jute and a deterioration in the balance of payments, with exports inadequately responsive to growing needs. The combined effect of natural factors on the one hand and of rising investment and the maturing of previous investment on the other, was a marked growth of the economy, accompanied, however, by signs of strain with shortages in power, including coal, in steel and cement and in transport. The general price level rose further during the year though only by about a third as much as in the previous year. The expansion in bank credit to the private sector and to Government led to a further sharp increase in money supply during the year; while the expansion in bank credit to the private sector was larger than last year, that in the latter was smaller. The widespread boom in economic activity was also reflected in the ebullience of stock and capital markets during the greater part of the year.

In this context, according to the Report, the need for more effective action on the part of the Reserve Bank was clearly indicated, in particular to alleviate the growing pressure of monetary de-

mand on the economy and to restrain inflationary pressures. The moderate action to regulate credit initiated in March 1960 through impounding of additional reserves of banks, which was further reinforced in May 1960, did not have a significant effect on the volume of credit, which continued to remain high through the slack season, facilitated mainly by the relatively low cost of borrowing from the Reserve Bank. The resulting over-extended position of banks provided the need as well as the opportunity for the more drastic measures of general credit restraint which the Bank initiated in September 1960. It introduced a system of slab rates and quotas to regulate banks' access to Reserve Bank assistance and at the same time directed banks to raise their average lending rates by at least $\frac{1}{2}$ per cent. Later, however, with a view to easing the impact of seasonal stringency, the Bank withdrew in two stages the additional reserve requirements which had remained in force throughout the slack season. The selective credit controls continued to be flexibly operated in conjunction with the general credit measures and were either extended (as in the case of raw jute and jute goods) or relaxed (as in paddy and rice) or totally withdrawn (as in wheat and sugar).

As in the preceding years, the Bank continued to give close attention to the development of institutional credit for agriculture and industry as well as to consolidate and strengthen the banking structure. The liquidation of the Palai Central Bank focussed attention on the weak spots of the banking system. The banking law was amended during the year, among other things, to further expedite liquidation proceedings of banks, to assure small depositors of the safety of their funds by making them preferential creditors, to provide for the declaration of a moratorium to facilitate the process of reconstruction or

amalgamation of banks and to provide for compulsory amalgamation of banks with other banks including the State Bank of India or its subsidiaries. The Government of India has also decided to introduce a scheme of deposit insurance. Mention may also be made of two proposals formulated by the Reserve Bank, one for strengthening the capital funds of banks and the other for increasing the cash reserves and liquidity requirements of banks. In the sphere of industrial finance, legislation was passed to widen and diversify the assistance provided by the Industrial Finance Corporation, while the scheme of refinancing of the Refinance Corporation was liberalised both as regards its scope and terms and conditions of refinancing. The Government of India's Scheme for the guarantee of loans granted to small-scale industries, initiated last year, was extended to 30 additional districts and was also liberalised with a view to facilitating its working. As a result, there was a further marked expansion in the activities of these corporations and in the finance made available to industry during the year. As regards co-operative credit, the Bank continued to play a major role in expanding and co-ordinating the credit facilities available to the rural sector as well as in rendering financial assistance to the co-operative structure. During 1960-61, the outstanding amount of loans by the Reserve Bank to State co-operative banks for financing seasonal agricultural operations and marketing of crops rose from Rs 78 crores to Rs 100 crores and that of medium-term loans for agricultural purposes from Rs 6.7 crores to Rs 8.8 crores. In addition, the Bank continued to subscribe to the debentures floated by the central land mortgage banks. Further progress was also made during the year in implementing the Bank's scheme of handloom finance.

According to the Report, the achievement of the Second Plan remains impressive, despite the foreign exchange crisis early in its course, the vicissitudes of nature

and a steady rise in prices during the period. Agricultural output rose during the period by 16 per cent, industrial production by 40, per cent and national income (at constant prices) by 19.6 per cent. On the other side of the medal, exports were stagnant and the balance of payments deficit widened considerably. The pressure of aggregate demand in the economy was intensified and largely contributed to the rise of 30 per cent in the general price level. The Third Plan, which envisages an aggregate investment of Rs 10,400 crores and an increase in national income of about 30 per cent demands for its success, the Report says, a high degree of discipline in the fiscal and monetary fields to achieve a substantial increase in the rate of domestic savings. Further, notwithstanding the substantial foreign aid promised by friendly countries for the first two years of the Plan, it would be necessary to organise a massive step-up in efforts to promote exports to pay for at least the maintenance needs of the economy. For this purpose, appropriate incentives may be required and the cost-price structure will have to be kept under control, as the price of exports is the key to their competitiveness in a phase of increasingly intense competition in the world markets. The Report also emphasises the importance of the role of monetary policy in the task of maintaining stability and discipline during development. With continuing investment and rising output, the demand for bank credit in the Third Plan would rise continuously; so too, would the pressure on prices. The Reserve Bank's monetary policy, the Report states, would, therefore, have to continue to be a two-pronged one, viz. of ensuring an adequate flow of credit to meet the genuine requirements of agriculture, industry and trade and checking speculative excesses with their inflationary overtones. In other words, the two-directional objective of monetary policy is to maintain the momentum of development and at the same time to avoid the pace of development from outstripping the capacity of the economy to sustain it. In this context, there is need further to strengthen the institutional machinery of agricultural credit and finance for industrial rehabilitation, expansion and development, which the Bank has promoted, as well as to consolidate and strengthen the banking system through geographical and functional expansion of its scope, for undertaking the larger tasks that lie ahead.

During the year under review, the Bank's income amounted to Rs 52.1 crores and expenditure Rs 9.6 crores, the net profit available for payment to the Central Government in terms of Section 47 of the Reserve Bank of India Act being Rs 42.5 crores as compared to Rs 40 crores in 1959-60.

Notes

SUGAR

Commonwealth Opportunities and—

One topic which might with advantage be raised at the Commonwealth Finance Ministers' Conference at Accra, though so far very little has been said about it in this country, is the question of revision of the Commonwealth Sugar Agreement, following the termination of South African participation at the end of December 1961. India was not in the picture as an exporter when the agreement for supply of sugar at negotiated prices was made in 1951 between the British Government and sugar exporting members of the Commonwealth. Presently, these prices are substantially above world prices. South Africa had a quota of 217,000 tons under this agreement. With the termination of South African participation, Commonwealth countries can legitimately ask that this quota be distributed among members of the Commonwealth exporting sugar. But the Government of India so far has not shown any interest in following up this export opportunity for our sugar

surplus. (However, on the eve of his departure to Geneva, Mr A. M. Thomas, Deputy Minister for Food, told our correspondent in an interview that possibilities of India joining the Commonwealth Sugar Agreement are being explored.)

The imminence of the International Sugar Council meeting which is expected to fix an export quota for India may be an inhibiting factor. Moreover, it is understood that the British Government has assured South Africa of its readiness to conclude an agreement for import of sugar outside the Commonwealth Sugar Agreement on practically the same terms and also agreed to support South Africa if the latter applies for quota under the International Sugar Agreement to the full extent of its entitlement under the Commonwealth agreement. Perhaps it is a consequence of the British Government's application to enter the European Community that they should regard the maintenance of the Commonwealth as depending on ties less tangible than trade relationships.

World Opportunities

An Indian Delegation led by Mr A. M. Thomas, Deputy Minister for Food is taking part this week in the UN Sugar Conference at Geneva. This is not the first time, that India is attending the UN Sugar Conference, though India joined the International Sugar Agreement only recently. Indian delegations had attended the conferences held in 1953, 1956 and 1958. India had also been recognised as a Sugar Exporter and allotted a quota of 150 thousand tons. We had exported 150 thousand tons in 1958. In 1958 the quantity exported was 50,000 tons. This year we have exported over 100,000 tons to world markets, in addition to 1,87,000 tons to the US market. We shall also be exporting the balance of the quota of 30,000 tons mainly to Malaya.

We are applying for an export quota as member of the International Sugar Agreement for the first time this year. Because of the large surplus of crystal sugar in the country, the Indian Delegation will endeavour to get the quota substantially enhanced. The basic quota fixed by the International Sugar Agreement is exclusive of US import quotas. But it is a condition that any country exporting to the US should be a

member of the International Sugar Agreement.

The International Sugar Agreement reached in 1958, to which India was not a party, has still two years more to run. But it is reviewed and adjusted every three years to meet changing conditions. Following the announcement of the US import quota, India has applied for an export quota under the Agreement. India can legitimately ask for a quota which will enable the country to export its sugar surplus, currently estimated at half a million tons. This quantity, as Mr S. K. Patil has rightly emphasised, represents just half per cent of our total sugar output including unrefined sugar. The size of the quota which is finally agreed to will indicate how far it will be advantageous for this country to seek to export sugar to countries other than the US.

COAL

Difficulties of Steel Makers

Mr Swaran Singh's Lok Sabha statement on coal supply to the steel plants more or less confirms the apprehensions recently voiced by the Chairmen of the two private sector steel companies. Both Mr Biren Mookerjee and Mr J. R. D. Tata have pointed out that the working of the steel plants are greatly hampered by the high ash content and irregular supply of coal made available to the steel factories. The result is that the installed capacity is not expected to be utilized fully for another two years or so.

Mr Swaran Singh also does not deny that difficulties are faced by the steel companies but emphasises the fact the problems of supply of coal and limestone are common to all steel plants both in the private and public sectors. He seems to think that such difficulties are inevitable in the present context of the rapid growth of steel making capacity. The country is fortunate in possessing plentiful supply of iron ore but with regard to other raw materials such as limestone and coking coal the position is not quite satisfactory. In the past the private sector steel plants had the entire supply of raw materials at their command as it were but now that more steel plants have come into being demand for the raw materials has considerably increased. The supply of limestone is likely to remain unsatisfactory because new deposits are yet to be proven. Considering the pressure on transport facilities, the steel companies cannot complain too loudly. Mr Swaran Singh has drawn attention to the fact that about 5 million tons of raw materials have to be brought to the factories for them to produce 1 million tons of steel. This is not a small job and the railways are doing their best to cope with the situation. Already the railways

steel plants 15 per cent of the entire goods carried by them and it is expected that the share of the steel plants will increase to 30 per cent in the course of the next five years. Even so, according to Mr Swaran Singh every thing possible is being done to ensure that the steel plants are not handicapped for want of raw materials including coal. A high level committee is being set up to watch over the supply of coal to the steel plants. While the committee can possibly have no control over the quality of coal it can at least ensure that supply is regular. As Mr Biren Mookerjee has pointed out the assurance that a certain quantity of coal will be received at stated intervals will go a long way toward adjusting production schedule. There are handicaps such as the allocation of unsuitable wagons to the steel plants which can easily be removed by a co-ordinating body. All this may improve matters considerably but it would appear that the main problem of the steel plants, that is the high ash content of coal, will still remain. The remedy is more coal washeries and it seems the steel plants have to wait to attain reasonable efficiency till the needed number of washeries are established in the course of the next few years.

COTTON TEXTILE

Poor Export Performance

That all is not well with our cotton textile exports is not a revelation that has come yesterday. Our cotton textiles are not as popular in foreign markets as they

were some time ago for perhaps two main reasons. The first consideration that weighs with a buyer of cotton textiles is price. In this regard our goods are at a disadvantage as other competitors are able to dump their goods in overseas markets at much cheaper price than we are able to offer our cotton textiles. The second deterrent seems to be our failure to cater to the exact needs of the foreign consumer. Considerable headway has been made in recent years in regard to the latter but the first of the handicaps is still very much there. It is idle to expect the foreign buyer to support our cotton textiles when he is able to get his requirements according to his taste and at prices much lower than what we can offer.

If we want to promote the export of our cotton textiles, an essential prerequisite seems to be that we make our goods intended for export according to the taste and need of the various foreign markets in which we want to sell them and price them competitively.

This is the crux of the problem and in solving this, the responsibility does not solely rest with the Government as is often supposed. It is true, Government has much to do in this matter as the ability or inability of the indigenous industry to compete successfully with other manufacturers in overseas markets stems primarily from Government policies governing the industry. It was time the authorities sat up and took note of the deterioration in exports. The position has been lucidly explained by Mr Neville N. Wadia, Chairman of the Cotton Textile Export Promotion Council, the other day at the seventh annual general meeting of the council. The performance on the export front so far in the current year is very disappointing. In the first five months, exports are 48 million yards behind 1960. There is stiff resistance to our goods in overseas markets and on the top of this there is the question of the UK joining the European Common Market. This is a matter for con-

cern for us because the UK is taking one-third of our exports. While efforts should have to be made to offset the effect of this development which is perhaps inevitable, the success of our cotton textile exports depends ultimately on our own efforts. Government has to find out what facilities it can possibly give to the industry to enable it to stand on an equal footing with other competitors in world markets. It is gratifying to note that Government has realised that modernisation of mills is an important step in the direction of maximising exports and that foreign exchange will be made available for this purpose even in the present context of an acute shortage of it.

TEA EXPORTS Decline in 1960

The decline in India's tea exports, which is spotlighted by the Tea Board in its review for 1960, is a matter for grave concern all

over the country, particularly at a time when the country's foreign exchange reserves are distressingly at a low level. Exports of tea from India declined from 229.5 million kgs in 1958 to 214.3 million kgs in 1959 to 195.1 million kgs in 1960. The main factors that are responsible for this downtrend are the fierce competition in the international markets, decline in domestic production and the increased internal consumption. The overall production in 1960 was shorter than in 1959 by 5.6 million kgs whereas the domestic consumption rose from 109 million kgs in 1958-59 to 115 million kgs in 1959-60. To arrest this upward trend in internal consumption, Mr A. S. Bam, the Chairman of the Tea Board, has announced the other day that all the propaganda units of the tea industry in India will be withdrawn. Probably the Chairman was guided by the reduced output in 1960 to resort to such a drastic step. But the latest reports from the tea growing centres provide ample indications of a record crop during the current year. If we can rely on these reports the supply position is likely to create an actual glut in the country. Viewed in this context the decision of the Tea Board does not seem as a palliative, on the contrary, it will only worsen the position.

However, in fairness, it has to be stated that the eagerness of the Chairman to stimulate our exports is laudable. Obviously Mr Bam has overlooked the simple fact that mere reduction in internal offtake will not, by itself, solve the problem. Two well-known deterrents to our exports are the uncompetitive nature of Indian tea and the inadequate propaganda carried out in the consuming centres abroad. The inroads made by other exporting countries in the international markets were to a great extent facilitated by the competitive prices of their tea and the facilities extended by their Governments. For instance, the East African tea is exempt from export duty and the Indonesian tea enjoys export subsidy. The position in India is entirely different. Indian tea is subjected to several taxes like export duty, excise duty and sales tax which will only inflate the prices and make it all the more uncompetitive. Considering all these factors the need of the hour appears to be the reduction of load on the industry and adoption of other suitable steps which will strengthen the competitive position of Indian tea in the international markets.

MANGANESE In Deeper Difficulties

Addressing the second quarterly general meeting of the Nag-Vidarbha Chamber of Commerce,

Nagpur last week, Mr D. C. Sutari underlined the paramount importance of governmental action with a view to assisting the manganese industry in Maharashtra which is "getting deeper in difficulties". Exports of manganese ore from the country has slipped down from 1,715,000 tons in 1957 to 1,162,000 tons in 1960 which alone will cast a depressing spell on the industry. Apart from this the industry in Maharashtra has cause for serious concern, for production there has gone down in comparison with Orissa and Mysore.

Mr Sutari observed that the present predicament of the industry in Maharashtra, is partly due to the unsympathetic treatment meted out by the authorities both at the Centre and the State level. The suggestion to allow some railway freight concession has fallen on deaf ears. The special concession granted by the Ministry of Commerce and Industry by way of 5 per cent foreign exchange for the import of machinery for actual users will practically be of no avail to the majority of the mine-owners since nearly 95 per cent of them are not exporters. Even the Municipal Corporation of Nagpur has adopted an indifferent attitude. For example the question of octroi duty and refund regulations raised by the representatives of the trade is left untouched by the Corporation. Unless these difficulties are removed the position of the industry will only weaken further.

Side by side with such measures, concerted efforts are also required for the promotion of exports. The decline in exports during the past few years is the result of numerous factors like rise in world production, development of new mining areas in the proximity of consuming countries and the emergence of Russia as a leading exporter of manganese ore. The actual demand for this ore in the country forms only about 40 per cent of total production. Taking into account of this factor alone the need for increasing our exports becomes all the more imperative.

LIC An Odious Comparison

In 1960, the Life Insurance Corporation of India achieved a larger income from the investments, and this is largely responsible for the dividend of 11 per cent paid on the capital of Rs 5 crores invested by the Central Government. It has been pointed out that the Government had agreed to make good the deficit arising from the failure of some nationalised companies to meet their obligations in full. A question that may be asked now is whether a dividend can be paid out of the available surplus before the bonus to the

policy-holders has been paid. This is a legal point which may require to be tested by a Court action, because any dividend paid to the Government can come only from the valuation surplus on which the policy-holders have a superior claim.

It is surprising that the Chairman who has referred to the two valuations conducted in 1957 and 1959 has permitted the Government to claim and receive 5 per cent and also conceded the claim of the Government to receive a dividend of 13 per cent for 1958 and 1959. Nothing has been said about the dividend for 1960 or to the sum available in the profit and loss account, although a great deal has been said about administrative efficiency. A comparison with old-established companies like Oriental or New India in the past would be out of place, because the LIC today has a monopoly and operates on an expanded scale. Nevertheless, a comparison with a leading British Company like Prudential in the matter of earnings

or business is sobering. Those who are aware that the 4 sh. shares of Prudential are quoting around £18, will argue that the 13 per cent dividend paid by LIC is not a financial triumph. Of course, there is no market for the LIC share capital and some satisfaction may be derived from the fact that among nationalised enterprises, the LIC is doing much better than many others—the shipyard, for example. The yield on the life funds may be applied as a yardstick by any careful investor who can now assume that a minimum return of 4½ per cent is just and proper and anything lower (as in the case of growth stock) should be compensated by capital appreciation.

ANDHRA PRADESH New Endeavours

The asbestos found in Andhra Pradesh is the base for an expanding industry. The deposits in Rayalaseema and Telengana are

exploited. Some grades are exported but a use must be found for preparing the mineral near the mines. This will require power supply but domestic demand is going up, according to the Director of Mines. As the sole producer of barytes, with an estimated output of 6,500 tons a year, Andhra Pradesh is meeting the requirements of the paper, paint and rubber industries in India. The oil industry requires barytes but no export trade has been established. Two mills to crush barytes may be set up at Cuddapah soon. The establishment of a paint factory requires capital: so also barium chemical manufacture to replace present imports.

Far more important in the view of many is the establishment of iron and steel perhaps in Warangal near enough to the coal fields. There are State-owned deposits to permit the establishment of a low shaft furnace at Kothagudem. The public sector in Andhra Pradesh will include pig iron production because limestone coal etc.

PROUD OF INDIA'S FIRSTS...

Gently, he sticks the last strip of tissue-weld and fabricate the sleek aluminium paper over the frail balsa fuselage. A little glue, a little patience and he is proud of his HF-24, supersonic jet plane.

Someday soon he will know that putting together India's first supersonic jet wasn't so easy. It would have been impossible to

weld and fabricate the sleek aluminium body he admires so much without Argon.

A rare gas, Argon welds difficult metals and is now produced in India for the first time, by Indian Oxygen. Like HF-24 indigenous Argon will save India much foreign exchange.

an be got easily and the claim or a small industry to use iron ore in surplus has been backed by private enterprise. At a meeting with Mr K. C. Reddy in July the A. F. Federation of Industry and Commerce pleaded for a small steel plant and a big re-rolling mill. The ambitions and plans of Madras have influenced the demand for a steel plant though the State Government's outlay of Rs 305 crores on the Third Plan must be increased to meet the investment requirements. The claim that non-cooking coal is enough to start iron and steel production in Andhra Pradesh has been made again and it is fairly certain that the State means to get the most out of its minerals, because of the takeover of the Singareni collieries by the Central Government on the score of loans and advances made after the capital was reorganised last year to raise the paid-up capital to Rs 4 crores.

PROFITS TAX

A Fiscal Novelty

An article in the ECONOMIC JOURNAL (the latest issue) is of special interest to India as Mr M. Fg. Scott has written about absorbing the rise in prices by means of a special profits tax. While he has conceded that rises in wages influence prices and expensive imports affect the costs of production, he has also argued that price stability can be ensured by a new graduated tax related to the increase in prices. This seems a painless cure for inflation, though Mr Scott is quite modest in putting forward his plea for a supplementary profits tax as distinct from income tax and super-tax. Price stabilisation involves a wage-freeze to which Mr Lloyd is committed today; but it is a remedy apt to provoke industrial strife. But Mr Scott recognises that prices are detailed by the leaders of industry, the big firms which have virtual monopoly at present. It is assumed that in order to avoid public criticism, big ones will not raise prices to the consumer and expose themselves to inquiry.

The argument over steel prices in the USA, with workers asking for a price increase against the plea of the consuming industries just emerging from a recession, will probably induce the USA to think of a fiscal remedy for inflation. The payroll tax in the UK may not have the effect of cutting costs or retarding increases in prices. The excises, sales tax and customs duties raised by order may also raise prices and if the volume of consumption falls, prices might go up faster than expected, and to a greater degree. The problem is much the same in India because excises and sales tax contributed to the rise in prices.

The ingenious proposal for increasing tax in relation to prices

charged, not profits earned, may savour of mediaevalism with its bias for the just price, but economic regulation in future must think of the consumer as well as the producer. The former also pays taxes, mostly indirect, and the new variation on indirect taxation will have the merit of saving for the Government promptly a part of the undue or windfall profits and promote retail price maintenance by the most efficient firms in any business. The intrusion of price control can be limited, while in the case of export commodities the prices offered by foreign buyers may come to determine prices for the domestic market. In any case, Mr Scott has produced something of a fiscal novelty, a tax not on person or property, but on the movement in prices so as to check the depreciation of money.

CHARTERED BANK

Rights Issue Quite Logical

There may be no direct connection between the Reserve Bank's proposals to strengthen banking and the Chartered Bank's proposal to raise its capital by 20 per cent to £6.6 million. But the rise in deposits after the acquisition of the Eastern Bank's capital may render the new issue of shares quite logical and easy too. The clearing banks in the UK have increased their paid-up capital and the exchange banks may be inclined to supplement mergers by raising the present capital to show that they can cope with regulations as well as competition. By increasing its capital, the Chartered Bank in its second century will please its shareholders. And the Allahabad Bank too may be induced to follow the example by raising extra capital here to make it clear that foreign connections imply also the capacity to meet all demands.

The Chartered Bank's example will be followed doubtless by the Hongkong Group and the National Grindlays so as to show that the Exchange Banks have the means to retain and extend their business even if the 27½ per cent rule were to apply to them in regard to liquid assets. The Indianisation or recruitment of staff undertaken earlier this year contained a hint that the Chartered Bank means to improve its position because it has an Indian subsidiary which has come down to the South also last year.

The promise of keen competition for business may compel the larger joint-stock Indian Banks to look soon beyond the large cities and the direction that branch banking lately may be different from that of the past in which the Jam Sahib had to offer the Central Bank of India special inducements to open a branch of the bank in

Jamnagar. The rule of non-discrimination, applied since the Central banking enquiry decided against protection for Indian banks against British rivals, may still help the exchange banks because their long experience may build up new connections. And if trade in S. E. Asia is based on a common market as projected by Malayan leaders, the Exchange banks stand to gain, more so as the Indian banks with branches abroad may find it harder to compete in the future. It is easy to predict that the Chartered Bank has more opportunities in Japan though Australia may be out of its reach.

CLOAK AND DAGGER

Many Inventions

Another diplomatic discovery by Russian agents about the Cento's intention to divide Afghanistan and give away a part to Iran and another to Pakistan may provoke ready ridicule abroad. The capacity of Iran to regain a lost empire is doubtful. But the rupture of relations between Karachi and Kabul provides an occasion for Moscow for many inventions. And the reference to the schemes of Pakistan or Iran is an indication of what Russia wants, a weak Afghanistan which is a buffer State living off foreign aid, both Russian and American. The Russian achievement in the partition of Germany or earlier in Poland does not stand in the way of raising an alarm, perhaps because some Pathans in the tribal area may actually prefer to join Pakistan if Afghanistan were divided.

The Paktoonistan demand implies the creation of a N.W. Frontier State that will merge in West Pakistan eagerly. And Kabul has no means to stop it because the dynasty is new and the Afghans have a chance of getting more US aid if there were to be a division. The withdrawal of Britain has not really altered the position for the better, as Afghanistan has to lean on Russia and there are no minerals to help a land-locked country which like Nepal must rely on neighbours to help out. Of course, history indicates that Lahore could rule Kabul easily and keep guard on the Oxus but Afghan tribalism is an obstacle to expanding nationalism on either side and the buffer status is largely a result of the clash of Russian imperialism on the British expansionism in the last century. Dependence on Russia for cloth, sugar etc has made Kabul a client of the Soviet Union and to warn off the USA may be the major object of a discovery which can be related readily to current events. It will not be surprising if the Afghan government decides to stop taking American aid, because of Cento and Pakistan's alliance with the USA. That is presumably the object of the Russian warning

against aggression. This may well lead to the end of the monarchy in Kabul and it may pass into history like the Khanates in Central Asia which have become Russian colonies in Asia, confronting a resurgent Chinese imperialism in Sinkiang and Tibet.

AUTOS

Uncertain Future of Independents

The motor industry in England, examined earnestly by PEP after the war, has undergone a great change in recent months and the future of the industry in the light of falling exports is discussed anxiously after the indication that Leyland Motors is carrying out a drastic economy campaign in Standard-Triumph and the future of the latter company is causing concern to the workers as well as shareholders. The 5 sh. shares of Standard Motors are now easily distinguished from the 5 sh. shares of British Motor Corporation which in view of its expansion plans may be said to have an assured future. The current preference for bigger companies and fewer models may be soon reflected in mergers within the industry although subsidiaries of American companies like Ford Motors or Vauxhall motors will not lend themselves easily to reorganisation.

It is now clear that like shipping or shipbuilding motor manufacture is exposed to more intense competition from Europe and the future of small independent companies like Rover will be soon viewed with anxiety. From the Standard Motor Company's point of view, the earlier bid to acquire control made by the late Mr Ferguson would have proved advantageous and it is evident that acquisition of Triumphs did not help the company to regain the prosperity it hoped for. Whether overseas associations or assembly plants would be affected by the concentration of control desired by Leyland Motors, is a minor matter as compared with the Company's probable withdrawal from the light car field. But Leyland motors, hitherto identified with commercial vehicles, is credited with an intention to enter the field of passenger car manufacture.

CYPRUS

Lemons and History for Sale

Cyprus, the isle of unrest has since 1959 sought stability and even tried to bring the Turkish minority round to approval of its independence. In the Commonwealth, and also among the neutrals that assembled recently at Belgrade, Cyprus is planning for a transformation. Last month,

16 September 1961

Parliament was told by the President-Archbishop Makarios about the need for a five-year plan costing £62 million for rapid development of the island's resources. The shortage of water must be reduced by irrigation and subsistence farming must be improved by co-operatives. The lemon farms of Cyprus are famous and there is a trade in fruit as well as wine. But Cyprus has history to sell just like Greece and if packet-boats call at ports, a rush of tourists can be expected. The minerals are exported, but much more can be done if more capital enters. Greek experience may indicate that fugitive funds may return to Cyprus but the opportunities for local investment must be created.

Welfare and development grants from the UK are unlikely and Greece may have little money to spare. Cyprus is turning eagerly to the World Bank for loans and the IDA may advance funds for roads and railways, especially, as the mining companies maintain only tramways for haulage of ore. The scheme of land reform to pull the peasants up from their pathetic contentment may need no justification at present. The ideal is a freehold even for small holders and the Archbishop thinks of co-operation also as a tool for improving agriculture. The Guardian reporting the Cyprus five year plan last month made no mention of the economic consequences of the troubles of 1955-59. But the Archbishop looks for a rush of capital in order to overcome the trade deficit. In 1959 the imports exceeded substantially the exports as the last report of the Colonial office about the island's administration made it clear. The revenue came largely from customs duties but Cyprus levied estate duty in addition to incometax on all having over £300 per annum. The excises on matches, tobacco and liquor proved that Cyprus had copied the UK fully before thinking of a plan. The island's public debt was small (about £13.38 million) and that may inspire a hope that Makarios will get the funds from his plan.

The Neutrals can offer only advice. None of them can make a contribution to Cyprus' welfare and development. The Government has to keep half a million people on the island particularly when many are eager to get off to Greece or Egypt. That is a type of population problem for which the only solution is economic growth. Cyprus is hopeful since the World Bank may help its mining or other projects on the score of Europe's rising need for asbestos, chrome ore, copper and pyrites. The list of improvements desired cannot be met by the British in charge of Cyprus' defence and the Balkan countries can offer little money so as the island does not qualify as a communist area because it is ruled by

a Church dignitary who has been raised to temporal power by popular vote.

US AND THE ECM Protectionist Protests

The European Common Market may help US overseas trade or investment but the US farmer will find demand for surplus grain shrinking, if tariffs are put up against non-European countries. The US Government's protest to the ECM has been confirmed by Mr Orville Freeman's view and talks in Brussels are promised. If surplus grain from France or Italy supports agricultural production in West Germany, there will be no need to buy wheat from the Middle West, especially if tariff concessions are made to Canada at the instance of Britain. And Germany's investment in Brazil or Argentina will ensure supplies of cotton or grains like maize.

The old hog-corn formula of the USA would become useless and the Government will have a bigger holding in commodities and will have to rely on the P.L. 480 programme, which is not so good when yields per acre are rising as in the case of cotton. The USA wants a liberal trade policy but a customs union in Europe relying on imports from Africa, spells danger to the USA especially when Argentine meat or linseed will be pressed on the European Common Market for sale. The revival of European nationalism and the creditor status of the USA compromise long term export prospects and Latin America cannot buy the commodities because the means to pay for US imports is doubtful. The Randall Commission did not think of it and reciprocal trade treaties will not ensure a steady offtake of grain by the Low Countries or by Britain which will probably put commonwealth demands for advantages first.

The US obviously wants free trade in foodstuffs but France wants to protect potato-growers and others in order to remove present discontents. This is clearly a situation which will probably lead to bargaining over tariffs. The USA must accept German or Swiss goods in order to keep up exports of foodstuffs, let in Danish dairy products or French cheese. But there is a strong protectionist element at home even now and the USA will have to lower her tariffs to help one section against dairy farmers who like to keep out margarine and butter too. The Common Market tariffs will be low but not so far as the US farmer is concerned, and the Farmer Lobby in USA will be alarmed by differential tariffs based on ECM preference. The adjustments would spell danger to French farming resting on a tradition of

production like German agriculture. Indeed, the sudden retreat to free trade in Europe means danger to protection in the USA and the large free trade area in the USA, if it is an example to Western Europe, has a double-edged effect, for it means that the US agriculture surplus would be larger and hard to dispose of.

US Price Stability Vital

US Government officials have made repeatedly clear their belief that the current upsurge in economic activity can proceed with inflation. Indeed, this has been the case so far; the price level has remained stable, particularly when one considers the rapid pace of the current economic rebound and the rise in demand for goods and services.

Yet, it is recognized that as the economy continues to expand, and production and demand continue to rise, the possibility of an incipient inflation could become an influence to reckon with. Hence, the Kennedy administrations oft-repeated admonitions against the kind of price and wage increases that could feed the fires of inflation at home and injure US industry's competitive position abroad.

This was a theme to which President Kennedy returned in the course of his recent news conference, when he strongly urged the nation's steel makers to avoid price increases this fall. He is

hopeful, he said, that the companies will decide they can absorb wage rises, scheduled for October 1, under existing labour-management contracts, without price boosts.

The President was basing his statement on information supplied by his economic advisers, who believe it is possible for the steel companies to pay the higher wages and still enjoy good earnings. The idea is that the normal gains in productivity, or output per man-hour, plus the greater efficiency possible at the rising levels of production will more than offset the impending increases in wages rates.

The extent of public interest in this subject is seen in the stated opposition of a number of influential Congressmen, led by Senators Gore of Tennessee and Douglas of Illinois, to any steel price increases. And in a recent speech at the University of Wisconsin, Chairman Walter Heller of President Kennedy's Council of Economic Advisers expressed the hope that price lines will be held and wage negotiations will be kept within the bounds of productivity increases.

This latter reference is particularly applicable right now to the automobile industry, where collective bargaining is in progress on new labour-management contracts. It was no accident, then, that President Kennedy also expressed the hope at his news conference that new agreements in this industry would not provide for increases in the cost of automobiles to the consumer.

Actually, at this moment the American people are living through

THE GREAT INDUSTRIAL WHEEL in motion

In spite of dangers from outside and faspiparous tendencies inside, the country's progress must go on. The wheels must keep moving and we do our bit in that direction.

"J.K." today serves the nation through the following industries:-

Cotton, Jute, Wool, Rayon, Nylon, Mining, Steel, Aluminium, Engineering, Office Machines, Paper and Board, Plastic, Chemicals, Oil, Soap, Paints, Sugar & Ice.

AND Banking, Insurance, Export and Import for service of industries.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IT would perhaps be cynical to suggest that Mr P. A. Gopalakrishnan has thought up the scheme of "mass insurance", because he will not be there to implement it. The scheme has certainly its points, not the least attractive of which is its novelty. But the brief account he gave in his address to the Bombay Insurance Institute leaves many essential questions unanswered. The idea is put thus by the LIC Chairman: "Instead of issuing individual policies with different rates of premium, depending upon the age at entry and the duration of the policy, mass policies should be issued to industrial and commercial establishments, army personnel and workers in Government departments insuring them with a standard amount". There is to be no medical examination and no proof of age. The idea is that on the death or retirement of an employee, the establishment will certify the fact, and the LIC will pay it the agreed amount of the policy. The attractions of the idea listed by Mr Gopalakrishnan are many: certainly the way he described them would make many mouths water: "There will be no payment of first year's or renewal commission, no administrative work dealing with field officers and agents and no payment of medical fees. For millions of policies, the number of premium notices and receipts to be issued will be only a few thousand. The renewal expenses ratio for this mass business will be reduced to one or two per cent and premium rates can be reduced to astonishingly low levels."

Obviously, the idea opens up interesting possibilities. Though it is somewhat novel in the form in which the LIC Chairman presents it, it was not entirely unknown before. Many business houses have similar schemes for some of their senior staff. Again, in pension and gratuity arrangements for employees, an insurance company is often brought into the picture and by means of a three-cornered contract, pension-cum-death benefit arrangements are worked out in return for agreed premia paid by the company. Often it is a condition of employment that an employee should join such pension-cum-life insurance scheme. Indeed, the Income-tax Act treats the annual premium paid by an employer on

such policies as a perquisite in the nature of salary and taxes it in the hands of the individual employee. Under the mass insurance scheme envisaged by the LIC Chairman, it is not clear whether the premium will be paid by the individual employee or by the employer. If it is to be another "amenity" to be provided by the employers, they are not likely to be very enthusiastic over it. Already there is in operation a kind of compulsory provident fund to which the employer is obliged to contribute. This mass-insurance may be considered by the employer an additional burden on him, though, of course, it will all come off his income-tax. If, on the other hand, the premium is to be paid by the employees themselves, then, invidiousness of various sorts may arise. For instance, as recognised by the LIC Chairman himself, a person on the verge of retirement will pay far less by way of premia than a person who is brought in on the scheme at a much younger age. Mr Gopalakrishnan tried to justify it on the general principle underlying life insurance, by which "every policy holder, whatever his longevity, pays for the mortality of other policy-holders". Acquiescence in such philanthropy is now ready only because it is invisible and often unsuspected. What the eye does not see, the mind does not grieve about. But in a case where a young policyholder knows whom he is subsidising, he may consider it a species of extortion. The LIC Chairman is undoubtedly right in anticipating an enormous increase in the quantum of LIC's business if the scheme he has suggested is adopted. But, even here, it is possible to exaggerate the scope of the scheme in a country in which the vast majority of the people are self-employed or employed by people without the resources for working out the kind of scheme outlined. The area to which this kind of scheme can be extended is also comparatively small. To the rural areas which were supposed to be virgin soil to be explored by the LIC, this scheme is entirely inapplicable. Last but not least, the vast army of agents and other salesmen of insurance is not likely to welcome a prospect in which they will be put out of "commission" in both senses of the word.

"Should any of the States in the present-day conditions resume nuclear-weapons tests, it is not difficult to imagine the consequences of the act. Other States possessing the same weapons would be forced to take the same road. An impulse would be given to resume nuclear-arms testing... under any conditions, and unlimited by anything... Should any side violate the obligation to which it has committed itself, the instigators of such violation will cover themselves with shame and they will be condemned by the peoples of the world." Were this a quiz session and you are asked to guess the author of the passage quoted, you would perhaps attribute it to somebody in the outer fringes of the CND movement. Actually it is Mr Nikita Khrushchev before the Supreme Soviet in January 1960. If Mr Khrushchev bothers at all to remember what he said in January, he will find it an embarrassing memory. Or maybe he may not. In the passage quoted the shame attaches to "the instigators of such violations", and Mr Khrushchev can always point, at least to his own satisfaction, to others as the instigators! Americans, no longer under an obligation to desist from tests of their own, are inclined to consider the Russian action a propaganda gift to the West. The fact that the announcement of the decision to resume tests came on the eve of the Belgrade Conference of Neutrals is taken as indicative of Mr Khrushchev's indifference to neutral opinion. There is even a tendency to consider Mr Khrushchev's action as a sign of the Russian leader's nerves snapping under the strain of the cold war. This last may be a piece of wishful thinking, but there is no doubt that the motives behind the decision to resume tests, and the timing of such tests are still obscure.

Whatever the motive, the ending of the two-year moratorium of testing has come as a profound shock to the uncommitted peoples of the world. It is worth recalling that Russia reaped the propaganda advantages of being the first to renounce the tests two years ago. In resuming these tests now, whatever the reasons for such reumption, Mr Khrushchev owes an explanation. To a world that is helplessly watching the pollution of the atmosphere and the perfection of deadly weapons, the hypocrisy of the professions of peace and goodwill towards mankind is simply disgusting. It is no longer possible for Russians to exploit cynically the high-minded protests of persons like Bertrand Russell against nuclear weapons. Indeed Bertrand Russell's imprisonment this week for organising protests against nuclear weapons

assumes added poignancy in the light of the Russian tests.

In the passing away of Lord Pethick-Lawrence, India has lost a warm friend and a life-long well-wisher. Only a fortnight or so ago, I read about his taking part in a function in honour of Rabindranath Tagore held in London. Lord Pethick-Lawrence was one of those who get churned into politics by high purpose and whose moral idealism redeemed it from being the rat-race it essentially is. The radical streak in the British middle class is a well-documented phenomenon: men burdened with the sins of their complacently exploitative confreres have in their time done much vicarious atoning. It is a matter of history that this streak in Lord Pethick-Lawrence took the form of pledging his physical, financial and moral resources to the suffragette movement, on behalf of which, he went to gaol. And in what is perhaps an early western example of the use of a Gandhian weapon that has since become blunted with indiscriminate use, he went on hunger-strike in gaol. After this, it was perhaps predictable that he should have become a pacifist during the war and should have drifted into the Labour Party, on whose behalf he achieved an unique distinction: he defeated Sir Winston Churchill in an election. Contrary to the popular image of him, he was a financial expert: at Trinity College, Cambridge, he won the Adam Smith Prize and among his published books, there are many on economics. In the Labour Government formed in 1929, he was appointed Financial Secretary to the Treasury. But with all that, the popular image of a kindly, warm-hearted and humane man is probably the essential truth about him. In any event, it is an image that he would have preferred to be remembered by.

I knew him well, and as he told me last Thursday he knew father before I was born. He was his sparkling self and of course he did not miss the weekly verandah (misnomer, surely, these days?) It's held in the air-conditioned bar party at the Calcutta Club. As usual the chairs around his table multiplied and were fully occupied. As an aside to me he spoke of the time when father had ordered a small whisky. The bearer promptly brought the libation—but with a splash of soda. "Take this away," said father, "I did not ask for soda." A long and successful career at the Imperial Bank; a sustained period during which he was sportsman par excellence, representing India in the Davis Cup; and a circle of friends that was vast and bewildering in the cross-sections and strata of society that it covered. Yes, a host of people will miss Bobby De, and I am one of them.

EAVESDROPPER.

NEWS IN BRIEF

The Reserve Bank of India has requested all persons holding accounts abroad except those maintained in the currencies of Burma, Ceylon and Pakistan to furnish full particulars of such accounts to the bank by 12 November 1961. It was made clear that it was not the intention of the bank to freeze the balances in the accounts. But in the very difficult foreign exchange situation the country is facing they had to be taken into account when fresh releases of foreign exchange were asked for the current holders.

The Lok Sabha passed the Bill providing for the insurance of Bank Deposits upto Rs 1,500. A Corporation would be set up as a subsidiary of the Reserve Bank for this purpose with a paid up capital of rupees one crore and would insure all deposits in commercial banks including the State Bank of India and its subsidiaries. Deposits of the

Union and State Governments and of foreign Governments will not be covered.

The displaced Indian banks in Pakistan have been exempted from the operation of the Evacuee Property Law of Pakistan. This step, which renders 59 Indian banks as non-evacuee concerns, has been taken in accordance with the agreement reached between the Rehabilitation Ministers of India and Pakistan at their meeting in Calcutta on 6 July 1961. These banks have now the option either to operate in Pakistan, if allowed to do so by the Government of that country, or repatriate their surplus assets. The mode of repatriating the surplus assets of the banks, which either do not wish to function in Pakistan or are not permitted by the Pakistan Government to operate in that country, has yet to be decided.

The Constitutional Bench of the Supreme Court of India has upheld the validity of the operative provisions of the Forward Contracts (regulation) Act 1952 in a judgement delivered by Justice Ayyangar on 12 September.

India will be producing Rs 500 crores worth of machines every year by 1965. Machines to make machines will account for Rs 45 crores of this figure.

A new direct air service between India and Philippine Island will be opened by BOAC in November. Comet 4 jetliners will leave Calcutta on Wednesday and Saturday nights, arriving in Manila, capital of the Philippines the following morning, after a flight of nine and a half hours. Return services will leave on Thursdays and Saturdays. The service is subject to the Government's approval.

PERSONAL

Mr A. M. Thomas, Union Deputy Food Minister, left for Cairo on his way to Geneva to lead the Indian delegation at the International Sugar Congress. He was accompanied by Mr K. P. Jain Chief Director of Sugar, Union Ministry for Food and Agriculture. The other two delegates Mr D. D Puri and Mr S. S. Kanoria are to join them in Geneva.

Mr K. B. Lal, Special Secretary Ministry of Finance, is leaving for Bangkok on 16 September to preside over the special meeting of the Group of the ECAFE, which has been set up to promote commerce and trade of the South East Asian region.

Mr Khemchand Rewachand Fatechand Khilani, at present Joint Secretary in the Ministry of Commerce and Industry, has been appointed Commissioner for the Government in British East Africa with jurisdiction extending to the Federation of Rhodesia and Nyasaland and concurrently as Consul General in Ruandi Urundi.

a period that some economists have characterised as a "price ideal." The consumer price index—which is not really a cost of living measurement but is the closest thing to it—has risen only fractionally so far this year, and is less than one per cent above the level of a year ago. As of mid-1961, the index stood at 127.6 per cent of the 1947-49 average, compared with 127.4 at the beginning of the year and 126.5 in mid-1960.

Of course, the index has now reached the point where any time it shows any kind of a rise, no matter how small, it nonetheless means a new high. This tends to result in the kind of publicity that may overtake the extent of the increase and its consequences.

On the basis of present trends, many experts expect that 1961 as a whole will see a consumer price rise of little more than one per cent, if that much. A rise of this magnitude is slight enough, and certainly qualifies as reasonable

price stability, especially when it occurs against the background of a vigorous economic expansion.

This obviously has great significance for the American people and their pocketbooks. For with incomes moving steadily upward, and at a much faster pace than prices, it means that Americans are taking important steps up the living-standards ladder.

It hardly needs to be emphasized that the American people would like to see these trends continue—and so would the Kennedy administration. Just what additional moves the administration could or would make to head off price or wage increases it deems unjustified or inflationary is an open question at the moment.

One thing is evident, however. The President now has made this a matter of clear public concern, and openly has thrown his, and his administration's influence behind the maintenance of price stability as a national objective.

Where on earth is

Mogadiscio?

Frankly, till somebody in Mogadiscio ordered BINNY's cloth, we too didn't know that it was the capital of Somalia in East Africa.

Today BINNY's cloth is imported by 50 countries—superb fabrics made from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved.

Rigid Quality Control* ensures maximum durability and perfect finish

Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

*Testing cloth for defects

Every yard of cloth from the looms is examined thoroughly for defects before it is passed for dyeing or bleaching and finishing.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels • Anticrease Suitings • Tussore Union Fabrics • Silk Sarees etc. etc

BINNY—a great name in textiles

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited
Subsidiaries of Binny & Co. (Madras) Ltd.

Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

Export and Import Policy

THE proceedings of the Import Advisory Council, which met in New Delhi last Monday, were enlivened by a discussion of the question of 'maintenance vs development' imports. The ball was set rolling by Mr C. H. Campbell of the Associated Chambers of Commerce with the suggestion that imports of raw materials, components and spares must constitute a primary and essential charge on the country's foreign exchange resources. He was ably seconded by Dr P. S. Lokanathan, who made out a lucid and logical case for accordng priority to maintenance imports, in order to ensure maximum utilisation of existing capacity. Dr Lokanathan's speech made a profound impression on the Council, to judge by the powerful efforts that were made to reserve a place for development imports in the overall pattern.

Dr Lokanathan argued that import policy should be geared to export promotion and in this context made the interesting suggestion, later endorsed by the Minister for Commerce and Industry, that the two bodies, the Import Advisory Council and the Export Promotion Advisory Council, should be merged or at least should hold joint meetings. The tight foreign exchange situation in the context of unutilised capacity, which he estimated at fifty per cent, dictated a new order of priorities. The country should accept its implications and be prepared for the sacrifices it involved.

Dr Lokanathan's thesis was countered by the Minister for Industry who preferred a pragmatic approach to the problems of imports and development. It was not possible, he said, to draw a line of demarcation between maintenance and development imports. He demonstrated with overwhelming detail that what could now be classified as development was actually intended to meet the maintenance needs of existing industries. The points made by Mr Manubhai Shah are certainly valid in the perspective of the Five Year Plans. But we cannot be sure that they are equally relevant to the immediate problem of the policy for next six months which after all was what the Council was supposed to consider. The suggestion made by Mr G. D. Bansal that a balance should be struck between maintenance and development imports appears to provide a cosy and comfortable answer, until it is realised that we are here dealing, not with a case of static equilibrium in which the forces are perfectly balanced, but a dynamic condition

in which the point of equilibrium is continuously shifting. The overriding consideration, at present is the fact to which Mr K. C. Reddy, Minister for Commerce and Industry, drew attention in his inaugural address, namely, that even after drawal from IMF, foreign exchange reserves have declined to the low level of Rs 136 crores.

Considered from another standpoint, the entire debate, despite its stimulating highlights, appears to be unreal, especially when viewed against current practice in the utilisation of available foreign exchange. As things are, almost the entire free foreign exchange resources available, that is, 'export earnings plus the small amounts of 'untied' British and German loans, fall short of the amounts required to pay for maintenance imports. Government, it has been repeatedly stated, is striving to persuade aid-giving countries to give as much of their assistance as possible in the form of 'untied' loans so that they could be utilised to pay for maintenance imports. No part of the free foreign exchange is devoted to what may be narrowly defined as development imports. New projects in the public sector are almost entirely financed by loans tied to these particular projects or, in the case of private sector undertakings by foreign equity participation. There may be marginal cases where small quantities of foreign exchange are made available for import of balancing equipment or machinery for essential expansion. But this does not alter the basic pattern, under which almost all the free foreign exchange available is actually used to pay for maintenance imports.

If, in despite of this policy, there still exists considerable unused capacity, and imports of raw materials, components and spares cannot be liberalised to the extent necessary to utilise existing capacity to the full, the reason is shortage of total free resources available and not any diversion for development. Any liberalisation will depend less on a change in the attitude of donor countries to the question of aid and their readiness to accept the position that it is not helpful to make a distinction between maintenance and development. In view of these facts, it is difficult to understand the relevance of the debate or for whose benefit the leading participants engaged in 'a demonstration of shadow-boxing.

If the Import Council discussions were dominated by this debate, the bogey of compulsory exports cast its shadow over the Export Promotion Advisory Council which met the next day. But it is heartening to note that the Business Leaders

were prepared to look the bogey in the face. Both the Vice-President of the Federation of Indian Chambers of Commerce and Industry who initiated the discussion, and the President of the Mill Owners' Federation conceded the need for some measure of compulsion, direct or indirect, to ensure the required volume of exports. At the same time it was suggested that the purpose could be achieved on a formally voluntary basis through the organisations of the exporting industries. Mr S. P. Jain pointed out that it was difficult to enforce a uniform formula for all categories of exports. A blanket provision of compulsory exports may be self-defeating, for it may result in reducing competitive capacity.

Mr B. P. Singh Roy who had doubts about compulsion, dealt mainly with the problems of tea and jute. While he yielded to none in his concern for safeguarding the interests of jute growers and recognised the importance of a floor price for jute, he urged the need for careful consideration in fixing it at a proper level. He hoped that it would not be fixed in a hurry in an atmosphere surcharged by political considerations. He made the specific point that the price should not be fixed on the eve of the election. Otherwise the jute industry will face the same sort of difficulties as the cotton textile industry whose exports, as Mr N. N. Wadia had pointed out earlier, are handicapped by the high price of raw materials.

Outstanding contributions to the discussions were made by Mr Bharat Ram and Mr K. K. Birla, who represent the rising generation of industrialists. The former referred to the report of the Committee on Quality Control whose recommendations have been accepted by Government. While describing the report as a 'useful document', he urged care in implementing its recommendations. Compulsory quality control, he said, should not be allowed to act as a brake on exports, through the inevitable red tape. He also disagreed with the Committee's recommendation to ban goods sent for export on consignment basis. From his experience of his recent visit to Germany, he felt that exports would increase if goods are sent on consignment basis. He also questioned the utility of fixing standards for an article like artistic brassware whose appeal consisted in the fact that it did not conform to any definite standard.

Mr V. Ramakrishna made the original and interesting suggestion that export of iron and steel could be developed if the monopoly of the public sector is lifted and small scale steel plants are set up in the private sector. But in view of the prevailing shortage of protective foods, his discovery of export prospects for bananas is not likely to be received with unmixed enthusiasm.

The high level conference on coal that was held at the capital to discuss the various problems regarding the supply and production of coal in the country had ended without any

hopes of an early improvement in the supply of coal to industries through speedier movement from the collieries. Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, who presided over the conference, apprised the members of the measures that Government had taken to effect improvement in the coal movement. He also quoted figures to show that the Railways had, since the transport bottleneck started, made available additional railway wagons for movement of coal in Bengal-Bihar region, and for States above Moghul-sarai. In the Bengal-Bihar region 5,200 wagons a day moved now against 4,465 a day last year. In the congested area above Moghul-sarai, also the supply of wagons was higher at 2,100 against 1,900 last year. However, it was admitted that the improvement in coal movement had not been as satisfactory as was expected and it was disclosed that consequent on the continuing shortage of transport capacity for movement of coal, coal production had to be reduced by three to four lakh tons. But imports of either coal or coke have been ruled out under any circumstances.

Sardar Swaran Singh also outlined a system of priorities for movement according to which Railways, steel plants and power plants, in that order would get priority in respect of their requirements. The Minister made out a strong case for top priority for the requirements of the Railways in view of the need for enabling the Railways to move traffic arising in other sectors and industries.

The view of the representatives of the industry was that while requirements of industries for wagon supplies was 10 to 15 per cent higher than the quota sanctioned by the Coal Controller, the actual supply was shorter by another fifteen per cent. They put forward a suggestion that instead of the industries being asked to curtail their requirements to suit the capacity, the Railways could be advised to work out an annual target movement during the Third Plan.

Though subjected to sharp criticism from all quarters, the representative of the Railways put up as best a defence as possible of the Railways' performance. One important point made by the representative of the Railways was the need for coal dumps which is not very well received in industrial circles. The Railway spokesman made it clear that without the introduction of coal dumps, the Railways would find it impossible to cope with the needs of coal during the Third Plan. It will thus be seen that matters are very much where they were before.

The US Government has concluded an agreement with the Government of India for a loan of Rs 45 crores to the Chambal, Nagarjunasagar, Kosi, Bhadra and Tungabhadra river valley projects. This amount will come out of the sums earmarked as loans to the Government of India from the sale proceeds of agricultural commodities supplied to India under the US Public Law 480. The loan is repayable in rupees.

Markets

JUTE Revival of Overseas Interest

Steady conditions prevailed in the jute and gunny markets during the past week ended Wednesday. While raw jute prices were generally unchanged, fluctuations were rather wide in the goods section. With arrivals showing improvement daily, holders in the raw jute market were eager for business. Prices in the goods section moved up steadily on indications of fresh overseas business and on account of the decline in August-end stocks of the goods with mills. Total stocks at 64,100 tonnes were 7,100 tonnes less than at the end of the previous month. The decline is distributed more or less evenly in both the main categories; hessian stocks at 20,000 tonnes were 3,400 tonnes lower while sacking stocks at 34,500 tonnes were 3,600 tonnes. Other varieties of goods at 9,600 tonnes were also lower by 100 tonnes. Production during the month has recorded an improvement over the previous month. Output in August amounted to 78,300 tonnes as compared with 64,400 tonnes during the previous month. Production of hessian has increased from 22,500 tonnes to 28,600 tonnes with that of sacking showing an improvement from 30,100 tonnes to 34,900 tonnes. Production of other goods has also improved

from 11,800 tonnes to 14,800 tonnes.

It will be evident from the above two sets of figures that demand for jute goods during August had been on a satisfactory level. Despatches of gunnies should have been near about 85,000 tonnes as compared with the actual in July of 69,000 tonnes. The fact that stocks have declined despite a rise in production is an indication that foreign buyers are beginning to take interest in the Indian market. Thanks to the present reasonable level of raw jute prices, mills are finding it advantageous to do simultaneous business. During the week there have been reports of fresh business from Argentina and indications of revival of interest from the US. It is not unlikely that substantial orders may emanate from Cuba where there is an increased demand for gunny due to higher agricultural production. There is reason to believe that foreign consumers may be entering the primary market sooner rather than later for the simple reason that there is little chance of any further substantial decline in prices of raw jute what with the insistent demand for fixing a minimum price for raw jute. This matter came up again for discussion in the West Bengal State Legislative Assembly last week. A non-official resolution passed by the House suggested that steps should be taken to make it compulsory for the jute mills to create a buffer stock under

the supervision of the jute Commissioner so that production in the mills could go on unhampered. Dr B. C. Roy, Chief Minister, in the course of his speech averred that if the jute industry was to be stabilised the growers of raw jute should be assisted. In his view prices of raw jute should be fixed long before the cultivation period. He further pointed out that it was in the interest of mills to ensure that raw jute prices do not fall to uneconomic levels. However, for the time being at least there is not much talk about floor prices. This is probably because raw jute prices have recovered considerably since the idea was mooted.

In the meantime further discussions regarding the stability of raw jute, the creation of a buffer stock and kindred matters have taken place between the representatives of the Indian Jute Mills Association and the Government of India.

It is generally believed that in view of the plentiful supply of raw jute and with a view to prevent a glut of raw jute in the market mills will be asked to increase their hours of working from the present 42½ per week to 48 hours. It is this apprehension that has been responsible for the slight recession in jute goods prices noticeable toward the close of the week.

PRODUCTION OF JUTE GOODS: AUGUST 1961

	(000 Metric Tons/Tons)		
	Aug. 1961.	July 1961.	Aug. 1960.
Hessian	28.6 (28.1)	22.5 (22.2)	35.7 (35.1)
Sacking	34.9 (34.3)	30.1 (29.6)	49.0 (48.3)
Others	14.8 (14.6)	11.8 (11.6)	10.9 (10.8)
Grand Total	78.3 (77.0)	64.4 (63.4)	95.6 (94.2)
Hours worked	187.0	136.0	208.0

*Based on 42½ hours per week and does not take into account the hours lost by mills which worked lesser number of hours.

TEA Exports

NORTH INDIA, with a crop increase of 40 million pounds, has recorded a 30-million pound increase in exports since the new season began. Despite a 12-million pound gain in crop, Ceylon has increased shipments by only about 1½ million pounds. Eire is now buying more from Ceylon and Ceylon's exports to Iraq have moved up. According to trade sources in Cochin, tea exports from Cochin fell to 5.59 million pounds in July 1961 from 6.49 million pounds in the corresponding month of last year. This reduced the total tea exports from South India, in the four months ended July 1961, to 26.53 million pounds from 27.13 million pounds in the corresponding period of last year.

However, exports of Indian tea to several Asian countries fell sharply in 1960-61. Exports to Bahrain fell in value from Rs 27 lakhs to Rs 27 lakhs; to Kuwait from Rs 55 lakhs to Rs 46 lakhs; to Saudi Arabia from Rs 23 lakhs to Rs 23 lakhs and to Trucial Oman from 56 lakhs to Rs 53 lakhs. Exports to Afghanistan, however, rose value from Rs 58 lakhs to Rs 87 lakhs to Iran from Rs 2.85 crores to Rs 3 crores and to Iraq from Rs 88 lakhs to Rs 1.14 crores.

Meanwhile, in the Export Sale in Calcutta this week, offerings were 70,414 packages. After a hesitant start, there was a good general demand at lower rates with buyers paying particular attention to the well-made teas of orthodox manufacture. Plain Broken were well accepted; but where stalk was present they were up to 15 nP per kilo less. Fannings declined by some 15 nP although more general support was forthcoming at these lower rates. Better orthodox descriptions in with more demand than in recent weeks although prices again decline.

CTC teas were an irregular feature but met with more enquiry and clear medium and good liquoring sort were sometimes considerably dearer. More fibrous teas, however, once again met with a heavy discount. Whole Leaf grades were again weak feature; but there was more support for any teas free from stall Tippy teas and Darjeelings met with a little more enquiry at easier rates. Following rates were quoted:—Clear Plain Pekoe Rs 4.20 to Rs 4.50; Plain BP Rs 4.10 to Rs 4.30; Plain Fannings Rs 3.95 to Rs 4.10. Medium Assam CTC BP Rs 4.30 to Rs 5.20. Medium Assam CTC Fannings Rs 4.81 to Rs 5.20; Best Assam CTC BP Rs 5.30 to Rs 5.70 and Best Assam CTC Fannings Rs 5.40 to Rs 6.10.

In the Internal Sale, offerings were 26,325 packages of Dusts. There was a fair demand at easier rates. Enquiry for CTC types was selective and prices were much lower, particularly towards the close. The few bright liquoring teas, however, met with better support. The fibrous CTCs were virtually neglected. Plain orthodox dusts were absorbed at a drop of 20 nP to 30 nP, while the Assam varieties proved difficult of sale. There were heavy withdrawals, particularly towards the close. Following rates were quoted: Plain Orthodox Dust Rs 4.00 to Rs 4.25; Medium Assam Dust Rs 4.30 to Rs 4.70; Legg-cut Dust Rs 4.30 to Rs 5.00; Medium Assam CTC Dust Rs 5.50 to Rs 5.80 and Good Assam Dust Rs 6.30 to Rs 6.50. Also, 227 packages of leaf grades were offered for internal consumption.

Tea stocks in Calcutta warehouses increased to 526,861 chests at the end of August 1961 from 395,032 chests at the close of the previous month. Stocks in public warehouses rose sharply from 204,145 chests at the end of July 1961 to 268,272 chests at the close of last month as did those in private warehouses from 190,887 chests to 258,589 chests. At the end of August last year, stocks amounted to 516,393 chests with 303,230 chests in public warehouses and 213,163 chests in private warehouses.

In London auction, offerings were 70,000 packages. North Indian teas

net with a good demand with bright colouring liquoring Assams attracting the strongest competition and the best of these tended dearer. Useful medium descriptions moved in seller's favour; but stalky and thin liquoring kinds were irregular and easier. The South Indian growths submitted met with a fair demand, but at lower rates with bids generally 1d to 3d per pound below the previous levels. Some of the better liquoring African sorts met with good competition and were sold well; but demand for the best of the African offerings was somewhat limited and there were a number of withdrawals. Ceylon teas came in for rather less competition.

The London averages for the first eight months of this year show some significant trends. North Indian teas, sold through London, gained more than 150,000 chests in volume and 1.42d in value per pound over the corresponding period of last year. Reversing the relationship with Ceylon prices, North India's this year was higher by slightly more than 1d

per pound. Mincing Lane auctioned less South Indian tea this year, but obtained a slightly better price.

COTTON Brisk Activities in Cotton Market

Active conditions prevailed in the cotton markets in Bombay during the last week. The March contract reached the highest level of the season. Apprehension of considerable damage to the crop in Punjab, Vidarbha and Berar, and fresh speculative demand helped the market to forge ahead. Adverse weather forecasts continued to give boost to buying activities. After opening around the previous closing the March contract looked up further in buying by Calcutta operators. However, on Tuesday last the contract

was quoted lower at Rs 603.25. But the undertone was firm throughout the week under review.

The spot market also depicted steadier conditions. The selective enquiries developed presumably deriving inspiration from the announcement of the release of cotton quota to the mills. The turnover, however, was restricted as the Forward Market Commission has not yet permitted dealings in the delivery contracts. Among the indigenous growths new crops like Laxmi and Kalayan met with some mill interest.

In the foreign section, African cotton was in the limelight. The revival of interests in this growth resulted in the purchase of a sizeable quantum during the week. The brisk demand in the African cotton was due mainly to their low prices, and Egyptian growths also attracted attention on a moderate scale. Spinner interest was also noticeable for ready lots of Egyptian, Sudan, African and American cotton.

The export section remained featureless throughout. According to latest indications the Government of India is believed to have rejected the trade's suggestion to release a Deshi. The Government arrived at quota of 25,000 bales of for Bengal such a decision without specifying any reasons.

During the season which just ended our exports totalled about 0.3 million bales of cotton and the foreign exchange earned was around Rs 12 crores. The total quantum exported comprised 0.19 million bales of Bengal Deshi, 50,000 bales of stapling 23/32" and below, 30,000 bales of stapling 24/32" and 30,000 bales of yellow pickings Assam and Comilla.

The Textile Commissioner announced the Government's decision to permit mills to purchase Indian cotton during the season to the extent of 50 per cent of their aggregate consumption of both imported and indigenous growths during the previous season. The

mills are allowed the option to cover their requirements either from the new crop or from the earlier season's crop. No separate quotas will be given to the mills. But they are required to submit to the office of the Textile Commissioner statements of the commencement of every month specifying the quantum of Indian cotton purchased by them in previous month against this quota.

This quota will not be available to mills who failed to fulfill their obligations to import American "B" cotton allocated to them during the previous season ended 31 August 1961. Those mills are, on the contrary, required to approach the Textile Commissioner through the Indian Cotton Mills Federation for obtaining the requisite permission to purchase indigenous cotton. Under these circumstances purchases against unutilised quota issued during the last season will be permitted.

Consumption of cotton by the Indian mill from 1 September 1960 to 30 June 1961 increased by 173,598

bales to be placed at 4,408,652 bales.

Description	1959-60	1960-61
Indian	3,735,819	3,457,375
Pakistan	15,989	16,687
American	123,221	562,196

Other Countries	1,258	396
Total	195,277	287,527

Fall in Tin Prices

The most marked feature of the London commodity markets, during the week, has certainly been the abrupt ending to the rapid soaring of the price of Tin. Early in the week, the £1,000 level seemed to be acting as a psychological ceiling and inducing a widespread profit-taking. But, the sudden setback to £935

per ton in the middle of the week, was attributed to the announcement that the US General Services Administration had decided that 50,000 tons of strategic stockpile of tin were surplus to requirements. While the prices on the London Metal Exchange crashed, Singapore, too, faltered in sympathy.

The direct implications of the US announcement are still obscure, although certainly none of the tin can be sold until six months at least have passed and Congressional approval obtained. Moreover, the US is legally bound on selling to try to avoid disrupting the market. In its own interest, it will try not to take an excessive loss on metal, much of which was bought at the high prices ruling in recent months.

In spite of the easiness in price and the offer by the United States, tin sources from New York still predict that the price may go even higher. They say that these offerings, along with sales by other governments, will have only a temporary effect on the world prices of the metal. They add that "these offerings may put a damper on the rising price for a little while. But, in the long run, we anticipate the price will continue upward."

The International Tin Council is presently unable to do anything to stop the spiraling price, since speculators have taken over the market. Tin sources, therefore, predict that some sharp revisions in the floor and ceiling prices will be made when the Council meets in mid-September.

In India, too, prices have suffered a setback in sympathy with the international trends. In the Bombay market, the September contract in tin was marked down to Rs 175.50 per 10 kgs from Rs 180, while the ready price has lost Rs 3 per 10 kgs.

Prices in India are stated to have been rigged up by the excessive speculative bull manipulations. Some of the powerful operators in the Calcutta, Bombay and Madras markets are reported to have cornered all the available supplies. This had caused a boom in tin prices in the country. It is, however, felt in market circles that the present stocks in the country can last for eight months. The impending imports are also expected to improve the supply position.

PEPPER

Thanks to the slight improvement in the conditions on the export front, Pepper prices have shown a slight recovery from the recent low levels. In the Cochin market, the rate for the ready position is quoted at Rs 415 as against Rs 405 per quintal.

The change in sentiment has been mainly caused by the improved prospects for exports. The Indonesian trade delegation, which toured US recently, was reported to have sold a fairly big quantity of black pepper at a lower price. But selling from Indonesia is now reported to have subsided. The US buyers are reported to have limited stocks. With the result, ready

On Pan Am...

MOST BIG JETS TO THE MIDDLE AND FAR EAST— AND 'ROUND THE WORLD

No other airline offers direct from Europe to so many cities in the Middle East: Istanbul, Ankara, Beirut, Teheran, Karachi, Bombay, Pan Am Jets continue across the Pacific to Hawaii and the U.S. West Coast... completely 'round the world.

It costs no more for the most experienced airline crews... in the spotless planes of your giant Jet Clipper.

And Pan Am gives you the Priceless Extra of Experience

inside and out... in the efficient, multi-lingual flight attendants who serve the rare wines and delicious food. It's a wonderful experience to fly Pan Am.

For reservations, call your Travel Agent or Pan Am in:
New York: 42 Chowringhee, Tel. 44-3251 (5 Lines)

Calcutta: Taj Mahal Hotel, Tel. 211063, 211064

Clipper, Trade-Mark, Reg. U.S. Pat. Off.

WORLD'S MOST EXPERIENCED AIRLINE

Moreover, demand from the Continent has revived. Pakistan has bought some quantity, while East Germany is reported to have purchased 200 tonnes. All these developments seem to have installed some confidence in the domestic market.

CARDAMOM

Cardamom prices have moved up gradually during the past fortnight. Prices of white superior quality have gone up from Rs 15.75 to Rs 17.50 per kilo. Owing to heavy rains this season, the crop in Mangalore green variety has been damaged. According to the trade estimate, the crop in this area may be less by about 25 per cent.

Floating stocks in Bombay are estimated at 1,500 bundles of Alleppey green variety. The daily average arrivals are placed at 200 packages. The supply position may not remain comfortable in the coming weeks, as the crop is expected to be delayed owing to floods and rains in most of the producing areas.

GUR

Conditions in the Hapur Gur market remained generally quiet with prices displaying a slightly easier tendency.

In the Bombay Market, sentiment appeared to have been influenced by the weakness in Chittoor, Vellore and Nizambad. Demand had been at a low ebb, while buying from Konkarn area had dried up owing to incessant rains. Floating stocks at three lakh burlaps were considered to be considered heavy.

The market at Kolhapur was also ruling quiet. Prices were quoted between Rs 35 and Rs 60, according to quality.

FOODGRAINS

Steady conditions were witnessed in the Hapur Foodgrains market due to poor arrivals. After early fall to Rs 14.25 a maund due to the sale of imported wheat, the average quality improved to Rs 15.25 as daily arrivals were poor. The Rice section was quiet on reports of a good crop. Gram, however, rose on firmer advices from the Punjab. In the Pulses section, Peas were steady due to good support from Calcutta.

Trade circles are hopeful about the crop prospects in grains and pulses in the new season. According to some sources, the total crop may exceed 80,000,000 tons in the new season. The last season's crop was 79,300,000 tons—4,300,000 tons more than the previous year. Favourable weather this season in most of the producing areas and the good progress in sowing have brightened the prospects of a bumper crop. It is now generally felt that there is no need to depend on imports. On the contrary, some even express the hope that it will be possible to export pulses, which enjoy a ready market in overseas countries. With buffer stocks, to be created out of the imports from USA, the supply position in wheat is expected to remain comfortable in the new season.

TOBACCO

The US Department of Agriculture has estimated the world Tobacco production at 6,184 million pounds for 1961—slightly above the 6,168 million pounds in 1960. Major increase in production this year are in the United States, Greece, Japan and Iran. Principal decreases are in Italy, Canada, Turkey and France.

Production in Asia for harvest during the last half of 1961 is a little above 1960. The output of most countries is about the same. In Japan, however, it may rise 21 million pounds above 1960.

The Soviet Union is reported to have purchased 1.9 million pounds of low grade Indian tobacco of the 1961 crop. It is understood that this purchase has been made from the Guntur stock at prices ranging from 20 nP to 62 nP per pound. The bulk purchase by Russia is likely to give some relief to the tobacco market in Guntur. However, in view of the large stocks accumulated there, the new purchase may well pass un-noticed so far as its impact on prices are concerned.

The final estimate of Indian production of tobacco is placed at 281,000 tons for 1959-60. The comparable figure for 1960-61 is not yet available; but the sowing area, which was 934,000 acres in 1959-60, has shrunk to 881,000 acres according to the second estimate for 1960-61.

BANGALORE SILK

During the week under review, the prices of all qualities of raw silk remained at the same level as in the previous week. The prices for filature raw silk of 20/22 Dr. continued to be quoted between Rs 84.89 and Rs 87.04 per kgm. and those for cottage basin raw silk between Rs 72.75 and Rs 77.16 per kgm. The prices for charka raw silk were quoted between Rs 52.91 and Rs 71.65 per kgm. The supply of raw silk was reported to be fairly satisfactory and the demand was moderate.

The rates for reeling cocoons showed slight rise by 25 nP to 35 nP per kgm. They were quoted between Rs 3.45 to 4.50 in Mugur area, between Rs 4.00 to Rs 4.60 in Channapatna area and between Rs 5.00 to 5.25 per kgm. in Sidhaghatta area.

An upward trend was noticed in the rates of Mysore race seed cocoons when quoted between Rs 4.25 to Rs 5.20 per thousand while a decline of Rs 6.00 to Rs 10.00 was noticed in the case of foreign race seed cocoons which were quoted between Rs 6.00 and Rs 15.00 per thousand.

GOLD & SILVER

Prices on the Bombay Bullion Exchange showed a further decline during the week. Silver was particularly weak due to increased arrivals and a lack of buying interest. Though a leading bank which had sold silver a few days back was reported to have withdrawn from the market, fears that it might come again to sell the metal at improved prices curbed enthusiasm to buy even at lower levels. Arrivals

amounted to 32 bars as against an offtake of only 8 bars. Silver ready (below .996) changed hands at Rs 203.25 to Rs 204.55.

Price movements in the Gold section were barely steady. Arrivals amounted to 6,000 tolas as against an offtake of only 4,000 tolas. Ready rates moved narrowly around Rs 124.60. Sovereign ruled, however, very steady at Rs 95.75.

SHELLAC

According to the final estimate released by the Indian Lac Cess Committee, the Baisakhi lac crop for the current year is estimated at 550,000 maunds as against 1.1 million maunds in the previous year. It may be mentioned that the normal yield, based for the 10 years preceding 1960, is 736,000 maunds. The decline in the crop is shared by all the States.

The Jethwi (Kusmi) crop is estimated lower at 31,000 maunds against 32,500 maunds in the previous year.

Meanwhile, conditions in the Calcutta shellac market continued to rule quiet in the absence of foreign enquiry. Pure TN quality is quoted around Rs 125 per package. Shipments, during the current month till 7th, were 12,839 packages comprising 3,949 packages of shellac; 8,375 packages of seedlac; 50 packages of buttonlac and 465 packages of other varieties.

OILS & OILSEEDS

In the Bombay market, the overall trend in Oilseeds remained weak. The bumper crop expectation in groundnut, the falling prices of edible oil and the disheartening performance on the export front in castor oil—all these factors sapped the morale of the market.

Groundnut, its oil and oilcakes lost much ground owing to full liquidation. Apart from the reports that Russia had rejected offers of cakes, encouraging reports of the crop were pouring in from all over the country. The bright prospects and the falling prices attracted groundnut from growers, stockists and co-operatives all over the country who had withheld the supplies in anticipation of higher prices. Groundnut Bold ready was quoted at Rs 45.75 and Groundnut Oil at Rs 19.70.

The decline in groundnut prices had a sobering influence on the stock holders of castorseed and the visible supplies increased considerably. Renewed weakness in the market was mainly attributed to nervous unloading, induced by a fresh turn for the worse in the outlook for the export of castor oil. While reports regarding the possible release of castor oil from the US stockpile had tended to create uneasiness, the details, which had got into circulation during the past few days, served to demoralise the market further. Castor ready was quoted at Rs 33.50 and Castor Oil, commercial quality, at Rs 13.50.

Sentiment in the Linseed section remained affected in sympathy with other oilseeds. Linseeds ready was quoted at Rs 39 and Linseed oil at Rs 16.50.

Throughout last week the groundnut and oil market in Madras continued to exhibit an easier under-

tone. Calcutta interests stepped in to buy at lower levels. They negotiated a number of deals. This was late last week. Prices of oil, both spot and valda had gone up, but not much.

Last week Calcutta interests preferred to get groundnut oil stock from Calcutta itself at lower rates. Only bazar people were found lifting small quantities of groundnut oil from the local stocks. But the price of groundnut kernel still is not proportionate to that of oil. There is steadiness of kernel supplies to local and upcountry markets. Whereas the Madras City stock position daily continues to be about 25 tons, that of South Arcot markets continues at the daily rate of 300 tons. Pollachi arrival of red groundnut kernels continues to be the same. But price of this quality had not gone down.

Summer crop at Tindivanam, Villipuram and other centres attracted attention. There was not much business done in groundnut kernels both last week and this.

There was not much to say also against forward business. Even here the steep decline continued to be the feature, but for a temporary break last weekend.

The price of groundnut oil September 6 was at Rs 190.50 per 100 kgs. From that day it began to decline to Rs 189.80. By week-end it came down to Rs 187.40. Only at this time came the Calcutta interests to buy at lower levels. They withdrew after a small purchase and the price went up by about Rs 3.40 per 100 kgs.

As for kernels the price of coramandel variety per 80 kgs continued at Rs 82 for two days from Thursday last. It declined by a rupee by the week-end. Then it was quoted at Rs 81.50. There has been no change in this rate and it closed at that today. Peanut variety or medium quality also did not suffer much from the midweek prices. From Rs 79.50 per 80 kgs, the prices declined by a couple of rupees. There was only a rupee increase again today at the close at Rs 78.00 per 80 kgs.

Arrivals of kernels in southern markets were fair this week. In Pollachi area also good supplies were available. The local merchants absorbed all the quantities. At Salem too new crops had begun to arrive though small, around 1000 bags per day.

There was firmness in price of gingelly seed and oil due to good demand in the producing areas of Tuni, Rajahmundry. Northern side people have begun buying gingelly seed thinking that price is lowest. There was slight improvement in oil price too due to this.

In the Southern centers the price of groundnut oil was at a lower level. In Bezvada the price per candy of 500 lbs remained at Rs 465. In Vriddhachalam it was priced at Rs 430. In Pollachi the price was consistent at Rs 440. In Villipuram the price is still lower at Rs 420 per candy.

The price of kernel continued unaffected in these places during the last week. In Villipuram area it was at Rs 80 per 80 kgs. In Salem it was at Rs 82.

16 September 1961

The Bombay Gas Company Limited

Increased Production Despite Adverse Factors

Need for an Adequate Rise in Price of Gas

Mr B. L. Jalan on Problems Facing Company

The following are the Extracts from Chairman's Address of Shri B. L. Jalan at the Annual General Meeting of The Bombay Gas Company, Limited held on the 15th September, 1961.

Gentlemen,

In a recent address in Calcutta, I had traced the three distinctive stages of economic growth which the country will have passed through in a relatively very short span of three decades. As I said then, what we should aim at is a kind of "incentives-based regulated economy". Much of the progress which we have achieved would not have been possible but for such incentives. At the same time, it is true that a lot more could be achieved if we relied more on incentives rather than on restrictive regulations. To satisfy the growth-hunger of our economy, as perhaps of all developing economies, we will have to devise an ingenious system of incentives without permitting the growth of a lop-sided economic system. The objective of orderly and balanced development should not interfere with the larger objective of acceleration of the growth rate.

INCENTIVES-BASED REGULATED ECONOMY

The incentives take many forms: positive and negative; direct and indirect; financial and non-financial; and tangible and notional. Sometimes negative incentives in the form of removal of deterrents to industrial production such as shortages of feed stocks, fuel, power and transport facilities may be as effective in the promotion of industrialisation as direct, positive and financial incentives.

During the last few months disquieting news flashes regarding such shortages have appeared. Steel production which is so vital to the country's industrialisation and general progress was hampered by non-availability of coal which again was due to transport bottlenecks. In fact, transport difficulties and production and distribution of coal have become the subject of an ominous controversy in the official and non-official quarters. We are aware of the power failure in Calcutta and Delhi. These failures only aggravated the chronic power shortage in the country. Many industrial proposals in several States could not be promoted owing to non-

availability of power or cheap power.

My object in pointing out the specific instances is merely to establish that there is a great scope for the State to provide increasingly and to strengthen the basic sinews of industry and thus accelerate the pace of industrial and economic growth in the country. While it is true that the national income in the country increased by 42 per cent during the first decade of planning, we are conscious of the great leeway which we have to make in order to catch up with the economic standards of more advanced countries. Owing to the population growth at a rate of over 2 per cent per annum, the per capita income during the first two Plan Periods could increase by only 18 per cent. We are still ranked among the lowest group, our per capita income being Rs. 302 in 1959-60 against Rs. 1,426 in Japan, Rs. 4,863 in the U.K. and Rs. 11,118 in the U.S.A.

An attempt has been made recently to rectify our tax law by passing a new Income Tax Act. While there is, no doubt, a lot of scope for differences of opinion on the changes which this new Bill has or has not brought about, one thing is patent: it has not gone far enough in simplifying or rationalising our tax system. The adherence to a system of multiple taxes such as Expenditure Tax and Wealth Tax has been guided by doctrinaire approach rather than by pragmatic approach to economic problems. While these taxes have not been given up, the highest rate of individual income tax continues to be as high as 84 per cent while Prof. Kaldor, on whose suggestions the so-called integrated tax system was adopted, desired the rate to be reduced to 45 per cent only.

As regards a liberal credit system, we may refer to the proposal being discussed at present among the banking circles to reduce the advance-deposit ratio. In support of the proposal it is mentioned that the ratio is higher as compared to those prevailing in advanced countries such as the U.K. and the U.S.A. One would easily see the futility of comparing such ratios with those of advanced countries if the basic objective of accelerated rate of growth is kept steadily in view. First, our ratio is lower as com-

pared to rapidly developing countries such as Japan where it is as high as 100%. Secondly, the banking habit in countries like the U.K. and the U.S.A. is so widespread that even a lower ratio would meet the requirements. Thirdly, our deposit-advance ratio has not been growing appreciably in the past. While it was 64.42 per cent at the end of 1951 and rose to 71.63 per cent at the end of 1956, it was as low as 52.79 per cent at the end of 1959. If in March, 1961 it was 72.12 per cent, it fluctuated between 56 per cent and 72 per cent during the preceding 12 months, depending on seasonal requirements of the money market. Moreover, the insecurity to which the bank depositor is exposed will be well taken care of by Deposit Insurance which is very rightly being sponsored and by a more vigilant policy followed by the Reserve Bank.

GAS PRICE: A CASE OF DISINCENTIVE

When we think of incentives, the case of our Company for raising the price of gas sold by it comes to my mind in bold relief. If one were to mention a glaring case of disincentives by restrictive regulations, one could easily cite the example of our own Company. While there is a clear and strong case for providing incentives for further expansion of the Company by allowing a reasonable price so as to enable it to create its own resources for expansion, it has been denied even a basically economic price which would cover its mounting costs and yield a minimum fair return to the investors. While the general level of prices has increased five-fold since the beginning of the Second War, the gas price chargeable by your Company has been rigidly held at a level lower than that of 1926. I am not aware of any such instance in any other industry. The rates and prices charged by public utilities, such as railways, road transport services and air lines run by the Government have been increased from time to time.

The increasing costs of raw materials—coal and diesel oil, and the continuous upward trend in salaries wages and dearness allowance, have resulted in a precipitate fall in net revenues. Since the close of accounts, the cost of diesel oil has increased by Rs. 24.01 per kilo-

litre. The increase in the excise duty on coal from Re. 1 to Rs. 4 on account of the Coal Mines Amendment Act, will cost your Company a further sum of Rs. 3 lacs annually.

NO SURPLUS LEFT

The cumulative increase of costs without a corresponding rise in the sale price of gas has resulted in yielding negligible, if any, profits from the main operations of the Company, namely, production and distribution of gas. Leaving out the income from investments and providing for taxation, the net profit from the main operations of the Company comes to the meagre amount of Rs. 20,694, which means practically no profit.

The prices of basic commodities like steel have been increased from time to time, on the recommendation of the Tariff Commission, in view of the increased costs. The Government of India have similarly granted repeated increases in prices in the case of many other basic and important industries such as cement, caustic soda, paper, coal and the like. The Hydrel Companies in Bombay regularly levy in their bills "Fuel Adjustment Charge" on account of increases in the cost of fuel. Likewise, in the case of the Calcutta Electric Supply Corporation, the coal surcharge on the rates for electricity is raised automatically by the Corporation so as to cover increases in the pithead price of coal and/or in freight. There have also been increases in prices levied by several utility concerns, such as electricity, water, telephones, railways, posts and telegraphs, air-lines and the like. The Tariff Commission is presently engaged in an inquiry relating to the price of cement, pursuant to a representation made by the cement industry to the Government of India that the price of cement fixed in 1958 was uneconomic today. You can view this factor in juxtaposition with the authorised price of town gas payable to your Company which is lower today than the 1926 level. The price of coal has gone up from Rs. 26.53 per ton delivered at factory in 1926 as against Rs. 52.36 per ton in 1960. This represents a 97 per cent increase. Similarly, the wage bill during the same period increased by about 60 per cent per thousand cubic feet of gas sold.

We may also compare the cost of coal to and price of gas charged by the Oriental Gas Co. Ltd. in Calcutta, which is a directly comparable case. While the Calcutta Company gets its coal at a delivered price of approximately Rs.35 per ton (against the price paid by your Company at Rs. 52.36 per ton) and charges an effective gas price of Rs. 5.25 nP. per thousand cubic feet (against the price allowed to your Company of Rs 3.94 nP per thousand cubic feet).

It has to be impressed on the Government that an industry subjected to price regulation should be enabled to provide substantial funds for rehabilitation, modernisation and expansion from internal sources, and that the return on investment in such an industry should have some relationship with the return in other industries, so that it might be in a position to compete effectively for new funds in the capital market.

INCREASING PRODUCTION AND EFFICIENCY

In spite of all sorts of adverse factors affecting the growth of the Company, I am proud to inform you, gentlemen, that your Company has kept up the tradition of increased production from year to year, to meet the increasing demand of the existing customers.

At this juncture, it would not be out of place to mention that your Directors do not wish to rest content by meeting only the increased needs of existing customers with increased production, but have a keen desire to expand its present capacity by installing additional plant and equipment so as to meet the greater requirements of those who do not enjoy the benefit of this cheap and highly convenient fuel. The greatest factor inhibiting this growth, as you know, is the uneconomic selling price of gas. We cannot, you will appreciate, approach investors to invest more funds in an industry which does not permit an adequate and fair return, more particularly in view of the many competing and growing demands on the Limited financial resources available in the country.

SUMMING UP

I may now sum up the case of the Company for an adequate rise in the price of gas:

1. The Company continues to get the price lower than that prevalent in 1926;
2. The prices of all components of cost have risen phenomenally;
3. The gas price received by the Company is about the lowest town gas price in the world;
4. While the Company pays 50% more for coal delivered ex-factory as compared to the Oriental Gas Co. Ltd., Calcutta, it is allowed a price which is

25% lower than that being charged by the Calcutta;

5. The price received by the Company is only a fraction of the price of bottled gas, which is only a bye-product, now being sold in the town by large companies;
6. The Company has, in spite of the meagre or no profit earned, maintained perfect service by supplying quality gas to its consumers;
7. Since 1946, the Company has increased the production of gas by over 60 per cent;
8. The Company has been denied the benefit of an escalator clause which is allowed to electricity and public utility Companies in Bombay, Calcutta and elsewhere;
9. The Company has been denied also the necessary margin in price for creating internal revenue for financing an expansion programme, which is a feature of price-fixation by the Tariff Commission in other industries such as steel and which is invariably an important factor in industrial expansion in all the fast-advancing countries of the world;
10. The Company has practically ceased to earn any profit from its operations of gas production and distribution;
11. By denying compensatory allowance for meeting the rising costs, in spite of continued good services and expansion in production, efficiency has been penalised and the investors denied a fair return on the capital invested;
12. Without an adequate return on capital, investors are not interested for further investments to expand the capacity of the Company to keep pace with the over increasing demand and to replace the use of costlier gases by some 33,000 Bombay consumers, which is about double the number of the existing consumers of your Company.

We have again moved the Government of Maharashtra for allowing us a reasonable and adequate rise in the price of gas in order to cover increases in the manufacturing costs, and also to enable us to launch a programme of expansion in gas connections. As you are aware, rapid industrialisation is the sheet anchor of the present economic policy and programmes of Government. We have every hope that the Government will make a realistic reappraisal of the Company's case this time, and allow the Company to

make an adequate increase in the price of gas.

COAL SUPPLIES

The Company has recently been experiencing considerable difficulties in securing full or regular supplies of coal; the total wagon allotment during the first six months of this year was only 2118 wagons as against a quota of 2520 wagons.

The coal supply position showed further and marked deterioration from July this year. The total loadings in July were only 308 wagons (as against the quota of 420 wagons); but as most of these were loaded in the second half of the month, the actual deliveries during July were only 227 wagons. The shortage of coal was so acute that the fuel gas supply to the consumers had to be drastically reduced during the period from the 23rd to the 30th July.

In spite of continuous representations from the Company to all competent State and Central Government authorities, the supply position during August deteriorated alarmingly. The Company was compelled to cut down gas supplies to the extent of 15 to 20% to all its consumers except for Public Lighting with effect from the 22nd August. The inconvenience caused by such a cut to important consumers like hospitals and maternity homes and to major industries like the Government Mint, can be easily imagined. The shortage of coal results in reduced coke production, which also causes widespread inconvenience to those using coke for domestic purposes.

A study of the causes of the present sharp fall in the coal supplies reveals:

1. that there is a downgrading of the priority of supplies to this public utility concern by the Coal Controller;
2. that alternate supplies from other collieries programmed for the Company during the third week of August, were diverted to other shipments, thereby causing a further delay in loading for the Company; and
3. that the Company's allotted and programmed supplies from the Colliery scheduled to load in box wagons, were diverted to the Railways and Steel Plants at the last moment.

An examination of the question as to how far the present difficulties with regard to coal supplies can be solved by the movement of coal by the rail-cum-sea route from Calcutta to Bombay would show:

1. that sea transport is open to a variety of risks and delays due to variety of risks and delays due to labour troubles, port detentions and weather conditions;
2. that movement by sea with the completion of necessary formalities may take about 8 to 12 weeks and is of no help in improving the present position; and
3. that the landed cost of coal at the Gas Works by the rail-cum-sea route may involve an additional financial burden of about Rs. 10 to Rs. 15 per ton, over and above the subsidy offered by the Government.

Moreover, the proposed mode of transport being in an experimental stage, it is not appropriate that the fuel supplies to a public utility concern, playing a vital part in the civic and industrial life of Bombay, should be exposed to the risks and uncertainties of an altogether new experiment.

Your directors feel that when the selling price of the major product of this Company, town gas, has been frozen at an uneconomic level by the State Government, the imposition of any additional burden on the Company at this stage, would further aggravate the critical financial position with which it is faced.

This does not purport to be the proceedings of the Annual General Meeting.

For the Investor

INVESTMENT GOSSIP Stock Exchange Reform

BY making the stock exchange itself responsible for its orderly working, Mr Morarji Desai, Union Finance Minister, has dispelled the apprehension that Government has preconceived notions about what is wrong with the stock market and how and what remedies are to be applied to rectify the situation. It is significant to note that Mr Desai has made it clear that since stock exchanges are autonomous bodies, Government will not ordinarily interfere in their day-to-day working.

Rumour had it that last week's meeting between the Union Finance Minister and the Presidents of Stock Exchanges was primarily called to announce certain decisions reported to have been arrived at by Government in regard to stock exchange reform. But what actually happened at the meeting was surprisingly different. Far from being reduced to a position of secondary importance, the stock exchanges have been made to shoulder the responsibility for effecting whatever reform is needed. The task has been entrusted to a committee of seven comprising the presidents of all the recognised stock exchanges in the country. The first meeting of the newly constituted body is expected to be held early next month and thereafter it will meet periodically.

Thus a major uncertainty that had been dogging the steps of marketmen has been removed. Now and then during the past few months there were the "usually" reliable reports that more curb measures were in the offing only to be quickly followed by reports that Government would stay its hand for some time. The position has now been made clear. The Stock-exchanges Committee is to deal with the main problems pertaining to the proper conduct of transactions in stocks and shares. The Government will ordinarily function as philosopher and guide, thinking of taking powers to control the stock exchange only when such a course becomes necessary and that too after consulting the stock exchanges.

There is a consensus that the stock markets should primarily function in the interests of investors. In recent years the lists of shares transacted in the various stock exchanges have considerably lengthened and quite a large number of people with modest means

have come to evince an interest in the stock market. In coming years more and more shares will be listed and more and more people will be turning to the stock markets for the investment of their funds. It is therefore of the utmost importance that the stock markets are made fairly safe for the investor. The new committee has no doubt an onerous task before it but it is by no means impossible.

NEW ISSUE NOTES Swadeshi Cotton Mills

The Swadeshi Cotton Mills Company Limited, Kanpur, has been accorded consent to issue capital of Rs 87.50 lakhs viz. Rs 17.50 lakhs in bonus shares on capitalisation of the company's reserves to a like extent and Rs 70 lakhs for cash, at par, on right basis. The proceeds of the cash issue will be utilized for repayment of the company's borrowings in part and for improving its liquid position. The company is engaged in the manufacture of textiles and has a paid-up capital of Rs 210.00 lakhs.

Vishnu Cotton Mills

The Vishnu Cotton Mills Limited, Bombay, has been granted a consent to the issue of further capital of Rs 73,60,000, divided into 57,600 equity shares of Rs 100 each and 6,400 first cumulative preference shares of Rs 250 each, carrying a dividend of 5½ per cent (subject to deduction of taxes at the prescribed rates). The shares will be issued for consideration other than cash in terms of the scheme of amalgamation of the Lakshmi Cotton Manufacturing Company Limited, with the Vishnu Cotton Mills Limited.

DCM

The Delhi Cloth and General Mills Limited, Delhi, have been granted consent to the issue of further capital of Rs 150 lakhs divided into 4 lakh ordinary shares of Rs 25 each at a premium of Rs 5 per share 2 lakh preference shares of Rs 25 each at par with dividend not exceeding 9 per cent per annum, free of company's tax, but subject to deduction of taxes at source at prescribed rates, and debenture stock of the value of Rs 250 lakhs carrying interest at 6½ per cent per annum. The proceed of the issue will be utilised for financing the manufacture of PVC and Tyre Cord Rayon at Kotah in Rajasthan. The company's present paid-up capital is Rs 410.75 lakhs.

Mysore Spinning

The Mysore Spinning and Manufacturing Company Limited, Bombay, has been granted consent to the issue

of capital of Rs 19,86,150 in equity shares of Rs 50 each for cash at par. The proceeds will be utilised for renovation and expansion of the mills. The present paid-up capital is Rs 47,13,400 divided into 79,363 equity shares of Rs 50 each and 14,901 ¼ per cent preference shares of Rs 50 each.

Aryodaya Ginning

The Aryodaya Ginning and Manufacturing Company Limited, Ahmedabad, has been granted consent to issue 3,465 bonus shares of Rs 200 each on capitalisation of Rs 6,93,000 from the share premium account, to be allotted to the equity shareholders of the company in the proportion of one bonus share for every 4 equity shares held.

Schrader-Scovill Duncan

The Schrader-Scovill Duncan Limited, a company incorporated in West Bengal, has been granted to the issue of capital of Rs 35 lakhs, divided into 350,000 equity shares of Rs 10 each. The company has already obtained a licence for setting up an pneumatic and tyre and valves plant in Bombay. Fifty-one per cent of the issued capital will be subscribed by the foreign collaborators, Scovill Manufacturing Company of the USA. It will be utilised in meeting the foreign exchange requirements for the import of machinery. Duncan Brothers & Company Limited, who is proposed to be appointed as Secretaries and Treasurers, will subscribe 87,472 shares, while 84,028 shares will be offered for public subscription.

International Computers

The International Computers and Tabulators (India), Private Limited, Bombay, dealers in tabulating machine, has been accorded consent to issue capital of Rs 16,93,600 in equity shares of Rs 100 each, at par. Of the new issue, shares of the value of Rs 49,19,395 will be for cash and the balance for consideration other than cash. A part of the shares will be allotted to International Computers and Tabulators, London, in discharge of the loan due to Power-Sams Accounting Machine (Sales) Limited. The present paid-up capital of the company is Rs 27.06 lakhs.

Utkal Machinery

Utkal Machinery Limited, Bombay, with its factory at Rourkela, has been granted consent to the issue of further capital of Rs 55 lakhs, divided into equity shares of Rs 10 each, at par. Out of the new issue, the three existing German collaborating firms will be offered shares to the value of Rs 26.25 lakhs and the balance will be subscribed by Indians. The company's existing paid-up capital is Rs 100 lakhs in equity shares of Rs 10 each.

Devashola Tea

The Devashola (Nilgiris) Tea Estates Limited has proposed to issue bonus shares at two shares of Rs 10 each for every five equity shares held. This issue is being made to increase the authorised

capital of the company from Rs 6 lakhs to Rs 10 lakhs.

Fit Tight Nights

The first call of Rs 25 per share on the new equity shares is payable on or before 30 September, 1961. Facilities for the splitting of the large call notices and the issue of duplicate call notices will be available

Afsons

Afsons Industrial Corporation Limited has offered to the public 12,250 equity shares of Rs 100 each, at par. The issued capital is Rs 25 lakhs in 25,000 equity shares. Out of this, Rs 3,40,500 has been subscribed and the fully subscription amount has been paid. The directors and their friends have agreed to subscribe for Rs 9,34,500. The balance of Rs 12.25 lakhs is now offered to the public. The company will be setting up a paper and pulp plant to manufacture high grade printing and writing paper with an annual capacity of 2,400 tons. The plant will be located at Wasrangaon, Khapoli in the Kolaba District. The subscription list was opened on 11 September and will close on 19 September, but not before 14 September. The entire issue, offered to the public, is underwritten by the Central Bank of India Limited.

Northern India Paper

The Northern India Paper Mills Limited, Meerut, will enter the market for raising capital in October next. The company, licensed for an annual output of 18,000 tons of paper and pulp, will issue, for public subscription, 10 per cent taxable redeemable cumulative preference shares worth Rs 60 lakhs and equity shares valued at Rs 69.90 lakhs, both kinds of shares being of Rs 100 each. The total public subscription will thus be Rs 129.90 lakhs. Out of this amount, the directors and their friends will subscribe Rs 40 lakhs. The entire issue has been underwritten in the following manner:—ICICI Rs 35 lakhs; LIC Rs 10 lakhs; the Uttar Pradesh Industrial Corporation Rs 25 lakhs; and brokers and directors Rs 59.90 lakhs. The project will be partly financed by a loan of Rs 1 crore from the IFC and partly by deferred payment arrangements for the import of plant and machinery.

