To an industry geared to a steady annual increase in traffic of up to 15 per cent, such results are alarming, especially in a year when all airlines had over-expanded. The temperature chart of the air transport industry is best measured by the percentage of seats sold ; in August last year it was more than 68 per cent on North Atlantic routes, providing a profit to spread over leaner months of the winter. This August it was 52.4 per cent which meant that most services were running at a loss. In fact, the big airlines, with high-powered selling organisations, have probably been doing better than this, at the expense of the smaller operators who rely considerably on picking up traffic for which the big airlines have no room. Some smaller countries may ponder after a year such as this whether prestige alone justifies maintaining a North Atlantic service.

STEEL

Down to 77 Per Cent

STEEL users again drew heavily from their stocks in September, creating another hole in steel production. At an average weekly rate of output of 400,200 tons, the steel industry was working at about 77 per cent of its current capacity during the month, compared with about 78 per cent during August. All told, steel production was 14 per cent lower than last year during the third quarter, after running 2 per cent lower in the second quarter: this was roughly the pattern of decline in 1958, the last year of stock recession. Up to March this year, stocks held by users and merchants were still, albeit slowly, being built up: about 100,000 tons were added during the three months. In the second quarter stocks were run down by some

80,000 tons, and present indications point to a possible further reduction of as much as 250,000 tons during the third quarter. Another substantial reduction is expected during the fourth quarter, though the industry is hoping, perhaps optimistically, that by the end of the year most of the larger stockholders among the motor companies and consumer goods manufacturers will have brought their stocks down to something like desirable levels. This year's change round, however, has already caused Appleby-Frodingham to delay completing the extra pig iron capacity it had planned.

Meanwhile there has been no significant change in the pattern of orders actually placed, pointing for instance to any slackening in the activity of heavy and structural engineering firms. New export orders are becoming hard to get ; current export shipments are slightly higher than last year, but deliveries have not been matched by new orders.

BIDS AND DEALS

Entertainment Mergers

AS expected the latest move in the tidying up of the complicated capital structure of the Rank Organisation is its bid for the ordinary shares in Gaumont British which it does not already own. At the moment Rank owns 41.6 per cent of the Gaumont equity but controls 57.2 per cent of the votes, and the directors say that the terms of the merger pay particular regard to the common revenue resources of the two companies and their predetermined sharing of profits as a result of the 1959 rationalisation scheme. Thus Rank's more highly geared equity has been recognised by the inclusion of an element of preference capital in the exchange offer for the Gaumont equity. What the terms do not recognise however are the existing, though admittedly minority, voting rights of the Gaumont shareholders who have one vote for every 10s. share and one vote for every 20 5s. "A" shares.

Voting control of Rank Organisation is firmly held by a Rank family trust. It does not seem necessary however to debar the Gaumont shareholders completely from any say in the group's affairs as the present offer does. The terms, 260 Rank "A" plus 75 6¾ per cent preference shares for 200 Gaumont British 10s. shares and 260 Rank "A" plus 60 6¼ per cent preference shares for 400 5s. "A" shares means that holders of Gaumont "A" shares will have their dividend maintained at 20 per cent while the dividend of a Gaumont ordinary shareholder will be raised effectively from 20 to 20.9 per cent. This calculation takes account of the preference distribution and Rank's forecast that the 1961-62 dividend will be raised from 22½ to 25 per cent.

★

THE proposed merger of Mecca and Forte's two of the largest catering and entertainment groups in this country, has also focused attention on the importance of non-voting shares, for Mecca's capital, all in 5s. units, consists of £350,000 ordinary and £2,040,000 non-voting "A" ordinary. Forte's is still a private company with its founder, Mr Charles Forte, its controlling shareholder. Full details of the merger are not yet settled and it remains to be seen how the merger is to be effected ; suggestions that Mr Forte is prepared to accept "A" shares for his catering companies which are roughly equal in size to those of Mecca are difficult to believe even if he and several of his colleagues went on the board of the merged group. It seems certain that the two companies will have to discuss the possibility of giving votes to the Mecca "A" shareholders or the creation of some new type of capital such as management shares. The latter step however would certainly not please many in the City.

The profit implications of the merger of these two lively groups both with thrustful managements exploring and developing wide interests in the entertainment and catering fields have been made clear in the net rise of over 10s. in Mecca 5s. ordinary to 54s. 6d., after they had touched a peak of 61s. 6d. The "A" shares were only 2s. better on balance at 35s. 3d. after touching 40s. 3d.

EUROPEAN CAPITAL MARKETS

Conference of Bourses

A MEETING between the representatives of eighteen stock exchanges from thirteen European countries has been taking place in London this week. This is the fourth and biggest conference of its kind, and the first to be held in London. Delegates from the three Scandinavian countries have joined in for the first time, together with representatives from this country, Switzerland, Austria, Spain and the common market countries. The possibility that Britain may enter the common market enhances the importance of a conference which aims at good will and co-operation between the bourses, as well as tangible matters such as aiding the freer movement of securities throughout Western Europe, methods of exchanging information and better standards of protection for the investor.

These are worthy aims, though to a large extent they demand government action to remove the barriers of exchange control, administrative regulations and tax complications. But the stock exchanges can play an important role themselves. A report* from Political and Economic Planning this week shows that one important impediment to trading in foreign securities is lack of published information in company accounts —which stock exchanges can influence. The report also concludes that the slow pace of integration among European stock exchanges

* International Money and Capital Movements in Europe. PEP, 16 Queen Anne's Gate, London, SW1. 4s.

has not been due so much to government restriction as to insufficient interest on the part of the companies whose shares are most likely to obtain quotation on the principal stock exchanges in West Europe.

Such questions deserve as much attention from the European stockbrokers' club as it gives to pressing governments to do their part by abolishing stamp duties—a point that Lord Ritchie again took up in his speech at the Mansion House last week. The conference can also pool its knowledge on such technical problems as the printing of bearer securities, the exchange of information about lost or stolen securities and the possibility of some kind of international clearing mechanism. One result of this week's meeting may be to establish a rather more formal and permanent federation of bourses. This could only be a loose federation at first and in its early stages it would probably not need a permanent secretariat; but it could develop into a valuable instrument for assisting free and safe movement of investments across Europe's frontiers.

See How They Run

THE traffic has not been completely one way to the London Stock Exchange this week, for a small party of London stockbrokers paid a short visit to the Basle Stock Exchange to see how prices can be communicated by a closed circuit television system. They have a lively interest in such a development, for when the London Stock Exchange is re-built television could ease the problem of communications between the "house" and the brokers' offices. In Basle

The New Governor Speaks

LORD CROMER'S address at the Mansion House dinner on Thursday of last week was his first public speech since he became Governor of the Bank of England on July 1st. The Governor spoke frankly. He indicated his leanings in his own sphere of policy—questioning the desirability of high interest rates and emphasising the limited scope that monetary measures should be asked to perform—and, as the following extracts show, he also asked some radical questions over a wide range of economic and social policy.

Mixture of Maladies

We had borrowed short, and properly so, to deal with what I might describe as an attack of fever. This fever tended to obscure the deeper-seated, but more malignant, disease which was afflicting us as well; both diseases are curable, but while the fever would soon subside with appropriate treatment, the other would need more drastic treatment and longer-term care. As it was, we were left in the situation of owing our bills arising out of the treatment of the short-term fever, and were not earning enough to pay these bills owing to the longer-term disease which, in itself, required further treatment. The regime for the longer-term treatment was initiated by the various measures announced by the Chancellor at the end of July.

Limitations of Monetary Measures

What I may call the non-monetary measures, which included the pause in wage and salary increases and the promised reduction in the rate of increasing Government expenditure, although fundamentally the most important of all the measures, were likely to be relatively slow in producing their effect. But the seriousness of the situation that had arisen, together with the discouraging factors outlook, demanded defensive measures making an immediate impact. I was therefore fully in support of the proportionately heavy reliance on the use of monetary measures in the short term, which alone could, in the time available, make this impact. . . . I would, however, not be true to my own convictions if I did not state that it is my firm belief that continued recourse to disproportionate use of monetary measures is no substitute for a consistent and appropriate national economic policy.

The Bank Rate Reduction

Today Bank Rate has been reduced from 7 per cent to 6½ per cent. I have little to add to what the Chancellor has said, except to endorse that this change calls for no less resolution in the application of the Government's determined economic policy over the longer run as the other measures of monetary restraint. This modest reduction in Bank rate made possible by an improvement in the exchanges. There is also the evidence of credit restraint in which the banks and other financial institutions have been operating.

Tariff Barriers and Export Profits

Let us be under no illusion that we have been forced into borrowing from the Fund solely by the activities of foreign speculators. We have been spending overseas more than we have been earning overseas; at the same time at home we have allowed the level of demand to grow in such a way that, in the home market, behind some debilitating protective barriers, increased costs have been passed on to the consumer in higher prices, with the result that, by comparison, the profit motive in exporting is today in many cases inadequate.

Some Searching Questions

If we are to maintain our present standard of living, let alone improve it, we have to work for it and not against it. There are, I believe, a number of factors working against it, stemming in part from our national tendency to revere the past to an excessive extent, to hanker after the good old days or to use our energies to fight evils and abuses, many happily long disappeared, of the bad old days. Are there not still many out-dated customs and practices in industry which owe their origin to mitigating the dire hardships of the years of depression between the wars, but which today only result in limiting the advance in the standard of living? Is it perhaps not possible that the overall level of Government expenditure today has grown to levels that the population as a whole is not willing to support by foregoing personal consumption to the extent necessary? Is our system of taxation matched to the present needs of the nation? Are the money rates we have seen in this country in recent years the most appropriate to achieving the rate of progress we would like to see? Are we saving enough? Is the high level of Government expenditure overseas not perhaps based more on our Imperial past than tailored to our changing position in the world or the need to confine financially unremunerative expenditure overseas to what, as a nation, we are prepared to earn overseas? Do the remnants of the "siege" economy which remain with us from the last war make any positive contribution to our good or merely restrict our earning capacity? These are some of the questions that are crossing my mind in my first few months of office. . . .

THIS IS THE EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

hey were shown how prices established by he Stock Exchange "ring" of banks are isted on a large share form. This is divided nto the various market sections, such as ponds, banks and dollar stocks, and each ection is covered by one of eight cameras concealed in the ceiling above the clerk's nead. The pictures are transmitted throughout the building to screens, each with a push button selector unit to project the appropriate section of securities on the screen. This system was developed by Pye and may soon be extended to banks and offices throughout Basle, as is already being done n Zurich. Eventually it is hoped to link it least these two exchanges by a television system.

Screening of prices is not unknown around the "House"; a few firms using Pye or other equipment already relay prices from their boxes to their offices and *to some institutional clients.* One method used is a scanning system with a prism moving *in front of a television camera* which covers every 75 seconds a board showing *the prices of about 200 stocks. Soon a firm* of stockbrokers handling a large amount of *business from Scottish institutions plans to* transmit prices, first "telexed" from Lon*don to its clients by television from its Edin*burgh office.

The use of television would be facilitated f the brokers' boxes in London approached he impressive standard of the streamlined booths at Basle. The cost is not much of a stumbling block; the Pye equipment at the two Swiss exchanges cost about £30,000 though on present levels of business, many London brokers would think hard before investing on this scale.

RESTRICTIVE PRACTICES COURT

Five More—Scots 'n All

IN one day's sitting the Restrictive Practices Court, under Mr Justice Russell for the first time, sealed the fate of five more restrictive agreements, all of them by consent order. The agreement of the **Steel Hinge Makers' Association** was a straightforward minimum price restriction. The agreement of the mileage conference group of the **Tyre Manufacturers' Conference** was broadly similar: it had provided for minimum rentals based upon mileage where tyres are rented by large fleet operators rather than bought outright. The **Diary Publishers' Association** agreement had prohibited the supply of dated diaries on sale or return, and maintained manufacturers' retail prices until after March 1st for each year's batch of new diaries. The **Millinery Distributors'** agreement contained a roughly similar provision precluding the supply of new autumn hats before June 18th, and new spring models before November 12th, as well as forbidding price cuts on spring millinery before June 12th. It also confined supplies of millinery to firms appearing on an approved list.

The fifth agreement, that of the **National Caravan Council** which in effect maintained a closed shop of manufacturers and retailers, provided the Court with a chance to publicise the boundaries of its jurisdiction. Two Scottish members of the council, evidently believing that no Court sitting in London had any power north of the border, had told the Registrar that they would not be attending the hearing nor represented. Mr Justice Russell, presiding over a United Kingdom Court that on occasion sits in Edinburgh and Belfast, granted injunctions against both companies, adding that they should be informed of the situation "not offensively in any way but factually."

HIRE PURCHASE

Beta for Effort

THE urgent need for extending official information about hire purchase agreements to provide a major forward indicator of consumer spending has been demonstrated pretty conclusively. Now, tentatively, the Board of Trade seems to be responding. In an article in the September issue of *Economic Trends** it ventures into a fuller analysis of its regular figures. The new presentation is a marked embellishment of the regular series. This analysis provides a subdivision of the new credit extended by finance houses between "mainly to business" and "mainly to personal consumers" (though there is still a substantial category "partly business," "partly personal"). A new table compares sales of motor cars in recent years with total instalment credit extended on new and used cars; the credit amounted to 60 per cent of sales in 1959 and 47 per cent in 1960—but net credit extended (that is total credit less estimated repayments) took up only one tenth of gross credit last year.

The official analysis goes on, encouragingly, to approach hire purchase from the

* HMSO, 3s.

A Quarter's Profits

The tables below summarise the profits and finances of the 546 companies whose full accounts were received and analysed in this office in the July-September quarter. The detailed tables appear on pages 182 and 183, and comments on them appear on page 153.

meant longer credit and lower deposits. It emerges that the proportion of disposable income laid out on instalment buying has remained pretty constant. This is one of the underlying assumptions made by Mr J. R. Cuthbertson in his analysis of car buying, which led him to conclude that the major influence on the starting of a new contract is the termination of an old one. But the other key element in the Cuthbertson analysis is the role of the trade-in;

WHERE HIRE PURCHASE COUNTS

	Yearly changes in Personal disposable income	Net borrowing on credit instalments (£ million)	Consumer spending on durables
1957.....	+ 725	+134	+121
1958.....	+ 585	+ 41	+150
1959.....	+ 868	+142	+196
1960.....	+1,272	−215	+ 11

and on this the Board of Trade is utterly silent. It carries the analysis to the brink of a forward projection: and there, precipitately, it stops. "Given estimates of the future trend of disposable income," it says tantalisingly, "and of how much is likely to be pre-empted by way of repayments on past credit contracts, a forecast can be derived of what deposits are likely to be put down on new contracts." Can be, but is not. "The various stages in such a forecast pre-suppose some knowledge of the terms on which business is currently being transacted and has been transacted in the immediate past. . . ." The hire purchase companies themselves have that knowledge; could the Board of Trade not tap it?

BALANCE OF PAYMENTS

What Target for Trade?

THE big story in the Treasury's half-yearly white paper on the balance of payments was scooped last week by the Bank of England's quarterly bulletin, which provided the information about the Basle central banking credits necessary to show how the current deficit and the capital outflow in the first half of this year were financed. The figuring was done in these columns a week ago. The main interest in the white paper is in details of invisible transactions, in some important revisions of past figures—which for once have been generally in the right direction—and in the figures on the overseas sterling area. These show that in their current payments with non-sterling areas, the overseas sterling countries as a whole ran a deficit of £180 million in the first half of 1961—well below the high figure of £302 million in the seasonally adverse second half of 1960, but well above the deficit of £70 million in the first half of last year. The deterioration was more than offset, however, by a sharp rise in the inflow of non-sterling capital (including drawings on the International Monetary Fund), from £129 million in the first half of 1960 and £228 million in the second half to as much as £281 million in the first half of this year. The upshot was that the overseas sterling countries were able to make a net contribution to the London gold and dollar pool of £101 million, compared with a drawing of £74 million in the second half of 1960.

The accounts for the United Kingdom itself confirm the improvement in the current balance in the first half of 1961 that had already been evident in the monthly trade figures and quarterly payments estimates. The balance has probably improved further since mid-year; but the Treasury would be happier if more of the improvement were based on a rise in exports rather than a pause in imports. The balance of merchandise trade in the first half of 1961 still showed a deficit of £108 million, and this has to be turned into a substantial surplus. Just how substantial this surplus must be to restore stability to the balance of payments depends on two major elements which at present are in a state of flux: net invisible earnings on the one hand, and net overseas investment commitments on the other. Net outflows of long-term capital have recently been kept down by special transactions such as the Ford take-over and debt repayments by Germany: the gross outflow of private investment has in fact risen sharply, to no less than £195 million in the first half of 1961. The Chancellor has given notice of his intention to curb this strain on the balance of payments, and companies may now get their projects approved only if they arrange overseas borrowing to finance them. May such borrowing provide continuing relief even when the pause is over? Certainly Britain is now beginning to find some offset to its own capital commitments overseas.

Better Value from Investments

EARNINGS from invisibles in the first half of 1961 were only £25 million—compared with £49 million in the first half of 1960. The deterioration was entirely due to increased aid and overseas military expenditure, notably in Germany, which Mr Lloyd says will now be checked. Some reassurance can also be derived from the statisticians' wider coverage of investment income, and notably interest on export credits, which suggests that Britain has in fact been getting better value from its overseas investments than previously appeared. Net receipts of interest, profits and dividends for 1960 are revised upward from £179 million to £238 million. (These figures include the unremitted portion of investment earnings, but the figures which the Board of Trade published last week suggested that the unremitted portion actually fell in 1960.) In the first half of 1961, net investment income is estimated to have risen to £143 million. The main element is a rise of £32 million to £158 million between the first half of 1960 and 1961 in "other credits" including the income of the oil companies. This hardly squares with the fall in profits reported by the major companies, and the improvement may simply reflect the cut in overseas taxation per barrel of oil sold that resulted from the change in posted prices in the Middle East between the first and second halves of 1960.

Optimism about the invisibles is also checked by still more unfavourable estimates for shipping. The net debit for 1960 is now put as high as £58 million, and it continued at the same rate in the first half of 1961. Expensive charters taken at the time of Suez continue to be an unfavourable influence, but the big factor is presumably the shrinking portion of trade—including Britain's trade—carried in British ships. There is also a downward revision of the freight element in the cif trade figures which slightly increases the trade deficit as shown on the Treasury's fob basis.

All these revisions more or less cancelled themselves out in 1960, so that the estimate of that year's current deficit fell by only £5 million to £339 million, leaving the balancing item only £13 million down on £364 million. But for 1959 and 1960 the statisticians have now decided that a fair part of their unknown receipts in the balancing item were in fact current receipts and the persistence of a large positive balancing item in the first half of this year when short-term capital was clearly flowing out, seems to confirm that there is a built-in understatement of current earnings

WE'D ENJOY MOULDING PLASTICS FOR YOU

Osma Industrial Mouldings have a high strength/weight ratio, will neither rust nor corrode and are unaffected by weather. They resist a wide range of chemicals including weak acids, alkalis, organic solvents, oils, fuels and inorganic solutions. Their mechanical properties are good and they are an electrical insulator. They resist abrasion and are through coloured.

Any particular property can often be enhanced if required.

In our Factory at Hayes, we have a battery of presses capable of producing mouldings from 0.32 square inches to 32 square feet.

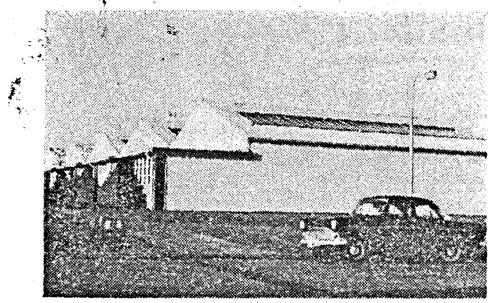
They are used to mass-produce reinforced plastics and D.M.C. mouldings in all manner of shapes for Industrial purposes. Small intricate mouldings or components with large surface areas can both be made to fine tolerances.

Our interest is primarily in polyester-glass fibre and because we employ experts we know, perhaps more than anyone else, the possibilities and limitations of the material.

This specialised knowledge is available to industry in general, and in particular to manufacturers of electrical and mechanical equipment.

What can we make for you? Can our product help yours? The materials you are now using may appear to be the best, but in a surprising number of cases OSMA polyester-glass fibre will prove even better.

The full strength of our technical advisory service, and of our design, development and mass-production facilities could be yours.



Arrange to meet us. We shall not keep you for longer than we can hold your interest.

OSMA PLASTICS LIMITED

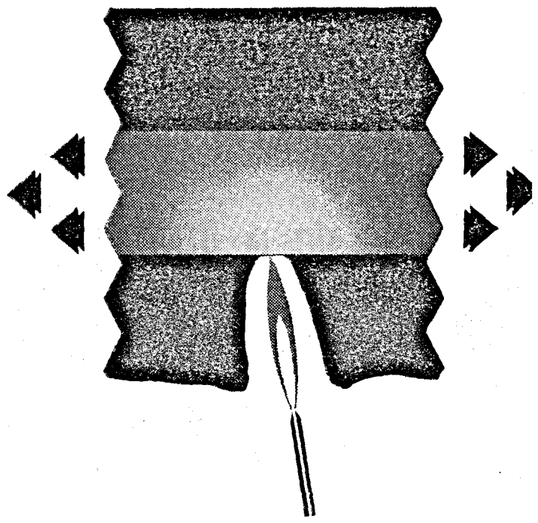
STANDARD FACTORIES IN GLENROTHES

Glenrothes Development Corporation are continuing their policy of building Standard Factories in advance of need, which in the past has proved a sound speculation for all concerned. Two of these factories are at present under construction, one 21,700 sq. ft. and the other 13,200 sq. ft. They are sited close to one another and in such a way that they can be joined to form one factory if necessary, along with ample room for expansion.



RENTALS 3/- per sq. ft.

Glenrothes, which offers you top-grade labour and houses for all grades, is recognised as a reception area for overspill purposes, and financial assistance is available under the Local Employment Act, 1960 in approved cases.

For further information write to the General Manager,

GLENROTHES DEVELOPMENT CORPORATION, GLENROTHES. FIFE. TELEPHONE 2202

procrastinating peter

Time is precious to the safe-breaker. A Chubb safe—or 'peter'—is carefully designed to make him squander it.

For example: a blow-pipe can cut a fist-sized hole through 3½-inch steel in ten minutes. But most Chubb safes surround their contents with a secret alloy to disperse heat so fast that the effect of cutting tools is reduced to the minimum. Look again at the drawing above. You will see how the blow-pipe has penetrated the outer layer of a Chubb safe, and then met the alloy. It will take more hours than any burglar can spare to go further.

If he tries a short cut with explosives, the emergency re-locking mechanism will come into play, even if the lock is destroyed. A keyless combination lock, of course, offers no lodging for explosives.

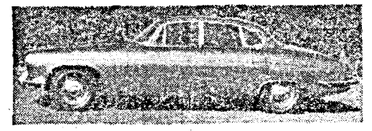
Chubb put time on your side

In the fight against crime, Chubb put time on your side. Install modern and adequate Chubb security equipment before the safe-breaker arrives. But don't put the moment off: tomorrow may be too late. Write for details today.

CHUBB

Chubb & Son's Lock and Safe Company Limited
11-22 Tottenham Street, Tottenham Court Road, London W.1.

Chubb counter the crime wave



certainly official sources of current debits are more comprehensive than those of current credits, though the Treasury is now trying to remedy this by direct enquiry. Meanwhile, the balancing item remains the joker in Britain's balance of payments, and much thought is devoted to its likely trend. But as one Treasury official declared gravely this week: "We are not prepared, at this stage, to forecast what our future errors and omissions will be."

JAGUAR

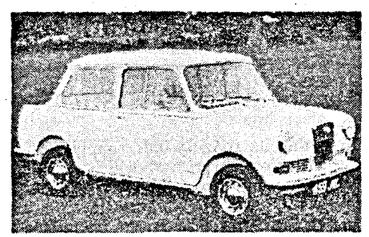
For Plutocrats and Plebs

JAGUAR has chosen the same week to announce its new luxury car, the Mark X, and to buy the moribund firm of bus and lorry makers, Guy, from the receiver in bankruptcy. The Mark X replaces the Mark IX as Jaguar's contribution to the luxury car market; after ten years in production, the old car was becoming somewhat dated. The Mark X is just as big as the Mark IX in all dimensions except height—it is only 4 ft. 6 in. high but 16 ft. 4 in. long. In design the car shares the main features of the E-type sports car; the engine is also the 265 bhp version of the 3.8 litre, and the same independent rear suspension system is used. This should provide a useful improvement in handling qualities and ride. The performance of the Mark X is roughly the same as that of the present Mark 2 saloon with 3.8 litre engine, which develops 220 bhp in the form in which it is fitted to this car; the makers claim a maximum speed of 120 mph and acceleration from rest to 100 mph in 29.2 seconds. A car of this mechanical specification that sells for £2,392 seems assured of a large market at home and abroad, and will make life harder for those who are trying to sell other luxury cars for twice the price.

Jaguar's decision to buy Guy is surprising; this company has been operating at a substantial loss for several years, and though it produces buses of advanced design, the reason for these losses seems to be that these vehicles are too expensive to make. Jaguar

is certainly anxious to extend the commercial vehicle interests that it acquired with Daimler, which also specialises on buses; it must be assumed that it intends to amalgamate the activities of these two companies. The production facilities of Guy are mainly useful for assembly; the firm used to buy out a large proportion of the parts of its vehicles, which may be one reason for its commercial troubles. But at the £900,000 that Jaguar is reported to have paid, these facilities may be cheap.

RAIL V. AIR



Three Guinea War

THE British Transport Commission has in the past had to fume impotently under increasing competition from internal air services that made it possible to commute daily between London and points in Scotland and Northern Ireland for a fare that, in winter at least, was no more than a first-class rail ticket. The creation of the Air Transport Licensing Board to hear applications for, and objections to, new air services has provided the BTC with its first real opportunity to scotch this competition and it has chosen its ground for a major show-down with British European Airways with formidable care. BEA wants to run a nightly mail and newspaper service in both directions between London and Belfast, Glasgow and Edinburgh, leaving shortly before midnight and arriving between 1 and 2 a.m. To make this service pay, it will be necessary to carry rather more passengers than might normally use night services during winter and BEA has plans to attract them with a flat-rate single fare of £3 3s. between November and April.

This is lower than the second class rail fares, which range up to 72s. though with bus fare added, there is little difference beyond the saving in time. The BTC seems to have no doubt where the traveller's choice will lie and it has protested loudly to the Air Transport Licensing Board at "unfair"

NEW CARS

The High Price of Walnut

THE British Motor Corporation has followed almost its prewar practice this year in modifying most of the models in its range for the Motor Show, while adding yet more variants to its range of baby cars and raising some prices. All the models in its Farina range have had their track widened or their wheelbase lengthened to improve their ride and cornering—something that was much needed with the popular 1½ litre models. An anti-roll bar has been added to the front suspension of the 1½ litre cars and of the A40, and the rear springs modified. The power output of their engines has been increased at the same time; on the A40 the carburettor and inlet manifold have been changed, raising power from 34 to 37 bhp, but on the 1½ litre cars the engine has been enlarged to 1,600 cc and bigger valves fitted, putting the power up from 53 bhp to 61 bhp. So the A55 now becomes the A60; and, to take advantage of the extra power, the top gear ratio has been raised. Externally the cars have received a face-lift to make them recognisable from the old models and somewhat to reduce the angularity of the original Farina bodies. The price of the A40 is unchanged, but that of the 1.6 litre cars goes up by £20. The big six cylinder models too have had their engine power increased and their wheelbase lengthened: prices go up by £60.

The most interesting technical innovation this year in the BMC range is the adoption of the new Borg-Warner automatic transmission on the 1.6 litre range, for an extra cost of only £99 including purchase tax—£29 less than Smiths automatic transmission on the Hillman Minx. This new transmission has appeared after several years of development, and is intended for cars of from 1½ to 2½ litres capacity—it is being made in the United States as well as in Britain and there used in the Rambler.

BMC has also put Riley and Wolseley radiator grilles on its baby cars so that these can now be sold by nearly all the dealers in its network. It is assuming that there is a section of the public that likes its baby cars, but will only buy a car if it has a traditional look and some more chromium. This trimming, which may seem to some a negation of the Mini's utilitarian design, will cost such a buyer £80 extra for the Wolseley and £100 more for the Riley, which has a walnut facia. At the same time the price of the basic and de luxe versions of the Minis goes up by £10, though the only changes are more colours and a plated grille for the Mini-Minor; BMC no doubt wants to improve the margins on its biggest-selling lines.

competition. The BTC may have its eye as much on the mail and newspaper traffic as on passengers in making this stand; it is quite right in suspecting that BEA has worked out the new fare on a marginal basis, balancing it against the mail and newspaper contracts that it hopes to negotiate. If BEA is refused a three guinea fare, it may have to drop the negotiations for new night services. In that case the BTC would have killed a number of troublesome birds with one shot.

The issue turns, not on what is good for the passengers, but on whether the licensing board, set up solely to deal with air traffic, is under any obligation to allow for the effect of air competition on other forms of transport. BEA says that it is not, but the Transport Commission has suggested that if the licensing board were to decide in favour of BEA, it would take the point to a higher court. If a legal battle develops, there would be little chance of starting the service on November 1st and the railways would win an important delaying action. They are not fighting so much for the few shillings difference between the old and new fares as for the principle that a new, thrusting form of transport should hold back in deference to its older, slower and apparently less competitive elders.

BANK NOTES

Six Million a Day

This week the new ten shilling note goes into circulation. It is the second bank note in the Bank of England's new series and in design it is little different—unfortunately—from the one pound note, using the same three-quarter face portrait of the Queen. The note has a continuous watermark in readiness for production on a continuous roll of paper instead of separate sheets, a process discussed in an article on bank note printing in the Bank's latest quarterly bulletin.

There are, the Bank says, some 1,500 million notes circulating in the United Kingdom at present, weighing some 1,500 tons—surely a new entry for weights and measures tables. To keep these notes clean and serviceable the Bank's printing presses turn out six million notes every working day. Zurich need not suspect hyper-inflation: another six million dirty notes are withdrawn from circulation by the commercial banks. This means that the note issue is completely replaced about once a year. In fact the average life of each note is only about 14 months. The ten shilling note lasts for a mere six months, the pound note for just over a year, and the five pound note for nearly two years. Thus, although 452 million ten shilling notes were issued in 1960, against 112 million five pound notes, there are now nearly as many five pound notes in circulation as ten shilling notes.

The £5 note has gained rapid popularity since the new note was introduced in 1957, and it now accounts for more than 40 per cent of the value of all notes in circulation. But the Bank itself points out that some other countries have twice as high a percentage of their notes in this or larger denominations. The Bank therefore has to do far more work than should be necessary to keep the public supplied with its notes. Yet while the Bank has made impressive progress in developing new printing machinery designed eventually to produce notes "untouched by hand," production of new bank notes still takes many years. The earliest date that it can offer the new £5 note in the "Queen's portrait" series is 1963—and, more regrettably, no date at all can be put on the issue of the promised £10 note.

COPPER

Market Influences

Since dealings in copper were resumed on the London Metal Exchange in August, 1953, the prices fixed there have not been to everyone's liking. Excluding France and Belgium, they remain nevertheless the basis for settling most transactions in copper in the free world outside the United States. Sir Ronald Prain, the chairman of the Rhodesian Selection Trust group, was never one of the Exchange's most enthusiastic supporters: he said in London last April that the output restrictions the copper companies have been forced to retain should be based on statistical rather than market factors. But there can be more than one view about statistics and despite lengthy consultations between consumers and producers the sort of negotiating machinery that could reconcile these opinions has not yet been evolved.

Failing that, the London market gives the best reconciliation of people's independent readings of the statistical evidence. On the evidence before it, the market broke sharply in the middle of last month after a period of relative stability. By Monday of last week cash copper was down to £220½ a ton following the anouncement of a rise in copper held in London Metal Exchange warehouses to 22,600 tons. Since then a producer who was evidently prepared to quarrel with the market's prevailing view about copper has become a substantial buyer of the metal; in market parlance, "an influential buyer" bought several thousand tons of the metal when prices cracked and has since supported the market intermittently, touching off a recovery in cash copper to £230 a ton.

Sir Ronald Prain's group was thought to have been responsible for the "influential buying" of copper that occurred just over a year ago. That intervention was largely unsuccessful, unlike the support that was given when copper dropped to £160 a ton in 1958. Then the market was ripe for recovery, but the timing of last year's intervention was less fortunate and the buying was mainly of forward copper which gave those who took a dim view of copper's prospects the opportunity to sell forward in the hope that they could later cover their transactions by buying when copper prices fell.

On this occasion the buying has been of cash copper, so that only those who have copper to sell could counteract the special buyer in the market, but the premium on metal for forward delivery, which earlier was £4 a ton, disappeared completely. However, one man's view cannot prevail indefinitely against the market; it will be proved right or wrong by the subsequent course of prices.

SHORTER NOTES

In setting its 1962-63 bulk supply tariff for electricity—the price at which it sells power wholesale from the grid to area electricity boards—the Central Electricity Board this week made significant alterations in the way that it charges these boards a "kilowatt charge" related to maximum demand, and introduced a differential in its unit charges for power consumed, as between night and day supplies.

*

Schweppes is to raise £3 million by a one for twelve rights issue of 5s. ordinary shares at 26s. per share. Before the news of the issue the 5s. shares fell back from 34s. 6d. to 31s. 6d., to make the rights worth 5d.

*

Nothing came of this week's meeting of the International Tin Council. As expected, producing countries were unanimous in favour of raising the support price for tin within the agreement. For reasons discussed in last week's issue, consumers claimed that this was the wrong time to alter the agreement's price range and voted overwhelmingly against the producers' proposal. The matter will be raised again at the next meeting of the Tin Council in February.

COMPANY MEETINGS

ALITALIA

Italian Airlines S.p.A.—Rome

CAPITAL LIT. 25,000,000,000

ANNUAL GENERAL MEETING

The Annual General Meeting of ALITALIA was held on June 22, 1961, at the Head Office of the Company at 92 Viale Maresciallo Pilsudski, Rome, with **Count Dr. Nicolò Carandini** presiding.

The meeting approved the Balance Sheet as at December 31, 1960, which shows a net profit of Lit. 110,597,259.

The report of the Board of Directors to the shareholders draws particular attention to the fact that the year 1960 marked the entry of the Company into a new era of commercial aviation, when ALITALIA joined the small number of major air-transport companies which, in 1959, had begun to use jet aircraft.

Commencing in May, 1960, and gradually throughout that year, a total of eight jet aircraft were put into service, comprising four DC-8 long-range types and four medium-range Caravelles.

During the current year ALITALIA will have available three additional DC-8s and six Caravelles and in the first months of 1962 three more DC-8s and four Caravelles.

At December 31, 1960, the Company's fleet consisted of the following units:

DC-8	4	DC-6	3
Caravelle	4	Viscount	14
DC-7C	5	Convair	6
DC-6B	8	DC-3	4
		Total	48

During the year, a new link with Canada (Montreal) was established in connection with the New York service, as well as new services linking Italy with Egypt (Cairo), with Czechoslovakia (Prague) and with Holland (Amsterdam). In addition two DC-7Cs have been adapted for freight carrying and are already in service on the following routes:

Rome/Turin/Milan—London—New York
Rome—Beirut—Teheran
Rome—Tripoli

The expanding requirements connected with the training of aircrews in every sphere of duty were met by the construction of a suitable building at Fiumicino Airport. Designed to accommodate flight simulators for DC-8s, Caravelles and Viscounts, it will constitute a modern and fully equipped training centre.

Within the framework of a vigorous commercial policy, several new traffic agreements were concluded, thereby strengthening the structure of the Company's concession agreements. New agencies were created, new centres of representation and production established, and the network of agents was also strengthened, particularly in the Far East.

In order to satisfy the growing demands of traffic and to maintain the constant high quality of the service on board that is a traditional characteristic of ALITALIA, the Company has almost completed a new building at Fiumicino that will house the catering organisation with its up-to-date methods for the efficient preparation of meals to be served in flight.

The workshops were supplied with all the adequate equipment. At the same time, the technical services were intensively occupied with the transfer of the maintenance shops and associated stores to the large new hangar at Fiumicino. The overhaul shops have remained at Ciampino Airport, awaiting transfer to Fiumicino on the completion of additional hangars now under construction.

The administrative department adapted itself to the complex demands imposed by the new methods and the consequent expansion of the Company's business. The innovations introduced and the increasingly diversified operations carried out were facilitated particularly by the timely acquisition by the Company of a modern IBM-7070 electronic computer.

* * *

The report underlines the opinion that, allowing for administrative difficulties, the economic results achieved in 1960 may be regarded with satisfaction. The increase in gross income over the 1959 figure is shown in Table III, which also indicates the movement of corresponding incomes in the last few years. It is significant that foreign currency accounts for 63.8 per cent of this income.

THE PROFIT AND LOSS ACCOUNT FOR 1960 is summarised in the following figures:

Traffic income	Lit. 44,481,688,193
Income from various sources	„ 2,242,280,301
Total income	Lit. 46,723,968,494
General operating expenses	„ 41,520,780,979
Balance	Lit. 5,203,187,515
Sinking fund	„ 5,092,590,256
Net profit	Lit. 110,597,259

Reviewing the Company's assets, the report draws attention to the considerable investments effected during the year. In fact, the items relating to the fleet and to the fixed assets reached the outstanding figure of about Lit. 78,000 million. In the previous year the same items totalled about Lit. 47,000 million.

The report also points out that the increase in authorised capital from Lit. 20,000 million to Lit. 25,000 million, decided upon in 1960, was fully subscribed; the first six-tenths of this increase were paid up early in 1961.

The Sinking Fund stands at about Lit. 18,000 million. Contingent liabilities amount to Lit. 10,000 million, and liabilities to financial institutions total about Lit. 30,000 million.

Finally, the Company extends its warm thanks to all those who have contributed to the development of Italian civil aviation, to the Ministries of State Participation and of Defence and Civil Aviation, to the *Istituto per la Ricostruzione Industriale*, ever attentive to the problems confronting the industry, and to the various economic and financial bodies with which ALITALIA has relations.

TABLE I.—SUMMARY OF OPERATIONS IN 1959 AND 1960

	1959	1960	Increase %

ROMAC INDUSTRIES

The thirty-sixth annual meeting of Romac Industries Limited was held on October 6th in London, **Mr R. D. Boyce** (the chairman) presiding said:

Despite our problems, the turnover of your Company shows an advance, both at Home and Abroad, and is reflected in the increased Trading Profit of £54,933 compared with £51,965. The Final Net Profit after taxation (£27,386) remains in the neighbourhood of last year's figure, which was the highest obtained in the Company's history.

Our Cable Division continues to expand.

Reception of the Company's B.S.I. "Kitemark" range of Car Seat Safety Belts has been most gratifying.

During the year under review an Equipment Division was formed to deal with heavy vulcanising plant. This, too, has made a good start.

The Company is about to introduce on a large scale a new range of "Motorway" patches to meet modern standards of high speed road travel. There is encouraging indication that this new product will be beneficial to the Company both at Home and in the Export field.

Referring to the current year, the Chairman said: With the knowledge I have of the new projects in hand, the sound and, indeed, very low book valuation of the Company's Fixed Assets, and the stability of its finance, I feel we will at least hold our own.

The report was adopted and a total distribution of 27½ per cent for the year was approved.

THE DOXFORD & SUNDERLAND SHIPBUILDING & ENGINEERING CO. LIMITED

SUBSTANTIAL BENEFITS ENVISAGED FROM MERGER

The annual general meeting of The Doxford & Sunderland Shipbuilding & Engineering Co., Limited, will be held on October 31st in London.

The following is an extract from the circulated statement of the chairman, **Dr. J. Ramsay Gebbie, CBE.**

The merger with The Sunderland Shipbuilding Dry Docks and Engineering Company Limited (The Sunderland Group) became effective on the 6th June, 1961. Your Board is confident that in the long run the merger will prove of great benefit to the group and therefore to the company's stockholders.

The consolidated balance sheet shows the united strength of the two groups now merged with net assets in excess of £12,000,000.

In view of the intense competition from shipyards and engineering works both at home and abroad it is clear to your directors that further considerable capital expenditure will have to be made in the next few years.

The further and rapid development of the Doxford oil engine is clearly a matter of major importance and will entail heavy outlay so that the maintenance of ample resources is essential.

During the year our three shipyards and the Doxford engine works have continued to work at high capacity.

Eight of the new Doxford "P" engines are now in service and they show every prospect of being completely successful. A considerable number of these engines are now under construction or on order with ourselves and some of our licensees.

We are proceeding with all possible speed with the design and construction of a further new type of engine designed to give ultimately power of up to about 25,000 b.h.p.

Major reconstruction schemes at Joseph L Thompson's shipyard are now complete and will permit the building of tankers up to 100,000 tons deadweight.

New plater's and welding sheds are being built at Sir James Laing's shipyard.

All our shipyards and the engine works have received a number of new orders during the year and all of them will be well occupied during the current financial year, whilst a considerable number of orders are also on our books for the following year.

The prices at which orders are now obtainable, however, leave little or no margin for profit and where deferred terms of payment have to be conceded there is a substantial time lag before final payment. In these circumstances it is to be expected that there will be a further reduction in profits for 1961/1962.

Much hard work and thought will be needed to obtain the best results from the enlarged group but we have a team of highly experienced executives who are well qualified and capable of tackling all the difficult problems ahead.

INDUSTRIAL DEVELOPMENT CORPORATION OF SOUTH AFRICA LTD.

SUMMARY OF ANNUAL REPORTS

Dr H. J. van Eck, the Chairman of the Industrial Development Corporation, presided in Johannesburg on October 9, 1961, at its 22nd Ordinary General Meeting.

The following are the main points from the Corporation's Annual Report and the Chairman's Statement:

The Corporation's issued capital on June 30th was R117,284,000. Operating profits, before tax, for the year amounted to R1,269,000, from which R1,040,441 was appropriated to Reserves, bringing the accumulated reserves at the year end to R6,725,000. Investments increased by *R4,740,000 to R136,854,000.*

The Statement dealt at some length with the Corporation's policy towards applications and again stressed the importance of "economic merit" which was a statutory prerequisite to every proposal considered. The IDC was designed primarily to champion private enterprise and generally could not provide an unduly large proportion of the capital required for any project. It was contrary to its policy to control the companies assisted by it and it normally limited its participation to a minority interest. It regarded the ability to earn reasonable profits as the yardstick of an efficient enterprise and had to satisfy itself that competent management was available.

More applications were received than in any previous year and the resultant commitment aggregated R12,344,000, a new record for the Corporation, excluding certain periods when Sasol and Foskor were involved.

In dealing with the future outlook in South Africa, the Chairman referred to the slackening in the tempo of industrial development which had become apparent a few years ago and which had coincided with, amongst other factors, the completion of a programme of large-scale mining and railway development. A period of consolidation had followed which had been taken advantage of by many industries to lay plans for future expansion. The operating results of the majority of the Corporation's associated companies showed increased turnovers and profits in their last financial year. This suggested that business conditions generally favoured the implementation of these expansion schemes.

In Dr van Eck's view South Africa could look forward to an improvement in her monetary situation and in internal liquidity during the immediately foreseeable months. This factor should exert a beneficial influence on the general business outlook.

INDUSTRIAL ESTATES

The statement concluded with a reference to the establishment by the IDC of its first industrial estate. This was being operated under the aegis of a wholly-owned subsidiary, Elangeni Estates (Pty.) Limited, which had acquired ground at Hammarsdale on the border of the Umlaas Bantu Reserve, where industrialists could lease factories, erected to their specifications, on reasonable terms with an option of renewal or outright purchase.

THE RANK ORGANISATION

A YEAR OF PROGRESS AND DEVELOPMENT

In his Statement for the 52 weeks ended 24th June, 1961, The Lord Rank described the past year as an important one in the history of the Organisation. There have been substantial changes in the Group structure, and considerable developments in the scope of the Group's activities, particularly in the non-cinema interests.

RESULTS FOR 1960/61

Group profit before taxation was £5,082,240 compared with £4,002,764 last year.

The proposed final ordinary dividend of 15% as forecast, payable on the increased capital, together with the interim dividend of 7½%—making 22½% in all—compares with 15% last year, and absorbs £441,106 as against £230,371.

Group exports were in excess of £7,500,000.

FILM PRODUCTION; DISTRIBUTION AND EXHIBITION

Pinewood films produced and released during the year made an overall profit, and more than 45% of net earnings were secured abroad.

Attendances at Group theatres showed a slight upward tendency in the latter half of the year—although it is too early to say that the decline has been permanently arrested.

The theatre rationalisation and modernisation programmes have continued. A phase of redevelopment, incorporating cinemas in the redeveloped properties, has begun.

NON-THEATRICAL ENTERTAINMENT AND ALLIED ACTIVITIES

Expansion of Ballrooms and Dance Studios, and the Group's first ventures into Tenpin Bowling and Health Clubs, have all proved successful. Further developments are planned in all these fields, and also in catering. The gross dividend received this year from Southern Television was £276,120 as against £184,080 last year.

TELEVISION RETAIL AND RELAY

New relay franchises have been obtained in addition to those already operated, and 'Choiceview'—the joint venture with Rediffusion Limited into Pay-TV—has reached the stage at which a field trial could be carried out. The number of 'Visda' shops, retailing television, radio and consumer durable goods, has been slowly expanded.

INDUSTRIAL AND COMMERCIAL ENTERPRISES

RANK-XEROX has a great and important part to play in the Group's future. It is now in profit, and its growth amply confirms the belief we have always had in its potentialities.

RANK PRECISION INDUSTRIES has continued to develop. Heavy capital commitments have required a conservative dividend policy.

In common with other manufacturers of television sets—although to a lesser degree than most—BUSH RADIO experienced a marked decline in profits, but profits from manufacturing activities other than of television receivers continue to grow. The pioneering work of RANK CINTEL in colour television has placed it in a strong position in this market, and important developments in aircraft instrumentation have been made.

THE FUTURE

23% of Group Profits were derived from manufacturing and miscellaneous activities in 1961, which I anticipate will increase in 1961/62. I firmly believe that on our present foundation we are entitled to look forward to steadily increasing profits in the next few years providing that our programme and trading operations are not adversely affected by factors outside our control.

At the close of the Annual General Meeting the Deputy Chairman and Managing Director, Mr. John Davis, announced that proposals were being submitted to shareholders, the effect of which would, if adopted, make Gaumont British a wholly owned subsidiary company of The Rank Organisation.

A copy of the Chairman's full statement and Annual Accounts may be obtained from The Rank Organisation Limited, 38, South Street, London, W.1.

RÉGIE NATIONALE DES USINES RENAULT

BILLANCOURT, FRANCE

INTERNATIONAL COMPETITION IN EXPORTS

The report for 1960 of the Régie Nationale Des Usines was recently presented by **Monsieur Pierre Dreyfus**, chairman and managing director. The following are extracts from his introductory statement:

The year 1960 was marked by a stiffening in International Competition. In the United States this increase in competition was most severe. European manufacturers exported to the United States only 444,000 vehicles in 1960 compared with 668,000 in 1959; the fall in exports was concentrated in the second half of the year, on the other hand, in European Markets a keener struggle developed. The heightening of competition in European markets was in part hidden by the overall increase in production (Germany : 18 per cent ; Italy : 51 per cent).

The strengthening of competition was, nevertheless, evidenced by such signs as the almost general disappearance of delivery delays, price reductions and the introduction of numerous new models. From the Autumn of 1960, it was apparent to manufacturers involved in world-wide competition that in the winter of 1960/61 they would have to mark time.

This was the situation in which the large American companies found themselves : after having broken production records in the first half of 1960 they had in September a stock of unsold vehicles exceeding 1,000,000 which is far from being eliminated in the middle of 1961.

As a result of this in the earlier months of this year, there were shut-downs and dismissals which had the effect of cutting down American production by an average of more than 40 per cent in the first quarter of 1961, compared with the same period in 1960. [British manufacturers have been in a similar predicament and have had to reduce the number of their employees and cut down their working week from five days to two or three days over a period of several weeks.]

Renault, being involved in export markets since it was a national necessity and because the company is convinced that it is only those who succeed in developing outside French territory who will be able to stand up to future competition, has suffered the consequences of the present situation and the stiffening of competition.

The 1960 results must be assessed in the light of these facts. In 1960 the company produced 542,920 motor vehicles and 16,207 agricultural tractors and thus maintained its place as sixth largest world manufacturer, it sold within the metropolitan area 214,138 private cars and industrial vehicles, that is 15.8 per cent more than in 1959.

EXPORT MARKETS

Exports from the metropolitan area were slightly lower than in 1959. In 1960 as a whole deliveries by the company outside the metropolitan area amounted to 297,514 private cars and industrial vehicles which is 54.79 per cent of the company's production and 51.2 per cent of French exports. In the United States the company remained the second largest European exporter by a substantial margin. The company exported 52.4 per cent of French exports to the Common Market and 59.2 per cent of French exports to EFTA countries and 61.7 per cent of those to Latin America. The standing which Renault has acquired outside France is firmly based ; the results for 1961 will confirm this, for the company continues to export more than half the French cars sold outside France.

Of course, Renault like most of the world-wide automobile companies has known difficulties in the trading year 1960-61, but these difficulties will perhaps have had the benefit of clarifying certain issues.

First, exports, and particularly bulk exports, are more than ever a national necessity. It is essential that French industry, and especially the car industry, should continue to earn the currency needed by France. That is all the more essential since, as customs barriers are rapidly being lowered, France is becoming, at a speed unimaginable only two years ago, a large importer of manufactured goods.

In 1959 our imports of cars totalled some 11,000. In 1960 they rose to 25,000. They will probably amount to 60,000 in 1961, although the distribution networks of the majority of the large foreign firms (in France) are not yet very concentrated and the international Common Market tariff is still 18 per cent and our external tariff—that is against such large producing countries as the UK and the USA—is 29 per cent.

Customs barriers will continue to be lowered and Europe will become the chosen area for competition, in which the European and American firms will concentrate all the weight of their industrial, commercial and, most important of all, financial strength. French manufacturers will soon have to put as much effort into maintaining their positions in the national market as upon winning foreign markets.

Second, it is essential to appreciate that the French economy would be incapable of standing up to world competition if it clung to its old ways. The only way of resisting effectively is to achieve maximum flexibility in our business efforts. In the car industry in particular, we cannot expect as in the last 15 years a steady advance in production and sales of all firms at the same time. Necessarily, there will be peaks and troughs, either for the whole industry or for a particular firm at a given time. What is true now for this competitive industry will soon be true for the others. [Of course, it is possible to alleviate to some extent the consequences of these variations, but it is impossible to eliminate them altogether as they are part of the rules of the game which the countries of the Western world have imposed upon themselves.] The removal of trade barriers [between these countries] is perhaps the way to speed up the raising of our standard of living as well as of those under-developed countries which we must aid, but whether we wish it or not, it implies a capacity for rapid adaptation to competitive fluctuations and a great degree of flexibility. Competition is not trench warfare. It is a war of rapid movement. The worst illusion would be to fail to recognise this. To prepare for unavoidable changes is the first task.

THE KETTON PORTLAND CEMENT CO. LTD.

The Thirty-third Annual General Meeting of The Ketton Portland Cement Co. Ltd., was held on October 12th at Albion Works, Sheffield. The Chairman, **Mr H. W. Secker, OBE**, presided, and in his report, already circulated, said:

Our deliveries were 326,506 tons compared with 337,854 tons last year, and this is the second highest figure obtained by the Company.

The profit for the year, before tax, is £440,090 compared with £407,932, an increase of £32,158, which has been influenced by a change in the basis for computing depreciation, to which I refer later.

INCREASED PROFIT

Taxation at £196,000 is £13,000 less than for the previous year owing to the influence of Investment Allowances. The profit after tax is £244,090, an increase of £45,158.

Your Directors recommend a Final Dividend of 15 per cent on the ordinary shares, making, with the Interim Dividend of 5 per cent already paid, a total of 20 per cent less tax. Holders of 7½ per cent participating preference shares will be entitled to the half-year's dividend of 3¾ per cent and an additional participation of £6 8s. per cent, in accordance with the terms of issue.

We propose to allocate £150,119 to General Reserve, which will then stand at £500,000, and after payment of the proposed dividends the amount to be carried forward will be £260,857, an increase of £4,607 over last year.

The charge for depreciation is £102,163 compared with £139,393 for the previous year. This follows from the change made in the basis for computing depreciation. In recent years this charge was calculated on a fixed rate per ton of cement produced, but to accord with more general practice the depreciation charge for the year under review has been based on percentage rates of depreciation applied to the various categories of assets on a "straight line" basis. Although this has resulted in a temporary decrease in the annual charge it will be appreciated that on the completion of the 5th unit there will be a considerable increase in the annual charge for depreciation in future years.

Additions to the fixed assets in the past year amount to £335,827, which includes £271,30 related to the installation of the 5th unit.

Your Company's liquid position is satisfactory but Current Assets exceed Current Liabilities b some £956,000.

NEW PLANT

The plant, buildings and machinery have bee maintained at a high standard, and in othe directions the past year has been one of prepar tion for a 5th unit.

Extensions at Ribblesdale Cement Ltd., whic is jointly owned by ourselves and the Tunn Portland Cement Co. Ltd., were substantial completed in the Spring and a 50 per cent i crease in output is now being fully absorbed.

It is a pleasure to refer to the conscientio and willing services of our workpeople, staff a management, and the sales staff of our sole se ing agents, Thos. W. Ward Ltd.

The report and accounts were adopted a the retiring director, Mr. F. W. Robinson, w re-elected.

HECHT, LEVIS & KAHN

(Merchants in Raw Rubber and Other Commodities)

A MORE PROFITABLE YEAR

The thirty-sixth annual general meeting of Hecht, Levis & Kahn, Ltd, was held on October 6th in London, **Sir James Helmore, KCB, KCMG** (the chairman), presiding.

The following is an extract from his circulated statement:

Towards the end of my statement last year, I said that prospects seemed favourable. In the result, the profits of the group, before tax and before deducting minority interests, rose from £410,875 to £567,828. This was due to maintenance of their substantial contribution to the group's earnings by the S.A.F.I.C. group of companies, the elimination of the severe losses incurred in the Far East in the previous year and profitable use by the parent company of its increased liquid funds. The net profit available for appropriation is £168,460 as compared with £123,755.

In these circumstances, and having in mind the strong liquid position of the group, the Board would have wished to give consideration to an increase in the rate of dividend. Having regard, however, to the Chancellor's wishes, we are proposing a dividend of 15 per cent (same).

The results of S.A.F.I.C.'s trading speak well for the skill and knowledge of those responsible; the French market for natural rubber becomes more difficult every year not least because of the competition of synthetic rubber produced in Europe and sold direct by the producers. This development in the context of the Common Market means that we can no longer look for increased profits from rubber dealing by S.A.F.I.C. and its efforts to find new lines of activity are therefore being intensified. One such effort is the 25 per cent interest in Schenectady de France (a subsidiary of Schenectady Varnish Inc.). The production by Schenectady de France of a wide range of synthetic resins has now begun and the marketing of these products in the Common Market will be undertaken by S.A.F.I.C. and also by S.E.P.P.I.C.

Having referred to the merger of S.E.P.P.I.C. with S.I.N.T.E.C. (Société des Industries Techniques de Cernay) and to the satisfactory re-organisation of the Company's interests in the Far East, the Chairman continued:

PROPOSED CAPITAL DISTRIBUTION

I now come to the proposed reorganisation of Hecht, Levis & Kahn, Ltd. itself, concerning which a brief preliminary announcement was made on August 23rd. It is still too early to give any details of the method of putting this re-organisation into practice. I can, however, say that it is intended in the future to concentrate our investment upon the European group of companies, of which S.A.F.I.C. is the most important and to dispose of our remaining interests including those in the Far East. I have referred on more than one occasion to our desire to diversify should suitable opportunities arise and also to the strength of our liquid position. While our efforts to diversify have shown some results in France—and to some extent also in the Far East—we have come to the conclusion that it would not be justifiable to continue to retain such large liquid resources in conditions where the opportunities for fresh investment of a kind appropriate for a group such as this are both rare and expensive. We intend therefore to bring before you in due course proposals under which, after satisfying the claims of the preference stockholders, ordinary stockholders will receive at least £800,000 in cash.

The report was adopted.

GOLD MINES OF KALGOORLIE (AUST.)

The annual general meeting of Gold Mines of Kalgoorlie (Aust.) Limited was held on September 21st in Melbourne.

Mr G. Lindesay Clark, CMG (the Chairman), presided and, in the course of his speech, said:

(All figures quoted are in Australian currency.)

Net profit for the year ended March 31, 1961, was £281,917 compared with £323,869 for the year 1959-60, a decrease of £41,952. This decrease was caused mainly by an increase in operating costs, consequent upon higher labour costs and a higher proportion of cut-and-fill stoping compared with the previous year.

Calls of 1s. per contributing share were made during the year by Kalgoorlie Southern Gold Mines No Liability, and have increased this Company's interest in the project by a further £9,131 to £88,155. Since the close of the year a loan of up to £15,000 has been made available to Kalgoorlie Southern, in return for which an option over 50,000 forfeited shares at par has been granted.

A dividend of 1s. per share absorbing £202,265 was paid on December, 1, 1960. Since the close of the year the Company has recommenced consideration of dividends half yearly, and a dividend of 6d. per share was paid in May, 1961.

OPERATING RESULTS

The mill treated 530,138 tons for the year including 441 tons of customs ore, an average of 40,780 tons per four-weekly period, an increase of nearly 500 tons per period over the corresponding figure last year.

Gold recovered amounted to 144,411 fine ounces, being 134,005 ex Mill, 10,324 from concentrates treated at Fremantle and 82 from clean-up of shut down mills. Gold in concentrates awaiting treatment at Fremantle increased by 2,331 ounces.

The head grade from the mines for the year averaged 6.16 dwts per ton and the residues 0.62 dwts, giving an overall recovery of 90.0 per cent.

Ore Reserves at March 31, 1961, were estimated at 1,133,000 tons averaging 5.9 dwts per ton, compared with 1,287,000 tons averaging 5.8 dwts per ton in March, 1960.

During the year 31,708 feet of development was done, of which 1,195 feet was special work in connection with shafts, haulage connections and ore passes. Of the 30,513 feet of normal development, 23 per cent was in ore averaging 9.2 dwts over 65 inches. Between the end of the year and August 15, 1961, 10,992 feet of normal development has been done, of which 27.4 per cent was in ore averaging 10.1 dwts over 64 inches.

The report and accounts were adopted.

WESTERN MINING CORPORATION

The annual general meeting of Western Mining Corporation Limited was held on September 27th in Melbourne.

Mr G. Lindesay Clark, CMG (the chairman), presided and paid tribute to the memory of the late Mr Leslie Edwards, a Director of the Company, who died on November 29, 1960.

(All figures quoted are in Australian currency.)

Net profit for the year ended March 31, 1961, of £297,568 was £42,188 higher than for the year 1959/60. Dividends received from the Central Norseman and Gold Mines of Kalgoorlie companies were unchanged and the principal reasons for the increase in profits were reductions in the amount of investigations written off and in administration charges and interest.

GOLD MINING

Production by the three gold mining companies in the Group totalled 1,127,024 tons, yielding 309,883 ounces of fine gold in bullion and concentrates. A further 1,893 tons of ore, from which 1,643 ounces of fine gold were recovered, was mined by tributers working the Yilgangie Queen Mine.

Operations at Central Norseman Gold Corporation N.L. and Gold Mines of Kalgoorlie (Aust.) Ltd. continued this year with satisfactory developments and dividends were maintained at the level of the previous year.

Great Western Consolidated N.L. suffered a loss on its operations and is now in the stage of mining and treating its residual ore reserves.

ALUMINIUM

Commenting on prospecting for minerals other than gold the Chairman said: When it became apparent that an important bauxite deposit had been discovered in Western Australia it was thought that we might hope to develop an export trade in bauxite which could lead later to the erection of a refinery to produce alumina.

Following extended negotiations, we had the great good fortune to interest the Aluminum Co. of America in joining us in establishing an integrated aluminium industry through the formation of Alcoa of Australia Proprietary Limited to develop these resources. Your Directors look forward to the future of Alcoa of Australia with the greatest confidence.

IRON ORE

For some time the Corporation has been interested in the iron ore resources of Western Australia. Recently the Government has decided to grant reserves over certain deposits and six reserves have been granted to the Corporation.

The market for iron ore is the expanding steel industry in Japan. We have recently had conversations with representatives of steel mills in Japan and are assured that their market can absorb any tonnages that we are likely to be able to supply.

CAPITAL

The Board considered that if people subscribed to separate companies establishing new

industries, such as Alcoa of Australia and iron ore, they would not expect dividends for some years in any event. It was thought, therefore, that the situation could be best met by issuing deferred shares which would enable the tax-free dividends to be continued on the present issue.

On this basis the Board now proposes to make a rights issue of 60 per 100 at 12s. 6d. per share, due for dividend in August, 1964. The payment for these shares will be 2s. 6d. down, the remainder in calls over approximately 2 years.

The report and accounts were adopted.

SCRIBBANS-KEMP LIMITED

The 34th annual general meeting of Scribbans-Kemp Limited was held on October 9th in London.

In his circulated statement the chairman, **Mr. F. N. Martin, FCA,** said that the Company had had a most difficult year. It had become apparent that they could not make money in Ireland and the Board had decided to withdraw. He added that the Company retained a distribution depot in Northern Ireland for the sale of products made on this side.

Reporting on new acquisitions, Mr. Martin stated that during the year they had acquired the old-established firm of H. H. & S. Budgett & Co. Ltd. of Bristol. Since the close of the financial year they had also acquired the whole of the share capital of Hughes Bros. (Manufacturers) Ltd., of Liverpool.

Turning to the retail side of the business, which was now considerable, the chairman said that there had been an improvement in both sales and profits.

Export trade last year had shown a further substantial increase and had been easily the best ever.

The features of the past year, concluded Mr. Martin, may perhaps be summarised as follows: sales were maintained, but we are to have a 'new look' on marketing; profits were down, but we are to go out for better margins as a result of efficiency and economy. And what of the future? In the current year we have not got off to a particularly good start but we have great confidence in the steps we have taken and feel that we have justification for a cautious optimism.

The report was adopted.

ACROW (ENGINEERS) LIMITED

MR W. A. de VIGIER SURVEYS 25 YEARS OF PROGRESS

The twenty-fifth annual general meeting of Acrow (Engineers) Limited was held on October 5th in London.

Mr W. A. de Vigier (the chairman) presided and said:

From the accounts in front of you, you will have noted that the consolidated trading profit for the year under review amounted to £774,310. A final dividend of 12½ per cent on the Ordinary shares, making 47½ per cent for the year on the increased capital, is recommended by your Directors. In addition, an Anniversary bonus of 2½ per cent was paid on September 5th.

Much criticism is often meted out against private enterprise so let's review, on the occasion of the Twenty-Fifth Anniversary, what the Acrow team has achieved.

We started in 1936 at a time when over a million were registered as unemployed and a war was looming ahead, with only £150 capital and a railway arch as a works. Soon the war years came when the Company had no E.P.T. standard and all profits went in taxation. 1936/46 were struggling years when, believe me, many an anxious hour was spent by the Company Secretary wondering how to pay the wages on Thursday. However, a team emerged from this struggle which had only one aim—to see Acrow grow. At home, in ten different towns, offices and depots were organised to give our customers the best possible service; five works were built in South Africa, Australia, the Argentine, Canada and Italy; selling companies were established in eighteen different countries. For the first twelve years shareholders did not get a penny in dividends, every cent was ploughed back into the business. In 1949 the Company was made public and since that date shareholders have had ten bonus issues and the Directors have progressively increased the dividend on the increased capital to 50 per cent. this year including the Anniversary bonus.

Product-wise, an intense programme of diversification has taken place, always remaining within the engineering field. Whereas ten years ago nearly all our output went to the building and civil engineering trade, today, after 30 per cent of the total output has been exported, to seventy different countries, of the remaining 70 per cent sold at home, 25 per cent goes to the building and civil engineering trade, 20 per cent to agriculture and forestry, 11 per cent to industrial and catering and 14 per cent to Government and mining. The name Acrow is today known the world over. For many of the products manufactured the Company has become the leader in the field.

The above is a record of true private enterprise.

I am sure that you would like me to pay a tribute of thanks to all my colleagues on the various Companies' Boards, and to the employees who, through their loyal co-operation and unstinted efforts, have made these twenty-five years of progress possible. No Company Chairman could wish to have a more wonderful team than I have the privilege to lead.

For the future, the outlook remains satisfactory and in the absence of unforeseen circumstances there is no reason why 1961-62 should not be another record year.

The report and accounts were adopted.

JAMES HOWDEN & COMPANY

(Engineers: Specialists in the Design and Manufacture of Air and Gas Handling Plant)

RECORD LEVEL OF OUTPUT

OVERSEAS SUBSIDIARIES' CONTINUED EXPANSION

MR CRAWFORD W. HUME ON A DECADE OF PROGRESS

The fifty-fifth annual general meeting of James Howden & Company, Limited was held on October 11th in Glasgow, **Mr Crawford W. Hume, MRINA** (the chairman), presiding.

The following is his circulated statement:

Since the last Annual General Meeting, Mr H. L. Paul, MBE, retired from the Board after 27 years of valuable service with the Company. We wish him health and happiness in his well earned retirement.

Mr H. K. Roseveare, MBE, GM, who has been some 10 years with the Group, has been appointed to the Board. We look forward to the benefit of his wide experience as an able administrator who has already been of great and valuable assistance to us in our overseas subsidiaries.

The Accounts of the Parent Company and of the Group are presented in the usual form for the year which ended on April 30, 1961.

THE YEAR'S RESULTS

The profit of the Group before taxation is £802,524. The Parent Company contributed £671,433 and the Subsidiary Companies £131,091. After making provision for taxation, the profit of the Group amounts to £421,705.

£200,000 has been transferred to the Group General Reserve, bringing this to £2,559,604.

If the recommended final dividend of 20 per cent is approved there will be a balance to be carried forward of £193,575 in the Parent Company's accounts. The Group balance to carry forward will then be £109,401.

The factories in Scotland have been fully employed throughout the year. Output, both in tonnage and in sales value, was higher than ever before. Manufacturing facilities were expanded and improved by purchase and installation of new and more efficient plant, and by rearrangement of internal layout. This policy will continue.

We constantly seek to extend the range of products which fit into our fields of activity. Two years ago we negotiated a licence from Lurgi Apparatebau Gesellschaft m. b. H. of Frankfurt, West Germany, for sale and manufacture of their design of Electro Precipitator. Substantial orders were subsequently received for Power Stations and Steelworks and those already in operation are proving satisfactory.

I am very pleased to say that our booking of orders during the year was most encouraging. At the present time the order book of the Parent Company is the highest in its history.

OVERSEAS ACTIVITIES

During the last ten years or so great efforts have been made in the establishment and expansion of the Company's Subsidiaries in Australia, Canada and South Africa. These efforts are being rewarded by the growth of healthy and vigorous Subsidiaries. Their effect on the fortunes of the Group as a whole is twofold. Not only do they enable the Group to obtain orders in overseas markets which, in the absence of such subsidiaries, might easily have been taken by foreign competitors, but, having booked the orders, they then place with the Parent Company a considerable proportion of the equipment for manufacture at home. These parts, made by the Parent Company, rank as direct exports. At the same time, the Subsidiaries manufacture the other parts thus benefiting the Group as a whole.

The Canadian Company has again had a profitable year and its long term prospects continue to be encouraging.

The South African Companies have had a good year. It does not appear that the political situation there will affect the business in any serious way. The Johannesburg factory is working normally and there are no indications of uneasiness over labour conditions. The order book is very much larger than ever before and the prospects for business satisfactory.

The Australian Company had a busy year but the profits were down. This to some extent was due to the completion of a contract being delayed beyond the end of the year. The bookings during the year, however, were satisfactory and the amount in the order book was more than trebled. These orders are for plant to be delivered within the next three years and the prospects are therefore good.

I have also to report recent developments of some importance affecting our business on the Continent of Europe. We have acquired a controlling interest in a new Dutch Company named Holima Ingenieursbureau voor Warmte-en Koudetechniek N.V., established to take over the business of our former Agents in Holland. We have enjoyed valuable business in Holland for upwards of 30 years and by this step we believe the future there will be assured.

Our sales in France have been increasing steadily over the past four years to some extent due to the easing of import restrictions and are now substantial. The market is promising and we are at present forming a French subsidiary company. It is our belief that the new company will afford us certain advantages.

RECORD OF PROGRESS

The growth of the Group to which I have referred from time to time can be well illustrated by a few figures. For instance, in 1951 the net assets amounted to £1,019,510. By 1956 they had risen to £2,546,924, and at the end of the year under review to £4,800,841.

On your behalf and on behalf of the Board I have pleasure in thanking the Boards of the Subsidiary Companies and all the executives, staff and workpeople at home and abroad for their loyalty and service.

The report and accounts were adopted.

EDUCATION AND COURSES

UITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal courses in a wide range of subjects for the so examinations for London Univ. B.Sc.Econ. three if entrance is included) at moderate fees. 431 Wolsey Hall students passed London Univ., B.Sc. *Economics exams, 1950-60.* Tuition fee for G.C.E., Law, Statistical, other exams. Prospectus (mention examination) from L. W. Shaw Fletcher, C.B.E., LL.B., *Director of Studies,* Dept. P.17.

WOLSEY HALL, OXFORD

SECRETARIAL TRAINING, especially for university graduates and older students. 18-month and intensive 14-week courses.—Write, Organising Secretary, Davies's, 158 Holland Park Avenue, W.11. PARK 4654.

B.Sc.(ECON)

LONDON UNIVERSITY

U.C.C., founded in 1887, successfully prepares *students* for this Degree (obtainable without residence), *which is a* valuable qualification *for* those seeking *executive appointments* in commerce or industry, *government or municipal* posts.—Prospectus, giving details of Courses for other London Degrees, G.C.E., Law Exams., &c., *from Registrar, University Correspondence College,* 60 Burlington House, Cambridge.

EXPERT POSTAL TUITION

for Examinations—B.Sc.*(Econ.)*, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. *Also many practical (non-examination)* courses in business subjects.—Write *today* for free prospectus and/or advice, mentioning *examination or* subjects in which interested, to the Secretary (G9/2).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

ADVANCED STUDIES IN MARKETING PRACTICE AT HOME AND ABROAD

A series of one- and two-day seminars exclusively for the Director and Senior Executive.

Full programme from:

London School of Marketing, Ltd.,

Newspaper House, Great New Street, London, E.C.4. Tel. Fleet Street 3519.

BUSINESS AND PERSONAL

THE COMMITTEE OF LONDON CLEARING BANKERS.

Notice is hereby given that the MAXIMUM RATE of INTEREST allowed by the undermentioned London Clearing Banks on deposits, which must be lodged for a minimum period of seven days and be subject to a minimum notice of withdrawal of seven days, will be FOUR AND ONE HALF per cent per annum until further notice.

ANNOUNCEMENT

STATEMENT REQUIRED BY THE ACT OF AUGUST 24, 1912, AS AMENDED BY THE ACTS OF MARCH 3, 1933; JULY 2, 1940, and JUNE 11, 1960 (74 STAT. 208) SHOWING THE OWNERSHIP, MANAGEMENT, AND CIRCULATION OF The Economist, published weekly at New York, N.Y., for October 1, 1961.

1. The names and addresses of the publisher, editor, managing editor and business manager: Publisher, Sir Geoffrey Crowther, 22 Ryder Street, St. James's, London, S.W.1, England. Editor, Donald Tyerman, 22 Ryder Street, St. James, London, S.W.1, England. *Business* Managers, Gerald Andrews and Peter Dallas *Smith,* 22 Ryder Street, St. James's, London, S.W.1, England.

2. The owner is:

The Economist, Newspaper Limited, 22 Ryder Street, St. James's, London, S.W.1, England.

Stockholders owning or holding 1 per cent or more of *total amount of stock are:* Financial News Ltd., 10 Cannon Street, E.C.4; J. Cadbury, The Davis, Northfield, Birmingham; D. E. W. Gibb, Hayes Bacton, Gerrards Cross, Buckinghamshire; R. L. Greig, Oaklene, Parkfield Road, Altrincham, Cheshire; L. K. A. de Rothschild, *New Court, St. Swithin's* Lane, E.C.4; The Executors of the late Lord Simon's Estate, Cheadle Heath, Stockport, Cheshire; H. Graham White, Mere Cottage, Birkenhead, Cheshire; David Layton, 47 Hampstead Way, London, N.W.11; G. C. Layton, Owls Wood, Avon Castle Drive, Ringwood, Hampshire; M. J. Layton, 48 Wesleigh Avenue, London, S.W.15; C. W. Layton, 41 Elsham Gardens, Barnes, London, S.W.13; H. W. B. Schroder, 145 Leadenhall Street, London, E.C.3; Sir Geoffrey Crowther, 19 Dover Park Drive, Roehampton, London, S.W.15; B. M. Crowther, Westfield, The Sland, Ashtead, Surrey; R. St. John Thomas, Bouts Farm, Inkberrow, Worcestershire.

3. The known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: none.

4. Paragraphs 2 and 3 include, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner.

5. The average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the 12 months preceding the date shown above was 65,366.

P. DALLAS SMITH,
Business Manager.

Sworn to and subscribed before me this 25th day of September, 1961.

H. E. MOLONEY,
A Commissioner for Oaths.

WEST HIGHLAND SEA SCHOOL LAMLASH, ISLE OF ARRAN 1962

Gifted Managers are few, management technicians many. If your son has shown management potential, send him to us. Please write our Secretary, Mrs. E. Douglas Morrell, Parkview, 127 Lockerbie Road, Dumfries.

THE LINCOLN GALLERY, 8, Sloane Street, Knightsbridge, S.W.1. *Rt.Gravia* 6639. Sept. 25th to Oct. 21st "Art and energy"—a Scheltini retrospective.

THE PURCHASING OFFICERS ASSOCIATION maintains an Appointments Register, and employers *requiring* the services of *purchasing* staff are invited to communicate with the Association at Wardrobe Court, 146a, Queen Victoria Street, London, E.C.4 (City 3841).

APPOINTMENTS

The

EEC COMMISSION

requires *two experienced* TRANSLATORS for English. *University degree or equivalent and thorough* knowledge of FRENCH and/or GERMAN essential, *Dutch or Italian* useful.

One candidate should have legal training.

Applications to:

Recruiting Division of the EEC Commission,
13, avenue de Cortenberg, Brussels, 4.

STATISTICIANS, HOME CIVIL SERVICE. Pensionable posts for men and women with *degree or post-graduate* university diploma in statistics, or *degree (preferably with* good honours) in which statistics is a principal subject, or a higher degree involving work in statistics of at least 2nd class honours standard. Candidates qualifying by summer, 1962, may apply. Selection by interview. Age at least 20½ and under 28 on 1.8.62 (extension for service in H.M. Forces or Overseas Civil Service and/or approved post-graduate experience). Starting salary (Inner London) £783 (or higher according to age and experience); scale maximum £1,282. Promotion prospects to £3,415 or over. Write Civil Service Commission, Burlington Gardens, London, W.1, for application form, quoting 362/61. Closing date November 7, 1961.

For other appointments see page 185

DEPARTMENT OF AGRICULTURE AND FISHERIES FOR SCOTLAND. *Pensionable posts* in Edinburgh for man or woman as (a) AGRICULTURAL ECONOMIST or (b) ASSISTANT AGRICULTURAL ECONOMIST. Age on 1.11.61: at least 26 for (a); at least 23 and normally under 28 for (b). Qualifications: university degree, normally with 1st or 2nd *class honours,* in economics, agriculture or *closely related subject, or practical experience* of *agriculture* an advantage. Duties include investigation of changes in financial conditions of agricultural holdings, or *practical experience* of *agriculture* an advantage. Duties include investigation of changes in financial conditions of agricultural holdings, or practical experience of agriculture an advantage. Duties include investigation of changes in financial conditions of agricultural holdings, analysis of farm accounting data, and preparation of material for farm management advisory work. Salary scales: (a) £1,342-£1,674; (b) £738-£1,222. Starting salary may be above minimum in either grade. Promotion prospects. —Write Civil Service Commission, Burlington Gardens, London, W.1, for application form, quoting 5395/61. Closing date November 6, 1961. A1826/DM.

CENTRAL ELECTRICITY GENERATING BOARD

NORTH EASTERN REGION

OPERATIONAL RESEARCH SCIENTISTS

Applications are invited for two appointments in the *Operational Research Department,* North Eastern Region of the Central Electricity Generating Board at Leeds.

The applicants should have a good degree *in mathematics,* statistics, economics or science, and be *capable* of original and constructive thought. *Some previous experience* of Operational Research is desirable but training is available for suitable applicants without *previous experience.*

The posts offer a wide scope for the application of *operational* research techniques to the problems of the *economic operation* of the Board's power stations and transmission systems. The extensive computer facilities of the Board are *available for* the solution of these problems and the *successful applicants will be required to* co-operate with the Board's *Computing* Services on problems requiring computer time.

The salary for the two posts will be within the range of £900-£1,500 per annum, Grades 11 to 7, Class BN of the National Joint Board Schedule, *depending upon qualifications* and previous experience.

Forms of application may be obtained from the Regional Personnel Officer, Central Electricity Generating Board, North Eastern Region, 3 Whitehall Road, Leeds, 1.

COUNTY BOROUGH OF SOUTHAMPTON

ORGANISATION AND METHODS ASSISTANT REQUIRED

A.P.T. V (£1,310-£1,480 per annum).

Full particulars (quoting this publication) from Establishment Officer, Civic Centre, Southampton, before October 20, 1961.

A. NORMAN SCHOFIELD,
Town Clerk.

RESEARCH MANAGER

Substantial London Advertising Agency requires a Research Manager. The Agency has its own team of field interviewers.

Probable characteristics of the successful candidate are:—

1. Age 27-32.
2. High technical competence.
3. Several years' experience in Research (Agency preferred).

The Research Manager will be required to assist in the *planning of a* programme of Agency research covering media, copy, and consumer problems, as well as carrying out consumer research for clients.

Send full personal and career details, in confidence, to the *Director of* Marketing & Research,—Box 1547, *c/o The Economist,* 22 Ryder Street, S.W.1.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF GEOGRAPHY

Applications are invited for appointment as LECTURER *or* ASSISTANT LECTURER IN GEOGRAPHY at a *salary* on the scale £1,650 x £50—£1,400 x £75—£1,850 a year for a Lecturer (efficiency bar at £1,850) and within the range £800-£950 a year for an Assistant Lecturer according to age, qualifications and experience. Preference will be given to a specialist in the field of Human Geography, *with first hand* experience of a major overseas *area outside Europe.* Applications (three copies) stating date of birth, qualifications and experience, together with the names of *three referees,* should reach The Registrar, The University, Leeds, 2 (from whom further particulars may be *obtained) not later* than November 13, 1961.

COMPANY AFFAIRS

Margins Still Falling

THE latest batch of interim reports has sharply checked the rise in the industrial market which occurred after the reduction in Bank rate, for they all follow the trend of past months by showing narrower profit margins. **Babcock and Wilcox** indeed administered a shock to the market by its decision to pass its interim dividend. In the past two years the dividend of 9 per cent has not been fully covered by earnings and in omitting the interim dividend, recently half the total payment, the directors say they took into account the provisional trading results. These have been affected by the low level of manufacturing activity, by the nuclear contracts (for which they believe sufficient provision has been made) and by a number of outstanding claims on contracts still under construction. For the longer term the news is slightly more encouraging as the group's order book is the highest for four years though the directors add the warning that "capacity in the boiler manufacturing industry is in excess of requirements and trading conditions are likely to remain highly competitive."

From **United Drapery** comes the more reassuring news that sales in the six months to July 29th were higher than in the corresponding period of 1960, in the first quarter of which HP sales were free of restrictions. But costs have continued to rise so that the 3 per cent increase in trading profits from £4,484,000 to £4,628,000 is much smaller than in past years. After bringing in a credit from hire purchase provisions and

DIVIDENDS AND YIELDS

	Prev. interim	Prev. final	Latest interim	Price	Yield
	%	%	%		%
Babcock & Wilcox	4½	4½	Nil	19/6	...
United Drapery..	10*	20*	10	44/3	3·4
United Glass.....	5	10	5	15/3	4·9
Sunday Pictorial..	10	17½	10	21/7½	6·4

* Adjusted for scrip issue.

crediting net interest income (in the previous year there was a large interest charge) profits before tax have risen by 13 per cent from £4,013,000 to £4,489,000. After tax and a full year's preference dividend, net equity earnings have risen from £1,915,000 to £2,095,000. A similar improvement in profits in the second half of the year would raise earnings on the bigger capital by about 2 points to cover the 30 per cent dividend almost twice. With the company well endowed with cash the directors of United Drapery might well be disposed to follow their policy in the last two years of distributing rather more than half of the available earnings.

Sales by **United Glass** rose in the first half of 1961 but profits were lower in this period though the directors do not tell shareholders by how much. They say the culprit is the increase in costs. But prices have now been raised and profits for the full year are expected to be higher than in any year apart from 1960, when net equity earnings amounted to £960,000 to cover the 15 per cent dividend over 2½ times. It seems certain that this payment, raised from 12½ per cent, will be maintained, for on the basis of 1959 earnings a 15 per cent dividend would still be covered twice.

The results from **Sunday Pictorial** for the six months to August 31st begin to bear out Mr Cecil King's forecast that trading profits for the full year would be somewhat higher and investment income slightly lower than in 1960-61. Reflecting the increase in the selling price, trading profits amounted to £355,000, compared with £279,000 in the same period last year and £264,000 in the second half of 1960-61. Investment income contributed £529,000, which is slightly more than the £515,000 received in the corresponding period last year but well below £599,000 received in the second half of the 1960-61 financial year. Earnings for the whole year seem likely to rise by a sufficient margin to justify an increase in the dividend to 30 per cent. But there is always the Chancellor and his request.

Properties in Plenty

THIS week there has been a further spate of news from several property companies not only on new developments but on their search for funds. For the second time in a year **Second Covent Garden Property** is making a rights issue. The company in which Eagle Star Insurance is a major shareholder and supplier of funds is raising over £4 million by a two for five issue at 24s. a share. This compares with the pre-issue price of 30s. and the company is effectively raising its funds at about 3¾ per cent. The reasons for the issue are clear; overdrafts have risen close to £2¼ million; existing commitments amount to £4 million; other projects are under discussion; and the unspecified proceeds from the sale of Covent Garden market will not be available until the middle of 1962.

Hallmark Securities too is securing new funds. Sun Life Assurance has agreed to provide further finance beyond the £5 million which it agreed to advance in August, 1960. The £5 million is being used to finance £4¾ million development schemes on the Sussex coast and in London. Together these developments should produce £473,000 in gross rental income and this prospect of expansion forms the background to the results for the year to April 30, 1961, when pre-tax profits more than doubled. But for the Chancellor's request the ordinary dividend would have been higher than the forecast 60 per cent, which compares with the equivalent of 45 per cent. A similar payment has been forecast for the current year, when the Sun Life's 10 per cent stake in the equity first ranks for a dividend, and it will be paid on the capital as increased by another one-for-ten scrip issue.

Particular interest has been centred this week on the offer for sale of 1,400,000 shares in **United Real Property Trust**, founded by Mr Maurice Wohl. As expected the offer has been heavily oversubscribed which is a sign of investors' confidence in the management ability of the company founded only 13 years ago and now possessing a portfolio of properties valued at almost £14½ million. After the offer Mr Wohl's stake in the company will amount to 74 per cent. The Co-operative Insurance Society, which has agreed to lend up to £10 million (of which £6 million is already committed) for long

	Dividend per cent	Current price	Yield per cent
Second Covent Gdn.	16	24/9xr	3·2
Hallmark Securities	60	28/3	2·4*
United Real Property	7½	18/–	2·1

* Allowing for proposed scrip issue.

term finance, has a 10 per cent stake in the equity which it acquired at 17s. 9d. a share. The public will hold 11¾ per cent. The group's properties consist almost entirely of modern office blocks in London and its rental income is expected to double by 1963-64, and the dividend to be progressively raised from 7½ per cent through 12½ per cent to 15 per cent. These would seem to be minimum forecasts, for they make no allowance for income from the additional £4 million made available by the Co-operative Insurance. With the offer price of 18s. a little above the net asset value of 17s. 2d. per 5s. share as calculated on existing developments, the market is looking for a premium of about 2s. when dealings begin next week.

Gallaher

IN the past five years Gallaher has doubled its sales to £320 million and enlarged its share of the cigarette market from under 20 per cent to 35 per cent. Shareholders can hardly expect this rapid rate of expansion to continue. Higher prices, incorporating further tax increases, are proving a deterrent not so much to the established smoker (who often switches to a cheaper brand when prices rise) but to the younger person, especially the office worker. The proportion of non-smokers is rising, especially among young people. It is not surprising, therefore, that Gallaher would now be satisfied with a 2½ per cent growth rate which would still enable it to gain ground from its competitors.

While Imperial Tobacco's "Woodbine" remains Britain's best selling cigarette, Gallaher's "Senior Service" is still set towards supremacy among the 4s. 6d. brands, and already it is selling better than

"Players" in the South. While the industry awaits the outcome of the Monopolies Commission's recommendation that Imperial Tobacco should divest itself of its 42½ per cent shareholding in Gallaher, the latter's contention is that competition between the two groups could not be more intense that it now is.

Gallaher plans further expansion; recently it bought for about £2 million a textile mill in Belfast which it is to convert for a like sum into a modern cigarette factory on the lines of the Linisfallan factory, 30 miles outside Belfast which makes about 30 per cent of "Senior Service" cigarettes as well as the "Park Drive" brand and cigars. Other capital commitments amount to £2 million and the increase in leaf tobacco prices has tied still larger sums in stocks, which were shown at £65½ million at the end of last year. The group's overdraft then amounted to £6½ million even though £10 million had been raised by the rights issue in June, 1960. Gallaher has been a big user of capital having raised in the past five years £25 million by rights issues and £18 million by loan stock.

Earlier this year Gallaher increased its authorised capital by 10 million shares and it may not be too long before the company once again has to come to the market. The success of any such issue would partly turn on the decisions taken about Imperial Tobacco's holdings. At 41s. xd the 10s. shares yield at 4¾ per cent, two percentage points lower than the yield on the shares of its major competitor and shareholder.

Copper Dividends

THE interim dividends declared by the Rhodesian copper producers in the spring proved a better guide to payments for the full year to June 30th than the quarterly results published by the **Rhodesian Selection Trust** group. These showed that Mufulira, from which RST draws practically all its income, suffered a fall from £9,954,000 to £7,727,000 in its operating profit. Roan Antelope suffered an even steeper decline from £8,399,000 to £6,343,000. In May, the interim dividends of Mufulira and RST had been cut by about a quarter and there were some fears that the final payments would have to be reduced even more sharply. In fact, the final dividends have only been cut in the same proportion as the interims. Mufulira is paying a final dividend of 4s. a share after Rhodesian taxes, making 6s. a share for the year, against 7s. 10½d., and RST is paying a final of 9d. a share, making 1s. 1½d. a share, against 1s. 6d. Roan's interim payment was reduced by only ½d. to 4d. a share; but though the fall in profits might have justified a bigger cut in the total dividend, Roan is paying a final of 8d. a share, making 1s. for the year, against 1s. 3d.

The results of the copper companies in the "**Rhoanglo**" group with June accounting dates are still more encouraging. In March, Rhokana and Rhodesian Anglo American maintained their interim payments. Now they have held their final dividends at last year's level, so that Rhokana is again paying 7s. a share and "Rhoanglo" 8s. a share. The lame runner from this stable appears to be Bancroft, which has been forced to cut its dividend from 1s. 3d. to 9d. a share.

The profits of the "Rhoanglo" companies have held up rather better than those of the RST group. Rhokana's operating profit was only 16 per cent lower and its investment income higher, so that its net profit fell only slightly from £11,534,000 to £10,956,000. Rhoanglo's net profit increased from £7,135,000 to £7,251,000. In the Anglo American group, investment income depends partly on past profits earned by other associated copper producers. Rhoanglo, which has a 52 per cent holding in Rhokana, also derives a substantial part of its income from Nchanga, which has a March accounting date and enjoyed a slightly more favourable year than the June companies. Higher production costs at Bancroft may explain in part the relatively greater effect that the decline in the price of copper has had on its profits, which fell from £3,693,000 to £2,745,000.