Hicks Thermometers

Hicks Thermometers (India), Limited, incorporated on 2 June, 1961, will enter the capital market on 23 September, 1961. The present issued capital of the company is Rs 10 lakhs of which shares worth Rs 5 lakhs are being taken up by the directors, promoters and their friends for cash consideration or for consideration other than cash. The balance is being offered for public subscription, at par. The authorised capital of the company, Rs 50 lakhs, has been divided into 4 lakh equity shares of Rs 10 each and 10,000 cumulative preference shares of Rs 100 each. The company's collaborators, Heath, Hicks and Perken

(Thermometers) Limited, London, are contributing Rs 2 lakhs in terms of plant and machinery. The company will go into production by June 1962. The main factory will be situated at Aligarh. The production target for the first year is 1,50,000 thermometers; 75,000 hydrometers and 3,60,000 glass syringes. The capacity in the third year will be 3,30,000 thermometers.

INVESTMENT NOTES Bonus Issue for Dunlop Rubber

The Directors of the Dunlop Rubber Company (India) Limited announce that application has been made to the Controller of Capital Issues for consent to increase the issued ordinary Share Capital of the Company from Rs. 3 crores to Rs. 4.5 crores by the capitalisation of reserves and the issue of Bonus Shares, on the basis of one new share for every two shares held.

Premier Tyres

Premier Tyres Limited will go into production by the end of this year.

Trial production is expected to start in November. The Rs 2 crore tyre factory, situated in Kalamasseri, an industrial suburb of Ernakulam, will have a capacity of 1,000 tyres and tubes a day. The company has secured the technical collaboration of an American firm, Dayco Corporation.

Madras Rubber

The Madras Rubber Factory Limited has made the second call of Rs 2.50 per share on the Rs 7.50 paid shares, payable on or before 14 October, 1961.

Bajaj Electricals

The expansion programme of the Bajaj Electricals Limited is making progress. Part of the machinery available from indigenous sources has been installed, while import licences for the rest are awaited.

A decision to merge the two companies—Hind Cycles and Gwalior Rayon—is reported to have been taken by the respective board of directors, subject to the sanction of the High Court and the approval of the shareholders. The amalgamation of Hind Cycles does not mean that the

manufacture of cycles will be given up. If the scheme of merger goes through, it will be beneficial to the shareholders of both the companies. With its various plans of expansion and its large resources, Gwalior Rayon can improve the working of Hind Cycles by making cycles more competitive in the market and wipe out the losses and arrears. Details with regard to the terms of merger are not yet available. There are, however, rumours that the shareholders of Hind Cycles may be offered 2½ shares of Gwalior Rayon of Rs 10 each for every share of Rs 100 each.

INVESTMENT BRIEFS

Mysore Amalgamated Coffee has maintained the dividend at 10 per cent, taxable, for the year ended 31 March, 1961.

Rane (Madras) Limited has maintained the dividend at 14 per cent, less tax, for the year ended 31 March, 1961.

General Papers Limited has maintained the ordinary dividend at 12½ per cent, less tax, for the year ended 31 March, 1961.

STOCK EXCHANGES Upswing in Equities

Watch-Dog Writes:

STOCK markets have wound up the week on a buoyant note, thanks to hectic bear-covering and renewed bull support. Apart from the fact that the market has been set for a recovery due to technical considerations, there is a general feeling that the worst is almost over. Bears must be disappointed to find that there is nothing to enthuse them in the recent meeting of the Stock Exchange Presidents with the Union Finance Minister.

A cheerful sentiment was noticed on the Calcutta Stock Exchange where prices in almost all sections staged a smart rally under the lead of speculative issues.

The Bombay Stock Exchange remained closed during most part of the week. During the period it remained open, the overall trading was cautious and somewhat erratic.

On the Madras Stock Exchange, cleared shares put up a poor show in regard to turnover, while Miscellaneous issues came in for better attention.

CALCUTTA

Friday Evening.
THE local stock market looked definitely better during the week under review when there was a marked improvement in sentiment as well as expansion in turnover. Apart from the fact that the non-interference policy of the Government in regard to stock exchange reform, at least for the time being, was well received by the market circles, expectations that the LIC might invest funds in equity shares kept sellers rather reserved. Moreover, with the corporate news being on the encouraging side, the market quickly responded to buying orders.

The main development in the gilt-edged market was the new State Loans. The response to the State Loans was better than that to the Central Loans in that five State Loans were over-subscribed. Save for the new loans, the gilt-edged market was listless. Even the short-dated issues were neglected. The only steady feature was 3 per cent 1986 Conversion Loan, which improved to Rs 73 from the recent low of Rs 72.70.

Bank shares displayed a firmer tendency due to the emergence of buying support. Punjab National changed hands at Rs 18.37 to Rs 18.56 and United Commercial at Rs 90.50 to Rs 91.

There was a little more activity in the Jute section. The decision made by the mills to raise the working hours from the 25 September gave rise to a feeling that stabilised conditions were gradually returning to the industry. Birlas moved up to Rs 25.50 from a low of Rs 24.50; Ganges up to Rs 11.75 from Rs 11.21; Howrah up to Rs 15 from Rs 14.75 and New Central to Rs 17.56 from Rs 17.19.

There was little doing in Coal shares. The railway's proposal to ease the strain of coal deliveries by creating dumps had an unenthusiastic reception. While Burrakur moved up to Rs 18.37 from Rs 18 due to speculative support, New Beerbhoom came in for offer at Rs 23 against Rs 23.37. Central India and Western Bengal hovered idly around Rs 11.87 and Rs 9.37 respectively.

Except for the sustained support to a few selected shares following the release of encouraging working results and the announcement of higher dividends, Tea shares remained generally dull. Apart from the lower prices obtained at the recent auctions, fears were entertained that the industry might face a glut due to over-production this year. Those shares, which remained active, were Bishnauth having buyers at Rs 26.75 to Rs 27.25; Hasimara at Rs 31.25 to Rs 32.69; Huldibari at Rs 31.25 to Rs 31.75 and Jaysree at Rs 17.94 to Rs 18.12. Brooke Bond were neglected at Rs 16.12 following the reduction in dividend from 15 to 10 per cent for the year ended 30 June, 1961.

Sugar shares lacked buying interest, reflecting the general anxiety to await further developments in the sugar situation. Dyer Meakins turned quiet at Rs 34.19 against Rs 34.25; Ramnugger Cane at Rs 30.31 against Rs 30.44 and ISKG at Rs 11 against Rs 10.90.

Hopes of clearance of accumulated stocks of cloth with the mills during the coming Puja festival acted as a stimulant to the Textile section. Almost all the shares recorded fresh higher levels for the week. Cawnpore were enquired upto Rs 8.75 from Rs 8.06; Bowreah up to Rs 34.50 from Rs 33.12; Dunbar up to Rs 30.56 from Rs 29.69; Kesoram up to Rs 30.19 from Rs 29.12; J. K. Rayon up to Rs 19.19 from Rs 18.25 and Elgins up to Rs 20 from Rs 18.87.

In the week's dealings, the lead to the general recovery was mainly given by Indian Irons which, in turn, were subjected to settlement adjustments till Wednesday, Opening higher at Rs 25.34, Indian Irons advanced further to Rs 25.40. After reacting at one time to Rs 25.17, the scrip improved again to Rs 25.24 on Wednesday. From Thursday, the shares changed hands on the ex-dividend basis and moved between Rs 24.22 and Rs 24.54 to close finally at Rs 24.42. The settlement rate was fixed at Rs 25.25 as against last settlement of Rs 25.05. Braithwaite moved up to Rs 38.31 from Rs 37.44; Jessop up to Rs 19.50 from Rs 19.25; J. K. Steel up to Rs 20.37 from Rs 20.12; Guest, Keen, Williams up to Rs 40 from Rs 38.12; and TEXMACO up to Rs 17.85 from Rs 16.75.

The Miscellaneous section provided several bright spots. The news of the company seeking permission to make a bonus issue in the ratio of 1:2 caused Dunlop Rubber to spurt to Rs 54.81 from a low of Rs 49.69. Support from the LIC induced Indian Cable to move up to Rs 37.87 from Rs 36.19. Following were the price trends of a few other selected shares:—

BALANCE-SHEET BRIEFS

The Bengal Coal Company Limited has declared interim dividends of Rs 8 per share on the Ordinary shares and 1.998 per cent on the Preference shares, for the year ended 31 October 1961. Tax will be deducted from both these dividends in accordance with the provisions of the Finance Act currently in force. These dividends will be payable to those members whose names are registered in the Books of the company as on 21 September 1961.

WHOLESALE PRICES

Review For June 1961

Wholesale prices as measured by the official index (with the year ended March 1953=100) moved up by 0.6 per cent to 126.0 during the month of June 1961, as compared with 125.3 for May 1961. The index was higher by 2.4 per cent when compared with 123.0 for June 1960. During the month under review, the index for 'Food Articles' rose by 2.9 per cent to 120.6 and 'Fuel, Power, Light and Lubricants' by 0.2 per cent to 121.7, while 'Tobacco' declined by 4.3 per cent to 96.6, 'Industrial Raw Materials' by 2.9 per cent to 148.8 and 'Manufactures' by 0.6 per cent to 126.6.

'FOOD ARTICLES'

An increase in the prices of all cereals raised the sub-group index by 2.4 per cent to 101.9. At this level, the index was 5.0 per cent lower when compared with the corresponding month of the earlier year. The subgroup index for 'Pulses' rose by 3.8 per cent to 90.6 as a result of a rise in the prices of Gram, Mung, Masur and Urad. Higher prices of Potatoes, Oranges and Bananas pushed up the index for 'Fruits and Vegetables' by 3.4 per cent to 126.1, despite a fall in the prices of Onions and Cashewnuts. A fall of 0.3 per cent to 113.6 in the index for 'Milk and Ghee' was caused by lower prices of Milk although the prices of Ghee witnessed a rise. Increased prices of Groundnut oil, Gingelly oil, Mustard oil and Coconut oil raised the index for 'Edible Oils' by 2.3 per cent to 163.3. The sub-group index for 'Fish, Eggs and Meat' went up by 0.7 per cent to 128.2 due to a rise in the prices of Fish and Meat; there was, however, a fall in the prices of Eggs. A further rise in the prices of Gur pushed up the index for 'Sugar

and Gur' by 3.0 per cent to 123.7. Higher prices of Tea, Black Pepper, Chillies, Turmeric, Betelnuts and Salt were responsible for an increase of 8.2 per cent to 181.1 in the index for 'Other Food Articles'; the prices of Cardamoms and Coffee, however, exhibited declines.

'TOBACCO'

Lower prices of raw tobacco brought down the index for 'Tobacco' by 4.3 per cent to 96.6.

'FUEL, POWER, LIGHT AND LUBRICANTS'

Higher prices of Coal and Castor oil raised the index for this group by 0.2 per cent to 121.7.

'INDUSTRIAL RAW MATERIALS'

A sharp fall in the prices of raw Jute combined with a decline in the prices of raw Cotton and raw Hemp brought down the sub-group index for 'Fibres' by 8.8 per cent to 150.6, although the prices of raw Silk and raw Wool showed advances. The sub-group index for 'Oilseeds' moved up by 2.5 per cent to 160.5 due to a rise in the prices of all oilseeds except gingelly seed which moved down. The index for 'Minerals' stood at 95.2 as against 95.4 for the previous month. Lower prices of raw Skins, Lac and Bamboos were responsible for bringing down the index for 'Other Industrial raw Materials' by 0.5 per cent to 126.9 despite an increase in the prices of Tanning Materials and Logs and Timber.

'INTERMEDIATE PRODUCTS'

Increased prices of Linseed oil, Rayon yarn, Colr yarn, Zinc, Brass, Copper, Tin and Lead raised the index for 'Intermediate Products' by 2.0 per cent to 139.7 during the month under review.

'FINISHED PRODUCTS'

A substantial fall in the prices of Jute manufactures (—3.8 per cent to 125.1) supported by lower prices of Cotton manufactures (—0.3 per cent to 126.2) pulled down the sub-group index for 'Textiles' by 2.3 per cent to 124.8, notwithstanding a rise in the prices of Woollen manufactures (+3.9 per cent to 123.7) and Rayon manufactures (+1.0 per cent to 116.5). Among Cotton manufactures, Handloom cloth witnessed fall while mill-made cloth did record any change. The sub-group index for 'Metal Products' remained unchanged at its earlier month level of 147.1. An advance in prices of General Chemicals, Dye Materials and Drugs and Medicines pushed up the index for 'Chemicals' by 1.8 per cent to 109.4. Prices of Cycles moved down while those of machinery and vehicles moved up and the index for 'Machinery and Transport Equipment' stood steady at its previous month's level of 112.8. Higher prices of matches a time raised the index for 'Other Finished Products' by 1.0 per cent to 120.3, although the prices of bricks and tiles and glass exhibited declines. On the whole, the index for 'Finished Products' receded by per cent 123.3 during the month under review.

Company Reports

Sharp Decline in Rohtas Profit

ROHTAS Industries Limited has reported a substantial decline in earnings for the year ended 31 March 1961, reflecting the production being considerably affected due to inadequate and interrupted power supply and the acute shortage of transport. While sales have declined to Rs 16.24 crores from Rs 17.64 crores, the net profit, before providing for Depreciation and Taxation, amounts to only Rs 1.24 crores as against as much as Rs 2.16 crores for the preceding year.

In respect of allocations, the Depreciation amount is reduced to Rs 58.32 lakhs from Rs 76.03 lakhs, while Development Rebate Reserve is raised to Rs 5.05 lakhs from Rs 3.10 lakhs. No provisions are made for Taxation and General Reserve against Rs 52 lakhs and Rs 28 lakhs respectively in the previous year. The directors have proposed a taxable dividend of Re 1 per share on the capital increased by the issue of right shares, as against Rs 2.00 paid previously on the original capital.

The company has taken steps to expand its pulp production capacity and bleaching capacity of the pulp plant. Orders have already been placed for some of the equipments required. It is also proposed to remodel the existing paper machines so as to expand the capacity and further improve the quality of production. The company has also received an industrial licence for the manufacture of Slag cement. Negotiations in this respect are in progress.

Against a paid-up capital of Rs 6,03,57,970 (Rs 3,55,57,070 in the previous year), reserves and surplus are shown at Rs 2,80,56,527. The gross block at Rs 15.08 crores is depreciated by Rs 6.76 crores, leaving a net block of Rs 8.32 crores.

Ashoka Cement Repeats

The rise in sales from Rs 1.66 crores to Rs 2.00 crores is reflected in the working results of the Ashoka Cement Limited for the year ended 31 March 1961. The net profit is higher at Rs 16.68 lakhs as against Rs 13.94 lakhs. All allocations have been raised:—Depreciation from Rs 6.90 lakhs to Rs 8.97 lakhs; General Reserve from Rs 2.50 lakhs to Rs 3.00 lakhs and Development Rebate Reserve from Rs 32,500 to Rs 33,000. The dividend is maintained at 70 nP per share, subject to tax.

Production of clinker is higher at 1,66,512 tonnes against 1,31,739 tonnes and cement at 1,73,733 tonnes against 1,64,206 tonnes. Despatches are also higher at 1,76,014 tonnes against 1,63,947 tonnes. The directors state that the working results will improve further during the current year in view of the installation of an Electro-static Precipitator to eliminate the dust problem.

Against a paid-up capital of Rs 59.91 lakhs, General Reserve stands at Rs 5.50 lakhs and Development Rebate Reserve at Rs 3.88 lakhs. The gross block at Rs 1.79 crores is depreciated by Rs 22.51 lakhs to show a net block value of Rs 1.56 crores.

Modernisation Plan by Orient Paper

The modernisation programme of the Orient Paper Mills Limited is expected to be practically completed by the end of the current fiscal year. The Export-Import Bank of Washington has sanctioned a credit of \$18.5 million to the company for its Amal Paper Mills Project. Clearance of the credit and issue of necessary import licences are under negotiation with the Government of India. It is hoped that the Government approval in respect of the loan and 'import licences' will be obtained at an early date. Meanwhile, preliminary work on the project has been started.

The company has reported a rise in its earnings for the year ended 31 March 1961 despite the increase in the cost of raw materials, freight, revised prices as recommended by the Tariff Commission and other expenses, thanks to increased production due to better efficiency and normal working of the mills. While sales have risen to Rs 7.52 crores from Rs 6.79 crores, the net profit amounts to Rs 1.93 crores as against Rs 1.85 crores for the preceding year. Taxation provision is raised to Rs 48 lakhs from Rs 40 lakhs and General Reserve to as much as Rs 27 lakhs from only Rs 3 lakhs. All other allocations have been reduced:—Depreciation from Rs 72.50 lakhs to Rs 70.03 lakhs and Development Rebate Reserve from Rs 17 lakhs to Rs 3.00 lakhs. No provision is made for Contingency Reserve against Rs 10 lakhs. The dividend on the Ordinary shares is just maintained at Rs 2.25 per share, subject to tax.

Against a paid-up capital of Rs 3,26,83,75, Reserves and surplus stand at Rs 3,53,66,875. In this connection, it would be recalled that the issued capital of the company was increased by the issue of 4,40,475 ordinary equity shares of Rs 10 at a premium of Rs 12 per share, of which Rs 5.50 per share was payable on application and the balance of Rs 16.50 will be payable as and when called.

The gross block amounts to Rs 10.31 crores; total depreciation to Rs 3.76 crores and the net block to Rs 6.55 crores.

Macneill & Barry Pay More

Despite a decline in sales from Rs 1.39 crores to Rs 99.72 lakhs and in "Agency Commission and Allowances" from Rs 38.79 lakhs to Rs 32.63 lakhs, Macneill & Barry Limited has reported a slight rise in the net profit from Rs 47.56 lakhs to Rs 55.70 lakhs for the year ended 31 March 1961, thanks to the increase in the income from the tea and light industries and the harbour boating service.

In respect of allocations, Depreciation is raised to Rs 3.37 lakhs from Rs 3.36 lakhs; Taxation to Rs 20.70 lakhs from Rs 20.20 lakhs and General Reserve to Rs 7.00 lakhs from Rs 6.00 lakhs; A sum of Rs 3.52 lakhs is provided for Capital Reserve against nil, while the Pension Reserve is maintained at Rs 1.00 lakh. It may be added, in this connection, that the loss of Rs 17.09 lakhs incurred in the preceding year was adjusted by making a transfer of a like amount from the Capital Reserve. The provision for Development Rebate Reserve is lower at Rs 13.600 against Rs 64,000. The dividend on the Ordinary shares is raised from Rs 8.00 to Rs 10.50 per share, subject to deduction of tax.

The directors state that considerable progress has been made with the company's various development projects. Three new companies are expected to be formed during the current year. Production from the first of these is anticipated by March 1962.

Jardine Henderson Maintains Profit

Jardine Henderson Limited has maintained its earnings for the year ended 31 March 1961. Sales are slightly higher at Rs 12.61 crores against Rs 12.41 crores, while the item "Agency Commission and Allowances" is shown at Rs 43.90 lakhs against Rs 47.65 lakhs. The net profit, after providing for Depreciation and Taxation, amounts to Rs 17.72 lakhs as against Rs 17.65 lakhs. Apart from maintaining General Reserve at Rs 1.00 lakh, Depreciation is reduced to Rs 1.36 lakhs from Rs 1.42 lakhs and Taxation to Rs 7.00 lakhs from Rs 9.50 lakhs. Development Rebate Reserve is lower at Rs 1,294 against Rs 8,623. The dividend on the ordinary shares is repeated at 7 per cent, taxable.

The directors state that the company's income from the jute mills is likely to be reduced further during the current year, while the income from dividends from the tea companies is expected to increase. The plans to expand the activities of Braithwaite, in which the company has a substantial interest, are now well advanced.

Titaghur Paper Pays Less

The full force of the cuts in selling prices recommended by the Tariff Commission, increases in the cost of chemicals and coal and the loss sustained in No. 3 Mill, are reflected in the working results of the Titaghur Paper Mills Company Limited for the year ended 31 March 1961. Sales have shown a substantial decline from Rs 9.86 crores to Rs 9.52 crores, while the net profit, after providing for Depreciation and Taxation, has shown a sharp fall to Rs 23.92 lakhs from Rs 55.42 lakhs.

In respect of allocations, Depreciation is raised to Rs 57.75 lakhs from Rs 32.46 lakhs, while Taxation is reduced to Rs 20.06 lakhs from Rs 27.09 lakhs. After transferring a sum of Rs 7.00 lakhs from Dividend Equalisation Reserve, the directors have provided Rs 6.28 lakhs (Rs 24.90 lakhs) for Statutory Development Reserve and proposed a final dividend of Re 1, making a total of Rs 2.00 per share, taxable, on the 'A' and 'B' Ordinary shares as against Rs 2.50 per share, taxable, paid previously.

In the Directors' report, it is stated that renovations at No. 2 Mill are proceeding and the erection of the electrolytic plant is well advanced. They have decided to obtain more loan capital to finance the construction of No. 3 Mill and the State Bank of India has agreed to make available a cash credit facility of Rs 50 lakhs for which documents are under preparation. This facility will be secured against the issue of Debentures ranking pari passu with the existing issue.

Against a paid-up capital of Rs 1,42,92,300, Reserves and surplus stand at a higher figure of Rs 3,52,58,640. The gross block at Rs 9.56 crores is depreciated by Rs 4.93 crores, leaving a net block of Rs 4.63 crores.

10,00,000 DURGAPUR STEELWORKS WHEN IN FULL PRODUCTION TONS

- will help to feed those subsidiary industries which will raise India's per capita consumption of steel, considered today as the index to prosperity.
- will save India many crores of rupees in foreign exchange.
- will help to create full employment.
- will raise the standard of living.
- and it will remain as a monument of the united effort of the peoples of India and the United Kingdom.

New Resources for the IMF

THE IMF met this week in Vienna at the end of nearly a year of intense discussion on problems of international liquidity. Urgency was lent to these discussions because of pressure during the year on the dollar and the sterling, the two key currencies of international payments. In a sense, this crisis can be said to be the consequence of the comparative success of the ideal of free convertibility for which the International Monetary Fund has stood. The free movement of funds, a corollary of the ideal of multilateral trade has brought in its wake many problems of payment deficits for particular countries. Speculative movement of funds which tended to gravitate towards areas already fiscally well-protected and well-provided tended to aggravate the problem of countries already in difficulties. Short-term solutions like those adopted by Britain recently did not touch the core of the problem; they also involved drawing on the goodwill of the Central Banks of the more fortunate countries. Finally, Britain had to draw heavily on the resources of the International Monetary Fund. But the existing resources of the IMF are understandably felt to be unequal to meet the demands on them of this order.

Solutions of varying degrees of fiscal heterodoxy like the Triffin, the Stamp, the Bernstein and the Meade Plans have been canvassed. The orthodox have not been idle either. There have been nostalgic looking back to the Gold Standard by people like Mr Jacques Rueff. In the event, however, the IMF has opted for a solution no more unconventional than that of increasing the resources of the Fund by borrowing several currencies. Mr Per Jacobsson, the Managing Director of the IMF, was known all along to be unimpressed by newfangled solutions.

The existing resources of the IMF of the order of 15 billion dollars were the result of increasing the quotas of member countries in 1958 in consequence of decisions taken at the meeting of the IMF in Delhi in October 1958. At that time, the problem was one of increasing in absolute terms the resources of the IMF. These resources should normally be sufficient to meet the demands of comparatively minor payments difficulties of several nations. But the kind of pressure experienced by the dollar and the sterling during last year would cause a severe strain on the existing resources of the IMF. For if countries like the US and the UK having large quotas and consequently large drawing rights on the currencies available with the IMF were to exercise their right, the available resources in convertible currencies of the Fund may prove inadequate. So, if "the risk of a relapse into restrictions and currency disorder" is to be avoided, it is necessary to strengthen and diversify the IMF's resources.

However, it has not been considered expedient to increase once again the quota of member countries in order to increase the resources of the IMF, because this would involve a permanent "sterilisation" of the resources of the members, which many may consider both inexpedient and one-sided. It is for this reason that the IMF has

recommended recourse to its borrowing powers under Article VII, which have so far remained unexercised. At the end of this week's discussion, it is considered likely that about 5 to 6 billion dollars of standby credit in various currencies will be obtained by the IMF. Reports from Vienna indicate that the standby credit to be made available to the IMF would be provided by the US to the extent of two billion dollars, by the UK to the extent of one billion dollars, by West Germany to the extent of one billion dollar and by France, other Common Market countries, Japan, Sweden and others to the extent of one to two billion dollars.

The idea of an arrangement for standby credit in various currencies put forward in the Annual Report of the IMF was welcomed by both the US and UK, but initially met with considerable opposition from the continental countries, especially France. The opposition arises partly from the fear that they are called upon to underwrite the inefficiency of the improvident and partly from the feeling that their own prosperity is no longer founded securely enough for them to permit this kind of accommodation. But latest reports indicate that French opposition may be overcome.

To the developing nations, all these arrangements may appear to be somewhat remote from their problems. In one sense they are but in another they are not. The immediate purpose of these schemes is to meet situations likely to be created by the payment difficulties of major industrial nations. In so far as the developing countries enter this picture, it is because of their using these currencies for their international payments. But in so far as their own payment difficulties can be met from the increased resources of the IMF, the enlargement of the IMF's resources would be an indirect benefit to them. For, it is inconceivable that the IMF can accept any conditional standby credits that would be available only to the industrial nations of the world. Though some reports indicated that the continental countries originally thought in terms of a Central Bank equivalent of the NATO and the OECD to meet the payment difficulties arising out of pressure on any of their currencies or on the sterling or the dollar, the solution not adopted has brought the IMF into the picture and it is unlikely that the IMF, with its wider responsibilities, will allow its resources to be circumscribed for selective use.

But it is largely true that the chronic difficulties over payments of developing nations have to be met less by the good offices of the IMF than by the good offices of the IERD and its associates. In other words, for a long time to come the major solution for the balance of payment difficulties of the developing nations would be economic aid and development finance from various advanced countries. Indeed, the payment difficulties of the US arise not because of its trade deficit but because of the vast responsibilities assumed by it for economic and military aid. From this point of view also, steps taken to strengthen the dollar are of importance to underdeveloped countries.

VOCATIONAL TRAINING A Major ILO Programme

By V. K. R. MENON

IF one is to define the objective of the ILO in the fewest words, it may be said to be the betterment of conditions of the working classes. The ILO is realistic enough to know that such betterment cannot proceed limitlessly without linking this with the efficiency of the worker as, in the last analyses, increased wages, provision of amenities and so on will have to be related to productivity. Except in purely unskilled jobs, no worker can produce the best unless he has had proper training.

The preamble of the Constitution of the ILO which, by the way, is now forty-two years old, itself mentions the organisation of vocational and technical education among the reforms necessary for improving the conditions of labour. The first instrument dealing with the subject was a recommendation adopted by the International Labour Conference in 1921 urging upon member countries to develop vocational agricultural education. If read with another recommendation adopted at the same session, dealing with measures to combat unemployment in agriculture, one will notice a clear recognition that proper vocational education could be one of such measures. It was at the annual Conference held in 1939 that two fairly comprehensive recommendations were adopted, one on vocational training and the other on apprenticeship. To correctly appreciate the position then as compared with to-day, it should be remembered that till the commencement of World War II, the ILO's work primarily related to standard-setting, the volume of operational work being relatively small. The value of the standards set in the recommendations adopted in 1939 will be clear when one sees that some parts of these recommendations can serve as excellent guiding points even to-day.

With the world plunged into war soon after the adoption of the above recommendation, the next occasion for renewal of ILO's activities was immediately towards the close of the war. The momentous Philadelphia Charter of the ILO was adopted in 1944 and this spelt out the future objectives and obligations of the Organisation in much greater detail. Vocational training also assumed urgency in one particular direction, that is in finding measures for ensuring full employment in the transition from war to peace.

Two major events have increased the ILO's activities in the field of vocational training enormously. These were the launching of the United Nations Programme of Technical Assistance in which the ILO like the other Specialised Agencies, is an active participant and the more recent launching of the United Nations Special Projects Fund. The funds made available from these sources are mostly intended for operational activities in the underdeveloped countries. No quotas are earmarked for work in any particular field and the choice of projects has to be made on grounds of urgency and of the relative importance attached by the recipient countries themselves. The assistance by the ILO consists of provision of experts and equipment, a certain number of fellowships for nationals of the recipient countries for training in countries outside where the subject under study has developed much greater, and the holding of regional and inter-regional seminars and training courses facilitating pooling

of knowledge and experience. The Special Projects Fund is intended for relatively large projects spread over larger periods and including a generous supply of equipment.

One method, though by no means a perfect one, of assessing the importance attached to vocational training may be the quantum, in financial terms, of the assistance received by the recipient countries in this field as compared with all other fields of ILO's activities. The following figures relate to expenditure under the ILO's share of the Expanded Programme of Technical Assistance:

Year.	Total provision (US dollars).	Provision for vocational training (US dollars).	Percentage.
1950-51*	336,316	137,653.28	40.9
1952	1,876,454	1,120,243.038	59.7
1953	2,268,106	1,279,211.784	56.4
1954	1,991,585	1,041,784.306	52.1
1955	2,632,222	1,339,800.998	50.9
1956	3,045,438	1,495,210.658	49.1
1957	3,201,277	1,776,709.735	55.5
1958	3,422,850	1,883,036.300	55.0
1959	3,362,166	1,684,445.166	50.7

*Eighteen months.

Perhaps another method of comparison may be of expert assistance rendered. During 1960 two hundred and forty-eight experts worked on ILO projects under the Expanded Programme of Technical Assistance. While a breakdown by different fields of activities is not readily available, an analysis of the figures for Asia shows that at the end of the year out of 33 experts on assignment in a dozen countries in Asia, six or approximately 20 per cent were for vocational training and allied subjects.

All available reports on the evaluation of work under the Expanded Programme of Technical Assistance show that the projects have worked satisfactorily. There have been a few failures here and there which was naturally to be expected in a new venture. One indication of the appreciation of the recipient countries is the added interest shown by them in receiving further assistance. This work, as is the case with all other work of the ILO is quiet and does not hit the headlines. This is probably why, except perhaps by those directly concerned, the public at large does not know quite enough about the working of the ILO technical assistance programmes.

The United Nations Special Projects Fund was launched in 1959. It could be regarded as a sort of compromise arising out of the claims put forward by several underdeveloped countries for establishment of the Special UN Fund for Economic Development (SUNFED). The Special Projects Fund finances execution of projects, mainly in the underdeveloped countries, which are sizeable and fairly long-term in nature and which have a bearing on sound economic development in the countries concerned. Contributions are wholly voluntary so that the exact amounts cannot be foreseen. Nevertheless, some targets are attempted and by and large these have been fulfilled.

For instance, the funds allocated up to December 1960 amounted to US \$96 million. Though the projects are examined and sanctioned by the authorities of the Special Projects Fund, normally, the Specialised Agency of the United Nations responsible for a particular field, is appointed as executing agency on behalf of the Special Projects Fund. Thus the ILO has been designed as the executing agency in regard to projects relat-

Indian Finance

ing to vocational training. The importance which the authorities of the Fund and the ILO attach to vocational training can, in a way, be judged by the fact that out of the first batch of projects submitted by the Government of India to the Special Fund, the first to be sanctioned related to vocational training, the establishment of an Instructors' Training Institute at Calcutta. In regard to projects submitted by other countries also, those relating to vocational training received priority. Subsequently, the Fund also approved aid for the establishment of similar Instructors' Training Institutes at Kanpur and Madras. The Plan of Operations for the first two institutes (Calcutta and Kanpur) have been signed and implementation is well under way. Taking these two projects together the assistance from the Fund in the form of experts and equipment will amount to approximately US \$2.10 million, while the Government of India's rupee contribution will amount to approximately US \$4.26 million. The period of expert assistance by the Special Fund totals 825 man-months, spread out over a period of roughly three years in the case of each project. The two institutes together are expected to provide training on highly up-to-date standards for 724 persons per course. Hitherto, one primary reason why vocational training did not make adequate progress was the fact that the instructors imparting training were themselves not highly trained and qualified. The new institutes when they function fully will be the solution to this serious existing deficiency.

By my abruptly turning off the ILO's operational activities, one may think that the standard-setting work of the Organisation has been abandoned. This is not so. The ILO recognises the growing importance of operational work but it is equally convinced that the standard-setting work has also its own importance. The subject of vocational training was specifically discussed at the annual Conference only in June this year. When the Governing Body of the ILO decided to place this item for discussion at the Conference, it recognised that conditions had changed considerably since the subject was discussed last in 1939 and, to a limited extent, in 1950. The present discussions were, therefore, far more general and comprehensive, covering the operational activities of the ILO to see how far it could assist countries, particularly those in the throes of industrialisation, to apply international standards as also what use could be made of the various types of international technical co-operation and assistance that are now available. The result was a detailed preliminary study by the office which included collection of the existing position on main aspects of vocational training in all the member countries. The materials collected were condensed in a report which was examined by a committee of the Conference which made its recommendations. The committee's report included a draft recommendation which will come up for final consideration again at the Conference next year (1962).

As I indicated earlier if the draft recommendation, substantially in the form submitted by the committee, is ultimately adopted by the Conference, it will give ample guiding points to the countries, particularly the developing countries. One needing such guidance should not look merely at the text of the recommendation as might be adopted but should also study the reports on the basis of which the discussions and final conclusions were reached. Very often, when dealing with a particular subject, say vocational training, those responsible are anxious

to know how the matter is dealt with in other countries. Not many are perhaps aware that the answers can be found in such cases by a scrutiny of the ILO reports on the subject. This explains why the reports and conclusions reached by the ILC do effectively provide valuable and practical guidance to member countries.

To sum up, therefore, vocational training is one of the major fields of ILO's activities. The importance, for the reasons I have tried to explain, is growing rather than diminishing. The ILO is making all efforts to meet its consequent growing responsibility in this field. This is done, both in the old traditional way of studies and setting up of standards as also by the considerably added operational activities in which the Organisation is now engaged. The activities cannot be measured by any specific yard-stick but it is correct to say that in comparison with the state of affairs before World War II, the ILO's work on vocational training has now grown very considerably indeed.

COAL MOVEMENT

New Dumps For Old

PROBLEMS of the supply and distribution of coal were considered at a recent high level conference of coal producers and consumers. Though no definite decisions were reached, it is learnt, that suggestions for action have emerged out of the two-day discussions. Two primary considerations relating to the supply and distribution of coal have been forcibly brought to the notice of the conference. These concern: (1) the economic use of fuel through the standardisation of grades and sizes of coal to be allocated for particular purposes so as to ensure effective use of the total output and (2) the urgent need for rationalisation of transport arrangements to close the gap between the growing demand for coal from all parts of the country and the available rail capacity.

These two considerations are closely inter-linked. For the purpose of planning transport, it is necessary that demand is assessed in detail, and separately, for each direction of rail movement, for each junction and for each destination. Such detailed planning presupposes qualitative assessment of demand and standardisation of supplies. The recommendations of the Fuel Efficiency Committee which fixed the grades and sizes of coal for different groups of consumers and the order of priorities were accepted by Government in June last year. But implementation is still far from complete. The advantages claimed for the scheme are: (1) the elimination of disparities in the supply of coal to different units in the same industry employing the same processes and (2) fuel economy through better utilisation of coal of all sizes and grades. Two British fuel experts who recently visited this country have expressed the view that the overall consumption of coal could be reduced by at least one-third if suitable economy measures were adopted. The benefits of the scheme of standardisation of supplies for different groups of consumers, it is stated, will also accrue to the producers. Apart from helping to conserve coal, it will enable the industry to plan raisings of different grades for specified markets.

As regards transport, the Railway Board had already indicated that, unless the system of transport, was rationalised keep-

ing in view the limits to expansion of Railways' capacity, it would not be possible to provide the additional transport capacity required for the movement of coal envisaged in the Third Plan. The main features of the new scheme suggested are: (1) Progressively coal should be moved in bogie type Box wagons, each with carrying capacity of 55 tons as compared with 22 tons of the ordinary four wheeler wagon (2) The movement should take place in block rakes of such wagons to a few selected points only and dumps should be created for the utilisation of the rakes of such wagons. Coal dumps at selected points, it has been explained, are necessary to make the optimum use of railway facilities. Heavy capacity bogie type Box wagons cannot be distributed piece-meal, as they would have to be unloaded quickly at a time. As all stations and sidings will not be able to handle Box wagons, it would be necessary to set up coal dumps at selected stations where sidings would be available for handling of rakes of bogie type Box wagons. Dumps will also have to be established at transshipment points where break of gauge occurred. The new system will speed up transport by improving the turn-round of wagons, and also enable the coal movement to continue during the slack season. It has also been suggested that all consumers, except those who would be able to absorb and receive full train loads of wagons at their own sidings, should be brought under the scheme of coal dumps.

Under the existing arrangements, all consumers of coal and coke, irrespective of priority, could obtain direct supplies from the coal fields provided they had the sanction of the Coal Controller. While the advantage to the consumer is undeniable, it is pointed out that this system makes for piecemeal allotment over a large number of railway stations and results in wastage of limited transport available. To relieve the strain on the Railways, it is also proposed that all consumers situated within 50 miles of coal fields and connected by road should be required to obtain their coal by road.

Both the measures indicated above, that is, movement in block rakes to selected points and movement by road, will increase the cost of coal to consumers. Double handling, risk of wastage and pilferage, and cost of further movement by road will all add to the price of coal distributed from the coal dumps that are proposed to be set up. Restriction of coal movement within fifty miles of the coalfields to road transport will increase the cost of coal in the important industrial area in and around Calcutta, though consumers at greater distances from coalfields are not likely to be impressed by this argument.

Another important consideration is the disruption of the normal pattern of trade. The effect of the new scheme of distribution, which has been brought into operation on a limited scale in respect of certain grades of coal and of soft coke from September 1, has spread consternation among traders regarding the consequences of its extension to other grades of coal as well. It is feared that the large number of coal merchants engaged in the procuring and distribution of coal may be drastically reduced if the coal dump scheme is enforced.

While the disadvantages are real, it has been argued that, in this as in other matters, the country and the consumers of coal are faced with an unhappy choice. The consumers in the low priority categories who are directly concerned have to choose between more costly coal or no coal at all. It has also been suggested that the interest of the trade could be safeguarded by suitable arrangements.

On the plane of theoretical argument, it should be easy to make out a case for standardisation of supplies and rationalisation of transport on the lines desired by the Government of India, and those who fear adverse consequences may be persuaded to reconcile themselves to the inevitable hardships in the larger interest. But the question is whether the new scheme will in practice be an improvement on the existing arrangements, even in the matter of speedy haulage. And important consideration to which sufficient attention has not been directed is whether adequate preparations have been made at all levels—by the Railways, the Department of Fuel, the Coal Controller and the sponsoring authorities—for a smooth changeover from the existing, familiar system.

It has been noted earlier that the programme of movement would have to depend on qualitative assessment of demand and allocations based thereon. It appears that, while fixation of grades and sizes for different groups of consumers has been made by the Fuel Efficiency Committee and approved by Government, a lot yet remains to be done in regard to the assessment of the requirements of individual concerns within each priority group. Doubts have been expressed whether the sponsoring authorities responsible for recommending the allocations, have adequate technical staff for the purpose. The hesitations of the State Governments about the new scheme appear to stem from doubts whether the necessary preliminary preparation could be completed in time. Any scheme which will speed up coal movement and reduce the growing dumps at the pitheads should be welcome to the industry as well as to the consumers. But both would like to know more about the practical details and implications of the scheme before they agree to the exchange of "new dumps for old."

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

RBI REPORT

Capital Market: Slab Rates: Maintenance Imports

The capital market, on the whole, maintained the buoyancy of the preceding two years, judging from the volume of new issues, although the public's excessive enthusiasm, which had characterised the new issue market in 1959-60, appeared to have abated.

—Report of the Central Board of Directors, Reserve Bank of India, page 12.

There has been a tendency, of late, on the part of industries to rely more heavily on bank finance for purposes which are normally to be met by self-finance or resort to the capital market; and one factor aiding this process has been the relatively low cost of bank credit.

—Ibid, page 24.

Is the new issue boom fizzling out? That, at any rate, it is tapering off, is suggested by the first of the two preceding extracts; and perhaps is reason why, partly at least, there is the tendency for industry to rely on banking finance for medium-term purposes. Indeed, it would appear that, as happened in 1956, a less responsive capital market is compelling industry to have recourse to bank finance. (Is it coincidence that one company after another is extending dates for closing of subscription lists?) In 1956 the apathy of the capital market was perhaps due to just the lack of an investible surplus with the public; in 1961 two factors may be responsible. On the one hand the investor undoubtedly feels sated; during the new issue boom that has lasted for over two years now the spate of offers has been a veritable flood; on the other we may now already be having the pre-election jitters. The Reserve Bank cites the low cost of bank credit as one factor "aiding" the utilisation of short-term accommodation for medium-term purposes. We grant that; but where the demand for goods consistently outstrips supplies, and where imports are rigorously restricted, surely margins of profits available are such that a small increase in the cost of bank credit is rendered purely notional, and does not succeed in reducing the demand for bank credit. Furthermore Government is possessed of all the powers to ensure that the abuse of bank credit is minimised. Apart from the Reserve Bank's selective credit controls, sanction is necessary for any expansion programme; and what is to prevent the Development Wing from approving an expansion programme only on condition that an adequate approach be made to the capital market? Inescapably small industry or industry brought into being by new entrepreneurs cannot get its capital needs from the investing public; and this category should be left free to make what arrangements it can. We may add here that the

capital market should begin to get more active after the elections—and after the post-election Budget, provided that Budget is none too demanding. For the present there would seem to be a pause, and the slowing down in the rate of growth of industrial production has partly released resources which can be made available and are being made available for medium-term purposes of industry; the cost of credit in this regard has in our view little deterrent potential.

The system of slab rates combines the features of direct limitation on borrowing and raising the cost of borrowing. It provided a technique whereby the objectives of credit restraint could be attained without too large an adjustment in Government security prices.

—Ibid, page 20.

... it was not the intention of the Bank to restrict the availability of credit for the legitimate needs of industry and trade.

—Ibid, page 20.

Certainly the three-tier bank rate has increased the cost of credit to banks and hence to constituents. The Reserve Bank is to be congratulated on having perfected the technique whereby its objectives monetarily speaking are sought to be attained without too great a disruption of the gilt-edged market or Government's borrowing programme for which, in the ultimate analysis, the responsibility rests with the central banking institution. But it is doubtful if the system does directly limit borrowing, whether on the part of the bank or on the part of its constituents. So long as the rise in the cost of credit is marginal, as we have explained earlier, industry—or for that matter commerce and trade—is unlikely to burke at it; and so long as its constituents are prepared to pay more for their Advances, a bank is not likely to shirk borrowing from the Reserve Bank—even at the penal rate of 6 per cent. The Reserve Bank did not intend that productive enterprise be starved of bank finance; all that its package deal of last autumn will have done is to increase the cost of credit; and in any case it is selective credit controls which will determine which sector of the economy is to be starved of finance, and when.

Following the initiation of the system of slab rates in October, all Scheduled Banks raised their lending rates in accordance with the directive and quite a few of them raised

their average lending rates by more than 1 per cent.

—Ibid, page 23.

Indubitably many a bank informed its constituents that arising from the Reserve Bank directive the rate of interest to be paid on their Advances would be raised by 1 per cent or more. But the reason did not lie in banks thus seeking to mulct their customers (though naturally they would not have been averse to a better margin of earning): in order to get a confirmatory note of acceptance as to the new rate chargeable, banks used the subterfuge of hiking by more than the directed 1 per cent, anticipating that most constituents would write to protest, indicating their preparedness for the 1 per cent increase; it came distinctly as a surprise to most banks that not a few constituents accepted the enhanced rates without a murmur; and this may indicate how relatively unimportant in the costs of production is the cost of bank credit thought to be.

With maintenance imports alone expected to average Rs 730 crores per annum in the Third Plan period and with rising payments on invisibles taking the place of the net receipts on this account, India's balance of payments position has now become more vulnerable than ever before... external aid has become necessary also for financing an adequate level of maintenance imports, the demand for which inescapably rises with the growing level of general economic activity in the country.

—Ibid, page 18.

Notwithstanding the magnitude of the foreign aid promised, it would be necessary to organise a massive step-up in efforts to promote exports to pay for at least the maintenance needs of the economy. Appropriate incentives may be required for the purpose but they will be of little avail unless the cost-price structure is kept under control, as the price of exports is the key to their competitiveness in a phase of increasingly intense competition in the world market.

—Ibid, range 26.

As this journal has long been stressing an export drive much more intensive than we have so far thought of is necessary if India is to be able to pay for maintenance imports. In the Second Plan actuals of export earnings exceeded the original estimates; and foreign assistance received exceeded our fondest hopes or expectations. But nevertheless our reserves were drawn down by three times the figure originally thought of. Even so during the Third Plan we feel that greater effort, and yes, ambition are called for. The price situation has to be watched carefully; and while the Reserve Bank can be relied upon to institute the monetary measures to keep prices in check, what will be the impact thereon of Govern-

ment's fiscal policies? It goes without saying that whatever the effort we may put in, foreign assistance will be required to meet part at least of the import cost of maintenance goods; and hence the necessity for persuading our foreign friends that some part of the assistance they extend to us should be "untied."

The Reserve Bank's monetary policy would, therefore, have to continue to be a two-pronged one, viz., of ensuring an adequate flow of credit to meet the genuine requirements of agriculture, industry and checking speculative excesses with their inflationary overtones.

—Ibid, page 26.

Comment would be superfluous.

BANK RETURNS

Puja Bonus, Tax Payments, Loans

While the latest returns of the Reserve Bank and of the State Bank reflect Puja bonus payments and advance tax instalments due this month, the statutory statement of Scheduled Banks bears the full impress of State loan subscriptions.

Active Note circulation has, according to the Reserve Bank figures for 15 September, fallen by Rs 9.40 crores to Rs 1,889.46 crores, and there has been inflow of Rupee Coin for Rs 0.88 crore. With Foreign Securities unchanged at Rs 116.86 crores and Rupee Securities fractionally better at Rs 1,548.65 crores, the Reserve Bank's cash in the till has gone up by Rs 10.35 crores to Rs 19.28 crores.

The Centre's balances, thanks to tax receipts, are higher by Rs 10.03 crores at Rs 73.53 crores. State Governments' Deposits, too, have improved by Rs 6.22 crores to Rs 38.16 crores, though their ways and means borrowings from the Reserve Bank have risen by Rs 1.33 crores to Rs 49.45 crores. Investments are at Rs 281.16 crores, and though the State Bank is known to have disinvested in gilts for Rs 8 crores, it is unlikely that there has been deficit financing. Rather, the State Bank sale may be linked with the rise of Rs 6.73 crores to Rs 24.99 crores in the Reserve Bank's holdings of Treasury Bills purchased and discounted.

Reserve Balances of member banks, wholly on account of the State Bank, are higher by Rs 2.81 crores at Rs 78.66 crores. But the Other Loans and Advances of the Reserve Bank have risen further by Rs 1.22 crores to Rs 136.96 crores, indicating that banks have felt the pressure due to payments of Puja bonus and tax instalments. Advances against usance bills are shown Rs 1.10 crores higher at Rs 6.59 crores.

Balances Held Abroad have again dropped, by Rs 0.97 crore to Rs 17.76 crores; and foreign assets held by the Reserve Bank have fallen below the Rs 135 crore mark.

The return of the State Bank for 15 September discloses another rise of Rs 2.55 crores to Rs 247.84 crores in the total of Advances; this of course is on account of the special payments we have referred to. However, the seasonal return of funds has concealed the magnitude of drawing down of Deposits, which are lower only by Rs 0.14 crore at Rs 523.88 crores. Nevertheless, the State Bank has sold Rs 8.11 crores of securities (presumably, discount of Treasury Bills) and the portfolio is now placed at Rs 251.19 crores. As a result, cash balances, including money at call, have improved by Rs 4.11 crores to Rs 30.70 crores.

The return of Scheduled Banks for 8 September fully reflects transactions connected with State loan subscriptions:

- (1) Net Demand Deposits are lower by Rs 3.18 crores at Rs 818.69 crores.
- (2) Net Time Deposits are sharply lower by Rs 14.75 crores at Rs 1,120.80 crores.
- (3) Cash balances, including money at call, have fallen steeply by Rs 26.27 crores to Rs 179.83 crores.
- (4) Of this over Rs 20 crores are by way of drawing down on Reserve Balances.
- (5) Borrowings from the Reserve Bank have mounted by Rs 13.42 crores to Rs 14.98 crores.
- (6) Gilt-edged holdings have risen by Rs 2.83 crores to Rs 610.67 crores.
- (7) The total of Advances has expanded steeply by Rs 15.40 crores to Rs 1,243.27 crores.
- (8) But, of this, nearly Rs 4 crores are on account of inter-bank borrowings.

Banks' subscriptions are reflected in the fall in Reserve Balances; but the gilt-edged portfolio is higher only by Rs 2.83 crores. The return of the State Bank for 8 September disclosed gilt-edged holdings to be some Rs 2 crores lower. So, Rs 5 crores worth of State loans purchased have been consolidated in the Scheduled Banks' return for 8 September. The next return should show the balance of purchase of State loans by the banking system.

Although month-early disbursements must have affected the bank figures, the fall in Deposits and the rise in "net" Advances together give a rough indication of money put out by constituents for subscription to the State loans. These add up to just under Rs 30 crores.

The implication is that subscriptions to State loans which cannot be traced to either the Reserve Bank returns or the Scheduled Banks' return amount to around Rs 30 crores. The question is, have the States themselves, from out of reserve funds, departmental funds, etc., subscribed the remaining Rs 30 crores?

+

Firmness of Sterling

By Paul Einzig

THE announcement of the arrangement with the International Monetary Fund and of the resulting increase in the published gold reserve has brought about a sharp improvement in sterling. As short positions in sterling were covered some time ago, this must have been due to the return of the foreign short-term balances which left London earlier this year as a result of pessimistic views then taken about sterling. Many commentators welcome the return of hot money as an indication that sterling once more enjoys the confidence of

the International financial markets. Taking a long view, however, the influx of hot money must be regarded as a doubtful blessing. The counterpart of the resulting increase in the gold and Foreign Exchange reserve is represented by an increase in London's short-term foreign liabilities. And while the support given by the influx of foreign funds at the present stage is not really needed, the pressure that eventual withdrawal will give rise to is certain to take place at a moment when it will be most inconvenient. No wonder hot money has been compared with human teeth. Both are a nuisance while they are coming; they are a nuisance while they are there; and they are a nuisance when they are going.

Last year's influx of hot money could have been easily prevented, because most of it was the result of covered interest arbitrage. This means that the official manipulation of forward rates could have made the operations unprofitable. The present influx, however, represents largely uncovered interest arbitrage. With the Bank Rate at 7 per cent the interest differential between London and other centres is wide enough to cover any possible loss through a depreciation of sterling, on the reasonable assumption that within the next three months it would in no circumstances be allowed to depreciate below its lower support point of \$2.78. Even allowing for the maximum possible loss through such a limited depreciation, the interest differential would provide sufficient profit to attract funds through covered interest arbitrage.

Notwithstanding this, the authorities would be in a position to check the unwanted influx should they wish to do so. All they would have to do would be to encourage outward covered interest arbitrage by deliberately depreciating forward sterling. They could and should widen the premium on forward dollars and other forward exchanges sufficiently to secure a profit on the operations in spite of the heavy interest differential against London. They would thus be able to ensure that outward covered interest arbitrage offsets the effects of inward uncovered interest arbitrage. The British monetary authorities are fully familiar with the technique that would have to be applied to that end, judging by evidence given by representatives of the Treasury and the Bank of England before the Radcliffe Committee and by official forward operations that are known to have been undertaken from time to time. If they prefer not to apply that technique in the present instance, it is probably because they do not consider the influx of hot money unwelcome. It enables the Government to claim success for the first stage of its measures taken in support of sterling. Unfortunately, it was the easiest stage. The real problem, to improve the balance of payments, remains to be solved.

Notes

IBRD Pattern of Lending

Since it was started 15 years ago, the activities of the International Bank for Reconstruction and Development have increased tremendously in scope and character. With the emphasis in its lending operations being mainly on the provision of credit to meet the needs of the developing countries, the contribution of the World Bank to the economic development of the under-developed countries has been both important and significant. The latest report of the Bank for the year 1960-61 draws attention to the varied scope of its activities as well as to the magnitude of its lending to an increasing number of member countries. New lending of the Bank during the fiscal year totalled \$609.9 million which included 7 loans and with this the cumulative total of the Bank's loans, net of cancellations and refundings has risen to \$5,669 million of which \$4,320 million had been disbursed. The total number of the loans extended by the Bank is placed at 92 while the number of countries which have benefited from the loan operations of the Bank is 57 among which India stands first.

The break-up of the Bank's loans as between different sectors shows that the major portion viz nearly two-thirds, of its loans has been provided for the development of transportation and electric power with railway development figuring prominently as the single large object of the Bank's lending activities. During the fiscal year of 1960-61, transportation loans amounted to \$310 million while electric power loans totalled \$125 million. Industrial lending comes last in the list of the total loans provided by the World Bank, the share during the fiscal year under review being only \$48 million.

A noteworthy feature of the working of the Bank during 1960-61 was its achievement in exceeding the \$1,000 million mark in the total sales of its loans. Such sales of its loans is a means adopted by the Bank to promote international investment. This enables the Bank to borrow large sums from private investors to finance economic growth in its less developed member countries. Though in the early years the sale of such loans was made with the Bank's guarantee, since 1956, the Bank had ceased to offer its guarantee in any further sales of parts of its loans to other investors. The decision has by no means affected the total sales of its loans and it is recorded that since then, the Bank has sold over \$730 million worth of loans maturities without guarantee.

The Bank has experienced further accretion of financial strength which is reflected in the improvement of its reserves income and repayments. As at June 1961, the Bank's total reserves stood at \$602 million which represents an increase of \$95 million over the year. Gross income for the year excluding loan commissions at \$167 million was also higher by \$16 million over the previous year.

The Bank's role in other spheres such as the provision of technical assistance has also considerably increased in scale and the year under review particularly witnessed the highest level of activity in providing assistance to its member countries through general economic surveys. The most signal achievements of the Bank during the year related to the settlement of the Indo-Pakistan dispute over the Indus waters and the sponsorship of the consortium of Western countries interested and willing to help India and Pakistan over the foreign exchange needs of their development plans.

IDA Off to a Flying Start

The International Development Association, is the newest of the international organisations set up to provide financial assistance to developing countries, having come into existence in September 1960. Though only one year has passed since its coming into being, it has set off in its business in a most successful manner and during the first year of its operation has extended credits just over 100 million dollars for development projects in member countries. The countries which have benefited from the credit granted by the IDA in its first year of existence are Honduras, Sudan, Chile and India. The credit extended to India was for an amount of \$60 million and was intended to cover half the cost of improvements to the National Highways during the first 3½ years of the Third Five Year Plan.

The IDA differs from its senior members in some important respects and particularly in the terms governing the grant of its credit which has proved to be more favourable than the credit granted by other institutions such as the IFC and the IBRD. The specific object of the IDA is "to promote economic development, increase productivity and thus standards of living in the less developed areas of the world". The IDA's loans are generally for long period extending to 50 years and while it is entitled to charge a moderate rate of interest, the credits so far given have been without any burden of interest, though there is a negligible service charge. The IDA credit should for this reason be more useful for the developing countries which are in many instances faced with the problem of servicing foreign credits on account of their being for short periods. However to make its operations more effective and beneficial to the developing countries, the funds of the institution should be expanded considerably. For, in relation to its sphere of operations and the need for the type of development capital that IDA can provide, its resources are small. At the end of the fiscal year, 51 member governments had accepted membership of the IDA and subscriptions amounted to the equivalent of 906 million dollars. The annual report of the institution draws attention to the lengthening list of proposals under investigation all over the world.

IFC Fifth Year of Usefulness

Among the international institutions set up to assist economic

development in the developing countries, the International Finance Corporation has a rather unique role. By virtue of an amendment to the charter of the IFC passed in August 1961, the IFC has been enabled to invest in the capital stock of enterprises which it seeks to promote in various countries. It is significant that the amendment does not entitle the IFC to assume responsibility for managing any enterprise in which it has invested and it also shall not exercise voting rights for such purpose or for any other purpose which in its opinion is properly within the scope of the managerial control. This change in the charter of the IFC has great significance for the international flow of investment particularly for the developing countries, for the IFC not only puts its own funds into investment, but also seeks to draw private investment funds into participation in economic enterprises.

While the effectiveness of the new role of the IFC is yet to be judged, there can be no doubt about the usefulness of the assistance it has so far rendered during its five years of existence. In its fifth annual report published recently, the IFC has claimed that its funds have been so far invested in productive enterprises in about 18 countries. The Institution has incurred commitments in India to the extent of 1,575,000 dollars, the beneficiaries being the Assam Sillimanite Company and the KSB Pumps Ltd. The other countries in which the IFC has put its investments are Argentina, Australia, Brazil, Chile, Columbia, El Salvador, Finland, Guatemala, Iran, Italy, Jamaica, Mexico, Pakistan, Peru, Tanganyika, Thailand and Venezuela. The total investments

of the IFC in all these countries now stand at 44,387,705 dollars.

New investment during the fiscal year under review has totalled 6.2 million dollars. The effective operational investments held by the Corporation as on 30 June 1961 is estimated at 27.9 million dollars of which 24.4 million dollars are shown as having been disbursed. The gross income for the fiscal year totalled 4.4 million dollars of which 2.5 million dollars were derived from investment in the United States Government securities and 1.9 million dollars from operational investments for commitment charges, fixed interest etc.

NEVELI Bulk Extraction Begun

At Neveli, last week, bulk extraction of lignite for tests abroad, was formally inaugurated. This is a matter of considerable significance to the southern region in general and Madras in particular. This Rs 90 crore integrated project which was inaugurated by Prime Minister Nehru in 1957 envisaged an annual output of 3.5 million raw lignite to meet the requirements of a thermal plant with a capacity of 250 MW, a fertilizer plant for the production of 70,000 tons of fixed nitrogen in the form of urea, and a briquetting and carbonisation plant for producing 380,000 tons of carbonised briquettes; and a clay washing plant for the production of 6000 tons per annum of white china and ball clay. For one reason and another, however, mining operation has been delayed. Lignite mining is new to our country and it is in vogue in only few other places elsewhere in the world. At Neveli new problems were encountered because of the peculiar conditions in which lignite deposit is found. The fact that the deposit is practically floating on a subterranean water course which exerts strong upward thrust on the deposit constitutes a major problem. Before mining can be begun, the pressure of the water below the deposit is to be reduced to a safe limit. Giant pumps are employed for this purpose. The removal of the overburden also has not proved to be easy because of the rocky soil. The excavators originally commissioned have had to be provided with teeth strong enough to pierce the rocky stratum. The major difficulties seem to have been overcome now. Although the authorities of the Neveli Lignite Corporation have all along been confident of success, the continued delay in commencing bulk extraction operation has caused some misgiving in the minds of the general public about the early fruition of the Neveli project. The bulk extraction now commenced has an immediate signi-

ficance for the Madras Government who has set its heart on building a steel plant as early as possible based on the high quality iron ore available in abundance in Salem. The proposal is to set up a Rs 25 crore iron and steel plant of a capacity of 0.5 million tons using the Neveli lignite. Further progress of this project depends on the outcome of the tests that will now be conducted with the Neveli lignite. The Madras Government is keen on inaugurating the project during the Third Plan period and hence has been anxious that bulk extraction of lignite at Neveli should commence as expeditiously as possible as something like 2000 tons of lignite have been found to be needed in

order to conduct the various tests which have to be done in a number of countries in Europe where only facilities for such tests are available.

SHIPPING Inexorable Facts

The merger of the State-owned shipping corporations has evoked less notice than the argument over higher freight rates applicable as from 1 October. It is evident that India's shipping, still below a million tons, cannot work well until full employment is available. The State-owned line equipped with about the same fleet as India

Steamship, will be on its trial. Its results will be constantly compared with that of the company whose reserves have been drained by losses on working for two years. The claim that the Plar has helped shipping to increase its range and operations has been shaken by the failure of Indian Shipping Companies to earn normal profits.

The revival in shipping shares in London noted last month has been ignored wholly in India because freight rates are yet to rise and empty space is yet to be filled. The acquisition of a tanker on instalment purchase is of relatively minor significance compared with the level of freight rates and the argument over the

TOP MANAGEMENT FINDS OUT

HOW TO STOP LOSS THROUGH ORGANIZED LUBRICATION

Alert leaders of industry are fast realising that organized lubrication can increase production, extend machine life and reduce down time... vital factors that make for increased production and profits.

The new Caltex booklet "STOP LOSS through ORGANIZED LUBRICATION" discusses specific benefits of organized lubrication and shows how Caltex Lubrication Engineers can help you effect real savings in your maintenance costs.

CALTEx (INDIA) LIMITED
Bombay • New Delhi • Calcutta • Madras

proposed increase has only suggested that Government is ready to use undue influence against the shipping interests whose claim for relief is based on the inflation of operating costs. The Indian shipping lines are convinced like the foreign lines that some relief is overdue and the Government, as a customer, must soon submit to inexorable facts. The merger of shipping companies like that of P & O and Orient lines on the UK model will probably be considered only when the time is propitious.

*

PORTS

Uncertainties

Though priority has been accepted by the Government for port development, the allocation made in the Third Plan and the schemes and proposals of development countenanced by the Planning Commission in the field of port development have caused considerable disappointment to various State Governments which have set great hopes for development of the various ports within their respective geographical jurisdiction. While total requirements for development of major ports were originally estimated at Rs 86.44 crores excluding a sum of Rs 10 crores for the development of the Tuticorin port in the Madras State, the Planning Commission has fixed a ceiling limit of Rs 75 crores for major port development in the Third Plan. It is relevant to point out that this outlay of Rs 75 crores is inclusive of a sum of Rs 37 crores for carryover schemes from the Second Plan and another sum of Rs 7 crores for the development of the Haldia port to act as a subsidiary port to Calcutta. Compared with the size and volume of development work in the major ports, the allocation appears meagre and quite inadequate to sustain a tempo of progress to meet the potentialities of traffic growth. Even under the Second Plan, the tempo of port development work had been tardy particularly in the early years and against an outlay of Rs 99 crores for port development made in the Second Plan actual expenditure had amounted to only Rs 46.40 crores. This has resulted in accumulation of uncompleted works at various ports, and this should, in the final analysis, also tell on the progress of new development works undertaken during the Third Plan. The most important problem in port development is that of siting which is particularly grave in the Calcutta port, though other ports such as Bombay, Kandla, Mangalore etc are also faced with the same problem in varying degrees. The construction of additional berths at Vizag and Kandla is also urgent in view of the growing importance of the iron ore trade.

Along with the development of the major ports, the question of the development of other smaller ports has also assumed importance in view of the anticipated growth in freight traffic. Among such ports which have shot into prominence are Tuticorin in the Madras State, Mangalore in the Mysore State, Paradip in the Orissa State and Porbandar in the Gujarat State. The Intermediate Port Development Committee had recommended the development of these ports into all-weather ports. Mangalore and Paradip particularly will be the focal points for future growth of the iron ore export from the country while the commercial possibilities of the hinterland of these two ports would also justify large-scale investment for their development. The attitude of the Planning Commission and the Government, however, appears to be far from helpful for the development of these ports in the course of the Third Plan.

Latest indications available from New Delhi would seem to preclude any chance for the inclusion of the scheme for the development of Porbandar during the Third Plan. The Finance Ministry would seem to hold the view that the allocation already made in the Third Plan would not permit the accommodation of new schemes for execution in the Third Plan. The fate of Paradip also looks uncertain while for the development of the Mangalore port, the allocation provided in the Third Plan at Rs 5 crores is far too meagre as compared with estimated requirements at Rs 13 crores. Besides, the allocation for minor ports has been reduced from Rs 10 crores to Rs 6.5 crores, but it is interesting that the schemes originally included have been retained. The question of port development is to be discussed at the next meeting of the National Harbour Board which is scheduled to meet shortly. But whether it will be able to convince the Government of the necessity of providing more funds for port development remains somewhat doubtful in view of the competing claims on the general fund.

*

MONEY MARKET

Not Integrated

The Central Board of the Reserve Bank has affirmed its faith in selective credit control and without a rise in the bank rate, there will be a trend towards dearer money. While West Germany may seek to liberalise credit, the UK is deliberately curbing credit facilities to check domestic investment and consumption. In India the special deposit scheme is gone, but banks have to pay for getting usual facilities. The operation of credit control in the USA, France and Australia over many years is due to the postwar pressure on

prices. If India has not yet interfered with the stock market by asking for compulsory margins, the ban on badia business by banks last year indicated that speculation was going to be checked. Hire purchase is not a major factor today in India and the bazaar rate is the decisive determinant of interest charged. The curb on speculation in commodities by means of a limit to bank advances has been tried out long but experience suggests that the rules are of limited value and banks have today many rivals in financing.

The same may be said about stock market speculation and carry-over facilities at 12 per cent are derived from the contango charges. The variations in interest rates from region to region, and business to business, only shows that the money market is not so far integrated. The comments based on State borrowing or bill discounting are far removed from the practice of private bankers. The private bankers in London are fully organised like Hambro's bank and take some capital from the public to supplement resources. Indigenous banking in India is still very much of an unknown field and the refusal to follow modern methods is based on the high profits that come from secrecy. The financing of illegitimate business apart, the stricter licensing of imports creates many openings for enterprising bankers or money-lenders who are able to skim off profits easily. That also reinforces the trend towards higher interest rates.

*

RESEARCH

Smokeless Fuel

About 95 per cent of the 100 million tons of fuel (in terms of coal equivalent) consumed in India for domestic purposes is made up of cattle dung, farm wastes, charcoal and firewood. Kerosene, coal and electricity constitute another 2.5 per cent of the total demand. Apart from coal gas, soft coke is recognised as a convenient form of fuel for domestic use in the urban areas.

Domestic soft coke requirements of the urban population in the next 10-15 years are estimated at 35 million tons; the demand in the States of West Bengal and Bihar alone is put at 2.5 million tons and 345,000 tons respectively. At present only 1.8 million tons of soft coke are produced in India by the open-stack burning method.

In this method, the valuable by-products of coal carbonisation are lost and the yields of coke are low. The quality of coke produced is not uniform, and poor combustibility and smokiness are other drawbacks of the product. Also, the open-stack method requires the use of sized coking coal, which is in short supply. There is need, therefore, for developing

a more acceptable fuel by other economic methods.

Investigations on low temperature carbonisation of Indian coals have been in progress in the Central Fuel Research Institute and the Regional Research Laboratory, Hyderabad, for some years. Interest in this work stems not merely from inadequate availability of an acceptable domestic fuel but also from a more important angle—the recovery of the valuable by-products of coal carbonisation which are basic to dyes and drugs industry.

A pilot plant at the Regional Research Laboratory at Hyderabad is producing and marketing soft coke obtained from inferior non-caking coals and coal slacks under the trade name 'Coalsite' which has found ready consumer acceptance.

Pilot plant studies at Neyveli Lignite Corporation have established conditions for the production of smokeless briquettes from lignite for domestic use. Based on these trials, a 100 tons/hr plant is scheduled to go into operation in 1964.

A continuous process for the production of soft coke has been developed by the Central Fuel Research Institute on the basis of which a low temperature coal carbonisation pilot plant has been set up.

The plant, which recently went into operation, produces smokeless coke and is reported to have many attractive features. The capital outlay required for a unit is not large compared to a conventional low temperature carbonisation plant of comparable capacity. Both caking and non-caking coals can be employed. Since many cities in North India can economically support low temperature carbonisation plants with a processing capacity of 1000-1500 tons coal per day, it is considered an attractive proposition to put up such plants, equipped with by-product recovery units. The gas produced would find use in industry and the tar obtained could be pooled and processed in plants centrally situated.

Smoke nuisance in thickly populated urban areas is a matter for serious concern because of the health hazards attendant on it. The introduction of smokeless fuel would make for cleaner and healthier cities and towns.

*

FOREIGN HOLDINGS

The Non-Resident Rupee

The latest notification relating to Indians holding foreign currency is accompanied by an assurance that penal action is not proposed. It is noteworthy that Burma, Ceylon and Pakistan are distinguished from the sterling area. It means that sterling balances are Straits dollar balances

23 September 1961

held abroad must be reported if not repatriated in view of India's present exchange position. The power to take over balances by offering Indian currency is implicit because of wartime practice. The depreciation of the Indian rupee in terms of Malayan currency is well known and the Reserve Bank seems to have realised that dealings at a big discount can be countered by stabilising the official exchange rate by means of a census that may be a prelude to compulsory acquisition from Indian residents.

Whether wealth tax in regard to foreign currency holdings will be payable is one issue that is raised. The other is whether the source of bank balances, etc. will be investigated. One point that calls for notice is that much wealth may be held in ready cash outside the banks and information may not be got. Moreover, banks abroad are not obliged to give data about their clients' holdings. The emergence of non-resident rupees, corresponding to non-resident sterling, may be expected if there are developments. One result may be that non-resident rupees may be soon turned into Malayan or Hongkong shares, in view of the tin or rubber industries' progress. Of course, the holdings in East Africa or the Middle East may be reported, but repatriation is unlikely and if money goes to Zurich into the Euro-dollar, the Indian holder will have to declare. The desires for information is wholly in line with exchange control in practice.

*

JUTE INDUSTRY

Pak Threat

IT is not doubted now that the 1961-62 jute crop will be a bumper one and there is already a tendency to rate prospects of the industry with optimism. The improvement in arrivals of raw jute is reflected in a sharp decline in price and at current levels mills may perhaps be able to do simultaneous business even at a profit. But it will be wrong to think that with jute available in plenty, the industry has nothing to worry about. The jute goods industry is a predominantly export industry and what matters most is its ability to sell its production abroad. Thanks to the lack of stability in our prices, foreign buyers are losing interest in our goods. Consumers who were once solely dependent on jute goods for their packaging and other needs can now take to substitutes like paper bags whenever they think jute goods prices are too high. In recent years bulk handling has inexorably invaded what was once the undisputed domain of jute goods. Yet another threat has been the emergence of Pakistan as a producer of jute goods. This country has started with some important advantages over India

in that it could set up the most modern jute mills and supply to its mills much better quality jute at a cheaper price than the mills in India get. These factors place Pakistani mills in a favourable position in world markets. They have further strengthened this by undercutting Indian goods.

According to Sir Walter Michelmore, Chairman of the Kinnison Jute Co., Ltd., the threat posed by Pakistan is quite serious. Pakistan has been undercutting India to the extent of Rs 8 or Rs 9 per hundred bags and even now the differential is about Rs 5 per hundred bags. This way Pakistan is able to take the "first cut" of foreign business. Importers come to India only when Pakistan is unable to guarantee any supply. Sir Walter says that no less than 80 per cent of the recent Australian business in cornsacks went to Pakistan. Cuban orders are increasingly going to Pakistani mills and India's other traditional markets like Africa and Burma are

being successively invaded by Pakistan. In the meantime Pakistan is expanding its jute industry, especially its sacking side. Sir Walter thinks that if conditions continue as at present, Indian exports of sacking may vanish entirely by 1965 as by that time Pakistan's sacking production will have reached the level of our export of this category of jute goods. He estimates that Pakistani mills have a cost advantage of Rs 300 per ton in their favour. This enables them to undercut India and still make substantial profit. The position of our jute mills is in marked contrast to that of the Pakistani mills. Indian jute mills have sustained heavy loss last year due to the high price of raw jute and cut in production, to mention only two reasons.

The crux of the problems facing our industry is the urgent need for a reduction in the cost of production. Only when cost of production is reduced will our jute goods be able to compete with Pakistani

goods in overseas markets. Failure to do this will be the continued dominance of Pakistan in world markets and a progressive decline in our exports. It is therefore well for Government to bear in mind the increasing threat of Pakistan and the progressive losing of ground by our jute goods in foreign markets while deciding questions like minimum price for raw jute and other measures which have a bearing on the cost of production of the jute goods industry.

*

MOBILE BANKS

An Example From Hongkong

Hong Kong makes many things from junks to jewellery, and is also known to be a major centre of film production supplying S. E. Asia Chinese films. One interesting innovation reported in July must be mentioned. On the main-

land, there is idle money and the Hong Kong and Shanghai Banking Corporation has gone out to attract depositors in the New Territories by introducing a mobile bank. A van decorated in red and cream with legends in many local dialects and English too goes out to appeal for savings and armed guards plus radio equipment ensure safety on the trips undertaken by four Chinese officers of the Bank employed on the mobile bank which brings the H. & S. Service to the door of the former and shop-keeper living outside the island.

The idea of a mobile bank may be commended readily to the more venturesome or prosperous banks that have head offices in the district towns in India. The facilities for deposit and withdrawal offered by van will enable the banks to get ahead and stay ahead of the P.O. Savings bank. The new deposit insurance scheme should help but mobile banks will do more than add to the assets. They can promote thrift and finance agricultural marketing in the season. Much cheaper to operate than a regular branch office a mobile bank, if started by an institution of the same status as the H. & S. Bank will not require a licence and can be inspected on the spot. Security and other equipment fitted to the chassis will make a mobile bank as widely welcome as the mobile post office in the major cities. But the bank must look to the small towns or big villages near the City and observe regular hours just like mobile dispensaries operated for charity. The simple and ingenious device may induce a special approach to rural women who are known to keep nest-eggs. Making more money move must be the object and cheapness of operation is a real merit. It is strange that Indian credit survey committees have so far not thought of it. But the H. & S. has done it.

US Pleasant Prospect

With the advent of September and the approach of autumn the US economy can be expected to show its usual seasonal pick-up in activity. At this time of year, then, the experts start to examine the economy's prospects for the months ahead.

This year, such an examination tends to fall into the category of pleasant work. It is not necessary to cite a mass of details to see that the economy is moving rapidly ahead. The total output of goods and services (Gross National Product), personal income, industrial production, construction expenditures and other important economic measurements already have rebounded to record highs, and now, with the usual summer lull about over, further gains are confidently anticipated.

Evidence continues to mount that this anticipation is solidly based. Showing good strength are a number of barometers of the business climate which tend to presage future advances—e.g. factory sales manufacturers' new orders, and incoming orders for steel. Also, inventory restocking seems to be gathering momentum with the passing months.

The view among many experts now seems to be that the Gross National Product may well reach an annual rate of \$540,000 million by the end of the year. This compares with earlier estimates of \$520,000 million-\$530,000 million, and an actual second quarter rate of \$516,000 million.

These largely domestic manifestations of heightened economic activity now have been reinforced by an apparent resurgence of US imports. A rise in demand for foreign merchandise is a normal accompaniment of economic expansion at home.

The US Government has just reported a particularly sharp rise in imports during July, the latest month for which such data are available. According to the census bureau, July merchandise imports were valued at a seasonally adjusted \$1,371,400,000, up 16 per cent from the June level and nine per cent from the level of July 1960. This was the largest monthly import volume since September 1959, and reflected heavy US purchases of such products as machinery, vehicles, metals and textiles.

This sharp July rise seems to have brought to an end an import lag that dates back to the closing months of 1959. Imports hit a two-year low last December, and showed a tendency to pick up rather slowly in the early part of 1961.

Because of the relatively slow pace of the early-1961 pick-up, imports over the January-July period came to a seasonally adjusted annual rate of only \$14,000 million, which was eight per cent below the comparable 1960 rate.

Indicative of the continuing improvement in US demand, however, is the fact that for the latest three-month period, May-July 1961, imports on a seasonally adjusted basis hit an annual rate of close to \$14,700 million, which was some nine per cent ahead of the rate for the preceding three months.

While the experts clearly are heartened by this pickup in imports, particularly as it reflects the upswing in the US economy, they still are mindful of its possible effects on the US balance of payments. The large margin of US export income over payments for imports—which has been proceeding at an annual rate of better than \$5,000 million—has partly offset large outflow of US funds in such forms as government economic aid, overseas military spending, and private foreign investment, and thus had helped reduce the net deficit in the international accounts of the United States.

To the extent that this favourable trade surplus narrows—which could be one result of rising imports—the over-all balance of payments deficit would grow, the US Government's answer to this problem has been, and still is, not to discourage imports but to encourage exports. This is in keeping with the nation's basically liberal trade policies, and obviously benefits nations selling their goods in the United States.

In any case, there is little likelihood that the balance of payments deficit this year will come anywhere near the abnormal \$3,500 million-\$4,000 million range of the past three years. The general expectation still is that the deficit will be in the neighbourhood of 1,500 million—a level which represents a significant improvement in the US position.

COCHIN PORT Gratifying Progress in 59-60

Though made public somewhat belatedly, the 'Administration Report' for the port of Cochin for the year 1959-60 shows gratifying progress in all directions. The financial results show the revenue receipts of the port (excluding the Pilotage Account) during the year at Rs 1,10.82 lakhs which compares with Rs 1,04.77 lakhs for the previous year. The expenditure (excluding that charged to the Pilotage Account and contributions to Reserve Funds and Capital Account) has registered an increase from Rs 79.21 lakhs in 1958-59 to Rs 84.22 lakhs. After contribution to Capital Account of Rs 18 lakhs, to Revenue Reserve Fund of Rs 1 lakh and to the Account and Renewals and Replacements Funds of Rs 3.96 lakhs, the net surplus worked out to Rs 5.63 lakhs which shows a decline as compared with the surplus reported for 1958-59 at Rs 7.96 lakhs.

The total expenditure under Capital Account during the year under review amounted to Rs 48.16 lakhs and the closing balance under the Capital Account was Rs 24.25 lakhs. The gross income and expenditure under the Pilotage Account were Rs 5.80 lakhs and Rs 6.08 lakhs respectively which resulted in a net deficit of over Rs 25,000. The closing balance of the Fund is placed at Rs 7.69 lakhs.

As one of the major ports of the country, Cochin commands a large volume of freight traffic both coastal and overseas and such traffic has tended to increase in recent years. From 1,551,619 dead weight tons in 1954-55 the traffic tonnage has increased to 1,946,388 tons in 1959-60. Including bunkers, the total trade during 1959-60 was 2,046,337 tons. The freight traffic registered during 1959-60

was higher than during 1958-59 both in respect of coastal and overseas trade. The overseas trade showed an increase from 928,912 tons in 1958-59 to 963,322 tons in 1959-60, while the coastal trade showed an increase from 928,912 tons to 983,066 tons. The greater part of the total volume of freight traffic handled at the Cochin port is made up of imports. While imports during the year under review amounted to 1,524,847 tons, exports amounted only to 421,541 tons.

The Second Plan has initiated a programme of large-scale expansion of the facilities at the port. Notable of the programmes included in the Second Plan was the one for the construction of four additional warf berthes in the Ernakulam channel with ancillary facilities. Considerable progress has been recorded in the execution of this programme and nearly 78 per cent of the work connected with their implementation is reported to have been completed. More development work has been envisaged under the Third Plan. The construction of the second shipyard at Cochin is the most important scheme to which interest now attaches.

TOTAL TONNAGE		
Year	Quantity (In Dead weight tons)	
1954-55	..	1,551,619

TRACTOR MANUFACTURE A New Madras Enterprise

With the resources and experience of Massey-Ferguson, the biggest firm in agricultural machinery, the new Madras enterprise of Tractors and Farm Equipment has been commenced as another admirable example of foreign collaboration with Indian industrialists. At a ceremony on 17 September, Mr R. Venkataraman dwelt on the steady expansion of Simpson interests from pens to paints and indicated that the successful manufacture of the Perkins diesel

engines over the years had led to the licensing of the light tractor plant. Mr Behr with long experience of marketing, regards many regions and crops as suited to the Ferguson system of farming, especially, when intensive cultivation is demanded by the growth of numbers.

With a rated output of 7000 tractors per annum and the prospect of complete indigenous components from engine to tyres, the Massey-Ferguson tractor is not subject to an excise duty, if it is wholly used for agricultural purposes. Dealers who visited Madras for the formal inauguration pointed out that full service after sales and regular instruction in operations are offered by the supplier of farm machinery and there is a promise of 4000 jobs at the new factory. Dealers also will benefit and the Government's gain may be not only in excise on fuel consumed or tyres used. The solution of the food problem is not distant, as Mr Kamaraj pointed out and if each village in regions like Gujarat or Tamilnad goes in for a tractor and the assembled implements like tiller, harrow, and which the villager too will acquire skills to raise the glory of farming. The possibilities of consolidation of holdings with a minimum of 25 acres per family after the new ceilings are imposed may be a good reason for advocacy of tractor farming in future. The investment in machinery with surplus cash may limit local landlord's outside interests. The higher productivity now aimed at would increase rural employment and raise the level of wages, as Mr Behr has pointed out early this year in an analysis of what power farming can now do for India. The tractor may be also the best agent of extension service to agriculture and act as a stimulus to rural cooperation. The orders for 2300 new Indian made tractors placed this year only prove that TAFE has got off already to a flying start.

The industrial estate of Simpsons at Sembiam (Madras II) includes a tractor assembly plant but when the bigger production factory is ready, the chances are that the new TAFE will become a bigger unit in the Simpson Group than the paint or piston plant. Providing fresh proof of faith in the future, amalgamations at work have been building up the light engineering industry in Madras and it is evident that industrial evolution in postwar years has not been only in sugar or cement but in the field associated with steel and skills. It should be added that the demand made by industrial growth on outside capital has been negligible and the control of Stanes & Co. has lately brought Simpsons to Coimbatore.

PAPER Unremunerative Prices

The paper industry has made rapid progress in recent years. It has achieved the target set for the Second Plan and its development is to be stepped up further during the Third Plan as it has been set a tar-

get of 900,000 tons for capacity. Licences have however been issued for much larger capacity. But it is significant to note that while almost all other industrial groups have been receiving considerable investor support, shares of paper mill companies have remained more or less neglected. This is largely because paper mill companies are not reporting satisfactory profits. It would appear that paper mill companies' profits have been adversely affected by the unremunerative prices at which they are obliged to sell their production. On one side, the sale prices are pegged at low levels while on the other side cost of production is steadily going up.

In his recent statement to the shareholders Sir Walter Michelmore, Chairman of the Titagur Paper Mills Company Limited, has drawn attention to the fact that prices of raw materials, chemicals, and coal continue to rule high while there are indications of further cost inflation. It stands to reason that Government

which has pegged the selling price should also help the industry to bring down its cost of production. Companies like Titagur situated in North East India have a special grievance in regard to the extra cess they are to pay on all coal receipts, even though Titagur, for instance, is paying as much as Rs 100,000 per month extra in transport charges for coal brought to the mills by road. Sir Walter is justified in characterising this as gross discrimination because this amounts to making the companies in the North East region subsidise the increased cost sustained in the movement of coal by the railcum-sea route by companies in the South and West India. As Sir Walter has pointed out, Titagur is thus made to subsidise the coal transport of its competitors in the regions benefited by this arrangement. It is only proper that whatever measure Government is obliged to adopt in dealing with particular situations, it is ensured that the repercussions fall evenly on all the affected parties.

WHOLESALE PRICE Slight Fall

The official wholesale price index (with the year ended March 1953 as 100) receded by 0.4 per cent to 125.5 during the week ended 2 September, 1961 as compared with 126.0 for the earlier week. The index was lower by 2.4 per cent when compared with the corresponding week of the last month but was higher by 0.3 per cent than that of a year ago.

Lower prices of Fish (—11%), Oranges (—8%), Bajra (—7%), Gingelly oil and Tea (—6% each), Rice at Trivandrum, Ghee at Kalthal and Cummin (—5% each), Groundnut oil (—4%), Jowar and Gram (—3% each), Maize, Urad and Potatoes (—2% each), and Wheat, Barley, Arhar, Mung, Cashewnuts and Eggs (—1% each) brought down the index for 'Food Articles' by 0.8 per cent to 123.2 as compared with 124.2 (revised) for the previous week. The prices of Rice at Jayanagar and Milk (+5% each), Ragi and Coconut oil (+2%

“Do LIC actually invest at the rate of Rs. 1½ million a day?”

More! In fact they're the largest investors in the country.”

PEOPLE ARE TALKING ABOUT LIC

With LIC's mounting business turnover, comes a steady increase in its premium income. A large part of this income is invested in the country's economy—averaging more than Rs. 1½ million every day.

These investments stimulate the economy, creating new wealth. By helping to finance industries LIC catalyses more jobs, more incomes and more goods.

Today there is increasing recognition everywhere of the part which LIC is playing towards domestic and national stability.

Life Insurance Corporation of India

each) and Gur and Chillies (+1% each), however, moved up.

The index for 'Tobacco' remained stationary at the previous week's level of 98.5.

The index for the 'Fuel, Power, Light & Lubricants' group stood at 121.5 as against 121.6 for the earlier week. The prices of Castor oil (-2%) showed a fall.

The prices of Groundnuts, Castor-seed and Cottonseed (-3% each), Gingellyseed (-2%) and Lac (-1%) showed declines, while those of raw Jutes (+6%), Copra (+2%) and Tanning Materials (+1%) moved up and the index for 'Industrial Raw Materials' stood at 138.7 as against 138.8 for the earlier week.

The index for 'Intermediate Products' fell by 0.2 per cent to 140.7 due to a decline in the prices of Linseed oil, Coir Yarn and Brass (-1% each), although the prices of Tin (+2%) showed a rise.

The index for 'Finished Products' advanced by 0.3 per cent to 122.1 as a result of a rise in the prices of Jute manufactures (+3%). The prices of oil cakes (-1%), however, moved down.

NEWS IN BRIEF

The International Development Association extended a development credit equivalent to \$6 million to India for the expansion of tubewell irrigation in the State of Uttar Pradesh. Under the Plan prominence is given to an increase in the supply and use of water for irrigation as a means of achieving during the first three years of the Plan period the irrigation of 320,000 acres of land in UP. The cost of the project is estimated at the equivalent of \$12 million of which the half would be covered by the loan credit.

Mr Manubhai Shah, the Union Minister of Industries, revealed at a press conference held in Srinagar that the Government of India was most likely to set up a 30,000 ton newspaper factory in Kashmir. He also stated that the Government has already decided to install a 30,000 ton paper and pulp factory in Kashmir valley which will also produce rayon pulp.

The National Council of Applied Economic Research has undertaken a survey of ancillary industries in Bihar, Madras and Maharashtra. The survey covers fifteen groups of industries in the field of light engineering, including machinery and machine tools, industrial scientific and mathematical instruments, household equipment, automobiles and bicycles, radios and air-conditioning equipment.

A formal decision to bring public sector commercial undertakings within the purview of the proposed Bonus Commission is understood to have been taken by the Government of India. Monopolies like the Railways and Posts and Telegraphs Department will be excluded.

An additional rebate of six naya paise on the sale of cotton khadi, over and above the existing rebate of 19 nP per rupee, will be allowed

to all purchasers of khadi on the occasion of Gandhi Jayanti for a period of 45 days from 2 October, 1961. This additional rebate will be applicable to the sales in all the certified khadi bhandars in the country. The State Khadi and Village Industries Boards may however adjust the period during which such additional rebate may be in operation according to regional requirements, and allow the rebate in two stages—initially for a period of thirty days from 2 October and subsequently for another period not exceeding 15 days. The State Boards may also allow further rebate in consultation with institutions in their respective States.

The raisings and despatches of coal during June 1961 from all fields in India were 4,182,192 and 3,997,546 metric tons respectively, the corresponding figures in the previous month being 4,598,761 and 4,182,102 metric tons respectively. The total raising of coal upto June 1961 was 29.15 million metric tons as against 26.06 million metric tons during the same period in the previous year.

Loan assistance under the Middle Income Group Housing Scheme can now be availed of by persons with incomes upto Rs 15,000 per annum, as against the previous limit of Rs 12,000 per annum. To encourage the construction of comparative smaller houses, the minimum floor area to be built under the scheme has also been reduced from 700 sq ft 400 sq ft. The Government has further agreed that the amount of loan to be granted for construction of a house should be 80 per cent of the cost, including the cost of land, subject to a maximum of Rs 20,000 per house.

With an export of 4.82 million lbs in June 1961, the total amount of tea exported direct to the UK in the first three months of the current fiscal year increased to 7.32 million lbs from 6.93 million lbs in April-June 1960. Exports to London Auctions rose from 6.67 million lbs in April-June 1960 to 6.80 million lbs in the quarter under review.

Earnings from the export of sewing machines in June 1961 increased slightly to Rs 2.96 lakhs from Rs 2.29 lakhs in the corresponding month of last year. This raised the total earnings from the sewing machines in the first half of the current year to Rs 16.73 lakhs from Rs 13.99 lakhs in the corresponding period of the previous year.

The export duty on Pakistan tea has been reduced from 38 to 25 paise per pound. The Government has resorted to such a step with a view to improving the competitive position of Pakistani tea and ensuring adequate returns to the producer.

PERSONAL

Mr V. G. Pendharker, till recently Manager of the London Office of the Reserve Bank of India, took over charge as Economic Adviser to the Reserve Bank on 15 September.

Mr R. Krishnaswamy, Senior Deputy General Manager, Western Railway, has been appointed as General Manager of the Chittaranjan Locomotive Works.

Dr B. K. Madan, Executive Director, Reserve Bank of India left for Vienna to officiate as temporary Alternate-Governor of the International Monetary Fund for the duration of the sixteenth annual meeting which has commenced on 18 September. Dr Madan will be representing the Governor Mr H. V. R. Iengar who is now touring the United States.

Mr P. R. Viswanathan, Resident Representative of the Indian Sugar Mills Association, has left for New York. Mr Viswanathan will

supervise the work of weighing and sampling of sugar on its arrival there and will also inform the ISMA of the day to day developments in this field in the USA.

Mr W. C. F. Simmonds of Tea Estates India (Private), Limited, Coimbatore, and Mr H. C. Kothari were unanimously elected President and Vice-President respectively of the United Planters Association of South India.

Mr P. M. Mathew, IAS, Director of Agriculture, Kerala, has been appointed Planning Adviser to the Government of British Guiana. The State Government has placed his services at the disposal of the Indian Planning Commission for deputation to the Government of British Guiana.

Are you in need of a loan for your industry?

The problem of finance faces a small industrialist like any other entrepreneur. To help solve this problem, a scheme for the co-ordinated provision of finance has been evolved by the various financing agencies with the assistance of the Central and State Governments.

The State Bank is ready to assist small industrialists with advances against raw materials, manufactured articles and ready stocks etc., as well as with advice as to any other source from where credit can be obtained.

There may be a branch of the Bank in your town. Why not take your problem to the Agent who will be glad to be of assistance?

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IF, as widely suspected, Mr Hammarskjöld's death was due to Katangan sabotage or shooting, it would be yet another instance of the Muse of history taking a special delight in irony. For about a year now Mr Khrushchev has been slinging Mr Hammarskjöld and metaphorically asking for his head, because of the latter's alleged complicity in imperialist plot to keep the Congo divided. And yet Mr Hammarskjöld's death has followed in the wake of UN attempts at bringing Katanga into the Union of Congo. What is more, the hand that most probably took his life was that which he is supposed to have liked to shake by preference. But the irony does not end there. Latest reports indicate that it was British pressure that sent Mr Hammarskjöld to meet Mr Tshombe for arranging a cease-fire in Katanga. If these reports are true, Mr Hammarskjöld's death by probable Katangan instrumentality is even more grimly ironical.

The role of an honest broker in international politics is notoriously unenviable, but it is hard that high-minded intercession in the way of the duty should be visited so harshly. Mr Hammarskjöld's death is yet another reminder of the true nature of the barbarous politics of our times, dyed in blood and wrapped in violence. Any complacent attempt at giving oneself a moral alibi by suggesting that all this is due to excesses of voodoo and black-magic associated with African politics will not bear a moment's scrutiny: At an individual level one recalls other violent deaths encountered by men who were doing nothing but their duties. Of particular poignancy in this context is the assassination eight years ago of another distinguished Swede, Count Bernadotte, while performing a similar international duty. Mr Hammarskjöld's death like that of Count Bernadotte merely dramatises the violence in the air and the fear that lurks in every corner in an age in which the moral sensibilities of mankind have been dulled. For a world that has been conditioned to the possibility of mass destruction as a normal hazard of civilised life, individual deaths do not come with a vivid shock. Perhaps the Yeatsian Second-Come is already a fact: The blood-dimmed tide is loosed everywhere, the ceremony of innocence is drowned: The best lack all conviction, while the worst are full of passionate intensity. In Mr Hammarskjöld we had at least one good man who did

not lack conviction, though, he was not noticeably garrulous about it. Now that he is gone, the worst will probably be even more noisily passionate.

A rather interesting suggestion for solving the problem of international liquidity has been made by Mr L. K. Jha, Secretary of the Finance Ministry, Government of India, in an article in the London Financial Times. Mr Jha has steered clear of fancy schemes that involve the creation of a new medium of international exchange and other institutional changes associated with it. In fact, his scheme does not even involve the invoking of Article VII of the IMF and obtaining firm commitments of lines of credits in various currencies. The essence of the idea, if I may permit myself an oversimplification, consists in making the IMF function rather like a commercial bank offering the usual facilities of overdraft. As in the case of ordinary overdraft arrangements, a simultaneous credit is given to the borrower and he will be allowed to operate this account for his disbursements as and when occasion arises. In effect, he will issue "a cheque" in favour of particular countries and these cheques will be credited to the accounts of the countries concerned. These countries can either withdraw the amounts to their credit in such accounts immediately or they may use them when they themselves want to make payments to others. Mr Jha expects that in course of time the IMF will have a sizeable number of such "current accounts". In so far as these accounts with the IMF are allowed to remain, they automatically increase the resources of the IMF. In fact, as in the case of a commercial bank, the IMF will be able to create credit on the basis of such growing resources. No doubt, care will have to be taken that such expansion of credit does not add to world inflation. But that is a danger which a seasoned financial institution like the IMF can be confidently expected to take care of.

The principal attraction of the scheme as explained by Mr Jha himself is that it does not make any immediate demands for fresh commitments on the part of the member countries. In fact, it does not even involve the promise of firm credit lines such as have been asked for in the current discussions at Vienna. As Mr Jha puts it, "No new obligations are created.

Reliance is placed instead on the attractiveness of an account with the IMF as against holdings of individual currencies. The countries which hold such an account can readily reduce it if their surpluses begin to dwindle. On the other hand, if any country were to agree to hold this account for long periods of time, the IMF could pay an interest to them—since the IMF would be earning an interest from the original borrower". In other words, when the scheme gets going, the IMF will be a gigantic commercial bank operating on a global scale. By any manner of reckoning, this is an interesting scheme and all its implications deserve to be studied closely.

Sir Bernard Waley-Cohen, the Lord Mayor of London need not have travelled five thousand miles (and at his own expense too) to make himself ridiculous. At an official lunch in Calcutta the other day, he felt impelled to lecture Mr Nehru how a freeman (though honorary) of the city of London should conduct himself in public. As the Lord Mayor of London, he said, he felt he had a certain responsibility in the matter. Mr Nehru's misdemeanour, it would appear from certain things that the Lord Mayor let slip at the lunch and elsewhere, was his somewhat wistful reference at a Press conference to Earl Russell's imprisonment. Anyone with some knowledge of Mr Nehru's own past would have seen in it nothing more than a certain nostalgia for the period when moral protests and gaol sentences were daily occurrences in his life. To construe this as a piece of interference in the internal affairs of Great Britain requires obtuseness of a special order. Curiously, the Lord Mayor advises Mr Nehru in the same breath to concentrate "his brilliant and statesmanlike abilities on the great world problems." Apparently, in Sir Bernard's estimation, preoccupation with nuclear disarmament in a statesman is unforgivably trivial. But apart from the merits of the argument, what makes Sir Bernard think that he is answerable for the behaviour of honorary freemen of the city of London? And does he really believe that the London County Councils (General Powers) Act of 1927 has conferred on him the duty and the power to pull up honorary freemen of the city all over the world? Some obscure jurisdictional point is apparently troubling the Lord Mayor and it is only kindness to tell him that he is mistaken in assuming such global responsibilities. But taking Sir Bernard on, on his own terms, surely a Londoner's privilege extends to criticising his Government and a freeman of the city of

London can do so without impropriety? In any event, distinguished men who would normally feel proud to be elected freemen of the city of London would be noticeably less eager for the honour if they thought that they were answerable to the Lord Mayor of London for their conduct at Press conferences.

Popular literature, which is basically anarchic in its inspiration, has often been irreverent to the office of the Lord Mayor. Over centuries, even the little brief authority in which the office is dressed has been rendered largely ceremonial. It is a little unfair to criticise a Lord Mayor for pomposity when the essence of the office is pomp and a somewhat anachronistic circumstance. It is easy to tilt the precariously poised dignity of that office into abysses of the ridiculous. Sir Bernard has done just that.

I have always felt that the rather smug habit of holding up to public scorn the howlers of candidates for government employment was grossly unfair. I also feel that the wrong kind of conclusions are being drawn from them. The nuggets chosen for the delectation of the public are examples not so much of ignorance as of enterprise: the very bizarerie of the answers proves it. Any fool can, by dipping into the appropriate reference manuals, set a paper in General Knowledge that will stump the most omniscient examinee. I should think poorly of the initiative—a quality that we are told is indispensable in a civil servant—of the examinee who, when he does not know the answer to a question, accepts defeat and leaves a blank column. In a situation where the odd mark is important, a plucky guess is worth the trouble. I, for one, am willing to consider this readiness to take a long shot a point in favour of the candidate who, after all, may have to take many long shots before he earns his pension. He may, as he has, come a cropper, but these are days in which government officials are exhorted to learn by making mistakes. That is why I admire the Orissi candidate who, when he did not know who Janos Kadar was, hazarded the opinion that he was a Pakistani Minister. Now you may deplore the fact that the great Hungarian revolution did not sea the soul of the young man badly enough for him to recall who M Kadar was. But I have nothing but praise for the way he let his auditory imagination supply his factual deficiency and track the name to a probable Muslim origin and so inevitably to Pakistan. must also say that English orthography, against which Shaw was tilting all the time, has its share of the blame. Indeed my new paper reporting the howler he made the Hungarian Prime Minister Janab Kadar!

FOOD PRICES Storage for Stabilisation

A broad indication of future price policy—this has since been spelt out in the election manifesto of the Congress party—was given by Prime Minister Nehru at his press conference last Sunday. Mr Nehru made it clear that maintenance of floor prices for foodgrains would be an essential constituent of the policy of stabilisation of the prices of essential commodities. Government's broad policy, he said, was not only to check the prices of essential articles, particularly food grains from rising, but to prevent them from falling too low. He added that Government would like to fix a price below which food grain prices should not fall but such price should be fixed before the sowing season.

The policy briefly indicated by the Prime Minister is implicit in the Third Plan approach to the problem of prices. Hitherto Government's intervention has been confined to action designed to control rising prices for the benefit of urban consumers. Though the necessity for floor prices has been urged by many expert bodies which have gone into the problem, action to ensure stable and fair prices for producers has been halting and half-hearted, with the result that the entire policy of price control has remained largely ineffective. If food grain prices are to be stabilised, Government should be in a position to take action to prevent sharp fluctuations in prices in either direction. The key to stabilisation, as the Planning Commission has pointed out, is building up of buffer stocks and operating them through continuous purchase and sale over a wide front. The difficulty that has held up the implementation of such a comprehensive policy, it has been suggested, as been inadequate facilities for storage of food grains. Successful implementation of the policy in future will depend on rapid expansion of storage and warehousing capacity under Government control.

At the end of Second Plan the total storage capacity at the disposal of the Central Government was only 2.5 million tons of which only about a third was owned by Government. It is proposed to increase storage accommodation to 5 million tons of which about 3.5 million tons will be owned by Government. The plan has allotted Rs 25 crores for the construction of additional godowns and Rs 8 crores for warehousing programme. It is also stated that, as provision of storage capacity is a vital step in the implementation of the price policies under

the Plan, such further resources as may be needed will be made available. The storage capacity of warehouses of the Central and State Warehousing Corporations is to be increased from 350,000 tons at the end of the Second Plan to 1.6 million tons. Progress already achieved and plans for the future were reviewed at the fourth annual general meeting of the Central Warehousing Corporation. The Chairman, Mr B. B. Ghosh, Union Food Secretary, said that warehousing had been making steady, though not spectacular, progress, and had created a general consciousness of the need for good storage; this was bound to result in widespread benefits. The storage capacity of Central warehouses rose from 44,040 tons at the end of 1959-60 to 79,020 tons at the end of 1960-61. The Corporation has approved project reports for the construction of warehouses at 34 centres with a total storage capacity of 1,63,400 tons at an estimated cost of Rs 231.27 lakhs. Warehouse buildings with storage capacity of nearly 27,000 tons have been so far completed at seven centres in different States. The State Corporations have also undertaken construction of their own buildings at more than 20 centres.

The Corporation has also taken steps to accelerate its construction programme. Mr Ghosh said that emphasis during the Third Plan would be on building warehouses of a proper size at least at centres where warehouses had been started in hired accommodation and to take up construction increasingly at new centres. The Engineering Organisation functioning under the Government of India's Department of Food, would now also undertake and look after the construction programme of the Central Warehousing Corporation. This was expected to expedite the construction of facilities.

Apart from the provision of buildings it is also necessary to train the personnel for the large number of new warehouses that are to be set up. So far more than 400 persons have been trained at the five courses organised by the Corporation. Another two months' training course was inaugurated by Mr B. B. Ghosh, Union Food Secretary, on September 11. The first batch of 87 trainees from the Central Corporation and a number of State Corporations will complete their training on October 16. The second batch of 82 candidates from various State Corporations will commence their training on October 9.

Revised Coal Targets

The task of the National Coal Council, which met in New Delhi last Tuesday to review the coal production target and its fieldwise and gradewise breakup, would have been

facilitated if the high level conference which met in the previous week had been able to arrive at firm decisions. The Council, it is learnt, has however approved a tentative fieldwise and gradewise breakup of the additional production of 37 million tons required to reach the Third Plan target of 97 million tons by 1955-56. It has been emphasised that this target of 97 million tons is an actual production target set for achievement in the last year of the Plan and not a target of the rate of production to be achieved in the last quarter of that year. This means a monthly rate of production of 8.1 million tons by the first month of the last year of the Third Plan.

The additional production was allocated between the private and public sectors as 20 million and 17 million tons respectively, at the last meeting of the Council held on November 28, 1960, when a tentative breakup was also approved on the basis of data then available. More geological data about the coal fields to be developed, especially in the public sector, as well as a clearer picture of the gradewise demand of essential consumers, have now become available and the pattern of production has been modified accordingly.

The additional production of 20 million tons in the public sector has been allocated as 17 million tons from NCDC and 3 million tons from Singareni. The total capital investment required for the purpose is estimated at about Rs 103 crores with a foreign exchange component of Rs 48.1 crores. It is also pointed out that the outlay of Rs 57 crores provided in the Plan for raising 17 million tons by NCDC may not be adequate. Further funds may be required to achieve the target and it is believed that these funds will be made available from out of the outlay for the Bokaro Steel Plant.

The additional production of private sector collieries of 17 million tons will consist of: Coking coal 4.87 million tons; blendable coal 1.12 million tons and superior grades of non-coking coal 10.84 million tons. The major portion (11 million tons) of this additional production will be from existing mines and the balance from new sinkings in existing leasehold areas. The capital outlay in the private sector programme is estimated to be of the order of Rs 60 crores with a foreign exchange component of Rs 28 crores.

The review of demand and production targets has disclosed a shortage of coking coal for steel plants underlining need for more washeries. Against estimated requirements of Rs 29.25 million tons, made up of 26 million tons of coking coal and 3.25 million tons of blendable coal, the availability will be 23.25 million tons of coking coal and 4.82 million tons of blendable coal by end of Third Plan. It has been suggested that, unless blendable coal is earmarked solely for the steel plants, it would be difficult to meet their requirement of 3.25 million tons of this grade by 1965-66. According to present estimates a washing capacity of 112 million tons, is to be built up.

The Railways too will not be able to get all their requirements of quality coals for which they have

been pressing. Though steps have been taken to set up washeries for beneficiating coals so as to meet the requirements of railways, the present indications are that adequate washing capacity for washing non-coking coals will not be established by the end of the Third Plan. Till the full washing capacity is established, the quality coals will have to be distributed proportionately among all the essential consumers and the Railways will have to make up their full demand by making use of grade I coals.

The Council considered the requirement of coal for the Fourth Plan and estimated the requirements at 200 million tons and indicated the manner in which the demand and fieldwise breakup of the production may be worked out. The total development cost at the rate of Rs 60 per ton for raising the additional 103 million tons is estimated at Rs 618 crores. This figure excludes the extra cost of developing deep and difficult mines as well as the capital cost on maintenance of the level of production to be achieved by end of Third Plan.

The appointment of a nine-man committee to review the functions of the different organisations for development of small industries was announced last week. It may be recalled that the Estimates Committee of the Lok Sabha, in its report on Small Scale Industries presented last year, had drawn attention to the multiplicity of organisations that have been set up for the development of the small scale sector. There are two executive agencies at the Centre, the Development Commissioner's organisation and the National Small Industries Corporation. The Committee found that the functions of these two organisations were not clearly demarcated and felt that there would be advantage if the two could be amalgamated. At the State level there are several agencies for rendering assistance to small industries. The main organisation at the State level is the State Directorate of Industries. The functions of the State Director of Industries, the Committee observed, overlap those of the Central agencies at the State level in many respects. In addition, the State Financial Corporations and the State Bank of India are in certain cases also acting as agents of the State Governments in rendering financial assistance to small industries. The large number of agencies makes for delay in the grant of developmental aid, as reference has to be made to a number of other agencies, Central and State, before any one Central agency can take action. After considering the set up of the organisations and their functioning, the Estimates Committee recommended that a committee "consisting of representatives of Central and State Governments and of small industries may be constituted to review their working and make suitable recommendations with a view to reduce the multiplicity of organisations, eliminate overlapping of functions by clearly demarcating the duties as between them, avoid delays, procedural and otherwise and provide as far as possible service".

DESIGN... for finest performance

Of all aspects of industrial endeavour the most intriguing is thermo-dynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story... a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is tailor-made to give optimum performance under varying local conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities

of waste material in the form of bagasse for fuel; again in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digesters in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will tailor-make not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

Markets

JUTE Progressive Increase in Gunny Output

It is generally believed now that the jute industry can confidently look forward to a period of smooth working. The supply of raw jute has considerably increased during the past fortnight or so and the price levels both in the raw jute and goods sections seem to be quite reasonable. A few weeks ago it was feared that raw jute prices might be pushed down so low that cultivators would lose interest in jute cultivation next year. It was at that stage that the question of fixation of a minimum price for raw jute came to the fore. The West Bengal Chief Minister lent powerful support to the floor price idea which appeared to have been favourably received in New Delhi also. In the meantime, however, partly because of the decision of mills to bring into commission looms sealed during August and partly because of the active consideration of the buffer stocks proposal, raw jute prices recovered.

Raw jute prices are quoting at what is considered generally as a reasonable level and during the past few days there has not been any wide fluctuation. The present level seems to be quite remunerative both to the cultivator and the jute goods manu-

facturer. Mills require considerably increased supplies as they have, since the beginning of the month, reopened a total of about 9 per cent of looms. Moreover, they are shortly to increase their weekly working hours from the present 42½ hours to 45 hours. The next step will perhaps be the restoration of the 48 hour week with the unsealing of more looms to come later on if such a step becomes necessary.

It is to be expected that the industry will be progressively increasing its output in coming months in view of the adequate supply of raw jute that will be available during the current jute year. An official estimate has placed the 1961-62 jute crop at between 65 (and 70 bales bales. The final estimate of the acreage under jute this year is 1,836,000. This shows an increase of 20 per cent over last year. The area under mesta is estimated at 800,000 acres. Although the quality of the fibre is said to have suffered a setback due to inadequate supply of water for retting, the yield is reported to have increased in most growing regions. The new crop is already moving into the markets in daily increasing quantity and in coming weeks arrivals may be expected to further increase in volume. Besides the Indian crop, mills will be able to supplement their supply from imports. A liberal import policy is being adopted by Government in regard to jute. Import of jute from Pakistan is free of duty and recently the 35 per cent

import duty payable on imports from other sources has been removed. This will enable the Indian industry not only to build up its depleted stocks but also to reduce its cost of production by the use of cheaper imported jute. Both Pakistan and Thailand have reported good crops this year and since there is no import duty payable, importers can get their requirements from either of the two countries, Pakistan and India, depending on which country offers better prices. So far about 300,000 bales of jute cuttings had been authorized for import and it has been indicated that further imports may be authorised if necessary. It is understood that the buffer stock authority will come into being before the end of the current month. The authority may not, however, be required to enter the market immediately it is constituted. For, what with the unsealing of looms and increase in the working hours, mills will be needing increased supplies which they have perforce to buy from the market as their stocks have already been practically exhausted.

The jute goods market ruled dull most of the time developing a quiet undertone toward close. It would appear that foreign buyers continue to buy only their immediate requirements in the hope that prices would come down in view of the increase in working hours from next week. B Twills Ready opened the week at Rs 133.50 and was done up to Rs 134.50 around midweek mainly in sympathy with the raw jute section. In the continued absence of foreign interest and on confirmation that mills would work 45 hours a week from next week, a quiet trend prevailed and B Twills Ready reacted to Rs 132.75. Hessian 40" x 10 oz Ready was likewise easier at Rs 50 after having been done up to Rs 51 from an opening rate of Rs 50.50.

The raw jute section, however, ruled steady throughout. It would appear that holders have derived strength from the fact that the official Pakistani estimate of jute acreage in that country has turned out to be much below earlier indications. Pakistan's jute acreage has increased only by 35.8 per cent and is placed at 20.61 lakh acres against 15.18 acres. It was expected that the increase in acreage would be something like 50 per cent. Consequently, the Jute outturn in Pakistan will also be lower than anticipated. It was believed earlier that the Pak jute crop would be about 80 lakh bales. On the basis of the actual acreage, jute production in Pakistan may not be more than 65 lakh bales.

TEA Production and Prospects

PRODUCTION of Tea in North-East India has risen sharply to 110.82 million pounds in August from 95.78 million pounds in the previous month and 95.36 million pounds in the corresponding month of last year. Total production, for the first five months

ended August 1961, is also higher at 324.66 million pounds as compared to 269.03 million pounds in the corresponding period of last year.

According to the latest monthly review, released by Messrs J. Thomas & Company, four sales were held during last month, when offerings totalled 272,371 packages as compared with 248,191 packages in five sales in August 1960. With the quality of the offerings from all districts past their peak and with a larger crop being produced this season, prices for all sorts showed a steady decline with sharpest drop occurring in the fourth sale of August. In spite of the easier market that prevailed there was a good demand from exporters and internal buyers for orthodox teas even though rates for the tippiest sorts showed falls of, sometimes, up to Rs 5 per kilo.

The review adds that North Indian producers and buyers are at a disadvantage compared with their Ceylon counterparts due to the taxes they have to bear, and thus Indian plain teas are uncompetitive on world markets. The review concludes by stating that "altogether, at present, the outlook for producers is not particularly encouraging and we expect the market to fall still further before any improvement can be expected. It is necessary, therefore, that on such a market, a better standard of teas than last year should be produced, since, with ample supplies to choose from, buyers can be very selective."

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 66,307 packages. There was a good general demand. Plain orthodox descriptions were irregular. Wellmade teas free from stalk and fibre were firm; but the remainder were generally a little easier. BOPs were well supported. Medium and better orthodox types were irregular; but useful liquoring kinds and particularly Orange Fannings met with good competition.

CTC types were very irregular with a few selected best liquoring kinds selling above last rates. The remainder were, however, generally up to 20 nP easier with BP's receiving better support than similar Fannings. Off-grades were irregular, but those with useful liquors were sold well.

Darjeeling teas received fair support at easier rates. Whole Leaf grades were again a little easier with more demand for the cheaper varieties were quoted:—Clean Plain Broke Rs 4.20 to Rs 4.40; Plain BP Rs 4.10 to Rs 4.30; Plain Fannings Rs 3.90 to Rs 4.10; Medium Assam CTC BP Rs 4.80 to Rs 5.20; Medium Assam CTC Fannings Rs 4.80 to Rs 5.20; Best Assam CTC BP Rs 5.30 to Rs 5.70 and Best Assam CTC Fannings Rs 5.30 to Rs 5.90.

In the Internal Sale, offerings were 25,380 packages of Dusts and 212 packages of Leaf grades. There was a good and general demand for Dusts. CTC types were irregular, but generally dearer, particularly those with a clean leaf appearance. Orthodox descriptions eased further; but there was a better demand than in the previous week. Better liquoring Legg-cut types were fully firm to dearer; but the plainer and fibrous

descriptions declined in value. Following rates were quoted:—Plain Orthodox Dust Rs 3.90 to Rs 4.20; Medium Assam Dust Rs 4.20 to Rs 4.60; Legg-cut Dust Rs 4.30 to Rs 5.00; Medium Assam CTC Dust Rs 5.65 to Rs 5.90 and Good Assam CTC Dust Rs 6.30 to Rs 6.60. There was a fair general demand for the Leaf grades.

In the Colombo market, offerings were 6,969,208 pounds. There was a stronger general demand. Best Dim-bula/Dickoya Brokens were sold at about last rates; but lower qualities were substantially dearer, reflecting active demand. Best Uva teas were irregular, following quality. Better medium brokens were slightly dearer, while low-grown teas were slightly easier.

In London auction, offerings were 27,268 packages including 20,308 packages of Northern India teas. Bidding was strong and well distributed for all good teas and prices tended dearer. Teas from Doars, except the poorest kinds, were fully firm. For all other kinds, the market was very irregular and prices showed a decline.

The export quota of Pakistan tea has been fixed at 10 million pounds, which is double the quota allocated by the Pakistan Government three months ago. This increase is made possible by a record production. The Government has also reduced the export duty on tea from 38 paise to 25 paise per pound to enable Pakistan tea exporters to compete favourably in export markets. While the authorities are watching the situation regarding price control now in force, active steps are being taken to increase the area under tea under the scheme of three per cent annual extension of tea acreage to fulfil the five-year target of one lakh acres from the present estimated 80,000 acres.

In the sale held at Chittagong, offerings were 14,361 chests of leaf grades and 3,675 chests of dusts. Among leaf grades, best liquoring sorts were the strongest feature and realised full valuations; but stalky residues aroused less interest and were discounted by 20 to 30 paise per pound. Dusts met with a fair demand at prices generally 10 paise below levels ruling a fortnight ago. The next internal sale will be held on 27 September, when offerings will be 15,320 chests of leaf grades and 4,300 chests of dusts.

COTTON Futures Buoyant

Bullish trend held its sway for the second week in succession in the cotton futures market in Bombay and the Varilla March contract during the past week gained further ground deriving inspiration from the unpropitious weather conditions in many of the cotton growing centres and fresh buying support. The contract during the close of the week reached a new peak of Rs 612.25 and showed a net rise of five points over the previous week's closings. However thereafter the contract drift-

ed lower and on Tuesday last was quoted at Rs 608.25. The resistance the contract confronted at higher levels was attributed to the light but persistent realising by Ahmedabad and Calcutta. According to the consensus of opinion the contract is not likely to remain firm unless some adverse developments take shape in the weather conditions.

A gradual revival of mill demand for old crop was visible in the spot market at Sewri. The only possible explanation that can be given for such a development is the fear of possible damage to the new crop and the likely delay in their marketing.

Staple growths like Dig Vijay, CO 2 and L 147 met with spinner demand at slightly higher prices. The trade circles confidently feel that the current crop of Surti and Dig Vijay has practically been exhausted. The prices of these varieties showed an upward trend.

Interest in Bengal Deshi, on the export front broadened during the week under review and nearly 16,000 bales were reported to have been sold. Japan figured as the leading buyer of this growth and accounted for 10,000 bales; the remainder being absorbed by Continental purchasers. Shipments of cotton during

the previous season aggregated 0.28 million bales as against 0.19 million bales in the previous season. Japan topped the list accounting for 0.22 million bales.

In the import section African varieties were eagerly sought after by the mills on account of their low prices. Interest in Sudanese and Egyptian growths was sporadic. American cotton stapling 1.1/16" and above failed to attract the attention of buyers. Some mills were reported to have purchased a small quantum of US cotton 1" and below presumably due to the paucity of indigenous cotton spinning 20/30s counts.

ENGLISH ELECTRIC

HIGH RUPTURING CAPACITY HEAVY DUTY FUSEGEAR

H. R. C. CARTRIDGE FUSE-LINKS

Hermetically sealed construction—
Non-deteriorating—
ASTA certified for 35 MVA rupturing capacity—
Visible indication of operation—
Ratings up to 300 amps.

COMBINATION FUSE-SWITCHES

Ratings from 30 to 750 amps—
Rugged construction, fully shrouded and interlocked—
Type tested for 35 MVA rupturing capacity.

COMBINATION FUSE-SWITCHBOARDS

Incorporating Combination Fuse-Switches upto 750 amps—
Robust and compact construction—
Readily modified and extended—
Type tested for 35 MVA rupturing capacity.

DISTRIBUTION FUSE-BOARDS

Robust, dust and moisture proof construction—
Type tested for 35 MVA rupturing capacity—
Ratings from 15 to 100 amps.

Flexibility of power distribution—
Can be installed without disturbing existing layout or production—
Avoids chasing of floors for ducting—
Approved by Fire Insurance Authorities.

OVERHEAD BUSBAR EQUIPMENT

A complete range of distribution equipment manufactured at the Madras Works of The English Electric Company of India (Private) Ltd.

PIECEGOODS:

Divergent conditions prevailed in the Bombay cotton piecegoods market during the past week. The domestic sector remained featureless whereas the export front depicted moderately lively conditions.

The dull conditions in the domestic sector had serious repercussions and the turnover during the week under review dwindled into a mere trickle. Purchasers were conspicuous by their absence. Even those from Andhra, Bihar, Kanpur, South India and Assam who entered the market transacted only small business.

The mills and merchants are still very much in the embarrassing position in which they were placed a few weeks ago. Their endeavours to liquidate their holdings even at lower rates proved futile. Popular items which had at one time commanded a premium of about 15 per cent were offered at a low premium of five per cent. It was also reported that in some cases goods were even available at par. Stockists of grey goods, poplins and power-looms too were ready to dispose of their stocks at very low prices. Unfortunately all their efforts were of no avail for the market was deserted by the customers.

The export front, on the contrary, showed signs of looking up and presented routine dealings. The UK evinced considerable interest in spot goods against the unutilised licences for the current year. Inquiries for usual varieties for delivery in January, February and March under export licences flowed on a highly encouraging level. However the shippers in Bombay were reluctant to make any commitment before securing an assurance for their quota.

Sudan during the last week remained inactive. Stray transactions in uncalendered sheetings with West Germany were reported. Burma's interest hovered around coatings, sheetings, bleached mulls and superfine dhoties. Bangkok was contented with a small quantum of printed voiles, sarees and bleached longcloth. Aden's fancy focussed on grey sheetings and gadapat and East Africa was satisfied with a small quantity of sheetings.

The East India Cotton Association has now finalised arrangements for carrying out arbitrations on quality of US cotton (including appeals) in Bombay by the six sworn surveyors. They have been designated as Board of Cotton Examiners by the US Department of Agriculture in 1959 and are authorised to carry on arbitrations and appeals on quality of US cotton. The Association has also framed by-laws to govern CIF, C&F and FOB contracts and contracts for cotton imports to arrive and for forward delivery and the same have also been approved by the American Cotton Shippers' Association. (The by-laws have also received the approval of the Government of India.

Till now disputes regarding quality of US cotton were mostly forwarded to the Liverpool Cotton Association. Hereafter, if the buyers and sellers so agree at the time of entering into contract, the arbitrations and appeals could be carried on in Bombay.

To meet the wishes of the American Cotton Shippers' Association, a special provision has been included in the by-laws that if the contracting parties so desire at the time of entering into a contract, appeals against arbitration awards in Bombay could be lodged with the Liverpool Cotton Association upto 31 July 1962, which date is subject to further extension by mutual agreement between the Associations. The Association is now in correspondence with the Liverpool Association to finalise these arrangements.

In the meantime such shippers and importers who desire to have arbitrations and appeals in Bombay, can do so subject to the newfangled by-laws.

Pepper Output

ACCORDING to a report issued by the Commonwealth Economic Committee, the output of pepper in India, which fell from 526,000 cwt in 1959-60 to 524,000 cwt in the following season, is expected to show a further decline in the 1961-62 season as a result of the damage to the pepper vines caused by floods in Kerala. An official forecast in June placed the Sarawak crop in 1961-62 at about 120,000 cwt against an exportable production of 133,000 cwt in the previous season and 141,000 cwt in 1959-60. Full details of the 1960-61 harvest in Ceylon are not yet available.

Information so far available suggests that there was some expansion in world trade in pepper in the first part of 1961 compared with a year earlier, the reduction in shipments from India and Ceylon being more than made good by an increase in those from Sarawak and in re-exports from Malaya of Indonesian pepper.

Exports of pepper from India in January-April 1961 totalled 174,800 cwt against 194,700 cwt in the corresponding period of 1960, reflecting, in large part, the reduction in consignments to the US to less than two-fifths of the level a year earlier. The decline more than outweighed the threefold increase in shipments to the Soviet Union and, on a smaller scale, the increase in those to Pakistan, the ECM, Egypt and Iran.

Apparently, as a result of clearing of stocks in Sarawak at the end of the 1960-61 season, there was a sharp increase in shipments in April-June leading to a more than fourfold increase in exports over the first half of the year. Some 75 per cent of the total was consigned to Malaya, while, on a much smaller scale, increased quantities were also taken by the ECM, the UK and other Commonwealth countries.

COFFEE

According to the figures released by the Coffee Board, the receipts of coffee into the 1960-61 Pool up to 15 August 1961 have amounted to 67,149 tonnes, comprising 28,956 tonnes of Plantation variety; 10,121 tonnes of Arabica Cherry and 28,072 tonnes of Robusta.

During August 1961, internal releases were 2,947 tonnes of coffee, bring-

ing the total, for the eight months ended August, to 21,721 tonnes.

Up to the end of August 1961, 22,793 tonnes of coffee, made up of 17,911 tonnes of Plantation; 1,382 tonnes of Arabica and 3,500 tonnes of Robusta were sold for export out of the 1960-61 crop as against only 9,218 tonnes (Plantation 8,007 tonnes, Arabica 819 tonnes and Robusta 392 tonnes) exported in the corresponding period of last year.

SUGAR

Thanks to easy supplies following the removal of curbs on its sale and distribution, conditions in the Sugar markets have remained generally quiet. The Union Government may soon lift whatever curbs are left to encourage consumption in the country. In view of the heavy carry-over, sugar factories are reported to be reluctant to start crushing earlier in the season. In the Hapur market, the rate for wholesale delivery is quoted at Rs 105.50 per bag.

The production of sugar has since witnessed considerable progress and the total stocks that will be made during the current year in the country are estimated to be at a record figure of 3,320,000 tons. In fact, the increased production has been a source of worry, both to the producers and to the State Governments. The disposal of exportable surplus has become a problem.

With the better supply position that is obtained currently, the need to modify the present system of distribution has been widely acknowledged. In fact, the States of the Punjab, Gujarat, Uttar Pradesh have already removed the inter-district restrictions on the movement of the sweet commodity.

GUR

In the Hapur Gur market, trading is poor, as only dry selected stuff is in demand. Stocks are estimated at 14,000 maunds.

Cane crop prospects are considered to be bright. As the supply of cane is not likely to show any increase as compared to last year, a rise in gur and khandari production is expected. Production in the new season is expected to commence early next month. Dry selected gur is quoted at Rs 16.25 a maund.

FOODGRAINS

The Hapur Foodgrains market exhibited steadier conditions during the week, following the reported damage to kharif crops. Wheat prices have improved fractionally to Rs 15 a maund for the average quality and Rs 16.50 a maund for the farm produce. The market for Rice is, however, ruling quiet following last year's bumper crop. Gram has recorded fractional gains at Rs 14.12 a maund for superior Punjab variety. Barley prices have sought higher levels. In Pulses, Peas rules steady on good Calcutta demand. Moong has drifted to lower levels on good crop reports from the producing areas of the South.

They Bombay market has also presented a steadier appearance.

Reports of inclement weather and sustained downpour in several States of the country are received by traders with concern. It is feared that if the weather does not improve soon the standing kharif crops may be affected adversely. Already, there are reports that the standing maize crop in Bihar has been adversely affected by adverse weather. Apprehensions are entertained also in respect of the jowar in Madhya Pradesh and the output of Bajra in Gujarat. Reports in respect of Gram production in Madhya Pradesh and the Punjab are also causing anxiety.

In the circumstances, the mood of depression, which characterised trading in the previous weeks, has begun to disappear from the market gradually. Traders are no longer very keen to unload supplies even at the lower levels. The general inclination is to await a clearer picture of the foodgrains output in the country.

CHEMICALS & DYES

Quiet conditions are witnessed in the Bombay Dyes and Chemicals markets. Operators are not very active and prices have tended to move down, influenced largely by the position of supplies.

Among Chemicals, the demand for Caustic Soda has tapered off with operators expecting fresh stocks from Japan through the State Trading Corporation. Camphor is moving narrowly between Rs 22 and Rs 22.50 due to seasonal demand. Menthol prices have registered small improvements over last levels due to the continued firmness of the Calcutta market.

The ready price in Calcutta has climbed up to a new level of Rs 158 per pound owing to a keen demand against meagre offerings. Stocks are believed to have been covered by some resourceful bulls at Calcutta. With the result, consumers are reported to be virtually at the mercy of sellers. An announcement regarding the new import policy is in the offing; but traders do not fear any further cut in the licences. Imports are at present are allowed on the basis of 2½ per cent for six months. This itself is considered to be inadequate in the context of the rising demand in the country.

In the Dyes section, a mixed trend is noticeable. Though turnover is fair, demand is confined to certain items only. Bases and Naphthols are easy owing to the revision of tariff values. Stockists are, however, unwilling to part with their holdings on the belief that imports will not be liberalised in the next licensing period.

NON-FERROUS METALS

Prices of Non-Ferrous Metals have generally displayed an easier tendency in the Bombay market. The Tin section rules quiet. Although the local stocks can by no means be considered adequate, the general feeling is that the situation may change for the better in view of the US decision to market a portion of its reserves.

Copper shows a two-way tendency.

23 September 1961

Zinc and Lead have not displayed much movements in prices. They are evidently affected by the behaviour of tin and copper.

GOLD & SILVER

Prices on the Bombay Bullion Exchange displayed a firmer tendency during the major part of the week. Both the metals advanced after a higher start following the improved trend in the ready section, thanks to buying by Madras and Bangalore operators. Later, however, most of the gains were erased due to the sale of about 500 tolas of gold by the Reserve Bank.

Gold was already poised for a rise on account of bull cornering and a brisk offtake. It was felt that the worsening international situation would tend to push up the demand for the metal and the smuggling would be restricted. Spot houses were not, therefore interested to part with their reserves except at sizable improvements in prices. Gold ready changed hands at Rs 124.50 to Rs 124.75, while Sovereign ruled steady at Rs 96.00. Arrivals amounted to 3,500 tolas against an offtake of as much as 6,500 tolas.

After initial firmness, prices of Silver generally showed an easier tendency. Arrivals were higher at 17 bars as against an offtake of only 8 bars. Silver (below .996) changed hands at Rs 202.70 to Rs 202.90.

OILS & OILSEEDS

The trend of prices on the Bombay Oilseeds Exchange was generally irregular. Trading in Groundnut started on a firm note in the hope that the Government would offer extra incentives for exports of groundnut oil; but the deliberations of the Export Promotion Advisory Council failed to justify the hopes. However, the market rebounded sharply due to renewed trade support, inspired by fears that the latest adverse turn in weather conditions in some of the major producing areas might affect the new crop adversely. A section of the trade felt that the extent of the damage would not be large enough to warrant a drastic revision of the earlier crop ideas. In an event, sellers were inclined to be cautious. Groundnut Bold ready was quoted at Rs 48.25 and Groundnut Oil at Rs 20.50.

In the Castorseed section, trading was featured by consistent strength in the maturing contract, as tenders continued to be very small. Shippers claimed that the bulk of the 1,200 ton shipment afloat for the week had been sold at \$114 per ton; but fresh demand from that country continued to be small. There were no enquiries from the US or any of the Communist countries.

In view of the change in the supply and demand position, the world over, some of the market circles are inclined to believe that India may hardly be able to export 25,000 tons in oil in 1961 as against about 52,000 tons exported last year. Indian exports can improve only if the prices come down in line with those of Brazil. Meanwhile, Castor ready was quoted at 33.37 and Castor Oil, commercial quality, at Rs 13.46.

The continued shortage of ready supplies characterised trading in the Linseed section. While arrivals were relatively small, crushers were in the market for their immediate requirements. Linseed ready was quoted at Rs 39.50 and Linseed Oil at Rs 16.85.

The erratic trend in the Madras groundnut and oil market again cropped up after the middle of last week, when the Calcutta interests trying to buy at lower levels suddenly withdrew. The prices of both the commodities came down. Many of the upcountry buyers are confident that more and more of the kernel stock will be available during October and therefore, their stopping to buy created an uncertainty. It is possible that there can be no more rise in the price of groundnut and oil for some weeks more in Madras oil market. Pollachi markets received good supplies at the rate of 12,000 bags of unshelled nuts. It is possible that this supply would continue for many more weeks. Equally so are the arrivals in the South Arcot centers where at present 300 tons

daily are reported. Arrivals of groundnut in Madras remained at about 30 tons daily. Here only small crushers availed of the stocks in the market. In groundnut oil the volume of oil trade was not much. Even in distant deliveries no sizeable business was reported. Bigger crushers turned their attention to South Arcot for the present. Not only arrivals here were good but the quality of seeds is also reported to be far better than that obtainable in the City.

At Pollachi market the price of groundnut kernels continued to be high though the arrivals were good. Red variety was quoted at Rs 240 per candy of 531 lbs. Salem also registered good arrivals last week. In view of these good market stocks, crushers are obtaining their needs from these centres.

A review of the market rates prevailing in groundnut oil during last week shows that the price was consistent upto last week-end. Per 100 kgs the price of groundnut oil was quoted at Rs 196.20 last week (Wednesday). There was a bit of uncertainty when the week pro-

gressed, and when the market opened Monday the price had fallen to 194. The possibility of further decline is not ruled out.

HIDES & SKINS

This week the tanned cowhide market in Madras was firm with good clearance. Good business was reported in the c.i.f. section with agreement at workable prices among buyers and sellers. For example in premium marks transactions took place at 81d, 71d and 60d for 5/5½ lb, but in semi premium marks settled price was at 76d, 66d, and 56d. In the middle weight section fifth commanded a fair turnover. Also good demand was reported in 8/8½ lbs.

In tanned cow calf arrivals were poor. There was no change in tanned buff calf. Prices of these remained unchanged.

For tanned goatskins there were good inquiries from both UK and USA. There was good demand for top marks. For sheep skins, there was also good trade.

LET YOUR APPLICATION DECIDE
WHICH HONEYWELL INSTRUMENT
FITS YOUR NEEDS

Do you have a temperature or control job to handle?

There is no need to "shop around." From one source—

Honeywell—you can be sure of getting exactly the
right instrument to fit your needs and budget.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

The Kinnison Jute Mills Company Limited

Guaranteed Supply of Raw Jute, Only Lasting Remedy

Serious Threat to Sacking Exports from Pakistan

Sir Walter Micheltore, on the Future of Jute Industry

The following statement has been circulated to shareholders of The Kinnison Jute Mills Co. Ltd., by the Chairman, Sir Walter Micheltore.

Dear Sir/Madam,

Last year for the first time a statement by the Chairman was enclosed with the Accounts and I am again issuing a statement this year with a view to providing to all Shareholders of the Company more detailed information in regard to the Company and the Industry as a whole.

It will be seen from the Directors' Report and Accounts that profits for the year ended 31st March 1961, show a reduction from those of the previous year—a feature which is common to the majority of Companies in the Birds/Heilgers Group—due partly to the extremely difficult trading conditions in October/December 1960, when Jute purchased at advantageously cheap prices was not delivered until long after contract due dates. It is regretted that the improvement in the overall efficiency of the Mills and the number of spindles being operated per loom from June 1960 was not maintained up to the end of the financial year and this also militated against profits reaching the level of the previous year.

PROSPECTS

The current year could well be the most critical the Jute Industry has encountered in its long history. The disproportionately high price of raw jute has involved Mills in crippling losses on simultaneous trading up to the time of writing. Block closures of one week each month in June and July 1961 and curtailment of production in August and part of September due to shortage of raw material have added their burden in the shape of lay-off compensation to the labour force and increased costs consequent on the reduced volume of goods produced.

The drastic curtailment of the electrical power supply between the hours of 6.00 p.m. and 10.00 p.m. from February 1961 called for a rearrangement of shifts in your Mill and Factory, but it is pleasing to record that the flow of production was not interrupted.

News of the 1961-62 crop both from India and Pakistan is heartening in regard to expected output—although quality may not be up to normal due to shortage of

steeping water. It is hoped that ample supplies of fibre will be available at a price which will permit Mills to do simultaneous business without incurring a loss.

MODERNISATION

Apart from a small quantity of additional machinery on the fine side still to be received, the modernisation programme of the Preparing and Spinning Sections of the Mills is completed for the time being. The Spinning and Preparing Machinery installed in No. II mill in 1949 still continues to give excellent service.

In pursuance of the policy of developing and extending the most modern techniques in machinery, your Directors have placed orders with Messrs. James Mackie & Sons Limited for 24 'Onemack' Weaving Machines. Application has been made for the relative import licence.

WIDE LOOMS

The wide looms installed in No. I Mill have contributed their share to the year's profits. It was not, however, found possible to work looms to capacity and for two periods during the year one shift had to be cut back in order to adjust supply to demand. It is becoming increasingly apparent that the scale of installation of additional wide looms is such that supplies will tend to be in excess of demand and the competition arising from this situation will inevitably result in a shrinkage of profit margins.

LABOUR

The Wage Board for the Jute Industry set up by the Government of India, while considering the issues involved, made an unanimous recommendation as to the grant of Interim Relief to all categories of workers involved, and this was accepted by Government. The extent of the Relief amounted to:—

- Rs. 2.85 monthly per worker from 1st October 1960 to 31st December 1960.
- Rs. 3.42 monthly per worker thereafter.

While there can be no doubt of the desirability of raising the income and standard of living of agricultural and industrial labour in the country as a whole, including the Jute Mill industry, regard must, nevertheless, be had to the competitiveness of the industry,

not only in relation to other countries which produce jute goods, but also in relation to alternative packaging (or non-packaging) media such as paper and bulk handling. Unless, therefore, higher remuneration and standards of living can be related to productivity, which might be achieved by the extension of piece-rates and the system of payment by results, indiscriminate wage increases can only be to the long-term detriment of this vital export industry.

RAW JUTE

The quality of the 1960-61 crop was better than that of the previous season and could be considered as being above normal. The quality of deliveries to the Mills was satisfactory.

The period covered by these accounts was characterised by an acute shortage of raw jute, which dominated market trends. The small 1959-60 crop, resulting mainly from the low prices prevailing at the time of sowing in the early months of 1959 and unrelieved by the relatively small imports permitted from Pakistan, was followed by another short crop in 1960-61. On this occasion the crop failure was caused by the unseasonably dry weather during the period February/May 1960 which delayed sowings so long that eventual area put under jute restricted, while in certain areas the young plants died and a scarcity of seed handicapped re-sowings. The Industry, therefore, started the new season in July 1960 with the by no means large carry forward of 12½ lac bales and faced the prospect of another season of reduced supplies. Unfortunately the situation was aggravated by the fact that licences for the import of Pakistan Cuttings were not issued in time for them to be a factor in preventing jute prices from reaching uneconomic levels.

Despite these corrective measures, the Industry's jute stock position showed no signs of improving and it became increasingly evident that the available supplies were even less than anticipated, and that the final crop figure would be somewhere in the region of 52 lac bales, including Mesta. With stocks continuing to dwindle, the Indian Jute Mills Association approached the Central and State Governments in May on the need for further production cuts to conserve jute, and agreement was finally reached on a block closure of the Industry for a week in June and a week in July. Even these measures have proved insufficient to bridge the gap until new crop became available in quantity, and from the beginning August Mills individually have taken steps to adjust their output in accordance with their jute supplies in each case.

The Indian Jute Mills Association was under no illusions as to the seriousness of the outlook for the Industry and, in addition to making representations for a greater liberalisation of fibre imports, urged upon Government the need for a controlled restriction of output in order to conserve jute and avoid the complete dislocation of the Industry when supplies started to fall off towards the end of the season. From early June 1960 the Association permitted its member Mills to seal looms voluntarily on the understanding that the loom

hours lost would be recoverable after 1st November, although, as it so happened, this recovery became largely impossible owing to the persistent deterioration in the jute supply position. In October 1960, the Association introduced a jute purchase quota system designed to control buying and ensure an equitable distribution of available fibre supplies. This arrangement has been successfully maintained to end August 1961 and has levelled out Mills' stocks.

Early in December, after consultation with Government, the voluntary sealing scheme was abandoned in favour of a total compulsory sealing, under the Working Time Agreement, of 17% of the total looms. Towards the end of the month, again with the approval of Government, this arrangement was replaced by a reduced working week of 45 hours with a 12% loom sealing, in order to permit a greater number of the labour force to obtain employment. From the end of January 1961, the working hours were further shortened to 42½ per week.

Despite these corrective measures, the Industry's jute stock position showed no signs of improving and it became increasingly evident that the available supplies were even less than anticipated, and that the final crop figure would be somewhere in the region of 52 lac bales, including Mesta. With stocks continuing to dwindle, the Indian Jute Mills Association approached the Central and State Governments in May on the need for further production cuts to conserve jute, and agreement was finally reached on a block closure of the Industry for a week in June and a week in July. Even these measures have proved insufficient to bridge the gap until new crop became available in quantity, and from the beginning August Mills individually have taken steps to adjust their output in accordance with their jute supplies in each case.

It is now abundantly clear that the initiative taken by the Industry in regulating production from October 1960 was instrumental in saving the Industry from complete disaster.

Every possible effort must be made to ensure there is no recurrence of this unfortunate set of circumstances and it would seem the only lasting remedy possible is a guaranteed supply of raw material at reasonable and stable

23 September 1961

prices. This entails a substantial increase in the yield per acre by the adoption of modern agricultural practices and the creation of an organisation to ensure that prices do not fall to levels unremunerative to the Jute cultivators. The association has forged ahead with its plan for supplementing the jute development work of the Central and State Government. Three intensive cultivation blocks have been started in each of the three different zones in West Bengal with the object of demonstrating to the growers the advantages of using improved seeds, fertilizers and mechanical implements. A seed multiplication scheme has also been worked out in detail envisaging financial assistance from the Government of India for the purpose of improved seed multiplied by registered growers and its sale at subsidised rates to the cultivators.

Your Company held substantial stocks of jute in the first six months of the period under review and was, therefore, spared the disastrous experience which befell a section of the industry at a time when jute prices were entirely out of parity with those of finished goods.

JUTE GOODS

The policy of selling up and down the market in small lots was continued throughout the year with generally satisfactory results.

Trading conditions were far from satisfactory throughout the period under review and, latterly, have been as difficult as the industry has experienced for many years. The root cause of the trouble has been, of course, the abnormally high prices of jute which in February 1961 reached the level of Rs. 67.00 per maund, a price which bears no relationship to normal conditions in the international market for jute goods and which, if maintained, would gradually lease the Indian jute industry all of its export business. That overseas buyers have been antagonised by the high prices is unquestionable, and business has been slack as a result. Buyers have deliberately followed a policy of digging into their stocks and replacing only to a limited extent, waiting for a levelling off of prices at lower levels. Consumption has also been restricted in a number of markets: in the U.S.A. alone, it has fallen by 60 million yards in the first seven months of 1961 compared with the corresponding period of 1960.

Owing to this limited purchasing activity, and with Pakistan capturing the greater share of the business that has been offering, the prices of Indian jute goods while still high by normal standards have not been in parity with jute prices. It is for this reason that the Mills have suffered severe financial losses in recent months. Business was also retarded by the stringent controls imposed by the Forward Markets Commission in November

1960 on trading in Transferable Specific Delivery Contracts, controls which were designed to curb speculation but which necessarily affected genuine traders as well. The further restrictions introduced by the Reserve Bank of India to limit credit facilities by scheduled banks against stocks of jute and jute goods had the same effect.

A healthy finished goods market will not be possible until the industry's raw jute supply problems have been solved: and in the long term the expanding jute industry in Pakistan will become even more of a force to be reckoned with unless means can be devised of strengthening the Indian Mills' competitive position.

Buyers generally are becoming increasingly quality conscious and with a view to improving the products of your Mills and supporting Export Promotion further progress has been made in Statistical Quality Control.

COMPETITION FROM PAKISTAN

I feel that pointed attention must be drawn at this juncture to the very serious threat posed by Pakistan to Indian exports of sacking goods. In recent months Pakistan has been under-cutting India to the extent of Rs. 8/- or Rs. 9/- per hundred bags, and as I write their prices are approximately Rs. 5/- per hundred bags below our market prices. It follows, inevitably, that they take first cut of the business of any importing country and it is only when their manufacturing capacity is fully booked that the foreign buyers turn to India for the balance of their requirements. In the result no less than 80% of the recent Australian business in cornsacks was placed with Pakistan, whose mills have also made serious inroads into the markets of Cuba, Africa and Burma and of other countries which have traditionally been the prerogative of India.

So much for the present, but if the present position in which India—the home of the jute trade—finds itself is most unhappy, the prospects for the longer-term future are even more bleak. Pakistan is understood to be placing orders for an additional 6,000 looms, to be installed over the next few years, and these looms are expected to be operative by 1965. It is anticipated that of this total, 5,000 looms will be for the manufacture of sacking, and assuming an average of two and a half shifts per day, production would be of the order of 30,000 tons monthly. In recent years India's exports of sacking have averaged 32,000 or 33,000 tons monthly, so it will be readily seen that if the present price differential remains and Pakistan continues to be able to take priority in all export markets, then by 1965 India's export trade in sacking goods will have vanished entirely, leaving it only to satisfy its indigenous demands.

The reasons why the Pakistan mills can undercut the Indian are three-fold: first, Pakistan mills can normally buy better quality jute and at cheaper prices than the Indian mills; second, wage rates in Pakistan are appreciably lower than in India; third, the export bonus scheme operating in Pakistan has the effect, in present conditions, of adding approximately Rs. 200/- per ton to the trading profits of Pakistan mills. Even allowing for the fact that efficiency is lower and power costs higher in Pakistan I estimate that there is at present a price advantage of approximately Rs. 300/- per ton in their favour. In the result, while undercutting Indian mills to the extent necessary to sell their entire production they can still make substantial profits—and will continue to do so at India's expense.

In these circumstances it is vital that Indian mills be given the earliest opportunity of competing on even terms with Pakistan; the longer action in this matter is delayed the more difficult it will be to regain the markets lost. The jute industry being the premier export industry of the country, and its highest dollar earner, the consequences of a serious decline in it can be nothing but a disaster to the general economy of the country.

SUBSIDIARY COMPANY—THE STANDARD JUTE CO. LTD.

This Company continues the manufacture of goods on a limited scale. Last year it was mentioned that fairly substantial funds had been accumulated and while these were being loaned to Kinnison at a rate advantageous to both Companies, it was hoped to utilise them in a diversification of interests outside the jute industry.

Your Directors have now to advise it has been decided to invest:—

- Rs. 6 lacs in the purchase of 6,000 Equity Shares of Rs. 100/- each, at par, of McNally-Bird Engineering Company Private Limited;
- Rs. 6,75,000/- in the purchase of 9,000 Equity Shares of Rs. 10/- each in Coates of India (Private) Limited.

Approval of these investments was obtained in General Meetings of the Company held on 12th July, 1961 and 12th August 1961, respectively.

The McNally-Bird Engineering Company Private Limited is a new Indian company formed and registered in relation to a collaboration between Bird & Company (Private) Limited and the McNally Pittsburg Manufacturing Corporation of Pittsburg, Kansas, U.S.A., and will establish a manufacturing undertaking at Kumardhubi.

Coates of India (Private) Limited is an Indian Company formed and registered in 1947 to take over the Indian business of Coates

Bros. Co. Ltd., London, manufacturers of inks for the printing and packaging trades, and has established factories in Calcutta, Madras and Bombay.

Chartered Bank Building, Calcutta-1, 11th September, 1961.

The above statement is not a report of the proceedings of the Annual General Meeting, which will be held in Calcutta, on September 27, 1961.

THE PUNJAB NATIONAL BANK LIMITED,

Registered Office: Parliament Street, NEW DELHI:

CLARIFICATION

The Board of Directors have issued 7,50,000 shares in the Capital of the Bank for which Letters of Offer have already been posted to the Registered Shareholders as on 2nd September, 1961. In response to enquiries it is hereby clarified that these shares are parri passu with the existing shares save and except that they shall carry right to dividend at one-fourth of the total dividend that may be declared at the next Annual General Meeting for the whole of the year, 1961 including Interim Dividend of Re. 1/- per share already paid.

By Order of the Board of Directors, A. M. WALKER, General Manager

Dated: 18th September, 1961.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have decided to recommend to stockholders at the forthcoming Annual General Meeting that a Final Dividend for the year ended 31st March 1961 on the Company's Ordinary Stock at the rate of 24 per cent net (Tax applicable at 7s. 9d. in the £) be paid on the 11th November 1961 to those stockholders whose names are registered in the Company's Stock Register on the 24th October 1961.

Applications for transfers received in this office before 12 O'clock noon on Tuesday, the 24th October 1961, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board H. C. BOWKER, Agent

Victoria House Calcutta, 19th September 1961.

Company Reports

United Breweries Fare Well

THE United Breweries Limited has done well in the year ended 31 March, 1961 with an increase in sales from Rs 39.74 lakhs to Rs 45.93 lakhs. The various units in which the company is interested have also worked satisfactorily. Production has increased considerably and this trend continues during the current year.

The net profit, before providing for Depreciation and Taxation, has increased to Rs 25.98 lakhs from Rs 20.32 lakhs. The amount set aside to Depreciation is Rs 2.14 lakhs against Rs 2.29 lakhs and Taxation Rs 10 lakhs against Rs 10.17 lakhs. After transferring Rs 7.95 lakhs (Rs 14.80 lakhs) from various accounts, the transfer to General Reserve is Rs 12.35 lakhs against Rs 15.10 lakhs. A final dividend of Rs 3.50 per share, taxable, is to be paid, making a total of Rs 6 per share, taxable, for the whole year (same in the previous year).

A large capital is ranking for dividend purposes now. During the year, there was an increase in the paid-up capital to Rs 20 lakhs from Rs 12 lakhs with the issue of new equity shares. It is now proposed to raise the capital further by another Rs 5 lakhs.

The new machinery, on order, have been shipped and it is expected to be installed in the next few months. This will enable the company to increase its production.

The issued and subscribed capital is Rs 20 lakhs divided into 2,00,000 equity shares of Rs 10 each. Against this, General Reserve is shown at as much as Rs 38.25 lakhs; Capital Reserve at Rs 20 lakhs and Development Rebate Reserve at Rs 1.75 lakhs. The gross block at Rs 60.37 lakhs is depreciated by Rs 21.00 lakhs, leaving a net block of Rs 39.37 lakhs.

Rane (Madras) Repeats

Rane (Madras) Limited was originally incorporated as a private limited company in 1929 and was converted into a public limited company in 1936. These twenty-five years, the company was carrying on business as distributors of automobile spare parts and dealers in motor cars and trucks.

The year ended 31 March 1961 is a very important one in the history of the company, as the company has switched over to the manufacture of automobile ancillaries and the directors look forward to taking up more lines of manufacture very shortly.

The manufacture of Clutch Discs has been taken up in hand. Most of the machinery has been received and will be installed very shortly. The necessary sanction for power has been received from the Madras State Electricity Board.

While sales have gone up to Rs 1.49 crores from Rs 1.09 crores, the net profit, before providing for Depreciation and Taxation, is only slightly lower at Rs 4.70 lakhs against Rs 4.73 lakhs for the preceding year. Apart from providing Rs 1.05 lakhs for Development Rebate Reserve, the Depreciation is raised to Rs 97,216 from Rs 42,963. Taxation provision is, however, lower at Rs 1.17 lakhs against Rs 2.18 lakhs. The dividend on the Ordinary shares is just maintained at 14 per cent, taxable.

The subscribed capital is shown at Rs 15,90,750 divided into 2,45,120 equity shares; 38,030-6 per cent tax-free cumulative preference shares and 35,000 "A" class 7 per cent tax-free cumulative preference shares, all of Rs 5 each. Against this, General Reserve stands at Rs 3.34 lakhs; Share Premium Account at Rs 12,500 and Development Rebate Reserve at Rs 1.05 lakhs. The gross block amounts to Rs 15.97 lakhs; total depreciation to Rs 5.74 lakhs and the net block to Rs 10.23 lakhs.

Anglo-India Jute Pays only 7½ per cent Against 20 per cent

The Anglo-India Jute Mills Company has produced disappointing results for the year ended 31 March 1961, reflecting the difficult conditions generally experienced by the jute industry. Although sales have risen to Rs 7.26 crores from Rs 6.45 crores, the net profit, after depreciation and taxation, amounts to only Rs 9.95 lakhs against as much as Rs 25.54 lakhs for the previous year. Apart from Depreciation which is increased to Rs 11.59 lakhs from Rs 10 lakhs, taxation provision is lower at Rs 5.25 lakhs against Rs 20.90 lakhs and Development Rebate Reserve at Rs 1.50 lakhs against Rs 6.60 lakhs. No provisions are made for Contingency Reserve and Investment Reserve against Rs 1.20 lakhs and Rs 5.00 lakhs respectively. The dividend on the Ordinary shares is substantially reduced from 20 per cent to 7½ per cent, subject to tax.

Marked Rise in Hasting's Profit

Hastings Mill Limited, has reported a marked rise in sales from Rs 2.59 crores to Rs 3.40 crores and in the net profit from Rs 8.03 lakhs to Rs 13.77 lakhs for the year ended 31 March, 1961.

All allocations have been raised:—Depreciation from Rs 7.69 lakhs to Rs 8.14 lakhs; Taxation from Rs 6.25 lakhs to Rs 8.30 lakhs; General Reserve from Rs 2.50 lakhs to Rs 6.00 lakhs and Development Rebate Reserve from Rs 1.11 lakhs to Rs 2.71 lakhs. The dividend on the Ordinary shares is maintained at Rs 6 per share, less tax. In the previous year, the directors had to transfer Rs 9.00 lakhs from the Investment Depreciation Reserve to pay the dividends, both on the ordinary and preference shares.

The Carpet Backing Cloth plant has started production and quality of the cloth has been well received in the US market. To make this plant economical, the directors have decided to install further 20 looms.

Fort William's Proposal to Raise Further Capital

To meet a part of the financial requirements for the Steel Wire Rope project, the company has arranged with the Industrial Credit and Investment Corporation of India for a loan in foreign exchange currency of Rs 7,35,000 equivalent to about Rs 35 lakhs. The company will also approach the shareholders to subscribe further capital to finance the project.

Meanwhile, the company has done well during the year ended 31 March, 1961. Sales have risen to Rs 2.97 crores from Rs 1.98 crores, while the net profit works out to Rs 7.39 lakhs as against Rs 6.60 lakhs. The depreciation amount is lowered to Rs 6.83 lakhs from Rs 7.37 lakhs and Development Rebate Reserve to Rs 31,052 from Rs 59,000. The Taxation provision is raised to Rs 8.20 lakhs from Rs 6.95 lakhs, while a sum of Rs 1.00 lakh is provided for General Reserve. The dividend on the Ordinary shares is repeated at Rs 2.25 per share, subject to tax.

For the Investor

INVESTMENT GOSSIP Improved Tone

The stock market has staged a late rally after ruling dull most of the week. The unusual stringency in the money market is not being conducive to an expansion of bull activity. Moreover, what with the publication of the Congress Election Manifesto, the complicated international situation, the renewed apprehension that there may after all be some restriction, albeit self-imposed, on stock market activity and the forthcoming Puja holidays in Calcutta, bullish fervour does not get much encouragement.

It is perhaps wrong to say that market men have been unduly disturbed by the Congress Election Manifesto. It is true that there has been no serious disturbance to the price levels following its publication. This is evidently because there is nothing new in it as far as the stock market is concerned. Limitation on urban income is advocated along with lessening of concentration of economic power. That the Congress Party stands for these objectives is well known and it may even be said that the stock market has digested these long ago. Even so, the manifesto has served as a reminder of the possible shape of things to come.

There is no doubt general satisfaction that Government has not chosen to impose restrictions unilaterally on the stock market. But the fact remains that the responsibility of ensuring the proper conduct of business on the stock market has now devolved on the authorities of the stock markets themselves. Since it is not claimed that unhealthy practices are non-existent, there may be need for imposing certain reforms voluntarily. Presumably market men feel that the new Stock Exchange Committee may have something to say in this regard soon enough.

The improvement in sentiment noticed in later dealings seems to have stemmed more from bear covering on Dalal Street on the eve of settlement than from a revival of bullish fervour. The present up-trend may not gather momentum in coming weeks in view of the fact that next month Lyons Range will remain closed for a fairly long period for the Puja holidays, but it does not also seem possible that bears can hold sway for any length of time. For, hereafter the stock exchanges whenever they are obliged to initiate some measure or other calculated to meet particular situations at particular markets, will be working in close cooperation so that operators will have no chance of continuing in another centre the same type of activity which is sought to be curbed. The emphasis on export promotion and the realisation on the part of Government of the need for maintaining industrial production by per-

mitting adequate import of raw materials are bull points which may come to exert considerable influence on market sentiment in course of time.

NEW ISSUE NOTES Trianthrene Dyes, Drugs & Chemicals

Trianthrene Dyes, Drugs & Organics Limited, Bombay, is expected to place its public issue of Rs 40 lakhs on the market in the near future. It has an authorised capital of Rs 100 lakhs, divided into one lakh equity shares of Rs 100 each. Out of the issued capital of Rs 50 lakhs, the promoters, directors and their friends and associates have taken up Rs 10 lakhs. The balance of Rs 40 lakhs in 40,000 shares will be offered for public subscription. The terms of payment will be Rs 25 per share each on application and allotment and the balance of Rs 50 per share will be payable in two identical calls of Rs 25 per share. Each application will have to be for a minimum of five shares or multiples thereof. The company has not created any mortgage or issued any debenture or debenture stock and has no other loan capital. The company will manufacture and deal in indigenous dyestuffs, synthetic dyestuffs and organic chemicals.

Rajasthan Spinning

The list for public subscription to the capital issue of the Rajasthan Spinning & Weaving Mills Limited will open on 29 September and close on 10 October or earlier, but not before 5 October 1961. The company proposes to issue 1,95,000 equity ordinary shares of Rs 10 each and 6,000-9 per cent cumulative preference shares of Rs 100 each. Of these 4,000 preference shares and 20,000 ordinary shares will be allotted to the Rajasthan Government. The balance of 2,000 preference shares and 1,75,000 ordinary shares are being offered to the public. The entire preference issue has been underwritten by the LIC. The company's mill, which will be set up at Bhilwara, Rajasthan, will have an installed capacity of 18,000 spinning looms and 450 looms. In the first instance, the company proposes to install 13,200 spindles and put them in production by August 1962. The capital cost of the first phase of the project is estimated at Rs 60 lakhs. This will be financed by the capital issue of Rs 30 lakhs and a loan of Rs 30 lakhs from the Industrial Financial Corporation of India.

Globe Auto Electricals

The response to the recent issue of shares to the public by Globe Auto Electricals is reported to be encourag-

ing and the issue has been oversubscribed.

Madras Cements

A call of Rs 50 per share on the 17,211 equity shares and 9,559 redeemable cumulative preference shares allotted on 16 February 1961, 1 March 1961 and 29 March 1961 on and from 1 October 1961, has been made payable on or before 30 November 1961.

Andhra Sugars

Andhra Sugars Limited has proposed to issue 1,00,000 equity shares of Rs 10 each, at par, at one equity share for three equity shares held to holders as on 25 October 1961, ranking for pari passu with the existing equity shares in all respects except for dividend. The new shares rank for proportionate dividend from the date of payment.

Sakthi Pipes

Sakthi Pipes Limited, Madras, has been granted consent to the issue of capital of Rs 70 lakhs, divided into 56,000 equity shares of Rs 100 each and 14,000 cumulative redeemable preference shares of Rs 100 each carrying a dividend of 8.57 per cent (free of company's tax, but subject to deduction of taxes at source) for cash at par. The new company will undertake the manufacture of Spun Cast iron pipes.

Sodepur Engineering

The Sodepur Engineering Company Limited, proposed to be incorporated in West Bengal, has been granted a consent to the issue of capital of Rs 30 lakhs, divided into equity capital of Rs 25 lakhs and cumulative redeemable preference shares of Rs 5 lakhs. The capital is required for undertaking manufacture of refractory plant, jaw crushers, coal crushers, etc. The Factory is to be established at Sodepur, 24-Parganas. Messrs Kusum Engineering Company Limited, of Calcutta are the promoters of the company.

Kota Strawboards

Kota Strawboards (Private), Limited, has been granted consent to the issue of capital of Rs 25 lakhs, for cash, at par, divided into 18,000 equity shares of Rs 100 each and 700 cumulative redeemable preference shares of Rs 1,000 each, carrying a dividend of 7 1/2 (free of company's tax but subject to deduction of all taxes at source). The proceeds will be utilised for the manufacture of strawboards and pulp.

Sturdia Chemicals

Sturdia Chemicals Limited, Bombay, has been granted consent to issue capital of the nominal value of Rs 30 lakhs in equity shares of Rs 10 each for cash, at par. The proceeds will be utilised for establishing and the manufacture of precipitated and activated calcium carbonate, in collaboration with Messrs John E. Sturge Limited of Birmingham, UK, who will be offered shares of the value of Rs 9 lakhs, partly for cash and partly for consideration other than cash.

23 September 1961

Zenith Lamps

Zenith Lamps & Electricals Limited, Madras, has been granted consent to issue capital of Rs 25 lakhs consisting of equity shares worth Rs 20 lakhs and 9,286 per cent cumulative redeemable preference shares of the value of Rs 5 lakhs. The proceeds of the issue will be utilised for setting up a factory for the manufacture of Fluorescent Tubes and Glass Tubes.

Trichy Steel Rolling

Trichy Steel Rolling Mills (Private) Limited, Madras have been granted consent to the issue of capital of Rs 30 lakhs in the form of equity shares of Rs 100 each, for cash at par privately. The new company will undertake the manufacture of steel re-rolled products including wire-rods.

Bengal Paper

For financing its expansion and modernisation scheme, the Bengal Paper Mills Company, Limited, Calcutta, has been granted consent to issue capital of Rs 57 lakhs as under: (i) Rs 9 lakhs as bonus shares divided into 1,80,000 equity shares of Rs 5 each to be issued in the ratio of one bonus share for every five shares held; (ii) Rs 18 lakhs divided into 1,80,000 equity shares of Rs 10 each for cash at a premium of Rs 12 per share to be issued to the existing shareholders in the ratio of one equity share of Rs 10 each for three equity shares of Rs 10 each. (iii) Rs 30 lakhs in 6 1/2 per cent taxable loan stock of Rs 250 repayable after ten years, with a right of conversion into equity shares at specified rates. The existing equity shares of Rs 25 each and the bonus shares would be consolidated and divided into equity shares of Rs 10 each. Bengal Paper Mill Company Limited, Calcutta, has a paid-up capital of Rs 71 lakhs (preference capital of Rs 26 lakhs and equity capital of Rs 45 lakhs).

Hind Rectifiers

Hind Rectifiers Limited, Bombay, has a paid-up capital of Rs 5 lakhs in equity shares of Rs 100 each. It has been granted consent to issue capital of Rs 20 lakhs in equity shares of Rs 100 each for cash, at par. The proceeds of the issue would be utilised for the manufacture of rectifier apparatus.

Menora Hosiery

Menora Hosiery Works (Private), Limited, Bombay, having a paid up capital of Rs 1,60,000 and engaged in the business of the manufacturing knitted hosiery goods in woolen, nylon and cotton, has been granted consent to issue bonus shares of Rs 40,000 divided into 40 equity shares of Rs 1,000 each to be allotted in the ratio of 1 bonus share for every 4 equity shares held.

INVESTMENT NOTES Chemicoat

Excellent response has been received from the public for the shares

of Chemicoat Limited. It is learnt that the issue has been oversubscribed nearly 25 times. In consultation with the Bombay Stock Exchange authorities, the Board of Directors of the Company has fixed the basis of allotment of shares.

East India Distilleries

The Reserve Bank of India has given the formal consent to the East India Distilleries to accept transfers of the 1,88,112 right shares of £1 each, issued on the London register in September, 1960 to the Madras register after 18 September, 1961.

LIC Investment

The next meeting of the Investment Committee of the LIC will be held on Wednesday, 27 September at 3 p.m. at Bombay. Offers for the consideration of the Committee should reach the Executive Director not later than 3 p.m. on Tuesday, 26 September. Offers received thereafter will not be considered.

STOCK EXCHANGES A State of Indecision

Watch-Dog Writes:

STOCK markets are now in the grip of indecision, with both bulls and bears resorting to stonewalling tactics. Although the Congress election manifestoes do not seem to have any marked effect on sentiment, the undertone of the markets remains somewhat quiet.

Dull conditions prevailed on the Calcutta Stock Exchange where price movements were confined to narrow limits.

The Bombay Stock Exchange finished the week on a steady note. Although selected shares continued to receive support in the Textiles section, the volume of business on the Madras Stock Exchange remained small.

CALCUTTA

Calcutta, Friday Evening.

APART from a few firm features, price movements on the local stock exchange were insignificant during the week under review. This was mainly due to cautious buying at the lower levels and profit-taking at the bulges. The main contributory factor to the cautious buying was the absence of any pressure from bears, who found nothing in their favour to depress the market.

Some of the shrewd operators were, however, inclined to be cautious and book profits at the higher levels on the fear that the question of imposition of margins might be thrashed out at the first meeting of the Committee of the Presidents of the different stock exchanges, to be held at Bombay early next month. It was also feared that the coal policy, announced recently by the Government, might have its impact on certain industries in regard to production and quality.

Above all, market circles felt that the future outlook was somewhat

clouded by the various measures proposed to be adopted in the implementation of the socialistic policy of the party in power. The emphasis on curbing the growth of monopolistic tendencies and the concentration of economic power was interpreted bearishly. In the circumstances, it was thought that any sustained recovery in equity prices would not be possible, barring occasional rallies on technical considerations.

Gilt-edged securities ruled quietly steady. Despite fair demand for the short and medium-dated stocks, business was limited due to shortage of sellers. The new State Loans were easier and some of them were reported to have been offered at discounts. 3 per cent 1988 Conversion Loan moved between Rs 72.80 and Rs 73.05 to finish at the former level.

Bank shares remained practically unchanged in the absence of fresh activity. United Commercial moved narrowly between Rs 90.50 and Rs 91, while Punjab National were nominally quoted at Rs 18.56.

Although Jute shares came in for selective support following the LJMA's decision to raise the working hours from 25 September, turnover remained restricted due to the fear that the mills might have suffered substantial losses so far. Birlas changed hands at Rs 25.31 to Rs 25.75; Howrah at Rs 20 to Rs 20.25; Megna at Rs 11.56 to Rs 11.65 and New Central at Rs 17.12 to Rs 17.50. Champdany were enquired up to Rs 126 from Rs 116 with Fort Williams hovering narrowly around Rs 11.62.

Coal shares were rather sluggish. Despite the World Bank having agreed to give a loan to the industry for meeting the necessary foreign exchange expenditure of the expansion programme, investors were inclined to be cautious for two reasons. First, it was thought that the transport shortage might hamper production. Secondly, the price of coal was considered to have become uneconomic in the light of increased production costs. Equitable were on offer at as low as Rs 27.25 against Rs 34.12; New Beerbhoom at Rs 22.31 against Rs 23.25; Amalgamated at Rs 21.44 against Rs 22.50 and Burrakur at Rs 18.06 against Rs 18.25. The only steady feature were Western Bengal at Rs 9.56.

Except for the sustained support lent to a few selected shares, the Tea section remained generally neglected. Apart from the lower prices obtained at the auctions, there was a general feeling that the industry might face a glut due to over-production during the current year. Hasimara had buyers at Rs 32.19 to Rs 34.37; Dheklakhat at Rs 19.25 to Rs 19.31; Basmatia at Rs 26 to Rs 26.25; Huldibari at Rs 31.50 to Rs 31.81 and Jay Shree at Rs 18.12 to Rs 18.31.

Sugar shares were practically neglected. Operators seemed to be worried about the reports that stocks with the factories had been accumulating, especially when the new crushing was likely to start within a few weeks. There was an anxiety to know whether the necessary finance would be forthcoming for the increased output. Belsund moved

narrowly between Rs 11 and Rs 11.19; SKG between Rs 10.87 and Rs 11; and Cawnpore between Rs 13.25 and Rs 13.31. Dyer Meakin came in for sustained enquiry up to Rs 35 from Rs 34.37, to close finally at Rs 34.50 due to profit-taking.

Textile shares continued to receive good support although higher levels were not retained till the close due to general profit-taking. Jay Shree were at one time taken up to Rs 16.94 from Rs 16.50 (Rs 16.62); Cawnpore up to Rs 8.56 from Rs 8.44 (Rs 8.41); Bowreah up to Rs 32.62 from Rs 32 (Rs 31.87); Dunbar upto Rs 30 from Rs 29.69 (Rs 30); Kesoram up to Rs 30.25 from Rs 29.87 (Rs 28.87) and J. K. Rayon up to Rs 19.25 from Rs 19 (Rs 18.87). Figures shown within brackets were the week's closing rates.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 24.28, Indian Irons opened higher at Rs 24.40 and, after touching a low of Rs 24.18, recovered again towards the close to Rs 24.46. In sympathy, TEXMACO moved down at one time to Rs 16.45 from Rs 17.40 (Rs 16.90); Guest, Keen, Williams to Rs 38.50 from Rs 40.37 (Rs 38.50); Jessop to Rs 19.37 from Rs 19.50 (Rs 19.50); Jay Engineering to Rs 28.87 from Rs 29.19 (Rs 28.87) and J. K. Steel to Rs 20.87 from Rs 21.31 (Rs 21.12).

The Miscellaneous section provided a few firm spots, as will be clear from the following price trends of a few selected shares:—

	Week's High	Week's Low	Week's Closing
Orient Paper	37.15	36.30	36.90

BALANCE-SHEET BRIEFS

The Talayar Tea Company has reported a net profit of Rs 5.35 lakhs for the year ended 31 March, 1961 as against Rs 3.04 lakhs for the previous year. The dividend on the Ordinary shares is raised from 8 to 10 cent, taxable.

The net profit of the Be Be Rubber Estates Limited has increased from Rs 1.22 lakhs to Rs 2.06 lakhs for the year ended 31 March, 1961. The directors have proposed a taxable dividend of 5 per cent as against nil.

The Mysore Chemical Manufacturers Limited has reported a decline in the net profit from Rs 6.18 lakhs to Rs 5.21 lakhs for the year ended 31 March, 1961. The dividend on the Ordinary shares is, however, maintained at 20 per cent, subject to tax.

are you a victim of executive fatigue?

at the end of a working day
are you tired, listless,
completely done-in?

If so, you are possibly a victim of executive fatigue and you need Smiths **SUPER FORTE**—the tonic that fights executive fatigue. An exhausting day's work uses up more vitamins than your daily food intake can restore. **SUPER FORTE** 10 vitamins and 9 minerals adjust this deficiency.

What results can you expect of **SUPER FORTE**? Nothing dramatic. It wouldn't be fair to suggest that **SUPER FORTE** works wonders overnight. But take two tablets daily for 30 days and you'll get results—added vitality, strength, staying power—all the additional physical reserves you need to cope with the stress and strain of modern business.

Fifty Years of Public Service

THE Southern India Chamber of Commerce celebrating its Golden Jubilee this week can look back with pride and satisfaction on half a century's substantial service to the cause of commerce and industry in the southern Peninsula. In his address of welcome, Kumararaja Muthiah Chettiar explained in detail the achievements of the Chamber between the Silver Jubilee in 1935 and the Golden Jubilee (delayed for unavoidable reasons) celebrated this week. Looking ahead, he indicated that the Chamber was pledged to further progress in consonance with current expectations. The jubilee celebrations were preceded by an exhibition meant to let the public know how achievements have measured up to anticipations and how the Chamber's acceptance of State regulations was derived from its own appreciation of the public weal. The most valuable insurance for the continuance of a progressive and responsible private enterprise is the democratic character of the political system in which we live.

The rapid progress of Madras in industrialisation in recent years has been the result of close co-operation—verging on an amiable conspiracy against doctrinaire faddists of the left and the right—between the Madras Government and the entrepreneurs in Madras represented by the SICC. It is worth recalling that the idea of progress under planning was accepted by the SICC long before it became the cliché it is today. At a conference held under the auspices of the SICC when the late Dr Alagappa Chettiar was its President, the idea was explored in some detail. It was then argued that a bold policy of industrialisation to develop resources must figure in post-war reconstruction and the revenue reserves built up during the war must be applied to advantage. Indeed the Chamber then provided a pre-view of planning by listing probable industries eligible for tariff protection, and, indicating lines of assistance. This early acceptance of the inevitability of planning is worth recalling today. For, criticism of some of the more onerous and iniquitous burdens imposed by planning and of the mistakes and errors of judgment in the course of execution of the plan has often been misunderstood as opposition to the idea of planning itself.

The Jubilee occasion provides an opportunity for a review of the industrial evolution of South India in the last 50 years. The souvenir issued by the Chamber provides such a review and records its own impressive part in this evolution. The Chamber has been responsible for securing improvement of the harbour, extension of railway communications and the growth of road transport. It has also drawn continuous attention to the industrial potentialities of the State, and the need for a healthy banking system attuned to the requirements of growth. Hopes for the future in Madras are largely tied up with the new complex of heavy industry that is slowly taking shape. The four-fold increase in power output between 1950 and 1960 has not removed doubts about limitations of power

supply. That is why the new Neyveli Thermal Station is regarded as more important than even the fertilizer project. The steel project, for which there is a keen public desire locally, depends on the success of the tests that are currently being made. The boiler plant proposed to be set up near Tiruchirapalli, the automobile and bicycle industries that are making rapid progress and the aluminium project that will help both the aluminium utensil industry and the engineering enterprises that need metal are instances of the new industrial orientation of the South. The paper, rayon, chemical and other enterprises launched in recent years will be supplemented by new efforts for making plastics. Cement, sugar and textiles have increased output. Many light engineering and small-scale industrial units have come into being in very quick succession in recent years. Madras has interested outside entrepreneurs also in its industrial development. New enterprises like rubber manufacturing and fertilizer production have brought outside investors. Above all the State Government has adopted a responsive attitude towards all promising schemes. For its part the Chamber has ably assisted the State Government in bringing about this meaningful practical interpretation of the idea of a mixed economy.

The justification of the SICC and, for that matter of any Chamber of Commerce lies in its serving the public as a discriminating supporter or critic of the Government and as an exponent of the views of trade and industry. Happily, the atmosphere in Madras is such as to make this function of the Chamber easy and automatic. For the rest, the existence of controls makes inevitable organisations to explain the non-official point of view. War-time experience suggests that the Chamber in performing its tasks earns the gratitude of others besides its members. The support given by many members—associations and affiliated bodies to the SICC is one reason for assuming that an organisation devoted to regional advancement remains useful, especially when the State Government is also committed to the view that an early and proper distribution of industries in the country is necessary to remove economic disparity.

On the Jubilee occasion, the permanent establishment of the SICC has received as many appreciative references as the elected office-bearers. This is as it should be. As the Annual Report for 1960 suggests, the Secretariat of the SICC has been kept continually busy by the increasing pace of the economic activity in the South. Since at least 1935 the SICC has relied on a keen and growing staff to serve its members and in the last few years, their tasks have broken the bounds of routine duties. It is gratifying that the Chamber's Secretariat has been found equal to the demands made on it.

SAVINGS

Reserve Bank Study—I

Savings have been the subject of two notable studies in recent times. The Reserve Bank of India undertook a study of the subject and published its findings in the March 1960 issue of its Bulletin, which covered estimates of savings for the period 1950-51 to 1957-58. Meanwhile, the National Council for Applied Economic Research also took up a survey of urban savings and at the same time made a study of the subject based on the statistical data provided from various

governmental and institutional agencies. The results embodied in the study were published in May 1961. The Reserve Bank has now again come out with another study of savings the findings of which are published in the August issue of its Bulletin. The latest study by the Reserve Bank extends the coverage of its estimates of savings and investments up to 1958-59. This, however, is not the only point of difference between its earlier and latest studies of the subject. In the latest study, the earlier estimates are stated to have been revised in the light of fresh data which have become available and also certain changes in the estimation procedures. The following table gives the volume and pattern of savings in the aggregate as also sector-wise being the results of the latest study by the Reserve Bank.

VOLUME AND PATTERN OF SAVINGS

		(Rs crores at Current prices)									
		1951-52	1952-53	1953-54	1954-55	1955-56	1956-57	1957-58	1958-59		
Government Sector	93.84	192.30	88.39	70.99	82.22	69.92	128.92	114.42	103.00		
Domestic Corporate Sector	...	32.15	56.49	4.29	22.87	38.88	54.33	53.69	17.20	34.27	
Household Sector	509.88	254.76	492.62	504.88	561.64	785.98	810.36	686.55	837.57		
(a) Urban households	...	319.95	59.78	305.79	298.64	392.69	610.42	595.96	481.47	595.21	
(b) Rural households	...	189.93	194.98	186.82	206.24	168.95	175.56	214.40	205.08	242.36	
Total	...	635.88	503.55	585.29	598.74	682.74	910.23	992.97	818.17	974.84	

Some interesting points emerge from the data contained in the table. Most significant is that relating to the proportion constituted by savings in the household sector to total savings. Savings in this category may be seen to account for the major portion of the total savings. At constant prices, savings from this sector had amounted to more than 80 per cent of the total savings for the entire period from 1950-51 to 1958-59. The corporate sector is of relatively insignificant size to have any large share in the total. Within the household sector it is the urban household sector, which is the larger source of savings. Its relative share is more than double the share of the rural household sector. It is also worthy of note that a substantial portion amounting to more than 80 per cent of savings in the household sector is in the form of physical assets.

Total savings for the whole period at current prices have risen from Rs 635.88 crores in 1950-51 to Rs 974.84 crores in 1958-59. At constant prices, the increase is from Rs 591.0 crores to Rs 902.0 crores. For the entire period, the household sector's share of total savings amounts to 81.4 per cent at constant prices, and that of the Government at 13.9 per cent. As a proportion of the National Income, savings have increased from 6.7 per cent in 1950-51 to 7.7 per cent in 1958-59. The percentage is higher for some of the intervening years being 9.1 per cent for 1955-56 and 8.8 per cent for 1956-57.

AVERAGE SAVING-INCOME RATIOS: AGGREGATE AND SECTOR-WISE (PER CENT)

	Period I (50-51 to 52-53)	Period II (53-54 to 55-56)	Period III (56-57 to 58-59)	First Plan Period	Three Years of Second Plan (56-57 to 58-59)	50-51 to 58-59
Government Sector	13.5	7.4	8.2	10.3	8.2	9.7
Domestic Corporate Sector	34.2	41.0	32.4	37.0	32.4	35.8
Household Sector	4.3	6.3	6.7	5.3	6.7	5.8
Rural Household Sector	2.6	2.6	2.7	2.5	2.7	2.6
Urban Household Sector	9.5	16.0	16.9	12.6	16.9	14.1
Aggregate Saving	5.9	7.3	7.9	6.6	7.9	7.1
Aggregate Marginal Savings Income Ratio	...	19.1	14.2	...	17.3*	...

*Calculated with reference to First Plan period.

The Reserve Bank study is also important for its estimate of the average savings/income ratios both in aggregate terms and sector-wise. The calculations regarding the average savings/income ratios are made for three

This draws attention to the fluctuations from year to year in the total savings both at current prices and constant prices that are noticeable in the figures given in the Reserve Bank study. The fluctuations are marked for almost every sector, though it is clear that in the household sector there is a recognisable trend toward increase in the total volume of savings over the whole period. While the variations in the savings in the household sector may be explicable in terms of the variations in the different components contributing to the total savings in the sector, the variations in the savings in the other two sectors are not explicable in a similar manner. And the Reserve Bank study has also not sought to assign particular reasons for such variations.

It is the fluctuations in the domestic corporate sector that are really intriguing. There was a sharp fall in savings in this sector during 1952-53 when it dropped to Rs 4.0 crores (at constant prices) from Rs 51.0 crores in 1951-52. Though during the subsequent years, savings in this sector staged a remarkable recovery standing at Rs 57 crores in 1955-56, there was again a sharp fall in 1957-58 when it went down to Rs 17.0 crores from Rs 52.0 crores in 1956-57. The variations in the savings in the Government sector have also been of a similarly pronounced order. From Rs 176.0 crores at constant prices in 1951-52, savings in this sector fell to Rs 85.0 crores in the next year.

year periods rather than for each year. The justification for this grouping of years is stated to be the unreliability of the figures from year to year while the figures for a set of years are assumed to be more meaningful.

The aggregate savings/income ratio risen from 5.9 per cent during period I to per cent during period II and further 7.9 per cent during period III, the average ratio for the whole period being 7.1 per cent. The savings/income ratio is the highest in the domestic corporate sector and lowest in the household sector. Further there is clearly discernible trend in the ratio except for the household sector in respect of which there is noticeable increase over the year. The ratio has however gone down during period III for both the Government and corporate sectors as compared to period I.

The Government sector's average savings/income ratio declined from 13.5 per cent in period I to 7.4 per cent in period II but rose to 8.2 per cent during period III. The average ratio for the domestic corporate sector on the other hand after rising to 41 per cent in period II from 34.2 per cent in period I, went down to 32.4 per cent in period III.

Indo-British Trade in 1960

An analysis of trade between India and the UK in 1960 comes opportunely at a time when the future of Indian exports is exercising the minds of both Authority and the Public. The detailed notice made available in the Journal of Industry and Trade refers, of course to the unfavourable balance of trade in spite of a reduction in India's own imports last year. From the statistical information in hand it may be inferred that the major rival in regard to tea is Ceylon. And in regard to jute manufactures, it is Pakistan, not Belgium, that is the trade rival at present. The fall in UK imports of hides and skins was in part due to supplies from Elre, Australia and France. The strong position in regard to carpet wool has been also modified by Pakistan's entry but then India sells carpets more than wool at present. The UK demand for bristles is up and India has gained from the demand noted at the auctions. China is the main source, but India has a better chance, if clean white bristles, properly graded, are offered for sale at the auctions.

It is in regard to manganese ore that the decline in Indian exports to the UK in 1960 is obvious. Both South Africa and Soviet Russia increased their shipments but the outlook is to be gauged by a reference to the rise of 24 per cent in value last year. The record makes it clear that while India remained supreme as the source of mica and shellac, she failed to benefit from the increase in UK imports of coffee. On the other hand, the imports of tobacco were up, though Rhodesia holds a lead over India as before.

The most important development of the year was the sharp rise in the UK's takings of groundnut oil from Nigeria. It is clear that India is handicapped increasingly by high prices at home. As the major supplier of linseed oil in the Commonwealth, India was not badly placed but it should be noted that the Netherlands and the Argentine are also regular suppliers of both linseed and linseed oil. The ECM arrangements would obviously help Argentina. As for groundnuts, India is naturally out of the picture at present. The UK gets what she wants mainly from West Africa. In respect of castor oil the position of India is definitely better, as also in regard to oilcake.

The review indicates that in regard to pepper, this country is a minor supplier in spite

of the rise in UK imports in 1960, but cardamoms from India, were definitely preferred though it is evident that Scandinavia draws supplies from the London market. The jump in India's exports of cashew kernels last year is reflected in the UK trade returns. The experiments in processing raw nuts imported from Tanganyika was not successful. Mention may be made of similar efforts made earlier in Kenya and Uganda to process cashewnuts from Portuguese East Africa which is still a major source of raw nuts for Indian cashew factories which are being expanded in expectation of regular, larger exports in future.

The review emphasises the fact that India is the principal source of grey cloth for finishing in the UK, though Spain increased her share of the UK market. This may not damage India's long-term interests if Hong-kong limits supplies as expected. The future of textile exports is governed by agreement among the importers. But the first need is to limit the rise in raw cotton prices in India by regulating exports or other means.

The more important consideration after the Accra talks is that the common tariff in Western Europe would apply to supplies drawn from Africa as well as India in the case of groundnut oil, textile manufactures or hides and skins. But in the ECM itself tariffs have been gradually reduced and the UK as a shipper of spices, leather or oilcake may be at no disadvantage if the entrepot trade is kept up as usual. Far more important in the long run for the UK is the maintenance of her invisible exports from shipping, banking and insurance so as to permit larger imports from the Commonwealth especially, of agricultural commodities, though British farmers might enter objections after long experience of both tariffs and subsidies. The re-export of items like tea, tobacco and castor oil would not be prejudiced by the imposition of tariffs and for the maintenance of textile exports by the UK, the continuance of cloth supplies from India is certainly necessary. On the view that India like Australia after the war has changed the pattern of trade, it is open to the UK to argue that her prospective adherence to the Treaty of Rome is an unavoidable contingency.

The end of Empire Free trade, fashioned by Tariff reformers in Britain, is the consequence as much of British disinvestment during the war as the evolution of a new Commonwealth that looks to the USA for both trade and aid. All that could be claimed in the face of industrial development in the Dominions making them serious trade rivals to Britain (not only in the case of butter or meat) is that quotas should be set for UK imports from outside the Commonwealth. That too may have an effect on Commonwealth trade with the USA though in regard to tin or rubber from Malaya, or copper from Rhodesia, there should be hardly any change. One may add justifiably that British manufacturers are exposed to a degree of competition and the ECM too may be disposed to increase its imports for the sake of keeping up capital exports in the future.

End of Speculation Against Sterling

BY JOHN KINGSLEY

THE new economic programme introduced by the British Government in late July is already yielding results. In August, the drain of funds from London that had been

proceeding at an alarming rate in earlier months was not only checked, but actually reversed.

The figures are somewhat involved. The actual rise in the central gold reserves in August was £369,000,000, carrying them to £1,245 million. There was a large special injection from the International Monetary Fund, of £518,000,000—leaving some £17,000,000 of Britain's drawing for a later month. Against this, some £200,000,000 was repaid to Continental central banks to extinguish the greater part (though not the total) of the credits granted by these banks earlier in the year. In addition, £10,000,000 was paid to European countries on account of standing obligations to repay Britain's debt to the old European Payments Union (EPU).

On balance, this left a net injection of £308,000,000—and the reserves rose by £61,000,000 beyond that. One last distorting influence was provided by purchases of sterling by France for its own EPU payment to Britain, of £27,000,000—but it is understood that the purchases of sterling during the month were significantly less than this. Thus the true increase in the reserves appears to have been £40,000,000 to £50,000,000.

A GOOD BEGINNING

This clearly is only a beginning—unofficial estimates of the drain in the first seven months of 1961 range as high as £600,000,000 to £650,000,000—but it is a creditably good beginning. Sterling, as a leading international currency, has been adversely affected in this period by the deterioration in the international situation, even though the Berlin crisis has, this time, affected the mark rather more. Funds are now moving out of Germany, partly in response to political fears, though also as a counterpart to the ending of speculation against the pound.

At the same time, no new wave of hot money has so far made its appearance in London. The additions to the reserves represent mainly the unwinding of speculative positions by operators who had left themselves very short of sterling to cover commitments, or who had postponed making purchases in sterling, in the hope that it would be depreciated.

Although short-term interest rates in London are now outstandingly attractive on international standards—Treasury bills yield 6.7 per cent and seven-day deposits with local authorities 7½ per cent—there are few signs of international funds coming in any large volume, as they did in 1960.

For this, London observers detect two main reasons. One is the general shock administered first by the fact of the German revaluation in March, and then by the fear (unfounded as it turned out) of devaluation of sterling this summer; faith in exchange stability has inevitably suffered. Secondly, there is no doubt that the growing fear of war also discourages international arbitrage of this kind. Instead, operators have been turning to gold—though so far the Bank of England, through prudent management, has succeeded in preventing any drastic break-away in the gold price in the key London market.

LONG-TERM PLANNING

A number of the proposals mentioned by Mr Selwyn Lloyd, Chancellor of the Exchequer, for long-term improvements were too lightly dismissed in early public comment, and the Chancellor has now made it clear that they form an integral part of his programme.

This is especially true of long-term economic planning. People in every quarter in Britain—employers, trade unionists, and Whitehall officials—have been impressed with the experience of France in implementing an ambitious, and at points detailed, national economic plan by co-operation and persuasion rather than by controls and coercion.

There is widespread agreement that Britain has something to learn from this French experience. During August, the Chancellor saw delegations from the employers and the unions and discussed the matter with them, in a deliberately tentative way. The Government has not yet formed a definite view about the form the planning machinery should take. It is anxious to hear views from both sides of industry—and fairly quickly. The ambitious aim is to have the national economic council (as it may be called) in being by the end of the year.

The Government has, however, a provisional view, and it puts this to the representatives of industry. It sees the advantage of the plan as twofold—the sense of national purpose derived from setting targets for economic growth; and the revelation of inconsistencies and priorities in the economic and industrial structure. The possible disadvantage, to be guarded against, is a belief that the existence of the plan itself will solve the problems.

TWO-TIER COUNCIL

On organization, the Government is clear in its mind—and there is almost universal agreement on this—that the key decisions must still be taken by Ministers: there can be no question of a second authority on the political level. But there need not necessarily be an extreme choice between a 'planning commission as a separate administration and one fully integrated in the Government machine.

The halfway house, which the Chancellor appears to favour at present, is a two-tier council. The "policy" element would consist of representatives of employers and trade unions and officials of the Treasury and Board of Trade, presided over by the Chancellor. This council would be 20 to 25 in number.

Beneath would be an "office" for the formidable work of detail—doing the calculations on national income, keeping contact with individual industries, collating and correlating. This office need not necessarily be staffed by existing civil servants, though it could, of course, draw on the Government's statistical services and the like.

In this way, it is hoped, a planning authority with a real weight of its own would emerge, fully geared into the process of Government. Industrialists as a whole are strongly in favour; trade unionists, while they naturally at present have their own worries over the wages pause, are strongly in favour of a planning organization in principle.

Surplus Manpower and Planned Development

By TARLOK SINGH

In varying degrees many of the less developed countries share the problem of surplus manpower. In India, it exists in an acute form for the country as a whole and, even more, in certain specified regions which are noted for an imbalance between population and resources. To a large extent the surplus

of manpower expresses itself as under-employment or disguised unemployment although, with economic development, an increasing proportion of the surplus may take the shape of open unemployment and a steady influx into urban areas. Nevertheless, owing to the rapid increase in population, the relief to rural areas is not significant, and a large labour surplus continues to characterise the rural economy.

The view that manpower is capable of being used as a resource for rapid economic development has been held for many years. Not enough is known yet of the conditions under which this objective may be achieved and its precise place and timing in the scheme of development or of its dependence on a variety of institutional factors. The general proposition still remains to be worked out systematically or on a large enough scale. The rural works programmes which have been recently initiated in India and is to be expanded in the course of the Third Plan to provide work for about four months in the year to some 2.5 million persons will provide an opportunity to develop the idea in many areas, and enable us to assess its practical possibilities and limitations more precisely. Even at this stage, a few preliminary observations based on the actual course of development, specially in India, may be of some interest.

In the first phases of development, commonly the main stress is on the building up of productive capacity in industry and agriculture, development of economic overheads and of essential social services, and the strengthening of the apparatus for administration, training and research. The expansion of employment opportunities, although always recognised as important, is in practice accepted as a by-product of economic and social development, rather than as an aim directly sought or achieved. The use of manpower as a resource does not therefore emerge as a distinct priority. In the main the interests of employment are safeguarded through the adoption, wherever feasible, of labour-intensive techniques in construction and of protective measures for traditional industry. These devices are not strong enough to check the economic trends and cannot take the place of a positive drive to use manpower as a resource in so far as this may be feasible. Moreover, any extended use of manpower itself, except at the very lowest levels of technology, requires the very services which development seeks to establish and involves claims on resources which would otherwise go into development. Thus, it may well be that despite the wide acceptance of the case for effective utilisation of manpower for development, the stage at which manpower may be deployed both more fully and more efficiently may often be reached after the process of development has got under way. Such a stage would appear to have now arrived in India. It is not of course suggested that under certain institutional conditions—different from those actually witnessed in India and many other countries—there could not be a somewhat different sequence.

RURAL WORKS PROGRAMME

It is mainly in the rural areas that manpower resources could be used intensively for development. Beyond the ordinary processes of agriculture and rural industry and services, additional work opportunities flow from the development programmes undertaken in an area, such as, irrigation, soil conservation, distribution of fertilisers etc. A proportion of the opportunities arise directly; but to a much larger degree and on a continuing basis, indirect and private employment, which the completion of development programmes

makes possible, is even more significant. It follows that any programme for rural works for the further use of manpower should look beyond direct to indirect employment. This consideration also suggests the need for much closer knowledge of the employment impact of different activities than is at present available and of the real employment needs of each area.

The earlier suggestions concerning the use of surplus manpower perhaps failed to stress one aspect of practical importance. There is a vast difference between employing the mechanism of rural works (a) where these are the principal means for providing employment, and (b) where they serve as a marginal additional addition to an existing and reasonably well-knit scheme of development. In the second situation, which generally holds in India, what is attempted is a purposeful expansion of the development programme, a broadening of the prevailing pattern rather than something fundamentally new. The problems of organisation, even of motivation, and the underlying assumptions, are somewhat different in the two circumstances. It is obvious that in an area where a rural works programme supplements the existing effort, the latter must itself be fully oriented towards expansion of employment opportunities, both direct and indirect. In other words, its greatest concentration must be on production and on organisation for the better harnessing of manpower resources, for instance, through various forms of co-operatives. Without these steps, a large part of the value of supplementary programmes which may be taken in hand may be easily lost. Thus, the objective of utilising manpower on which a programme of supplementary works focusses attention, brings with it a challenge not merely to the manner in which development is organised, but also to some of the concepts on which it is based. Among the issues to be considered are:

- How far can peasant agriculture be adapted to the dynamics of large-scale utilisation of manpower for development;
- To what extent will be additional employment opportunities for slack agricultural seasons, such as rural works are likely to provide, meet the requirements of the rural economy even during the transition?

Peasant agriculture has the ability to carry on with a large labour reserve. To the extent the surplus labour continues to be retained in agriculture, despite some increase in the intensity of operations, the gains in living standards and in productivity may be limited. Invariably, lack of capital resources impedes growth in productivity and, even with greater facilities from co-operative agencies, the limitation is likely to persist. Moreover, while there are various ways open to the peasant family to increase its income and production from land, progressively the larger gains will accrue from works affecting a wider area and calling for labour on the part of substantial numbers of persons. In other words, if the more effective use of manpower is to be secured in the context of peasant agriculture, besides co-operative organisation of credit, supplies and marketing and labour co-operatives, techniques have to be developed whereby groups of workers and farmers can carry out improvements over whole blocks of land as part of a wider scheme of development. Individual holdings have to fit into such a scheme and those who benefit have to accept certain obligations or liabilities, but over a growing range of activities, development plans have to be formulated and carried out on the basis of areas, villages and groups of villages rather merely in terms of

choice and preference on the part of individual farmers. Naturally, methods of persuasion and consent and the approach of mutual interest have to be adopted to the greatest extent possible, but these will not be sufficient.

The combined effect of the growth of population and the improvement of agriculture may be to throw up more and more of surplus labour such as will require full-time work rather than work only during the slack agricultural seasons. This is at present in the nature of a guess. The most important aspect of the organisation of rural works now being undertaken is, therefore, to arrange for the precise study of the types of surplus labour which exist in different areas the scope for integrating works programmes such as can be undertaken in the slack agricultural seasons with the operations and needs of the agricultural economy, and the scale on which, as part of the development programme, full-time opportunities must be brought into existence from year to year. As a first approach, it is highly important and essential that additional work opportunities for the less busy agricultural seasons should be rapidly developed. The more difficult problem is to meet the demand and to train the labour force for full-time employment. The crux of the problem of transforming the rural economy remains what it has been for a long time—establishment of a progressive and efficient and essentially cooperative system of agriculture and the expansion of small and medium-sized industries based on agricultural raw materials as well as others, at the level of the small town and in rural areas generally. The rural works programme, while serving an urgent need, is also likely to create conditions under which these basic processes of reconstruction will have to be greatly speeded up.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

RBI REPORT

Strengthening the Banking System

MENTION may be made here of two proposals formulated by the Reserve Bank, one for strengthening the capital funds of banks and the other for increasing the cash reserves and liquidity requirements of banks. Briefly, the first proposal seeks to establish the relationship to Deposits as the criterion of minimum adequacy of a bank's capital funds, and also to increase the minimum capital required for setting up a banking company.

—Report of the Central Board of Directors, Reserve Bank of India, page 29.

The other proposal seeks (i) to relate the cash reserve requirements as well as the liquidity ratio of banks to total Deposits, instead of to total liabilities, (ii) to abolish the distinction between demand and time liabilities observed at present in calculating reserve requirements, (iii) to raise somewhat the reserve and liquidity requirements, and (iv) to ensure a raising of the liquidity requirements pari passu with every increase in the reserve requirements.

—Ibid, Pp. 29-30.