A year ago the RST companies decided to restrict their production and the results were clearly seen in their results: Roan's output dropped by 10,000 tons to 82,000 tons; Chibuluma's output fell by 3,000 tons to 19,000 tons; and Mufulira cut its production from 104,000 tons to 101,000 tons. But the Anglo American companies apparently preferred to rely mainly on stockpiling copper to achieve a reduction of 3,000 tons a month in their marketing, though more recently they may have modified this policy.

Thos. W. Ward

THE Thos. W. Ward group has an unusually wide range of interests ranging from steel, engineering, scrap metals and locomotive manufacture to chemical plant and cement. In the year to June 30th, turnover rose by 5 per cent to £52 million and trading profits rose by 4½ per cent from £3,433,000 to £3,595,000. The tax charge showed hardly any increase so that the rise in net profits from £1,468,000 to £1,593,000 is proportionately higher at 8½ per cent. The ordinary dividend is effectively maintained at 13¾ per cent and the bigger earnings cover it almost 3.6 times, compared with 3.1 times in the previous year.

The rise in profits probably comes mainly from the engineering interests, where machine tools are likely to have done well. The iron and steel divisions will have felt the burden of higher costs and of the reduction in demand for sheet steel from the motor industry. Ketton Portland Cement made slightly smaller deliveries last year and its profits, which constitute about one-seventh of the group's total, were only marginally higher even though the depreciation charge fell by 38 per cent. The £1 ordinary shares were little changed after these results were published and at 68s. yield 4 per cent.

London Stock Exchange

FIRST DEALINGS:	Sept. 18	Oct. 2	Oct. 16
LAST DEALINGS:	Sept. 29	Oct. 13	Oct. 27
ACCOUNT DAY:	Oct. 10	Oct. 24	Nov. 7

THE cut in Bank Rate last Thursday brought an immediate rise in the prices of both gilt-edged stocks and equities. But the Chancellor then emphasised that the cut did not herald any easing of the credit squeeze or of the wages pause. Consideration of this statement brought the rise in equities to a halt after the week-end. Disappointing results from a number of companies contributed to the uneasy time in the industrial market and by the middle of the week the gains made in the short-lived rally had been wiped out. *The Economist* indicator fell by 4.1 points to 346.7, a new low for the year.

After the reduction in Bank Rate the gilt-edged market became more lively. There had been a fair amount of switching into medium and short dated stocks as well as some institutional buying of them. There was a pause in investment buying on Tuesday but prices remained steady; short dated stocks rose on Wednesday but long dated were dull. Bank buying of Savings 3 per cent. 1955-65 contributed to the rise of ⅞ to 89 23/32. Conversion 5 per cent 1971 gained ¼ to 90⅛ and Funding 3½ per cent 1999-2004 gained ⅜ to 57. Among the irredeemables, 2½ per cent Consols gained ⅝ to 38 13/16. Corporation stocks also had a firm week, helped by the announcement of the new LCC loan conversion offer of 6½ per cent 1971-72 at 96½ for the maturing 3 per cent stock 1956-61. This stock gained 1½ to 102¾ on the announcement and the new stock was fully subscribed at the opening on Thursday morning.

Bank shares gained limited amounts over the week, though Barclays went ahead of the rest, putting on 3s. 3d. to 77s. 9d. Insurance shares were slightly lower over the week, losing their early gains, but breweries held their early rises and Watney Mann gained 1s. to 91s. Heavy falls occurred among store shares and Marks and Spencer "A" lost 1s. 7½d. to 99s. 7½d. Bad news from capital goods producers depressed prices in several sections of the market. The passing of the interim dividend by Babcock and Wilcox led to a drop of 4s. 3d. to 19s. 3d. in its shares and Doxford and Sunderland lost 6s. 3d. to 50s. xd following the chairman's statement. The cutback in United Steel's development programme and the latest report about steel output led to sharp falls in steel equities; United Steel itself lost 2s. 3d. to 40s. 7½d.

Exceptionally, Unilever gained another 4s. to 147s. on further consideration of the share split and Jaguar "A" showed a net gain of 1s. to 81s. though the price was trimmed a little on the announcement of the acquisition of Guy Motors. Kaffir shares were reasonably firm ahead of the quarterly figures; St. Helena gained 1s. to 58s. 9d. and F.S. Geduld gained 2s. 6d. to 56s. 3d.

THE MONEY MARKET

At the Treasury bill tender following last week's cut in Bank rate the syndicate of discount houses raised its bid by 2s. 5d. to £98 9s. 5d., and the average rate of discount fell sharply by $\frac{7}{16}$ per cent to $6\frac{1}{8}$ per cent. It is unusual for the bill rate to fall almost fully as much as Bank rate; but, still more unusually, the bill rate had actually risen at the tender before the Bank rate cut. Thus the present rate of $6\frac{1}{8}$ per cent is by no means out of line with Bank rate at $6\frac{1}{2}$ per cent, and it gives the market some scope for competitive bidding for bills in coming weeks. This week, however, two or three houses have been obliged to borrow small amounts from the Bank of England on two occasions. But the Bank of England was, after all, discouraging the discount market from anticipating the reduction to $6\frac{1}{2}$ per cent, and that did not prevent the Bank from making it.

Total applications at the tender fell by £50 million to £398 million and the market received 57 per cent of its application against 39 per cent a week earlier. Credit has been very short throughout this week and the rate for day-to-day money has rarely fallen below $5\frac{7}{8}$ per cent and has often been up to 6 per cent—compared with $6\frac{1}{8}$ per cent before the Bank rate cut.

APPOINTMENTS

Marketing

- TWO CHALLENGING APPOINTMENTS, one of which is at Board level, are to be made in the overseas associate companies of a big commercial group. They arise from decisions to extend abroad the latest techniques of mass marketing.
- THE OUTSTANDING FEATURE of these jobs is the scope they offer. They demand initiative and the capacity to apply the basic principles of marketing in entirely new fields. Responsibility will be for all aspects of planning, developing and managing marketing activities in the widest sense.
- EXPERIENCE at management level of large scale operations in mass marketing is essential. Overseas experience is not.
- APPOINTMENTS can be on pensionable terms for career service abroad or on fixed contracts. Conditions include overseas allowances, leave passages to U.K. every year and good arrangements for families.
- SALARIES: on career terms the starting basic salary for one appointment will be about £4000 p.a. and for the other about £3500. The terms for a fixed contract appointment in either case would be negotiated individually at a higher salary.
- BRIEF details should be sent in confidence to us, as the company's advisers, on the understanding that nothing will be disclosed to the company without permission.

Letters should be addressed to M. J. Graham-Jones.

JOHN TYZACK & PARTNERS LTD
10 HALLAM STREET · LONDON W1

SYSTEMS PLANNING ASSISTANT

required by the West Midlands Divisional Coal Board at their Electronic Computer Centre situated at Bridgtown, near Cannock, Staffordshire.

This position would suit a recently qualified graduate in Mathematics or Statistics, or someone with an equivalent qualification, who is looking for interesting and creative work.

Salary in accordance with age, experience, etc.

Application forms from Divisional Chief Staff Officer (quote ref. O), WEST MIDLANDS DIVISIONAL COAL BOARD, Himley Hall, Dudley, Worcs., to be returned by October 20, 1961.

EXPORT

OZALID, the leading Company in the photocopying field with established overseas markets, wishes to expand its Export Sales Force and young men of proved selling ability with some experience in the export field and a knowledge of several languages are invited to apply for a restricted number of vacancies which will become available in the near future.

Good salary and incentive offered. Contributory Pension Scheme. All expenses paid. Applicants must be willing to travel extensively. Apply in writing in confidence to:—

The Administrative Controller of Sales,
OZALID COMPANY LIMITED,
Langston Road,
Loughton, Essex.

EXPORT MANAGER

The Churchill Group—manufacturers and distributors of Machine Tools—require a General Manager for the Export Division of their Sales Organisation. He will be responsible to the Group Managing Director for all aspects of overseas sales promotion and administration.

This is a senior appointment in the Group and offers excellent prospects to an energetic man of imagination aged about 35-40, currently earning in excess of £3,000 p.a.

Candidates should have had responsible Executive experience in medium and heavy engineering preferably in the Sales function, be fluent in at least one European language and be competent to conduct negotiations at the highest levels.

The appointment is based in Birmingham, but will involve extensive overseas travel.

Salary, pension and other benefits will be commensurate with the responsibilities involved.

Applications, which will be treated with the strictest confidence, should give full particulars of qualifications, experience and previous appointments, and should be addressed to:

The Personnel Director,

Charles Churchill & Co., Ltd.

1323, COVENTRY ROAD, BIRMINGHAM, 25

THE MANCHESTER SHIP CANAL COMPANY

APPOINTMENT OF AN ASSISTANT TO THE SECRETARY

Applications are invited, preferably from University graduates, for an appointment as an Assistant to the Secretary of the Company. Candidates should be under 28 years of age and either possess legal qualifications or have had experience of public administration.

Applications, giving full particulars, should be addressed to the Manager and Secretary, The Manchester Ship Canal Company, Ship Canal House, King Street, Manchester, 2, and be received not later than November 30, 1961. Envelopes should be marked "Personal."

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for (a) Assistant Lecturer or (b) Lecturer in Economics. Salary scales: (a) £1,200 x £50—£1,350 p.a.; (b) Grade II, £1,350 x £50—£1,600 p.a., Grade I, £1,600 x £50—£1,900 p.a. Applications would also be welcomed from persons interested in secondment for such duties. Passages to Salisbury for appointee, wife and dependent children on appointment, with allowance for transport of effects. Superannuation and Medical Aid Schemes. Unfurnished accommodation at rent of 15 per cent. of salary. Assistance given for triennial visits overseas. Detailed applications (six copies), naming three referees, by November 15, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

For further appointments and other classified advertisements see page 177

SK&F

wish to appoint a

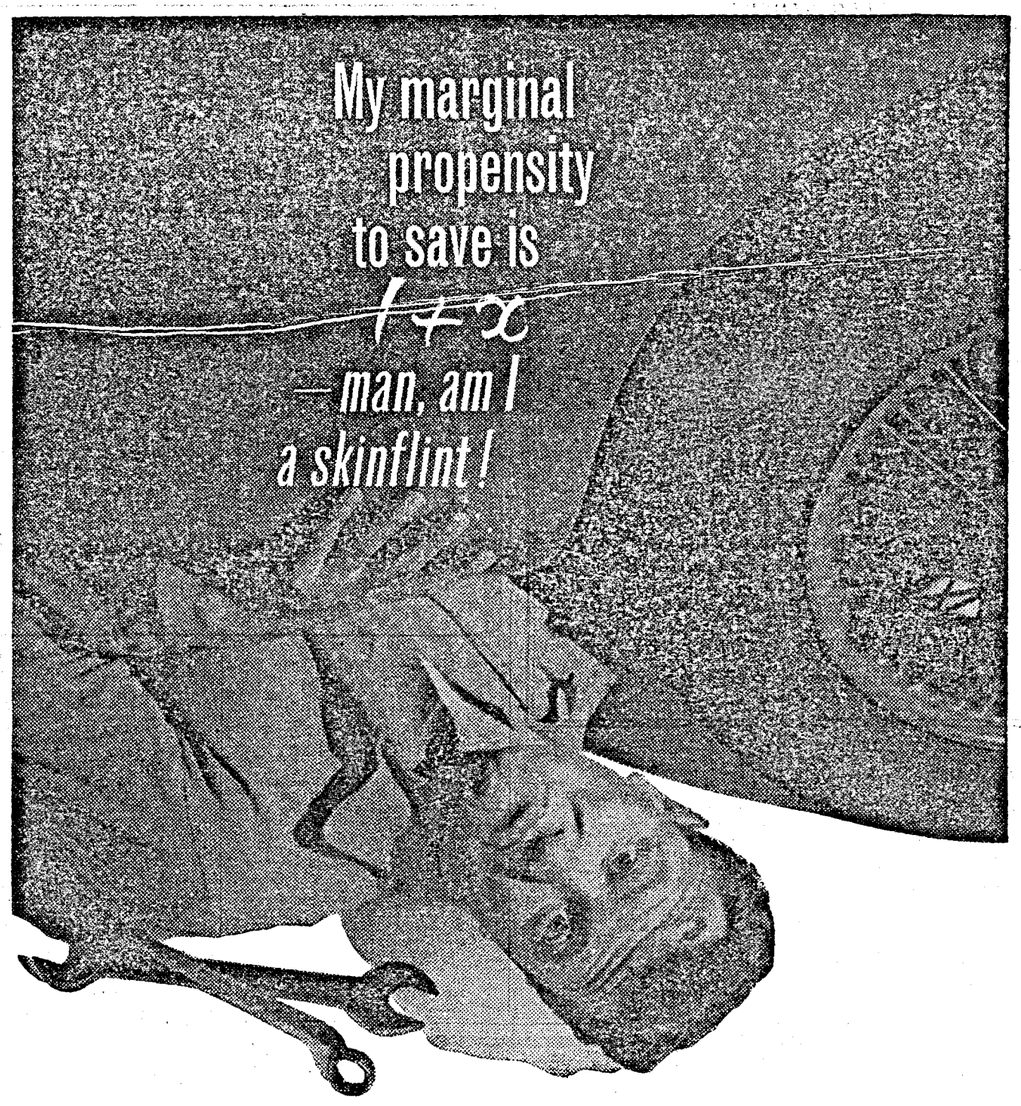
CHIEF ACCOUNTANT

This is a new post established as a result of continuing expansion and will carry with it full responsibility under the Company Secretary for the accounting of financial operations of a manufacturing company in the Ethical Pharmaceutical field employing approximately 800 staff.

The successful applicant should be a Chartered Accountant aged between 28-35 years. He must have had at least 3 years' practical experience at a senior level of modern, corporate and cost accounting methods accompanied by a keen familiarity with financial control and planning techniques.

An initial salary of not less than £2,000 p.a. is envisaged with opportunities for this to be increased on a merit basis.

A non-contributory Pension and Life Assurance Scheme, full payment of removal expenses and many other attractive benefits are offered as part of the outstanding conditions of employment existing within the organisation.



Letters of application for this post giving fullest details of age, qualifications, experience and salary progression to date (including present appointment) should be addressed to:—

SK&F
The Staff Manager
SMITH KLINE & FRENCH LABORATORIES LTD.
Mundells, Welwyn Garden City, Herts.
Quoting Ref. No. N.0638.

ACCOUNTANT FOR THE FAR EAST

JARDINE, MATHESON & CO. LTD.

There is a vacancy in the Jardine, Matheson Group of Companies for a young qualified Chartered or Certified Accountant or Chartered Secretary with some experience since qualification. There are good prospects of making a pleasant and interesting career in the Group which has a variety of interests through the medium of branches and subsidiary and associated companies in Hong Kong, Singapore and elsewhere in the Far East. Terms of service include regular home leave, including paid passages; kit allowance; medical benefits; provident fund and pension scheme. Furnished accommodation provided at nominal rental. An unmarried man is preferred for the first tour of service. Applicants available for interview in London October/November should apply to the Secretary, Matheson & Co. Limited, 3 Lombard Street, London, E.C.3.

To put it mildly, not everyone can always hope to see things the right way up in matters of finance. All the same, it's not hard to get your facts straight about one important aspect of economics—Life Assurance. Life Assurance works two ways. It gets you, the policyholder, the best deal possible, through free investment backed by immense financial know-how. After all, the Life Assurance industry has two hundred years' experience of doing just this. And money put into Life Assurance goes towards making a better life for everyone in Britain — it helps to provide valuable and flexible finance for industrial expansion and public projects.

You get a good deal from **LIFE ASSURANCE**

Issued by The Life Offices' Association, London, and Associated Scottish Life Offices, Edinburgh

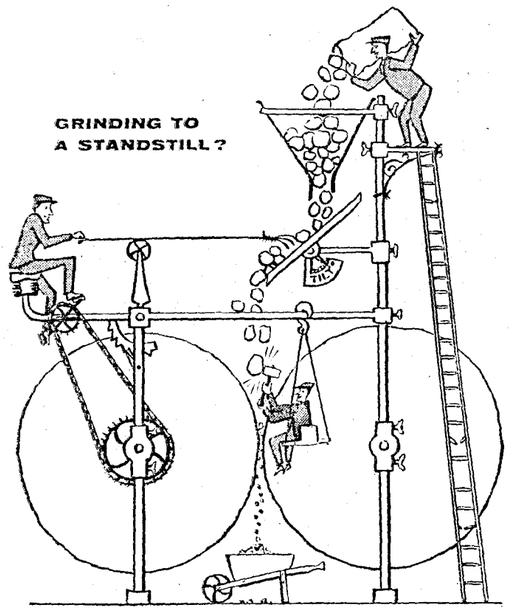
GLENFIELD VALVES

in Water Supply Systems



In all the elements of a waterworks—the reservoir, the trunk mains, the purification plant, the pumping stations and the distribution lines—it is invariably necessary to provide means of controlling flow. Flow control is a Glenfield specialty, and in waterworks throughout the world it is effected by valves, gates and numerous other kinds of appliances from the extensive range of Glenfield Equipment.

GRINDING TO A STANDSTILL?

....time you invested in Unipulver

Want to grind raw materials faster, finer, more economically, without maintenance, without skilled supervision? Want to grind liquids and semi-liquids? Want to be able to guarantee uniformity of grinding, yet control the degree of coarseness or fineness? Want to grind something that other mills won't even tackle? Want to see an output which makes nonsense of all the others?

—A single "Yes" to any of these questions shows that you're losing money until you invest in a Unipulver Mill....and we'd welcome the chance to prove it.

GRINDING FINER THAN EVER BEFORE!

THE WEEKEND IS THE MOST NATURAL BREAK OF ALL

Out of the husk breaks the shiny new conker: after the weekdays comes the weekend break. Natural breaks both...

...but the weekend is the most natural break of all. A break for leisure and relaxation. A chance to sit by the fire and talk...and listen ...and look.

At weekends half the ITV homes in England and Wales turn to ABC Weekend Television. It's part of the weekend way of life—something all the family enjoy together. This is the time your product story gets real attention from 16 million relaxed 'weekenders' in the North and Midlands—the ABC Weekend Television audience. The largest coverage of any single ITV company...

INTERNATIONAL

Concerto Grosso

In his solo performance at the Communist party congress, Mr Khrushchev has reaffirmed the theme of peaceful co-existence. Like American policy it is composed of two strands—ostentatious armed strength and a willingness to talk (page 203). His softer words on Berlin are conditioned by expectation that the West will talk too. If no response comes, the military theme will swell (page 204).

Ensembles

The uncommitted nations are now the dominant element in the **United Nations.** But the assembly badly needs the tonic of improved parliamentary machinery if they are to become the effective masters of the UN executive (page 207).

The new **west German** Bundestag may provide livelier debates than its predecessor. But the conductor, Dr Adenauer, is expected to stay on; how long, is not yet clear to anybody but, perhaps, him (page 234).

Swing

Turkey's electoral swing against General Gürsel and his government of soldiers is also a vote against Kemal Ataturk's vision of a modern, western nation (pages 211 and 233).

Discords

President Nasser's graceful acceptance of **Syrian** independence has not lasted long. For it is a tacit premise of Arab politics that he who controls Syria controls the Middle East (p. 211).

The Bizerta explosion has left scars both on **Franco-Tunisian** relations and on President Bourguiba's standing in his country (p. 214). Violence in the streets of Paris is a reminder that the **Algerian** malaise has infected France itself (p. 212).

Sotto Voce

Separatism amongst **Kenya's** tribes and regions, muted hitherto, has been brought into the open—*with perilous implications*—by the prospect of independence (p. 237).

Mr Tshombe of **Katanga** has many secrets. His latest failure to hand over United Nations prisoners was predictable; it is the series of military and political manoeuvres which led to their capture that demands investigation (p. 215).

New World

Americans are deeply divided over the civil defence precautions which the Administration is pressing (p. 223).

Farm exports may be threatened if the European common market adopts protectionist farm policies (page 228); demands for protection against **imports** of **textiles** may be checked by new tax laws making it easier for firms to renew their machines (p. 227).

The shocking spectacle of cops turning robber in Denver shows that the lot of the honest policeman in many states is unhappier than the felon's (p. 227).

HOME

Stand Pat

A cold douche brings Cunard to its senses; there is to be no new Queen, and the whole prospect of transatlantic travel by sea and air will be reappraised (p. 273).

Britain's present high interest rates are an essential part of the long-term recovery programme—at home and abroad (p. 271).

The high cost of holding gold (p. 280).

September's trade figures give a jolt to the optimists (p. 275).

Englishmen are C of E but still stay away from their established, [illegible]nised and increasingly international church (p. 209).

Up

[illegible]e pause is on it is essential to think hard about how [illegible]e increases should be mapped out: some new ideas for over (p. 205).

[illegible]aims on the production line: a warning progress report

g Over

At Brighton the Tories showed their newly scrubbed, progressive face (p. 218): but their own extremists scared them off from tackling trade union reform (p. 214).

Some of Birmingham's overcrowded population must be dispersed, but others should stay close to home—*and their jobs* (p. 211).

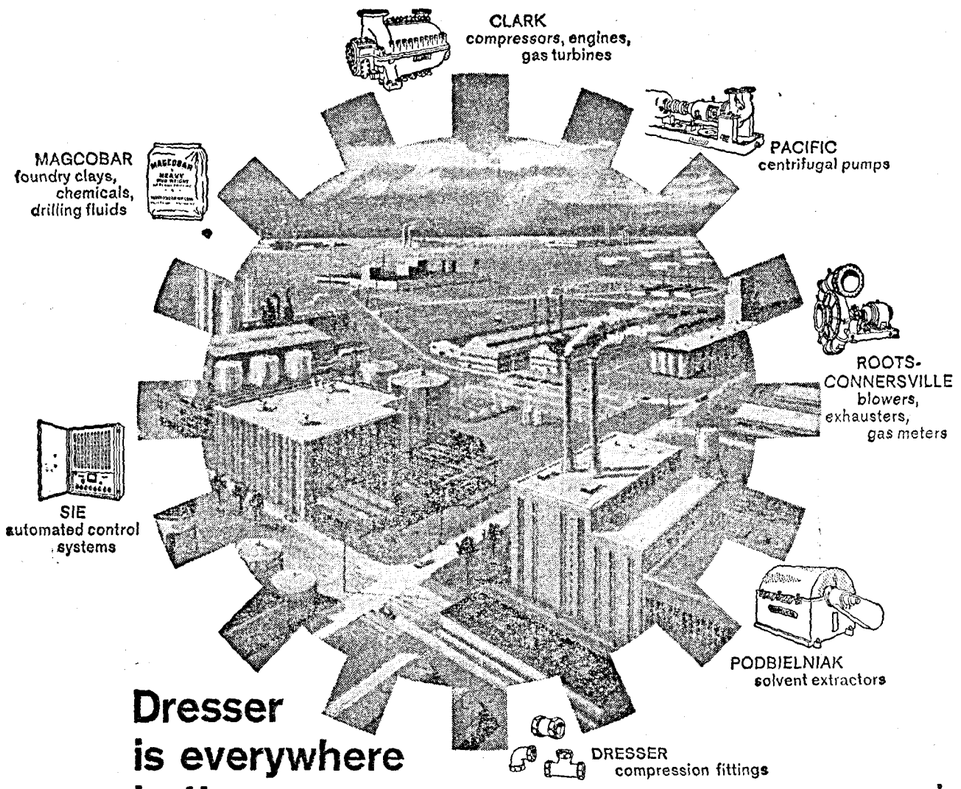
Europe's stock exchanges form a federation (p. 278).

The Air Transport Licensing Board is no longer accepting applicants without looking at their books (p. 280).

Breaking Down

Europe's biggest integrated steelworks has been halted by a tiny dispute (p. 216).

The Rootes motor group, too, is at a standstill because of a few malcontents (p. 276).



The teachers' resistance to the salary offer by the Minister of Education has collapsed (p. 211).

The traditional Welsh Sunday (not exactly temperate) is the subject of a hotly contested referendum (p. 221).

The workings of last month's butter conference needed lubrication: it ground to an international deadlock (p. 278).

Dresser is everywhere in the

WORLD of INDUSTRY

Wherever industry turns a wheel . . . shapes a metal . . . "cooks" a chemical . . . purifies a pharmaceutical or food . . . pipes or pumps a liquid . . . moves, compresses or measures a gas . . . some Dresser product is somewhere at work, helping to get the job done – and done well.

Under world-famed trade names, Dresser provides heavy duty engines, pumps, compressors, solvent extractors, gas turbines . . . for countless tasks. Dresser supplies foundry clays, couplings, blowers, exhausters, gas meters and scores of other products. In automation, Dresser is playing an increasingly important role . . . particularly in electronic control instrumentation for pipe lines, process plants and automated oil production systems.

In fact, Dresser Industries, through its far-flung group of integrated companies and licensees, is able to provide essential equipment for virtually any industry – general manufacturing, chemicals, pharmaceuticals, food-processing, steel-making, non-ferrous metal processing, electronics and communications, power and petroleum in any land.

Call on Dresser for technology, for experience and initiative, for reliable, world-proved products and technical services . . . no matter what you make or where you make it.

Who's Who in The Observer's new financial team

SAMUEL BRITTAN—ECONOMIC EDITOR

Formerly the economic correspondent, Financial Times. Each week writes in The Nation's Business about economic trends and their effects on politics and people. *Mission*: explaining crises. For: the Common Market, the wage pause. Against: playing 'cat and mouse' with the economy.

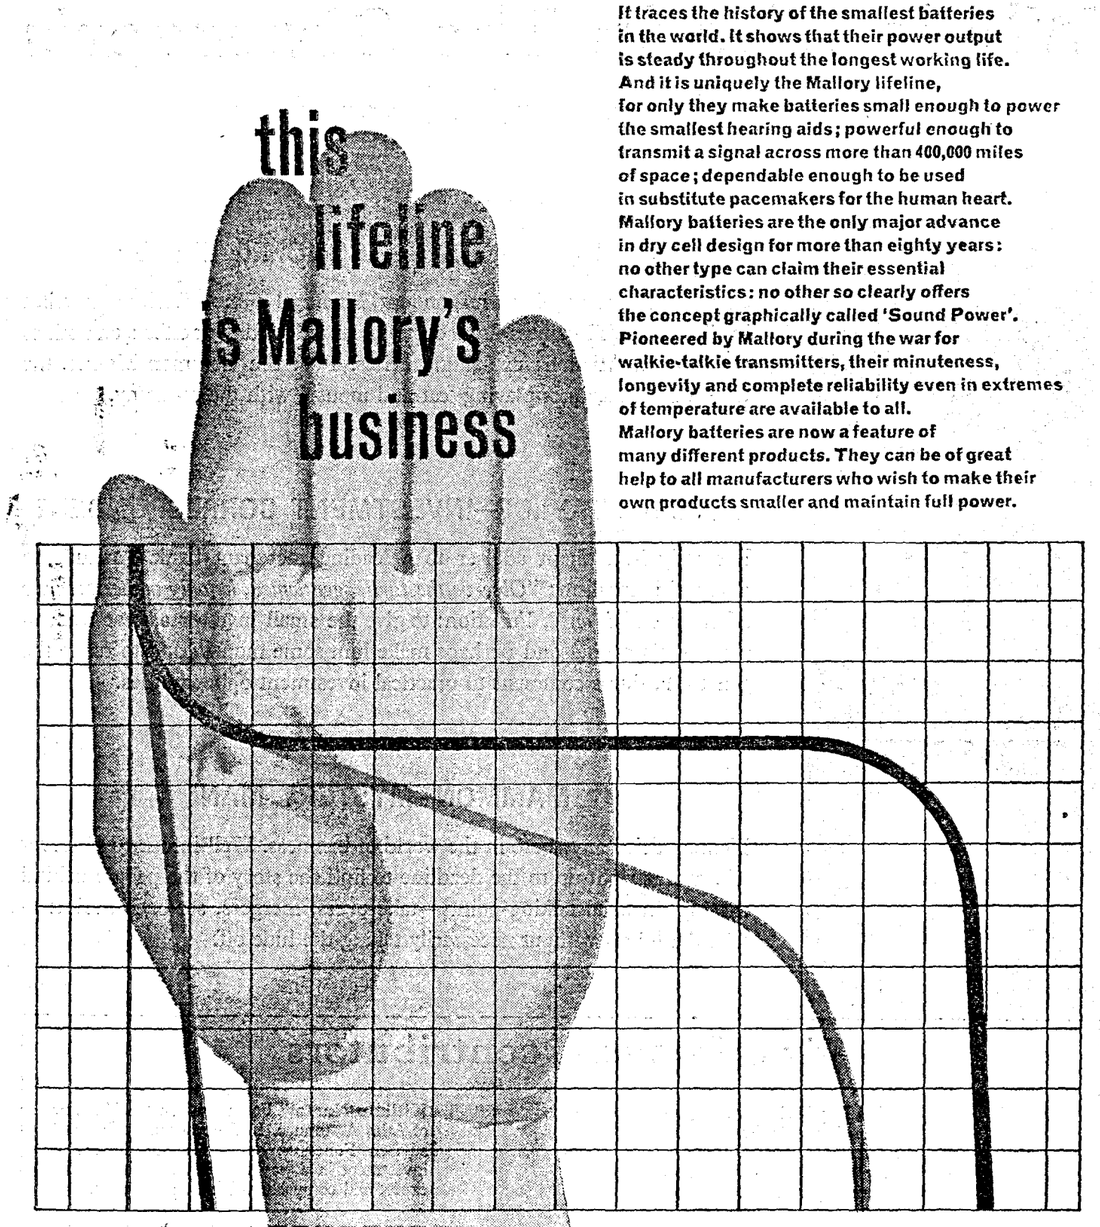
RUSSELL TAYLOR—INVESTMENT CORRESPONDENT

Formerly investment adviser to a leading merchant bank. Attitude to financial journalism: "*Observe the turtle, gentlemen, he only makes progress when his neck is out*". Function: to give the small investor a clear lead, to protect his capital and perhaps make him some money; and to relate the general business comment to practical investment opportunities.

MAMMON—MYSTERY MAN

He may delve anywhere in the world of business. Well-informed observer who works right up to the deadline to find the story of the people behind the big financial talking-points—take-overs, mergers, set-backs. Aim: to take the lid off without necessarily taking the hide off.

Two frequent contributors

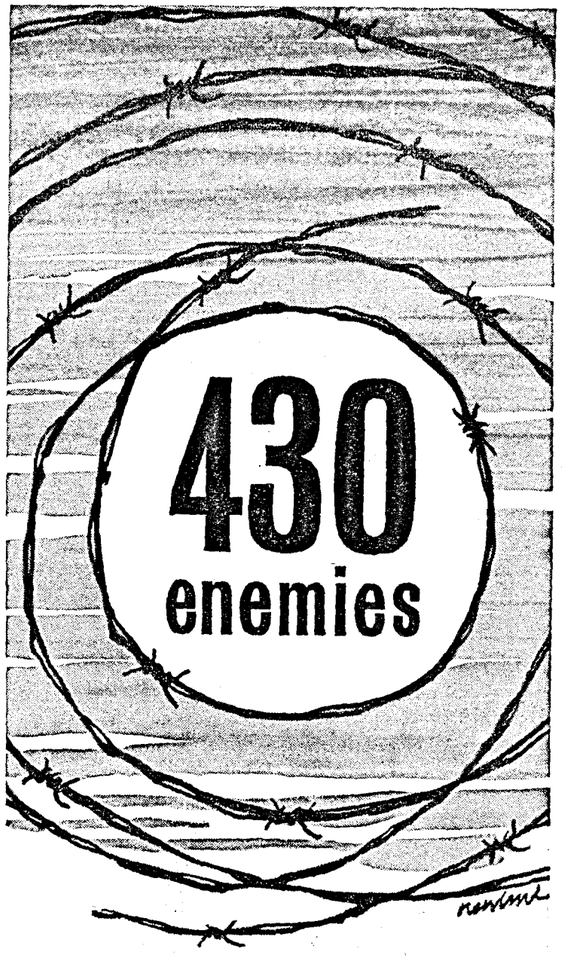


Alan Day Well-known international economist. Special interests: money and traffic—how to keep cars moving and where to park them.

William Nursaw Formerly Trustee Manager of Atlas Assurance. High-level family financial adviser. Function: to write about the art of investment in a way that is interesting to the expert and comprehensible to the layman.

For the highest interest yield, read

THE OBSERVER



It traces the history of the smallest batteries in the world. It shows that their power output is steady throughout the longest working life. And it is uniquely the Mallory lifeline, for only they make batteries small enough to power the smallest hearing aids; powerful enough to transmit a signal across more than 400,000 miles of space; dependable enough to be used in substitute pacemakers for the human heart. Mallory batteries are the only major advance in dry cell design for more than eighty years: no other type can claim their essential characteristics: no other so clearly offers the concept graphically called 'Sound Power'. Pioneered by Mallory during the war for walkie-talkie transmitters, their minuteness, longevity and complete reliability even in extremes of temperature are available to all. Mallory batteries are now a feature of many different products. They can be of great help to all manufacturers who wish to make their own products smaller and maintain full power.

The problem the printer sets the papermaker is the turning of a substance, which at the start of the papermaking process is about 98% water, into a sheet of paper with certain well defined characteristics.
The proper blend has to be made, but the mixing and beating is of equal importance, for the same recipe, beaten differently, can produce both blotting and greaseproof papers.
This beating is not easy and it cannot be fully controlled by instrumentation in spite of modern scientific advances. So the beaterman has to be a craftsman, for without the aid of instruments he must control 430 variables which are enemies to a good paper.
All J. A. Weir's Beatermen are craftsmen. All beat the 430 enemies and produce a consistently good paper welcomed by modern printers.

LIVELY MINDS WRITE THE GUARDIAN...

Michael Frayn lives in a world which is half your world and mine (the one with income tax in it, and crowded roads and bubble gum and the H-Bomb) and half his very peculiar own. His feet are on the same ground as ours, but his head is high above, watching us from outer space.

The result is that when he starts tapping at his typewriter a column emerges which is surely among the wittiest and cock-snookingest in journalism. There are times when we get cold feet and say Frayn, you've gone too far this time – think of our readers... But next morning's mailbag proves that they lapped up his irreverence more than ever... We trust our readers are too high-minded to turn to Frayn's column before digesting the more serious events of the day (wool prices down: cigarette prices up: strikes here, there and in Herzegovina: mystery of why mother of twelve left home). But rumour suggests that a good many are weak-willed enough to read him first thing. If so, we don't want to know about it. Not officially, at any rate.

Birthe couldn't hear a note

Birthe lives in Denmark. She is ten years old and studying music as an extra subject at her school. In fact, she hopes to graduate at the Royal Academy of Music in Copenhagen when she has finished her general education.
Music has always meant a lot to Birthe. But when she was only three years old it seemed she might never hear it again. After a severe case of measles, she developed chronic inflammation of the middle ear. As a result she became almost completely deaf. Only after a long course of penicillin injections was she cured. Birthe was lucky. Only 10 years earlier, before Sir Alexander Fleming's great discovery, her hearing might easily have been affected for life. Nowadays the synthesis and mass production of antibiotics is carried out by chemists all over the world. At Leo Pharmaceutical Products in Copenhagen, one of the largest chemical works in Europe, sterile oil-free air for the cultivation of penicillin and streptomycin is provided by Atlas Copco compressed air equipment. And this is only one of the great enterprises in which Atlas Copco & Sandvik Coromant equipment plays a part. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

VOLUME CCI - NUMBER 6165

Armed Coexistence

MR KHRUSHCHEV, the Indefatigable, addressed his party congress on Tuesday for more than six hours, reporting on Soviet and world events since 1956. On Wednesday he was up on the rostrum again, outlining the new party programme and his country's economic and social plans for the next twenty years. Probably he will close the public proceedings with yet another oration; he is bound to be active in the subsequent debates if the eighty foreign delegations join the Russians in a secret session after the congress. It was the first of these performances that was expected to provide a tentative answer to two key questions. Are the Russians embarking on a radical revision of their foreign policy? Will the climax of the Berlin crisis come before the end of the year?

On the second, more urgent, question Mr Khrushchev provided a very plain answer. Denying now that there ever was a Soviet ultimatum, he argued that the essential thing was to get a German peace treaty; the time factor was subordinate. If the western powers showed signs of willingness to come to an agreement, the time limit of December 31st would cease to apply. He gave his reasons for a qualified optimism. Mr Gromyko's talks in Washington and London have given the Russians the impression of a "certain understanding of the situation" and of western inclination "to seek a solution . . . on a mutually acceptable basis."

Having thus held out to his 5,000 or so listeners the hope of an east-west agreement on the German question (not merely on Berlin), Mr Khrushchev could reiterate his basic doctrine of peaceful coexistence. Indeed, a great deal of his speech was taken up by the restatement of this doctrine, elaborated at the memorable twentieth congress of 1956 and amended, in conjunction with the Chinese, at the international gathering in Moscow in November of last year. Once again, he asserted that wars were avoidable in the current "historical period." Once again he stressed that the communist system, because of its superior economic dynamism, would win. Russia's industrial output was now sixty per cent of the American; this gap would soon be closed. The economies of the communist block, he added, had grown much faster than those of the advanced western states. The world's changing economic balance had been affected, and would be more affected, in the Russian view, by the shrinking of western overseas possessions through the "just anti-imperialist" struggle. Mr Khrushchev has reworded his warning to the West. Now he promises not to export revolutions by force, since "you cannot bring in ideas . . . on rockets." But he gave warning notice, too, that "the export of counter-revolution" would not be tolerated.

Mr Khrushchev's latest survey places communist dynamism in the usual sharp contrast to western stagnation. The United States is given the by now traditional appellation of "international gendarme," but the relative decline of the American share in the total western economic output is underlined. Much play is made of alleged conflicts in the western block resulting from economic competition. West Germany and Britain are represented as bitter rivals, with France as Germany's unnatural ally. This vision of a world in which the Soviet parts are expanding and the western ones, torn by internal dissensions, are shrinking is painted by Mr Khrushchev to justify his faith in the inevitable ultimate victory of communism. It is aimed at the domestic critics as well as at the foreigners.

and is an inherent part of his thesis that wars can and must be avoided in this nuclear age.

At the same time, great pains are taken by Mr Khrushchev to ensure that the new delay of action on Berlin, the reiterated proposals for zones free of nuclear weapons in Europe and Asia, and the renewed talk of global disarmament, cannot be interpreted as signs of weakness. He sticks out his chest as well as holding out his hand. The ruin of war, if a separate treaty with Berlin touched off the conflict, he grimly said, would not be unilateral. At the same time he showed great anxiety to stress Soviet might in what may be called this phase of armed coexistence. He spoke of the growing fleet of Soviet nuclear submarines and, in a passage apparently added to the original script, announced that the current Soviet series of nuclear tests would probably culminate at the end of this month with the detonation of a 50-megaton bomb. It was, immediately, this brandishing of the big bomb that made most impact on the waiting world.

The "fantastic weapon" mentioned with awe by Mr Khrushchev on several earlier occasions is the 100-megaton bomb. Once again he has re-asserted the existence of this jumbo weapon, adding, however, that Russia is not to test it for fear of breaking its own windows. But the testing of a bomb even half that size raises perplexing questions, as well as great perturbation and distaste the world over, uncommitted or committed. If western experts are to be believed, the possession of such a weapon does not alter radically a country's striking power. This opinion was reinforced by a statement the same day from the White House claiming that the United States had been in a position to produce such colossal weapons ever since 1957, but did not consider that their production was worth while. The statement was coupled with an appeal to the Soviet Union not to pollute the world's atmosphere by such an explosion. Can one believe that the Soviet leader is willing to shoulder the international blame for the nuclear fall-out of this test, if there is no substantial advantage to be gained from it?

On this score, the arguments and counter-arguments remain baffling. But the picture produced by Mr Khrushchev at this congress is that of a man determined to stick to his set course. Deliberately and emphatically—while brandishing the bomb—he has identified himself and his policies with the changes and reforms carried out since Stalin's death. In this break with the stalinist past, domestic communist matters and foreign affairs are intimately connected. Mr Khrushchev gave his own version of the way in which the majority of his colleagues in the presidium (with Marshal Voroshilov now firmly placed in the ranks of his opponents) had tried to eliminate him in June, 1957. He claimed that he won the battle in the larger central committee because he stood as the champion of the new order against the old.

Again, when Mr Khrushchev charged the Albanians—revealing the reason for their conspicuous absence—with an attempt to revert to stalinist practices, he said the Russians would not yield on this "either to the Albanians or to anyone else." According to eye-witnesses, an unsmiling Mr Chou En-lai did not join in the general chorus of applause. It is obvious that Mr Khrushchev would not have made so much fuss if the Albanians had been the only dissenters. He mentioned the "personality cult" as an Albanian sin, but the controversy is not merely about that; nor are the communists neatly aligned in Stalin black and Khrushchev white. For years the leading communists, and notably the Russians and the Chinese, have been arguing about basic principles of home and foreign policy. It may be that Mr Chou En-lai will stay in Moscow for quite a time, as Mr Liu Shao-chi did last year, to thrash out a new compromise. The significant fact is that, even at this awkward stage of armed coexistence, Mr Khrushchev has again publicly asserted his belief in communist success through prosperity and reform.

The possible Berlin respite has to be seen in this context of unfinished communist controversy. Western military experts will use it to try to understand the strategic significance of the big Soviet bomb, with which Mr Khrushchev has again taunted them. Western diplomats must take advantage of it to find out what a "mutually acceptable basis" may now conceivably mean over Berlin and Germany, when translated from the Russian. But they should also thoroughly probe Mr Khrushchev's suggestions of zones of safety and other forms of disarmament. When the armourers talk in megatons, however brashly, neither side can afford to base its policy on pride or prejudice.

Breathing Space

A respite has been provisionally offered; it must be realistically used

Two rival explanations are going to be offered for Mr Khrushchev's announcement on Tuesday that he is willing to put off his deadline for a peace treaty with east Germany until next year. One, which is no doubt the explanation favoured by General de Gaulle and those Americans who think like him, is that Mr Khrushchev has been pushed into making this concession because the West has stood firm on Berlin, reinforcing its armies in Europe and, so far, declining to negotiate; the implied moral is that the West has only to maintain this attitude and the Russians will back down still further. The second explanation is that Mr Khrushchev has been drawn into this concession—not thrust into it—as the result of hints dropped into Mr Gromyko's ear, by President Kennedy and Mr Rusk, that the crisis might be resolved by an accommodation acceptable to both sides.

No doubt Mr Khrushchev has felt both a push and a pull. Had the West not said that it would fight rather than surrender the freedom of west Berlin, and half-unsheathed its bayonet to emphasise its words, Mr Khrushchev's reasons for holding his hand would have been less strong. But it would be a mistake to think that this alone is what has moved him—and a perhaps fatal miscalculation to assume that he can be impelled further in the same direction simply by a policy of armed silence. Mr Khrushchev made it clear on Tuesday that the deferment of his peace treaty with east Germany was conditional upon the allies' willingness to negotiate about the German question, which could not be "put off to infinity." He claimed to detect such a willingness in Mr Gromyko's account of his conversations in New York and Washington; and then, to make sure that the willingness persisted, he produced one of his now familiar atomic *aide memoires* in the shape of the 50-megaton bomb to be "probably" let off by the end of October.

To use the current phrase in Washington, Mr Khrushchev's approach to the Berlin crisis is, like Mr Kennedy's, a double-barrelled one. On the one hand, both sides make repeated demonstrations of military determination. (For the American equivalent of Mr Khrushchev's multi-megaton bang, one might look at the cover stories in recent issues of *Time* and *Life,* and one might glance at the article on American civil defence on page 223 of this issue of *The Economist.*) On the other hand, both sides interleave these shows of resolution with hints that it is possible to come to an accommodation. The West cannot now assume that it can leave the second barrel to rust.

It is unlikely that a man of Mr Khrushchev's temper, having twice put off the east German treaty beyond a time limit publicly announced, will go on deferring it for ever. Those who say that the West should just sit tight ought to let their mind's eye wander over the situation that would develop once the treaty was signed. Even if there were no interference with Berlin itself, or with the access routes to the city, the people of west Berlin would live in perpetual fear of such interference, and the temptation to get away from it all by packing their bags for west Germany would never cease to nag. The only way the free half of Berlin can be saved from dying of insecurity is to give it a guarantee, assented to by both East and West, that it will have an extended and unharassed future.

Mr Khrushchev having now withdrawn his time limit, and thus (apart from his big bombast) the "duress" under which the West refused to negotiate, the two sides have a lengthier time to search for a method of securing Berlin's future that might be acceptable to both of them. So far General de Gaulle has prevented any serious attempt by the western powers to formulate the limits within which they are willing to conduct this search. It is not clear why General de Gaulle refused to allow the French representative to join his American, west German and British colleagues in the meeting of senior officials it had been intended to hold in London this week. He may have objected to the place, to the level of representation, or to the whole idea of discussing terms to be offered to Moscow. The effect, though, is plain: consultation among the four allies has for the present been brought to a halt, save for the (lately, rather ineffectual) committee of ambassadors in Washington.

It is unlikely that the United States, which is still the main source of western power, will accept this stoppage of the alliance's mechanism indefinitely. By again taking out the time-fuse from his Berlin menaces, Mr Khrushchev has offered another breathing space which can be used for finding a way out of the present danger; or which, if left unused, may lead straight to worse danger. It will be easier to tell how the alliance can be got in motion again when more is known of the new government in Bonn—in particular, the extent of its willingness to confront the German public with unpleasant facts. But it will do no harm if, in the meantime, General de Gaulle is reminded that the rest of the alliance can no longer accept total immobility.

Pay After the Pause

A proposal for advancing now towards a national wages policy

Next Monday Parliament is to hold the first of several debates on Mr Lloyd's wages pause. These debates should be treated by all who care for the future of Britain's economy as occasions for going back to the simple fundamentals of economic policy, and for repeating them as clearly and often as the opponents of the pause repeat their slogans. Only thus can there be a hope not only of keeping policy on the right lines for the next few months, but also of moving towards some more sensible system of wages determination when the immediate pause is over.

The first and simplest immediate point to make during these coming debates is that a Government can fight a wage-price spiral either by taking a tough line on wages directly—or else by holding down production through fiscal and other restrictions, in the hope that wage inflation may then be checked indirectly, by the general deflation of demand. There is not the slightest doubt that the direct method is the more progressive and sensible; because the level of real earnings depends overwhelmingly on the level of production, the method of the wages pause is the one that should be overwhelmingly supported by all who want to see an advance in Britain's real standard of living. More and more people may gradually come to recognise this in the next few months; but it will be argued against them in debate that (*a*) the pause will react unfairly on those who were next in the queue for a pay rise when the chopper fell, particularly those in some parts of the public service; and that (*b*) the Government is "breaking up the traditional, long-built-up system of wage arbitration and conciliation in this country."

The answer to argument (*a*) is that whenever one cuts into a spiral, those on the next step up are bound to feel unfairly treated for a while; that is what cutting into a spiral means. The answer to argument (*b*) is that the break-up of parts of the "traditional, long-built-up system of wage arbitration and conciliation in this country" would be a very good thing; indeed, because constant inflation through arbitration has been a main impediment to British economic advance, such a break-up is now an essential national requirement.

To these two simple lessons of experience it is certainly sensible to enter two long-term provisos. First, in deference to argument (*a*), measures need to be devised to ensure that a national wages and salaries policy does not work uneconomically in the public sector; that is to say, that it does not work in a way that creates a perpetual shortage of staff in those parts of the public services which ought to be expanding as the economy grows richer. Secondly, if the present system of arbitration is to be broken up, something else has to be put in its place; instead of abolishing industrial courts and

the like, the Government could reasonably demand merely that there are certain sorts of information for the public that must henceforth always be included in official courts' reports.

THESE two long-term provisos—the need for a new yardstick for negotiating wage and salary increases in the public service, and the need for new sorts of terms of reference for arbitrators—really march hand in hand. In the sector of public servants' salaries, as in arbitration awards in the private sector, the great toxic influence in recent years has been the doctrine of "strict comparability" or of "fair wages for inflation"; this principle of unthinking "comparability" has been specifically written into salary negotiations in the civil service ever since the disastrous royal commission report of 1955, and it has been written into wages negotiations in the nationalised industries by such documents as the Guillebaud report on railway pay.

This has had two results. One is that whenever there has been an inflationary wage increase in outside industry, that increase has eventually been passed on to all public servants, even when they work in jobs or grades where more public servants are not needed, so that the public sector has done much to keep the spiral spinning. The other result has been that under "strict comparability" special sorts of public servants in fields where large new recruitment happens to be especially needed—in the police forces, in some of the welfare services, some scientific civil servants and certain categories of long-service teachers—have tended to get merely the same wage or salary increase as everybody else; so the extra recruitment that is urgently needed has not taken place. Usually, when the services concerned have become hopelessly undermanned, a special "non-comparable" wage increase has been granted to them; but it would be much better if the undermanning were never allowed to occur in the first place.

A more sensible system of bargaining about wage increases in the public services now needs to be worked out. Different people will have different ideas on this, but let us suggest one as a basis for discussion. First, the Government could announce some base figure of "economically tolerable" increases in the public sector's total wage bill, fixed either by the increase in gross national product in the year before, or by the expected increase in gross national product during the current bargaining year; the exact formula should be left flexible. If the base figure for the increase in gross national product in the year concerned worked out at, say, 4 per cent, the Government might reasonably offer an increase averaging 3 per cent to most public servants; it could then keep back the other 1 per cent of "economically justifiable" increases in the public sector's wage bill for special pay increases to certain named categories of workers whose recruitment it most especially required to step up. Because these "named categories" should be relatively small, an extra 1 per cent of the public service wage bill spread among them could give them very sizeable individual increases indeed.

The actual distribution of the general 3 per cent increase could then be the subject of bargaining between the Government and the civil service unions, with some public servants getting more and some less; the only thing that the Government would really have to insist on resolutely is that the "named categories" of workers in short supply should get their fair share of this "general increase" too. There could also be bargaining on whether agreements should run for one, two or three years; an increase of 3 per cent each year for three years would cost the Government the same eventually as a flat 6 per cent increase in a three-year contract, although under a three-year agreement the beneficiaries would gain more at first and less later in the contract. In years when the Government was particularly eager to hold down costs immediately, it would therefore favour short-term settlements rather than longer-term ones, but this could certainly be a matter for bargaining.

The solution of the teachers' pay dispute this week has, in fact, proved to be along these lines. The original Burnham recommendation was to have run for two and a quarter years: the new one will be for one and a quarter. The Government has held the line now, when it wanted to—and the teachers stand to get more under the new arrangement (say a further 3 per cent rise from March, 1963) than they would have done over the full period of the original Burnham contract.

IF the Government could work towards some such system of wage determination in the public sector, what should then be done about arbitration awards in outside industry? The main requirement here is that the reports of any arbitration courts in whose establishment the Government plays any part should be obliged to lay the plain, unvarnished truth before the public on two matters about any awards they are recommending; private industrial arbitrators could then be shamed into doing the same thing. The two essential requirements for aiding clear thinking on this matter seem to be:

(1) Arbitrators should always be required to state plainly, at a fixed place in their reports, what percentage increase in average earnings their recommendations would bring about, on the assumption that average hours actually worked remained the same as now; at present the real effect of many awards is fudged by citing only a small percentage increase in basic wage rates but ignoring the fact that a concurrent cut in official hours worked will expand overtime payments. By the same token, arbitrators would always be required to state the present level of actual earnings in the industry; at present they often mislead the public by mentioning only minimum basic wages rates which are sometimes only half of what average earnings are. Moreover, arbitrators should be required to look back to the period covered by their industry's last wage award, and to say what the workers' effective increase per annum in that period has therefore been; and to look forward and declare until what "stated date" their new award would have to last if the average increase per annum granted under it is not to exceed the average wage increase (3 per cent per annum or what not) at present being granted by the Government's own public service wage awards, in line with its estimation of the current rate of expansion in gross national product.

(2) Often, of course, it would be right for particular groups of workers to get above-average wage increases. Arbitrators should therefore also be required to make some estimate of the present level of unfilled vacancies in the industry they are reviewing, both by grades and by regions of the country; the latter point is important because it would often be right to concentrate above-average increases on special differentials for the grades or the districts where recruitment is most needed, instead of making them general. In the case of nationalised industries that are running at a loss, the estimate of "unfilled vacancies" should not apply simply to the number of (e.g.) buses which the establishment of the industry concerned might like to run; there should be a separate schedule showing how many staff would be required to run the number of buses that might reasonably be expected to operate at some sort of financial profit. If it is argued that these estimates would be too difficult for an *ad hoc* body of arbitrators to work out, then by all means let the Government provide a small team of economists and researchers to each major body to try to do the fairly simple sums required.

These requirements, by themselves, would not necessarily deter some arbitrators from recommending wage increases that were right out of line with the arguments of economic virtue that they would thereby be required to set down; but the public would soon come to recognise who these particular arbitrators are, and the spotlight of public criticism would be turned on them. Moreover, the requirement of promulgating a "stated date" until which an award should last, if it is not to be an above-average one, could become an important psychological weapon; under certain circumstances it might be right for the Government to refuse to grant any official arbitration facilities in any dispute where an effort is being made to secure an additional increase long before that previously stated date is reached.

The degree of "government interference" involved in stating such terms of reference for arbitrators would merely be that arbitrators were being required to tell the whole economic truth in their reports. It would be difficult for anybody to call such interference very wicked. Yet, by switching the emphasis of pay policy away from the doctrine of fair wages for inflation towards the proper economic doctrines of what the country can afford and where inflows of labour are most needed, a reform along the lines set down as a cockshy here, or any reasoned variant of it, could transform the whole prospect for future British economic expansion. During the next few months the British people are going to have to decide whether some such system is at last to be set up.

The 101 Masters

The UN needs to overcome the unwieldiness of its swollen Assembly as well as to ensure that its executive arm is not paralysed

NO MAN can serve two masters? The staff of the United Nations has to serve 101, now that the admission of Sierra Leone and the reappearance of Syria have lifted the number of member states into three figures. Membership has doubled since 1945. The 27 African and 21 Asian members, together with the 20 Latin Americans, constitute a clear two-thirds majority—without any need of help from the ten communist votes—on issues that strike a strong chord of anti-colonial or anti-racialist feeling; last week's unprecedented vote of censure on a speech by the South African foreign minister was a vivid illustration.

In the prewar show at Geneva, it was the Europeans who starred. Now they have been almost drowned in the human sea at Turtle Bay—and the tide is still rising. Western Europe, even if stretched to include Cyprus and Turkey, commands only a sixth of the Assembly's voting power; more, admittedly, than it would command if votes reflected populations, but little enough for the old masters. Again, the two secretaries-general who served the organisation during its first seventeen years were both Europeans, but the next one will not be. On Tuesday the western European delegates held an indignation meeting over the prospect that there would not even be one of their nationals among the new chief's deputies. The proportion of their nationals in the ranks of the secretariat as a whole is also being reduced to make more places for Africans and Asians.

For Europeans, it is only too easy and natural to equate the United Nations' present troubles with this eclipse of Europe, and to forecast that when "equitable geographical distribution" has ousted many experienced old-timers from the staff, the predominance of rawness among both masters and servants will prove a disastrous combination. But nostalgia for the way things were run at Geneva in the old days is of little relevance in a fast changing world. Is it solely because they are green that the new faces are distrusted, or is pigmentation of another sort the real objection?

There is certainly still a tendency for the aim of making the United Nations more effective to be confused with the instinctive wish of each group for more say in its operation. The west Europeans (who are not alone in this respect) showed this confusion in their statement after their Tuesday caucus, which rejected any rearrangement that "would not give Europe its rightful place." It is true that the recession in European representation at the United Nations has coincided with a resurgence of European economic strength, and is to that extent unrealistic. Two of the greatest European nations have contributed to this bizarre effect—France by turning its back on the organisation's affairs in a mood of national affront, Germany by choosing not to be represented at all rather than see two German governments sit side by side. However, the Europeans would be wiser to hold to the principle that the secretariat is better not composed along lines of national, regional, or ideological representation, at any rate in the present state of world struggle and tension; or its task will be made impossibly difficult.

THE Europeans, like the vast majority of member governments, had already rebuffed Russia's demand that the next secretary-general should be fettered by veto-wielding deputies. They had insisted that, as in the past, he must be free to accept or reject his assistants' advice; and this essential condition still looks like being secured, although Thursday's reports suggested that U Thant might not after all be going

Appointments, Business and Personal notices, and other Classified Advertisements: pages 293 and 294

up in the fast lift to the top floor of the secretariat skyscraper. What, then, is this talk of *rightful* places?

In June Mr Hammarskjöld made public his own proposal—which has been widely approved, and nowhere decried—that the secretary-general should have five chief political advisers and assistants, one of them American, one Russian, and three "from countries outside any power-blocks." He was obviously neither toadying to the uncommitted states nor in any other way concerned with "rightful places"; he wanted a set-up that would work. Experience has amply shown that a UN secretary-general needs, above all, political assistants whom he can entrust with special assignments, as in the Congo. A Soviet career official temporarily seconded to the secretariat is, in practice, useless for this purpose; an American or other Nato national, however single-minded in loyalty to the UN, is of limited use because he is vulnerable to the kind of baseless attack that Russia made upon Dr Ralph Bunche's record in the Congo. Even among the "uncommitted," few can be found with a reputation for disinterested competence that would shield them from criticism and thus lend the UN more effectiveness. But it is among these few that the key political officials of the secretariat have to be sought—not because they are necessarily purer in spirit than other men, but simply because they are more usable.

The place for a "cabinet" is above the UN's chief official, not below him. What the secretariat needs is clearer and more continuous direction from its 101 masters, not a hidden layer of factionalists in its own structure whose wrangles might prevent it acting even when the guidance from above was clear. The presence at UN headquarters of the permanent missions of the member states gives them plentiful opportunities of reminding the secretariat to take their various viewpoints into account. But no one of the 101 masters can expect obedience to his wishes unless he has first won over enough of the other 100 to the same view to make it official UN policy. And that is a cumbrous business when the Assembly is sitting, a virtually impossible one when it is not.

U Thant: stuck in the lift?

Ever cumbrous, the Assembly is now so swollen that it has taken a month to get through its rambling and disconnected "general debate." The Charter's provisions for smaller, quasi-executive organs have revealed their inadequacies all too plainly. The Trusteeship Council has nearly run out of trust territories to watch over. The Economic and Social Council has defied repeated attempts to drag it out of its normal state of near-oblivion. The Security Council rarely emerges from a similar state (its last resolution on the Congo was in February). Whenever it does, its absurd composition draws caustic comment: Turkey is now its representative for eastern Europe, Liberia for western Europe, Formosa for China, and the Syrians could make out a case for occupying on alternate days the seat to which the United Arab Republic was elected while they were united with Egypt.

The decline of the councils has contributed to the congestion of the Assembly. It is gorged not only with members, but also with matter that the founding fathers meant smaller organs to digest. Little wonder that it usually requires a general state of panic or outrage to rouse the sluggish monster to give its servants any definite instructions about the complex tasks it has landed them with. The member states will have solved only part of their problem if they manage to get a new (and unfettered) secretary-general. They will simply be thrusting him into the same intolerably vulnerable position as his predecessor, unless they also take thought for their own parliamentary procedures.

Some thought about this is in the air. Siam, Jugoslavia and other members have been canvassing the idea of creating committees of a workable size to fill the gap between the unwieldy Assembly and its struggling servants. The smaller nations' general sense of fear and frustration has been vividly expressed by the Nigerian foreign minister, who last week, in effect, told the great powers to move over and let others run the show. It was Mr Hammarskjöld's often expressed belief that these "others," who have the keenest interest in seeing the UN thrive, are the members to whom the secretariat is responsible in the fullest sense. They have played a crucial part in beating off Mr Khrushchev's assault on the loyalty of the secretariat. Can they now sink their own many differences sufficiently to devise workable means of guiding their international servants through the trials to come?

The Economist

OCTOBER 19, 1861

FREE THOUGHT FOR STUDENTS

The Duke of Modena's objection to University learning appear to be infectious. Not only have they made a complete conquest of the Marquis of Normanby and roused that venerative nobleman to a campaign in their favour, but they seem to have been eagerly taken up by the highest authorities at St Petersburg, in the absence of the Emperor in the Crimea. Hitherto the Universities have been the principal centres of free thought in Russia. Like the students of the German Universities, the men who end in being submissive bureaucrats, begin life in the centre of the most extreme and fiery democracy of theory, and yet the Russian Government cannot apparently see the worldly prudence of leaving this safety-valve of liberal youthful feeling free. . . . [The] new rigour is one ultimately to be lamented, we believe, only by the *despotic party*. . . . That the students are the embryo bureaucracy is true, but is exactly the truth which should induce the Government to be lenient with them. The depraving power of official interests is found sufficient to extinguish the seeds of radicalism in all minds when it has been permitted to bloom fully in the years when it is most ardent and sentimental. But if rigidly repressed, then it is likely enough to take a more formidable form, and to grow into mature revolutionary purposes where otherwise it would have flowered and died. Experience shows that very free and democratic Universities are one of the safest outlets for social discontent in despotic countries. When young men have had their say without let or hindrance, they easily become aware of its extravagance; a reaction sets in, and if backed by the power of corrupting official self-interest, only too surely obliterates all the elements of revolutionary enthusiasm. It is the men who are permitted no freedom in their youth whose democratic sentiments condense to sterner stuff as they grow older. . . . That a wide-scepticism and spirit of resistance to authority has taken possession of the educated youth of Russia seems to be established on the clearest evidence. If the Government were as cunning as despotic Governments usually are, they would not discourage the scepticism, while they would trust to self-interest to bribe out all the smouldering dislike to authority.

The Church of England

A survey of the present state and problems of England's established church

Comprehensive, tolerant, quite illogical, the Church of England is a very English institution. Protestant and reformed, it takes pride each day in proclaiming its belief in the holy Catholic Church, and includes within its communion shades of theological opinion which range from the anglo-catholic Church Union to the ultra-protestant Church Society. Outsiders sometimes mistake this diversity for doctrinal indifferentism; insiders explain that each school is firm in its own orthodoxy but willing to tolerate within the same fold other peoples' 'doxies as well. The truth is that Anglicans inherited doctrinal diversity from the original Elizabethan settlement three hundred years ago, which was intended to embrace as much of the nation as possible; and they have learned to make the best of it. The secret of Anglican survival is dogmatic tolerance just as that of Rome is dogmatic intolerance. Because compromise has always repelled a certain austere type of religious mind, the Church of England throughout its history has been apt to lose bands of its zealots, shedding a wing in one century and a section in another. But the main body somehow contrives to go marching on.

Besides being English, the Church of England is also a very medieval establishment. A benefice is still essentially a piece of property. Patronage rights are extensive, half of them vested in private hands and the rest in the crown, the church, the universities and other institutions. Once appointed, an incumbent becomes virtually owner of his benefice and is practically irremovable. Curates are nominated by the incumbent and licensed by the bishop and cannot be removed without the latter's consent. Deans, canons, and other dignitaries also have entrenched positions, so there are strict limits on the powers of the Church of England's diocesan bishops. (There are 43 of these, 29 in the southern province of Canterbury and 14 in the northern province of York; since 1870 there have also been 40 suffragan bishops, who bear territorial titles but wield no jurisdiction, and are dubbed by the irreverent "confirmation hacks.") The Church of England has escaped nearly all the post-Tridentine centralising of the Roman Catholic Church. The Archbishop of Canterbury is not a protestant pope, although Dr Fisher sometimes behaved like one; he enjoys a primacy more of honour than of jurisdiction.

The Church of England claims to be the church of the nation and this is borne out by the baptismal statistics. Some 27 million Englishmen, 66 per cent of those born in the two provinces of Canterbury and York, are baptised Anglicans. But baptism is not a reliable indicator of active membership. Confirmation is a slightly better one, and the number of confirmed members (aged 13 and over) drops sharply to about 9½ million. Easter communion is generally accepted as the best test of the committed, and Easter communicants numbered 2,248,229 in 1958. The rest of the baptised are only nominal Anglicans.

The Anglican Church is said to be "by law established," but no one statute lays this down. Establishment does not bring it any money from the state, but does bring a number of statutory and customary privileges. Twenty-six of the senior Anglican bishops are entitled to sit in the Lords. The Archbishop of Canterbury ranks before every other subject of the crown, excluding only members of the royal family. The Church of England has the right to conduct all services associated with the state and to celebrate marriages in its own right. This official rank of the Church of England undoubtedly adds to its influence; it makes "C of E" the ritual religion to belong to; but it is bought at a high price.

No change in the doctrine or ritual of the church can be made without the consent of Parliament. All the bishops and many other high ecclesiastical dignitaries are appointed by the crown, which in practice means by the prime minister. The judicial committee of the privy council, a body composed entirely of laymen, is the final court of appeal for all matters concerning church doctrine and discipline. Feeling in the church is growing that it should have an official say in the appointment of its own officers; and that the ecclesiastical jurisdiction which up till now has been undertaken by the judicial committee of the privy council should be handed over to a special new court (perhaps composed of the two archbishops and a number of Anglican laymen who have held high judicial office).

The other disability of establishment—that Parliament ultimately controls the Church of England—is tempered by the practical fact that the church has considerable autonomy in conducting its ordinary affairs. In each province "convocation" (and especially the upper house of convocation, which is composed of the diocesan bishops) is the highest ecclesiastical authority and exercises considerable spiritual jurisdiction over the church. For instance, the rule that no divorced person can be re-married in church while the original partner is still living has no legal validity, but because it is an act of convocation is almost universally observed; the only right the clergy have at law is a legal privilege to refuse to conduct such a ceremony. Apart from the two convocations, the principal instrument of internal government is the Church Assembly, a vigorous and lively organisation, made up of bishops, clergy and laity (the latter elected on the basis of the

parochial electoral rolls). Parliament has delegated much of its legislative authority on ecclesiastical matters to the assembly since 1919, but retains a right of veto (which is far from theoretical, as the rejection of the 1928 prayer book showed).

The Church of England also possesses a network of ecclesiastical courts. Canon law is part of the law of England and the official acts of the church must be carried out in accordance with the law. Each diocese has a consistory and archdeacon's court (day-to-day supervision of the clergy and churches of each diocese is the archdeacon's office, acting as *oculus episcopi*) ; there are courts of appeal in each province ; and special courts can be set up, such as the court of the archbishop for the trial of heresy. All this antiquated jumble might well be reformed when the revision of canon law, tortuously proceeding since 1939, is completed in the 1970s.

TODAY the Church of England is beset by pastoral problems. Its clergy has dwindled as well as its congregations. In 1911, a population of 33½ million was served by 23,000 clergy, but in 1958 for a population of 43 million only 15,000 were available. Death and retirement claim 600 clergymen a year, and the church has only recently succeeded in replacing these each year. The average age of the clergy is going up ; it had risen from 44 in 1851 to 55 in 1951 and today is probably near 56. York (i.e., northern England) is shorter of clergy than Canterbury (the south).

The Church of England also has a pressing schools problem. Many of its schools have been unable to bear the financial burdens placed on them by the 1944 Education Act and have changed from "aided schools" (which provide a full Anglican training) to "controlled status" (where religious instruction is limited to two hours a week and based on a syllabus acceptable to non-conformists). In 1959 there were only 402,640 Anglican children in aided schools compared with 482,375 Roman Catholics. Some 14.7 per cent of the total of schoolchildren in 1957 were still in Church of England schools, but this compared with 17.2 per cent only seven years earlier.

Despite its reputed wealth the Church of England has serious financial problems too. Apart from the pay of certain chaplains the Church of England receives nothing from the state, and depends on voluntary contributions and endowments. The income of the parochial church councils for 1959-60 was £18.6 million, of which £12.8 million came from voluntary contributions. For the same period the investment income of the Church Commissioners was £14.3 million; the commissioners have made handsome capital profits in recent years since their investment policy has been overhauled by an expert committee, and their rising income has been used to raise the average stipend of vicars, which is now at a minimum of £750 a year.

The Church of England today has spread far beyond the confines of Britain. Past missionary efforts have resulted in the growth and development of autonomous churches in Australia, Canada, New Zealand and the United States ; there are also a number of overseas dioceses directly under Canterbury. Since 1867 the Anglican Communion has held regular conferences at Lambeth and their influence on Anglican thought has steadily increased, distinguishing it from that of continental and American protestantism. The appointment of the American Bishop Bayne as executive officer of the Anglican Communion in 1960 marked a new stage in this international development. The Church of England is certainly better organised today than for many years past, but its impact on England is far from being as effective. A majority of the nation stays indifferent to its ministry and witness.

NOTES OF THE WEEK

PARLIAMENT

Who Comes Home?

THE country now has the evidence on which to judge whether the emergency recall of Parliament, which has annoyingly interrupted many people's timetables, was really particularly necessary. What is clear, however, is that it is a great mercy that Parliament was still in recess last month when the fighting in Katanga broke out. Otherwise the stream of criticism against Dr O'Brien—which emanated from the Tory backbenches during this week's foreign affairs debate—would certainly have made it even more difficult to keep the British Government's name unmuddied in the uncommitted Commonwealth. The debate provided some troubling indications that the Conservative party, despite the massive triumph of its left wing at Brighton, still contains a large enough right wing in the House to give the Government some cause for unease.

Across the floor, Mr Gaitskell has been served notice that his extremist wing is still kicking too. Mr Greenwood is to stand against him in Labour MPs' election for the leadership, Mrs Castle against Mr Brown for the deputy leadership, and Mr Parkin against Mr Bowden for the office of Labour chief whip. Obviously this left wing trio can expect less than the 81 Labour MPs' votes that Mr Wilson gathered against Mr Gaitskell in the election for the leadership last year, but the very fact that there is to be a contest means that the counting of heads will begin again. Throughout the coming session both the Conservative and Labour leaderships will be concerned to try to degrade their guerilla wings from the status of a recognisable faction to that of a mere dissident group. The difference between these statuses is that a recognisable faction sometimes has to be appeased by a party leader, although preferably by absorbing some of its members into his counsels rather than by adopting any of its policies ; a mere dissident group can be overridden because it consists of bounders who are universally regarded as "damaging party unity."

When they look in front of them, instead of behind them, both front benches at the beginning of this session are inclined to regard their immediate opponents as even more reasonable chaps than usual ; Mr Gaitskell's patriotic speech on foreign affairs on Tuesday won many Conservative plaudits, and the Macleodite swing of the Tory party could logically tend to revive Butskellite bipartisanship in home affairs again. But some time early in this session fighting has got to be started across the floor, between the best of enemies, for political conventionalism's sake; the political struggle cannot for ever be left to be fought merely internally, within each party, between the worst of friends. One's guess is that Labour will choose industrial relations as the first bloody battlefield, and that it may thereby make a grave, if ineluctable, electoral mistake.

TEACHERS' PAY

At Last

THE teachers have decided to be sensible. The settlement they accepted on Wednesday means that the Burnham committee formally agrees to the £42 million salary offer by the Minister of Education, on the understanding that a new agreement can take effect from the beginning of April, 1963. If the teachers receive a further 3 per cent rise then (and if the increase in national productivity that the Government expects has materialised they can hope for more than this) they will be better off than they would have been had the £47½ million Burnham recommendation been implemented for the full contract period up to April, 1964. Negotiations will start in July next year. The date envisaged for the next award has no particular relevance (as some people are curiously claiming) to the length of the general pay pause: the period of the English teachers' award is merely intended to synchronise with the existing Scottish one which ends on March 31, 1963.

The new agreement naturally relieves the minister of the need to enforce his basic salary scale by immediate legislation. It thereby gives all concerned a better chance to discuss the overhaul of the Burnham machinery itself in a less strained atmosphere (the teachers' threatened withdrawal from the supervision of school meals would have been a serious obstacle to restoring relations) ; it also gives the teachers' side a useful opportunity to see how the Government's policy on wage negotiating as a whole is shaping up. Sir William Alexander, the spokesman for the local authorities' side of the Burnham committee, said on Wednesday that the committee as a whole would resist unilateral action against the teachers' salary machinery, but equally he admitted the blinding truth that Burnham itself could be improved upon. It will not have escaped anyone's attention that the salary machinery for the teaching profession in Britain is not uniform as it stands: the Minister's ideas merely seem to be moving towards the negotiating procedure already established in Scotland. There is nothing to cavil at in this. It will, however, be plain to the members of the National Union of Teachers that the new salary arrangement is one that has been on open offer from the Minister for the past six weeks: why the executive of the NUT has taken so long to grasp and expound the realities of the situation is a matter for the union membership to elucidate for themselves.

TURKEY

Morning After

THE military junta, which has been ruling Turkey for nearly eighteen months, promised fair and free elections, and the Turks took it at its word. In the elections held on October 15th, roughly half the electors, by voting for one of the three parties which are in effect heirs to the Democrat party of the late Mr Menderes, demonstrated that they did not approve of the soldiers' stewardship. As our correspondent in Ankara points out on page 233 this should not really have surprised the present government, especially as in the referendum on the new constitution in July —the only other occasion on which the Turks have had an opportunity to express their feelings about the military coup of May, 1960—nearly 40 per cent of the votes were adverse. Moreover since then Mr Menderes and two of his colleagues have been executed. But it must be deeply discouraging for those officers who believed, as most of them did, that in overthrowing Mr Menderes they were carrying out a patriotic duty. And it means that Turkey's new attempt at parliamentary democracy will begin in the most difficult and inauspicious circumstances.

General Gürsel had obviously hoped that he would be able to cast his mantle on the Republican People's party, Mr Menderes's old adversary. But although the RPP has emerged as the largest party in the Assembly, it does not have an absolute majority ; and in the Senate, elected by a different voting system, it has some 24 seats less than the Justice party, led by General Gümüşpala, which has presented itself, within the limits of what could be dared, more openly than the others as successor to the Democrats. Clearly Turkey's eighteen months of military rule have not turned out to be a unifying experience.

Some sort of coalition now seems inevitable. In theory the RPP could go into opposition, but it is doubtful if the military junta would accept this. It has asked the parties to form a four-party national government under a neutral premier. This may turn out to be the only practicable solution, but it would hardly be a happy or a durable one ; almost certainly, it would mean that the army remained the real ruler of the country. Another solution might be a coalition between the RPP and Mr Alican's New Turkey party which enjoys a good deal of support among the intellectuals. This might be the best solution if Turkey is now going to make a genuine attempt at parliamentary government.

EGYPT AND SYRIA

Divisive Unity

TRUCES between Arabs are notoriously short-lived. By gracefully conceding defeat in Syria, President Nasser raised hopes that the former partners in the United Arab Republic might in future live apart more equably than they had lived together. Those hopes have been dashed by this week's fierce exchange between Cairo and Damascus. What angered Cairo and roused its combativeness was the proposal for a decentralised Arab confederation, advanced by Dr Kuzbari, the new Syrian prime minister, on October 11th. This was a direct challenge to President Nasser's claim to be the sole leader of the movement for Arab unity. "Our people," he wrote in March to King Hussein, "have been chosen by destiny to be both the vanguard and the base of the Arab struggle."

Now President Nasser is thrown on the defensive ; how much so, was brought out on Wednesday by his explanation to Kuwait of the strange decision to withdraw his contingent from the Arab defence force, only just assembled, there. The real meaning of his vague hints of "conspiracy" and "provocation" involving the contingent may become clear later.

Arab unity may be a fuzzy notion in the minds of Arab theorists, but to the men actually engaged in the inter-Arab power battle it means something quite specific: the struggle for the control of Syria. It is a tacit premise of Arab politics that whoever controls Syria leads the Middle East. A combination of Syria with either Egypt or Iraq is more than a match for any other local grouping. The loss of Syria, therefore, means far more for President Nasser than that of a distant and factious province. It raises the possibility of Syria moving into a rival Arab sphere of influence, and of the consequent emergence in Arab Asia of a unit strong enough to challenge the Egyptian "elder sister." This is a development which it has been Egyptian policy for a quarter of a century to prevent.

No wonder Cairo now sees sinister imperialist designs behind Dr Kuzbari's proposals. Today, as in pre-union years, Egypt raises the alarm of "Fertile Crescent" or "Greater Syria" whenever Syria, slipping from Cairo's grasp, throws so much as a glance towards Amman or Baghdad. But President Nasser may be counted on to resist vigorously any attempt to "contain" him on the Nile. His Arab rivals might well find allies in Egypt itself. Arabism has never been a strong growth there ; and the sight of President Nasser's Arab policy in ruins may be expected to encourage the latent isolationism in Egyptian opinion. One of the president's most deep-seated fears must be that all the effort he has put into making Egyptians feel at one with other Arabs will now have been wasted. Nothing could sap his position as Arab leader more effectively than a revulsion against Arabism in Egypt itself. "Brothers," he cried on the morrow of the Syrian coup in an appeal to his people, "there is no more vital time than now to call upon us to adhere to our Arabism."

WEST MIDLANDS

The Awkward Ones

THE undeniably serious problem o coping with the overspill of populatio from Birmingham and the west Midland had an unsatisfactory airing last weekend Dr David Eversley, secretary of the Mid lands New Towns Society, set off the rum pus by accusing the Ministry of Housin and Local Government of designs to dum

300,000 people just outside the green belt. The Ministry replied stiffly on Monday that no decisions had been taken but that, of course, good planning standards would always be upheld. This exchange does not advance matters very far. There is, in fact, a potential overspill in the present west Midlands conurbation of some half a million people. The Ministry's idea seems to be that 200,000 of these can be dealt with by the prospective new town at Dawley and by local expansions at Daventry, Redditch and Worcester under the Town Development Act. But this still leaves the awkward 300,000, and the Ministry has not denied that sites for the 100,000 houses that they need are being sought in the three surrounding, and apparently rather reluctant, counties.

If employment is allowed to go on rising in the Birmingham region (as it is still doing) there will be no option but to allow the city itself to expand or to have many more people commuting to their jobs into Birmingham across the green belt. Some industries can be persuaded to move to a new town like Dawley (and there seems to be a growing case for a second new town as well); it is also desirable, although this may be harder to achieve in practice, to shift as much routine office work out of the city as possible. (One of Dr Eversley's complaints is that when industrial workers have moved out of Birmingham office workers promptly move in.) The dispersal of industrial growth can be tackled either under the New Towns Act, or (as the Board of Trade prefers) by encouraging firms to go to areas with some slack of unemployment in north east England and elsewhere.

But these methods cannot solve the major problem of providing enough housing to clear Birmingham's own overcrowding and slums. The experience of London's new towns suggests that their contribution to this kind of rehousing, although important, is not necessarily the most efficacious way of tackling the more urgent overspill problems. As far as Birmingham is concerned many of the people who need to be rehoused are tied to jobs in the city, and it is arguable on economic grounds that most of these jobs ought to remain where, in fact, they are: there is a point at which it is unwise to disrupt industrial success stories. It is wrong, therefore, to shut one's eyes to the need to rehouse a substantial population near their work, and to shudder too doctrinarily at the thought that Birmingham may need some outer suburbs of the sort that Reigate and Dorking are to London. But commonsense on this point needs to be complemented by purposeful and imaginative efforts to prevent the level of general employment in and around the conurbation from rising in the spectacular way it has been doing.

FRANCE

Seven Years' War

MOSLEM mass demonstrations reached Paris itself this week. Thirty thousand Algerians came out into the streets on Tuesday night in several districts of Paris to protest against the virtual curfew imposed on them earlier this month. The police went into action. The provisional casualty list mentions three dead and 77 (including 13 policemen) wounded. More than 11,000 Algerians have been arrested and the bulk of these are being deported. The Paris police have been heavily reinforced to face yet another move in the absurd, and yet inevitable, cycle of violence.

The Moslem insurgents have stepped up their terrorist activity in France in recent weeks, taking policemen as their favourite targets. The French authorities replied by "advising" Algerians living in the capital or its suburbs not to leave their homes between 8.30 in the evening and dawn (and the word "advice" is the French understatement of the year). Justifiable or not, the discriminatory measure angered the Moslem community and increased its sympathy for the rebels. The rebel government in Tunis will now be able to claim the Paris demonstrations as yet another proof of its hold over Algerians everywhere. The

Strikes, Claims—and Lockouts

EVERY year with the autumn gales comes the round of wage claims from the major unions, and the prospect, more or less remote, of winter strikes. This year the happy—and inflationary—solutions have been ruled out by the Chancellor. But the Government has let cracks appear in the pause: three wages council awards have been authorised by the Minister of Labour because the employers agreed to pay more before the pause was announced: yet another wages council (for *catering staff*) may be allowed an increase. The leaders of the public servants' unions may now try to exploit the fact that a few *government scientists* were awarded a rise this week: but these people's case was based on the ground that a rise was needed to overcome a shortage of essential men, rather than on the well-worn platform of "fair comparability." By outmanoeuvring the *teachers* (see page 211), the Minister of Education has averted an unpleasant, rather than a dangerous struggle.

Wage claimants in private industry have one recent increase to look to: but *Ford Motors* got substantial concessions on productivity and on tea-breaks in exchange for their deal on higher wages and shorter hours. The same healthy trend has shown itself in the *building* industry: the last little strikes over the building workers' cuppa petered out this week after a skilful and somewhat obscure text allowing for local arrangements on tea-breaks had been worked out.

Far more portentous are the two giant lock-outs in *Rootes Motors* (page 276) and at *Steel of Wales* (page 216): in both the employers are standing up to small groups of their workpeople—at Rootes to an unofficial team of persistent troublemakers who are disapproved of by their unions (although a few left-wing union officials have displayed a sadly ambiguous attitude); and in Wales to a tiny group of official strikers who by their action have threatened the livelihood of a whole community. Two smaller and odder strikes are on the cards—by Equity and the Variety Artists on *independent television*, possibly beginning on November 1st, and by *pharmacists*. The most bizarre threat is that of the supervisors' and technicians' union, whose members will stop work at *airports* for one hour on November 2nd to try to secure Government finance for a supersonic airliner.

The most formidable claims come in *engineering*, and their progress will depend on the employers' answer in about six weeks' time to a claim for perhaps £1 a week for manual engineering employees. The *shipyard* and the *railway workshop* men have also asked for indeterminate amounts, and the white-collar engineering workers are to put in their claim on October 31st. The *railwaymen* and the *electricity supply* employees have been turned down, and have expressed the expected indignation: the railwaymen's union has persuaded its Scottish members not to strike on November 6th in protest against the closing of branch lines. All three railway unions—the clerks, the footplate men and the NUR—are furious at the rejection of the Guillebaud principle of automatic pay rises: for once it is just possible that they might act together. Other current claims have gone in to the employers from the *clothing* workers, the *textile* makers and finishers, and the *agricultural* workers: on Thursday the *mineworkers* decided to ask for a rise of £1.

The big threat remains the claim for a rise for workers in *government industrial establishments*: Mr Cousins and Sir Tom Williamson agree that the Government had committed itself to reviewing these people's pay at regular intervals, and their combined action, if it materialises, could be dangerous. The risk this winter is that those manual unions whose claims are directly affected by the Chancellor's pause may get together to oppose it—and rally to their side the unions in private industry affected by the new toughness of employers. Such unity could possibly be backed by the Labour party on the political front (see page 210).

GROUP PENSIONS are briefly introduced, clearly explained and factually discussed in the Society's new publication 'Pensions and Retirement Benefits'. This booklet, which is issued as a guide for employers who may be considering the installation of a scheme to provide pensions or other retirement benefits for some or all of their employees, is available on request from

DO YOU FLY BECAUSE YOU ENJOY IT
or just because you're in a hurry?

By his second or third crossing, the transatlantic traveller begins to be critical. He appreciates the speed—but where has the pleasure gone? It hasn't—if you fly on our Shamrock services. On these services, the speed is provided by the latest Boeing jet liners and the pleasure begins at the beginning. Why? Because alone among airlines we offer:

THE 11-POINT TAKE-OFF You can fly to America from any of eleven cities in Britain—London, Manchester, Edinburgh, Glasgow, Blackpool, Liverpool, Leeds/Bradford, Birmingham, Cardiff, Bristol, Isle of Man—saving perhaps hours of cross-country travelling.

THE LUCULLAN INTERLUDE Relaxing, before the long hop, in the comfort of Dublin Airport, you will find a restaurant where the food is as superb as anywhere in the world—each dish a creation cooked and served to highest international standards . . . Dined and wined, legs stretched, lungs freshened—you discover the next pleasure . . .

SMILING IRISH EYES, sparkling property of the air hostesses—beautiful, soft spoken, thoughtful and efficient—that you will meet whether you fly 1st Class Golden Shamrock or Economy Class Silver Shamrock. If you're a traveller first class, *your* eyes will light up at the sight of—

THE GOLDEN SHAMROCK MENU starred with such delicacies as Broiled Liffey Salmon or Limerick Ham Bunratty style, with Pouilly Fuisse 57 or Charles Heidsciek 53. Travellers who know, place Golden Shamrock food in a class by itself.

THE 2-POINT TOUCH-DOWN Shamrock services give a choice of flights not only to New York, but also to Boston. On which thoughtful note, we wish you goodbye—until your next transatlantic trip.

DUTY FREE SHOPPING The Shamrock transatlantic service gives you time enough at Shannon to make profitable purchases at the International Duty-Free shopping centre.

AER LINGUS
IRISH INTERNATIONAL AIRLINES

Algerian community in France still exceeds the 300,000 mark, and is concentrated chiefly around Paris and in the industrial areas of north-eastern France.

While the plague has thus been spreading to France, in Oran—Camus's town—mobs of angry Europeans have once again been lynching Moslems, as if bent on destroying any chance of peaceful cohabitation in the future. Tension between the two communities is reaching a paroxysm in Algeria and everybody is now wondering how the Moslem population will celebrate the 1st of November, the seventh anniversary of their insurrection. The week's distressing and repugnant events in the streets of Paris drive home once more the evil importance of the war as a source of infection to France itself.

FRANCE AND TUNISIA

Fall-Out from Bizerta

OUTWARDLY, Bizerta has returned to normal. French troops are back in their base areas; the whole town is in Tunisian hands. No good reason now remains for delaying talks about the status of the base and about the awkward subject of its future evacuation. The July battle is over; but it is very far from forgotten. A painful reminder was issued in Geneva on October 13th by the International Commission of Jurists. Sponsored by the commission, three distinguished lawyers, including Mr G. Gardiner, QC, investigated on the Tunisian side and concluded that French paratroopers had perpetrated numerous acts of atrocity during the July fighting. The French government, angrily denying all the allegations, has recalled that the Tunisians, at one stage, rejected the idea of a combined inquiry. It implied that this was why the international team had not been allowed to investigate on the French side.

Three other distinguished members of the International Commission—including Lord Shawcross—have since dissociated themselves from the report, questioning, if not the findings, at least the manner in which it was presented without prior reference to the French government. On the substance itself it is hard for outsiders to form a definite judgment. Yet two circumstances might well be given thought in Paris. The previous, and unpunished, behaviour of French paratroopers in Algeria inclines many people to find atrocity stories credible. Secondly, the present French government's attitude of ostentatious contempt for international bodies ensures a ready hearing in the world for suggestions that France has something to hide. (The seizure, this week, of a Paris daily which published the commission's report, together with comments by its correspondent, is certainly not the best way of proving innocence.)