There has been a furore about the capital plus reserves link with Deposits. It would appear that the suggestion put forward by the Reserve Bank places the relevant ratio too high—so high indeed that the objective is practically impossible of achievement. The Indian Banks' Association and the Exchange Banks' Association have reportedly considered the proposals, and the former is understood to have suggested that the percentage should be somewhat lower than the 7½ per cent of the draft proposals. There is no gainsaying the fact that bank Deposits have in recent years grown so fast and vast that capital and reserves as a ratio of Deposits have been rendered perhaps unreasonably low. But the intention to make statutory provision for transfer to reserve and/or raising of capital is fraught with difficulties. If banks are required to set apart a certain fixed percentage of the published profit for reserve, then the distributable surplus will be reduced, dividends will suffer—and the prospect will be downright bleak for any approach to the shareholder in the form of a rights issue. It is conceded that the Reserve Bank itself has acted in manner to ensure that banks' profits will increase; to that extent banks' capacity to transfer to reserve will have improved. But bank Deposits are not static, and cannot be static; and the rate of increase is likely to be such that even after the maximum possible transfer to reserve out of profit for the best that banks may be able to hope for would be that the ratio to be steady, the danger being that it might deteriorate. In any case we do not greatly favour at the present moment and in the light of existing conditions any such

* Exclusive of inter-bank transactions and 'other' liabilities.

restrictive kind of formula. Instead we would concentrate upon the building up of inner reserves—after all losses can be met from inner reserves, it would be impolitic and impractical to use published reserves for the purpose. Maybe the link should be between inner reserves and risk assets, with banks encouraged to put by to inner reserves until specified ratios of particular kinds of risk assets are achieved. We gather that in Canada such strengthening of inner reserves is encouraged, the relevant transfers (up to specified limits) being tax-free. In India too the feasibility of allowing such a tax concession should be considered. New industry here gets the benefit of Development Rebate, apart from tax holidays and the rest; if banking is being called upon to undertake new forms of service, some at least of which hold greater risk potential, it is but fair that they should be compensated in the form of tax-free strengthening of inner reserves.

The second proposal is unobjectionable; and it is to be hoped that the Reserve Bank will where necessary use the more powerful monetary weapon it will be possessed of.

The pattern of distribution of bank credit has also undergone a change, for there has been a growing participation of banks in industrial finance; banks are now venturing into new lines of activity such as term-lending to industry and underwriting of shares involving a greater risk element.

—Ibid, page 29.

"Greater risk element": precisely, and more reason why attention should be paid to strengthening of inner reserves. Term-lending, however, is not exactly a new activity; in 1956, whether the banks knew it or not, they were so extending accommodation to constituents. In that year the capital market was shy, and existing industry quite often put to medium-term use the short-term accommodation it got from banks. It is good that banks are increasingly taking upon themselves the chore of underwriting; apart from the fact that such sponsorship enables relatively new entrants to industry to secure their capital needs, the fact is that the banks themselves by so extending their activities improve their earning potential.

Other measures proposed for strengthening the banking structure include a general tightening of the Bank's inspection machinery and the introduction of Deposit insur-

ance. . . . It has . . . been decided to introduce an element of surprise in the inspections conducted by the Bank, to inspect each bank at least once a year and the weaker ones more than once, and to inspect a larger number of branches of banks than hitherto. Government have also decided to introduce a scheme of Deposit insurance as a measure of protecting the interests of depositors and as an aid to banks in mobilising Deposits.

—Ibid, Pp. 46-47

The Palai Central failure did not occur because the Reserve Bank's inspections were not rigorous enough; it was because the advice of the central banking institution was not heeded or acted upon. In principle there is everything in favour of surprise checks and checks at branches. But we are not sure that the Reserve Bank has done right in informing the general public that "weaker" banks will be inspected "more than once" a year. However secretly and discreetly inspections may be conducted, information in this regard leaks out; and in the light of the Reserve Bank's intention to peer into weaker units' working more than once a year, it will amount to Reserve Bank labelling of banks so inspected as weak. Will this engender confidence? Or will it set off jitters just when they should be avoided?

Hail, Deposit insurance, watered down though it is!

The main source of the increase in income during the year was the rise in earnings under interest resulting from increased holdings of rupee securities consequent on purchases from the State Bank of India in accordance with the revised procedure for the placement of PL 480 counterpart funds, and the funding of ad hoc Treasury Bills for a further amount of Rs 50 crores in January 1961, in addition to Rs 150 crores funded in December 1959.

—Ibid, Pp. 49-50

Not to speak of the funding of Rs 300 crores of Treasury Bills, in the year previous, by the creation of a special issue of non-marketable 4 per cent 1973. The Reserve Bank's income in the year to 30 June 1961 went up by Rs 4.50 crores, and the net profit payable to the Centre rose by Rs 2.50 crores. The funding operation of January 1961 was comparatively speaking a small affair, and will not have greatly contributed to increase in profit. Then, the increased earnings arising from the funding operation of December 1959 could have—or should have—been taken into account while framing the Central Budgets since then. We are consequently led to believe that a not inconsiderable factor attending the enlarged earnings is the receipt of counterpart funds. If this conjecture is correct, then the windfall profit enjoyed by the State Bank since the first accrual of counterpart funds must have been sizable—and well in excess of published figures.

Week ended 15 September for Other Scheduled Banks.

Note: State Bank figures are distorted by Rs 24 crores loss in Deposits owing to repayment of counterpart funds.

BANK RETURNS

Balances Held Abroad Higher

After the considerable currency expansion owing to Puja disbursements, Active Note Circulation has, during the week ended 22 September and as disclosed in the latest returns of the Reserve Bank, contracted by Rs 20.77 crores to Rs 1,863.70 crores. Also, there has been inflow of Rupee Coin in the considerable amount of Rs 1.80 crores. Foreign Securities are unchanged at Rs 116.85 crores, and currency has been contracted against Rupee Securities for Rs 20 crores, the latter now being placed at Rs 1,528.73 crores. In the result, the Reserve Bank's cash in the till has improved slightly by Rs 2.71 crores to Rs 21.99 crores.

The return for the Banking Department indicates that there have been inter-governmental transactions. Balances of State Governments are lower by Rs 16.80 crores at Rs 21.36 crores, on top of a fall of Rs 3.91 crores to Rs 45.53 crores in their ways and means borrowings from the Reserve Bank; and these two changes suggest some element of repayment of loans, etc., to the Centre. The Centre, in its turn, with cash balances adequate, has instituted reverse ad hoc for Rs 20 crores, as represented by the fall in Rupee Securities in the Issue Department. In the event, the Centre's balances have declined by Rs 18.48 crores to Rs 55.05 crores. There may also have been a special transaction, with Other Deposits rising by Rs 14.63 crores to Rs 172.66 crores.

A somewhat easier banking position can be inferred from the rise of Rs 5.64 crores to Rs 84.31 crores in Reserve Balances; also the Other Loans and advances of the Reserve Bank have moved down by Rs 1.07 crores to Rs 135.89 crores. On the other hand, advances against usance bills are nearly Rs 3 crores higher at Rs 9.51 crores.

Investments are unchanged, in broad terms, at Rs 260.61 crores. It would appear that Government also had a maturing commitment in respect of Treasury Bills purchased and discounted by the Reserve Bank in an amount of roughly Rs 6½ crores.

Lastly, it is heartening that Balances Held Abroad, which have been falling continuously without break, have recorded a small improvement of Rs 0.66 crore to Rs 18.42 crores; and foreign assets held by the Reserve Bank now just barely exceed the Rs 135 crore mark.

The return of easier conditions is revealed in the statutory statement of the State Bank for 22 September. The total of Advances has fallen by Rs 5.15 crores to Rs 242.69 crores,

and Deposits are up by Rs 0.58 crore at Rs 524.46 crores. The gilt-edged portfolio is largely unchanged at Rs 250.27 crores. But there may be an impending purchase of Government securities through the Reserve Bank tap, since Other Assets are higher by about Rs 4 crores at Rs 25.85 crores. As an end result, cash balances, including money at call, have risen fractionally by Rs 0.74 crore to Rs 31.44 crores.

The return of Scheduled Banks for 15 September reveals partly the impact of Puja bonus payments and the incidence of advance tax instalments. Net Demand Deposits it is true are higher by Rs 1.45 crores at Rs 820.14 crores, but net Times Deposits have fallen by Rs 4.40 crores to Rs 1,116.39 crores. Moreover the total of Advances has risen, though slightly, by Rs 1.40 crores to Rs 1,244.66 crores. In consequence there has been increased recourse to central banking credit, partly offset by reduction in the indebtedness to the State Bank. Borrowings from the Reserve Bank are shown to be Rs 2.27 crores higher at Rs 17.25 crores, whereas those from the State Bank are lower by a shade over Rs 1 crore at Rs 18.21 crores. Banks appear to have disinvested in gilt-edged for Rs 5 crores, with the portfolio showing such a drop to Rs 605.61 crores, but the State Bank is known to have sold securities for Rs 8 crores in that week. Hence, other Scheduled Banks added to their holdings by something like Rs 3 crores—relating of course to State loans. The cumulative result of all these changes is an improvement of Rs 2.50 crores to Rs 182.33 crores in cash balances, including money at call.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 26 September 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs. 99.375 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.500 per cent per annum.

Tenders for Rs. 2,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to 11 A.M. on Tuesday, 3 October 1961. Successful tenderers should make payment on Friday, 6 October 1961. Other conditions are as usual.

During the week ended 22 September 1961 Government of India Treasury Bills for Rs. 52,98,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 20 to 23 September 1961 amounted to Rs. 55,00,000.

Resources of the IMF

By Paul Einzig

IT looks as if ambitious monetary reformers who want to reorganise the international monetary system for the sake of ensuring higher international liquidity will have to wait a little longer before their plans will materialise. For the time being the problem will be dealt with on the basis of the existing system through the addition of some \$6,000 million to the facilities which the International Monetary Fund is in a position to place at the disposal of member Governments. The amount is substantial and should go a long way towards meeting requirement in the near future. It should enable the International Monetary Fund to assist much more effectively in the defence of currencies which are subject to speculative pressure. From this point of view progress has certainly been achieved.

Before rejoicing over this progress it is necessary, however, to bear in mind two qualifying considerations. The one is that the additional resources promised to the Fund by various member Governments will not be unconditional. The Governments concerned are anxious to have a say in regard to the way their respective currencies are used for supporting other currencies. It is now no longer sufficient to convince the Fund itself that the application for assistance is justified. It will be necessary to convince also the Governments whose currencies would be used for the support of the currency that is subject to pressure.

The other consideration is that the international exchange situation is apt to change with disconcerting suddenness. So long as the dollar was obviously impregnable there appeared to be no risk for the United States to let the Fund draw on its dollar resources in support of other currencies. But recent experience has proved that today's hard currency is apt to become tomorrow's soft currency. The Government whose currency is used extensively for assistance through the Fund is exposed to difficulties if a sudden deterioration of the exchange position should occur. It may not always be easy to reverse the operations, so that the generosity of a Government in allowing its currency to be used by the Fund is apt to become a major source of difficulties.

In theory there is nothing to worry about, for if a currency is subject to selling pressure one or more other currencies are bound to be subject to buying pressure to a corresponding extent. This should mean that those Governments whose currencies are subject to buying pressure can afford to help the currencies subject to selling pressure to the extent to which that pressure is in relation to their own respective currencies. In practice, however, things are not always so simple. The Governments concerned may entertain doubts whether the buying pressure on their currency is of a sufficiently lasting nature to justify a decision to authorise the Fund to draw upon their currency.

However, even if the new facilities will not be easily available to anything like their full extent, the reinforcement is none the less welcome. It will tend to discourage speculators, at least to some extent, for the possibility of massive retaliation to their attack will exist. At the same time the fact that the assistance is not unconditional and automatic will tend to discourage Governments from relying on it excessively and from pursuing unsound policies on the assumption that in case of difficulties large-scale support will be available as a matter of course. LABOUR STATISTICS

Dubiety in Figures

An article in the July issue of the Tata Quarterly discusses the content and character of the statistics relating to labour under various heads such as factory employment, employment exchanges, wages and earnings, absenteeism and consumer price indexes. The data presented in respect of all these are shown to suffer from serious deficiencies and shortcomings which inevitably detract from their value as reliable tools of economic study. The common defects of the economic data presented under all these heads are their obsolescence and their lack of exhaustiveness. In respect of employment, for example, the data are collected from the annual returns submitted by industrial units. It is shown that a number of industrial units do not comply with this provision and that in such measure, the statistics of industrial employment remain incomplete. This incompleteness naturally affects the usability of the data for purposes of comparison between different States and between different times. The long time lag after which the figures become available is a fac-

tor that renders them useless for current studies. (For example, the latest available Provisional All-India figure of factory employment is for 1959.) The territorial change that have followed the merger of the former princely States and the States Reorganisation scheme, have further vitiated the comparability of the figures of industrial employment and there has been no attempt at reconciliation or revision of the data to cover the same area to make them useful for comparative purposes. It is also shown that the figures presented for industrial employment refer not to the number in employment, but to the number which attended work. This tends to underestimate the actual employment in view of the possibility that the number which attended work cannot take into account the numbers absent.

The data in respect of wages and earnings also continue to be incomplete and somewhat unreal for the same reasons as failure on the part of employers to submit annual returns—in 1958 only 71 per cent of employers submitted returns—and the calculation of employment on the basis of the number which attended rather than the number in actual employment. That the actual situation in respect of wages and earnings should in the circumstance fail to be reflected in the figures furnished by the Government departments is, therefore, inevitable. There is also lack of uniformity over a period of time in the figures that are collected and presented. (Upto 1957, the data relate to employees earning upto Rs 200 p.m. and thereafter upto Rs 400.) To aggravate all this, there are serious gaps particularly in respect of data needed for inter-industry comparisons.

The most serious defects are noticeable in respect of the statistics relating to employment exchanges. For reasons of the small number of people availing of the employment exchanges for new jobs and of the lack of compulsion on employers to recruit candidates through the employment exchanges, the statistics provided by the employment exchanges serve as poor basis for estimation of the employment opportunities and unemployment. The article points to the result of an inquiry conducted by the National Survey in 1953 which showed that nearly 75 per cent of the unemployed in the urban areas did not register themselves with the employment

exchanges. Further dubiety in the figures is introduced by the fact that the registers of the employment exchanges include names of people already in jobs and further the figures tend to get deflated by the habit of people preferring not to renew their registration in the employment exchanges.

It is the consumer price indexes and the working class cost of living that offer the most glaring instances of obsolescence and unreliability among the whole mass of labour statistics presented by the Government. This is due to the fact that it makes no distinction between States and regions and also makes no allowance for the varying importance of the articles that enter into consumption at different times and in the different States. World War II has wrought the most pronounced changes in consumption habits, but the Indian consumer price index has not wholly taken into account these changes. It is fantastic that the price indices for important Centres like Bombay, Ahmedabad and Madras should continue to be based on pre-war standards which makes them utterly irrelevant for any worthwhile study. The assumption of an all-India pattern of consumption is also, as the article points out, extremely fictitious since the climatic conditions, character of production and habits of consumption differ very widely from place to place.

The defects in the statistics presented by the Government departments may thus be seen to be not only a matter of detail but basic. The use of such faulty statistics prevents precision in economic studies and analysis and further has dubious significance as reliable indicators of progress. While instances may arise where the use of such statistics may lead to erroneous conclusions, a worse result may be that Government's policies which are based on such data may fail to correspond to actual conditions and needs. An All-India consumer price index, officially admitted to be "of hardly any real significance" has yet been used for adjustments and wages. It was used by the Labour Appellate Tribunal (1954), the Bank Award Commission (1955) and the Pay Commission. The propriety of such use is questionable. Improvement necessarily rests with the Government and the cooperation of the industrial and other interests. Arming Government with more powers to elicit information from industrial units may serve to fill only part of the breach. What is more essential is that the apathy of the Government should be broken. Official admission of deficiencies should be followed by corrective action. Something is being done. For instance, the results of the family budget inquiries conducted in 1958-59 at 50 centres are expected shortly. This should make possible a more meaningful consumer price index.

MAHARASHTRA State Cooperative Bank's Golden Jubilee

That the Cooperative Movement has taken deep roots in Maharashtra is borne out by the remarkable progress that has been achieved by the newly constituted Maharashtra State Cooperative Bank. It is true that the Bank is this year celebrating its golden jubilee by virtue of the fact that it is a part of the old Bombay State Cooperative Bank. But strictly speaking the Bank in its present name came into existence only on 1 May 1960 following the bifurcation of Bombay into Maharashtra and Gujarat. Recently the Vidarbha Cooperative Bank has been merged with it. The Maharashtra State Cooperative Bank, as is to be expected, was hard put to it in the first six months of its separate existence to carry on smoothly. For as a result of the bifurcation, the deposits of banks and societies in Gujarat had to be transferred to the Gujarat State Cooperative Bank. At the same time commitments had increased because of the unchanged demand from cooperative sugar mills and the increased demand for loans from the agriculturists. Thanks to the timely help of the Government of Maharashtra to the tune of Rs 1 crore, the Bank was enabled to concentrate its attention on augmenting its funds by fresh deposits. Its effort in this direction was crowned with resounding success as before the completion of the first year of its working, it had deposits far in excess of the deposits of the

parent Bank just before the bifurcation. A highly significant feature is that the Bank has been able to attract increasing deposits at a time other commercial banks were experiencing a fall in their deposits.

Addressing the annual general meeting of the Bank, the chairman Prof. D. R. Gadgil, has pointed out that in spite of the strenuous efforts put forth by the Bank to raise funds, the Reserve Bank of India had to continue to render substantial assistance. The Committee on Cooperative Credit headed by Mr. Vaikunthbhai Mehta which submitted its report in May 1960 had recommended provision of agricultural credit on a more liberal basis. The Mehta Committee recommendations have been generally endorsed by the conference of State Ministers for Cooperation held at Srinagar in June 1960 and the Reserve Bank has also accepted these recommendations in principle. The co-

operative movement has no doubt made commendable progress in Maharashtra and because of this demand for funds has considerably increased. The Cooperative credit structure is not able to cope with the situation unaided. Perhaps some time in the future, it would have grown strong enough to go it alone but under existing circumstances, it needs assistance and the sooner such help is made available, the better will it be able to serve the needs of the rural population.

★ CAUSTIC SODA The Protective Umbrella

The past decade has been conducive to the rapid growth of the caustic soda industry as to many other industries. Thanks to the rapid progress of industrialisation

in the country, the demand for caustic soda, a basic material used in a number of industries such as soap, textiles, paper, vanaspati, rayon, aluminium and ancillary chemicals, has increased considerably. The indigenous caustic soda industry could therefore expand its production to meet the increased demand as it has been adequately protected from competition from imports by tariff protection since 1955. During the past six years of protection, the industry has expanded considerably. In 1955 there were twelve units engaged in the production of caustic soda of which seven produce for sale and the remaining five for self-consumption. There are now eighteen units of which eleven produce for sale and seven for self-consumption. The rated capacity of the industry which stood at 39,946 tonnes in 1954 increased to 68,270 tonnes in 1958 and 131,630 tonnes in 1961. Production also shows a sizable in-

crease in the course of the past seven years. In 1958, production stood at 58,31 tonnes and it aggregated 97,402 tonnes in 1960. As against the Third Plan target capacity of 400,000 tonnes, licences so far granted for expansion of existing units and new units will bring the capacity of the industry to about 366,500 tonnes.

The position at present is that there is a shortfall in domestic production and it would appear that although the gap may progressively be narrowed in coming years, self-sufficiency may not be reached before the end of the Third Plan as demand is expected to rise to about 300,000 tonnes by 1964. The shortfall now made good by import which is the sole responsibility of the State Trading Corporation. The selling prices of caustic soda in all forms and its allied products are controlled since 1959. Protection is due to expire on 31 December 1961 and the industry has prayed for continuance of protection for a further period of three to five years beyond that date over and above praying for various measures of assistance such as, continuance of the policy of regulated imports, higher ceiling prices for caustic soda, facilities for transport of raw materials and finished products, exemption from the payment of electricity duty etc.

In opening the public enquiry a few days ago in Bombay Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, has pointed out that the industry is working under quite favourable conditions. Under the protection umbrella, it has made rapid progress during the six or seven years. The quality of its products is generally considered satisfactory. Thanks to the strict regulation of imports, foreign competition has been practically eliminated. Mr. Aiyangar has further said that in the context of the present acute shortage of foreign exchange in the country, import of caustic soda is not likely to be liberalised. The industry perhaps need not unduly worry about obtaining protection for a further period. For, as has been pointed out by Mr. Aiyangar, the industry will not be much bothered by excessive imports as Government is itself extremely stringent in allowing imports. While the industry can justifiably plead for continuance of protection and other facilities and concessions, it has a primary responsibility toward the consumer. The protection cover should not lull it to a sense of complacency. The consumer has a right to expect to the given supplies which are of the highest possible quality and at a reasonable price. It is also incumbent on the industry to strive to achieve self-sufficiency as expeditiously as practicable for here is involved not only self interest but the larger interest of the nation as well.

HARBOURS

Fair Progress

The National Harbour Board met at Ernakulam last week to review the development work at various ports. The proceedings have served to underline the trend of development work in various ports, which indicates fair progress in some of the major ports, particularly at Cochin and Madras. The work regarding the construction of four berths in the Ernakulam channel of the Cochin port is stated to be progressing satisfactorily and is expected to be finished by the middle of next year. The new wet dock scheme in the Madras port is also stated to be proceeding according to schedule and is expected to be completed by the end of 1962 or the beginning of 1963. It is the improvement of the Calcutta port that poses the most difficult problems. Dr. P. Subbarayan, the Minister for Transport and Communications who presided over the meeting of the Board, indicated some of the steps that are being taken for further development of the Calcutta port. These include purchase of dredgers and other craft required by the port, and extension of the King George's Dock to provide additional accommodation for vessels inside the dock. The problems thrown by the heavy silting of the Balari Bar also received special attention and in this connection, the assurance given by the Minister regarding the implementation of the Farraka Barrage scheme should be welcomed.

The decision in respect of legislation being passed for setting up of port trusts at Cochin, Vizag and Kandla which are presently under Central administration would also be welcomed. The potentialities of traffic growth at these ports are such as should call for a fairly flexible system of administration which only the creation of port trusts could ensure. With the completion of the present scheme for construction of four berths at the Cochin port, its capacity for handling larger freight tonnage would be enlarged. The Vizag port would also be called upon to handle a larger volume of freight traffic in view of the export potentialities of iron ore to Japan. By 1964 the annual traffic in this would be of the order of nearly 2 million tons, which is further expected to go up to 4 million tons two years thereafter.

The Board does not also seem to have arrived at any decisions in respect of the development of other important ports such as Paradip and Porbandar which would qualify for inclusion in the development schemes by virtue of the anticipated growth in traffic in these places. There is considerable difference of opinion between the Gujarat Government and the Central Ministries in respect of the prospective volume of trade

likely to be available at the Porbandar port and these differences were expected to be thrashed out at the Board's meeting. The Planning Commission would seem to favour the inclusion of only Tuticorin and Mangalore for development into major ports at present and a sum of Rs 10 crores had been provided for in the Third Plan outlay for port development for this purpose. The inclusion of the other ports within the scope of development envisaged in the Third Plan is contingent on the provision of more outlay for port development.

★ TANNING

A Public Utility

The decision of the Madras Government to declare the tanning industry (operating mainly in rural areas) as a public utility may well be due to its importance for the export trade. The change from raw hides to tanned leather has made the local tanneries important and since a large number of tanners depend on a small number of export outlets smooth working is required. The E.I. kip trade producing over Rs 20 crores in exports in a year is the major item in Madras at present as groundnut oil exports are virtually extinct. The hope of a large trade in chrome leather and finished leather is always there, but it is in regard to footwear that the outlook has improved with the arrival of orders from Eastern Europe for boots and shoes. That leather is needed for sportsgear like cricket pads or footballs may be a real link between one small industry and another big industry. But as is generally known, it is upper India that believes in leather and the S. I. tanning industry is more concerned over raw materials like goat.

That the joint stock enterprise is virtually unknown in the field may be due to the risks of the trade. The Mysore venture in chrome tanning has evidently not paid off and the poor start made by manufacture of sned leather is known to many. In any case, tanning is more of a trade than industry and the export houses are largely dependent on commissions paid. And the importance of the trade is not due to leather research but to the fact that it was the first industry in South India to get going in the first decade of this century. Not yarn, but hides and skins won attention when industrial education was planned and the European merchants thought of E.I. kips as the backing for their own export trade to offset fluctuations in import trade. The tanning industry is upset by the monsoon and wet spells imply only idleness. But in Madras it is not so much of a seasonal industry as cotton spinning or sugar and the most impor-

tant feature today is that Indian capital predominates.

Also new trade connections, for instance, with Japan have been built up in recent years by careful attention to the needs of export markets. There has been no attempt to draw imports of hides and skins from Australia and it is from S. E. Asia or Pakistan that the supplementary supply of hides and skins is drawn.

★ COFFEE To Join or Not to Join?

That coffee marketing has been a headache for the Coffee Board and that the planting community has had a period of anxiety during the past many months are known facts. One of the important reasons for the present difficulties is, that the coffee-growing industry has produced and is still producing a rapidly-growing crop, while there is world over-production and price decline in the commodity. The crop in India does not exceed 2 per cent of the world crop. But, when a sizable crop is to be marketed in the world market under the prevailing conditions of supply, India cannot but sell at prices offered there, especially when the world price of coffee has been dropping heavily since the middle of last year and the Indian coffee, sold for export, has also been fetching low prices.

In this context, the meeting of the board of directors of the International Coffee Agreement, currently in session in Washington, is of special interest. It is reported that the present Coffee Agreement will most probably be extended for a further period of one year. It is also expected that a sub-committee will be formed to draw up plans for a long-term agreement to include all the producing countries and the larger consuming countries. Fifteen countries, representing 93 per cent of the world's coffee exports, are now signatories to the Agreement. Proposals have now been made to widen the membership to cover all coffee growing countries of the world. The Latin American producing countries and the United States are reported to be agreeable on the provisions of a long-term agreement. It is felt that the successful implementation of such a scheme necessitates that membership embraces "all" coffee-producing countries without exception, as also the main consuming areas in the world.

Reports aver that the planters and the Government of India differ on the advisability of India keeping away from the Agreement. The planters feel that it will be advantageous for India to become a member of the Agreement in view of the mounting exportable surplus; while, according to the Government, the exportable surplus so far is a very fractional

part of the world trade in coffee and, at present, the country may lose rather than gain by joining the International Coffee Agreement.

The argument between the Planters and the government is bound to be inconclusive in a situation where the imponderables are so many. And the analogy of sugar may not be strictly applicable. But the embarrassments of excess production are real enough for the question to deserve a close scrutiny before the idea is rejected out of hand.

★ REROLLING INDUSTRY Raw Material Difficulties

The problems faced by the re-rolling industry came for discussion at the annual general meeting of the Steel Re-rolling Mills Association held at Calcutta last week. Chief of the difficulties impeding the progress of the industry concerns the inadequacy in the supply of the main raw material namely billets. The fact that the steel mills set up in the public sector are yet to gather full steam, has affected the supplies of billets to the re-rolling industry. The formula which guides the production of billets—that is, for every one million tons of steel ingots, the optimum production of billets should be 15 per cent—has not been favourable to liberal production to meet the requirements of the re-rolling industry. It has been pointed out by Mr. B. P. Khaitan, Chairman of the Association, that on the present basis of production capacity in the industry, a production of nearly two million tons of billets would be required for meeting the needs of the re-rolling industry.

The industry has considerable potentialities of expansion on a dispersed basis. Considerations of balanced regional development of industries would warrant special encouragement being given to the development of the re-rolling industry. During 1960, the re-rolling industry has set up a new record of production at 91,000 tons which represents nearly one-third of the total steel production in the country. The Third Plan target for steel production at 10 million tons of ingot capacity, should open up new opportunities for the growth of the re-rolling industry and it is doubtful whether even with the prospects of greater supplies of steel ahead it would be in a position to meet the entire requirements. On the basis of the existing formula for the production of billets, it is estimated that the availability of billets would fall short of requirements by nearly one million tons. The need for the revision of the formula for the production of billets appears obvious. It is also necessary that the industry should adjust itself to the changing demand

AUSTRALIA, the land of kangaroos and cricketers, is one of the 50 countries importing BINNY's textiles.

BINNY's fabrics are made from yarns spun only from cotton of the best quality and are dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

*Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is

laboratory testing to eliminate defects at every stage of production. That's why BINNY's fabrics stay smart so long.

Testing size mix to ensure strengthening of yarn
Viscosity and temperature of the size mix are tested to ensure uniform penetration, dressing and strengthening of yarn.

Buy your requirements of BINNY's fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

BINNY - a great name in textiles

BINNY's manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels
Anticrease Suits • Tussore • Union Fabrics • Silk Saris etc. etc.

for steel products. Sardar Swaran Singh, the Minister for Steel Mines and Fuel who presided over the conference drew particular attention to the change in the pattern of demand that has taken place in the course of the First and Second Plans as a result of which emphasis has shifted to flat steel. To satisfy the varying needs of the industry, Mr Khaitan has suggested specialisation in production in the steel plants that are to be set up in the country hereafter. It has been suggested that the Bokaro plant might concentrate on the manufacture of flat products while the fifth plant that might later be set up might specialise in the production of billets.

PARTY FUNDS

No Neutrality

Mr Nehru's remarks on donations to the Congress or other political parties may please investors

who have reason to fear that sheer generosity at the expense of shareholders by company directors would reduce transfers to Reserves in spite of some probable saving in tax. (The legal position regarding tax is doubtful and Mr Morarji Desai left the matter to the courts.) But Mr Nehru has, by implication, told companies that their idea of neutrality, reflected in donations to more than one party in the coming election, does not find favour with him. He has asked (in his blunt way) that those who approve Congress aims can donate but the Laodiceans need not pay up. This is rather hard on the other parties, for if a single donation to one party alone is to be the ideal, the Congress will easily outdistance all its rivals who may have to seek the help of individuals, not incorporated enterprises.

The Prime Minister's objection to indiscriminate donations is understandable. Those who dislike the Congress should not pay

because donations too must be inspired by sincerity and must not be a form of expiation. Mr Nehru also mentioned that it may be a form of insurance and a simultaneous hedge. Donors may thus hope to avoid trouble whoever is in power, forgetting that the permanent civil service dispenses more patronage. In any case, if imports are curtailed and exports are licensed freely, there is no point at all in looking for licences. Perhaps this factor may come to limit donations; so also the growth of the public sector in the future.

The Prime Minister appeals for small donations only from the humble. This might make donations unidentifiable, but the volume may be a welcome proof of solid support from the masses. The classes, of course, are free to assist other parties, as Mr. Nehru rightly pointed out at Kanpur. But it may be claimed that the Prime Minister in asking prospective voters to back their ballot papers by some donation—perhaps

even the widow's mite may help—has made it clear that faith must find practical expression and the Mandal committees must gather funds regularly for the party cause, instead of relying on donations from a few who pay mainly out of fear.

TURKEY

The Perfect Elimination

The Turkish State trials may be regarded by some as only completing the revolution. The Democrat party is broken necessarily but the constitution has been voted and the Army will retreat to barracks. The trials were held to justify the military authorities displacing the Menderes regime abruptly. It was also a plain hint to all politicians in the future that Ottoman tradition of perfect elimination was not forgotten, though no Selim or Murad is in power today. The Turkish people have been told that the regime of Beyar and Menderes has been erased completely by the sentences carried out. The Nuremberg trials which disposed of politicians in discredit was copied and the West cannot complain that forms were not respected at the island of Yassida. Bowstrings could not be sent for the adoption of suicide though that would constitute a valid confession of guilt. The suicides are a warning against graft which has made Turkey lose the advantages accruing from US aid. The people should be satisfied that the Leftists in the Committee were dealt with gently earlier this year, while the opponents alone were marked out for punishment. The Turkish regime is not likely to be challenged by the electors when they come to vote with these new parties out for their favours even if it be in favour of Ismet Inonu who remains a link with the Ataturk regime. The polling will mark a break with the past and the conservative Army officers will probably leave free enterprise room to grow. There has been no change in foreign policy and the anti-Soviet attitude will persist after the elections. To that extent, the USA should be satisfied that unlike Cuba, there is in Turkey no desire to seek new alliances that threaten security. The Turkish attitude to the West may bring her in line with the ECM for mineral or other exports must go to Germany or France and the Turks cannot look to Iran or Iraq as markets for cotton or fruit. The alignment of Turkey with Europe is in a way complete, though Islam still remains a force in the background. The cry of atrocities cannot be raised easily as Christian minorities have not been persecuted and the Turks have fashioned their own Commonwealth in the same way as Crom-

well. The Turks do not present a problem, as they have no territorial claims on others and their neutrality in the war has made them pro-Western, as the bases leased to the USA will suggest. Better crops and lower prices have broken domestic discontent and money is easier of late.

THE CHANGING TIMES

Palaces into Hotels

Col. Tod will perhaps be shocked by the report that the Maharana of Udaipur means to start a hotel for tourists. The lake and the palace are attractions to which Kipling's Letters of Marque—the best Indian travel diary to date—bear witness. The conversion may create tax problems, but the Central Government will probably approve the use to which superfluous residences are put by princes. The princes who have become company directors or entered business on their own are still few and those who are in policies are fewer. The advantages of business are obvious: more tourists will come in the cold weather, and the means to keep up old palaces in style will be obtained from visiting foreigners.

The Queen's visit to Jaipur may impel many princes to think of converting decayed towns into pleasure resorts and Indian capitalists may be ready to keep in creating new works of art a la Sinclair Lewis—the big hotel. The identification of Parsis as investors in hotels will probably be ended by the advent of palace hotels. The public companies that run hotels have import, staff and other difficulties: the new hotels may not encounter them because the servants and the equipment exist and a feudal tradition is anyway a guarantee against labour trouble similar to that experienced in Calcutta.

Opportunities of sport are probably meagre in Rajasthan for the tourists visit Rajasthan for the sights and sounds, not for blood sports. The civil aviation links may be extended soon as the tourist business will grow and the ex-ruler of Udaipur will start his first season with the advantage of some official publicity. While the tourist trade helps Monaco to survive as an independent State, Udaipur may create a new tradition of dependence on the friendly alien and oppose only the formalities that worry the foreigner who sees that India today is not cheap, as in the past, for the holiday-maker. But a crisis in Europe means more business for Asian countries and it is India or Japan that will attract US citizens seeking a change.

GAS PRICE

An Item for Ripley

Believe it or not, there is at least one commodity which is selling at below the price obtaining nearly 35 years ago. That is gas sold by the Bombay Gas Company. Speaking at the recent annual general meeting of the Bombay Gas Company, Mr B. L. Jalan, Chairman, has pointed out that while the price of every other commodity in the country has gone up during the past ten or fifteen years, the price of town gas in Bombay is pegged at a level lower than that of 1926. The price of coal has gone up from Rs 26.53 per ton delivered at factory in 1926 to Rs 52.36 per ton in 1960. Mr Jalan estimates that the wage bill during the same period has increased by about 60 per cent per thousand cubic feet of gas sold. The company has been asking for an increase in price for a considerable time now without any favourable response from the Government concerned. Meanwhile, caught between the Scylla of a rigid selling for its product and the Charybdis of ever increasing cost of production, its profit margin has narrowed to a point of invisibility.

It is not as though Government has set its face against any increase in the prices of basic commodities. The prices of steel, coal and many other basic raw materials like caustic soda etc., have been increased from time to time on the recommendations of the Tariff Commission. Several public utilities have also been permitted to increase the cost of their services and facilities. Even in the case of electricity companies which are not permitted to increase the cost of electricity supplied to consumers, a surcharge is allowed to be levied to cover the increased cost of fuel. Taking the gas industry itself, it will be seen that the selling price for gas allowed to be charged in Calcutta is much more than what the Bombay Gas Company is permitted to charge its consumers notwithstanding the fact that the producer in Calcutta gets its coal supply much cheaper while the Bombay Gas Company has to get its coal supply hauled over almost the entire breadth of the country.

A public utility such as a gas company will have an increasingly important role to play when improvements in living standards demand make a clean and convenient fuel like gas an indispensable amenity. Even as it is, all the demand is not being met. Gas production has to be increased considerably and the Bombay Gas Company is quite keen on expanding its present capacity by installing additional plant and equipment. But to make this possible, it must have adequate funds, which will become available to

the company only if it is enabled to make reasonable profit. And this in its turn under present circumstances, depends upon a reasonable increase in gas prices.

PARTY POLITICS

The Congress Manifesto

The approach of a general election compels a statement of aims on the part of politicians. The Congress Party, while it is disposed to stand on its own record for a decade, is also not reluctant to mould the future according to its heart's desire. While many will be surprised by the absence of a specific reference to socialism in the Working Committee's draft, it is patent that the Third Plan has coloured the ideas about taxing urban incomes for the sake of equality. The party's faith in planning is undimmed though the Fabians in Britain may be reluctant to think of control or extending the public sector at present.

The crux of the party manifesto is the criticism of concentration of economic power. How this can happen when the Government is in overall control is a separate issue. But the Congress, like the other parties, must condemn inequality and put in a word for panchayats. It is all according to plan—that the Congress must go to the country on its own record. The ginger group has done little between the Bhavnagar session and the latest meeting at Delhi to shape ideas. The old ideas about social change ending poverty, about neutrality producing foreign aid, are freely aired again.

The manifesto is surprisingly weak on the issue of national integration. Economic trends and developments can make India one by providing for the movement of men, money, and materials to confirm the fact of internal free trade by every means. The disturbances last year and this year are slurred over, (perhaps for diplomatic reasons) and the Congress Party in each State wears a different look. That too probably runs counter to the scheme of integration of emotions and it is not surprising that Congress relies on the weakness of many parties even more than on its own strength. The manifesto has said nothing at all about the President's constitutional powers or even who is going to be President next year. To that extent, the party leaves out the personality cult and it is evidently relying on measures, and not men, on its platform, and not its propagandists. That may be needed since the party list of candidates is not ready and the aspirants too must know in advance what the party wants of the elector.

PLASTICS

A Beneficiary of Import Control

As an industry identified with diversification and growth plastics in India enjoy special approval at present. The chances of chemical

manufacturers increasing the supply of raw materials are given special weight by those following the licences given for resins and fibres. As a post-war industry, plastics may be described as a real beneficiary of import control. An official review of development makes it clear that imported machinery, materials and more have helped the manufacturer who is, however, called upon to face rising domestic demand, while production facilities are limited.

The rise of competition within the plastics industry is, of course, related to the maintenance of competition. The Third Plan looks now for further expansion under plastics, if the average capital investment per annum is kept up at Rs 15 to Rs 20 crores. This involves higher skills especially if capacity is raised from 20,000 tons to 85,000 tons a year. Plastics, as substitutes for other materials, are bound to meet with a larger demand. Delegations to study some foreign markets cannot do much as compared with producers cutting costs and prices alike.

The first Plan hardly took notice of the plastics in industry's existence or prospects. But the Third Plan indeed looks for plastics production going up steadily to help cable-makers, furnishers and others. The uses of plastics are called infinite and the small scale sector too can hope for success, if it gets its supplies quickly. The production of synthetics should assuredly help, so also the shortage of metals and rubber in India which make for preference for plastics in place of glass, especially because plastic containers are not brittle. The advantage of cheapness is undeniable and the plastics producer is well-placed because the demand for leather cloth and other materials means that India's leather exports can be kept up easily. The industry's needs are known: its importance as a provider of jobs may be small, but it can nourish small enterprise over a wide area.

BRITISH RAILWAYS

Losses in 1960

The British Railways operate road services. The Transport Commission has its own coach-building works. The annual report of the Commission presented to the Minister for Transport refers to the cross-Channel steamer services. The ferry services for the Anglo-Irish routes are vital. The British Railways maintain docks and packet ports. The improvements carried out in 1960 at a cost of £5 million find mention. Swansea Port Talbot and Cardiff, where a new oil terminal was set up in 1960 stand out as ports under Railway control. Southampton was equipped with a new passenger terminal in addition to six electric quay cranes. Hull also is being improved because of its grain trade and the landing of fish. Grimsby is another fishing port being rapidly improved. The fishing ports' capacity to take tankers is enlarged. Grangemouth in Scotland is being improved and more important, the packet ports like Harwich are being provided with

facilities for extra traffic to the Continent. The Canals in England are being strengthened on the banks and regular dredging, as in the ports, is being carried out. The development of waterways is being reinforced by the promise of berths at the main towns served. Some disused canals are to be closed and flood control is also attempted.

The B.T.C. report contains a reference to the Channel Tunnel by means of a road cum rail route costing £109 millions. The long

bruted venture has been approved. Whether the existing Channel steamers would suffer is not known but the former traffic with the London to Paris journey, covered in four hours by rail in future should be large in the BTCs view.

The report presented to Mr Ernest Marples refers to a loss of £100.19 million in view of interest charges in 1960 exceeding £64 million. The rise in wages also raised the operating deficit for 1960 despite a rise in income. One important feature of

the year was the rise in coal traffic on the waterways, on which tolls are collected. The receipts from road services showed no improvement despite a rise in passenger fares. A fall in holiday traffic was a major factor, as also labour trouble at the ports. The British Railways run the famous old haulage and delivery service of Pickfords. A forecast of more cars and congestion in the suburbs also is probably the reason for special car parks that collect a fee in London.

US AGRICULTURE A Case Study in Success

Agriculture in the US has been described as a case study in success. The abundance of its output and the productivity of its yield are too well known to require another round of detailed discussion here.

Suffice it to say that the American farmer, through his diligence and the help provided by his government, produces more than enough to supply the nation's 180 million people with a sufficiency and variety of foodstuffs. Enough is produced moreover, to help feed many of other lands, and still have something left in reserve for emergencies.

This is brought to mind by the latest crop report for 1961 by the US Department of Agriculture. It shows that good weather and growing conditions during August helped raise US crop production prospects for the year by 2.6 per cent over earlier estimates. The volume of all crops for 1961 is now estimated at 106 per cent of the 1947-49 average.

While this is not a record—last year's output came to 121 per cent of the base period—it still represents a bumper crop. It is being achieved, moreover, in the face of efforts by the government, with the voluntary cooperation of the farmers themselves, to stabilise the output of several key farm products by reducing the acreage under production. As in the recent case of wheat, these acreage restrictions are put into force only when accepted by a majority vote of the farmers affected.

This dilemma of rising output despite acreage controls is underscored in another part of the Agriculture Department's report. It shows that the crop yield per acre this year promises to set a new record of 144 per cent of the 1947-49 average, compared with 143 per cent last year, attesting once again to the efficiency and productivity of American agriculture. All this is being accomplished furthermore, with a farm labour force that has been declining steadily over the years, feeding more and more Americans for other productive work in industry, trade, commerce, the professions and service establishment.

In the face of this record, it is somewhat strange to find Soviet leaders constantly boasting that within a short time the USSR will surpass the United States in agricultural production. But the farm problem of the USSR is diametrically opposite that of the United States. The major US agricultural problem is the stabilization of output to keep burgeoning farm production and reserves under control. The Soviet Union, on the other hand, is struggling to meet basic food requirements, and shortages often occur.

In an effort to ascertain just where the two systems—that of the US and that of the Soviet Union—stand in relation to one another, the Agriculture Department recently drew up a detailed series of comparisons. They make interesting reading.

They show that over-all, the US produces on the average about 60 per cent more in annual farm output than does the Soviet Union. Yet the Soviet Union has one and a half times the sown cropland of the US, and its farm labour force is some seven times of the US seven million. In the US, only 10 per cent of the total labour force is engaged in agriculture, while in the Soviet Union the figure is about 45 per cent.

To a large extent, these differences reflect differences in the resources and organizational structures used to achieve the respective levels of farm output in the two countries. Resource-wise, the US uses less labour and land, but far more in the way of capital investment, including tractors, motor trucks, grain combines and fertilizers. Its consumption of electricity on the farms also far outweighs that of the Soviet Union.

But it is the matter of organizational structure that may be at the heart of the differences. In the Soviet Union, land is nationalized, and agricultural production is guided by Central State Planning, operating through a complex of large-sized collective and state farms. US agriculture, however, is characterized by many individual farm units, free to make their own decisions and producing for a market economy.

RESEARCH Water Loss Through Evaporation

Successful experiments have been conducted recently under the aegis of the Council of Scientific and Industrial Research in preventing large-scale evaporation losses of water stored in open tanks and reservoirs. Studies conducted for two years successfully with cetyl alcohol at the Badkhal Tank, Faridabad, (Punjab) have shown that a layer of cetyl alcohol helps to restrict evaporation of water. Cetyl alcohol is insoluble in water and forms a film when spread on the water surface and thereby retards evaporation from the surface. The experiments revealed that larger doses of cetyl alcohol than normally required are necessary to maintain the film layer over the water during heavy rains or when a strong wind keeps on blowing. The method of spreading cetyl alcohol over the water in the form of an emulsion was found quite effective.

HINDUSTAN STEEL Agreement with Atlas Steels

An agreement was signed on 12 September at Ranchi between the Hindustan Steel Limited and the Atlas Steel Limited of Canada for supply of production know-

how and training services for the proposed Alloy Steels Plant at Durgapur. The agreement provides for the supply of production know-how and training services for the Alloy and Special Steels Plant being set up at Durgapur. The Plant will manufacture 48,000 tonnes per year of finished saleable products consisting of carbon tool steels, alloy tool steels, engineering and constructional steels, stainless steels, heat-resisting steels and various other qualities of special steels. About 35 per cent of the production will be in the form of stainless steel sheets.

The proposed Alloy Steels Plant at Durgapur is estimated to cost about Rs 40 crores and is likely to be commissioned by 1965. The plant will have a labour force of 4,000 and is expected to have an annual turn over of over Rs 20 crores.

WHOLESALE PRICES Small Decline

The official wholesale price index (with the year ended March 1953 as 100) declined by 0.6 per cent to 124.5 during the week ended September 9, 1961 as compared with 125.2 (revised) for the previous week. The index was lower by 2.7 and 0.6 per cent respectively, when compared with the corresponding week of the earlier month and that of a year ago.

The index for 'Food Articles' receded by 1.0 per cent to 121.2 as compared with 122.4 (revised) for the previous week due to a fall in the prices of Oranges (—22%), Jowar at Hyderabad and Gulbarga (—9% each), Rice at Gaya and Imphal and Fish (—6% each), Gingelly oil and Tea (—5% each), Masur and Groundnut oil (—3% each), Mung and Milk (—2% each and Bajara, Maize, Potatoes, Cashewnuts, Mustard oil and Black pepper (—1% each), although the prices of Onions (+15%), Rice at Contai (+8%), Jowar at Nagpur (+7%) and at Jhansi (+5%), Salt at Tuticorin (+6%), Gram and Coffee (+2% each) and Ghee, Eggs and Gur (+1% each) showed advances.

The index for the 'Fuel, Power, Light & Lubricants' group also remained stationary at the previous week's level of 121.5

Lower prices of Groundnuts (—5%), Cottonseed (—3%), raw Hemp (—2%) and Castorseed, Gingellyseed, Rapeseed, raw Hides, Tanning Materials and Lac (—1% each) brought down the index for 'Industrial Raw Materials' by 0.6% to 137.8. The prices of raw Jute (+4%), however, moved up.

The prices of Rayon yarn (+5%) and Copper (+7%) showed a rise, while those of Linseed oil, Coir yarn and Tin (—1% each) were marked down and the index for 'Intermediate Products' advanced by 0.4 per cent to 141.3.

The index for 'Finished Products' worked out to 122.6 as against 122.5 (revised) for the earlier week. The items which showed variations during the week were:—Handloom cloth (2%) and Oil cakes (1%).

NEWS IN BRIEF

The Government of India has announced the locale of the first seven major heavy industrial projects to be taken up in the public sector during the Third Plan period. The projects and their locations are as follows:

(i) Precision instruments project (for the manufacture of electrical and electro-magnetic instruments with Russian aid) at Kotah, Rajasthan; (ii) Precision instruments projects (for the manufacture of hydraulic, pneumatic and mechanical instruments with Soviet assistance) in Kerala; (iii) Heavy electrical equipment project with Soviet aid at Ranipur in UP; (iv) Heavy electrical equipment project with Czechoslovakian assistance at Ramchandrapuram in Andhra Pradesh; (v) High pressure boilers plant with Czech aid in Tiruchi area in Madras State; (vi) Heavy plate and vessel works and heavy structural works with British collaboration near Wardha in Maharashtra and (vii) Machine tool project with East German collaboration at Pinjore in the Punjab.

The above projects are estimated to cost Rs 125 crores involving a foreign exchange of nearly Rs 60 crores.

The Dominican Republic, which withdrew from membership of the World Bank in December 1960, applied for readmission in July of this year, and was readmitted to membership on September 18, 1961.

The Dominican Republic's subscription to the capital stock of the Bank is 80 shares with a total par value of £8,000,000. Its readmission brings the Bank's membership to 72 countries, and increases total subscribed capital to \$20,287,800,000.

Much of the Indian ocean bed consists of rocks of volcanic origin, and in the southern part there are large deposits of iron manganese ores containing up to 0.5 per cent of nickel, cobalt and rare metals. This was revealed by the Russian scientists from the research ship Vityaz, reporting to the International Oceanographic Congress held recently in Honolulu.

Philips India Limited has been awarded the first prize for the best presented accounts for 1959-60. Mr K. C. Reddy, Union Minister for Commerce and Industry presented the shield to Mr Vink, Chairman and Managing Director of the Company, at the recent annual meeting of the Council of the Institute of Chartered Accountants of India held in Delhi.

The number of cases in which majority capital participation by foreign collaborators was allowed in 1960 and in the first half of 1961 was 26 and 11 respectively. Considerations that govern permission for such participation have been officially stated to be as follows: As a rule,

Government prefer that the majority interest in ownership and effective control of an undertaking should be in Indian hands. Where foreign collaborators seek majority foreign capital participation in new enterprises, it is considered only when the following conditions are satisfied:

(i) the project has a high priority for fulfilment of Plan targets.

(ii) the main contribution of the project is in a field of technology where India has so far made little progress and where a great deal of additional development is essential and

(iii) when the amount of foreign exchange needed for the project is such that unless the foreigner is allowed to have a majority, Government will have to find a substantial amount of foreign exchange from their resources and when no alternative methods of long-term finance is found practicable.

The Suggestion Box Scheme has been introduced in the Bhilai Steel Project with a view to enabling the employees to cash in on their bright ideas. Cash rewards upto Rs 10,000 are offered for suggestions which will enable the project to reduce costs, waste and spoilage, maintenance expenses, hazards to health, possibilities of accidents, etc; to increase and improve the quality yield, or output of products, to conserve materials, energy, power or time of processes; to improve the product or its design, to rationalise works, materials or methods; to simplify practices, procedures etc; to promote sale of products; to improve civic problems, traffic, hygiene and cleanliness in the plant and town, and to economise in stationery etc. Every suggestion will be scrutinised by a high power committee comprising General Superintendent, Chairman, and Chief Mechanical Engineer, Chief Electrical Engineer and Chief Metallurgist Members.

A total sum of Rs 182 crores—Rs 122 crores provided in the Plan and Rs 60 crores expected from the LIC—will be available for various housing schemes. The scheme-wise break up of the provision of Rs 122 crores made in the Plan is as under: subsidised industrial housing scheme Rs 29.8 crores, dock labour housing Rs 2.0 crores, slum clearance improvement Rs 28.6 crores, low income group housing scheme Rs 35.2 crores, middle income group housing scheme (Union Territories) Rs 2.5 crores, village housing project scheme Rs 12.7 crores, plantation labour housing scheme Rs 0.7 crore, land acquisition and development scheme Rs 9.5 crores and experimental housing, research and statistics Rs 1.0 crore.

About 59,000 houses, tenements, shops and plots have been provided in Delhi to displaced persons from West Pakistan according to a survey carried out by the Union Ministry of Rehabilitation. There are now 73 new colonies and shopping centres for displaced persons constructed under the Ministry's programme to

As you need two hands to clap, so the country needs the combined efforts of man and machine to bring about industrial growth and prosperity.

Today, through the Five-Year Plans, the country is striving to create such a unity of effort where all will have enough.

It is our privilege to participate in this historic adventure of building a new India.

provide accommodation to them of different income groups.

Indians have been progressively replacing overseas men in Standard-Vacuum. Whereas 62 out of 118 senior management positions in Standard-Vacuum's Marketing Operations were held by overseas men in 1951, all but 23 were replaced by Indians in 1960. The total number of Indians in senior management positions in the Stanvac's Marketing Operations was 160 in 1960. 51 out of 60 old overseas men holding key positions at the time of the start-up of the refinery were replaced by Indians within the short span of six years. At the end of 1960 only 9 overseas men were employed in the Stanvac Refinery. The percentage of Indians in positions originally held by overseas staff in Marketing Operations which in 1951 stood at 46.6 increased to 90.1 in 1960. The corresponding percentages in Refining were in 1954 and 84.4 in 1960.

India exported cashew kernels of 40,638,800 lbs during the first five months of the current year as against 37,927,250 lbs in the corresponding

period in the previous year. The value earned by the exports of this item during the same period in 1961 totalled Rs 87,745,322 compared to Rs 76,902,489 in 1960.

The Government of India sanctioned foreign collaboration arrangements of 108 firms during the quarter April-June this year. Out of these 35 were British, 24 US, 20 West German, 9 Japanese, 6 Italian, 3 Dutch, 2 Swiss, 2 Polish, 4 French and one each from Canada, Luxembourg, and Czechoslovakia.

The central gold and convertible-currency reserves of the Sterling Area rose by £369,000,000 to stand at £1,245 million on August 31, the British Treasury announced in London on September 4. It is pointed out that the very considerable rise in the reserves during August is largely explained by the fact that, during the month, Britain received £518,000,000 of the announced drawing from the International Monetary Fund. But during August, Britain paid some £200,000,000 in settlement of special assistance from other central banks which had been received

earlier in the year—under "Basle agreement." There were also some other special factors during the month, including a payment by Britain of £10,000,000 in respect of the European Payments Union bilateral debts. Allowing for all special payments and receipts during the month, there was, therefore, a "true" rise in the central reserves during August of just over £50,00,000. The reserves are at their highest level since mid-1951.

The Nangal Fertilizer Factory, one of the major production units of the Fertilizer Corporation of India, has stepped up its production to two-thirds of its rated capacity of 1,176 tons of calcium ammonium nitrate a day.

One hundred and fifty-one more industrial training institutes will be set up in different parts of the country under the Union Labour Ministry's craftsmen training programme within three years from now.

Exports of razor blades during the first quarter of 1961 were valued at

Indian Finance

Rs 154,000 as against Rs 76,000 during the corresponding period of 1960. Chief importers of Indian razor blades were Pakistan (Rs 55,000) Kenya (Rs 51,000), Ethiopia (Rs 32,000) and Somaliland (Rs 11,000).

The Burmese Government has raised the customs duties on about 200 articles including consumer goods like milk food, fish, prawns, fruits, confectionary, coffee seeds and powder, groundnut and sesame oil, wines and tobacco to cover a deficit of Rs 96,600,000 in the State Budget for the next financial year. The rise ranging from 30 to 300 per cent also cover perfumery, cotton goods, building and engineering materials, stationery, newsprint of all sorts, jute manufactures, jewellery and other articles.

The Bank of Japan has decided to raise its official discount rate by 0.315 per cent to 7.3 per cent a year from 29 September with a view to curbing the continuous drain on the country's foreign currency reserve.

The bank's action was the latest in a series of financial measures which the Government of Japan has enforced to reduce mounting imports that threaten its programme of doubling the national income within ten years.

PERSONAL

Mr C. H. Bhabha and Mr R. M. Deshmukh have been unanimously elected directors of the Industrial Finance Corporation. Mr Bhabha will represent scheduled banks and Mr Deshmukh, the cooperative banks on the IFC Board.

Professor D. R. Gadgil, Director of Gokhale Institute of Politics and Economics, Poona, has left for the UK en route to Geneva to attend the first meeting of the Advisory Committee of the International Institute of Labour Studies sponsored by the International Labour Organisation.

Mr M. A. M. Muthiah Chettiar has been unanimously re-elected President of the Southern India Chamber of Commerce for a third term.

Mr Badhrisprasad Poddar, MLC, has been appointed a director of the Calcutta Tramways Company in place of his elder brother, the late Mr Anandilal Poddar, the first Indian director of the Company.

Mr M. Gopala Menon, leader of the Indian delegation to the International Supervisory Commission in Vietnam, has been appointed head of the Indian Investment Centre in New York. Mr Menon was formerly India's Con-

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THROUGHOUT his life, Sir Homi Mody has made love to Life rather than bullied it in a chimerical pursuit of something else. This, I would venture to suggest, is the secret of his being, at eighty, as chirpy as a bird in spring. There is hardly an Indian now living who has touched public life at so many places and yet carried his burdens so lightly as he has. Excesses of any sort is distasteful to him and I rather think that he would have understood the word "Enthusiasm" in its eighteenth century sense. He had as keen a sense of the ridiculous as of style. And that is why he accepted gubernatorial honours when they were offered him. A lesser man with a tenth of his ability would have considered the office not large enough for his talents. During his tenure as during that of his predecessor, Mrs Sarojini Naidu (who was in many ways his soul-mate), the Government House at Lucknow, must have witnessed more laughter than ceremony. And I think that it may not be difficult to find legislators who would be prepared to swear that they distinctly saw Sir Homi wink when he read his address to the joint sessions of the two legislatures. A sense of humour is the saving grace of a public man who, for no fault of his, has much pomposness thrust on him. (It is rather like your getting sententious the moment you have a stenographer before you with his pen poised to take down what you say). Sir Homi had humour in abundance. There are innumerable stories of his having quelled rebellious shareholders at annual meetings by the witty word in season and of having reduced parliamentary opponents to helplessness by a quip. But he is no mere bon-vivant, as his resignation from Government in 1953 showed. He is a wise counsellor to all who go to him and J. R. D. Tata's oft-quoted tribute—"Sir Homi can consider himself for as long as he likes and as he thinks us worthy, to be the unofficial chief adviser of the Tatas"—is an accurate assessment of Sir Homi's indispensability. We have eminent centenarians among us and therefore Sir Homi must be considered young at eighty. A hundred shouldn't be too difficult for one who, as I said in the beginning, has a way with him when it comes to dealing with Life.

I must be extraordinarily insensitive to atmosphere, if what the Press says about the parlous state of Indo-British relationship is anywhere near the truth. True enough, some harsh and, as it turned out, incorrect things were said in Britain about what Indian troops—

and as Mr Menon reminded, it is better to remember that they are UN troops—did in Katanga. In India we were all angered by what we considered British equivocation over the mandate given to the UN in the Congo. But that these contretemps should be described as a crisis in Indo-British relationship seems absurd to me. Surely we are past that sort of childishness. What about all that mutual back-slapping about the unique manner in which power was transferred to India and our remaining friends, despite a bitter struggle spanning over at least a century? Surely if Indo-British relationship could have survived the Suez episode and we could have welcomed Mr Macmillan enthusiastically and done the Queen proud after that event, we can still remain friends after a difference of opinion on what is, when all is said and done, of only indirect concern to both of us? Incidentally, I must be reading the wrong papers or must not be reading them carefully enough: it is said that Indians have alleged British instrumentality in Mr Hammarskjöld's death. I have never heard or read any such accusation proceeding from Indian quarters. I am beginning to wonder whether there is not some interested queering of the pitch by people on both sides who have never reconciled themselves to the new relationship. At the risk of sounding somewhat complacent, I should mention that we have achieved a degree of political maturity that makes it inconceivable that we should go into sulks merely because the BBC put out a news report that we consider wrong and unfair.

The Board of Trade Journal which completed its seventy-fifth year on 15 September, deserves a fraternal salute from Indian Finance. Begun in September 1886, when A. J. Mundella was President of the Board of Trade, it met a felt need. Commercial rivalry abroad and import surpluses at home made commercial intelligence a desideratum which the Board decided to make good by a journal that was to be "dull by design". Though no gag book, (which is pretty dull anyway), the BOT Journal has never been heavy reading. As that redoubtable literary critic—he was much else besides—Abraham Lincoln once said of a book, "people who like this sort of thing will find this the sort of thing they like". The Journal is a standby for those anxious to follow tariff changes and quota regulations and it gives regularly news of big tenders. Its data on prices, production and finance are indispensable for those interested in the subject. It has also kept its eyes peeled for legal intelligence and

restrictive practices that need inquiry never get past its eagle eye. Interestingly, unlike our own Indian Trade Journal, which owes its inspiration to the BOT Journal, the latter does not give details of licences issued for new industries in the UK. Perhaps licences don't evoke such strong emotions of opposing kinds as they seem to do in India. But its surveys are thorough and well worth emulating. The 15 September issue contains a report on South Korea where economic trends have been confused by purges carried out by the Army. It keeps its eyes on trade and industry everywhere and at all levels—toys are reckoned as interesting as tractors or trade marks. Incidentally, the Fabian infiltration—that perhaps is the only word to describe the high-minded subversion of British economy by the Webbs—extended to the BOT Journals also. Indeed, the Board of Trade itself, a wail that the Privy Council had given birth to, but couldn't be bothered with, was made respectable only when Sidney Webb chose in 1924 to adopt it as his baby. Since then it has become, rather in the manner of labour politicians with humble origins, a force to reckon with in British economics. But by and large, the Board's policies have been shaped less by its Presidents than by its officials, one of whom was Sir Edward Marsh, the dry nurse of many an English poet. Though no Golden Treasury, the BOT Journal bears the imprint of men of such wide interests.

Count your blessings, as the preacher saith, especially if you are a patron of the turf: In the United States they tax race winnings. Over here, they wouldn't dare after a Madras High Court ruling in 1960 on the subject. In the US, however, it is quite legal. But there are several interesting practical angles to it and some of these are discussed in a recent note in Fortune. It would seem that, after jibbing at it for long, the Internal Revenue Service is buckling down to the job. It is asking race clubs to "require winners of 600 dollars or more on a two dollar daily-double tickets to identify themselves and fill a short tax form before they are paid." Therefore melancholy and preoccupied men hanging about paying counters in Belmont Park are not necessarily losers with a compulsive neurosis about tote counters. They may well be winners trying to do a quick sum about their tax liability: or, as is even more probable, they may be merely trying to think up a plausible enough fictitious name and address. As Fortune points out, a 600 dollar win for a man in the 90 per cent tax bracket is worth only 60 dollars and to a 20 percentor, it means only 480 dollars. But these men need not have worried themselves sick, for taking the rough with the smooth, it is hardly likely that, over a season, you will end on the right side of the ledger. At this point, I see the eyes of a certain kind of tax-payer light-

ing up with interest. But let him not make any mistake: a ready-made loss such as a season at the turf club can provide is not—repeat not—an answer to a tax-dodger's prayer. These American IRS men are every whit as smart as ours: like the stipulation in our tax laws to the effect that speculation losses are available for set off only against speculation profits, racing losses in the US can only be adjusted against racing profits. So trading in race losses (like trading in speculation losses, so fashionable some years ago in India,) to the mutual advantage of the buyer and the seller is not possible. Indeed, Fortune says that even the prospect of a set-off of a racing loss fails to cheer the winner since, in practice, there will be "trouble in establishing" such losses. I must confess this rather puzzles me since a running account with a bookie (no horse laughs, please) and payments by cheque should take care of the evidentiary aspect of the matter. In any event, the "short form" one has to fill on winning, may also provide a column for losses, though I can visualise the practical difficulties in this procedure with thousands of punters clamant for the form.

Fortune has also commented on another rather ingenious tax angle. Re-counting a true story, it gives details of an interesting proposition that was made to a businessman (in the fifty per cent tax bracket) who had won a 630 dollar bet and was waiting to collect his loot. It seems a furtive individual in a black sweater approached him and explained that he had, for reasons that need not be gone into, never paid any tax. Nor did he propose to start doing it now. So if the businessman could part with the winning ticket for 530 dollars in cash, the transaction could be to the advantage of both. The ethics and even the legality of the thing did certainly bother the god-fearing and law-abiding businessman, (as they had every reason to). But what was decisive of his refusal was his uneasy but unlocated feeling that he was being played for a sucker and was being taken for a ride. On the latter point however, he was wronging the man in the black sweater. As Fortune explains it, apart from the ethics of the thing, the man in the black sweater was right. Against his gain of one hundred dollars, the businessman gains 215 dollars, being the difference between 530 dollars that was offered him and his take-home winning on a 630 dollar win. All I can say on this transaction is that it is a small world. For knowledgeable people would tell you how deals in winning treble tote tickets are often struck during Indian race meetings. Since race winnings are exempt, a well-authenticated stroke of luck at the races is an useful thing to have up one's sleeve when one's tax man shows an ungentlemanly curiosity about mysterious accretions to one's wealth. A few hundred rupees of commission—or arbitrage as Fortune calls it—paid to the real winner is well spent considering the tax saved and the painless way in which, as the expressive saying goes, black money has been made white.

COOPERATIVE HOUSING Great Expectations

THE symposium on cooperative housing, inaugurated by Dr B. Gopala Reddi, Union Minister for Works, Housing and Supply, last Monday, has helped to focus attention, not only on the different aspects of the main theme, but also on the problem of housing in general. The housing shortage in urban areas at the end of the Third Plan, after allowing for the new construction envisaged during the Plan period, is estimated at 4 million houses. In rural areas, the magnitude of the problem defies any precise calculation. It has however been roughly estimated that about 50 million rural houses are unfit for human habitation and have to be replaced. While the problem has a forbidding aspect, its solution is indissolubly bound up with the general economic development of the country, for it is not possible to conceive of any improvement in levels of living, in towns or in the country, if the conditions of housing for large sections of the population remain as they are. As Mr S. K. Dey pointed out, "you cannot have modern farming along with subsistence housing".

The agency for carrying out a phased programme of house construction, which would provide every family in the country with a decent habitation, should, as Mr Gopala Reddi emphasised, "combine the elements of individual initiative and collective action." In the prevailing climate of public opinion in the country, there is little to complain if co-operative institutions have been singled out as the agency with the required combination of qualities which could be relied upon to deploy the financial and other assistance provided by the State, on the most equitable basis. The cooperative movement in housing, when it really gets going with corresponding developments in other cooperative sectors, as for instance, manufacture of building materials, building labour and transport, could help to mobilise the resources of the people to the maximum extent possible. The scale of investment required to provide every family with decent habitation is so vast that it cannot be made without some device for capitalising the labour potential of the country. And unless the cooperative housing movement in the rural areas is speci-

fically organised to serve this purpose, it may not be able to make any appreciable impact on the rural housing problem.

The movement so far has been confined to urban areas, where it has made steady, if unspectacular, progress since 1915, when the first cooperative housing society was started. There were in 1959-60, 5564 cooperative housing societies with total membership of 3,20,000. The number of houses constructed by these societies which was 36,000 in 1957-58, rose to 44,000 in 1958-59 and to 45,000 in 1959-60. While the total figures are encouraging, the State-wise breakdown is less satisfactory, for the progress has been confined to a small number of States like Madras, Maharashtra, Gujarat and Uttar Pradesh. During the last few years Government has been encouraging the formation of housing cooperatives under the Subsidised Industrial Housing, Low Income Group Housing, Middle Income Group Housing and Village Housing Schemes by giving higher proportions of loan and subsidy as well as some tax concessions. Still, as Dr Gopala Reddi, was obliged to admit, the contribution of cooperatives to total housing under the Plan schemes has been meagre—being roughly 2 to 3 per cent. Even the proportion of housing cooperatives to total number of cooperatives is only about two per cent and the membership of housing cooperatives is just one per cent of the total membership of all types of cooperatives. The slow progress of cooperative housing cannot be explained by the fact that the Ministry of Cooperation so far has been preoccupied with the development of cooperation on the agricultural front. If the cooperatives are to fulfil the great expectations entertained of them, the factors both internal and external, which hamper their growth will have to be identified and eliminated. To some of these, mostly external factors, the Minister has made a passing reference in his inaugural address.

A more serious difficulty, to which Mr Carl Anonsen, UN expert attached to the National Buildings Organisation, has drawn attention in a paper submitted to the symposium, is that people in need of a house are willing to co-operate only with a limited or selected group of persons. They are willing to co-operate only to a limited extent and for a limited time. The cooperative housing movement, in his view, will not be able to contribute successfully

to the solution of the housing problem without facing up to these difficulties and without taking them into account in the organisational structure.

There are different types of cooperative housing societies functioning in the country. Some merely provide long-term credit to their members to enable them to construct houses themselves on the sites owned by them according to plans and estimates approved by the society. Occasionally these societies also help in other ways. They may acquire lands, prepare layouts, allot sites to members and also help in procuring building materials. There are other types of societies which, in addition to providing credit, also undertake construction of the houses themselves on behalf of the members. The acquisition of land, preparation of layout, and allotment of sites, are also done by the society. While the two types of society mentioned above are based on individual ownership of plots and houses, a third type of society is based on co-partnership tenancy system, where the ownership of houses is vested in the society and members obtain occupancy rights under certain limitations. In the first two types of societies, the extent of cooperation involved is very limited, while it is recognised that the third type of organisation has not so far met with much success.

Practical considerations would suggest the advisability of not aiming too high in extending the cooperative principles in their application to housing societies. At the same time, it may not be ignored that the first two types of societies have presented their members with opportunities of windfall profits. As Mr Carl Anonsen has pointed out in his paper mentioned above, members are only willing to accept the principle of non-profit-making as long as they themselves are buyers and not prospective sellers either of their house or its services in the form of sub-letting. Considering the serious shortage of houses in urban areas, it may not be in the public interest to ban subletting altogether. But when the houses are built with funds provided by Government on special concessional terms, there is every justification for including safeguards in the constitution of the societies to regulate the sale of the properties as well as to regulate the scale of rents that may be legitimately charged by the members.

CODE OF DISCIPLINE

The working of the Code of Discipline, which was evolved out of the discussions at the Indian Labour Conference and was deemed to have come into effect from 1 June 1958, was reviewed at a two-day seminar in New Delhi last week, which was attended by over fifty representatives of industrial associations and industrial establishments. The semi-

nar was jointly organised by the Employers Federation of India and the All India Organisation of Industrial Employers under the Chairmanship of Mr Naval H. Tata.

While conceding that the Code, by and large, has created a sense of awareness in the parties of the need to follow certain principles to promote industrial peace, the statement adopted by the seminar also focusses attention of the specific difficulties experienced in working the Code, such as difficulties regarding speedy and authentic verification of membership of unions for purposes of recognition owing to lack of adequate machinery; industry-wide recognition of unions in case of units in which the industry-wise union does not have sufficient hold; and the anomalous position in which unrecognised unions are in a position to raise industrial disputes which are taken cognizance of by the industrial relations machinery of Government.

It is suggested that, since recognition is voluntary under the Code, where there is clear-cut and gross violation of the Code, the management should have the right to suspend the recognition of the union concerned pending consideration of the breach reported to the implementing authority. Similarly in dealing with claims to recognition, the employer may withhold such recognition pending investigation by the implementation machinery into breaches already reported. It is also suggested that a convention should be set up that where agreements concerning the general terms of employment are entered into between recognised unions and employers, these agreements should not be disturbed by unrecognised unions.

The Statement has drawn attention to the fact that the Implementation Machinery is not functioning satisfactorily in a number of States on account of lack of informed personnel with clear conception of their functions. The following measures have been suggested to improve the situation: increase in number of investigation officers where necessary; organisation of seminars by the Central Government to enable the officers to appreciate the principles underlying the Code and the rights and obligations of the parties including the Government; check on the tendency to widen the functions of the Implementation Machinery which should in no case deal with matters which normally come under the purview of the industrial relations machinery or those involving interpretation of law; the Implementation Machinery should not take upon itself the work which is entrusted to the authorities prescribed under the various enactments; no reference made by a union which has not accepted the Code should be entertained by the Implementation Machinery; there

must be immediate on-the-spot enquiries into breaches of the Code; no enquiry or investigation must be made without giving due notice to the parties concerned; the Implementation Committee should not consider any reference made to it without informing the parties concerned; uniform principles should be followed in the composition of Implementation Committees in the different States, and instances where the employing interests have been nominated by authorities without reference to employers' organisations should be rectified; and it should be clearly recognised that voluntary arbitration implies willingness on the part of both employers and workers to resort to arbitration, so that a demand for arbitration by one party and non-acceptance of it by the other party should not be construed as violation of the Code. The suggestions for improvement indirectly spotlight the defects in the functioning of the Implementation Machinery. The Statement also emphasises that, from the very beginning, it has been the general understanding that the Code is a moral instrument and should not be looked upon as a legal document.

A week before the seminar was held the Central Implementation, and Evaluation Committee (a top tripartite body to keep watch over the effective implementation of the Code of Discipline) felt that, while substantial success had been achieved in the new voluntary approach for avoiding litigation, the measure of success could be much greater if the central organisations took more active interest and used their good offices effectively in screening cases and bringing about out of court settlements. A policy decision was taken by the Committee that extensive publicity be given to habitual defaulters of the Code and those who commit grave breaches of it. The Committee also decided that a departmental enquiry be carried out by the Labour Ministry on the entire question of labour-management relations in coal mines. It would study the law

and order situation, non-implementation of awards, agreements, etc and breaches of the Code of Discipline. Pursuant to the decision taken by the Committee, the report on the Calcutta Tramways' Strike of 1958, the first tripartite enquiry under the Code of Discipline, has been made public. The Tripartite Committee found both the Company and the Unions guilty of certain infringements of the Code of Discipline.

★

Sugar in Reverse Gear

The decision of the Union Cabinet to remove the controls on distribution and prices sugar was announced by Mr S. K. Patil at a press conference last Wednesday. The system of controlled releases will however be retained as it is the most important control mechanism for regulating prices in the interest alike of cane growers and consumers of sugar. As Mr Patil explained, controlled release is essential to prevent catastrophic collapse of

sugar prices. But he also gave the assurance that in view of the coming festive season, the usual monthly quota had been announced in advance, and more will be released as and when necessary.

It is proposed to set the target of production for each factory at 10 per cent below the quantity produced in 1960-61. There will be special provisions for new factories. Production in excess of the targets will attract additional excise duty.

Mr Patil did not anticipate any shortage of sugar or rise in prices as a result of these measures. In any case stocks are large enough to be effectively deployed to regulate prices. As a matter of fact consumption has been stationary over the last two years at 21 lakh tons against releases of 24 lakh tons. It is expected that domestic consumption may increase by 2 to 3 lakh tons as a result of relaxation of controls on distribution and prices. That will leave a surplus of 6 to 7 lakh tons for which export markets are being explored. The problem is to liquidate the sugar stocks in which over Rs 94 crores of State Bank funds are locked up.

Sir Padampat Singhania on Expansion Programme

The following is the Address of SIR PADAMPAT SINGHANIA, Kt., Chairman, Board of Directors, to the Twenty-third Annual General Meeting held on the 28th September, 1961. (The address was read by Shri Hari Shankar Singhania, Director, who presided over the Meeting in the absence of Sir Padampat Singhania.)

Gentlemen, I have great pleasure in welcoming you to the 23rd Annual General Meeting of the Corporation. From the audited account and Directors' Report, already circulated, you will observe that the operations during the year have been normal with improvements in coal mining, alumina and paste production. In spite of increased wages and increases in cost of raw materials, transport etc. the cost of production has been maintained within reasonable limits. On the other hand the prices of aluminium products have remained steady and in fact the basic prices have remained unchanged for the last four years. The main increase in prices to the consumer has been of excise duty as levied by the Government. Last year all accumulated metal of earlier years was disposed off with the result that sales during the current year, excluding excise duty realised, have been lower, thus affecting the profit. You will be pleased to observe the

Corporation has still maintained the ratio of gross profit to turnover. You will also notice from the Directors' Report and accounts that adequate provisions have been made towards depreciation and General Reserve and the Directors have recommended the same rates of dividend to the shareholders as in last year.

In the previous year's statement before you, opinion had been voiced that the consumption of metal in 1965-66 would become much higher than the target of 87,500 tons of metal production as adopted by the Planning Commission in the Third Five Year Plan. I am pleased to report that the Planning Commission is now actively considering to increase the target to 1,15,000 tons which, I feel, is still low and it would be advisable to increase this target to at least 1,50,000 tons. Without any risk of contradiction it is possible for me to say that next to steel and power the entire development of basic industries of our country is dependent on the availability of non-ferrous metals in the country. Unfortunately, our country is not blessed with natural resources for most of the non-ferrous metals with the exception of aluminium and our only hope of expanding non-ferrous metal production in the coming future which will enable the country to be self-sufficient is the expansion of Aluminium Industry. Hon'ble

Sri Manu Bhai Shah, Central Minister for Industries has indicated recently that in 1965 India will need at a very modest estimate at least Rs. 100 Crores worth of non-ferrous metals. This is a modest estimate indeed and perhaps by that time we would require much higher quantity of metals than provided in this estimate. Aluminium metal is indeed a very versatile metal with possibility of application in all industrial fields and it is possible to substitute important non-ferrous metals like copper, zinc, lead, etc. in many fields and spheres with aluminium. According to the present situation, therefore, we are left with the development of aluminium metal alone in the country to achieve self-sufficiency in non-ferrous metal as far as possible. Bauxite, the mother ore, is available all over the country and our power development schemes can help a rapid development of this important metal. I would do no better than quote from a recent speech of Hon'ble Minister, Sri Manu Bhai Shah to emphasise this point—

"It is inevitable to the country that aluminium has to be developed to the maximum extent possible from day to day, year to year, from plan to plan until we make the country self-sufficient in aluminium with a positive surplus for export".

Almost all important big aluminium producers of the World have displayed interest in setting up aluminium plants in India in collaboration with Private Sector and the Government has already under consideration such several schemes. Government has also recently announced their intention to set up an Aluminium Plant under Public Sector with Hungarian Collaboration. I do hope that the Government will give careful consideration before giving any preference to the setting up of this plant in Public Sector over the proposals from Private Sector already in hand.

Now that India is on the threshold of increasing immediate aluminium production capacity about five times the capacity at the end of 1960 as per schemes already licenced, it has, therefore, become imperative to give special attention to completing survey of bauxite bearing areas in various parts of the country. Sizeable quantity of bauxite is at present being exported and also some of the bauxite is utilised in chemical industry. However, the consumption of bauxite for the aluminium industry stands on a different footing as this industry will require large quantity of bauxite regularly for number of years to come. As such the aluminium producers have to have contiguous areas having maximum workable

deposit of bauxite enough to last for at least 25-30 years and wherever such areas are found the Government should take steps to reserve such areas for the aluminium producers. Furthermore, careful consideration should also be given to other physical raw materials like caustic soda, fluoride, and cryolite to ensure that these important raw materials are also available adequately in the country as far as possible.

An important question is the rate at which the electricity will be supplied to various new plants, since this is the most important raw material affecting the cost of production of aluminium metal. The generation and development of power production is in the hands of Central Government and at the same time it is now clear that the production of this metal must be developed in all parts of the country and the future economy of the country has to be based on increased production of

this important metal. Therefore, it is my humble suggestion that the Government should immediately set up a high powered committee thoroughly represented by Government officials and representatives of the industry to consider the question of supplying electric power at uniform rates to all aluminium producing companies. This is a question of utmost importance and it should be settled at the earliest.

Labour problems are becoming more and more complicated day by day in our country. In a growing economy certain amount of inflation is inevitable but by watchful steps this must be kept within reasonable limits. Unfortunately the trends in India have not been encouraging and the industry is faced with ever increasing demands by the labour unions but at the same time they do not show any responsibility towards increasing efficiency or productivity to minimise infla-

tionary trends. Therefore, the usual leniency shown in the country to the Trade Union movement has to come to a halt. This movement is no more in infancy and it has come of age. The Union must be made to realise and develop responsible attitude for development of the country and it is high time that the Trade Union movement behaves in an adult manner.

I am glad to inform you that expansion programme of our company already in hand is progressing at fast pace. The first phase of metal production is under way and the production can be expected early next year. Several shipments of equipments have arrived and are on way to our plant in Jaykaynagar. The building and foundation work for the machinery is almost ready and erection work will start soon. The construction and building programme for other phases of expansion has been taken in hand.

The production from expanded fabrication facilities is expected to follow as per schedule. The programme of training technical personnel both in India and abroad is going according to a schedule.

Gentlemen, in conclusion I would again emphasise that a new history is in the making of the existence of the Corporation in the coming years. The Corporation's growth is fast under way from its humble start. I will be failing in my duty if I do not express my gratitude to the Managing Agents for having managed the affairs of the Corporation in the most economical and efficient manner. I will also express my appreciation to the conscientious working of our staff and technicians who have made the working of the Corporation a success.

Note: This does not purport to be the proceedings of the annual general meeting.

of the Representatives of these Lines and the two Indian Lines in Delhi, in November, 1960, an agreement was arrived at, defining the percentages of earnings which the lines under different flags would be allocated at the end of each year. It is a matter of some satisfaction that this arrangement has been arrived at and is considered beneficial by all the Lines concerned, particularly as it removes unhealthy competition, various kinds of malpractices and ensures the better working of the Conference system, as much in the interests of Shippers as of the shipping lines. The Pool system in the India-U.K./North Continent Trade, has come into effect from 1st January, 1961, and in two other Conferences of the Continent, viz. the French Conference, and the Western Italy Conference, came into effect from 1st April, 1961. It has to be emphasised that by this arrangement Shippers will not be inconvenienced to the slightest extent and in fact the movement of cargo to and from Continental ports will be better facilitated. It is also hoped, provided that the international trade does not deteriorate, and there is no reason to expect it will, the earnings of the various companies will improve by this arrangement. I would only like to add that the results of this Pool System, owing to the date at which it came into effect, are not reflected in the Balance Sheet for the year under review.

PORT DELAYS:

But all attempts at improving the financial position of the companies will prove infructuous if the delays that are occurring at the ports both in India and abroad are not seriously checked and curtailed. One of the main reasons for the serious loss which your Company along with others has sustained, is the extraordinarily long hold up of the vessels at various ports during the year. The Directors' Report refers to the fact that 332 days were lost in the ports in the year under report as against 85 days in the previous year when vessels were idle without loading or unloading operations. The unofficial strikes in the U.K. and the delays in some of the Indian Ports have largely contributed to this unfortunate result. When it is remembered that on the company's new vessels, and they are in a majority in the composition of our fleet, Rs. 10,000 is lost every day the vessel is idle in port, it requires little calculation to assess the loss to the Company on this account alone. The tugmen's strike at Bombay which held up the port working for many days, is only an instance in point. The unofficial strikes in the U.K., particularly in London and Liverpool, which manifested themselves all too frequently during the year, contributed substantially to the loss incurred by companies.

SHIPPING—PUBLIC AND PRIVATE:

While the position is as I have stated, there has arisen recently a doubt as to the part that Shipping in the Public Sector, the Shipping Corporation of India, can or should play in relation to the Private Sector. Is it proper for the Public Sector to come in competition on routes which the Private Sector has been handling so far and if so to what extent is this desirable or justifiable? The question has come into prominence in connection with the recent entry of the Western Shipping Corporation into the India-U.K./Continent Conference, and I should like to take this opportunity of clarifying the position. The Western Shipping Corporation applied for a limited number of ships being allowed to ply in the Conference route as ships of a member of the Conference. The Corporation with the full approval of Government agreed on the number of ships that would ply in this route and the period during which that fixed number of ships will operate. With the agreement and approval of the two Indian Lines on this route, the Conference admitted the Shipping Corporation to its membership. In this connection there has been some criticism that the Government owned Corporation should not have entered into competition with the Private shipping concerns, and the statement of Hon'ble Shri Lal Bahadur Shastri, when he was Minister of Transport, has been quoted which was as follows: "I must state it very clearly that it is not our intention that shipping in the Public Sector should run in competition on routes which private shipping companies have established themselves". I believe that this will still be the basic policy in the expansion of shipping, whether in the Public Sector or in the Private Sector. The vessels of the Indian Flag whatever route they may be engaged in, are facing worldwide competition in many ways. They do not have the protection of tariffs as inland industries have and it is therefore essential that no Line or Lines engaged in a particular route should have over competition from the same flag vessels, to the ultimate detriment of all the Lines of the Flag, whether it be the vessels of the Public Sector or of the Private Sector. The only principle on which either kind of vessels can enter a route which has been established by other Lines of the same Flag, should be as stated by the Chairman of the National Shipping Board "The new Line must be supplementary to and not in displacement of the existing shipping Lines".

DEVELOPMENT REBATE:

The question of expanding shipping tonnage whether for shipping companies already in operation or for new companies, presents a

problem in view of the legislation regarding development rebate, which was passed some time back. The development rebate has been allowed generously at 40 per cent of the cost of the ship. But the onerous character of this allowance arises out of the fact that 75 per cent of this allowance has to be provided out of the profits before any dividend can be declared. Shipping companies have repeatedly represented to the Government that the provision of this amount out of the profits of the company may be extended over a period of years so that the prospect of payment of dividend to Shareholders may not be seriously affected. The National Shipping Board has considered this problem on more than one occasion and has unanimously adopted the recommendation that the development rebate to be provided for by the companies, may be spread over a period of years. These representations and recommendations have not so far helped in modifying the provisions regarding development rebate. I would only like to reiterate our request for the Government giving further consideration to this question.

LOOKING AHEAD

I do not desire to strike an unduly pessimistic note as to the future of your Company. I have reiterated often that shipping is a peculiar industry, where the boom periods are few and the lean periods are many. While we are going through a lean period, I do venture to express the hope that we may turn the corner before long. There has been in many quarters a very reasonable and legitimate demand that Indian shipping should expand fast and that during the Third Plan Period, a larger amount of tonnage should be added than is provided for at present. While I myself have advocated the expansion of tonnage and your Company has established its belief in such expansion, I would like to enter a caveat against hasty and illtimed expansion under the circumstances in which shipping, all over the world is today. Such expansion requires very deep thinking. The question how and on what routes such expanded tonnage should be used, whether the expansion in tonnage should take the form of tramps or liner cargo vessels, or tanker or passenger vessels—all these aspects of expansion require careful consideration. The National Shipping Board has paid some attention to these factors and its recommendations will, I hope, engage the serious attention of shipping companies and of Government. I am certain that the Ministry of Transport is giving careful thought to these questions. In Dr. P. Subbarayan, the Minister of Transport and Shri Raj Bahadur, the Minister of Shipping, we have gentlemen, enthusiastic and eager for the promotion of

Indian Shipping, but who are also at the same time, realists and cautious in approaching these problems. To them, Indian shipping owes a deep debt of gratitude for the encouragement they have given and the support they have extended, particularly in the Pool negotiations. The Ministry of Transport, the Secretary to the Ministry of Transport, the Director General of Shipping, his deputies and assistants, have shown their concern in and anxiety to help Indian shipping, and to them we owe our thanks. They have helped us with advice and assistance at all times. The Shipping Co-ordination Committee has been reorganised and promises to be of real help to Indian shipping whatever the routes may be. I was rather critical of the Chartering activities of the State Trading Corporation in my speech last year and I am glad to note that this Charter Committee has now been reconstituted and my hope that it will be on a better, broader and firmer basis with more clear policies adopted is likely to be fulfilled.

TRIBUTE:

The financial results of the Company does not reflect the hard work and the devoted attention which officers, both ashore and afloat, and the staff of the Company have rendered during the year. In fact, owing to the conditions mentioned earlier, their responsibilities have been greater and their work heavier and I should like to express the Board's appreciation of their services. I should also like to convey the thanks of the Company to the Shippers who have extended their continued and firm support to us, and to the brokers and forwarding agents who have shown confidence in us and in the quality of our shipping service.

Note: This does not purport to be the proceedings of the Annual General Meeting.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED

Payment of Dividend on Preference shares

In connection with the payment of the above dividend for the half-year ending 30th September 1961, the Preference Registers of the company will be closed from the 4th October 1961 to the 11th October 1961, both days inclusive.

By Order of the Board

India Steamship Company Limited

Severe Competition in Freight Market

"Expansion Requires Very Deep Thinking"

Sir A. Ramaswami Mudaliar, Chairman, on Problems of Indian Shipping

The following is the Address of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, India Steamship Co., Ltd., delivered at the Annual General Meeting of the Shareholders of the company, held on the 26th September 1961:

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March, 1961, has been in your possession for sometime and with your permission I shall take them as read.

The Directors' Report shows that the freight earned during the year was Rs. 8,63,00,835 as against Rs. 8,38,59,427 in the previous year. The total number of Liner voyages during the year was 49 compared to 47.5 in the previous year. Though the freight earned was higher than last year, owing to a variety of reasons, I regret to state that the net result is a substantial loss to the Company.

NAVAL DISASTERS:

At the beginning of the year, the Company suffered a serious loss by the sinking of the s.s. 'Indian Navigator' after an explosion on board. All the crew except one seaman were rescued. A more serious and sadder calamity was the loss of the lives of some of the Officers and Crew of a sister ship s.s. 'Indian Success'

in their effort to salvage the abandoned vessel, the s.s. 'Indian Navigator'. As both the disasters are subject of a formal enquiry, it would not be proper for me to comment on them, except to the extent that I share, and I am sure you also do, the tribute that has been paid in the Directors' Report to the gallant Officers and Crew.

OVERSEAS TRADE AND FREIGHT RATES:

During the last two years, I referred to the decline in International trade and to its effect on international shipping. During the year under review the position was not any better than it was last year. In an effort to chase cargo and to keep up with the severe competition both of other shipping lines in the liner trade, and of the tramps, your ships have had to call at an even greater number of ports to secure the cargo, resulting in heavy expenses.

The rates of freight were generally at an uneconomic level—most of the rates remaining the same as they were in 1957. Meanwhile, in the intervening period, costs in every direction have gone up. Wages of staff, both floating and on the land, have had to be increased. Concessions had to be made by way of longer leave periods for the floating staff, necessitating additional personnel

for the purpose. Stevedoring charges in most ports had to be revised in accordance with the rules and regulations in these ports. Any freight increase required very careful consideration and could not be readily equated to the increased costs of running the service. Some of the countries in the trade were anxious to promote export of commodities and manufactured goods in a desire to earn foreign exchange and to preserve the balance of payment position of their Governments. Conflicting considerations such as these have to a large extent prevented the easier course which would otherwise have been adopted, of increasing freight rates to meet extra and heavy expenditure. The position is now being studied both objectively and scientifically and an effort is being made to see whether freights may be increased on commodities which can bear the increase and still maintain their competitive positions in world markets.

I referred to the keen competition that prevailed last year and the unhealthy and unfair means by which a few of the companies or their agents tried to obtain the cargo by undercutting freight rates and giving larger rates of rebate to the Shippers. These and other practices such as the manner in which some of the forwarding agents, particularly on

the Continent of Europe, tried to corner the cargoes, were referred to by me in my last address and these practices continued during the greater part of the year under review.

A PARTIAL SOLUTION:

In my speech last year I referred to a possible solution that was being attempted at by the two Indian Lines in the Conference, along with other Conference Lines, who faced the same problems and were equally anxious to find a solution to put an end to unhealthy competition and to the malpractices. I stated that the solution suggested was that the allocation of freight earnings of the Conference, in certain proportions over a term of years, providing at the same time, for the growth and development of the fleets of underdeveloped countries, through a defined and reasonable escalation of the rate of allocation during the period. Negotiations for this purpose were started as early as 1959 at a Conference in Delhi, between the representatives of British and foreign lines and representatives of Indian Lines, and they were continued in London and Hamburg in the early part of 1960. The result, however, was not promising at that stage. Meanwhile the evils enumerated above were on the increase. At last, at a meeting

Markets

JUTE Gunny Steady: Jute Subdued

IJMA mills have with effect from Monday increased their working to 45 hours a week as against 42½ hours in force till last week-end. The increased working hours will result in higher production though the full effect of this change will be felt only next month as in the current month mills will be working 45 hours for only one week. It is generally believed that before long the industry will be going on a 48 hour week in view of the large availability of raw jute.

But the market which was rather subdued last week when it came to know about the impending increase in working hours, has surprisingly turned steady this week with the hessian section quite firm. This may be due to the encouraging burlap consumption figures coupled with local interest in ready delivery goods. It will not be however surprising if foreign buyers even though they are in need of supplies, prefer to await further developments before entering the market for their full requirements.

Overseas buyers' hesitation despite the present reasonable price levels is to be traced to the conditions that are gradually

turning into their favour. The increase in working of mills to 45 hours a week will yield in a full month about 5000 tons more of goods. The current trend in the raw jute section may have raised the hope that further levels in jute goods are in the offing. Prices in the raw jute section this week have tended to be easier largely because of heavy arrivals and indications of further accumulation of supplies in the markets. Since Government is following a liberal import policy, raw jute supply may be expected to be plentiful this year. It is natural for the foreign buyers of Indian jute goods to take the view that it will be prudent to watch the trends in the primary market for some more time.

The fact that prices in the raw jute market have this week declined will focus attention once again on the question of an equitable price for the jute cultivator. One thing however has been made quite clear: a floor price for raw jute, if at all it is imposed, will be announced well in advance of the beginning of the jute season. Even so, the demand for a floor price may be revived. Government is perhaps not much worried over the fall in raw jute prices yet because it would appear that according to its calculation, there will be cause for anxiety only when the price tends to soften below the Rs 30 mark.

Indian Finance

The jute goods market opened the week on a steady note especially round hessian due to covering of ready delivery goods. In subsequent days demand further strengthened in ready hessian 40" x 10 oz with the result the quotation daily advanced to close on Wednesday at Rs 55 as against the week's opening rate of Rs 50. Around midweek it was announced that burlap consumption in US during August had improved to 67 million yards as against 56 million yards in the previous month. The news has evidently been taken to mean revival of US interest in hessian. Sacking prices too were steady partly in sympathy with hessian and partly due to reports of a sizable government tender. B. Twills ready closed on Wednesday higher at Rs 133.90 as against Rs 132.50 a week ago.

The raw jute market however ruled rather subdued during the week. In the absence of mill interest prices in early dealings moved within a narrow margin. Quotations continued to remain unchanged on Monday but from Tuesday the undertone turned softer as mills continued to remain on the sidelines while arrivals tended to increase in volume. Wednesday found the holders anxious for business but there was little response from buyers. Assam Bottoms Ready delivery opened at Rs 35 and recovered to Rs 35.50 only to be pushed back by close of Wednesday to Rs 34.

TEA Increased Output

ACCORDING to the latest figures available in Calcutta, production of Tea in the major producing countries is running 80 million pounds ahead of last year. The increase has been mainly due to larger crop in India and Pakistan.

India has produced, in the first eight months, 324.7 million pounds as against 269 million pounds in the corresponding period of last year. Total output in South India is, however, lower at 109.1 million pounds as against 114.6 million pounds in the corresponding period of 1960.

Production in Ceylon, during July, rose to 37 million pounds from 31.5 million pounds in the corresponding month of last year. This put the total outturn, in the first seven months of the current year, higher at 286 million pounds as compared to 269.9 million pounds in January/July 1960.

Production of tea in Pakistan, in August, rose to 9.6 million pounds from 7.5 million pounds in August last year. Total outturn, in the current season up to the end of August, is almost double at 32 million pounds as against 17.6 million pounds in the corresponding period of last year. The output in Indonesia and East Africa is running at the level of last year.

A glut of tea is, therefore, feared in the world market in view of

marked increase in the world tea production. It is understood that, despite this factor, the Government of India does not propose to make any immediate changes in the existing rates of excise and export duties on the commodity. The Government does not consider Pakistan's recent reduction of duty on tea by 34 per cent as a serious challenge to India's tea export prospects. On the other hand, it is pointed out that India's keen competitor in respect of tea is Ceylon. But, here, the Indian duty rates compare favourably with those levied in Ceylon.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 72,310 packages. There was a strong general demand. Clean plain broken were firm to dealer; but similar fannings were up to 10 nP easier. Less interest was shown in any teas containing stalk and fibre. Medium and better liquoring sorts were sold readily with the best descriptions often a little dearer though prices were generally irregular. CTC types met with a good enquiry and were firm to dealer. Off-grade teas came in for more competition; but prices were irregular.

Darjeelings received good support at generally easier rates, while prices for Tippy sort were irregular. There was more interest in Whole Leaf grades, particularly the cheaper. Following rates were quoted (per kilo):—Clean Plain Pekoe Rs 4.30 to Rs 4.50; Plain BP Rs 4.15 to Rs 4.35; Plain Fannings Rs 3.85 to Rs 4.10; Medium Assam CTC BP Rs 5.00 to Rs 5.40; Medium Assam CTC Fannings Rs 4.90 to Rs 5.30; Best Assam CTC BP Rs 5.40 to Rs 6.00 and Best Assam CTC Fannings Rs 5.40 to Rs 6.20.

In the Internal Sale, offerings were 25,552 packages of Dusts and 325 packages of Leaf grades. Demand for Dusts was once again good. Medium CTC types were irregular with the clean bright teas being generally firm and sometimes dearer. The small powdery types were sold well; but the good CTC types were slightly easier. Plain orthodox dusts were taken up at prices which were 5 nP to 10 nP per kilo below last rates, while the Assam varieties met with good support at a small discount. Legg-cut dusts were readily absorbed at generally firm rates; but the fibrous teas declined in value. Following rates were quoted: Plain Orthodox Dust Rs 3.90 to Rs 4.20; Medium Assam Dust Rs 4.10 to Rs 4.50; Legg-cut Dust Rs 4.40 to Rs 4.90; Medium Assam CTC Dust Rs 5.65 to Rs 5.90 and Good Assam CTC Dust Rs 6.20 to Rs 6.40. Leaf grades met with a good market, the few green teas being sold extremely well.