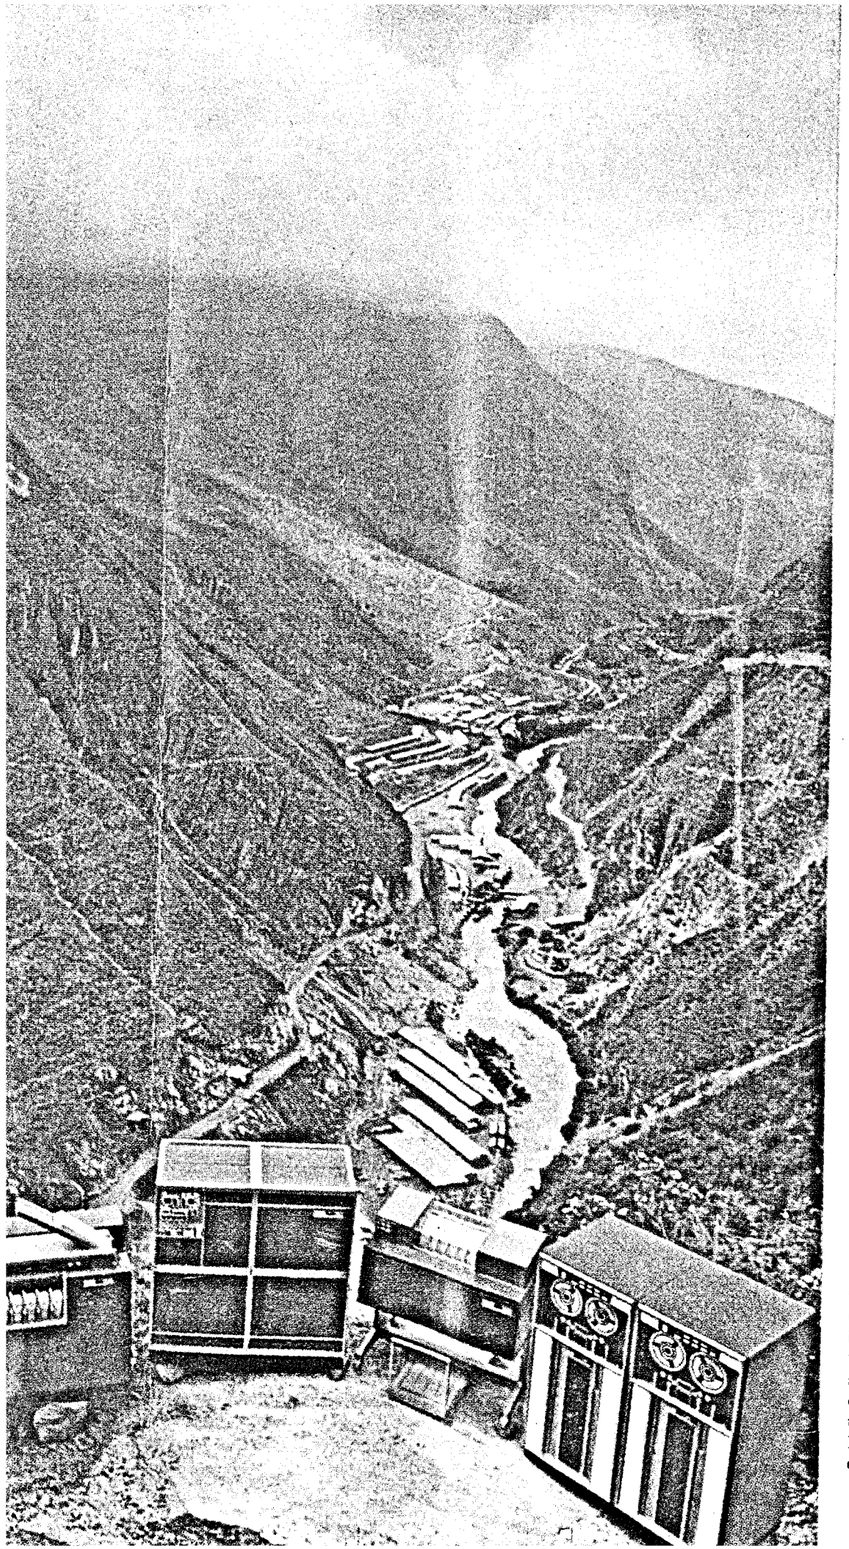
In Tunisia, too, the after-effects of the Bizerta incident are still being felt. The way in which President Bourguiba first threw his men resolutely into battle, and then returned to what seemed his original position—"going into reverse at 100 miles an hour," according to one of his colleagues—has proved too much even for the docile Tunisians. The departure of M. Masmoudi from the ministry of information is a symptom of this malaise. M. Masmoudi is connected with the group of younger politicians who express their views in M. Bechir Ben Yahmed's lively weekly, *Afrique Action*. It is no accident that his removal coincided with the publication in that weekly of a leading article questioning the virtue of "personal rule" in newly independent states. President Bourguiba's position is still solid, but after his changes of course over Bizerta, his infallibility no longer goes unquestioned.

TRADE UNION LAW

Killed by Extremists

ALL hopes that the Government might introduce a sort of Companies Act for trade unions were buried at Brighton last week, when Mr Hare firmly rejected a very mildly worded motion at the Tory conference (calling for an inquiry into trade unions, and suggesting legislation if the Government then desired it); and when the conference voted with Mr Hare by an overwhelming majority. The manner of this burial was interesting. There was only one even mildly good speech in the whole debate, when the mover of the resolution propounded the sort of reform that *The Economist*, among others, has long called for (enact that trade union privileges under the 1906 Act should apply only to unions registered with the chief registrar of friendly societies; get the registrar to publish an annual report; give him power, as a last resort, to strike off unions which either blatantly infringe personal rights of their members or engage in ballot rigging).

Nearly every other speech in the debate fell into one of two categories. Against the motion spoke a succession of the members of the small band of minor trade union officials who give increasing service to the Tory party on its advisory councils and so forth, and whom the party cherishes for the devotedly worthy men they are. Their continual cry was that any legislation could lose the Tory party three million trade unionists' votes, and that legislation would involve building hundreds of new prisons to lock up thousands of unofficial strikers; the arguments that a sort of companies' act would annoy trade union officials much more than ordinary trade union members, and that the proposer of the motion had shown how such an act could be enforced without bringing any shades of the prison house into the matter, were completely disregarded. For the motion spoke some of the most right wing Tory backwoodsmen, who plainly did want to lock up unofficial strikers and do all the things that the Tory trade union officials rightly castigated. By the time that Mr Hare summed up, this sensibly liberal Tory conference of 1961 felt overwhelmingly that it could not vote with most of those who had spoken to the motion. The net effect is that all hope of reform thereby goes into limbo for another three or four years.



GHANA

Queen to Red Pawn?

THE QUEEN belongs to many countries and many peoples; she is only in a very general way the property of His High Dedication the Osagyefo, the President and Victorious Leader of Ghana. She is, first of all, Queen of the United Kingdom; secondly Queen of her non-republican realms; thirdly head of the Commonwealth. Ghana has a claim on her in her last capacity—but it is in her first that her relationships with West Africa will be judged. Whatever decision the British Government takes about the Queen's proposed visit to Ghana on November 9th to 20th will be seen as a declaration of policy. The decision will be hard to make.

The visit should be cancelled if there is any serious reason to believe that the Queen's life would be in danger. The British Government has investigated this point and, up to Thursday, still hoped that the Queen would be at least as safe in Ghana as she is anywhere else. It would be tempting to cancel the visit as an expression of British disapproval of a government that locks up fifty people without trials; moves steadily towards complete authoritarian rule; and looks like being in danger of doing many more of the repulsive things that authoritarian states in a mood of high tension sometimes do. But this leads on to treacherous ground. When ought a British Government, or the British monarch, to express disapproval or approval of a country's internal policies? Ghana's internal affairs are no more, and no less, private than *apartheid* in South Africa, or Portuguese repression in Angola, matters in which the British Government has been over-careful to avoid appearing to interfere, as Mr Gaitskell pointed out in the Commons on Tuesday.

In practice, if charges of "neo-colonialism" are to be avoided, Britain has to be more careful to be seen not interfering in Ghana's internal affairs than in the internal affairs of older countries, or of countries that were not lately British colonies. (Britain's foreign policy differences with Ghana were—on paper at least—ironed out in the joint statement signed by Dr Nkrumah and Mr Sandys in Accra on October 4th.) The price of the Queen's visit may be to be accused of bolstering an unpleasant regime; the price of asking her not, after all, to go would probably be a complete break between Britain and Ghana and a readjustment of Commonwealth habits of thought as far-reaching as the one made necessary by the expulsion of South Africa. It might also make a genuine red pawn out of Dr Nkrumah.

CONGO

Mysteries of Katanga

MR TSHOMBE'S failure to hand over his 190 Irish prisoners in the exchange that had been arranged for Monday as part of what was to have been a definitive cease-fire agreement was, unhappily, predictable. The Katanga president's trail of broken promises is now so long that the only question left is whether he is personally responsible for all his irresponsibilities, or is not a free agent. For a year and more he has veered between declarations of independence and pledges of loyalty to a united Congo; between undertakings to halt the recurrent bloodshed in his province, and arbitrary cancellation of them; between signed agreements to co-operate with the United Nations, and rabble-rousing calls for action against the UN. On August 28th he publicly announced that all Europeans had been removed from his gendarmerie. It was in response to the assurances then given by him and by the local Belgian consul that the UN halted its round-up of mercenaries in Katanga: only to find, when the round-up was resumed on September 13th, that these Europeans were now prepared not only to start a battle but even to continue it despite a cease-fire appeal from Mr Tshombe.

Lord Lansdowne told the House of Lords on Wednesday that it might never be known who fired first on September 13th. The Government seems ready to ignore the detailed report made on the 14th by Dr Sture Linner, the UN officer in charge in the Congo, which makes it clear that the first shots came from a building occupied by European officers. Even more total oblivion seems to be the fate of Dr Linner's letter to the Red Cross International Committee, which was distributed to the press on October 11th but got little further. This letter said that the celebrated charges of UN firing on ambulances in Elisabethville had been carefully investigated, and that, apart from cases of unintentional involvement in cross-fire, the only "ambulance" attacked was one carrying four Europeans and a bazooka with which they had killed three Irish soldiers and injured others; the injured survived to give evidence.

If Lord Lansdowne wants to clear up a real mystery, he might ask how Mr Tshombe got the Irishmen whom he is now using as bargaining counters. They had been sent to Jadotville at the urgent request of the Belgian consul and his colleagues, who said that Europeans there were in grave danger. They were promptly surrounded and shelled by a much superior force, led by Belgian officers, and bombed by a jet aircraft flown, from a base 100 miles away, by Europeans. Their absence, and that of two more UN companies sent to relieve them (which were held up on the road by a European-led force skilfully entrenched in positions which the first Irish company had been allowed to pass without encountering any resistance), depleted the UN strength in Elisabethville. The UN's anxiety to free them is now one of the levers on which Mr Tshombe—or his even more intransigent friends—may press to secure better terms.

EAST AFRICA

Haven of Peace?

POLITICS in east and central Africa will be changed by the emergence, on December 9th, of an independent Tanganyika. For a while at least Dar-es-Salaam will become the natural capital of African nationalist activity in the surrounding territories; not until October, 1962, will Uganda, the next in line for independence, be able to claim the same amount of pan-Africanist attention. On Monday the importance of Dar-es-Salaam was underlined when several African nationalist leaders ended their meeting in the town by signing a joint statement of aims.

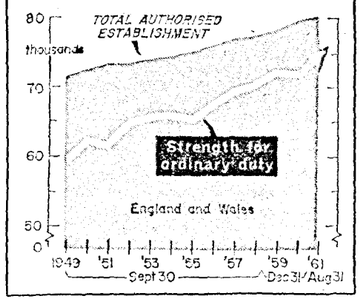
The signatories were Mr Nyerere, the Tanganyikan prime minister; Mr Kenyatta (tribal, but not yet paramount, chief of Kenya); Mr Nkomo, Mr Kaunda and Dr Banda of the Rhodesias and Nyasaland; and a representative from Zanzibar. These men held, as it were, their first board meeting. They welcomed Uganda's coming independence. They said they would fight for independence "under popular governments" of the other territories, and that they were determined to make all other African lands independent and united.

The importance of their statement is that it effectively gives notice of what is to come in east and central Africa. Several years ago, when he was seen overseas as a radical black nationalist, Mr Nyerere began to point out that the future of these territories was going to be decided by Africans only. His prediction is near to coming true; that is why the British Government is waiting for the east African leaders to ask for a federation of their territories. For Britain to suggest it, it is believed in Whitehall, would be disastrous. What is equally likely, however, is that the east and central African leaders will jointly demand an end to the federation of Rhodesia and Nyasaland; or at least the incorporation of Northern Rhodesia and Nyasaland in an east African federation. The centre of activity for the men who will press these claims will in the coming months almost certainly be the Haven of Peace—or, in its African name, Dar-es-Salaam.

EAST GERMANY

Response to a Threat

THE western idea of an economic embargo on east Germany, widely aired after Herr Ulbricht's Berlin coup in August, has produced a striking reaction from the east German economic council. In a speec in Berlin on October 14th Herr Mewi chief of the state planning commissio declared that the first aim of planning i 1962 would be to link the east Germa economy so closely to the Soviet block tha it would be independent of the West.



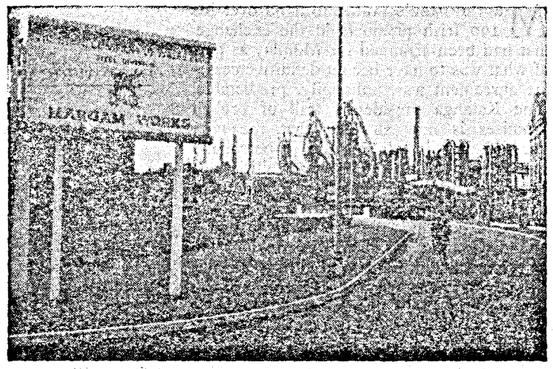
In a sense this is a tribute to the poten tialities of a western embargo, if it were im posed now. The east Germans are stil sufficiently dependent on exports from wes Germany—of special steels and certair kinds of machinery, for instance—to find the threat embarrassing, and to want to be free from it. But threats of this kind, though originally designed to punish Herr Ulbricht for dividing Berlin, also evidently impel the east Germans to deepen the division of Germany as a whole.

A year ago, when the west Germans first threatened not to renew the inter-zonal trade agreement, this pressure (or the removal of the pressure?) apparently helped in the end to persuade the east Germans to renew the same agreement on relatively friendly terms which included reasonable arrangements about traffic to west Berlin. But that threat, too, worked in a double-edged way, stimulating the east Germans to develop plans for adapting their engineering industry from German to Russian standards, thus freeing themselves from dependence on the West.

The new effort to make east Germany invulnerable to western action may prove costly, adding further to the burdens on an economy which—though no longer weakened by the flight of refugees—now has to support the strain of a partial military mobilisation. All the same, given Russian backing, the aim can no doubt be achieved. The division of Germany is becoming steadily more complete.

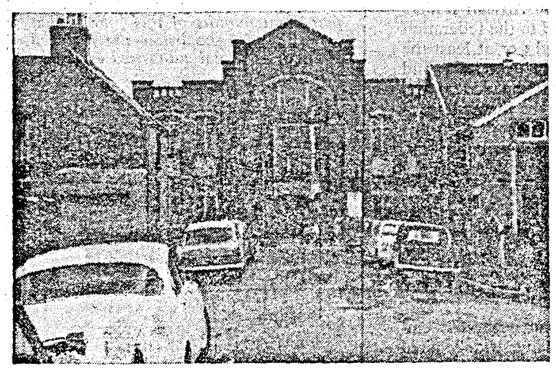
WATCH IT—CRIMINALS!

The police force strength does respond to rises in pay: following a considerable pay increase in 1951, the force swelled by 3,000. Now, after the biggest increment in wages for 40 years in September, 1960, the Home Secretary announced at Brighton that the strength of the police force for ordinary duty increased by 2,330 in the first eight months of this year. That brings it to 6,500 below the required strength or "total authorised establishment."



HOME REPORT

IN HOME REPORT members of the editorial staff and local correspondents report on life and happenings in and around Britain.

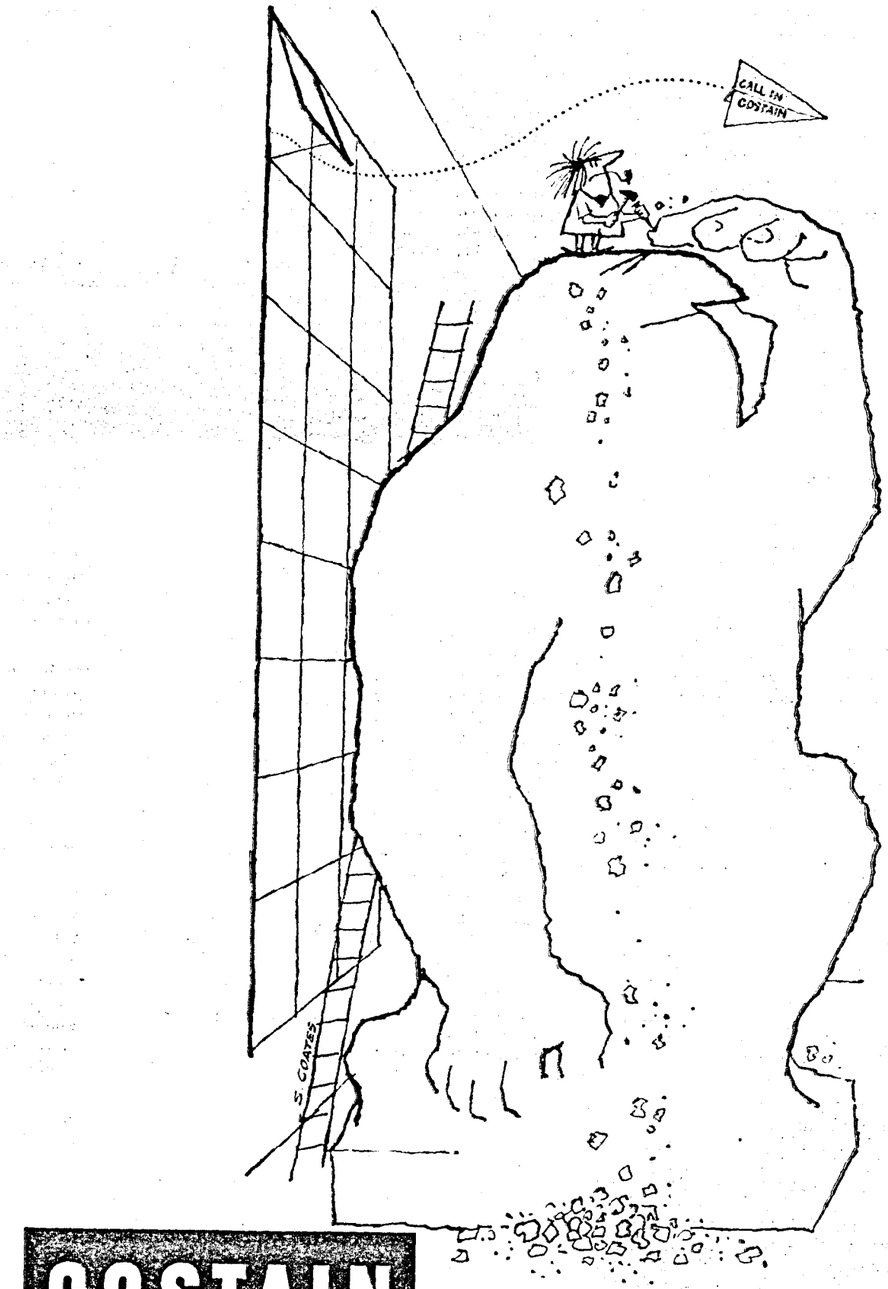


Half Blast in South Wales

FROM OUR SPECIAL CORRESPONDENT

CITY of Steel takes up the Challenge—thus, by an unhappy chance, an advertisement that has been appearing in the national press during the past week. The challenge meant was that of foreign competition: but this week the City of Steel—the works of the Steel Company of Wales that stretch for 4½ miles along the coast at Port Talbot, Glamorgan—has been facing up with a vengeance to a challenge much nearer home. From Monday on 15,500 of its 17,000 employees, sacked at a moment's notice, have been rolling up in their cars to sign on for the dole at a Wesleyan hall, transformed for the occasion into a labour exchange. Whole communities along the foreshore and up into the black mining valleys were smitten with something like panic at the realisation that this vast plant, the fountainhead of a prosperity such as the area has never known, might not go on for ever dispensing its bounty. Memories of unemployment, dormant for twenty-five years, were once again alive.

But this experience was no more than the logical consequence of what had been going on for years. Some 13,000 of the steelworks' employees are members of the Iron and Steel Trades Confederation, which has the highest-paid membership of any British trade union, and is probably the most level-headed. The remaining 3,000-odd trade unionists belong to a complex of craft unions: most of these resent the domination of the ISTC, and their members have carved out tiny but important fields of influence in the works. Average pay at SCOW is £18 10s. a week (meaning, incidentally, that local spending power will be reduced by some £250,000 a week while the strike lasts): with such a vast wage-bill, and with demand for steel strip exceeding the supply, the company has too often taken the easy way out of an argument with the craft unions by granting them absurdly large wage concessions. Of these small groups the 358 bricklayers had built themselves the strongest fortress of privilege: their leaders, indignant at some press reports of their vast earnings, claim that they have on average been getting a mere £35 for a 35-hour week. (With wages at this level, and with no unemployment, it is understandable that new employers have been reluctant to come in and relieve the area of its total dependence on one employer.)



Rolling up for the dole

The bricklayers' technique for pushing wages up and hours down has been simple. Their job of relining the furnaces and ladles that contain molten steel is both tough and dangerous. Their bodies are dried out by heat, and their lungs threatened with the dangerous silicosis. To speed up production they have been paid a special bonus for going into ladles and furnaces before they have cooled, in temperatures that would literally set their clothes on fire if they remained in them long. They have been allowed to leave the works as soon as they have finished one such job, while continuing to be paid for a complete shift at the special incentive rates. This can hardly be quarrelled with. But, with an incredible lack of foresight, the company allowed this practice of "job and finish" working to spread to jobs in which there is no danger and no special need for fast working: for two years now they have been trying to repair this expensive mistake.

In mid-September these negotiations broke down: under a leader who really does run a Jag and buy his suits in Savile Row—and with the official backing of their union—the "brickies" came out on strike. They were followed by their 700 mates, who, absurdly, belong to the Iron and Steel Trades Confederation and were not backed by their union. The work continued to be done by office staff and foremen (which might indicate that the bricklayers' job is neither so arduous nor so skilled as they have made out): after a month the Amalgamated Engineering Union noticed that its members were working with blacklegs, and threatened to strike. The company was not waiting for this: it closed the works. For the first time in ten years Port Talbot was free of the cloud of noxious yellow smoke that is the symbol of its riches.

THE first local reaction was that "they can't do this to *our* steelworks": in this overwhelmingly labour area there were some vocal hankerings after the days of nationalisation. The "brickies," in a country where the betting shops are so often the liveliest place in town, are envied as sharp operators rather than resented for their high wages. The only rumoured violence

COSTAIN

had come when the strikers broke the windows of one of their rare blackleg members: but bad feeling has started to build up as the local transport firms and others that live on orders from the steelworks begin to lay off men whom they no longer need either. The most worried people now are the officials of the Iron and Steel Trades Confederation: not only has their authority been defied by the bricklayers' mates, but their union may face the heavy financial threat of having to pay lock-out benefit to its 13,000 workless members.

Meanwhile the company will not meet the local officials of the Building Trade Workers, with whom it has negotiated in vain for many years, and who cannot put themselves in the position of appearing to agree to a drop in their members' pay. But the company can make little progress with the national officials of the union, who, however much they may know about the building industry, are quite ignorant of the complicated techniques of work in a steel plant. So the parties sit in separate rooms in the Ministry of Labour in Cardiff, while an official tries good-heartedly to find some common ground.

Port Talbot itself, which shows little outward sign of its prosperity save for monumental traffic-jams and fine tweeds on its menfolk's shoulders, for the moment regards the whole business as an absurdity. As long as the optimistic wisps of white smoke show that the blast-furnaces are still alight, nobody believes that the cataclysm of a long lock-out will really come. What people do realise, at last, is that the employers mean business when they talk of economies. Perhaps this is not such a bad way to face up to the foreign challenge after all.

Unforgettable Thursday

FROM OUR SPECIAL CORRESPONDENT AT BRIGHTON

SWELTERING in Brighton's ice rink on Wednesday last week, with an Indian summer blazing outside and the refrigerating system unseasonably turned off inside, the 5,000 Tory representatives (not delegates please) wilted their way through a tedious first day and seemed bent on making a staunch counter bid to rival Blackpool's insipidity. The usual rituals were solemnly enacted—the inter-denominational service which hints that Tory power does not stop with this world: the banalities of the befurred mayoral party: Lord Hailsham's bid for the front pages by adding flippers to his aquatic equipment, supplemented by some new on-stage business with a red despatch box (from Fylingdales, of course). It was all very dull, very decorous, and very Homely. But Thursday's astonishing events swept all this mumbo-jumbo into oblivion and staked out Brighton's claim to rank as one of the great conclaves of the party.

At a stroke—or more accurately at two—they brought about a remarkable rejuvenation of the conference, and seemed to swing the whole Tory image into touch with contemporary reality. The much heralded internal party savaging on flogging, the colonies, and the common market never took place. The right was eclipsed—but that has happened before. What was new was the triumphant resumption of the advance of the forces of progressive Toryism. Nothing like it has been seen since the exhilaration of the immediate postwar years. There were several reasons for this, but the Cabinet reshuffle was the most important. It both checkmated the right wing revolt—you don't waste powder and shot on an evaporating colonial secretary and you don't kick even Mr Butler when he is down—and gave an electric new stimulus to the left and centre. Although there is an uneasy feeling in some circles that Mr Butler's departure from the party chairmanship means that King Stork has been substituted for King Log, it seems almost inevitable that Mr Macleod will become the conference idol. He has not only the grittiness and strength which evoke loyalty and devotion, but the charm to consolidate it, and the skill to manipulate it, as well.

Secondly, the Tory left won the two vital battles on the common market and penal reform because above all else Tory party workers are realistic. Just as they accepted Mr Macleod's colonial policy because they saw it was inevitable, so the common market —cold, unfamiliar and prickly creature as it is—has been grappled to the party bosom. Thirdly, the battles were won because the Tory party is a deferential party and enjoys following its leaders. Of all the demarcations in the penal policy debate the most marked was social. The nasties had the wrong accents, the goodies the right ones. The weight of argument, thanks to some judicious platform selection of pro-Government speakers and the poverty of mind inherent in the floggers, was heavily in favour of the penal reforms. Mr Butler also made a brilliantly clever speech, but not a particularly brave one; he was too intent on sheltering his liberal penal policies behind the rest of the Government's skirts, and on declaring that Lord Kilmuir was the most liberal home secretary we hadn't got. (And what were the eventually triumphant infantry meant to make of this from their platoon commander: "I am afraid, much as I should like to, I cannot say that the Government can agree to reintroduce corporal punishment.")

Finally, much credit for the turn-round should go to an unwilling recipient, Mrs Eirene White, whose remarks about sex perverts had warned the conference how much the floggers could damage the party. Fear of ridicule has a much more powerful impact on the Tory mind than Benthamite argument, and, relentlessly hammered home at the conference, it proved a turning point. Caught up in its own exhilaration, the conference then kept to what it thought was the left by overwhelmingly rejecting a mild motion calling for an inquiry into trade unions (see page 214) and by defeating another motion on education policy. But this last defeat was largely a mistake. Sir David Eccles had said that he agreed equally with speeches in support of the first part of the motion (which warmly approved the Government's educational policy) and with those in criticism of the second part (which implied that more attention should be paid to primary schools); the conference was horrified to read in some newspapers afterwards that its vote meant that it had risen in revolt about teachers' pay. Nevertheless the party leaders left Brighton with the knowledge that the old image of the Conservative conference, as a force that is supposed to impede the Government from forward-looking policies, has ceased to exist.

In touch again?

The newspaper you read has never mattered more

The more the world demands understanding, the more difficult it becomes to understand. At this moment, when so much depends upon your newspaper, can you do with anything less than The Times itself?

The Times equips you to understand because The Times reports the news straight—not made agreeable by omissions or entertaining by additions. It reports the news completely. Short of attending every session of Parliament and every significant law case in person, reading every important government report, or being present at every major news event, you cannot find out more about the world each day than by reading The Times.

The Times reports the news accurately. The account you read in The Times today is an historian's record tomorrow.

Upon this structure of facts The Times throws the light of every shade of opinion. You will find the opinion of The Times itself conveniently labelled as such. You will also find, on its letter page, a most vigorous and varied exchange of views by other people.

If you take the world seriously, you should take The Times.

Read THE TIMES today

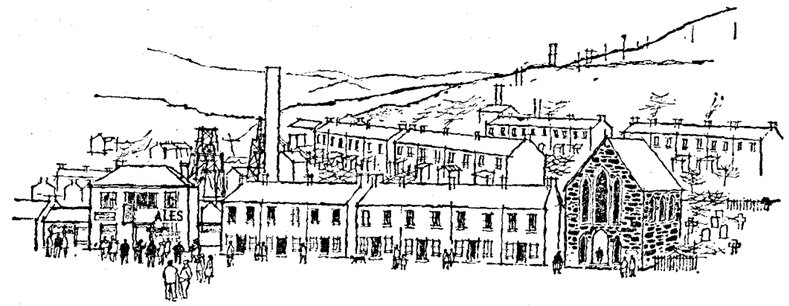
Capital for the Treasury

Mowlems are now reconstructing the Treasury in Whitehall for the Ministry of Works.

Virtually the whole block, known as the Old Treasury Building, is being rebuilt from the foundations up.

When the work is finished the familiar facades will be restored. But most of the stonework, like this Corinthian capital, and the joinery will be new, carved and made by craftsmen at Mowlems' Cambridge company, Rattee & Kett Ltd.

Mowlems combine fine craftsmanship with the most modern techniques. Long experience and high traditions help the biggest building jobs to go through smoothly.



Chief Architect to the Ministry of Works: Mr. E. Bedford, C.B., C.V.O., A.R.I.B.A.

Open and Shut Case

FROM OUR SPECIAL CORRESPONDENT

FULMINATIONS against the evils of drink are as old as Proverbs. But popular feeling about the uses of alcohol waxes and wanes, even in Wales. The origins of the Principality's present row are almost in the mists of time. In 1880 Welsh nonconformity presented a petition at Westminster aimed at the closure of the public house. It did not press for total abolition ; still, Sunday closing was to be a beginning.

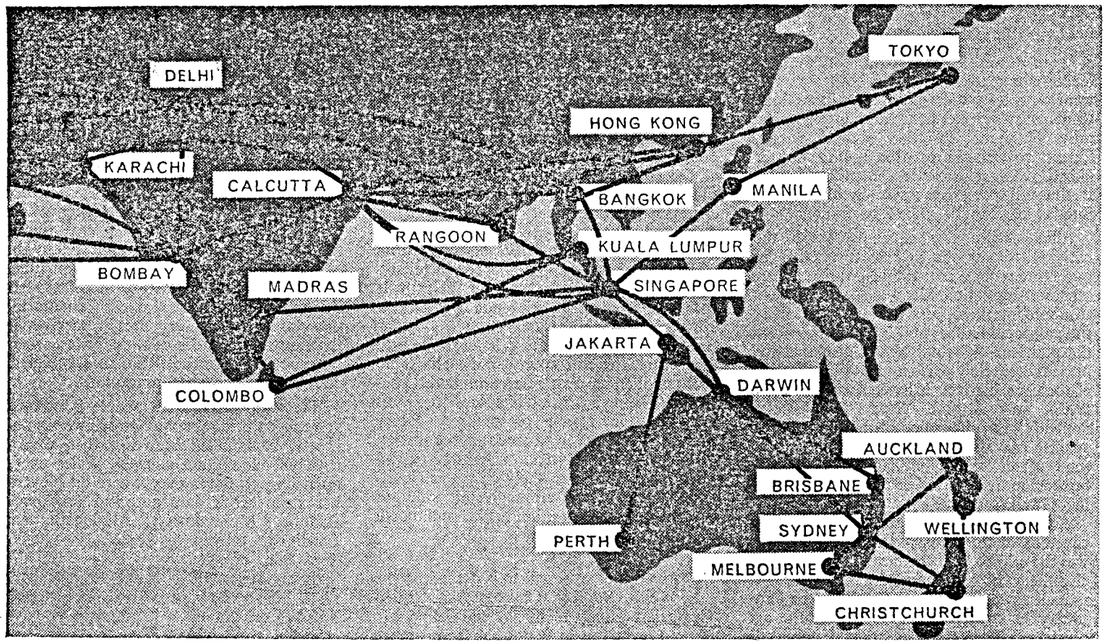
Allied with the puritans were the nationalists, anxious to achieve a crack in the façade of Welsh-English unity. Any separate legislation for Wales was a small triumph for them, and their support aided the passage, in 1881, of a bill resulting from the petition. It is not by accident that the present agitation against any liberalisation of the licensing laws is based firmly on "the *Welsh* way of life" and "the *Welsh* Sabbath," nor that some of the vituperation against the 1960 act is so intemperate in tone ("an unholy alliance of Tories, brewers and Englishmen" bent on destroying Gwalia's calm).

A further triumph for the separatists, long covetous of the rich land on their borders, was the addition, in the licensing laws if not elsewhere, of Monmouthshire to Wales—a measure sworn by Lloyd George to be temporary in 1915, but entrenched in the act of 1921. That act also stopped publicans from serving any *bona fide* traveller on a Sunday, a gateway through which entire populations drove their "whisky brakes" to one another's villages. (The inclusion of Monmouth was on the ground that the Sabbath migration of thousands of thirsty Welshmen over the border would be dangerous in wartime.) A royal commission of 1931 succumbed (with reservations) to the well-used arguments of sentiment, which seem thin only outside Wales itself ; even last year's licensing bill came close to losing its reference to Wales (clause VI) in face of the passion displayed in committee by patriotic Welsh members. In the outcome the national referendum pressed for by some members was refused, and the system of local option offered in its stead.

That nonconformist religious forces are neither the main nor the sole resisters to this reform is suggested by the absence of similar agitation against the "clubs" which are so outstanding a feature of the Welsh Sabbath. The 2.6 million population is catered for by no less than 1,350 of these unsupervised institutions, and membership (obtainable, as in Bingo, on the payment of a nominal fee and a delay of 24 hours) extends to nearly 600,000—which would be some 60 per cent of the adult male population. The clubs' share of the drink trade is probably 25 per cent, nearly three-quarters of that being done at weekends, to the great annoyance of the 5,000 licensees of Wales, nine-tenths of whom (according to a poll conducted by the Sunday Opening Council for Wales) will cry "aye" when the referenda are held on November 8th.

Local option means that each county (there are 13) and county borough (four) will conduct its own referendum, the prerequisite being a petition of at least 500 local signatures in favour of change. Every authority has received such a requisition (Glamorgan's had 50,000 signatures) ; and every one of them is likely on present indications to go "wet," although some strength remains in the opposition in the rural north and west.

THE taint of nationalism is denied by the Welsh Sunday Closing Act United Campaign (a holy alliance of the Fellowship of the Lord's Day in Wales, the Temperance Council of Christian Churches in Wales and others) ; but their protestations do nothing to mitigate the impression created by some of their supporters. These have been very sharp with the (Anglican) Archbishop of Wales, Dr Morris, accusing him of unilingualism, priesthood in the worship of Bacchus, and blasphemy allied with the intention of corrupting young Cambrians—all for propounding the essential moral neutrality of alcohol and its sale on Sundays and reserving his condemnation for its misuse at any time. They have not been kind, either, to Mr Iorweth Thomas, Labour MP for Rhondda West (there are 70 clubs in Rhondda), who is vehemently opposed to Mr James Griffiths, MP for Llanelly, on the side of (for want of a better word) the angels.



This bitter invective is significant less of the strength of the temperance side than of its weakness. Nationalism has cause to be loudly vituperative if it is to draw attention to itself ; and nonconformism is in danger of falling into the same low esteem in Wales. Membership of "chapel" is claimed to be 62 per cent of the churchgoing population (compared with 26 per cent for the Anglican Church in Wales)—but only 10 per cent of Welshmen attend church, and the masochistically dark Bethels and Bethesdas, like the parish churches, are emptying where they are not empty. In the large towns, where little importance is attached to the twitch of a lace curtain, the puritan influence is dead (and it was low in 1880, when these large towns asked to remain outside the closing legislation) ; but it survives in the tiny communities of rural Wales, where there are even towns (Rhos in Denbigh is one) without the ubiquitous clubs.

The ratio of clubs to people is uniform at 1 : 2,500 throughout Wales, however, and it may be inferred from this that, were a national referendum allowed, Wales would open its pub doors everywhere on November 12th. If it does not, and Brecknock Radnor, Montgomery, Merioneth and Cardigan remain dry, one of the biggest bogies of the closers, drunken drivers on crowded roads, is likely to become less chimerical: drinkers from the deprived counties may well realise all the fears of the Union of Club Stewards and desert on Sundays to the surrounding vinous areas. And if these drinkers fail to carry the poll, no doubt they will be better organised and more numerous seven years hence, when the stern, unending conflict that is local option comes round once more.

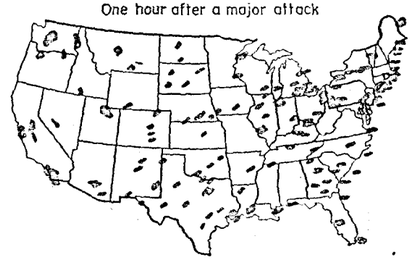
A Matter of Survival

WASHINGTON, DC

SNCE the barriers went up in Berlin and radioactive particles came down from the Russian nuclear tests the "revival for survival" called for by the American civil defence authorities has generated its own mushroom cloud. Fall-out shelters make a daily appearance on the front pages of newspapers and in the advertisement columns. The government's booklet on how to build your own shelter, which has been collecting dust on official shelves for years, has been bought at a rate of 500,000 copies a week, while *Life* magazine sold out the recent issue which featured the same information. People line up to inspect model shelters and displays of the food and other equipment which should go in them and shelters are discussed at every cocktail party.

There, someone is sure to mention the Jesuit father who, in an article on ethical niceties in the shelter doorway, maintained that a householder would be justified in using violence, even in shooting, to keep neighbours from crowding into his family's shelter. The distaste with which sophisticated intellectuals discuss this epitomises their feeling that the whole idea of building shelters is degrading. And their feeling that the whole idea is also silly was epitomised last week by the elegant young man who walked down a sunlit avenue in New York under a large black umbrella on which was painted in white letters "portable fall-out shelter."



The current emphasis is on protection against the deadly radio-active dust which would descend like rain after, but not immediately after, a nuclear attack, spreading all over the country; no one who is within several miles of the immediate blast of the bombs is expected to survive. Shelters with a sufficient thickness (three feet) of heavy material—and, for example—to block fall-out would according to *Life*, save 97 people out of 100. Government officials are less optimistic; they talk of reducing deaths from, say, 60 million (one-third of the population) to 45 million. To many scientists, however, this calculation seems unrealistic; while some of them are building their own shelters others allege that shelters would be death traps, with their occupants being "barbecued" by the fire storms which would sweep across huge areas outside the main centre of destruction after the bombs exploded. Furthermore, in the opinion of these scientists, when the survivors emerged after two weeks in their shelters they would find only a devastation unable to support any life worth living.

These views are seized upon by those who contend that fall-out shelters are a waste of money and energy. To these people—and here they find much agreement—nuclear war would be the final failure of civilisation and they prefer to meet it in the open. In the meantime they fear that concentration on civil defence will engender a sense of security and will thus weaken public pressure for the constructive negotiations with the Soviet Union which are the only true protection against fall-out. There is also a complex argument to the effect that, if the United States builds shelters, the Russians will deduce that the Americans are going to strike first and will therefore launch a surprise attack themselves.

The President and his advisers refuse to accept these contentions, although they agree that if the government were to initiate a "crash" programme of blast-proof shelters this might give a belligerent impression. They regard fall-out shelters as an insurance, which they hope will never be needed, against an accidental or miscalculated war, an insurance which "we could never forgive ourselves for forgoing in the event of catastrophe." The fresh emphasis on civil defence is part of the President's new effort to make Americans realise that peace is unlikely in their time and to teach them to be patient through the long years of tension ahead. It is denied officially that the shelter programme is part of the current attempt to convince the Russians that the United States will use its nuclear weapons if necessary. But effective protection for civilians will, it is believed, make the Russians think that an attack is less likely to succeed and make Americans think that they themselves have some chance of surviving such an attack.

HOW FALL-OUT WOULD SPREAD

One hour after a major attack

Twenty-four hours afterward

Prevailing winds on a given day

The new drive behind civil defence began when the operational responsibility for it, hitherto in the hands of an independent and rather ineffective agency, was transferred to the Department of Defence. This was done partly because, logically, civil defence should be co-ordinated with the general defence system, partly in the hope that civil defence would no longer be starved of funds if it was included in Congress's favourite department. This hope was justified; Congress gave the President $294 million for civil defence this year, almost all he had asked for and nearly five times as much as was appropriated in the previous year.

This year's expanded programme is only a first step. What will come after is not decided—maybe government help for private shelters, maybe deep blast-proof shelters for the general public in target areas, maybe communal fall-out shelters for everyone, maybe just shelters in schools and new buildings. The cost

of complete protection is estimated at $20 billion, but there are suggestions that such structures might double as underground parking areas or public transport facilities and thus help to solve traffic problems as well. *Meanwhile, about $170 million will be spent in* the coming twelve months on surveying and marking spaces—mostly basements and corridors—in existing buildings which offer adequate shelter against fall-out and in installing ventilation and stocks of food, water and radiation detectors. These should provide room for 50 million persons during working hours but at night, when attack is considered most probable, nothing like that number would be able to reach this comparative safety from their homes during the half hour that is expected between the nuclear explosions—perhaps the only warning—and the beginning of fall-out.

If the enemy missiles were directed against urban areas, many of these shelters would be destroyed, but military installations rather than cities may be the primary targets; moreover, the missiles may not be aimed accurately or may be diverted in flight. In fact, no one can be sure of being near enough to a bomb to make protection against fall-out a purely academic question. For all these reasons all families, particularly those in the suburbs, are being urged by the government to build their own home shelters. Some critics argue that such shelters put a premium on selfishness and that communal shelters would make it easier to re-establish a civilised way of life after the attack. But while the government hopes that neighbours will build shelters jointly wherever possible, it does not want people to sit back and wait for the government to do something. Private enterprise is co-operating enthusiastically with the Administration in this regard, offering the public home shelters of all kinds. Manufacturers are rushing into the business and investment in such firms is being recommended as a means of getting in on the ground floor of a coming growth industry.

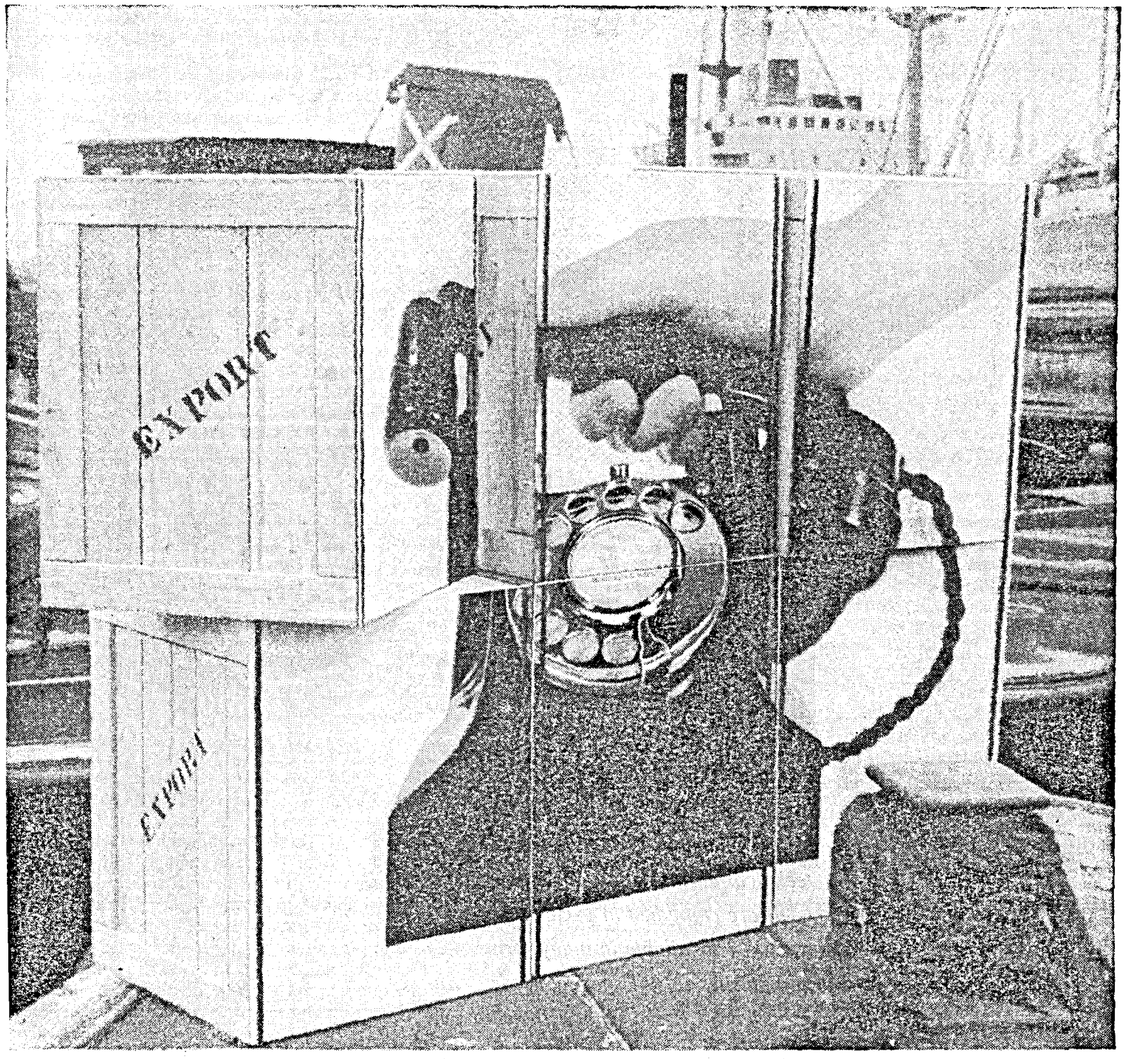
A home shelter may soon be the successor of the swimming pool as a status symbol—if something which is kept secret can be such a symbol. For people are disinclined to talk about their shelters, both because they are afraid of being laughed at and because they do not want to share them with less far-sighted friends. It is therefore difficult to guess how many family shelters are actually being added to the 2,000 or so already in existence; inquiries are certainly much more numerous than are actual orders. Next month the President is going to suggest minimum steps, at a cost of about $100, which home-owners can take to protect themselves and their families.

The federal government's main purpose—and one which it seems to be achieving fairly satisfactorily—is to stimulate initiative on the part of the state and local governments which are primarily responsible for civil defence and by communities, business firms and individuals. It insists that the effort is worth while, that survival is possible, but it is hard for the ordinary citizen to be convinced of this when so much scientific controversy and so many obvious doubts are included in the government's calculations. "The intentions of the enemy are the most significant variable in civil defence," said an expert this week, and these will not be known for sure until it is too late for that certainty to make any contribution to survival.

Scholarly Doubts

WASHINGTON, DC

EVEN though Congress has gone home and the Indian summer is surpassing itself, there is unhappiness and dissatisfaction in Washington or at least in those parts of it—the White House and the huge government offices—which constitute "the nation's capital." The bright young professors and politicians, who were piling into the new Administration with so much confidence and determination last spring, and the journalists who greeted them and particularly their President so hopefully and so uncritically, are worried and disillusioned. Much of this is because the experiences of the last nine months have forced them to accept what they knew but tried not to recognise: that the troubles of their times cannot be solved by a change of Administration in the United States and that it may really make very little difference whether the President is an Eisenhower or a Kennedy.



But on top of this is a growing fear that their President is not the man they thought he was. More and more it is being said that Mr Kennedy is immature, a party leader not a national one, that he is concerned more with saving the Democratic party at the next election than with saving the world, that he is afraid to be unpopular and therefore afraid to be as tough as a President must be. These are damning comments on the man whose courage and independence were supposed to be among his main qualifications for the Presidency. Another of his qualifications, and this one has been very evident during his first months in office, was his intellectual capacity and his respect for it in others. Therefore, if he is indeed as sensitive to criticism as is being rumoured, the current issue of the *American Scholar*, the quarterly publication of Phi Beta Kappa, the intellectual society whose members consist of the cream of college graduates, must be disturbing him. The autumn number has as its subject "The Changing American Scene" and among the wide variety of articles are several discussing some of the doubts being expressed about the President—though not, unfortunately, the reciprocal doubts which Mr Kennedy may now feel about some intellectuals.

These articles hardly merit the attention which they are attracting. Mr William Shannon of the *New York Post* explains, as he has done before, why "only future events can make clear whether Kennedy has the moral vision necessary to give steady leadership." Mr Richard Rovere of the *New Yorker* reports irreverently on his researches into the American establishment. Mr David Butler reflects an English point of view on the new Administration. Mr Alfred Kazin's study of "The President and Other Intellectuals" is the only really pointed attack on Mr Kennedy and one which probes him where it hurts most—but that is Mr Kazin's habitual approach. Now that the intellectuals have talked the stars out of their eyes perhaps they will be able to see the President and his problems in a more realistic and helpful perspective.

Hoffa True to Form

ON the face of it, things did not go well last week for Mr James Hoffa, the incorrigible president of the International Brotherhood of Teamsters, the trade union for lorry drivers (and anyone else who cares to join) that was expelled from the federation of American labour in 1957 on grounds of corruption. A federal grand jury returned a new indictment accusing Mr Hoffa of misusing $500,000 of union funds for a property venture in Florida; an earlier indictment was dismissed on a legal technicality. He found himself back in the Senate Caucus Room where, for the past four years, he has engaged in intermittent verbal battle with lawyers (notably Mr Robert Kennedy, the present Attorney General) and unsympathetic Senators; this time he was defending not his own integrity but his right to make mutual assistance pacts with two trade unions that are believed to be communist-dominated. And finally, a move to readmit him and his teamsters to the merged American Federation of Labour and

"Export Ease" just a 'phone call away

Through its world-wide network of overseas branches and correspondents First National City is in constant contact with business conditions in almost every country throughout the world. As a result, First National City are in an excellent position to offer up-to-date credit information on the economic and political climate of a given country.

But this is only a small part of the service you can get from First National City. For instance, for any client, First National City will be pleased to arrange a letter of introduction to the manager of any of its overseas branches or correspondents. Their knowledge of local customs, local laws, and local commercial practices is invaluable.

Whether it be the financing of exports, requests for credit information, the rapid collection and transfer of funds, or knowledge of local exchange control regulations, First National City are ready and willing to help ease your export problems.

There can hardly be a business or a businessman in the export field that wouldn't benefit from this sort of service. Why not get in touch with First National City at either 117 Old Broad Street, E.C.2 (London Wall 1221) or 17 Bruton Street, W.1 (Mayfair 6600)?

to be invited and that the anti-trust laws were not to be violated. On these lines the FCC instructed the firms involved to produce a joint plan by Friday, October 13th. It looked like a clear victory for private enterprise. But almost since the day of the President's announcement there has been strong congressional opposition to the FCC's proposals and this has a powerful ally in the Justice Department, which has twice recently expressed its continuing concern about possible violations of the anti-trust laws by AT & T and has stated its opinion that no one firm should dominate the running of the satellite system.

The issue is complicated by other considerations, particularly by the desire of the United States, which seems likely to be bested by the Russians in the race to the moon, to come first in this field. Would private development be quickest or is government operation preferable, given the possibility of a long wrangle between AT & T and its critics? On the other hand, the company's Bell Laboratories have played an essential part in the technology of space communications and the willingness of private firms to find the necessary risk capital is attractive. Last week nine of the communications companies submitted their scheme for a non-profit corporation, which they would own jointly, to develop and operate a system of communications satellites by 1964 or 1965. No concern would have a majority of the directors, but the Western Union Telegraph Company, in a dissenting report, objected that this was no guarantee against domination by a single company; AT & T seems certain to put up much more of the money than anyone else. The FCC insists that it is not committed to the companies' plan and it seems plain that the last word will rest with Congress and the President.

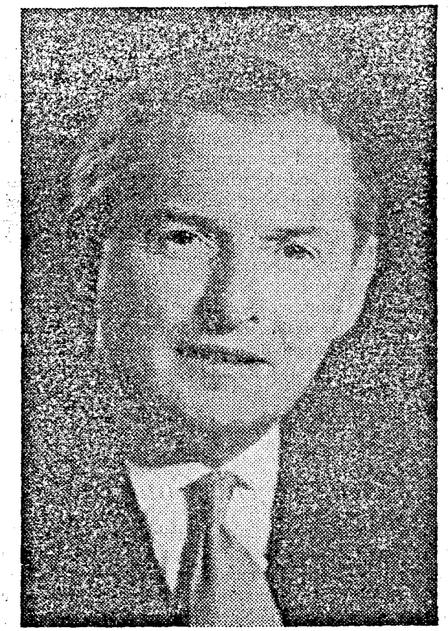
Going to the Country

CONGRESSMEN who have been home only a few weeks will soon find their grass-roots alive with official figures from Washington. The President has announced that regional conferences are to be held all over the country in November in fourteen cities ranging from San Francisco to New York and Houston to Chicago. Cabinet officers, government officials and experts of various kinds will meet local officials, civic groups and other interested people to discuss the legislation which was passed by Congress and how it affects them; the emphasis is to be placed on the impact upon the communities where people live. Among the topics scheduled for discussion are full employment, economic growth, the problems and opportunities for young and old people, the plight of the cities, agriculture and the conservation of natural resources. But given this list, it will not be easy to keep the discussion to what Congress did and avoid the larger question of what it ought to have done.

The President himself also plans to go west—as far as Seattle—something which he has not done since his election campaign a year ago. At his press conference last week Mr Kennedy denied that either his own trip or the regional conferences amounted to an attempt to go over the head of Congress, which showed so little enthusiasm for his programme, to stir up interest among the ordinary people who would benefit from it. Members of the House of Representatives and of the conservative groups which oppose any increase in spending for domestic purposes are likely to take this denial with more than a grain of salt.

Mr Kennedy's personal popularity is undimmed in spite of the international difficulties which he has encountered; it is higher than that of Mr Eisenhower at a comparable stage in his Presidency. But so far foreign affairs have left Mr Kennedy little time to undertake the education of the public in the domestic issues which must be dealt with if the country, in his old phrase, is "to move ahead." Mr Ribicoff, the Secretary of Health, Education and Welfare, recently opened fire with an aggressive speech to the American Council on Education, blaming the defeat of the Bill for federal aid to education on the short-sightedness and selfishness of various groups—including the educators themselves. It would be surprising if at least some other members of the Administration did not feel that the moment had come to put pressure on Congress through the voters. The pressure may not be enough to budge the present House of Representatives. But educating the public now may lay the ground-work for the election of a more responsive Congress in 1962—at least this is what the Republicans suspect.

Marshal Tito's Fighters



IN spite of his exasperation with the attitude of some of the neutrals at the Belgrade conference, the President has, on second thoughts, declared that the independence of a country—not whether its views on foreign policy coincide with those of the United States—should be a basic condition of foreign aid. For example, if Mr Nkrumah can satisfy a high-level mission which is to be sent to Ghana for a last look at the financial soundness of the Volta project, American support for it is likely to be forthcoming. But not all Americans are so level-headed under the strain of the international tension which has been built up over Berlin. The discovery that a handful of Jugoslav pilots and maintenance men are being trained in Texas and that the United States has sold obsolescent jet fighters to Marshal Tito has evoked cries of "treason" and inflamed even further the right-wing extremists who think that one communist is much like another.

The present Administration has the defence that the sale of these 130 aircraft was concluded before Mr Eisenhower left the White House, though it could have been cancelled by Mr Kennedy. But the new Administration shared Mr Eisenhower's belief that such sales would prevent Marshal Tito from turning to the Soviet Union for military supplies and would strengthen Jugoslavia's independence. This sensible policy goes back to 1949, the year after Marshal Tito broke with Moscow, when a programme of economic aid was instituted; military aid flowed to the Jugoslavs from 1952 to 1957 when it was ended by Belgrade. In all, assistance of about $2.3 billion has been given to Jugoslavia of which nearly $700 million was military. A wide-ranging review of relations between the two countries is now going on in Washington, to the alarm of the Jugoslavs, who would find it hard to obtain the wheat they need to supplement their poor harvest if no new American aid is made available. Poland—an actual member of the Soviet block which has been treated as a friendly country ever since it showed signs of independence at the time of the Hungarian revolt in 1956—is in much the same boat. The Americans are not hurrying to commit themselves to three more years of enlarged sales of wheat (for Polish currency) to a country where American consulates are stoned and Mr Kennedy insulted and where the Soviet line on Berlin is faithfully echoed.

Unfortunately right-wing critics of American policies toward Poland and Jugoslavia have a sounding-board right at hand; soon a special committee of the House is scheduled to hold hearings (which are not likely to be sympathetic ones) on trade with the communists. Mr Hodges, the Secretary of Commerce, has done his best to take the wind out of its sales by hastening to release figures that show that new licences for exports to these countries are much lower than they were under the Eisenhower Administration. They fell to less than $12 million in the third quarter, apart from exports to Poland; the quarterly average during the past two years has been over $20 million. Actual exports (including some goods which do not require licences) to the whole Soviet block came to $100 million in the first six months of 1960—considerably less than those from the United Kingdom, France, Italy or Germany.

CITY OF STEEL TAKES UP THE CHALLENGE

'Britain's capacity to discharge her defence obligations overseas, her ability to give aid to the poorer countries, the growth of her economy, her industrial equipment, her standard of living, all really depend on one factor– competitiveness, and ability to compete in world markets"

The Rt. Hon. Selwyn Lloyd, Chancellor of the Exchequer, speaking at the Mansion House, October 5th, 1961

THE CHANCELLOR'S views on exports and the economy are a challenge to Industry. At the City of Steel we feel that our export figures are proof of our determination to meet this challenge.

In the year to the end of September 1961, direct exports of Tinplate, Sheet Steel and Electrical Steel from The Steel Company of Wales amounted to £34,250,000. Shipments went to fifty-nine countries including consignments to Russia and the U.S.A.

Over and above these direct exports were substantial *in*direct exports in the form of electrical generators, motor cars, trucks, household appliances and many other manufactured goods made from our products.

Encouraging as these figures are, we feel that there can be, and must be, further improvement. For this reason we are not only working to increase our business with existing customers overseas, but continually looking for new ones.

THE STEEL COMPANY OF WALES LIMITED

This is Broadsheet No. 25 from the City of Steel

THE WORLD OVERSEAS

A Vote Against Kemalism

FROM OUR CORRESPONDENT IN ANKARA

MANY people in Ankara today are openly saying that the result of last Sunday's elections to the new Turkish parliament is "a victory for Menderes." Certainly the successes scored by the Justice party and the New Turkey party, each of them a direct heir of the Democrat party led by the late Mr Menderes, have shaken the Turkish leaders. These successes make the execution of Mr Menderes in mid-September more than ever a sorry business ; but, at the same time, they explain it.

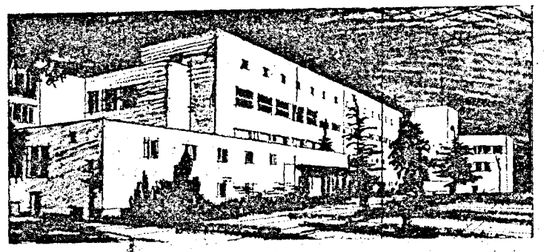
Turkey has been divided for many years into two camps: the now dissolved Democrats, and the Republicans led by Mr Ismet Inönü. More than anything else, the vote of October 15th was a vote against the Republicans. Without doubt the hanging of Mr Menderes and his two colleagues, and its delayed shock, played a definite part. But the Turks are familiar with the idea of sudden death, and the crucial factor in the elections was the persisting hatred of a large part of the Turkish population for the Republican People's party. Despite all Mr Inönü's prestige, despite his party's experience, wealth and organisation, the RPP lost. Why?

To begin with, it had become identified with the military regime. The frustration and sterility of eighteen months of army rule, culminating in the executions, was laid at its door. A capital error was made by the military junta in November last year, when it dismissed and exiled the fourteen "radical" officers led by Colonel Turkesh, and followed this with the nomination, by dubious means, of a constituent assembly dominated by Republicans. This more than anything made the junta and the Republicans synonymous in the public mind.

But the thing goes deeper. The result of the election is a bizarre but natural one. It was certain if free elections were held—which they have been—that it would have this sort of a result. The election underlines once more the basic fact in Turkey: that Turkey still has a built-in majority that does not accept the reforms of Ataturk which tried to make Turkey into a European nation. This is a fact which made Ataturk himself despair, and which brought Mr Menderes in the end to the gallows because as a Democrat leader he came inevitably to represent the Reaction (which in Turkey means the movement away from Ataturk back to Islam and the ways of the East). Mr Menderes represented reaction simply because there was nothing else in Turkey that his party could represent. The Justice, New Turkey, and Republican Peasants' and Nation parties all represent reaction today. So, oddly enough, to some extent, does even Ataturk's own Republican party.

The astonishing fact in the election campaign was that the name of the mighty Kemal Ataturk, founder and father of the Turkish nation, which is usually on everybody's lips, was almost not mentioned at all. More amazing still, the election manifesto of Ataturk's Republican party, in all its fifty-six pages, does not refer to him. Even Ataturk's famous foreign policy slogan, "Peace at home, peace in the world," is used without attribution to its author. The day after the election a highly educated Turk, a member of the New Turkey party, said to your correspondent. "We Turks can never be Europeans. We can only pretend to be Europeans. We must stay Turks, and develop our religion of Islam." His words recall the other words that one of Ataturk's most convinced followers said to me on the day after the May coup last year : "We shall never be able to impose Ataturk's ideas on our people."

The renewed emergence of reaction raises a fundamental issue in Turkey. Is Kemalism a spent force? How many Turks, in their hearts, really believe that it is possible to make the Turks into Europeans, or to detach them from their traditional religion, which is the apparent intention behind Ataturk's ideology of the secular state ? If last Sunday's elections show anything, it is that the reaction away from Ataturk is stronger than ever in the Turkish people. It is reasonable to suppose that the twin force which made the May revolution, the army officers and the Kemalist intellectuals, is still strong enough to impose its will. But it is ideologically committed, and seems genuinely devoted, to a western-type democracy. The constitutional referendum in July, and the present elections, both fair and free, are proof of this. But how is Turkey to continue Ataturk's revolution, and combine it with democracy, if what the people want is reaction ?



For some months it has been clear that the real rulers in Turkey have not been the junta, who are powerless and partly discredited, but a secret cabal of some two hundred officers in the armed forces known as the Ordu şurasi (the council of the army). This powerful body is said to include the chiefs of the air and naval staffs, and to have the patronage, though not the actual membership, of the elderly chief of the general staff, General Cevdet Sunay. Four or five extremist members of the junta are also in it, and it is said to have high-placed civilian members in the ministries. It was primarily Ordu şurasi which insisted on the execution of Mr Menderes, Mr Zorlu and Mr Polatkan. It is believed that this power behind the throne would not permit government by coalition of the two "Democrat" parties—the Justice and the New Turkey parties—as that would amount in its eyes to a counter-revolution. The officers seem to be aiming at a national coalition which would include all four parties, or which would at least not exclude the Republican party, possibly with some "natural" ex-military figure, perhaps even a member of the present junta, as prime minister. The president of the republic is likely at present to be General Gürsel.

This idea, which in practice would be an authoritarian regime disguised as a western democracy, seems remarkably similar to that thought to have been held by the fourteen "radicals" of Colonel Turkesh, who were denounced as "traitors" and "fascists" less than a year ago, but today, it seems, are to be welcomed back with honours. The return of the fourteen is just another somersault in the fierce struggle for power in Turkey. Whether the fourteen are members of Ordu şurasi is uncertain, but it is probable that they think in parallel.

Turkey, under the presidency of the benign General Gürsel, is now likely to traverse a further period of confusion and uncertainty out of which, after a pause, a new man may emerge to carry Ataturk's revolution further, and to make a start on the appalling backlog of economic and social reforms which no Turkish government has ever really attempted to tackle. Such a man is not yet in sight.

Germany's Fourth Bundestag

FROM OUR BONN CORRESPONDENT

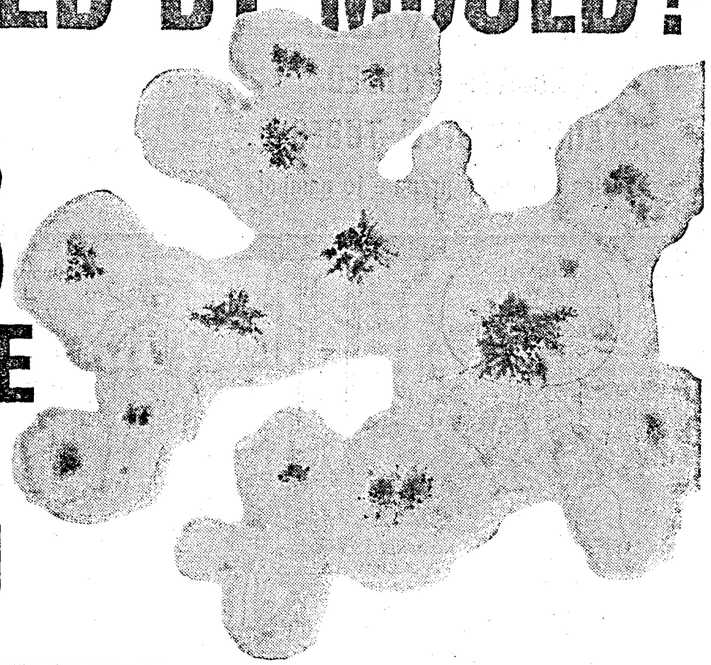
THE fourth Bundestag held its inaugural session on Tuesday—*piano* in Bonn, not *con brio* in Berlin as its predecessor did in 1957, thirteen happy months before Mr Khrushchev unfolded his plan for a neutralised free city. But this deference to Soviet susceptibility was not the only sobering circumstance. The Federal Republic's newly elected representatives were still awaiting President Lübke's nominee for the chancellorship. In his turn the president was still waiting for the party leaders to make up their minds with whom, and on what terms, they would form a government—that new government which, Mr Kennedy was hoping last week, would enable the Germans "to participate with perhaps more vigour in making allied policy with the other Nato countries."

Herr Mende, the chairman of the Free Democrats, has not yet persuaded a sizeable section of his party to join him in eating their tough words about the impossibility of serving in a coalition government headed by Dr Adenauer. At midweek such a prospect was still anathema to the *Land* organisations of Schleswig-Holstein, Hamburg, Bremen, and the Saar, as well as to the chairman of the Hessian Free Democrats, Dr Oswald Kohut. The issue is to be thrashed out at a meeting of 150 party delegates in Bonn this Saturday, October 21st. In the meantime, Dr Adenauer has tried to allay suspicion by assuring his own party that he has no intention of remaining in office for another four years. At the same party gathering, Herr Erhard, the neglected heir apparent, provoked ardent applause when he declared pointedly that continuity of policy demanded "close personal collaboration between the chancellor and the vice-chancellor." Herr Mende has been advocating that Dr Adenauer should undertake to retire by the spring of 1963 at the latest; the Christian Democrats reply that to impose a time limit would be as unseemly as it would be unconstitutional. These exchanges continue. If things go as the coalition negotiators would now like them to, it should be possible for the president to propose a chancellor, most probably Dr Adenauer, to the Bundestag about the middle of next week. But it is not wholly certain that agreement will be reached by then. Calls for a crisis government of all the parties are still being heard, notably from Herr Brandt.

Dr Adenauer has been giving his mind this week much more to the tangled east-west issues than to coalition soundings. After a series of conferences with ambassadors and foreign office officials, he is sending Dr Grewe back to his post in Washington this weekend with a discouraging message for President Kennedy. Its gist is that the federal government, whoever its head and foreign minister may be, can accept virtually none of the president's tentative proposals for easing the tension arising from German partition. All plans for a "thinned-out" military zone confined to central Europe, or for going any further towards recognising the east German regime—even, for instance, extending existing contacts—are regarded in Bonn as a deadly threat to the status and security of the Federal Republic. And the Federal Republic, as Herr Gerstenmaier declared on Tuesday after his re-election as president of the Bundestag, is the only rightful custodian of the interests of the whole German people.

The new Bundestag consists of 521 members, including the 22 non-voting representatives of west Berlin. Together with their Bavarian confederates of the Christian Social Union, the Christian Democrats hold 251 seats with 242 voting occupants; the Social Democrats 203 seats with 190 votes; and the Free Democrats, who are not represented in the Berlin parliament, 67 seats with 67 votes. The CDU has 38 seats fewer than it had in the last Bundestag; the SPD 23 more; the FDP 22 more.

The average age of the new parliament is fifty-two. Three deputies are over eighty—Dr Adenauer himself, his lifelong friend, Dr Robert Pferdmenges (who presided on Tuesday until Dr Gerstenmaier was re-elected), and Frau Helene Weber, a Christian Democrat who is less known to the German public as a feminist than as a solicitous slipper of chocolate to Dr Adenauer during long debates. One of the three deputies under thirty is Gottfried Arnold, the twenty-eight-year-old lawyer son of Karl Arnold, the prominent left-wing Christian Democrat and one-time minister-president of North Rhine-Westphalia who died prematurely in 1958.



More than half the members are either public administrative officials (27.5 per cent), industrial and commercial executives (16.3 per cent), lawyers (8.3 per cent), or party and trade union functionaries (8.8 per cent). Among the rest are 57 farmers, 36 journalists and publishers, 29 schoolteachers, 16 housewives, 12 professors, 8 doctors, one carpenter, one baker, one wine merchant, and one expert on cattle breeding. There are altogether 43 women in the present Bundestag, compared with 48 in the last.

As many as 133 deputies will be sitting for the first time in the Bonn parliament. Of these 57 are Social Democrats, 48 Christian Democrats, and 28 Free Democrats. Several of the newcomers bring much useful experience, and some the promise of livelier opposition. One, for instance, is Max Brauer, the 74-year-old Social Democrat and one-time Burgomaster of Hamburg. Two other prominent reinforcements for the Social Democrats are Wilhem Hoegner, a former minister-president of Bavaria, and Fritz Steinoff, who has held the same office in North Rhine-Westphalia. And the quality of opposition (or of coalition, if the unexpected happens) should be further strengthened by the addition of Alex Möller (director-general of a Karlsruhe life insurance company), Philipp Seibert (chairman of the railwaymen's union), and Fritz Sänger, a former editor-in-chief of the German Press Agency. Two eloquent and independent-minded Christian Democratic newcomers are expected to salt discussion. One is Erich Blumenfeld, the well-to-do coal shipper and chairman of the Hamburg Christian Democrats, who quite openly opposes the party's official decision to put forward Dr Adenauer for the chancellorship. The other is Max Güde, hitherto the chief state prosecutor at the federal supreme court at Karlsruhe. Dr Güde has performed with magnaminity the disagreeable task of prosecuting at most of the important treason and espionage trials that are a by-product of partition. He declared the other day that the Germans as a whole had not yet contemplated their recent past with sufficient honesty. The Free Democrats have fewer notabilities among their freshmen. But one is Dr Wilhelm Menne, founder of the association of chemical industries and one-time vice-president of the Federation of German Industries.

All in all, the fourth Bundestag looks as though it may deport itself rather more energetically and constructively than its predecessors have done, and show its better paces more frequently

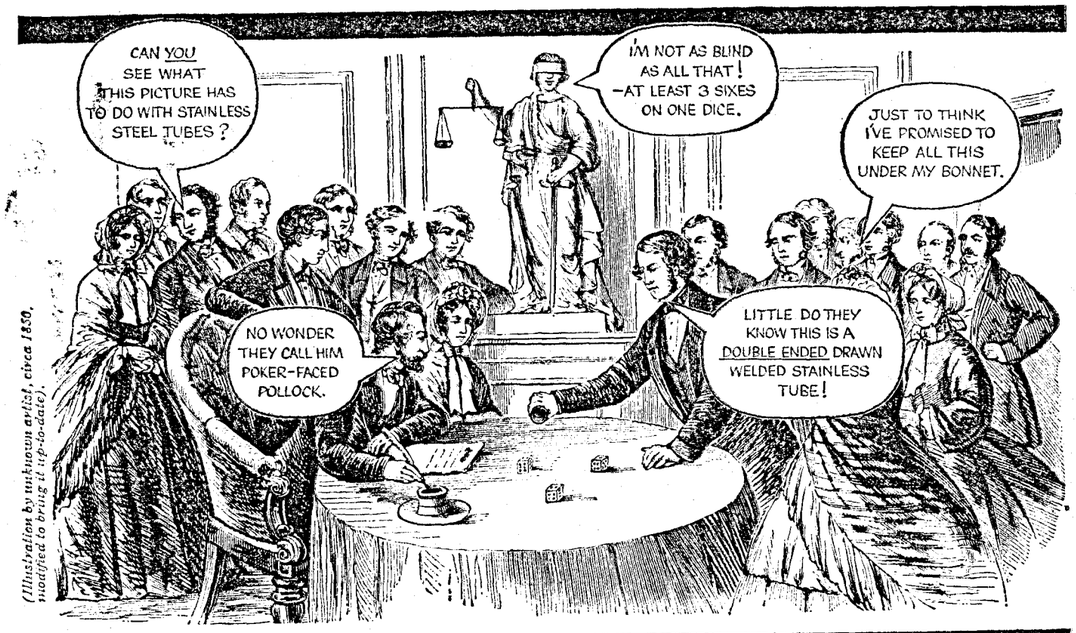
MADDENED BY MOULD?

THAMES BOARD HAVE THE MEN TO HELP YOU

Thames Board don't just make boxes. They make "FIBERITE" cases tailor-made to your special needs. That's why Thames Board have a brilliant team of technicians and designers, who design specific "Fiberite" cases for specific tasks. Take the banishment of Aspergillus Niger for example . . .

Mr. P. sells soap. And very fine soap it is too. The only trouble was that, by the time it reached his customers in West Africa, many packets were covered with black mould. Very sensibly, Mr. P. took his problem to Thames Board. Their experts examined specimens of his packaging materials and found the answer. Airborne spores of a mould called *Aspergillus Niger*, settling on the boxes, flourishing there, and then moving on to the individual packets of soap.

After a series of tests, the Thames Board experts produced the solution to Mr. P's problem. Ordinary "Fiberite" cases, thinly coated with a non-toxic fungus-repellant. And so everyone lived happily ever after. Except, of course, for *Aspergillus Niger*.



FIBERITE PACKING CASES

ARE MADE ONLY BY
THAMES BOARD MILLS LIMITED

DICE LOADED IN FAVOUR OF WELDED AND DRAWN WELDED STAINLESS STEEL TUBES

Accles & Pollock prepare to gambol

(Illustration by unknown artist, circa 1850, modified to bring it up-to-date).

IF it were not for the well-known fact that nobody (except the Directors of Accles & Pollock) ever reads advertisements we should now be in the difficult position of explaining what this one is all about. As it is, all we need do is to state clearly what the Directors would like to read. **HERE IT IS:–** For a long time past Accles & Pollock (sometimes miscalled Pickles & Wallop, Anchors & Poppycock etc. etc.) have been known as skilled makers, manipulators and fabricators of cold-drawn seamless precision steel tubes. The Directors would like all fifty-two million of you to know that, not only are they the country's largest producers of seamless stainless steel tubes but that they are also the leading makers of **WELDED** and **DRAWN WELDED STAINLESS** steel tubes. For many purposes, **WELDED** and **DRAWN WELDED** stainless tubes offer considerable economic advantages.

We should be most obliged if all manufacturers—potential users of stainless steel tubes—would sign the affidavit alongside for the Directors—

We/I the undersigned hereby declare that I/We have read and nearly/fully understood Accles & Pollock's Directors statement about Stainless Steel Tubes and would like a technical booklet about them (the tubes, not the Directors).

in full assembly, not only in committee. This week the three parties were continuing to sound each other with the genuine intention of formulating a common foreign policy. But there is going to be plenty of scope for stimulating controversy on domestic issues. Of these, one of the most important is the pending reform of the whole administration of justice and of the penal and civil codes.

Uganda's New Harmony

FROM OUR CORRESPONDENT IN KAMPALA

UGANDA is well satisfied with the results of the constitutional conference which ended in London on October 9th. A time-table for independence has been set, and the outline settled of a future constitution which reconciles the claims of traditional rulers and modern politicians, central government and local administrations. The relationships between the different parts of Uganda are to follow the lines suggested in Lord Munster's report, with some modifications, such as dropping the rather unfortunate term "semi-federal" to describe the status of the three kingdoms outside Buganda. The cause of unity must have been helped forward by the mere fact that delegates from all Uganda managed to sit round the conference table together for three weeks, with only two brief walk-outs by disappointed groups.

The attitude of the Baganda was crucial for the success or failure of the London conference. Under skilful pressure from Mr Macleod, who carried on parallel negotiations outside the conference room with the Buganda delegates, Buganda came to terms with the rest of Uganda. The policy of secession, announced by the Lukiko a year ago and supposed to have taken effect last January 1st, and still not rescinded, is now dead as far as the Buganda leaders are concerned; it can be buried when the Kabaka and his chief advisers return from London to convert the Lukiko backwoodsmen. There is no reason to suppose that the Buganda leaders will not carry their followers over to the new policy, but it is still to be proved how sincere is their own conversion to the national view and just how co-operative they intend to be.

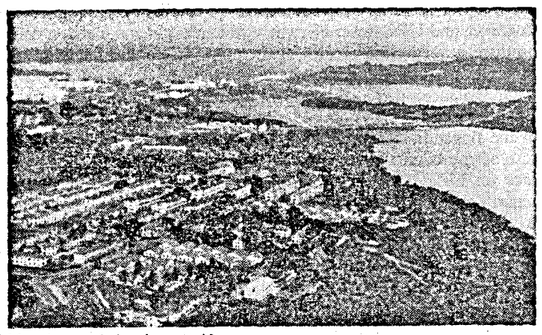
The price of Buganda's participation in the central government is permission for the Lukiko to select the Buganda representatives in the national assembly—21 of its 82 elected members. But before the next general election is held the Lukiko itself must be reformed—68 out of its 100 members will be directly elected—and the block of 20 chiefs who continue to sit in the Lukiko by right will not take part in the choice of the Buganda representatives, if the Lukiko does opt for indirect elections to the central legislature. Immediate interest therefore attaches to the Lukiko elections. There is rumour of a "Buganda Party" being formed, which would certainly sweep the board in these elections. If this should happen the Lukiko will presumably choose to act as an electoral college, and thereafter a Buganda party could easily hold the balance of power between the other two Uganda political parties.

Indirect elections in Buganda may affect the Uganda political parties in another way. Mr Benedicto Kiwanuka, chief minister and leader of the Democratic party, opposed the granting of this concession to Buganda separatism, and staged the conference's first walk-out on this issue; while Mr M. A. Obote, leader of the opposition and of the Uganda People's Congress, supported the concession, and indeed anticipated it by a pre-conference bargain with the Buganda leaders. At present the Democratic party's majority in the legislative council depends on the Buganda seats it won six months ago, more or less by default, since so few electors then voted in Buganda. The Democratic party may now expect to lose its Buganda seats in the next election. On the other hand, Mr Obote's attitude to indirect elections will undoubtedly cost him support outside Buganda. With the probability of DP losses in Buganda, and UPC losses elsewhere, the next general election could produce a very close result—again playing into the hands of the Buganda party in the national assembly.

On balance, these dangers are worth risking for the sake of Buganda's present co-operation, but a lot depends on the honesty of the Buganda leaders' intention to work with and not against the rest of the country. Meanwhile, Mr Kiwanuka has put the best face on his defeat over indirect elections, and has said that he regards the new constitution as 99 per cent satisfactory. Mr Obote has announced that he has got most of what he wanted from the conference. He had hoped, however, that the next general election would precede the granting of internal self-government to Uganda on March 1, 1962. As it is, the election is scheduled to take place in April, so that the Democratic party will get the credit for carrying the country into the stage of semi-independence, as well as the kudos that may accrue to Mr Kiwanuka for his defence of "undiluted democracy" against the principle of indirect elections.

The second walk-out at the London conference took place on its last day, and was a protest by the Bunyoro delegation against the conference's failure to consider the "lost counties" dispute between Bunyoro and Buganda. This problem remains to disturb the new harmony in Uganda, as does the problem of the future head of state, which was considered too hot to touch and was not even included in the agenda. With these exceptions, however, the present prospects for Uganda's political future are brighter than they have been for a long time. The greatest achievement, Mr Macleod's last before he left the Colonial Office, is to have brought Buganda and the other parts of the country within the framework of a single constitution.

Pandora's Box in Kenya



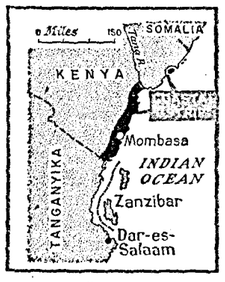
FROM OUR CORRESPONDENT IN NAIROBI

SOMEONE has opened Pandora's box in Kenya, and the troubles that have been hidden there for most of Britain's sixty-odd years' administration in east Africa have flown out to darken the skies. Who that someone was is a difficult question to answer. The governor, Sir Patrick Renison, seems to assume some of the blame for himself. Summing up in a broadcast, after the five frustrating weeks of all-party constitutional talks under his chairmanship broke down this month, he said:

> I was determined to bring the major problems of the country into the open so that the leaders would know what they would have to face in the years ahead. I don't think it is fair to sweep all the difficulties under the carpet and leave them to be discovered after independence. But we seem to have let loose all these worries for nothing.

He was probably being too gloomy. The airing of these problems, which mostly concern minorities, has raised tension, but this was necessary if they were to be acknowledged and resolved before independence. Nevertheless, as Sir Patrick said, "now we have all round us and all at once" such worries as the coastal strip, the Somali secession movement in the northern frontier district and other tribal fears. What chances are there of dispersing Pandora's flock of troubles?

The coastal strip, the ten-mile wide belt stretching from the Tanganyika border to the Tana river, which is known as the Kenya Protectorate, was originally thought the most difficult of these problems, principally because it is bound up with an international agreement. Under an agreement signed in 1895, Britain leased the strip from the Sultan of Zanzibar—for which it now pays £16,000 a year—and undertook that it should be administered by officials



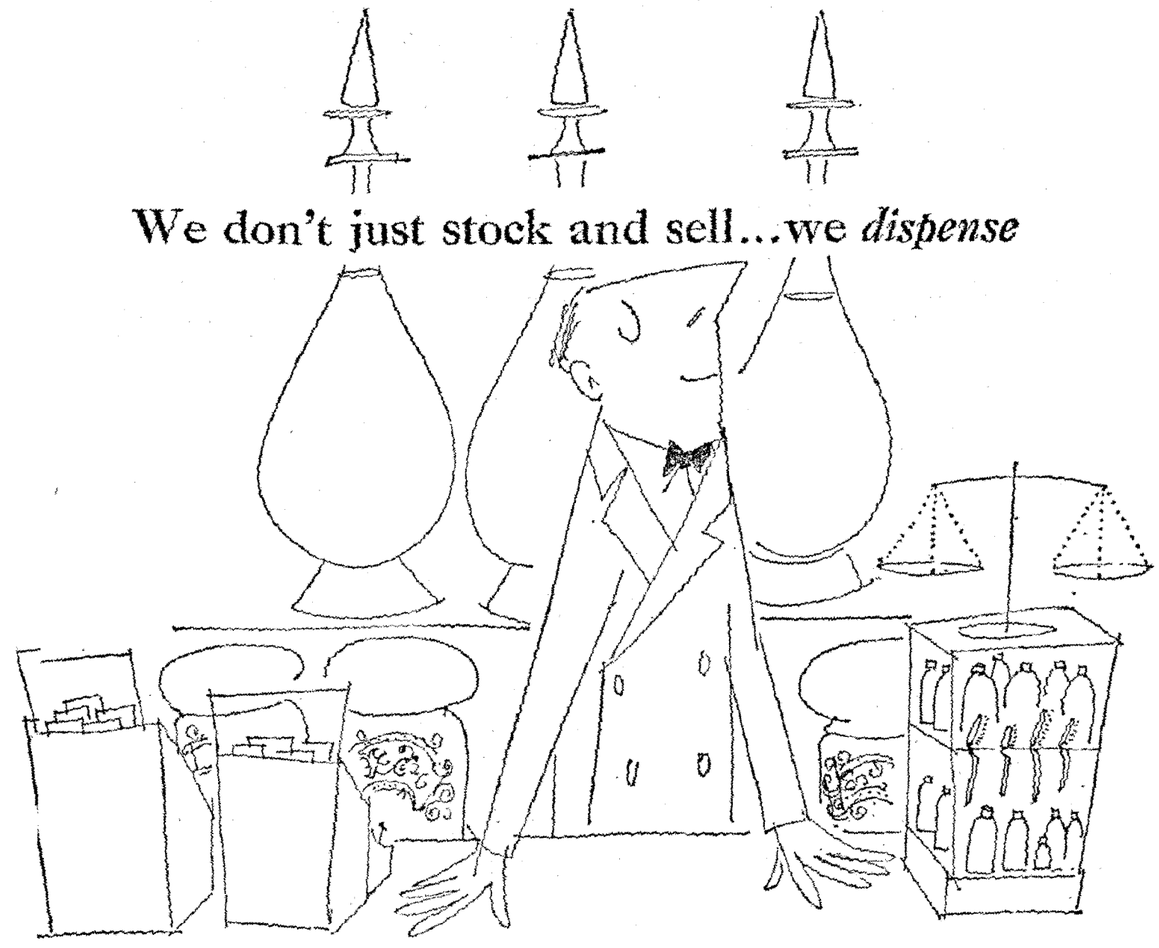
Mombasa : federal capital?

directly responsible to the British Government. With Kenya shortly to become independent, the agreement obviously needs to be reviewed and Sir James Robertson arrived in Kenya a fortnight ago, as commissioner, to investigate the problem. The 35,000 Arabs who live in Mombasa and other parts of the strip have campaigned for a year for coastal autonomy ; they have been quietly backed by their few thousand European neighbours. Both communities have said they want to cut nearly all ties with the quarrelsome up-country tribes. They argue that the need to review the 1895 agreement provides the opportunity to pass to autonomy. Autonomy they see as making them a small unit inside an east African federation. They offer to set up a port trust for Mombasa of all the user territories to make sure that its profits are put to port development. They dangle before Britain the bait of a secure military and naval base. They suggest Mombasa as a federal capital and produce Lagos for an analogy.

The objections to autonomy are many. The ten-mile strip makes no geographical or administrative sense. The area would lose as much as £1 million annually of central government expenditure and would need to use the port profits, which have recently been about that figure, to fill this gap rather than to develop the port. The vast majority of the 300,000 Africans and 40,000 Asians in the area are opposed to autonomy ; autonomists would want to disqualify them from voting as not being "permanent residents" without ever defining this term. Most of them are permanent in any ordinary sense, however, and the recent arrivals must be reckoned with, since they provide a good deal of the dock labour.

Since Sir James Robertson arrived there have been signs that the problem will evaporate rather than explode, as some Arabs have threatened it will do if they do not receive independence by mid-December. One sign has been the public disinterest in Zanzibar, where Sir James had some pleasantly idle days for lack of witnesses. Another has been the reported attitude of the new Sultan, who is said to have told two African emissaries from the Kenya legislative council that he does not support Arab claims. There is a growing hope that Sir James, bluff and sensible, with years in the Sudan and Nigeria to sustain him, will put the right amount of pressure in his report to make the autonomists listen to other plans.

Government officials look on the campaign for secession among the hundred thousand nomadic Somalis in the northern frontier district as Kenya's most intractable problem. Like the coastal strip, it needs to be settled before Kenya gains internal self-government ; the Somalis made it clear through their delegation to the recent Government House talks that they wanted unification with Somalia before Africans took over full responsibility for Kenya's internal affairs. Unlike the coastal strip, opinion is almost unanimous for secession in the whole area east of Lake Rudolf and Marsabit. The reasons why Kenya nationalists strongly oppose any secessionist move are partly economic, since exploration for oil has begun there, but mostly political. To allow one-third of Kenya's land area, however barren agriculturally, to be alienated would be a blow to national pride and too tempting a precedent for other secessionists. At present the Somalia Republic, which could stir up much trouble in the area, is being extremely sensible. Its president, Aden Abdulla Osman, said in Nairobi this week: "The aspirations of our people for unification are commonly known, but there is no question of an aggressive policy being sponsored by our country." Nevertheless, tensions in the province, which grew from the time of Mr Kenyatta's release (the moment Somalis realised that Britain was making ready to depart) run high.



Encouraged by talk and publicity about these major problems, other minority groups have hastened to add their claims. The 60,000 Masai are asking the government to pay for a delegation to London to impress on Mr Maudling the importance of what they consider to be their exclusive rights to large areas in south Kenya under their 50-year-old treaty. The leader of the 160,000 Kipsigis, Mr Arap Towett, the minister of labour, has talked confidently about tribal independence and of founding their own university. The 5,000 Tende in the far south-east, whom no one had noticed for a long time, have now said they want to join Tanganyika.

Many of these breakaway movements stem from fear, partly natural and partly induced, of being dominated in a strong unitary state by the sophisticated if mistrusted Kikuyu and Luo tribes. The Kenya African Democratic Union, the main base of the coalition government and itself sustained by the minority tribes, has caught (some would say inspired) this mood and has rationalised these secessionist feelings into their new regional plan. A Kadu leader, Mr Peter Okondo, made out during a recent London visit a plausible case for dividing Kenya into five regions with strong reserved powers over education, administration and land.

This week Mr Tom Mboya put the nationalist counter arguments. The regionalists, he said, wanted to safeguard individual rights, but this could only be done by those in charge of security—the central government. Similarly the central government's control of finance meant that the regions would have only shadowy powers. He argued that regionalism would harm the economy by interfering with the free movement of labour and that if each region ran its own civil service Africanisation would be retarded in them all and for decades in some of them. Finally, tribalism was being aggravated, not assuaged, by regionalist talk. What was needed was devolution of powers to effective local government and the education of the coming generation to move away from tribalism.

There is considerable common ground between the nationalists and the moderate regionalists. Both end up by talking about stronger powers for a form of county council government. The clarification of issues through this discussion of regionalism may do more lasting good than the temporary harm already seen in the raising of tribal passions. It has, after all, made Mr Mboya and his party analyse their views on the division of powers between the central and local government. On the other wing it has offered a compromise for some of the coastal autonomists. For the Kenya Somalis perhaps it seems irrelevant: the most likely solution for their problem would come if Somalia joins an east African federation. Its president unexpectedly said this week that his republic would welcome an invitation to federal talks.

If all sides keep their tempers while these questions are being discussed for the first time with some penetration, this period of tension could still turn out to be the most constructive in Kenya's history.

We could just sell industrial lubricants, then wash our hands of them. In fact, we think it more professional to provide a good, thorough, all-round copper-bottomed industrial lubrication service. This means we market a complete range of oils and greases, look after them, give advice to our customers, and endlessly anticipate new needs in industries all over the world.

Let's take an example. The pioneers of the first nuclear power stations reported that conventional lubricants turned solid when exposed to radiation. So our people worked with their opposite numbers in the nuclear business, and produced Shell Atomic Power Lubricants. These could work happily even in the core of a pile, and only needed changing every two years.

The civil use of nuclear energy is just one rather more spectacular example out of many. Closer to you, Shell industrial lubricants smoothed the way for the sheet steel in your car, helped to fire your china, to make your clothes, your children's toys . . . the list is endless because everything's to order with us, and we dispense with such distinction.

YOU CAN BE SURE OF SHELL

Burma Dreams and Realities

FROM A CORRESPONDENT

EARLY last month, on September 6th, Burma officially embarked on its second four-year plan. It is, however, really the first in a series of four. The aim—or rather, the hope—of the whole programme is to double *per capita* real income by 1977. It is difficult to predict how realistic this is ; in spite of the impressive jungle of tables and figures with which it is illustrated, the latest plan, like some of Burma's earlier exercises in planning, is somewhat vague. Many sections seem to be simply statements of aspirations rather than guides to action.

As a statement of policy, however, the plan is significant. The government has decided (for this plan at least) not to participate any further in industry ; it will limit itself to the "consolidation and rationalisation of factories and industries already established," and will otherwise concentrate on such essentials as improving the transport system and providing electric power. In order to promote industry, the government promises "all possible help and facilities" to private industrialists. Hence, the private sector of the economy is expected to provide nearly half of the investment envisaged by the plan—540 million kyats (£41.5 million) out of a yearly total of 1,090 million (£83.8 million).

The decision to abandon government ventures seems sensible in view of their past record—they include a steel rolling mill for which adequate stocks of raw material are not yet available and a textile mill unsuited to the kind of cotton grown in Burma. But it is doubtful whether the private sector can or will provide anything like the hoped-for amount of capital. Even if sufficient credit can be provided for private entrepreneurs, the fact that private enterprise has for long been frowned on in Burma may discourage heavy private investment for a time at least.

To expand the meagre credit now available to private business from existing banks, the minister of industry, U Raschid, has promised that the government will establish an Industrial Development Bank. The bank has not yet reached the planning stage, however, and it will certainly take time to establish it. In order to provide a more favourable investment climate, the plan promises to "make necessary changes in fiscal policy." But unfortunately the government's most recent fiscal measure, a reduction in the turnover tax (sales tax) exemption level from 500,000 kyats (£38,000) to 100,000 kyats (£7,800) is bound to dampen the spirits of private businessmen still more. The traditional gap between planning and reality looms wider than ever, and the projected industrialisation appears unlikely to materialise.

Another disturbing feature of the plan is the foreign exchange deficit (400 million kyats or £34.6 million), which remains even after the normal sources of foreign aid have been counted—the Chinese loan, Japanese reparations, American aid, and a loan from the International Bank for Reconstruction and Development. To plug this gap, Burma has presented Japan with a demand for additional reparations, which is likely to be at least partly granted, and hopes for further loans from various sources. The remainder is to be covered by private foreign investors, who, the plan confidently states, are "going to come to Burma in increasing numbers." Although it is generally acknowledged that the existing Investment Act, which guarantees foreign investments against nationalisation for ten to twenty years only, offers insufficient inducements to foreign capital, the plan is vague about what, if any, measures will be taken to attract investment from abroad. As if to dramatise the insecurity of foreign capital, the ministry of trade recently ruled that, as of October 1st, all imports must pass through agencies owned by nationals ; at the same time it was left uncertain whether British trading firms thus forced to liquidate their businesses would be allowed to repatriate their capital.

The plan frankly admits that Burma is still a one-crop rice economy. It aims to diversify agriculture and to increase production, which is still below prewar levels for most crops. To increase production, the plan proposes greater irrigation, the establishment of a fertiliser plant, and the purchase of over 2,000 new tractors. Irrigation and fertilisers are urgently needed, but in Burma's small wet paddy fields the usefulness of tractors is limited ; and to use foreign exchange to mechanise farming while there is still substantial unemployment seems of doubtful wisdom. The real obstacle to increased production, of course, is rural insecurity, which prevents resettlement and the development of new land. But if effective military operations, such as are now under way against the Karen rebels, continue, and if the trust of all the minority people can be gained, this section of the plan stands a good chance of success.

In order to diversify production, plantings of rubber, cotton, jute, sugar, wheat, and tobacco will be increased. Except in the case of rubber, the present aim is simply to achieve self-sufficiency. Hence Burma cannot expect to diversify its exports much during this first plan period.

The agricultural sections of the plan are not only by far the soundest, they are also the most important and, fortunately, they depend the least on heavy investment and foreign exchange. If the plans for agriculture can be carried out, Burma's dependence on imports will be reduced and it can hope in the future to diversify its exports. The emphasis on improved transport is also important since without it greater agricultural output would be useless. If Burma's four-year plan includes a number of dreams, it also contains a realistic approach to some of the country's most crucial problems.

Racing 1961 261

Triumph is already in an awkward position, despite the success of the Herald 1200 during the summer; the new breeds of Minis may take some sales from it, as may the old and cheap Minx, and the price cut that its makers have felt forced to introduce must take away some of their profit. The Leyland directors have succeeded in making big cuts in operating expenses; if the selling costs of the big companies are as inflated as Leyland says those of S-TI were, the austere policy that Leyland is applying to this firm might prove a part of the answer to the problem of competing with bigger companies if it really does not affect efficiency—until they adopted this policy too.

THE two bigger makers face the same problem of over-capacity after their expansion schemes are finished; BMC, which has started production of trucks in Scotland and will complete other new factories during the winter, will suffer more than Ford, which has to wait another year for its factory near Liverpool. But neither is likely to have as big a margin of surplus capacity as the other firms will, and a boom next summer might find BMC welcoming its availability and Ford lamenting its absence. And this will mean that the smaller companies cannot do again as they did last summer and get sales that the bigger firms lacked the production to satisfy.

Entry into the common market is another factor that may well increase pressure on the medium-sized companies, even though all three regard entry as their best hope for raising sales in Europe to an economic level and so of putting their new capacity to use. European cars would face the same problem of inadequate distribution facilities that British cars meet on the continent, and only the bigger firms that are already established here—Volkswagen, Renault and Fiat—would be likely to sell in quantities at first. All British firms would lose some home sales, but those with the fewer would feel this loss most. Foreign cars have already proved competitors for those of the medium-sized firms. The more these rely on the appeal of "something different," the more competitive will the foreigners be.

In the long run, the effect of producing a market for cars that will be bigger than that of the United States must strengthen the pressure towards concentration within it. But the competition is likely to be tough enough to make even BMC and Ford suffer; the former has yet to make much impression on the European market, though its new cars should suit its tastes, and it might therefore suffer more than Ford. As in Britain, only the smaller concerns that successfully specialise can expect to survive unless they can somehow match the costs of the bigger producers or produce a model that has more sales appeal, and provide the production facilities for really large-scale production. At least the surplus capacity that the smaller British concerns possess makes them better able to cope with any such situation, just as American Motors could when it introduced the Rambler American.

Over-capacity is no unusual factor for a motor industry: that of the United States has been operating at around 60 per cent of its capacity for many years past, and some British companies found that their plants were far from fully used in the years after the Suez recession: BMC, for example, operated below its potential capacity from 1956 until late 1959, partly as the result of model changes; yet it earned a reasonable profit in 1958 and 1959, though it was 50 per cent greater in 1960. But if one guesses that the market will allow the smaller firms to operate at around 60 per cent of capacity for the next few years, BMC and Ford might be at 75 per cent or so—even if they make no further increase in their share of the market. And they may well do that too in the long run. Ultimately, however, only the designers of the motor industry, and the reaction of the public, here and abroad, to their efforts, can determine whether the capacity that the different firms have installed with so much optimism earns them profits or is a millstone around their necks.

How much Capacity in Europe?

FEAR of over-capacity dominates discussion of the future of the European motor industry. With the prospect of protection being progressively eliminated as the provisions of the Rome Treaty take effect, and the likelihood of Britain joining the club becoming greater, some have suggested that there might be not only a certain amount of unemployment, but also some cut-throat competition by 1965. In France, the Minister for Industry, M. Jeanneney, has gone so far as to suggest that the Common Market Commission, or some other body, ought to get the European motor manufacturers around the conference table to develop a co-ordinated investment programme.

It is obviously difficult to decide whether or not these fears are

justified, for two aggregates, demand and capacity, have to be compared, and both of them are subject to the margin of error inherent in estimating for a period four years ahead. Even so, to make such a comparison is instructive, and indeed essential, if we are to assess the prospects for the British motor industry in the common market.

Table I contains the available information on the expansion plans of the European manufacturers, with some of the more important gaps filled by estimates. Alongside them are the 1960 production figures for comparison. No very accurate deductions can be made from these figures, however, since European manufacturers are even less forthcoming about the exact nature of their expansion plans in their public announcements than are United Kingdom manufacturers. Dates for completion are usually vague, and so is the division of planned output between cars and commercial vehicles. And it is rarely clear whether the figures refer to capacity with full overtime working, or to capacity with straight time working. In the absence of any indication to the contrary one must assume that capacity means maximum capacity; but since output at straight time working may be only 80 per cent or less of that at overtime working, there is a considerable margin of possible error. A further source of error in estimating capacity is that investment plans can be, and often are, modified upwards or downwards as manufacturers' expectations change. This usually means that the difference between capacity and demand proves to be smaller than the long-term forecasts have suggested.

THESE uncertainties are exemplified by the Volkswagen expansion plans in Germany. Current daily output of the "1200" is said to be 4,200, while daily production of the "1500" will soon reach about 300 units. If these figures are accepted the planned capacity for 1965 of about 4,800 units a day certainly seems to be a modest objective for such a successful concern. The two American-owned companies, Ford and Opel, plan the largest expansion in Germany, both for cars and for commercial vehicles. All of the increase in Opel's capacity is to come from a new factory to be built at Bochum, in the Ruhr, while Ford is extending its existing plant at Cologne. Mercedes has not been particularly explicit about its plans to increase its own car and commercial vehicle production, though its DKW subsidiary is expanding its car output by 50 per cent.

With the exception of Citroën-Panhard, which is expecting a larger share of the market since adding the Ami-Six to its range, the announcements of expansion plans by French manufacturers have been remarkably vague. All the French manufacturers are said to have difficulty in raising enough capital from their own resources to finance their expansion, yet the plans announced so far imply a considerably greater increase in vehicle output than the 1.8 million vehicles allowed for in the Fourth Plan of the *Commissariat du Plan*.

In 1959 Fiat announced that it was planning to double its output of vehicles by the middle 1960's. If these plans are realised Fiat will displace Renault as the second largest manufacturer on the Continent. The commercial vehicle figures for Fiat do not include the output of its subsidiary O.M. which made 11,000 units in 1960. Alfa Romeo, the second Italian manufacturer, is of course dwarfed by Fiat, but it plans an even greater increase in output, involving a five-fold increase in the area covered by its factory at Milan. Much of Alfa Romeo's future output will presumably consist of small Renault cars, which it assembles and which accounted for one third of the firm's car production in 1960. The high costs of Italian companies makes their competitive position in the common market a weak one. Their home market has been heavily protected in the past, and they are therefore vulnerable to competition in the home and export markets. Their ambitious expansion plans may well in practice not be matched by a significant rise in sales.

IF one adds up these capacity estimates for the Continental producers one has a total of almost 6½ million vehicles. The capacity of the UK industry by 1965 should be about 3½ million. Thus, including Sweden but not allowing for any capacity in Austria, the Netherlands or elsewhere (which amounted to about 40,000 vehicles in 1960), the maximum capacity of the European motor industry in 1965 should be as much as 10 million vehicles. This is rather less than the present capacity of the United States industry, but substantially more than the present level of production in the United States.

These estimates, however, represent maximum capacity. A firm cannot work at maximum capacity throughout the year. It must have some margin to cope with cyclical and seasonal fluctuations in demand. One cannot assume, therefore, that the effective annual capacity is more than 80 per cent of the figures given in Table I, or about 8 million vehicles annually for all European manufacturers.

Turning now to demand, estimates of the home and export sales which each country's manufacturers might reasonably expect by 1965 are shown in Table II. The home market sales estimates are net of imports, that is, they show how many vehicles manufacturers may expect to sell in their own domestic markets; sales in each other's domestic markets are included in the export sales estimates. By 1965 the German manufacturers should have the advantage of a larger home market than the British industry. Not only is the German population bigger, but it is likely, on present trends, that income per head will be higher in Germany than in Britain by the middle 1960's. And as there is no purchase tax in Germany, prices of both new and second-hand cars are much lower than in Britain. The number of persons per car might also fall to a lower level in Germany than in Britain (as it has already done in France) because of the lower population density and the superior road system. The German market is relatively unprotected already and

imports are not expected to increase very much as a proportion of total sales. The size of the German home market will, in fact, probably be an important factor in maintaining the competitive strength of German manufacturers in this period. The French and Italian markets, on the other hand, are very much more vulnerable to imports, having a relatively high level of tariff protection at present. The growth of sales in France is likely to be slower than in Germany. Some increase in imports by Sweden is expected as tariffs come down, but it is already a "mature" market, and only a relatively small expansion in sales is expected.

The passenger car exports of the four vehicle producing countries will largely expand to the extent to which each penetrates the markets of the others, and is successful in selling its cars to the

other countries of Europe. Only a small increase in sale to North America is expected, but there should be a slightly faster rate of increase in vehicle exports, particularly of commercial vehicles, to the rest of the world than in the recent past.

The United Kingdom has been included at the bottom of the table, since it is assumed that in 1965 Britain will be a full member of the common market, and at no significant tariff disadvantage compared with its competitors in Europe. The sales and capacity estimates for the UK are the same as those developed in *The Economist* of October 22, 1960; recent events have shown that only a small increase is needed in the capacity estimate and that no change is required in the demand estimates.

THE best that one can do in forecasting sales for a period four or five years ahead is to estimate the trend in demand. Such estimates are subject to two distinct sources of error. One is that the actual trend of demand may depart from the estimated trend because of an implied or explicit failure to predict accurately changes in the factors which determine the sales of vehicles, such as incomes, relative prices, and consumer preferences. Except in the most elaborate and sophisticated estimates the margin of error resulting from this cannot be assessed, and is best ignored. The other source of error arises from the certainty of fluctuations about the trend, and the fact that the timing of these fluctuations cannot be predicted. These cyclical swings may introduce a range of uncertainty of plus or minus 10 to 15 per cent in the estimate for any particular year. These margins of error apply, of course, to

TABLE II. TOTAL ESTIMATED SALES BY EUROPEAN VEHICLE MANUFACTURERS, 1965

European total	3,355	2,730	6,085	625	557	1,182	3,980	3,287	7,267

the estimates of total European demand. Errors in the estimates of market shares could result in over-estimating or under-estimating the sales of individual countries. Again, in assessing the export demand of different manufacturing countries a qualification that must be borne in mind is that in "free" conditions such as will prevail in the common market the inherent advantages of particular countries of origin will disappear: country shares will result from the aggregate performance of individual manufacturers.

In Table III estimates of "normal" capacity (which are simply 80 per cent of the maximum capacity figures given in Table I) are expressed as a percentage of the demand estimates (from Table II). For Europe as a whole total vehicle capacity exceeds estimated demand by 11 per cent, and should therefore be sufficient to cope with any upward cyclical swing that might raise demand 10 to

TABLE III. MANUFACTURERS' CAPACITY AS A PERCENTAGE OF ESTIMATED DEMAND IN 1965

	Cars	Commercial Vehicles	Total
Germany	90	90	89
France	132	107	126
Italy	142	80	135
Sweden	122	110	121
Continental total	109	89	106
United Kingdom	120	120	120
European total	112	103	111

15 per cent above the estimated trend level. It follows, however, that there is more likely to be too much capacity than too little, and that cars, rather than commercial vehicles, will be in surplus. The British industry clearly is building enough capacity to cope with any likely level of demand, and is almost certain to have excess capacity by 1965.

The Continental producers, taken as a group, are likely to find that their capacity to supply will be roughly in balance with demand, although if there were a boom year they could be unable to meet demand for commercial vehicles. Even if the market shares of the French and Italian producers are under-estimated, however, these two countries are likely to suffer from excess capacity in passenger cars by 1965, even if demand is at boom levels. On the other hand German manufacturers, with their present plans, will almost certainly have insufficient capacity to meet demand. This is, of course, the static picture; it assumes that manufacturers will not revise their plans. The United Kingdom, France and Italy could take advantage of any shortage of German vehicles, and if plans are not revised to allow for increased capacity on the Continent the British industry would be in a good position to profit from any shortage of commercial vehicles.

ONE final point has to be made. Any discussion of the problem of productive capacity must also take account of the possibility that some firms may not be able to survive the increasingly competitive market conditions that lie ahead. The fact that there is not likely to be very much excess capacity in Europe as a whole in 1965 can do little to defer the process of rationalisation and concentration. The competitively weaker firms, in any case, are most likely to succumb during cyclical downturns in demand. Certainly the lowering of tariffs will hasten the process of concentration, for which there is still a great deal of scope in Europe, especially among commercial vehicle producers. In Germany 84 per cent of vehicle output was accounted for by four firms (taking Mercedes and Auto-Union as a group); in the UK five firms accounted for 88 per cent of output; while in Italy Fiat accounted for 82 per cent of production, and in France four firms produced 96 per cent of output. For cars alone the percentages are much higher.

The scope for concentration in some countries is greater than these figures would suggest. In Germany, for example, there are no less than eight firms with an annual output of less than 50,000 cars, and fifteen with an annual output of less than 12,000 commercial vehicles. In France there is very little scope for further concentration, except among the big four. In Italy the smaller producers will encounter considerable difficulties as the relatively high Italian tariffs are reduced. At the moment only General Motors and Ford have major manufacturing interests in more than one European country, but the growing integration of the European market will soon lead to amalgamation and concentration across national frontiers as well as within them. The sales and technical agreements between Renault and Alfa Romeo and Fiat and Simca will probably soon be followed by others, and eventually by mergers too.

The British industry is in a rather stronger position to compete with the Continental manufacturers now than it was in 1957 when the discussions for the free trade area were under way. Although it is at present suffering (like the French) from a recession, its output in 1960 was slightly higher relative to that of Continental manufacturers than it was in 1957, its range of models compares more favourably, and a great deal of rationalisation has been carried out. The UK industry is not likely to be short of capacity in the middle 1960's, but the production capacity prospects for Europe provide additional reasons for thinking that the motor manufacturers are wise in their eagerness to have Britain participate in the common market. The initial shock is likely to be unpleasant, and to involve some losses in sales on the home market; but British makers, once they have built up an adequate sales network on the Continent, should have the ability to provide cars that are competitive in design and price with those of Continental manufacturers.

If your horizons have widened . . .

Every picture tells a story—every Humber tells the right one. This one could be called 'the partnership of assurance'—a man and his Humber. He can rely on it. On the way it performs (brilliantly), on the way it looks (every inch a thoroughbred), in the way it accommodates (generously, luxuriously). Able to deal with any conditions that climate, roads and traffic can devise. And safe. Very safe. Very strong. Imposingly elegant in any company. And it is for these very important reasons that at a certain moment in your life (perhaps now?) a Humber will fit your aspirations like a glove. The 3-litre, six-cylinder Super Snipe Saloon is **unrivalled by any other car approaching its price: £1532.9.9 including purchase tax.** Fully-automatic transmission, power-assisted steering, individual front seats and overdrive on normal transmission models available as extras. See also the luxurious **Humber Hawk** Saloon. Remarkable value at £1277.5.7 including purchase tax.

An Ideal Car?

In recent years the British motor industry has been showing more signs of originality—one might say, of thought—in its efforts to produce the sort of car that can enjoy as world-wide an appeal as the Volkswagen that it once scorned. But each car buyer has his own desires, which British car makers often neglect; one wonders why, for example, continental makers can afford to provide such popular fittings as the sunshine roof on their cheapest cars, when British makers claim that they cannot have their production lines complicated by adding to the number of variants on each model they produce. But falling export sales may help to convince makers that they will have to do more to adjust their products to the varying desires of the public. A guide to some people's prejudices in car design may thus be of some use to the car manufacturers; and it may give readers the excuse to think what they really want, but can never get—and, we hope, fire them to start demanding these features. The selection of ideal features set out here—and compared in passing with the characteristics of some of the world's new cars—is highly individualised, and very demanding; it comes from two discriminating, 'semi-professional' motorists. What would your ideal car be?

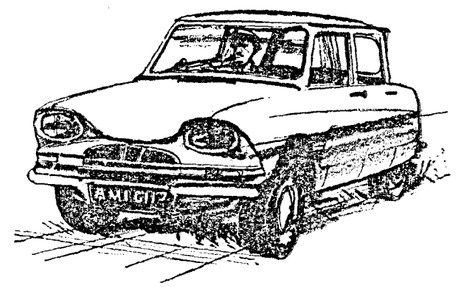
THE first thing that an ordinary motorist buying a car considers is the price; and the biggest market is certainly for cars that cost, including the present rate of British purchase tax, under £650—say £450 without tax. This is the price that we shall take as the maximum cost of our ideal small car in its basic form. Given large-scale production, it should be possible; and if such a car is to get world-wide sales, this would be the maximum figure that could be considered.

In this country traffic density and lack of easily attained parking space has made the really diminutive automobile acceptable, but the biggest sales are made to family motorists who must have four seats. Small overall dimensions with decent living room inside the car are going to prove more and more acceptable. Alec Issigonis of the British Motor Corporation has set the lead with his recent minicars, in which four adults can sit in comfort, with elbow room to spare, plenty of stowage room for oddments, and enough volume in the boot for a week's luggage for two of the occupants. All this in a vehicle in the baby-car class.

The popularity of the Austin A 40 has attuned the public to slab-ended bodywork and so our "ideal" family car might well be one that is as wide as the Morris Mini-Minor or Austin 850, perhaps a few inches longer, with good visibility ensured through the provision of generous window area. But it should be sparing of overhang all round, so that parking in small spaces shall not be an accomplishment confined to the expert driver.

The boot should be able to hold three or four weekend suit-cases but be compatible with the lack of overhang. The boot of the Ford Classic will be popular at holiday times, but it does make the car a foot longer than it need be. The new Vauxhall Victor shows that an equally large boot can be combined with less rear overhang and more space for the rear passengers' legs. The spare wheel might well be accommodated in a separate compartment below it, as so well contrived in the Wolseley 1500 and the Riley 1.5, or the new Singer Vogue and Hillman Super Minx; for luggage that lives with the spare becomes easily chafed if not downright dirty. A folding sunshine roof, like that of the Volkswagen, Fiat 600 and Renault 4 L, should be a cheap option.

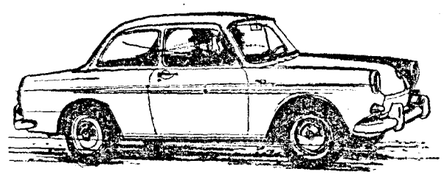
Within the car the seats must be properly designed, not just something on which to place the occupants, and the driver's must slide back far enough for even a tall man to adopt the "arms stretch" driving stance made popular through watching Grand Prix drivers at work (but also the best for an average person to use). A bench seat is of no merit in the smaller car, as it would be too narrow to seat more than two side by side; and separate seat squabs should have adjustment of rake, by a simple means as in the VW, or should fold flat to form a double bed with camping holidays in mind. This need not be a costly arrangement—the Russian Moskvitch, which sells here for under £760, has a very crude main seat adjustment but still contrives that the seat squabs fold flat.



Rubber floor matting will save cost and be easy to clean and the upholstery must be porous; nobody wants to be stuck to the seat with his own sweat. The heating and de-misting system should avoid the too-general shortcomings of complex controls that leave passengers either too hot or icy cold. Fresh air vents on each side of the scuttle, as in modern Citroën and Rootes cars, would be welcome, and it might not be impossible to provide aircraft-style ducts for the back-compartment passengers. Some means of quickly de-misting the back window is important, perhaps as a development of Saab's rear outlet ducts, which also help to provide for good air circulation within the car.

HAVING visualised the car as a shell, what size of engine shall it have and how shall it be sprung? Modern traffic conditions which vary between the need for effortless fast cruising along our better roads (headed by M1) and the best possible pick-up to regain speed lost in congested places set a minimum engine size of around 1,000 cc. A straightforward push-rod overhead valve unit of this size could develop 40 bhp at a normal maximum of about 4,800 rpm and could give the compact car we have visualised a performance better than that of present small cars—in the same class as the Ford Classic, in fact, with its 51 bhp engine. This engine could be flexible enough to permit a minimum speed of 15-20 mph in a top gear high enough to give a stress-free cruising speed of 70-75 mph.

As to suspension, the leaf spring, especially in conjunction with a rigid back axle, has had a very long innings. It is well worthwhile using an alternative: and so successful are the rubber suspension units of the BMC minicars that these would seem to suit our purpose admirably, especially if front-wheel drive is used to simplify the provision of independent rear suspension. This is a matter for the design staff, but as users we want a comfortable ride coupled with stability when cornering, sufficient damping to cut out bouncing, and enough traction at the driving wheels to make muddy car parks and steep slime-coated hills no excuse for getting out and walking—or pushing.



The cost and time involved in car maintenance are becoming steadily less tolerable; chassis lubrication has remained virtually unchanged for over 60 years. So let us be firm and insist upon following the brave lead taken by the Triumph Herald and now followed by Rootes, Renault with the cheap R4L, and the new Vauxhall Victor, which use rubber and/or nylon bushes throughout the car, so that greasing operations are virtually eliminated. The more heavily loaded moving parts could be metal bearings impregnated with graphite, or oil-sealed units such as Rover and American Ford have found serviceable. And if the car does not need greasing, it is hardly logical to have to adjust brakes; whether disc or drum, they should be self-adjusting.

The entire car should be conceived with the idea of simple assembly, which will help to reduce factory inspection lapses, and a durability of components that would give 50,000 trouble-free miles. From this

Citroen Ami-6

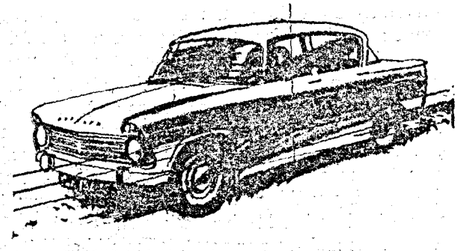
THE Ami-6 is Citroën's attempt to make a small car that would combine the virtues of the 2cv with the style and performance of more conventional vehicles. The result is a car that is more like the 2cv than an ordinary small car, but sells for a price—£480 in France—that scarcely puts it among the ranks of the cheap cars. It retains the soft springing of the 2cv, allowing it to be driven fast over the worst of roads with reasonable comfort for the occupants, but means considerable roll on corners. With an engine that is still of only 600 cc, the acceleration remains significantly inferior to that of other small cars selling for the same price or less, though the maximum speed and cruising speed differ little. The Ami-6, surprisingly, gives the rear seat passengers less space for their legs than they have on the 2cv, though the luggage boot should contain all that four people are likely to want to take for a holiday. It is in small matters, however, that the Ami-6 shows some unexpected failings: only the rear halves of the front windows slide open, an arrangement calculated to provide only draughts—though there is a cool air intake under the windscreen—and the seats are difficult to adjust.

Volkswagen 1500

THE new Volkswagen is a surprisingly conventional car, which its makers seem to hope will sell at its higher price on the reputation for reliability and good service that the old car has gained for itself. In design there is little difference between the two cars; the 1500 is a little wider, but the wheelbase is the same and the engine differs chiefly in its internal dimensions. Thus Volkswagen can make a second model with the minimum of extra tooling—little more than that needed for the body—while the new car should inherit the virtues of the old car so far as its main components are concerned.

The 1500 develops a third more power than the old VW and weighs little more, so that it should have a significantly better performance. But it is much less powerful than the cars that it is priced to sell against, such as the Ford Taunus, while the old VW competes on equal terms for power with its rivals. And the bigger car is not significantly roomier: legroom is still limited in the back seat, and though the two luggage boots provide much more space than is available on the old car, this is still rather less than conventional cars of the same price can offer, and the luggage needs to be removed from the rear boot if any work has to be done on the engine. The springing is rather softer than that of the old model, though the design of the suspension system is basically unchanged, so that the car still oversteers, and the steering is lower geared. The car gives the impression that its designers have sought to avoid the then novel approach that gave the old model part of its appeal.

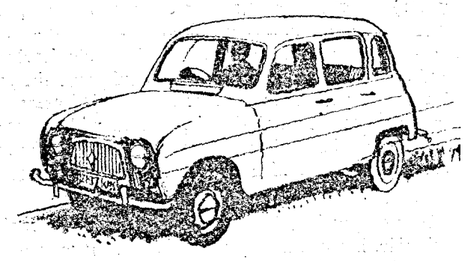
aspect air-cooling has something to recommend it, as it dispenses with anti-freeze and eliminates faulty water hoses and joints. But the matter of exterior finish is more important; the body shell must be initially cleaned and rust-proofed to retain its paint, which must be able to withstand extremes of climate and airborne corrosives so that, after five years of open-air garaging, the car will polish up like new. Volkswagen manage it and in a low-priced vehicle, so it is not impossible. Stainless steel for bumpers and bright work is preferable to chrome, as Peugeot knows.



A really thorough treatment with underseal compound should be normal practice, applied even to hidden places, as Saab do it. Inspection after assembly must include a water bath using very powerful hoses directed from every conceivable angle, to eliminate the chance of any single car giving its owner wet feet, as happened with new products from two of Britain's biggest manufacturers a couple of years ago.

If troubles should arise, the minimum period of guarantee should be twelve months, and should include labour charges incurred at the agents, not only the factory, as well as free replacement parts. The manufacturer should set up an efficient department where customers' complaints are investigated thoroughly with a minimum of delay, as Vauxhall have, and their findings are passed on to the design staff. Best of all, the car should be so designed and built that the customer does not have to complain.

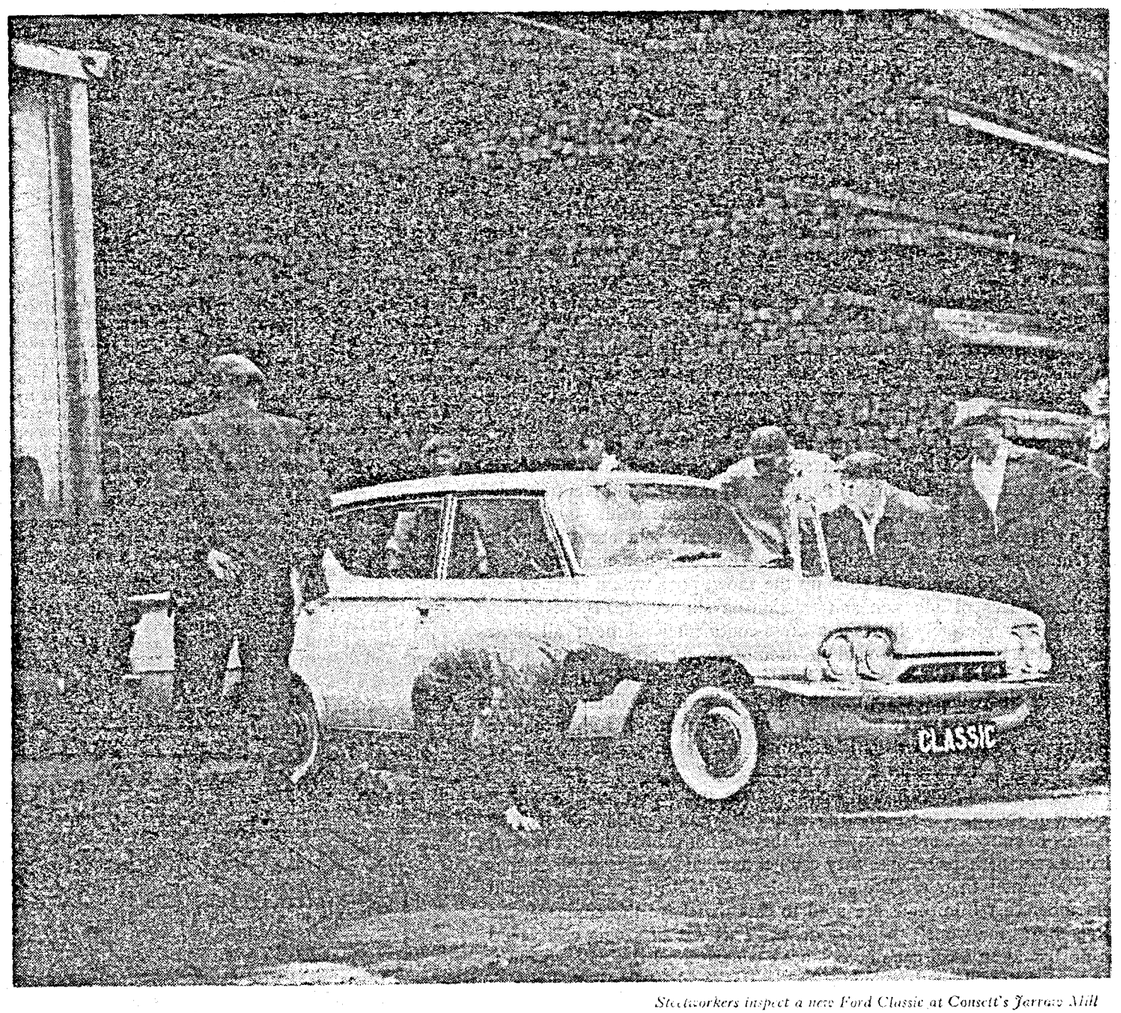
WE have now "designed" for ourselves a comfortable, not too cramped, four-seater saloon, cool in summer, warm in winter, of adequate if not sports performance, that needs a minimum of attention and cleaning. It is well sprung and does not roll on corners, so we are encouraged to drive it fast. In today's traffic this demands powerful brakes that do not deteriorate when hot—as too many car's brakes still do. Progressive rather than ultra-light retardation should be the aim; if Ford can afford to offer disc brakes on the Classic, we shall demand them on our ideal car, too.



So we have looked at the design in general, but curiously it is in the smaller aspects of a car that sales are so often made or lost. There is the question of whether to have two doors or four. The latter are far more convenient, providing each door is not skimped in width, but parents with children may feel happier with a two-door car. If there is to be crash-padding, let it be scientifically applied. With it should go safety-belts; and perhaps the designer has done sufficient in providing steering, road-holding and braking to enable an accident to be avoided. But he must provide really good head lamps, with an adequate cut-off beam when dipped. Dipping should be by a stalk lever protruding from the steering column, because the foot for a floor dipper is so often working the clutch pedal when dipping is needed. And we are adamant that a daylight head lamps flasher be provided. To help preserve personal possessions from theft, the cubby hole should be really large, and be locked by a separate key from that used for the ignition.

The gear change should be by a simple little central lever, well placed and rigid, with reverse not too difficult to engage; the hand brake should lie between the seats and the pedals should not be off-set in relation to the steering column. Steering should not need a boxer's muscles when parking and should be both light and smooth at speed—Volkswagen do it to perfection, aided by a rear engine weighting the rear wheels. It should be geared not lower than 2½ turns lock-to-lock, for quick skid correction, in conjunction with a Herald-like turning circle; and a little kick-back, as with rack and pinion, is preferable to no "feel." If there is castor return action the wheel should play easily through the driver's fingers, not spin back viciously to straight-ahead, and the wheel should incorporate decent finger grips and be sweat-absorbing, as on the Citroën

Hillman Super Minx



ROOTES has not followed any less conventional an approach to design than Ford or Vauxhall, but it has produced a car of quite different character. The Super Minx feels much more of a sports car in its handling characteristics, having springing that is firm enough to allow the car to be cornered fast with little roll, though still absorbing most bumps. In body space Rootes follows closer to Ford than to Vauxhall, holding to the traditional concept of the Minx as a four-seater car and no more, but the boot is smaller than that of either. In design for easy maintenance it is closer to Vauxhall, reducing the number of points that need greasing to three that need attention every 3,000 miles, when the engine oil is changed. And, like Vauxhall, Rootes sticks to the drum brake. It also has the body undersealed, and it has taken much trouble to reduce the noise level inside the car; plastic foam is stuck on the engine side of the scuttle, and the floor covered with felt. The ventilation system incorporates a separate cool air intake for the driver, apart from the air that can enter through the heater itself.

Renault R4L

THE R4L is Renault's entry into the market for a countryman's car selling for £390 in France. Though its handling characteristics tend to excessive understeer, it is a design that shows much ingenuity and forethought in its details. Greasing has been completely eliminated by the use of rubber bushes, self-lubricating bearings or bearings in which the lubricant is sealed for its life; and, what may prove less useful in practice, for the risk of a burst radiator hose remains, the cooling system is also sealed and should not need refilling during the life of the engine. In suspension Renault has opted for a soft ride, to give real comfort over unmade roads, and despite the use of methods that are conventional except for the softness of the springs, the result is remarkably successful. The actual cornering ability of the car does not seem to meet the same high standard as that of other front-wheel drive cars such as the BMC babies. The gearbox provides only three speeds, and there is no synchromesh in bottom gear; and the brakes need adjusting as usual—one item of maintenance that still remains.

The R4L seems essentially designed for the user who puts comfort over bad roads and low maintenance costs before the ability to travel fast; and many amenities that such buyers would like are provided, if only as extras. One that many British buyers will envy is a sunshine roof that opens above both the front and the back seats, which costs £9. Standard features include an effective fresh-air ventilation system, though the rear seat passengers have to put up with fixed windows and comfortable though cheap-looking seats.

Steelworkers inspect a new Ford Classic at Consett's Jarrow Mill

Some Consett steel comes elegantly home

THE AMOUNT of Consett steel in any single car on Britain's roads may not look very impressive; it's to be measured in pounds rather than hundredweights. But if you took all the cars made in Britain in one year and added all these pounds together you would get a figure of thousands of tons. In fact only constructional engineers, tube manufacturers and cold rollers take more steel from Consett's Jarrow Merchant Bar and Strip Mill than does the motor industry.

Consett steel goes into wheel rims and brake shoes, bumpers and rainwater channels, door-handles and lay-shafts for gear boxes. Wilmot Breeden use it for their accessories and so do Rubery Owen and the Dunlop Rim and Wheel Company. Ford Motor Company Ltd. buy it direct for their distinguished family of cars, including the exciting new Classic.

So Consett provides the sinews of industry not only to its home ground in the North-East but far afield over Britain. And over the world, too. Both the Jarrow Mill and the new plate mill at Hownsgill are making a substantial contribution to our overseas trade as well as our home markets. A £30 million development plan is helping to make sure that Consett—and Britain—maintain a leading position in the field of export.

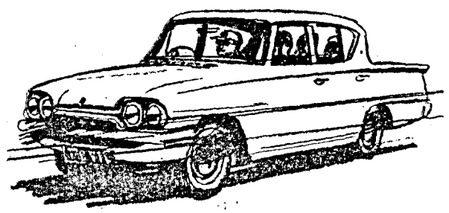
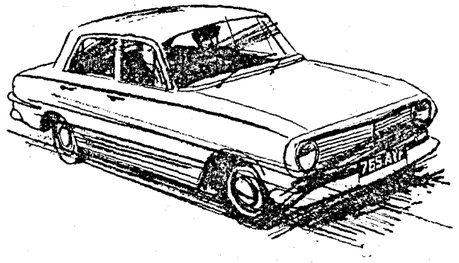
DS and ID. The wheel must be placed so that a driver of average height looks over it, not through it.



Instrument lighting should be controlled for brightness by a rheostat incorporated in the switch and illuminate the controls as well as the dials, when fully turned up. We want to see the various knobs clearly labelled as to their functions and located with some care, choke adjacent to starter-key, washers control beside the screen wiper knob, and so on. The driver's window should open fully with not more than one turn of its handle, so that he can get his head out. And the bonnet and boot lids should stay up of their own accord. A jack that is simple to operate and raises the vehicle without buckling, a starting handle that is both easy to insert and rigid in use, and fuses that a novice can find and replace are all other vital items of this "ideal" automobile.

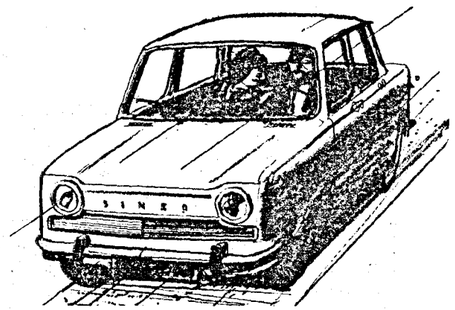
It is attention to details such as these that make or mar a car, but the first essentials to world sales are durability and dependability, with which must be coupled quick starting in low temperatures, provision of adequate interior heating of a water and dust-proof body, and controllability that imparts a sense of security to the driver. He must have excellent forward visibility, as on the Triumph Herald; the car must neither over- nor under-steer to an abnormal degree (if it does, the accident will either happen as it spins round going into a corner, or head-on coming out of a corner); and it must ride well and feel unbreakable, as does a Saab or Citroën 2 cv, over unmade roads.



Our designers must try to remember that cars sold abroad operate in remote areas and in extremes of heat and cold not encountered at home. Hooded lamps that pack up the snow, poor weight distribution that spells lack of adhesion and traction on slippery roads, seats that become uncomfortably hard in a cross-continental journey: all these can lose sales. It is also vital to attempt to get prices down to the competitive level of those prevailing in the common market. Even a comprehensive instruction manual may make all the difference when the nearest agent is many hundreds of miles distant. A fully operative spares service in all markets is essential: its lack has caused much of our industry's troubles in export markets.

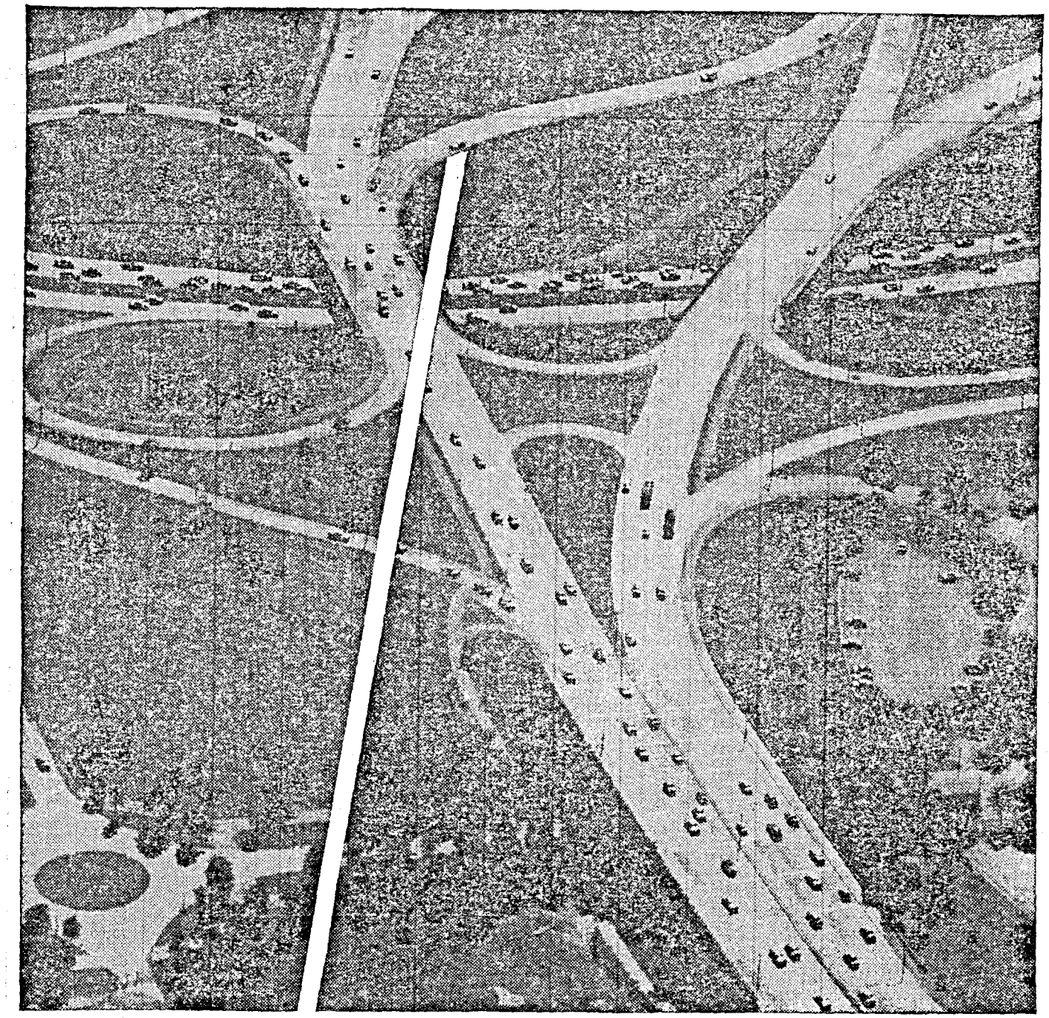
A car on these lines would help to make our motor industry again become a leading export industry. European markets, which it is so anxious to cultivate, are choosy—and they do not choose enough present British cars, perhaps because they can get more of these desirable fittings on continental than on British models. And British makers should remember that Europeans are used to cars that have the engine at the same end as the wheels that they drive. This way of saving cost would be no bar to an ideal car's acceptance; conventional designs can do it, too, but they will need ingenious production engineering if they are to offer comparable value.

Ford Classic



THE Classic may suffer in comparison with competing cars from the fact that it was designed at the same time as the Anglia. Thus it does not have such details of design as few greasing points, but it does have disc brakes: buyers seem unable to get a car that needs neither brake adjustment nor greasing. In suspension design Ford has leaned towards Vauxhall, and adopted soft springs that give a comfortable ride but allow some roll on corners. They have not, however, followed Vauxhall in providing as much space for the rear passengers' legs, though they have built just as big a boot into the body. One criticism of the car is that it does not provide as much space as one expects in a car of its price—and less than older and only slightly dearer models such as the BMC 1.6 litre cars provide. In styling the car rather lacks the look of a purposeful means of transport, such as the Minis possess, with its long overhang at the rear and front-end decoration; perhaps our tastes are changing.

Vauxhall Victor



THE Victor is yet another of the conventional cars that the British motor industry mostly still thinks are the best bet in the medium-sized class. In basic design it follows the old Victor, but with a general softening of its character; the effect has been to change it from a continental car into an American car. The ride is more comfortable on bad roads, but this has been gained at the price of considerable body roll if corners are taken fast. The designers have, however, thought through the details of the design; they appreciate that the rear seat passengers in the car of this size expect to have enough space for their legs, and that buyers would like this feature combined with a large luggage boot. Greasing is another feature where this care appears; there are only four points that need attention every 12,000 miles. But disc brakes, which are self-adjusting, have not been adopted, and as drivers are likely to find that drum brakes need adjusting more often than the oil needs changing if braking efficiency is to be maintained, part of the benefit from this simplification of maintenance procedure is lost. Much emphasis is placed by the makers on the quality of the paint-work, and the body is undersealed.

Simca 1000

THE Simca 1000 is one of the more expensive small cars, selling for £475 in France, and intended to give more comfort and performance than the basic Dauphine, Minis or Volkswagen offer. But with a weight of 14 cwt and an engine developing a gross power of 45 bhp, it does not have a significantly better power-weight ratio than the Minis, for example; solidity looks like being one of its maker's advertising points. The basic design of the car is that of the Fiat 600, except for an engine which derives from that of the Simca Aronde, with its five-bearing crankshaft. It is thus well-tried, though it originated a decade ago. The detail design, however, shows signs of the commercial acumen of the Simca concern: greasing has been reduced to four points on the front suspension that need attention only every 12,500 miles, and the turning circle is only 29½ feet. There is also synchromesh on all four forward speeds, by now a feature that appears on most new cars; but the brakes are normal drums, if generously proportioned for a car of this size. The body has been designed for easy repairs, with detachable wings—essential in Paris traffic, one might think.

CAN BRITISH CARS TAKE IT?

Can British cars take it in America?

ASK PRESSED STEEL

Can our cars face the new challenge over there? Can they compare for ride, comfort and solidity with the new American compacts at American speeds on turnpikes and motorways? We can answer for the British cars we know, because we make their bodies.

These cars are tried in almost Le Mans conditions at the MIRA testing ground in England, and under extreme conditions abroad. They're flogged day after day on high-speed banking capable of being lapped at 150 mph. They're checked for high-speed stability in Europe's only true car wind-tunnel. They're tested against corrosion, heat and cold. They're braked viciously; driven through dust tunnels to check their sealing; turned in ever-decreasing circles for roll and steering tests.

We say British cars can face any kind of challenge in America. Because they give a good ride, because they're good value. And because they last.

Sea Change in Detroit

FROM A CORRESPONDENT IN DETROIT

ONE who has carefully observed the US automobile industry for a number of years has the unsettling feeling this fall of 1961 that he is looking into an industrial kaleidoscope. Every time he blinks he sees a different kind of industry.

Looked at from one aspect, the industry does not seem to have changed, or even progressed, very much. Some cars are longer and more powerful; once again there are bright metal strips to festoon the sides. Still, some of the cars with familiar nameplates on, even at a glance, are smaller than they were a year ago.

Again, the apparent engineering pattern of the industry would seem to be the tried and true designs and mechanical arrangements of the past decade. Yet one car this fall has a V-6 engine and another firm has an in-line 4-cylinder unit such as it has not used for over 30 years. In an industry that long has tried to simplify the transmission of power from engine to wheel to a point where even a chimpanzee could be trained to push the right selector button, there leaps into view a company that has gone back to a semi-automatic transmission.

An industry swollen into the biggest in the world by spawning millions of models as similar as possible, has suddenly shattered into dozens and dozens of odd sizes and shapes, each a car designed for a different purpose or clientele. An industry that has always seemed dedicated to a marketing system calculated to sell each motorist a new car every year or so, now appears to be an industry dedicated to helping the buyer keep the same car much longer. And once in a while eyes that stare at the automobile industry do not see automobiles at all, but refrigerators, washing machines, television sets, missiles, space ships and weird flying vehicles. From yet another view, the American automobile industry, the largest manufacturing complex in the country, appears to be going abroad.

The automobile industry in the United States has profoundly changed, even in the past half-dozen years, changing other industries and regional economies with it. If the kaleidoscope is dismantled, and some of the most prominent shiny bits examined separately, you can easily see the change.

Encouragement to Engineers

THE saying so popular around Detroit a few years ago—"you have to sell the sizzle instead of the steak," that is, styling rather than engineering—seems forgotten. Americans have become more interested in what their cars will do, rather than merely in how they look at the time they are bought.

The 1962 models continue the concentration on engineering and mechanical features that become so prominent with the small cars from General Motors, Ford Motor Co. and Chrysler in 1960. Buick has a V-6 engine, an innovation in American passenger cars, for its Special, the cheapest car it makes. Buick claims that this engine (although it has a cast iron block) is from 140 lbs. to 179 lbs. lighter than competitive in-line 6-cylinder engines. Perhaps as important, of course, is the fact that the V configuration permits Buick to retain the low hood line of its Special. In 1961, the first year it was on sale, the Special used an aluminium V-8. This, however, was not only more expensive to make than the V-6, but an embarrassingly high proportion of the sand castings were porous. So this year Buick's aluminium V-8 is being reserved for its bigger cars; the cheaper V-6 has enabled the Special to drop down a notch in price.

Chevrolet, too, has a new engine: an in-line 4-cylinder with a displacement of 153 cu. in. and 90 horsepower. Although Pontiac last year brought back 4-cylinder engines to US passenger cars, this is the first time Chevrolet has had such a power plant since 1928. This small engine is used in a new car Chevrolet has introduced, confusingly named "the Chevy II." This has another new feature, a single-leaf spring as part of the rear suspension. The single, tapered piece of steel is 5 feet long, and in addition to saving money is supposed to provide a better ride.

American Motors Corp. is the company bringing back the semi-automatic transmission—which was last used (on some Chrysler cars) in 1954. For its 100-inch wheelbase American, AMC is offering what it calls an "E-Stick" (for economy) transmission, which is simply the familiar automatic clutch type of arrangement recently used in some British and European cars. It will cost less than $100 and be more sparing of fuel than an automatic transmission.

Detroit engineers have thus been given encouragement to design a better car than ever before. In 1962 nearly every new car will be supposed to run for 30,000 miles without additional lubrication. Recommended mileage between oil changes is up to 6,000; in a few cases even higher. Some oil filters are claimed to be good for 30,000 miles. Some car factories are offering (at extra cost) to instal a "permanent" coolant in cars, to last 30,000 miles.

There are risks attached to claims such as these. There are customers who will abuse their vehicles and expect the manufacturers' guarantee for "normal" driving still to pertain. One factory head complains that whereas the chassis of his car is guaranteed not to need lubrication within 30,000 miles, customers complain about body squeaks. Just as important a consideration for the factories is that their dealers may be made unhappy when they don't see their customers as often.

Myriads of Models

IT would be a brave man who would say flatly that the sea change in the type and character of US automobiles that began several years ago has now run its course; but it is hard to see how much farther it could go. The spread of models now is so wide that the posture of the industry almost has to be indicated by a factory-by-factory run-down.

Starting at the top is easiest. **Cadillac** is still a big car, serving the same kind of market as ever. But it, alone, has been untouched by the ferment in the market of the past few years.

Chrysler Corp. now has two car divisions, instead of the five it had only two years ago. The **Chrysler-Plymouth** Division gives that factory and its dealers a size range from around 227 inches in overall length (Imperial) down to 183 inches (Valiant) and a price range from nearly $6,000 to down around $1,800 (before federal tax). There is no more Desoto. **Dodge** Division spreads across a major part of the entire size and price spectrum with a middle-size and middle-price car, standard-size car, and compact. Dodge used to what was called a "medium-price" car, and competed with Pontiac, Buick, and Mercury. Now its major sales effort will be behind its "Dart," a car on a wheelbase of 116 inches, two

inches shorter than in 1961. Plymouth is the same size, having also shortened its wheelbase by the same two inches.

The **Ford** Division of Ford Motor Co. is bringing out early in November a completely new line of cars with an old name, Fairlane and Fairlane 500. These cars, on a wheelbase of 115.5 inches, come in price and size in between the 109.5-inch wheelbase "compact" Falcon and the 119-inch Galaxie. The **Lincoln-Mercury** Division of Ford Motor Co. will have the same sized (115.5-inch wheelbase) car named the Mercury Meteor (in addition to the Continental at the top of the price list and the 114-inch wheelbase Comet at under $2,000). The Mercury Monterey continues the same size (120-inch wheelbase) as in 1961.

Chevrolet Division of General Motors also has an entirely new-size car, its Chevy II, on a wheelbase of 110 inches and has an overall length of 183 inches. As before, the "big" Chevrolet is on a wheelbase of 119 inches. The other GM divisions, **Pontiac, Buick** and **Oldsmobile,** are continuing with "big" cars of at least 120-inch wheelbase, and the compact Tempest, Special and F-85 on a wheelbase of 112 inches.

Studebaker-Packard has lengthened many of its models, some by as much as 12 inches, and **American Motors** has discontinued its luxury model, the Ambassador, which had a wheelbase of 117 inches, retaining that name on a 108-inch wheelbase model.

Ford's Galaxie, Chevrolet's Impala and Mercury's Monterey will be merchandised as distinct automobiles. Plymouth and Dodge have withdrawn from that particular arena, but now will compete with the Fairlane and Meteor. The Chevy II is to compete with Ford's enormously successful Falcon. Chevrolet's rear-engine Corvair will be directed toward a different kind of market, people who buy a car for lively performance and unusual handling. In size and price there will be more competition than ever for American Motor's Rambler and Studebaker-Packard's Lark—the two makes that started Detroit's move toward economy.

That is an indication of how Detroit sees the majority of customers for the next year or so. They are more interested than ever in a comfortable, but not extravagant, size. They are more price conscious than ever. The pattern of living in the United States is making two or more cars in a family not merely desirable, but nearly necessary. Accordingly, a dealer cannot survive in attempting to serve the popular market if he cannot have a broad selection of vehicles to offer his customers.

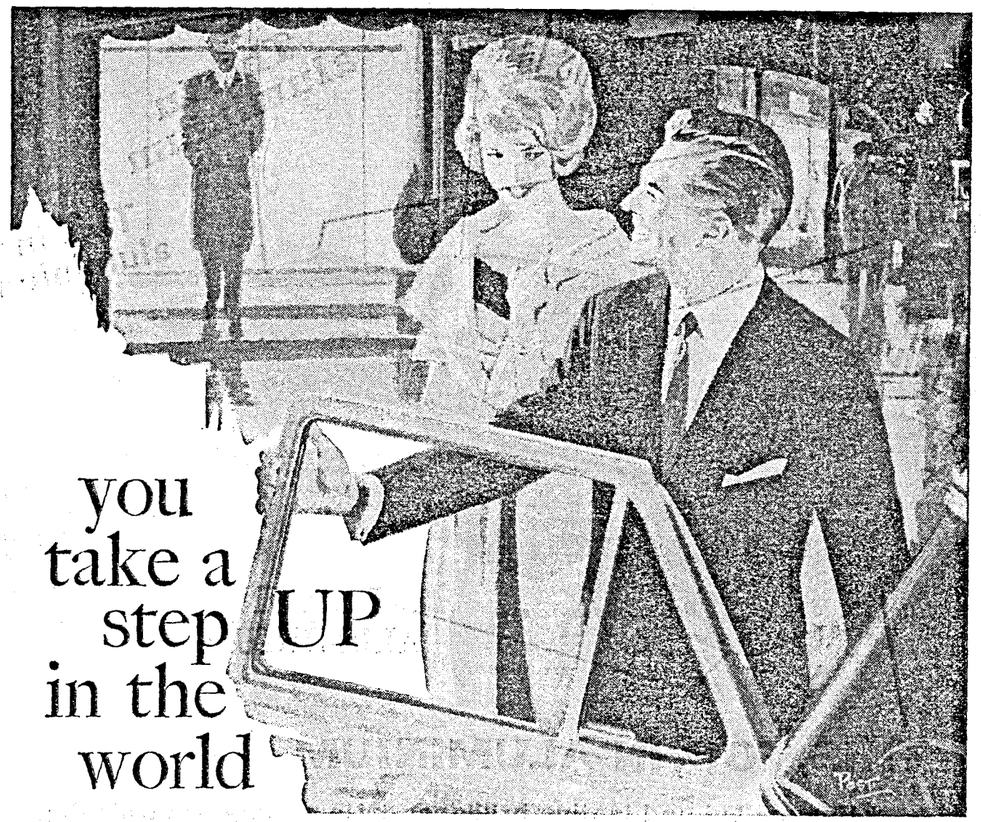
With that philosophy, the factories are trying to reassure dealers that extending the period between customer visits to a dealer's service shop really will not be bad for business. On the assumption that most owners drive 12,000-15,000 miles a year, the factories are telling the dealers that the time to go after "repeat business" is when the 30,000-mile lubrication period is up, when the tyres need replacing, or when the car needs a heavy overhaul—in other words, at the end of two years, a time when the dealer normally would not be seeing the customer anyway. Meanwhile, the companies argue, there will be a greater sales potential because of the number of families who need more than one car.

This may just be the familiar and often unwarranted confidence of U.S. motor makers that they function in an ever-expanding market. In fact, though, it seems to be a different type of confidence. Once Detroit believed that every wage-earner panted for a new car—and frequently. Now the belief has more substance: that every wage earner probably needs a car, and that he will buy a new car more frequently if a new car, by extended maintenance periods, can be made cheaper to own over a reasonable period of time than operating a trouble-prone older car.

This new philosophy will enter its testing period with the 1962 cars. Next year the U.S. auto industry believes that new-car sales will be between 6.5 million and 7 million, including perhaps 400,000 imported makes. That 6.5 million to 7 million is getting to be a shop-worn figure now. It has been used every fall for the past three years; came true in 1960; but will be too high for 1961. But the people most optimistic about it are at General Motors and Ford, the companies that are invading new markets.

Many Talents

AUTOMOBILE manufacture requires such huge resources of capital that no company in it can afford to broaden the base of its fortunes very widely beyond its central job of selling cars. Ford's stockholder equity, for example, is nearly $3 billion. It is quite impossible to think of Ford being able to put anywhere near that amount into any other business in order to balance any drop in its income from auto sales.



Such moves as Ford's present proposal to acquire Philco therefore have to be viewed for what they really are: an attempt to get a position in the world of the future and to employ automobile profits where they can be of more use to the stockholders. Ford doesn't need vast new plant capacity in anything, for the auto industry is not expanding that fast. General Motors is building a new assembly plant on the Pacific Coast, but to replace an older plant. Consequently there is a noticeable drive among automobile companies today to move into other expanding industries. The emphasis, of course, is on defence and space, because of the enormous sums of money the government pours into these activities. Ford was more concerned to obtain scientific manpower and knowledge in the electronics business in its offer to buy Philco than by the desire to enter another hotly competitive consumer-goods business such as electrical appliances.

General Motors is already a big producer in many different businesses. In addition to making cars, trucks and buses, it manufactures earth-moving machinery, diesel engines, locomotives, a full line of electrical appliances, commercial refrigeration equipment, aircraft engines, every accessory or part for a car except tyres and glass (and sells them to other auto companies). Ford now is edging its way into the commercial glass and plastics market in addition to making cars, trucks and tractors and industrial engines. Chrysler Corp. manufactures cars and trucks, and marine engines, air-conditioning and heating equipment, metal bonding materials and powdered metals. American Motors has a very large division for electrical appliances, Kelvinator. Studebaker-Packard, a late-comer to diversification, owns companies which manufacture floor-cleaning equipment, earth-movers, plastics and chemicals.

And all these automobile companies are in defence or space work to some extent. General Motors' AC division is a main source of guidance gear of all kinds, and bits and pieces of far-out work are scattered through the GM complex. Chrysler has built the Redstone and Jupiter boosters which first put the U.S. into the space race. Ford has an "Aeronutronic" division in California which is working on, among others things, a capsule which will be fired toward the moon next year. American Motors and Studebaker-Packard are still trying to get substantial government contracts.

On balance, the effort of the auto companies to move into new pursuits generally benefits their employees, stockholders and the sponsors of the new activities. But it is bad news to some others—specifically the traditional beneficiaries of motor industry payrolls. Ford may expand many times in electronics or space work, but in California or the south, not around Dearborn its home, or even elsewhere in Michigan. General Motors over the years have spread out over a good part of the United States; it has a total of 130 plants, less than half of them in Michigan. Chrysler, too, has had to expand more outside of Michigan than in that state.

Up to now, the auto industry's activities outside of Michigan have been due to changing markets occasioned by shifting population; 40 years ago, for instance, there was no reason to put assembly plants or any manufacturing in California. Today the auto industry is important to many states other than Michigan, and that state will have to find other industries to furnish a sound tax base—which with its current labour costs may not be easy.

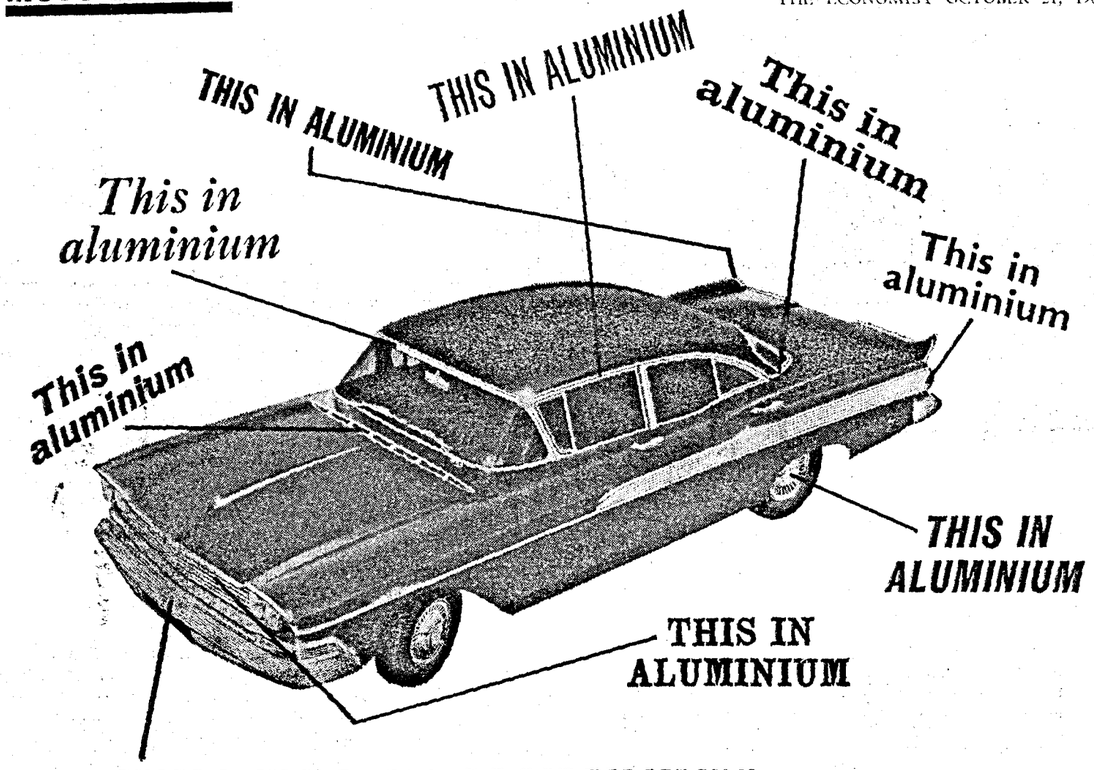
you take a step UP in the world

when you buy a car with

LEATHER UPHOLSTERY

and step out smartly, too!

Leather is kind to you; kind to your clothes. Keeps them from creasing; from clinging. Keeps you fresh and smart from the start of the run to the end.



THE BEST CARS IN ANY PRICE RANGE HAVE LEATHER UPHOLSTERY

Real leather upholstery has a scent and a feel of luxury. It has a richness, a suppleness, a comfort that can't be equalled by any other upholstery material. It's cooler in summer; warmer in winter. Wears cleaner. But these are incidentals. What's really important about leather in a car is the feeling it gives to the owner. A feeling of well-being. Of better living. The best cars in any price range have Connolly leather upholstery. Why not your next one? For who wants a substitute when the real thing gives you all this for only a trifle more?

Connolly Leather

FOR CHARACTER AND COMFORT

Racing 1961

A YEAR ago, when the 2½-litre Grand Prix formula was replaced by a new formula for the years 1961-64, British makers gave this new formula a stormy reception. It calls for a top engine size of 1½-litres allied to a minimum weight limit of 450 kg (8.9 cwt), together with self-starters, crash anti-roll bars, a ban on oil replenishment during a race and other stipulations aimed at safer racing. The British argued that the reduced power (on average, about 70 bhp) would result in skill being of less account and the driver's task in a difficult situation being made more dangerous. Lotus, Cooper and BRM, who had no new engines available, feared that foreign rivals would beat them on sheer horse-power. Racing organisers feared that the formula would reduce the spectacle of racing; smaller engines imply less wheel-spin and controlled sliding at corners and reduced maximum speed.

In fact, few of these objections have turned out to be well founded. While it is true that British cars, dependent on the four-cylinder 3.22 × 3.80 inch (1,498 cc) Coventry-Climax engine, have been outclassed by Ferrari, who had prepared narrow and wide-angle V6 engines for 1961 of considerably greater power, the year's racing has been exciting and stimulating.

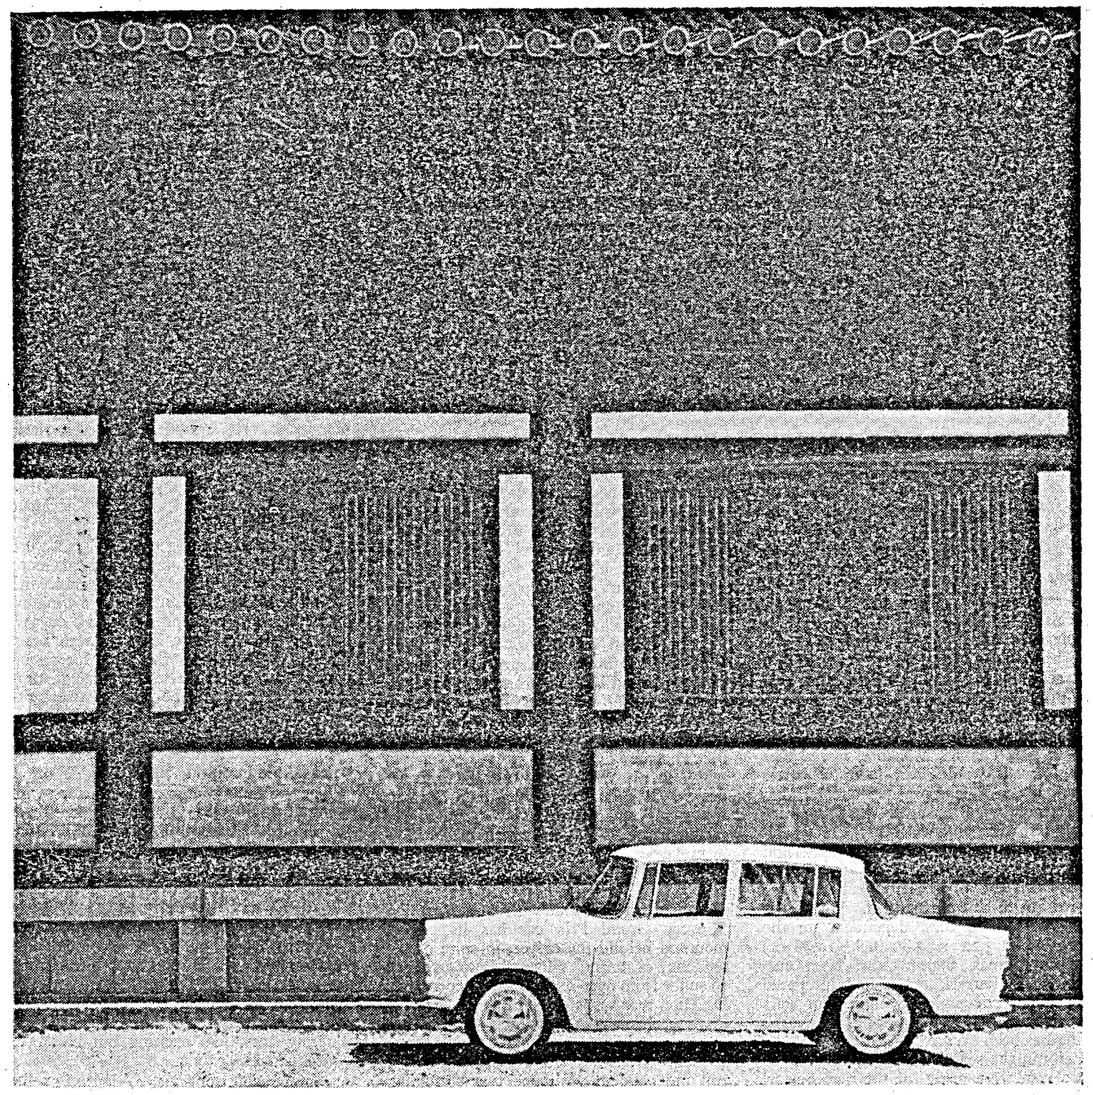
Early in the season claims of 190 bhp at 9,500 rpm were made for the new Ferrari V-6 engine; even with 178 bhp this would have had about 28 bhp more than the British cars commanded in four-cylinder form. To combat this deficiency Coventry-Climax and BRM put in hand new V-8 racing engines, but these were not ready until late in the year and even when they did appear were insufficiently developed to be of any assistance in overcoming Ferrari supremacy. However, both are likely to be formidable engines by 1962. Both weigh more than the four-cylinder units they replace and may well provoke road-holding problems. Moreover, the advent of these V-8 power units built under the new racing rules may help the development of production engines. This V-8 cylinder formation is common for American production cars, albeit of much greater swept volume than that of the latest racing engines, and has been adopted by Rolls-Royce and Daimler for cars in the highest price class. Lessons that racing may teach in respect of extracting the utmost power and reliability from this type of engine, which poses problems of carburation and sump ventilation, should thus be applicable to production cars, especially as modern Grand Prix cars run on pump fuel. The Ferrari V-6 layout has now been followed by General Motors; perhaps the horizontally-opposed eight-cylinder form that Porsche has chosen for its new engine may also prove another future commercial design. Bringing Porsche, the German sports car manufacturer, into Grand Prix racing has been another merit of the new formula.

IT is significant that with one exception every Grand Prix car has its engine mounted behind the driver, in spite of the tendency of normal saloon cars so arranged to suffer from over-steer (tail-out) cornering. De Dion rear suspension, in which the final drive mechanism was mounted on the frame but the wheels were tied together by a cross-tube, has given way to universal adoption of full independent wishbone rear springing. The need to run these new small racing engines at speeds in the region of 10,000 rpm should result in valuable development work on transistorised ignition systems and on valve gear.

At the end of the season another very important technical development was vindicated when Stirling Moss won the Gold Cup Race in a front-engined Coventry-Climax-powered Ferguson, largely by reason of enhanced traction from four-wheel-drive and maximum retardation from Dunlop Maxaret non-locking brakes, evolved originally for aircraft applications. However, the Ferrari team was not in that race.

Apart from the incentive that the new formula has given to engine designers, forebodings that the new cars would be depressingly slow went overboard very early in the season. Over the slow, twisty circuit at Pau and at the faster course at Bruxelles, lap records were beaten by Cooper and Lotus, proof that the 1961 cars were fast enough, even though at this early stage they were virtually last year's chassis re-engined. Later in the year improvements in braking, road-holding, tyres and driving rendered the new 1½-litre cars more than a match for the former 2½-litres except over the fastest circuits.

Further vindication of the effective performance of the new racing cars came as the season advanced. At Monaco Moss in the winning Lotus and Ginther in a Ferrari came within 0.1 second of the former 2½-litre lap record and at the extremely difficult Nurburgring Phil Hill's Ferrari beat the absolute lap record by the handsome margin of 11.4 seconds. However, these evenly-matched cars give rise to bunching and to the difficult art of "slip-streaming" a slightly faster rival; it seems probable that the former contributed to the fatal accident to Count von Trips at Monza.



Although the leading races of 1961 were for 1½-litre cars an attempt was made to encourage racing bigger machines under the Inter-Continental Formula with a limit of 3-litres. Ferrari prepared a 2,925 cc 310 bhp car, but only the English were keen, There are still those who hope for racing next year of single-seaters using production engines with no limit on size, suitably tuned, in the hope of attracting American support. But such cars would need racing tyres, and these may not be forthcoming in appropriate sizes.

The Formula Junior single-seaters with 1,100 cc engines based on catalogue power units flourished. Both Ford and BMC have acknowledged the publicity value of this class of racing, in which their 997 cc engines figure prominently: BMC employed Cooper research when designing their new high-performance minicars.

Sports-racing cars having become as fast as Grand Prix machines, a 3-litre ceiling was imposed which did not deter Ferrari of Italy from winning the 1961 Championship. Next year the emphasis will be on Grand Touring cars, less exciting but closer to catalogue specification.

Motor racing continues to depend on the support of petrol companies and newspaper sponsorship. It is possible that the World Drivers' Championship is wearing a bit thin and that Grand Prix racing should revert to a battle between manufacturers' teams, with team managers again permitted to call a car in for a faster driver to take it over if race tactics render this desirable. The RAC has delegated the 1962 British Grand Prix to Aintree under the management of the British Automobile Racing Club and there is every reason to suppose that it will be a contest between Ferrari, Cooper, Lotus, BRM, Porsche and Ferguson, using highly developed multi-cylinder engines approaching a maximum horse power of 200.

MOTORS 1961

The Toyopet Tiara combines old and new in dynamic symmetry

The Toyopet Tiara pays a modern tribute to the classic beauty of Tofukuji Temple in Kyoto. With its crisp, angular styling and functional interior, the Tiara combines the dignity of traditional Japanese design with the superior achievements of modern automotive engineering.

This is the car which signalled the Japanese automobile industry's coming into its own in the markets of the world. According to Motor Trend, December, 1960 "The Tiara has excellent quality material and workmanship, above average engineering and exceptionally well thought out detail design . . . ."

From structural soundness to tastefulness of design, the ancient traditions of Japanese craftsmanship find new expression in the Toyopet Tiara.

Immigrants

SIR—One wonders whether you are fully aware of the conditions in which West Indian negroes live in Brixton and Islington. You suggest (in your issue of October 14th) that there should be "purely voluntary employment bureaux in the West Indies," but then have nothing to propose at home, where there is a need for facilities to cope with the arrival of nearly 100,000 people a year from the West Indies alone (at 1961 rates). There is a need for these facilities because West Indian negro immigrants have rather different standards to those one finds among ordinary English city-dwellers.

A welfare officer recently visited an Islington house where he found 43 people living in eight rooms. In one room there were eight or nine people (constituting two families) and a single bed; all these people slept in the one room. Consumer durables were being bought on hire purchase at such a rate that weekly outgoings on hire purchase were a large proportion of weekly pay in some cases. One man, living in another house, was paying £6 a week in hire purchase instalments while his weekly pay was rather over £9. One of his hire-purchases was a £55 tape-recorder. He paid in addition £1 a week alimony.

Is it realised that such living conditions are not unusual among West Indian immigrants? There seems to be plenty of evidence that some immigrants' standards of conduct are not sufficiently flexible to enable them to lead happy lives in the poorer parts of London. This is not equivalent to saying that they should learn to live happily in the muck. The point is that some immigrants do not know how to adapt themselves, and are only too liable to make passable houses into squalid and smelly pits in a short time.

The coloured immigrants in particular have to be helped to adapt themselves, and purely "voluntary employment bureaux" in the West Indies would not be enough. What do the immigrants do when they have entered the country? An immigration policy has to be coupled with a policy for these people once they have landed at Southampton. There should be action to deal with the landlords, often West Indians, who exploit their countrymen. Who finances the landlords who allow eight men to live in a small room, charge them thirty bob a week each, and find them floor space by taking in four on night work and four on day work? How can it be that a West Indian obtains the minimum £4,000 to buy a fair-sized house in Islington? Even if half a dozen of them club together this is a large sum. An overall approach to working and housing conditions is plainly overdue.—Yours faithfully, H. SCOTT STOKES

London, SW1

Drug Prices

SIR—In your issue of October 7th you commented upon the Minister of Health's use of S.46 of the Patents Act to buy drugs from unlicensed suppliers. It was suggested that the Minister's decision was influenced by figures of profit on capital employed, prepared by a firm of accountants, in respect of the subsidiaries of eight American pharmaceutical companies—"including the four companies supplying hospitals with the new antibiotics."

This statement is incorrect. Pfizer, the patentee of two of the antibiotics concerned (oxytetracycline and tetracycline) was not one of the eight companies to which you refer. At the time the Minister issued invitations to tender Pfizer had quite independently undertaken to submit information about its return on capital employed in its entire pharmaceutical business. This was done, but although the figure was quite close to the 20 per cent attributed to British firms, and in spite of a demonstration that prices in the UK are generally lower than in other countries, the data provided had not even been discussed when the contracts were awarded.

The 30-35 per cent return which was shown by the adjusted figures of the eight American companies should be considered in the light of the following special circumstances. The companies were chosen because they appeared to be, at that moment, some of the most profitable in the industry, but the figures relate to the most risky part of their business, not to all their activities. It is not reasonable to compare such figures with the 20 per cent average of British companies whose activities include non-pharmaceutical operations nor, in view of the fact that a whole range of companies in various industries has, in recent years, shown similar results, is it fair to stigmatise them in particular as "rather on the lush side."

The idea that there is something special about the profitability of American pharmaceutical companies is widespread, but it is easily corrected by reference to the July issue of *Fortune*. The ten companies listed there as showing the highest returns on capital employed included only one which is primarily a pharmaceutical concern, and it stood in fifth place.—Yours faithfully,

P. V. COLEBROOK
Chairman and Managing Director,
Pfizer Ltd.

Sandwich, Kent

White Africans

SIR—Mr Mynott's letter and a line in your own "Memo to Mr Maudling" (October 14th) give grounds for a little hope, a little encouragement. However, you will, I am sure, admit that Mr Macleod himself, during his time at the Colonial Office, never conceded anything as generous or as forthright as "we'll surely have to look after the settlers." Even at the party conference at Brighton he said once more that the minorities in Africa must rely on the good will of the Africans.

Mr Mynott's sentiments are excellent, but I doubt whether he has appreciated the realities of the Kenya situation, in so far as it concerns the British farmers. While squatters invade British-owned farms, plant their crops, pasture their cattle, enter homes and insult and wound farmers, Mr Paul Ngei demands "the farms which were given to us by the God of Africans," and turns his demand into a chant: "The farms belong to us, the farms belong to us in Africa, the farms belong to us in Kenya."

In face of this situation, the compensation of individual officials and the placing in suitable jobs of technicians and teachers, though excellent as minor palliatives, are not enough. What is required is the evacuation of a whole community, before and not after the transfer of power. It will now have to be planned for, with speed and skill. First, however, the Government, Parliament and the electorate must be brought to realise that an emergency exists, and that an obligation lies on us all, which it would be dishonourable as well as tragic any longer to evade.

As Mr Mynott points out: "the fate of white Africans has been virtually overlooked, even by liberal observers." It may prove in the next month or two no longer possible for any observer, however liberal, to avert his eyes from a catastrophe to which, month after month, I have striven to direct attention.—Yours faithfully,

JOHN CONNELL

London, SW1

Local Government

SIR—In your issue of October 14th Mr Alan Yates defends an anomaly in local government, which he admits the separate existence of Rutland to be, on the ground that it reflects the wishes of the inhabitants themselves.

I wish to point to another anomaly which has been maintained in the interests of those who are not the inhabitants. The justice of the claim of Cambridge to be a county borough has been recognised by independent tribunals three times in 50 years, so that its continued existence as a non-county borough must be regarded as an anomaly. In this case, however, it can hardly coincide with the wishes of the inhabitants of Cambridge, since one ground of defence for this anomaly is that they are under an obligation to subsidise those who inhabit the neighbouring and largely de-rated rural areas. There is something to be said for removing rather than perpetuating anomalies.—Yours faithfully, G. F. HICKSON

Cambridge

BOOKS

The Margin of Waste

The Strategic Air Offensive Against Germany, 1939-1945, Vols. I-IV
By Charles Webster and Noble Frankland.
Her Majesty's Stationery Office. 42s. each.

Air Bombardment
By Robert Saundby.
Chatto & Windus. 288 pages. 30s.

THE four official volumes do not say that the bombing of Germany was a costly failure. One of the conclusions of this monumental task of research, analysis and description is that strategic bombing "made a contribution to victory which was decisive." This is a historical judgment made in retrospect. It is not an expression of faith as one may suppose some of Sir Robert Saundby's comments and those made earlier by that indomitable and pugnacious commander, Sir Arthur Harris, were. Of all men these are the two who know best the toil and gallantry of Bomber Command ; this was their policy and their purpose and to deny either is cruelly unjust. As the leaders of Bomber Command they crystallised in their single-minded determination the desire and will of the British people to strike back. Bombing from the air in the black days of 1942 and 1943 was practically the only offensive weapon Britain could use ; and to argue, however strong the rational calculations against its use, or over-use, were then and are now, that Britain should have held its hand is sadly to underrate the emotions that underlie the conduct of war.

The controversy, then or now, was not 'to bomb or not to bomb," but about how much bombing, when and where. Though there were moral objections—and in the final phases of the war political ones as well—the argument is really about priorities, about the use of scarce resources in terms of cost and yield. It was this that concerned Sir Henry Tizard when he said after the war: " No one thinks now that it would have been possible to defeat Germany by bombing alone. The actual effort in manpower and resources that was expended on bombing Germany was greater than the value in manpower of the damage caused." In the war, as these four volumes and other evidence have made plain, there were serious doubts in Whitehall about the wisdom of the policies governing the air offensive—and there was some public disquiet, as the wartime copies of this newspaper reveal.

Should so much of Britain's resources in men, production and scientific effort have been devoted to the air offensive ? Which, for example, in 1942-43 should have had first priority—engines for aircraft or for landing craft? In 1941 and 1942 should more of the effort devoted to and by Bomber Command have been switched to the one battle that Britain could not afford to lose—the battle of the Atlantic? Should more of Bomber Command's skills have been used defensively—in bombing, say, the U-boat pens—and, later, offensively in tactical support of the land and sea forces? These questions are in the province of grand strategy and it was not the first task of the late Sir Charles Webster and Dr Noble Frankland to answer them directly.

What they have done is to make forthrightly clear what the cost of the decision to press ahead with strategic bombing was, and how muddled was the thinking which informed this decision and affected the campaign. That, in doing so, they provide further arguments for those who have questioned the priorities given to the air offensive is not surprising. Precision daylight bombing by British aircraft failed because of the strength of the German defences. Selective night-time bombing had to be abandoned because of its inaccuracy and, in turn, gave way — though never quite entirely — to general area bombing. This policy was not successful, at the time, as Sir Henry Tizard and others had argued. Sir Charles Webster and Dr Frankland say bluntly:

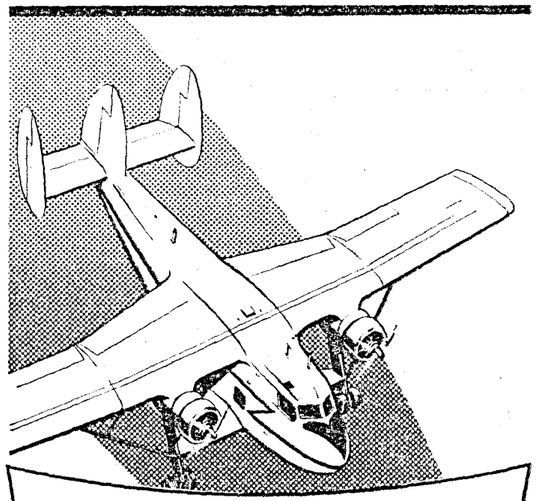
> But the great area offensive of March, 1943, to March, 1944, did not produce direct results commensurate with the hopes once entertained and at times, indeed, feared by the Germans themselves. Huge areas in many great towns all over Germany were severely stricken and some were devastated, but the will of the German people was not broken nor even significantly impaired and the effect on war production was remarkably small.

It was not until the Russian and Allied forces were poised on the borders of Germany—until the ring was closing and the Germans' economy was for the first time totally extended—that the allied air offensive became truly effective ; and then it was largely directed against Germany's oil installations and transport centres.