Arrivals of tea in Calcutta from the gardens are reported to have improved during the past week, while the forward export bookings, particularly for the UK, have begun to show a welcome increase. There is ample liner tonnage bearded for most destinations to cater for any increased business there may be.

Total imports of tea into the UK, in the first seven months of the current year, rose in 310.47 million

30 September 1961

pounds from 285.62 million pounds in the corresponding period of last year. Total imports into the USA, during the same period, were, however, lower at 63.61 million pounds as against 73.56 million pounds.

COTTON Futures Touch New Level

After initial hesitancy, cotton futures forged ahead to scale new peak level thanks to hectic buying and frantic bear covering and finished with impressive gains over the previous week's closing.

The sentiment was influenced by the reported damage to the crop particularly in East Khandesh, Amraoti, Madhya Pradesh and CP tracts, the downward revision of new season's crop to about 4.8 million bales as against the outturn of nearly 5.4 million bales in the previous season, the upward trend in the consumption ceiling of Indian cotton textile exports to the United Kingdom for the next year. The Jarilla March contract, during the week under review, after a brief lull firmed up and reached new high of Rs 625.00 and on Tuesday last closed at Rs 620.00.

The Government of India's announcement of an export quota of 0.15 million bales of Bengal Deshi cotton has been gratefully greeted by the trade circles.

The Government has also announced its decision to allow import of Pakistani cotton of staple length 1" and below worth about Rs 150 lakhs under the Indo-Pakistani trade agreement signed as early as in March. The trade, however, considers the prospect of Pakistani cotton as bleak as the prevailing prices of Pak cotton is not at all attractive.

An increase in the quota for exports of Indian cotton textiles to the United Kingdom to 195 million square yards from 175 square yards was announced by the Board of Trade in London last week. The announcement follows the undertaking entered into by Hong Kong for restricting exports of cotton textiles to British markets in 1962. Indian and Pakistani quotas for the next year have been revised to bring them into line with the new Hong Kong agreement. The Board of Trade is administering the licensing of 1961 supplementary quotas for India and Pakistan and will continue to deal with questions regarding imports of these two countries arising from 1961 agreement.

Meanwhile the trade has expressed its satisfaction at the arrangements made by the East Indian Cotton Association Limited for carrying out arbitrations on the quality of American cotton (including appeals) by its sworn Surveyors in Bombay.

New crop cotton in the spot market continued to attract the interest of spinners despite the fact that the prices tended to ride above the ceilings. Moderate business in Pakistani cotton was reported to have been done in spite of the comparatively high prices. Fairly good business was

transacted in African cotton and ready lots of American growths. An important development in the cotton market during last week was the commencement of trading in non-transferable specific delivery contracts in 216 F, H 14, 320 F, LL 54, Bengal Deshi in the Punjab UP and Rajasthan, 197/3, L 147, Jarilla G 6 and G 12 and all Cambodia varieties from Gujarat, Maharashtra, Mathia and Madhya Pradesh.

Consumption of cotton by the Indian mills from 1 September to 30 June amounted to 4,408,652 bales as against 4,235,054 bales in the corresponding period in the previous season.

PIECEGOODS

Conditions in the Bombay piece-goods market were rather subdued during the past week. The only exception to this was the slightly improved activity on the export front.

The domestic sector again depicted sluggish tone and according to the consensus of opinion this trend is likely to continue at least for another month. The demand from upcountry centres was on the whole far from encouraging and the traders evinced interest only to cover their immediate requirements. Transactions on a small scale were reported to have been done by buyers from Uttar Pradesh, Bihar and Punjab. Despite the presence of traders from the Peninsula in the market no appreciable business was done. The inquiries from Calcutta and neighbouring centres were comparatively meagre in spite of the proximity of the Puja festival. The net result of all these was the accumulation of stocks with both the wholesale dealers and mills. The stockists offered their goods at reduced rates. A general decline in prices was noticeable. The prices of grey goods slipped down by about 7 nP and those of sarees and dhoties declined to some extent. Poplin was offered even below the ex-mill prices.

Slightly improved conditions were noticeable in the export section. The offtake looked up to some extent. The official announcement of a supplementary quota of cotton textiles for exports to the United Kingdom for the current year failed to produce any impact on the market, for business has already been concluded on this count with the expectation of such an announcement. Fair business was reported to have been done by exporters with the mills against their licences for the coming year.

Moderate business with Australia was reported in grey goods. Ethiopia and Eritrea focussed their attention on chaddars and East Africa evinced some interest in processed sheetings. Burma was contented with a small quantum of printed goods and voiles.

Outlook for Sugar Prices

THANKS to an easy supply position, Sugar markets have generally continued to rule quiet. Although the new crushing season will officially start on 1 November, factories are reported to have planned to begin crushing later this year due to the accumulation of stocks. In the Hapur market, the rate is quoted around Rs 106.25 per bag.

But, the steady rise in the price of the sweet commodity in Calcutta during the past few days is very disturbing. It appears as if supplies are being rigged by unscrupulous traders so as to inflate the price further in view of the expected increase in demand, which usually develops before the Puja festival. It is rather regrettable that, at a time when factories claim to be seriously embarrassed by the accumulation of stocks, consumers are being forced to pay exorbitant prices. It is true that, if effective steps are not taken to reduce stocks quickly, production in the next season will be hampered. But, it is not understood why no energetic step is taken to promote domestic consumption by expediting despatches of the commodity from the factories to various consuming centres, especially when export prospects are not bright.

On the London market, too, sugar prices have weakened after their recent small recovery. Reactions to a large Iranian tender for sugar have shown that supplies are still ample and the only real hope of a significant rise in the market is that the International Sugar Council, now being held in Geneva, will come out with some positive proposals. Dealers are less sanguine than they have been of late about the outlook for sugar prices.

On the one hand, there are vague hopes that the Geneva conference may try to secure a more stable and realistic price for producers. On the other hand, Cuba and Poland, which are at present the only major "first hand" sellers of sugar in the free market, have recently been unwilling to press their sugars on buyers at the risk of depressing prices. If these two suppliers are able to stand firm over the next few weeks, their action can provide a basis for a distinctly better trend in sugar prices.

Rates of reeling cocoons showed a slight downward trend, while the rates of reeling cocoons from Sidlaghatta area ruled between Rs 4.00 and Rs 5.00 per kgm, reeling cocoons from Mugur area were quoted between Rs 3.25 and Rs 4.20 per kgm and reeling cocoons from Channapatta between Rs 4.10 and Rs 4.80 per kgm.

SUGAR

At the time of going to Press, it is announced that the Government of India has removed all controls on the movement, distribution and prices of sugar with immediate effect. The Government has, however, retained the system of controlled releases to regulate the prices in the interest of the cane-grower and the consumer. For the ensuing season, the Government has proposed to restrict sugar production by imposing a cut of 10 per cent in the output of each factory.

The present step is designed to raise the internal consumption and reduce the surplus available for export to manageable levels. While the Government will continue to control the release of sugar, there will be

no continuance of the system of allotment of sugar to specified dealers. The factories will now be able to sell sugar freely to all dealers.

It is generally felt that there will be no more sugar shortage; but consumption has not increased along with production, mainly because prices are too high. It is also felt that the removal of controls will not lead to a rise in prices, especially, with a surplus of stocks, any factory may not attempt to sell the commodity at black market prices. In this connection, the Government has stated that, if there will be any rise in prices, it will release further stocks and bring the price under control.

As a matter of fact, the price of sugar in Calcutta has come down by Rs 3 a maund and is expected to record a further fall during the Puja festival owing to an improvement in the wagon supply position. Trade circles have expressed the view that prices may eventually decline by Rs 5 to Rs 6 a maund in the internal market, as the Government is not likely to enforce rigidly its new policy of controlled release of stocks from the mills. Supplies are expected to arrive in the State from all parts of the country.

GUR

Conditions in the Gur market remain, however, steady. At Hapur, ready gur attracted a good demand. With the result, stocks there are reported to have dwindled to 12,000 maunds. The new production is expected to commence after about ten days. The rate for the commodity is quoted around Rs 19 per maund.

BANGALORE SILK

The Bangalore Silk market presented a mixed trend in the prices of raw silk during the week ended 22 September, 1961. While the Filature raw silk of 20/22 Dr. continued to be quoted between Rs 84.89 and Rs 87.64 per kgm as in the last week, charka raw silk of all the grades registered a decline of about Rs 4.00 per kgm. Cottage basin silk, however, remained firm between Rs 74.75 and Rs 77.16 per kgm.

Rates of reeling cocoons showed a slight downward trend, while the rates of reeling cocoons from Sidlaghatta area ruled between Rs 4.00 and Rs 5.00 per kgm, reeling cocoons from Mugur area were quoted between Rs 3.25 and Rs 4.20 per kgm and reeling cocoons from Channapatta between Rs 4.10 and Rs 4.80 per kgm.

Rates of Mysore race seed cocoons were quoted between Rs 3.50 and Rs 5.00 per thousand. Foreign race seed cocoons remained steady between Rs 4.00 and Rs 10.00 per thousand.

FOODGRAINS

The Hapur Foodgrains market has continued to rule quiet with prices seeking lower levels. Reports of damage to the standing crops should have normally imparted a steadiness to the price level. But, the present trend is an unexpected one. The offtake has gone down to such an extent that, in some cases, distress sales have become inevitable. The main contributory factor are the stringent conditions prevailing in the

money market, while rates of interest on personal credit basis have also moved up.

The average quality wheat is quoted at Rs 14.75 to Rs 15 a maund. Rice has recorded a modest fall on good crop expectations. Gram remains unchanged despite poor arrivals. Bejhar prices are almost stagnant, while Barley has sought lower levels due to good arrivals from the Punjab. Among Pulses, Peas has continued to be steady, thanks to a good demand from outside the State and support from dal grinders.

CHEMICALS & DYES

Sentiment in the Bombay Chemicals & Dyes market was largely influenced by the proximity of the new import policy. While the Chemicals section was dull with a restricted turnover, the Dyes section showed signs of weakness.

Among Chemicals, divergent trends were witnessed. With the arrival of about 80 tons of Rongalite from Germany, the prices of this item registered a marked fall. There was a mild setback in the prices of Caustic Soda, too, with the ICI quality solid dropping down to Rs 49 and the indigenous variety to Rs 46. On the other hand, Menthol moved both ways. Bleaching Powder continued to maintain its upward trend. There was no change in the prices of other items.

In the Dyes section, there was an anxiety on the part of stockists to part with their holdings. With hardly a few days more for the announcement of the new import policy, consumers and dealers kept away from the market and the prices of most of the items sought lower levels.

COPRA

According to a bulletin issued by the Forward Markets Commission, India ranked second among the coconut-growing countries of the world, with an annual production of 4.150 million nuts accounting nearly for 25 per cent of the world output.

In India, coconut production was estimated at around 1.85 lakh tons (1.23 lakh tons in terms of oil) in 1960, which was slightly higher than in the previous year. Imports were of the order of one lakh tons valued at Rs 11.9 crores. The total supply in the country thus amounted to 2.85 lakh tons—7.5 per cent higher than in 1959.

During the Second Plan period, against the targeted additional production of 870 million nuts per annum, coconut-growing States in the country produced only 350 million nuts over the average annual yield at the end of the Second Plan. The target for the Third Plan has been set at an additional production of 1,037 million nuts per annum.

CASHEW

The decision of the Government of India not to allow further imports of Cashewnut has failed to arrest the decline in prices. In the Bombay market, prices have declined further

by Rs 25 to Rs 30 per ton in the imported varieties during the fortnight. The heavy burden of stocks in old crop and the approach of the new season have been the two main factors responsible for the continued nervousness in the prices. The ebbing overseas demand and the comfortable conditions in the producing countries have also acted as dampers.

Although fresh import is now prohibited, import licences for about 13,000 tons, issued earlier, are reported to remain unutilised. The shipment period of these imports has been extended till October-end, while the shippers are expected to place orders soon to the producing countries in Africa.

The new crop will be ready by October in Tanganyika. Part of this is expected to be imported by the Indian shippers against these licences.

GOLD & SILVER

Prices on the Bombay Bullion Exchange, after recording fresh higher levels, developed a reactionary tendency towards the close. Following the carryover charges in favour of bears, bulls were sellers and there was technical correction in both the metals.

In the Silver section, arrivals amounted to 40 bars as against an offtake of 10 bars. Ready silver (below .996) changed hands at Rs 205.50 to Rs 205.70. Gold receipts totalled 4,000 tolas as against an offtake of 2,000 tolas. Ready gold changed hands at Rs 125.25 to Rs 125.40, while Sovereign ruled firm at Rs 96.75.

OILS & OILSEEDS

Conditions on the Bombay Oil seeds Exchange remained generally quiet due to liquidation by longs and weakness in the ready section. The improvement in prices, noticed early in the week following the reports that the Government would shortly announce export quotas for HPS groundnut and groundnut expeller oilcake, proved to be shortlived. A section of the bull operators came forward to book profits at the recent high levels and hence the market lost the bulk of the gains. Groundnut ready Bold was quoted at Rs 47 and Groundnut Oil at Rs 19.65.

Reports from the various producing areas indicate that India will harvest a bumper crop of 29 lakh tons this season against the trade estimate of 24 lakh tons in the last season. Last year's crop itself was higher by 10.5 per cent over the preceding crop. This year, there has been a definite shift in favour of groundnuts due to the high level of prices noticed last season.

In Castorseed, trading was purely of a speculative nature. The export trade in castor oil was confined to a few transactions with the UK. The demand from other buyers was poor. A section of the trade was inclined to unload purchases in the maturing contract in view of apprehensions that inferior quality might be tender-

ed against sales. Castor ready was quoted at Rs 33.12 and Castor Oil, commercial, at Rs 13.40.

The shortage of spot supplies provided the main feature of trading in the Linseed section; but the price variations were mainly influenced by the behaviour of other oilseeds. Linseed ready was quoted at Rs 38.50 and Linseed Oil at Rs 16.65.

The release of an export quota of 50,800 metric tonnes of linseed expeller cake for shipment between October 1961 and May 1962 has, however, failed to enthuse the export circles. Despite favourable price of Indian expeller, India has not been in a position to export much during the last several months. But numerous instances of adulteration in India's exports have resulted in the loss of the market.

As has been reported last week the prices of groundnut oil and groundnut have become easier. Summer crop arrivals in southern centres are steady, though in a few places the supplies are reported to have slightly gone down. Big interests are keeping aloof in the belief that there is possibility of the oil and kernel prices going down further. Arrivals of groundnut in Pollachi this week had gone down to 7,000 bags daily. Last week the daily arrival was reported at 12,000 bags. In the city the receipt of kernels continues at 25/30 tons and in other southern centers the reported arrivals continue between 250 to 300 tons. In castor oil there is a firm tendency with the quotation below last week's by five rupees. With better quotas of copra, coconut oil was easier in the market. The same was the case with gingelly seed and oil. Groundnut cake kept steady.

Both Andhra and Calcutta interests bought small quantities of groundnut oil. Andhra merchants went to Salem or Erode to buy their needs. In these places the price of oil was a little weaker than in the City of Madras. Spot goods were in good inquiry though buying was severely restricted to those in need of immediate consumption. Longer valdas were not attended to. The distant deliveries therefore kept much easier than spot deliveries.

In the upcountry markets summer crop arrivals were steady and they lost also a little in value. In sympathy with oil price decline, groundnut kernels in these centers lost a couple of rupees per 80 kgs.

HIDES & SKINS

In the tanned cowhide section here, while there were good arrivals, the absorption was equally good with no change in price quotations. In the c.i.f. section inquiries for 8/8½ lb tanned cow hides were good. The price quoted and offered for 5½ lb fifts was at 43d, 44d and 53d respectively.

For run, fourths and fifts in premium marks there was also good business. Inferior fifts too had quoted good demand from the overseas market. It would appear that

there seems to be no possibility of the price changing for 5½ lb weights at 39 to 40d.

There was no change in price of tanned buffalo hides. Nothing of importance too occurred in tanned cow calf skins. The raw market price of buff calf was high and as such tanned buff calf was offered at a higher rate.

For tanned goatskins good inquiries were being made from all places. It should be noted that the raw goatskins prices are going up and the traders in tanned line are reluctant to stick to particular quotations. In tanned sheepskins there was not much of a change.

The following are the prices of tanned skins and hides per lb: Tanned cow prime 5½ lb Rs 3.12 to Rs 3.25; 6/6½ lb Rs 2.87 to Rs 2.94; 8/8½ lb Rs 2.37 to Rs 2.44; 10/12 lb Rs 2.19 to Rs 2.31; Inferior fifts: 4/4½ lb Rs 2.50 to Rs 2.56; 5½ lb Rs 2.30 to Rs 2.35; buffalo 12/13 lb Rs 2 to Rs 2.06; cow calf 1½/2 lb Rs 4.12 to Rs 4.37; buff calf 1½/2 lb Rs 2.75 to Rs 3.00; Goat-prime 8/9 lb Rs 10 to Rs 10.50; sheep ordinary 6/7 lb Rs 7 to Rs 7.50; 5/6 lb Rs 9 to Rs 10.00; prime 6/7 lbs Rs 11.50 to Rs 12.50.

WOOL

The Woollen industry has asked for the maximum possible allotment of foreign exchange to meet its requirements. It is contended that in the face of increasing demand for woollen and worsted yarns following the increase in population and a rise in the standard of living, there is need to revise upwards the ceiling for the import of woollen raw materials.

The reduced imports have created numerous problems of short supplies and high prices resulting in the under-utilisation of the existing machinery, which is reported to be working only 50 to 60 per cent of its capacity.

Arrivals of the new yellow clip, which were delayed due to heavy rains, are now in full swing. Indian mills are showing great interest in superior qualities. Russia is also buying. Prices are generally at the last fortnight's level. The announcement of the next export policy is anxiously awaited by the trade. In the Delhi market, following rates (per pound) were quoted:—1st White Rs 2.75 to Rs 2.81; Tinged White Rs 2.57 to Rs 2.69; Pale Yellow Rs 2.31 to Rs 2.40; Yellow Rs 2.37 and Grey Rs 1.15 to Rs 1.30 (per maund).

Company Reports

Auckland Jute Reduces Dividend

The Auckland Jute Company Limited, has reported a net profit of only Rs 30.51 lakhs as against Rs 36.29 lakhs despite a rise in sales from Rs 2.49 crores to Rs 2.86 crores. In respect of allocations, the Depreciation amount is raised to Rs 7.19 lakhs from Rs 6.68 lakhs; General Reserve to Rs 1.50 lakhs from Rs 1.00 lakh and Statutory Development Rebate Reserve to Rs 1.76 lakhs from Rs 50,000. Taxation provision is, however, lower at Rs 10.71 lakhs against Rs 12.65 lakhs, while Machinery Replacement Reserve is maintained at Rs 3.00 lakhs. The directors have proposed a final dividend of Rs 5, making a total of Rs 12 per share on the Ordinary shares, subject to tax. This compares with a taxable dividend of as much as Rs 27 paid for the previous year.

An order has already been placed by the company for 24 "Onemack" automatic weaving machines for one high speed Mackroll Winding Machine, suitable for hessian warp and sacking light yarns. Import licences are still awaited for these machines. Modernisation of the Sacking Weft Section of the mill has been completed and the new machines are working satisfactorily.

Dalhousie Jute Repeats

The Dalhousie Jute Company, Limited, has maintained the dividend at Re 1 per share, taxable, in spite of a sharp decline in the net profit, after providing for Depreciation and Taxation, from Rs 11.97 lakhs to Rs 4.10 lakhs. Apart from maintaining Debenture Redemption Fund at Rs 1.00 lakh and providing Rs 27,031 for Taxation, depreciation is raised to Rs 4.85 lakhs to Rs 4.71 lakhs and Statutory Development Rebate Reserve to Rs 56,340 from Rs 30,400. Sales are shown at Rs 1.95 crores against Rs 1.68 crores.

The arrangement with the Northbrook Jute Company, for the utilisation of loom-hours, continued throughout the period under review with small adjustments to loomage to fit in with the Association's sealing and unsealing programme.

Excellent Results of Northbrook Jute

Of all the companies in Bird group, the Northbrook Jute Company, Limited, has produced excellent working results, thanks to a marked rise in sales from Rs 2.03 crores to Rs 2.62 crores. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 19.53 lakhs as against only Rs 13.75 lakhs for the preceding year.

All allocations have been increased:—Depreciation to Rs 6.09 lakhs from Rs 4.86 lakhs; Taxation to Rs 16.39 lakhs from Rs 10.57 lakhs; General Reserve to Rs 9.00 lakhs from Rs 7.00 lakhs; and Statutory Development Rebate Reserve to Rs 1.48 lakhs from Rs 60,700. Machinery Replacement Reserve is, however, maintained at Rs 3.00 lakhs. Total dividend is maintained at Rs 3.00 per share, subject to tax.

The arrangement for the sale of loom-hours to Dalhousie Jute continued throughout the year under review. The balance of 13 Carpet Backing looms were commissioned during July 1960.

Union Jute Pays only 6 per cent Against 25 per cent

The Union Jute Company, Limited, has reported a net profit of only Rs 3.22 lakhs as against as much as Rs 12.37 lakhs for the previous year. These figures have been arrived at after providing for Depreciation and Taxation.

With regard to allocations, Depreciation is raised to Rs 4.51 lakhs from Rs 4.09 lakhs, while Taxation provision is reduced to Rs 3.26 lakhs from Rs 9.40 lakhs and Statutory Development Rebate Reserve to Rs 65,630 from Rs 84,700. No provisions are possible for General Reserve and Machinery Replacement Reserve against Rs 1.50 lakhs and Rs 1.00 lakh respectively set apart against these items in the previous year. The directors have proposed a final dividend of Re 1, making a total of only Rs 6 per share, taxable, as against Rs 25 per share, taxable.

Under the terms of sale of the Union South Mill property, payment has been received from the purchaser of the fifth and sixth instalments of the balance of the purchase price. This leaves an outstanding balance of Rs 4 lakhs, payable over the next year, carrying interest at 5 per cent per annum.

Modernisation of Kinnison Jute Mills

In the latest report, the directors of the Kinnison Jute Mills Company Limited, have stated that orders have been placed for the following machinery to complete the modernisation of the mills:—Four 4½" Silver Spinning Frames; three Screw-gill 2nd Drawing Frames; three Conversion Sets for Finisher Drawings and nine sets of Conversion Conductors for 4½" Silver Spinning Frames. Import licences have been received for the last three items and shipment is expected to be completed by September 1961. The Silver Spinning Frames will be obtained locally from the Lagan Jute Machinery Company, Limited.

Orders have also been placed for 24 "Onemack" Automatic weaving machines and an import licence is awaited. With a view to effecting a more economical layout and making the mills more efficient, it was decided to convert No. II Mill to an all Hessian unit and the changeover was completed by 6 October, 1960. The transfer of looms involved was effected without any disturbance to the normal working of the mills.

Meanwhile, the company's accounts, for the year ended 31 March, 1961, reveal a rise in sales from Rs 3.55 crores to Rs 4.07 crores; but the net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 10.64 lakhs as against Rs 20.11 lakhs for the preceding year.

After maintaining Machinery Replacement Reserve at Rs 3.00 lakhs, Depreciation is raised to Rs 9.09 lakhs from Rs 7.94 lakhs; Taxation to Rs 9.82 lakhs from Rs 6.64 lakhs and Statutory Development Rebate Reserve to Rs 1.51 lakhs from Rs 68,000. General Reserve is lowered to Rs 50,000 from Rs 3.00 lakhs. The directors have recommended a final dividend of Rs 2.00, making a total of Rs 7.00 per share, subject to tax, for that year. This compared with as much as Rs 20 per share, less tax, paid for the preceding year.

the fifth year. For the implementation of the scheme, no additional capital and no foreign collaboration or royalty or cash payment is envisaged. The Union Government is understood to have supported Phillips's scheme.

Hindustan Lever

The Hindustan Lever Limited has proposed to undertake the manufacture of dehydrated vegetables. There is a plan to manufacture 800 kg each of dehydrated spinach, carrot, cauliflowers, beans, potatoes, ladies fingers and onions per month on a trial basis at its factory at Ghaziabad, near Delhi. The capital required for the scheme will be wholly met from the current resources of the company. No fresh issue of capital in any form is, therefore, likely to be made. For the implementation of the scheme, Unilever Limited of London, which holds the majority of shares in the company, will give assistance free of charge.

Macneill & Barry

Macneill & Barry Limited, one of the largest managing agency houses of Calcutta, has proposed to form a new company jointly with Ganges Rope Company Limited (one of the companies under its management) and a wire rope manufacturer in the USA. The company proposes to establish a plant for the manufacture of wire ropes with an annual capital of 8,000 tons of winding and haulage ropes and is seeking the collaboration of the US manufacturer.

Punjab National Bank

The Punjab National Bank Limited issued recently 750,000 Ordinary shares of Rs 10 each to the holders of the old shares as on 2 September 1961. These shares rank *pari passu* with the existing shares except that they shall carry the right to a dividend equivalent to only one-fourth of the total dividend that may be declared for the year 1961, including the interim dividend of Re 1 per share already paid.

Mukund Iron

The Mukund Iron & Steel Works Limited has large expansion plans on hand. It is proposed to find the required foreign exchange from the Industrial Credit and Investment Corporation and the Commonwealth Development Finance Company. The company is making arrangements to secure its own supplies of billets to the extent of 50 per cent by erecting a new 20-ton electric furnace at Kalwe. A wire rod mill is also planned to be erected in the same place. A third furnace of 4-ton capacity has been complete at Kuria. The present expansion programme will need additional finance of the order of Rs 3.50 to Rs 4 crores. The time, method and the form of raising will be decided later.

BALANCE-SHEET BRIEFS

The net profit of the Nilgiri Estates Limited has risen sharply to Rs 6.40

lakhs for the year ended 31 March 1961 from Rs 4.16 lakhs for the preceding year. The dividend is raised from 8 to 10 per cent, taxable.

Cottanad Plantations Limited has also reported a higher net profit of Rs 1.17 lakhs for the same year as against Rs 79,087. The dividend is, however, maintained at 10 per cent, subject to tax.

STOCK EXCHANGES

Mixed Performance

Watch-Dog Writes:

STOCK markets have given a mixed performance during the week under report. Textile shares have given a better account following optimistic reckoning of the outlook for earnings during the current year, while the speculative issues have just maintained the values without recording any worth-the-name advances. Sugar shares have ruled weak. Price movements in other sections were confined to narrow limits.

The Calcutta Stock Exchange displayed a steady undertone and prices responded to selective support.

Although sentiment on the Bombay Stock Exchange remained subdued following the disappointment over the halving of the dividend by the Khatua Mills, prices rallied briskly towards the close due to short-covering.

Activity on the Madras Stock Exchange was restricted; but prices were well maintained.

CALCUTTA

Calcutta, Friday Evening.

EXCEPT for Textile shares which changed hands at enhanced levels due to sustained demand and Miscellaneous issues responding to selective support, conditions in other counters remained generally dull with small losses on balance being registered. The undertone was cautious as will be evident from the lack of strength behind the recovery movement. The volume of business was also disappointing, considering the extended working hours now in force.

In general, interest was selective to the extent that it was confined to a few issues. Price variations were naturally small and, on the whole, losses outnumbered gains. Against the background of uncertain international political situation and the election manifesto of the Congress Party, operators were not inclined to extend their commitments, not to speak of their anxiety to wait till such time they had some idea about the trend of thinking among the Presidents of the recognised stock exchanges in the country.

Moreover, the market was disturbed by other unfavourable developments. There was evidence of a growing shortage of credit and it was difficult to estimate the extent to which fresh funds were likely to flow into stocks and shares. Again, the growing difficulties concerning raw materials, coal supplies and transport were

felt although the recent reports of some companies revealed increased profits. The general economic conditions were also not considered to be encouraging due to the continued adverse balance of payments position despite attempts being made to boost up exports.

But, the smart recovery in prices, noticed towards the close of the week, was mainly influenced by renewed short-covering and replacement buying. Although attempts were still being made by bears to depress the market, the shortage of floating stocks and the emergence of buying support for popular industries at every setback in prices, imparted a steadier tendency. The recovery in prices would have been more pronounced, but for a general disposition amongst the operators to restrict commitments and book profits at bulges due to the forthcoming Puja and Diwali holidays.

The Gilt-edged market remained dull with business at a much reduced scale. Sellers were in evidence in most of the medium-dated loans with buyers reserved. State Loans were practically neglected. 3 per cent 1986 Conversion Loan moved narrowly between Rs 72.80 and Rs 72.85, to finish at the former level.

Bank shares were a steady feature with Punjab National changing hands at Rs 18.25 to Rs 18.37 and United Commercial at Rs 90.50.

Jute shares continued to meet with selective support, although there was a predominance of sellers. There was a general anxiety to await further developments in the jute situation following the recent decision made by the IJMA to raise the working hours. Anglo-India met with business at Rs 174 to Rs 176; Birlas at Rs 24.94 to Rs 25.25; Howrah at Rs 20.25; Megna at Rs 11.94 to Rs 12.06 and New Central at Rs 17.12 to Rs 17.50.

Coal shares were generally neglected in the absence of any news of fresh impost to boost sentiment, as the industry continued to suffer from transport shortage. Despite the news of the dividend being doubled to Rs 2 per share, East Indian were on offer at Rs 34.50 against Rs 35.50, while Central India were nearly maintained at Rs 11.75 and so also Western Bengal at Rs 9.37. Burrakur moved rather irregularly between Rs 18.25 and Rs 18.44, to finish the week at Rs 18.31.

Teas, too, were in a section in which nothing peculiar happened to report except that one or two isolated shares met with sustained support due to favourable corporate rumours. Bhatkawa were enquired up to Rs 18.37; Hasimara up to Rs 35.56; Jay Shree up to Rs 18.19 and Huldibari up to Rs 35.06, to react towards the close to Rs 18.12; Rs 34.62; Rs 18 and Rs 33.87 respectively on profit-taking. Rydak lost nearly three points at Rs 25.50 with Telojan being marked down to Rs 30.81 from Rs 31.75.

Sugar shares turned weak following the abolition of controls on price and distribution of the sweet commodity. It was feared that prices of sugar might develop a steady fall

till such time, when the accumulated stocks were disposed of and consequently the earnings of the companies might be affected to that extent. Belsund were quiet at Rs 11.12 against Rs 11.10, while Dyer Meakins were comparatively firm at Rs 34.62. SKG moved narrowly between Rs 10.87 and Rs 11.

Textile shares were again in the limelight although profit-taking erased some of the extreme gains towards the close. Hopes of larger offtake of cloth during the ensuing Puja and Diwali festivals and improved profitability of the industry during the current year, stimulated sustained buying interest. The additional export quota of textiles for the UK was also a contributory factor. Jay Shree were at one time taken up to Rs 17.75 from Rs 16.62; Cawnpore up to Rs 9.44 from Rs 8.62; Bowrah up to Rs 35.12 from Rs 33.06; Dunbar up to Rs 33 from Rs 31.50; Elgins up to Rs 22 from Rs 20.19; Kesoram up to Rs 29.75 from Rs 28.87 and J. K. Rayon up to Rs 19.37 from Rs 18.87. The closing rates were a little below these levels due to profit-taking.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. After opening steady at Rs 24.50 and improving further to Rs 24.56, Indian Irons were depressed at one time to Rs 24.25 before finishing the week at Rs 24.44. In sympathy, TEXMACO moved down to Rs 18.85 from a high of Rs 17.3 (Rs 17.00); Jessop to Rs 19.58 from Rs 19.62 (Rs 19.69) and J. K. Steel to Rs 21.06 from Rs 21.25 (Rs 21.06). Braithwaite were a very firm feature at Rs 39, while Guest, Keen, William recovered to Rs 40.25 from the recent low of Rs 39.

Miscellaneous issues showed mixed trend. After ruling initial firm following indications about a early increase in ex-factory prices, Cement shares displayed a slight reactionary tendency towards the close due to reports that the Government might not be inclined to accept in full the Tariff Commission's recommendations. Paper shares, however, presented a steady front due to replacement buying on expansion projects. Speculative issues were subjected to intermittent profit-taking. Following were the price trends of a few selected shares:—

	Week's Week's Week's

Regional Cooperation in Asia

THE conference of Asian Economic Planners has taken a closer look at the scope for regional economic cooperation on which a comprehensive resolution was adopted by the ECAFE at its sixteenth session in 1960. The subject, as Dr P. S. Lokanathan who initiated the discussions described it, is of crucial importance, though the avenues of fruitful cooperation have yet to be developed. The low level of general economic development of most of the countries of the region has stood in the way of positive measures of economic integration of the sort attempted with success elsewhere. Most of the countries are not ready for it and feel that priority should be given to national development plans. While it is recognised that regional cooperation was necessary and desirable, the consensus appeared to be that the time is not yet for adopting concrete measures such as formation of a Customs Union, Common Market or Payments Union. But, as Prof J. C. Mahalanobis emphasised in the course of the discussions, proposals for regional cooperation should be based not on the current pattern of production but on a dynamic concept of possible developments over the next two decades.

The basis for discussions was provided by a very competent Working Paper prepared by the ECAFE secretariat. The emergence of regional trading arrangements in other parts of the world has provided the impetus for the formulation of tentative proposals of economic cooperation in the ECAFE region. When the rest of the world is divided into regional trading groups, countries in the ECAFE region have perforce to think of joint policies in respect of imports from these regions, if only as a measure to protect their own trade against discriminatory treatment. But the Working Paper has built up the case for regional economic cooperation on a broader basis. It rejects the argument that, because countries in other regions have formed economic groupings, Asian countries should also follow suit. Due note has to be taken of differences in economic structure and stage of development, as well as special social and historic circumstances, and it is emphasised that schemes of regional cooperation would not be acceptable unless each country in the region was assured that its own development would be accelerated as a result. Any scheme of economic cooperation in the ECAFE region will have to be framed with reference to the dynamic considerations of economic growth. The Working Paper seeks to show, by an analysis of regional trade patterns, of the possibility of agricultural and industrial specialisation and of the financing of trade and development, that such cooperation is not only necessary, but practicable. The case for regional cooperation is summarised thus: "The relatively slow expansion of world demand for the traditional export commodities of the ECAFE region will make it impossible for the primary producing countries in the region to rely on the traditional pattern of trade for accelerated economic growth. Nor are the prospects bright for a considerable expansion of extra-regional exports of goods other than the traditional export commodities. For this hope to be

realised, a notable change in the trade policy of industrially developed countries would be required, and there is no sign as yet that such a change will be forthcoming. The primary producing countries will have to aim at diversified output, expansion for home markets, substituting domestic production for as many lines as possible. However, in so far as import substitution is organised on a limited national scale, this cannot be the desirable solution: questions of economic and technical feasibility must be considered. The only way out, therefore would be to conceive the policy of import substitution on a broader and more rational basis. In economic terms, this is the essence of cooperation among the countries of the region. If the countries were prepared to do so, the process of import substitution could be effected at a regional level; substitution could be promoted and further accelerated in respect of imports from other parts of the world, but existing possibilities of specialisation and mutual trade within the region could be consciously cultivated. This applies mainly to manufacturing activity, which is to be started afresh in most of the countries, but there may also be greater scope for expanding trade in traditional export commodities among countries of the region. Thus, regional economic cooperation provides the only frame-work in which economic development can be accelerated on the basis of a substitution policy without detriment to the efficiency and advantages of international specialisation."

The lack of complementarity of the national economies of the region is often put forward as an insuperable obstacle to greater degree of regional cooperation. The Working Paper discusses this question of complementarity in some detail, and suggests that what is relevant to the possibility of further expanding the volume of intra-group trade is not the degree of complementarity, but the extent to which the full volume, determined by that degree of complementarity, is prevented from realising itself by the interposition of artificial barriers or other means of economic policy. What co-operation has to accomplish is to increase the flow of trade between some of the less rather than the more, complementary economies of the region.

A joint approach to the problems in individual fields, such as trade, agriculture, industry etc., could pave the way for the overall coordination of national economic policies. But in view of the historical circumstances which have kept the national economies of these countries largely isolated from one another, cooperation in individual fields may have to wait on the adoption by these countries of coordinated policies in the formulation of national development plans. The Paper, therefore, does not attempt to suggest a list specifying cases where economic cooperation among the countries would be possible. It is further emphasised that regional economic cooperation is not a matter that can be "immediately turned over to administrators and statesmen for them to implement as they best see fit. Very much further economic and technical analysis needs to be undertaken before any blueprints can be prepared."

SAVINGS

Reserve Bank Study—II

THE National Council for Applied Economic Research made a detailed and comprehensive study of the subject which yielded results that are strikingly different from the findings of the Reserve Bank. The following table gives the aggregate savings as well as sector-wise savings as estimated by the NCAER for some selected years.

	(In Crores of Rupees)		
	1950-51	1955-56	1957-58
Individuals	472	990	1,048
Corporate Sector*	16	32	21
Government	136	113	142
Total	624	1,135	1,211

* (After inventory valuation adjustments).

It may be seen that there is broad correspondence between the results of the NCAER study and the findings of the Reserve Bank in respect of the proportion constituted by savings in each sector to total savings. But the similarity ends there and in respect of the absolute volume of savings in each sector and the aggregate savings, there is wide divergence. The estimates of the NCAER are higher in respect of the total volume of savings and also in respect of the volume of savings in the Government and Individual sectors. (The category of Individuals in the NCAER classification corresponds to the category of Household Sector in the Reserve Bank classification.) As a result of such difference in the estimates of the total volume of savings, there is also difference in the saving-income ratios estimated by the NCAER and the Reserve Bank, the average saving-income ratio estimated by the NCAER being higher than that of the Reserve Bank. Further the finding of the NCAER regarding the similarity in the saving-income ratios of the Government and Individual sectors is also not supported by the Reserve Bank Study.

In respect of the Corporate sector, the estimates of the NCAER are lower than the Reserve Bank estimates for 1950-51 and 1955-56, but this may be attributed to the fact that the NCAER estimate of savings in this sector makes adjustments for inventory valuation while the Reserve Bank figures do not take into account such adjustments. Both the studies have adopted the method of 'blowing up' to arrive at the total volume savings from the savings ratio for a limited number of companies. But it is noteworthy that while the Reserve Bank study accepted the profits as presented in the Corporate accounts as they are, the NCAER has made certain adjustments in the reported profits. In this connection the NCAER study explains that the concept of corporate profits as used in such accounts fails to meet the economic definition of savings, which is held to mean the change in earned surplus.

It is with reference to the Individual sector that the greatest divergence is noticed with the NCAER estimates being considerably higher than the figures given for the household sector in the Reserve Bank study. The difference is not due to conceptual difference in the two studies or the methodology used in the two studies. Some difference appears inevitable between different estimates for savings in this sector in view of the vastness of its size and the difficulty of collecting relevant data in respect of the different components contributing to total savings. The

margin for difference and error is particularly great in respect of calculation of the physical assets. Further it has to be mentioned that the Reserve Bank estimates of savings in the Household Sector omits the Household Sector's savings in the form of inventories in agriculture and trade, non-monetised investment in agriculture, and consumers' durables. The National Council Study of the subject includes all these though it is recognised that the data for inventory investment remains incomplete. The NCAER has also included consumer durable goods as part of savings, though because of paucity of data for all kinds of consumer goods, only automobiles, trucks and other transport equipments have been included in the estimates of savings. Part of the difference in the estimates of savings by the two studies can be ascribed to the inclusion in the one and the omission in the other of such components of saving. The Reserve Bank study also mentions that the saving in the form of urban non-corporate investment is underestimated because of the particular estimation procedure adopted.

The Reserve Bank study does not claim precision for its estimates. These estimates are hedged with many qualifications which are recognised and mentioned in the study itself. The limitations to the validity of its estimates arise from the imprecise classification of receipt and expenditure items as between the current account and the capital account in the Government accounts, lack of comprehensiveness in the savings estimates of local authorities etc. Further the sample survey method used by both the Reserve Bank and the NCAER is also subject to inherent limitations. When the sample surveys undertaken by two different authorities show different results, the difference will be further widened in the estimates based on such results. It is to such differences in the results of sample surveys and the other inclusions and omissions of components of savings that the disparity between the estimates of savings by the NCAER and the Reserve Bank is to be attributed.

The Reserve Bank study also deals with the trends in the aggregate investments in the country which it may be seen is a function of saving. Total aggregate investment is defined as the increase in the aggregate reproducible capital stock of an economy and is derived by adding the estimated capital-inflow from abroad to estimated savings. The estimates of such investments given by the Reserve Bank shows an increase at constant prices from Rs 564 crores in 1950-51 to Rs 1,246 crores in 1958-59. The estimates of investments are however marked by fluctuations with the highest figure being obtained for 1956-57 at Rs 1,313 crores. For more meaningful analysis of the trends in investments, the Reserve Bank study discusses the trends in investments on the basis of three sub-periods of three years each.

It will be seen that the volume of investment rose continuously over the three periods the rise being much more pronounced during the period 111 as compared with the rise in period 11. This is understandable in view of the fact that period 111 synchronises with the first three years of the Second Plan period. The average investment income ratio rose from 6.3 per cent in period I to 7.5 per cent in period 11 and further to 11.3 per cent in period 111. For the entire period of 1950-51 to 1958-59 the average investment/income ratio amounted to 8.5 per cent. The rise in the marginal investment/income ratio during period 111 was also of a pronounced order. Capital 1 output ratio, on the other hand was higher for the first three years of the Second

Investment, Investment-Income Ratio and Capital-Output Ratio. (Rs Crores at Constant* Prices)				
	Investment (Annual Average)	Investment/In- come Ratio (Per cent)	Capital- Output Ratio	
Period I (1950-51 to 1952-53)	576	6.3	...	2.70:1
Period II (1953-54 to 1955-56)	774	7.5	17.6	2.28:1
Period III (1956-57 to 1958-59)	1,258	11.3	52.8†	3.23:1
First Plan Period 1951-52 to 1955-56	697	7.1	...	2.14:1
Three Years of the Second Plan period (1956-57 to 1958-59)	1,258	11.3	42.8†	3.23:1
1950-51 to 1958-59	869	8.5	...	2.76:1
1951-52 to 1958-59	908	8.8	22.8‡	2.59:1

* 1948-49 prices.

† Marginal with reference to 1953-54 to 1955-56.

‡ Marginal with reference to 1951-52 to 1955-56.

§ Marginal with reference to 1950-51.

Plan period than for the first Plan period. The ratio which declined from 2.70:1 in period I to 2.28:1 in period 11 rose to 3.23:1 during period 111. This reflects the relatively greater concentration of investment during the Second Plan period on projects which require a longer gestation period for commissioning. As the Reserve Bank study has pointed out, the ratios reflect also the impact of other factors such as the vagaries of the monsoon, the extent of utilisation of productive capacity etc. For the whole period from 1951-52 to 1958-59, which covers the First Plan period and the first three years of the Second Plan, the capital/output ratio is 2.59:1, which is lower than the average for the first three years of the Second Plan.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

BANKS

The Reserve Issue

WE gather that the Indian Banks' Association is next week further to discuss the very thorny problem that has been set by the Reserve Bank. The central banking institution desires that banking in the country should be strengthened. As such last autumn a directive was issued whereunder banks were required to put up their lending rates to a minimum of 5 per cent and in any case all along the line by half per cent. Consequently for about three months of last year banks benefited from a higher rate of earning on Advances. For the whole of the current year earnings should in this wise have improved, and it also needs to be remembered that there was a record expansion in bank Advances in the busy season to April 1961. Unfortunately there has meantime been a development which will have partly offset such improvement on the earnings side of the profit and loss account: we refer to the two revisions in interest rates that have taken place. Unfortunately also for the banking system the contraction in Advances during the current slack season is tending to be much larger than has been the experience in recent years. So what has happened is that on the one hand interest paid on Deposits has been rising; and for a second reason this head of expenditure will be costly: bank Deposits which had been stagnant in the second half of 1960 are now once again on a boisterous uptrend. On the other hand the slackness of the 1961 slack season will surely have eaten into earnings.

It follows that the improved aspect for earnings consequent upon last autumn's does not now stand as unalloyed unearned profit for the banks. It is in such background, as also in the light perhaps of the failure of two Scheduled Banks in 1960, that we—and the IBA—have to consider ways and means whereby banking in this country needs to be strengthened.

Plan disbursements have served to add to bank Deposits; the transfers to reserve have amounted to scarcely anything substantial over the same period. As a result the ratio of capital plus reserves to Deposits has got greatly distorted. The Reserve Bank is apparently of the view that one of the ways in which banking is to be made more secure is by persuading banks that the ratios had better improve—or else.

When first the suggestion in this regard was mooted the ratio that was had in mind as target was absurdly high—so high that we could be well-nigh certain that it could never be reached. Second thoughts are leading to modifications, and it is modification which we presume that the IBA will busy itself with.

Should the ratio be as low as 5 per cent? We may as easily pose the question as the other side of the medal: Should the ratio be as high as 5 per cent? It really doesn't matter at what level the ratio is pegged at. The necessary transfers to reserves on the basis of current bank profitability are going

to be exceedingly difficult. One aspect of the scheme is that there be statutory provision for transfer to reserve: but this strikes at the second of the Reserve Bank's desiderata: while transfers to reserve will correspondingly strengthen reserves, the result will be a reduction in the disposable profit—and therefore a reduction in the rate of dividend—and hence, again, an increasingly bleak prospect for banks to raise capital by means of rights issues.

We suggest that if at all transfer to reserves are to be insisted upon, the direction should be that the beneficiary should be inner reserves. If banking losses are experienced, and in the context of new forms of bank financing, banking losses must be expected on larger scale and accordingly provided for—published reserves can scarcely be drawn upon to offset them. What writing off has to be done must be from inner reserves. Why, may we ask, this unreasoning bias in favour of published reserves being in need of strengthening? From time to time as necessary inner reserves could be transferred to published reserves, when the former have swelled to such size as to make such transfer possible.

Secondly we reiterate our suggestion of last week that we may as well jettison the notion of linking capital plus reserves with Deposits; instead we may have a ratio of reserves (of the inner, non-public kind, preferably) to specific kinds of risk assets.

Thirdly the Indian Banks' Association would be justified in asking for a tax concession in respect of transfers to inner reserves up to specified limits.

Fourthly the IBA would be wise to reconsider the inter-bank agreement on Deposit rates. A steadily increasing number of bankers are beginning to feel that little is gained, by way of Deposits, with the rates pitched high, but quite a lot is lost, by way of interest paid.

Then, fifthly, there is the question of adequate recompense being earned by banks for various kinds of services that they render. One such service is the credit limit; and the moot point is whether a commitment charge should not be levied. While the borrowing rate for constituents is not high in India, the services that they get gratis are considerable. And let the constituents now be required to pay.

It would be heartening if such constructive suggestions were contained in the response that the IBA prospectively is to make to the Reserve Bank proposals. We shall wait and see, as the cliché goes, what happens.

BANK RETURNS

Advances Fall Again

A sharp fall in Active Note Circulation, a considerable rise in the State Bank's Deposits and a fair-sized contraction in Scheduled Bank Advances highlight the latest banking returns.

According to the returns of the Reserve Bank for 29 September, Active Note Circulation has contracted by Rs 11.46 crores to Rs 1,857.24 crores, and there has been inflow of Rupees Coin for Rs 1.33 crores. Foreign Securities are unchanged at Rs 116.86 crores, and Rupee Securities practically so at Rs 1,528.80 crores. Hence the return of currency is wholly reflected in the Reserve Bank's cash in the till, which has improved by Rs 12.81 crores to Rs 34.80 crores.

Other Deposits, as shown in the return for the Banking Department, are unusually lower by Rs 16 crores at Rs 146.69 crores; and this may well involve a special transaction relating to counterpart funds, with the Centre as the recipient of some payment. Indeed the Centre has been able to cancel ad hoc for perhaps Rs 20 crores, with Investments shown lower by roughly Rs 29 crores at Rs 231.24 crores, Rs 11 crores of the decline being ascribable to sale to the State Bank. The State Bank's purchase of securities is incidentally partly reflected in the fall of Rs 5.83 crores to Rs 78.47 crores in the Reserve Balances of member banks. After meeting the liability of Rs 5.68 crores in respect of Treasury Bills purchased and discounted by the Reserve Bank which matured during the week, the Centre's balances have been marked up by Rs 4.42 crores at Rs 59.46 crores. States' Deposits, too, have improved by Rs 1.13 crores to Rs 22.49 crores, but then the States have borrowed Rs 3.83 crores more at Rs 49.36 crores in the form of bills and means credit from the central banking institution.

The Other Loans and Advances of the Reserve Bank have fallen by Rs 2.56 crores to Rs 133.33 crores, and that the fall is wholly on account of reduction in debt by Scheduled Banks is suggested by the decline of Rs 4.16 crores to Rs 5.34 crores in the Reserve Bank's Advances against usance bills.

Lastly as far as concerns the Reserve Bank returns, Balances Held Abroad have fallen fairly steeply by Rs 5.55 crores to Rs 12.87 crores, and the foreign assets shown in the Reserve Bank statement are now below the Rs 130 crore mark.

PROGRESS OF 1961 SLACK SEASON

	(In Rs Crores)		
Reserve Bank	28-4-61	Latest Week*	Change
Active Note Circulation	1,982.43	1,857.24	-125.19
Banks' Deposits	78.16	76.47	+ 2.31
Other Loans & Advances	126.47	133.33	+ 7.86
Adv. Against Usance Bills	21.09	5.34	- 15.75
State Bank			
Deposits (see note)	549.70	532.62	- 17.08
Cash Inc. Money at Call	27.87	29.63	+ 1.75
Giltedged Investments	237.47	261.29	+ 23.82
Total of Advances	267.33	242.47	- 24.86
Other Scheduled Banks			
Net Deposits	1,367.04	1,415.82	+ 48.78
Cash Inc. Money at Call	153.18	149.14	- 4.04
Giltedged Investments	324.99	357.01	+ 32.02
Total of Advances	1,644.78	1,611.99	- 32.79

* Week ended 29 September for Reserve Bank and State Bank.

Week ended 22 September for Other Scheduled Banks.

Note: State Bank figures are distorted by Rs 24 crores loss in Deposits owing to repayment of counterpart funds.

The State Bank return for 29 September discloses a welcome rise of Rs 8.15 crores to Rs 532.62 crores in Deposits. This has been taken advantage of to make tap purchase of gilt-edged, the portfolio being marked higher by Rs 11 crores at Rs 261.29 crores. The total of Advances is more or less unchanged at Rs 242.47 crores, and thus cash balances, including money at call, are lower by Rs 1.82 crores at Rs 29.62 crores.

Deposit resources of Scheduled Banks improved during the week ended 22 September, thanks to the return of disbursements by way of Puja bonus. Net Demand Deposits are lower by Rs 1.77 crores at Rs 818.38 crores, but this is much more than offset by the rise of Rs 5.51 crores to Rs 1,121.90 crores in net Time Deposits. The total of Advances, for much the same reason, has contracted by Rs 9.65 crores to Rs 1,235.01 crores. The gilt-edged portfolio is better by Rs 1.67 crores at Rs 607.28 crores, and to this we have to add the nearly Rs 1 crore of disinvestment by the State Bank to get the figure of securities absorption by other Scheduled Banks. Borrowings from the State Bank are lower by Rs 0.76 crore at Rs 17.45 crores, and those from the Reserve Bank by Rs 1.63 crores at Rs 15.62 crores. As a result cash balances including money at call have moved down by Rs 1.75 crores to Rs 180.58 crores.

CHARTERED BANK Rights Issue

The Manager, the Chartered Bank, Calcutta, has received the following cabled information from his Head Office in London:—

"Stockholders have today raised Authorised Capital to pounds ten million and Stock Exchange have granted quotation for and permission to deal in 1,100,000 New one pound shares. Issued Capital now £6,600,000—"

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 3 October 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs. 99.375 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bombay, Kanpur, Madras, Nagpur and New Delhi up to close of business on Monday, 9 October 1961 and at Bangalore and Calcutta up to 11 A.M. on Tuesday, 10 October 1961. Successful tenderers should make payment on

Friday, 13 October 1961. Other conditions are as usual.

During the week ended 29 September 1961 Government of India Treasury Bills for Rs 100,16,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 4 to 7 October 1961 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 27 to 30 September 1961 amounted to Rs 70,00,000.

UK

Cut in Bank Rate

Britain has cut its Bank rate by $\frac{1}{4}$ per cent to $6\frac{1}{4}$ per cent. A statement made by the Bank of England in this connection says: "The very high Bank rate of 7 per cent was introduced to reinforce the other restrictions on credit and to help in relieving the pressure on sterling. . . . Enough progress has been made towards these short-run objectives to justify the reduction of one-half per cent without prejudicing the attainment of the long-run objectives which the Chancellor of the Exchequer announced in July."

The pound is currently around its highest levels since mid-November last year. Since July it has gained 3 cents in terms of the US dollar, and mildly improved its position against leading European currencies. The Bank of England earlier this week made it clear that Britain would not welcome any inflow of International "hot money" such as occurred in 1960 through the attraction of high interest rates.

STERLING AREA

Reserve Touch Peak Level

The central gold and convertible currency reserves of the Sterling Area rose by £24,000,000 during September and stood at £1,269 million on 30 September. The easing of speculative pressure on sterling continued throughout September and the reserves now stand at their highest level since the second quarter of 1951. During the month Britain received the balance of its recent drawing from the International Monetary Fund, amounting to £18,000,000. The reserves would have risen by considerably more than the recorded increase of £24,000,000 had not a further large instalment of the "Basle Agreement" debts been repaid. Evidence of this is to be found in the consistently high rate which

sterling has maintained in terms of the United States dollar throughout September. In the course of the month, the "spot" sterling rate has risen from \$2.80 $\frac{1}{2}$ to \$2.81 $\frac{1}{2}$. The improvement in the sterling-dollar rate which began with the Chancellor of the Exchequer's measures of 25 July was, therefore, fully maintained during September.

Snippets

Money supply with the public registered a fall in July 1961 to Rs 2,808.74 crores from Rs 2,873.02 crores in June. The decline was pronounced in respect of Deposit money which fell from Rs 903.37 crores in June to Rs 871.88 crores in July. The currency with the Public during July stood at Rs 1,936.87 crores as compared with 1,969.64 crores in June.

The total secured advances of the scheduled banks in the country declined from Rs 1,135.07 crores as on 28 April 1961 to Rs 1,113.10 crores on 26 May 1961 and further to Rs 1,105.86 crores at the end of June 1961. Advances against Food Articles were higher at the end of June at Rs 155.17 crores against Rs 145.25 crores on 23 April. But, advances against Industrial Raw Materials and Manufactures and Minerals declined respectively from Rs 150.39 crores and Rs 411.06 crores to Rs 129.40 crores and Rs 404.31 crores. There was a pronounced rise in the advances against wheat from Rs 2.89 crores as on 28 April 1961 to Rs 8.97 crores at the end of June.

Receipts of small savings during 1960-61 amounted to Rs 329.98 crores and outstandings at Rs 770.80 crores. Comparable figures for 1959-60 are Rs 305.70 crores and Rs 672.99 crores respectively. Outstandings at the end of June 1961 are placed slightly higher at Rs 777.66 crores.

The foreign exchange reserves of the country after rising in February 1961 to Rs 320.94 crores from Rs 316.86 crores in January declined during the subsequent months so as to be placed at Rs 283.99 crores in April. A small rise in May halted the decline which however continued during the next two months so that the reserves are now at the lowest level of Rs 260.02 crores.

The Bazaar Bill Rate remained steady at 12.00 and 13.92 respectively in Bombay and Madras for the first seven months of 1961, but moved between 11.50 and 13.00 in Calcutta.

The Index Number of Variable Dividend Industrial Securities rose steadily from 164.9 in January 1961 to be placed at 183.5 in June 1961. The index, however, recorded a small decline in July being placed at 182.8.

The reserves of the scheduled banks with the Reserve Bank of India for July 1961 show an excess to the tune of Rs 19.68 crores the statutory minimum being Rs 64.37 crores. Comparable figures for May 1961 are Rs 12.43 crores and Rs 64.13 crores respectively.

Notes

PLANNERS

Exchange of Ideas or Exchange of Goods?

Identity of experience in Asian countries may not lead to the ready acceptance of planning but ten years of the Colombo Plan have probably made all countries, industrially backward, more aware of the need to curtail imports, to attract outside capital, and to create new local industries. The virtues of economic co-operation are more often preached than practised in public and the fact that most Asian countries are ready to give help for pioneer industrial ventures in Burma or Malaya may be one reason for arguing that exchange of ideas will not lead to the exchange of goods. If India like Japan is a major (but not new) industrial nation today, the trading opportunities are still limited by India's handicaps in regard to costs and prices. A larger intake of raw materials might help India to sell her surplus of sugar or salt easily. But the whole problem is one of price, just as in the case of jute manufactures. And a common market in S. E. Asia may be hard

to promote, because countries like Malaya depend on the old export markets in Europe and America for rubber and tin. The Asian countries can offer little but if a larger territorial arrangement is devised, Malaya may prove a better market than Indonesia.

The plea that every nation should go in for secondary industry from, biscuits to tyres, seems irresponsible for the international division of labour would be compromised seriously and the supply of minerals for instance, would suffer if the smaller countries like Burma or Malaya were to go in for steel-making or fabrication. The fact that planning has not checked the excess of economic nationalism at a time when capital requirements are large and urgent may be regarded as a paradox. That all countries lean today towards socialism may also signify more than supposed, for capital formation for domestic investment would be prejudiced to some extent, whether it is in Burma or Ceylon. The present competition for aid may require modification, but the Delhi Conference has not presented any table of priorities for the countries disposed to offer assistance. It is not perhaps diplomatic today even to tender advice on the advantages of postponing non-essential development schemes and to concentrate on food and fertilizer production in the first instance and leave cement or chemical production for the second stage of development. The impact of the UK's entry into the ECM may be slight for Malaya but serious for Hongkong. Asian Planners have more cross-purposes to straighten out than common programmes to pursue at the moment.

IMPORT POLICY

Positive Aid to Exports

The latest policy announcement on trade control may owe little to the memoranda submitted to the committee now engaged in a review of results of controls and licensing. But most memoranda have stressed the need for positive aid to exports. But exports can only rise, if prices are reduced. And the Indian Chamber of Commerce has pointed out that installed capacity in existing industries must be fully utilised to secure a surplus for export and also that essential imports for the

operation of industry must be available. The Tariff Commission could help by calling attention to the present cost structure of industries. While many argue that retention prices should leave a fair return on capital to producers, the major problem is one of raising output to the level of installed capacity. In most industries, output is below rated capacity for various reasons. And manufacturers are now less keen on expansion of capacity than on maintenance of optimum output, by reducing holidays, raising production per man hour and in a sales policy that ensures rapid distribution. Trade Commissioners cannot help so much as the provision of essential supplies at home and ancillaries must be got without difficulty for the engineering or other industries. Priority for exports in the matter of railway transport or the offer of incentives might help shippers though it is apparent that the regulation of prices is vital for keeping export markets for raw cotton or oil seeds.

The fact of competition abroad cannot be ignored at present in the case of all items except mica or shellac and the Indian Chamber of Calcutta has mentioned the competitive conditions as an argument against compulsory exports. It may be added that reduction of internal consumption in the case of tea or coffee will not help to ensure larger exports. Removal or reduction of export levies must be considered necessary at present as also drawbacks and refunds. The diversification of local manufactures may lead to exports of spares and stores for overseas customers. This is perhaps important enough for engineering exports. The Indian Chamber has at least recognised that new enterprises in which foreign capital participation takes place are entitled to consideration as new enterprises afford employment opportunities. The savings effected on some lines of imports may be offset by larger outlay and the Government that now saves on oil prices must be willing to forego or reduce export duties or help essential imports in all deserving cases.

COST INFLATION

Corrosive Effect

After last week's conference on housing and the need to help the building trades, it was only natural that some difficulties in the way should be mentioned. At the annual meeting of the Southern India Chamber of Commerce on 29 September. Mr M. A. M. Muthiah Chettiar mentioned the housing problem in relation to current costs. He pointed out that inflation has hit the house-owner and low income groups find now that co-operative housing schemes are far more expensive than anticipated. The monthly instalments are upgraded and

the subscribers find that longterm contracts are harder to accept. The middle class that aims at saving and investment is seriously affected by the continued rise in prices because the habit of saving is destroyed. A reference to the high prices of commodities said to be in surplus at present found a place in the President's review of price levels. Taxation has raised prices in the case of articles subject to both excise and graduated sales tax at present. The inflation of costs, more than prices, requires to be dealt with but inefficient distribution system throughout the country is obviously another reason for the rise in prices. It was natural for the President to refer to the export drive proposed but Mr Muthiah Chettiar objected to schemes for export at a loss, for that would obviously advertise both the further depreciation of the rupee and the country's acute need for foreign exchange. Keeping down costs of production implies restraint in wages and the avoidance of intermediate taxes on processed materials. It is easy to levy excises but it is hard to keep down prices which raise costs and price most Indian goods out of export markets. The export problem for India is not different from that of the UK, a mature industrial country with far-flung trade connections. And India has the disadvantage of having lost tariff advantages in Burma and Pakistan—natural markets for most of her manufactures.

ICAR

Notable Advance

A "notable advance" in the science and practice of agriculture is claimed in the annual report of

THE HONGKONG AND SHANGHAI BANKING CORPORATION
(Incorporated in Hong Kong with Limited Liability)

S. T. SADASIVAN

the Indian Council of Agricultural Research for 1960-61. Development of rust-resistant wheat, distribution of four new maize hybrids which could raise production by 20 to 40 per cent, release of three new strains of cotton, effective implementation of rinder pest control schemes are among the results of "practical utility" achieved during the year. Research continues to be the major function of the ICAR. Altogether 105 new schemes of research in the fields of agriculture, animal husbandry and allied subjects at a total cost of Rs 38.47 lakhs were sanctioned during the year. Concrete steps have also been taken to fill the gaps in agricultural research during the Third Plan with the establishment of new central and regional research institutes.

The foundation both for research and extension has to be laid by a properly designed system

of agricultural education which could meet the requirements of planned development. Though the number of agricultural colleges in the country has increased during the Second Plan from 30 to 53 and their intake capacity from 1989 to 5600, grave doubts have been expressed about the adequacy of the number of graduates turned out as well as their quality. The requirement of agricultural graduates during the Third Plan has been estimated at 20,000. Mr S. K. Patil recently referred to the "mushroom growth" of many private colleges and to the many deficiencies found in agricultural educational institutions. Two Indo-American teams which investigated the position have drawn attention to the defects and suggested the lines of reform of the existing system of agricultural education. The recommendations are now being reviewed by a high level committee and Mr Patil expressed the hope that it would be

possible to come to early decisions on those recommendations.

RURAL HOUSING Freedom for the Villagers

Mr S. K. Dey, Union Minister for Community Development & Co-operation, was refreshingly outspoken when he addressed the seminar on "Housing Co-operatives", organised by the National Buildings Organisation on its inaugural day. This is the eighth in the series of seminars organised by the NBO. While the earlier seminars were mainly concerned with the technological aspects of housing, the present one, as Mr C. P. Malik, Director of the NBO, pointed out, is related to the socio-economic aspects, and this lends point to the suggestions made by Mr S. K. Dey. Dealing with rural

housing in particular, Mr Dey warned against the attempt to impose any rigid pattern of designs or construction on the villagers. Such an attempt was foredoomed to failure. The Rural Housing Cell, for instance, was producing a lot of excellent literature on the subject. But so far the villagers have been reluctant to accept the suggestions put forward. This should not, however, be considered surprising when set against the record of the Government in the matter of adopting the results of research in its own laboratories. No Government building has yet been constructed with the sort of new type bricks, tiles or waterproof plaster which the villagers are asked to adopt.

One of the problems of a comprehensive housing programme is 'how to prevent architects and engineers from imposing a design of barracks on the villages.' Direction from the top, according to Mr Dey, should be confined to the preparation of layouts and floor plans and provision of basic civic amenities. The rest may safely be left to the initiative of the villagers themselves who, after all, are the persons who have to live in the houses. It is however essential that housing materials should be made available at reasonable prices. It will not be correct to assume that the villagers could be left to their own devices in this matter. For, with the growth of population, the traditional building materials—thatch or bamboo—are no longer to be had for the taking. The villager has to pay a price and a pretty stiff one too. If the effective life of these materials is taken into account, the cost will work out higher than for the more durable materials used for urban dwellings. Dependence on machine-made products is, therefore, unavoidable even for rural housing. Moreover, it is hardly reasonable to expect the villagers to adopt improved methods of agriculture if they have to continue to live in the same old type of huts as their forbears, with their domestic animals for warmth and company. Rural electrification will remain a costly fad without a programme of improved rural housing. Economic development is an integrated process. Modern technology cannot be superimposed on primitive housing.

★ DIVERSIFICATION Impressive Evidence

The desire for launching new enterprises in new directions is again reflected in the formation of companies handling iron and steel. Even sugar mills are anxious to diversify and the prospect of large supplies soon has induced many to think of rolling mills in new places. The most

important item of intelligence in the first quarter is that the oil refineries in Bombay mean to produce lubricating oils and soon make imports unnecessary. The production of batching oil at the rate of 60,000 tons a year by Burmah-Shell will help the jute mill industry. Recent support for Indian Cable is not due mainly to the last report; the production of paper insulated and plastic insulated cables will go up very soon.

The licensing news relates also to the proposed manufacture in Madurai District of clutch plates and brake linings for automobiles by Jayaraj Nadar & Sons. The big transport operators in the South with an assured revenue are now looking towards industry, especially, the ancillary manufacture business that is familiar already. Expansion in the engineering industry or the use of bagasse for paper-making is now, more or less routine but chemical progress is news and Tata-Fison is starting the manufacture of household sprays. The graduated increase in spindleage in existing cotton mills is accompanied by some provision even for new units meant to serve the handloom industry. The formal entry of rice bran oil as a new item, for export also, needs mention. The plywood industry is expanding; so is cement but more important is the entry of Philips India into the manufacture of nuclear measuring test equipment on a three-year programme. Electronics is set for progress at a sparkling pace. The big chemical plant started by Standard Mills will produce chlorine, caustic soda and some acids. ICI starting terylene manufacture in Bombay is not "news", but Rallis' expansion in the chemical field is something to catch the eye of the market. Of course Alembic is expanding and the shares in Bombay look cheap now as compared with shares of Chemical and Dyestuff firms. The latest issue of the Journal of Trade and Industry confirms current talk about S. I. Viscose attempting the production of pulp from hard woods. Many are likely to assess immediate prospects for Braithwaite or Gwalior Rayon from the inception of the new lines. More significant of the change in industrial outlook is the production of machinery in India. Foreign firms are interested. The share market will be guided by the proposal to increase the capacity of Mettur Chemical in regard to caustic soda and bleaching powder. But more interest will be shown in the new undertaking contemplated by India Cements for making PVC resins and compounds (with the help of a very big US firm) to the extent of 6,000 tons a year. This has led to suggestions about an early increase in India Cements' own paid-up capital by means of a rights issue to existing shareholders.

FAO REPORT

Population Outstrips Production

The following are highlights of the world agricultural situation, drawn from the 1961 issue, released today, of the FAO annual report on the state of food and agriculture in the world. The report is based on data available to the Food and Agriculture Organisation up to 30 June 1961:

Preliminary FAO estimates of agricultural production in 1960-61, for the world excluding Mainland China, show a rise of no more than one per cent over the previous season. This is less than the estimated population growth of 1.6 per cent per year. Taking the last two seasons together, production appears to have continued to increase slightly faster than population. If Mainland China, which had a very poor harvest, could be included in the world index agricultural production it would probably show a decline in 1960/61 over 1959/60 instead of a modest increase. There were fairly large increases in the Far East (other than Mainland China), Western Europe and Oceania. Shortfalls were in Latin America and in Eastern Europe and the USSR. Elsewhere there were small increases. The most encouraging development was an increase estimated at about 3 per cent in the Far East (excluding Mainland China) and per caput food production in this region has finally regained the average level of the immediate pre-war years.

World food production per caput has changed very little since the big increase two years ago in 1958/59 though it is still some 14 per cent more than before the war. In 1960/61 per-caput food production in the Far East (excluding Mainland China) has finally regained the pre-war level. In Africa it has been declining for some years and is now fractionally less than before the war. In Latin America where population growth is particularly rapid the pre-war level was briefly exceeded in 1956/57-1958/59, but per-caput food production has subsequently fallen back. In the Near East it is still above the pre-war level, in spite of some deterioration in recent years. It seems that with the recent rapid growth of production in the USSR per caput food production in Eastern Europe and USSR "has increased more rapidly since the war than in any other region" of the world.

In 1960, the world catch of fish rose to about 37.5 million tons—about six per cent over 1959. World removals of roundwood in 1960 increased by about three per cent over the previous year to 1,770 million cubic meters.

Stocks of many agricultural products continued to increase in

1960/61. There were particularly large increases in the stocks of coarse grains, butter and sugar. The tendency for stocks to accumulate has spread to certain tropical tree crops i.e. coffee and now cocoa.

Although food supplies have improved in the worse-fed parts of the world, they are lagging further behind the levels in the better-fed areas. Increased supplies in the less developed regions came from crop products and in the more-developed regions from live-stock products.

Volume of world trade in agricultural commodities rose by 5 per cent as against an increase of 11 per cent in the overall volume of world trade (including non-agricultural products). Total value of world agricultural exports rose by about six per cent at current prices: "terms of trade" of agricultural exports declined, however, for the sixth year in succession and the "real" value of agricultural exports as measured by their capacity to purchase manufactured goods, rose by only three per cent. Increases in the volume and "real" value of agricultural exports in 1960 were largely confined to Western Europe and North America. Oceania's "real" earnings from agricultural exports fell by 4-5 per cent. Africa's by about 6 per cent. Those of the Far East also fell slightly but for other regions there was relatively little change. During the past ten years commercial agricultural exports (i.e. excluding exports on special terms) rose by about 33 per cent in volume, 14 per cent in value at current prices and only four per cent in value in "real" terms, thus bringing only "little benefit to agricultural exporters as a whole". The Far Eastern region, which had already been a net importer of food products since the end of the war in 1960 became for the first time a net importer of agricultural products as a whole. Most of the recent modifications in agricultural policies and programmes in developed countries have been concerned with the problem of avoiding the further accumulation of surplus stocks, while in most under-developed countries they have aimed at increased production to meet growing needs.

Of the 71 countries for which indices of retail food prices are available, prices advanced in 1960 in comparison with 1959 in 49 countries, remained the same in six and declined in 16 countries. Despite the downward drift of prices in world markets, the consumer had, generally speaking, to pay more for his food, owing to domestic price supports and rising costs of processing and distribution.

Regarding the outlook for 1961-62, the report says that indications as of the end of June 1961 are that the rise in world agricul-

tural production may again be comparatively small. Setbacks due to bad weather appear to be rather numerous. Supplies of most commodities will remain heavy so that there appears to be little prospect of any substantial recovery in world prices for agricultural products, and thus in the export earnings of the less-developed countries.

★ ELECTION SYMBOLS

Swatantra Makes the Grade

The revised criteria adopted by the Election Commission leaves the Congress as the only party entitled to national status for the purpose of reservation of distinctive election symbols in all the States and Union territories. While the Pair of Yoked Bulls are free to range over the entire country, the "beats" of the Hut, Corn & Sickle and the Lamp, which enjoyed the same privilege in the last election, are more circumscribed. But Swatantra are enabled to hitch their wagon to the Star, at least in five of the States and one union territory. (In Bihar, however, they will have to "ride" a bicycle.)

For the first general election, parties were graded on an ad hoc basis, 14 out of 29 parties asking for it were accorded national status with reserved distinctive symbols in all the States. Fifty-nine parties were similarly recognised in the States. The first general election, which provided data regarding the extent of electoral support commanded by each party, also indicated the need for drastic pruning. The Election Commission decided that a party's candidates must have polled at least 3 per cent of the total valid votes polled at the parliamentary elections to secure recognition as a national party, and at the assembly elections in a State to secure recognition as a State party in that State. The application of this yardstick left only four national parties, and 19 State parties to contest the second general election.

The application of the same method for recognition of national and State parties, it is recognised, would lead to some anomalies. For instance, a party whose support is limited to a few States could get recognition all over the country if it polled 3 per cent of votes in parliamentary elections, even though it did not contest single seat in other States. The new principle adopted by the Commission—to recognise the parties Statewise, after taking into account the electoral support the party had in the State in parliamentary as well as assembly elections—is certainly more rational. But it will not serve to dispose of all claims to recognition on an equitable basis.

PEOPLE ARE TALKING ABOUT LIC

Every year, about Rs 30 crores is received by people who own life insurance policies (or by their dependents). And it is interesting that more than 70% of this money is paid to policyholders on maturity of their policies.

This fact clearly demonstrates that the benefits of Life Insurance are being largely enjoyed during the life-time of the policyholder himself.

Millions of people are today realizing that Life Insurance is a unique investment of security—both for themselves and for their families. And millions of people are placing their trust in the soundness of the LIC to safeguard their interests.

Life Insurance Corporation of India

The test of electoral support in the last election is clearly inapplicable to parties formed after the election. In such cases the Commission has adopted an ad hoc basis for recognition, taking into account the following which the parties command in the legislatures. Under this test, Swatantra has been able to get recognition in Andhra Pradesh, Bihar, Gujarat, Madras, Uttar Pradesh and Himachal Pradesh. Restriction on the allotment of symbols has been relaxed so that candidates of a party which has been allotted a reserved symbol in one State have a prior claim to the same symbol in constituencies which they contest in other States where it is classified as a 'free' symbol. And if such a free symbol is allotted to the party's candidate in a parliamentary constituency the same symbol will not be allotted to any candidate in any of the assembly constituencies comprised within that parliamentary constituency unless

that candidate also belongs to the party.

The Commission has also given notice of its intention to tighten the requirements for recognition after the next elections. The minimum electoral support required for recognition in a State has been increased from 3 to 4 per cent of total valid votes cast either at the parliamentary elections or assembly elections in that State. The Commission has also laid down that votes secured by candidates who have forfeited their security deposits will not be taken into account. This is intended to remove the incentive to set up candidates indiscriminately on the party ticket merely in order to qualify for recognition in subsequent elections.

SOAPS & COSMETICS

Export Prospects

Soap and cosmetics are subject to excise duty and that is one

good reason for the plea that production must be raised. Another is that prices are up and sales resistance has developed. Mr Godrej called attention to the results of fiscal policy. The small unorganised units enjoying tax concessions are forging ahead. Yet they have no change of building up an export connection. The major problem today is the excise levied on raw materials like oils. The sharp rise in oilseed prices this year does not sustain hopes of large, regular exports of vanaspati or soap, while Indian soap manufacturers today do not comment on the rise of a giant international combine they are compelled to refer to the difficulties of expansion according to plan. It is also necessary to keep in mind the need for imports of copra and palm oil to keep the Indian industry going. The surplus following the restraint of home consumption by the higher prices prevailing today may justify special facilities for exporters

who have still the advantage of offering competitive goods to adjacent countries on the strength of brand names.

If it is futile to talk of non-edible oils being used for soap-making, it is yet relevant to speak of a minimum outlay for advertising abroad. The value of such investment may not be apparent to all but a rising standard of living means a bigger demand for soap in the tropical countries. One point made plain is that the larger units able to invest on larger capacity require help. They alone can exploit adequately export opportunities, present or potential. The soap manufacturers' plea is based on the plan for larger output but sales also must go up. The natural advantages we have should be supplemented by keeping prices low and helping exports to expand.

MYSORE PAPER Poised for Expansion

The Mysore Paper Mills Limited is on the threshold of considerable expansion of its capacity. It is at present an integrated pulp and paper unit with a capacity of 8000 tons. The present scheme of expansion envisages the increase of capacity to 18,000 tons, the raw material to be used being exclusively bamboo which is available in sufficient quantity. The scheme is estimated to entail a total expenditure of Rs 350 lakhs of which Rs 100 lakhs are proposed to be raised by rights issue and the balance as loans from the Industrial Finance Corporation, Commonwealth Development Finance Company Limited, Industrial Credit and Investment Corporation of India and bank borrowing and other resources. The plants required are to be purchased from Germany, the UK and from indigenous sources.

The developmental activities envisaged under the expansion scheme will at once increase the production sizably and go a long way towards making the company much more efficient than at present. The unit now suffers from imbalance particularly in so far as its paper making capacity exceeds its pulp making capacity. Another drawback is that its present size does not permit installation of a modern soda recovery plant which is essential if economical working is to be obtained. These will now be corrected as the expanded unit will have enough pulp making capacity to feed the existing two paper making machines of 15 tons each and also the new paper machine of 30 to 35 tons capacity.

Speaking at the twenty-sixth ordinary general meeting of the company at Bangalore recently, Mr M. D. Shivananjappa I.A.S., Chairman, and Managing Director, has pointed out that manufacturing costs are mounting on

account of increase in prices of raw materials, power, coal and chemicals. The increased excise duty on caustic soda, an essential basic raw material of the paper industry and the higher incidence of railway freight have further added to expenses. The developmental activities now in progress will pave the way for securing reduction in costs. Even so, the financial stringency may not ease to the extent required to show any considerable improvement in earnings as the selling prices of the company's products are subjected to an uneconomic level in common with the other units in the industry. Much depends on the recommendations of the Tariff Commission in this regard and Government's decision on them.

ALUMINIUM

Target Inadequate

Sir Padampat Singhania, Chairman of the Aluminium Corporation of India Limited, has raised some important questions connected with the development of the aluminium industry in his address to the twenty-third annual general meeting of the Company held last week. He has particularly drawn attention to the inadequacy of the target of production envisaged for this industry in the Third Plan. This fact has been evident even to the Planning Commission itself which has been known to be considering the question of revising the target upward to 115,000 tons. But Sir Singhania holds the view that even this revised target of production will fall short of the country's requirements at the end of the Third Plan period. Though there are no reliable estimates of demand which, perforce have to be tentative and somewhat arbitrary, the factors governing the pattern of demand for aluminium would seem to indicate a future growth in demand for aluminium that will be much more pronounced than witnessed in the past. A basic factor that will considerably influence the pattern of demand for aluminium is the limited resources of the country in copper, nickel and zinc, and the substitutability in varying degrees of aluminium for these products. Considering that import of basic metals imposes a serious strain on the foreign exchange resources of the country mainly on account of import of the scarce base metals, the process of substitution will have to be intensified and speeded. The Government's policy is also directed to conservation of the foreign exchange resources by encouraging the substitution of copper and other base metals by aluminium. Whether therefore, self-sufficiency in aluminium would be attained with a production target even at the enhanced level of 115,000 tons remains a matter open to question.

At least considering the plentiful resources of the country in bauxite ores which is now a proven fact, there does not seem to be any reason for restricting the development of the aluminium industry. There is also another factor which would seem to favour a further upward revision of the production target for the industry. This relates to the interest being displayed by all important aluminium producers of the world in setting up aluminium plants in India in collaboration with the private sector.

For the proper development of the industry on economical lines, there are other important conditions to be satisfied to which Sir Singhania has drawn attention in his speech. The most important consideration is the availability of electric power at rates that will be reasonable. The supply of bauxite to the aluminium producers is also a question that will have to be solved in a satisfactory way to ensure adequate supplies to the producers. Sir Singhania has suggested reservation of contiguous areas having maximum workable deposits to the producers.

SHIPPING

Problems of Expansion

In his address to the annual general meeting of the shareholders of the India Steamship Company Limited, Sir A. Ramaswami Mudaliar, Chairman of the Company, has referred to the continued depression in freight rates and the consequent problem faced by the shipping companies in keeping themselves in profitable working conditions. The depression in freight rates reflects excess shipping tonnage in the context of stagnant international trade. However, the earnings of shipping companies have been affected not only by the depression in freight rates but also by the increased commitments in respect of wages to staff and other non-monetary benefits to them. The question of revision of freight rates is, therefore, of importance to the shipping companies, but as Sir Ramaswami Mudaliar has pointed out, is one which bristles with difficulties and conflicting interests of different countries. Any increase in freight rates should be within the capacity of the commodities and should not also affect their competitive positions. So far as the Indian shipping companies are concerned, the more important problem is that of minimising the uneconomic competition and other malpractices. Importance is therefore attached to the agreement that has been arrived at in November, 1960 which defines the percentage of earnings which the lines under the different flags would be allocated at the end of each year. This agreement, Sir Ramaswami Muda-

liar states, will ensure better working of the conference system and reduce unhealthy competition and malpractices.

Sir Ramaswami Mudaliar also touched on the question of possible competition developing between the public and private sectors. The question has been brought to the fore by the entry of the Western Shipping Corporation into the India/UK Continent conference. It has been explained by Sir Ramaswami Mudaliar that the Corporation applied for only a limited number of ships being allowed to ply in the conference route as ships of a member of the conference. Having regard to the previous statements of the Government spokesmen there does not seem to be any cause for concern since the Government's policy as reflected in such statements underlines the supplementary roles of the two sectors.

On the question of expansion of the shipping industry, on which there can hardly be any difference of opinion, Sir Ramaswami Mudaliar has pleaded for deep and cautious thinking. This is necessary in view of the different aspects presented by the question of development of the tanker, liner or tramp lines. The question of the development of tonnage on different routes is also relevant and can be settled on the basis of prospective tonnage developing in respect of each of them. Expansion on any of these lines, according to Sir Ramaswami Mudaliar is a problem in view of the legislative development regarding development rebate. In terms of this legislation the generous provision of development rebate at 40 per cent of the cost of the ship has been made subject to the condition that the shipping companies provide 75 per cent of the allowance out of their profits before the declaration of any dividend. The legislation has harsh implications to the shareholder's interests. The plea of the shipping companies for being allowed to spread the payment of provision of such rebate over a period of years has been supported by the National Shipping Board.

WHOLESALE PRICES No Change

The official wholesale price index (with the year ended March 1953 as 100) remained stationary during the week ended September 16, 1961 at the earlier week's revised level of 124.6. The index was lower by 1.7 and 0.4 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

A fall in the prices of Rice at Nowgarh and Contai (-8% each), Gram at Delhi and Oranges (-7% each), Jowar, Bajra, Cashewnuts, Gingelly oil and Fish (-3% each), Ragi, Urad, Dalda (Vanaspatti) and Tea (-2% each) and Barley, Maize, Mung, Masur, Coconut oil, Eggs and Coffee (-1% each) was neutralised by a rise in the prices of Onions (+22%), Cloves (+10%), Wheat at Rajkot (+6%), Rice at Jayanagar (+5%), Cardamoms (+3%), Potatoes and Milk (+2% each) and Groundnut oil, Betelnuts and Salt (+1% each), and the index for 'Food Articles' stood unchanged at its previous week's revised level of 121.3.

The index for 'Tobacco' receded by 0.5 per cent to 96.0 due to a decline in the prices of raw Tobacco (-1%).

The index for the 'Fuel, Power, Light and Lubricants' remained stationary at its earlier week's level of 121.5.

Higher prices of Lac (+3%) and raw Cotton, raw Jute and Linseed (+1% each) raised the index for 'Industrial Raw Materials' by 0.3 per cent to 138.2. The prices of raw Silk (-3%) and Castorseed (-1%), however, moved down.

The index for 'Intermediate Products' declined by 0.4 per cent to 140.7 due to a fall in the prices of Rayon Yarn (-3%) and Zinc and Tin (-1% each). The prices of Linseed oil (+1%) showed an advance.

The index for 'Finished Products' worked out to 122.8 as against 122.7 (revised) for the earlier week. Items which showed variations during the week were: Bricks & Tiles (+2%), Jute manufactures (+1%) and Oil cakes (-1%).

NEWS IN BRIEF

The Shipping Corporation of India Limited, a Government of India undertaking, formed by the merger of the Eastern and Western Shipping Corporations started functioning as one unit on 2 October. The Corporation which has its head-quarters in Bombay operates scheduled passenger cum cargo services on the Bombay-East Africa run; Madras-Singapore run; and Calcutta-Madras run. In addition to these, the Corporation also operates regular cargo services (as member of governing conferences) to and from the UK, the Continent, the USSR, Poland, the Middle East, Australia, the Far East and Japan.

The Government of Kerala has decided to establish nine industrial estates in the State during the Third Plan period. A sum of Rs 2 lakhs is allotted for each district for the current financial year.

The Government of Rajasthan has allocated an amount of Rs 7.5 lakhs for the establishment of a ceramics institute at Alwar during the Third Plan.

India's balance of payments for the period January-March 1961 showed a deficit of Rs 157.3 crores on current account. Total receipts are estimated at Rs 345.8 crores against the aggregate payment liabilities of Rs 503.1 crores.

A new plant for the production of transformers, motors and industrial high tension and low tension switchgear in collaboration with the AEG of West Germany will be set up in the Mysore State. The plant will have an annual turnover of nearly Rs 7 crores when in full production.

As a measure of further encouragement to the cottage match factories for using bamboo, the Government of India has decided to reduce further the rate of duty applicable to them by 25 nP per

gross of boxes of 50s and 20 nP per gross of boxes for 40s. The new concessions will be available only to those factories whose annual production do not exceed 50 million matches.

The Government of India has granted licence to a private industrialist to set up a factory in Salem for the manufacture of alloy, tool and special steels with a production capacity of 50,000 tons per annum.

Mr Bimla Prasad Chaliha, Chief Minister of Assam laid the foundation stone of the Rs 60 lakh meter factory in the public sector on 27 September.

The Madras Government passed the Madras Land Reforms (fixation and ceiling) Bill fixing 30 standard acres as the ceiling extent which a family of five can own. A family which has more than five members is entitled to own an additional five standard acres for every member of the

family in excess of five subject to a maximum of 60 standard acres. The surplus land will be distributed among cultivating tenants according to the rules made under the Act.

The Government of India has set up an Indian Central Spices and Cashewnut Committee under the aegis of the Indian Council of Agricultural Research for the all round development of spices and cashewnut.

The first electric locomotive manufactured in India will be launched on the track by the Prime Minister at Chittaranjan on 14 October. This is one of the ten DG 1,500 volts electric locomotives which the Chittaranjan Locomotive Works is expected to turn out by March 1962. The entire mechanical portion of the locomotive will be constructed in Chittaranjan. The electrical equipment in the initial stages will be imported till the Heavy electricals at Bhopal develops capacity for manufacturing it.

PERSONAL

Mr K. P. Mathrani, Chairman of the Industrial Finance Corporation, has been appointed Chairman of the National Industrial Development Corporation.

Mr B. P. Kaithan was re-elected Chairman of the Steel Re-rolling Mills' Association of India and Mr V. J. Shah, Chief Executive, Mukand Iron and Steel Works Limited was elected its Vice-President.

Mr Bharat Ram, President of the Indian Cotton Mills' Federation and Mr B. G. Katakari, Honorary Secretary left for the US to attend the Indo-US textile talks in Washington.

Mr R. Dhawan was re-elected President of the Delhi Stock Exchange for the fourth time in succession. Mr Bhagavan Das Gupta was elected its Vice-President and Mr P. R. Khosla was re-elected honorary General Secretary of the Board of Directors.

Mr Shadilal Jain has been elected President of the All-India Plastics Manufacturers' Association at the 15th annual general meeting of the Association held in Bombay last week. Messrs S. N. Kasera and K. K. Mody have been elected Vice-Presidents and Messrs S. I. Parekh and A. R. Chouhan as Honorary Secretaries.

Mr P. S. Rau has been elected Chairman of the Praga Tools Corporation Limited and Mr A. M. Kelkar, senior industrial advisor to the Government of India, will assume charge as Managing Director of the Corporation when Mr Venkataraman will relinquish his office on 18 October.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

PERHAPS it is necessary to resist the temptation to draw doleful conclusions from the fact that the Aligarh riots have followed close on the heels of the National Integration Conference in Delhi. Even if one is to assume that the conference has had a cathartic effect on the participants, it is perhaps a little premature to expect that the souls of rabble-rousers in Aligarh would be cleansed by high-mindedness at Delhi. Aligarh is our problem university and inhibitions of various sorts are standing in the way of cleaning this academic Augean stables. But the dark depths of unreason are manipulated not only from obscurantist hide-outs that have been passing for beacons of sweetness and light. It is easy enough to talk sensibly and reasonably at conference tables: (Even this may not be easy: Mr Nehru was obliged to remark that the conduct of a member who threatened to walk out because he did not agree with something that was said at the conference was a poor example of national integration.) But, trite though it is, it is necessary to remark that practice in future must bear a reasonable likeness to precept before we can share the gratulation of the participants in the conference. The past, I regret to say, has not been very edifying. It is idle to deny that the Congress, or any party for that matter, has spoken with two voices on the subject and what is worse, action has loudly proclaimed the hypocrisy of the words. Apart from the well-known compounding with the barely concealed communalism of the Muslim League in Kerala, there are other less spectacular and more continuous manifestations of the impugned evils of casteism, communalism and linguism at all levels. When those "great reckonings in little rooms" are made, the advantages of appeals austere renounced at conference tables quietly make themselves felt. So, unless one is to construe the emphasis on education as an instrument of integration as unavowed despair about grown-ups, it is necessary to see that the code of conduct agreed to is actively respected. The trouble is that it is possible in practice not only to be dishonest but to cheat oneself about blatant violations of the code. Can the proposed Council of National Integration evolve some objective standards to make such decep-

tion and self-deception impossible? It seems unlikely. In any case, a test of the sincerity of the professions made at Delhi is not far off. The coming elections should provide an opportunity to the impartial observer to separate the sheep from the goats.

Mr C. Subramaniam, Leader of the House in the Madras Legislative Assembly deserves the gratitude of the Press for his attempt at cutting legislative privilege to size. As is well-known, a recent editorial comment in the Mail of Madras on a speech of a member of the Assembly was adjudged as guilty of breach of privilege. Mr Subramaniam has now publicly wondered whether such touchiness on the part of legislatures is not a trifle thin-skinned. Such robustness comes refreshingly after much recent invocation of legislative privilege in various parts of the country. Those who have professionally to deal with what goes on inside legislatures are often hard put to it to decide whether or not they are treading on some sensitive legislative corn or the other. For it is difficult to resist the impression that many legislators are, like Hotspur, quick to take offence these days. Mr Subramaniam has laid down two admirable principles: the first is that it is impractical to expect any newspaper to refrain from commenting on what happens inside a legislature until an authoritative version of the proceedings is available to it. All that can be reasonably expected is that the paper should ensure that the comment is based on a report that is not misleading. Secondly and more importantly, Mr Subramaniam has debunked the notion that some sort of magical taboo attaches to the goings on in the legislature and anyone offending it will be risking tribal wrath. In Mr Subramaniam's view, comments on a speech made inside the legislature would (or should) be actionable only if it would have been actionable had they been made on an identical speech made outside. In other words, in venturing to comment on speeches made in legislatures, all one has to guard oneself against is the hazards of the ordinary law of libel. By the same token, all the defences available against such a cause of action can be invoked by anyone who has been cited for contempt of the legisla-

ture. God knows that even the ordinary law of libel is full of snares, but it is at least a recognised body of principles to which one can appeal. Whether Mr Subramaniam's statement of the law of privilege will be acceptable to all members of all the legislative bodies in the country or even whether it represents the strict legal position as it obtains now is doubtful. As I pointed out when I discussed the Blitz case in these columns, the practice of the House of Commons (which governs the present law of privilege in the country) is, according to May, to consider the act of reporting itself as the substantial offence and the objectionable part of the comment or report as an aggravation of the primary offence. However, there can be no doubt about the essential fairness and reasonableness of Mr Subramaniam's view. If this view is not the law, it ought to be. And what is particularly pleasing is that such a view of the law should come from a legislator and a Leader of the House at that. But since it is only a personal view, it may be too rash to act on the assumption that it represents the current law on the subject. Other legislators and other legislatures may have other views. That is why it is imperative that such unexceptionable principles should be written into the law of the land by Parliament and the State legislatures declaring themselves in those terms under the relevant articles of the Constitution.

I don't know about others, but I cannot resist that something "free" that goes with the various articles I buy. It may be a free tooth brush that goes with a tube of tooth-paste or it may be a (quite needless) key ring that goes with a brand of hair oil. I have no brand loyalties and even if I had I would cheerfully repudiate them for a free set of transfers. I fancy there must be countless others like me. Sales promoters doubtless know this and have even a word for it: "Incentive Buying". In a recent issue of the Times Weekly Review there is an interesting discussion of the economics, and marginally, of the psychology of incentive buying in Great Britain. Nearly £20 million out of an estimated national advertisement expenditure of about £400 million is reportedly spent on giving "something for nothing." (We in India are more coy about reporting such things. I have therefore no comparable figures for our country to give you. But from time to time—rather more frequently in the last few years—we have

had baits to entice us into needless purchases.) Some of the things that are being given away in Britain will make many mouths water here. Luxury motor-boats, Morris Mini-minors, Ford Consuls, Kodak home projectors are among the possible windfalls that go with the more expensive kinds of buy. For those who are prepared to spend no more than a pound, the range of choice is limited to such things as inflatable bathing rings and picnic sets. Other kinds of gifts are extra packets of detergents—which I think is bad psychology—recipe books, ball-point pens etc. (I am sure some Freudian principle is involved in the almost universal choice of a ball-point pen as a gift.)

Many of these are to be had as prizes in competitions of varying degrees of sophistication. Often enough they are no more than lucky dips. As can be imagined, a flourishing subsidiary industry of manufacture of gift articles has grown. Apparently, the economics of scale press their inexorable logic in this as in many other things and it is not unlikely that rival manufacturers get their supplies of the gift articles from the same source. It would appear that the economics of specialisation are considerable: for instance, it is said that manufacturers of gift ball-point pens are able to sell them at three pence each to an advertiser and yet make a profit.

Of course, the joys of getting something for nothing are largely illusory. If most purchasers don't know it, they at least suspect it. It is different when, as happened in the thirties, there is a competitive war on between rivals. Even newspapers went in for this sort of thing and almost ruined themselves by trying to outbid each other in the gifts they gave in exchange for coupons to be cut out of their papers. It used to be said that an entire village in Wales clothed itself by a judicious distribution of its favours among the various papers, each one of which offered only one particular article of wear. But apart from exceptional occasions like this when losses are being deliberately incurred for the sake of certain long-term gains, the customer pays for the gifts. For the cost of the gifts and of the campaign enters inevitably in the fixing of the price of the primary commodity sold. In most cases, such expenditure is part of the annual advertisement budget and the appearance of a sudden fit of magnanimity is as illusory as so much else in advertising. But then, the consumer is not perhaps inclined to be too censorious about it all, since he gets his little fun, especially when there is a competition to try his luck (or wits?) in.

PLANNING

"A New Dimension"

A new dimension, as India's Tarlok Singh described it, has been added to planning by the UN Conference of Asian Planners which concluded its eight-day session, in New Delhi, after adopting with only minor changes the Report prepared by its technical committee. The Report points out that, until recently, development plans were being formulated with reference to the conditions and requirements of individual countries, and there was need for greater considera-

tion of the bearing of these plans on one another and of the possibilities of mutual co-operation which they might offer. As the various development plans progress, they may in turn call for certain adjustments in the economies of individual countries. In some measure, adds the Report, these adjustments might be effected to mutual advantage if the prospects of economic development in the countries concerned could be visualised over a period of years in advance and the progress achieved in different countries could be reviewed jointly from time to time from the wider regional aspect. Moreover it would be in the common advantage of developing countries in the region to take

advantage of such economies of scale and possibilities of intra-regional division of labour as might promote the growth of individual economies as of the region as a whole.

The Conference approved proposals to establish (1) an Asian Institute for Economic Development to provide practical and theoretical training for Government personnel in economic and social planning; (2) a Regional Advisory Group on Economic Development Planning consisting of experts who would be available on the request of Government to assist them in drawing up their plans. Planning agencies could make a specially valuable contribution in making feasible proposals for economic co-operation. There could be, it is suggested, periodic exchanges of information between them on national development plans and the ECAFE Secretariat could assist in joint studies on specific problems of interest to more than one country. It was also noted that a number of projects involving regional co-operation had already been launched, such as the Mekong Project, the Asian High-

way, the Joint Aerial Survey and intra-regional trade talks. Moreover groups of countries within the region had felt the need for working together for various economic purposes.

A proposal of immediate practical significance to the region that emerged out of the Conference was that some regional arrangement should be worked out to stabilise export markets and prices of primary products of the region. A firmer basis for the implementation of the proposal was given when it was amplified, on the suggestion of the US delegate, to include study of possibilities of working out a broader arrangement to cover major consuming countries in the world of these products as well as producing countries in the region.