The part Bomber Command then played in hastening Germany's defeat was of decisive significance. But the earlier failures strongly suggest that too much effort, sometimes maladroitly applied, was concentrated on this one weapon of war ; it is a question, as it always is in war or economics, of the margin of waste. It is upon the reasons for the failures that Sir Charles and Dr Frankland are so clear and just. With means, they say, far less effective than expected Bomber Command had to undertake a task far more formidable than had been supposed, and " it took more than four years to realise and to close the gap." In those four years, Bomber Command learnt its job, continually revising its aircraft, its manning policies, its training, its navigational aids, its bombs and its tactics. And then, in the final phases of the war, the authors conclude that " the potential of the strategic air offensive was greater than its achievement."

The failure to make fully effective use of the resources lavished on Bomber Command was bound up with the organisation of command (there were, in Sir Arthur Harris's phrase, too many fingers in the bomber pie) ; with faulty intelligence (for which the Ministry of Economic Warfare and the Foreign Office must shoulder much of the blame) ; with the constant and unresolved controversy about area and selective bombing (on which the tough character of Sir Arthur Harris had an important bearing); and above all, with the inability to grasp the essential meaning of air superiority. For strategic bombing to be successful, Germany's fighter force had to be neutralised, but a policy of a combined, concentrated and selective attack on the sources of the German fighter force was not achieved. The British Air Staff, the authors say, was " slow to accept this conclusion and, indeed, never entirely admitted it."

In view of these statements it would be ridiculous to charge Sir Charles and Dr Frankland with not being tough enough. It is equally ridiculous to criticise them for making the comments they do because so many gallant lives were lost. Casualties neither excuse nor justify any action in war. The pity of war is that lives pay for success or failure, victory or defeat.



Youth in Rebellion

Insecure Offenders
By T. R. Fyvel
Chatto & Windus. 347 pages. 25s.

AT the end of his speech on the prevention of crime at the Tory conference last week, Mr Butler spoke of launching a national appeal for the " mobilisation of our whole society " to combat the spread of delinquency among the young. The main influence on teenage youth, he said,

> instead of being the family, religion and the teacher, was incitement to excitement, whether in films, television or commercial advertisements.

This, roughly, is also the theme of Mr Fyvel's book. Not that he is much impressed by the argument that the portrayal of violence in the cinema or on television (which the courting, gang-forming youth rarely watches) is a cause of the increase in crime. For him, rebellious youth has to be seen in the context of the affluent society and all that pertains to it : the consumer revolution ; the advertising that sustains it ; the commercial build up of ordinary youths into teenage idols with fabulous incomes ; the decline in the status of the father with the rise in teenage earnings and the emergence of the mother as a breadwinner in her own right ; the failure of the state to expand and support sufficiently the services that affect the rebellious adolescent most

How to beat bogey every time

If I slice my drive into that patch of rough over there, it will cost me two extra strokes to get round the dog-leg and on to the green. On the other hand, if I'm too cautious and drop short, I'll get into the deep sand behind the first bunker, and very likely take three to get back on the fairway . . .

Relaxing on the golf course at the week-end, high-ranking industrialists and businessmen may reflect that during the week they are faced with similar, but even more complicated, problems. Every project, like every hole on the golf course, has its bogey—a target date which *must* be achieved, however complex the operation, however many component sub-operations are involved. Management must know at *every* stage of the project as it proceeds, not only how each individual sub-operation is going, but how it relates to all the others—a knowledge which can only be achieved by the techniques of Continuous Project Evaluation or Critical Path Analysis with the aid of high-speed electronic computers. C-E-I-R are regularly handling such techniques on behalf of clients, particularly in constructional fields such as the building of ships or the erection of factories—thus not only helping these clients to meet and beat target dates, but saving them money as well.

Project Evaluation and Critical Path Analysis are only two of the many scientific management techniques offered by C-E-I-R, the largest computer services organization in the world. At the London C-E-I-R Centre, with its advanced on-the-spot computer facilities, C-E-I-R are handling on behalf of clients a wide variety of operations ranging from routine Data Processing on a regular contract basis to the solution of the most complex industrial and commercial problems. If you have any problem, large or small, which can be solved by logical or mathematical means—then send for C-E-I-R.

nearly—the schools, the probation service, youth clubs, playing fields.

Mr Fyvel, it will be seen, is deeply impressed by the writings of Professor Galbraith. He also refers to, among others, the writings of Professor Titmuss on the welfare state and Lady Woolton on social pathology. But his book is far more than just a rehash of other people's views. For one thing, he has done extensive field work among the rebellious young, so often and so wrongly, as he points out, all lumped together as Teds (he has, incidentally, an interesting chapter on the fashions in clothes from which the epithet Teddy boy sprang). He mixed with them in their caffs, went with them to their tailors, visited them in a remand home and a borstal. Secondly, he neither accepts the views of others unquestioningly nor applies what he himself saw and was told too dogmatically.

But Mr Fyvel's very diffidence prevents his book, in the end, from coming up to the expectations aroused by the earlier, reporting chapters. He somehow fails to marshal his material and his propositions into a convincing and satisfying whole, and gives the impression that he is groping for a synthesis that constantly just eludes him. For instance, he does not reconcile with his main theme the increase in delinquency among the Russian young in a most unGalbraithian *milieu*. So much has been written about juvenile delinquency that is far too sweeping and remote from the facts that it is a bit unfair to criticise Mr Fyvel for failing to be more positive. In any case, as an account of all that it means to be out of step in contemporary society his book deserves to be widely read for its detachment and humanity.

Man the Animal

African Genesis

By Robert Ardrey.

Collins. 379 pages. 36s.

ALTHOUGH the increasing sophistication of palaeontologists and anthropologists no longer allows us to expect the dramatic discovery of a missing link between ape and man, any promise of new light on man's animal origins is hard to resist. Perhaps, if only we knew where we came from, we could see better where we are going; and if we knew how we came to be as we are, we could understand why we behave as we do. Mr Ardrey has spent six years on this quest, visiting laboratories, museums and field sites, reading dusty journals, discovering and synthesising the latest scientific discoveries. As a dramatist, he is well equipped to provide a readable and exciting story of his search. Detailed studies of the behaviour of fish, bird and monkey, hunts for skull fragments extending over decades, patient analyses of collections of bone and stone; all are presented with vividness and clarity. Even the scientists come alive through Mr Ardrey's typewriter as he describes how he took tea with this one at the Athenaeum, was phoned by another at his Johannesburg hotel, while a third has the manner of "a bull in search of a china shop" and is "churning up pre-human remains . . . by the bucket load"—though this description conveys little idea of the tedious, heartbreaking, dogged work lying behind the success of the man in question.

The book has two main themes. On the one hand the author claims that the "contemporary revolution" in science has brought with it the disclosure that man is neither innocent nor unique, but dominated by ineradicable animal instincts, with "sapient powers devoted largely, thus far, to the task of hiding from himself all those truths which he deems disagreeable." Is this news, a century after "The Origin of Species" and a half century after Freud wrote about our instincts and their "vicissitudes"? If it is, then Mr Ardrey presents it in a dramatic and disturbing fashion, and its impact is only partially diminished by his carefree juxtaposition of anecdote and experiment, and his smooth generalisations from one species to another which ignore hundreds of millions of years of separate evolutionary history.

The second theme concerns the nature of the ape-like animal from which man arose. Did man come before tools, or tools before man? (Surely this is a matter of definition?) Was man a predator or preyed upon? Did he come from stock already engaged in intraspecific strife, using weapons to strike down their fellows? Here the author has synthesised a mass of difficult and obscure material and presented it with the excitement of a detective story. He has achieved this by pressing a minority view, and poking fun at the conservative weight of opinion from armchair scientists. At the least he gives the lay reader an idea of the problems, and he will stimulate many to read up more detailed accounts. But even the author himself would hardly claim to be giving a balanced account of knowledge in this difficult, controversial and rapidly expanding field.

Soldiers in Charge

The Egyptian Army in Politics

By P. J. Vatikiotis.

Indiana University Press. 317 pages. $7.95.

MR VATIKIOTIS'S contention that Egypt's military dictatorship may provide the pattern of government for other Middle East or underdeveloped countries is not exactly prophetic. So many have already discarded their faltering parliamentary systems for brass hat rule. That only soldiers have the discipline and technical competence to impose social change—and unity—on politically immature peoples is a tempting argument. Yet the itch for democracy dies slowly: many military governments are tolerated only as a necessary evil. In Egypt President Nasser's most outstanding achievement is to have persuaded the Egyptians that his rule, and his revolution, are, of all alternatives, the best. That he could not so persuade the Syrians has been proved since this book was written. But its author has not been caught napping by the dissolution of the United Arab Republic. "Egyptians," he writes, "but not necessarily Syrians, have realised that a return to . . . representative government would be both unpractical and undesirable." Indeed, his reservations about Syria find him at his most far seeing. He describes Colonel Nasser's twin policies of political regimentation from Cairo and controlled economy as "standard enough for Egypt and the Egyptians, but quite alien to the less placid Syrians . . . ."

The conversion of soldier into ruler is of course in the Islamic tradition. From earliest times the triumphant warriors for Islam were rewarded by political office. In modern times an army career has moulded a number of formidable statesmen from Reza Shah to Nuri Said. It was, however, defeat (in Palestine), not victory, that galvanised Egypt's Free Officers. And, on seizing power, they are shown by Mr Vatikiotis to have been not so green, politically, as they were thought to be. A number had been members of the socialist or communist parties or the powerful Moslem Brotherhood. Their skill in scattering all political rivals is seen to have been remarkable. As a crowning example one might take Colonel Nasser's promise in 1954 to restore parliamentary government: Mr Vatikiotis interprets this promise as a deliberate feint to disarm the political parties before finally demolishing them.

Drawing largely on Arabic sources, Mr Vatikiotis explains in great detail Colonel Nasser's revolutionary measures and his efforts to identify them—through the one-party National Union—with the so-called popular will. Whether the mass of Egyptians really wish to co-operate in government or prefer to be told what to do by a man they admire and trust is problematic. This book does not quite make out its case for military government in the abstract. But it does make a concrete case for the military dictatorship in Egypt.

Protest too Late

The Birth of the Bomb

By Ronald W. Clark.

Phœnix. 223 pages. 16s.

THE damp but determined nuclear disarmers have made their protests nearly a quarter of a century too late; the time to have demonstrated against the bomb was in the late 1930s when scientists first conceived the possibility of building it, and the early 1940s when the British Government gave them the facilities to try. It was the first government to do so, and although the bomb would have been built without this British initiative, "it would probably have been made too late for this particular war." In that case, scientists would have found it difficult to convince anyone of the bomb's monstrous destructive capacity and the present course of world politics might have run differently.

Mr Clark's purpose is to show how, through a series of political accidents, Britain came to be the first country to sponsor intensive research into nuclear weapons. During the inter-war years, when physics were in a great state of ferment, some of the leading European research workers were either Jews or, like the late, great Enrico Fermi, married to Jewish girls. Nazi persecution turned these men into refugees seeking shelter in Britain and the United States. This explosive concentration of talent was set to work in wartime Britain on the technical problems of designing and building nuclear weapons because the British Government was convinced that the Germans were doing the same. By the time the project was transported bodily to the United States, much of the laboratory spadework had been finished and the time had come to hand over to the chemical engineers who built the plants that built the bomb. It is a complicated story, involving the tying together of many loose strands, but for a professional writer, Mr Clark makes unexpectedly heavy weather of it. His scientists have no identity. Who did the work of separating uranium 235; was it Slizard? No, *he* was the one who went to America to build reactors with Fermi, so it must have been Peierls . . . or was it Rotblat? Sir James Chadwick? No, he supervised the programme. The scientist from France, Halban? No, he was the one who brought the heavy water and refused to stay at the Great Western in Paddington because he always used the May Fair. Then it must have been Peierls . . . wait a minute, who is (or what is) Frisch? Perhaps it's Peierls's Christian name. Oh, what does it matter; the bomb went off, didn't it?

After Versailles

Documents on British Foreign Policy, 1919-39

Edited by Rohan Butler and J. P. T. Bury. First Series, Vol. XI, 824 pages, 75s.; Third Series, Vol. X, 154 pages, 27s. 6d. *Her Majesty's Stationery Office.*

THE First Series of these documents continues the very comprehensive coverage of the situation in post-Versailles Europe to which it has already devoted several volumes. How comprehensive the treatment is may be judged from the fact that the latest volume accords nearly 200 pages to the arrangements made for the plebiscite in Upper Silesia in the period from January, 1920, to March, 1921, and nearly 550 pages to the settlement of problems in Poland, Danzig and the Baltic states during the same period.

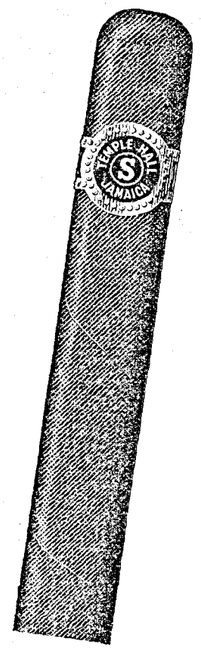
Like its predecessors in the series on the same theme, the volume is even more important for its account of the situation in these areas than it is for British policy in relation to them. It is not too much to say that it contains the only reliable and detailed assessment of the developments that took place in these areas during the later stages of the Russo-Polish war that at present exists in print or is likely to exist for a considerable time. It is, of course, the assessment of British observers; but they were the more detached in that British policy with regard to these developments was to await on them.

This was particularly true in Upper Silesia where it was impossible for Great Britain, who had no troops in the area, to do more than report on the situation. But it was also the case in Poland, Danzig and the Baltic states. The British attitude to the problems raised by the break-up of the old Russian Empire in these areas was that nothing should be done which, to quote Curzon, would enable "a reconstituted Russia to demand the restitution of territory filched from her at a time when she was not in control of her own destinies." It was only when Britain was convinced that the Russian Government was in favour of the independence of the Baltic states that it granted them *de jure* recognition. Its ambassadors hailed the Battle of Warsaw, in which Poland defeated Russia, in August, 1920, as one of the decisive battles of the world, but in the Russo-Polish war as in the Baltic states Great Britain waited on events and was content to accept their consequences.

The Third Series of the documents being now complete, the editors have issued an index. It contains reference lists to the sovereigns, the holders of political office and the diplomatic representatives of all the states in addition to an index of persons and a subject index to the documents printed in the nine volumes of the Third Series.

Birth of a Nation

The Emergence of Modern Turkey



By Bernard Lewis.

Oxford University Press for Royal Institute of International Affairs. 526 pages. 48s.

NOT surprisingly, among all the peoples belonging to the Ottoman empire, the Turks themselves were the last to feel the urge to assert their separate national identity, which for centuries had been submerged in a sense of loyalty first to Islam and secondly to the Ottoman dynasty. It was not until the early nineteenth century that Turkish writers, largely influenced by the research and ideas of European scholars, began to show an interest in a separate Turkish national consciousness. And when the Turkish republic was founded by Kemal Ataturk, some forty years ago, the idea of a territorial state, based on the Turkish nation, and confined within specific (new) frontiers, was quite unfamiliar to the vast majority of Turks. It is significant that the National Pact, in which the Anatolian nationalists, led by Ataturk, put forward their basic demands in the early days of their revolution, speaks of "Ottoman Muslims," but never of "Turks."

It is against this background that modern

whatever the occasion choose

TEMPLE HALL

a fine medium sized cigar from the leading Jamaican factory

Turkey, having successfully established its position in the world as a whole, is still painfully struggling to establish a stable and progressive form of government. No English writer has described this background with greater erudition, objectivity and insight than Professor Bernard Lewis in this book. It is equally valuable for the scholar planning to explore specific lines of research, and for the teacher and journalist who have to explain and analyse developments in modern Turkey.

The book is divided into two parts. The first is largely devoted to a chronological account of the efforts made, from the early nineteenth century onwards, first by the Sultans and then by the Young Turks, to reform the Ottoman empire; this is followed by an account of the establishment and development of the modern Turkish republic. In the second part of the book, Mr Lewis discusses in more detail the development of the Turks' sense of corporate identity and loyalty, of their theory and practice of government, of their religious and cultural life, and of their economic and social order.

Mr Lewis does not carry his story beyond 1950, when for the first time in Turkey, power was peacefully transferred from one party to another after fair and free elections. The hopes aroused by the 1950 elections have been sadly disappointed. But this book, by placing the events of the last ten years in their proper perspective against the long years of Ottoman rule and the long struggle to escape from outmoded ideas and ways, suggests that, in the long run, the present setbacks may not prove irreversible.

Sick and Hurt

Medicine and the Navy, 1200-1900: Vol. III, 1714-1815

By Christopher Lloyd and J. L. S. Coulter. *Livingstone.* 414 pages. 50s.

UNTIL 1806, when it was amalgamated with the Transport Board, the medical department of the navy was administered by the Sick and Hurt Board, the commissioners of which were appointed by the Admiralty. The exigencies of war exposed its limitations, and what the Secretary to the Admiralty called a "new model" was introduced in 1806. When the commissioners were chided in the last days of the old regime with their want of system and it was suggested that they might work longer hours, they replied that "six hours a day is as long a time as official business can be prosecuted with alacrity and effect." It is scarcely surprising that they disappeared from history with little official sympathy.

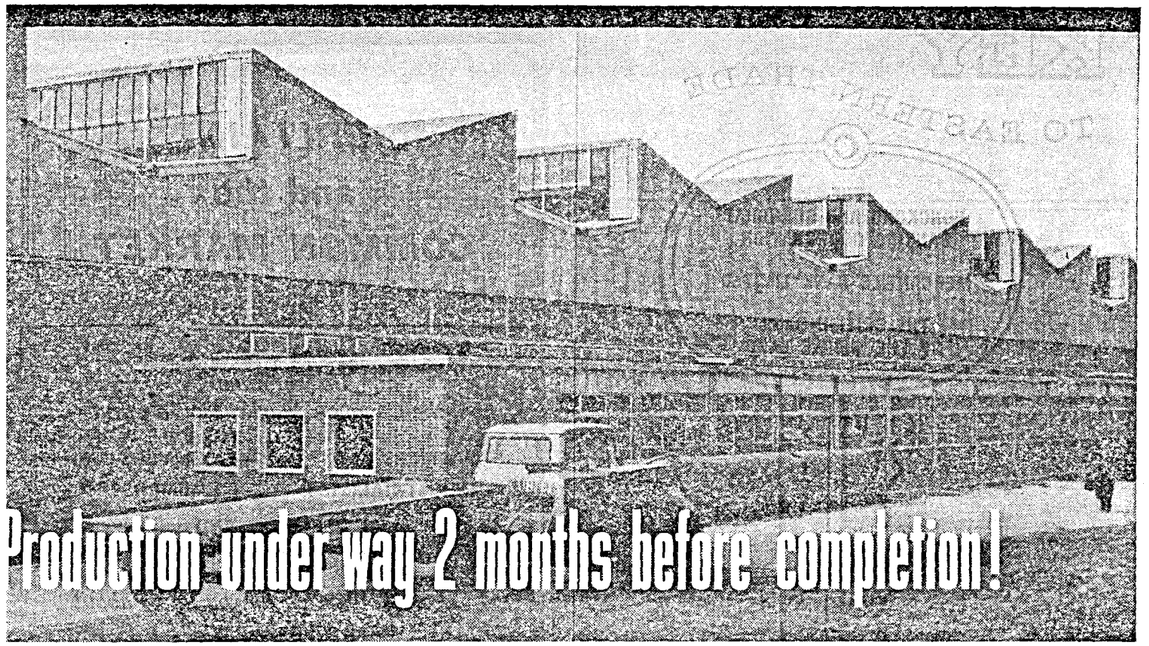
The industrious authors of this well compiled and definitive volume have described the various aspects of the care of the sick and hurt during the eighteenth and early nineteenth centuries with skill and vigour. They start with a survey of the social status and professional accomplishments of surgeons, physicians and apothecaries, an interesting study of eighteenth-century notions of hierarchy, and before turning to the naval hospitals they describe conditions of victualling and hygiene and some of the medical problems that arose in the successive wars of the period. A good chapter on "Nelson and the surgeons" brings out many of the points dealt with in other chapters, for Nelson suffered from most of the diseases described in the book and underwent more operations than almost any other flag officer. "I have all the diseases that are," he said soon after being wounded in the eye in Corsica, "but there is not enough in my frame to fasten them on." The chapters on the hospitals at Haslar and Plymouth are fascinating. The various methods of discipline are set out in documentary sources of the period, and there are many revelations of contemporary attitudes towards administration and incidentally towards religion. Apparently the naval hospital at Plymouth was sufficiently good to attract sick army deserters, who felt that they would get better treatment there than in any other place.

In the last part of the book there is a useful account of sea diseases and the various ways of treating them. The sections on yellow fever show how misleading it is to write, as most historians have done, about the Seven Years War without mentioning it. The last chapter is concerned with the very primitive surgery of the period, and the final paragraph is about the statistics of amputation. It is interesting to note how slowly new methods were adopted in many of the arts both of surgery and of general medical treatment. For example, with sea water all around, the routine use of saline solution for burns did not appeal to the doctors. As in the twentieth century, however, large-scale wars encouraged changes in official policy. Thus at the end of the eighteenth century lemon juice, for protection against scurvy, was made a general issue after a delay of forty years.

The general historian will learn much from this volume, although he will have to make his own comparisons with what was happening in civilian hospitals and civilian medicine. Not the least interesting material comes from journals and autobiographical reminiscences. Smollett's account of his experiences in "Roderick Random" is well known. The authors have discovered many other examples of such material, however, including an unforgettable account of the scene in the cockpit of HMS *Ardent* at the battle of Camperdown, written by Robert Young, a naval surgeon. Governor Cryke's daily journal at the Plymouth hospital is also a superb historical source.

OTHER BOOKS

THE FABRIC OF THE HEAVENS. By Stephen Toulmin and June Goodfield. *Hutchinson.* 272 pages. 25s.



This first volume of four in a series on "the ancestry of science," part of the work of the Nuffield Foundation unit for the history of ideas, is an admirable introduction alike to cosmology and that increasingly important study—the history of scientific thought: an excellent sample of scientific exposition in the best humanistic style. It should serve students of the humanities, who may think science and scientists uncultivated, well.

TRENDS IN THE AMERICAN ECONOMY IN THE NINETEENTH CENTURY. Conference on Research in Income and Wealth. National Bureau of Economic Research. *Princeton University Press.* London: *Oxford University Press.* 780 pages. £6.

This new tome in a valuable, established, series of analytical studies by North America economists, brought together by the National Bureau of Economic Research, throws much light on the recent background of the developing American and Canadian economies. Balances of trade and payments, investment in railroads and canals, etc., wages and dividends, and prices and production of both primary and industrial products are carefully tabulated, with studies of interregional and other contrasts. It is another sourcebook for economics libraries provided by the indefatigable bureau and its officers, and it is germane to current disputes about "growth."

CHANGING PATTERNS IN SOUTH ASIA. By Ian Thomson. *Barrie and Rockliff* with *Pall Mall Press.* 166 pages. 18s.

For the layman who is interested in, but baffled by, news items from West Pakistan to the Philippines, Mr Thomson has performed a service. Larger tomes are overburdened with the history of a complex area or heavy with charts and statistics. Reporters' books are often circumscribed by individual experience. Mr Thomson may not write as compellingly as some foreign correspondents, but he has a selective mind. His originality consists in presenting South Asia in terms of its dominant ideas: nationalism and racialism, democracy, communism and socialism, Islam, Hinduism and Buddhism. It is a rewarding method, for each of his *exposés* is illustrated by examples drawn from the contemporary scene.

ARCHITECTS: Harry W. Weedon, F.R.I.B.A., & Partners.

One of the fastest construction projects ever carried out on Merseyside, this new £3¼ million Fisher & Ludlow factory was built by Cubitts on a 50-acre site at Kirkby. Just 15 months from initial planning to completion—with sections of the factory being made available for machinery installation as they were finished! This allowed Fisher & Ludlow to start production of domestic appliances two months before completion.

Speedy construction was made possible only by precise planning and exact timing of every building operation: and 100% co-operation between the client, architect, Cubitts and their 40 sub-contractors. At regular meetings they devised methods of streamlining operations using the most modern equipment, thus keeping construction time to a minimum and ironing out problems as they arose. This close collaboration resulted in the 17 bays of the main production building being erected in 17 weeks—half the normal time!

Mr. Philip Wyatt, Managing Director of Holland & Hannen and Cubitts (North West) Limited, says: "One of the most important industrial projects on Merseyside, the Fisher & Ludlow factory required a construction team able to build at speed with close attention to economy and quality. Detailed planning and co-operation at all stages between client, architect and contractor has lead to early completion of this project. It demonstrates the advantages of working closely together with an efficient construction team."

Mr. J. R. Stanfield, Works Director of Fisher & Ludlow Ltd., Birmingham, says: "Teamwork has been the essential factor that has ensured the completion of this vast undertaking within the time scheduled. Large areas of the factory are devoted to specialized process plants involving complicated foundation work and numerous underfloor services. Only the closest of co-operation throughout between architects, contractors and our own planning and engineering departments has enabled construction to proceed without interruption."

THE BUSINESS WORLD

Interest Rates and $2.80

WHEN investors sell equity shares because they are worried about the balance of payments one does not normally expect them to buy gilt-edged. Yet this is what has happened on the London Stock Exchange in the past fortnight; at the very moment that the City has become so concerned about the competitiveness of British industry, it has started talking about the likelihood of interest rates coming down. More extraordinary still, the talk-down was set in motion by the Bank of England itself. The ½ per cent reduction in Bank rate a fortnight ago was accompanied by a revealing speech from the new Governor, Lord Cromer, which made it clear that he was as concerned as his predecessor about the "disproportionate use" of monetary measures. In a phrase that the City has since repeated to itself many times he asked: "Are the money rates we have seen in this country in recent years the most appropriate to achieving the rate of progress we would like to see?" Spurred by these ruminations, the City has reminded itself that the balance of the budget is the most disinflationary since the days of Sir Stafford Cripps—so much for disproportionate reliance on monetary measures alone—and is reviving the original interpretation of the April budget as implying that pressure on gilt-edged would be reduced. This prognosis was rudely shattered by the summer exchange crisis. Now, the talk internationally is of "co-ordinating" Britain's interest rates to obviate a renewed inflow of hot money, and this is seen as another reason for interest rates to fall.

Prudent men cannot, of course, go so far as to advocate a general relaxation of credit restrictions. So, while the authorities reduce Bank rate, they affirm that this marks no relaxation in credit restrictions. They are thereby subscribing implicitly to the view that the price of credit has no essential part in regulating the quantity. The ultimate logic of this argument leads to what one school has long advocated—that high interest rates are an irrelevant extravagance, and that credit can be kept tight but cheap. City institutions, contrary to the popular view but for good reasons of their own, dislike high interest rates: they limit their business. But the Bank of England can be expected to take a longer view and think through the implications of its "no green light" reductions. The fact is that on both external and internal grounds, high interest rates are in the long-term category of Britain's present recovery programme. Seven per cent Bank rate, and more directly the associated level of domestic overdraft rates and bond yields, should be regarded, not as crisis rates, but as norms for the new situation, as relevant to the defence of $2.80 as toughness on wages and government expenditure. The Bank of England, naturally, is more concerned than anybody to protect and retain the present fixed parity; it cannot expect Mr Hare and Mr Brooke to do the job by themselves.

INTERNALLY, it is now clear that in this economy it is only when interest rates are around their recent levels that they begin to have a real impact on business and investment decisions. For years, while the authorities were fumbling with Bank rate at the levels that would have been high in the past, the critics were pointing out why four or five per cent on borrowed money was nowadays a negligible factor. Admittedly the doctrine of permanent inflation has lost favour since then, but it is still probably true that to restore interest rates to those levels now would remove such restraining influence as they now have. Some critics of course will assert that this influence is itself excessive, and Lord Cromer himself appeared to range himself with them. It is hardly excessive on savings—the Governor's next question was: "Are we saving enough?" And the restraints on economic growth in Britain in recent years surely stem from a different source.

The most important check on investment in productive assets is not the cost of the money but uncertainty about future demand, which is partly caused in turn by periodic upsets from the Government's impositions of purchase tax or changes in hire purchase controls. The burden of evidence that industrialists give about interest rates is that they will never be a decisive element on a project which is clearly called for by the state of demand; and this is as it should be. In so far as high interest rates encourage a curtailing of fringe projects, which there will always be, they relieve pressure on the economy and thereby

reduce the need for government restraints that tend to stop, not the least productive, but the most productive investment. Thus in the present context it would surely be the negation of economic priority to bring Bank rate down, let gilt-edged rise, and relieve the pressure on the builders of municipal swimming pools or factory canteens while leaving Coventry on short time.

The one point at which high interest rates could now have undesirable results is in the cost of export finance. Since Britain needs to give a special boost to exports at present and since international conventions about export credit have, most unfortunately, pretty well gone by the board, there is now a case for a special export finance corporation able to supply cheap finance, on a highly selective basis. The problem must be tackled directly: it would be absurd to bring down the whole structure of interest rates, or even all rates for exporters, because foreign governments give occasional credit subsidies for specific export contracts.

In the domestic economy, therefore, high interest rates—very high rates by old standards—are needed to act as a modest but not insignificant selective brake on less urgent investment, and financially to maintain a due balance between fixed-interest securities and equity shares in the capital market. Externally, high interest rates have a more direct function—which, because of all the furore about that nebulous entity "hot money," is rarely understood.

BLUNTLY, the point is this. The course of Britain's balance of payments in the past ten years shows conclusively that, whatever targets may have been set up by the Treasury, Britain has been unable to earn the very large surplus (£450 million was the last official estimate) that would be necessary to cover its large outward investment commitments and improve the extraordinarily weak ratio of quick monetary assets to liabilities (gold reserves to sterling balances). Nor is there any real prospect that at the exchange rate of $2.80 a surplus of this magnitude will consistently be attainable in future. This does not mean that the exchange rate is wrong, or that devaluation would be the right remedy. It does mean that in present circumstances some offset to the large investment commitments must be found; and that some underpinning of the reserve position must be achieved. This is the key external argument for high London interest rates.

A few years ago London was easily the cheapest centre in Europe, if not in the world, to borrow. It may not have appeared so on the basis of comparative Bank rates; but the highly organised London capital market has always offered a spread of rates that is smaller beyond official rates, and smaller too between different categories of creditworthy borrowers, than market interest rates in other centres. It takes a Bank rate of 7 per cent in Britain to bring bank lending rates to the level of 7½-9 per cent prevalent in Germany with a Bank rate of 3 per cent. Even in the United States, where the official discount rate is also 3 per cent and the prime loan rate is 4½ per cent, many small and middle-sized businesses are paying 6 per cent on their bank loans, and after allowing for differences between loan accounts and overdrafts, some of them may be paying an effective rate as high as their English counterparts. In Holland and Switzerland, admittedly, the whole structure of interest rates is lower than in Britain, but these capital markets have a distinctly limited capacity, and have to ration their allotment to outsiders. Thus it needs a Bank rate around the current level to get rid of an actual incentive to commercial firms to borrow in London rather than abroad.

In the bond market, admittedly, yields in London, even allowing for the smaller commissions that prevail in this sector of the capital market too, are now at last significantly higher than in most markets outside Latin America. This comparison itself is apt to be taken in the City as something of a slight—but it is an accurate and desirable reflection of Britain's difficulty in balancing its international payments. Bond yields of 6½ per cent plus are an effective deterrent to overseas borrowers. The overseas sterling countries have now become quite accustomed to looking elsewhere: in the first six months of this year alone they borrowed £281 million from non-sterling sources, or almost twice as much as their annual intake from such sources five years ago. At the same time, large companies in Britain now have a distinct incentive to borrow abroad when they can, and, very belatedly, it is now Treasury policy to encourage them to do so. Thirdly, high yields in the London capital market attract the overseas investor: the Treasury has now detected £100 million of portfolio investment in the second half of 1960, and it admits that its information is not complete. A new burst of such portfolio investment should be taking place now.

It is at this point that people are apt to raise the spectre of money that is not worth having because it is apt to flow out again very fast: overseas portfolio investment, it is said, is at best lukewarm, while investment in Treasury bills or local authority deposits is palpably hot. The caution cannot be dismissed; but neither can Britain's continuing need to attract foreign capital. This is the baby that must not be thrown out with the bathwater. A high structure of interest rates in Britain will, in divers ways, help to redress the balance in Britain's long-term capital account. At the same time, admittedly, it will tend to attract the loose money that moves from centre to centre for a turn in the interest rate, but is still more prone to a dabble in exchange speculation. No monetary authority relishes this loose money. But in present circumstances there is no reason why Britain should be embarrassed by it—certainly not to the extent of reducing the attraction for foreign money as a whole. Indeed, while Britain has $1,500 million owing to the International Monetary Fund there is an urgent purpose to which every pound of short-term investment here should be put: for the only acceptable way of coping with excessive movements of short-term funds is to compensate them with official funds, and the compensation machinery through IMF happens at present to be in urgent need of the boost that an early United Kingdom repayment could give it.

The time to start thinking that Britain's short-term rates might be too high will be only when the whole IMF loan has been repaid. But even then care might be needed to avoid

bringing the whole structure of rates down in a way that brought money market rates in London to the international level but took commercial borrowing rates far below it. In practice a sustained inflow of funds to London should itself tend to narrow the differential in short-term rates, by raising them in foreign centres and also by reducing them in London. The Bank of England at the moment feels bound to exert a sharp brake on any falling away in Treasury bill rates—which makes its unexpected reduction in Bank rate still more inexplicable. But over the years, once it becomes clear that something like the present level of long-term rates is here to stay, this change in expectations should itself take pressure off the short-term market. It is only when borrowers expect interest rates to fall, as local authority treasurers have done ever since rates started rising from 3 per cent, that they are willing to pay significantly more for short-term money than for long. This is the case for saying, as the Radcliffe committee did, that the authorities can help guide the capital market by taking a view of rates. Lord Cromer perhaps came nearer to that than the Bank has ventured in the past; it is a pity that the view he implicitly expressed should have been such a debatable one.

IT may be, therefore, that short money rates in London should in time become somewhat lower in relation to long-term rates. But it would be highly dangerous to try to force such a development under the mirage of a "two tier" structure of rates, rigging the market so that the government pays as little as possible on its floating debt, especially that held by foreigners. Advocates of this course tend to forget that the foreigners might then withdraw their money: as a note on page 280 points out, London's hold on the reserves of overseas sterling countries now rests very largely on the relatively high return that it offers.

More generally, the two-tier solution, like the similar idea of "tight but cheap" credit, is not compatible with a highly organised and reasonably free capital market such as London's. Suppose Bank rate were brought down to 4 per cent and special deposits were raised *pari passu*—a scheme which has already been suggested by some observers, and might be held to be in line with the logic of this month's Bank rate reduction. Bank overdrafts would be as tight as they are now—and manifestly under-priced. A wide gap would emerge between rates in the officially influenced and the free sectors of the money market; and the same gap between deposit rates would give a further stimulus to the growth of the unorganised sector. Even now the clearing banks, with their uncompetitive deposit rates, are standing still while the merchant banks and overseas banks sweep forward. Either special deposits will have to be imposed on every City institution; or the authorities must rely mainly on the price mechanism—interest rates—as a credit regulator. The prospect of Britain's entry into the common market sharpens the choice. For if once the financial barriers begin to come down, the technical superiority that the City of London has even now over Continental facilities will necessitate a brake, of one kind or the other, to stop it lending more than the balance of payments can stand.

Cunard Heaves To

AT the eleventh hour a combination of belated wisdom and cold feet round the boardroom table of Cunard Steamship Company has brought about the decision that the liner company's critics, within the shipping industry and outside, have said right from the start it ought to take—not to build a replacement for the *Queen Mary* of the size, capacity and design that until now the company has stubbornly favoured. Just in time Cunard has saved itself from being stuck for thirty years with a maritime white elephant, which never had a chance of being profitable (why, if otherwise, ask for a subsidy?) and which, rather than fostering prestige, would merely have invited professional scorn.

In the bleak situation that has descended upon Cunard this year, the decision to postpone placing any order for a new passenger liner was perhaps inevitable as well as sensible. The group as a whole, Sir John Brocklebank announced, will incur a "substantial overall loss" this year. Preference dividends are to be paid, but if any distribution is made to ordinary stockholders—a matter yet to be considered—then it will have to come from reserves. The group is currently losing money not only on its passenger operations but also, more surprisingly, in cargo carrying. While the two Queens are still earning a profit, the Cunard Company itself is making a "heavy loss." So is Thos. & Jno. Brocklebank, one of the group's two major freight subsidiaries, mainly because of difficulties in the India trade. And, for another year, Cunard Eagle Airways is deep in the red too.

Without stretching historical analogies too far, a comparison can be made with the events of thirty years ago when the collapse of passenger and cargo traffic at the time of the slump forced Cunard to stop work on the *Queen Mary* itself. But the ship that was then on John Brown's slipway was something new and bold in mercantile technology, even if it now reminds a generation used to transatlantic jet travel of the dinosaur. The Q3 Cunard had in mind was little more than a moderately updated replica of the *Queen Mary*. It reflected none of the advances in naval architecture achieved, for instance, by the designers of P & O's *Oriana*, the 45,000-ton passenger liner built by Vickers-Armstrongs—which in partnership with Swan Hunter submitted the lowest tender for the Q3 (still under £30 million even after allowing for increases in costs under the customary escalation clauses of a shipbuilding contract). Even if traffic and profits had been maintained, Cunard states that the new ideas in the Swan Hunter-Vickers tender, particularly on weight, hull design, and the ratio of power to size and speed, would have needed "time for evaluation before any final commitment on the size and performance of a new ship." These ideas, Sir John confessed, "will profoundly influence our thinking in regard to any large ship which may later be built for this service." Not only laymen, but also other shipping men, wonder why it took so long for the light to dawn.

Treasury bill rate fell sharply last week by ⅛ per cent to a shade over 6 per cent; covered arbitrage in Treasury bills now offers a margin in favour of London over New York of ⅜ per cent, compared with ⅝ last week.

In the discount market the Bank of England has now applied the brakes quite noisily, forcing the market to take a considerable amount of money at Bank rate. In the mortgage market supply and demand interact rather more freely, and the large offerings from industrial companies at home and bankers overseas have reduced the rate on seven day money from 7 to 6¾ per cent. Before this, the Treasury last weekend followed the market in the usual way by reducing the rate for loans of less than 15 years from the Public Works Loans Board from 7½ to 7¼ per cent as an adjustment to the Bank rate cut (it is now again out of line); the rate on longer loans is unchanged at 7 per cent.

The dollar has been rather stronger this week against all currencies except sterling and the Swiss franc. Its strengthening against the mark, pretty clearly, though not equally obviously, was associated with the 50 megaton blast from Mr Khrushchev, and the same influence was cited to explain similar gains for the dollar in Amsterdam, Paris and Milan. The Swiss, or rather the operators acting through Switzerland, presumably prefer gold, which has again been in active demand from private holders this week. In London the dollar price has continued to be quoted in the range $35.18-21 a fine ounce; central banks are still absent as buyers, and the Russians as sellers.

The Swiss government has now formally asked the Berne parliament to approve its proposed loan to Britain. The amount is 215 million francs (nearly £18 million) which is rather more than market sources had at first expected. Interest is at 3 per cent and repayment is to be in Swiss francs by the end of 1964. The loan thus provides assistance on the same lines as that granted by other countries through the International Monetary Fund, of which Switzerland is still not a member. The loan will fund Basle central banking credits that have not yet been repaid, and it is unlikely therefore that there will be any transfer across the exchanges.

THE ECONOMY

Output Speculative

FACTORY holidays are not always taken at precisely the same time each year, so the course of industrial production between July and August is more than customarily difficult to correct for seasonal variations. The fact that the official index of output, after adjustments intended to allow for holiday habits, failed to register any further gain in August, following successive monthly improvements from 122 to 125 (1954=100) since May, should not necessarily be taken as meaning, therefore, that the economy's incipient growth has been nipped in the bud. The one point drop in the seasonally corrected index of manufacturing output, from 127 in July to 126 in August, could also turn out to have been contrary to trend—or even to reflect the chance effect of "rounding off."

But it was in August that the recession in steel stocks first began to have a major impact upon the current production of the steel mills, and the decline in steel production is likely to continue for some months to come. August was also a bad month for the motor industry, even after allowing for the varied incidence of holidays; nor is car output likely to improve much in the coming winter months. Against that, engineering output and construction work were still holding up under the intense pressure of past orders; though new orders for capital goods, as this week's figures of approvals for new industrial building projects confirm, have for some time been flowing in at a much lower rate. The chemical industry is still working at a high rate and there appears to have been some slight increase in July and August in the production of textiles and clothing. Manufacturers of household equipment, on the other hand, have still to experience any real improvement. All in all, the grounds for reckoning on much of a further improvement in output are hardly very encouraging.

INDEX OF INDUSTRIAL PRODUCTION

MOTORS

Shadows over the Show

THE leaders of the motor industry (whose long-term problems are discussed in a series of articles on pages 241 to 262) have marked the opening of this year's motor show with their usual optimistic pronouncements about the success of their new models. But they have felt it necessary, for the second year running, to remind the government that its economic policy is cutting deeply into sales at home and so making it even more difficult for the industry to achieve capacity operation in its new factories. Heavier purchase tax, tight credit and less ready hire purchase, have depressed used car prices, and seem to have had a more immediate and perhaps more severe effect on car sales than the hire-purchase restrictions did last year. The industry hopes that the short-term effects will prove to be the worst. Sales in September at 47,449 were only 1,400 higher than in August, though they usually rise by about a fifth, and they were more than a fifth below those of September 1960. Sales seem to show no further increase in October. So the industry hardly feels very happy about the prospect of the rest of the winter. Exports may rise a little during the winter, however, now that there are new models to sell and stocks in the United States near exhaustion; even the American-owned companies hope to restart shipping cars there in the new year.

The company with the most dismal prospect is Rootes. Car production has been virtually at a standstill for seven weeks, since the workers at its subsidiary British Light Steel Pressings went on strike. Rootes buys its car bodies from Pressed Steel, but some parts for all its bodies are made at BLSP. Its decision to dismiss all the workers at its Coventry and Dunstable factories who had been made idle by the strike was, it says, determined by its inability to afford to pay them their guaranteed wage any longer, which cost some £70,000 a week. Certainly the situation must impose a severe financial strain on Rootes, after a year in which its output has been at a low rate; but one effect of the dismissals has been to make the union leaders take a more active interest in the stoppage. Rootes' reluctance to take back the men who have organised the strike seems, however, to be an obstacle to agreement on terms for a return to work. The present lack of alternative jobs in Coventry makes it likely that Rootes will be able to get most of its workers back whenever it is able to employ them again. But the company is losing sales that it can ill afford to its rivals, while the introduction of the Super Minx in Europe, where the company was planning a big sales effort, has perforce been a flop.

BIDS AND DEALS

Revival of Take-overs

ALTHOUGH equity markets are depressed there has been a revival in take-over bids. In view of the sharp decline in share prices this is not altogether surprising since take-overs can now be made on cheaper terms than over the past couple of years. Moreover intensive competition and dwindling margins are now hitting a number of smaller companies to such an extent that a take-over by a bigger company with the necessary resources to withstand the present difficulties might well prove the only logical solution to their problems.

1. This was the case with British Enka, the biggest rayon manufacturer in this country outside the Courtaulds group for which Courtaulds has now made a bid worth £1,875,000 of 5s. in cash per 5s. share. The bid might seem to be on the low side, for it is only 6d. above the pre-bid price and compares with a net asset value in the last balance sheet of 9s. 5d. per share. But since the end of 1960, losses of about £200,000 for the first eight months and capital expenditure have seriously depleted current assets and the British Enka chairman esti-

The Hawera Star!

WHERE IN HEAVEN'S THAT?

We can tell you in a twinkling. For it's not in the heavens at all, oddly enough, but in New Zealand. And it is, in fact, a newspaper. We know because it just happens to be something to do with our country. And so far as *that* is concerned, there is very little we don't know. For as a Bank operating in New Zealand, we are constantly being called upon to provide reliable, comprehensive information on subjects relating to our national life. This we can do without the slightest difficulty, since we have more than 160 branches and agencies throughout the North and South Islands. So whenever your question involves points of national interest about New Zealand, ask us—

The National Bank
OF NEW ZEALAND LIMITED

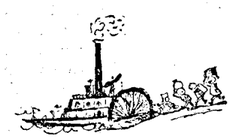
8 Moorgate, London, E.C.2 (MONarch 8311)

West End Branch: 14 Charles II Street, London, S.W.1. (TRAfalgar 6791)

THE BIG FERRY

an economic fable



ONCE UPON A TIME there was a very strange country. This country was divided into two parts by a great and dangerous river. The part on the North bank was called Spending. The part on the South bank was called Saving. One of the strange things about this country was the difficulty of getting

any money across the river, from the Spending side, where it ran to waste, to the Saving side, where it was put to good use.

It was a very capricious river. For one thing, it refused to have a bridge built across itself. When people tried to build one, it just shrugged its shoulders and down it all came. It was a little better about boats, but not much. To get across, one needed not only a strong, well-built boat, but also a helmsman who knew the currents and the sandbanks.

At long last, after many years of struggling with the river and its ways, a number of citizens of the strange country decided to band themselves together. They built a strong, large, well-found boat specially adapted to the conditions to be found on the river. And they selected an experienced helmsman to pilot it. The boat began to ply across the river with the savings of

the people who had built it. Everyone saved as never before. And as the years went by, the helmsman got to know the currents and sandbanks, the wind and the weather, more than anyone else in the whole land.

But one day the King of the strange country died and the Crown Prince succeeded him. The new King was a handsome and virtuous young man. He wanted to do everything that was best for his people. He ran up and down, scolding, supervising and—especially—organising them.

One day he arrived at the place where the ferryboat was making its way across the stream. He looked at it. He looked, too, at the turbulent river. Then he began to worry. "What!" cried the new King. "Is there no-one to supervise, no-one to organise, no-one to keep a watch over this important and valuable ferry-boat which is one of our national assets? How monstrous! How unheard of!" Then he settled his crown a little straighter. "I myself", he declared, "despite the numerous other cares of my office, will now take charge of matters. I will tell the ferryman when to set out and when not to set out. I will tell him how much money to carry and at what point on the other bank to land it." The ferryman was forced to acquiesce.

And so the King stood on the Spending bank and scolded, and

supervised and organised. (It was one of the traditions of the Monarchy that the King must never cross over to Saving.) The ferryman did his best to do as he was told, but he was always being made to set out at odd hours and to go by unaccustomed channels. And one day the ferryboat got stuck on a sandbank and nearly sank with all the money aboard.

The King was upset about this. So was the ferryman. But most upset of all were the people whose money it was. "Why bother to save at all?" they said. "Next time it will be worse", they said. And nearly all the citizens who used the ferry agreed with them. There and then a good many of them stopped sending money across from Spending to Saving.

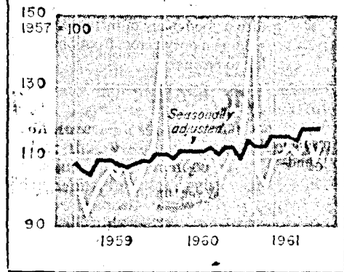
MORAL:

Confidence takes years. No confidence takes minutes.

* * * * *

ISSUED BY THE LIFE OFFICES' ASSOCIATION, LONDON—AND ASSOCIATED SCOTTISH LIFE OFFICES, EDINBURGH.

mates that the realistic break up value is now below the offer price. Algemene Kunstzijde Unie (AKU), the Dutch textile company, holds 54.8 per cent of British Enka equity and is accepting the offer. Enka shareholders will still retain their rights to subscribe for shares in British Enkalon which will produce mainly nylon yarns at a factory to be built in Northern Ireland. Clearly this latest move by Courtaulds will bring a rationalisation involving a considerable reduction in British Enka's operations and staff for Courtaulds already has ample capacity for rayon production following its past acquisitions of British Celanese and Harbens.



2. Treasury consent has been given to the sale by Firth Cleveland of its 56.7 per cent holding in Solartron to Schlumberger Limited for £1,928,000. This represents a capital profit of 40 per cent for Firth Cleveland which purchased a 53.125 interest in this electronic group early in 1960. This interest was extended to 56.7 per cent as a result of Firth Cleveland's offer for the remaining shares last July and the few shareholders who accepted this latest offer are to receive an ex gratia payment amounting in all to £33,500, representing the difference between the price of the two offers. The sale will improve Firth Cleveland's net liquid balances by about £2½ million but it is selling what the group's shareholders have been led to believe was an outstanding long term prospect. The directors say that Firth Cleveland will now be better placed to maintain expansion; but this sale, following board room disputes and resignations, may well leave shareholders with uneasy questions in their minds as to the group's future prospects.

The Schlumberger group is closely linked with the oil industry and has assets of about $140 million and its shares are shortly to be quoted in New York following its proposed merger with Daystrom Inc., a big manufacturer of electronic equipment. Its bid of 85s. in cash for the Solartron shares is being extended to the minority holders, of whom Mr John Bolton and other directors of Solartron hold about 25 per cent of the equity. It has also agreed to assume Firth Cleveland's undertaking to permit an application for a quotation for Solartron shares by 1965 unless the majority of minority shareholders decide against it. Schlumberger is not bound to make any of its shares available but clearly to hold on could be a more attractive prospect to minority shareholders than the present bid if the high hopes held out for this company, now to be backed by ample resources, materialise.

RETAIL SALES

Shoppers were still spending as much in September as in the weeks of anticipatory buying before the Chancellor put up prices. According to the Board of Trade's estimate (provisional but "unlikely to be revised downward"), retail sales, seasonally adjusted, remained at the same level as in July and August. The indications are that food and clothing shops did well, but that sales of durables may have declined further.

Allowing for price increases, the total volume of goods bought over the counter in both August and September was probably only about 1 per cent less than in July.

BUTTER

Fat Still in the Fire

LAST month a meeting of Gatt members in Geneva to discuss the problem of butter dumping ended. How exactly it ended is not yet public knowledge, though to an outsider it ended in what looked uncommonly like complete deadlock. This was particularly disappointing to the United Kingdom which had little directly at stake but plenty of friends it might alienate by taking precipitate action. Britain is the only big open market for butter; it consequently draws butter from many, often unsuspected, supplying countries. Today there is by common consent too much butter in this market; the value of New Zealand's finest grade, having slumped to 250s. a cwt, has stayed there all this year. The only promising factor in the great milk glut is that communist cows seem to have been less productive than their western counterparts: Russia has taken 5,000 tons of Danish butter and has signed a two-year agreement to take more. East Germany has been drawing off supplies from France and Finland, but a high output of milk has been maintained in western Europe relatively late in the season.

Since the problem will not melt away, British officials may have to take some further initiative in solving it. Their task will probably not have been made easier by the reported general agreement between farming interests at last week's meeting of the International Federation of Agricultural Producers in Paris on a suggested solution to be put to their respective governments. Farmers are proverbial lobbyists, and one would have thought that a gathering of 42 farmers' representatives from 14 countries could be very influential indeed. But the governments' and producers' interests are far from identical. The point at which the governmental negotiations broke down at Gatt was when specific reductions were suggested for specific exporters. A country like New Zealand could not be expected lightly to surrender free access to Britain's market with all its implications for trade relations between Britain, the common market and Commonwealth countries. But other suppliers such as France might be equally unwilling to restrict their exports without corresponding sacrifices from the so-called "traditional" suppliers.

If Britain raises the question of anti-dumping duties with Gatt, it will again face deadlock because the principal suppliers will be represented and this side of Gatt's articles has never before been tested. It is not therefore surprising that despite New Zealand's prompting, no further action has yet been taken since last month's Gatt meeting. A compromise that will not sacrifice New Zealand's principles may yet prove possible.

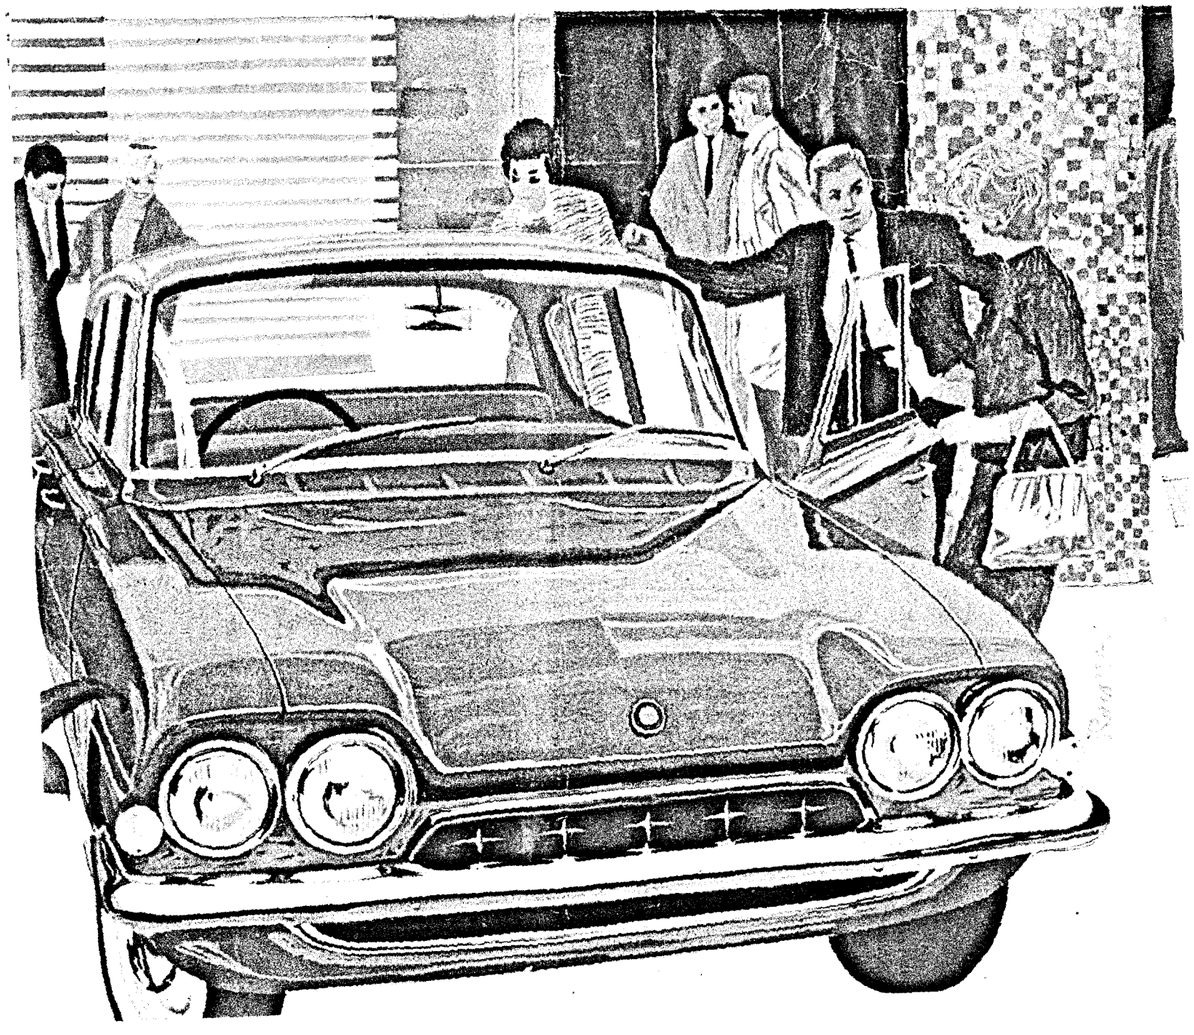
EUROPEAN CAPITAL MARKET

Fédération des Bourses

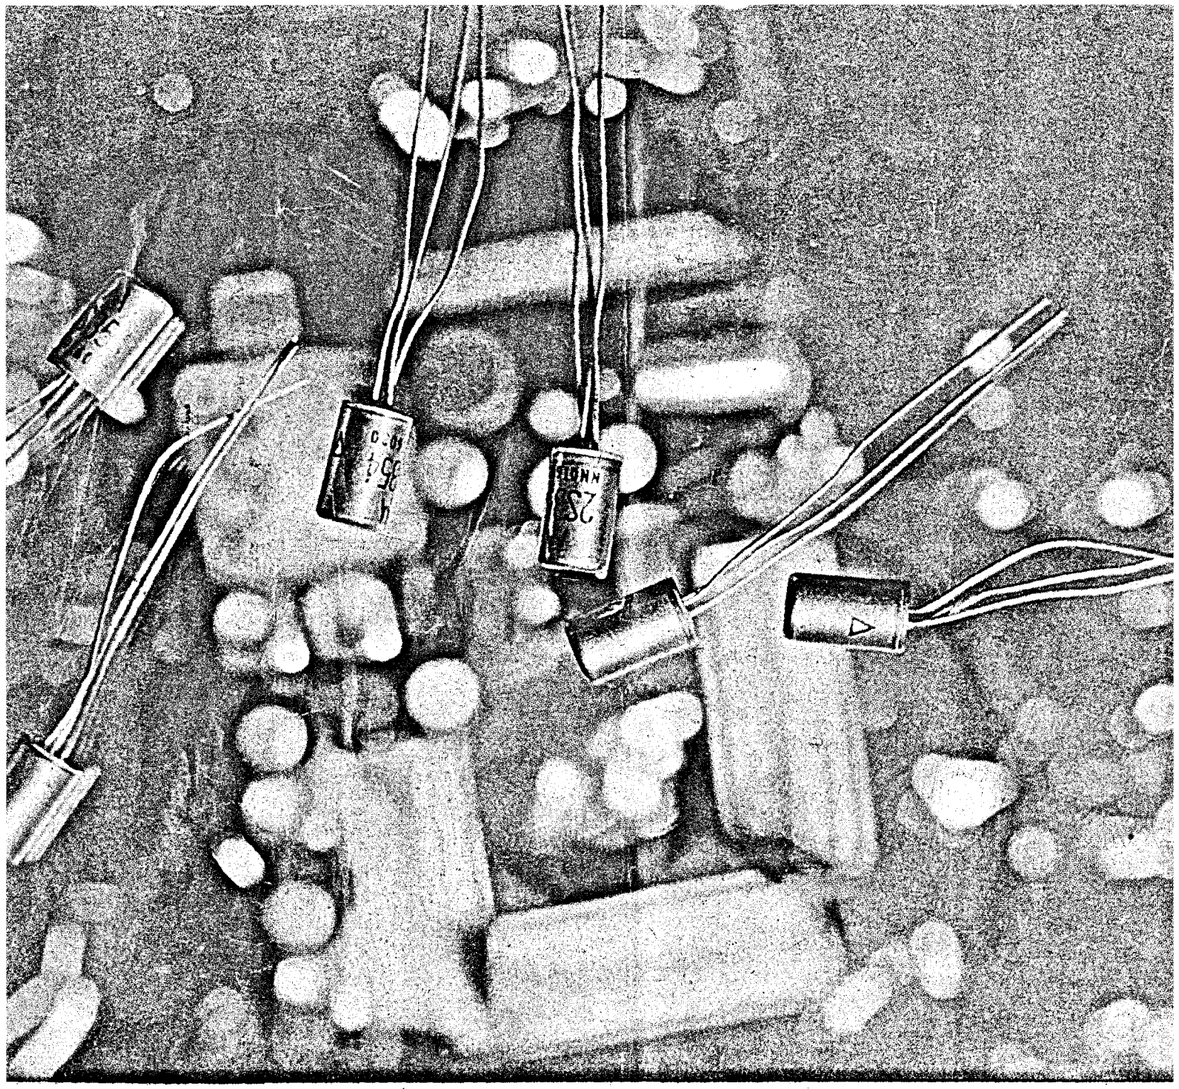
AS expected, the principal result of the conference of European stock exchanges held in London last week was the establishment of a federation of bourses. Called the "Fédération Internationale des Bourses de Valeurs," it will have a Frenchman as its first president and a Dutchman as its vice-president. Rather to the surprise of the English delegation, the establishment of a permanent secretariat for the federation was agreed in principle. Regulations governing its operations and administration were adopted and its broad aims were defined. These were:

(1) To promote collaboration between its members, while respecting traditional relationships which some of them have with exchanges of other countries.

(2) To act as the representative appointed by the various members to assist in making their opinion, or that of some of them, known to the international organisations on subjects relating to stock exchange activities.



Although the freer movement of securities across national boundaries depends largely on governmental action, such a federation can perform a useful service, not least in promoting common interests and exchanging information. It can build, for example, on the foundations that the conference has already laid on such matters as the methods of quotations in various countries, the problems arising from the international circulation of damaged bearer securities and the standards of printing required for such securities. At the conference, moreover, the delegates from London and Paris in special reports described the type and standard of information required from quoted companies in regard to their securities and activities. It is upon such a question that the federation can do much in helping to protect investors by promoting uniform and better standards. But to do so it will have to feel its way gently, since in practice the standards vary widely.



FORD SHOW!
IT'S A
CLASSIC SHOW!

Big Fords, little Fords, favourite Fords, brand-new Fords—you'll see them all at the Motor Show. You'll see the brilliant CLASSIC, style-setting pace-maker among family cars. You'll see the lively ANGLIA saloon and the new ANGLIA ESTATE CAR, the world's most exciting—and most wanted—light cars. You'll see the ZEPHYR, now with front disc brakes as a standard fitting. And the rest of the Ford family; the ever-popular POPULAR, the six-seater CONSUL 375 and the sumptuous ZODIAC both with front disc brakes. At the Motor Show too, you'll have your first glimpse of the dazzling newcomer to the family, the CAPRI—soon to be available on the home market!

POPULAR FROM £508.14.9. ANGLIA FROM £606.8.11. CONSUL CLASSIC 315 FROM £766.17.3. CONSUL 375 FROM £822.5.7. ZEPHYR FROM £915.1.5. ZODIAC FROM £1,011.17.3. ALL PRICES INCLUDE PURCHASE TAX

Toshiba

Transistors . . . nucleus of electronics

Transistors are playing a major role in the realization of the present so-called space age, or the age of electronics. Radio, television, telecommunications . . . all necessities of modern life . . . use transistors. Electronic computers for business and research, and various types of automatically controlled measuring equipment . . . these all need transistors, too.

Toshiba produces these transistors — made of 99.99999999% pure germanium — at a monthly production rate of 4,500,000 pieces. It also produces all the above-mentioned products and equipment designed to meet the exacting standards for excellent quality, uniformity and high reliability demanded by world industry.

TOKYO SHIBAURA ELECTRIC CO., LTD. Tokyo, Japan

TELEVISION

TV-in-the-Slot

THE Rank Organisation is the latest of several companies to propose a scheme for private, wired television services with the subscriber paying for those programmes he chooses to watch. Limited services of this kind have recently been started in Canada. Rank, which has teamed up for this purpose with Rediffusion Ltd., wants to start a similar experiment in this country to test the demand for the kind of super-programmes for which subscribers are said to be willing to pay between 6d. and £1 to see. It has never yet been satisfactorily explained where these super-programmes are to be found for 365 days of the year. Sport can provide only a portion of the time required; and the obvious choice, new feature films, are not produced in anything like the numbers required for, to take Rank as an example, a service offering one afternoon and two evening programmes.

The sheer number of programmes required is likely to worry the wire company much more than the subscriber, who can always go back to the old, free BBC and ITA programmes when nothing takes his fancy on the Pay TV channel. It is usually estimated that an average of £1 weekly per subscriber is needed to make a Pay TV break even, and in Canada where these services have been running longest, average spending in the early days was only three-quarters of the break-even figure and is said today to be well below half. If, however, Rank can restrict the service to only those subscribers taking Rediffusions's wired relay system, and therefore already paying rental for their television receiver, then the company would by-pass the heavy capital investment in cable, wire and specially designed receiver (estimated at £50 or more per subscriber). Its main capital outlay would be the coin-box attachments—plus the programme costs—and it might be able to break even if subscribers bought only a few shillings' worth of programmes weekly.

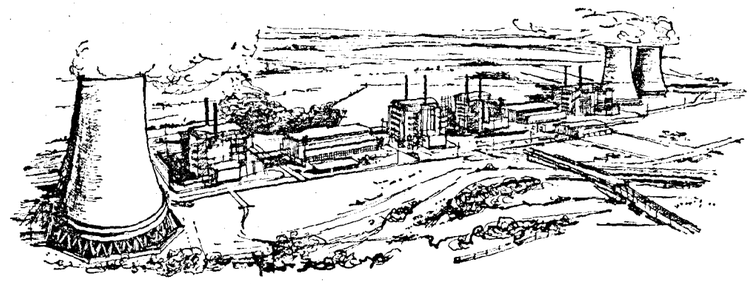
Whether the government would license a service that was restricted to Rediffusion subscribers is another matter, but these obviously present the company with a ready-made market for its Pay TV programmes. It is prepared—but much less anxious—to send its Pay TV programmes by air from a central transmitter even though the transmitter would cover a much wider catchment area than any wired service could hope to do. The main reason for its reluctance probably lies in the need to send these programmes out "scrambled" and provide each subscriber with a descrambling device for his receiver. These are expensive to supply but are said to be far from fool-proof; do-it-yourself addicts may be able to construct their own and get the company's programmes without paying its fee. Hence Rank's discreet reference to the need for "more research . . . before a reliable means of doing this (i.e. unscrambling) without undue expense can be developed."

INDUSTRIAL FINANCE

Boffins in the Parlour?

THE burden of the 1961 Sir Alfred Herbert paper delivered to the Institution of Production Engineers by Mr D. L. Donne, a director of Charterhouse Industrial Development, was that the services the financial institutions provide must keep pace with the changing needs of industry. As a man with experience in production management and management consultancy, who later became a director of a company primarily concerned with the provision of finance for small and medium-sized firms, it was natural for Mr Donne to give particular attention to the links between the financial institutions and industry and to the problem of finance for the smaller business. Few will dispute his conclusions that the working relationship the finance house has with the smaller company is less close than that it has with the bigger concern and that the smaller company finds it difficult to raise the permanent capital it

CALDER HALL



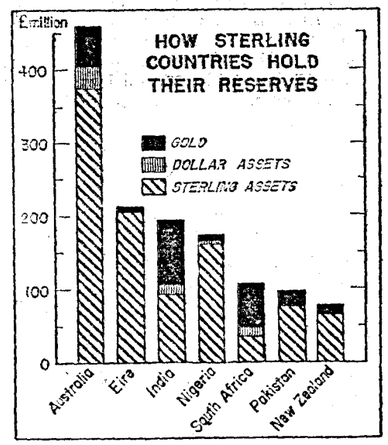
Five Years Wiser

ON a bright cold morning five years ago last Tuesday, the first half of the Calder Hall nuclear power station was officially opened by the Queen, the first nuclear plant of its size in the world. Time blurs the memory of the gamble taken by the men who built it from scratch, without benefit of a prototype, against a strict military timetable that demanded delivery of plutonium from the new reactors by a certain date and would brook no delay for tests and experiments on the power generation side of the installation. Five years later, all that needs to be said about Calder Hall is that it has worked, and worked triumphantly well despite the unknowns that went into its construction.

Its very success has tended to diminish in popular esteem the size of this achievement by making it look so easy. Other nuclear power stations since commissioned in various parts of the world have run into considerable troubles, some of them involving expensive re-design. But according to the Atomic Energy Authority, only four break-downs have occurred in its nuclear power stations during the five years that it has been in the power generating business—and occurred in the conventional transmission and generating equipment. The reactors themselves have given 25 per cent more heat than was expected of them; and even after re-blading the turbines this leaves a considerable surplus in hand which will now be used to produce process steam. More important for the nuclear power programme even than the fact that load factors of near 90 per cent have been achieved without difficulty is the toughness of the nuclear fuel. There has been some doubt about whether uranium fuel as designed in Britain could stand up to the strains produced inside a reactor for long enough to yield an economic amount of heat (the target was 3,000 megawatt days per ton of uranium).

These doubts look less serious since experiments carried out in Calder Hall, where some fuel elements have stayed four years in the reactors and where one reactor has been operated without a break (or a break-down) on the same charge of fuel for a year. The biggest question still to be answered now is the probable life of a nuclear station.

It does not follow automatically that the commercial nuclear power stations now being run in by the Central Electricity Generating Board will work as well or as smoothly as those at Calder Hall. They are designed, for one thing, for much more exacting operating conditions, and their construction started before there was much data from Calder Hall to guide the designers. But the engineers working on today's blue-prints are five years wiser, and the Calder Hall type nuclear power stations on their drawing board still look a better bet for competitive atomic electricity than many a fancier design.



requires. But not everyone will agree with his suggestion that, taking a leaf out of legislation in the United States, finance could be provided for the small company by a combination of private and governmental money.

There will, however, be less reluctance to accept Mr Donne's other thesis that as industrial processes become more specialised and complex, the financial institutions themselves will have to specialise more. A finance house set up solely to provide money for, say, electronics or plastics could offer something more than finance and could become, Mr Donne suggests, the source of central management services for smaller companies. Some institutions already provide such services and, as Mr Donne says, this requires the cross-fertilisation of ideas and men between the City and industry. This can also be of importance when finance is being arranged for larger concerns. As industry becomes more capital-intensive, technical advances are likely to require the provision on a bigger scale than hitherto of finance for research and development, and in putting up risk capital for such developments the financial institution will need to be able to assess the quality of technical management. It will have to know something about industrial techniques as well as money and financial management; and also, Mr Donne argues, to "employ people competent to evaluate the prospects of a technical development." The bankers' parlour will require, in other words, the support of specialists recruited largely from industry.

STERLING BALANCES

The High Price of Gold

THE announcement from Lagos last week that Nigeria had converted some £7 million of its sterling balances into gold and about £3½ million into United States dollars must have made many of the sterling area countries contemplate afresh the conflict of influences in the manner they should hold their reserves. The exchange value of sterling has periodically come under suspicion; there is always talk of a rise in the price of gold; and, not least important for a newly independent country, a national gold reserve has come to be almost as much of a symbol of independence as a national airline. But it can also be almost as costly. London offers far higher yields than the alternative reserve centre, New York, and Nigeria's conversion of less than one fifteenth of its reserves into gold and dollars will mean a loss of close on £500,000 in foreign exchange earnings. Ghana has so far been more cautious in this sphere and still holds only £2 million in gold out of reserves that totalled £100 million last March. Many of the other sterling area countries, however, as the chart shows, are making quite large sacrifices in earnings by keeping substantial portions of their reserves in gold—though only in South Africa and India is the gold and dollar portion more than half of total reserves.

The continued financial links that these countries have with London make sterling a particularly convenient reserve and trading currency for them. But the link to the London capital market as such has become much weaker, and even the formal right of privileged access may become less significant if Britain has to allow a freer flow of capital to the common market. Overseas sterling countries may therefore feel that they are getting less of a *quid pro quo* from the sterling area arrangement. In that case, interest rates may become still more important in affecting the disposition of their reserves.

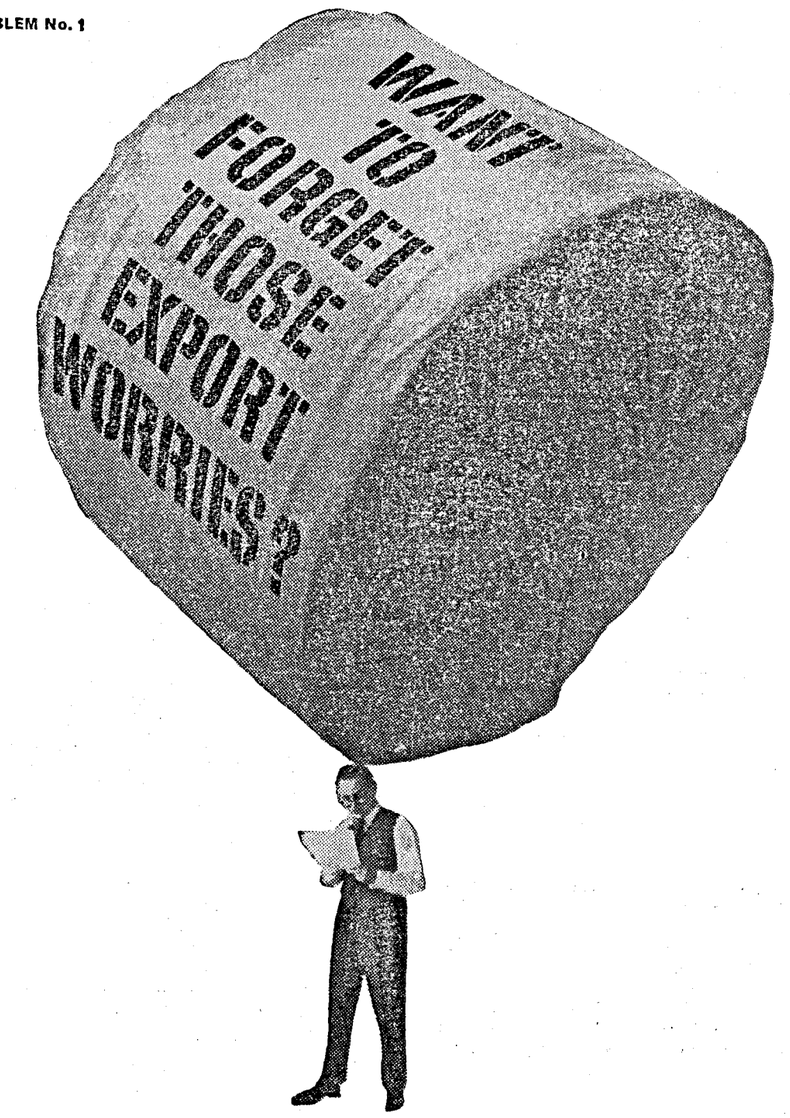
SUGAR CONFERENCE

At Full Stretch

ALLOWING for lengthy warming up period before delegates really got down to business, the international conference to review the 1958 Sugar Agreement was expected to last five weeks. It began on September 12th, but it has still not completed its business. This is not the first commodity conference to fall behind schedule this year, but this delay is probably the most significant of all. No official statement was made when the conference was adjourned at the end of last week, and a normal annual meeting of the International Sugar Council was sandwiched between these abortive discussions and a resumption of the review conference on Wednesday, when a fairly heated discussion seems to have followed the introduction of a draft solution worked out by a negotiating committee.

The conference has been an unusually tight-lipped affair, but the stumbling block has undoubtedly been Cuba's request for an enlarged export tonnage under the agreement to compensate for the loss of its market in the United States. Cuba was originally allotted an export tonnage of 2.4 million tons to the free market, and other producers would apparently have accepted a proposal that this basic tonnage should have been increased by the 3 million tons of sugar shut out of the American market. However, Cuba wanted a basic tonnage of 7.3 million tons, which would consolidate its original quota and the 4.9 million tons of sugar it has arranged to sell to communist countries.

Though the conference was apparently willing to stretch its export tonnages a little further, Cuba stood out for a very large allocation and no agreement has been reached. Doubts surrounding the conference have caused a renewed weakening in the price of sugar, which has dropped to about £23 a ton in London. On two points, the conference seems to have reached agreement. South Africa's application for an independent export quota instead of sharing the Commonwealth's combined quota has been favourably received. Less unanimous has been the qualified acceptance of a proposal that a committee be formed to investigate the curious state of affairs that results in refined sugar fetching a lower price than raw sugar in world markets.



AIR TRANSPORT

Interim Report

THE government's new Air Transport Licensing Board came into being a year ago but during its first six months it was faced with the need virtually to rubber-stamp applications for air services submitted to it if the whole business of civil aviation was not to grind to a standstill before the summer. Reporting on the work of the first six months, the board says frankly that it was none too happy about some of the decisions it reached. Nor are some of the board's critics, who have been asking how it was that small relatively unknown airlines were granted licences for large numbers of flights (mainly holiday tours) without first inquiring whether they had the resources and the fleets to fulfil all these commitments. At least one of them, Overseas Aviation, went out of business half-way through the holiday season, but there have been other cases too of passengers temporarily stranded.

The board says that in those rushed first months it just did not have the time "to examine the financial standing of the licence holders" who were applying for transitional licences by the hundred to enable them to maintain services while the board got down to the serious business of deciding how much competition to allow in the air. It is now going through each airline's books, but "this will take some time." In the meantime, the cursory inspection that has been possible to date has thrown up one aspect of the air licensing system that strikes the board as unworkable. It is instructed not only to take into account the financial standing of any airline applying for a licence, but

to see that it is properly insured and can meet any claims that might be made on it for loss or damage.

This is easier said than done ; producing an insurance certificate is not necessarily the same thing as being able to meet all liabilities for loss or damage, for should the aircraft crash because someone has broken the rules, the insurance policies will probably become void leaving the victims and their dependents to claim what they can by way of compensation from the airline itself. There has been at least one instance of this in Britain in recent years and when, as in that case, the airline is a small one, the chances of adequate compensation are slim. Even under the existing international agreement that puts maximum liability at £3,000 per person (and this maximum liability does not hold in every circumstance or even in every country) claims on behalf of 50 or 60 passengers killed in an accident could put even a flourishing small airline out of business. Cases of this kind are admittedly rare, and it is not their frequency that concerns the board so much as the fact that clumsy drafting in the Aviation Act has saddled it with a duty, namely to see that airlines can pay compensation under all conceivable circumstances, that it cannot possibly carry out. Altogether it is a report that contains an unusual amount of plain speaking whether on this, on the subject of competition ("competition in the public mind usually connotes price competition . . . there is no opportunity for this kind of competition in the international civil air transport business") or on the board's offices in Glasshouse Yard to which it takes strong exception.

TEA

Doom Dooma's Aftermath

EXCEPT for companies badly hit by last season's drought in India and Pakistan, tea producers are not having a noticeably better season than a year ago. The average price for North Indian tea so far this year is a penny a pound lower than a year earlier. The recovery in production in North India and Pakistan has ensured an abundance of tea by the end of the year: stocks in bonded warehouses in Britain have already risen to 128 million lb at the end of September, compared with 86 million lb a year earlier. The weather has been favourable in India and September and October are the peak months for output. It is only the temporary shortage of supplies caused by delay in shipments of tea from North India that has brought firmer prices at recent ten auctions.

Under the weight of imports from Africa, the price of plain teas fell by about 7d. a lb from the end of June, though prices have recently recovered slightly to around 3s. 4d. a lb. The main consideration of investors in the recent boomlet in Indian tea companies which are the biggest producers of quality teas has been asset values and this interest has been mainly inspired by Brooke Bond's bid for Doom Dooma. Fortunately for the estates this was a protracted affair during the course of which all the hidden assets of this tea company were thoroughly exposed and Brooke Bond acknowledged them by lifting its bid in two stages from 45s. to 60s. a share. This bid put a value of about £180 an acre on the estates ; it is generally agreed that tea estates in Africa cost more than £500 an acre with ancillary buildings.

INDIAN TEA SHARES

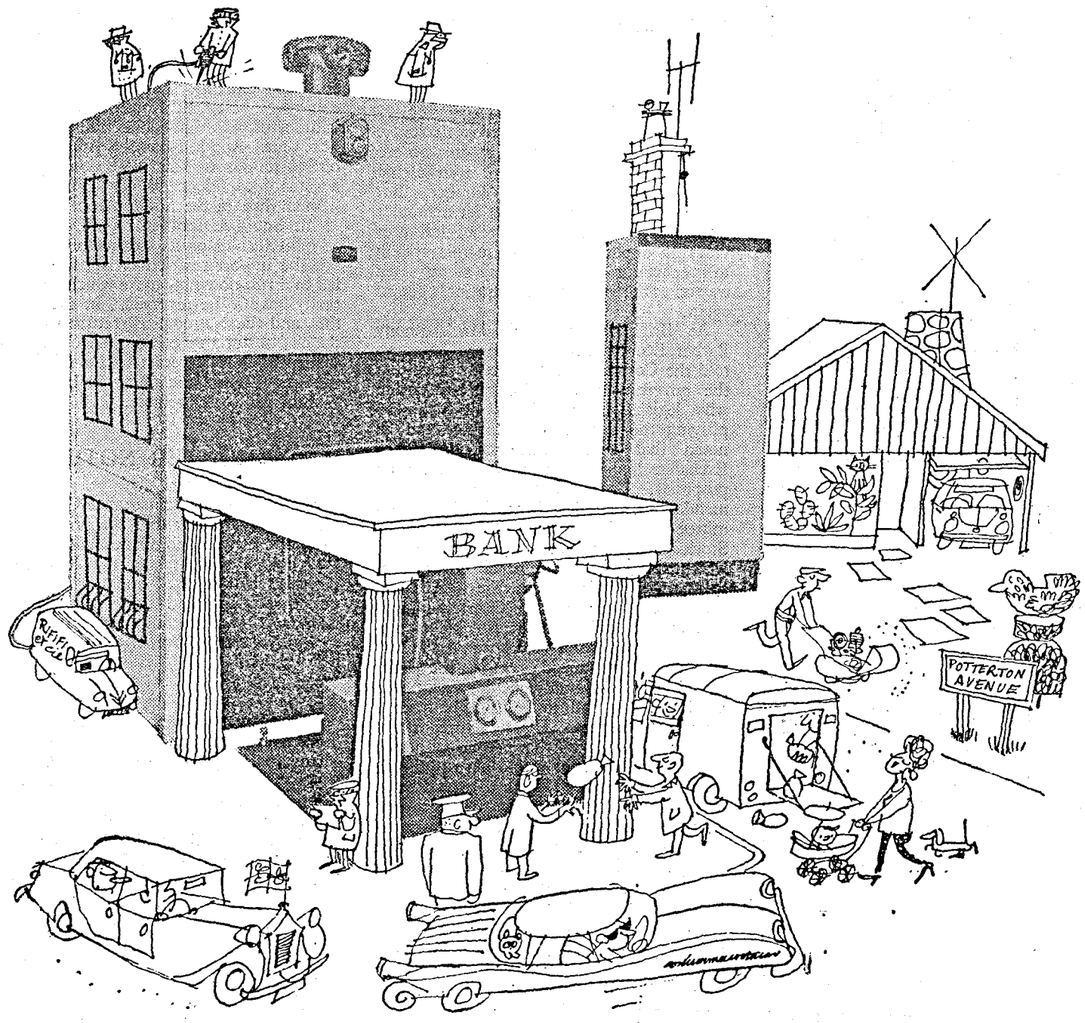
*Tax free.

But production costs are probably lower about 5,000 sq ft, economies of scale become less important, the extra capacity may not be matched by extra sales, the risk of pilfering increases, and the need for organised management emerges.



Managing and staffing a supermarket in fact require rather different skills and experience than the proprietor and girl-of-all-work of the corner grocery is accustomed to. In many other ways, too, Mr McClelland considers the supermarket to be a "new commercial form" in food retailing, requiring techniques and an approach much more different than the mere difference in size with an owner-managed grocery would suggest. It demands acumen in pricing, an understanding of "customer behaviour," an ability to handle other lines of food and other articles than groceries, a knowledge of packaging, as well as the ability to exploit the opportunities of internal rationalisation and specialisation that come with size. Mr McClelland believes that the development of supermarkets should have wholly beneficial effects upon retailing. Besides offering the prospect of increased productivity in distribution, "their concentrated buying power, their competitive situations and their price flexibility can be an important power on the side of the consumer, countervailing the power of the manufacturer, which in my judgment is now not only excessive but overweening . . . they could do for the food shopper what Marks and Spencer has done for the clothes shopper."

Growth Pains in Supermarkets

SUPERMARKETS have a long way to go in Britain before they bulk as large in food retailing as they do in the United States. There, they now handle about two-thirds of the trade: here, still only about 3 per cent, and that is after taking a somewhat more generous view of what in fact constitutes a supermarket—it does not allow, for instance, for any minimum qualifying turnover. But American supermarkets had a twenty-year start and in Britain the number has been growing fast by any measure. Four years ago there were only about 80, with at least 2,000 sq ft of selling area, the sole criterion adopted here to distinguish the genuine article from the self-service copy. By 1961, Mr W. G. McClelland, who is managing director of a Northern chain of grocery shops, told the British Association at Norwich recently there were reckoned to be about 600. As in the United States, the initiative came primarily from outside the grocery trade—from a Canadian millionaire, a large milk chain, and from a department store group.

This kind of super-grocery, which offers the housewife so minded the chance of buying at one go all her week's supplies of food and certain of the more common household stores, is still largely confined to London, the Home Counties and certain other parts of the country where compact population and busy high streets presented obvious concentrations of "housewife traffic." Mr McClelland asked himself the question whether future development of supermarkets in Britain would be more or less rapid than in the United States. Britain's greater density of population cuts both ways. While it helps the super-grocer to attract the much higher turnover needed to cover his high fixed costs (and low marginal costs), it makes sites for the store itself and the parking space its customers will want very much more expensive ; it also still makes economically possible some home delivery service.

THE extensive programmes of rebuilding and urban renewal that Mr McClelland sees coming in Britain in the next few decades may give supermarket developers a better chance of getting hold of good sites. But they may still be disinclined to go in for supermarket "emporia" of the size now common in the United States. There, a selling area of 20,000 sq ft is a good size ; some as big as 100,000 sq ft, where pretty well everything imaginable is sold, have recently been opened. Apart from the problem of space for car parking, which American supermarkets generally reckon ought to be four or five times the actual selling area, several other factors may keep most British supermarkets to a more modest 10,000 sq ft or less. Beyond

Potterton heat bank or bungalow beautifully

Potterton make boilers—oil-fired or gas-fired—rated from 31,000 to 2,000,000 B.th.u./hr. They are automatic, efficient, economical and purpose designed.

Potterton have been making boilers since the year dot. Very experienced people. Very reliable boilers. Pick Potterton. It pays.

Is your Potterton file up to date? For all the latest information by return post, just jot "boiler information, please" on your letterhead and send it to us.

A Potterton FOA oil-fired boiler (output: 1,000,000 B.th.u./hr.) heats Barclays Bank, York. Supplied and installed by J. Shanksmith Limited.

And a Diplomat 100 (a domestic gas-fired Potterton) supplied by South Eastern Gas Board and installed by C. Fletcher, Sons & Company Limited, Kingston, heats and provides hot water at an 8-roomed bungalow in New Malden, Surrey.

in Africa and taxes, particularly the absence of export duties in British East Africa, have been less inhibiting. Therefore it has been in Africa that proportionately the greater expansion in production has been taking place. In fact, tea growing has been spreading rapidly in other areas and India's exports have lagged behind, though this is partly the result of increasing local consumption. That seems particularly disconcerting in view of the surplus that appears to be developing.

However, when politics are taken into account, India now has few strong rivals as a haven for non-residents wishing to invest in tea estates. This year Brooke Bond has reduced its normal rate of planting in Africa, where it is one of the largest producers, after it its chairman admitted a concern at what he called "clouds gathered over the horizon in Africa." Brooke Bond has followed a consistent policy of ploughing back a considerable part of its earnings into estates. That it should invest £1.6 million in India at this time is doubly significant. It may mean a shift in the group's direction of expansion as well as a further strategic strengthening of its competitive position among blenders in this country.

Tramp shipping freights have been hardening to levels not seen since late in 1957 during the backwash of the Suez boom; while the tonnage of world shipping in lay-up, especially dry-cargo, has now dropped almost to insignificance. Rather more oil tankers have become idle since last spring, but two-thirds of the tankers and almost all of the dry-cargo carriers still out of work are old merchantmen, built during or before the last war and unlikely to be of much commercial use again.

STOCK EXCHANGE

Simplified Transfers

The sharp fall in the volume of transactions on the London Stock Exchange has brought some respite to those who are engaged in the mechanics of transferring shares from one investor to another. But this has not lessened the need for a simpler transfer system, and the current lull provides an opportunity to revise this system to prepare for the time, which seems some way off at the moment, when business booms again.

At Brighton last week Mr Anthony Barber, Economic Secretary to the Treasury, told the Conservative party conference that the government was already considering what legislation might be involved in simplifying the transfer of securities and he noted that a committee of the Stock Exchange had already put forward certain proposals. These are based on the recommendations made last December by a committee consisting of representatives of the Stock Exchange, the Bank of England, which acts as registrar for all government stocks, the clearing banks, the issuing and acceptance houses and the Chartered Institute of Secretaries. The principal recommendation was that a "stock transfer form" should be introduced so that the seller would have to sign only one document even if his holding had to be split between a number of buyers. His signature, it was suggested, would not have to be witnessed but the seller's agent would have to fix his stamp to the form. The stamp would be an integral part of the conveyance so as to prevent the document from becoming a quasi-bearer security. The buyer would not have to sign the form at all. Since December these proposals have been discussed with a large number of interested institutions, including the broking firms themselves; they have generally welcomed the new system although on some points of detail, such as on the wording of the transfer form, minor adjustments have been suggested.