MARKETING INTELLIGENCE SEMINAR

While stabilisation of export prices and markets is of great importance to the region as a whole, for India the problem of rationalisation of the internal price structure, and stabilisation of prices, especially of food-grains, is of at least equal importance. Formulation of proper price policies has to be based on a realistic knowledge of market behaviour which is also the condition for the effective implementation of the policies that are drawn up. Under the auspices of the Directorate of Economics and Statistics of the Union Ministry of Food and Agriculture, an integrated scheme for improvement of Market Intelligence has been initiated in various States. The Scheme envisages the setting up, according to a phased programme, of technical reporting agencies in important markets of the country as well as appointment of requisite supervisory agencies. Under the Scheme arrangements are also being made for the dissemination of prices and other intelligence for a number of markets through various media, as for example, broadcasts by regional stations of AIR, distribution of market news bulletins to village institutions, display of market information on notice boards in the markets, etc. The Directorate has also set up regional offices in Bombay, Calcutta, Madras, New Delhi, Lucknow, Bhopal, Jaipur and Shillong. The organisational and supervisory aspects of the collection, analysis and interpretation of Market Intelligence will be discussed at a three-day seminar convened by the Directorate of Economics and Statistics, which is scheduled to be inaugurated on 6 October by the Union Minister for Agriculture.

ILO CONFERENCE ON SMALL INDUSTRIES

The 'message of small scale industries' was put across with missionary zeal by Mr Manubhai Shah, Minister for Industry, at the international forum provided by the ILO Technical Meeting on Small Scale and Handicrafts Industries which he inaugurated last Tuesday. Mr Shah made the points that small scale industries are necessary to maximise the development of human skills which form the roots of economic growth, to bring about technological revolution of modes of production on a broad front, to even out regional disparities by

spreading the benefits of industrialisation all over the country and, above all, by fostering the growth of an industrial middle class, to underpin the structure of democracy.

The ILO's interest in the development of small scale industries, said Mr V. K. R. Menon in his welcome speech, stems from several vital considerations. Although the founders of the ILO envisaged an organisation for establishing international labour standards, it was realised in the 'thirties that the social objective could register progress only when the economic conditions were favourable and that social and economic development could only proceed side by side. It is for this reason that, while concerning itself with the international labour standards, the ILO has been equally interested in economic progress in developing countries.

The programme of work of the ILO in this field is mainly educational and is directed to raising the technological level of industrial operations, organisation and management, through provision of technical assistance and facilities for study and research. The working papers on various topics prepared by the ILO office will form the basis of discussions at the meeting which will examine questions relating to credit facilities, supply of raw materials, marketing of products, vocational training, improved technology, productivity and organisation and management of small scale industries. The Conference will consider, in particular, the problems relating to mechanisation and labour standards and the role of international technical assistance.

INDIAN LABOUR CONFERENCE

Some aspects of the Code of Discipline—it may be recalled that that a representative conference of employers recently adopted a comprehensive statement on the Code—figure on the agenda of the nineteenth session of the Indian Labour Conference meeting in Bangalore on October 9 and 10. The question concerns the right of a representative union to represent technical and supervisory staff and the rights of a recognised union under the Code vis-à-vis unrecognised unions.

The Code of Discipline provides for recognition of two types of union, namely (1) The Representative Union of the industry in the locality and (2) Majority Union in an establishment in which the Representative Union is not functioning. In both cases the Code specifically lays down that only one of these should be recognised, as a multiplicity of unions in an establishment will not make for satisfactory relations between workers and management. The question has been raised whether the recognised union should have the right to represent technical and supervisory staff also, and whether the representative union should have the right to represent workers in all establishments.

Most of the State Governments appear to favour the view that the recognised union should have the right to represent technical and supervisory staff also provided they are the members of the union concerned and are included in the category of workers as defined

in the Industrial Disputes Act. On the other hand, some other State Governments think that, as technical and supervisory staff form a distinct class of employees, it will be advisable in the interest of maintaining discipline to treat them differently from the workers for grant of recognition to their unions. Adoption of this position will mean that a union of technical and supervisory staff of an establishment may be accorded recognition even if there is a representative union of the industry functioning in that establishment.

Employers' organisations are un-

animous that the Representative Union of workers should not be entitled to represent technical and supervisory staff. It is also urged that, if a question arises whether a Representative Union represents any specific category of workers, the Union should establish to the satisfaction of the employers that a substantial number of that class of workers are members of that union.

Trade Union organisations hold different views on this question. The INTUC and the AITUC favour the view that the Representative Union should have the right to represent

technical and supervisory staff, HMS think that there should be no hard and fast rule and the UTUC are against any sort of compulsion in the matter. On the other hand it has been pointed out that, if the Representative Union does not represent the technical and supervisory staff, the Union may find it difficult to guarantee industrial peace even if it has entered into an agreement with the management, because the technical and supervisory staff may refuse to fall in line and act against the agreement. Such instances it is said, have actually occurred in Kerala.

OUR PAY LATER PLAN MADE EASIER!

**NOW
15% DOWN
PAYMENT!**
THE REST IN 20 SMALL INSTALMENTS

Take advantage of our revised Pay Later Plan. Less to be paid initially — and a longer period over which to pay the rest in smaller instalments! Now it's 15% of the fare down — the balance in 20 manageable monthly payments! Applicable to First Class and Economy — on all routes! Markets

JUTE

Raw Jute Easy

PRICES in the jute and gunny markets have tended to be easy during the past few days. The decline in the raw jute section is well pronounced as buyers are still showing limited interest. Arrivals have been quite heavy and mills appear to be in no hurry to accumulate stocks of the fibre except to meet their immediate requirements. This may be due to expectations of a further drop in prices. As a matter of fact those who have been adopting a cautious purchase policy should have reaped considerable benefit as today's raw jute prices are quite a few points lower than those at, say, a week or ten days ago. There has been increased buying from mills during the past few weeks, comparatively speaking, of course. This is partly due to their depleted stock position and partly because they need more raw jute to feed the 14 per cent looms reopened during September.

The position should have considerably eased since a fortnight or so as there is no longer the fear of a

shortage of jute atleast in the current season. The Indian crop is quite big and government policy is to allow the import of sufficient quantity of raw jute from Pakistan and other growing countries. Moreover, a buffer stock authority is to be set up to ensure first, an uninterrupted supply of raw jute to mills and second to ensure a reasonable price for the jute cultivator. Some time ago it was said that the authority would come into being before the end of September but its inauguration has been delayed. As has been noted in this column last week, government is not worried about the trend in the raw jute market presumably for the reason that in its opinion prices are still above the uneconomic level.

The reluctance of mills to buy more than their current requirements despite the fact that prices are at present ruling at attractive levels may have stemmed from the apprehension that in coming weeks jute goods prices would decline further. As it is the demand seems to be concentrated on the ready position. The forward positions are quoting quite low. As compared with the quotations for the ready position of

Hessian 40" x 10 oz of Rs 54, the rate for the same construction for Oct/Dec is quoting at Rs 48.50, Rs 6½ lower. Similarly, B Twills Oct/Dec is quoting at Rs 128.25 as compared with the ready rate of Rs 132.25.

★

The jute goods market opened the week on a slightly easier tone although demand for ready 40" x 10 oz hessian continued unabated. The general undertone during the early part of the week under review, however, improved somewhat, but the interest centred on ready hessian. While the strong demand in ready hessian is due to the scarcity of this construction caused presumably by the recent foreign enquiries, the wide disparity in the quotations between the ready and forward positions shows that foreign buyers are not keen on buying forward in view of the steady decline in raw jute price on the one hand and the possibility of mills further increasing working to 48 hours a week in the first instance. It is also suggested that if Indian mills are to compete effectively with Pakistan, their cost of production is to be reduced. One way of doing this is to increase production upto installed capacity.

The raw jute market has turned easy following heavy arrivals. Mills have not been showing much interest even at the declining levels. It would appear that as some stock has been accumulated during the past few weeks, mills may wait for some time before commencing purchases in quantity.

★

TEA Proposal for Abolition of Export Duty?

THAT Indian Tea is now placed at a disadvantageous position in the world market owing to the present

rate of export duty of 44 nP per kg and excise duties ranging from 10 nP to 35 nP per kg according to zonal placement of gardens, is a known fact. The incidences of these taxes and duties coupled with the low price prevailing in the export market are being felt adversely by the producers.

The Government of India is, therefore, understood to be giving serious consideration to the proposals for the abolition of export duty and the introduction of drawback of excise duty on tea. The proposals, coming from the tea producers, envisage an increased yield for the Government from income-tax, agricultural income-tax and other sources, following the corresponding increase in the earnings of the beneficiaries of the drawback system. Various tea associations also feel that the proposed measures will boost the export of tea at competitive prices without putting any strain on the producers.

Again, the Tea Board is also understood to have requested the Government of India to sponsor a tea delegation to the United States, which will study whether India should embark on her own to undertake the promotion of Indian tea independently of the Tea Council. This move has been taken in the face of discouraging reports from the USA that the propaganda on the virtues of Indian tea has not been done on the scale desired by traders in India.

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 67,726 packages. There was a strong general demand. Plain Broken met with keen competition at prices up to 15 nP per kilo above last levels. Similar Fannings were also well supported and prices were generally dearer. Medium and better liquoring orthodox teas met with keen competition, buyers being selective.

CTC descriptions were well supported. Prices for medium and poorer sorts were irregular, while the best were fully firm to dearer. Off-grades met with more support and

7 October 1961

were generally dearer. Legg-cut teas met with a better enquiry and prices were generally firm to dearer for the better kinds.

Darjeeling teas met with useful support. Although they were irregular, they were generally dearer. There was a good demand for Whole Leaf grades. The cheaper varieties were generally dearer, while the remainder were irregular, but tended dearer. The prices for Tippy teas were irregular. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.40 to Rs 4.60; Plain BP Rs 4.20 to Rs 4.40; Plain Fannings Rs 4.00 to Rs 4.20; Medium Assam CTC BP Rs 5.00 to Rs 5.40; Medium Assam CTC Fannings Rs 4.90 to Rs 5.30; Best Assam CTC BP Rs 5.40 to Rs 6.00 and Best Assam CTC Fannings Rs 5.40 to Rs 6.20.

In the Cochin market, offerings were 200,000 kilogrammes of tea dusts. Against good demand for all descriptions, high-grown were fully firm, while medium sorts were about steady. Other varieties were 10 nP to 20 nP a kilo easier.

In the Colombo market, offerings were 6,064,275 pounds. At the opening, Dimbula/Dickoya broken were irregular following quality; but subsequently the tendency was generally dearer. Uva teas were lower following quality. Medium teas from Western districts were in better demand at an advance of about 5 cents per pound. Low-grown teas were generally easier, particularly Fannings and stalky Broken.

In London auction held this week, offerings were 26,984 packages of North Indian and other miscellaneous teas. There was a buoyant tone and most teas were sold readily at fully firm to dearer rates. Good and medium CTC Assams and orthodox manufacture were in particular demand, while the better legg-cut Dooras and Africans often realised higher prices.

★

COTTON Futures Buoyant

The Jarilla March contract maintained the uptrend during the past week also and touched a new high deriving inspiration from the unpropitious weather reports that emanated from many of the cotton growing centres in the country and the excellent mill buying in ready cotton. The Government of India's announcement of a bulk export quota at 125,000 bales of Bengal Deshi also imparted buoyancy to the futures market.

The March contract during the week under review moved both ways within narrow limits on alternate bouts of buying and selling. Toward the close of the week sentiment was fanned by the aggressive bull buying and frantic bear covering so much so that the contract spurted upto Rs 628.75 per three quintals and on Tuesday last closed at Rs 629.25.

The trade has welcomed the release of export quota for Bengal Deshi. The Cotton Buyer's Association has expressed its appreciation at the simple export licensing procedure prescribed quite in unison with the recommendations suggested by the trade. Foreign traders have also

enough reason for enthusiasm for they are assured of adequate cotton even at the commencement of the season.

The ceiling fixed by the authorities for cotton imported from Pakistan, on first-come first-served basis, has already been attained. It has been reported that a prominent mill during the week under review accounted for nearly 10,000 bales of this growth.

In the spot market at Sewri good spinner inquiry was reported in all the available lots of Kalyan, Digvijay, CO2 and Surti. Keen demand for Kalyan cotton pushed its prices up. Southern traders were found active in Nagar CO2 cotton. Demand for old and new crop Kalyan, CO2 and LI47 was fair but inadequate offerings restricted transaction of any appreciable business.

Among the imported varieties, Egyptian and Sudan cotton met with good attention presumably due to a possible delay in their imports. Mill attention was also pronounced in the available lots of American and African styles.

Total production of cloth in the first eight months of the current calendar year recorded a net rise of approximately 97 million yards over the overall output of 3,337 million yards during the same period in the previous year. Production of yarn also looked up to 1,238 million pounds during the same period in 1961 from 1,140 million pounds in the corresponding period in 1960.

Imports of foreign cotton into India from 1—16 September, 1961, amounted to 65,714 bales as against 104,702 bales in the same period in the previous year. The accompanying table will furnish a detailed account.

Description	1960	1961
American ...	65,675	48,356
Sudan ...	10,304	5,262
Egyptian ...	3,276	4,103
East African ...	20,860	7,376
Pakistan ...	503	...
Others ...	4,084	917
Total ...	104,702	65,714

Exports of Indian cotton to the foreign countries from 1 to 16 September, 1961, totalled 15,819 bales in contrast to 4,162 bales in the corresponding period in 1960.

Countries	1960	1961
UK ...	...	405
Continent ...	109	684
Hongkong ...	417	188
Japan ...	3,636	10,762
USA ...	...	3,630
Other Countries ...	...	150
Total ...	4,162	15,819

The Cotton Advisory Board which is convening a meeting in Bombay is likely to take up the cotton crop situation in the country for the current season and other relevant problems that are closely interlinked with it. According to the consensus of opinion the question of freeing Bengal Deshi cotton solely for export will also be taken up for discussion. Naturally enough the outcome of the deliberations of the Advisory Board is anybody's guess.

PIECEGOODS

The Bombay piecegoods market staged a partial recovery during the past week. The turnover, however, failed to turn upto the expectations.

In the domestic sector demand for piecegoods showed signs of shedding all the shyness thanks to the approach of Puja and Deepavali festivals. Though purchasers directed their attention toward all the varieties, seasonal goods were in the lime-light. Punjab figured as the prominent customer in the market particularly in the earlier part of the week and accounted for a moderate quantum of all varieties. However as the week advanced the traders from that destination beat a safe retreat from the market. Stray business with purchasers from South India and Rajasthan was also reported though the offtake was insignificant. Nevertheless prices tended to rule steady.

Certain varieties were reported to have been sold at a discount of about 5 to 10 per cent. This was the direct outcome of the eagerness of the stockists to liquidate their holdings which were piling up at an alarming pace. Stocks with mills at the end of August, according to the latest information, stood at 367,300 bales in contrast to 339,000 bales at the end of the previous month. The main contributory factors that led to such an embarrassing position were the murkiness in the domestic market and the enhanced production.

Export front depicted slightly better conditions. During the week under review UK appeared to be more active and exporters concluded business for more than three million yards with the expectation of better bookings from December onwards. Sheetings, especially of wider width, and furnishing fabrics met with improved demand.

Sudan preferred to be in the background. Australia focussed its attention on grey calendared sheetings, flannels and other usual varieties, but the turnover was unfortunately meagre. Burma was virtually satisfied with dyed and printed voiles. East African fancy turned toward processed goods and West Africa accounted for moderate quantities of coatings, towels and domestic bafts. Enquiries from Indonesia for the usual qualities flowed on a quietly encouraging level.

The resistance to the price fall has mainly stemmed from the prospects of a brisk demand till the Puja and Diwali festivals are over. In view of the present shortage in Bombay, Gujarat and some parts of the country, the offtake is likely to remain at a high level for some time to come. The possibility of absorbing sugar to the extent of 200,000 tons by the trade has encouraged the manufacturers not to go in hurriedly for sale. Besides, the retention of the system of controlled releases rules out the possibility of any sizable fall in prices.

Even assuming that, as a result of decontrol, consumption goes up by about 200,000 to 300,000 tons, there will be still a surplus of 1,800,000 tons which the industry will have to dispose of. In these circumstances, some circles feel that the industry will find it hard to pull through unless it finds an export market for the surplus sugar, irrespective of the loss it may sustain for which the Government must help the industry by way of subsidising the losses, at least to some extent.

Shellac Market Inactive

ACCORDING to the figures released by the Indian Lac Cess Committee, the final estimates of the Baisakhi lac crop production for 1961 have been placed at 550,000 maunds as against the revised estimate of 605,000 maunds and 1,100,000 maunds last year. The normal production, based on the average production in the ten years preceding 1960 is 736,000 maunds.

The crop is said to be poor this year, because of the scarcity of brood lac at the time of infection and lack of rains in April and May. Low prices of stick-lac have affected the arrivals, particularly in Madhya Pradesh and Maharashtra.

Jethwi (Kusmi) lac of 31,000 maunds has also been produced this year. The average of the production of ten years preceding 1960 is 26,500 maunds for this crop. The following is the Statewise production (in maunds) of the Baisakhi crop for 1961:—Bihar 298,000 maunds; Madhya Pradesh 110,000 maunds; West Bengal 93,000 maunds; Maharashtra 10,000 maunds; Uttar Pradesh 25,000 maunds; Orissa 3,000 maunds; Gunerat 3,000 maunds and other Indian States 3,000 maunds.

Meanwhile, the shellac trade has come to a standstill in Calcutta. There has been virtually no business with foreign countries nor has any export been made during the past few weeks. It would be recalled that the trade has formulated a new export scheme for the commodity to replace the existing one by making export prices more flexible. The idea is that, unless prices can be adjusted in line with supply and demand, trading will be hampered.

But, the Government of India has disapproved the new export scheme. At the same time, it has not made up its mind as to how the trade is to be regulated. Foreign customers would have bought more willingly if they had been permitted to take their requirements freely from India. Shipments during September till 22 were 29,796 packages comprising 9,199 packages of shellac; 17,775 packages of seedlac; 135 packages of buttonlac and 2,687 packages of other varieties.

SUGAR

The lifting of all controls on the distribution and prices of Sugar has no visible effect on the prevailing prices of sugar. This is as it should be for the reason that floating stocks in the market are low. Market circles are inclined to wait and watch the situation in the next few days when fresh stocks, out of the controlled release, are expected to arrive. Although most of the mills are anxious to dispose of their stocks, no transaction is reported so far. In the Hapur market, prices have declined by Rs 1 per bag.

The resistance to the price fall has mainly stemmed from the prospects of a brisk demand till the Puja and Diwali festivals are over. In view of the present shortage in Bombay, Gujarat and some parts of the country, the offtake is likely to remain at a high level for some time to come. The possibility of absorbing sugar to the extent of 200,000 tons by the trade has encouraged the manufacturers not to go in hurriedly for sale. Besides, the retention of the system of controlled releases rules out the possibility of any sizable fall in prices.

Even assuming that, as a result of decontrol, consumption goes up by about 200,000 to 300,000 tons, there will be still a surplus of 1,800,000 tons which the industry will have to dispose of. In these circumstances, some circles feel that the industry will find it hard to pull through unless it finds an export market for the surplus sugar, irrespective of the loss it may sustain for which the Government must help the industry by way of subsidising the losses, at least to some extent.

4½ Per Cent Madras State Electricity Board Bonds, 1971

For Rs. 200 Lakhs.

(Payment of Interest and Repayment of Principal, Guaranteed by the Government of Madras).

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

Issue Price Rs. 99.50 Per Cent.

REDEEMABLE AT PAR ON THE 16th OCTOBER, 1971

Subscriptions will be received in cash or cheques from the 16th October, 1961. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 200 lakhs and in any case not later than the close of business on the 23rd October, 1961.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Calcutta, Delhi, Bangalore and Bangalore city.

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all Offices of the State Electricity Board and its undertakings.

The world production of sugar is estimated higher at 57.55 million metric tons in 1960-61 as compared with 50.38 million tons in the previous season. Though production of cane sugar has improved from 30.67 million metric tons in 1959-60 to 31.96 million metric tons in the season under review, the bulk of the increase comes from beet sugar, which has risen from 20.31 million metric tons to 25.59 million metric tons.

GINGER

In the Bombay market, the price of Ginger has improved by Rs 5 per 50 kgs, being quoted at Rs 88 for the bleached variety and Rs 84 for the unbleached variety. The improvement in the price has been caused by good off-take, both on export and domestic accounts. Low stocks of good quality ginger also aided the sentiment.

The supply is expected to remain tight, as the crop is stated to have been delayed by about a month. Owing to heavy rains and floods in

the early period, the new crop is not expected to arrive before November.

TOBACCO

There has been a shortfall in India's exports to the traditional market like Benelux countries, Aden and Hong Kong. During 1960-61, these countries have not taken as much as in 1959-60. In the case of Benelux countries, the shortfall of Rs 2.3 lakhs as compared with the previous year, was perhaps due to their increased purchases from Rhodesia and America.

Similarly, exports to Hong Kong have gone down to nearly one-third of what it was in 1959-60. Besides, competition from other countries and a general decrease in the internal production as a result of a lack of re-export opportunities might have contributed to the decline. In the case of Aden also, there was a slight fall by about Rs 3.2 lakhs. This decrease is explained by the lesser demand for beedi scrap tobacco.

The reported accumulation of tobacco at different centres in the country indicate that, at present, the supply is in excess of the demand. This being so, control on cultivation might appear justifiable. It is stated that the inequality of the tariff basis has resulted in a change of cultivation in the last ten years.

NON-FERROUS METALS

Price movements in the Bombay Non-Ferrous Metals market have shown divergent trends. While Tin has not sustained its early strength, Copper has maintained a steady tone. Zinc rules easy, with Lead remaining quiet. The new import policy evidently did not make much of a mark on the prices, since no material change was noticed.

The tightened margin restrictions evidently had an effect on the prices, which declined sharply and could not recover the ground lost towards the end. Reports, that releases from the US stockpile might

begin soon, also subdued the feeling. Advices from the mofussil centres further weakened the sentiment.

On the London Metal Exchange, Tin prices, after recording a rise of £20 per ton early in the week, declined sharply towards the close following the announcement that the US Government was seeking permission from Congress to sell the metal from the strategic stockpile.

The stockpile question is still creating uncertainty; but world tin supplies remain scarce and any sales from the stockpile will only help to fill the gap.

The Copper market has been weak, cash metal being quoted around £225 per ton as compared to £250 in May. Although copper consumption has risen in the USA, the demand has fallen in Britain. Moreover, though the main copper-producing companies are still working below capacity, stocks remain on the high side. This is certainly the case in London where warehouses stocks are the highest for some years.

SILK

The need to step up the production of filature silk from the current level of 3.46 lakh pounds to 10 lakh pounds per year, by the end of 1965-66, was emphasised by the Fact Finding Committee, constituted by the Central Silk Board at its recent sittings in Calcutta.

The Committee, which was set up in April this year to enquire into the problems of the filature silk industry in India, recommended certain steps to be taken by the filature silk-producing States in the country to put the working of the industry on a sound basis. It felt that a comprehensive scheme should be undertaken for the reorganisation of the silk reeling industry to bring down the cost of production of filature silk and to make the selling prices of quality silk competitive within a period of five years. Another recommendation was to increase the number of cottage basins in the various States to ensure increased

production of quality silk and economic utilisation of the cocoons produced. The Committee visited the States of Mysore, Jammu and Kashmir, which are major filature silk-producing States in the country and had discussions with the Ministers and the officials of the State Governments, prominent sericulturists and other representatives connected with the industry.

GOLD & SILVER

On the Bombay Bullion Exchange, prices generally displayed a steadier tendency although the steadiness in silver was more pronounced than in gold. However, there is a general feeling that the conditions prevailing at present hardly raise any hope of an appreciable improvement in the supply of the yellow metal. With imports prohibited, the only source of fresh supplies is through smuggling; but the authorities have plugged most of the loopholes.

In the case of gold, the stock position is tight. Fresh supplies are uncertain. Traders expect that the offerings of the metal will gradually tend to dry up. Besides, the traditional busy season is approaching fast. The usual Diwali demand is in the offing. Everything, therefore, points to a rise in price. Arrivals week amounted to 6,000 tolas as against an off-take of 4,000 tolas. Ready gold changed hands at Rs 124.80 to Rs 125, while Sovereign ruled firm at Rs 97.

Silver attracted some speculative support due to firmness in the up-country centres despite increased arrivals. Arrivals amounted to 50 bars as against an off-take of 12 bars. Silver ready (below .996) changed hands at Rs 205.65 to Rs 206.

OILS & OILSEEDS

Bearish conditions were witnessed on the Bombay Oilseeds Exchange where spot and forward rates of all oilseeds and oils recorded a sharp

decline in prices due to persistent selling pressure.

In the Groundnut section, prices slumped to new low levels, inspired by the favourable prospects for the new crop. Upcountry advices indicated helpful weather in most producing areas. Moreover, the latest estimate of the crop was placed at as high as 29 to 30 lakh tons. Sentiment was further affected by the reports that the Government was not inclined to offer any incentive for the export of groundnut oil for the time being. Ground ready Bold was quoted at Rs 43.50 and Groundnut Oil at Rs 18.40.

The weakness in groundnut affected the working of the Castorseed section adversely, not to speak of the poor performance that India has had in her export of castor oil. Traders felt that the supplies held by the growers might be unloaded in the near future. Apart from the sales of 350 tons of commercial oil to the UK at prices ranging from £115 to £113½ per ton, there was little activity in the export section. Castorseed ready was quoted at Rs 32.31 and Castor Oil, commercial quality, at Rs 13.30.

In the Linseed section, trading was devoid of any fresh influence and price variations were usually governed by the behaviour of groundnut. Demand for both linseed and linseed oil was at a low ebb, as crushers and paint manufacturers were inclined to await lower prices. Ready Linseed was quoted at Rs 37.50 and Linseed Oil at Rs 16.10.

HIDES & SKINS

It was quite a different tone this week in the tanned cow hides market where the trend was towards higher levels. Absorption of the arrivals was good. Britain wanted to import fifties in all kinds. As for the lower weights, those of 5½ lbs were settled on the basis of 53d. For the weightier 8½ goods the price fixed was at 43d. Light weight goods could be had for 81d, 71d and 60d for runs, fourths and fifties.

The semi-premium market continued to be firm and stable. Quotations were based on 76d, 66d and 56d for 5½ lb. Negotiations at a slightly higher level than this were also noticeable in some cases. There were good inquiries for inferior fifties also.

As far as tanned Cow Calf was concerned, the price was firm. Tanned Buffalo hides were not changed. In tanned Buffalo Calf, the market trend was also unchanged.

As for tanned Goat skins, the trend was mixed. For 8/9 lbs, there was good demand for thirds and fourths. There were no changes in tanned Sheep skin prices also.

The following were the prices of tanned skins and hides per lb: cow prime 5½ lb Rs 3.12 to Rs 3/25; 6/6½ lb Rs 2.87 to Rs 2.94; 8/8½ lb Rs 2.37 to Rs 2.44; 10/12 lb Rs 2.19 to Rs 2.31; inferior fifties 4/4½ lb Rs 2.50 to Rs 2.56; 5/5½ lb Rs 2.30 to Rs 2.35; buffalo 12/13 lb Rs 2 to Rs 2.06; cow calf 1½/2 lb Rs 4.12 to Rs 4.37; buff calf 1½/2 lb Rs 2.75 to Rs 3; goat prime 8/9 lb Rs 10 to Rs 10.50; sheep ordy: 6/7 lb Rs 7 to Rs 7.50; 5/6 lb Rs 9 to Rs 10. Prime 6/7 lb Rs 11.50 to Rs 12.50.

Mysore Paper Mills Limited

Big Expansion Programme

Continued Increase in Price of Raw Materials Affect the Earnings

Mr. M. D. Shivananjappa, Chairman, on New Financing Programme

Presiding at the Twentysixth Ordinary General Meeting of the Mysore Paper Mills, Limited, held at Bangalore on Friday the 29th September 1961 Sri M. D. SHIVANANJAPPA, I.A.S. Chairman and Managing Director said:—

Ladies and Gentlemen,

It gives me very great pleasure to welcome you to this the 26th Ordinary General Meeting of the Shareholders and to place before you the Report of the Directors and the Audited Balance Sheet for the year ended 31st March 1961. These have been circulated already and with your permission, I shall take them as read and would proceed to review the main features of the year's operations.

PRODUCTION

Production during the year under review is quite satisfactory. Sales realisation during the year amounted to Rs. 123.22 lakhs as against Rs. 141.31 lakhs in the previous year. The reduction in turnover is largely due to the revised prices fixed by the Government of India in accordance with the recommendations of the Tariff Commission from 1-1-1960, the effects of which were felt for the full year under review as against only one quarter during the previous year. The efforts of the Paper Industry to move the Government of India for a suitable revision of prices in the interest of existing units, particularly to minimise the adverse effects on smaller units like ours and in the interest of expansion of existing units and starting of new ones have not borne fruit and repeated requests are being made to Government of India by the industry for a suitable revision and I hope that the Government of India would view this question with sympathy.

In regard to despatch of papers, I would like to keep you informed that during some months in the year, there were continuous railway booking restrictions and this led to accumulation of stocks which caused strain on our liquid resources—common to Companies which finance capital projects by current resources—which necessitated draws from the Cash Credit Account. This year, we had also to meet tax liability to the extent of Rs. 9,32,700/- and also to deposit advance tax under Sec. 18 A of the Income-tax Act to the extent of Rs. 7,44,775/-. To provide for adequate working capital, your Directors have taken

steps to raise the limit of cash credit account with the State Bank of Mysore to Rs. 25 lakhs. I should hasten to state that conditions have improved now and our products are moving quickly and there is no cause for anxiety.

I must bring to your notice that manufacturing costs are mounting on account of increase in prices of raw materials, power, coal and chemicals and there are no signs of decline. Recently, Government of India have levied an excise duty of Rs. 40 per tonne on Caustic Soda. Having regard to the rates of excise duty for writing and printings, it must be said that the rates of excise duty levied on packing and wrapping paper are disproportionately high and in addition there has also been an increase in Railway freight and all these have added considerably to our expenses. The only hope, as it appears to my mind, lies in increasing production and improving efficiency and securing maximum economies calculated to reduce costs. It is with this view pending implementation of the expansion scheme-action was taken to secure Dorr Oliver's Re-austicising Unit, and I am glad to inform you that the equipments have been installed and taken to service and it is expected that appreciable economies would be secured which would go to reduce production costs.

BALANCE SHEET AND ACCOUNTS

Coming to the consideration of the Balance Sheet, I have to mention that provision has been made for depreciation on fixed assets calculated in accordance with the rates allowed for normal depreciation and extra shift allowances as per Income-tax Act, amounting to Rs. 6.69 lakhs; Rs. 1,69,700/- towards Development Rebate and a further sum of Rs. 55,000/- towards Retirement Gratuity. A provision of Rs. 6.5 lakhs has been made towards taxation. I am glad to inform you that the only one instalment of Rs. 4 lakhs that was due to the Industrial Finance Corporation of India has been paid during the year under review and the loan of Rs 50 lakhs obtained from them for financing the First Expansion Scheme has now been fully repaid, about a decade ahead of due date. A sum of Rs. 12,50,000/- remaining in the Industrial Finance Corporation of India Loan Redemption Fund has been trans-

ferred to General Reserves. As the loan has been completely repaid, the Industrial Finance Corporation of India have withdrawn their nominee, Sri T. Bhaskara Rao, from our Board of Directors. I am glad to acknowledge that the Board received valuable assistance and advice from Sri T. Bhaskara Rao and your Board have placed on record their appreciation of his services to the Company.

In regard to disposal of surplus namely Rs. 6,61,663/- including carry over of last year, which stood at Rs. 51,988/- your Directors have decided to transfer Rs. 2,50,000/- to Dividend Equalisation Fund, which fund now stands at Rs. 3,12,500/- a sum of Rs. 62,500/- having been provided for in 1954. Further your Directors, having regard to the satisfactory working during the year under review have proposed to maintain the rate of dividend at the level of previous year and to recommend declaration of a dividend of 15 per cent, subject to tax, absorbing Rs 3,75,000/-; the balance being carried forward, and I am confident that these proposals will meet with your approval.

I am happy to inform you that the labour-management relations continue to be very cordial. Your Directors have been pleased to sanction a bonus of four months' salary or wages to the employees for the year ended 31-3-1961 and the same has been disbursed.

In regard to the celebrations of the Silver Jubilee of our Mills you will remember that I had said on the last occasion that your Directors would fix a suitable date and I am glad to announce that it has been proposed to celebrate the Silver Jubilee in a befitting manner during the last week of March or 1st week of April 1962, and invitations will be sent to the Shareholders and I do hope that a very good number of shareholders will participate in the Function.

EXPANSION PROGRAMME

I now come to the important subject of the Development activities of our Mills in which you are deeply interested. When I had the privilege of addressing you for the first time in August 1959, having regard to the tightness of the foreign exchange position obtaining two years preceding, I cautiously expressed the hope that our application for increasing the production capacity of our

Mills from the present level 8,000 tons to 18,000 tons would receive sympathetic consideration at the hands of the Government of India and that I would be able to formulate specific proposals for expansion. Last year about this time I informed you that the necessary Industrial Licence had been received from the Government of India and that discussion with the Commonwealth Development Finance Co., Limited and Industrial Credit and Investment Corporation of India for exchange loans had been encouraging, the only difficulty that had delayed implementation of our scheme of expansion. I should also like to recall that I informed you that having availed myself of the opportunity of studying close range the conditions and trends obtaining in Capital Goods Market in foreign countries. Was confident of formulating a scheme of expansion which would be both sound and economical. I am indeed a matter of gratification to me, and I have no doubt it will be to you—that we have been able to secure loans to cover the value of Plant and Machinery to be imported from abroad and I shall come to the details presently.

Though I do not wish to burden you with technical details relative to the scheme of expansion yet I should like to state a few details of fundamental importance. You are aware that our existing unit is an integrated pulp and paper unit with a capacity to manufacture 8,000 tons, the primary raw material being bamboo, supplemented by Rags, waste paper and wood pulp. The Paper making capacity exceeds the pulp making capacity, if only the primary raw material, bamboo is used. It has been explained in previous years that it is this imbalance between pulp making and paper making capacity that stood in the way of achieving the target production earlier.

The current capacity of the Mills does not permit installation of a Modern Soda Recovery Plant, which alone secures higher percentage of chemical recoveries, procuring considerable economies. The present scheme of expansion contemplates use of only bamboo for manufacture of pulp, discarding rags and waste paper used at present. In this connection, I am glad to inform you that the Government of Mysore have agreed to supply annually 50,000 tons of bamboo required for the

expanded plant. The Pulp Plant expansion will have a capacity to produce sufficient quantity of pulp to feed the existing two Paper Machines of 15 tons each also the New Paper Machine 30 to 35 tons capacity. This increased capacity will enable us to install a Modern Soda Recovery Plant which secures considerable economies and reduce cost of production to a great extent.

The production of 18,000 tons of marketable paper will help to reduce costs of way of overheads, labour charges etc., and also help to meet the needs of the community. I have heard it said that the going into production of new units and additional units of the existing units produced may exceed demand by 1965. I feel that with the progress of educational and developmental activities of the Government of India and State Governments under the five year plans, entailing expenditure of crores of rupees, there will be created a demand for paper in the ensuing years which will be positively favourable to the indigenous paper manufacturers. Speaking for ourselves, I should like to say that production of 18,000 tons of marketable paper will undoubtedly increase the earnings of our Company and will place the Company on a firm and sound basis ensuring a fair return on capital and so far as marketability is concerned, I wish to add that our steady and sustained supplies during good years and bad have established for our products a ready and an assured market. The scheme of expansion is estimated to entail a total expenditure of about Rs. 350 lakhs which is proposed to be financed under:—

	Rs.
Re Capital by Rights	in lakhs
Issue	100
Loan from I.F.C.I.	60
Foreign exchange loans from DFC and ICICI .. .	140
Bank Borrowings and other resource	30
	350

As you are aware, the Shareholders at their meeting held on 10-10-1960 accorded approval to increase of authorised capital from Rs. 25 lakhs to Rs. 150 lakhs. Pursuance of that resolution, application had been made to the Controller of Capital Issues and sanction obtained to raise Rs. 10 lakhs by issue of 10 lakhs of Equity Shares of Rs. 10/- per share attaching a premium of Rs. 10/- per Share. I do not wish to go into great details regarding the same as you have all been in possession of the Letters of Offer in terms of the Controller Capital Issues sanction order. I am glad to inform you that the Government of Mysore have agreed to take 10% of the Shares which are their quota of Right

Shares and the balance of 90% has been under-written in compliance with the condition laid down by lending Institutions, under-writing commission being 1½% without brokerage.

I am happy to inform you that the response from our Shareholders has been encouraging and there have been numerous enquiries from non-members regarding the availability of the Shares and I am hopeful that the issue would be a success.

FINANCE

Reverting to the question of loans, I am very happy to inform you that I signed the Subscription Agreement with Commonwealth Development Finance Co., Ltd., on 18th August 1961, when I happened to be in London in connection with the expansion scheme of the Mysore Iron and Steel Works. According to the agreement, the Commonwealth Development Finance Co., Ltd., would give us a loan of £5,25,000 or Rs. 70 lakhs carrying an interest of 7½% repayable in 7 equal annual instalments, the 1st instalment to be paid on 31st March 1970. This amount will suffice to finance 50% of our purchases of equipment in U.K. and Europe. Further, I am glad to inform you that the agreement between Industrial Credit and Investment Corporation of India Ltd., and ourselves has also been signed on 1-9-1961 and according to the terms and conditions the Industrial Credit and Investment Corporation of India Ltd., will give us a loan of United States \$1,470,000 or Rs. 70 lakhs carrying interest at the rate of 7½% repayable in 13 half-yearly instalments, the first instalment to be paid on 1st May 1965. This loan will finance the purchases abroad to the extent of 50% and the two loans referred to above will fully cover our foreign exchange requirements. I am very happy to keep you informed that all the necessary permissions, consents and licences have been received from the Government of India. The terms and the conditions governing the loan from Industrial Finance Corporation of India have been settled, and the agreement is being signed. According to the terms and conditions the Industrial Finance Corporation of India have agreed to give us a loan of Rs. 60 lakhs carrying an interest at the rate of 7% subject to a rebate of ½% repayable in 15 instalments, the first instalment to be paid on 1st July 1965. I should like to add that the Industrial Finance Corporation of India and Industrial Credit and Investment Corporation of India Ltd., have each sought representation on our Board of Directors and we have agreed to it. In compliance of a Statutory requirement, the Industrial Finance Corporation of India have stipulated a condition that the repayment of their loan should be guaranteed by a scheduled Bank and I am glad to in-

form you that the Canara Banking Corporation Ltd., one of our Bankers has agreed to stand guarantee on a nominal guaranteeing commission of ½% on the day today balances due to the Industrial Finance Corporation of India.

As you know, certain legal formalities have to be observed for execution of loan documents referred to above. To simplify the procedure and to avoid somewhat heavy expenditure it has been agreed to appoint a common Trust Deed and to execute a common Trust Deed for the purpose, and I am happy to inform you that the State Bank of Mysore has accepted our offer to be appointed trustee, who will look after the interests of the three lending Institutions and on a nominal commission of 6 nP. per cent on the amount of the loans. You have before you resolution No. 5 relating to the borrowing powers of the Directors and as stated in the explanatory note you are requested to pass the resolution to comply with the Statutory requirement.

Having dealt with the question of finances you will naturally expect me to say a word or two regarding the Plant and Machinery to be imported from abroad. We have had full discussions and consultations with well known manufacturers and suppliers of Plant and Machinery in U.K. and Europe and it is important to bear in mind that we are free to select and buy equipment from well known firms in U.K. or the Continent as ours is not a package deal, and funds are available for the necessary purchases in U.K. and Europe. As a result of extensive survey and study, we have formulated a scheme and a schedule of purchases and in accordance with it arrangements have been made to secure best equipments at economic prices. We have concluded arrangements to secure Pulp Plant and Paper Machine from Germany and Boilers and Modern Soda Recovery Plant and Cross Cutters from U.K. I should mention here that agreeably with the policy of the Government of India provision has been made in our scheme for the purchase of balance of equipment necessary from indigenous sources.

I feel it a pleasant duty particularly to bring to your notice that the chief merit of our scheme lies in the fact that the work of erection assisted by two or three foreign erectors, installation, supervision and co-ordination of several units of the scheme is being under-taken by a devoted team of our own technical and administrative officers and operatives, who have the requisite knowledge, experience and skill, acquired and accumulated over years and I am glad to acknowledge that it is these human resources that embolden me to launch this scheme of expansion and I am quite hopeful that the scheme will be implemented successfully and expeditiously.

I have now to refer to Resolution No. 6 regarding amendments to our Articles of Association. As has been stated in the explanatory note that our Articles of Association were framed and incorporated in 1936 at the time of inception of the Company. The Indian Companies Act 1956 and the subsequent Amendment Act 1960 have introduced considerable changes. As you are aware, our Shares are quoted in the Stock Exchanges of Bombay, Calcutta and Madras and certain amendments to Articles are called for to be in conformity with their regulations and all these amendments have been made and I seek your approval to the same.

I am happy to say that as mentioned in your Directors' Report, your Directors have contributed a sum of Rs. 5000/- towards the Centenary Celebrations of Bharata Ratna Dr. Sir M. Visvesvaraya, Engineer-Statesman of Mysore who has rendered meritorious services to the State and I hope you will appreciate and approve of contribution made.

I am obliged to you all for the whole-hearted support you have been extending and look forward with confidence for a full measure of support and encouragement in the implementation of the scheme of expansion.

On behalf of the Company, I should express my grateful thanks to the Government of India and the Government of Mysore for their abiding interest in the progress of the Company and for having granted the necessary permission and consents and concessions in connection with our scheme of expansion. On behalf of the Company, I should also express my grateful thanks to the Board of Directors of the Commonwealth Development Finance Co., Ltd., London; Industrial Credit and Investment Corporation of India Ltd., Bombay; and the Industrial Finance Corporation of India, New Delhi; the State Bank of Mysore and the Canara Banking Corporation Ltd., for their valued assistance in securing funds for the expansion scheme.

I am grateful to my colleagues on the Board for the uniform courtesy, consideration and valuable guidance I have been receiving. I wish also to express on behalf of the Directors and myself our warm appreciation of the willing and efficient co-operation of all our employees.

Ladies and Gentlemen, I now move that the Directors' Report and the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st March 1961 be "APPROVED AND ADOPTED."

N.B.: This does not purport to be a report of the proceedings of the shareholders' meeting, a copy of which shall be sent to the Shareholders separately.

Jay Engineering Works Limited

Usha a By-word for the Highest Value in Sewing Machines and Fans

New Sewing Machine Unit in Hyderabad

Lala Charat Ram Exhorts Employers and Employees for Dedicated Efforts for Export

THE following is the speech delivered by Lala Charat Ram, as Chairman of 24th Annual General Meeting of Shareholders of The Jay Engineering Works Limited, held on 28th September, 1961:—

Ladies and Gentlemen,

It is a matter of pleasure for me to welcome you at the 24th Annual General Meeting of Shareholders of the Company. I am however saddened by the fact that, due to illness, our Chairman, Sir Shri Ramji, has been unable to preside personally at this Year's meeting. Sir Shri Ramji is now well on the way to recovery, and all of us fervently hope that he will soon be in a position to resume his active interest in the Company.

I am very much touched by the feeling reference of Lala Kishen-lall Poddar to Sir Shri Ramji, and though, as a son, it is somewhat embarrassing for me, I must say that he has echoed the feelings of all those who have watched with interest and appreciation the progress of Jay Engineering Works Ltd. I shall convey these sentiments to Sir Shri Ramji who will

be greatly cheered by the expression of affection by the Directors and Shareholders of the Company, for him.

The Directors' Report and the Balance Sheet and Profit and Loss Account for the year 1960-61, have been with you for some time, and with your permission, I shall take them as read.

HIGHER EXPORTS & REDUCTION IN FAN PRICES

As you will have seen, Company's profit, after providing Employees' share of profit amounted to Rs. 58.4 lacs in the year under review against Rs. 52 lacs in the previous year. The increase in profit is comparatively lower because of higher exports and reduction in Fan prices to the consumer. Due to higher provision for Income Tax, the disposable profit is only slightly more than last year, and the Directors have therefore recommended to maintain the dividend at last year's level.

An idea of progress made by the Company during the last 5-year period can be had from the following figures:—

	Unit	1955-56	1959-60	1960-61
Net sale value	Crore Rs.	3.1	7.2	8.9
Profit (after providing employees' share of profit)	Lac Rs.	28.4	52.0	58.4
Production:				
— Sewing Machines	Lac Nos.	1.1	2.4	2.6
— Electric Fans	"	0.8	3.5	5.1
No. of retail points	Number	1115	1800	2000
" „ Schools	"	150	700	800
" „ Students	"	11000	50000	55000
Value of Exports	Lac Rs.	21.0	82.5	113.0

PRODUCTION INDEX IS MUCH HIGHER

It is interesting to see that while the All-India index number of industrial production for all manufacturing industries, with 1956 as base, has gone up to 126 in 1960, the corresponding figures of our Company are, 207 for Sewing Machines and 440 for Fans.

Working results for the year are quite gratifying, and you will no doubt join with me in congratulating the officers, staff, and workers of the Company for putting in the hard work which has produced these results. Our special thanks are due to Shri Bishan Sarup Agarwala and Shri T. R. Gupta for the fine performance of our splendid team of personnel at all levels.

CONSUMERS ARE BENEFITED BY REDUCTION OF PRICES

During the year, we reduced the prices of ceiling fans by Rs 5 and of table fans by Rs. 2.50 each. This step was in keeping with the Company's policy of continuously sharing the fruits of economy of operations with the consumers. We have found that Indian society is financially so stratified that demand for durable consumer goods tends to be highly elastic, and with every reduction in price, a larger and more numerous class of consumers opens up to the manufacturer. Voluntary price reductions therefore enable the company to move farther towards economies of large scale operation, with consequential benefit to consumers, employees, shareholders and to the national economy.

OPENING A NEW UNIT AT HYDERABAD

The Chairman mentioned in his speech last year that we had applied for Industrial Licence for setting up a new unit for producing 3 lacs Sewing Machines per year. Government of India has since then granted the Licence, and plans for establishing the new unit—at Hyderabad—are in hand.

As I mentioned earlier, our exports during the year under review exceeded Rs. 1 crore. This has been possible because of vigorous selling effort put in by the Company and its Selling Agents, at considerable sacrifice of immediate profits. It is a matter of pride for us that we have been in the fore-front of export promotion of engineering items like Sewing Machines and Fans, and have been able to get foothold even in industrially advanced countries like U.K., U.S.A., West Germany, France, Australia, etc. However, the bulk of our exports is still to under-developed countries, and, as is natural, these countries, like our own, are anxious to build up indigenous manufacturing industries. Again, just like us, they have the foreign exchange problem. These factors put a limitation on the size of foreign markets, and the severe international competition for them makes the promotion—or even maintenance—of exports, a function of the efficiency and quality standards that we can command.

Our country's need for foreign exchange for developmental purposes makes exports a matter of vital importance. The achievement of highest standards of productivity, efficiency, and quality thus calls for dedicated effort on the part of managers as well as workers, and no consideration of doctrinaire regard for vested "rights" of employers or employees, should be permitted to interfere with this national effort.

Our country's need for foreign exchange for developmental purposes makes exports a matter of vital importance. The achievement of highest standards of productivity, efficiency, and quality thus calls for dedicated effort on the part of managers as well as workers, and no consideration of doctrinaire regard for vested "rights" of employers or employees, should be permitted to interfere with this national effort.

PLANNING TO PUT UP MANUFACTURING AND ASSEMBLY PLANTS IN FOREIGN COUNTRIES

We have proposed to meet the challenge of exports by re-orientation of our policy in three respects. Firstly, we plan to develop further our exports to developed countries by making our products continuously more attractive to them on the basis of quality and prices; this will release us somewhat from depend-

ence on under-developed markets which, by their very nature, will shrink as they develop. Secondly, we propose to start assembly and progressive manufacture of our products in those of our present export markets which are seeking to establish industries of their own. We have already got a Licence for putting up a unit in Ceylon, and are registering a Company under the name "Usha Industries Ltd." as a subsidiary of our Company. It is proposed to have similar arrangements in other countries like Burma, Pakistan, Thailand, etc. Thirdly, we plan to help the industrial concerns in other countries to set up assemblies with a phased programme of progressive manufacture by giving them technical know-how, equipment, personnel and the supply of component parts. Such an arrangement has come in operation in South Vietnam and negotiations are going on in Iraq, Egypt and Yugoslavia.

You are probably aware that Government of India is proposing a programme of compulsory exports. A pre-requisite for the success of such a programme is an efficient system of rigid quality control so that sub-standard goods do not get exported. Otherwise there is the danger of export markets being spoiled for Indian goods, and good-will built over long periods will be lost. Means must, therefore, be devised for checking such a situation.

We believe that in the existing circumstances there is no alternative to a programme of enforced exports. At the same time it is necessary to create favourable conditions for those who are themselves willing to export. Our economy is tending to be a high-cost economy; for this reason, the need for matching the incentives which exporters of other competing countries enjoy, becomes all the more emphasized. Amongst export promotion measures awaiting Government action are, reduction in steel prices for Engineering goods, and the availability of long term credit at low rates of interest. Early decision on these will considerably stimulate exports.

It is a matter of gratification that Government has realised the need for offering Income-tax relief to exporting industries. While we are happy that the proposition has been accepted in

principle, I would like to submit to Government that the mechanics of granting the relief should be designed to avoid self-defeating delays and complications. I am moved to make this observation by our experience of existing incentives, with which it has unfortunately been the rule, rather than the exception, that mechanics of obtaining the promised reliefs have been far from simple and speedy.

I would reiterate the suggestion made by our Chairman last year that a High Power Committee should go into the matter of export incentives and should devise ways of weeding out causes which defeat or delay the inducements available to exporters.

USHA DISPLACES THE FOREIGN RIVALS

In internal market, USHA has become a by-word for the highest value in manufactured goods, and

to a very large extent, consumer preference for foreign Sewing Machines and Fans has been displaced. It appears clear from the progress of our Company and from that of other large and small-scale manufacturers, that in our field there is absolutely no need for foreign know-how or capital, and indigenous resources are adequate for meeting the country's requirement of Sewing Machines and Fans.

MALPRACTICES IN THE TRADE

In this connection I refer with some distress to what our Company considers to be a situation not conforming with rules of fair trade practice. My reference is to the exploitation of internationally established trade-names by applying them to goods which are produced neither by the owner of those names, nor in conditions under which it is customary to permit such use. To the extent

that such a practice conveys to the consumer an assurance which is not founded on facts, it needs to be discouraged in the interest of business ethics. There appear to have been only isolated instances of this type so far, particularly one in Sewing Machine industry, but the industry and Government have to safeguard against the continuance and spreading of this practice.

PROGRESSIVE EMPLOYMENT POLICY

This leads us to the need for building up the intrinsic strength of our industry. I referred a little while back to the pressing demand for high standards of productivity, efficiency and quality. Our Company is committed to a policy of 'High wages—low unit costs', and has been practising it for the past many years. By and large our experience with this concept has been encouraging,

but the realization that the monetary impact of this policy must be reciprocated in ever-increasing measure by higher performance standards, requires more to be driven home. Employee relations in our Company are a worthy example to industries anywhere. I am therefore mentioning this not in a spirit of dissatisfaction, but as a live fact which must be increasingly realised and translated into practice if progressive employment policies are to survive the forces of competition in internal and foreign markets.

Ladies and Gentlemen, I am very proud of this opportunity of addressing you today, and I hope that operations of the Company in the year have been a matter of satisfaction to you. Thank you.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

The Praga Tools Corporation Limited

Technical Collaboration with Foreign Firms

Sound Financial Position

Shri S. Ranganathan, Chairman, on Company's Future Prospects

The following is the speech of Shri S. Ranganathan, Secretary, Ministry of Commerce & Industry, Government of India and Chairman of the Board of Directors at the Seventeenth Annual General Meeting of the Shareholders held on September 28, 1961:—

Gentlemen,

We met last on March 27, 1961 for the Sixteenth Annual General Meeting of the Company and I am happy to welcome you to the Seventeenth Meeting in six months' time. This is possible because we have been able to close the accounts for the year ended March 31, 1961 and present the same to you within the period of six months stipulated in the Companies Act.

2. The audited statement of accounts and the Directors' Report thereon have already been sent to all shareholders. You would have also received, as on the last occasion, a simplified Balance Sheet and Profit and Loss Account. These would give at a glance the working results of the Company. With your permission, I shall take them as read.

3. As you are aware, the Government of India started taking an interest in the affairs of our Company in 1956 and appointed

some of their officers to serve on the Board, even when the Industrial Trust Fund of the erstwhile Hyderabad Government acted as the Managing Agents. Later, the Managing Agents resigned as from July 1, 1958, from which date the management of the affairs of the Company has been the direct responsibility of your Board of Directors assisted by a General Manager.

4. I propose, with your permission, to review briefly the progress achieved by the Company since your Board assumed direct charge of its affairs. At the outset I am glad to report that during the period of 2 years 9 months from July 1, 1958 to March 31, 1961 the Company earned a gross profit of Rs. 17.36 lacs, after providing for full depreciation. Almost all this profit, however, has had to be utilised in writing off past losses, value of intangible assets and unsaleable finished goods, developmental expenses, etc. so that the final carry over of profit on March 31, 1961 is only Rs. 23.631. Your Directors can take justifiable pride in the fact that today the Company has been placed on a comparatively sound footing and its financial position is such that a reasonable share of the surpluses accruing in succeeding years could go to the payment of dividends, and the

balance ploughed back for expansion programmes.

5. The capital of the Company was reconstituted in 1958 by writing down the share value from Rs. 50 to Rs. 35 per share. Even so the loss carried forward was Rs. 9.99 lacs. Another important step was the decision of the Central Government to invest Rs. 70 lacs in the Company. At the same time the Andhra Pradesh Government agreed that the loan granted by them to the Company of Rs. 17.75 lacs could be converted into share capital. They also agreed to forgo the outstanding interest of Rs. 5.29 lacs due to them. These steps put the Company in ready funds to meet its various commitments and its business could thereafter be conducted without the nightmare of constant financial difficulties to which it had been subject in the preceding years.

6. One of the handicaps this Company suffered from was the lack of adequately experienced personnel at the middle management levels. This deficiency has been remedied by the appointment as heads of departments of persons with considerable experience in their respective lines. The post of Works Manager, however, continues to be vacant since November 1959 and attempts to recruit a suitable person have not

yet succeeded owing to the paucity of persons with requisite technical experience.

7. In the factory itself, considerable improvements have been effected. The drainage was improved to prevent storm water entering the machine shop and causing damage to machinery as has happened in past years. The machines were re-laid out to form productwise sections to the maximum extent. Considerable re-wiring of the plant was undertaken in order to minimise electrical losses and breakdowns which were occurring frequently. Over sixty machines have been reconditioned. In order to minimise running repairs and sudden breakdowns a preventive Maintenance Unit has been formed. A systematic lubrication procedure has been introduced. A new and hygienic canteen has been built. All these steps have already yielded results in the greater utilisation of machines.

8. With the available plant and machinery the factory had reached a production level of Rs. 60 lacs per annum in 1959 itself, but during 1960, due to unsettled labour conditions, production came down to Rs. 48 lacs in 1960-61. In the current year 1961-62 we have every hope of reaching the Rs. 70 lacs target provided labour continues to co-operate, and if this

figure is reached the shareholders could not reasonably complain.

9. As at the time of my last report to you, labour situation has been continuing to cause us concern; but I am glad to report that on the 1st July 1961 the management and the Employees' Union signed a settlement which gave the workers an additional dearness allowance of Rs. 10/- per month and certain other benefits in the form of a night shift allowance and supply of uniforms. In its turn the Union has entered into a truce agreement for three years and has also agreed to the revision of work-norms and work standards by mutual negotiation. This settlement if implemented in the spirit, will be a landmark in the labour-management relations in this company, and we may look forward to peace in the industry and to a climate for better working and productivity in the coming years. The General Manager who has conducted these delicate negotiations deserves our congratulations.

10. Thus, we have so far, with some measure of success, consolidated the position of the Company and ordinarily there should be no fear of its sliding back. With this assurance, we have now taken in hand a substantial expansion. As you are all aware our Company has signed technical collaboration agreements with three British firms for the manufacture of drill chucks, lathe chucks and tool and cutter grinders respectively. Negotiations, are currently under way with a fourth British firm for the manufacture of milling machines under licence. The Government of India have already assigned to this Company a definite role in the machine tool industry. Three hundred acres of land on the outskirts of Hyderabad near Maula Ali Railway Station are being acquired. When these expansion schemes are completed the factory would produce about Rs. 2 crores worth of machine tools and accessories annually besides the other products the Company is currently manufacturing.

11. Since we last met here, there has been another significant development. The Company has negotiated and signed an agreement with CEKOP of Poland for the preparation and supply of a Project Report for a unit manufacturing machine tools of various types. This Project Report is expected to reach us in a month or two. The Government of India have already earmarked Rs. 1 crore for the use of our Company out of the Polish Credit. A second agreement with CEKOP for the supply of machinery under this credit arrangement is under negotiations.

12. You will expect me to say something about the future. All I would say is that I am optimistic, even though some of our

products are in the competitive field. Already there is keen competition from other entrepreneurs in same lines; this competition could be expected to increase rather than decrease. But quality is our hall mark and if we maintain our standards, I am not unduly pessimistic about sales. There may however be need to reduce prices. Greater productivity is the answer and our management is fully alive to this need.

13. Our General Manager Shri B. Venkataraman who has been with us since July 1958 is due to retire shortly from the Company on October 18th next. I am sure you will wish to express our sincere appreciation of his services to the Company and to wish him a happy retirement.

Shri A. M. Kelkar, an Officer of the Industrial Management Pool who joined the Company as Officer on Special Duty on July 21, 1961 will be taking over from him and we propose, with your permission, to designate him as Managing Director.

14. This will be the last occasion I shall attend your meeting as Chairman of the Board of Directors. The President has decided to appoint Shri P. S. Rau as Chairman and I am confident that the Company's affairs will register under his able and experienced stewardship greater and greater success.

N.B.—The above does not purport to be the report of the proceedings of the seventeenth annual general meeting of the Company held on September 28, 1961.

JESSOP AND CO. LTD.

Notice is hereby given that in compliance with the provisions of the Preference Shares (Regulation of Dividend Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5% Cumulative Preference Shares for the half year ending 31st October, 1961, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 28th October to 1st November, 1961, both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 1st November, 1961 or to their Mandatees.

BY ORDER OF THE BOARD

K. S. BASU
SECRETARY.

63, Netaji Subhas Road,
Calcutta, 28th September, 1961.

2nd October, 1961.

THE CHAMPDANY JUTE COMPANY, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held at its Registered Office at 2, Netaji Subhas Road, Calcutta-1 at 3-30 p.m. on 26th October 1961 to consider and if thought fit to pass the following resolution as an Ordinary Resolution:—

"That the Directors be and they are hereby authorised to sell the land and premises comprising the Company's Champdany Mill and the appurtenances thereto together with the plant, machinery, equipment and installations situated thereat to Kothari & Company Private Limited for the sum of Rs. 48,20,000 upon and subject to the terms comprised in an Agreement entered into between the Company and the said Kothari & Company Private Limited, and that the said Agreement submitted to this Meeting be and the same is hereby approved."

By order of the Board,
JAMES FINLAY & CO., LTD.
Managing Agents.

Dated Calcutta,
30th September, 1961.

EXPLANATORY STATEMENT

As your Directors indicated in their Report to the Shareholders for the year ended 31st March, 1961, it has been decided to concentrate the manufacturing operations of the Company at Wellington Mill and to close down Champdany Mill in order to reduce manufacturing costs. In pursuance of this policy, negotiations have taken place between your Directors and Kothari & Co. Pri-

vate Ltd. for the sale of the Company's Champdany Mill and, subject to your consent under Sec. 293(1) (a) of the Companies Act, 1956, it is your Directors' intention to proceed with the sale to Kothari & Co. Private Ltd. on the terms indicated in the resolution and in the Agreement referred to therein. The Agreement contains the usual stipulations that the sale is subject to the Company making out a good and marketable title to the property to be sold and to the property being free from encumbrances, and also to a provision that it is subject to your consent under the above Resolution.

Inspection

A copy of the said Agreement is available for inspection at the registered office of the Company, No. 2, Netaji Subhas Road, Calcutta-1, during the usual office hours and will also be available at the meeting.

Interest of Directors and Managing Agents

Your Directors and Managing Agents are or may be deemed to be interested in the resolution as follows:—Mr. A. I. Murison, Mr. N. S. Coldwell, Mr. R. G. Edwards, Mr. K. P. Goenka and Mr. B. Gill as members and directors and James Finlay & Co. Limited as Managing Agents and members of the Company.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

Company Reports

Excellent Results of Jay Engineering

THANKS to the upward trend in production, Jay Engineering Works Limited has produced excellent working results for the year ended 31 March, 1961. The output of sewing machines has risen to 256,000 from 242,000 and fans to 514,000 from 346,000. Sales also have kept pace with production. Total sales are shown higher at Rs 3.89 crores against Rs 7.21 crores.

The net profit for the year, after providing for Depreciation and Taxation, amounts to Rs 34.76 lakhs as against only Rs 32.44 lakhs for the preceding year. Except for General Reserve which is reduced from Rs 4.80 lakhs to Rs 2.70 lakhs, all other allocations have been increased: Depreciation from Rs 23.55 lakhs to Rs 29.36 lakhs; Taxation from Rs 19.50 lakhs to Rs 22.85 lakhs and Development Rebate Reserve from Rs 7.00 lakhs to Rs 8.56 lakhs. The dividend on the Ordinary shares is, however, maintained at 17.15 per cent, subject to tax.

The directors have, in their report, stated that the zig zag sewing machine will be introduced in the home market during 1961. The company has continued its efforts towards exports, which show an increase of 50 per cent over last year. It has received the Government's approval for putting up a factory for the manufacture of sewing machines with a capacity of one lakh machines per annum on single shift basis. Since the end of accounting year under review, the company has placed orders for capital goods amounting to Rs 10.19 lakhs.

Expansion Plan by Aluminium Corporation

The construction work on the expansion project of the Aluminium Corporation of India is reported to be going on well and the equipments for the metal production section have been since shipped. The directors hope that the additional metal will flow out of the plant early in 1962. Orders for the plants to fabricate aluminium metal into finished products like sheets, circles, foils, extrusions, ACSR cables, etc. and for the alumina plant are being finalised.

Meanwhile, the company has reported a substantial rise in the net profit, after providing for Depreciation and Taxation, to Rs 25.48 lakhs from Rs 11.58 lakhs for the preceding year. The directors have made the following allocations:— Depreciation Rs 4.76 lakhs (Rs 9.00 lakhs); Taxation Rs 13 lakhs (Rs 14.50 lakhs); General Reserve Rs 14 lakhs (Rs 1.00 lakh) and Development Rebate Reserve Rs 7,107 (Rs 6,356). The dividend is, however, repeated at Rs 1.20 per share, subject to deduction of tax.

The subscribed capital is Rs 1,02,50,000 divided into 6,25,000 ordinary shares of Rs 10 each; 20,000—5 per cent Cumulative Preference shares of Rs 100 each and 20,000—6 per cent Cumulative Preference shares of Rs 100 each. The gross block at Rs 4.00 crores is depreciated by Rs 1.14 crores, leaving a net block of Rs 2.86 crores.

Orissa Textile Fares Well

Despite serious floods which dislocated the entire transport system, and communications in Orissa last year, the Orissa Textile Mills Limited has been able to maintain production and report better results for the year ended 31 March, 1961. While sales have gone up to Rs 3.31 crores from Rs 2.86 crores, the net profit, after providing for Depreciation, amounts to Rs 12.35 lakhs as against Rs 2.94 lakhs for the previous year.

The present profit has been adjusted against the previous year's debit balance, leaving still a debit balance of Rs 22.18 lakhs, which is carried forward. The directors state that the company is now in a position to enter the export markets.

The authorised and issued capital is Rs 75,00,250. The subscribed capital is Rs 73,78,564, divided into 4,80,020 Ordinary shares of Rs 10 each and 25,002 1/2—5 per cent Redeemable Cumulative Preference shares of Rs 100 each. Forfeited shares amount to Rs 78,114. The gross block at Rs 2.47 crores is depreciated by Rs 1.39 crores, leaving a net block of Rs 1.08 crores.

NISCO Skips Dividend Again

The reduction in sales from Rs 1.49 crores to Rs 1.42 crores is reflected in the working results of the National Iron & Steel Company, Limited for the year ended 31 March, 1961. The accounts reveal a loss of Rs 75,562 as against a net profit of Rs 1.17 lakhs for the preceding year. The Depreciation is lower at Rs 5.22 lakhs against Rs 6.09 lakhs. Including the year's loss, there is a debit balance of Rs 9.55 lakhs. This is set off against the balance of the General Reserve account, leaving a debit balance of Rs 7.05 lakhs, which is carried forward.

The directors state that the scarcity of raw materials, in particular billets and first grade melting scrap, continued throughout the year and there is not still much improvement. They have however, assured the shareholders that all efforts are being made to improve the position.

Expansion Programme of Praga Tools

The directors of the Praga Tools Corporation Limited have, in their latest report, stated that arrangements for putting a new factory are on hand. The expenditure, incurred on this account to the end of the year ended 31 March, 1961, amounts to Rs 10.40 lakhs.

In addition to the collaboration arrangements concluded with the three British firms for the

manufacture of drill chucks, lathe chucks and tool and cutter grinders, it is proposed to develop the manufacture of milling machine in collaboration with another British firm. Negotiations in this regard are in progress.

The Government of India have authorised the company, to enter into an agreement with Centrala Handlu Zagranicznego Obiektow Przemyslowych-CEKOP of Warszawa, Poland, for the manufacture of Polish type machine tools by the company, utilising the Polish credit to the extent of Rs 1 crore, available under the agreement on Economic Co-operation between the Government of India and the Polish People's Republic.

Meanwhile, the company has reported a rise in sales from Rs 47.89 lakhs to Rs 67.15 lakhs, although the net profit is slightly lower at Rs 3.15 lakhs as against Rs 3.45 lakhs for the preceding year. Adding the balance brought forward of Rs 3.73 lakhs, there is an available balance of Rs 6.88 lakhs. Out of this, a sum of Rs 6.64 lakhs is written off against losses and expenditure on the development of work-in-progress and Rs 19,291 against expenditure on jigs and fixtures, leaving a balance of Rs 23,631 to be carried over.

For the Investor

INVESTMENT GOSSIP

Dull Phase

The stock market has generally been ruling somewhat dull during the past week. While the more speculative counters have been moving within narrow margins, selected shares all along the list have been meeting with support mainly on indications of growth and other prospects such as bonus and rights shares issues. There are a number of factors in the investment situation favouring a cautious approach to equities. Perhaps an urgent consideration is the forthcoming long Puja holidays in Lyons Range. The dislocation to traffic and damage to crops caused by the recent floods in Eastern India and the continued shortage of coal may slow down industrial production, prospects of which are not brightened by the new import policy with its emphasis on capital imports.

If sentiment has not deteriorated, it is probably because the first meeting of the Presidents of the Stock Exchanges and the AICC session have so far not produced any jitters. It would appear that at Thursday's meeting in Bombay, it has been concluded that whatever reform is needed is to be implemented without much ado. The meeting is reported to have finalised only one measure. This refers to margin; a graded scale of carry-over margins ranging from 2 to 50 per cent, depending on the quantum of carried forward business in all the cleared shares from one settlement to another, will be levied. In determining the margin the value of the membership card and the security deposit of a member will be taken into account. Although the meeting is said to have noted the need for curbing curb trading, no decision seems to have been taken. The matter is to be left to be tackled by the various stock exchanges themselves. It is evident from the behaviour of the market during the past two days that it is not unduly disturbed by the outcome of the meeting of the Committee of the Presidents of the Stock Exchanges. The AICC has now approved the election manifesto without any major changes. Marketmen may derive some comfort from the fact that the amendment seeking to put a ceiling on urban property income has been thrown out.

The outlook for the stock market in the immediate future appears to be a phase which will be a continuation of the present dull conditions with selected shares receiving support on favourable news. Soon after the Puja holidays in Calcutta, Dalal Street will start preparing for its Diwali recess. A pronounced bullish phase may therefore not be in the offing for some time to come.

NEW ISSUE NOTES

Upper Doab Sugar

The Upper Doab Sugar Mills Limited, Shamli (U.P.), an existing public company having a paid up capital of Rs 63,76,200 has been accorded consent, to issue a capital of Rs 25 lakhs divided into equity shares of Rs 100 each for cash, at a premium of Rs 25 per share, to the existing shareholders of the company.

Dehri-Rohtas Light Railway

Dehri-Rohtas Light Railway Company Limited, Dalmianagar, Bihar, running a narrow gauge railway line for movement of public traffic and having a paid-up capital of Rs 30,02,600, have been accorded consent to issue 1,00,000 equity shares of Rs 10 each as bonus shares to their existing shareholders on capitalisation of the company's reserves to a like extent.

Victoria Mills

The Victoria Mills Limited, Bombay, has a paid-up capital of Rs 25,60,000 (Rs 8 lakhs in Preference shares and Rs 17,80,000 in Equity). It has been granted consent to issue bonus shares of the value of Rs 4,40,000 to be made in the ratio of one bonus share for every four equity shares held. The company is engaged in the business of spinning-weaving, manufacturing and processing of cotton and piece goods.

Kalasa Tea

The Kalasa Tea & Produce Company Limited, Mangalore, has been granted consent to the issue of capital of Rs 3 lakhs divided into 1,50,000 equity shares of Rs 2 each to be issued as bonus shares on capitalisation of reserves to a like extent. The present paid-up capital is Rs 6,00,000 in ordinary shares of Rs 2 each.

Ghaziabad Engineering

Ghaziabad Engineering Company Private Limited an existing private company engaged in the manufacture of engines, diesel engines etc. and deal in Bosch Parts and Tractors, have a paid-up capital of Rs 4,50,000. The company has been accorded consent to the capitalisation issue of bonus shares of the value of Rs 1,12,500 to its existing shareholders in the ratio of one for four shares held.

Struthers Wells

Struthers Wells (India) Limited has obtained the necessary industrial licence and will be in the capital market, sometime in December, with a public issue of Rs 37 lakhs. This company is formed for the manufacture of plants and equipments for use

by industries, such as fertilizer factories, petroleum refineries, chemical dyes and pharmaceuticals. The technical collaborators are Struthers Wells International Corporation of the USA. The capital outlay of the project is estimated at Rs 2 crores. This is to be met by way of Rs 37 lakhs from public subscription, Rs 30 lakhs from subscriptions from promoters and their friends; Rs 32 lakhs from the foreign collaborators and a long-term credit of Rs 1 crore. The factory will be located at Chinchwad, near Poona.

Hind Rectifiers

Hind Rectifiers Limited, Bombay, is expected to enter the market for raising capital in December next. The company, which was converted into a public limited concern in April 1961, has an authorised capital of Rs 30 lakhs in equity shares of Rs 100 each, of which the issued and paid-up capital is Rs 5 lakhs. Out of the new issue of Rs 20 lakhs, the existing members will subscribe Rs 5 lakhs, while the foreign collaborators will take up shares worth Rs 3 lakhs, subject to Government's approval. The public will be offered Rs 12 lakhs. On completion of the scheme, the annual output is expected to reach Rs 50 lakhs in about three years. At present, the company produces selenium rectifier apparatus. It proposes also to manufacture silicon rectifier apparatus and silicon diodes.

INVESTMENT NOTES

South India Viscose

The South India Viscose Limited proposes to set up a plant in Coimbatore for the manufacture of dissolving pulp from hardwoods, such as eucalyptus and wattle. The company's plant for the manufacture of viscose, rayon yarn and staple fibre is at Mettupalayam. The new plant will be set up in collaboration with an Italian firm. The plant will have a production capacity of 21,000 tons a year.

Bisra Stone Lime

The Bisra Stone Lime Company Limited has decided to issue bonus shares in the ratio of three fully paid-up equity shares of Rs 10 each for every share held, by the capitalisation of General Reserves to the extent of Rs 30 lakhs. The company has applied to the Controller of Capital Issues for the necessary sanction.

Hasimara and Huldibari

It is understood that the Hasimara Industries Limited and the Huldibari Tea Company Limited have applied to the Controller of Capital Issues for issuing bonus shares in the ratio of one share for each share held.

Digvijay Cement

Shree Digvijay Cement Company Limited has been successful in concluding an agreement with a well-known US firm for securing financial as well as technical collaboration for the asbestos sheet and high pressure pipe-making project. The American

collaborators have agreed to provide the necessary technical know-how for the manufacture of asbestos cement products on the payment of royalty, both on the internal and export sales. The terms have, it is understood, been approved by the Government of India with some modifications. Further negotiations are being carried on with the Government in this connection.

Travancore Chemical

The Travancore Chemical and Manufacturing Company Limited will be issuing 50,000 equity shares of Rs 10 each, at par, to the equity shareholders, as on 1 December 1961. A sum of Rs 5 per share is payable on or before 15 January 1962 and the balance on or before 15 April 1962. The new shares will rank for dividend pari passu with the old shares from 1 April, 1962.

J. K. Synthetics

J. K. Synthetics Limited is putting up a Nylon factory at Kota. This is the first plant to be set up in India by J. K. Organisation. The building is almost complete. The plants and machinery is under erection. The erection work is going on in full swing and every possible effort is being made to complete it as early as possible. It is expected that the plant will go into production before the close of the current year. The nylon industry has a very bright future and the scheme is expected to yield good return.

IISCO

According to the figures released by the Indian Iron & Steel Company Limited for last month, the output of Pig Iron has shown a sharp fall to 97,760 metric tonnes from 101,000 tonnes in August, while that of Steel Ingots is slightly higher at 76,888 tonnes against 76,053 tonnes. The output of saleable steel has declined to 60,138 tonnes from 62,809 tonnes. Despatches have also declined to 58,138 tonnes from 62,156 tonnes. In this connection, the directors have stated that 3,200 tonnes could not be despatched, because of non-availability of B. R. Ts on the last day of the month under review and due to destination restrictions.

TISCO

The Tata Iron & Steel Company has reported a slight increase in the output of saleable steel to 107,000 metric tons in September from 102,700 tons in August. On the other hand, the production of Pig Iron is lower at 123,900 tons as also that of Steel Ingots at 128,300 tons as compared with 131,500 tons and 131,700 tons respectively. The shortfall between scheduled and actual steel production in September was, it is learnt, due to irregular receipts of raw materials compelling an average withdrawal of 4,838 tons per day from the reserve stock. There was the usual difficulty of increase in ash content of coal. The fall in pig iron output was due to heavy shortfalls in supplies of iron ore from

the mines as a result of which operation of the furnaces had to be slowed down.

STOCK EXCHANGES

See-Saw

Movements

Watch-Dog Writes:

CONDITIONS in stock markets have remained, on the whole, steady during the week under report. Both the bulls and the bears have been extremely cautious in their commitments. Whatever transactions, that have been taking place, are in the nature of squaring-up.

The general trend is unlikely to change much, as there is an anxiety to watch the deliberations of the Madurai Congress meeting as well as the final decision to be made by the Stock Exchange Presidents in their jurisdictions with regard to share reform.

Apart from a few firm features, conditions in other counters on the Calcutta Stock Exchange remained generally steady.

Values on the Bombay Stock Exchange moved indecisively during the major part of the week under review.

Steadier conditions were witnessed on the Madras Stock Exchange where activity was more prominent in the Textile and Miscellaneous sections.

CALCUTTA

Calcutta, Friday Evening.
ALTHOUGH activity continued to be restricted, the local stock exchange displayed a steady trend with prices responding to selective support. Apart from a general reluctance to extend commitments in view of the ensuing holidays for the Puja festival, operators were unable to take a constructive idea about the future trend of the market.

Even a times, apprehensions grew that the bulls had perhaps been weakened rather to a point of being scared by the recent recession that drained out much of their available funds. The decision made at Bombay by the Committee of the Stock Exchange Presidents to adopt a uniform system of margin on carry-over business, the Government decision to continue development imports even at the cost of maintenance imports, reports of damage to the crops by the widespread rains and floods in various parts of the country, anxiety to watch the deliberations of the Madurai Congress meeting, the growing shortage of credit, the shocks induced by a crop of adverse corporate news and the uncertainty in the international political situation—all these factors had an adverse effect on sentiment.

Nevertheless, some of the shrewd operators seemed to be optimistic about the investment outlook especially when many companies had already framed plans for the diversification of their activities. With the result, bears, too, were not bold to hammer down values by taking advantage of a stalemate. Thus, in the absence of any aggressive buying or selling, prices moved within a narrow groove. There was a general feeling that there would not be any major change in values in the near future.

The Giltedged market was dull and interest was limited to a few loans. Medium-dated loans were on offer. Some of the State Loans were also marked down due to moderate offerings. 3 per cent 1986 Conversion Loan, after opening lower at Rs 72.90, improved gradually towards the close to Rs 74.25.

Bank shares remained generally steady. Punjab National came in for business at Rs 18.50 to Rs 18.69.

Jute shares met with only small business. Prices, where changed, were inclined to be upward, reflecting the growing feeling that the industry had now turned the corner due to the easing position of raw jute supply. Howrah were enquired up to Rs 20.62 from Rs 20.25; Fort William up to Rs 26.87 from Rs 26.69; Champdany up to Rs 131 from Rs 125 and Khardah up to Rs 17/12 from Rs 17.00. New Central were, however, sticky at Rs 17.06.

Coal shares were generally neglected in the absence of any news of fresh import to boost sentiment. Burakur moved rather irregularly between Rs 18.06 and Rs 18.31 due to alternate buying and selling, while Bengal met with some enquiry at Rs 385 and also Amalgamated at Rs 21.44. Western Bengal were rather quiet at Rs 9.34 against Rs 9.44.

Teas, too, were in a section in which nothing peculiar happened to report except that Hasimara and Huldibari met with sustained support following the proposals made by these companies to issue one-for-one bonus issues. Even in the case of these companies, there was considerable profit-taking at the higher levels, resulting in Hasimara being marked back to Rs 30.37 from Rs 32.44 and Huldibari to Rs 29.12 from Rs 29.50. Basmatia turned quiet at Rs 26 after being done up to Rs 26.25, while Bishnauth changed hands on the ex-dividend basis at Rs 19.37 to Rs 19.62.

Sugar shares continued to remain weak following the abolition of controls on the distribution and price of the sweet commodity. Raza/Buland came in for offer at as low as Rs 10.94 and SKG at Rs 10.81. Carew were, however, nearly maintained at Rs 13.19.

If there was any section, which displayed conspicuous strength on active bull support, that was the Textile, thanks to the hopes of larger offtake of cloth during the ensuing Puja festival. Jay Shree were enquired up to Rs 18.12 (Rs 17.06); Elgins up to Rs 22.25 (Rs 22); Cawnpore up to Rs 9.25 (Rs 9.09) and J. K. Rayon up to Rs 19.06 (Rs 18.81). Figures shown within brackets were the week's closing rates.

In the Engineering section, price movements were rather irregular due

to the speculative activity in Indian Irons which, in turn were subjected to settlement considerations till Wednesday. After opening steady at Rs 24.38, Indian Irons improved to Rs 24.48. Selling pressure at this level brought down the scrip at one time to Rs 24.18 before finishing the week at Rs 24.34. Jessop were taken up to Rs 21 from Rs 19.81; Guest, Keen, Williams up to Rs 41 from Rs 39.94 and TEXMACO up to Rs 17.45 from Rs 16.90, to close finally at Rs 29.62; Rs 40.75 and Rs 17.45 respectively. Binani Metal were rather steady at Rs 12 with J. K. Steel and Dalmia Iron ruling rather quiet at Rs 20.62 and Rs 10 respectively.

Miscellaneous issues showed a mixed trend, as will be clear from the price trends of a few selected shares:

	High	Low	Closing

Grading of Mica

Rapid and accurate classification of mica, micanite and other laminated sheets can now be made with an apparatus developed at the Central Glass and Ceramic Research Institute Calcutta. The development of the apparatus is of significance in view of the fact that India meets nearly 80 per cent of the world's total requirements of good quality sheet mica.

The quality of mica is generally evaluated visually on the basis of properties such as colour, waviness and presence of stains and spots. Tests with the new apparatus developed at the CGCRI reveal that visual evaluation is not a satisfactory method for determining the quality of mica and a correct assessment can be made only by determining its power factor. The conventional methods of power factor determination are too slow and elaborate for commercial routine testing of mica sheets. These limitations have been overcome in the new apparatus. The new apparatus is portable, self-contained, battery-run and is easy to operate. This renders it eminently suitable for use in industry. Test-pieces of any size and thickness can be evaluated with the apparatus.

Another process for making modified phenolic and urea resin adhesives was developed at the Shri Ram Institute for Industrial Research, Delhi.

are you a victim of executive fatigue?

at the end of a working day
are you tired, listless,
completely done-in?

If so, you are possibly a victim of executive fatigue and you need Smiths **SUPER FORTE**—the tonic that fights executive fatigue. An exhausting day's work uses up more vitamins than your daily food intake can restore. **SUPER FORTE's** 10 vitamins and 9 minerals adjust this deficiency.

What results can you expect of **SUPER FORTE**? Nothing dramatic. It wouldn't be fair to suggest that **SUPER FORTE** works wonders overnight. But take two tablets daily for 30 days and you'll get results—added vitality, strength, staying power—all the additional physical reserves you need to cope with the stress and strain of modern business.

smiths
super forte
tablets
for
executive fatigue

INVESTOR'S SUPPLEMENT

Irregular Price Movements in September

AN irregular trend prevailed on the stock market during September with equities alternatively subdued and cheerful. In early trading prices staged a mild rally which, however, proved short-lived. Sentiment again revived in the second week and this time the recovery lasted for about a week. Although bears continued to be subdued during the third and fourth weeks of the month, bulls were found to be reluctant to extend commitments.

The withdrawal of enhanced margins on certain scrip in the forward list in Calcutta was the signal for a renewed bear attack. The downtrend was further aided by the depressed sentiment in steel shares and prices were marked down on a wide front. The reiteration by the Chairman of the Indian Iron and Steel Company Limited at the annual meeting of the shareholders of the company adversely affected Indian Iron shares. Although the Chairman of the Tata Iron and Steel Company Limited had pointed out that there was no cause for undue pessimism as regards the prospects of the company, the fact that its working results were somewhat disappointing kept interest in steel shares at a low ebb.

Fresh buying had also been hindered by a number of restraining influences that were at work during the early part of the month. The resumption of nuclear tests first by Russia and then by the US and the growing anxiety in the country on account of the fast undertaken by the Akali leader Master Tara Singh in connection with his demand for a Punjabi Suba called for caution. Operators were also worried over the talks that were to be held at the end of the first week between the Union Finance Minister and the presidents of the principal stock exchanges in the country relating to the reform of stock markets. It was generally believed that the outcome of the meeting would be some more restrictions on trading on stock markets.

During the second week of the month, there was a distinct improvement in sentiment, particularly on Lyons Range. The rally stemmed mainly from the fact that contrary to earlier apprehensions, the Union Finance Minister in his discussions with the presidents of the stock exchanges had made it clear that the responsibility of curbing speculation should primarily rest with the stock exchanges themselves and that Government would have to interfere only when the stock exchanges were found unable to maintain order. Far from reducing the stock exchanges to a position of secondary importance, the Finance Minister had made them shoulder

the responsibility for effecting whatever reform was considered necessary. A committee comprising presidents of seven recognised stock exchanges has been entrusted with the new task. The first meeting of the committee was expected to take place early in October.

While the uncertainty as regards curb measures issuing from Government all of a sudden has been removed, it does not follow that there will not be any restrictions on trading. But the fact remained that the responsibility of ensuring the proper conduct of the stock market devolved on the authorities of the stock exchanges themselves. The basis of the renewed apprehension was that it was not claimed that unhealthy practices were totally absent and

consequently, there might be some self-imposed regulations. The publication of the Congress Party's election manifesto did not produce any visible reaction presumably because there was nothing new in it as far as the stock market was concerned. Towards the close of the month, there were other considerations such as the forthcoming Puja holidays in Calcutta and the reported government decision on the recommendations of the Tariff Commission as regards cement prices. Rumour had it that the price of cement would not be increased to the full extent of the Tariff Commission's recommendation. There was also a tendency to await the outcome of the first meeting of the Committee of Presidents of Stock Exchanges.

Sectionwise, jute shares were easy most of the time in view of the heavy loss incurred by the industry in recent months. However, there was a mild rally during the second half of the month following increase in working hours of mills. The outlook for the industry in the current year is considered good as raw jute will be available in sufficient quantities to enable mills to increase production further.

Despite the bright prospects of expansion of the industry, coal shares continued to rule dull. It was evident that investors were of the view that unless there was improvement in the transport position and coal prices were revised upward, dividends might not show much improvement.

Tea shares were a generally dull market although selected shares met with good support from time to time. Buyers were not encouraged by the lower prices obtained at the auctions and the growing apprehension that there might be a glut in the market due to over production.

Sugar shares which were dull in earlier dealings turned easy later on following the abolition of controls on price and distribution. The reactionary tendency was impelled by the apprehension that sugar prices might develop a steady downward trend.

Perhaps the only section that ruled steady throughout the month was textiles. The sustained interest in the section stemmed from hopes of larger offtake of cloth during the festival season. The fact that an additional export quota for the UK had been obtained further stimulated interest in the section.

While engineering shares were generally subdued, the miscellaneous section provided some firm spots on encouraging developments. Banks were a dull market with glitged ruling quietly steady most of the time.

(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.

(c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.

(f) After transferring Rs 234,695 from General Reserve.

(g) After transferring Rs 2,656,522 from General Reserve.

(h) After writing back Rs 360,718 being excess depreciation provided in 1958.

(i) After transferring Rs 1,098,546 from General Reserve No. 1.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.

(m) After transferring Rs 119,825 from Development Rebate Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 6,27,612 from General Reserve.

(q) After transferring Rs 400,000 from General Reserve.

(r) Includes Rs 100,280 being provisions made in previous years written back.

(s) After transferring Rs 3,22,899 from General Reserve and Rs 78,000 from Depreciation Reserve.

(t) After transferring Rs 9,50,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 1,00,000 being Adhoc. reduction in stock-in-trade provided last year.

(x) After transferring Rs 890,580 from General Reserve.

(y) After transferring Rs 255,000 from General Reserve.

(z) After transferring Rs 825,000 from General Reserve.

(a1) After transferring Rs 1,075,000 from General Reserve No. 1.

(a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(a3) After transferring Rs 14,72,865 from General Reserve.

(a4) After transferring Rs 300,000 from General Reserve.

(a5) After transferring Rs 4 lakhs from Reserve to fall in price.

(a6) After transferring Rs 100,848 from General Reserve.

(a7) After transferring Rs 780,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

(a8) After transferring Rs 271,942 from General Reserve.

Depreciation in Company Law

[The following note presenting the view of the Company Law Administration on the provisions of Sections 205 and 350 of the Companies Act, 1956 should be of interest to our readers. It discusses the question of provision for depreciation before arriving at the disposable profits. The quantum of depreciation is also relevant in determining the net profits for the purposes of calculating managerial remuneration.]

The Companies (Amendment) Act, 1960, has considerably amended the provisions of Section 350 regarding deduction of depreciation in determining the net profits for payment of managerial remuneration. As compared to the requirement of that Section as it stood before the amendment (viz.) that of deducting the normal depreciation allowable under the Indian Income-tax Act, 1922 and the rules prescribed there-under, it is now required that the depreciation under section 350 should be calculated according to the rates prescribed under the Indian Income-tax Act, 1922 with reference to the written down values as mentioned in that Section. From time to time, queries have been received from members of the investing public, companies and their managements, chartered accountants etc. regarding the method of computation of depreciation in accordance with the provisions of the amended Section 350. The matter was carefully examined in consultation with the Advisory Committee of eminent businessmen and professional accountants, lawyers etc. attached to the Department, and a memorandum setting out the principles to be followed for the purpose of such calculation was prepared and circulated to the Chambers of Commerce, Professional bodies etc. It would however appear that some company managements continue to experience difficulty in giving effect to the provisions of the Section. The queries raised by them in this connection and the Departmental views in regard to such problems are set out below:

1. Since Section 350 provides that depreciation shall be calculated with reference to the written down value of the assets shown by the books of the company, whether it would be advisable to adopt the basis of notional written down value contemplated in the departmental memorandum?

A close perusal of the wording of Section 350 will make it clear that written down value as shown by the books has to be taken into account for purposes of Section 350 in respect of the first financial year expiring at or immediately after the commencement of the Companies Act, 1956 and that in respect of the first subsequent financial year, the written down value for the purpose of Section 350 will have to be calculated separately by applying the Income-tax rates of depreciation on the written down value mentioned above. The depreciation for the next financial year should be calculated by applying the Income-tax rates to the said written down value reduced by the amount of depreciation calculated for the previous financial year. Similar procedure should be followed for the subsequent financial years. If it was the intention of the statute that the written down value for the purposes of Section 350, should be the written down value as shown by the books of accounts from year to year, it would have been unnecessary to

include any reference to subsequent financial years. The intention could have been fully brought out by merely stipulating that "the written down value of the assets as shown by the books of the company" should be taken into consideration and omitting the words "at the end of the financial year expiring at the commencement of this Act or immediately thereafter and at the end of each subsequent financial year." It is a well-known principle of interpretation that every word occurring in a section has to be given a definite meaning and in the present case, such meaning could only be that where a company does not adopt the method of calculation of depreciation as laid down in Section 350 for purposes of its books of account, for each subsequent financial year, a separate notional written down value for the purposes of Section 350, in the manner stated at the beginning of this paragraph, should be worked out. This is the basis recommended in the Departmental memorandum.

Quite apart from the legal interpretation of the section set out above, it would be necessary to ensure that—

- (a) the method of calculation is in conformity with usually accepted accounting principles;
- (b) there is no under-charging of depreciation in future and also that companies are not required to deduct depreciation in excess of the cost of the assets concerned.

The continuous application of the basis of "the written down value shown in the books" may, in certain circumstances, lead to results contrary to the objectives set out above.

It is open to a company under the law to provide in its books for depreciation an amount higher than the minimum amount of depreciation required to be provided, in accordance with Section 350, before declaring dividend. In actual practice, many companies consider the Income-tax rates to be somewhat inadequate, particularly in relation to the higher replacement cost. If a company does provide for depreciation in its profit and loss account at a rate higher than what is contemplated under Section 350 (i.e. income-tax rates of depreciation) there would be an under-provision of depreciation for the purposes of Section 350, as would be seen from the illustration given below:—

	Provided in the P & L account at the rate of 25% (straight-line method).			Book written down value.	Provided at the rate of 20% u/s 350 on the basis of book written down value.
	Rs.	Rs.	Rs.		
Cost:				10,000	
1st year	...	2,500		2,500	2,000
				7,500	
2nd year	...	2,500		2,500	1,500
				5,000	
3rd year	...	2,500		2,500	1,000
				2,500	
4th year	...	2,500		2,500	500
5th year	...	Nil		Nil	Nil
Total Depreciation provided	...	10,000			5,000
Assets sold in the 6th year for	...	2,000			2,000
Total amount charged	...	8,000			3,000

It will thus be seen that if the book value basis is followed continuously, depreciation to the extent of Rs 5,000 would not be provided for, for the purposes of Section 350, in the above circumstances.

Similarly, if a company does not declare dividend it is open to it to provide no depreciation in its profit and loss account or to provide for it at rates lower than those prescribed in Section 350. This would distinctly result in the over-charging of depreciation (i.e. more than 100 per cent of the cost of the assets) as will be seen from the following illustration:

	Provided in the P & L account at the rate of 10% (straight-line method).		Book written down value.	Provided at the rate of 25% u/s 350 on the basis of book written down value.
	Rs.	Rs.	Rs.	Rs.
Cost:			10,000	
1st year	...	1,000	1,000	2,500
			9,000	
2nd year	...	1,000	1,000	2,250
			8,000	
3rd year	...	1,000	1,000	2,000
			7,000	
4th year	...	1,000	1,000	1,750
			6,000	
5th year	...	1,000	1,000	1,500
			5,000	
6th year	...	1,000	1,000	1,250
			4,000	
Book written down value after 6th year				
Total depreciation provided	...	6,000		11,250
Asset sold in 7th year for	...		1,200	
Loss on sale	...		2,800	
Additional change in 7th year	...	2,800		2,800
Total amount charged	...	8,800		14,050

It will be seen that the adoption of the book value basis would result in depreciation to the extent of Rs 4,050 being charged in addition to the cost of the asset, for the purposes of Section 350, in the above circumstances.

It will be seen that the Departmental memorandum seeks to achieve a logical compliance with the provisions of Section 350, at the same time without causing much difficulty or inconvenience to company managements and professional accountants in the matter of calculation of depreciation. As it is necessary that the procedure followed under Section 350 should not only conform closely to the spirit of the provisions therein, but be in accordance with good company practice, it would be advisable to adopt the notional written down value basis suggested in the Departmental memorandum.

2. The reasons for not deducting extra and multiple shift allowance in respect of financial years ending on or before 27 December, 1960, in calculating the notional written down value in accordance with the Departmental memorandum are not clear.

Under the provisions of Section 350, before its recent amendment, only normal depreciation allowable under the Indian Income-tax Act 1922 and the rules made there-under were required to be deducted for determining the net profits for payment of managerial remuneration. This Department has been advised

that the expression "normal depreciation" would not include extra and multiple shift allowance. Since the Section has no retrospective application requiring the deduction of extra and multiple shift allowance, in respect of periods prior to the commencement of the Companies (Amendment) Act, 1960, i.e. before 28 December, 1960, the application of the rate of depreciation including extra and multiple shift allowance in calculating the notional written down value would only create hardship to the company managements (as the arrears of extra and multiple shift allowance for previous years would require to be deducted in the very first financial year after the commencement of Companies (Amendment) Act, 1960) and distort the profitability position of the companies concerned. It would not therefore be appropriate to deduct extra and multiple shift allowance in respect of financial years ending on or before 27 December, 1960 in calculating the notional written down value for the purposes of Section 350.

3. In the case of companies, whose fixed assets have been revalued by writing up the difference to a Capital Reserve Account, whether the written down value should for the purposes of Section 350 be taken as the original cost?

If any asset or assets has or have been revalued prior to the expiry of the financial year ending on 1 April, 1956 or immediately thereafter, the amount added on revaluation would be a part of the book value in computing the notional written down value in accordance with the departmental memorandum on Section 350. Any addition arising out of subsequent revaluation should not be taken into account for the purpose of Section 350, as it has been made clear in the memorandum that the written down value in respect of years subsequent to the financial year ending on or immediately after 1-4-1956 would be the notional written down value referred to in the said memorandum.

4. Whether depreciation should also be deducted under Section 350 in respect of those assets which remained idle during the whole or a part of a financial year.

Since it has been held by accounting authorities that depreciation may arise even during the period when an asset remains idle, by the efflux of time, it would be necessary to deduct depreciation in respect of idle assets in accordance with Section 349(4)(k) read with Section 350 of the Act.

(To be Concluded)

International Oil Pro-Rationing

(Contributed)

It will be recalled that following the reduction in Persian Gulf Posted Prices in August 1960, Iraq, Iran, Saudi Arabia, Kuwait and Venezuela set up the Organisation of Petroleum Exporting Countries (OPEC) with a view to consulting together on important matters affecting their interests and to bringing about stability in crude oil prices. The restoration of prices, on which the income of host countries from oil operations depends, is OPEC's major immediate aim. To this end pro-rationing or regulation of production has been talked about as a possible solution to the problem arising out of the current pressures on prices. On the model of some of the international commodity agreements. Before considering the pros and cons of oil pro-rationing, it is as well to take a brief look at other commodity

agreements, which have been prompted by unstable prices.

There are a number of international commodity agreements in existence. The main ones cover wheat, sugar, coffee and tin. The aim of these agreements is to iron out short term fluctuations, which have a serious and unpredictable effect on the income of producing countries, many of them underdeveloped and relying heavily on such products to provide local funds as well as the foreign exchange for both current and development expenditures. Tin, wheat and sugar are producers/consumers agreements and in each agreement producers and consumers hold an equal number of votes; the coffee agreement is among producers only. Prices are fixed in the tin, wheat and sugar agreements and are essentially the result of negotiations between consumers and producers, based on recent past and present prices. They are revised periodically. None of the four agreements fixes production quotas. Effective supply on the international markets is regulated by means of voluntary export control.

Each of these agreements has succeeded in its primary aim, damping down short term price fluctuations, to quite a satisfactory degree. However, they have not yet resolved the root cause, namely, over-production. It is also important to note that the agreements have no pretensions to keeping prices fixed in the longer term, nor would it seem possible for them to do so in the face of the forces of supply and demand.