Whether legislation will be introduced in the forthcoming session remains to be seen; it is more likely to be later in the new parliamentary year. Much depends on the speed with which the various government departments involved, primarily the Treasury, the Board of Trade and the Lord Chancellor's department, can tackle the problem of framing a bill.

SOUTH AFRICA

One Hundred Up

South Africa's siege economy is yielding results. This week, with Dr Verwoerd gaining an increased majority in the elections, the external reserves have topped the £100 million mark. This is an increase of £30 million on the mid-June low-point. It

is also reported that a consortium of Italian banks, headed by the Banca Commerciale Italiana, is making a £3½ million loan to South Africa. But the country's financial headache remains. The Italian loan is for only three years and South Africa has £50 million of external obligations maturing next year. And last month's American loan of $30 million to Rand Selection was more a sign of confidence in Sir Harry Oppenheimer than in the South African Government. South Africa is still running a current account surplus on its balance of payments, but the import restrictions appear to have led to a run-down in stocks which will eventually have to be reversed. In the light of this, and the Nationalists' return to power, the chances of a relaxation in exchange control regulations, forecast by Dr Diederichs, minister of economic affairs, in London last month, still seems remote.

SHORTER NOTES

Shareholders of Reinsurance Corporation were told last week that the proposed bid from Mercantile and General Reinsurance was 90s. a share which the Reinsurance directors had rejected and that two other possible bidders had also withdrawn. On Monday the shares fell sharply from 128s. to 85s., before recovering to 95s.

★

Arrangements have been made with Cazenove and Company to place 129,998 £1 shares (out of 500,000 shares) and £300,000 of a 7 per cent debenture 1984-87 in Cumulus Investment Trust, a new trust backed by a number of bankers and by Sir Edwin Herbert, the chairman of the Industrial and General Trust. Its aim is to invest primarily in equities with long term growth prospects.

★

For the fourth consecutive month the value of unit trust funds have fallen. In September, despite the inclusion of the Trades Union Unit Trust for the first time, total funds fell from £219.1 million to £217.3 million. But sales of units, at £1,163,000, again exceeded repurchases, which totalled £752,000.

CHEMISCHE WERKE HÜLS AG

On the northern periphery of the Ruhr near newly sunk colliery shafts Chemische Werke Hüls AG and its subsidiaries have, during recent years, developed into the fourth largest chemical concern in West Germany. Production, for example, has now reached an average of 80,000 tons of Vestolit (polyvinyl chloride), 30,000 tons of Vestyron (Polystyrene), 6,000 tons of Vestolen A (low-pressure polyethylene) and 3,600 tons of Vestolen P (low-pressure polypropylene) per year. And, finally, this new chemical manufacturing centre on the river Lippe also turns out 120,000 tons of "BUNA Hüls" synthetic rubber annually and will produce synthetic textile fibres in the very near future.

RESEARCH
DM 36 millions were expended on research and development and on related installations and equipment. The success of these research efforts are reflected in the numerous new or improved products in the Company's range, particularly in the traditional production lines of polystyrene and polyvinyl chloride, as well as in the field of polyolefines. The operation of a large-scale pilot plant for polypropylene was also inaugurated in 1960. Research in the fields of epoxy resins and detergents was intensified, thus ensuring that interesting new products will be forthcoming in the near future. Data required for the production of 1·4-cis-polybutadiene were assembled by work on a pilot plant scale.

INVESTMENTS IN AFFILIATED COMPANIES
The Company's 50 per cent subsidiary, Bunawerke Hüls GmbH, Marl, recorded an output of approximately 71,000 tons of synthetic rubber in 1960. By virtue of completed plant extensions an annual productive capacity of 120,000 tons was attained by the end of the year.

The year 1960 also witnessed the foundation of the Katalysatorenwerke Houdry-Hüls GmbH, Marl, in which Chemische Werke Hüls AG and Houdry Process Corp. of Philadelphia, Pa. (USA), both hold 50 per cent of the shares. This subsidiary is designed to produce catalysts for the petroleum and chemical industries.

Furthermore, Faserwerke Hüls GmbH, Marl, was established by the Chemische Werke Hüls AG, for the manufacture and sale of fully synthetic fibres. It is a joint subsidiary with Eastman Kodak, Rochester, New York (USA), both parent companies participating with an interest of 50 per cent.

PERSONNEL
At the end of 1960 Chemische Werke Hüls AG maintained a total personnel force of 12,512 workers and employees, as well as an additional group of 2,969 persons in the employ of sub-contractors engaged by the Company. The number of Company-owned or Company-subsidised flats rose by 227 to a total of 4,483 dwelling units.

DIVIDENDS AND CAPITAL
A dividend of 17 per cent on the share capital of DM 180 millions was distributed for the financial year 1960 with the capital increase of DM 30 millions (October, 1960) participating in the dividend to the extent of 25 per cent only. The Annual General Meeting of Shareholders authorised the Board of Directors to increase the share capital by an additional DM 30 millions by June 1, 1966, through the issue of new shares against cash or kind.

SALES
The Company's turnover in 1960 (not including its subsidiaries) rose to a high of DM 709 millions, representing 14·5 per cent increase over the previous year's total of DM 619 millions. An increasingly significant share of this sales turnover was achieved by plastic raw materials, auxiliaries and plasticisers. Home market sales accounted for a somewhat larger proportion of this rise in turnover than the Company's exports which were responsible for roughly 32 per cent of total sales.

INVESTMENTS IN MATERIAL ASSETS
During 1960 capital investments, totalling DM 92 millions, were directed predominantly to the building of new and the extension of existing plant, as well as to still further measures of rationalisation and automation of production facilities. Of this investment 63·3 per cent were apportioned to manufacturing plants, including laboratories and technical centres, 24 per cent to power stations, and 12·7 per cent to transportation facilities, workshops and social welfare services. Seventy-two per cent of the investments were covered by depreciation.

PIFCO HOLDINGS LIMITED

INCREASED SALES

The Forty-ninth Annual General Meeting of Pifco Holdings Limited was held on October 19th in London.

The following is an extract from the circulated statement by **Mr A. D. Webber,** chairman and managing director:

I am pleased to report increased sales and some improvement in profits. Turnover rose, but profit margins were a little thinner. The rise in costs continues and competition in our field is intensive, which means that we cannot always increase our selling prices.

The Group Profit before providing for Taxation amounted to £253,128 as compared with £227,601 the preceding year. I consider this a creditable performance in the varying conditions experienced in the period. The Group Profit after Taxation is £126,890.

Your Board recommends a final dividend of 22½ per cent, less income tax, making a total of 35 per cent for the year.

You will doubtless expect me to furnish you with some information on trading results since the end of the financial year and prospects for the present year. Turnover in the first four months shows a satisfactory increase, but a forecast may be unwise. Nevertheless, we are in good heart for the future. Your Company exports to many markets and continues to make vigorous efforts to increase sales abroad. The new appliances introduced last autumn have made good progress. The popularity of our Products grows and a bold advertising campaign has been planned for the autumn.

BEKOH CONSOLIDATED RUBBER

A SATISFACTORY PROFIT

The forty-first annual general meeting of Bekoh Consolidated Rubber Estates Limited was held on October 18th in London, **Mr A. A. Estall** (Chairman) presiding.

The following is an extract from his circulated Review:

The Accounts for the year ended March 31, 1961, show a profit of £64,218 before taxation and provision for replanting and upkeep of immature areas. This compares with a profit of £85,108 for the previous year and, bearing in mind the lower prices realised for our crop, cannot be considered unsatisfactory. Taxation requires £17,865, and we have spent during the year on replanting and upkeep of immature areas, less Malayan Government grants, no less than £14,897.

Your Board recommend a final dividend of 10 per cent less Income tax, making a total for the year of 12½ per cent.

2,481,000 lb. of rubber were produced during the year, against an estimate of 2,600,000 lb.—the main reasons for the shortage being due to holidays and subsequent absenteeism on Coronation Estate and, to a certain extent, to declining yields in the old areas.

For the current year we have estimated for a crop of 2,592,000 lb. and for the five months to the end of August 1,063,000 lb. have been harvested, and it is confidently expected that our estimate will be obtained. The replanting programme is proceeding as planned.

The report and accounts were adopted.

THE ENGLISH, SCOTTISH AND AUSTRALIAN BANK

THE HON. DAVID F. BRAND'S REVIEW

The sixty-ninth annual general meeting of The English, Scottish and Australian Bank, Limited will be held on November 8 in London.

The following is an extract from the circulated review of the Chairman, **The Hon David F. Brand:**

In my review last year I mentioned that there had been a noticeable expansion in the main sections of Australia's economy and that the difficulty would be to ensure that such growth did not encourage an undue degree of inflation.

In the event difficulties did arise and by the second half of 1960 there was an unhealthy boom condition in the internal economy, while at the same time there appeared a serious imbalance in Australia's overseas trade. This imbalance was consequent on the freeing of import restrictions early in 1960 while general terms of trade were moving adversely.

After commenting on Britain's possible entry into the Common Market and its practicable effect on Australian trade, the chairman said: It must be acknowledged that any development that led to the overall increased economic strength of the Western Countries of Europe and at the same time brought about a common unity of purpose in those countries could have far-reaching and beneficial effects for the whole world.

THE BANK'S AFFAIRS

The Consolidated Profit and Loss account of the Bank shows the Group profit for the year at £526,789, an increase of £148,358 over the previous year. Of this increase £31,526 represents the improvement in the Bank's net earnings which are shown at £356,385. Most of the balance of the improved profits of the Group were contributed by Esanda, Limited, our main subsidiary, which, in difficult operating conditions, had a successful year.

The Directors now recommend a final dividend of 5 per cent, less the standard rate of income tax, making a total distribution of 9 per cent, less tax, for the year.

When I recall the many difficulties that have prevailed during the twelve months under review, I regard the Group's profit figures as satisfactory.

Commenting on other aspects of the Bank's activities, the chairman stated: During the year the Bank acquired the remaining shares of Federal Trusts Limited, which has been renamed E. S. & A. Federal Trusts Limited. This wholly-owned subsidiary will enable the public to invest in Trust Units through the Bank's network of offices in Australia.

On September 29, 1961, we commenced our Savings Bank business through our subsidiary company in Australia, namely E. S. & A. Savings Bank Limited. Its business can be transacted at every one of the bank's 500 offices in the Commonwealth.

It is hoped that both of these new services will prove to be of benefit to the public and, at the same time widen our sphere of operations and open new avenues of business.

EAST ASIATIC RUBBER ESTATES

The thirty-eighth annual general meeting of East Asiatic Rubber Estates, Limited was held on October 16th in London, **Mr H. T. Karsten** (the chairman) presiding.

The following is an extract from his circulated statement:

The profit of £124,283 for the past year is approximately the same as that for 1959/60 despite a reduction of nearly £30,000 in rubber sale proceeds. This was partly due to a dividend received from Teluk Merbau Plantations Ltd., our subsidiary company, and also to reductions in Export duties and Taxation provisions.

It is recommended, however, to restrict the dividend to 15 per cent. Having regard to the heavier capital commitments during the current year and the necessity of ensuring that sufficient funds will be available for our planned replanting programme and for the upkeep of immature areas it is thought advisable to conserve our resources and to increase our carry forward by some £13,000.

The replanting of older areas with modern high yielding clones is progressing steadily, and at the end of the year under review approximately 56 per cent of the total cultivated area had been replanted.

Commenting on the increasing menace from the improved qualities of the new synthetics, the chairman said: We may see a further decline in the price of natural rubber during the next few years. Until therefore we can increase the output from our replantings this may have an adverse effect on our earning capacity.

The report was adopted.

CRYSTALATE (HOLDINGS)

The Annual General Meeting of Crystalate (Holdings) Limited was held on October 12th in London, **Mr J. Lesser** (Chairman and Managing Director) presiding. The following is an extract from his circulated Review:

The Consolidated Accounts for the year to March 31, 1961, show a profit of £120,911 as compared with £119,686 and Group Net Profits after taxation are £55,645 as compared with £65,527. The Directors recommend a Dividend of 15 per cent less tax on the Ordinary shares for the year. The Consolidated Balance Sheet of the Group continues to show a sound financial position.

The manufacturing companies, Crystalate (Mouldings) Limited, Ebonestos Industries Limited and Mica Products Limited, comprise the major revenue producing activities of your Group. The three companies on balance did slightly better than the previous year. For the first four months in the current year in total these companies are maintaining comparable figures.

This year Crystalate (Printing) Limited made a profit, as against a small loss incurred in the previous year. The British Homophone Company Limited continued to manufacture and supply Gramophone Records consistent with its policy of "Pressing for the Trade."

For the period from the end of the financial year the trading figures of the Group as a whole have been maintained, and the "orders in hand" position is somewhat stronger than at the same time last year. The policy of steady expansion is being continued.

The report and accounts were adopted.

COMPANY AFFAIRS

British Electronics' Next Dividend

SHAREHOLDERS of Pye and E. K. Cole, merged a year ago into British Electronics Industries, were no doubt very relieved to hear in September that they were to receive the 15 per cent dividend promised them at the time of the merger even though the combined group's profit before tax had fallen sharply from £3,099,000 to £727,000. They will now study the full report to assess the chances of the payment being maintained in the current year which runs to next March. The balance sheet suggests that the augurs are not too hopeful, for stocks have now risen to £19.3 million and net bank overdrafts to over £8 million. But these figures are not really startling, for stocks have risen by under £3 million, which is less than might have been expected in such a gloomy year for the television market while, after allowing for the cost of the acquisition of Telephone Manufacturing, bank overdrafts are at about the same level as a year ago. Nevertheless at a time when it would clearly be difficult to fund this overdraft on anything but penal terms the group is faced with a very heavy interest charge. Total loan and bank interest last year amounted to £1.1 million, more than double the previous year's figure and over a third of the group's trading profit.

On the current outlook for the television et industry Mr C. O. Stanley, the chairman, ays that no one can say how soon the resent difficulties arising from factors oth within and outside the industry can e overcome. He adds that it is not posible to judge how profits in the current year ill be affected. Shareholders will perhaps e disappointed that Mr Stanley, who in he past has been very frank with them, annot give a clearer indication of the nmediate prospects of profits or losses from ie main section of the group's business hen over half the current year's trading as been completed. He does however tell iem that the main reason for Cole's loss last year was its very heavy stocks of television sets, which exceeded those of Pye's.

On the group's growing interests in electronics and other fields Mr Stanley is able to paint a much brighter picture. For its new subsidiary Temco and its other telecommunications interests the group is budgeting for increased profits; its scientific instrument companies are expected to show a profit in the current year of over £500,000 and plans are in hand to double this business, of which a large part is in exports, over the next five years. Pye TVT which makes television, studio and transmitter equipment has successfully introduced a new television camera and hopes soon to bring production of this camera more in line with orders.

Cole's electronics group, which is a major supplier of airborne radar, suffered a fall in output as a result of the group's move from Malmesbury to Southend, made necessary by the expansion in business. Its plastics division which it had been thought would provide the group with some element of diversification failed to do so, for it was badly hit by the recession in consumer durables, but Mr Stanley says that currently the outlook is better.

Clearly this cannot be said yet for the group as a whole and the current difficulties are partly reflected in the 7 per cent yield offered by the 5s. shares at 10s. 7½d.

Astley Industrial Trust

ASTLEY is fortunate in its balance sheet date of June 30th. Last year's results were still buoyed-up by the 1958-59 boom, while this year's setback in profits and reduction in dividend caused no surprise coming after so much bad news from the hire purchase companies. Astley's setback is attributed to an increase in bad and doubtful debts, and to the rise in borrowing costs. In his report however, the chairman, Sir Stanley Bell, throws little light on these problems. An extra £110,000 has been set aside for doubtful debts "in addition to normal provisions," but the size of the normal provision is not revealed. Bank and loan interest has more than doubled from £648,000 to £1,395,000 and it is difficult to reconcile this sharp rise with borrowing that has increased over the year to June 30th by only one third from £18 million to £24 million and with interest rates that were on average about 20 per cent higher. It would appear that Astley has had to pay very high rates for its deposits from the public. Sir Stanley also fails to explain why, when debts outstanding have increased by £5 million to £31 million unearned revenue charges are little changed at £2.7 million.

Sir Stanley concludes his statement by forecasting a recovery in profits "in the absence of any untoward change in the economy." But he expects that Astley will for some while have to bear the cost and trouble in cleaning up further defaults and financing existing low rated contracts with dearer money, though he says that new business, which is apparently still at a high level, is now being taken on terms which take account of higher interest rates. It is possible, however, that this is too optimistic a view of the immediate prospects for Astley and other hire purchase companies in this country, but on the dividend reduced from 16 to 13 per cent, the 5s. shares at 16s. 4½d. still yield only 4 per cent.

Decca Record

THE news that Decca Record has earned higher profits came as a pleasant relief to investors who have been buffeted in the last few weeks by reports of smaller margins of profits in almost every sector of British industry. In the year to March 31st its trading profits rose by 9½ per cent, from £3,468,000 to £3,796,000, even though its total sales fell by £700,000 to £24½ million. At home there was a small increase in sales but sales to Canada and the United States fell by £900,000 to £1,480,000. Exports, on the other hand, to countries other than the United States and Canada, fell by only £40,000.

Heavier charges for depreciation, mortgage and loan interest and taxation have left net profits slightly lower at £1,249,000, against £1,260,000. But earnings still cover the maintained dividend of 23½ per cent twice. At home the group clearly felt the effect of the marked fall in demand for television receivers although this may have been partly offset by the rise in sales of transistor radios. But gramophone records are still Decca's principal business and last November the chairman, Sir Edward Lewis, said that in the first seven months of the year sales of 45 rpm records were slightly higher and there was "quite an upsurge in demand" for the group's long playing records. The record industry as a whole in this country sold 5 per cent more records in Decca's financial year—so that Decca may have added to its share of this highly competitive market. Better profits may also have been earned by the navigator and radar divisions. Since the results were published the 10s. ordinary shares have fallen slightly to 57s. 3d. and the 10s. "A" shares to 55s., to yield 4.1 and 4.3 per cent respectively.

Years to March 31	1960 (£'000s)	1961 (£'000s)

Tronoh

A COMBINATION of high earnings and political stability is a rarity in the commodity section of the Stock Exchange nowadays. But for Malayan tin shares, 1960 provided a double blessing: the twelve-years-old political "emergency" was officially ended and the three-years-old international restriction of tin production was lifted. Tronoh has gained directly from both these factors; as a producer Tronoh's revenue rose from £1,022,000 to £1,559,000 and as a company holding a portfolio of tin shares the value of its quoted investments advanced from £2½ million to £3 million in the year to December 31st.

Continued from page 287

Last year was undoubtedly a turning point. This year should be better and next year, failing an unforeseen slump in demand for tin, might be better still. A major factor in that prospect is that tin production is unlikely to rise very swiftly because many mines are becoming worked out. Therefore, only those companies owning mines with a considerable life ahead of them will really benefit. On this point, Mr J. H. Rich, the chairman of Tronoh, has made a full and very encouraging report. Tronoh's Kampar Section will be exhausted in about three years' time, and the current rate of tin production will taper off. But drilling has revealed that payable ground might be found at greater depths. Further development is also hinted at in another section of the group's mines. Prospecting on the western side of Malaya has proved moderately encouraging and in a joint venture with another group it is hoped to get permission to work a new area in Thailand. Tronoh has also joined a group investigating the reopening of a mine in Cornwall, and appears to have a small stake in the promising North Quebec copper discovery. After the recent one-for-one scrip issue, Tronoh's 5s. units at 30s. yield 8¾ per cent on last year's total dividend of 5s. 3d. a share on the old capital.

J. & F. Stone

LIKE other retailers of consumer durables, J. & F. Stone Lighting and Radio has suffered from the credit squeeze over the past eighteen months. Even so its profits have continued to grow and in the year to June 30th its trading profits rose by just over 10 per cent from £916,000 to £1,019,000. Two factors mentioned last November by the chairman, Mr D. G. Nairn, have probably helped to maintain the advance of profits in the past year: the growth in cash sales and the inflow of repayments and profits on earlier HP contracts. The latter item was probably still quite substantial, as the amounts owing under the agreements rose from £105,000 in mid-1958 to £1,024,000 in mid-1959 and £1,286,000 in mid-1960; but the current year could witness a drop in these receipts and shareholders will be interested to know what contribution they have made and will make to total income. Net profits are 9 per cent higher at £421,000 and cover the unchanged dividend of 35 per cent over 1.6 times.

The directors have also announced plans to form a property holding company, in which existing Stone shareholders will receive a free issue of shares. Last year the group had 191 branches, of which the freehold values amounted to £726,000 at cost. A revaluation of all properties made in 1956 showed a surplus of £816,000 over the then book value of £591,000, but this has never been written into the accounts. In the first instance the company will take over the freeholds and the directors hope by the time of the annual meeting in November to be able to indicate the size of the proposed issue. The possibilities opened up by the new development led to a rise of 2s. 4½d. to 28s. 4½d. on the 5s. Ordinary shares which now yield 6¼ per cent.

Norvic Shoe

INCREASED buying by affluent teenagers has been a major factor behind the present boom in the footwear industry. Among the shoe makers Norvic has made a big effort to capture this valuable market and its success has been marked by a second successive increase of 21 per cent in gross profits. In the year to June 30th its gross profits advanced from £529,000 to £639,000 and it is not surprising that profits rose even more sharply in the second half of the financial year as this includes the early spring and summer.

Norvic has apparently been able to withstand the pressure on margins resulting from the wage increase in the industry in March last year and the full report will show whether its increase in sales in 1960-61 matched the rise of 20 per cent in 1959-60. Although net equity earnings have risen the ordinary dividend has been left unchanged at 15 per cent, presumably in deference to the Chancellor's request for dividend restraint. This payment is now covered more than twice and the 5s. shares at 13s. 9d. yield 5½ per cent. This is not an unreasonable return from a company which over the next few years is likely to serve a growing market as the number of teenagers rises.

Neepsend Steel

RESULTS against the current trend have also come from Neepsend Steel and Tool which has again done well and, indeed, rather better than had been expected. In an interim statement in February the directors simply indicated that results for the full year would be comparable with those for 1959-60 but in the event trading profits rose by 21½ per cent from £1,211,000 to £1,473,000. This suggests that most of the improvement came in the second half of the financial year ending on March 31st. For the first time, profits are included from G. H. Blackbourn, the mill furnishers acquired in February, 1960, but steel and steel products, including stainless steel, still remain the principal activities of the group. It may be that the economies effected by the conversion from coal to oil fired boilers have continued to benefit the group, and that higher sales to other industries have offset the contraction in demand from the motor industry.

Net profits have risen by nearly 9 per cent from £704,000 to £765,000, so that the cover on the unchanged dividend of 50 per cent has risen from 1.8 times to nearly twice. The under-utilisation of capacity in the steel and motor industries, however, is reflected in the yield of nearly 6 per cent offered by the 5s. shares at 43s. each.

FIRST DEALINGS:	Oct. 2	Oct. 16	Oct. 30
LAST DEALINGS:	Oct. 13	Oct. 27	Nov. 10
ACCOUNT DAY:	Oct. 24	Nov. 7	Nov. 21

As the account drew to a close last Friday the unfavourable prospects for industry revealed by the FBI inquiry assisted the downward movement of equity prices that had persisted throughout the week, and the widening of the trade gap in September was a further dampening influence. On Monday the *Financial Times* index at 284.7 struck its lowest level since the Conservative election victory in early October, 1959. But on Tuesday there was a limited amount of investment buying and bear covering, sufficient in the absence of many sellers to push prices slightly higher; this modest rally continued on Wednesday. It was not enough, however, to offset the earlier falls and over the week *The Economist* indicator lost 4 points to 342.7.

In contrast, the gilt-edged market continued to attract buyers but this week there was less interest in short-dated stocks and more switching into longer-dated stocks. But there was also a good deal of buying throughout the range of stocks and the short-dated issues still made further gains with Treasury 5½ per cent 1962 up 3/32 to 100 3/16. Among the medium-dated stocks 5 per cent Conversion 1971 gained 1⅛ to 91 7/16. Long-dated and undated issues also rose sharply; 3½ per cent Funding 1999-2004 gained ½ to 57½ and 2½ per cent Consols 7/16 to 39½.

Bank and insurance shares both lost ground as the account closed last weekend but insurances became firmer by mid-week. General Accident gained 2s. 3d. to 75s. and among the banks Barclays gained 6d. to 78s. 3d., while Lloyds fell by the same amount to 62s. The expectation that ICI workers' shares would come on the market caused falls before the weekend but over the week the shares were unchanged at 58s. 1½d. Stores were not in demand and were generally lower but J. and F. Stone gained 3s. 3d. to 28s. 9d. following the news of higher profits and a property scrip issue.

Electrical shares generally held up over the week though AEI lost 3d. to a new low of 29s. Shipbuilding shares were depressed by rumours that the Cunard Q.3 project would be dropped and John Brown lost 1s. 7½d. to 34s. but Cunard gained 1s. 6d. to 17s. This gain was wiped out on Thursday, however. Motor shares closed lower with Leyland showing a sharper drop of 3s. 7½d. to 77s. 9d. Unilever again ran against the trend, the coming Wall Street quotation adding to buying pressure which raised them by 3s. to 150s. Initially depressed by the breakdown of the IPC-Iraq talks oil shares later made good some of their losses as investment buyers appeared but Shell Transport fell by 2s. over the week to 115s. 6d. Several Kaffirs made sharp gains as buyers appeared in a market short of stock: Union Corporation gained 4s. 3d. to 50s. 9d. and F. S. Geduld 8s. 1½d. to 94s. 4½d.

EXCHEQUER RETURNS

For the week ended October 14, 1961, there was an "above-line" deficit (after allowing for sinking funds) of £6,513,000 compared with a surplus of £7,900,000 in the previous week and a deficit of £15,599,000 in the corresponding period of last year. There was a net expenditure "below-line" of £16,505,000 leaving a total cumulative deficit to date of £667,260,000 compared with £669,134,000 in 1960-61.

Money and Exchanges

THE MONEY MARKET

SINCE Bank rate was cut to 6½ per cent, competition for Treasury bills has become noticeably keener, on the expectation of a further cut in the rate in the next few weeks. The authorities, to prevent the bill rate falling too quickly in the face of this pressure, forced the discount market to borrow from the Bank of England on each of the three days preceding last week's bill tender. But the syndicate of discount houses raised its bid by 10d. to £98 10s. at the tender and the average rate of discount fell sharply by nearly ⅛ per cent to fractionally above 6 per cent. The Bank was quick to retaliate, and on the same day six or seven houses had to borrow a large amount from the Bank at Bank rate. Seven or eight houses were again in the Bank this Tuesday. Total application for the £250 million bills on offer rose by £21 million to £419 million and the market received 59 per cent of its application as against 57 per cent a week earlier. In the weeks ahead the market syndicate will need all the guile it can muster if it is both to satisfy the Bank and obtain satisfactory bill quotas.

Credit has been very tight throughout the week in Lombard Street. The rate for overnight loans has remained at 5⅞ per cent.

APPOINTMENTS

ORGANISATION AND METHODS ANALYST

We are looking for a man, preferably educated to graduate level, who has had O & M training, and experience in the fields of accountancy machinery or office reproduction equipment. A knowledge of the application of office systems to computers is useful.

The Analyst will be expected to carry out investigations in General Offices and Warehouses of the Mail Order Division and also in Chain Stores, so he should be prepared to travel throughout Britain from time to time.

His age range will be around 27-32 years and he should be earning £1,000-£1,200 in his present employment. His commencing salary with us will be up to £1,500, and this appointment should lead to further promotions within the Organisation during the next five years, with appropriate salary increases.

Letters of application, giving brief details, should be sent to:

The Management Appointments Officer
(Ref. O&MA/236/TE),
Littlewoods Mail Order Stores Ltd.,
Spinney House,
Church Street,
Liverpool, X.

ASSISTANT EDITOR for investment journal for research and writing. Permanent.—Details, in confidence, to Box 1548.

UNIVERSITY OF KHARTOUM

Applications are invited for the Chair, Readership or Senior Lectureship in Agricultural Economics.

Salary Scale:
Professor — £5,2,760 per annum.
Reader — £5,2,175 per annum.
Senior Lecturer — £5,2,052-£5,2,127 p.a.

Generous allowances payable. Passage for appointee and family on appointment, termination and annual leave. There is a superannuation scheme, and arrangements can be made to maintain F.S.S.U. policies. Direct appointment on contract normally for five years with possibility of renewal; (secondment welcomed if possible). Unfurnished accommodation provided at rent (excluding rates) up to 7½ per cent. of salary.

Applications (10 copies) detailing qualifications and experience and naming three referees by November 20, 1961, to Registrar, University of Khartoum, c/o Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1.

EXPORT

OZALID, the leading Company in the photocopying field with established overseas markets, wishes to expand its Export Sales Force and young men of proved selling ability with some experience in the export field and a knowledge of several languages are invited to apply for a restricted number of vacancies which will become available in the near future.

Good salary and incentive offered. Contributory Pension Scheme. All expenses paid. Applicants must be willing to travel extensively. Apply in writing, in confidence, to:

The Administrative Controller of Sales,
OZALID COMPANY LIMITED.
Langston Road,
Loughton, Essex.

M&B

MARKET RESEARCH ASSISTANT

MAY & BAKER LTD., Dagenham, Essex, invite applications from young men, aged 20-25, for a position in the Product Development Group, who have Graduated with an Honours degree in Economics preferably with some commercial experience in market research or a similar organisation.

The successful candidate will be required to carry out surveys within the Company's general fields of interest. Salary according to age, qualifications and experience. There is a Pension Fund and Life Assurance Scheme in operation. Five-day week, sports and social club, canteen facilities. Apply initially in writing to the Personnel Officer, giving full particulars of qualifications and experience, quoting Reference No. 63/61.

CITY OF BIRMINGHAM EDUCATION COMMITTEE

CITY OF BIRMINGHAM COLLEGE OF COMMERCE

Applications are invited for the following post, effective from January 1, 1962, or earlier if possible:

ASSISTANT, GRADE "B," IN ECONOMICS AND BUSINESS ADMINISTRATION

Candidates should hold a good Honours Degree in Economics or Commerce and should have had business and teaching experience. Research experience would be an additional advantage.

SALARY—in accordance with the Burnham Scale for Teachers in Establishments for Further Education:

Assistant, Grade "B," £700 x £27 10s. to £1,150 per annum, plus graduate allowance of £90 and good Honours degree allowance of £75, where applicable.

In fixing the point of entry on the scale, certain increments (up to a maximum of twelve) may be allowed for approved professional experience after the age of 21.

APPLICATIONS: Forms of application and details of the post may be obtained by sending a stamped addressed foolscap envelope, as soon as possible, to the Principal, City of Birmingham College of Commerce, Broad Street, Birmingham, 1.

E. L. RUSSELL,
Chief Education Officer.

GRANGE CHEMICALS LIMITED
a subsidiary of
BRITISH HYDROCARBON CHEMICALS LIMITED
(Manufacturers of Petroleum Chemicals)
requires for its London Office

A TECHNICAL SALES ASSISTANT

Applicants should be approximately 25-30 with a science degree and preferably some experience in the paint, plastics or detergents industries as duties will include sales of raw materials in these fields in the U.K.

This post carries an attractive starting salary, is pensionable (non-contributory), and has prospects of increasing responsibility.

Apply, quoting Serial No. SA/74, in strict confidence, with full details, to: Personnel Department, British Hydrocarbon Chemicals Limited, Devonshire House, Mayfair Place, London, W.1.

APPLICATIONS are invited for position as Economics Secretary to a National Employers' Federation in Westminster. Duties cover the economic, research and accident prevention aspects of an important industry. Age 25-30. Applicants must be graduates in economics, preferably with statistics, but previous experience of trade association work essential.—Write, giving full details of age, education, qualifications, experience and salary required, to Box 1549.

For other appointments see page 294

CO-OPERATIVE AND MARKETING OFFICER required by the Government of NORTHERN RHODESIA for one tour of 36 months in first instance with prospect of permanency.

Commencing salary £1,110 a year rising to £1,848 a year. Outfit allowance £30. Liberal leave on full salary. Free passages.

Candidates, of good education, must have a sound general knowledge of economic and commercial principles, business administration, commercial book-keeping and accountancy. Experience in the co-operative trade, agricultural or retail stores, or an accountancy, banking or book-keeping qualification an advantage.

Officer will be responsible after training for promoting and supervising all co-operative and agricultural marketing activities in a large district including both rural and urban areas, and for lecturing to Europeans and Africans on co-operative societies.

Apply to Crown Agents, 4 Millbank, London, S.W.1, for application form and further particulars, stating age, name, brief details of qualifications and experience and quoting reference M3B/53655/LN.

UNIVERSITY OF AUCKLAND
NEW ZEALAND.

SENIOR LECTURESHIP IN TOWN PLANNING.

Applications are invited for the above-mentioned post. The Senior Lecturer will be required to lecture and conduct seminars in Town Planning Theory and Techniques and to supervise Drawing Office and Field Work exercises. The appointment will carry certain rights of private practice provided such practice does not in any way interfere with the Senior Lecturer's work at the University. Preference will be given to a graduate in Town Planning or in an allied field and to those who have direct experience in the professional planning field.

The salary scale for the position is £1,750 per annum rising to £2,000 per annum by annual increments, two of £100 and one of £50. Commencing salary within this scale will be determined according to qualifications and experience.

The person appointed will be expected to take up his duties on February 1, 1962, or upon such other date as may be arranged with the University Council.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in New Zealand and London, on November 27, 1961.

The Wellcome Foundation Limited

Burroughs Wellcome & Co. invite applications for the post of

PERSONNEL OFFICER

at The Wellcome Chemical Works, Dartford, Kent.

Applicants, who should be men, should have a sound knowledge of personnel management and some experience as a Personnel Officer. The possession of a University degree or a Diploma in Personnel Management would be an advantage. The successful applicant will be responsible to the Personnel Manager for employment and welfare duties in connection with all weekly and hourly paid employees in the factory (1,500). He would also be responsible for the control of personnel records and other general duties connected with the personnel function which is very well established. The post is interesting and progressive. Salary will be in accordance with experience and qualifications.

Written applications should be sent to the Personnel Manager, Wellcome Chemical Works, Dartford, Kent.

THE EDINBURGH SCHOOL OF AGRICULTURE

Applications are invited for the post of ASSISTANT ADVISORY OFFICER, FARM BUILDINGS.

Salary Grade IV, £718-£993.

The appointment is eligible for superannuation.

Candidates should hold a Degree in Agricultural Economics or Agriculture or Economics. Post-graduate study or especial interest in Work Study is desirable. The post has been created to further the study of labour and power organization in farming. Particulars and application forms may be obtained from The Secretary, Edinburgh School of Agriculture, West Mains Road, Edinburgh, 9, with whom applications should be lodged within two weeks of this advertisement.

J. A. JOHNSTON,
Secretary.

Successful applicant required to become familiar with Insurance Exchange Control and Company Laws of Overseas Territories particularly where Company has Subsidiaries or Branches. Non-contributory pension and life assurance schemes.—Write, giving full details, to Box 1550.

HERTFORDSHIRE COUNTY COUNCIL. ST. ALBANS COLLEGE OF FURTHER EDUCATION AND HERTFORDSHIRE COLLEGE OF BUILDING. Assistant Lecturer, Grade B (Graduate) to teach Pure Mathematics to Advanced Level and Mathematics to Ordinary Level, mainly to full-time students. Salary Scale, at present within the range £820 to £1,405, according to qualifications and experience.

Application Forms can be obtained by sending a stamped addressed envelope to the Principal, 29 Hatfield Road, St. Albans, to whom they should be returned when completed.

ACCOUNTANT FOR THE FAR EAST

JARDINE, MATHESON & CO. LTD.

There is a vacancy in the Jardine, Matheson Group of Companies for a young qualified Chartered or Certified Accountant or Chartered Secretary with some experience since qualification. There are good prospects of making a pleasant and interesting career in the Group which has a variety of interests through the medium of branches and subsidiary and associated companies in Hong Kong, Singapore and elsewhere in the Far East. Terms of service include regular home leave, including paid passages; kit allowance; medical benefits; provident fund and pension scheme. Furnished accommodation provided at nominal rental. An unmarried man is preferred for the first tour of service. Applicants available for interview in London October/November should apply to the Secretary, Matheson & Co. Limited, 3 Lombard Street, London, E.C.3.

IF YOU ARE A CHARTERED ACCOUNTANT

we can offer a challenging job in our computer team. An IBM 650 computer has just been replaced by one of the first IBM 1401 computers in the U.K. and we are rapidly developing fully integrated schemes of commercial data processing. To meet this expansion we need a man, under 27 years of age, to further our studies on customer and product profitability, costing, sales analysis and statistics.

You do not need to have previous computer experience.

Excellent initial salaries. Profit-Sharing Scheme. Pension Fund.

Housing assistance, reasonable refund of removal expenses and a temporary lodging allowance, will be paid to a married man to help him settle in the Slough area.

Write to the

Personnel Officer (Commercial),
I.C.I. Ltd., Paints Division,
Wexham Road, Slough, Bucks.

EUROPEAN REPRESENTATIVE

Prominent British Group of engineering companies engaged in manufacture of extensive range of valves and flow control equipment wishes to engage a full-time representative to promote its business on the continent of Europe.

Candidates for this important appointment should have a recognised engineering degree or equivalent qualifications and also practical experience of engineering methods and commercial practice in continental countries. Fluency in English, French and German essential.

Emoluments will be commensurate with qualifications and the importance of the assignment.

Applications, which will be treated in strictest confidence should list personal details, qualifications, experience, present remuneration or level likely to be desired and should be addressed to the Secretary, Glenfield & Kennedy Holdings Ltd., Kilmarnock, Scotland.

MARKETING EXECUTIVE

A leading London Advertising Agency wishes to appoint a Marketing Executive aged 25-35, with a thorough knowledge of merchandising and marketing techniques in the consumer goods field.

Applicants should be accustomed to making recommendations on sales promotion, product presentation, etc., and, preferably, have had experience of working with specialist market research staff.

Please write, in confidence, stating age, qualifications, full details of experience, and salary required, to the Marketing Director, Osborne-Peacock Co. Ltd., 26A Albemarle Street, London, W.1.

THE REPUBLIC OF THE SUDAN

The Ministry of Education invites applications for Senior Lecturers in Accountancy in the School of Commerce, Khartoum Technical Institute which adopts the syllabuses of the Association of Certified and Corporate Accountants for both the Intermediate and the Final.

(i) Candidates for these posts must (a) possess an appropriate University Degree; (b) or must be Chartered or Certified accountants; and (c) must have had considerable experience either in

(continued in next column)

business or government departments.

(ii) Appointment will be on contract (with bonus) for a period up to five years. Salary scale ranges from £S.2100 to £S.2225 (£S.1 = £1 0s. 6d.). Starting salary in accordance with age, qualifications and experience. In addition to salary quoted a cost of living allowance, which is reviewed every two months, is payable at present between £S.168 and £S.180 per annum. An initial outfit allowance of £S.50 is payable on appointment. Leave accrues at the rate of seven days per month.

A special re-settlement gratuity to British Lecturers will also be paid on satisfactory completion of the contract.

Applications, in writing, stating full details of age, qualifications and experience, should be made to the Appointments Section, Sudan Embassy, Cleveland Row, St. James's, London, S.W.1.

Closing date: November 15, 1961.

NORTH EAST DEVELOPMENT COUNCIL

APPOINTMENT OF DIRECTOR

This post, previously advertised, has not been filled. Further applications will now be entertained.

The Director will be responsible for the control and administration of the Council whose purpose is to assist in promoting the sound economic development of the Region.

The Director will be required, very largely by his personal endeavours, to "sell" the Region as an area of natural opportunity for the development of industrial and commercial activity.

The qualities required are initiative, imagination and drive; the calibre and personality to negotiate at high level, and administrative ability.

Wide general industrial experience is essential; a knowledge of public relations and economics will be useful.

Attractive salary, by arrangement.

Final applications will close November 1, 1961.

Further details of appointment will be provided on request.

Apply to:
The Secretary, North East Development Council, 9 Eldon Square, Newcastle upon Tyne 1.

FORD

require

FINANCIAL CONTROL STAFF

to work on future model programmes at their

AVELEY ENGINEERING WORKS AND AT DAGENHAM

Young men between the ages 21-35 years who are studying for or who have obtained ACWA will be considered for positions of

COST ANALYST
PROCEDURES ANALYST
PROJECT ANALYST

Successful candidates will join existing teams working on the preparation of cost targets and budgets and cost control for future cars, vans and trucks and the appointments offer considerable variety and scope.

Salary will be paid according to age, qualifications and experience.

Applications, giving full details of training, experience and salary requirements, should be addressed to:

Mr V. W. Williams
Training and Recruitment Office 012A
Ford Motor Company Limited
Dagenham Essex
quoting reference VFC/1

(For other appointments see page 293)

ECONOMIST

Harris Lebus Ltd. invite applications for the post of ECONOMIST in the Marketing Division. The successful candidate will be responsible for the Company's sales forecasting and will undertake economic and statistical studies on a wide variety of marketing problems. He will be a graduate under 30 with good qualifications in economics or statistics. Previous research experience would be an added, but not decisive, advantage.

This is an unusual opportunity for a young economist to assume very real responsibility and make an important contribution to the Company's marketing policy.

The salary to be paid will be dependent on the qualifications and experience of the successful applicant, but will in any case be attractive.

Applications, which will be treated in strict confidence, should give full details of qualifications, experience and present salary, and should be addressed to

The Marketing Manager
HARRIS LEBUS LTD.
Tinsbury Works, Tottenham, N.17.

GROWTH OF A NATION: In a series . . . No. 7

Japan's Export of Transistor "RAJIO" is Remarkable!

Japan considers the transistor "Rajio" (Radio) as one of the genuinely Japanese products it has placed upon the world market. In 1960, some 16 million sets, valued at little over $144 million were exported.

We are proud of the transistor progress and many of the electronics products exported -- ranging from acousticon to television station equipment. The Nippon Kangyo Bank has earnestly helped to promote foreign trade for these products; for "Kangyo" means "industrial and commercial promotion." We cordially welcome you to use our facilities freely, and to the best of your advantage!

Canadian Methods

We know the difference

Things are done differently in Canada. So many factors, such as the geography and economy, have a great bearing on the way things are done in this rich, booming country.

Knowing Canada and the Canadian method is our business. We've been an integral part of Canada for over 100 years. With 570 branches across the country, we can supply you with vital, up-to-the-minute information about Canadian trends, habits and conditions . . . information that could save you costly mistakes.

FREE BOOKLET

"The Bank That Knows Canadian Business" is a booklet describing the complete facilities of "The Bank" in Canada. It also contains facts and growth predictions pertaining to Canada's future. Invest in The West Indies

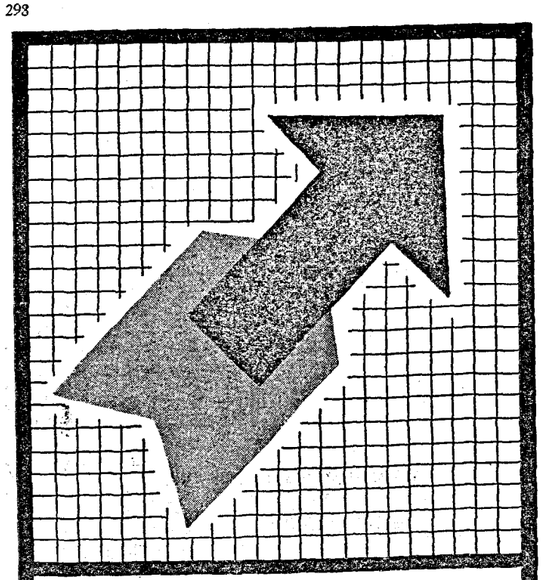
How Federation benefits new investors

Economic and foreign trade policies are co-ordinated, the aim being to establish a fully diversified economy. Transport, communications and power facilities are being expanded—new harbours and roads, larger airports, all these are creating new opportunities for new secondary industries.

THE RESOURCES ARE THERE:
Oil, bauxite, water power and many minerals. Fruit, cocoa, cotton, coffee, sugar, spices, crops of all kinds. And 3½ million people.



THE SKILLS ARE THERE:
Considerable progress in education has been made in recent years and much more is planned. Research programmes of The Agriculture Faculty of the University College of The West Indies (formerly the Imperial College of Tropical Agriculture) and its other Faculties benefit the whole region.

THE MARKETS ARE THERE:
Both Americas are prosperous near-neighbours. The tourist possibilities of The West Indies are far from fully realised.

Customs Duty and income tax concessions are available

Investment Opportunities in Japan!

In 1959 Japan attained the highest economic expansion of all the industrial countries of the world. Its gross national products that year increased by 16 per cent over the previous year and has seen a yearly increase ever since. This upward trend has increasingly induced overseas investments in Japanese securities.

Daiwa Securities, as one of the four largest securities companies in Japan ... capitalized at £8 million sterling and having 4,000 employees ... is engaged in a wide range of business, acting as broker, dealer and underwriter of securities and distributor of investment trusts. The "pioneering spirit" which has been the motivating power behind its 60 years of expansion is still very predominant today.

Make your money work for you in Japan's booming industries by investing through expert and experienced hands. For literature on Japanese stocks, bonds, debentures, investment trusts, etc., write

COAL helps BULMER'S Woodpecker Stay Top of the Tree

'BITTER-SWEET' apples cared for in the sun-tanned orchards of the West Country . . . that's how cider, one of the traditional drinks of England, is born. From the succulent juice of these apples Bulmer's blending experts, skilled in the art of cider making, produce the sparkling, refreshing taste of their famous Woodpecker cider. Today this popular cider is enjoyed by the young at heart all over the world.

The men who control the policy of this company choose *coal* to provide the steam power at the world's largest cider works in Hereford. They know that coal, fired automatically and burned smokelessly, gives maximum efficiency at the most economical cost; that supplies of this home-produced fuel are assured for generations to come.

If your voice is a deciding one in the question of fuel, remember Bulmer's. You could well follow their example and see how coal satisfies a thirst for progress.

Here are some key facts and figures about the consumption of coal at Bulmer's Hereford Plant:

Number of boilers	3 shell type
Method of firing	chain grate stokers
Steam pressure	up to 160 p.s.i.
Steam temperature	341°F. and 370°F.
Max. continuous rating	28,000 lbs of steam per hr.
Annual fuel consumption	5,300 tons of coal

SOLID FUEL—
more heat at less cost—and it's British

***PROGRESSIVE INDUSTRY IS GOING FORWARD ON* COAL**

THE BOMB BLOCKS

Camps and Contests

Mr Khrushchev's latest big blast has raised the level of anger, as well as that of other kinds of fall-out, throughout the world. But if his chief motive was a wish to demonstrate his nuclear resolution to his own communist opposition, while he goes on negotiating with the West, natural indignation should not make the Nato powers spurn the chance of a settlement with him (p. 316).

The evidence of continuing dissensions within the once-monolithic communist block, provided by events at the Soviet party congress, reinforces this point (p. 319). Russia's not-so-little, not-so-local difficulties with Albania are discussed on pp. 326-8.

Mr Kennedy's support for attempts to use atomic bomb energy peacefully, and his reluctance to resume bomb-tests in the atmosphere are to be applauded (p. 336); his compatriot's readiness to throw needles in the eyes of astronomy is not (p. 316).

Meanwhile the Berlin timebomb ticks louder; President de Gaulle and Dr Adenauer are not disposed to try to defuse it (p. 322).

Shades of Democracy

After Dr Verwoerd's victory in the South African elections, the one Progressive MP returned becomes the sole representative of 56,000 liberal whites and 10 million non-whites (p. 358). It would be magnanimous of the South African government to permit Chief Luthuli to receive his Nobel Prize in person (p. 324). The Commonwealth Relations Office must show courage if Swaziland is to be a shop-window for democracy and not for apartheid (p. 354).

North of the Limpopo, Sir Edgar Whitehead has promised to "fight like a tiger" for a mandate at the next general election to end racial discrimination in public places in Southern Rhodesia (p. 324).

In spite of the wish recently expressed at the polls by a majority of voters, to say good-bye to his long reign, Dr Adenauer is set for another period as west German chancellor (p. 351).

Tomorrow's Greek elections will serve to test communist strength against the westward-looking government and the democratic opposition (p. 357).

The New Jersey Republicans have a good chance to end eight years of Democratic rule (p. 342).

Imperilled Associations

President Nasser has survived the breach of the union with Syria; but he depends heavily on army loyalty as he rough-rides Egypt towards socialism (p. 320).

Belgium is having one of its periodic outbursts of ill-feeling between Flemings and Walloons (p. 352).

Cornflakes and bacon may make or mar the common market (p. 322).

The United Nations' and the Congo's futures are still obscure, and for the same reasons (p. 322).

State of the United States

New Spy Master. In appointing Mr John McCone to reorganise and rein in America's MI6, the President has aroused liberal doubts (p. 335).

Disorderly House: Wall Street has a great deal at stake in the efforts of some members of the American Stock Exchange to put its house in order before the government does so (p. 338).

HOME

New Hopes

Can Britain's planning machinery be fashioned on the French model? A reconnaissance in Paris points to the problems, the possibilities—and the potential muddles (p. 313).

Britain's large repayment to the International Monetary Fund ought to—but may not—lessen the pressure to make dangerous cuts in Bank rate (p. 364).

National wages in the Commons (p. 323).

New Bills for Parliament (p. 329).

The National Association of Schoolmasters has won its coveted place on the Burnham committee—in exchange for an agreement not to campaign there for sex discrimination (p. 328).

Old Fears

War: the Government is likely to reject the reintroduction of compulsory military service for electoral reasons: but the idea deserves serious consideration if military contingencies change markedly (p. 317).

Sickness: the new vaccines against polio can effectively combat the spread of new epidemics (p. 323).

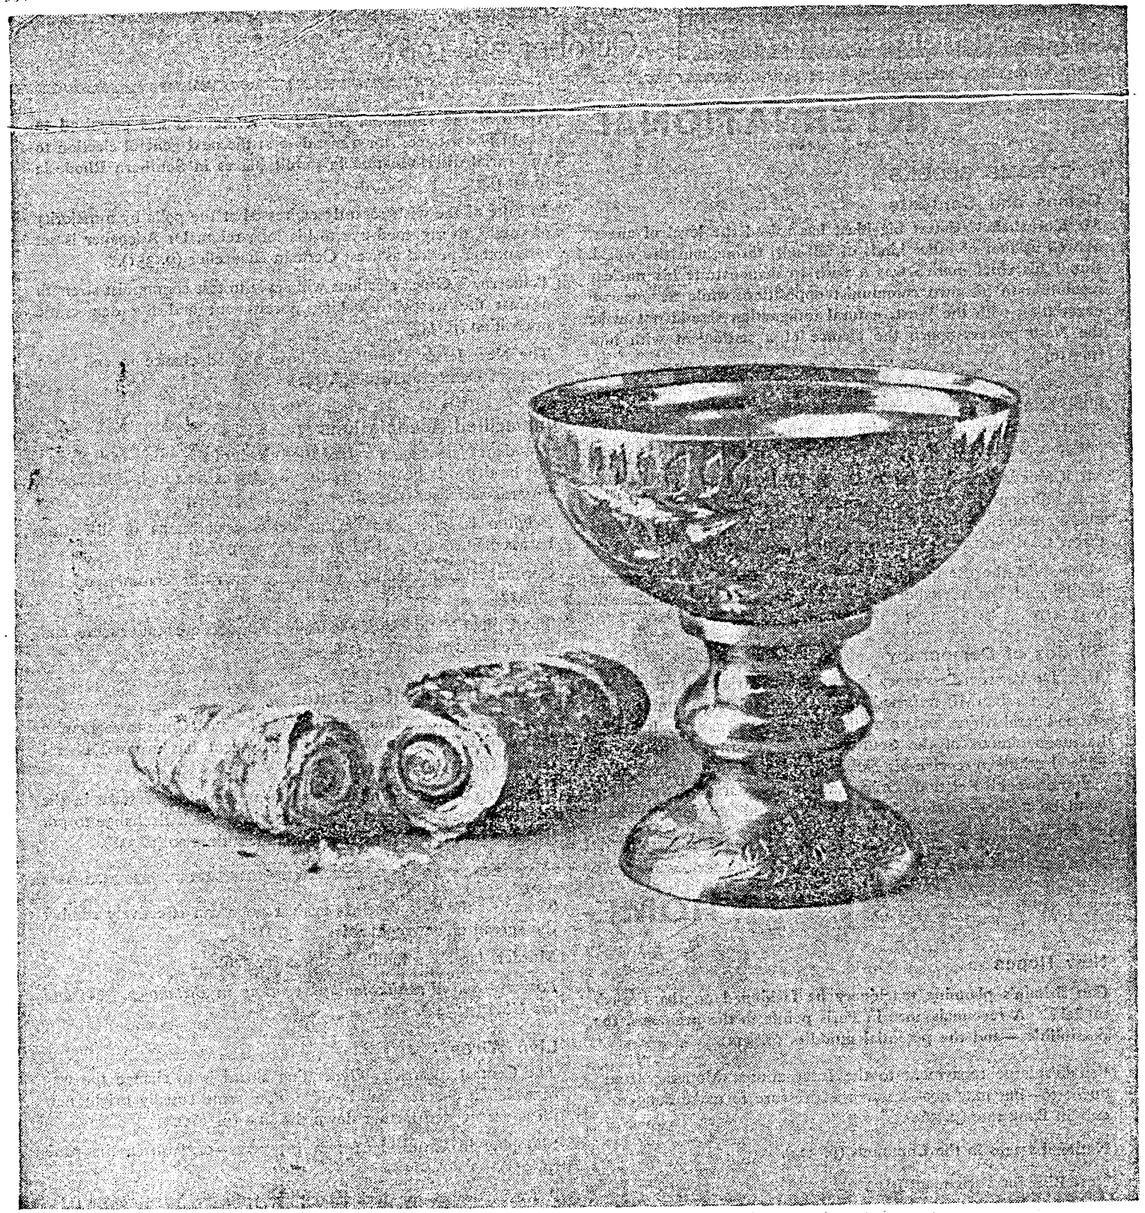
Murder: largely a family business (p. 326).

Poverty—and Wealth: family spending in Britain (p. 328) *and the USA* (p. 342).

Live Wires

The Central Electricity Generating Board is to change the way in which it charges area boards: now some equally bright new ideas are needed farther down the line (p. 363).

Shopping in Cambridge: new prospects—or flash in the pan? (p. 345).



A fresh advance for dock labour (p. 326).

Dead Ends

If Lancashire does not change some of its old ways it can hardly make much of the changed circumstances in which it finds itself (p. 361).

The chemists' threat to withdraw from the health service has been treated like the teachers' strike threat—with a ministerial ultimatum (p. 323).

Detailed contents on page 313

DEPARTURE: *Salt Sticks in Colombia, Salt Water in Ceylon— Both can taste good because of AMF equipment!*

It is only a few years since the people of Colombia and other countries of Latin America began to depart from their centuries-old custom of eating only hand-baked bread and began enjoying bread, rolls and other bakery goods made by machinery. This change was brought about by AMF. Today, AMF makes bakery equipment on four continents, sells it in over 35 countries. And in any country where there's a fresh water shortage, the desert can bloom, and salt or brackish water can be made potable and used for irrigation by utilizing low-cost, efficient AMF water desalinating machines. Baking and water purification are only two of the vast number of AMF products. In many fields, in many lands, in many product lines, new departures take place every day — thanks to AMF International.

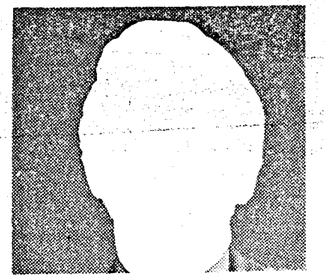
Who's Who in The Observer's new financial team



SAMUEL BRITTAN—ECONOMIC EDITOR

Formerly the economic correspondent, Financial Times. Each week writes in The Nation's Business about economic trends and their effects on politics and people. Mission: explaining crises. For: the Common Market, the wage pause. Against: playing 'cat and mouse' with the economy.

RUSSELL TAYLOR—INVESTMENT CORRESPONDENT

Formerly investment adviser to a leading merchant bank. Attitude to financial journalism: "*Observe the turtle, gentlemen, he only makes progress when his neck is out*". Function: to give the small investor a clear lead, to protect his capital and perhaps make him some money; and to relate the general business comment to practical investment opportunities.

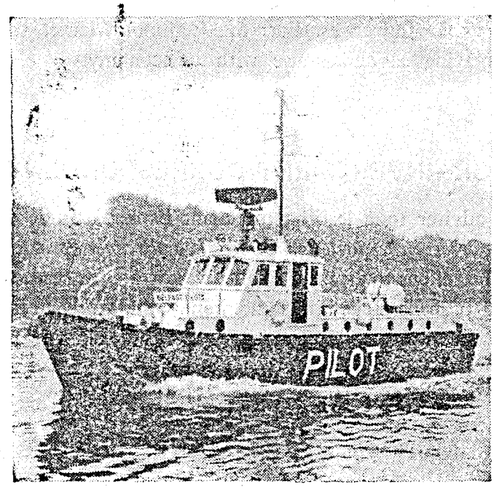
MAMMON—MYSTERY MAN

Remarkably well-informed reporter whose beat is the City and most other places where people make money (or lose it). He names names, reveals the people behind trends, take-overs, mergers, set-backs. Aim: to take the lid off without necessarily taking the hide off.

Two frequent contributors

Alan Day Well-known international economist. Special interests: money and traffic—how to keep cars moving and where to park them.

William Nursaw Formerly Trustee Manager of Atlas Assurance. High-level family financial adviser. Function: to write about the art of investment in a way that is interesting to the expert and comprehensible to the layman.



For the highest interest yield, read

There's a good Ant....

The ant finds kingdom in a foot of ground.
John Brown's Body, Book 4.

Admirable ant. Not everyone's idea of a lovable pet, of course. Nevertheless, that "X" Certificate exterior belies many sterling qualities dear to the hearts of industrialists. The ant has guts; the ant has a justifiably majestic confidence in his own toughness. Above all, the ant has a keen sense of order, economy and industry. He works like mad as though he loves it – and uses space as if space did not exist. These are the qualities of "Mechanised Muscle" – the ants of modern industry – which save millions of pounds annually in space, time and effort. Is *your* company utilising existing storage space to fullest advantage? Let us check for you, free of charge or commitment.

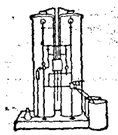
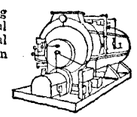
INTERNATIONAL

offers industry a bigger and broader range of quality products



As leading engineers and architects know, Crane has been the outstanding leader in the valve and industrial piping industry for a great many years. Crane's reputation for quality is established throughout the industry. Crane...today...offers a greatly expanded line of products for industrial, commercial and residential use. Every Crane product is checked for quality at every step of its production. Crane maintains the industry's most complete facilities for engineering, manufacturing and testing its products.



Industrial Products
Valves made of bronze, iron, cast steel and forged steel. Cylinder operators, flanges and welding fittings. Heat exchangers and feed water systems.

Systems & Controls
Fuel and hydraulic pumps, automatic breaking systems, actuators, aircraft, missile and electronic components.

Engineered Products
Special valves, recorders, automatic controls, water treatment equipment, separators and purifiers, exhaust heads, deaerating and non-deaerating heaters, fabricated piping, process equipment and pumps.

Plumbing, Heating & Air Conditioning
Baths, lavatory fixtures, plumbing brass accessories, plumbing fixtures for hospitals and institutions. Industrial and residential heating units, steel and cast iron boilers, radiators. Residential and commercial air conditioners and chillers. Combination refrigerator-range-sink units.

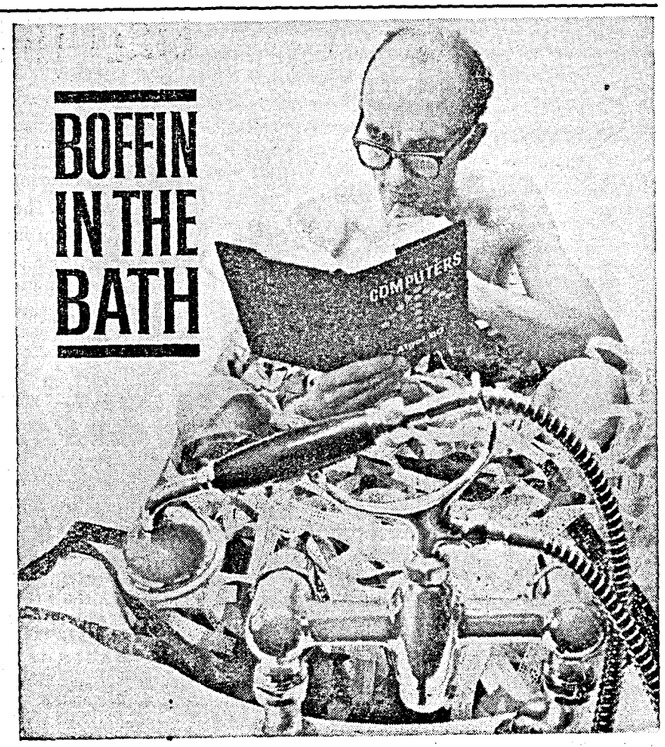
International Headquarters: 300 Park Avenue, New York 22, New York, U. S. A.



WELL, why not? Everyone takes a bath occasionally, even computer experts! When you live, eat and sleep computers as we do at Elliotts, a bath can sometimes be very relaxing.

Now please don't think that we rush off and plunge into a bath at the drop of a formula. This just isn't true. We take our work very seriously and because of this, our computers can deal with almost any problem under the sun.

All sorts of people find computing necessary. For instance, National-Elliott 803 computers are being used, and relied on, by hundreds of people, in forty-six installations, in fourteen different countries. That may not be a record – but it's something to be proud of. We save these people time, money and trouble – and they're very grateful. Here's proof. Last year we sold more computers than ever before. *This is success.* And this success is entirely due to the know-how gained in years of computer study. That's why we never let up, not even in the bath!

Now maybe you're interested in computers, maybe you're not. But the faster we progress, the more demand there is for automation, and to many, computers and automation are inseparable. We predict that in ten years time, over 10,000 companies or organisations in this country alone will depend on computers to handle their problems. Sweeping statement? No. It's already started to happen. The faster it happens, the faster we work. Speed is the very essence, both of our minds and our computers – particularly the 503.

So come down to Elliotts and see for yourself what our computers can do. We know you'll be surprised – and not just because you may find us in the bath!

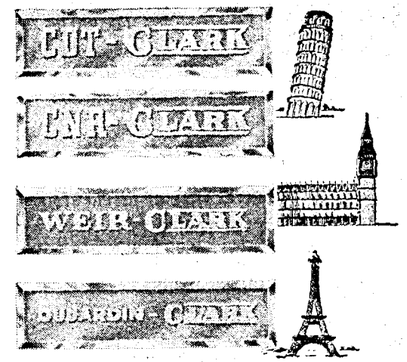
Clark Centrifugal and Motor-Driven Reciprocating Compressors to be built in Japan

Japanese Government Validates Agreement between Mitsubishi Zosen and Clark Division of Dresser A.G.

New York – Clark's overseas network of licensed manufacturers has been expanded by the addition of Mitsubishi Zosen, Tokyo, it was announced by R. R. McCartney, vice president of overseas operations for Clark Bros., Co., Olean, New York, one of the Dresser Industries. The licensing arrangement was concluded by Dresser A.G., Clark's overseas licensing representative.

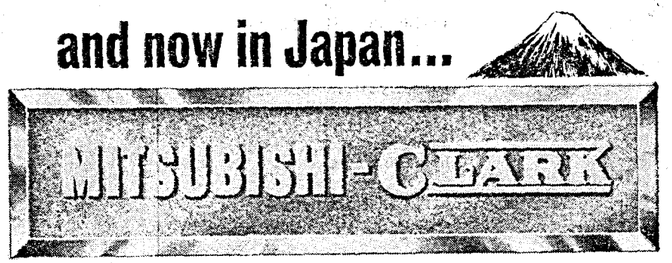
Mitsubishi Zosen is one of Japan's largest manufacturers of engineered equipment. Sales of Clark compressors built in Japan will be handled through Nippon Clark, a Japanese trading company to be jointly owned by Dresser A.G. and Mitsubishi.

The network of companies outside the U.S.A. licensed by Dresser A.G. to manufacture various products in the Clark line of heavy-duty compressors, engines and gas turbines now numbers six, with the addition of Mitsubishi. Five licensees are located in Europe.



In conformity with the world-wide availability and service of Clark products, the compressors to be manufactured by Mitsubishi Zosen will have parts that are fully interchangeable with those of Clark compressors manufactured in the United States and under license in Great Britain, France and Italy. The units manufactured in Japan will bear a Mitsubishi-Clark nameplate.

Mitsubishi Zosen, a long established engineering, shipbuilding and manufacturing organization known for the precision and quality of its products, has global distribution of such units as land and marine prime movers, machine tools, chemical process equipment as well as iron and steel manufacturing machinery. The manufacture of world-proved Clark compressors will complement this production. Mitsubishi is also a leader in Japan's shipbuilding industry.



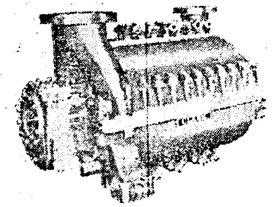
Clark centrifugal compressors are available in both horizontally-split case and vertically-split case designs. A third group is designed specifically for pipeline booster service. Capacities of Clark's centrifugal line range from 2,000 to more than 150,000 cubic feet per minute.

Clark motor-driven reciprocating compressors feature the time-tested Clark Balanced/Opposed design principle. These heavy duty units are available in six stroke lengths and eighteen frame sizes, with ratings from 200 to 8,000 bhp.

In Italy... in Great Britain... in France...

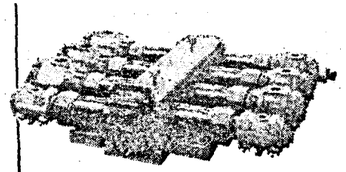
and now in Japan...

CLARK COMPRESSORS BUILT TO U.S.A. STANDARDS



Clark centrifugal and motor-driven reciprocating compressors, world-proved in performance, now for the first time will be built in Japan by Mitsubishi-Zosen. These heavy-duty units, designed and engineered in the United States by Clark Bros. Co. and manufactured by Mitsubishi, can now be purchased in Japan through Nippon Clark. All parts of Mitsubishi-Clark compressors are identical and fully interchangeable with Clark equipment built in the United States and under license in Italy, France and Great Britain. For complete performance and application data, write to either of the two addresses below:

NIPPON CLARK 4 Marunouchi 2-chome, Chiyoda-ku, Tokyo, Japan



CLARK BROS. CO. OVERSEAS DIV. 122 E. 42 St., New York 17, N. Y., U.S.A.

CLARK | DI

COMPRESSORS • ENGINES • GAS TURBINES

CLARK multi-stage, horizontally-split centrifugal compressors are extensively used in the refining and chemical process industries. These world-famed compressors are built in seven case sizes having from two to ten impellers each. Capacities of 2,000 to more than 150,000 cfm.

CLARK motor-driven compressors are available in two, four, six and eight cylinder sizes. These units utilize the balanced/opposed design principle for vibrationless operation. They are widely used in the refining industry and as industrial air compressors in general industry.

SAVING FOR EVERYBODY

GOOD RATE OF INTEREST.
EASY TO BUY, EASY TO HOLD.
INCOME-TAX-FREE CONCESSIONS.

National Savings Certificates (10th Issue)

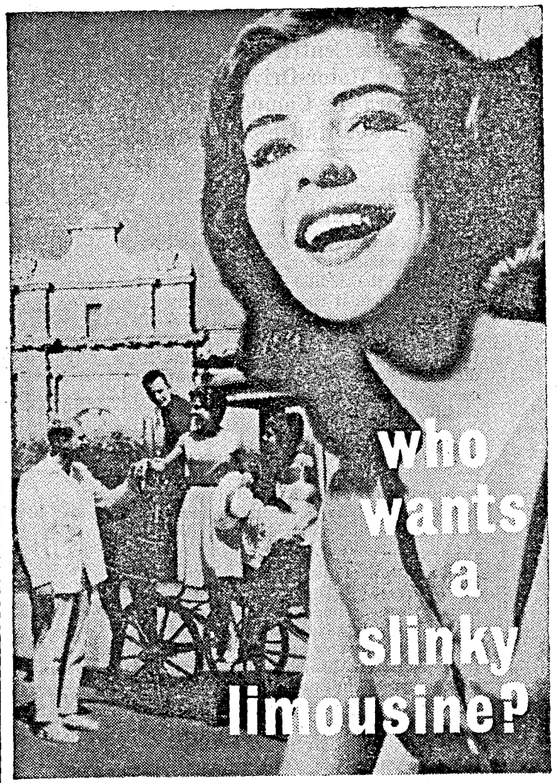
Each unit costs 15/-, becoming £1 in only seven years—equal to nearly 4¼% interest free of U.K. income tax and surtax, or nearly 6⅓% taxable at the standard rate of 7/9. You may hold 1,200 units.

Post Office and Trustee Savings Banks

You may deposit up to £5,000, with no restriction up to this maximum on the amount invested in any one year. Both husband and wife can each enjoy £15 interest free of U.K. income tax (but not surtax) each year on their Savings Bank deposit accounts.

Defence Bonds

5% Defence Bonds are on sale in £5 units, and after seven years yield a 3% bonus free of U.K. income tax. You may now hold £5,000 worth, exclusive of holdings of earlier issues. Ideal trustee investment.



Premium Savings Bonds

Thousands of prizes, from £25 to £5,000, free of U.K. income tax and surtax, can be won each month. Bonds cost £1 each, and the permitted holding is now 800.

FOOD FOR THOUGHT

The Accelerated Freeze Drying technique for preservation of foodstuffs is no longer an experimental process. Housewives will be buying the new foods this year.

The Vickers development of commercial scale plant means fresh thinking and wider horizons, because the benefits to consumer and processor are so great.

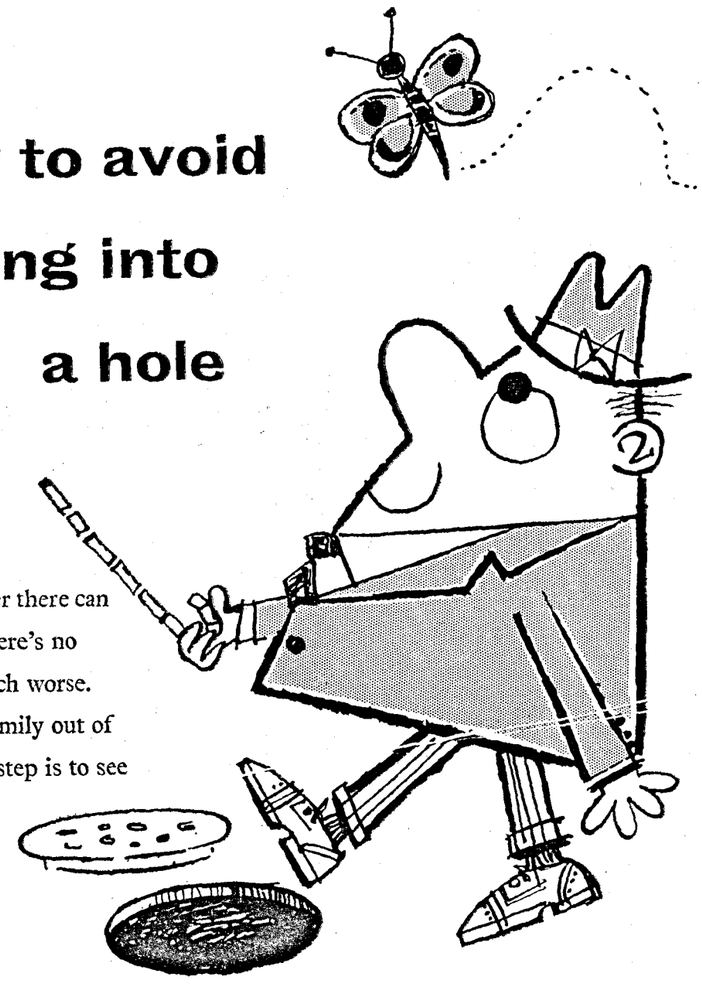
Food can be stored *for years* in sealed packets without refrigeration, and can be restored in a moment so that it looks, tastes and smells exactly as it did at the moment of preservation. Even the colour, the calories and vitamins are the same. All that has gone is the water and the weight —about 90% of it.

Think of the economies in transportation, packaging and storage! Think of the opportunities to expand sales to markets that are now closed owing to high freightage costs or lack of cold storage facilities! Think even more of the opportunities for automatic vending! The implications are endless.

TODAY many processors at home and abroad have been familiarising themselves with the technique using the low-cost pilot plant and full-scale commercial plant is now installed.

TOMORROW? Vickers laboratories are constantly extending the list of freeze dried foods that can be effectively and profitably marketed. Invite Vickers engineers to examine the application of this new process to your business.

VICKERS-ARMSTRONGS [SOUTH MARSTON] LTD



South Marston Works Swindon England *Telephone Stratton St. Margaret 3241*

In addition to Accelerated Freeze Drying Plant, Vickers-Armstrongs (South Marston) Limited are working on technically advanced government and industrial engineering contracts for the General Post Office, the United Kingdom Atomic Energy Authority, the British Transport Commission and the War Office. The Company's design departments, renowned in many fields, are at work on Food Processing Plant, Linear Accelerators for Radiotherapy, Radiation Sterilisation Equipment, Hovercraft, Nuclear Research, and Nuclear Training Equipment.

Planning Like the French?

HOW far does Mr Selwyn Lloyd's draft scheme for a new National Economic Development Council (hereafter called Ned) in Britain incorporate the real lessons to be learned from planning experience in France? Or how far is everybody here in danger of misreading what those lessons are? This article is written after an intensive visit of exploration in Paris last week. It is inevitable that it should be a controversial article, for there seem to us to be some considerable dangers as well as considerable opportunities in the present state of Britain's planning debate. The problems, possibilities and (in our view) potential muddles now emerging can best be summarised under four heads.

The first head concerns the machinery required. The French machinery for planning, like Mr Lloyd's draft scheme for Ned, includes (*a*) a nominally top council (*conseil supérieur*) of employers' representatives, trade unionists, ministers and independent members; and (*b*) an "office" of economic technocrats, the *commissariat du plan*. But, at first sight, Mr Lloyd either does not seem to have grasped—or else is in danger of allowing British employers and trade unions to lead him into forgetting—that the secret of the French success is that the *conseil supérieur* has been completely dormant and powerless. Indeed, most Frenchmen probably do not even know that this *conseil supérieur* exists, although (under personal prompting from General de Gaulle) it held a series of meetings last week, and has decided to meet once every six months in future. The driving force behind France's planning machinery has resided entirely in the office of technocrats in the *commissariat du plan*.

The commissariat professes to be reasonably pleased that the *conseil supérieur* is to meet as often as once every six months in future; it hopes vaguely (presumably like Mr Lloyd) that, if inflation recurs, the union leaders and agricultural representatives on the council may lend some useful moral support to the commissariat's determination that this should be countered by restraint in incomes rather than by measures of demand deflation which would slow down production. But everybody agrees privately that if the *conseil supérieur*, with its balance of divergent and protectionist interests, tried to be the real initiator of French planning, the result would be disastrous. Fortunately for France, the *conseil supérieur* has 57 members (far too many to be effective), does not take votes at the end of its discussions, and so is only a talking shop.

Mr Lloyd's draft scheme at least pretends to British employers and union leaders that the equivalent of the *conseil supérieur* in Britain would be much more of a policy-making body; he is also seeking to keep it down to only about 20 members, in order to allow it to try to be effective. But if this conglomerated body of competing vested interests does try to be the main plan-making authority, striking a compromise on every issue, the planning simply will not work. There is therefore a certain element of lunacy in the present state of the debate in Britain, where everybody is supposing that the big question is whether the Chancellor can persuade union leaders to sit on his equivalent of the *conseil supérieur*—but where the real question is whether, once he has formed this *conseil supérieur*, he can successfully send it to sleep.

The second main question is the effect of planning on Government policy, and here again one enters a field where the hand often seems to delude the eye. Some French Treasury officials say privately that the influence even of the commissariat—of the office of economic technocrats—has been exaggerated.

"The commissariat people discussed their latest four-year plan with us for three years in advance," they will say, "and the target figure for annual expansion in industrial production that they eventually wrote into it (5½ per cent a year for 1961-65) was exactly the figure that we thought right on financial grounds." Probably the greatest triumph of the commissariat is that the French Treasury genuinely believes this, and the greatest triumph of Ned in Britain would be if it could gradually get the British Treasury to come to do the same.

The Economist had better be frank about the changes in Government policy which it would like planning to bring about. At the moment the British Treasury constantly directs its policy according to two guiding lights: its main purposes are to avoid cost inflation at home, and to maintain the strength of sterling on the international exchanges. Whenever a warning signal flashes in either field, the Government reacts by damping down internal demand and production. If Ned could get a third guiding light installed in the Treasury—a target rate for annual expansion in national production—then the Treasury would be more likely to come to tackle its other two problems in more direct, more desirable and less anti-expansionist ways. It could tackle cost inflation by sticking to the sort of national wages policy which it has at last begun to edge towards during this year's crisis. It could attract support for sterling by a bold policy of maintaining high interest rates, but could offset the anti-expansionist force of these at home by deliberately running the sort of budget deficit required to enable domestic expansion to be maintained.

The question of how Ned could best work to bring about such changes in national economic targets—how best it could get this new guiding light of an annual target rate for expansion set up in the Treasury—is a complex one. Previously this newspaper has argued that Ned would be most effective if it was tied fairly closely within the Treasury's own official family, but with the duty of publishing reports to the public about how much expansion might be attained. But last week's study in Paris of how M. Monnet and his successors have influenced the French Treasury, from outside, into believing that expansion was all its own idea, leaves one delighted with the ingenious technique of diplomacy from an outside body which these men have invented and which Ned might copy; the commissariat's willingness to withdraw or keep silent on small (and medium) matters that would have annoyed the Treasury has been as important as its readiness to be a propagandist on big ones. One should not despair of an outside body attaining some of the same sort of influence in Britain, provided the office of Ned, which will issue statistics and plans, is given a sufficient high-powered permanent staff. But if this staff is formed mainly of people on purely temporary (two or three years) secondment from outside jobs in the universities or the civil service, as Mr Lloyd has suggested, its influence will be moribund.

THE third head concerns planning and industry. Many British admirers of the *commissariat du plan* believe that the real achievement of planning in France has not lain in its effect on government policy, but in the degree of detail into which discussions of industrial trends have gone with over 3,000 representatives of different industries in more than 300 industrial working parties. These enthusiasts argue that Mr Lloyd's planning scheme will fail in its main purpose if he does not manage to set up a similar network of groups in Britain.

Once again, one must enter some reservations here. Part of the services rendered by these working groups seem to be eyewash—although in the moderately useful as well as the derisory sense of that medical term. The main purpose of most of the groups is supposed to be to fix a target figure for the likely expansion of their own industry within the general framework of expansion set by the four-year plan; but, in fact, the figures arrived at are not often far out of line with the estimates that an outsider would reach by a crude guess of market possibilities without the benefit of all this work. Given that the target figure for total French expansion by 1965 is 24 per cent, what figures on either side of this total would you guess for the expansion of (*a*) the relatively undynamic industry of agriculture, (*b*) metal manufactures, (*c*) energy production, (*d*) chemical industry, (*e*) catching up the big backlog in French public works? The estimates given in the latest French plan are shown in a footnote below, and no prizes need be awarded to those readers who have reached approximately the same guesses off their cuff as the French planning groups have done after all their cogitation.*

Nor should too great an emphasis be laid on the claim that once French industrialists and trade unions have set targets for expansion in their own industries, a massive sense of united purpose produces a drive to hit them; trade union participation in some of the working groups has been less pronounced than most of the planners would like, and many of these groups seem to have been mainly enthusiastic coteries of leading industrialists with a planner as *rapporteur*. Sometimes such coteries of industrialists can lead to market-sharing arrangements and other restrictive practices which are not necessarily a good thing. Some of them have led to mergers which, in an age when concentration and take-over bids can lead to greater efficiency, sometimes are a good thing; but this largely amounts to saying that if (like France, but unlike Britain) one has not got a stock exchange system which makes economic rationalisers and takers-over like Mr Charles Clore possible, it is sometimes useful to invent a new system for establishing them. Nor should the British Government suppose that the idea of writing export targets into these individual industrial plans is a panacea; there is little evidence from French experience that these have any direct effect at all.

NEVERTHELESS, there clearly have been some advantages in these working groups which could conceivably be repeated in Britain. In the private sector of industry some of the sleepier industrialists have been encouraged to expand after contact with more expansion-minded people in their own industry. The very fact that a target figure for expansion is laid down tends to make some boards of directors feel that it would be a confession of failure if they did not try to expand their investment and capacity sufficiently to maintain their share of the market. There has been some sharing between competitors of the fruits of market research, technical research, managerial know-how, information about investment plans in

* Agriculture 19 per cent, metal manufactures 23 per cent, energy 24 per cent, chemicals 29 per cent, public works 32 per cent.

different segments of the industry (leading to some avoidance of purely wasteful overlapping), and a certain cross-fertilisation of ideas. It can also be argued that the presence of government *rapporteurs* on these industrial working groups enables the government to get a closer view of industrial problems, in contrast to the rather stand-offish atmosphere that more often characterises Whitehall's relations with industry. (But it is a moot point whether this is a criticism of the lack of any machinery for appropriate contact in Britain, or of the different outlook on economic problems bred within industry and the civil service by the British educational system.)

On balance, one's conclusion is that it would probably be useful to introduce some elements of this side of French planning into Britain, although a constant watch should be kept to see that such working groups do not become a breeding ground of new restrictive or monopolistic practices. In this context it was noticeable in Paris last week that some French planners hope that planning may be extended on "a common market wide" scale so that "European countries should not overlap in their industrial efforts"; in some circumstances, this could become a dangerous invitation to fix up market-sharing arrangements with continental cartels, and Britain would be likely to do very badly out of it.

THE fourth head for discussion is: how far has the mechanism of French planning been *dirigiste*, in the sense of deciding in which places growth should take place and of diverting resources towards them? In the nationalised sector of French industry there was certainly one important early example of this in the first Monnet plan. The first targets for expansion for French electricity production were pitched almost twice as high as anybody had previously expected: the French planners' philosophy here was that "the early stages of instilling a growth mentality are like a bayonet charge, and we chose electricity to lead it." If urgent steps are needed to lift an economy out of stagnation, there is probably something in this argument. In Britain, for example, there might well be a case now—although there was not such a case when a Tory conference called for such a policy ten years ago—for picking out a growth industry like building, and setting up a target that the country should try to advance within a recognisable period towards erecting 400,000 houses or other new buildings a year. But it is a symptom of the difference in economic language on either side of the channel that most "planners" in Britain are in fact people who are temperamentally inclined to restrict discriminatorily growth industries like building, by imposing building licences or other means.

Apart from its initial "act of faith" in electricity and some other industries, however, most French planning in the public sector has more closely accorded with the best theoretical practice in nationalised industries here. Nowadays, the French concentrate on carrying out whichever public investment ventures seem to be most profitable at some notional (but fairly high) rate of interest. But there is evidence that the existence of a national plan enables this policy to be followed more consistently than here—that it gives more power to the elbow of those parts of the public sector where investment is plainly most economic. Certainly those in charge of France's large roadbuilding programme say that they have found it easier to secure funds for their obviously economic ventures "while working within a general investment system than we would have done as lone horsemen."

In the private sector, one's impression is that French planning today is also much less *dirigiste* than many outsiders suggest. It is made to look *dirigiste* because France has always had a much less efficient capital market than Britain and, to get investment funds on what the British industry would regard as commercial terms, French capital issues generally have to secure official support. But the French authorities have praiseworthily tried to act in the same way as an intelligent private investor would do; they have channelled their funds and support to whichever investment ventures look most profitable, with remarkably little political meandering to help lame dogs over stiles.

One recent example, which is sometimes quoted as a sign that they are *dirigiste*, shows in reality how little *dirigisme* there now is. Two companies making refrigerators recently applied for permission to make bond issues to increase their production of refrigerators; as the plan suggested that more refrigerators should be bought these were agreed to, but eyebrows were raised when another company came along to join the queue at a time when the future market for refrigerators had begun to look a bit glutted: "We would not have refused permission for the issue if the company had insisted," said one French planner, "but we pointed out the market situation to it, and suggested that it withdrew." Probably, in that third case, a normal equity issue on the British market would have failed.

SUCH, then, is the best summary one can make of France's lessons for Britain. Perhaps the main conclusions are four. First, new planning machinery in Britain might do something to breathe a spirit of expansion into British economic policy and into the dustier halls of the Treasury. Secondly, however, the proposed top council of Ned—the twenty or so employers and trade unionists—should certainly not be given real authority over the proposed "permanent office" of Ned; Mr Lloyd's purpose in setting up the top council is presumably a hope that it might say some vaguely useful things about wages policy, but he should not sacrifice to this mirage all prospects that the permanent office of Ned might draw up effective targets and plans for expansion, which should point always to the places where it seems that growth would be most profitable instead of to those which vested interests in existing employers' organisations and existing large trade unions would most like to protect. Thirdly, the system of detailed industrial consultation in France has some lessons for Britain, but there are also dangers of breeding restrictive practices in it. Finally, there is no point in duplicating those elements of French planning which have mainly been concerned to find French substitutes for institutions (like an effective capital market) which Britain enjoys already.

Megaton Motives

In considering the latest and biggest Russian bangs, cause and effect must be weighed equally

MR KHRUSHCHEV has shot his megatons in the air, they will come to earth he knows not where. The victim areas, and precise degree of poisonousness, of the fall-out are not the only mysteries about the 30-megaton weapon (or was it 50-megaton, after all ?) tested over Novaya Zemlya on Monday. If the explosion was really of only thirty megatons—the "only" marks the lunatic dimensions of the subject—it may have been either intentionally or unintentionally so. If intentionally, it is odd that Mr Khrushchev, whose purposes apparently require him to advertise his nuclear strength as forcefully as possible, did not publicise it beforehand ; and the depressing possibility remains of another, even bigger, bang by the end of the month. If, on the other hand, Monday's explosion was an intended 50-megaton shot which just, as it were, trickled out of the end of the cannon, there is an even more depressing possibility that the errant scientists will be told to do it again and again until they get it right.

Mr Khrushchev is not likely to say whether or not this was a dud shot. There are three other questions, however, to which at least tentative answers can be given.

Fall-out effects. The extent of the offence that the Russians have perpetrated against mankind by showering it with more poisonous radiation than has ever before been released in a single explosion cannot even be guessed at until the answers are known to two questions. What kind of bomb have they built, and how many are going to be tested ? As the Prime Minister pointed out on Tuesday, the fusion reaction of an H-bomb produces no fall-out ; the radioactive dust that floats down from the stratosphere gently as autumn leaves is caused exclusively by nuclear fission, the detritus of split atoms. Both reactions are required to produce a megaton explosion, but the proportions in which they are combined can be varied to produce a bomb that is, relatively speaking, "clean" or "dirty." Russian officials in London have assured Lord Russell that Monday's monster was whiter than white. Scientists will not know the truth until they have analysed the fall-out arriving in this country during the next few weeks.

Meanwhile, the Medical Research Council has made certain assumptions about the amount of fall-out that might be expected from a 50-megaton blast. Its figures have been arrived at quite simply by looking at the fall-out known to have been produced by the same number of megatons during the 1957-58 tests, which included a number of "clean" as well as "dirty" bombs. The figures suggest, as a rough guide, that one test gives no special cause for alarm ; whether there is cause for alarm in the future depends on how many more of these bombs are exploded.

The sheer size of the Russian weapons has introduced a new dimension into fall-out. The only real hazard in the past has come from strontium 90, which the council expects to remain well below danger levels. Now scientists have to contend with the possibility that radioactive iodine 131 could easily build up to concentrations that were dangerous to the thyroid of babies, if not of the rest of the population. Iodine 131 has always been present in fall-out, but since its radioactivity diminishes rapidly, what little remained by the time the iodine reached the ground could safely be ignored. The quantities likely to be produced in an explosion of 30 or 50 megatons are too big to be overlooked, and the time and place at which the Russians carried out their test mean that the fall-out will descend quickly, with much of its normally short-lived radioactivity still unspent.

The Medical Research Council does not expect the amount of iodine 131 from a single 50-megaton test to exceed safe levels, but it is sufficiently worried about the prospect to have advised the government to arrange alternative milk supplies for babies under 12 months if it does. Not until next week will scientists begin to get an inkling of whether they have estimated this new hazard correctly ; and not until next spring will they know whether their comparative optimism about the danger from strontium is justified.

Military uses. The usefulness of a big warhead is that, by increasing the area of devastation, it diminishes the need for accuracy in the rocket that carries it. This may be particularly important in the case of the Russian rockets designed to destroy American missiles kept in underground emplacements, like the Minuteman and some Titans. The Russians have claimed that rockets can be made extremely accurate, and American experiments have tended to confirm that a missile can be put down within a mile or so of its target after a 5,000-mile run. Even so, it might take two or three five-megaton warheads to guarantee the destruction of an underground emplacement. If the Russians have found that their rockets are slow in coming off the assembly line, and if a 50-megaton warhead compact enough to fit into existing rockets is successfully tested, they may have decided that the bigger bang represents an economy. The suspicion that rockets are being produced more slowly than they would like is strengthened by the fact that the Americans have recently reduced their estimate of the number of missiles the Russians have ready for firing from 200 to sixty.

On the same grounds, the big warhead might be used against prowling Polaris submarines, if their general whereabouts, but not their exact position, were known to Soviet intelligence ; the extra hull-cracking pressure produced by the bigger explosion might make the difference between a hit and a miss. Just possibly, Monday's test may also be connected with the claim made by Marshal Malinovsky the same day that "the problem of destroying missiles in flight has been successfully solved." But, as the Americans have discovered, there is a big difference between solving the theoretical problem of intercepting a missile and creating an anti-missile defence that will ward off a mass attack. Marshal Malinovsky's vague phrase is unlikely to have put Strategic Air Command's missile squadrons out of business yet.

Political motives. If Mr Khrushchev had simply weighed these apparently somewhat marginal military advantages against the propaganda disadvantages of poisoning the northern hemisphere's babies, he would probably have decided against a test of Monday's size. Some third factor must have entered into his calculations. Perhaps he hoped to frighten people in western Europe, and through them their governments, into accepting a solution of the Berlin crisis on terms they would otherwise have rejected. But this hope had been stultified even before Monday's bomb went off. Britain's nuclear disarmers had already been sitting furiously in a salon of Mr Khrushchev's London embassy ; the general, predictable, reaction was one of less, not more, willingness to negotiate about Berlin or anything else.

One other possible motive, perhaps the decisive one, remains. The chief feature of the current party congress in Moscow has been the evidence it provides of a major struggle between Mr Khrushchev and his opponents in the communist block, even within the Soviet Union, who differ with him because (among other reasons) they regard him as too ready to compromise with the West. It would not be astonishing if, in putting his case for peaceful coexistence to the congress, he felt it necessary to cover his flank against accusations of "softness on capitalism" from the Goldwaters of the communist world ; the 50-megaton bomb was a ready means of demonstrating his resolution, and all that.

If this is so, it suggests what the West's response should be. There is already enough bad temper in the world to make sensible discussion about the differences between East and West remarkably difficult ; Mr Khrushchev's latest show of devil-may-care toughness has made everyone angrier still. But if one of his purposes was to enable himself to keep the door to negotiation open, by outmanœuvring opponents on his own side who would have preferred to slam it shut in favour of a "policy of strength" pure and simple, it would be silly of the West to do the intransigents' job for them. It remains the general lesson of the Soviet party congress (examined in the article overleaf) that Mr Khrushchev has the strength and the will to negotiate. The right attitude for the West after the multi-megaton test is the same as it was before: to be ready to negotiate within the limits set by the free world's basic interests in central Europe.

Pinprick

The shock administered to world opinion by the big Soviet test explosion has made the high-handed decision of the United States government, carried out on October 21st, to circle the world with a band of copper needles seem a mere pinprick ; still, it is a mighty irritating one to anyone with a professional interest in space. The needles, 75 pounds of fine copper hairs scattered in an orbit 2,000 miles high, are the prototype of a new, possibly interference-free, system of military radio communication. But if they work as planned, and reflect signals transmitted from earth back to receivers on the ground, astronomers fear they will work equally well in reverse and deflect back into space the light and radio signals from far galaxies which the astronomers are attempting to record and study. The experiment was modified substantially to meet furious protests of astronomers all over the world, but many remain uneasy about its consequences, especially when the needles are likely to remain in space for at least seven years and possibly even longer. It is an alarming demonstration of the ability of a small body of scientists to cause inconvenience to their colleagues generally. Some international forum to co-ordinate experiments in space seems needed if similar incidents are to be avoided in future.

Arms and Men

In an age of nuclear strategy what use would selective conscription in Britain be?

THE descent on London, Paris and Bonn this week by Mr Gilpatric, the American deputy secretary of defence, has been seized on by the advocates of a "conventional" —. distinct from a nuclear—defence policy for western Europe as proof that President Kennedy is firmly on their side. Whatever Mr Gilpatric had to say to Mr Watkinson, whom he was due to meet on Friday and Saturday, he will have discovered that the British Government has still to be persuaded both of the practicality of a conventional defence system in Europe and of the desirability of a major British contribution in manpower to it. Since Mr Gilpatric's mission has coincided with the grand climacteric of the present campaign to reverse the Sandys defence policy through the reintroduction of compulsory (preferably selective) military service, it seems desirable to try to spell out briefly just what the conflict over British policy really is, and what effect the resort to selective service would have on particular military contingencies. It is necessary to remark at the outset (for any innocents who may not have grasped the point) that the debate is less relevant to the present Berlin crisis than to the current preparation of the 1962-63 defence estimates.

1. The Concept of the "Pause." The most commonly heard case for increasing Nato's conventional forces rests on the supposition that the Russians might deliberately push forward from the Elbe using conventional weapons only ; it is said that Nato's ground and air forces must be strong enough to enforce a "pause" for diplomatic reflection in Moscow, without using tactical nuclear weapons which would be likely to escalate hostilities into a global nuclear war. This argument is politically popular. Against it, British planners contend that the idea of the pause is meaningless, except as a euphemism for a Russian defeat, to which the Russians would respond, if they really meant business, by using their own nuclear weapons. This might leave the West morally pure but militarily at a disadvantage since the conventional deployment of its forces would be particularly vulnerable to tactical nuclear bombardment. A strong build-up of forces in a purely conventional posture might even invite a nuclear attack *ab initio*. The moral argument, however, is not one to be scorned. If the West pursues a policy in which nuclear war is the only alternative to pacifism—however minor the emergency—its moral position becomes untenable.

2. The European Balance. The immediate argument for giving General Norstad a greater conventional capacity is

that his present forces (23 divisions—of which 17-18 are probably effective) are insufficient to stop even a limited, or accidental, foray across the border by the 18-20 Russian divisions (half of them armoured and half mechanised) in east Germany. To this it is answered that the numerical superiority of the attacker to the defender under modern conventional conditions has to be of the order of 3 to 1 at the point of attack. Thus, granted the mobility of the Nato defenders, if the Russians were to make a deliberate move they would first have to strengthen their present force in east Germany, a process which western intelligence would pick up as the extra divisions crossed the satellite countries. Once the Russians mustered a commanding superiority they would know that the West both expected deliberate aggression and would have to use nuclear weapons to stop it. Should part of the present force stumble over the border by accident it would not be too difficult to contain them. If there are any local doubts about the efficiency of the British Army of the Rhine at its present strength, the small British strategic reserve and the army emergency reserve (particularly to supplement technicians and specialist grades) could be dispatched quickly in any crisis. It is certainly desirable that General Norstad should have more substantial reserves to call on; and civilians on this side of the Channel are pretty useless. Even so, standing expeditionary forces on the American and British model are expensive and probably wasteful in resources and manpower. The ideal ground force reserves—at least in the official British view—are local European troops who can live and train on the spot.

3. The Army of 165,000-180,000. Some advocates of selective service based their original contention (some years ago) on the improbability of the army recruiting up to its minimum level. The Ministry of Defence does not now expect recruitment to fall significantly below "the floor" of 165,000 by the target date, January 1, 1963, when the last national serviceman has left. The later contention has been that this 165,000 is a meaningless figure, chosen for political convenience, and that "the ceiling" of 180,000 is, in fact, the necessary minimum. The official answer is that 180,000 is likely to be reached by the mid-nineteen sixties, that special training schemes will increase the intake of technicians, and that savings in the supply "tail" can be made by greater inter-service co-operation. In these circumstances selective service might be useful in providing 15,000 extra men in 1963 (although regulars would be needed to train them), but thereafter would be merely a costly embarrassment.

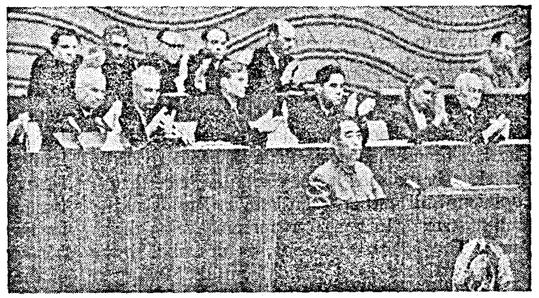
4. The Army of 250,000-300,000. It is argued that a sizeable increase in British conventional forces would not only help to give greater flexibility to General Norstad in western Europe but also increase the British political voice within the alliance which is now being lost to the west Germans with their 10-12 divisions in being or in formation. Clearly, selective service would be needed if large conventional forces of this kind were to become (over British objections) the accepted Nato policy. This would entail both the disruption of the present British regular army and vast new expenses in manpower and money. It would impose a major new strain on the British economy, and one that could not possibly be "paid for" by the small savings that might be derived by scrapping the antiquated parts of Britain's independent nuclear deterrent. Moreover, while the West as a whole could probably better afford to put more men into uniform than it now has, compared with the Soviet Union, a renewed build-up on both sides is not the best prelude to disarmament discussions.

5. Overseas Bases. A military argument for selective service, which has more impact behind the scenes than in the public debate, is that more men would help to sustain some of the British overseas bases which may otherwise have to be closed down to keep the British army in Germany up to strength. It is much more likely, however, that some bases (Kenya, Singapore) will have to be shut down anyway for political reasons. In any event, long-range air-sea commando forces seem a more effective police system than stationary garrisons. The prospect of a heavy British military commitment in, say, south-east Asia would naturally be a different matter.

THE political unpopularity, on both sides of the Commons, of reintroducing any form of compulsory military service is, on all present evidence, likely to be the decisive factor in determining the Government's mind. It should not be. But, equally, the concept of an increased conventional defence of western Europe, while attractive in appearance, may not necessarily be a substantial improvement on the existing Nato deterrent to aggression. The contingency in which increased conventional strength would be desirable would be if the West felt that it might have to fight for west Berlin itself in a limited operation on the access routes, or if it planned a riposte against some part of the German Democratic Republic which might compensate, in some sense, for a Russian and east German seizure of the western sectors of the city. It is this feeling, now becoming more vocal in Washington, that ends in calculations of the vast potential the West could put in the field for conventional war—if it accepted the permanent military burden that the Soviet Union does. But any western conventional thrust would still have to pay as much respect to the Russian ability to retaliate with tactical nuclear weapons as Nato now expects the Red Army to do in planning a conventional punch of its own towards the west.

The Economist

OCTOBER 26, 1861



AMERICAN SURVEY

(FROM OUR SPECIAL AMERICAN CORRESPONDENT)

"When I arrived from England a few days ago, after a fortnight's voyage, my knowledge of events in this country was of course a month behindhand; and as it requires pretty hard work even to keep pace with the daily current of news, it is of course still more difficult to recover a month which has been lapsed, and to sift for oneself "the wheat from the chaff," without the light usually derived from the knowledge and conversation of the hour. For so far, therefore, I am groping about, if not in the dark, at least in a dim twilight. I therefore take up my pen with considerable diffidence to give you my first impressions, and must reserve to myself liberty to modify them, if necessary, upon further knowledge hereafter. I may here state that I do not propose to fill my letters with "news" properly so called. That is well enough supplied by the daily papers. To events of any importance I shall of course refer, but my main object will be to inquire into the probable duration of a war which so seriously affects the commerce of England,—to form, if it be possible, a definite opinion on this point, and to lay it and the considerations which lead me to it before your readers. Whatever has any perceptible bearing on this point, proximate or remote, I shall consider within my province, and also anything affecting the finances, the general trade, or the chief staples of the country; but, above all, anything touching upon the great question of cotton supply.

The Communist Opposition

Historians may record this week's congress in Moscow as marking the end of the Soviet block's "monolithic" period

IT might have been a family reunion to celebrate the bright future, all the skeletons being firmly shut away in the cupboard. But it has turned out a much more controversial affair, at which at least some of the lurking family quarrels were brought into the open. Mr Khrushchev's new twenty-year programme was to be the main dish for the 22nd congress of the Soviet communist party. But his picture of future power and prosperity was overshadowed not only by the Berlin crisis and Russia's nuclear explosions, but also by the two major disputes that he himself suddenly unveiled in the new Kremlin hall. One is international: the Sino-Soviet controversy about policy towards the West, a controversy in which the Albanian quarrel merely serves as a pretext. The second is internal, and though the fresh denunciations of the "anti-party" group have mostly been worded in the past tense, they are clearly in the present, also. Indeed, the two controversies are twin aspects of the same big dispute over the shape and direction of the communist movement after Stalin.

When, last December, after 22 days of hard bargaining, the 81 communist parties of the world finally managed to agree on a common declaration, it was possible to argue that the communist eagle had two heads, with a tongue each. Such an argument, however, had to be based on guesswork and was hotly denied by both Moscow and Peking with protestations of absolute and eternal unity. Now, the division is plain for all to see. Mr Khrushchev's strictures on Albanian "stalinism" met with a prompt complaint from Mr Chou En-lai that "to disclose a dispute between fraternal parties in the face of the enemy cannot be regarded as a serious marxist-leninist attitude." On Monday, Mr Chou flew back to Peking, probably to consult Mao Tse-tung on how far the breach is to be allowed to widen.

While Albania provided a touchstone of international alignments (its own leaders' reactions are discussed on page 326), all the important Soviet speakers felt it necessary to attack the "anti-party group" at home. The official version of the critical conflict of June, 1957, is now more detailed, though hardly altered. It claims that Mr Khrushchev's opponents had tried to sabotage various reforms carried out since Stalin's death, but that they chose as their common platform resistance to his managerial reform. Mr Molotov launched the attack, and Mr Khrushchev was outvoted by at least 7 to 4 in the party presidium (of the then full members, only Mr Kirichenko, Mr Mikoyan and Mr Suslov are not mentioned among his opponents). He then turned the tables on them by transferring the struggle into the much larger central committee. At that moment, Marshal Zhukov, by throwing the army's weight into the scales, must have played a crucial part. Four months later, Mr Khrushchev got rid of this dangerous ally; Marshal Zhukov is now accused of Bonapartist ambitions.

Even in this official version, it is obvious that in 1957 Mr Khrushchev was faced with a broad coalition. Mr Malenkov had been previously accused of making too many concessions to the Russian consumer, and of arguing that nuclear war would spell the doom of the whole world, not merely of its capitalist half; he cannot be seriously identified with such stalinist die-hards as Mr Molotov or Mr Kaganovich. Although it suits the present accusers to lump the sins of the defeated opposition together, it is interesting to see whom each of them singles out as his favourite target. Mr Mikoyan, concerning himself mainly with international relations, concentrated his fire on Mr Molotov, whom he charged with too little faith in communist growth and strength, leading him to deny the possibility of avoiding war, with opposition to more flexible policies, contempt for Mr Khrushchev's travelling diplomacy, and preference for the cold war. Mr Mikoyan implied that even now Mr Molotov's views remained unchanged; and Mr Satyukov, editor of *Pravda*, told the congress on Wednesday that, just before it opened, Mr Molotov had written to the central committee criticising the new programme as "revisionist."

The protégés whom Mr Khrushchev has promoted tended to emphasise the "anti-party" group's opposition to reforms at home and its complicity in Stalin's crimes. Messrs. Molotov and Kaganovich, Voroshilov and Malenkov are accused of having resisted the rehabilitation of Tukhachevsky and other marshals who had been victims of Stalin's pre-war purges (all this sounds as if a new attempt was being made to enlist the army's support against somebody). In general, the defeated leaders' opposition to the revelation of past injustices is attributed to the natural apprehensions of men who had been Stalin's accomplices. Mr Malenkov, for instance, is now held responsible for the memorable purges in Leningrad and

Byelorussia back in the nineteen-thirties.

Was Mr Khrushchev, then—once the pupil and protégé of Kaganovich—the only innocent man among Stalin's underlings? Complicity in the crimes of the fallen idol is a tricky charge to revive in Soviet Russia. Even Mr Khrushchev's present lieutenants are not young enough to have clean hands. The new generation, which entered active politics only after Stalin's death, will have to come to the fore before the whole truth can be told, and the charge-sheet read without a tremor.

MR KHRUSHCHEV must know how double-edged is the weapon he has brandished against his defeated rivals. If he has, nevertheless, brandished it, the reason must be that some of their opinions still find an echo both in Russia and in other communist states. In regard to foreign affairs, the evidence is plain. The Molotov position, as described by Mr Mikoyan, sounds almost as if lifted from the Peking *People's Daily*. (As if to emphasise that the Chinese distaste for negotiations with the United States has not diminished, Mr Chou repeated, in his speech to the congress, the Chinese argument that President Kennedy is worse than his predecessor.) Among the Soviet people, the Khrushchev doctrine of co-existence is certainly more popular than Mr Molotov's rigidity, but Soviet officials may be critical of Mr Khrushchev's failure to get results. Indeed, it may be supposed that the latest multi-megaton bangs and Marshal Malinovsky's claims of Russia's superior military power (including anti-missile missiles) were largely meant to silence such critics and to show them that, if Mr Khrushchev is still trying to solve the German question by negotiation, he has no intention of negotiating from weakness.

On the home front, too, there are many controversies. One concerns the volume and direction of investment. Mr Khrushchev's decentralisation of management has, apparently, led to abuses. The strain on Soviet resources was heightened this year by the heavier defence burden. An investment pause has now officially been decreed for a year. Another dispute centres on the seemingly theoretical question whether Russia is still in the stage of "dictatorship of the proletariat." Mr Khrushchev, who claims that it is not, accuses his critics of wanting to retain the term as an excuse for repressive measures; but it is possible that some of them have merely wanted to call a spade a spade, and have demanded a speedier transformation of the regime so as to end the dictatorship in more than name. Some of the criticisms of his programme had a "Malenkov" ring; there have been demands for more consumer goods soon and for more momentum in the housing drive. And the biggest pressure from below was for greater equality in wages.

ONCE again, as in 1957, Mr Khrushchev gives the impression of a man standing in the middle of the road, dodging dangerous drivers on either side. But the immediate question is what he will do with his rivals who are down but not quite out. The advice given to him is contradictory. Mr Mikoyan insists on the "ideological" nature of the struggle, thus implicitly opposing summary "administrative" punishments. Many of Mr Khrushchev's lieutenants, however, are clamouring for the victims' expulsion from the party and, by cataloguing their alleged crimes, are preparing the way for trials. Mr Khrushchev's decision will partly depend on his estimate of the strength of his defeated opponents' following; partly on the immediate course of the Sino-Soviet conflict. If the Soviet leader can preserve his own position without resorting to trials, he will no doubt prefer to do so. The mood of Soviet society has changed greatly even since 1956; in February of that year, Mr Khrushchev had to deliver his indictment of Stalin in secret session: now, this indictment is displayed as one of his principal claims to fame and popularity.

Marshal Voroshilov's election to the presidium of the congress only a few days before it became the scene of his humiliation, and Mr Chou En-lai's hurried trip to Peking, suggest that both the dramatic controversies in the Kremlin hall contained elements of surprise. Other surprises may follow. Yet, even if Mr Khrushchev were to emerge in the end as the undisputed master of a united communist movement, his would be something of a pyrrhic victory. Stalin could afford to be consistent. He cowed his own people into silence and turned the Comintern into a ventriloquist's dummy. Mr Khrushchev, as behoves a ruler in a transitional period, is a man of half-measures. He has tolerated controversy within his own party, hoping to limit it to the chosen few; and he has then been compelled to accept controversy within the communist international, even though he hoped to be able to keep this quite separate from Russia's internal debates. Given the impossibility of a return to stalinism, the persistence of controversy is going to have to be accepted. Historians may see the 22nd congress as the evident end of the communist monolith.

Nasser Changes Windmills

With Syria lost, President Nasser has quickened the pace of change in Egypt

PRESIDENT NASSER has described in "The Philosophy of the Revolution" his conceit of a heroic role wandering in search of a hero, who is found at last in Egypt. The heroic figure—who, to be fair, was appointed by many beside himself—may now be pursuing a more confined, but possibly more rewarding, part. When that amateur show, the United Arab Republic, ended its run, President Nasser's strangely candid friend, Mr Hassanein Heikal, wrote in the newspaper he edits that "hero personality" can never become the foundation for Arab union. Nothing, said Mr Heikal, united Egypt and Syria save the personality and popularity of President Nasser; this, he soberly commented, was not enough. In confessional mood, the Egyptians are forestalling much criticism; seldom have dust and ashes been scattered in Egypt with such precision.

Shortly before the Syrian revolt, President Nasser had cast himself in two different but not unconnected parts. He was

co-starring as one of the more responsible leaders of uncommitted world opinion and, in a virtuoso solo performance, he was engaged in tipping the United Arab Republic over the brink of practical socialism. Although the president has emerged from the Syrian debacle with considerable personal honour, his voice in world affairs will have been severely diminished by the incontestable fact that he was unable to hold together the state of his own construction. When, in the past, domestic progress ground into the intractable sand, President Nasser would yield to the temptation of more rewarding avenues beyond his own frontiers. Now, this would probably be too risky an extravagance; Egyptian public opinion, impatient over the whole Syrian operation and increasingly isolationist, would hardly be appeased by any international posturing, however stout-hearted. The fences at home had to be strengthened first.

But here, too, there are signals of danger. In July, President Nasser embarked on a massive programme of nationalisation and socialisation, applied indiscriminately to Egypt and to Syria. A series of presidential decrees gave the then government a controlling interest in almost all business concerns except for retail trade, sliced the size of the maximum permitted land-holding in half, and limited the amount of money anybody could earn or receive from dividends. Although it was these decrees that precipitated the revolt in Syria, it is impossible, acrobatically, for President Nasser to pause in the middle of this heroic leap towards socialism. Instead, in Egypt, he has quickened the pace and brutalised the means. The problem with which he is faced is that the business and landowning classes, who objected to the laws in Syria, object to them no less violently in Egypt.

Studying a new part: President Nasser

IN his broadcast on October 16th, blaming Syria's defection on his own softheartedness towards "reactionaries," he had, therefore, a double object: on the one hand, he wanted to discredit the new Syrian regime as a bunch of rich opportunists; on the other, to prepare the way for tough action against Egypt's propertied classes. Dreaming of a merciful revolution, he said his government had made the mistake of "reconciliation with reaction." He admitted that the UAR had tilted its spears against the windmills of imperialist pacts and bases when, in fact, "imperialism had already changed its place and had hidden in palaces and in the safes of millionaires." (With this unusually sophisticated admission he relinquishes, temporarily, a good old propaganda stand-by.) The foundation on which the Egyptian revolution is built should, he claimed, be broadened by better publicity, by overhauling the civil service and the political machinery, and by indoctrination at all levels of society—but of a society that "has no room for millionaires." A few days later, the minister of the interior, Mr Mohieddin, announced the names of 40 "reactionaries" who had been arrested to insulate them from "any foolishness"; he also announced the names of 167 capitalists who had had their property expropriated by the government.

EGYPT is not a country in which the arrest of political discontents causes much surprise, nor is it usually publicised. Reports circulating in Beirut and Damascus suggest that, quite apart from the publicised pounce on "millionaires," there has been a much wider and more significant purge, possibly of army officers. Mr Mohieddin allowed no more than that one former officer and two former politicians (all three of whom had been in custody some years ago) had been re-arrested. But the flamboyance of these arrests and of the seizure of private property point to a much rougher road towards Arab socialism than was indicated by the sophisticated, if jumbled, principles laid down three months ago.

Probably all Egyptians who have something to lose are deeply suspicious of President Nasser's socialist leap. The plunge in July was taken precipitately and the results are confused, but even with the most careful preparation it would have been against nature to expect the better-off Egyptians to welcome a measure that was bound to hurt them. The question is whether the government, in justifying its ends with such rough means, is not once again tilting its force against windmills. Are the Egyptian upper and upper middle classes really so formidable that they need to be flung into disarray by arrest and expropriation? As also in Syria, civilian victims of socialism, however dismayed or hostile, can, in fact, do mighty little to dislodge the regime without the whole-hearted co-operation of a substantial group in the armed forces.

And so any assessment of President Nasser's strength on his own home ground boggles before the difficulty of making any useful speculation on just how loyal to its president the Egyptian army still is. There are one or two pointers: the rumours, and they are no more than rumours, of arrests, and President Nasser's still mysterious decision to withdraw the UAR contingent from Kuwait. Just possibly, one of the reasons behind the president's decision may have been his unwillingness to think of his officers communing so closely with Saudis, Kuwaitis and, particularly, Jordanians. But there are other, perhaps more tangible, reasons for believing that there may be elements in the Egyptian army who are not altogether happy at the way things are going. At this stage in the revolution, many of the officers or former officers are dug into good jobs at the head of banks or business firms. They themselves have become members of the ruling class, and as such their revolutionary fervour may have lost some of whatever edge it once had. Armies are not as a general rule a crusading force for socialism. Then again, there may be younger officers frustrated by the usual grouse that cabinet shuffles seldom produce new names. All this is circumstantial and speculative; what can hardly be in doubt is that the army's loyalty will decide whether or not President Nasser emerges a hero from this new, and tougher, ride towards Egyptian socialism.

NOTES OF THE WEEK

EAST-WEST

Continental Block

PRESIDENT KENNEDY has had a forbidding post this week. On Monday he received a letter from President de Gaulle; on Tuesday another from Dr Adenauer. Both seemed to reaffirm the determination of the French and west German governments to contribute nothing to any negotiation on Berlin. General de Gaulle, for his part, evidently takes the view that the clash between Moscow and Peking makes it unnecessary for the West to budge; the French do not regard themselves as bound by the exploratory exchanges between Mr Rusk and Mr Gromyko. Dr Adenauer, as our Bonn correspondent reports on page 351, has opposed all the suggestions for compromise that have been put forward. President Kennedy's recent soundings by letter, and Sir Evelyn Shuckburgh's visits to Paris and Bonn, have yielded no positive results.

There may therefore be some vigorous talk when Dr Adenauer visits Washington next month. During the uncertain phase of German domestic politics it has been President de Gaulle who has borne the brunt of the stand against negotiations; now, with Dr Adenauer evidently set for another spell as chancellor, the old inflexible German view has re-emerged. Yet it is clear enough that Mr Khrushchev, in postponing his peace treaty with east Germany, has acted on the definite understanding that the United States and Britain are prepared to talk. It would be courting big trouble to break faith with Mr Khrushchev in this matter. Voices are being raised in America to ask how far allies can be allowed to veto American policy, when the United States, after all, must take the ultimate decision for peace or war.

Meanwhile the situation in Berlin itself grows worse. The wall is becoming more elaborate; shots across the frontier are frequent. General Clay, after giving the Germans a first unpleasant dose of "realism," when he first arrived, has been cheering them by a demonstration of American determination to preserve the four-power status of Berlin. He and other American officials have been crossing the border regularly, and doggedly refusing to show their papers to east German officials (though to make identification possible they cross in clearly marked cars). On Sunday, and again on Wednesday, passengers who had been stopped were given a military police escort through the check-point, with the further backing of a show of force (including tanks) on the boundary. This game has ended in yet another formal dispute, which the American and Soviet commandants have tried, and failed, to settle between themselves.

EUROPE

Three Decisions for Six

CORNFLAKES and bacon have rarely decided the fate of nations, but they may make or mar that of the European Community. When on Wednesday the Council of Ministers of the Six discussed proposals from the Commission on cereals and pigmeat, they were entering a critical phase in the community's internal debates. With the west German elections past, the time has now come for Bonn to honour its promise to the French to do something to implement the common market in agriculture. This week's meeting did not get far. Major decisions may not be made until just before the end of the year. But there is no mistaking the French determination to make German concessions a condition of further progress in the common market as a whole.

The council made a friendly gesture to Britain by deciding that, when the British start negotiations with the Six, Britain should take a turn in the chair after Germany and France. But the importance of the gesture should not be over-estimated. The free trade area talks showed that British chairmanship does not guarantee success. Indeed, it is becoming increasingly apparent that, as far as negotiating procedure is concerned, Britain's first interest is that a formula should be found that helps the Six to agree on a single point of view. Delays caused by differences between them could be a serious source of trouble.

The six ministers also agreed on a formula for negotiations with the Turks on association with the common market, and on a lukewarm reply to the Irish application for membership. They have invited the Irish to further exploratory talks in January. Ostensibly, the reason for this postponement is the fear that Ireland may be too poor to stand up to the full blast of competition. But this notion was effectively squashed in the meeting when the Germans pointed out that national income per head in Ireland was higher than in Italy.

In fact, the economic argument masks the reluctance of the French and, Italians to admit a country which is not a member of Nato. If the European community were merely a coalition of military allies, the argument would carry weight. But, as it is designed to be something more organic and more permanent, the doubts lose much of their force. The qualities required for membership of the common market are loyalty to its aims and co-operation in constructing European unity. These qualities Ireland has.

CONGO

A Taste of Gall

SOMBRELY, United Nations Day was observed on Tuesday by a world whose ears were ringing from Mr Khrushchev's big blast, and by an organisation in travail. Twice on that day the UN was reminded how it must now live from hand to mouth. The Assembly's budgetary committee, faced with the imminent exhaustion of the funds for the Congo operation, authorised the secretariat to carry on until the end of December. The Russians, who once again combined a demand for strong UN action in the Congo with a refusal to help pay for it, found themselves once again completely

Tshombe with gendarmerie

isolated in opposing the resolution; but the longer-term financial problem remains unsolved. Meanwhile the secretariat announced its conditional approval of the cease-fire terms that Mr Khiari had negotiated with Mr Tshombe's regime in Katanga.

This was the first substantial decision of a political nature taken in the secretariat since Mr Hammarskjöld's death six weeks ago. It was taken, in effect, by the officials who had made up his informal working group in Congo matters: Dr Bunche, Mr Narasimhan, Mr Cordier, Brigadier Rikhye, Mr Gardiner (the Ghanaian UN official who had served as one of the conciliation envoys in the Congo), and Sir Alexander MacFarquhar, the chief adviser on civilian operations. Several members of the mainly Afro-Asian advisory committee on the Congo were known to feel—as does the Congo government—that the cease-fire terms conceded too much to Mr Tshombe; and there will be inevitable repercussions. But this endorsement of the terms was part of the price Mr Tshombe demanded for the return of the 190 Irish UN soldiers who had been trapped at Jadotville in September. To free these men, the UN has been prepared to turn a blind eye on the many violations of the cease-fire that Mr Tshombe's troops have already committed.

His demands that Leopoldville should recognise Katanga's independence as a precondition of negotiation have led to yet another deadlock in his dealings with the Congo government, which now proposes to ask the Security Council to give the UN force a clearer mandate. The vacuum created by Mr Hammarskjöld's death makes it the more urgently necessary that the force should be given authoritative guidance. Twice in the past week there were clashes between the government's troops and Mr Tshombe's. The legality of the UN force's action in Elisabethville on September 13th seems to have gained belated recognition; a noteworthy opinion in support of it has been given in a broadcast by Professor Jennings, Whewell Professor of International Law at Cambridge. But vindication for past actions is of little use to the UN's representatives in the Congo if they can get no clear direction from headquarters about the future.

WAGES DEBATE

Largely About Us

MONDAY'S debate in the Commons on arbitration ran along the expected tramlines. All six Labour speeches accused the Government of breaking contracts. Four of the seven Conservative speeches referred to articles in *The Economist* with approval. But the real interest centred on the Chancellor's speech. Quoting *The Economist* for the view that Britain's present procedures of negotiation and arbitration can be "built-in producers of inflation," he first blew hot ("I am determined that a new approach to these matters should be made") and then cold ("the Government alone cannot solve this problem"). But he agreed that the Government will "certainly have to consider with both sides of industry whether there should be some sort of guiding light" about the general level of wage increases that the country can afford; and added that "there is no great difficulty, perhaps, in arriving at a view on the likely rate in the growth of national productivity, but there are many practical problems to be worked out in regard to personal incomes."

He cited one "practical problem" about a national wages policy that is certainly paramount—"how does one secure that answers in principle are translated into action?"—and four "practical problems" that do not really exist. He thought dolefully that hard thought would have to be given in a national wages policy about how to secure (a) proper relativities among wage and salary earners, (b) the most effective deployment of manpower, and (c and d) fair play for workers in industries where productivity cannot easily be measured, or where individual productivity is bound to increase more slowly than the national average. But the essence of an economic wages policy should be that workers in industries where there is an above-average demand for new labour should then succeed in getting wage increases above the average increase in national productivity, and workers in industries where new labour is not needed should get a below-average increase. All of the Chancellor's last four "practical problems" would then come out in the wash. The problem of moving towards a "guiding light" policy for wages is difficult enough in all conscience, but it is a pity to make it more difficult by puzzling over problems that free market forces working within such a policy would rub out. The same applies to some other ministers' obvious worry that "if wages increases are to be kept down to the level made possible by increasing productivity, then we must take special measures to keep down profits too."

POLIOMYELITIS

Hull and the Vaccine

THE polio outbreak in Hull has coincided with the publication in last week's *British Medical Journal* of an official report on a trial of the Sabin vaccine and with the Ministry of Health's decision eventually to substitute this vaccine for the Salk vaccine in routine immunisation. Thanks largely to the Salk vaccine, the number of cases of polio in Britain has fallen from over 6,000 in 1955 to below 400 last year. But this reduction has not been followed by the progressive elimination of the polio virus from the community.

A taste of honey

Virtually the whole of the population would have to undergo the full course of immunisation with the Salk vaccine before sporadic epidemics, such as have now occurred in Hull and other northern towns, would be prevented.

Since the Sabin vaccine is given by mouth in the form of sweets or syrup, it will be far preferable to the population at large—particularly grown-ups, who can decide for themselves—than four, and perhaps more, Salk injections. Doubt about the safety of the vaccine, which contains a live, weakened virus instead of the killed virus of the Salk vaccine, has now been dispelled by last week's report and, even more, by the fact that it has been extensively and safely used in other countries. But the overwhelming advantage of the Sabin vaccine over the Salk is that besides stimulating the formation of antibodies in the blood, it produces an immunity in the gut. People vaccinated with Salk, though immune to the disease themselves, can still carry the virus in their gut. Through the Sabin vaccine it is hoped to break the chain of infection, by making the gut resistant to colonisation by the virus, and the complete eradication of the disease is thus a foreseeable possibility.

It is this property—the ability to protect the community as well as the individual—that makes the Sabin vaccine the vaccine of choice in combating an epidemic. The only doubt, so far as the Hull outbreak is concerned, is whether the vaccine given ought not to be of the same type of polio virus as the one that is causing the disease. Of the three types of virus, type I is the most prevalent and is responsible for the Hull outbreak. But type II Sabin vaccine, which is being used, has the advantage of producing gut immunity most speedily and, temporarily at least, prevents colonisation by type I. When it is given for routine immunisation, the vaccine will contain all three types of virus and three doses will be given.

CHEMISTS

Pill for Chemists

MR POWELL has countered the chemists' threat to withdraw from the health service if their demands for higher fees were not met by laying down his own revised fees, to take effect from November 1st. At present, chemists are paid the wholesale cost of the ingredients of the drug supplied, plus an on-cost allowance of 25 per cent for overhead expenses and profit, plus an allowance for containers (just over three-halfpence for each prescription) and a dispensing fee averaging 1s. 2½d. a prescription.

It is this last payment that has brought matters to a head. The chemists asked for an increase to 2s. and wanted it to be called a professional fee, whereas the Ministry of Health regards as one entity the chemist's remuneration from his business as a retailer of drugs and from his professional skill in dispensing them. Since chemists' total net earnings have gone up by 50 per cent since 1957, according to the Ministry, because their expenses have not risen so fast as the cost of ingredients to which the on-cost allowance is directly related, Mr Powell is now reducing that allowance, a reduction that will more than offset the small increase (2½d.) he is proposing in the dispensing fee. The taxpayer will, in fact, be saved £1¼ million a year. The new allowance will be

on a sliding scale, depending on the number of prescriptions dispensed. For the first 500 prescriptions the allowance will remain at 25 per cent, so that the new scale will be to the advantage of small chemists.

Chemists as a whole will still be 14 per cent better off, under the new terms of remuneration, than they were in 1957, and it is difficult to swallow the whole of their case for a high professional fee now that so much of their dispensing consists of putting the right number of pills into containers and writing the doctor's instructions on the label. Moreover, prescriptions dispensed for the health service are said to account for little more than a quarter of the total turnover of retail chemists. The contents of the average chemist's shop, with its mixture of cosmetics, hair brushes and soap, weaken the chemists' case to be considered more of a profession than a trade. Were they to persist in their threat to withdraw from the public service, they would be unlikely to win public sympathy.

ALGERIA

Race against Violence

BOMB and dove, concession and show of strength: the double-barrelled approach is in fashion, and not only in east-west politics. In Algeria, too, the new leader of the rebels' provisional government, M. ben Khedda, who succeeded the more moderate M. Ferhat Abbas in August, seems to be combining force and flexibility in a systematic way. Last week there were massive but pacific demonstrations by Algerians in Paris; more are planned in both France and Algeria on November 1st, the anniversary of the start of the rebellion. Yet M. ben Khedda, as he made plain in a statement in Tunis on Tuesday, still seeks to renew negotiations with General de Gaulle.

Some of the suggestions in his statement on Tuesday were hardly calculated to please the French. Independence, which, he pointed out, General de Gaulle had after all conceded in principle, meant for the Moslems the territorial integrity of Algeria, including the Sahara. He proposed a quick agreement on independence and a ceasefire first, and only afterwards negotiations on co-operation with France and guarantees for Europeans in Algeria—the crucial French demands.

Without much discrimination

Nevertheless, the clear public expression of a willingness to talk is encouraging; so is the offer of guarantees for the European settlers. Some observers in France feel that the negotiation of safeguards for the lives and property of the settlers is the crux of General de Gaulle's struggle with the French extremists in Algeria. There is thus some prospect of a resumption of negotiations. But President de Gaulle, like M. ben Khedda, is combining the desire to talk with the mailed fist. The unarmed Algerians who demonstrated in Paris last week were treated by the French police with a severity the extent of which is only now becoming known. Beatings-up in the provisional encampments where they were herded apparently disgusted even some policemen. Corpses have been found floating in the Seine. Tunisians, Moroccans, Algerians were rounded up, apparently without much discrimination, in the Moslem quarters of Paris. The demonstrations on November 1st could easily lead to a new clash. Now that the violence in Algeria is infecting France itself, the peacemakers have not much time left.

SOUTH AFRICA

Nobel Savage

IN the words of Mr Albert J. Luthuli, deposed chief and banned leader of the banned African National Congress, this is the history of South Africa:

> Who will deny that thirty years of my life have been spent knocking in vain, patiently, moderately and modestly at a closed and barred door? What have bee the fruits of moderation? The past thirt years have seen the greatest number of law restricting our rights and progress unt today we have reached the stage where w have almost no rights at all.

It is because Mr Luthuli has steadfastl resisted the easy next step in such a situ ation, the step towards violence, that he ha been awarded the Nobel Peace Prize fo 1960. A devout Christian, a socialist "of th British type," a passionate believer in non violence, Mr Luthuli's moment of inter national recognition has come—and, let i be noted, from Europe itself. The moment it seems, may coincide with another: les patient South Africans are thinking o immoderately crashing the door down.

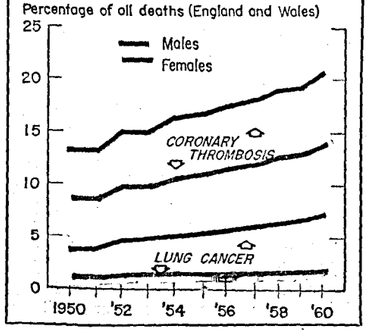
When that happens, Mr Luthuli's sym pathies may well lie at least partly with th whites; even with those among them wh still regard him as an agitator among th savages. For Mr Luthuli has already sai that he does not hate the white man, whos position of domination has put him in position of moral weakness: "We mus sympathise with him." A government tha has only just won a resounding electora victory (it is described on page 358) ma see the moral strength of magnanimity; i should allow Mr Luthuli to travel abroad t collect his prize.

SOUTHERN RHODESIA

Righter than Right

"THE essence of tragedy," said M Maudling in the Commons or October 19th, "is not a conflict betwee right and wrong, but a conflict betwee right and right." The annual congresses o Southern Rhodesia's two main politica parties have, in this sense, brought fort such an essence. The congress of the United Federal party (Southern Rhodesia division), which ended in Salisbury three weeks ago, resolved to do right by the standards of 1953, when the federation was formed and "partnership" promised. The resolutions called on the UFP government to give highest priority to removing racial restrictions on ownership of land. It asked for the Land Husbandry Act, and African education, to be reviewed and that pay and conditions of service should be the same for everybody.

More dramatically, it said that after the next general election (1962) the government should bar racial discrimination in cinemas, hotels, cafés and similar public places. This resolution was carried unanimously, and Sir Edgar Whitehead, the prime minister, said he would "fight like a tiger" to get a mandate for such legislation at the general election. In an encouraging speech, Sir Edgar said that straightforward white supremacy was dead as the dodo, and that the new policy of regarding everybody as a Rhodesian was the policy he believed in. The party congress—and Sir Edgar—are to be congratulated.



Tragically, however, they are far too late.

CAUSES OF DEATH

THE steady increase in deaths from coronary thrombosis in England and Wales over the last ten years is in part due to more accurate, or more fashionable, diagnosis, and to some extent has been offset by a fall in deaths attributed to other forms of heart disease. Coronary thrombosis is more prevalent in this country than in any other European country, but less prevalent than in America.

In 1950, deaths from tuberculosis (16,000) outnumbered those from lung cancer by four to three. Last year tuberculosis deaths had fallen below 4,000, less than a fifth of lung cancer deaths.

Percentage of all deaths (England and Wales)

How to save £150 millions a year

Simple really. Eliminate the annual loss on the farms of England and Wales due to the attack of insect pests (£80 millions) and the growth of weeds (£70 millions). It is much more than just a loss of money and crops. Into the melting pot go precious time and planning, costly labour, valuable raw materials and equipment potential. But for modern chemical controls the loss would be very much greater. Shell agricultural products, used on a vast and ever increasing scale, are progressively reducing this unnecessary wastage and helping to achieve higher yields from the land.

For further information, write to the Information Officer, Agricultural Division, Shell Chemical Company Limited, 170 Piccadilly, London W.1

Shell Chemicals SHELL

Acting by the standards of 1961, the African National Democratic party, at its congress last week-end, resolved to boycott the next elections. They will thus forfeit the 15 seats in a house of 65 offered to Africans (for the first time) under the new constitution. But to the NDP, "we don't want to sit next to whites in cinemas, we want one man one vote." Tactically, they may be wrong in choosing to fight outside Parliament; there is, however, hope that Mr Garfield Todd's New Africa party will fill the 15 seats with NDP sympathisers for them.

MURDER

A Family Crime

THE analysis of murders by the Home Office research unit (HMSO, 4s.) will doubtless be quoted to further their case by both supporters and opponents of capital punishment. The retentionists will point out that the total number of murders (including those classified as manslaughter under section 2 of the Homicide Act) has increased since the Act came into force: the annual average in the last three years was 160, compared with 143 before the Act. Further, the proportion of men with previous convictions has increased from a quarter to over a third, which on the face of it supports the argument that bad men have been encouraged to kill; half of those who committed sexual murders after the Act had had previous convictions for sexual offences.

On the other hand, the report also shows that, while the number of murders fluctuates considerably and inconsistently from year to year, the recent rise in murders has been much smaller than in other serious crimes; even over the last thirty years, the rise in murders is slight. Per million of the population the average annual number of murders was 3.2 in 1931-40 and 3.7 in 1960. Sexual murders of women, which are no longer punishable by death, have accounted for 7.1 per cent of all murders since the Homicide Act came into force; before, they accounted for 7 per cent. As regards girls under 16, over whom there has been most outcry, the report shows that the number murdered for sexual motives is tiny (only three last year). In a footnote, the report cites evidence in support of the suspicion that such murders occur in series, and are probably provoked by the publicity given to the first case.

In fact, what is made abundantly clear from the report is that murder is largely a family affair. Of the 51 child victims in 1960 (out of a total of 166 murders), nearly three-quarters were murdered by a parent or other relative; of the 71 women, over half were murdered, or suspected of being murdered, by their husbands. As the report states, if life is to be saved, a deterrent penalty is much less important "than investigating the kind of mental breakdown that leads to family murders." It is because these murders bulk so largely that nearly one-third of all murderers commit suicide immediately after their offence. The report also shows that the proportion of male murders committed for gain (a type of murder that still attracts the death penalty) has risen from 7.6 per cent before the Act to 19.6 per cent—though the actual numbers concerned are still tiny.

DOCK LABOUR

Decasualised Docks?

A MEMORANDUM distributed last week, over the signatures of the chairman of the National Association of Port Employers and of Mr Cousins for the Transport and General Workers, is the most encouraging event in the docks industry for years. It recommends that joint committees of employers and workers in ports throughout the country should consider a major advance to further decasualisation of labour in the docks.

At present over three-quarters of the 70,000 dockers in the country are not permanently employed. They are inscribed on a register, which ensures them a minimum income: but at the beginning of each day they do not know whether they will get a job that day or what firm they will be working for if they do. Not only does their income vary quite unpredictably; they also have hours of wasted time in which to sit around and brew grievances up to striking point. The casual docker's loyalties lie entirely with his fellow-workers: in this atmosphere men will enforce all sorts of uneconomic practices, such as the "carrying" of unneeded workers in a gang, refusing to operate labour-saving machinery for fear of working a mate out of a job, and so on. Most employers, too, are discouraged by the casual system from trying to engender loyalty and a spirit of co-operation, whether with pensions or with good-natured but intangible schemes such as sports clubs. Average earnings are high in the docks, but labour relations are as bad as can be.

The main advance towards decasualisation would be for employers to co-operate far more closely in forecasting their labour needs, for at least a week in advance. After all, the arrival of ships no longer depends on the trade winds. Men who are not needed for a particular week could then be selected by rota, informed in advance, and entitled to receive their fall-back pay without the demoralising business of having to turn up for calls. There is no reason why they should not take outside jobs for such weeks, provided that—in return for the privilege of fall-back pay—they agree to return to the docks when needed. Fair spreading of the burden of unemployment by rota in this way would help to remove the men's objection to decasualisation hitherto: namely that, if decasualisation were effected by each firm or group of firms signing up a larger roll of permanent employees, this would throw the risk of unemployment most heavily on the few casuals who remained.

COMMUNIST BLOCK

Defiant Albania

SINCE Mr Khrushchev openly revealed his quarrel with the Albanians on the first day of the Soviet party congress last week, neither side has shown any disposition to compromise. Day after day in their speeches to the congress, Mr Khrushchev's colleagues have added to, or embroidered upon, his original charge that the Albanian communist leaders were, in effect, defying Moscow's leadership and trying to turn the clock back. Mr Enver Hoxha and his friends have been accused among other things, of trying to sow dissension in the socialist family; of publishing only an "abbreviated and distorted version" of the Soviet party programme; of persecuting those Albanians who have been to Russia or who do not hide their pro-Soviet views; and of practically closing Albania to Soviet literature and newspapers.

The Albanians have not taken all this lying down. They at once despatched a letter to Moscow in which they flatly put upon Mr Khrushchev (disrespectfully referred to throughout as plain "Nikita Khrushchev") the responsibility for an open attack on the unity of the socialist camp. They went on to threaten to make public "by means of facts and documents" the "whole truth" about the relations between the Albanian and the Russian leaders. Mr Suslov has referred to this letter, in his speech to the party congress, as "a mixture of hypocrisy and slanderous insinuations." Inside Albania, the party's line has been made plain in a series of telegrams sent to Tirana by groups of workers and students; the eternal friendship between the Albanian and Soviet peoples is heavily underlined; Nikita Khrushchev is trying to destroy this, but he will fail "because his reach is short" and because his own people are not with him.

Mr Hoxha may or may not really believe that Mr Khrushchev is likely to be disavowed by his own party. He can take some comfort from Chou En-lai's prompt rallying to his support. Personal hostility to Mr Khrushchev, and the nagging fear that the Russian leader might contemplate a deal with Marshal Tito at Albania's expense, may also have played their part in stiffening Mr Hoxha's hostility. In any case it is now the Chinese and not the Russians to whom the Albanians look for economic and technical, as well as moral, support.

On Whose Authority?

IT is generally assumed that in directing his fire at the Albanians, Mr Khrushchev was really aiming at the Chinese. He has no doubt succeeded in getting his point across to the Chinese, but his indirect tactics have failed to avoid either what amounts to a direct clash with the Chinese or the danger of undermining the unity of the communist block.

this
aircraft
is
100 miles long

100 miles long, 10 miles wide and 1,000 feet deep, in fact . . . because rigid safety regulations say that ten minutes flying time, ten miles of lateral space and one thousand feet of vertical space shall separate all aircraft all the time they are using the air lanes. Now, multiply the *number* of aircraft that are flying . . . magnify their size . . . increase their speeds . . . and the problem of separation becomes difficult indeed. Obviously, accurate instrumentation, advanced electronics and even more advanced navigational aids are of paramount importance. In these three directions alone, Ferranti are making significant contributions to Britain's progress in the air.

FERRANTI
First into the Future

FERRANTI LTD. HEAD OFFICE: HOLLINWOOD, LANCS. LONDON OFFICE: KERN HOUSE, 36 KINGSWAY, LONDON, W.C.2

When Stalin decided to expel Jugoslavia from the communist camp in 1948 no other member ventured to disagree. But when Mr Khrushchev now publicly denounces the Albanians, Mr Chou En-lai at once rebukes him; and of the remaining ten members of the communist block, two, North Korea and North Vietnam, have demonstrated, by their refusal to attack the Albanians at the Soviet party congress, that they side with the Chinese. What is at issue here is not only the particular sins of the Albanians (and the Chinese) but the right of the Russians to hand down judgments on the behaviour of individual members that are binding on everybody else. "We must clearly understand," said Mr Mikoyan to the Soviet congress, that only by "choosing the attitude obligatory for communist parties" can one count upon the friendship of the Soviet people and party. The question is how, and by whom, it is to be decided what the obligatory attitude is to be.

How far the Russian quarrel with the Albanians will be pushed is not yet clear. They have not been formally expelled from the Warsaw pact, although Herr Ulbricht has taken it upon himself to say that they have violated its principles. Mr Khrushchev may feel that in the circumstances he would prefer to go no further and that a little vagueness about the status of the Albanians might be no bad thing. He might, on the other hand, find himself forced to thrash the matter out in a private conclave of the twelve communist parties in the sequence of international communist meetings that must follow the congress.

TEACHERS

Schoolmasters Join the Class

THE Minister of Education has taken an obvious gamble (as well as having to eat some of his own words) in offering a place on the reconstituted Burnham committee to the National Association of Schoolmasters. The NAS has been a militant, sex-discriminatory outfit that has earned itself just over 25,000 members, few outside admirers and some useful publicity by pressing male teachers' salary grievances without regard for the policy of equal pay. Its nuisance value has not lain so much in the staggered one-day strikes it has lately held in its local strongholds as in the leap-frogging competition over the basic scale that it had earlier worked up with the militant wing of the National Union of Teachers. Part of the NUT's antics this year have been explained by their fear of losing militant members to the NAS. For this reason alone the NUT, despite its cautious reception of the news, should not be sorry to see the NAS confronted with the responsibilities of wage negotiation.

The NAS's accession to respectability raises some intriguing questions. It has promised to respect equal pay in the workings of the Burnham committee, but what it does outside will be another matter. It is possible in the short run that the NAS will continue to pick up recruits from the dissatisfied males in the NUT. The NUT will, however, retain its overall majority on the teachers' panel, and if the distinctive NAS policies fail to impress themselves on future Burnham awards there could eventually be a disillusioned swing back to the big battalions. Should the Minister now decide to take in the one sizeable teachers' organisation left out in the cold, the National Association of Head Teachers (14,000 members), the teachers' side of the new Burnham committee will at least be more representative.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out this week:

ISRAEL

Israel, without an effective government, faces a severe economic crisis. The report analyses the problem of inflation, its short and long term causes, the difficulty of imposing remedies, and the political stalemate. It considers the deteriorating trade position, the possibility of devaluation, and Israel's approaches to the Common Market.

It describes developments in various industrial sectors, the recent population census, and increasing immigration.

FAMILY SPENDING

More on the Home

IN 1959, the average British family, in the statistical sense of 3.08 persons, spent £15 10s. a week, of which one-third went on food. In publishing some results from the small-scale family expenditure survey, which has been going on continuously since the beginning of 1957, the Ministry of Labour shows that more of the average budget in recent years has gone on the home and on transport, particularly private motoring, and less on food and clothing, since the large-scale inquiry made in 1953.

FAMILY BUDGETS IN 1959

Weekly income of household :—	£10–£14	£20–£30	£50 or more
Number of persons ...	3·15	3·61	3·91
	Per cent of total household expenditure		
Housing	10·0	8·5	5·9
Fuel and light	7·7	5·0	4·4
Household durables .	6·9	7·3	6·8
Transport	5·9	10·7	9·9
Food*	36·7	30·8	23·9
Clothing	8·7	11·0	11·9
Drink and tobacco* ..	9·5	9·8	8·3
Services	7·1	9·2	20·5
Other expenditure ..	7·5	7·7	8·4
Total	100·0	100·0	100·0

* As usual, people were coy about their indulgences —there was obvious under-recording of expenditure on drink, smoking, meals out, chocolates and ice-cream.

In part such trends reflect changing tastes in a society as it grows more prosperous, in part the relative shifts in prices. For instance, as the first table shows, the richer the family the smaller is the proportion of its spending that goes on housing but the larger the proportion on clothing. But average expenditures on these items did not change in these directions between 1953 and 1959 because housing has become relatively dearer and clothing relatively cheaper.

In 1953, the well-to-do spent less on TV and radio sets than those with moderate incomes; this was no longer true in 1959. Stereophonic equipment, slim-line television, the second wireless set—as well as the mechanisation of the home—were attracting much more of the middle-class budget, at the expense of public entertainments and domestic service.

SOME "SPARE" SPENDING

Weekly income of head of household :—*	Over £20 1953	Over £30 1959
	Weekly expenditure in shillings	
Gas and electric appliances	5·2	15·5
Domestic help	20·4	21·2
Radio, TV and musical instruments	2·3	10·8
Books, newspapers, etc.	7·6	7·9
Cinemas	1·9	1·1
Theatres and other entertainments	10·0	8·0
Total expenditure	543·4	661·2

* Income of main earner, as opposed to total household income in previous table.

Using the Survey

ONE of the purposes of this continuous survey, taking information from 3,000 families each year, is to keep a check on the "weighting" of the retail price index and another is to improve the estimates of consumer expenditure in the national accounting. But a lot more should come out of this survey than just household spending—questions are asked about taxes, insurance, mortgages, housing, business expenses, and instalment buying. The processing of this material, which has been pitifully slow, should be speeded up now the Ministry of Labour has its own electronic computer.

From this feast of possible studies, two immediate ones suggest themselves. The first is to see whether the retail price index needs revision. There is as yet no official guidance on this, but a rough calculation suggests that if the current index were re-weighted on the 1959 spending pattern, it would be revised upwards by about half a point. Secondly, the information about housing should be looked at immediately to try to see how big a shake-out has followed the 1957 rent act. It seems that a household with an income of £10-£14 a week in 1953 paid an average of 17s. a week for an unfurnished house or flat; the comparable household in 1959 might be in the £14-£20 income bracket and would then be paying 25s. 9d. in rent. At the top end of the scale, households with £30-£50 a week coming in during 1953 were paying 29s. in rent, those with higher incomes 30s. 5d.: in 1959, the corresponding rents for the same income groups were 35s. 7d. and 50s. 1d. At the lower end of the scale households with £3-£6 in 1953 paid 12s. 3d. in rent; households with £6-£8 in 1959 paid 20s. 1d. in rent. Including repairs and an imputed rent for owner-occupiers, housing was still taking less than 10 per cent of the average budget in 1959.

Bills in Prospect

The new session of Parliament, which will be opened by Her Majesty on Tuesday, will no doubt be remembered in British history for its watching brief over Britain's approach to Europe, and for the inauguration of likely experiments in British economic policy, much more than for its legislative programme. But some advance comments deserve to be made on the major pieces of legislation that appear to be in prospect for it.

THE biggest new bill—possibly a monster of 80 or more clauses—will probably be the **Transport Bill,** which will free the top railway management of administrative concern for London Transport, canals and docks, and the state-owned bus and road haulage fleets. The bill may cause some controversy inside the Tory party because some £1,200 million of railway capital is to be written off or put in a suspense account (leaving only about £800-£900 million on which interest at varying rates up to 5 per cent will still have to be paid). But perhaps its most important succour to Dr Beeching is that the Government has at last promised that the railways will be freed of the Transport Tribunal's control over fares and charges—except in and around London where officialdom clings to the mistaken belief that public transport still enjoys a position of monopoly—and from present restrictions on property development. Changes may also be made in existing safeguards for coastal shipping from competition from inland transport; these safeguards have never been very effective and it would be wise to strike them out of the statute book altogether. In general, however, the question whether railways will ever again pay their way must depend on whether the Government and Dr Beeching prove to be realistically modest when they eventually decide what shape and size of railway system a motorised Britain should afford.

Dr Hill should look closely at the new **Water Bill** Mr Brooke left on his desk. It is designed to inject a measure of rational order, and some economies of scale, into the medley of unco-ordinated private and public enterprise that provides Britain's present system of water supply. To put responsibility for flood and drought prevention into the same hands appears sensible in principle; so does the idea of basing control by the new water conservation authorities upon major watersheds. But to enable water to be pumped from wet to thirsty areas, there should be provision for effective ministerial co-ordination of the new authorities. The boards of the new authorities should be executive rather than representative, and their financial powers ought to be made a good deal stronger than those that Mr Brooke was considering earlier this year.

THE deplorable **Immigration Bill,** which will restrict Commonwealth immigrants except when they can show that "they have a job waiting for them or are needed," may not be mentioned in the Queen's Speech. But as this legislation is coming, let it be as liberal as possible. First, all skilled workers from the Commonwealth should be allowed into Britain automatically, for the economy of the country needs every skilled worker it can get. Secondly, there should be a provision for the free entry of at least some unskilled workers—i.e. there should not be a complete bar even for those who have not lined up jobs with short-staffed industries (such as hospitals and London Transport) from Jamaica, but a mobile curtain for free immigrants that moves up and down with the state of demand for labour. As Southern Irish labourers will manage to come here anyway, the legislation is bound to be colour-bar-discriminatory in practice; if unnecessary restrictions are imposed on white immigrants in a hypocritical attempt to pretend that it isn't, these will not make the bill better, but worse.

The Government's first attempt at a new **Weights and Measures Bill** made such heavy weather that it was withdrawn last summer and a revised version substituted. This is expected to be reintroduced in the new session. It meets criticism on some points of detail by bringing more goods into the net—soap and cosmetics for example—but inexplicably still does not define the size of a small brandy or sherry. Some of the most objectionable features of the old bill remain, like the latitude given to marking packs with their gross rather than their net weight, which looks like an open invitation to stuff out with packing. And in cases where the new draft appears deliberately vague about the information that, say, greengrocers or fishmongers are legally obliged to give their customers, it actually provides shoppers, especially the timid ones, with rather less protection than the old bill.

Mr Marples's **Road Traffic Bill** foundered in the Lords last session, but it is worth persevering with it. The original bill stiffened penalties for all road offences. Thus obligatory twelve-month disqualification from driving was laid down as the penalty for six first offences, and discretionary disqualification for a further 25; anybody who committed three of these lesser offences within any three-year period was to suffer an obligatory additional disqualification of six months, even if only endorsement had been imposed in the first two convictions. The provisions to deal with drunk drivers said that account could be taken by the courts of evidence obtained by breath, blood or urine tests, and of refusal to undergo such tests; it was the prolonged controversy over this clause which delayed the bill's passage, although the provisions for disqualification were much more important.

A year ago ministers indicated that the Government was considering "comprehensive legislation covering health, safety and welfare in **shops, offices, and other non-industrial premises.**" This Factory Act-type legislation—laying down the number of cloakrooms and so on that employers of white collar workers must provide—may be introduced this year, because the Government probably wishes to overtake a rather untidy private member's Offices Act of 1960 which would otherwise come into operation in June of 1962. Two points should be made about it. First, the Government should try to avoid the age-old trap of first issuing an impossibly draconian preliminary list of suggested requirements that would drive many small employers out of business—and then having to withdraw some of the more ridiculous of these, amid a loud outcry that it is giving way to vested interests. Secondly, there should be an end to "crown privilege" in this matter; any new office inspectors should be allowed to look at government offices as well as private offices, and above all at some of the insanitary office accommodation in Whitehall itself.

MR MACLAY is due to introduce a **Housing (Scotland) Bill** in order to come more closely (but not entirely) into line with Mr Brooke's new Housing Act in England. Scottish housing conditions (including a large slum clearance programme) are rather worse than in the south, but many Scottish councils have been charging absurdly low rents and letting the burden fall on the ratepayer. Mr Maclay should cut down Exchequer subsidies to Scottish councils which do not charge "reasonable" average rents; for this purpose average rents at this year's revised valuation figures for council houses (£40-45 a year) would still be absurdly low.

A minor, but hotly contested, measure (which has already

prompted one Scottish Tory from a fishing constituency to resign the Whip) is the **Salmon (Drift-net Fishing) Bill.** This will prohibit drift-net fishing for salmon around the Scottish coast, both inside and outside territorial waters, with power of extension to areas outside English territorial waters if necessary. Although this may look suspiciously like protection for an upper-class sport, it is eagerly supported by operators of stake nets in the Scottish rivers, who have suffered from the rapid rise in drift-netting by subsidised inshore fishing vessels off the Tay and Tweed, where a state of naval warfare has existed between the rivals. It should provide some interesting debates.

Among other bills in prospect, Sir David Eccles's reform of the Burnham negotiating machinery for **Teachers' Salaries** will now be delayed to allow for discussion among the interested parties. By contrast Mr Lloyd has hinted that he may bring forward in advance of the budget his limited **Capital Gains Bill,** which will ensure that "certain transactions such as short-term deals on the stock exchange and in property which are intended to bring in spending money and incomes will be taxed as such."

Any such hurrying forward would be a palpable sop designed to make his wages pause look fairer ; a hurried bill would probably either have to look absurdly narrow to the trade unions, or else be much wider in its effect than it was originally meant to be. One's fear is that the Tories may be going to make the same sort of muddle as they did with the Excess Profits Tax, and introduce a measure that is too silly to last. If so, serious consideration of the very reasonable case for a capital gains tax on all property sales (which should be tied in with a new approach to the problem of land planning) may be jeopardised. A bill that should certainly be brought forward is to reform the structure of **Local Government in London** along the lines recommended (with some reservations on education) by one of the best of recent royal commissions.

The proposed measure for **Protection of the Investor**—regulating the acceptance of deposits from the public—has run into constant drafting difficulties ; it might be better to hold it over until after the full Jenkins report appears. There are indications that the promised bill to create an independent authority to run the main **Civil Airports** will be delayed.

BOOKS

Unbreakable Hero

The History of Broadcasting in the United Kingdom, Volume 1: *The Birth of Broadcasting*
By Asa Briggs.
Oxford University Press. 415 pages. 42s.

BRITAIN is a nation noted for the impermanence of its idols: the respect and even adoration felt for such figures as T. E. Lawrence, Haig and Chamberlain can turn swiftly to ribaldry and contempt—perhaps justly, for we are noted equally for our gullibility in the face of large claims on our sensibilities. The mirth that greeted Lord Reith's forlorn plea, in *The Times,* for advice on the destination of his diaries of fifty years may be thought to have presaged another such reversal of image ; but, in fact, the diaries that matter, those between 1922 and 1938, have already fallen into hands worthy of them and, taken together with the considerable body of reminiscence and record of the period available to Professor Briggs, present us with an unbreakable hero, a man who occupied a strategic post in modern British history and changed, for the better, all our lives, who had, as he saw it, "a great work to do" and did it, undeniably, greatly.

For "The Birth of Broadcasting" is above all about Reith, as the subsequent volumes in this meticulous and scholarly history of a social revolution also cannot fail to be. Nothing that went before his advent to the general managership of the new British Broadcasting Company (and not much that came after his retirement in 1938 from the corporation which grew out of the company) is so important as Reith, so relevant to the shape of mass communication in Britain today. Nor is it remarkable, after a reading of this history, that this influence should last so long: what is remarkable is that it should have been founded not in the life of the corporation but in the four years that preceded its charter, four years in which radio grew from toyhood to social force.

Professor Briggs's first volume (two or three more are promised) concerns itself chiefly with those four years, 1922 to 1926. At the beginning of that period, in the face of intense opposition from government departments (chiefly the Post Office and the armed services), which felt that they had interests vested in radio and that the security of the country depended on those interests, Marconis and other firms agreed among themselves and finally with the Post Office to set up an organisation for the general dissemination, as opposed to the point-to-point transmission, of "messages by wireless." Their interests were neither the security of the country nor the entertainment of its people, but the proliferation of their own manufacture of radio sets, so much so that the company formed to broadcast for them was virtually non-profit-making, its dividend being fixed at 7½ per cent.

That they managed to get this far was not Reith's doing: it was only after the consortium had begun business and was already transmitting a minimal programme that he, at a loose end and ambitious, applied for and captured this unexpected stronghold of influence on the life of the whole nation. But it was he who, suddenly enlightened on the nature of his duties and their scope, guided the enterprise out of the hands of financial and sectarian interests and into the hands of his deeply respected "public," using the weapon of unified control which the manufacturers had insisted on if the chaotic example of America was to be avoided.

Professor Briggs shows that it was in these years of private enterprise that the characteristics of the BBC as we know it were bred and not, as is generally thought, in the early years of the corporation, when popular imagination saw it as an instrument of government (an impression understandable in view of the role it played in the general strike of 1926 when, while being as fair as it could, it did much to ease the government's task).

The key to Reith's success was his absolute control of an organisation itself in absolute control. In his view the public (never the masses, always the public) were intelligent but deprived, and with the mystery "God-given" into his hands, he intended that their deprivation should not last long, that their taste and welfare should be raised by "the brute force of monopoly." This view was not universally popular: there were those who saw in broadcasting not the instrument for enlightenment, education and culture that Reith saw, not even the means of giving the public the trifling entertainment which Reith allowed only in small doses—and then diluted—but a way of undreamed of profits. The *Daily Express* among others conducted an intensive campaign against the monopoly, Reith and the GPO, the while offering to provide a free (that is, sponsored) programme itself—an offer mercifully not taken up by the Post Office, which alone issued licences to broadcast.

But Reith's friends were powerful, too, and the major newspapers (this one among them) supported him then in his contention that this was Promethean fire, to be treated carefully and controlled if chaos was not to supervene. After two committees of inquiry the public service for which he had laboured so hard was incorporated by royal charter. Life in Britain today would have been different if it had not.

Naturally, if fortuitously, the publication f this volume is opportune to the deliberaons of the Pilkington Commission, conerned as it is, though in a much different etting, with much the same arguments bout competition and monopoly as raged 1926. Much of Professor Briggs's source aterial will no doubt be new to the comissioners ; it cannot fail to be grist to their ill. His own conclusions from the early vidence are clear enough :

> The temptation to exploit large numbers of people has grown as it has become abundantly clear that effective technical means lie at the disposal of would-be exploiters and that the profits of exploitation are huge. Moreover, the moral issues have been blurred by a great deal of loose thinking and equally loose writing. Much of the recent writing on the BBC falls into this category.

Two Passages to India

A Time in India
By C. Ross Smith.
Macdonald. 292 pages. 30s.

India: *Mirage and Reality*
By Peter Schmid.
Harrap. 256 pages. 25s.

THESE are two remarkably similar books. Mr Schmid is an observant Swiss with n eye for a picture and very well served by is translator. Mr Ross Smith is an Ameri-an who has spent much time in Paris, every it as sharp in spotting and reporting. The ommon quality they bring is an element f discovery and wonderment about India hat nowadays largely eludes the British, whose forebears wrote on India with greater cholarship and romance. Messrs Schmid nd Smith are seeing it all for the first ime, with eyes unimpeded by the past lories and shames of an imperial raj or by redispositions and affections for India and ndians that have been released since indeendence among so many British students f Indian affairs.

It is as if one were seeing it all again for he first time—the monuments, the millions, he squalor and the hope. The ambivalence —favourite Indian word—is well brought ut. "Dialogue with a Hindu is like a game f tennis in a fog. You demand precise letails and facts: the Hindu will evade them y lengthy general disquisition." So Mr Schmid ; he might almost have shared that hree-hour car ride to Bokhara during which n intendedly straightforward question bout the present condition of the Indian oal industry was taken back to 1925 and brought no further up to date than 1927. Both writers make shrewd—and for them riginal—assessments of Indian societies and eligions. Their tourism too is of a high rder. If Mr Ross Smith loses himself motionally in contemplation of the Taj Mahal, he gets Fatehpur-Sikri gloriously ight: "All men must have felt completely t home at Fatehpur-Sikri." And they make honest attempts to come to terms with the rotic sexuality of the sculpture that adorns Khajuraho and so many other Hindu temples.

On politics and economics, neither book offers conclusions of high significance. Indeed, Mr Schmid has a chapter boldly labelled "The Steel Battle for India" that can only be characterised as superficial. There is little on government, planning, or the prospects of Indian development. But both books paint a comprehensive and occasionally vivid social and cultural background, with all the richness and internal contradictions, which in the end will determine whether a comprehensive Indian government will prevail and whether the Indian people will grasp their opportunities for betterment. They are two literate attempts to solve some basic Indian puzzles.

Tawney's Century

Essays in the Economic and Social History of Tudor and Stuart England
Edited by F. J. Fisher.
Cambridge University Press. 235 pages. 30s.

THESE essays were written in honour of R. H. Tawney and presented to him on his eightieth birthday. Similar tributes have recently been paid to Sir John Neale and Professor Notestein, so that with the publication of these essays each of the great trio of Tudor and Stuart historians can contemplate his triumphal arch. Such monuments often make the observer reflect gloomily on the contrast between their stereotyped design and craftsmanship and the inspiration of the victories they commemorate. Here the first and last panel form striking exceptions. Mr Coleman combines precision with vitality in his description of the activities of that "rich tycoon," Sir John Banks, the Restoration financier, setting these firmly in the setting of monetary scarcity. Professor Fisher in his introductory essay, unfortunately the shortest in the book, sets "Tawney's century" in a new perspective. Starting with a happy quotation from *Lloyds Bank Review* on the underdeveloped parts of the world today, he draws the parallels with the economy of the late Tudor and early Stuart period, and suggests that "the task of the historian is less that of demonstrating the expansive force of economic ambition than that of examining the impediments that contained it." Professor Tawney has stressed the impetus given by the acquisitive forces in society ; Professor Fisher is concerned to emphasise the technological and social obstacles to economic growth.

The other essays deal with agrarian history, trade and government finance, apart from Mr Hill's contribution, which seeks to clarify the interdependence of Protestantism and capitalism. Mr Hill assumes that some connection between them is now accepted by most historians with the conspicuous exception of Professor Trevor-Roper. However, two of the contributors to this volume are also heretics. Professor Fisher finds the attempt to identify a capitalist ethic distinct from the simple and enduring desire for economic gain unconvincing ; and Mr Coleman refuses to regard Sir John Banks as moved by "a nebulous Protestant Ethic urging frugality and mysteriously favouring the reinvestment of gain," but shows him responding in a practical if unedifying way to the opportunities open to a man with money to lend at a time when money was scarce. Mr Hill's argument relies on a specialised definition of the "capitalist spirit," and his emphasis on Luther's theology stands in interesting contrast to Professor Tawney's own dismissal of Luther as a "capricious volcano," notable for his patriarchal ethics and his "hatred of economic appetites."

Mrs Thirsk has a thoughtful essay on rural industries, in which she suggests that their location should be explained more by the social structure of local communities than by the factors of easy access to raw materials or the demands of the market. Her evidence is drawn from the remoter parts of Westmorland and the Yorkshire dales as well as from southern England ; and she has given a valuable lead to local historians anxious to relate their work to general problems. Mr Aylmer adds an extended footnote to his study of the civil service of Charles I. Mr Ashton has a useful account of the splits within the City produced by the policies and expedients of Charles I's government ; but he is disposed to exaggerate the novelty and sophistication of his main argument. Mr Stone has an attractive essay on Robert Cecil's rich harvest of wealth from office. Limitations of space have prevented him from showing how he reaches all his figures, but he certainly establishes that Cecil "used his official position for personal financial gain on a very large scale." Only a much fuller study could establish and reconcile the conclusion that in respect of official morality "things had clearly gone downhill sharply during Salisbury's tenure of office" and that Salisbury was "a shrewd and clear-headed statesman who worked actively to further what he conceived to be the best interests of his country."

Russia's Trade Policies

The Challenge of Co-existence
By Milton Kovner
Public Affairs Press, Washington. 136 pages. $3.25.

"WE value trade least for economic reasons and most for political reasons." Thus Mr Khrushchev in 1955 to five visiting US Senators, and Mr Kovner writes to illustrate and establish the theme. This study provides a salutary—and at present a timely—reminder that sabre rattling conveys only part of the Soviet challenge: more subtle and continuing economic challenges may ultimately be much more decisive. The argument is familiar to specialists, but in chapters devoted to Soviet policies towards less developed countries

new insight is provided. We are reminded that the manipulation of trade and trade policies is much easier and of greater advantage for a totalitarian power than for a democracy. Trade can be adjusted in order to bolster some regimes, or to inhibit —perhaps destroy—others: Soviet imports of Egyptian cotton between 1956 and 1959, and the economic blockade of Jugoslavia from 1949 to 1953, are cases in point; decreased trade with Australia from 1954 to 1959, and the careful wooing of the Finnish economy, are others.

The main flaw in the work is the assumption of Russia's omnipotence in economic affairs. There is not sufficient stress—or documentation—on the pressing problems that afflict the Soviet economy continuously. Mention is made of some shortages, and the growing pains of each five year plan. But Russia's dependence on imports in, for instance, rubber, cotton, wool and other vital raw materials, makes it utterly dependent in several areas of trade; again, the internal demand for many capital and consumer goods can no longer be restrained as in earlier decades. Soviet trade—and hence Soviet foreign policy—is less independent than Mr Kovner's study suggests.

Statistics are usefully employed throughout the book, but only in the baldest form of percentages and trends: the study would be more valuable to specialists (not least to economists and Kremlinologists) if there were a closer analysis of trading figures from yearbooks. The most useful chapters relate to Soviet policies towards underdeveloped countries, and the author skilfully examines Russian strategy for speeding the end of colonialism.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

McCone

America's New Spy Master

WASHINGTON, DC

SPYING is big business in America. The Central Intelligence Agency, roughly the equivalent of Britain's MI6, costs the taxpayers well over $500 million a year. It has about 10,000 employees in Washington, though there has been a cutback in recent years, and many more abroad. Those at work in Washington are scattered through about thirty office buildings, but are shortly to transfer themselves and their closely guarded files across the Potomac River to a brand-new, $50 million headquarters in Virginia.

The CIA is also about to get a new chief. President Kennedy has selected Mr John McCone, who was Mr Eisenhower's last chairman of the Atomic Energy Commission, to succeed Mr Allen Dulles as Director of Central Intelligence and there seems little doubt that the Senate will confirm the appointment when it meets in January. Mr McCone is of craggy Scottish descent and he is a rich Republican and ardent Roman Catholic who is reputed to have a molten temper and a whim of iron. The liberal wing of the Democratic party disapproves of the President's appointment of Republicans to high positions in the Administration and it disapproves particularly of Mr McCone, who has been a firm believer in massive retaliation and was a strong opponent of the moratorium on nuclear tests.

But leading conservative Democrats on the Congressional Joint Committee for Atomic Energy are believed to have sponsored Mr McCone for the central intelligence post because he established flattering relations with them when he was chairman of the Atomic Energy Commission. The directorship of the CIA is said to be one of the two or three most important choices that a President may have to make and the CIA is under fire in Congress. Mr McCone's backers evidently believe, in the light of his past performance, that he is well fitted to handle just such a situation. What his critics fear is that this zealous man will behave in his new job like a sort of McCone the Knife, making the hot role that the CIA has been playing in the cold war still hotter. But the Kennedy Administration apparently feels confident that, while Mr McCone will employ his undoubted administrative talents to prune the agency's overgrown bureaucracy, he will refrain loyally from embarking on adventures similar to that in Laos last year and in Cuba this year—adventures of a sort that this scalded Administration is far from wishing to repeat.

The Central Intelligence Agency does not confine itself to spying. It is credited with having helped to oust Mr Mossadegh from the premiership in Iran in 1953, and Dr Arbenz from the presidency in Guatemala in 1954. Last year, in Laos, it apparently helped to persuade the strongly right-wing General Phoumi Nosavan to leave Vientiane and raise a southern army to drive the neutralist Prime Minister, Prince Souvanna Phouma, from power, instead of accepting his offer to join the cabinet as Vice-Premier and Minister of the Interior. This action was taken in the teeth of warnings and protests by both the French and the British, who predicted, correctly, that it would provoke a communist counteraction that would have more chance of success than the CIA's gambit. The agency's stock has been low since a U-2 spy aircraft was shot down in Russia in 1960, and it slumped heavily after the fiasco of the attempted landing of anti-Castro rebels in Cuba last April.

The anti-Castro forces were equipped and trained under CIA auspices in Guatemala on "ranches" and at a "shrimp factory" that the CIA rented as cover for the operation. Since the Cuban venture's ignominious collapse, a first-class row has been going on behind the scenes involving the Joint Chiefs of Staff, the Department of State and the White House, but at least some Americans are more concerned with the dubious morality of the Cuban affair, even if it had succeeded, than with who is chiefly to blame for its failure. Reportedly the Cuban rebel "leaders" were treated like pawns and a Congressman has accused the CIA of trying to "predetermine the composition and orientation of the proposed Cuban government" that was to have replaced Dr Castro.

SENATOR EUGENE MCCARTHY thinks that Congress would not have permitted the Cuban adventure had it been told about it in advance. It was not. At present, Congress votes money for the agency, but it does not know how much the CIA gets because the CIA's budget is concealed in appropriations for other departments, like the new fur coat in the expense account of the newspaper correspondent who said it was in there somewhere but that he defied anyone to find it. The agency is believed to get considerably more than the entire cost of the State Department. The Director of Central Intelligence reports once or twice a year to a dozen highly influential members of the Appropriations and Armed Services committees, but apparently they ask him very few questions. One member, Senator Saltonstall, said that "as a member of Congress and as a citizen" he preferred not to have the information that Mr Dulles was willing to give. Another, Senator Russell, said that it "chills the marrow of a man to hear about" such activities as those of the CIA.

Senator McCarthy, however, has proposed, as a result of recent mishaps, an enlarged congressional joint committee to supervise the CIA. This revives a proposal made five years ago by Senator Mansfield, and supported by the then Senator Kennedy, for a joint committee that would make itself "fully informed" about the CIA, with the right to subpœna witnesses and call for documents. Under strong pressure from President Eisenhower, Mr Allen Dulles and his brother, the late John Foster Dulles, who was then Secretary of State, the Mansfield proposal was defeated—and Senator McCarthy's new attempt to gain greater congressional control over the CIA is not expected to fare any better, even though Senator

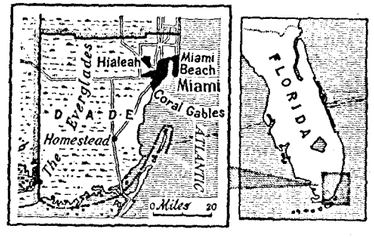
Kennedy is now President Kennedy. "You can't conduct spy operations and tell Congress everything," explains Mr Kilday, a Democratic member of the House Armed Services Committee.

Last May the President reappointed Dr James Killian as head of a board of foreign intelligence consultants, a post that Dr Killian held under Mr Eisenhower, when the CIA continued to grow in power and prestige without any interference. Mr Kennedy has also asked General Taylor to review American intelligence work in the light of the Cuban debacle. It seems possible that in future the agency will be expected to leave the planning and mounting of military undertakings to the military, and may also be required to co-operate more closely with the State Department as well as with the Department of Defence. But neither of these seems inclined to take over from it what Americans call the "department of dirty tricks" which, in conjunction with the agency's huge financial resources, its thousands of operatives and the almost unrestricted power of its director to use both for secret projects in foreign countries, gives thoughtful Americans most cause for alarm.

The CIA was set up in 1947 by the National Security Act, which gave it the three functions of co-ordinating the work of the other intelligence units, performing such other functions relating to national security as the National Security Council, a central policy-planning agency for the President, may direct, and acting, through its director, as chief adviser and consultant on intelligence matters to the President and the National Security Council. Because there were considerable fears that it might become a sort of Gestapo, the CIA was expressly forbidden to engage in domestic security functions, a ban that still applies. In 1949 it was made exempt from any law requiring disclosure of its organisation, functions, numbers or finances. Its subsequent vast growth has been due partly to the cold war and partly to the agency having Mr Dulles as its director while his powerful brother ran the State Department. Both brothers had ready access to the President. The National Security Council directed the operations of CIA, but Mr Dulles advised the Council, and the President, what operations the CIA should undertake.

President Eisenhower allowed the CIA to recruit and train an invasion force against Cuba, because he thought Cuba was drifting into communism, and President Kennedy allowed the invasion to be launched. This month Mr Kennedy told a press conference that American aid was intended to help countries that wished to maintain their sovereignty and independence. But withholding aid from governments that seem to be yielding up their independence by going communist is one thing; subterranean acts against such governments are quite another. It is said in defence of such CIA activities that they are intended to bolster the "democratic forces" in foreign countries, to counter Russian bolstering of anti-democratic forces. This week, however, Mr Harlan Cleveland, an Assistant Secretary of State, said that "the best answer to the stealthy Soviet practice of indirect aggression is often not reciprocal stealth but the highlight of publicity." Some Americans think the time has come to end the sort of morality that believes it is right to do wrong so long as the right side is doing it.

Atomic Testing for Peace



THE President's announcement that the first step toward developing peaceful uses for atomic explosions is to be taken in the salt caverns of New Mexico comes, probably not by accident, in a week when the world is preoccupied with the fall-out from the Russian tests of atomic weapons. The experiment, which will probably be made in December, is primarily to determine whether the heat released by an explosion of the force of 5,000 tons of TNT can be stored and tapped for the production of electricity. It would have taken place sooner but for the desire of the United States to do nothing to arouse Soviet suspicions while the talks on a ban on nuclear tests were still proceeding. Observers from countries which are members of the United Nations, including the Soviet Union, will be welcome to watch Project Gnome, though not to examine the explosives.

No radioactivity will escape into the air from this experiment, just as none has escaped from the handful of weapons tests which the United States has conducted underground since the Russians resumed testing. America has harvested such golden opinions from this restraint (and from the Russians' lack of it) that Washington would be most reluctant to start testing in the amosphere, even though it felt compelled last week to reserve publicly the right to do so. Moreover the bold way in which Mr Gilpatric, the Deputy Secretary of Defence, brandished America's big nuclear stick last weekend suggests that there is no urgent need for the United States to join the Russians in polluting the atmosphere; the fears of American weakness, which were so profitable to Mr Kennedy in his election campaign, seem to have melted away now that the Democrats have both the full facts and the responsibilities of office.

The pressure on the President to resume testing in the open air is apparently nothing like as heavy as the pressure was to resume testing underground, to which he acceded once the Russians had broken the moratorium. But the science of nuclear weapons does not stand still and Mr Kennedy has already appointed a group to consider the question. If the Russians seem to have learned a great deal from their present series (whose pace has surprised the Americans) and no new moratorium, with full inspection, can be achieved, the pressure on Mr Kennedy will rise. This will be particularly true if the Russians appear to be making rapid progress toward an anti-missile missile, which cannot be tested underground and which may someday represent the difference between destruction and survival. But in other tests as well the country limited to underground explosions is at a disadvantage compared with one which has no scruples about radioactive fall-out.

Reprieve for Metro

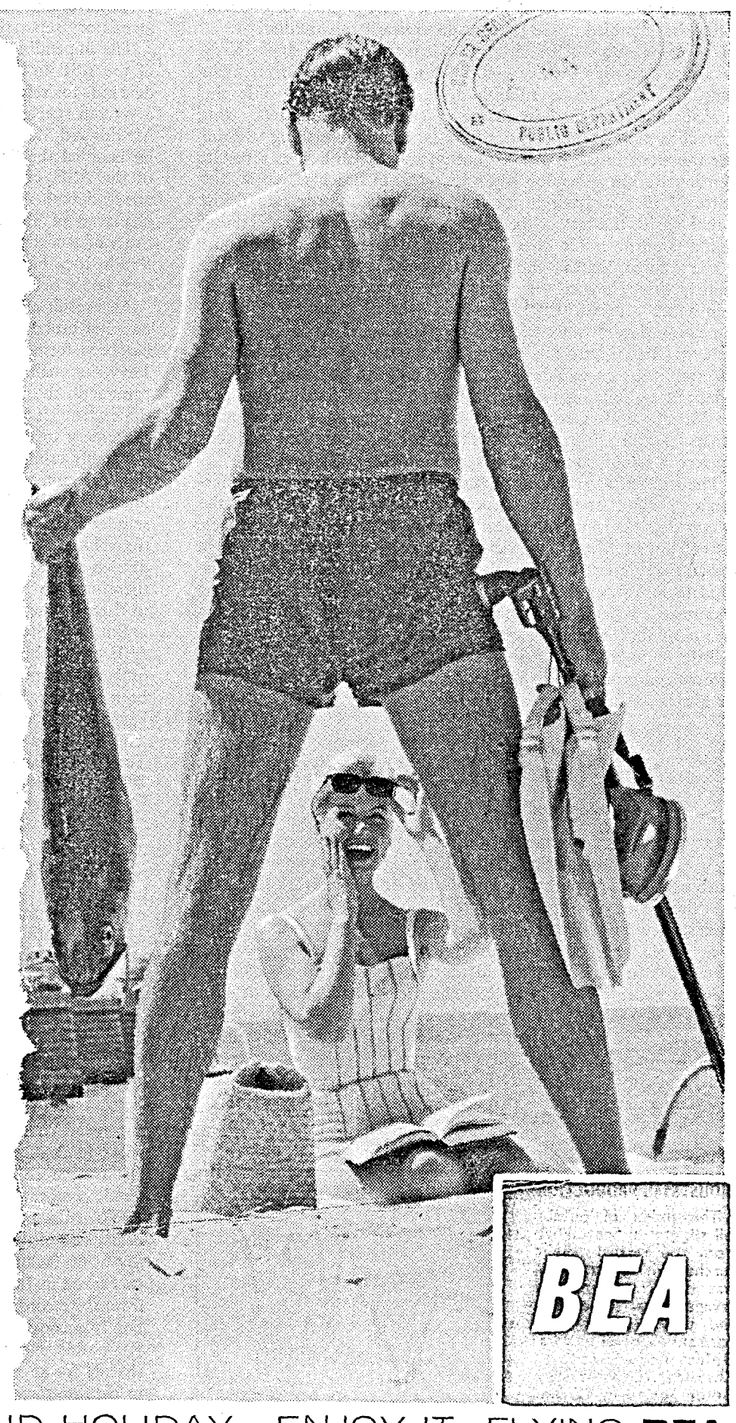
THE reputation of Miami is said to have been founded on fast women and slow horses, but recently this corner of the sunshine state has attracted attention for a more sober undertaking—the introduction of a regional form of government novel to the United States. Last week, however, it looked as if the four-year old metropolitan government of Dade County (known as Metro) might meet an untimely end; at a public referendum in the county voters were asked to approve a string of amendments that would in effect have killed the experiment. To the surprise of some and the intense relief of its backers, Metro pulled through. But with 48 per cent of the votes cast in favour of the hostile petition the future of Metro remains uncertain.