Although OPEC has not yet produced any definite plan for operating a pro-rationing

NOTICE

Owing to the intervention of the Puja holidays, there will be no issue of Indian Finance bearing the date 21 October 1961.

Manager

scheme, there have been suggestions that it should adopt one based on historical market share and proven reserves. There are obvious hurdles. In any scheme based on reserves, the Middle East will do extremely well at the expense of Venezuela. The formula would have to make allowances for new discoveries and addition to reserves. To be effective, the scheme must be joined by all other producing countries, otherwise OPEC group will lose share in the world markets to those producers who do not participate in the scheme. It is almost certain that OPEC members will face increasing competition from such countries as Algeria, Libya and Nigeria who may not relish any control on their newly found wealth. The USSR, anxious to regain its place in the world market, will also keep out. It must also be remembered that crude oil is not as homogeneous in nature as some of the other commodities. Besides differences in quality, there are also great differences in cost structure between, for example, Venezuelan and Kuwait crude. Maintenance of prices will stimulate even greater search for oil, attracting new investors, eventually leading to even greater surplus productive capacity.

Another difficulty will be the possible adverse reaction of consumer countries to any suspicion of price maintenance. Coffee or tin does not have a direct substitute. On the other hand, in its application in industry oil has substitutes and an almost certain outcome will be the promotion of other energy sources such as coal, and electricity, conventional as well as nuclear.

It seems that any attempt to share out market by a formal scheme is unlikely to succeed because of the great difficulty of trying to resist economic pressures without having an effective monopoly of oil producing areas and also alternative sources of energy. The essential differences between proposals for oil and the existing commodity agreements are:—

- (a) Commodity schemes aim at cushioning only short term fluctuations and make no attempt to check longer term economic forces of demand and supply. The oil scheme would be aimed at long term price maintenance, which would be impossible in the absence of monopolistic control over total production.
- (b) Oil is much more capital intensive which makes it attractive to sell at slightly over 'out of pocket expenses' to recover some of the capital quickly.
- (c) The wider variation in cost structure will tempt cheaper areas to break away from agreement.

In fact, some of the members of OPEC itself expressed doubt regarding the feasibility of regulating production. For instance, the Shah of Iran described the proposal as 'nice in theory but unrealistic in practice'. Nevertheless, OPEC represents a new factor in the International oil industry and if its researches help its members towards a better understanding of the complexities of oil marketing and pricing, this alone will eliminate a cause of frequent misunderstanding. Its studies will show that reasonably remunerative and stable prices are as much in the long term interest of the oil companies as of the exporting countries and indeed of consumers, for whom continuity and stability are of great importance.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

NEXT BUSY SEASON

Severe: But Less Pressure on Banks

TWO weeks remain for the notional end of the 1961 slack season, though if the experience of the last two, three years is repeated it is possible that relatively easy money conditions will continue to be in evidence for a month thereafter. By and large the anticipations of this column as to the manner in which the slack season would develop have materialised. Deposits of banks, after stagnating for a good few months consequent upon the Palai Central failure last year, began to accrue afresh. The total of Advances, which last year during the slack season had failed appreciably to decline, has been contracting steadily and week by week. Money rates turned distinctly easier, though they hardened somewhat in the wake of the Central and State Government loans. Another traditional interruption to the even progress of the slack season was offered by Pujā disbursements. But in broad terms it has been true that the World of Finance saw a sustained relaxation from the severe pressure to which, by the peak of the 1960-61 busy season, it was subjected.

The most important single factor contributing to the relative easiness is the slowing down in the rate of industrial growth from about the beginning of 1961. Partly perhaps inadequate supplies of raw materials were responsible for industry working below capacity; and this fact was reflected in the pronounced upward trend in the index of prices for industrial raw materials. Partly it was the severe shortage of foreign exchange which effectively reduced the flow of imported raw materials. Partly perhaps we also had a reduction in debt by industries which, begun in the early part of the Second Plan, commenced production around the middle of 1960. It is against this background that we have to assess the prospects for the next busy season.

We may state at the outset that we believe that a swifter rate of growth in industrial production will possibly be achieved as from around the present time. In the first place the position in regard to supplies of indigenously available raw materials has vastly improved; the relative index of prices has in recent weeks shown a considerable fall, so much so that, for the first time in some years, the general index of wholesale prices, for the latest week, is lower than the figure for the corresponding week a year ago. The drawing upon the International Monetary Fund would, in the second place, have released some foreign exchange for imported raw materials. In the third place, following upon a good agricultural crop year, it usually happens that there is a keener demand for consumer goods, which should act as a spur to additional production. In the fourth place, new enterprises set up during the new boom of the last two-three years should now be in process of adding to production—though it is necessary to add that in the bulk of cases such increased output, relating often to categories of industries not included in the general index of industrial

production, will not have much impact upon that index.

Nevertheless from the money market point of view the new production of new enterprises is extremely significant. While as its very name implies the busy season causes monetary stringency because of the seasonal requirements for funds, we need to remember that as a constituent of the whole of bank financing, seasonal finance is gradually diminishing in both ratio and importance. It is, in other words, the non-seasonal or industrial finance—*together with the automatically connoted funds for the trade and commerce to move that additional production—which in the present context determines whether or no a busy season will produce stringent monetary conditions.*

Consequently we believe it likely that the next busy season's requirements of bank finance will mark a further rise from the record expansion witnessed during the 1960-61 busy season; that is to say, Scheduled Banks' Advances should go up by something more than Rs 260 crores.

But the strain upon Scheduled Banks may turn out to be somewhat less severe than was the case in the 1960-61 busy season. Firstly, banks will be beginning the busy season with hardly any debt to the Reserve Bank. Secondly, Deposits may reasonably be expected to continue to accrue at a reasonable rate. Thirdly, banks have not, as they did in 1957 and 1958, put all of their "freed" resources (in the slack season) into giltedged, and to that extent have a more satisfactory cash reserve.

Thus it may be that the third tier of the three-tier bank rate may not operate at all. In any event it is unlikely that the "free" quota of banks' borrowings from the Reserve Bank will be exhausted before the end of the year. At that time of course transactions in connection with end-of-the-year window-dressing may cause the inter-bank money rate to go up, though temporarily. But it seems improbable that the call money rate should greatly exceed 5 per cent over the next 6 months or so.

As usual the last week in March will produce governmental end-of-fiscal-year payments; and though the busy season peak will be touched a month later, for banks the period of stringency should cease with the end of March.

PROGRESS OF 1961 SLACK SEASON

	28-4-61	Latest Week*	Change
Reserve Bank			
Active Note Circulation	1,982.43	1,891.49	- 90.94
Banks' Deposits	78.16	72.47	- 5.69
Other Loans & Advances	125.47	139.14	+ 13.67
Adv. Against Usance Bills	21.09	7.82	- 13.27
State Bank			
Deposits (see note)	549.70	530.31	- 19.39
Cash inc. Money at Call	27.87	26.98	- 0.89
Giltedged Investments	237.47	256.28	+ 18.81
Total of Advances	267.33	244.56	- 22.77
Other Scheduled Banks			
Net Deposits	1,367.04	1,412.62	+ 45.58
Cash inc. Money at Call	153.18	149.89	- 3.29
Giltedged Investments	324.99	356.55	+ 31.56
Total of Advances	1,024.78	978.27	- 46.51

*Week ended 6 October for Reserve Bank and State Bank.

Week ended 29 September for Other Scheduled Banks.

Note: State Bank figures are distorted by Rs 24 crores loss in Deposits owing to repayment of counterpart funds.

Tap purchases of giltedged, except by the State Bank and during November and December, are naturally to be ruled out. The State Bank's busy season financing may be met by sales of giltedged, amounting perhaps to Rs 50 crores; and disinvestment by other Scheduled Banks during the next busy season may be placed at half that amount.

To sum it up, the 1961-62 busy season should be severe as measured by the expansion in Advances; but as reflected in Scheduled Banks' disinvestment or borrowings, the pressure should be considerably less.

BANK RETURNS

Steep Expansion in Currency

BEGINNING of the month disbursements and the demand for funds consequent upon the Pujās are both reflected in the rather steep rise of Rs 34.25 crores to Rs 1,891.49 crores in Active Note Circulation as disclosed in the returns of the Reserve Bank for 6 October. Even so the outflow of Rupee Coin is in the unusually large amount of Rs 2.46 crores. Foreign Securities are unchanged at Rs 116.86 crores, and so currency has been expanded for Rs 20 crores against Rupee Securities by transfer from the Banking Department. As a result the Reserve Bank's cash in the till has been run down by Rs 16.70 crores to Rs 18.09 crores.

Inter-governmental transactions are suggested in the return for the Banking Department. The States would appear to have repaid some advances to the Centre. Their balances are substantially lower by Rs 17.81 crores at Rs 4.68 crores, and their ways and means borrowings from the Reserve Bank have at the same time increased by Rs 7.67 crores to Rs 57.04 crores. Only part of such receipt is seen reflected in the Centre's balances, which are better by Rs 5.68 crores at Rs 65.15 crores. The Central Government with its cash obviously much above the traditional minimum of Rs 50 crores has chosen to cancel ad hoc Treasury Bills before their maturity. This is indicated by the fact that though the transfer to the Issue Department was only Rs 20 crores, Investments in the Banking Department have shrunk by Rs 40 crores; and besides the State Bank is known to have sold giltedged for Rs 5 crores. It follows that the amount involved, *vis-a-vis* reverse ad hocs, may be around Rs 25 crores.

It would appear that banks have also felt the strain of the beginning of the month disbursements. For their Reserve Balances have been drawn on to the tune of Rs 6 crores, now

14 October 1961

being placed at Rs 72.47 crores; and the State Bank is responsible for less than half that amount. In the second place it would seem that borrowings from the central banking institution have also risen: that is suggested by the rise of Rs 5.81 crores to Rs 139.14 crores in the Other Loans and Advances of the Reserve Bank. In point of fact the Reserve Bank's advances against usance bills have expanded by Rs 2.48 crores to Rs 7.82 crores.

The States' payments have apparently meant a considerable strain: and it may be that they had to rediscount Treasury Bills for finding the wherewithal. The Reserve Bank's portfolio of Government Treasury Bills purchased and discounted has gone up sharply by Rs 22 crores to Rs 34.69 crores.

It is again encouraging to note that Balances Held Abroad have risen, though only slightly. The rise is one of Rs 0.73 crore to Rs 13.60 crores, and the foreign assets held by the Reserve Bank are as a result just a shade under the Rs 130 crore mark. During the export "season" till next March, it should be the objective of Government to build up the reserve to not less than Rs 175 crores. This should not be an altogether impossible undertaking.

The return of the State Bank for 6 October also bears the impact of month-early disbursements. The total of Advances has risen by Rs 2.09 crores to Rs 244.56 crores; and, in the second place, Deposit resources have fallen by Rs 2.30 crores to Rs 530.31 crores. It is reasonable to infer that constituents have "financed" their beginning of the month expenditure partly by drawing on their Deposits and the balance by reliance upon bank credit. In consequence of the two-way "loss", the State Bank, in order to avoid borrowing from the Reserve Bank, has sold giltedged for Rs 5 crores. As an end result cash balances including money at call and short notice have fallen by Rs 2.64 crores to Rs 26.98 crores.

During the week ended 29 September Deposit resources of Scheduled Banks have shown a distinct rise, but it is wholly on account of the State Bank, with other Scheduled Banks figuring as having experienced some element of fall. Net Demand Deposits have risen by Rs 2.97 crores to Rs 821.34 crores while Net Time Deposits have increased by another Rs 2 crores to Rs 1,123.90 crores. In the relevant week the State Bank reported a rise of over Rs 8 crores in Deposits, and so the inference is that other Scheduled Banks suffered a fall of just over Rs 3 crores in their Deposit resources. Simultaneously the total of Advances has shrunk further by Rs 2.69 crores to Rs 1,232.41 crores, with the State Bank negligibly contributing. This has enabled Scheduled Banks to reduce borrowings from the Reserve Bank by Rs 4.55 crores to Rs 11.07 crores, though indebtedness to the State Bank has risen fractionally by Rs 0.84 crore to Rs 18.39 crores. The giltedged portfolio shows a rise of Rs 10.56 crores to Rs 617.84 crores, this being wholly ascribable to the State Bank. Cash balances have dropped slightly by Rs 1.07 crores to Rs 179.51 crores.

It is likely that the return of Scheduled banks for 6 October should bear the considerable impress of beginning of the month disbursements. The total of Advances will almost certainly rise; borrowings from the Reserve bank (and perhaps from the State Bank as well) should go up; cash balances, particularly balances with the Reserve Bank, are

likely to have been drawn upon; and perhaps Deposit resources will fall somewhat.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 10 October 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs. 99.375 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Calcutta up to close of business on Saturday, 21 October 1961 and at Bangalore, Bombay, Kanpur, Madras, Nagpur and New Delhi up to close of business on Monday, 23 October. Successful tenderers should make payment on Friday, 27 October 1961. Other conditions are as usual.

During the week ended 6 October 1961 Government of India Treasury Bills for Rs 3,35,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 11 to 21 October 1961 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 4 to 7 October 1961.

Bank Rate for 6½ per cent

By Paul Einzig

THE reduction of the Bank rate by ½ per cent on 5 October took the City by surprise because, even though most people have not a very high opinion of the intelligence that guides the Government's monetary policy, they deemed it unlikely that Mr Selwyn Lloyd should go out of his way to ensure the defeat of his own policy of wage restraint. Hardly a day passes without some labour union declaring its determination to disregard that policy, and threats of strikes are flung about with great gusto. In the circumstances a gesture to indicate that the Government no longer considers sterling to be in danger is likely to remove the last vestige of hesitation on the part of the trade unions to press their wage demands with the utmost vigour. The relief obtained by industry as a result of the ½ per cent cut on the interest charges on their overdrafts will be offset

many times over by the increase of wages bill that will logically result from the Bank rate cut.

It is claimed that the Bank rate decision is justified by the need for discouraging the unwanted influx of hot money. The answer to this contention is that the influx, so far from being unwanted, is welcomed by the Government because it enables it to claim that its measures taken in defence of sterling had been successful. If the influx were really unwanted the Treasury would have the means to discourage it without having to jeopardise the chances of its major economic policy by this untimely Bank rate reduction. All that the Exchange Equalisation Account would have to do would be to resist the appreciating trend of sterling by buying forward dollars instead of buying spot dollars. The resulting widening of discount on forward sterling would make covered interest arbitrage unprofitable, while at the present level of spot sterling uncovered interest arbitrage, especially for short periods, entails a fairly substantial risk of capital loss through a depreciation of spot sterling.

The monetary authorities are fully familiar with the technique suggested above. The reason why they do not apply it is because the Government prefers to be able to announce at the beginning of each month an increase in its gold and Foreign Exchange reserve. It is a pity that the Treasury is not bound by the provision of the Companies Act under which a limited liability company is under an obligation to present a balance sheet showing liabilities as well as assets. A realistic balance sheet published by the Treasury ought to announce at the end of every month not only the amount of gold and Foreign Exchange reserve but also how much of that amount represents borrowed money, whether in the form of facilities from the International Monetary Fund and Central Banks or in the form of increase of London's short-term liabilities. Such a monthly return would not convey a false feeling of optimism at a time when such a feeling is calculated to give unwanted encouragement to wage demands.

It is true, Mr Selwyn Lloyd was at pains to emphasise that the credit squeeze would continue unabated. This will mean that industry will continue to have to bear the full burden of the credit squeeze without benefiting by the wage restraint which, after the Bank rate cut, stands a very poor chance of succeeding. It means that the country will have to bear the full disadvantages of the disinflationary policy without being able to benefit by its advantages. If there should be some major strikes during the next few months, or if such strikes are averted by granting more "unearned" wage increases, the Bank rate decision will be largely to blame for it.

Notes

INTEGRATION

The Pressures of Unity

The papers examined by the National Integration Conference held two weeks ago are perhaps more interesting than the speeches. The diversity of cultures and languages stands in the way of unity and in spite of the nationalist movement, Indian nationalism remains vague and amorphous. The persistence of communalism after the partition of India is a real problem. Regional differences even within a single State, like Mysore or Andhra Pradesh, are perhaps less acute than the Hindu-Sikh differences, exposed to public view by Master Tara Singh's fast.

Whether economic progress and financial integration by means of the migration of capital, and labour too, has helped to create unity is an issue that was not examined at the 1958 seminar or at the recent conference. The advent of new enterprises, the dispersal of major plants and the constitution of directorates in the private sector may well suggest that the financial world is less conscious of differences due to religion or caste. That a religious

renaissance accentuates differences and limits missionary activity is a ground for complaint by some. But xenophobia has been absent happily and it may be claimed that the desire for foreign economic aid has created even a mistrust of Swadeshi enterprise.

No attempt has been made to examine the break-up of the United Arab Republic within three years or to point to the results of the application of socialism to a backward region that believes even now in men rather than ideas. The same danger may not exist in India today but the Assam troubles prove that what was done in the past to relieve overpopulation has become difficult. The reorganisation of the States did not eliminate the linguistic minority and at a time when integration is stressed there is also a plea for safeguards. The big cities too are aware of a problem raised by linguistic extremism but not all cities are vulnerable like Calcutta. The question whether religion is a less formidable barrier than language may not call for examination, but caste is known to be pervasive and political parties set store by caste and the Congress has made compromises both in Bihar and Madras in order to keep power. The end of untouchability has not destroyed caste. Prof. M. N. Srinivas of Delhi has made it clear that equality is a remote ideal and the conflict between castes is in its way a sign of vitality like the regionalism that led to protests by Breton farmers against the policy of Paris. The only common language in India today happens to be English and the integrationists have conceded that English binds the States while Hindi only divides. This perhaps is the only positive conclusion that has followed from the recent discussions in Delhi. This may properly delay decisions on the change-over to Hindi, now associated with both big battalions and backwardness.

★

STEEL PLANTS

Defects in Raw Materials

Serious defects have been alleged in the supply of raw materials to steel plants in the private sector. A memorandum on the subject prepared by the Associated Chambers has drawn attention to the deterioration in the quality of raw materials and has called for

a scheme of attractive bonus and effective penalty for the producers of raw materials to ensure improvement in quality.

The two steel companies in the private sector, the Tata Iron and Steel Company and the Indian Iron and Steel Company have taken a grave view of the situation in respect of the supply of raw materials. The TISCO is confronted with a prospective shortfall in the supply of hard coke for its units. While its requirements of hard coke have been placed at about 165,000 tons, only about 75,000 tons are expected to be available to it for the period October-March and with its existing stock estimated at 30,000 tons, shortage of hard coke will amount to as much as 60,000 tons. The resulting loss in production of finished steel has been estimated at about 45,000 tons.

Shortfall in supply of coke is only one aspect of the problem of raw material supply faced by the private steel plants. Besides, there is also the question posed by the deterioration in the quality of coke and limestone. Apart from the high ash content of the market coal allocated to the TISCO, the note lays the charge of having to increase the ash content of its washed coal on account of the embargo imposed on movement of washery middling beyond Moghulsarai. Deterioration of deposits and mechanisation are also alleged to have affected the quality of limestone supplied to the TISCO. This is stated to have pushed the rate of consumption of limestone to 965 lbs per ton against 790 lbs considered for the mills expansion programme.

There can be no doubt that the deficiencies brought to light in the supply of raw materials to the steel plants will affect the production schedules in the private sector and delay the production target for steel in the Third Plan. At least in respect of the supply of limestone there seems to be scope for more equitable distribution as between the private and public sector steel plants, which could be ensured by throwing access to the private plants to the deposits in Palamau and Shahabad districts which are presently reserved to the public sector plants. Diversion from supplies of good quality limestone intended for the cement factories could also help ease the supplies situation for the steel plants further.

PAPER

Problems of Dealers

The problems faced by the paper dealers were discussed at the meeting of the West Bengal Paper Merchants' Association held in Calcutta last week. Presiding over the meeting, Mr Panna Lal Seal, observed that the target

for production fixed for the paper industry in the Third Plan was low in view of the anticipated growth of literacy and the implementation of the schemes for free and compulsory primary education. It is not the total quantity of production alone that is important. The matching of production to demand in respect of various kinds of paper should also be a relevant consideration in the preparation of schemes for paper production. In this respect there are signs of grave imbalances developing in respect of certain varieties of paper. As Mr Seal has pointed out, the demand for cartoons, literature, publicity and display materials is mounting and is likely to grow further with the country becoming increasingly publicity minded. But the pattern of production that is presently followed by the paper mills is not calculated to meet the requirements in respect of all varieties. Considerations of profit also tend to discourage diversified production of various kinds of paper by the mills. In this circumstance, it is worth considering whether as Mr Seal has suggested, the Government should not insist on the mills to produce paper according to required specifications.

Mr Seal has also drawn attention to defects in the system of distribution of paper. It has been pointed out that nearly 80 per cent of the paper merchants had no quota of indigenous paper. The severe restrictions on imports of paper have also hit them hard. Increased production together with liberalised allocation to dealers would go some way in alleviating the present difficulties of lack of supplies and quota for the dealers. Mr Seal has urged the Government to adopt measures so that all

Indian Finance

14 October 1961

the mills distributed their increased production on a compulsory basis to new dealers other than the existing quota-holders. The greatest loss for want of quota and supplies is being suffered by the established importers who are being practically squeezed out of their normal avocation. It is noteworthy that out of the total licences issued for import of different categories of paper during April 1960-March 1961, only 4 per cent was allotted to the established importers. The case of the established importers is deserving of consideration in view of their long experience in the trade and the effective links they have forged in the trade and industry.

TOBACCO

Surplus Stocks

Mr E. R. Campbell, Chairman of the Tobacco Export Promotion Council of Rhodesia, has in the course of an interview at Madras, warned against a serious situation developing in tobacco trade. What constitutes the danger signal to the tobacco trade is the mounting accumulation of tobacco surplus stocks in the United States and the Philippines. The US has been accumulating stocks since 1955 and the total was now 500 million lbs flue cured tobacco, while the Philippines had about five-year supplies. The disposal of these stocks which as Mr Campbell said must happen sometime in the future will seriously upset the world trade in tobacco, and in such an eventuality the repercussions on India and other tobacco producing countries such as Rhodesia will be very severe.

Mr Campbell has ruled out an international tobacco agreement on the lines of other commodity agreements in respect of sugar, tea etc, as being not warranted by the present signs in the tobacco trade. An agreement with the countries which have built up huge stocks so that the latter will not disgorge their stocks in a way which will harm the export markets may offer a way out. An opportunity for discussion to arrive at such understanding will be presented at the world tobacco congress which is scheduled to meet in 1963.

Apart from the danger signs constituted by the mounting stocks with the US and the Philippines, the intended move of the UK to seek membership of the European Common Market is another factor that clouds present prospects for export of tobacco from India and Rhodesia. Tobacco is one of the important items of export from India to the UK, while in the case of Rhodesia, it is the only agricultural export commodity. Since the conditions for Britain's entry into the Common Market are yet to be worked out, the position at the present time is somewhat uncertain. Mr Campbell has underlined the need for the tobacco

industries in India and Rhodesia to come closer together. Since both the countries will be faced with the same problem, exchange of ideas and coordination of policies in the marketing sphere should be to mutual advantage.

BANKING

The Big Eight

How the eight big banks, the Allahabad, Baroda, Central, Indian, India, United Commercial, United and Punjab National fared in 1960 can be ascertained from the statistical tables issued recently. What is set down about co-operative or

non-scheduled banks is of little interest for it must be admitted that the major banks alone show signs of healthy growth. They reported an increase in deposits and their capacity to stand up to competition from the State Bank and the State-associated banks has been demonstrated. It is noteworthy that the age or capital structure does not qualify any of the State-associated banks to rank among the majors. The favourable trend may continue, and attention may, therefore, be invited to the increase in bill business, both foreign and inland. This too helps to raise the degree of liquidity prescribed for the sake of safety.

The most significant feature was the rise in advances coinciding

with a fall in investments. The foreign banks doing business in India showed the same tendency to lend more. This is proof of the increased tightness of money in the last busy season though it is clear that what Keynes wrote in 1915 about seasonal changes in the money market in British India no longer retains its validity. The decay of indigenous banking and the growth of modern banking in recent years has not been examined in detail and the effects of amended banking law on indigenous bankers have not been so far set out in detail. But it may be assumed that the old business of the Brahmins of Kalladaikurichi and the Chettians of Karaikudi has really declined and fallen. The extent of competition in

Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

banking may not be ascertainable from the average rate of interest paid on deposits or the interest charged on advances. The differences in service provided still constitute an advantage for the 16 foreign banks that are able to hold their own easily against the majors and integration among the exchange banks is perhaps an operative consideration. The extension of branch banking has helped the major banks far more than the State Bank of India last year. Of course, the exchange banks did not branch out but the volume of their deposits is still independent of official recognition because their capital and reserves impress clients who seek quality in service. It may be inferred that one quarter of the total deposits in 1960 was held by the non-Indian banks. This may not be (derived wholly from) the strong position held by foreign capital in trade and industry. But it may be an apt acknowledgement of the age and stability of the foreign

banks mainly British. Preference for the British banks in the big cities has survived the political changes of 1947. That is a truism worth repeating.

PARAMBIKULAM An Example To Emulate

The inauguration of the Rs 35 crore Parambikulam—Aliyar multi-purpose river valley project by the Prime Minister on Saturday last constitutes an important event in more respects than one. The project stands as an eloquent testimony to the inter-State cooperation for which the States of Madras and Kerala are worthy of plaudit, though the project took concrete shape only after protracted discussions by the representatives of the two riparian States. Of the impetus to both industry and agriculture in the nearby dis-

tricts belonging to the two States there would be any room for dispute. Another notable attraction of the new project is the facilities that will be made available for developing fishing centres, tourists resorts and wild game sanctuaries. The supply of water for irrigation purpose even before the completion of the multi-purpose project is yet another remarkable feature of great economic advantage.

The new project, when completed, will harness water of seven minor rivers that traverse through the States of Madras and Kerala for the generation of electricity to the tune of 180,000 kw and will bring under irrigation about 240,000 acres of arid land. According to the present calculations the timely availability of water from this project during agricultural operations will help produce an estimated 24,000 tons of paddy, 48,000 tons of dry crops and 7,400 tons of cotton.

The project provides for the construction of six major dams, two

dams of lesser dimension, twelve and a half miles of interlinking tunnels, thirty miles of lined contour canal, one hundred and twenty miles of lined canals that will ultimately eliminate wastage and seepage of water and hundred miles of distributary and field channels. The first dam will be built across the river Nirar from where water can be diverted to Sholiar through a tunnel extending about 14,000 feet.

Of the two States it is true that Madras stands to gain much from the completion of the project but the advantages that will accrue to Kerala are also considerable. In effect, the two riparian States have set an example worthy of emulation by other States.

PALMAROSA OIL Quality for Export

India ranks first among nations producing Palmarosa oil, and is chief supplier of this important raw material for perfumery manufacture. This oil is produced by steam or water distillation of the grass known as Cymbopogon martini Stapf, popularly known as Rusha or Kosha grass. There are two varieties of this grass: Motia and Sofia. Motia gives far superior Palmarosa oil and Sofia gives inferior ginger grass oil. Both varieties grow in India abundantly and sometimes they are found side by side. But the experienced distiller can at once recognise the more valuable Motia grass from Sofia, because of its rose-like odour. The grass is generally cut from October to December.

Motia grass is commercially distilled for oil in Vidarbha and Khandesh regions of the Maharashtra State and in Madhya Pradesh. In Hyderabad region of Andhra Pradesh also the oil is distilled; but, there generally a mixture of the two grass Motia and Sofia is distilled, the latter predominating. Hence, it is mostly ginger grass oil and not Palmarosa oil. Yield of the oil is generally 0.15 per cent from fresh grass.

The annual exports of Palmarosa oil are of the order of about 60 tons valued at nearly Rs 25 lakhs. The oil usually contains 90 per cent geraniol for which it is valued so much. Palmarosa oil stands third in the list of essential oils earning foreign exchange for the nation. The first two places are held by the sandalwood oil and the lemongrass oil. In 1955-56, Palmarosa oil was valued at about Rs 40 per lb. But the production of synthetic geraniol has adversely affected its prices to a certain extent and the present prices are around Rs 25 per lb. Nevertheless, the importance of this oil as a perfumery raw material has maintained itself. Among our main overseas buyers of this

oil are the Sudan in the Middle East, Western Europe, Japan and USA.

Absence of any recognised standard and quality control of this oil had tended to export, at times, of sub-standard qualities or adulterated oil under various private trade brands. Obviously, if things were allowed to continue in that way, the export of Palmarosa oil would have definitely suffered. Hence, after a thorough consideration, the Government of India have now banned the export of Palmarosa oil, unless it is graded and certified under the AGMARK.

US A Balanced Budget in 1963

When and to what extent are budget deficits justified? At what point do they begin to cross the line of prudent government financing?

There obviously can be many answers to these questions. But no amount of theorizing can come completely to terms with the realities of a given situation. In the United States, the administration of President John F. Kennedy has had some difficult budgetary decisions to make, as it has devised programmes to meet adequately the nation's needs at home and abroad.

These decisions were the subject of a recent address by US Budget Director David Bell, who undertook at a business meeting in New York to explain the US Government's budget policies. Mr Bell in effect was defending both the level of government spending, and the fact that it will contribute to a moderate budget deficit during the current 1962 fiscal year that began 1 July.

It is his view that given the size of today's economy, the projected fiscal 1962 spending total of \$88,000 million entails no greater burden than other and lower outlays of recent years. While the budget has been growing, so has the economy.

Moreover, Mr Bell used the occasion last week to reaffirm the Kennedy Administration's intention of submitting a balanced budget to Congress for the 1963 fiscal year which begins next July.

There are bound to be some contingencies in this expectation, of course, as in any estimates prepared so far in advance. After all, the first 1963 budget estimates will be presented officially in January, some six months before the start of the next fiscal year and 18 months before its close. One major contingency in this instance can be summed up in the phrase, barring unforeseen new defence requirements—an implicit acknowledgement that rising defence needs, as well as domestic economic requirements,

are contributing to the size of the government's outlays.

If all goes well, however, the thought is that the 1963 federal budget will come into balance at present tax rates as the continuing economic recovery results in higher incomes for the American people and higher tax receipts for the US Government.

In reply to spoken or tacit criticism that the US Government is spending too much money, Mr Bell notes that budget outlays for the current fiscal year work out to some 16 per cent of the total national output of goods and services. This is a percentage that has not varied substantially throughout the post-war period, and reflects the continuing growth of the US economy over the past decade and a half. It hardly needs saying that these percentages have not been predetermined by formula, but have resulted mainly from programmes undertaken by the Federal Government to meet its responsibilities.

Non-defence spending has been expanding steadily under all post-war US administrations, in response to the underlying needs of the nation. These needs, according to Mr Bell, "stem legitimately from the growth in population, the growth in urbanization, and similar accomplishments of modern civilization which result in heavier demands upon governmental services."

As for the prospective 1962 deficit, Mr Bell characterizes it as "moderate, proper, and defensible." While the economy has been advancing vigorously, industrial capacity is not strained. Unemployment, while declining, is still higher than what the administration would like.

While these conditions prevail, Mr Bell sees little danger of any imminent or serious inflation to which a budget deficit would contribute. He concedes, however, that there might be some reason for concern on this score if a further deficit of some size

were anticipated during fiscal 1963, when the economy will be more fully employed.

But the fact that President Kennedy plans to propose a balanced budget for the 1963 fiscal year should allay that fear. In the view of Mr Bell and other administration officials, it should provide additional evidence of the administration's interest in financial prudence, as well as in encouraging vigorous economic growth on a sound and sustainable basis.

THE BUCKINGHAM & GARNATIC COMPANY LIMITED
THE BANGALORE WOOLLEN, COTTON & SILK MILLS COMPANY LIMITED
Subsidiaries of BINNY & CO. (MADRAS) LTD.

Company, "quite gratifying" results. The Company's profit, after providing for employees' share in 1960-61 registered a slight increase to Rs 58.4 lakhs from Rs 52 lakhs in the previous year. The increase in profit would have been much more pronounced but for the loss sustained by stimulating exports and reduction of prices of fans. Higher provision for income-tax also had corroded into the profit of the Company.

On the production side, the Company's performance has been very encouraging: total number of sewing machines manufactured during the year under review amounted to 0.26 million in contrast to 0.24 million in the previous year while the relevant figures for electric fans were 0.51 million and 0.35 million respectively. Net sale value also looked up and was marked higher at by Rs 1.7 crores to be placed at Rs 8.9 crores. Plans for the establishment of a new unit in Hyderabad for the

production of 0.3 million sewing machines are at hand and the Government of India has already granted industrial licence for that purpose.

Thanks to the vigorous selling efforts of the Company and the selling agents, greater inroads were made in foreign markets. The Company's achievement in gaining a strong foothold in the industrially advanced countries like the UK, the USA and West Germany is a creditable performance. The bulk of exports is however absorbed by the developing countries. The impact of international competition, the eagerness of the developing countries to develop indigenous manufacturing units and their foreign exchange difficulties were increasingly felt by the Company. It is indeed gratifying that the authorities have decided to re-orient the export policy firstly by producing highly attractive products, secondly by commencing assembly

and progressively manufacturing its products in those countries which are contemplating to set up their own units and finally by entering into technical collaboration with foreign countries. It should be remembered that the Company has obtained licence for installing a new unit in Ceylon and similar arrangements with countries like Burma, Pakistan and Thailand are in the offing. Arrangements for technical collaboration have already come into operation in S. Vietnam and negotiations with Iraq, Egypt and Yugoslavia are well under way.

PRAGA TOOLS An Array of Favourable Factors

Briefly reviewing the progress registered by the Praga Tools

Corporation Limited from 1 July 1958, from which date the management of the Company passed into the hands of the Board of Directors, Mr S. Ranganathan, Chairman, drew a picture which provides room for both enthusiasm and disappointment. The gross profit of the Company was marked higher at Rs 17.36 lakhs. The financial position of the Company was placed on a comparatively sound footing. Considerable improvements were effected in the factory, which had already started yielding rich dividends and many technical collaborations were entered into with foreign firms of great repute. On the other side of the medal weigh unsettled labour conditions and the consequent slackening of production particularly in 1960-61. An agreement has been reached by the employees and management on 1 July 1961 and harmonious labour-management relations prevail since then. The comparatively insignificant carry forward of Rs 23,631 on 31 March 1961 is the direct result of utilisation of profits in writing off past losses, intangible assets and unsaleable finished products, developmental expenses and the like.

With an array of favourable factors which have been listed above conducive for expanding production the Company can naturally anticipate brighter days ahead.

The Government of India has appointed a new advisory committee on national income consisting of the following members. Mr P. C. Mathew, Director, CSO (Ex-officio Chairman); Dr N. S. R. Sastri, Statistical Adviser, the Reserve Bank of India; Dr I. G. Patel, Ministry of Finance; Dr K. N. Raj, Delhi School of Economics; Mr Moni Mukherjee, Indian Statistical Institute; Prof. V. M. Dandekar, Ghokhale Institute of Economics; Mr P. N. Dhar, Institute of Economic Growth; Mr M. V. Devatia, National Council of Applied Economic Research and Dr S. G. Tiwari, Special Officer, National Income Unit, CSO.

The Chemical Limited will be setting up a factory at Dadra, near Bafoda, for the production of metallised paper and plastic films with the technical collaboration of a Dutch firm. The initial capacity of the new plant will be approximately 15,000 tons of metallised paper per annum. The factory will go into operation by the middle of 1962.

Nearly 14,500 acres of forest land will be brought under rubber plantation in 1962 in the Kelara State. Of these 4,000 acres would be planted directly by the State Government and the rest would be allotted to small private holders and for big plantation interests on auction basis.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

AT Hyderabad last week, Mr Nehru is reported to have lost his temper with a lot of persons who came whining to him about their backwardness. Like his lofty obiter at Kanpur on election funds, this is likely to land local politicians with a prickly problem on the eve of elections. A vested interest in backwardness is a curious back-wash of State paternalism which a vote-catching politician cannot quite afford to ignore. In two articles in the Statesman this week, Professor M. N. Srinivas, the noted sociologist, has examined the rather involved motivations behind the professions and the pampering of backwardness. The South provides an instructive case study. Historically, the non-brahmin movement is an excellent illustration of the equivocation

over definitions that has bedevilled the question of backward classes. The ambiguity has been useful politically and otherwise to some sections of the people. It would be largely true to say that the Justice Party's early history is nothing but the success story of a self-conscious non-brahmin elite exploiting with considerable cunning to its own advantage the sense of guilt of a once-privileged minority and the rancorous clamour of a miscellaneous majority. The beneficiaries of the new movement were largely the more go-ahead sections among the non-brahmins who gained at the expense of both the brahmins (rich and poor) and the less enterprising non-brahmins themselves. The other day, a DMK friend of mine made the cynical and on the whole unfair remark that the only persons who were benefited by the communal G.O., as it used to be shamelessly called, were the Nairs and the Menons. Even after the Constitution came into being, the ambiguity in definition persisted and mental reservations of various sorts led even to the amendment of the Constitution. And even today, eleven years after the Constitution came into being, there are sundry provisions that entrench vested interests in belonging to a backward caste. As pointed out by Professor Srinivas, in Madras today, 25 per cent of the seats in colleges and jobs in government are reserved for backward classes. In Andhra, the percentage is thirty-eight and in Kerala, 35 per cent of the seats and 40 per cent of the jobs are similarly reserved on a caste basis. Mysore apparently believes that all persons—except of course the brahmins—

are backward, but some are more backward than others. Consequently, the backward have 21 per cent and the more backward 24 per cent of the jobs kept exclusively for them. No wonder then that the Lingayats whom the Backward Classes Committee (1961) had included among the forward, have since successfully agitated for inclusion among the backward. But who can convince politicians that stratification of backwardness on caste basis is unreal and unjust? Others will however agree with Professor Srinivas that a more meaningful criterion of backwardness would be based on economic, educational and environmental considerations. It is however true that except for the discrimination involved in the shutting out of educational opportunities, these reservations should not unduly worry the so-called forward communities and castes. It is possible that this is already the case. Social and economic pressures are solving the problem in their own somewhat painful way. Sanskritisation, (an ugly word but a useful concept thought up by Professor Srinivas in another context) is operating on a wider area than that of ritualistic patterns of behaviour and social values. It is discernible in bread and butter decisions. A government job which was once as definitive a hallmark of a brahmin as the sacred thread is no longer that. Thus even while the communal G.O. has "sanskritised" the other castes into government servants, the brahmin has been "westernised" into choices of avocations that were not as recently as twenty years ago associated with him. I heard an orthodox friend of mine complain the other day that in ten years he won't find a purohit to help him in his filial pieties, since the sons of all the purohiths have become motor mechanics. And the DMK friend I mentioned earlier said something blistering about the uncanny sense of timing of the brahmin. Look, he said, at his having got on to the industrialisation band-wagon in recent years. Obviously old grievances die hard.

At Blackpool last week Mr Gaitskell redeemed the pledge he took at the end of the Scarborough Conference last year to fight till he got reversed the unilateralist decision then taken by the party. For a year Mr Gaitskell has been steadily wearing down opposition

to his views on the subject, and, for some time now, Mr Gaitskell's success has been a foregone conclusion. But the formal defeat of Mr Cousins' resolution at Blackpool sets, as it were, the official seal on the Gaitskell line. Thus the rather odd spectacle of the leadership fighting the declared policy of the party has now been brought to an end. But, then, the Labour Party has throughout its life found itself in paradoxical situations without any lasting harm being done to it. At the moment, what with one thing and another, the Labour Party's morale is higher than at any time in the last few years, and, for the first time, in several years it has to think seriously of the responsibilities of office. During last year the shine on the Macwonder has worn off more than somewhat. The embarrassments of the British economy and consequently of the Conservatives have made the Labour Party think less fatalistically of its prospects of taking office. It is this prospect and hope that has tilted the scale in the weighing of the nuclear question by the rank and file. In one sense, the latest decision is no advance over the position taken

by Bevan after his famous volte face that left his friends confuse and scattered; you cannot send British Foreign Secretary naked to the conference table. In other words, as the prospect of their being a Labour Foreign Secretary in the near future become brighter, the necessity of checking up his diplomatic wardrobe assumes urgency. This certainly is one reason for the decision. Another is the schism in the unilateralist camp itself. Even Bertrand Russell, who apparently advocates complete nuclear disarmament, does not wish the US to throw its nuclear bombs into the ocean. Rather involved moral, emotional and political considerations entered in the earlier party decision to vote for unilateral renunciation of nuclear weapons and tactical reasons brought about strange alliances within the party. These exert less power now. Other incidents of a purely domestic nature within the party have also had their effect on the voting this year. Disgust with the Electrical Trades Union and vote-rigging by its communist officials must have played its part in the resiling from a position that has vague fellow-travelling associations in the popular mind. All in all, despite minor reverses over Polaris and training of Germans in Wales, Mr Gaitskell has every reason to be satisfied with the outcome of this year's Party Congress.

EAVESDROPPER.

She believed
she made
a good first impression

An ideal receptionist, attractive, always eager to help—but her carelessness ruined her first impression on the visitor. She wore a lovely outfit, but it seemed ill-fitting, shrunk!

4½ Per Cent Madras State Electricity Board Bonds, 1971

For Rs. 200 Lakhs.

(Payment of Interest and Repayment of Principal, Guaranteed by the Government of Madras).

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

Issue Price Rs. 99.50 Per Cent.

REDEEMABLE AT PAR ON THE 16th OCTOBER, 1971

Subscriptions will be received in cash or cheques from the 16th October, 1961. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 200 lakhs and in any case not later than the close of business on the 23rd October, 1961.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Calcutta, Delhi, Bangalore and Bangalore city.

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all Offices of the State Electricity Board and its undertakings.

Olympus

FOREIGN TRADE FICCI's Suggestions

CONSTRUCTIVE suggestions on foreign trade policy and procedures are contained in a comprehensive memorandum submitted on behalf of the Federation of Indian Chambers of Commerce and Industry for the consideration of the Import and Export Policy Committee. By its terms of reference the Committee has been asked in particular to enquire into the working of Import Trade Control in all its aspects as well as to review the efficacy of existing export promotion schemes and to recommend measures necessary to step up exports to the level envisaged in the Third Plan. The memorandum has put forward suggestions against the background of the changes in the country's foreign trade, the emergence

of new trade groupings in other parts of the world and development of new trends in world trade.

The scope of Import Control, which was first introduced during the second world war with the primary objective of conserving shipping space, has been considerably enlarged in the context of planned development. Import Policy has now come to be regarded as the instrument to serve the three-fold objective of industrial development, conservation of foreign exchange and export promotion. The memorandum points out that it is in the common interest to utilise the limited foreign exchange resources in a manner that will sustain not only the reasonable requirements of the existing industries, but also those of new industries envisaged as part of planned development.

The basic point is that we cannot afford to have a stagnant economy, and therefore, in the allocation of resources among the different projects

under the Plan as well as in the distribution of foreign exchange resources, primacy must be given to the building up of the nation's productive capacity and to making it viable and self-generating. In this context the memorandum deals with the utilisation of the foreign aid and underlines the necessity of quickening the procedure for the disbursement of the available foreign exchange for speedy and successful implementation of the development plans. A part of the foreign aid, it is suggested, should be available to private industry as this will largely obviate the necessity of private parties approaching their foreign collaborators for supply of machinery on deferred payment terms. In this connexion it is also urged that such aid should be made available without insisting on immediate rupee payment.

In the distribution of foreign exchange for imports among Established Importers, Actual Users and governmental purposes, the share of the first category has been progressively reduced till it amounts at present to hardly 11 per cent of the total. The number of items licensable to Established Importers has also been drastically reduced. The memorandum draws attention to the substantial economies in the use of foreign exchange that could be realised by enlarging the scope for Established Importers. (Governmental purchases now account for over half the total imports. Publication of the details of the import licences of various categories of Government undertakings and departments including ordnance factories, it is suggested, will be helpful in forming a correct judgment as to whether it would not be possible for normal trade channels to undertake the imports more efficiently and economically than is being done now.

Referring to the complaints regarding the working of Rupee Payment Agreements, the memorandum calls attention to the need for a comprehensive review of these bilateral trading arrangements. Three points are made in this connexion: these agreements in some cases have led to disruption of our normal pattern of exports to some of the West European countries; the expectation that our trade with rupee payment countries would be diversified has not been realised; it has also been pointed out that imports available against rupee credits are not satisfactory in respect of range of commodities, their quality and prices. While conceding that bilateral trade on the basis of rupee payment has some part to play in eking out limited foreign exchange resources, the memorandum suggests that such arrangements should contain provisions to the effect that—(1) goods exported from India, particularly in the traditional lines should be for internal consumption and not for re-export or re-sale to a third country; (2) the importing country would buy a specified percentage of newly developing lines of exports from India. And as regards imports from rupee payment countries, there should also be adequate examination for ascertaining that goods are being sold at prices which do not compare unfavourably with the prices of similar products from other sources.

Indian Finance

The activities of the STC and their repercussions come in for detailed examination. The entry of the STC in the import trade, it is pointed out, has led to a certain amount of diversion of trade in favour of certain privileged importers. The stabilising influence the Corporation's entry was expected to have on prices has not materialised as imports do not seem to have been planned properly. The Federation, therefore, has suggested that a trade panel consisting of experienced and reputed businessmen may be set up to aid and advise the Corporation regarding quality, quantity, distribution methods and sale of imported commodities at reasonable prices. It is also urged that established trade channels should be utilised to the maximum extent possible in the distribution of STC imports. Regarding link and barter arrangements entered into by STC, the Federation has doubts whether these deals served their purpose at any time.

Stressing the importance of streamlining licensing procedures, the memorandum urges the need for adopting the system of annual licensing and for the abolition of ad hoc licensing. Annual licensing would be desirable, for, apart from reducing the volume of clerical and administrative work involved in applying for and granting of licences, it may also lead to procurement of supplies at reduced prices and thereby help in saving foreign exchange.

As regards the policy of issuing import licences on an ad hoc basis, the Federation feels that this policy should be discouraged for it vests in the licensing authorities discretionary powers which may not always be used with care. In the absence of any basis of allocation of foreign exchange, this policy also tends to create misunderstanding in the mind of the public.

On export policy, besides drawing attention to the suggestions contained in the detailed note on export promotion submitted by the Federation to Government last March, the memorandum has highlighted certain basic issues. As the future level of exports will depend largely on our ability to build up competitive strength both in regard to price and quality, effective steps should be taken forthwith to make available the requisite finance and other facilities for modernisation of productive equipment in export industries. Failure to effect timely modernisation, the memorandum warns, will lead to loss of foreign markets which it may not be possible to capture once they are lost. Since the level of cost has overriding importance, it is in the national interest that the question of sanctioning bigger units, especially in the case of export industries, must receive precedence over other considerations.

The memorandum has urged the need for strengthening commercial sections abroad and for study of 'growth imports' of our trading partners, particularly in the Afro-Asian region. In this connexion it may be mentioned that the Federation is organising an Afro-Asian Economic Conference commencing on 11 December, which will also provide the occasion for exploratory trade talks.

14 October 1961

Industrial Finance Corporation of India

Loans Reach All-Time High

Resources Position Quite Comfortable

Mr Mathrani's Review

Speech delivered by Shri K. P. Mathrani, I.C.S. Chairman, Industrial Finance Corporation of India, at the Thirteenth Annual General Meeting of the Corporation held on the 28th September, 1961.

Gentlemen,

Owing to the fortuitous circumstance that I assumed my duties immediately on the expiry of the year 1960-61, it is my pleasure and privilege, soon after my taking over, to present to you the Annual Accounts of the Corporation and the Report of the Board of Directors for the year ending the 30th June 1961. The printed copies of the Accounts and of the Report have been circulated to all the shareholders and I shall, with your permission, take them as read.

2. The year under report marks another stage in the economic development of the country—the completion of the Second Five Year Plan and the beginning of the Third. Your Corporation has played not an insignificant role in the achievement of one of the major objectives of the Plan, namely the establishment of a sound and progressive industrial economy. During this five year period, we sanctioned loans of the value of Rs. 62 crores and 61 lakhs and disbursed funds to the extent of Rs. 40 crores and 62 lakhs. Over the thirteen years of the existence of the Corporation loans aggregating Rs. 105 crores and 82 lakhs have been approved, a sum of Rs. 57 crores and 35 lakhs having been disbursed during the period. It shall be our aim to ensure that the Corporation makes a further useful contribution to the economic growth of India with the specific object of reducing our dependence on the import of manufactured goods as well as plant and machinery.

3. The year under review has been a particularly successful one for the Corporation. Our gross income reached the record figure of Rs. 2 crores and 99 lakhs as against Rs. 2 crores and 50 lakhs during the preceding year and our net profits, after making provision for income tax and corporation tax, came to Rs. 84.75 lakhs, showing an increase of nearly 42% over the previous year. It has, therefore, been possible for us to add substantially to our reserves which now stand at Rs. 1 crore and 89 lakhs, an increase of 69% on the balance at the end of the last year. We have, in addition, as a reserve for doubtful debts, a sum of Rs. 14.61 lakhs, which is considered to be more than adequate. In fact, a review of the reserve has shown a distinct

improvement in the position of our bad and doubtful debts. As in the previous two years, we have provided a sum of Rs. 10 lakhs towards progressive liquidation of the subvention of Rs. 53.45 lakhs received by us from the Central Government for the purpose of paying the guaranteed minimum dividend on our share capital in the early stages of the establishment of the Corporation. This leaves a balance of Rs. 18 lakhs only which we plan to repay in the course of the next two years. In view of the statutory restriction contained in the second proviso to Section 31(2) of the I.F.C. Act the dividend for the year is being limited to the minimum guaranteed by the Central Government, nearly 24%.

4. As will be evident from the Statement of Profit & Loss Account, there has been an appreciable diversification of our activities during the year, even though the interest on loans continues to be the major source of our income. While the income from this source has gone up by 13.3%, from Rs. 2 crores and 25 lakhs during the previous year to Rs. 2 crores and 60 lakhs, that from commission on underwriting of shares and on guarantee of deferred payments has increased by over 120%, from Rs. 4.60 lakhs to Rs. 10 lakhs; in addition, we have earned a handsome profit by sale of some of our investments. Moreover, during the year we also received, for the first time, a dividend on the shares held by us.

5. The total amount of loans approved by your Board of Directors during the year aggregated Rs. 21.21 crores, which is an all time record for the last 13 years of the Corporation's activities and shows an advance of Rs. 3 crores and 29 lakhs over the figures for the last year of Rs. 17 crores and 92 lakhs. The Corporation received 76 loan applications during the year under review for an aggregate amount of Rs. 36.88 crores as compared to 38 applications for an aggregate amount of Rs. 17.54 crores received during the year 1959-60, indicating an increase in the volume of business handled by the Corporation of almost 100% over the previous year. The aggregate amount of loans sanctioned by the Corporation has now exceeded rupees one hundred crores, which may be considered as a landmark in the life of the

Corporation. These noteworthy achievements have been facilitated by the fact that the Corporation has widened the scope of its activities by granting loans in foreign currency, guaranteeing deferred payments, underwriting equity and preference issues, and financing industrial projects jointly with other institutions, etc.

6. It may not be out of place to refer briefly here to some of the joint ventures with other financing institutions in which the Corporation has participated in recent months. The Corporation has for the first time sanctioned a loan of Rs. 60 lakhs to a concern engaged in the manufacture of paper jointly with the Commonwealth Development Finance Company Ltd., of the United Kingdom (CDFC) and the Industrial Credit and Investment Corporation of India Ltd. (ICICI). These two institutions have agreed to grant loans of £525,000 (approximately Rs. 70 lakhs) and 1.47 million dollars (approximately Rs. 70 lakhs) respectively to meet the cost of the imported plant and machinery while the loan of the Corporation is to be utilised for the rupee expenditure. In another case, the Corporation has agreed to grant a loan of Rs. 18 lakhs to a concern engaged in the manufacture of camphor and its allied products jointly with the ICICI which has granted to it a loan of Rs. 30 lakhs in foreign currency. In two other cases the Corporation has agreed to finance industrial projects jointly with two State Financial Corporations. I am sure you will agree with me that these are steps in the right direction. It is our intention progressively to broaden the fields of co-operation between ourselves and other financial institutions, both at home and abroad. This policy would also help to diversify the risks of investment and thereby render it possible to finance large requirements with a view to making a further contribution to the rapid industrialisation of the country.

7. At the last Annual General Meeting, mention was made of the efforts of the Corporation in obtaining credits in foreign currency and of the sanction by the Development Loan Fund of the United States Government of a loan of 10 million U.S. dollars to the Corporation for giving sub-loans to industrial concerns in the private sector in the country.

How useful this facility has proved can be gauged from the fact that during the few months of the year after signing of the agreement the Corporation approved dollar sub-loans aggregating 9.023 million dollars (Rs. 4.23 crores) along with rupee loans of the order of Rs. 1.37 crores to 14 concerns engaged in the manufacture of a variety of products such as glass, paper, chemicals including fertilisers and electrical machinery, etc. Shareholders will be glad to note that our relations with D. L. F. in the matter of these loan operations have been very satisfactory and the Fund have agreed to raise the limit up to which the Corporation can grant sub-loans without their prior approval from \$250,000 to \$500,000. The Corporation had, at the close of the year, pending with it application for the dollar sub-loans equivalent to Rs. 5.62 crores. As we stand almost fully committed in respect of this first loan, negotiations for an additional loan of U. S. \$20 million from the D. L. F. are in progress and it is hoped that a further tranche of dollar loan will soon be available to us. Apart from the credit in dollars, possibilities of securing loans in other foreign currencies are also being explored.

8. In regard to our loan operations, the sugar industry continues to lead the list of loans approved by the Corporation for the last three years consecutively. This is mainly due to the high priority given by the Corporation to the establishment of sugar factories in the Co-operative sector. The Corporation has so far sanctioned loans aggregating over Rs. 23.20 crores to 37 sugar co-operatives distributed all over the country and I am glad to say that the working of most of the factories which have gone into production, has been satisfactory. The success achieved in the establishment of sugar co-operatives has led to the promotion by the Corporation of co-operatives projects in other lines of production as well. The Corporation has sanctioned loans amounting to Rs. 49.70 lakhs for the establishment of two co-operative spinning units. The loans approved by the Corporation for co-operative societies represent 22.4% of the total loans approved by it, which is indicative of the important role played by the Corporation in the promotion of this sector of the economy.

9. Next to sugar, paper and textiles occupied the second and third places in the quantum of loans approved by us during the year. For the first time since its inception, the Corporation has

General Manager.

sanctioned a loan of Rs. 20 lakhs to a concern engaged in coal mining. It is also a matter for satisfaction that concerns from the less developed parts of the country are now utilising the facilities offered by the Corporation on an increasing scale. In this context you may be interested to note that 17 loans aggregating in amount to Rs. 5 crores and \$3 lakhs were sanctioned to concerns located in the States of Andhra Pradesh, Assam, Kerala, Orissa, Rajasthan and Uttar Pradesh.

10. In the field of underwriting too, we have made much progress, though our approach in this line has been somewhat cautious. The Corporation approved twelve proposals for underwriting of preference and equity issues of Rs. 2.32 crores (as compared to five proposals for Rs. 1.87 crores in the previous year), thereby bringing the total amount of underwriting approved by the Corporation to Rs. 4.30 crores. The applications for underwriting came from a variety of industries such as cement, glass, pottery, basic metals, basic industrial chemicals, fertilisers, textiles, rubber, etc.

11. As in the case of applications for underwriting, requests for guaranteeing deferred payments to the suppliers of foreign machinery also showed a significant increase over the figures for the previous year. The Corporation received 14 applications for an aggregate amount of Rs. 18.61 crores against 5 applications for Rs. 3.72 crores in the year 1959-60 and approved 9 such proposals to the extent of Rs. 13.29 crores. This brings the total number of proposals approved to 20 and the total amount to Rs. 25.47 crores.

12. It has been our practice to carry out regular inspections of the concerns financed by us and to obtain periodical progress reports from them. These inspections and reports, I am glad to say, show that most of the concerns have done well in the quantum of production as well as sales during the year. Many of them earned sizable profits and were, with our prior approval, able to declare dividends in excess of 8% (subject to tax), which is our standard limit. An overwhelming majority of our borrower concerns met their obligations to us promptly in the course of the year. There has been a further improvement in the position regarding defaults in the repayment of principal and in the payment of interest. The percentage of defaults in the repayment of principal has declined from 4.3% in 1960 to 2.34% in 1961, while that in regard to interest has come down from 1.2% to 0.25%. The industrial review which we have given in an appendix to our Annual Report will give an idea of the progress made by the various industries to which we have advanced loans and it is a matter

of satisfaction to us that they have contributed significantly in the rapid industrial progress made by the country.

13. The resources position of the Corporation during the year in regard to rupee finance was quite comfortable and we were able to meet the commitments for disbursement of sanctioned loans largely from our own resources supplemented by a net additional loan of Rs. 2 crores from the Central Government. In view of this we did not have to enter the market during the year for fresh issue of Bonds; but, as and when money market conditions justify our doing so, we shall go in for fresh issues of Bonds in order that we may be able to meet the demands likely to be made on us during the Third Five Year Plan period. We are also assured of further loans from the Central Government for meeting a part of our requirements during this period. In addition your Board of Directors have under their active consideration the issue of further share capital of Rs. 2 crores by the Corporation, carrying a minimum guaranteed dividend of 4% per annum for which the approval of the Central Government has been obtained. This will enable the Corporation to broad-base its capital structure and increase its borrowing powers in terms of Section 21 of the Industrial Finance Corporation Act, in order to meet the growing demands of industry for capital. Having regard to the progress achieved by the Corporation during the last 13 years of its working, I have no doubt that we can count upon your generous support when the issue comes in the market. While we have tried to ensure that the shareholders get an adequate return by way of dividend on the new issue, the question of enhancing the existing rate of dividend on the present paid-up capital will need an amendment to the I.F.C. Act. The Corporation is in correspondence on this subject with the Central Government.

14. In December last, Parliament enacted a bill incorporating certain amendments to the Industrial Finance Corporation Act, for which there was a pressing need in view of the changed conditions including the growing activities of the Corporation. These amendments now enable the Corporation to guarantee (a) deferred payments to machinery suppliers both within and outside India, (b) loans raised by industrial concerns from scheduled banks or State Co-operative Banks, and (c) loans raised and credit arrangements made in foreign currency by industrial concerns with any bank or financial institution outside India. The Corporation has also been empowered to subscribe directly to the stocks and shares of industrial concerns as also to convert at its option the loans granted or

debentures subscribed to by it into stocks or shares. These are useful facilities which have been eagerly sought for by industrial concerns and we have already, in one case, agreed to guarantee a loan of Rs. 1.47 crores in foreign currency. Another amendment of which I might make a specific mention is the deletion of the provision in Section 24 of the Act which required a guarantee of the Central Government in respect of accommodation by the Corporation exceeding rupees one crore to an individual concern. Since in all such cases the Corporation carefully examines the profitability of the project and the security available, the guarantee of the Central Government was hardly necessary. After the amendment, the Corporation is, however, required to obtain the prior approval of the Central Government before sanctioning the accommodation. This gives adequate opportunity to Government to scrutinise the merits of the proposal before any commitment is entered into by the Corporation.

15. As you are probably aware the Finance Bill introduced in the last Budget included an amendment to the Income Tax Act which gives us a welcome relief. The new clause (xiva) of Section 10 (2) of the Indian Income Tax Act provides that financial corporations which are engaged in providing long-term finance for industrial development and have been approved by the Central Government can claim rebate in Income-tax in respect of amounts not exceeding 10% of the total income of each year which are transferred to a special reserve fund, so long as the aggregate of the amounts so transferred does not exceed the paid-up share capital of the institutions concerned. I am glad to say that this Corporation has been approved by the Central Government for the purpose of this concession, and we have been permitted this rebate in respect of our accounting year ended the 30th June, 1960, the assessment in regard to which has been very recently completed. We have, as a result, got a relief of nearly Rs. 5 lacs in our assessment and we expect to be able to get a somewhat larger relief in respect of the assessment for the accounting year 1960-61.

16. Our relations with the various Chambers of Commerce and with our loanee concerns continue to be cordial. We have, during the year, nominated more non-officials on the Boards of our loanee concerns and I wish to thank them on behalf of our Board of Directors for the keen interest they have taken in the work.

17. Shri K. R. K. Menon who held the office of the Chairman of the Corporation since 18th September, 1955 with distinction and was largely responsible for the great strides made by the Corporation in the last six years proceeded on leave with effect from the

1st July, 1961 preparatory to the expiry of his tenure of office. On behalf of the Board of Directors, I should like to express our high appreciation of the valuable services rendered by him to the Corporation.

18. It is with profound regret that I have to report to you the sad demise of Shri H. V. Venkatasubbiah, who was the General Manager of the Corporation for about five and half years and who rendered valuable service to the Corporation. He has been succeeded by Shri D. R. Madhok, Secretary of the Corporation.

19. Before I conclude, you will, I am sure, wish to join me in expressing our warm appreciation of the co-operation and assistance made available to us by the Development Loan Fund and its officials. You would also like me to convey our sincere thanks to the members of our five Advisory Committees - non-officials and officials—for the very able and effective assistance they have rendered to the Corporation. I should also like to thank my colleagues on the Board for their very valuable co-operation and wise counsels and their generous response to the many calls made on their time. In this connection I should like to make a special reference to our two directors, Shri S. V. Ramamurthy and Shri S. C. Roy, who have been on the Board of Directors for two full consecutive terms and are due to retire this year. Finally, I have great pleasure in conveying the thanks of the Board of Directors, as well as my own, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE

Steady Conditions

MILL production will further increase this month as the Indian Jute Mills Association has decided last Saturday on resumption of 48 hours working with effect from the 16 October. In a press note, the IJMA has pointed out that the decision has been prompted by the current rate of jute imports and the prospects for this year's crop. It is noted that the increase in production in this manner will benefit both the jute mill workers and overseas buyers while the reduction in overhead costs will be most welcome to the mills themselves. Referring to the raw jute situation, the press note reiterates the importance of long-term self-sufficiency which in its turn at least in part depends on the cultivator receiving an economic price for his jute. Even though the IJMA does not expect any big surplus of raw jute this season, the scheme for establishing the buffer stock authority is well under way: the Articles and Rules of the Jute Buffer Stock Association are now being finalised. Perhaps the most important point in the press note is the decision of the mills to increase their purchases of raw jute. Members of the Association are to keep current purchases of raw jute approximately at the rate of imports during the pre-Puja period.

The decision of the IJMA mills to step up their purchases of raw jute will remove the uncertainty that was allowed to prevail for some time as to the future trend of raw jute prices. The recent continuous fall in the price of raw jute caused concern

and it was thought that if the downward trend continued unchecked Authority might be obliged to reopen the question of fixing a floor price despite the earlier indication that floor prices would be fixed well in advance of the commencement of a jute season. The resumption of 48 hours working will itself absorb increased quantity of jute and since mills have decided to match their rate of purchases to the rate of arrivals, the quantity that will be taken from the markets will be quite considerable. In its latest issue, the Jute Bulletin, says: "Although, on the assurance of a steady internal availability of jute, the mills in the membership of the Indian Jute Mills Association had ventured on their first production increase in about a year by working 24 additional hours per week with effect from September 22, their fibre stocks would need a large increase to meet the consumption requirements of 48 hour weeks. This was because the mills had been running on a virtual day-to-day purchase of jute".

The jute goods market ruled steady although in Tuesday's trading the

Branches: Over 135 branches in India and also in East Pakistan, London, British East Africa and Fiji Islands.

undertone was somewhat easier toward close. Interest was, however, mostly centred on near delivery goods. The figures pertaining to stocks of jute goods at the end of September show that total stocks stood at 52,500 tonnes comprising 15,800 tonnes hessian and 29,200 tons sacking. Other varieties were at 7,500 tonnes. Compared with the stocks at the end of the previous month, total stocks at the end of September were 12,500 tonnes lower. Hessian stocks were 4,600 tonnes lower while those of sacking were 5,700 tonnes lower. Stocks of other varieties were lower by 2,200 tonnes. With stocks at such low level and with indications of further improvement in overseas enquiries, the near delivery positions were in good demand.

The raw jute market ruled somewhat dull on Tuesday although in

earlier dealings a steady undertone prevailed. Mills were keen buyers in pursuance of their decision last week but on Tuesday they did not evince much interest with the result that sellers became anxious to conclude transactions at prevailing rates.

TEA Demand For Exports

THE demand for export space by the tea shippers has continued to be very heavy and, with arrivals from the gardens increasing steadily, the current good demand for export is expected to continue.

In the Export Sale held in Calcutta this week, there was a strong gene-

ral demand. Prices for plain Broken and the better Fannings in this category were fully firm; but Fannings of poor appearance containing fibre were up to 15 nP per kilo easier. Medium and better orthodox descriptions met with useful competition at firm to dearer rates.

CTC types were irregular and prices were generally around last rates. But, as in previous weeks, demand weakened considerably towards the close of sale. Off-grades were in demand; but prices were generally easier. Legg-cut descriptions were up to 15 nP easier. Darjeeling teas met with good support and were generally dearer.

Whole Leaf grades were sold well around last rates, while Tippy teas were generally dearer. Following rates were quoted:—Clean Plain Pekoe Rs 4.40 to Rs 4.60; Clean Broken Pekoe Rs 4.20 to Rs 4.40; Plain Fannings Rs 4.00 to Rs 4.20; Medium Assam CTC BP Rs 5.00 to Rs 5.40; Medium Assam CTC Fannings Rs 4.70 to Rs 5.10; Best Assam CTC B P Rs 5.40 to Rs 5.80 and Best Assam CTC Fannings Rs 5.40 to Rs 5.80.

Direct exports of North-East Indian tea to the UK, during July 1961, were slightly higher at 11.42 million pounds as against 11.28 million pounds in the corresponding month of last year. Exports of tea from South India, however, fell to 3.51 million pounds in August from 5.98 million pounds in the corresponding month of last year.

Meanwhile, the Ceylon's Board of Tea Research Institute has estimated that the total production of tea in the Island in 1961 will be 444 million pounds. This production figure will go up to 501 million pounds in 1965. The estimate does not seem to be absolute and the continued increase in production from 1961 to 1965 can be sustained only with the new and improved methods for stepping the output.

Tea circles in Ceylon have stated that, since most of the margin between the cost of production and gross proceeds of sale goes in taxes, improvements in production have to be very large before they provide any incentive in terms of returns. They have held that heavy taxation

is hitting the tea estates. Besides, there is the problem of replantation. On this aspect, the director of the Tea Research Institute has stated that nobody can say how long tea production in the island will continue, especially when there has been a decline in the rate of replanting due to lack of financial confidence amongst investors.

Tea production in Indonesia fell to 8.1 million pounds in June 1961 from 9.0 million pounds in the previous month. But, compared to the output of 8.0 million pounds in June last year, it shows a slight increase.

In London auction, a total of 26,751 package of tea, including 21,494 packages from Northern India, were on offer. Continued demand for colour and quality Assams resulted in a price rise of 2d to 4d per pound for most lots, while good medium teas remained steady at last week's rates. For the balance of the sale, with the exception of thin liquoring and fibry Dooars which were inclined easier, the markets ruled fully firm. Rates were unchanged.

Indian Finance

COTTON Futures React Sharply

AFTER initial buoyancy the cotton futures market in Bombay during the past week gave way to cautious trading and Jarilla March after touching a peak level of Rs 631.00 reacted sharply to a low of Rs 620.75 and at the close of the week was quoted at Rs 628.75. However, the contract fell further to Rs 626.50 on Tuesday last.

Such a turn in sentiment in a technically overbought market was not altogether unexpected and was by all counts long over due. With the return of the dry weather in the cotton growing centres all the apprehensions of considerable damage to the new crop, which fanned the bullish fervour during the past few days, were relegated to the background. The favourable weather conditions in these areas, in their wake, interestingly enough, led to an upward revision of the crop estimates to 0.50 million bales. Naturally the concern over a likely scarcity of raw cotton due to the anticipated lower production appears to have been shed and the operators are at present confident of a satisfactory supply.

During the week a re-emergence of sellers was visible in the spot market. The reports that emanated from the cotton growing centres like Berar, Khandesh and CP narrate that the damage to the cotton crop would be as much as was feared earlier. Consequently mill demand showed signs of slipping down and the prices in the market tended to decline gradually.

In the export front, barring stray enquiries for the American cotton no worthwhile development took place. The report of the Food and Agricultural Organisation that India may be able to step up its exports of cotton to Europe did not produce any immediate effect. Moderate spinner demand was evident in the import section. East African and Sudan cotton met with fairly good interest. Stray transaction in American ready cotton was also reported.

Influenced by the consideration of a reduced crop the Cotton Advisory Board is reported to have recommended for the import of about 0.12 million bales of cotton during the current season as against 0.7 million bales imported in the previous season. Of this the major portion will be US cotton under PL-480 programme provided the negotiations with the American Government prove successful and the balance will be imported from sterling area countries. The Board seems to have rejected the suggestion made by a section of the trade for earmarking Bengal Deshi solely for export.

PIECEGOODS

The Bombay cotton piecegoods market during the past week depicted slight, but pronounced change in transactions. The offtake was on the whole not unsatisfactory.

Revival of demand in all the varieties particularly in seasonal goods was the main development during

14 October 1961

this week under review. Punjab, UP and Bihar, among others, were found active buyers of seasonal goods. The demand for these goods is likely to firm up with the approach of Dusserah festival.

Among the other varieties dhoti, sari, shirting, longcloth, and fancy goods met with increased attention but unfortunately turnover never reached the expected level. Fancy prints also attracted the fancy of the buyers on a limited scale.

It has been reliably understood that the Indian Cotton Mills' Federation has adopted special methods to ensure adequate supply of piecegoods to West Bengal during the festive season. It has been reported that even the mills were alerted to make the relevant arrangements for the supply of dhoties, saris, etc. for meeting the boisterous demand.

Export section failed to produce any satisfactory results, demand for piecegoods did not flow on an encouraging level. Apart from small transaction with UK there was virtually no demand from overseas buyers.

Lac Prices to be Regulated

It is learnt that the Government of India has nominated the State Trading Corporation as the buffer stock agency to regulate the purchase and export prices of lac. Simultaneously, the Government has decided to fix the minimum purchase prices of different qualities of lac and reduce the export prices. As a result, the export price of B II quality seedlac will come down from Rs 70 to Rs 64 a maund with corresponding changes for other grades.

The minimum prices at which the STC will purchase certain types of lac from growers and manufacturers have been fixed at Rs 58 a maund for B II seed lac and corresponding prices for other types. The export duty will be Rs 160 per 1,000 kg of seedlac and shellac and Rs 125 per 1,000 kg on other types of lac.

The new scheme, which will take effect immediately, has been drawn up with the twin objective of encouraging overseas traders to purchase lac in preference to synthetic substitutes and also ensure fair prices to the growers and manufacturers.

The low price level at which lac purchases were being made recently from the growers and the manufacturers, it is feared, will lead to a curtailment of production. The Government expects that the new scheme will ensure reasonable prices to the growers, optimum production of lac and stabilise the export trade.

SUGAR

The decline in Sugar prices, expected after decontrol, has not materialised. Mills are reported to be quoting higher prices following the brisk demand from the Punjab, Gujarat, Rajasthan, Madhya Pradesh, Saurashtra and Delhi. Nearly 2,50,000 bags of sugar are reported to have been sold since the announcement of decontrol.

In the Muzaffarnagar market, prices are quoting 25 nP to 69 nP a maund higher than the previous controlled rates. It is feared that prices will rise further if the supplementary sugar quota for the coming festivals is not announced by the Government without delay. In the case of some factories, the quantity already released has been sold out and a few are trying to sell even the coming quota. The rate is quoted around Rs 101 a bag.

[At the time of going to Press, it is learnt that the Government of India have decided to release a further quantity of one lakh tons of sugar for sale in the open market from the 1960-61 season's production. This decision has been welcomed by the trade as this will meet the growing demand for the commodity, especially on the eve of Puja and Duruli festivals. How far the present release of one lakh tons will help to bring down the price level will depend on the attitude of the sugar factories, which, in turn, is dependent on the pressure of stocks with them. Market circles, therefore, do not believe that there will be any serious reduction in the prices. If at all a reduction materials, it will be marginal.]

NON-FERROUS METALS

In the Bombay Non-Ferrous Metal market, Copper ruled steady, while the prices of Tin showed an easier tendency. Zinc suffered a setback after early strength with Lead ruling almost unchanged.

The easier tendency of Tin prices was attributed to discouraging advices from London and Singapore. The volume of demand from the ready section also exerted a depressing influence although speculators tried to sustained the levels, presumably on the basis of advices from Madras.

GOLD & SILVER

After opening lower, prices on the Bombay Bullion Exchange developed a firmer tendency towards the close, thanks to the revival of demand in the ready section, improved offtake in both the metals and buying by Delhi and other upcountry operators. The offtake in both the metals registered improvement over their previous week's performance.

Arrivals of silver amounted to 35 bars as against an offtake of 15 bars. Ready silver (below .996) changed at Rs 203.30 to Rs 205.90. Arrivals of gold were 5,500 tolas as against an

offtake of 4,000 tolas. Ready gold changed hands at Rs 124.65 to Rs 125.10, while sovereign remained very firm at Rs 97.

OILS & OILSEEDS

The Bombay market for Oils and Oilseeds reflected an uncertain behaviour. After starting on a quiet note, the market for Groundnut registered a small improvement towards the close on rumours that the Government would grant export quotas for HPS variety and groundnut oil-cake. Ready Boid was quoted at Rs 43 and Groundnut Oil at Rs 18.50.

Trading in the Castorseed section was relatively dull. The demand for castor oil continued to be very small in view of the obscure export outlook. The bulk of the business was of a speculative nature. Castor ready was quoted at Rs 32.25 and Castor Oil, commercial quality, at Rs 13.20.

In the absence of fresh influences, trading in the Linseed section remained dull. The demand for ready linseed oil tended to improve following a broader interest shown by the paint manufacturers. Linseed ready was quoted at Rs 37.75 and Linseed Oil at Rs 16.50.

Whatever your furnace needs for control...

There's good reason why more heat-treating furnaces everywhere are controlled by Brown instruments. First, of course, is performance...sensitive, precise control. And equally important is versatility. In this varied line of instrumentation you'll find just about everything a furnace could possibly need in the way of control.

CHOOSE Electronic STRIP CHART CONTROLLERS for detailed, long-term records...and a complete selection of control forms.

CHOOSE Electronic CIRCULAR CHART CONTROLLERS for ease of scale reading...convenient dial charts; in a full range of electric and pneumatic control forms.

CHOOSE Electronic CIRCULAR SCALE CONTROLLERS where you want readability and control check at extreme distance...without need for a record.

CHOOSE PYRO-VANE CONTROLLERS where you don't need a record but do need precise vane type snap action electric control by a millivoltmeter instrument...also available with pulse-type time proportioning action, in both vertical and horizontal models.

Company Reports

First Dividend by Kalinga Industries

KALINGA Industries Limited has produced encouraging results for the year ended 31 March 1961, thanks to increased production and the expansion programme. While sales have risen to Rs 1.18 crores from Rs 71.14 lakhs, the net profit, after providing for Depreciation and Development Rebate Reserve, amounts to Rs 9.58 lakhs against a loss of Rs 3.86 lakhs incurred in the previous year.

In respect of allocations, Depreciation is reduced to Rs 4.16 lakhs from Rs 4.87 lakhs, while the provision for Development Rebate reserve is substantially lower at Rs 27,140 against Rs 13.55 lakhs. After paying all the arrears of dividend on the preference shares the directors have proposed a dividend of 5 per cent on the Ordinary shares for the first time. The company will not have to pay any income-tax in view of the development rebate concession allowed to the new industries.

The company has set up the first successful low shaft furnace in the country and, for the last 21 months, has been producing highgrade foundry pig iron. The present capacity is 30,000 tons per annum. The company is still awaiting advice from the Government of India about the allocation of foreign exchange for the import of essential equipment. The directors have stated that further headway towards the expansion programme can only be made after the Government decision is known about the allocation of foreign exchange from the German loan.

The expansion programme for which an industrial licence has been obtained includes increasing the production of pig iron to 1,00,000 tons per annum and setting up of a cast iron spun pipe plant using this pig iron as raw material and a power plant of 5,000 KW capacity using the rich top gas from the furnace. In collaboration with a Swedish firm, the company is also manufacturing the world famous Electrolux refrigerators in its factory at Cuttack.

Midnapore Zemindary Incurs Loss Again

The absence of any further progress made towards the settlement of the company's compensation claims is reflected in the working results of the Midnapore Zemindary Company Limited for the year ended 13th April, 1961. The accounts reveal a loss of Rs 1.45 lakhs as against Rs 1.08 lakhs for the preceding year. Adding the year's loss, there is a debit balance of Rs 23.39 lakhs, which is carried forward.

The directors state that the Government of West Bengal was unable to publish the Compensation Assessment Rolls within the period prescribed in the Estate Acquisition Act and consequently the date for publication has been further extended by the West Bengal Government to April, 1963. In addition, no payments have been received from the Government of Bihar and Pakistan.

The company now faces a difficult position due to non-receipt of ad-interim compensation and the progressive postponements of the date on which final compensation will be paid. In this connection, the directors state that the consideration of any further repayment of capital must be deferred until some payments towards the company's compensation claims are received.

Ahmedabad Electricity Repeats

Thanks to the increase in units sold from 6.98 million to 7.55 million and the consequent increase in revenue by sales from Rs 5.03 crores to Rs 5.54 crores, the Ahmedabad Electricity Company Limited has been able to report a slight rise in the net profit from Rs 1.28 crores to Rs 1.51 crores for the year ended 31 March 1961.

In respect of allocations, Depreciation is raised to Rs 49.68 lakhs from Rs 48.52 lakhs and Other Funds to Rs 19.74 lakhs from Rs 16.03 lakhs. The dividend on the Ordinary shares is maintained at 7 per cent, subject to tax.

The directors state that, in order to confine the demand within the limits of plant capacity, certain controls have been introduced under the directions of the Gujarat State Government and

with the co-operation of the Millowners' Association and the Textile Labour Association. The power position is expected to be considerably eased with the commissioning of the first and second 30 MV Sets in March 1962 and March 1963 respectively.

For the years 1955-56 and 1956-57, an arbitration at the instance of the then Bombay State Government (now the Government of Gujarat) was pending before the Central Electricity Authority. The award was received recently and is being considered as it relates to matters which may affect the accounting position between the company and the managing agents, and the company and the consumers.

Barakar Engineering Reports Better Results

Despite a decline in sales from Rs 17.12 lakhs to Rs 11.73 lakhs, the Barakar Engineering and Foundry Works Limited has reported a higher net profit of Rs 1.51 lakhs as against only Rs 27,429 for the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 1.41 lakhs from Rs 1.26 lakhs, while the provision for Development Rebate Reserve is reduced to Rs 9,000 from Rs 17,500. The dividend is, however, skipped again for the year.

The directors state that there has been a further hold-up in the implementation of the collaboration with Messrs. August Klonne of West Germany on account of reorganisation of the said firm. They expect the agreement coming into force in another few months. In the meantime, the Structural Shop has not remained idle and the company is successful in securing jobs to keep it going.

For the Investor

INVESTMENT GOSSIP

Pre-Puja Caution

Although prices have tended to sag in the past two days, the undertone of the stock market this week has been steady. In earlier dealings equity values were marked up under the impetus of buying support but higher levels could not be maintained due to profit taking. However the movement in the reverse direction has been slow as there has been no excessive selling pressure. The fast approaching Puja recess is a major limiting factor this week. With Lyons Range remaining shut for eleven days from this week-end, it is not surprising that operators are reluctant to extend commitments.

A feature of trading during the past few weeks has been the support that has been forthcoming for selected shares. Corporate news is generally good and investors have not been slow to lend support to shares which have good dividend and growth prospects. Such discriminating attention may well continue to characterise trading in coming weeks.

For a couple of weeks or so, sectionwise, textiles have been receiving the sustained attention of buyers evidently because cotton mill prospects are believed to have improved following increased offtake of cloth both by the domestic and overseas markets. It is not unlikely that interest may broaden in the jute section as the industry is expected to fare better in coming months than hitherto. Jute mills have decided to increase their working hours to 18 from the middle of this month following large arrivals of raw jute. It is expected that with raw jute prices at current reasonable levels and indications of larger foreign enquiries, mills may be able to record some profit instead of the heavy loss sustained by them during the past few months. Tea shares which have been sluggish presumably due to fears of a glut of the commodity in world markets may come into favour in view of the improved price levels obtained in the auction in Calcutta this week. Likewise paper shares which have been neglected so far seem to be getting attention following revival of the hope that government may sympathetically view manufacturers' plea for an upward revision of the selling prices of paper.

While the outlook for equities seems to be quite good, it would appear that wide price fluctuations there may not be witnessed for some time to come. The continued stringent conditions in the money market and new issues may not leave much funds for the stock market to put into speculative use. Opera-

tors have also perforce to bear in mind that there is now the Committee of Stock Exchange Presidents charged with the onerous responsibility of ensuring orderly working of stock markets.

NEW ISSUE NOTES

Dunlop Rubber

The Dunlop Rubber Company (India) Limited has obtained the Government sanction for the issue of 1,500,000 equity shares of Rs 10 each by capitalising the Reserves to the extent of Rs 1½ crores. The company's existing paid-up capital is Rs 3 crores and the bonus shares will be issued at the rate of one bonus share for every two shares held.

Kesoram Industries

It is understood that Kesoram Industries & Cotton Mills Limited has decided to offer 15,000 equity shares of Rs 10 each at Rs 28.75. The current market price of these shares is Rs 29.50. The company has, in addition to the spinning and weaving unit, commissioned a rayon plant and has achieved full production of the same. It has also further plans of diversification. The company plans to put up a Spun Pipe Plant with an annual capacity of 30,000 tons and also a steel tube project.

Tata Chemicals

Tata Chemicals Limited has announced to increase its capital, partly by issuing right shares and partly by Debentures. The directors have decided, subject to the approval of the shareholders and consent of the Controller of Capital Issues, to issue right shares of Rs 10 each, at a premium of Rs 2.50 in the ratio of one share for every five shares held and to issue additional Debentures of the value of Rs 50 lakhs, carrying interest at 6½ per cent, taxable, repayable in 1970-75.

Lucas-TVS

Lucas-TVS is a new company, proposed to be incorporated in the Madras State for the manufacture of automobile electrical equipment in collaboration with Messrs Joseph Lucas (Industry) Limited, UK. It is proposed to issue Rs 2 crores, divided into 200,000 equity shares of Rs 100 each for cash, at par. Of this, 60 per cent will be subscribed by the foreign collaborators.

India Refrigeration

The Controller of Capital Issues has given consent to the India Refrigeration Industries Limited, Delhi,

708 4236 ATLANTIC (EAST) LIMITED (Incorporated in England)

for the issue of shares worth Rs 80 lakhs, divided into Rs 36 lakhs worth of equity shares of Rs 10 each and Rs 14 lakhs worth of Cumulative Redeemable Preference shares of Rs 100 each, carrying interest at 9 per cent, free of company's tax, but subject to deduction of taxes at source.

Kerala State IDC

The Kerala State Industrial Development Corporation Limited, Trivandrum, has obtained the Government sanction for issuing 10,000 equity shares of Rs 1,000 each, for cash, at

par. The entire capital will be subscribed by the Government of Kerala and the proceeds will be utilised for promoting, establishing and executing industries for the manufacture of various types of plant and machinery.

Oldham & Son

Oldham & Son (India), Limited has been permitted to issue bonus shares of the value of Rs 2.5 lakhs on capitalisation of the company's reserves to a like extent. The company's paid-up capital is Rs 7.5 lakhs.

Shivrajpur Syndicate

The Shivrajpur Syndicate Limited has obtained the approval of the shareholders to issue 1,50,000 ordinary shares of Rs 10 each to the existing shareholders as bonus in the ratio of one share for every share held on 13 November, 1961. These shares will be issued by capitalising Rs 10.50 lakhs from the General Reserve.

Chartered Bank

The stockholders of the Chartered Bank, at their meeting held in London on 4 October, approved the increase in the authorised capital of the bank to £10 million. The Stock Exchange has granted quotations for and permission to deal the 1.1 million new £1 shares. The issued capital of the bank is now £6.6 million.

INVESTMENT NOTES

Gokak Mills

Gokak Mills Limited, Belgum, has been licensed to instal 50 automatic looms for the manufacture of industrial fabrics, such as tyre canvas. The licence is, however, subject to certain conditions. The firm will manufacture only cotton canvas and duck. No foreign exchange will be incurred by the company on the import of capital equipment. Moreover, it will have to undertake to export 50 per cent of the canvas and duck production for five years.

Godrej Soap

Godrej Soaps (Private), Limited, Bombay, has been refused permission to undertake the manufacture of 18,300 metric tons of fatty acids per annum; because even the existing manufacturers are currently working below their installed capacity owing to a shortage of foreign exchange for the import of raw materials, viz, copra and palm oil.

Jay Shree Tea

Jay Shree Tea & Industries Limited has been refused industrial licence to

We manufacture

- C.I. Domestic Hotwater Boilers
- C.I. Sewer Flushing Syphons
- C.I. Revolving Distributors for Sewage Disposal
- C.I. Turnstiles
- C.I. Locking Type Manhole Covers

J. B. NORTON & SONS LTD.
CALCUTTA-1

Phone: 22-8101

JB-12

manufacture 18 million square feet of commercial plywood per annum on three shifts. The refusal is at the instance of the State Government, which is reported to have felt that there will be difficulty in ensuring adequate supplies of raw material for the unit in the proposed area.

Union Carbide

It is understood that the Maharashtra Government has entered into a long-term contract with the Union Carbide Limited, Bombay, for the supply of rectified spirit for manufacturing polythene used in the plastic industry. With its State-owned distillery at Chitali already in production, the Government has an installed capacity for producing 2.7 million gallons of rectified spirit a year for industrial uses. The Government gets its supply of molasses for this purpose from a dozen sugar factories in the State.

J. K. Synthetics

J. K. Synthetics Limited has proposed to set up a Nylon factory at Kota. The building is almost complete. Plant and Machinery have arrived in India. The erection work is going on in full swing and every possible effort is being made to complete it as early as possible. It is expected that the plant will go into production before the close of the current year.

STOCK EXCHANGES

Overall Trading Pattern Unchanged

Watch-Dog Writes:

STOCK markets have disclosed no change in the overall trading pattern during the week under report. In the absence of any adverse news and with the return of buyers on a selective basis, slight improvement in prices have been recorded. There is, however, a general disposition to restrict commitments and book profits at bulges.

With operators reluctant to enter into fresh commitments owing to the approaching Puja holidays, the Calcutta Stock Exchange displayed a dull, but steady undertone, prices responding to selective support.

The Bombay Stock Exchange gave a mixed performance. Popular Mill shares met with good demand, while the shares in other counters came in for selective enquiry.

On the Madras Stock Exchange, activity was confined to only a few selected issues.

CALCUTTA

Thursday Evening.

ALTHOUGH trading was patchy and price movements were confined to narrow limits, selected issues on the local stock exchange continued to attract a fair measure of support. In general, the week just ended saw the familiar pattern of each successive rise being immediately followed by profit-taking.

Resuming the week on a hesitant note, prices looked up on cautious bear-covering and renewed bull support, thanks to a steady flow of favourable corporate news. Sentiment was also assisted by the Government decision to consult industries with a view to promoting exports through pooling arrangements. Support to the market, however, proved to be selective. This was mainly due to the fact that, apart from the unwillingness to extend commitments in view of the approaching holidays, operators were unable to take a constructive idea about the future trend of the market.

The Giltedged section continued to remain dull with enquiry limited to very few loans. Most of the medium-dated loans were on offer with buyers reserved. Barring a little interest shown in the new 4½ per cent 1972 issues at a heavy discount, other State Loans were neglected. 3 per cent 1986 Conversion Loan hovered narrowly around Rs 72.85.

Bank shares remained steady with United Commercial changing hands at Rs 91.00 and Punjab National at Rs 18.62.

Despite the news of the decision made by the IJMA to raise the working hours further from 45 to 48 a week, Jute shares continued to be out of favour, mainly due to a lack of overseas business in finished goods. Only very few dealings were recorded. Prominent amongst these were Fort William changing hands at Rs 27.19 to Rs 27.50; Birlas at Rs 25 to Rs 25.75; Ganges at Rs 10.94 to Rs 11.12; Howrah at Rs 20.25 to Rs 21.00 and New Central at Rs 18.87 to Rs 17.

Coal shares continued to be neglected on reports of the accumulation of stocks at various pit-heads. Burakur moved narrowly between Rs 18.25 and Rs 18.31 and Western Bengal between Rs 9.25 and Rs 9.31. New Beerboom turned ex-dividend at Rs 21.50. New Manbhoom came in for some enquiry up to Rs 15.62; but receded at the close to Rs 15.31 on reports of the company's proposal to issue the right shares in the ratio of 2:3 at a premium of Rs 2.50 a share.

Thanks to the improvement in the prices obtained at the week's export auction, Tea shares steadied up a little although enquiry was confined to only a few selected issues. The general belief, that there would be no more increase in production during the remaining months of the year, was also a contributory factor to the steadier tendency in prices. Bateli changed hands at Rs 18.94 to Rs 19.06; Hasimara at Rs 31.37 to Rs 31.62; Hattikhira at Rs 9.75 to Rs 18.18; Jay Shree at Rs 17.87 to Rs 18; Huldibari at Rs 29 to Rs 29.31 and Tezpor at Rs 15.69 to Rs 15.81.

Sugar shares continued to remain depressed. Operators did not view the prospects of the sugar companies with optimism as there was very chance of profits being affected under the new sugar policy. The only steady feature were Cawnpore, having sustained support up to Rs 13.19. Raza/Buland were a narrow market around Rs 10.50.

Textile shares continued to present a firm front on prospects of higher

exports to the UK and USA as a result of an agreement between India and the US. Jayshree met with business at Rs 17.25 to Rs 17.37; Cawnpore at Rs 9.06 to Rs 9.19; Bowraah at Rs 35.12 to Rs 35.75; Dunbar at Rs 33 to Rs 33.31; Elgins at Rs 21.87 to Rs 22.06; Kesoram at Rs 29 to Rs 30.00 and J. K. Rayon at Rs 19.25 to Rs 19.44.

Engineering shares displayed generally a steadier tendency under the lead of Indian Irons. After opening at Rs 24.34, Indian Irons touched a low of Rs 23.30 and a high of Rs 24.48 before closing finally at Rs 24.36. Other engineering shares, which came into limelight, were Jessop having sustained support up to Rs 21 from Rs 20.75; Binani Metal up to Rs 12.12 from Rs 12; Jay Engineering up to Rs 27.50 from Rs 27.37 and Guest, Keen, Williams up to Rs 40.75 from Rs 40.50.

Miscellaneous issues were in good favour due to hopes of a better showing in the near future as a result of import restrictions. The pews of the Government having given consent to the issue of bonus shares caused Dunlop Rubber to firm up to Rs 54.81 from Rs 54.25 before finishing at Rs 54.62. Hindustan Motor, after being taken up to Rs 19.44 from Rs 18.94, reacted at the close to Rs 19.06 on selling pressure following the news of the look-out of the factory in view of the strike. Following were the price trends of a few other selected shares:

	As on 7 Oct.	High 12 Oct.	As on 12 Oct.
Orient Paper	35.45	35.70	35.50
Shree Gopal	26.50	26.75	26.50

Trends in Capital Structure

INTERESTING information regarding new capital issues, such as the proportions of equity and preference shares, financing of project costs, formation expenses etc. is provided by a recent survey undertaken by the Research and Statistics Division of the Company Law Administration. The results summarised in the table overleaf are based on the study of prospectuses issued by the companies during the year ended March 1961. The study covered 43 big-sized companies with capital issues aggregating Rs 31.12 crores. Out of the 43 companies, only 8 were to be managed by Boards of Directors, while as many as 18 companies proposed to have Managing Agents. This apparently indicates a reversal of the trend that had been evident during the four years since the new Company Law came into operation. During this period the most popular form of management was that by Boards of Directors. Out of 4,356 new companies registered during the period 1956 to 1959, as many as 3,105 companies or 71 per cent were proposed to be managed by Boards of Directors. Next in the order of preference came companies to be managed by Managing Directors of which 1,182 were registered during this period. But out of 4,356 companies only 50 companies proposed to have Managing Agents. The analysis of the sample selected for 1960-61 indicates that there is still a lot of life left in the Managing Agency system. But a larger and more representative sample will have to be taken for analysis before conclusions could be drawn as to whether the Managing Agency system has staged a decisive come-back. The fact that most of the companies whose prospectuses were studied are of big size may be one of the reasons for the preponderance of managing agencies. Nevertheless the question has to be examined whether development of top management talent has been keeping pace with the growth of the corporate sector, both as regards number of companies and the scope and complexity of their operations.

Within the limits of the sample, three aspects of company finance are highlighted by the study. During a period of steady erosion in the value of money, it is not surprising that preferred shares are not preferred and that investors are inclined to seek scrips with 'growth prospects' to a greater degree than in the past. During the two quarters subsequent to the passing of the Preferred Shares (Regulation of Dividend) Act of 1960, which clarified the position regarding deduction of tax at source from preferred dividends, there was a spurt in the issue of preference shares. The percentage of preference shares to the total issue rose to 9.6 per cent and 13.8 per cent in the second and third quarters of the year as compared to the low level of 4.2 per cent in the first quarter. But the percentage declined to 6.1 per cent in the first quarter of 1961. For the entire twelve month period covered by the study, equity offerings accounted for 99.3 per cent of the total capital issue and preference shares for 9.7 per cent. This is about the same level as the average for the years 1951 to 1959 excluding the two years 1955 and 1956. During these

two years, when the new company legislation was on the anvil, the percentage of preference shares shot up to 23.8 and 23.5 per cent respectively.

Analysis of the subscriptions raised from different sources shows that, over the twelve months, less than half of the total issue (48.4 per cent) was offered to the public. Out of the balance, 27.2 per cent was taken up by the promoters, directors and their friends and 12.1 per cent by foreign collaborators, 12 per cent by financial institutions and 0.3 per cent by Central and State Governments. Further breakdown of the figures shows that in the case of new companies with assured growth prospects and having foreign collaboration, the share of capital subscribed by promoters was high and generally varied between 40 to 50 per cent of the total capital issue. On the other hand, in the case of issues by existing companies and issues which did not involve foreign collaboration, the promoters, directors, and their associates and friends subscribed a smaller proportion of the capital, and in some cases even the entire amount was offered to the public.

The third aspect brought out by the study is the high proportion of project costs proposed to be met by borrowed funds. In the first quarter, only 35.9 per cent of the cost of the projects were to be met from current issues and existing capital and a substantial portion of the project cost was to be met by foreign loans. During the first six months, borrowings from various sources constituted 56 per cent of the total project costs. In explanation of this trend it has been suggested that borrowings might have been considered to be more expedient as the resulting interest charges rank as allowable expenses for income tax purposes. But in view of the tax holiday enjoyed by new ventures, this cannot be regarded as the determining consideration. It appears more likely that the heavy foreign exchange component of the projects which had to be met in large measure by foreign loans is the main reason for the heavy proportion of borrowings to the total projects costs.

For the year as a whole, about 53.4 per cent was to be covered from current issues and existing capital, 17.2 per cent from foreign loans, 6.8 per cent from foreign collaborators, 12.9 per cent from bank credits and 9.7 per cent from miscellaneous sources. Miscellaneous sources include loans from financial institutions like the ICICI, the Industrial Finance Corporation etc. For the period covered by the study, taking all the 43 cases together, the total cost of raising capital came to Rs 1.10 crores, which worked out to 1.8 per cent of the total project costs and 3.5 per cent of the total capital issues. The preliminary expenses amounted to Rs 32.1 lakhs (29.3 per cent) and Brokerage and Underwriting Commission, Rs 52.3 lakhs (47.7 per cent). The other important item of cost was remuneration to promoters which for the period under review is placed at Rs 15.2 lakhs representing nearly 14 per cent of the total cost.

C.I. PRESSURE PIPES BY IISCO

IISCO-STANTON Cast Iron Spun Pipes
Made to BSS 1211 of 1958
and Vertically Cast Pipes
to BSS 78 of 1938

Our pipes are being utilised all over the country from Kashmir to Kerala and from Assam to Gujarat. A few of the largest schemes being supplied today from Kulti at the present moment are—

Ernakulam — Mattanchery and other Schemes under the Third Five-Year Plan, Kerala	
3" dia. to 24" dia. Spun Pipes	8,62,000 Rft.
Trivandrum Water Supply Augmentation Scheme	
48" dia. Vertically Cast Pipes	42,240 Rft.
Madras State Third Five-Year Plan	
Water Supply and Drainage Scheme, Madras	
3" dia. to 24" dia. Spun Pipes	46,02,000 Rft.
Thirupugondanahalli Water Supply Scheme, Bangalore	
36" dia. Vertically Cast Pipes	89,760 Rft.
Ajmer Water Supply Scheme, Rajasthan	
21" dia. Spun Pipes	3,69,000 Rft.
Manjira Water Supply Scheme, Hyderabad	
16" dia. to 24" dia. Spun Pipes	8,760 Rft.
36", 40", 42" & 45" dia. Vertically Cast Pipes	53,585 Rft.

Limits to Expansion

THE estimate that industrial output in India rose in 1960 by 12.1 per cent has been supported by reference to the new units installed last year. Whether the current year will be marked by the same favourable trend is debatable, owing to the sad results of the general shortage of power and the widespread flood disasters. The rise in output last year took place despite a rise in the cost of raw materials like cotton and jute. This means that agriculture must raise output to help industry with raw materials but prices must be cheap so that higher output as in the case of sugar mills does not mean only a bigger squeeze on the profits earned.

Whether the rise in imports had a bearing on higher industrial production may be debated by reference to the plea for maintenance imports. But the figures relating to diversification and expansion in existing industries suggest that the old industries did better than supposed. The performance of engineering units is decidedly better than that of Iron and Steel which had to face fuel difficulties. The increase in machinery output from local sources has already made many conscious of what is now called the second industrial revolution in India.

The rise in output has so far created few problems except in the case of sugar. The restriction of output for 1961-62 is certainly logical, if cane prices are to be maintained alongside sugar prices but the excise revenue might suffer from a reduction in output by 10 per cent. How far the new co-operative mills have aggravated the overproduction and the excess of stocks now carried over can hardly be glimpsed from the sugar statistics of 1960-61. But it may be urged that the States by a foolish clamour for expansion leading to 37 new mills are responsible for the sugar cesses and one way to rectify the mistake due to zeal is to cancel the licences for units that have not yet been set up. This may help to restore the lost balance. So will the scrapping of overaged mills or of mills that cannot pay their way. What is done in the case of redundant jute mills may even justify today a plea for 'concentration' in the Indian sugar industry.

How far a rise in cloth prices helped cotton mills to raise output may be ascertained

by reference to a rise of 2.5 per cent in cloth output. One point that requires emphasis is the superior performance of the larger composite units. The reorganisation on the pattern of Lancashire may not be called for but it may be argued that the industry is ripe for a degree of integration though the Government is averse to the extinction of obsolete and uneconomic units by means of a spindle levy. The shortage of cotton may not be dismissed by most as an irrelevant factor at present. Of course, textile machinery output may be restricted but the efficiency of the bigger units may rise to help enlarge output for export also. In older industries like jute and cotton, the rationalisation demanded by the rise of new rivals in Pakistan may be adduced as reason for curtailment of output and the consequences, though unpalatable, must be borne by capital and labour alike.

The limit of expansion has been reached in some other industries, for instance, plywood. The timber shortage may not be taken as a reason for the excess of capacity because exports are difficult. The paper industry too has grown to the point at which doubts arise in respect of new expensive units. The squeeze on profits under price control is patent and it cannot be denied that imports have fallen during the Second Plan. The demand for bamboo from rayon mills eager to make pulp on their own is one reason for curtailing expansion in paper. But still new units have been started and there is a distinct risk of overproduction together with a liability for foreign credits taken for the new mills. The shortage of raw rubber has not stood in the way of expansion of rubber manufactures. The licensing of more units in the current year has not been deprecated unduly. But it is fair to suggest that only the big, foreign-sponsored units are likely to perform up to expectations.

The Indian chemical industry's progress has induced few doubts. Excess of caustic soda militates against any rise in profits but the advent of fertilizer plants in response to the needs of agriculture has been hailed. But one may point out that older chemical firms are not making much headway and the really bright record is that of the new smaller companies making dyes and colours to replace the imports secured in the past. The risks of Indian expansion are underlined by a reference to Vanaspati also. The shortage of vegetable oil, the demands of export trade and the shadow cast by the UK's entry into the European Common Market may go far to support

a plea for caution in future. Protection by import control has stimulated the rise of Swadeshi glass, pharmaceuticals and refractories. But it may be argued by the usual inference from experience that the limit of safe expansion has been reached already as in the case of cement. In regard to exports, Indian cement makes a very poor showing. And the pressure of rising costs of fuel, limestone etc. is one reason for saying that in spite of the Third Plan targets, there is no place for any further expansion.

The limit of safety has obviously been reached in the case of iron and steel. The cost of production and the selling prices after levy of excise as in the case of cement inhibit optimism about domestic consumption growing as expected. The public sector may not absorb much of steel or cement hereafter and the outlook for exports is dim because India is not a low cost producer. Dependence on export as in the case of ~~ferromanganese~~ is certainly fraught with risks and it is easy to say that India is not like Canada or South Africa, that can count on exports to take care of enlarged production. The circumstances of aluminium may be different but here too, world prices and the trend of consumption must be kept in view.

In regard to consumer goods like sewing machines or razor blades, the growth of indigenous production may appear justified. But here too, the old, stable concerns alone have a future. The late entrants cannot hope for the same measure of prosperity. The licensing procedure has been modified this year by reference to capacity installed and the tacit conclusion is that in some lines an excess of competition may cause damage.

How far electric or other equipment made in India compares in respect of prices has not been examined but in regard to small motors or even storage batteries there is no doubt as to the excess of capacity and the limited possibilities of the home market. That some industries stand in need of essential imports and expansion of output is inseparable from the liberalisation of imports is underlined now by the experience of the motor industry. The clamour for a small car or the prospect of a State-owned plant cannot blind one to the fact that the Indian motor industry is now missing on more than one cylinder. The rage for automobile shares must not reduce forgetfulness as regards Japanese competition or the level of world prices attuned to shrinking demand entailed by credit restrictions.

That the industrial future is dependent on adequate supply of fuel and transport goes without saying. And pessimism in this regard seems fully justified. The coal industry is still a sick industry and sea transport has given no relief to distant consumers. The old and valuable export trade has also suffered. The planners may be constantly appraising results but something can be said for a devil's advocate when it comes to expansion and licensing of new industries. Industrial maturity depends on high efficiency and low costs and in regard to economic growth the experience of Japan and India tends to be dissimilar in spite of the framework of planning. There is no need to labour the usual point that Socialism in spite of its popular appeal has not yet provided the foundation for the expansion of the home market on the basis of real purchasing power and the steady cheapening of prices. Costs are, in any case, an insuperable barrier to expansion of steel or other major industries.

Planning in Britain?

By PAUL EINZIG

UNTIL recently the term "planning" was a dirty word in the vocabulary of British Conservatives. It seems now, however, that ten years after assuming power on the slogan of "Tory freedom works," the Conservative Government will now embark on some form of economic planning. The nature and extent of this planning remains to be seen. The fact that the example of France is often quoted seems to indicate that no really drastic change is envisaged. The French example is popular because of the spectacular economic improvement witnessed in France within the last two years or so. That improvement can be explained, however, largely on the ground of the higher degree of stability in French domestic politics achieved under General de Gaulle. Even so, it would be idle to deny that the influence of centralised planning must have been helpful.

The main channel through which the decisions of the French planning committee is put into operation is the nationalised French banking system. In France all the important banks have been under Government control and ownership since the 'forties, so that a decision to encourage or discourage the expansion or contraction of certain branches of industry can be put into practice by simply instructing these banks to increase or reduce credit facilities to the industries concerned. But to be able to do so in Britain it would not be necessary to nationalise the clearing banks. It has always been the British banking tradition to follow the hints received from the Bank of England in respect of encouragement or discouragement of credit expansion in specific industries. With the notable exception of Reginald McKenna Chairman of the Midland Bank during the inter-War period, who in the twenties often defied the official policy, all British bankers were willing to accept official advice even before the adoption of the Bank of England Act after the second World War. Under that Act the Bank of England has statutory powers to issue directions to the banks.

It has always been a mystery why so little use has been made of the Bank of England's powers, statutory or otherwise, to influence industrial activity in the desired direction. Possibly this was because apart from its views on the need for a general encouragement or discouragement of activity,

the Government of the day never had the courage to assume responsibility for steps which would directly affect individual branches of industry. Indirect effect is often produced, of course, by fiscal and other measures such as changes in the purchase tax or hire-purchase restrictions. But it seems that the Government would be reluctant to give instructions as a result of which employment in certain industries, as distinct from total employment, would be reduced through curtailment of credit facilities. Yet it is precisely that kind of planning that is needed. The main cause for Britain's economic difficulties has been the spectacular expansion of the motor industry and a few other industries, which can well afford to bid up wages in order to secure the manpower they require, and pass on the increase of their costs to the consumer. If as a result of the proposed planning the Government should be in a better position to call a halt to such expansion it would constitute a great improvement. Otherwise the additional assurance given to the unions that full employment will continue unabated would only encourage excessive wage demands and non-stop inflation.

—Copyright.

Company Finances

THE Reserve Bank's study of company finances, apart from indicating the use of profits, affords a measure of the rate of economic growth, governed by profits retained. The really important conclusions do not relate to the dividends but to the prospect of further industrial expansion. Two points are made plain. The dividends paid to the hilt of disposable earnings in the cotton mill industry are due to the age of the industry. Iron and Steel is largely a post-war creation and the borrowing undertaken is a reason for retaining profits instead of distributing them. The figures certainly illuminate dividend policy. Far more significant in the layman's view is the effect of price control on profits, following larger sales. Earnings on total capital employed remain modest because of State intervention and the higher rate of gross profit in the planting industry is only a measure of the risks involved. The high profits in textiles were earned by a very few firms, due to size, age and export connections.

The iron and steel industry does not fall in the category of blue chips, as now measured by earnings and dividends and it is clear that when only 33 out of 100 companies earn profits exceeding 25 per cent, the efficiency of Indian industry must be in doubt. The selection made in 1957 may not be a guide to the future but once again reference must be made to the erosion of profits by price control and wage awards. The trend of profits over four years will not encourage the average investor. The preference now shown for new promising ventures springs from the circumstance that scarcity of imports may help to maintain the market and raise the level of earnings.

The passion for growth stocks among equities is derived also from the pattern or investment of prospects. It is also noteworthy that rubber manufacturing is omitted though it is patent that the situation is far more favourable for the two big manufacturers than for the two steel companies whose profits have long been under pressure. The percentage of profit to the total capital employed appears highest in regard to matches and this is striking enough to show that,

in spite of taxes and competition created for some sentimental reasons, the match industry is immune to recession. On the other hand, the trend of profits in tea since 1955 has been downward and a study of share prices over a decade will establish that depreciation in share values is due to the impact of higher costs and the obvious dependence on exports as in the case of jute manufactures. One more point is that in the case of public utility concerns dividends are pegged because gross profits run at a level of 7 per cent and dividends paid out are linked with the Bank Rate. Of course, there are other industries in which profit margins have been pared by executive action; paper is one like sugar and the most important point is that the reward for risk capital has all along been limited while labour has asked for and obtained more.

Depreciation in Company Law

(Continued from previous issue)

5. It is not clear whether depreciation of a particular year is to be calculated after taking into consideration the additions to assets and the sale or disposal of the asset during that year.

In accordance with accepted accounting procedure the additions to the assets and the sale or disposal of assets during the year have to be taken into consideration before calculating depreciation in accordance with Section 350, in respect of that financial year; but the depreciation to be adjusted in any particular year on the additions and disposals made in that year would only be on a pro-rata basis with reference to the actual date of such additions/disposals.

6. Since plant and machinery which for income-tax purposes is divided into 10 or 12 sub-headings, each of which carries a different rate of depreciation, whether it would be in order to apply the average rates calculated with reference to the total depreciation allowed in respect of that type of fixed assets in relation to the written down values of the various items included under that asset head:

Since Section 350 of the Act refers to the rates specified in the Indian Income-tax Act and the rules framed thereunder, the relevant rates will apply to each kind of asset separately. Calculation of depreciation at the average of the rates would not be in conformity with the requirements of that Section.

7. The rates of depreciation in respect of agricultural assets have not been specified in Section 350—the procedure to be adopted in this regard may be clarified.

In accordance with sound company practice, if a company desires to deduct depreciation in respect of its agricultural assets for the purposes of Section 350, it may adopt the rates prescribed in the Agricultural Income-tax Act of the State in which it is situated.

II. Section 205 has been amended by the Companies (Amendment) Act, 1960 requiring companies to provide for minimum depreciation in their profit and loss accounts, in accordance with the norms suggested in that Section, before declaring dividend. The views of the Department in regard to the difficulties experienced by company manage-

ments in complying with this Section have been made known to the Chambers of Commerce, professional bodies etc. However, it would appear that some company managements continue to experience difficulties in this regard and the Department's views in regard to the queries raised by them are set out below for information:—

- (1) Whether it would be necessary to provide depreciation after the commencement of Companies (Amendment) Act, 1960 in respect of the entire amount of the 'original cost' as mentioned in sub-sections (2)(b) and (2)(c) of the above Section.

Any depreciation already provided for in the books, that is the profit and loss account of the financial years prior to the commencement of Companies (Amendment) Act, 1960, should be taken into account and only the written down value, after deduction of depreciation actually provided in the books in the earlier years, need be depreciated in accordance with Section 205(2)(b)(c). The reference to "original cost" is only for the purpose of determining the "specified period" in accordance with Section 205(5)(a) and the quantum of annual instalment of depreciation under the straightline method under Section 205(2)(b) (or any other method adopted under Section 205(2)(c)).

- (2) Whether it would be necessary to provide depreciation in respect of immovable property which has been acquired as an investment for the purpose of earning supplementary income and not for the use of the company.

Since immovable properties, unless they are acquired for re-sale, represent fixed assets, it would be obligatory to provide for depreciation on such immovable properties in accordance with the provisions of Section 205 of the Act, read with Section 350, which contemplates that depreciation should be provided at the rates specified for the asset comprised in the immovable property in question by the Indian Income-tax Act and the rules framed thereunder. Rates for different classes of buildings and other immovable properties under the Income-tax Rules and the rates prescribed in these rules have to be adopted for the purpose of providing for depreciation under Section 205(2), irrespective of the section of the Income-tax Act under which income arising from these assets becomes assessable to Income-tax.

- (3) Whether any company which had adopted the widely used "straight-line method" of providing depreciation in the past is required to change it in view of the provisions of the amended Section 205, provided of course that 95% of the original cost of the asset is written off by way of depreciation before the expiry of the specified period.

Section 205(2)(b) seeks to authorise the use of "straightline method" of depreciation and no company following this method is obliged to change this provided the provisions of that Section are complied with. The reference in this Section to "original cost" is only for the purpose of determining the quantum of annual instalment of depreciation under the straightline method and the "specified period" in accordance with Section 205(5)(a).

- (4) Under Section 205, it is required that arrears of depreciation should be provided for before any dividend is declared. This may create an anomaly in relation to the provisions of the Income-tax Act.

It is expected that depreciation would be provided every year as it is a charge on the revenue of the company and should not be allowed to fall in arrears.

- (5) Whether it would be open to a company to charge depreciation on straightline method in respect of major fixed assets like plant and machinery, building etc, while adopting the reducing balance method for fixed assets of a lesser value like motor vehicles, equipments, furniture, fittings etc.

It is permissible to adopt different methods for different types of assets provided the same basis is consistently adopted from year to year in accordance with the provisions of Section 205(2).

- (6) If extra and multiple shift allowance is not claimed by a company for the purpose of income-tax assessment, whether it would be necessary to take into account such allowances in calculating the specified period?

The real criterion would be whether the assets concerned are used for more than one shift and if so, the shift allowance will have to be taken into consideration for the purposes of Section 205(5)(a) and Section 350 and it would be immaterial whether such allowances are claimed by the company for the purpose of its tax assessment.

- (7) If any asset has already been reduced to 5% or below its original cost, whether any further depreciation would require to be provided in accordance with Section 205 before declaring dividend provided the asset is still in commission. If the written down value is slightly over 5% of the original cost, whether depreciation can be provided under Section 205 only to the extent it will bring it down to 5% of its original cost?

If the straight-line method is adopted in accordance with Section 205(2)(b), depreciation has to be provided till such time the written down value of the asset is reduced to 5% of its original cost. For the purpose of that Section, it would not be statutorily necessary to provide for depreciation in respect of the balance amount of 5% till such time when the asset is sold, discarded, demolished or destroyed.

- (8) The calculation of depreciation in accordance with Section 205(2)(b) would be a strenuous task and whether it would be adequate if the method is confined to the major assets like plant, machinery, building etc.

It should not be difficult to determine the specified period as prescribed in Section 205(5)(a). It is however open to a company to choose any of the methods mentioned, namely, the reducing balance method under Section 205(2)(a) or the straightline method under Section 205(2)(b) in respect of any of these fixed assets, subject to the stipulation that once a method is adopted, it must be consistently used in subsequent years.

- (9) Whether it would be necessary to provide for depreciation in the books of accounts in respect of assets which are not in use for the whole or part of any financial year.

Since according to accepted accounting principle, depreciation also arises out of efflux of time, it would be necessary for the purposes of Section 205 to provide for depreciation even in respect of assets which are not

in use during any financial year, if it proposes to declare to pay dividend for that year.

- (10) The amendment of Section 205 requiring the provision of minimum quantum of depreciation before declaration of dividend would make it difficult for new undertakings to declare dividends even after a number of years after commencing production, as the new company will necessarily take a long-time to clear the backlog of arrears of depreciation before it could declare dividend.

From the cases examined in this Department, it would appear that these misgivings have arisen mainly due to the fact that the alternative method of providing for depreciation according to the straightline method under Section 205(2)(b) of the Act has not been appreciated properly in many cases. The advantage of the straightline method is that it evens out the so-called burden of depreciation on a company and thereby enables it to bear it more easily than what the reducing balance method would ordinarily permit. It is for the managements of the companies under such expert guidance as they may need, to decide for themselves which of these two methods of charging depreciation or any other method, duly approved by the Central Government, would serve the basic objects of the provisions of Section 205. There is no reason why, if the company's profitability is not below the average obtaining in that particular business or industry, it should not be able to declare adequate dividends after a reasonable period after the commencement of production.

(Concluded)

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

BUSY SEASON

Prospects

The 1961 slack season has almost drawn to its close, at least on paper; and prospects are that the 1961-62 busy season will seem to start off, in the first week of November, in strident fashion. For in that week on top of the demand for money consequent upon beginning of the month disbursements will be super-imposed payments in connection with the Diwali.

For another reason also it appears possible that the next busy season will get off to an early start. During the last few weeks of the current slack season there has occurred a slowing down in its progress; that is to say growth in Deposits has tended to taper off, and the total of Advances, presumably owing to Puja disbursements, has signally failed to contract. As such there is already some element of pressure felt by the banking system, as witness the level of banks' borrowings from the Reserve Bank.

The fact, however, remains that the slack season now drawing to its close did produce easier money conditions than we have known in similar periods of recent years. Hence banks do have some "reserve" from which to meet the demand for funds in the emerging busy season. To the extent that they have purchased giltedged in the past few months, and to the extent of their holdings in loans which mature next year, one avenue of replenishment of resources, worth perhaps Rs 30 crores, is easily available. (In this reckoning the State Bank is omitted, since in any case the relevant institution can count upon Reserve Bank purchase of securities).

Beyond that there is always recourse to central banking credit. Though banks will be chary of paying the penal interest rates, they will not balk at the 5 per cent rate or even the top tier of six per cent in the event that the busy season does produce a demand for funds beyond their normal capacity to finance. At a pinch the credit lines they could use, in as far as the Reserve Bank is concerned, may be as much as Rs 60-80 crores.

In the final analysis, however, a relatively facile meeting of the monetary demand will depend on whether or no Deposits once again accrue with the banking system. In the first four months of the 1961 slack season there was reasonable prospect of not inconsiderable increase (and sustained, at that) in bank Deposits: since then the experience has been such as to hold out rather less hope of any useful-sized improvement in Deposits.

We trust that the slow-down in growth of bank Deposits is temporary. It may be that two factors—the State loans and the Puja disbursements—were mainly if not wholly responsible for the changed situation. In such a reading, it is not improbable that in the next six months, bank Deposits should rise by, say, Rs. 50-60 crores.

Against this is the certain foreknowledge that expansion in Advances in the next busy season will exceed Rs 200 crores. If we add up the "resources" we find that banks will barely be able to manage; and this is despite release of resources in a slack season prior to the commencement of what should be a

rigorous busy season. The inference is that in a developing economy, except in the short bursts of relative stagnation that are experienced, the pressure upon the banking system is sustained and considerable.

From the banks' point of view it obviously makes for better earnings; but the Advances/Deposits ratio will tend disturbingly to rise. This, too, should not normally matter. Unfortunately there is a traditional opposition to what is held to be high credit ratios.

The answer seems to lie in some form of a bank balance-sheet. Firstly, we would suggest that bills purchased and discounted should be left out when the Advances/Deposits ratio is worked out. After all such bills are supposed to be self-liquidating. So, to the extent of borrowings against bills, the least that can and should be done is to treat the relevant bills and the borrowings there-against as "contra" items.

Secondly, more use should be made of the Re-finance Corporation. And such borrowings could also be treated as a contra item, with the relevant Advances so shown on the assets side of the balance-sheet.

We would then have net Advances, whose ratio to Deposits would be much lower.

The second recourse is in disregarding the Advances/Deposits ratio, and instead to concentrate upon the liquidity ratio. For this purpose the items that form "liquid" assets should be: cash balances; unencumbered securities; and bills purchased and discounted against which no borrowings are outstanding.

Whatever the method, what should be obvious is the fact of sustained pressure upon banks. For the immediate future we suggest that banks be informed that, for the financing of the 1961-62 busy season, liberal credit limits with the Reserve Bank will be sanctioned.

BANKS

Restrictions Removed

With effect from 24 October 1961, the Reserve Bank has withdrawn the provisions of the directive issued on 11, March 1960 which required banks to maintain a ratio of clean advances to total credit in any one month at

a level not exceeding the ratio in the corresponding month in 1959. The circular issued on 23 October by the Reserve Bank to the Scheduled Banks on this subject says that the area of operation of selective credit control has since been curtailed following the removal of controls on advances against sugar, wheat and raw jute and jute goods. The general credit situation with the higher pattern of lending rates also acts as a curb on unessential demands for credit. In the circumstances the Bank considers that control on clean advances as such is no longer necessary. The circular, however, does not affect the operation of any directive regarding clean advance specially imposed by the Reserve Bank in respect of any individual scheduled banks.

+

BANK RETURNS

Balances Improve with Foreign Aid

WHILE the returns of the Reserve Bank for 13 October bear testimony to the spillover of month-early disbursements into the second week, the relative figures for 20 October reflect the return of easier conditions.

Active Note Circulation, after expanding substantially by Rs 14.63 crores, is marked lower by Rs 2.22 crores at Rs 1,903.90 crores. After an outflow amounting to Rs 0.60 crore there has been return of Rupee Coin from circulation in an amount of Rs 0.39 crore. Currency was expanded against Rupee Securities in the earlier week, for Rs 10 crores, by transfer from Investments in the Banking Department, and the latest figure is unchanged at Rs 1,558.86 crores. In the result, the cash in the till, which had been drawn on to the tune of Rs 5.18 crores, has since improved by Rs 2.61 crores to Rs 15.52 crores.

The return for the Banking Department, as at 13 October, suggests that there has been no recourse to deficit financing. The decline of Rs 10 crores in Investments can be traceable to transfer to the Issue Department; and the rise of some Rs 15 crores in the Reserve Bank's portfolio of Treasury Bills Purchased and Discounted probably relates to refinancing operation by the State Bank as to Rs 7 crores and by the State Governments as to the balance; but in as much as other Scheduled Banks figure as having purchased for Rs 7 crores in the same week, it is likely that the Treasury Bills discounted by the States were in larger amount. The Centre's balances were drawn down by Rs 4.08 crores, and the States' by Rs 0.70 crore. The improvement of Rs 9.63 crores in Reserve Balances of member banks is largely owing to the State Bank (Rs 6.73 crores). The States besides had to borrow

*Week ended 20 October for Reserve Bank and State Bank.

Week ended 13 October for Other Scheduled Banks.

Note: State Bank figures are distorted by Rs 24 crores loss in Deposits owing to repayment of counterpart funds.

Rs 6.33 crores more from the Reserve Bank. Balances Held Abroad fell by Rs 3.58 crores.

In the week ended 20 October, there appears to be considerable recourse to deficit financing. Investments are higher by Rs 20 crores at Rs 201.08 crores, despite probable purchase of Rs 8 crores of securities by the State Bank. Created money was in this wise necessary for two reasons. On the one hand, payments to the States, whose balances have improved sharply by Rs 24.62 crores to Rs 28.60 crores, on top of a fall of Rs 3.92 crores to Rs 59.45 crores in ways and means borrowings from the Reserve Bank, involved a considerable liability for the Centre. On the other hand, the Centre had also the obligation of the maturing liability in respect of Treasury Bills purchased and discounted by the Reserve Bank, the amount involved being nearly Rs 18 crores. As a result, the Centre's balances have fallen by Rs 11.15 crores to Rs 49.92 crores. Reserve Balances of member banks have further improved by Rs 2.39 crores to Rs 84.49 crores. Lastly, there is a sudden jump of Rs 18.25 crores to Rs 28.27 crores in Balances Held Abroad—inflow of foreign aid, clearly enough.

The return of the State Bank for 13 October disclosed a rise of Rs 0.99 crore to Rs 531.30 crores in Deposits. There was a small rise of Rs 0.32 crore to Rs 244.88 crores in Advances. The State Bank disinvested in gilt-edged for Rs 7 crores, and hence cash balances, including money at call, went up by Rs 6.53 crores to a level of Rs 33.51 crores.

In the week ended 20 October, the State Bank made good its sale in the earlier week of gilt-edged. The portfolio is higher by about Rs 8 crores at Rs 257.34 crores. Deposits, however, marked a fall of Rs 1.36 crores to Rs 529.94 crores. The purchase of gilt-edged has been "paid" for by running down Other Assets by Rs 8 crores to Rs 21.82 crores. The total of Advances shows little change at Rs 244.70 crores, and cash balances have improved by Rs 1.03 crores to Rs 34.54 crores.

In the week ended 6 October, thanks to month-early disbursements, net Demand Deposits of Scheduled Banks fell by Rs 4.23 crores to Rs 817.11 crores and net Time Deposits by Rs 3.98 crores to Rs 1,119.92 crores. While indebtedness to the State Bank was more or less unchanged at Rs 18.28 crores, with the total of Advances rising stridently by Rs 13.65 crores to Rs 1,245.46 crores, borrowings from the Reserve Bank mounted by Rs 5.33 crores to Rs 16.40 crores. The gilt-edged portfolio, which was lower by Rs 6.20 crores at Rs 611.65 crores, mainly reflected disinvestment by the State Bank. In the end result, cash balances improved by Rs 2.49 crores to Rs 182.00 crores; if the State Bank is taken into account, it would be seen that cash balances of other Scheduled Banks rose even more handsomely by over Rs 5 crores.

The return of Scheduled Banks for 13 October, with its suggestion of spillover of month-early disbursements into the second week, records a rise of Rs 2.50 crores to Rs 819.61 crores in net Demand Deposits which, however, is more than offset by a fall of Rs 2.74 crores to Rs 1,117.18 crores in net Time Deposits. The total of Advances has again expanded, though nominally, by Rs 0.56 crore to Rs 1,246.02 crores. While borrowings from the State Bank are slightly lower at Rs 18.01 crores, indebtedness to the Reserve Bank has been pruned by Rs 3.31 crores to Rs 14.99 crores. It would appear that other Scheduled Banks have bought securities for Rs 7 crores, since the portfolio for all banks is unchanged despite sale for like amount by the State Bank. Consequently cash balances, including money at call, are shown to be Rs 2.13 crores higher at Rs 184.13 crores. However, it is known that, in the relevant week, the State Bank reported cash balances to be some Rs 6½ crores higher; and the implication is that other Scheduled Banks, by virtue of purchase of gilt-edged, ran down their cash by about Rs 4½ crores.

Common Market Prospects

By Paul Einzig

MUCH to everybody's surprise, the Conservative Party Conference at Brighton endorsed the Government's decision to join the Common Market with an overwhelming majority. It is true, during the debate much was said about safeguarding the interests of the Commonwealth. But the size of the majority in favour of joining the Common Market has enabled the Government to put its own interpretation on what constitute the Commonwealth interests which it is pledged to protect. The main reason why the Conference has given the Government virtually free hand to proceed was the utter lack of constructive response on the part of the Commonwealth. The attitude of most Commonwealth Governments during the last few months has been purely negative. They simply objected to Britain joining the Common Market without trying to put forward an alternative solution or a formula for some compromise acceptable to them. They expected Britain to make all the sacrifices without any reciprocity. In the circumstances it is small wonder if even many formerly enthusiastic supporters of Commonwealth preference have arrived at the conclusion that, after all, it would be wiser for Britain to join forces with the Common Market, even at the cost of losing much of her trade with the Commonwealth.

Judging by what one hears about the line likely to be adopted, the Commonwealth is not likely to be affected adversely as far as the exports of tropical products are concerned. They are likely to be admitted to the Common Market on the same terms as are the similar products exported from French overseas territories. As for wheat, dairy produce, &c., quotas could safeguard the interests of the Commonwealth, and might even allow for an expansion of the market in the United Kingdom. When it comes to manufactures, however, there seems to be little chance for safeguarding their preferential treatment in the United Kingdom and no chance at all for securing their admission to continental countries of the Common Market. In view of the negative attitude of the Commonwealth Governments the British Government is not likely to sacrifice the chances of an agreement with the Common Market for the sake of safeguarding the industrial interests of the Commonwealth as distinct from their agricultural interests. The development of many of the new industries in the Commonwealth took place at the expense of British exports, and it is widely felt that it would be too much to expect Britain to forgo the prospects of an increase of exports to Common Market countries for the sake of bolstering up these new Commonwealth industries.

All is not yet lost, however. As negotiations are likely to drag on for many weary months, there is still time for Commonwealth Governments to adopt a more constructive attitude instead of expecting all the favours without offering anything in return. The fact that they are no longer shielded by a Commonwealth-minded majority of Conservatives should make them realise the need for offering concessions as well as showing some willingness to make sacrifices for the sake of facilitating Britain's task to come to terms with the Common Market. Any constructive gestures on the part of the leading Commonwealth countries might yet revive pressure on the British Government against sacrificing their interests. But the gesture must be prompt and impressive in order to secure a reversal of the attitude displayed at Brighton.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 24 October 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs. 99.375 per cent were allotted in full. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 30 October 1961. Successful tenderers should make payment on Friday, 3 November 1961. Other conditions are as usual.

During the week ended 20 October 1961 Government of India Treasury Bills for Rs 167,77,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 25 to 28 October 1961 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 16 to 21 October 1961 amounted to Rs 1,85,00,000.

Notes

MADRAS

Memorandum to Finance Commission

In a memorandum submitted by the Madras State Government to the Third Finance Commission which had concluded its inquiries in this State, the Government had recommended that the divisible income tax pool may be increased from 60 to 75 per cent of the net collection and the division effected on the population basis. On excise duties, which is the other main item of divisible central revenues, the Madras Government has suggested that 25 per cent of the net collection may be divided amongst States on the basis of population. It has been observed in this connection that in a country of vast regional disparities in industrial and commercial development, any mode of division other than the population basis, may tend to accentuate the existing disparities and therefore should be avoided.

According to the Government's forecast, during 1961-66, the Government would have a revenue gap of Rs 125 crores during the Third Plan period or non-Plan expenditure, i.e. expenditure on normal administrative services of State and a gap of Rs 94 crores on the new items of

expenditure incorporated in the Third Plan.

In respect of excise duties, the Madras Government memorandum states that substitution of additional excise duties in lieu of sales tax on sugar, textiles and tobacco has reduced the elasticity of the structure of the State taxes. It is therefore necessary, it pleads, that the proceeds of any enhancement by the Central Government of the excise duties on these commodities should be divisible between the Central and State Governments in the ratio of the existing respective incomes from this source.

Perhaps the Madras State is the first State in India to forcibly stress the aspect of the disparity in emoluments between the Central Government and State Government employees in the same area and to suggest the levelling up of this disparity. It urges that the Central Government should not unilaterally revise the dearness allowances rates to their staff without assessing and providing for the repercussions on the State Government.

The memorandum urges that there could be no justification for such wide disparities in the emoluments of the two Government servants doing similar work in the same locality and it has been suggested that the cost of bridging the gap would be about Rs 4 crores a year for the Madras Government.

The memorandum recalls that the Government of India's discontinuance effective this year of their assistance towards the increased emoluments of low-paid employees of State Government would cost the State nearly Rs 272 lakhs. An ad hoc grant is being pleaded to cover this deficit in the Madras State budget of the current year.

The Madras Government has stressed that the present ad hoc methods of determining targets of additional taxation should be replaced by more rational procedures based on the existing level of taxation in each State, the per capita income and the desired size of revenue component of the Plan. The memorandum has stressed the need for a suitable matching grant to be given by the Centre to the States, levying taxes in excess of the target fixed in the Plan.

The present procedures for the release of grants on Plan schemes have caused considerable irritation and delay, the memorandum complains. The Madras Government has, therefore suggested that in the place of the existing system of matching grants, a scheme of increased devolution should be devised which would meet the bulk of the Plan and non-Plan expenditure, leaving only a small balance to be covered by a variable grant.

PLASTICS

Scope for Expansion

A number of suggestions were made at the 14th All-India Plastics Manufacturers' Conference held in Bombay to impart greater momentum to the development of the plastics industry which it was observed has not touched even the fringe of the great potentialities of the use of plastics in food and agricultural fields. The great handicap in the development of the plastics industry is the absence of a well-established basic chemical industry. In a way, the growth of these two industries is interdependent and plastics industry provides the intermediate materials indispensable to the development of the chemicals industry. The most urgent problem facing the plastics industry at present is inadequate availability of raw materials which have to be secured through imports. The prospects are also not bright in view of the difficult foreign exchange situation. The scarcity of foreign exchange has underlined the need for setting up within the country itself capacity for manufacturing processing equipment and machinery needed by the industry. Two resolutions passed at the conference have drawn attention to these aspects of the difficulties faced by the industry at present and have stressed the need for providing more foreign exchange to meet the industry's requirements of raw materials.

The Third Plan schemes for the plastics industry envisage expansion of the capacity six-fold. The requirements of plastics and synthetic resins at the end of the Plan period have been assessed at 125,000 tons. Plastics offer a prospective source for substantial earnings of foreign exchange through exports. While taking note of the outlook for exports, the conference has suggested a number of measures to push the tempo of the export drive. These include availability of industrial raw materials at fair international prices and in desired quality, prompt issue of import licences for essential raw materials against prospective and actual exports, simplification of the procedure and settlement of claims in regard to draw-back of import duty and refund of excise duty, introduction of fiscal incentives such as rebate of income-tax and super-tax on export earnings and the planning of production suitable for exports.

*

INDUSTRIAL RESEARCH Achievements of NRC

The progress of research for industrial applications has to be intensified, but what has been done by the National Research Corporation in 1960-61 suggested that in addition to the Suri transmission for diesel locomotives, there were

some achievements. The Corporation with its capital of Rs 10 lakhs enjoyed an independent income and it is not liable to pay donations to political parties though it is a company. Its contacts with institutes carrying on research for specific purposes were continuous and the many inventions offered were taken up for development, for the Corporation is concerned with the practical use of processes and patents.

It is from the latest report that one can learn how baby food manufacture at Kaira through co-operative milk society came into being last year. It is noteworthy that the Tata Institute at Bangalore leads the field in invention. Age then has something to do with a standing in the world that works. A process that was launched last year promises something for the export trade. A prototype plant at the Tata Oil Mills, Bombay, for the integrated production of proteins and oil from groundnut is set up and Tomco will operate the plant, using the process evolved at the Food Research Institute, Mysore. The Poona Chemical Laboratory has been equipped with a unit to produce aromatic chemicals. This too may help cosmetics-makers in India and help in the development of export of geranium and other essential oils. The manufacture of white cement from gypsum, limestone and feldspar has been the subject of experiments at Hyderabad. The cement produced was comparable in colour with imported material. This conclusion may have good results for many cement producers. The manufacture of pine oil on a successful basis will have important consequences for the chemical industry. And the production of citric acid is launched on the basis of trials with pilot plant. The enrichment of low-grade graphite promises advantages like the application of betamen emulsions. Forest

products come within the range of research. And the Corporation gets licences for using foreign patents in India, if there is a demand from local users. The State agency that deals with the results of research has sustained a loss, but in the case of scientific advance or application, there should be no concern over the financial results or records. If royalties and premia do not cover the whole outlay there is a good case for a block grant to cover the deficit accumulated for additional capital to let the Corporation continue in its chosen line of business.

WAGES Need for Restraint

What was said at Bangalore about the application of labour laws to public sector industries will encourage trade unions to conform to the code of discipline if the State as employer observes the rules, as Mr G. L. Nanda promised. A good labour record is as important as commercial success and labour relations must be maintained though a

share in management represents only an ideal. The Railway workers probably have the means to enforce observance of ILO conventions and the Centre, through the Mines Department, will probably conform to accepted rules. But the new steel plants have blotted their book and they must be subject to a full degree of State control like the privately-owned undertakings that supplement wages by profit-sharing agreements.

The wage differentials between the public and private sectors have not been examined as yet and it

may be found that the State-owned plants must raise wages. The inevitable rise in costs will stand in the way of any reduction of iron and steel prices. Sardar Swaran Singh perhaps had this in mind when he declared against any cut in prices to stimulate consumption. The public regulation of wages is in its way a cushion against unemployment so that wage awards are necessary for cement, sugar and textile workers. But productivity must be raised to meet the rise in costs and the welfare expenditure too must be met out of earnings.

The problem of labour under socialism is not vastly different because trade unions will remain independent and the State cannot coerce them. This is calculated to restrain profits even in expanding industries and the whole object of workers' education is to secure the rights of labour. The improvement in the situation last year with fewer strikes on record has been offset by troubles this year due to power shortage and jute shortage. The employers' problem has been obvious and the State Government in enforcing payment of compensa-

tion declined to consider the needs of employers. Whether the jute mills' problem will be treated as unique remains to be seen. But the recent return to the 48-hour week is meant not only to help the jute grower but the operatives. Integration in the industry by the closure of some smaller units and the sealing of looms may be regarded as natural in the case of jute mills that live now by export in competition with mills abroad. The steel industry does not face such a problem but if exports of India's engineering goods are to rise as expected the

claims of labour must be modified. The tariff or the excise cannot be regarded as exceptional if labour does not concede the necessity for wage restraint. But Mr Nanda has not referred to the need for a wage pause during the Plan but only to the enforcement of labour legislation. The automatic increase in wages rather than the bonus is now the aim of labour unions that have to be reminded that conditions of trade are changing and Indian industries have to face up to competition from new industrial countries. The possibility of damage to export

in the case of plantation products must be kept in view at present. So also the need for new capital for development in rubber and tea alike.

INDIAN POLICE Celebrates Centenary

The Indian Police Service has been described in a history, long before the official centenary. And in States

DIFFERENTIAL BONUS SCHEME ANNOUNCEMENT

The Differential Bonus Scheme has now been finalised and in exercise of the powers conferred by Section 49 of the Life Insurance Corporation Act, 1956, the Corporation has made Regulations classifying the policies issued by the Corporation, and by the various insurers, whose controlled business has been transferred to and vested in the Corporation, for the purpose of declaring Differential Bonuses. The Regulations have been drawn up in consultation with and approved by the Central Government and notified in the Gazette of India.

2. The Scheme is being implemented under instructions from the Government of India and supersedes the Provisional Scheme framed by the Corporation and published in June 1959. The participating Policies of the erstwhile insurers and of the Corporation are now classified in 25 groups instead of the 6 groups under the superseded Scheme.

3. The rates of bonus now declared are as a result of the valuation as at 31st December 1957. The business valued included all the policies which were issued by the Life Insurance Corporation or by the erstwhile insurers and were in force as on 31st December 1957. Out of the gross profits disclosed by the valuation an amount of Rs. 27.56 crores was reserved for distribution to participating policyholders, after providing for the estimated Income-tax liability and the Government's share of surplus.

4. The rates of bonus in respect of participating policies issued by the Life Insurance Corporation of India are:

Whole Life—Rs. 16.00 per Rs. thousand sum assured per annum.
Endowment—Rs. 12.80 per Rs. thousand sum assured per annum.

5. As stated earlier the policies of the erstwhile insurers are now classified in 25 different groups. The policies of the Life Insurance Corporation as well as of cer-

tain insurers included in the same group have been allotted key index No. 10. Each of the other 24 groups has been given an index number and the ratio thereof to 10 indicates the proportion which the bonus rates applicable to the group bear to the bonus rates of the group which has the key index No. 10. The bonus vests immediately.

6. For the purpose of illustration, the bonus rates applicable to policies of some of the erstwhile insurers are shown below:

Name of the Unit	Index No.	Rate of bonus per thousand per annum
		Whole Life Endowment
		Life Rs. ment Rs.
Bombay Mutual	11	17.60 14.08
Hindustan Co-op.	10	16.00 12.80
National Insurance	10	16.00 12.80
New India	11	17.60 14.08
Oriental Govt. Sec.	12	19.20 15.36

7. The classification adopted in the new scheme will also apply to bonus allocations at future valuations. The new scheme will not apply to policies which have resulted into claims by death or maturity after 31st Dec. 1957 but before 15th Oct. 1961. For these policies bonuses are payable on the basis of the Provisional Scheme.

Full details of the L.I.C. Differential Bonus Scheme and names of Units in various groups are being published in the following papers:

Life Insurance Corporation of India

like Madras the police centenary has been celebrated earlier than in Delhi which has set up a memorial to record a border incident divorced from the normal labours of the police. The progress from a semi-military to a civilian force is part of the British Indian tradition raised on the codes. The fact that elected local authorities have no contact with the force is part of the tradition, though efficient, local self-government may demand the creation of a Watch Committee that will influence the Police and maintain a Record to deal promptly with local crime. The recent conference in Bombay revealed that the Police suffered from lack of confidence in itself due not only to judicial comments on police behaviour in certain cases, but to the march of crime in the Prohibition era. The imposition of hard tasks has certainly made for some difficulties and the reliance in many places on private watch and ward is due to a feeling that the Police are not equal to their responsibilities. In spite of appeals for public cooperation the policeman is apt to be regarded often as a beggar

in uniform. The selection may not be peculiar to India but upgrading to recruitment, training and methods can only follow a rise in pay for officers and other ranks too. The record of the police in Assam and UP too of late has been bleak so the effusive remarks about self-improvement can only be treated as irrelevant at present. The Police Commissioners who have examined the record of the services in the States may afford one a better idea of what are shortcomings. The percentage of crime in the police force and the prevalence of corruption, not only according to disciplinary proceedings, may be cited as one reason for saying that Peel's work had no large results in India which built up the police from the remnants of Mughal administration and relied on the law to infuse gradually a right spirit into the administration. The attitude of organised labour to the police in India only reflects the general mistrust of those in high authority. The constable as a public servant has acquired little standing and experiments in welfare work in odd places signify little, for the rate of

increase in police expenditure (especially on housing and amenities) due to the rise in population especially in towns, is bound to cause anxiety where and when development expenditure keeps rising.

COFFEE Stabilisation of Acreage

Speeches made by planters about the fall in export prices, the impact of excise and the Port Sales have not been without effect. The increase in India's coffee production requires attention to the home market and quality must be raised by ensuring an adequate return to the grower. It has been often pointed out the Pool receipts do not cover the increased cost of cultivation on coffee estates. If there is no direct assault on the Coffee Board, it has been made clear that production will suffer if prices go down for the sake of exports. As in the case of sugar, the internal market must meet the losses sustained

on export but the exports can realise better prices for premium grades if sales by estate marks are allowed. The new markets in Eastern Europe can be retained only if the right grade for blending are shipped. In view of a smaller crop owing to flood havoc it is possible that prices at home can be kept up but difficulties are necessary and sales promotion in the north must be revived soon because the Robusta crop cannot be sold abroad easily.

These are points that have been already emphasised by Mr. J. N. A. Hobbs. The Union Minister has conceded in part the demand for open sales for export leaving foreign buyers free to raise prices in line with quality. What obtains in the case of tea will be adapted to coffee sales and the idea of pool sales will be renounced for the sake of getting good prices for Coorg Coffee in line with the better culture available for the crop. There has already been a full review of marketing policy and the application of excise needs to be modified if the sliding scale related to quality and price were to apply as in the case of tea exported. The expansion of coffee production in the last decade has helped India to win export markets but African output is rising, and it is widely known that Ethiopia exported 65,000 tons this year emerging as a real rival to Kenya. The world coffee agreement cannot help India and the grower must be helped by better marketing. The extension of coffee to Assam or Andhra Pradesh appears uncalled for and the stabilisation of acreage is far more important than supposed at present.

TOBACCO EXPORTS Severe Competition

Though India is critical of Rhodesian policy, there is a tacit community of interests in regard to tobacco exports. An interview given by Mr. E. R. Campbell in Madras made it clear that if Imperial preference were to end both will perhaps be hit by competition from the USA and the Philippines. There has been no offer by the USA to sell tobacco under P. L. 480 but the weight of the surplus will be felt on prices realised by Commonwealth producers in future. The chances of sales in Asian markets are slim because many tropical regions grow tobacco and Western Europe is always accessible to Balkan producers. The competition in the UK market between South Rhodesia and India is, of course, a problem but the Imperial Tobacco Co. buys large quantities in both countries. A rise in internal consumption through higher quality may help but the periodical cancer scares must be reckoned with. However, in the USA the consumption of cigarettes has gone up and the leading tobacco shares have turned of late firm on Wall Street.

The real problem in India is not Virginia tobacco but disposal of country tobacco for which the excise relief is not enough. The outlets for cheap country used tobacco must be

sought in the Middle East or Far East but the China market appears to be out of reach. If Rhodesia were to get on foothold via Hongkong which supplies cigarettes, Burma, Ceylon and other markets the Indian export problem will become more difficult. In Europe, the cigar habit is well entrenched and sales of Indian tobacco for cigarette manufacture depend upon arrangements with State monopolies that will require guarantees as to quality and delivery.

CEMENT Anxious Future

The donation of 200 tons of Swish cement for relief work in Poona made by SKF is probably without precedent. The Government imported cement at a high price in the past in order to augment domestic production. But the SKF gift, even if it is a prelude to the early entry of SKF as a partner of Tatas in a new venture to make bearings may only suggest that cement is still scarce in Bombay and the donation in kind is demanded by the situation. The volume or value may not seem great in relation to the output of Indian Cement factories but the failure to meet demand is a result of retention prices fixed without reference to rising costs and the failure of production to reach installed capacity. The prompt acceptance of the Tariff Commission's views on the need to raise price in line with higher cost of fuel, packing, etc was expected widely. But the reports that Sheik of Government being unwilling to raise the price or to reduce excise in order to stimulate domestic consumption will only accentuate anxiety about the industry's future. The theory that the cost of projects will go up ignores the virtual completion of many irrigation projects, as also the poor return to the investor who put up money for the sake of the country's self-sufficiency in cement.

FLOOD CONTROL New Approach

The devastating floods in recent times have underlined the need for rethinking on the programmes of flood control. Formulation and implementation of flood control schemes is at present the responsibility of State Governments. The role of the Centre is to provide a measure of technical and financial assistance. But in respect of both formulation and implementation of control measures, the existing arrangement is not entirely satisfactory. In most cases the catchment areas of rivers lie outside the States which they devastate when in flood. Effective schemes for controlling floods in one State—these included formulation of master plans, construction of flood control reservoirs, river training works, soil conservation measures and flood forecasting and warning systems—have to be implemented in another. The idea has gained ground that notable progress will

not be possible unless the problems involved are tackled on a regional basis corresponding to the different major river systems. But before regional plans could be formulated, it will be necessary to prepare the ground for the acceptance of the idea. The Union Minister of Irrigation and Power, it is learnt, has asked State Governments to organise five regional seminars to lay down suitable policies and priorities for future works. It has been suggested that the regional seminars could be organised on the basis of the main inter-State river systems, namely the Brahmaputra region (West Bengal and Assam), the Ganga region (West Bengal, Bihar, U.P. and Punjab), the North Western region (Punjab, J. & K. Gujarat and Rajasthan), the Central India region (Orissa, Madhya Pradesh and Andhra Pradesh), and the Southern region (Mysore, Maharashtra, Madras and Kerala.) The demarcation of the regions could be improved; for instance, Maharashtra will have to be included in the Central region also as the Godavari system originates in Maharashtra. Simi-

larly, since Gujarat is included in the North-Western region Madhya Pradesh must also be included in this region as Narmada and the Tapi originate in that State. It is also suggested that the seminars should not be confined to experts and officials, but others interested in flood control who could make effective contributions to the discussions, such as retired engineers, Members of Parliament, and State legislators, should also be invited to these seminars. In fact a complete rethinking on riparian problems on the basis of river systems than of arbitrary State boundaries is an urgent necessity from the point of view of flood control as also of other familiar problems of sharing of waters etc.

IDA Loan to Costa Rica

The World Bank and its affiliate, the International Development Association (IDA), have jointly lent the

equivalent of \$11 million to Costa Rica for the improvement of its highway system. The Bank loan and the IDA development credit, each for the equivalent of \$5.5 million, will help to finance the reconstruction and construction of about 420 miles of national and regional high-ways and the import of equipment for highway construction and maintenance.

Three commercial banks are participating in the loan, without the Bank's guarantee, for a total of \$150,000, part of the first maturity, due 1 May, 1965. The Banks are: Fidelity-Philadelphia Trust Company, Philadelphia; The First Pennsylvania Banking and Trust Company, Philadelphia; and Girard Trust Corn Exchange Bank, Philadelphia.

The Bank loan is for a period of 15 years, at 5-3/4 per cent interest, including the 1 per cent commission which is allocated to the Bank's Special Reserve, and is repayable in foreign exchange. The IDA development credit—the first of its kind to Costa Rica—is also repayable in foreign exchange, but has a term of 50 years, and is free of interest. The first repayment of the credit will be due on 1 November, 1971. Thereafter, 1 per cent of the principal

pal will be repayable annually for 10 years and 3 per cent will be repayable each year for the remaining 30 years. The only annual charge on the IDA credit will be 3/4 of 1 per cent on the amounts withdrawn and outstanding, to meet IDA's administrative costs.

Costa Rica, with an area of 19,700 square miles and a population of approximately one million, is the second smallest of the Central American Republics, with good land resources and a highly literate and industrious population. A well-developed highway system is vital to

the realization of Costa Rica's considerable potential for economic growth.

The highways now carry 80 per cent of total passenger traffic and 70 per cent of freight. Over the past ten years there has been a threefold increase in the number of road vehicles, causing considerable damage to road surfacing and foundations. The road system also suffered from the insufficiency and poor condition of road maintenance equipment.

The highways to be reconstructed under the project represent about

one-third of Costa Rica's national and regional highway system. The majority of these highways serve the central plateau, populated by about three-fifths of the total population and containing the bulk of the country's agricultural and manufacturing wealth. Improvements in road alignment, width, and surfacing of existing roads will cut present vehicle operating costs by 12 per cent to 25 per cent on most of the project highways. Three new highway sections are to be constructed, two to relieve the severe traffic congestion in the San Jose area and the

third to open up a rich agricultural region. These works, together with the improvement of the maintenance organization, constitute the first and most important stage of a seven-year highway development programme to improve and extend the country's highway network.

Including today's loan the Bank has now lent the equivalent of \$25.3 million in Costa Rica, for the development of agriculture and industry, and for the construction of a hydroelectric plant on the Rio Macho.

★

STOCK EXCHANGES

Oath for Stockbrokers

The New Statesman, designed for lively minds, last month announced a literary competition, asking aspirants to prepare an appropriate oath for stockbrokers. There might be few entries from India but the idea has its own appeal. The stockbroker's profession may rise in esteem if there is an oath corresponding to the Hippocratic oath. To put clients' interests first always, and to cut commission charged by banks for orders may be easy, if the House were to decide that an oath pledging brokers to mind their own business and to secure the interests of clients were to be evolved and accepted. The Provincial exchanges will probably follow London eagerly to reassure clients about their bonafides. One thing is plain: brokers will not apply the familiar maxim, Caveat Emptor in passing on share certificates to buyer. For India, equipped with modern elaborate legislation and now a committee of seven to control speculation, an oath may be held superfluous but London may take it that an oath of office related to professional ethics and etiquette is desirable on all counts at present.

The ingenuity of competitors will be taxed but some amusing efforts will be forthcoming. The solicitors' clerks who responded to the Army Sergeant's call 'charge' by promptly answering six and eight may be recalled here. The brokers' problem is one of meeting the challenge of unit trusts, ready and able to adventure at present. The style or form of the oath may be influenced less by tradition than by the fact of competition and a nice balance between bull and bear must be held to impress clients that brokers act for others than themselves and can quote closely enough to get business. Smaller spreads may be a useful slogan for those thinking largely of jam today, not jam tomorrow.

—And Integration

The integration of the European stock exchanges has been approved more or less by Lord Ritchie in London. It may be difficult to maintain exchange controls of a rigid type if international stocks and shares are exchanged between the main centres. The major result may be that the European monetary agreement will acquire reality and purpose.

Indian Finance

3 October 1961

other may be a revival of South African mining shares, with Paris ing regular support to the Rand avies like Johannesburg Consolidated or Anglo-American. The rehabilitation of Congo shares, of use, depends on a political settlement there, but German industrialists bound to be followed extensively by US investors also in future.

German stocks are listed on the London Stock Exchange and a great thaw is bound to set in during the winter. The 1913 dealings may not take account of Eastern Europe is definitely out of bounds for the investor, but US capital held in Europe may soon be diverted from gold to international securities like Royal Dutch and Shell. It is not likely that Overseas Counter securities will find as much favour as the speculative areas that can be held in bearer form with the opportunity or privilege of collecting dividends on tune through Swiss banks.

The recovery of Italy may well be appreciated by British or other investors but the degree of State control now imposed on steel or chemicals may limit the appeal of Montecatini or other shares, though an expansion programme appears a fair point for the investor abroad. The downward drift in equities in London should, however, be checked and some promising concerns may even become the subject of takeover bids, in case price maintenance arrangements are extended to informal agreement among makers of heavy chemicals. The competitive capacity of British industry in the export field may affect the European interest in tobacco, textile or ore shares, but it is a fair guess that the European view of J and P Oats may be more optimistic than respect of a share like Courtaulds.

Free trade in shares may not enlarge company revenue but it should help to reduce fluctuations due to credit restrictions or the forced sale of holdings of deceased owners. The attractions of Indian Iron or Indian copper in London may not appear so great as compared with electric equipment shares which have heaped. Yet the major result will be a preference for equities for which the taste has been developed in an account of postwar inflation and the relaxation of rules relating to trustee investments in the UK. Investment trusts shares and unit trust shares with a European angle may soon come into being. Investors in Zurich are able to follow Canada's economic development by going in for shares in some special trusts. The financing of new issues may become easier if merchant bankers are able to continue and apply the golden touch to more than one centre, especially, if iron and steel is going to be integrated on the basis of lower tariffs in the ECM.

★

HINDUSTAN STEEL Production in September

The production of Iron and Steel during September, 1961, at the three Steel Plants of the

Hindustan Steel Ltd, was as follows:—

Bhilai Steel Plant produced 82,607 tonnes of Pig Iron and 66,570 tonnes of Steel Ingots during September, as against 84,101 and 68,631 tonnes respectively during August. Production of Pig Iron for Sale was 31,462 tonnes as against 31,743 tonnes in August. Saleable Steel Production was 41,755 as against 35,011 tonnes in August. This consisted of 28,436 tonnes of finished steel and 13,319 tonnes of Semi-finished products for Sale as against 24,279 and 10,732 tonnes respectively in August.

Durgapur Steel Plant produced 57,481 tonnes of Pig Iron and 42,748 tonnes of Steel Ingots during September, as against 63,526 tonnes and 33,733 tonnes respectively during August. The production of Saleable Pig Iron was 16,812 tonnes. Production of Saleable Steel amounted to 29,612 tonnes which consisted of 5,694 tonnes of finished steel and 23,918 tonnes of semis for Sale.

Rourkela Steel Plant produced 29,886 tonnes of Pig Iron and 23,310 tonnes of Steel Ingots during September, as against 30,408 and 23,649 tonnes respectively during August. Production of Saleable Pig Iron was 6,472 tonnes as against 6,178 tonnes during August. Production of total Saleable Steel rose from 11,804 tonnes to 17,364 in September. This consisted of 16,790 tonnes of finished steel and 574 tonnes of Semis for Sale.

★

MADRAS ELEC. BOARD 4½ per cent Bonds for Rs 2 crores

The Madras Electricity Board's issue of 4½ per cent bonds for Rs 2 crores and repayable in 1971 has been notified as a trustee security. The issue price is Rs 98½ per cent and the list opens on October 18. The Board will retain 10% of applications, if there is an excess. Like State loans, the bonds rank for half-yearly interest payments. The Sinking Fund arrangement ensures a regular if narrow market for the bonds and the Board's surplus of assets may induce lenders to go in for bonds. The quotation for older issues will perhaps decline. What is more other Boards will have to offer 4½% for any new issues. This is a clear indication of bank rate being merely nominal and interest rates even for institutional borrowers being settled by the forces of demand and supply. The half per cent or quarter per cent rise may be termed a submission to the new factors like the rise in bank deposit rates, meant to enlarge bank deposits in line with higher rates now charged for advances. The position before the busy season is clarified to a point. And it may be said that a cut in the UK bank rate does not really signify anything at present.

RAILWAYS

World Bank Loan

The World Bank has made a loan equivalent to \$50 million to India, to assist the development programme of the Indian Railways. The loan will help to meet the cost of equipment and materials to be imported over the coming year.

Five commercial banks are participating in the loan, without the Bank's guarantee, for a total of \$1,075,000, covering the entire first maturity, due 15 February, 1965, and part of the second maturity, due 15 August, 1965. The banks are: Bank of America N.T. & S.A., San Francisco; First National City Bank, New York; Manufacturers Hanover Trust Company, New York; Fidelity-Philadelphia Trust Company, Philadelphia; and the First Pennsylvania Banking and Trust Company, Philadelphia.

The development programme of the Indian Railways has a very important place in the Third Indian Five-Year Plan, which began in April this year. One of the largest railway systems in the world, the Railways handle the bulk of long-distance freight and passenger traffic in India. Large investments will be required if the railways are to keep pace with the requirements of the Plan, whose production targets imply a 75 per cent increase in railway freight traffic (mostly in bulk commodities such as coal, iron ore, steel and cement), and a 15 per cent increase in passenger traffic.

Since Independence, continuous and heavy expenditures—first on post-war rehabilitation and then on modernization and expansion—have been undertaken by the Railways to serve the developing economy of India. During 1958-61 (the Second Five-Year Plan period) alone, the Railways invested the equivalent of \$2,300 million. The World Bank has played a large part in providing

The Bank's loan is for a term of 20 years, and bears interest at 5-3/4 per cent including the 1 per cent commission which is allocated to the Bank's Special Reserve. Repayment of the loan will begin in February 1965.

SYRIA

New Status

After the recognition of the new Syrian regime by the USA, the revolution acquires a status. Russia's recognition earlier had cleared doubts about Dr. Kuzbari's power to stay on. Col. Nasser has referred the complaints of Syria to the Arab League which is divided. In any case, Turkey and Jordan have moved towards the Syrian regime already and Israel may be reassured by the breakup. There has been so far no comment on how the removal of Colonel Serraj from Syria affects the position of Israel which might find in Egypt's reverse some consolation for the loss of Gaza. The Syrian republic sports the title Arab and its own nationalism cannot be criticised. As the local Communists headed by Khaled Backdash are behind the capitalists who objected to

State socialism imposed by Nasser, the alliance is rather perplexing. The view of Iraq, said to be facing a crisis again, are in doubt but it is held likely that a merger of Syria with Iraq may be arranged, with Jordan coming in from necessity or choice. That means the end of Hashemite influence but it also means that Syrian independence will survive.

The chief issue, however, is whether Lebanon will move back towards Syria and the foreign influences there will percolate again to Syria. Economic factors may bring about a close union, as during the period of the Mandate, and the Syrian regime will acquire a cosmopolitan tinge easily again. The loss of face for Egypt will perhaps make for the Sudan's unwillingness to follow Egypt and Nasser's influence in Africa will decline. To that extent, Europe will feel pleased, for a domestic crisis will leave Cairo powerless to speak up for

As you need two hands to clap, so the country needs the combined efforts of man and machine to bring about industrial growth and prosperity.

Today, through the Five-Year Plans, the country is striving to create such a unity of effort where all will have enough.

It is our privilege to participate in this historic adventure of building a new India.

MAHINDRA & MAHINDRA LTD.
BOMBAY · CALCUTTA · DELHI · MADRAS

Ghana or Guinea or to ask for adjustments in the Congo. Whether Syria's cotton will be sold directly, whether the gold reserve will be returned or whether Syria will have to depend on US aid are clearly issues in the background. The grounds for separation exist and parallelly also exist. Sweden and Norway parted company like Austria and Hungary. If Syria becomes both free and neutral the Arab League will be less influential in speaking up for Algerian nationalists and the partition of North Africa may be achieved easily.

GOA Odds Against Freedom

The failure of Portugal to tell the UN about the conditions in the African colonies may be one reason for

a seminar held at Delhi. Condemnation of Portugal, where dictatorship seems durable, may not help greatly, if South Africa and Rhodesia are in favour of the status quo. An Afro-Asian seminar at Delhi with visiting leaders attacking Welensky as well as Salazar may lead to a better opinion about local Asian residents in African territories. But it is not going to crack the despotism in Angola. Criticism of South Africa has made no difference to the voters in South Africa last week, and if the three Protectorates are threatened the Afro-Asians can do little. Liberation in Africa cannot come on request. The voluntary withdrawal of Portuguese authority can come only from a revolution in Lisbon and that appears very remote. The assorted African leaders have condemned the association of NATO with Portugal but the risk that African development may suffer has not been so far recognised. However, Mr Desai poured cold water on the glib

talk of using military force to achieve the freedom of Goa in a short time. The cost must be always calculated. Foreign aid may be stopped if there is overt intervention in Goa and Mr Desai probably realises that Goa is less important than aid for the Third Plan. A more important consideration is that Pakistan may enter into the dispute as an ally of Portugal and the area of disagreement will be widened. The risk is not due to be ignored by India which can approve British missionaries' protest about events in Angola. But the regular imports of cashewnuts for the Quilon factories are essential and the end of trade with Mozambique which may also be helping South Africa to secure certain goods from India. The word sanctions has not been mentioned for Goa can draw supplies from Japan or other countries. None has yet suggested the idea of a purchase. The independence of the USA was

ensured by buying Florida and Louisiana before any trouble developed.

US Upswing in Economic Activity

Projections of economic activity reflect the optimism one might expect during a vigorous business upswing of the kind now under way in the US.

Mr Hodges, the US Commerce Secretary told a business group in Detroit recently that the nation's total output of goods and services—its Gross National Product (GNP)—is now being estimated at about \$520,000 million for the current calendar year of 1961. This indicates that the GNP will be running at an annual rate

28 October 1961

of about \$50,000 million during the fourth quarter, which would represent an eight per cent over the first-quarter rate—a remarkable growth rate for an economy the size of the United States.

Secretary Hodges did not stop there. On the basis of data developed by President Kennedy's council of economic advisers and his own commerce department experts, he forecast the likelihood of a 1962 GNP of more than \$575,000 million. To do that, the US economy would have to be operating at an annual rate of \$600 million by the fourth quarter of next year.

These projections are deemed to be well within the range of the economy's capability by most economists. Even those who may not wish to attach any specific figures to their forecasts at his time generally agree that the US

economic expansion will continue into next year, and beyond.

Only a few days ago, for instance, a group of government and university economists, after a meeting at the treasury department in Washington, expressed agreement with the view that the 1961 business recovery had been "very satisfactory," and that the improvement will continue in 1962. Further gains next year, they said, will stem from increases in business spending on plant and equipment, consumer buying, home building and government outlays.

Of these specified influences all appear to be progressing satisfactorily at this time, with the possible exception of consumer spending for goods and services. There is no denying that this vital sector, which accounts for two-thirds of the US GNP, appears to have lagged beyond the pace of the

general economic recovery, although it has been moving up steadily to new highs. But retail sales, generally reflecting consumer outlays for goods, have yet to regain their 1960 high.

Before one is tempted to take too gloomy a view of this development, however, one might take into account certain factors which place the consumer picture in a much brighter light.

Most telling in this connection seems to be the decisive gain in the past few months in consumer confidence, as uncovered by the latest survey of consumer buying intentions by the University of Michigan's predicting consumer behaviour through its periodic surveys.

While the persistence of some unemployment and the worsening of international tensions appear to be restraining any buying spree, the Centre concludes from

its findings that consumers will be making "a sizeable contribution" to the US economic upswing in the coming months. This is based on the judgement of increasing numbers of Americans that the economic outlook is good and that attractive buys are becoming available in such products as household goods, cars and houses. This latter point can be taken as another indication of the absence of inflationary pressures on the US economic scene.

Also to be taken into account is the fact that a lag in retail sales is not unique to the present situation. It also was evident during the two previous economic recoveries—those from the 1953-54 and the 1957-58 recessions. On those occasions, it was nearly a year before consumer confidence had recovered to the point where retail sales showed the anticipated buoyancy.

On the basis of the latest University of Michigan survey, one can say that such a point is fast approaching during the current economic recovery, if it has not already arrived. Indeed, one is tempted to predict that by the end of this year retail sales will be pushing on to new highs.

There are those experts, in fact, who see in the recent consumer hesitancy a sign of strength rather than weakness. They point out that during the past half dozen years or so, American consumers have shown a healthy attitude toward the use of consumer credit, with borrowing tending to be moderate in relation to after-tax income. And consumer income, they note, has generally kept on rising.

Additionally, consumers appear to have been on the look-out for "attractive" buys in major items, according to the Michigan survey results, with such buys now apparently deemed available.

All this may help explain the reported resurgence in consumer confidence and buying intentions. These consumer attitudes of selectivity, moderation and common sense may well emerge as important contributions to an economy that is trying to foster maximum growth without inflation.

BANKS First Things First

The Finance Minister of Maharashtra has allowed his chagrin at the alleged non-cooperation of banks over government loans recently floated to outrun discretion. He has forgotten that the Union Government alone regulates banking and it is not for him or any other State Minister to hold out a threat of nationalisation. It is elementary that a bank's first duty is to its depositors, and then to its shareholders and staff.

Moreover, a bank's obligation to retain cash or maintain investments is defined already by statute and

here is a regulatory agency to supplement inspection. Other than the normal increase in bank deposits is expected to increase investments (course the Estimates Committees) on LIC's investment policy may influence Ministers' talk of other methods to force subscription.

A forced loan by banks to oblige the government is not to be contemplated after specific assurances by Mr Desai that the banking industry (as it is called) is to be in the private sector and the limit of nationalisation has been reached. It is, of course, easy for Government to call on the State Bank to open banking business and invest in disposable funds in new loans. It is even open to the State Bank to sell off its valuable premises in the big cities to big business houses and engage firmly and exclusively in Government securities. The State Bank and the associated banks can curtail their advances and cease competing with commercial banks. This is a valid and, perhaps feasible, suggestion to which Mr Wankhede can extend approval.

The Indian Banks Association should, however, seek clarification about the report from Nagpur. The threat of nationalisation may also be brought to the notice of the Union Government as Mr Wankhede has mentioned the inevitability of nationalisation on the context of a limited response to the new loans floated. No reference has been made to the terms of loans floated in the light of money conditions ruling this year with the call loan rate up to 5 per cent at times or to the procedure adopted by the Reserve Bank which takes up loans and sells them when a demand springs up. The talk of nationalisation may not be a means of supplementing credit curbs in force. It may be due to a feeling that extra tax revenue is hard to raise and big borrowing, at the expense of banks whose profits are under pressure, is the only available means. This may be a reasonable point of view, but to speak of the possibility of nationalisation, when no charge can be brought against the banking system is hardly a responsible act. The idea of a monopoly in banking, as in the case

of life insurance, may be attractive but it runs counter to the accepted ideas and foreigners now in Delhi to assess business prospects may register alarm at the casual way in which a threat is held out by Mr Wankhede.

NEWS IN BRIEF

The International Development Association will provide a loan of about Rs 10 crores to the West Bengal Government to meet the expenses for its national highway schemes.

The US Technical Co-operation Mission authorities have agreed to undertake the development of Singrauli Coalfields in Madhya Pradesh.

The total cost of Colombo Plan Technical Co-operation during the ten years since its inception is estimated at 66,800,000 sterling, according to the annual report published by the Council for Technical Co-

operation in South and South-East Asia.

The Oil and Natural Gas Commission has found oil in wells No 37 and 47 in the Ankleshwar area. With these two discoveries the number of successful wells in Ankleshwar oilfield will reach 18 out of 22 wells drilled so far.

Indian exports to the USSR during the last five years have risen nearly 14 times. Tea topped the list followed by hides, jute goods, cashewnut kernel, wool, coffee, spices, leather footwear, castor oil, woollen fabrics, mica and shellac. Indian imports from Russia also registered a sharp rise. Main items on the import list are machines and equipments, ferrous metal, non-ferrous metal, alloys, newsprint, building materials and chemicals.

The Central Government has approved the Madhya Pradesh Government's proposal to establish four polytechnics in the State. Sixty per cent of recurring and non-recurring expenses will be borne by the State Government, local bodies and the public while the rest will be provided by the Centre.

The Government of Madhya Pradesh has decided to establish a small scale industrial corporation with a capital of Rs 10 lakhs for the implementation of the scheme of establishment of industrial estates.

A new trade journal entitled "Rubber News" of Polymer Publications was inaugurated last week by Mr K. M. Philip, the president of Indian Rubber Industries' Association.

According to the Indian Sugar Mills Association production of sugar during 1980-81 season upto 30 September 1981 totalled nearly 2.97 million tons as against 2.4 million tons during the corresponding period of the previous season.

Production from the Singareni Group of collieries in September last amounted to 249,198 tonnes as against 204,813 tonnes for the same period last year.

According to the preliminary figures released by the international rubber study group world consumption of natural rubber in July 1981 fell to 180,000 tons from 177,500 tons in June. Consumption of synthetic rubber also declined to 142,500 tons from 162,500 tons.

The Development Council of Machine Tools has recommended a Rs 5 crore increase in the target of machine tool production during the Third Plan period. The Council also suggested to give up the policy of allowing the export of machine tools as the internal demand will be greater than indigenous production.

The Transport Ministry has formulated a scheme for the construction of 60,000 miles of rural roads during the Third Plan at an estimated cost of Rs 100 crores.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I MUST confess to a sense of puzzlement over what precisely was sought to be achieved by the seminar on Portuguese Colonies that met at Delhi and Bombay this week. A general intention to catch at the flood the tide of genuine disgust with Portuguese barbarism that is running very high is evident enough. But the organisation of this enterprise on a global basis is fraught with many practical difficulties. This was evident from the description of the conference as a seminar, which in the event, turned out to be a rather odd word to use in the context. The participants, many of whom were involved in an existential sense in Portuguese colonialism, could hardly be expected to discuss the subject with dry academic detachment. And yet the particular auspices under which the seminar met could hardly lead to a more direct commitment to the practical consequences of the discussion even by those in a position to commit themselves. It is possible that the real decisions like those relating to tangible aid in the form of money and resources were taken informally. But the formal speeches made on the occasion did not make for clarity of either aims or methods. India was not only noticeably out of step with Africa in the urgency it brought to the question, but what was more unfortunate, it spoke in different voices giving rise to African feeling of India's double-talking hypocrisy. Mr Nehru's affirmation that India did not rule out the use of force in liberating Goa was not new, having been spelt out during the last session of the Indian Parliament. But its reiteration at the seminar was certainly worthwhile, though African delegates were inclined to read into it more than what it could bear. It is true enough that the dislodging of the Portuguese from Goa would be the beginning of the end of the Portuguese colonialism. But a global programme with a deadline for Goa's liberation as a first step is too ambitious in its details. But even the more modest implications of Mr Nehru's statement were rendered equivocal by what Mr Morarji Desai said at the conference. Mr Desai who claimed to speak only for himself preached, rather smugly, I regret to say, the virtues of non-violence. Besides, Mr Desai chose to give a gloss on Mr Nehru's statement that pretty nearly cancelled any substance the idea might have

possessed. The only contingency in which he visualised the "use of force" was when Goa "threatened to be a danger to the existence and freedom of India". This is perhaps as good as saying that there will never be an occasion when India will use force, for despite Portugal's association with the NATO, one cannot conceive of an occasion when Goa will be a threat to India. For Africans thirsting for "action, action, action," as the Tanganyikan delegate phrased it, Mr Desai's exposition of the dilemmas of using force while professing peace in larger international contexts, must have sounded an appalling piece of sophistry. And considering how unrelated to non-violence in the Gandhian sense our own ordering of our lives is, we should in bare honesty drop this cant. I often wonder whether we visualise with sufficient clarity how some of our international stances appear to others, especially Africans. There is already a certain amount of African prejudice, which was brought into sharp focus at Belgrade, against what is considered to be India's "holier than thou" attitude. Moreover, India has also to put up with a certain amount of hostility that always goes with a sense of dependence that an elder brother that has made good invariably invokes in the younger ones. And speeches like those of Mr Desai are hardly helpful in overcoming such hostility.

For whose benefit is Mr Khrushchev rattling his fifty and hundred megaton bombs? Surely it cannot be that he wished to strike new terror in the hearts of the West. For it has been clear for a long time now that an additional megaton or two would not make the slightest difference to the balance of terror. It is true that new bombs have had a big build up given to them. We have been told that a fifty megaton bomb will make a dent 400 feet wide and two miles long and destroy everything within a radius of seven miles. And Mr Khrushchev says that he is refraining from exploding a 100 megaton squib only because it may blow off his own windows. All this sounds pretty grim, but it does not add much to existing fears. For even with the lesser bombs already in the arsenals of the big powers the world can quickly be rendered uninhabitable if it ever came to a showdown. I therefore do not thin-

that the new series of testing super bombs has anything to do with wanting to bargain from strength. Mr Khrushchev has actually eased up on the one issue that could have touched off a nuclear war by saying that the deadline for a peace treaty with East Germany is not rigid. My own guess is that Mr Khrushchev is either trying to appease or frighten the dissidents in the communist camp itself. That the twenty-second Congress was as near a rowdy affair as it is possible for a communist get-together to become has been fairly obvious from the reports. The Albanians have been getting out of hand with tacit and even open encouragement from the Chinese. Disconcertingly to Mr Khrushchev, even the Russian claque seems to have clapped at the wrong places and he had, if reports are to be believed, actually to ask it to desist from such forms of approval. Some efforts to paper out of sight the cracks on the wall were no doubt made: but none was really deceived. In the light of all this, it is possible that the super bombs are either a sop or a warning. It would be a sop if it was meant to demonstrate Mr Khrushchev's belated intentions to the West; in that case it would constitute a gesture of homage to the Chinese thesis of an unregenerate capitalism with which it is impossible to live in peace. On the other hand, it may just be Mr Khrushchev's way of telling his comrades who are getting into his hair all the time that he is still the big brother and they had better behave. Whatever the motives, the cynical disregard of the almost universal appeal to desist from further tests, makes one sick.

For the rest, the twenty-second Congress may turn out to be even more decisive than the twentieth in the personal fortunes of Mr Khrushchev. The twentieth Congress merely pulled down Stalin from the pedestal, but it did not quite break the Stalinist core in the party and the country. The last few years have been seeing the steady ascendancy of Mr Khrushchev and one by one the awesome figures of the communist hierarchy have been denounced as guilty of anti-party and (what in Russia is apparently the same thing) treasonable activities. That Mr Khrushchev was feeling his way about is clear from the fact that he has got round to Voroshilov as another scapegoat only now. The twenty-second Congress saw renewed vigour in the frenetic condemnation of anti-party activities of erstwhile leaders. Mr Mikoyan said his piece. Madame Furzeva spoke in hushed

tones of midnight knocks at the door though, ironically, the recipient of the message was not the person who got it in the neck. And we hear of dark hints from such diverse sources as Michael Sholokhov, the noted novelist and friend of Mr Khrushchev and Dmitri Poliansky that these persons may be made to "pay" in some way for their alleged acts of treason. The rest of the world may be forgiven a measure of cynicism in accepting at its face value the justice of such retrospective retribution. Mr Khrushchev must sometimes be feeling, "There, but for the grace of Marx, Engels and Lenin, go I". But altogether, it looks as if Mr Khrushchev has finally broken the back of the opposition to him.

I think it was the film star Myrna Loy who once said that sleep was a terribly over-rated thing. Cambridge researchers have come to similar conclusions and I for one am inclined to agree. Like the Tamil saint, I am always lamenting the appalling waste involved in sleeping away half one's life. A different kind of problem is bothering the Americans: a recent gallop poll revealed, it seems, that 52 per cent of US citizens has "occasional or frequent difficulty getting to sleep." When all the hallowed aids to put yourself to sleep like counting sheep and watching shadow patterns fail, commerce, ever ready to serve the public, steps in. Surveying this problem, a writer in New York Times recently listed such aids to sleep as "sleep masks, ear stoppers, knee pillows, sinus masks, tranquilizer bath kits, chin straps, headwarmers, and innumerable dulcet recordings, of soporifics." They have even thought up "a Sleepy Head", (looking, the New York Times affirms solemnly, "suspiciously like H. L. Mencken"), contemplating which you drift into the land of the Nod. More expensive aids to sleep are Slumber Tones (\$9.95) which "utter a scientifically developed sonic vibration, which characterises the pre-natal environment, soothes and comforts the fretful infant." How nice! Psychologists keep on telling us that if only we could, we would all get back into our mothers' womb and since that is not possible, here is the next best thing, cheap at ten dollars. And those in a hurry can put themselves to sleep with pills. These have the most soporific brand names: like Dormin, Nytol, Sleep-eze, Somnux—etc. I have only one reservation about the efficacy of all these highly imaginative aids to sleep. I have no doubt they will do all that they claim they will, but what if the money I am to spend on them keeps me awake? Which only goes to prove that there is nothing like the old-fashioned remedy for sleeplessness—a hard day's work and a blameless heart.

INDUSTRIAL DEVELOPMENT

Probe into Prospects

ALMOST the entire range of the problems of economic development in India, with particular reference to the scope for private foreign investment in this country, is being reviewed in exhaustive detail in the round of talks between the Business International Executive Round Table Group and spokesmen of the Government of India and Indian business leaders. The talks started last Sunday and will continue till 27 October. While the discussions are purely exploratory, they serve as clearing house for ideas and help dispel misapprehensions on either side. In this respect, the spokesman of the Group said last Tuesday, after the meetings with the Ministers of Finance, Planning and Commerce and Industry, that the discussions had been eminently successful.

The general approach of the Government of India with regard to foreign collaboration in Indian industry and the procedures adopted in licensing joint ventures and the terms thereof loomed large in the round of discussions last Tuesday. One of the topics which came up in the course of the talks was the utilisation of "Cooley Funds." The recent visit to this country of Mr Orville Freeman, the US Secretary of Agriculture, it may be mentioned in parenthesis, has focussed attention on the working of the P.L. 480 agreements.

India has been the largest recipient of US agricultural commodities under Title I of P.L. 480. The total value of the five agreements—the last one and the largest was concluded on 4 May 1960 and will continue through 1964—amounts to Rs 1119 crores. Out of this a sum of Rs 77.6 crores (6.9 per cent of the total) is earmarked for Cooley Fund loans to the private sector. These loans are made available through the Export Import Bank to two categories of borrowers:

- (1) American firms or their subsidiaries operating in this country or Indian firms having an affiliation with an American firm; and
- (2) Indian firms with no American affiliation but which are facilitating the disposal of American agricultural products, i.e., local private

warehouses storing grain, or flour mills processing the grain, etc.

As of 31 August 1961 a sum of Rs 72.1 crores out of total accrual of Rs 558.1 crores of counterpart funds had been allotted to the Cooley Fund. But so far only 14 loans aggregating Rs 12.31 crores have been sanctioned out of this fund. Speedier utilisation of these funds, it is understood, was among the topics discussed by the Business International Group in their talks with the ministers and officials of the Government of India.

The questions raised in the course of the general discussions on foreign collaboration, suggest that doubts entertained by US businessmen about the prospects of joint ventures may be one of the reasons for the slow pace of utilisation of the Cooley Funds. Terms of joint ventures in other countries, their terms and working, were understood to have been discussed in this connexion. Government policy in general is to approve joint ventures which provide for majority participation in the equity by Indian nationals, though in special cases where development of a particular industry is considered essential, Government has also sanctioned joint ventures in which majority of the equity is held by foreign investors. The visitors are understood to have suggested that, where there are two groups of shareholders, disputes with adverse effects on business operations are unavoidable. Big US Corporations also apprehend that joint ventures would attract the provisions of anti-trust legislation of their country more readily than ventures abroad which are completely owned by them.

Government's attitude regarding licensing of enterprises which are entirely owned by foreign investors appears to have been one of the major points on which elucidation was sought at the discussions last Tuesday. The flow of private foreign capital, it appears, will be influenced less by the facilities afforded for joint ventures, for which spokesmen of Indian businessmen have been campaigning or the promptitude in processing applications of licences for such undertakings, than by the Government's willingness to encourage the establishment of undertakings wholly owned by foreign nationals. This probably explains the noticeable lack of enthusiasm on the part of Indian businessmen for the visit of their

American counterparts. The tight schedule of meetings with the various Ministers, Planning Commission and the Reserve Bank hardly leaves any time for purposive discussions with representatives of Indian business. They will of course be meeting at the reception arranged by the Federation on the 27th.

While the talks have enabled the visitors to gain an insight into Government thinking on the basic problems of economic growth and the strategy of planned development, Government representatives, too, had the benefit of an independent and expert appraisal of the development programmes. The ideas which have emerged out of the free and frank exchange provide the background to deliberations of the Central Advisory Council of Industries meeting over the week end.

While the Council can look back with satisfaction on the progress achieved on the industrial front during the two Five Year Plans, the prospect ahead for achievement of Third Plan targets is not without overtones of anxiety. The steady decline in foreign exchange

reserves last year which has continued during the first six months of 1961-62 is the main source of anxiety. Borrowing from the IMF has not been able to arrest the trend. As on 8 September 1961, the foreign assets of the Reserve Bank stood at Rs 136 crores, or less than the value of imports for two months.

In these circumstances, the Council has to consider the measures for setting up the manufacturing capacity required to attain the targets of the Third Plan. Licensing of capacity, either for new undertakings or substantial expansion, has been proceeding at a fairly satisfactory pace. In fact, in many sectors the licensed capacity is already in excess of the targets. But in most cases only a part of the additional capacity licensed is covered by foreign exchange. Out of 54 industries and groups of industries, the amount of foreign exchange required for setting up the additional licensed capacity has been fully covered only in the case of 15 industries. The position in respect of certain important industries is shown in the table given below.

Industry	Unit	Additional capacity licensed	Additional capacity not covered by foreign exchange
Nitrogenous fertiliser	000 tons	799	388
Phosphatic fertiliser (p205)	000 "	298	156

In view of the tight foreign exchange position Government has been obliged to adopt a cautious policy in releasing foreign exchange for imports either for maintenance or development. Import of capital goods for the establishment of new units and for substantial expansion is approved only against suitable methods of financing. Those approved are foreign investments, loans to the Government of India from foreign governments or financial institutions, long term foreign exchange loans secured by private parties from financing institutions abroad and

imports financed by NSIC. Maintenance imports requirements are financed primarily from export earnings. In addition it has been found possible to make some funds available from various tied loans secured by Government for the import of components and raw materials. But this is only in a limited way, the bulk of the foreign credits being used for capital goods. In the circumstances the emphasis is on export promotion. Applications for import of plant and equipment which will help to increase exports are accorded special priority.

Assam Sillimanite Limited

Growing Demand for Sillimanite in India specially for Glass & Ceramic Industry

Shri S. M. Wahi's Statement

The Tenth Annual General Meeting of Assam Sillimanite Ltd. was held on October 14, 1961 at the Registered Office at Gauhati, Assam.

Shri S. M. Wahi, the chairman in the course of his statement said:—

Gentlemen,

This year has been a period of great stress and strain—stress, because, while our production even though increased from the previous years, was not found to be enough to meet the growing demand for Sillimanite the World over as also the increased requirement from within the country; and strain, since our valued clients in Europe—most of the large Refractory Works—got a shock to find the Government of India's policy announced early in 1961 restricting exports to one third of the best year's export. These Works had switched over their production to Sillimanite products on account of the good quality as well as continuity of supplies being maintained by your Company during the last couple of years. Thanks to the efforts of your Managing Agents, export market for Sillimanite had been well established in Europe, Japan and several other countries.

With certain adjustments we had to make for meeting the immediate but reasonable needs of the indigenous industries, the Government of India was good enough to approve of the export of the quantities, for which we had entered into a firm commitment for export during 1961. So, while some of our customers abroad had some difficulties in receiving supplies expected by them, the position of meeting their orders for 1961 has been resolved. To frame the programme for 1962, the Ministry of Commerce & Industry, Government of India, has issued circulars to all indigenous Refractory Works to submit to us their requirements for 1962. We had also asked our overseas buyers to place their firm requirements in our hands at an early date so that we may be able to finalise arrangements for 1962. As in 1961, we expect some sort of satisfactory formula for export would be worked out on the basis of firm commitments after keeping a reasonable quantity for indigenous industries. It would be a pity to lose the World Market and the foreign exchange so earned out of the export of Sillimanite.

To restrict indiscriminate buying we had to ask for one third advance with orders, so that our old and genuine buyers continue to get their genuine needs met.

The gradual increase in production as anticipated is working out despite heavy odds under which the mine has to be operated. Larger sums of money had to be expended in the maintenance and improvement of the Company's 22 miles of hill section road. New approach roads and bridges had to be made to reach new deposits. The transport and excavation machinery has had rough beating, resulting in heavy depreciation.

The production, however, was 7540.01 tons in 1960-61 as against 6957.80 tons in 1959-60. In 1962 we expect to reach a production of 9000 tons. The sales had also increased to Rs. 25,26,344.09 in the year under review. Presently orders in hand are for 9374 tons valued at Rs. 33.75 lakhs. This does not include the 4366 tons already supplied upto August 1961.

Emphasis has been laid on increasing production of sawn blocks and additional capital expenditure was incurred for developing the facilities for Diamond Saw Plant at Paharpur in Calcutta to meet the growing demand of Sillimanite blocks and shapes for the Glass and Ceramic industries. While quite a number of back log orders have been completed during the year, we have received fresh orders valuing Rs. 7.40 lacs which, with the present installed capacity could only be completed by 1964. It has, therefore, been decided to double the capacity of the existing plant so that the orders in hand could be completely executed by the end of 1962 or early 1963 and we may be in a position to satisfy the growing demand of the industry by accepting fresh orders for sawn blocks, cut to size and shape, from the individual clients. It is expected that the import licence, which has been recommended by the Industry Ministry for this additional plant, would be in our hands and additional capacity set up early in 1962.

I am glad to report that the progress of work on the initial Refractory Plant at Ramgarh has been quite satisfactory. The Plant has gone into production and is producing Sillimanite blocks and shapes, fireclay bricks and shapes, crucibles and some quantities of Thermocouple sheaths have also

been successfully experimented. The present Plant has been erected entirely from machinery indigenously procured and has an installed capacity of 5,500 tons. We have in hand firm enquiries awaiting confirmation by us for 3076 tons valuing Rs. 22.00 lakhs. It is proposed to concentrate on the production of Sillimanite shapes and tank blocks to meet the requirement of our existing customers, by adding a couple more of machines. In the meantime the legal and other technical obstacles to International Finance Corporation's investment of Rs. 65.00 lakhs in the Company for the import of the 46,000 tons Main Plant have been resolved. According to the Companies Act, certain resolutions have to be passed by the Shareholders to implement the Investment Agreement. These are being placed before you at the Extraordinary General Meeting for approval.

Last year I had mentioned to you about the developing of the mines of fireclays, both plastic and non-plastic, near Ramgarh. For the manufacture of Refractories, both plastic and non-plastic fireclays, kyanite, chrome and magnesite are essential raw materials. Excellent deposits of fireclays have been located near about our Ramgarh Refractory Plant. Lease and other formalities for some of these deposits have been completed with the Government of Bihar, while for certain others the formalities are still to be completed. Operations on one of these plastic fireclay deposits have commenced. A prospecting licence and the relative lease agreement have also been signed with the Bihar Government for some Kyanite deposits in Chybassa District. Work on these mines would be started soon after the rains are over. With the mines of some of these raw materials gradually developed, the Refractory Plant would have largely its own sources of raw material supplies. It is intended to develop sufficient production of these mines so that some of the existing Plants and other Refractory Works could also get supplies and avail themselves of our services.

It may be of interest to the shareholders to know that it has been your Company's general policy to continually expand and invest in developing the properties and assets of the Company. This continuous process during the past few years has taken away some of your liquid resources

which otherwise could have been general Reserves. This has resulted in greatly increasing the value of your property and asset. Furthermore, this diversification of the activity to cover the Refractory field, from out of the existing resources of the Company, has opened the vast potential for your mining Company to serve the Refractory needs of the country and obtain its fair share of business.

Once again, this year, I would like to thank our workers for their devotion to duty and service rendered especially at the mines in Assam, where working conditions have been extremely difficult and during the rains, even hazardous. Major MacLeod has kept up the team spirit of the personnel and maintained good relations with the people of the area, which is an important aspect of any business operation in the present day. The Company has also to recognise the endeavours of Mr. N. C. Whiter Project Manager, who along with Mr. K. G. R. Nayar, our Refractory Engineer, have been responsible for erecting and putting the present Ramgarh Plant in operation. A good team of technicians and workers at Ramgarh is being built up and trained and their experience would greatly assist in the successful and economical operation of the Main Plant. This promises an excellent future for the Company in its service to the Refractory Industry in India, which is the basis of the Industrial and the relative Economic development of a country.

(The above statement is a report of the proceedings of the Annual General Meeting referred to).

JUTE

Steady Conditions

THE jute goods market ruled steady during the past few days with interest mainly centred on heavy goods. The improvement in sentiment does not seem to be due to any fresh foreign business put through as trading continues to be confined to short covering in ready and near delivery goods. However, there has been a large number of foreign enquiries indicating increased demand for jute goods at least in some consuming countries. The present squeeze in ready and near delivery goods is likely to continue for some time yet. For, production continues to run at a low level. Mill output in September has been lower than in August at 76,100 tonnes as against 78,300 tonnes. The decline is due solely to a rather steep fall in the production of other goods from 14,800 tonnes to 9,300 tonnes. The production of the two main categories of goods, however, shows a rise: output of hessian has gone up to 30,500 tonnes from 28,600 tonnes while that of sacking to 36,300 tonnes from 34,900 tonnes. In the current month production should record considerable improvement as mills have reverted to a 48 hour week. But the intervention of the holidays is a factor against the realisation of the full effect of the increased working hours. This explains the continued demand at increasing price levels of ready and near delivery goods.

It would however appear that foreign buyers of Indian jute goods

are still entertaining hopes of getting their requirements at prices much cheaper than ruling at present. Judging from the trend of burlap consumption in US during last month, it is clear that consumers in that country are not keen to use burlap at current prices. US burlap consumption in September 1961 amounted to 63.6 million yards as compared with 67.2 million yards in August and 76.3 million yards in September 1960. US end-September stocks amounted to 203.3 million yards as compared with 216.9 million yards at the end of August and 260.5 million yards at the close of September last year. The low level of stocks indicates diminished reliance on fresh purchases.

Conditions in the raw jute market too are steady but the price gain is not much. Assam Bottoms Ready has almost been stagnant at Rs 34 per maund during the past few days. Although mills have been showing interest in the market from time to time mostly in sympathy with the finished goods market, the quantum of business has not been sufficient to push up price levels. There is plenty of jute on offer and it is not surprising that mills are in no hurry to accumulate too much stock. It may be recalled that the Indian Jute Mills Association has asked member mills to keep current purchases of raw jute approximately at the rate of imports during the pre-Puja period. It is evident that the steady purchase of jute by mills has been responsible for averting a pronounced downturn in the raw jute market. Even

so, jute is expressed in some quarters about the present state of affairs in the raw jute market. It is pointed out that at current price levels, the jute cultivator is not getting his due share. The remedy is seen in the early establishment of the jute buffer stock authority under the active guidance, if not completely under the control of the Government.

TEA Marketing Outlook

THE trend at the Calcutta auctions has become softer during the past few weeks, reflecting the steady increase in offerings. As the North Indian crop is running at about 70 million pounds more than last year, there is a general feeling that there is no point in withholding teas from sale, because an accumulation will force increased sales in the New Year. Considering that foreign customers usually complete their buying before the end of the year, it becomes necessary to sell as much tea as possible during this period.

Total crop, up to the end of September this season, amounts to 430.5 million pounds, showing an increase of 70 million pounds as compared with the same period of last year and an increase of 32.4 million pounds two years ago. The current month is also a heavy cropping month; but the working might have been interrupted by the Puja holidays. Besides, the cold weather is believed to have set in in many producing areas. In the circumstances, the current season may close earlier than in 1960. It is, therefore, thought that the gain in production is unlikely to be improved upon much during the rest of the current year.

Indian Finance

As far as stocks are concerned, bonded warehouses in the UK held 27 million pounds more than last year in the second week of this month. In the Calcutta warehouses, stocks increased by 95,744 chests in September as compared to a rise of 63,700 chests in the corresponding month of last year. At the end of September, stocks totalled as much as 722,605 chests as against only 580,093 chests on the corresponding date of last year.

Stocks in public warehouses rose from 354,561 chests at the end of September 1960 to 415,004 chests at the close of last month as did those in private warehouses from 225,532 chests to 307,599 chests. Teas affoot were also higher at more than 70,000 chests as against about 45,000 chests at the end of September, 1960.

But, a disturbing factor at present is that the present level of Calcutta prices is still higher than that paid for comparable grades in Ceylon. A second factor is, that the price level has been distorted by various foreign trade agreements. In this connection, the September review, issued by Messrs. Carritt Moran, states that "prices of some grades are high due to buying from countries which have trade agreements with India. Advantageous as this may be, these higher prices for certain exports naturally restrict buying by other traditional markets in freely convertible currencies". The review concludes by saying that "an increased crop will react on prices considering that steady world crops over the three years up to 1960 did not produce very high prices. This indicates that world consumption has risen only slowly".

Production of tea in Ceylon fell to 31 million pounds in August last year. In the first eight months of the current year, however, the outturn at 314.1 million pounds was about 10.4 million pounds ahead of the figure for the similar 1960 period. Estimates for the September crop indicate a little change from last year, at a figure of about 26.5 million pounds.

In the meanwhile, Egypt has come into the Colombo tea market in a big way and, as a result of spirited buying at recent auctions, the prices of BOP Fanings and Dusts have moved up between 10 and 15 cents per pound. Hitherto, Egypt had been obtaining her requirements of tea largely from India on the basis of bilateral trade. But, with Ceylon, too, making increased purchases of Egyptian commodities, she is now switching to Colombo for tea.

Production of tea in Pakistan, during the 1961-62 period, is estimated at 590 million pounds as against 420 million pounds in 1960-61. This increase of about

28 October 1961

40.5 per cent is mainly due to favourable weather conditions. The first estimate of the area under tea crop for 1961-62 is 78,000 acres which is the same as the area reported in the final revised estimate for 1960-61.

World black tea production in 1965 is expected to be about 1,800,000,000 pounds. With consumption at this time estimated to run at about 1,700,000,000 pounds, it is feared that there will be an over-supply. The estimates are based on the expectation that, by 1965, Communist China will be exporting to the world market outside Soviet Russia at a rate of about 150,000,000 pounds per annum as compared with her 1957 level of 55,000,000 pounds.

In the Cochin market, offerings during the week were 221,000 kilogrammes of Dusts. Against a good demand, high-grown were somewhat irregular, but generally dearer. An exception were fibrous types, which were sometimes a little easier. Plain and low medium teas met with useful support and were fully firm. Mediums and good mediums were also fully firm to dearer. Residual grades had more support and were fully firm, while unorthodox types were sold at full firm to dearer rates.

Slump in Pepper

PEPPER prices have been showing a downward tendency during the past few weeks. The rate, which was quoted at Rs 394 per quintal in the first week of the month, is now quoted around Rs 344.50. The rate for the December position is declining almost daily and is quoted around Rs 330 as no support is forthcoming from the erstwhile bulls, who are unwilling to take risk in view of the proximity of the new season and good prospect for the new crop.

With the settlement of the October contract in black pepper at the Cochin Exchange, the downward trend in prices has been further extended, both in India and Singapore — the main suppliers of the commodity to the world market. Stockists and investors having lifted their hedge sales against the October contract, have gone "long" in their ready portfolio. To support the ready position, they have gone "long" in the December contract, too. They are now anxious sellers.