The idea of imposing a new layer of government on top of existing local authorities has been controversial from the start. The staunch supporters of Metro—civic leaders, business groups, the local newspapers—argued that only regional planning and administration could restore order to public services in the Miami area. Not only had responsibility for them been divided in the past between 26 municipalities, but population was also pouring into the region, much of it settling in the unincorporated hinterland where builders were hard at work converting patches o

TOMORROW
he'll be back at work–and loving it

'MEN WHO TAKE RESPONSIBILITY MUST TAKE A SECOND HOLIDAY'
MEDICAL OPINION AGREES

■ **Hard work won't kill you.** Men of a certain calibre actually thrive on it. But these are the very men who *must* take a second holiday. They need more than one break a year – and if they take it, they enjoy their work more. They do more of it and do it better. They enjoy living and do it better. They live longer.



This is a summary of the conclusion reached by medical men* concerned with the health of the nation's top management. Their work has convinced them that for men in important positions a second holiday is no luxury. It is an absolute necessity.

■ **In these days of rapid air travel** it is an unexpected pleasure too. A few precious days off at this time of year can now accomplish much more. For a busy man with only a long weekend to spare, Amsterdam, Paris, Madrid are possible destinations. Sun warm enough for swimming and lying in is shining now in North Africa, Greece, and the Middle East. A winter sports holiday by air is less trouble than a country weekend. And nowhere you fly by BEA is too far to return from in a few hours if work calls you back. Ask your travel agent how quickly and simply a trip can be arranged.

BEA have published a special new brochure to give you ideas about where to go, what to see, what the temperature is at this time of year. Ask your travel agent for it.

*The Health of Business Executives — Transactions of a One-Day Conference held by the Chest and Heart Association in the Royal Festival Hall, London on 20th November, 1959.

BEA

YOU NEED A SECOND HOLIDAY · ENJOY IT—FLYING **BEA**

swampland into desirable building plots. The population of Dade County has doubled in the last decade to nearly one million.

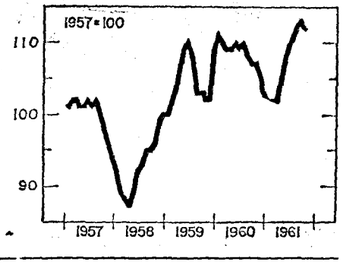
Under the terms of its charter, Metro was given responsibility for all county-wide services—for planning, traffic control, main roads, water, sewerage, rubbish disposal and so on—while the municipalities remained in charge of purely local matters. But in practice most of these bodies have been quite unwilling to hand over functions to the higher authority, and Metro has, as a result, been involved in some 600 law suits. Miami Beach which, as the centre of the tourist industry, is particularly reluctant to throw in its lot with the rest of the county, took its case for maintaining an independent traffic court all the way to the Supreme Court of the United States—and lost last week. What is more, the municipalities show no signs whatever of withering away (as had been hoped). Instead the existence of Metro has spurred them on to new (and sometimes directly competitive) activities. Despite these rivalries, Metro has made good progress in some fields. It has established a single traffic court and uniform traffic and building codes; it is building express roads and a new $20 million port for Miami; and it has made a start at organising county-wide transport. But to a large extent it has supplemented and not replaced the old pattern of government.

The latest attack on Metro has been led by one of its ex-commissioners, Mr McLeod, who has been telling voters up and down the county that Metro represents an additional and wholly unjustifiable cost of government. His views have received warm support in a good many quarters, particularly among small householders who stand to lose from the revision of rateable values that Metro has undertaken. Metro still has strong and influential supporters, but it is clear that its narrow victory at the polls last week has given it little more than a breathing space for a crash programme of reforms and economies before the forces of the opposition regroup for a new assault.

Self-Control at the Curb

FROM A CORRESPONDENT IN NEW YORK

WALL STREET is seriously worried about one of its own institutions—the American Stock Exchange. Once known as the Curb because of its pavement origins, the American Stock Exchange lists the shares of a great many relatively small, unseasoned companies, including some of the most popular growth stocks. It has always been regarded as something of a brash upstart by the senior New York Stock Exchange and the rest of Wall Street, although they have been prepared to accept the wide fluctuations in its share prices as one of the risks of the game. But this tolerant attitude has cooled perceptibly since the disclosure of a $10 million manipulation by the Res, a father and son team of specialist dealers on the American Stock Exchange. The Re case has led not only to a major investigation of the ASE itself, but also to a full scale inquiry —at the behest of Congress—into the entire securities industry. The latter could produce some fundamental revisions in the regulations governing the markets; for instance, it could result in a mandatory separation of the functions of broker and dealer.



The impending investigation, as well as the apparent reluctance of the ASE to discipline some of its own members, has brought demands for reform from inside the ASE itself. Mr David Jackson, a veteran specialist on the ASE, has demanded the resignation of Mr Edward McCormick, the president of the Exchange, for the way he handled the Re case. And a small group of younger members of the ASE, christened the "Young Turks" by the press, have attacked both Mr McCormick and Mr Joseph Reilly, the elected chairman of the ASE. More important, a group of the largest firms of stockbrokers, including Merrill Lynch, Pierce, Fenner & Smith, Inc., have made it clear that the ASE should clean up its own house before Washington steps in to do the job.

As a result of these developments a blue-ribbon committee, composed of brokers and investment bankers, all members of the ASE, has been formed to look into the exchange's affairs. Mr Gustave Levy, its chairman, has said he is determined to sort fact from rumour in the scandals being whispered about the ASE, to recast the exchange's rules and regulations, and to give the ASE adequate machinery to police itself. This will not be an easy task. It will inevitably crimp the style of operators on the ASE floor, and will thus encounter the opposition of many members who have already lined up behind Mr McCormick. Their support for him is understandable; since Mr McCormick assumed the presidency in 1951 the volume of trading on the exchange has soared from about 110 million shares a year to well over 400 million this year. Members, therefore, are prosperous and by and large have little inclination to change things.

But Wall Street in general recognises that the reputation of the ASE cannot be divorced from its own. The big firms of stockbrokers have too much at stake to permit the kind of laxity that has been revealed. Even some of the companies listed on the ASE have become uneasy, fearing that their own standing may be jeopardised; a number of them have applied for listing on the New York Stock Exchange. These factors, as well as the knowledge that Washington is prepared to move in if Wall Street fails to police itself adequately, should help Mr Levy in his task.

INDUSTRIAL PRODUCTION

The index of output fell slightly in September from the record height reached in August; this was due chiefly to the ravages of hurricane Carla and the strikes against Ford and General Motors. Unless negotiations at Chrysler, the other big motor company break down the advance should be resumed soon.

Mississippi's Gathering Storm

THE city of Washington is full of ideas for tackling racial discrimination: the Civil Rights Commission has just submitted two more reports on racial handicaps—one on housing, the other on jobs; there are plans for a Freedom Ride along Route 40, the road from Washington to Baltimore where so many African diplomats (and native Negroes) have been refused service at restaurants and cafés; and three big southern railways have announced the end of racial segregation at their terminals. But the next real battleground may lie in Mississippi, the poorest state of the South, the one with the highest proportion of Negroes and the one where any racial change has seemed almost unthinkable. Few Negroes vote; in Panola County, which the Department of Justice has just taken to court, only 10 of 7,250 Negroes of voting age are registered, compared with more than 5,000 of the 7,639 whites.

When the Freedom Riders passed through the state last summer nearly 200 of them were arrested on charges of breaching the peace (by using facilities reserved for whites). Although a federal court was asked in June to order these arrests and convictions expunged from the record, on the ground that the state law requiring segregation is unconstitutional, the judges have kept postponing any ruling. Early this month the Department of Justice asked the court sharply for an early decision which, if necessary, could be appealed to the Supreme Court. As things stand the delay of the judges and their reluctance to interfere with the state courts leaves standing all these wrongful convictions.

Do you wear a macintosh ... or a raincoat?

The difference may be slight ... but even small distinctions in language and in customs can assume importance, when people in Great Britain do business with people in the United States.

The Chase Manhattan Bank, with the largest network of correspondent banks in the U.S., naturally has close familiarity with American trade practices and usages —and with the ways in which they differ *among* the fifty states. And after more than seventy years in London, too, The Chase Manhattan is equally familiar with British ways. This understanding of customs on both sides of the Atlantic can be very useful to you in your dealings with the States.

Indeed, The Chase Manhattan can be of service to you almost anywhere you do business. Its network of more than 51,000 correspondent banks, branches and representatives' offices all over the globe can provide you with every type of modern banking service, promptly, efficiently, and on a personal, *localized* basis.

When you do business anywhere abroad ... it will help to talk with the people at The Chase Manhattan, in either of the London Branches.

DO YOU FLY BECAUSE YOU ENJOY IT
or just because you're in a hurry?

By his second or third crossing, the transatlantic traveller begins to be critical. He appreciates the speed — but where has the pleasure gone? It hasn't — if you fly on our Shamrock services. On these services, the speed is provided by the latest Boeing jet liners and the pleasure begins at the beginning. Why? Because alone among airlines we offer:

THE 11-POINT TAKE-OFF You can fly to America from any of eleven cities in Britain—London, Manchester, Edinburgh, Glasgow, Blackpool, Liverpool, Leeds/Bradford, Birmingham, Cardiff, Bristol, Isle of Man—saving perhaps hours of cross-country travelling.

THE LUCULLAN INTERLUDE Relaxing, before the long hop, in the comfort of Dublin Airport, you will find a restaurant where the food is as superb as anywhere in the world—each dish a creation cooked and served to highest international standards . . . Dined and wined, legs stretched, lungs freshened—you discover the next pleasure . . .

SMILING IRISH EYES, sparkling property of the air hostesses—beautiful, soft spoken, thoughtful and efficient—that you will meet whether you fly 1st Class Golden Shamrock or Economy Class Silver Shamrock. If you're a traveller first class, *your* eyes will light up at the sight of—

THE GOLDEN SHAMROCK MENU starred with such delicacies as Broiled Liffey Salmon or Limerick *Ham Bunratty style, with Pouilly Fuisse* 57 or Charles Heidseick 53. Travellers who know, place Golden Shamrock food in a class by itself.

THE 2-POINT TOUCH-DOWN Shamrock services give a choice of flights not only to New York, but also to Boston. On which thoughtful note, we wish you goodbye—until your next transatlantic trip.

DUTY FREE SHOPPING The Shamrock transatlantic service gives you time enough at Shannon to make profitable purchases at the International Duty-Free shopping centre.

AER LINGUS
IRISH INTERNATIONAL AIRLINES

The real trouble, however, is brewing in three counties further south, along the Louisiana border. Here students who conducted a "sit-in" and a parade as a protest against segregation were expelled from school; those over 18 were arrested; and a 15-year old girl was sent to a state home for juvenile delinquents. Negroes and whites who came from outside the state to encourage the local Negroes to vote have been beaten up; one Negro has been killed (in "self-defence"); and local Negro leaders have been arrested. In one extraordinary case a Negro voting instructor, Mr Hardy, was attacked by a voting clerk; it was Mr Hardy, not his attacker, who was arrested for a breach of the peace. Because voting rights were involved, the Department of Justice has intervened to ask that this prosecution be dropped. But in general its powers are limited. Negroes courageous enough to speak out in Mississippi can often not even count on legal help; there are very few Negro lawyers and no white ones will defend them in cases involving racial matters.

Third Force in Michigan?

FROM A CORRESPONDENT IN DETROIT

For more than a year Mr George Romney, the exuberant president of the American Motors Corporation, has devoted a part of his abundant energies to a group called "Citizens for Michigan," of which he is the leading spirit. The object of the group is to encourage citizens of substance who are beholden to neither political party to take greater interest, and perhaps participate, in the government of their ill-run state. Mr Romney has long been concerned over the fact that, for the last decade Michigan has been the rope in a tug of war between Mr Reuther's United Automobile Workers' union, which has the state Democratic party in its pocket, and the big business interests which operate the state Republican party more or less as a branch of their public relations and tax departments.

The Citizens for Michigan played an important part in a campaign last spring which has led to a special convention, now in session, for re-writing the State Constitution—a document which dates back to 1908 and is badly in need of modernisation. For the purposes of the convention Mr Romney has called himself an "independent Republican"; much as he dislikes it he cannot avoid a party label of some sort, and he could never fit into the Democratic party in Michigan, which requires its members to rubber stamp the programmes put forward by the automobile workers. Mr Romney is one of three vice-presidents of the convention. If he displays there some of the drive and leadership that have characterised his other ventures, he may emerge as a leading candidate for the Governorship of Michigan in next year's elections and, conceivably, he may become a national political figure by 1964, the next presidential year.

In many ways Mr Romney is a familiar figure in American life: the successful businessman who turns to public affairs. The exceptional circumstance in his case is that in any bid for elective office he would get only lukewarm support from some of his fellow businessmen and bitter opposition from others—particularly his colleagues in the automobile industry. For in his fight to keep American Motors (which makes the Rambler car and Kelvinator appliances) in the race with the three big motor manufacturers he has been a constant thorn in his competitors' flesh.

Most recently he has irritated, if not alarmed, the rest of the automobile industry by reaching a new three-year agreement with Mr Reuther, the president of the United Automobile Workers, which includes provision for profit-sharing or, as Mr Romney prefers to call it, "progress-sharing." Also unpopular in Detroit was his scheme, announced last winter with much fanfare, to "share progress" with the buyers of Ramblers by returning to them, in government bonds, part of the purchase price if the number of his cars sold exceeded a stated total. But the real damage to his relations with the officials of the other motor companies was done a few years ago when Mr Romney embarked on an extremely hard-hitting sales campaign to promote his Rambler car—then the only "compact" car made in the United States. He not only ridiculed the size of his competitors' products but, by implying that their construction was obsolete, also aroused a faint question about their safety. Even in the citadel of free enterprise this was regarded as not quite cricket.

Mr Romney became president of American Motors in 1954, a few months after its creation out of the merger of two automobile companies—Hudson and Nash—and at the death of the architect of this union. He was 47 years old and had never before run a company. The new enterprise was awash in debts to the tune of $70 million, and was losing more money every month. By ruthless economies, by being the first to introduce the smaller car that proved so popular with the American consumer and by persuading bankers and insurance companies not to foreclose, Mr Romney emerged with a company that, in the year ending September 30th, 1960, had sales of more than $1 billion and earnings after tax of nearly $50 million. (The 1961 figures will not be so shining but they will be comfortably in the black.) It is Mr Romney's boast that his company makes more money in relation to its investment than any other motor manufacturer—including the General Motors Corporation.

The possibility that Mr Romney may emerge as a commanding figure in American politics bothers a great many people and encourages many others who have been exposed to his magnetic personality—a term that should be reserved for people like Mr Romney. He is no demagogue though he often sounds like one. He is a man of such rock-ribbed integrity and earnestness that a cynical society has difficulty in accepting him at face value. And he is a salesman of awesome talents who is inclined to oversell his wares; this has been apparent in nearly all the manoeuvres that have drawn attention to him in the past few years. For instance, the Rambler, though undeniably a good product, has had difficulty in living up to the extravagant claims that he made for it. His "crusade" to share progress wih the consumer was quietly abandoned after only one month of rebates. And, in his recent negotiations with Mr Reuther, Mr Romney has had to eat some of his words.

When talks on a new labour pact began last summer Mr Cushman, the vice president of American Motors, vowed that AMC would not sign a contract which included either an automatic annual increase for improved productivity or a clause which relates wages to the cost of living index because of their inflationary impact (both of them were originated by and staunchly defended by the General Motors Corporation). Eliminate them, the union was told, and we will offer you a plan by which your members can share in the profits. The profit-sharing scheme was quite satisfactory to Mr Reuther but, since the "Big Three" had already offered to renew both the improvement factor and the cost of living clause, he insisted that these, too, should be included in any agreement with American Motors. Mr Romney had either to accept these terms or let Mr Reuther conclude a deal with the Big Three which American Motors would then have to accept or undergo a strike. He chose the former, and conceded the very clauses whose elimina-

tion was a condition of the progress-sharing offer.

In claiming that the agreement does not increase the company's labour costs, Mr Romney is once again overselling his wares. But while his fellow businessmen may reproach him for this trait of his personality, the voting public probably never will. In politics, the product that he will be selling is himself: an articulate, imaginative, vigorous man (he trots round the golf course at dawn, winter and summer, for pre-office exercise) of impeccable rectitude. He is president (the equivalent of bishop) of the Detroit branch of the Church of the Latter Day Saints and he fulfils the obligation of all good Mormons to give 10 per cent of their income to the church. He neither smokes nor drinks alcohol or coffee; he was a missionary overseas in his youth and once preached in Trafalgar Square. His career has included being a congressional employee and a lobbyist in Washington and few businessmen of his standing have such a detailed knowledge of the processes of government.

At the moment Mr Romney's great desire is to create a third force in American politics which would be a vehicle not for political adventuring but for rallying public opinion against bigness in both business and labour. Mr Romney does not approve of bigness. But, because of the kind of man he is, everything in which he gets involved starts to roll like a snowball, growing in size as it gathers momentum.

New Jersey's Choice

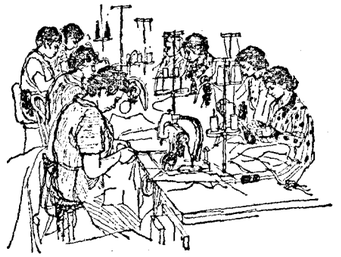
NEXT month the voters have to choose a new Mayor of New York and new Governors of Virginia and New Jersey. It is fairly safe to assume that the Democrats will—as usual—win in New York City and in Virginia, but Mr James Mitchell, the Republican candidate, seems almost equally certain to defeat his opponent, Mr Hughes, and put an end to an eight-year period of Democratic rule in New Jersey. Mr Mitchell was President Eisenhower's Secretary of Labour for nearly eight years, and in that role earned the respect of both management and workers; he is also a Roman Catholic. He can thus expect to make inroads on two traditional sources of Democratic support, although Mr Hughes, his opponent, is himself Roman Catholic. Mr Mitchell can also expect to benefit from the resentments inevitably provoked in two terms of office even by the popular Governor, Mr Meyner (who is debarred by law from running for a third term). But above all, Mr Mitchell is a national figure ("A big man for a big job," proclaim his campaign posters) while Mr Hughes, a lawyer by profession, is still little known in the state, in spite of 60,000 miles covered and 100,000 hands shaken since his campaign opened in the spring.

Mr Hughes has done his best to overcome these handicaps by accusing Mr Mitchell of knowing little about New Jersey's problems because of his long sojourn in Washington, and by offering to prove this in debate with his opponent. Mr Mitchell, who advised Mr Nixon (wisely, as the event proved) not to meet Mr Kennedy on television last year, has refused to give his opponent publicity by accepting this invitation, and has done his best, by issuing a stream of proposals, to prove that he is as well-informed about New Jersey's problems as possible. His programme, like that of his opponent, is broadly benevolent; but like Mr Hughes, he is cagey as to how he intends to pay for it—New Jersey does not tax sales or incomes, and neither party dares to suggest that it would introduce such novelties, except as a last resort.

President Kennedy's popularity not being the real issue of the election, the Republicans stand on the whole to gain more than the Democrats from victory. It would hearten their forces for next year's congressional battle, and it would put an end to the growth of Democratic strength in New Jersey, which has been marked since Governor Meyner's first victory. It is recognition of this, as well as a desire to help an old friend, that brought General Eisenhower into the campaign last week. He was greeted with all the old enthusiasm, which cannot have injured Mr Mitchell's already good chances, especially as the Democrats' big draw, the President, scenting the possibility of defeat afar, shows no intention of risking his prestige in a similar foray. He has sent three cabinet ministers instead.

Family Living

IN 1959, a man earning a salary of about $7,000 in Washington, DC, the national capital, could support his wife and two children on a "modest but adequate" scale of living for $6,147 a year. To do so, his wife would have to do all the cooking, cleaning and laundry without paid help. The budget covers rent for a five-room dwelling equipped with private bath, central heating, gas or electric cooking stove, refrigerator and a washing machine. The $6,147 includes outlays for taxes, social security payments, life insurance and participation in group medical plans. In addition, it provides the family with funds to buy a used car once every three years, to maintain a television set, and to pay for a telephone and varying amounts of other incidentals such as tobacco. This "City Worker's Family Budget," included in a study of twenty major cities in the United States by the Department of Labour,* is not a minimum subsistence budget nor does it attempt to show how the income should be spent; it is below the average for this type of family but is an estimate of the total cost of a representative list of the goods and services considered necessary by such a family.



The study, when compared with a similar one made in 1950, reflects sizeable increases in both standards of living and in costs. In 1950 the same Washington man was making approximately $4,838 of which, the department said, he would need $3,926 to support his family of three modestly but adequately. In 1959, this family was eating more meat and fish and drinking more milk; and it was spending more on medical expenses, housing and other things.

In 1959 the total cost of the budget varied with the city as is shown by the examples given in the table; Houston, Texas, was the cheapest of the twenty cities to live in, Chicago, Illinois, the most expensive. One of the major factors was the cost of renting a house, which represented from one-fifth to one-quarter of the total; although in most cities the majority of families of this type own their houses, there were no suitable statistical means for estimating comparative costs of home ownership. Food costs also varied with regional differences; the pattern of food consumption in the South meant that the food budget was lower there, while the amount spent on food was highest in the Northeast.

THE CITY WORKER'S BUDGET IN 1959

	Houston $	New York $	Washington, DC $	Minneapolis $	San Francisco $	Chicago $
Food and drink	1,486	1,853	1,684	1,647	1,795	1,751
Rent, heat, etc.	941	1,013	1,226	1,150	1,079	1,386
Other goods and services	2,195	2,182	2,289	2,368	2,467	2,470
Other costs	258	273	258	258	294	258
Personal taxes	490	649	690	758	669	702
Total	5,370	5,970	6,147	6,181	6,304	6,567

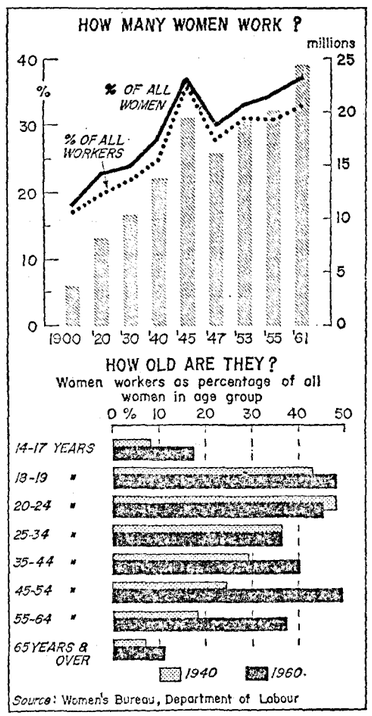
WOMEN AT WORK

FROM A SPECIAL CORRESPONDENT

RECENTLY President Kennedy raised the head of the Women's Bureau of the Department of Labour to the rank of Assistant Secretary. The post (a political appointment) is not one of great influence but the upgrading is an acknowledgement by the Administration of the ever-increasing importance of women in the American labour force. In July, 1961, a third of American workers were women; this represented a rise of almost a million over July of last year, in a period when employment in general was slack.

Mr James Thurber, asked to forecast the future, once said that he could only predict that women would get larger and that there would be more of them. Where the female American worker is concerned his prediction has come true already. They are larger (or at least heavier) because they are older and their numbers are rising steadily. At the beginning of this century, though American women were emancipated by the standards of that time, they made up only 17 per cent of the labour force and less than one-fifth of American women worked. During the war against Hitler the proportion went up to nearly 40 per cent in both cases. There was a drop after that but the numbers started to rise again with the Korean War and have gone on rising.

The changes in age and status have been striking. The typical working woman of 1900 was either very young or a spinster, employed in industrial work at home or in a domestic job. Mrs Esther Peterson, the new Assistant Secretary of Labour, is an embodiment of the statistics. She is 54, married (her husband is a State Department labour expert) and has four children. A modern American woman is most likely to work between the ages of 45 and 54 and 54 per cent are classed as "married, husband present." Spinsters seem to be relatively fewer and marriages are made younger, thanks either to the affluent society or the somewhat contradictory expectation that a wife will work for the first few years of marriage. In fact a pattern seems to be developing in female working life: a job after leaving school or college, marriage at an average age of about 20 and a couple of years of paid work, then the woman drops out of the labour force with the birth of her first child. At 35 or so, when the youngest child is in school, she is likely to reappear in the job market and by the age of 45 there is an even chance that she will be employed.



If the trend is toward the working wife, it is almost equally toward the working mother too, no matter how moralists rail at them or pundits relate them to the rise in juvenile delinquency. In March of last year, 8 million mothers of children under 18 were in the labour force, compared with 4 million in 1950 and about 1 million in 1940. Not all of them work from grim necessity: a quarter of the women with children between 6 and 17 and husbands with an annual income of $7,000 or more were out earning. Indeed there is a special incentive to go out to work in the middle-class family.

Such a family wants to send its children to the best college it can afford. Even with some help from scholarships, it costs around $12,000 to put a boy through a first-class private college, a terrifying sum to a low-paid government worker, teacher or other professional man. This sudden addition to the family expenses, justified by prestige and the graduate's subsequent earning power, can be coped with only if the mother works. Once the financial crisis is past, she may take up her home duties again; on the other hand she may decide to keep on working long enough to qualify for retirement benefits under the social security system.

The out-again-in-again pattern of women's work poses problems for employers and educators. Some occupations, especially those which are traditional with women, may not demand much retraining. Assembly line work in factories, retail selling, elementary teaching, professional or practical nursing and many kinds of office jobs can be resumed without much trouble, though the rapid increase in the use of complicated office machines and computers has brought problems of retraining and not just for lapsed workers. More than a quarter of all women employees are in clerical and office jobs, about 3 million are in non-household service jobs (waitresses, office cleaners) and another 3 million have semi-skilled factory jobs. Retraining can be done while at work or at a government-supported night school. Many will continue to work only part-time or part of the year, while the children are at school or during the Christmas rush. The high turnover of female labour (about 16 per cent above that of men) disguises the total size of the working force, which is probably around 30 million in any one year.

In more highly skilled occupations the female working pattern is a source of national concern, especially to the women's colleges. Women get less schooling than men even in egalitarian America. They attend high school in the same proportion but only a third of the bachelors' and masters' degrees awarded by American colleges are won by women and half of those are in education. Relatively few women enter professions like law or medicine or study the preferred masculine subject, business administration. Those who do are apt to stay in their jobs through marriage and child-bearing, probably because they earn enough to make it profitable to employ help. A full-time nanny can earn as much as a graduate teacher.

A women's college, however, must reckon that most of its graduates, expensively and carefully stuffed with knowledge and skills, will retire after a very few years of doing what they were trained to do and become split-level housewives for their most creative years, the years of their early maturity. The shortage and high cost of domestic help mean that most young housewives must resign themselves to a period of captivity at home. Heads of women's colleges are continually holding forth on the best ways of making this adjustment; some emphasise the importance of rearing clever children and urge their charges to resign themselves to the inevitable, while others insist that they fight it and take the place in the world to which their higher education should entitle them and in which they are badly needed, with the current shortage of trained graduates for many vital jobs. Recently Radcliffe College broke new ground with its Institute for Independent Study which gives part-time scholarships and access to the college's facilities to highly qualified women with family responsibilities who wish to get back into the intellectual swim.

707th Heaven

IN THIS AGE OF DISCERNMENT . . .

How long have you been with me Gladys?

You're a dear sweet girl. (*Yes, Madam*). But, *really*,

you *must* remember: whenever I can, I travel

by Air-India. (*Yes, Madam*). As the Colonel

always says: their efficiency and service—can't beat it.

(*Shall I get your tea now, madam?*). Their hospitality

would turn men into milk sops if it lasted too long

(*biscuits or bread and butter today, madam?*) and, what's

more, they have those grand Rolls-Royce Boeing 707's

. . . never had luxury like that in the old days

. . . Gladys! GLADYS! WAKE UP! *Yes madam* . . .

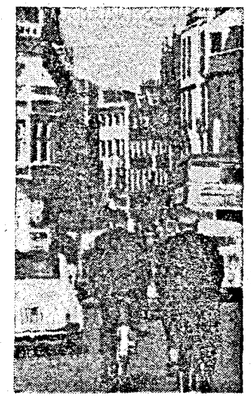
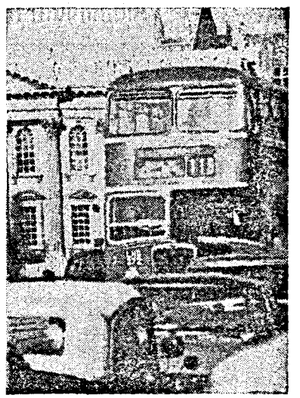
The Battle of Petty Cury



FROM OUR SPECIAL CORRESPONDENT

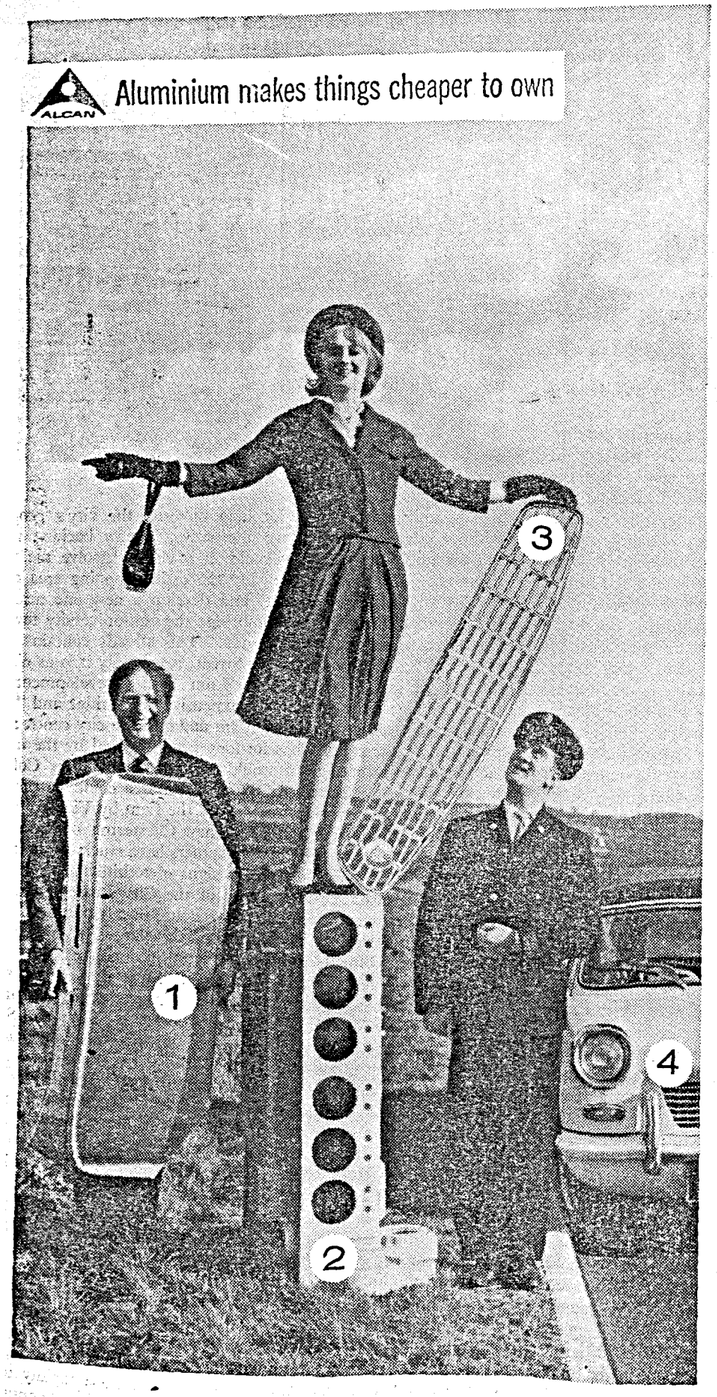


CAMBRIDGE was a market town before its university was thought of: today its university shoppers and seekers-after-culture have made the city into a regional capital, offering the East Anglian hinterland a range of goods and services far above what might be expected of a community of under 100,000 souls. But the briefest Saturday afternoon glimpse of the picturesque huddle that is the centre of Cambridge proves that, for shopping, it has reached capacity. Jostled by country Mums, menaced by bicycling undergraduates, obstructed by dons' jalopies or the subsidised Jaguars of East Anglian farmers, the Cambridge shopper is a hunted being.

Firm planning in the postwar years enabled the city, unlike Oxford, to keep at bay the rising tide of heavy industry; and the (now barely adequate) prewar relief roads ensure that most of the through-traffic passes round the city rather than trying vainly to thread between the colleges. But the Cambridge brand of congestion is as bad in its own way. The streets cannot be widened without knocking down or defacing various architectural gems: enclosed in a ring of colleges and historic open spaces, the inadequate shops cannot expand, or even devise ways of unloading their deliveries at the back of the premises. Something must be done, but, as ever, town and gown are incapable of agreeing on what it should be.

The natural site for expansion might seem to lie on the south side of Petty Cury. Here stands a rather ramshackle former coaching inn, the Lion Hotel: behind it is an area of some eight acres occupied largely by an open-air car-park belonging to the city, with a few ill-housed small businesses. This under-employed site, known as the Lion Yard area, abuts on the present huddle of shops in the town centre. In 1958 the city sought planning permission to redevelop almost the whole of it, between Petty Cury, St Andrew's Street, Downing Street and Corn Exchange Street. Its application was turned down after a planning inquiry, on the ground (advanced by the university) that high blocks and extensive shops would attract more traffic than the existing approach roads could hold.

The city now complains that the official inspector did not understand its proposals: it is to try once more for a less extensive development of the area that would merely give room for the existing central-area shops to expand, without greatly increasing the total amount of trading. The university argues that, given the inevitable geographical and cultural attractions of the city, such an expansion would soon attract more shoppers than it could hold from the rapidly expanding towns near Cambridge: the present congestion would simply be pushed into the future. The county council, which is in charge of the city's planning for as long as Cambridge fails to secure the status of a county borough, is on the city's side: and there is now a joker in the pack in the form of Messrs Cotton and Clore, who have bought the Lion Hotel itself, but have not declared their intentions.



But better planning than Oxford's

The university, having for long opposed the city's proposals without advancing a positive alternative, is now backing to the hilt an ambitious plan that could, it is claimed, solve the whole dilemma. This is to shift bodily the main shopping area out of the historic centre of the city and develop a new one nearer to the geographical centre of Cambridge the non-university town, in what is called the City Road area. This already contains a few sad, largish stores along Fitzroy Street, but mainly it is as obvious an area of urban blight as the Lion Yard. Development here would eliminate the need for an expensive new bridge and "spine relief road" leading across the Cam and into the city centre: this, proposed by the county, has for long been opposed by the university (cynics say because it would destroy one of Jesus College's hockey pitches). Access to the City Road area could be provided by improving the existing road across the Cam by Victoria Bridge from the north and west, and by a new Chesterton Bridge further east. But the overworked county planners have stuck by their Lion Yard scheme, despite some recent signs of rethinking.

There are obstacles in the way of the City Road scheme. It would be necessary to remove and rehouse over 1,000 households and 200 businesses, 12 of which are fairly large. Capital would have to be found for the quick redevelopment of an area of 65 acres. The big stores at present in the historic centre of the town would have to be persuaded to move—a shopping centre in England is nothing without Marks and Spencer, Woolworths, Boots and Sainsburys (although their present premises are so inadequate that not much persuasion might be needed). But if the move were made the historic centre could house the low-turnover specialist shops—bookshops, tailors, high-class grocers—that might thrive even more without the mass shoppers and as a result of lower site-values.

The Lion Yard itself could then provide a site for the concert hall that is so sorely needed in Cambridge: in the knowledge that this would be a heavy burden on the rates, plans have been drawn up for a combined concert hall and examination school, so that the university could bear some of the financial burden of building and upkeep. (The idea brings a gleam to the eye of some bursars, mindful of the profitable hotel accommodation their colleges could supply to conventions and conferences using such a hall during the vacation.)

But the university's most pressing argument is that its plan could enable Cambridge to remain a regional capital in an area of England whose population is likely to increase rapidly in the next couple of decades—without unduly increasing the population

We had our own motor show...

with aluminium!

The road vehicle industry now uses more than 20 per cent of all the aluminium fabricated in Britain. Cars grow lighter, and look smarter, because of it. Many commercial vehicles are largely made of it. Aluminium's low weight, non-rusting qualities and resistance to corrosion have brought about better all-round performance, at the same time as reducing running costs. In gear boxes, pistons and clutch housings, aluminium is hard at work saving fuel, maintenance and money. Wear on tyres, brake linings and engines is far less—and decorative trim more elegant. Enjoy yourself at this year's Motor Show. As you look around you'll be able to see just how much aluminium is used under the bonnet, and on bodywork of all kinds.

1 To help you travel light, this aluminium scuttle panel—fitted between windshield and bonnet—weighs only 6 lb. 5 oz. It was made for the Austin Healey, by Boulton Paul Aircraft Limited.

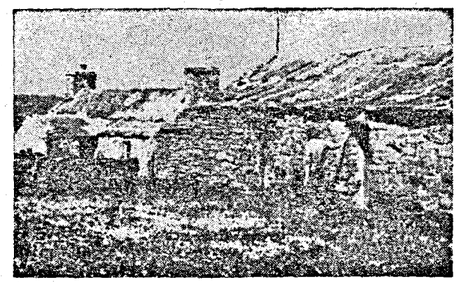
2 This aluminium alloy crankcase forms part of the famous Gardner 6LW engine used by many well-known commercial vehicle manufacturers. The power-to-weight ratio of the engine is higher—because the engine is lighter. The crankcase was cast in Alcan Enfield alloy L.M.3 by L. Gardner & Sons Ltd.

3 We predict a long life for this aluminium radiator grille. It was made for the T.R.3. Aluminium alloys can be chemically brightened and anodized to give a finish as bright as chrome—but which lasts longer. Similar weather-tight and lightweight grilles are chosen by leading car manufacturers throughout Britain.

4 The Triumph Herald is fitted with a pressure die-cast clutch housing of aluminium. It combines lightness, strength, durability and economy. Birmingham Aluminium Casting (1903) Co. Ltd. made it for the Standard Motor Company, using Alcan Enfield alloy L.M.2. The grille is made of aluminium, too.

Alcan, backed by the finest research and technical facilities, can answer any question on the use of aluminium. Write to: Alcan (U.K.) Ltd., Aluminium Canada House, 30 Berkeley Square, London W.1. Tel: MAYfair 9721.

ALCAN
ALUMINIUM LIMITED OF CANADA



Britain's most widely used aluminium—from Canada

ALCAN

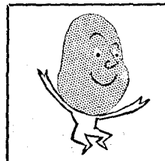
of the city or interfering with the life of the university. The city and county authorities sometimes seem mesmerised by the figure of 100,000 as an absolute maximum for Cambridge's own population, but growth in the surrounding countryside is coming whatever anybody does. It is a new thing for a British city to shift an entire congested shopping area to a site where it can expand. But, in the words of an enthusiastic don: "If Cambridge can't do it, who can?"

An Island Like Tristan?

FROM A CORRESPONDENT IN GLASGOW

Orcadian periphery—with subsidy

THE Colonial Office has decided that the 270 former inhabitants of Tristan da Cunha must have at least a month's privacy in the Home Counties in which to ponder their personal and collective problems of rehabilitation. Shetland and Orkney, which have been strongly favoured as the islanders' destination, will thus have to wait almost until Christmas before knowing whether they are to be partially recolonised from the South Atlantic.



Those who feel sure that most of the refugees will finally opt for Scotland include Mr Jo Grimond, MP for Orkney and Shetland, Sir Irving Gane, chairman of the Tristan da Cunha Appeal Fund (which was first launched 76 years ago) and Mr Sidney Glass, the Tristan leader of Scots descent. Sir Irving, however, is not so confident about the younger generation. The Tristan da Cunhans are appreciably more sophisticated than they were before the war, and he thinks, now that the volcano has enforced the physical break, that the young ones may be less keen to resume island ways.

The Shetland and Orcadian interest in getting new blood is obvious: their own young people have steadily drifted south. Shetland's population fell by 8 per cent in the last decade and Orkney's by 11.8 per cent. But are these the kind of statistics to induce the refugees to put their roots down in North Yell or Unst, or in the North Isles of Orkney, where community life is almost finished? The larger, "mainland" islands, especially the Orcadian mainland, are prosperous enough, but it is impossible to make a good life around the periphery where bad communications abound, and it is only there that island land is at all readily available.

One capital point that the local authorities seem to be banking on is that the refugees cannot be resettled (either as a single colony or in groups conveniently dispersed in neighbouring areas) without Government assistance—or without an expert examination of the local economy to find out exactly how the newcomers can be fitted in. The Shetlanders, particularly, feel it would be splendid if the Government produced a comprehensive scheme that would allow both refugees and Shetlanders to live profitably and contentedly in the non-mainland part of the archipelago.

The northern and western islands of Scotland are said already to float on seas of subsidy and to be totally encompassed by advice, but the truth is that the island peoples are less affluent than most—and, as a result, decline steadily. From time to time there are specific aid projects, such as the Scottish Office's recent decision to spend £500,000 on modern steamers to serve Orkney's North Isles, but the familiar complaint is that there is no comprehensive plan to cure the sick economy.

The Scottish Department of Agriculture has told the Colonial Office that it is ready to assist the Tristan resettlement. The Colonial Office, in return, has said that its social survey department will study the entire rehabilitation operation and publish its findings as a contribution to solving the problems encountered by migrant communities. It is possible that the refugees will survive the northern climate, only to be defeated by the chill island economy unless the communities they join are made more viable. As St Kilda and Soay have shown, there are other ways for islands to die than by volcanic eruption.

Chip on his shoulder

OVERPRODUCTION is the abiding terror of farmers, and most of them have been only too happy to fall in with the Government's compulsory marketing schemes which have become entrenched in the past decade in the fields of hops, milk, wool, eggs, tomatoes and cucumbers, and potatoes. Some, however, either individualistic or unconvinced, resent the coercion of the board and kick bitterly against the levy imposed on them for their enforced membership, as well as the excess contribution (i.e., fine) for producing more than what the board deems to be their quota for the season.

The Potato Marketing Board plans to raise its levies from £1 to £3 an acre, and its excess contributions from £10 to £25 an acre, much to the indignation of Mr Jack Merricks, who, firmly anti-board in any case, managed to get himself elected in place of the outgoing chairman three years ago, when the four national seats (out of 29) came up for refilling. Once on the board, Mr Merricks upheld his election promise to oppose the wasteful expenditure of farmers' money, presumably to the irritation of the other members, all official candidates of the National Farmers' Union.

Last Monday, however, the elections for three of these seats came round again, and Mr Merricks stood again, after a campaign of great fortitude and enterprise in the course of which he spent nearly £1,000 on publicity and damned the board as the ruination of farmers. He offered a grim personal illustration: the £380 his 60 to 80 acres of potatoes had cost him last year in excess contributions and the £1,000 they would cost him this year if the increases went through.

But fortune was against him. The NFU drummed up support for its official candidates (though they paid their own expenses) and overcame some of the apathy which had cost it the seat last time: the percentage poll rose from 17.4 in 1958 to 25.4, which is better than most boards can expect; and in its favour, too, was a weighted voting system by which large farmers have more say than small farmers. Mr Merricks failed, and with him failed the only other opponent of the NFU candidates: out of 52,000 votes, Mr Merricks polled 10,500, the other independent 4,000, and the NFU men more than 12,000 each. In a post-election manifesto Mr Merricks deduces that the NFU ganged up on him, and expresses regret at its tactics. So far, however, he remains a union member.

THE ECONOMIST OCTOBER 28, 1961

MONSANTO PUTS CREATIVE CHEMISTRY TO WORK

Microscopes discover an easier way to travel

TODAY, on world-wide travels, microscopes can rest snugly in tough, moulded-to-measure cases, cushioned from harm by the millions of air cells in Monsanto Montopore.

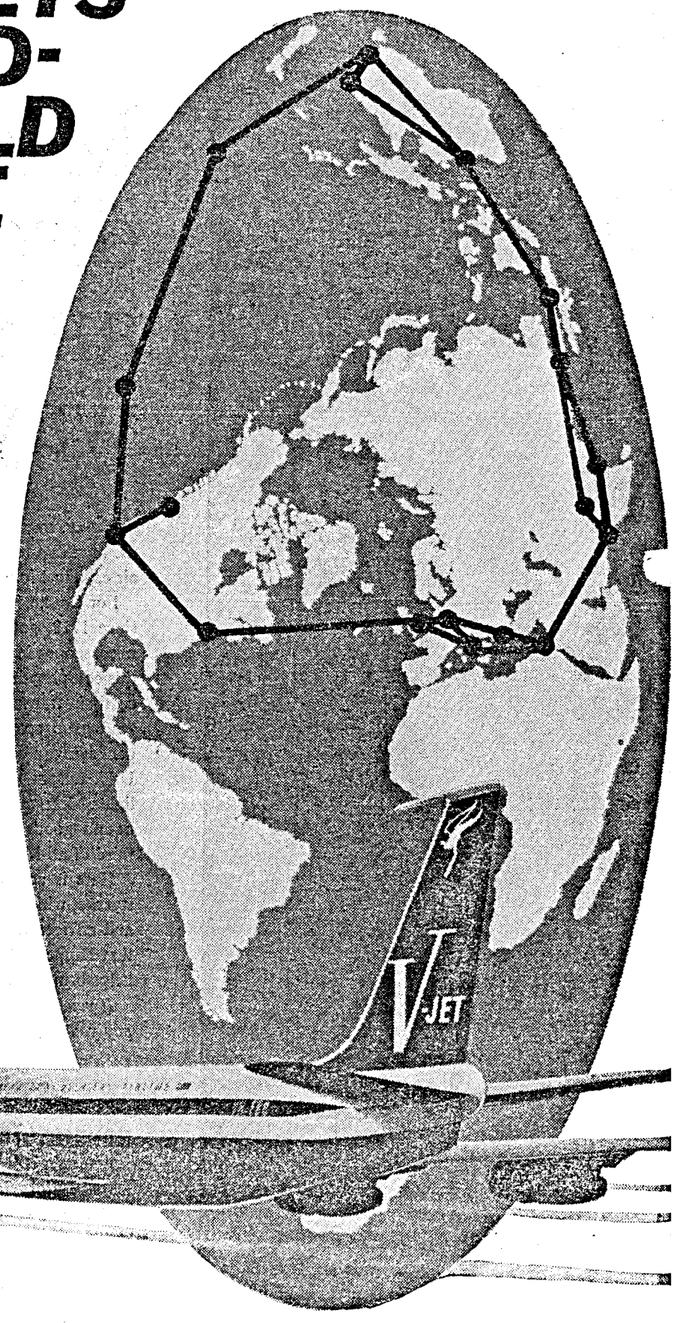
For Cooke, Troughton & Simms Ltd., makers of optical instruments since 1712, gone are the days of expensive bulk packages to protect microscopes in transit. Since using feather-light Montopore packaging, this company has made several substantial savings. Gone is the risk of costly in-transit damage. Gone is the need for expensive wooden boxes. And gone too are the extra air freight charges for heavy protective packaging, a considerable saving for a firm exporting 45% of the total U.K. output for this particular type of microscope. This point highlights Monsanto's importance as a supplier of raw materials for export-bound goods. And adds to an already large contribution (over one third of all Monsanto products) now helping the export drive.

Here is another success story in the young life of expanded polystyrene, which first found fame as an insulating material in the building and refrigeration trades. And one more example of the exciting things that happen when Monsanto puts creative chemistry to work . . . and helps bring a better future closer.

If you, as a manufacturer, are interested in chemicals or plastics, it will pay you to get in touch with Monsanto.

MONSANTO CHEMICALS LIMITED,
131 Monsanto House,
Victoria Street, London, S.W.1.
and at Royal Exchange, Manchester 2.

Monsanto
Regd.



In association with: Monsanto Chemical Company, St. Louis, U.S.A. Monsanto Canada Limited, Montreal. Monsanto Chemicals (Australia) Ltd., Melbourne. Monsanto Chemicals of India Private Ltd., Bombay. Representatives in the world's principal cities. Montopore is a Registered Trade Mark.

Microscope pack designed and manufactured by Export Packing Service Ltd. for Cooke, Troughton & Simms Ltd.

FASTEST JETS IN ROUND-THE-WORLD SERVICE

NEW 707 V-JETS

Be among the first to fly in the amazing Qantas 707 V-Jets eastward to Sydney via India and Singapore. Book now for the 'Kangaroo' flight leaving London on October 30. The fastest jets in international service, the new Qantas 707 V-Jets are already operating on the 'Southern Cross' route to Sydney via the U.S.A. thus enabling you to fly right around the globe in the most advanced, most efficient jetliner in the world today. Incorporating a revolutionary new development in jet propulsion, the new Qantas 707 V-Jets take off quicker, fly higher, cruise faster than conventional jetliners, and when the fleet is in full operation will rewrite the record books for elapsed and flying times on all route sectors. For reservations see your Travel Agent or Qantas, Corner Piccadilly and Old Bond Street London, W.1 (Mayfair 9200) or any office of B.O.A.C.

THE WORLD OVERSEAS

Allies after all: Herr Mende, Dr Adenauer

Dr Adenauer Again

FROM OUR BONN CORRESPONDENT

IN spite of last minute wrangling, everything looks arranged for the re-election of Dr Adenauer as federal Chancellor next week and consequently—so at least he himself would say—for preserving the continuity of his foreign policy. Dr Adenauer has maintained his ascendancy by a remarkable feat of canny, resolute and almost single-handed manœuvring. The swing of majority opinion against him, registered at the polls on September 17th, had been set in motion mainly by first reflections on the meaning of the barriers that went up in east Berlin on August 13th. Suddenly there were widely felt misgivings about the old man's judgment.

His course appeared to have led after all to increasing danger for Berlin and to a receding into the remote distance of any prospect of German reunification: the precise opposite, that is, of the declared objectives of the Federal Republic's foreign policy. Intoxicated by their election gains, the Free Democrats began by insisting that Dr Adenauer's hand must be removed from the helm. They have since humbly settled for a verbal assurance that he will withdraw it some time before 1965 (probably in 1963), and for some—still rather vague—arrangements for giving them a bigger say in foreign policy. The Chancellor is stoutly resisting their demand that Herr von Brentano should quit the foreign ministry in token of the government's readiness to think anew about old problems. Within a few days—before there can be time for proper consultation with the Free Democrats—Dr Adenauer will be setting off once again for Washington in order to restate his ideas of continuity to President Kennedy.

Partly for reasons of coalition tactics, partly for plain want of bearings, the Free Democrats have as yet little more than hinted at a new direction they would like German foreign policy to move in. They talk of "normalising" Bonn's relations with the countries of the eastern block and, more intriguingly, of pursuing Dr Gerstenmaier's suggestion (at the closing session of the last Bundestag) that the two German states might at least tentatively approach each other with the object of discussing the possible military status of a reunited Germany. Through five ministers in the cabinet, possibly a minister of state at the foreign ministry, and their deputies participating in the weekly meetings of a new Bundestag coalition committee, the Free Democrats hope to exert an appreciable influence on the framing and execution of foreign policy. But Dr Adenauer and Herr von Brentano are evidently still of the firm opinion that the two courses of action so far known to be contemplated by the Free Democrats would only help further to consolidate the east German regime. Both impenitently uphold the Hallstein doctrine, which excommunicates from Bonn all governments (Moscow excepted) that maintain diplomatic relations with east Berlin. And more than once during the election campaign Dr Adenauer dissociated himself from Herr Gerstenmaier's idea of a modest all-German reconnaissance.

President Kennedy has said he is hoping to hear from Dr Adenauer what ideas the new Bonn government has for helping the West to satisfy—as painlessly as possible for Germany as a whole—the Soviets' importunate demand for "a satisfactory solution to the German problem." It is possible that in the privacy of the White House the Chancellor will admit that the time has come to look some awkward facts in the face, and that he himself expects the western allies will soon be meeting Mr Khrushchev part of the way. But Dr Adenauer is no readier now than he has been before to offer his government's ratification to what may be done. There is, for instance, circumstantial evidence that, despite some of their weekend speeches, both Dr Adenauer and Herr von Brentano have in their hearts written off the eastern territories, where some ten million Germans used to live before the war. But should west Germany be asked to recognise the Oder-Neisse line for the sake of peace and quiet, they are not going to change their view that a freely-elected all-German government is alone legally entitled to do so. And, whatever Herr Gerstenmaier and the Free Democrats may have in mind concerning the military status of a reunited Germany, Dr Adenauer's government is still resolutely opposed to all schemes for military disengagement or for keeping nuclear weapons from the Bundeswehr. The most it is at present prepared to agree to would be the delimitation of an extensive area in central Europe from which the danger of surprise attack might be reduced by a system of inspection.

In the matter of Berlin, Dr Adenauer is opposed in principle to making any concessions at all, being convinced that any loosening of west Berlin's political and economic ties with the German federal republic would have mortal consequences. As for the existing east German regime, recognition is out of the question for any west German government. The farthest Dr Adenauer's government is prepared to go is to act as an agent of the allied powers in cultivating technical contacts with the east German authorities, primarily for purposes of trade and travel; these contacts just might be extended to the drafting of an all-German electoral law. For reasons of personal conviction and political expediency Dr Adenauer is bound to reject any other concessions that may be mooted. It remains to be seen whether the Free Democrats will have the ideas and the authority later on to initiate some experiments in German co-existence that might help to alleviate conditions in the east German state and lessen east-west tension.

From the national and party political point of view Dr Adenauer's intransigence is quite understandable. Yet its possible consequences are making many thoughtful Germans uneasy. Appreciating that some concessions at Germany's expense are unavoidable, they fear that public disillusionment may take ugly forms. The editor of the Hamburg paper *Die Welt*, rebuking the nation as a whole for its slow comprehension of what is happening, has remarked that the German people "must accustom themselves to their new insecurity after their almost absurd faith in the strong uncle in America and the wise father in Bonn has given them a hybrid measure of security, self-assurance and political indifference." The German character being what it is, he has pointed out, "there is a danger of the Germans feeling sorry for them-

selves and pinning responsibility for everything on the wicked world."

Blaming the foreigner for what the future may bring has already begun. This week the *Frankfurter Allgemeine Zeitung* reproached the West in general and the Anglo-Saxons in particular for encouraging Mr Khrushchev's expectations by brandishing "cliché conceptions of the German past" in order to prove that there are still ominous traces in Germany of an aggressive military spirit; and this in spite of federal Germany's enthusiastic contribution towards European integration. The newspaper recalled that the failure of the outside world to trust the leaders of the Weimar Republic had contributed substantially to its collapse.

Bilingual Doubletalk

FROM OUR CORRESPONDENT IN BRUSSELS

BELGIUM rivals England in the frequency of its marches and demonstrations. While the British, however, get wet feet and cold posteriors for the sake of world issues such as the bomb or apartheid, the Belgians set their sights strictly nearer home; often the target for their indignation seems to be their own compatriots. So it was in 1950 when the return from exile of King Leopold III brought thousands on to the streets, and again in the mid-1950s

Youth and ancient wrongs

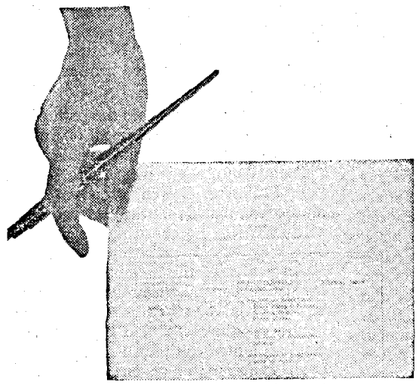
when the rival claims of church and state over education almost tore the country in two. During last winter's strikes a Socialist march through Brussels became an almost daily event. Unfortunately, none of these past explosions of feeling can now be written off as a dead letter; all of them remain alive in the public memory, and they helped to generate some of the complex emotions that brought fifty to sixty thousand Flemish Belgians into the heart of Brussels last Sunday.

Although 57 Catholic deputies and some hundred burgomasters accompanied the marchers, the Flemings insisted that their demonstration was a social rather than a political protest; it was directed against their status as "second-class citizens in their own country." They feel that Belgium is dominated by their French-speaking compatriots, in spite of the fact that the Flemish outnumber the Walloons by a million and a half. For three hours they marched, grimly conscious of their numbers and of innumerable ancient wrongs; yet the exuberance of the young turned the affair into something of a kermesse.

The young are the crux of the problem. Flemish families outside the industrial complexes of Antwerp, Ghent and Malines usually have four or five children, against an average of one child per family in the Walloon South. Agriculture, the traditional northern occupation, offers a dwindling source of employment and sets a general wage level lower than that of the Walloon coal and steel complexes. The northern areas suitable for industrialisation—around the Limburg coalfield and elsewhere—have lacked capital investment, thus forcing Flemish workers to travel long distances to their jobs. The construction of a huge steel plant at Zelzate, near Ghent (though resented by the Walloons), will help matters, but Flanders has long-standing economic grievances, and the fact that the Walloon areas now also suffer from under-investment and under-employment does not lessen the Flemings' genuine claims.

But close to the heart of the matter is the non-economic fact that the consequences of the language settlement of 1932 are now beginning to be felt. In that year Belgium was divided linguistically into two regions along an east-west line running roughly from Menin to Tongeren; those north of the line subsequently received all their school and university education in Flemish (a tongue almost identical with Dutch), those south of it continued to be taught in French only. Now a generation of young Flemings has grown up with a purely Flemish culture and outlook; and although the days when they were ruled and scorned by a French-speaking bourgeoisie are officially over, they resent the discovery that they still need French if they are to make their way in Belgium. They complain that the best jobs in the theoretically bilingual civil service, in finance and in the armed forces are still held by French speakers, and they are deaf to the plea that Belgium needs this world language for the foreign contacts on which its position and its economy depend. They feel themselves "intellectually and materially crippled . . . slaughtered . . . a case of mental genocide."

This wounded *amour propre* is further inflamed by religious fervour. There were no priests in last Sunday's procession, but the Church undoubtedly still plays a great though waning part in the life of the traditionally pious Flemings. Until quite recently young parish priests were openly anti-French and thundered regularly from their pulpits against the evil example of their godless republican decadent neighbour. Even now their slogan of the 1930s,



A
V V K
V

Alles voor Vlaanderen, Vlaanderen voor Kristus (All for Flanders, Flanders for Christ), still appears each morning on the cover of the leading Flemish daily. The force of this combined social and religious feeling is one that no Belgian government would dare to under-rate.

Since the death last August of the Archbishop of Malines, Belgium has been without a Primate. Because of the great size of the archbishopric and because of the widening breach between the two halves of the country, there is talk of appointing two successors, one Flemish and one Walloon. It is a difficult decision for the Pope to make, for if he throws the cross into the scales, or appears to do so, he may well tip the balance away from Belgian unity towards the long-heralded creation of a federalist state.

Many Flemings favour federalism, as do the Socialists of the growing *Mouvement Populaire Wallon*—even though federalism does not mean the same thing to the two sides; but if the separatist movement grows the dispute will continue to be centred on the capital, already an apple of discord. At present Brussels, historically Flemish, is predominantly French-speaking, but is surrounded by Flemish villages which are rapidly becoming dormitory suburbs. Most new suburbanites speak French, but because of the 1932 laws are obliged to accept Flemish as the language in which they pay their rates, buy their stamps and, more controversially, have their children educated. Legally, bilingualism must be introduced into any commune whose ten-year language census

The profit mix: pen and *han*

Trade with Japan is exceptionally profitable. Japan is buying more abroad than ever before, and its own consumer and industrial products are finding ready markets overseas.

To bring the man with the pen and the man with the *han* together for profitable business is the job of Mitsubishi Shoji. The confusions of doing business in an alien world disappear when dealing through this big general trading company.

It represents in foreign trade 30 Mitsubishi companies, each carrying the Three Diamonds mark and manufacturing many fine products in light and heavy industries.

To learn how profitable it is to trade with Japan, call at any of the Mitsubishi Shoji branches or affiliates. They are located in trading centres all over the world.

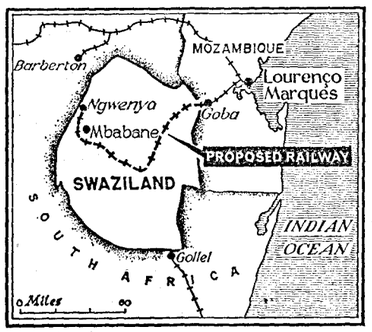
REMY MARTIN

Swaziland Shelter

FOR many South Africans, Swaziland is a sunny, hilly place; a haven to visit on a honeymoon, on a romantic weekend, or on the run from the political branch of the police. It is a spot for a farm to retire to; a fall-out shelter from apartheid. For the British Government, Swaziland is something different: one of three protectorates that must be used to demonstrate to white South Africans that their way of doing things is, perhaps, not the best. In Basutoland and Bechuanaland the Commonwealth Relations Office has arranged timid constitutional steps forward; in Swaziland the arrangements are now being made. The danger is that in this case timidity may lead the CRO directly up Dr Verwoerd's garden path.

Mr Sandys appointed a constitutional committee in November, 1960. Last month Sir Charles Arden-Clarke was sent out to advise the committee. Its report will probably appear at the end of this year, or perhaps at the beginning of next. Things have not gone smoothly—already the leader of Swaziland's African nationalist party, Mr John Nquku (the "q" is a champagne-pop click) has arrived this week in London to lobby the British people.

Mr Nquku was born and educated in South Africa. He was an inspector of schools before becoming a full-time politician; now, at 59, he is both a member of the South African Liberal party and head of his country's few thousand black nationalists. It is mostly the educated Swazis who follow Mr Nquku, and there are not many of them; his party claims a membership of 3,600. For many years he was president of the Swaziland Progressive Association, a social club for educated Swazis that was formed in 1929 with the encouragement of the British.



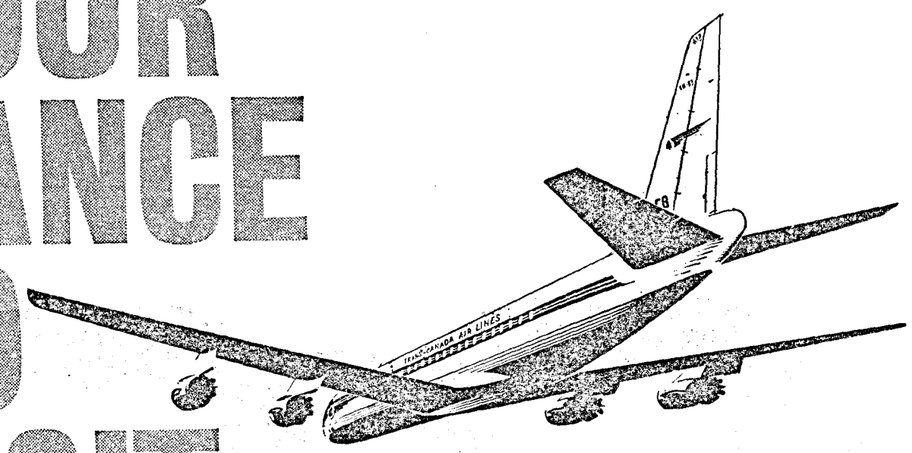
In those years he also worked closely with the real black power in Swaziland: the Paramount Chief-in-Council (the Ngwenyama in Libandhla). Most of the 250,000 Swazilanders swear allegiance to this traditional tribal body; indeed, in theory, the heads of all their families belong to it. In practice, they are ruled by Sobhuza II, a bearded patriarch of 72 who has run Swaziland's tribal kingdom for 40 years and who traces his Dhlamini dynasty back for four centuries. He has been a wise king: he has bought many thousands of acres of his country's land and holds it, fallow, in the name of the nation. The result is that only about 43 per cent of Swaziland is held privately by Europeans; even so there is a serious land tenure problem.

Paramount Chief Sobhuza's idea of constitutional advance is to raise the status of the present European advisory council (representing the territory's ten thousand Europeans) so that it may sit as an equal alongside the Ngwenyama in Libandhla. He has insisted that while the Europeans may have their democracy, the Africans must retain their ancient way. The effect of this would be to divide power between the African tribal authority in the black part of Swaziland and the European tribal authority in the white part. Some of the overall power at present exercised by the British Resident Commissioner, Mr B. A. Marwick, would pass to this new council. With one leap Europeans would jump to a position of considerable political power.

This form of government, however, would be a microcosm of Dr Verwoerd's system of "separate development." Its major fault is that it fails to take account of the (comparatively small) number of educated, modern-minded, Swazis; and that it leaves little room for their influence to grow as they grow in numbers. These are Mr Nquku's Swazis; they have formed the Swaziland Progressive party to fight for their case.

Mr Nquku and two other SPP members sat on the constitutional committee until May. They were there as members of the Swazi nation, not as party representatives. When they made suggestions outside the framework of the Chief's wishes, they were suspended. Cannily, they retained Professor D. V. Cowen, of Cape Town University, to advise them what to do next. (Professor Cowen did the same thing, successfully, for the Basuto four years ago.) His Swazi report appeared in Cape Town a month ago, and is made on behalf of the SPP and the mixed-blood coloured people in Swaziland. It is a comprehensive and well-argued document.

Professor Cowen points out that the Europeans in Swaziland must choose between Swaziland nationality, or South African. Many of them at present have a foot—and a vote—in both camps. In this, the professor is with Dr Verwoerd, who has said that the High Commission territories can no longer be considered as future South African "Bantustans" but must instead be looked on as foreign countries.



But if the CRO chooses the path of easy virtue and acquiescence in all of Sobhuza II's constitutional, and racial-minded, plans, a Bantustan is what Swaziland will be. Professor Cowen proposes, as an alternative, that Sobhuza be elevated from a tribal chief to a constitutional monarch. The king would, provisionally, nominate about a fifth of the members of the new legislative council. Another fifth would be officials and British Government nominees; the rest would be elected on a single common roll for all races, based on adult franchise; or on one such roll plus an "upper" roll. Mr Nquku and his party are putting forward their adviser's plan as a compromise; as one that will meet the demands of traditional society, make room for white Swazilanders, and allow for speedy development to a more orthodox democracy. The SPP has also suggested alternatives, as compromises, to this plan. It asks too for a Bill of Rights to use against the territory's racially-discriminating laws. The job of the CRO must be to lead its local administration, Swaziland's Europeans, and the tribal hierarchy along this path. The mainly South African-minded Europeans of Swaziland are as strongly against this idea as is Sobhuza II. South Africa's economy embraces Swaziland. The two monetary systems are inextricably bound up. Now, a railway 140 miles long is to be built at a cost of £9 million, some of which will come from the Anglo-American Corporation of South Africa. The railway will take iron ore (and other products) to the Portuguese territory of Mozambique; from the border it will travel by rail to the port of Lourenço Marques. From there it will be shipped to Japan, under a contract signed with the Yawata and Fuji iron and steel companies.

This will give Swaziland a state-owned railway, several new industries (Anglo-American's contract for iron ore is worth £40 million over ten years); and a chance of real viability. A British Government economic survey mission reported 18 months ago that if its recommendations (costing £2,667,260) are adopted, viability will be a near certainty. The British Government has not been able to find quite as much as that; £1 million has been spent so far.

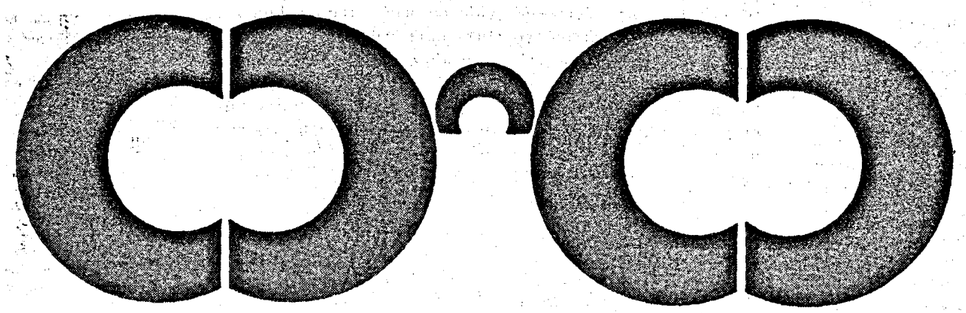
These economic plans will make Swaziland something more for some South Africans: a place to make money in. But it depends on the political plans—and on a courage that the CRO has not so far demonstrated—whether or not the territory will be the genuine shop-window of the British way that it should be, and that the CRO tells itself it is intended to be.

YOUR CHANCE TO VISIT CANADA

AIR TRAVEL WITHIN EVERYONE'S REACH
For family visits. For business. For autumn and winter holidays. That's what TCA 17-day Excursion Fares offer you. Return travel, Economy Class, at the lowest regular rates over the North Atlantic. Sample fares: Montreal £117. 10s. Toronto £131. 16s., Vancouver £196. 2s. And these are jet rates—they are even lower on the turbo-prop services BOAC operates in association with TCA.

TCA 17-DAY ECONOMY RETURN FARES NOW IN OPERATION

FLY TCA FOR £12·10 DOWN



GO NOW—PAY LATER TCA's Pay Later Plan gives you your ticket for a 10% deposit. To Montreal, for example, just £12. 10s. The rest in easy monthly payments over two years. (£4. 16s. 9d. per month on the Montreal fare.)

WHEN ECONOMY ISN'T ECONOMY The only thing you economise on when you fly TCA Economy Class is the fare! There's no lack of comfort. Meals are free. Service is included. There's even bar service—at a nominal price. That's the *only* extra.

TRAVEL AGENTS HAVE ALL THE DETAILS About TCA 17-day Economy Excursions. About other TCA off-season fares—for families travelling together, for emigrants—and low winter rates on propeller aircraft. About the combined TCA and BOAC service to Canada—flights every day of the week. And about TCA flights to and across Canada, serving 8 North American cities on through flights from London. With connections to over 50 others. Ask at any travel agency. Or write to the address below. *But hurry!* Most off-season fares end March 31st.

hows the population ratio to warrant it; but the Flemings passionately oppose this on the grounds that the soil of "mother Flanders" is sacred—it is up to the newcomers to learn Flemish f they wish to remain. To this their opponents retort that such pplication of the *ius soli* ties them to the soil as if they were serfs.

Both sides feel so passionately about the language question that he government fears to tackle it. Indeed, the Flemish-Walloon ivalry now bedevils so much of national life that the government's plans for long-needed decentralisation, capital investment, fiscal eform and the rest are being gravely hindered. As the Flemings riumphantly said after last Sunday: "Nothing can be done now gainst us or without us." Numerically superior, they seem to wish to dominate as they once were dominated; above all, they want to feel at home in Brussels, which is steadily becoming the most European of cities. The banners they carried last Sunday said "Brussels must be bilingual." Was this doubletalk? What hey all shouted was "Brussels must be Flemish."

Athenian Permutations

FROM OUR ATHENS CORRESPONDENT

THE Greek general elections tomorrow, October 29th, will be unusually important. The results will determine whether Greece is going to go on enjoying governmental stability, whether the Centre—the political backbone of the nation—can be revived, and whether communism in Greece is above or below the safety limits imposed by the country's western outlook.

The disposition of forces is clear. Mr Karamanlis and his National Radical Union (ERE), who have administered the country for six years, polled 41.6 per cent of the total vote in the last elections three and a half years ago. The Centre Union led by Mr Papandreou is essentially a last-minute alliance of the once powerful Liberal party, incorporating some isolated right- and left-wing groups, and with the well-disciplined Progressives of Mr Markezinis. These stood separately in the last elections, but their votes put together added up to 32.8 per cent of the total. The pro-communist EDA now running under the innocuous title of PAME (All-Democratic Agrarian Front) has a few non-communist candidates with well-known names—this was the best that EDA could do after the Centre's rejection of its attractive offers for a "popular front." In 1958 EDA capitalised on the divided Centre's loss of prestige and polled 24.4 per cent of the total vote.

The Greeks have a habit of changing their electoral system on the eve of every general election. Not one of the six postwar elections has been held under the same system. This time a modified system of proportional representation will be used. It will not give an absolute majority in the 300-seat parliament to any party polling less than a minimum of perhaps 46 or 47 per cent. Mr Karamanlis and his party, who returned 171 deputies with 41.6 per cent of the votes in the last elections, did so because the previous system awarded bonus seats to the two largest parties. It was in the same way that EDA's 24.4 per cent gave it 79 seats in the last Chamber, whereas the Centre added together returned only 48 deputies because of its disunity. In Sunday's elections Mr Karamanlis not only has to preserve his 1958 following intact, which in itself would be a victory, considering the wear and tear of six years in power; he must also attract a large number of new voters if his party is to be strong enough to rule alone as before. Mr Karamanlis believes he can do this mainly because of the good record of his government, popular appreciation of the political and financial stability it has brought and, above all, because he feels that the last-minute regrouping of the Centre has not inspired sufficient confidence among its more conservative followers. Many of them might therefore side with the National Radical Union in which the parliamentary élite is of Liberal extraction and which anyway has no ideological differences with the Centre.

Mr Karamanlis has many other advantages. The possibility of a world crisis or of a further worsening of Greek relations with the communist block, coupled with the presence of a sizeable communist following in Greece, should ensure a middle-class following for the strong government which has already shown that it can give them security. The Centre has both the advantages and the disadvantages of being composed of excellent men of politics. These could certainly give a far more effective performance as individual ministers than Mr Karamanlis's team, with few exceptions, has on record. Yet it is this individual excellence that has created the rivalries responsible for the disintegration of the Liberal party and through it of the whole Centre. The Centre leaders believe that although Mr Karamanlis's administration has done well by Greek standards, it has not yet grasped the basic fact that nowadays progress must not only be good, but must be continuously getting better. The Centre leaders have hopes—if not of an absolute victory, at least of a relative one. They believe that the discontented voters from the National Radical Union will join them and they are convinced that they can snatch back from the pro-communists those Centre voters who in 1958 favoured EDA out of disillusionment with the fragmentation of the Centre. Their opponents have repeatedly used the "lost vote" argument, claiming that the Centre's rival groups would break up on the morrow of the elections. The Centre leaders, however, point out that once in power, to split up would be absurd, particularly since they expect that the eventual defeat of the ERE would bring to the Centre several of its deputies. The nationalist parties forecast that the EDA-PAME electoral following will decline to 20 or less per cent, mainly as a result of the reconstitution of the Centre and this party's purely pro-Soviet attitude in the past few years.

The electoral law may deny either Mr Karamanlis or the Centre the chance to form a single-party government, which is evidently what Greece needs at the present stage of its economic development. In this context the key to the problem next week may be Mr Markezinis, the leader of the small Progressive party, whose intelligence is generally acknowledged in Greece and whose popularity has been growing. If Mr Markezinis returns with a sufficient number of Progressive party deputies he might be able to give Mr Karamanlis the working majority he may need in the new parliament. This would be a technically powerful team provided that the explosive characters of the two leaders can be harnessed for the sake of governmental harmony.

Austrian Press Changes

FROM OUR VIENNA CORRESPONDENT

HERR FRITZ MOLDEN, hitherto owner and chief editor of the Vienna daily *Die Presse* has sold the paper and will confine his attention to his printing works and his other publishing activities. Herr Molden took over the independent right wing *Die Presse* from his father ten years ago while he was still in his late twenties. He founded other papers and rapidly became the most controversial figure in the small world of the Austrian press. The hiving-off has been going on for some time. A year ago Herr Molden owned three other newspapers: *Die Wochenpresse*, a weekly which he later sold to an industrial combine, the *Express*, taken over by the Socialists last January, and the *Abend-Zeitung*, which was bought up by Herr Fred Ungart, who is part owner and business manager of the advertising firm IWG (Internationale Werbegesellschaft mbH). Herr Ungart is the new owner of *Die Presse*, and is closely associated with the former Chancellor, now President of the Federal Chamber, Herr Raab.

This sale has caused a minor sensation because *Die Presse* is the only independent right wing paper in Vienna directed at a politically literate readership. Although it is widely criticised as being (a singularly deadly combination) both stuffy and not always reliable, it is the direct successor of the famous old *Neue Freie Presse* which, by a little tinkering with genealogy, can be considered as heir to the *Freie Presse*, child of the 1848 revolution. Herr Oscar Pollak, the internationally known old-time Social Democrat, has initialled a leading article in his *Arbeiter-Zeitung* in which he laments not only the decline of the liberal tradition of sturdy independence, but also the passing of the wholesome practice of ownership combined with active editorial direction. Herr Molden has been in the habit of contributing to his own papers, but Herr Pollak remarks that Molden was always primarily a manager before he was a journalist. In their small way, he says, these events can be compared with trends in other countries; he mentions Mr Roy Thomson.

> We have watched with concern the battles and mergers, the wholesale shutting down and mopping up in the British press. In Austria we now have a miniature version of the same manager type and his methods.

This is the bitterness of a life-long professional journalist over a man who, he feels, has let the side down. Herr Pollak's distress ought to be slightly mitigated by the fact that feelers put out by intending German buyers were quickly clipped off by the Austrian Press Council, which recently issued a public warning that foreign ownership of a newspaper must on no account be permitted.

Ownership by a publicity expert may improve the layout of *Die Presse*; conservative party influence is less likely to enliven the content. If Herr Ungart can, he might make a start by knocking something off the price. *Die Presse* costs twice as much as its rival *the Wiener Kurier*, a popular-style, vigorous paper with a large circulation. The *Kurier*, with its two editions, has an initial pull over any separately produced evening paper, and has taken swift advantage of the *Presse's* embarrassment by announcing greatly extended international news coverage as well as more local gossip.

Dr Verwoerd's Mandate

FROM A CORRESPONDENT IN SOUTH AFRICA

IN the shadow of Paul Kruger's statue in Church Square, Pretoria, on October 18th, the minister of Bantu administration and development, Mr M. D. C. de Wet Nel, welcomed the National party's triumph in that day's general elections with these words:

> The United Nations knows where it stands and what to expect from my people in this southern corner of Africa. We will die—each and every one of us, every son and daughter of South Africa—rather than give up our nationhood.

The results show that this kind of rabble-rousing appeals to an increasing number of white South Africans. Dr Verwoerd's National party increased its share of the poll in every seat it contested. It captured three seats from the opposition: two from the United party, the third from the National Union, which had formed a pact with the United party and which failed lamentably to serve as a decoy for dissatisfied Afrikaner Nationalists. The Nationalists now hold 105 of the 160 seats in the all-white Parliament—only two short of that cherished South African political ideal, the two-thirds majority. Dr Verwoerd has a clear mandate from the whites—the wishes of the non-white majority are not considered—to push ahead with his "separate development" policy, which seeks to divide the country into a white parent state and several black satellite "Bantustans." He has five years to make "separate development" a reality, no matter what the cost.

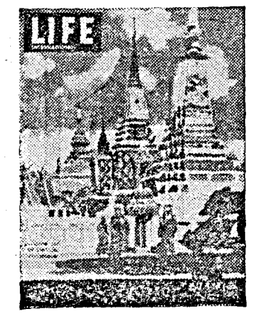
But the going will not be easy: the election campaign showed that the Nationalists are still the prisoners of their own past propaganda about the "black menace." The rank-and-file Nationalists are more than unwilling to make the economic sacrifices necessary if genuine "Bantustans" are to be built up; they are by nature suspicious of "doing too much for the *Kafir*." In a broadcast on October 20th, Dr Verwoerd stressed that there will be no sudden speed-up of separate development. A student of applied psychology, he understands well the mood of most white South Africans. His speech, which might have been charitable in the face of so great a victory, was instead devoted to sneers at his opponents.

The other feature of the elections was the support gained by the liberal Progressive party, which the Nationalists had hoped would be wiped out by the United party. The Progressives won only one seat from the United party, but they came close to taking several others. They polled 56,000 votes to the United party's 83,000 in 16 urban English-speaking constituencies. Tens of thousands of people in the cities are apparently prepared to reject race discrimination—the very basis of South African political thinking—and to strike out boldly for a shared society in which individual merit, and not race, will be the criterion. A heavy burden will rest on the shoulders of Mrs Helen Suzman, the only Progressive who won a seat. She will have to carry the banner in Parliament not only of 12,000 affluent white voters in Houghton (Johannesburg), but of 10-million non-whites. Judging by her performance in Parliament during the Sharpeville emergency last year, she is well qualified for the task. Liberal-minded people hope that she will become a substitute for Mrs Margaret Ballinger, who served as a representative of African interests in Parliament for many years before the Africans' representatives were barred from Parliament by Nationalist legislation in 1959.

EX-CHIEF Albert Luthuli, who is also ex-president of the banned African National Congress, commented in the peaceful spirit that has this week won him the Nobel Prize. He said he "deeply regretted" that white voters had given Dr Verwoerd's party increased support, which amounted to a mandate to continue its repressive policies. This meant that there would be hard times ahead for South Africa. But characteristically, Mr Luthuli added that the support which the Progressives had received was an encouraging sign. Although he did not agree totally with the policies of the Progressive party, it was moving along the only true path to healthy race relations in South Africa.

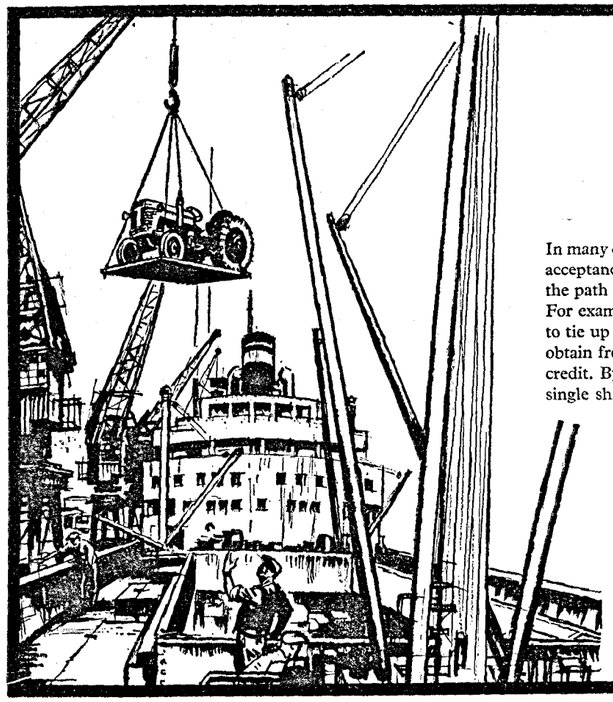
Now that the elections are over, white South Africans are wondering whether the United party, the traditional opposition which has "White leadership with Justice" as its slogan, has a future. In every election since 1948 it has lost ground; since the death of General Smuts it has lacked not only a leader, but a positive policy. Instead of opposing the Nationalists on principle, it has adopted an expedient "me too" approach: when Dr Verwoerd came forward with his Bantustan plan, the United party's answer was a vague "race federation" scheme. The party has not accepted what General Smuts would surely have acknowledged—that there is now a clear-cut division between liberal and conservative thought in South Africa. Although the United party won 42 seats, it lost ground to the left and to the right in every seat contested.

The tide is running strongly in favour of white nationalism in all but a few progressive urban areas; this will surely—and dangerously—stir the embers of non-white nationalism. On the eve of the elections, power lines near Johannesburg were sabotaged, and slogans—"The People Shall Govern"—were daubed on an Afrikaans church and on public buildings. This action, it is said, was directed from London. The Nationalist leaders assume that it will be from abroad—from the United Nations especially—that South Africa will be attacked during the coming years of Dr Verwoerd's rule.



LIFE SELLS LIQUEURS FOR BOLS

Says Erven Lucas Bols: "*We advertise in LIFE International to get umbrella coverage of the international market—in order to increase world-wide interest in our products.*



"*The readers of LIFE International are mostly upper-middle and top-class people—people who are apt to appreciate and enjoy our products regularly. This is a state of affairs which they and we both wish to maintain, and that is why we shall continue to advertise in LIFE International.*"

When Bols speaks of "umbrella coverage", they refer to the 146 countries of the free world outside the U.S. and Canada where the opinion-leaders read LIFE. In their homes, their clubs, and their businesses they set the buying patterns for others to follow. So it's natural that for seven consecutive years Erven Lucas Bols has advertised in LIFE International, for Bols and LIFE share these same customers—the world's best.

LIFE can sell for you, too. For more information about LIFE International, its new advertising edition for Europe, and LIFE's Spanish language editions for Latin America—write to Robert H. Garey, European Advertising Director, Time & Life Building, New Bond Street, London W.1.

A MERCHANT BANK AT WORK

Acceptance Credits can help to Increase Exports

In many deals which involve the movement of goods between countries, acceptance credits are at work, taking the financial strain and easing the path of buyer and seller alike.
For example, if a United Kingdom exporter of tractors does not wish to tie up his own money by giving credit to the foreign buyer, he may obtain from us the required temporary finance through an acceptance credit. By this means he can draw on us bills of exchange against a single shipment *or under a revolving credit, against a general turnover of export shipments;* the bills, after acceptance by us, can be sold immediately to provide him with the finance he needs.
Acceptance credits, running into many millions of pounds annually, finance much of this country's export and import trade with the rest of the world.

How Lancashire Stands

BRINGING Lancashire to Harrogate for the annual cotton conference does not ensure that cobwebs collected in the clammy climate west of the Pennines will be blown away in Yorkshire's brisker atmosphere. On the contrary, the cotton industry habitually counters the barbs of its critics at these meetings with a determination that might equally be applied to getting its costs down and its competitive power up. No one expects representatives of the cotton industry to leave behind their fears of lost markets, profits and jobs ; it is with reasonable measures to safeguard all these that the conference should properly be concerned. But the re-creation in Harrogate of the very atmosphere of Lancashire prevents this conference doing the constructive job that it should.

The main plank in the Cotton Board's platform this year was evidently intended to be a thoughtful paper given by Mr A. G. B. Burney, the director of reorganisation for the Cotton Board in 1959-60, which prescribed a drastic remodelling of the industry from its traditional horizontal organisation into a more vertically integrated one, able to stand up to the large retailing groups with which it often deals. The proposal was received with no great enthusiasm. At the same time a few stray shots from a quiverful of criticisms by speakers outside the industry attracted tart rejoinders. Lord Rochdale's restrained but revealing report of the important negotiations on the regulation of imports, in which he has been a central figure this year, as chairman of the Cotton Board, hardly attracted the attention it deserved. But when Mr W. T. Winterbottom, chairman of Fine Spinners and one of the three employer members of the Cotton Board, replied to a question with: "We have been completely let down. We have been lifted up and dropped and were lifted up when I believe an election was just around the corner. Since then we have been ditched"—he stole the headlines and, within the conference, turned the thoughts of many of the delegates away from practical proposals for lifting Lancashire out of its rut.

Trouble came to Lancashire, with monotonous regularity, in 1952, 1955 and 1958. Now despite import ceilings and financial inducements from the government to scrap and to modernise, a more serious crisis looms. Yarn output has been sliding since the spring. Cloth production was maintained at a high level until August, but new orders were negligible. Then short-time working, redundancy and—more surprisingly with the scrapping scheme completed only 18 months earlier—mill closures began to plague the industry once more. The labour force has again begun to drift, and the cotton industry has already lost a further 7,000 workers during the past year. Its labour force is now down to 177,000 ; five years ago it was 255,000. Meanwhile there is little sign of a revival in orders.

But Lancashire has not been ditched. Its troubles arise partly from continuing weaknesses in its own structure, which have themselves played a part in the apparently unexpected upsurge in imports of cotton manufactures from new sources. A large part of the overspill of demand from merchants last year was satisfied by imports from outside the Commonwealth, despite an import duty for cloth ranging up to 17½ per cent. When orders for Lancashire declined sharply this year it was hoped that this mainly reflected fears that voluntary curbs on duty-free imports from the Commonwealth might end ; it is now clear that the decline was a kick-back from excessive purchases made partly because it was feared that the cotton reorganisation had gone too far. The assured market for which Lancashire began to agitate in 1955, and thought it had in its grasp when Commonwealth producers agreed to ceilings on exports in 1958, has slipped away. While the warehouses are crammed full of cloth there will be few orders for Lancashire ; and the new suppliers who have their foot in this market are likely to remain.

ACCORDING to Mr Winterbottom, some machinery installed under the reorganisation scheme, and thereby qualifying for the grant of a quarter of its cost, is standing idle. But few manufacturers have been bold enough to invest too much—the majority have taken a more realistic view. Up to the first week in October, the Cotton Board had received applications for grants covering the installation of only £33 million worth of new machinery from the whole industry, which Lord Rochdale judged to be little more than a modern textile industry would require "for its normal development." Because it appeared that few further orders for new equipment would be placed before July 1962 in time to qualify for grants, the Cotton Board persuaded the Board of Trade to extend the qualifying period by a year.

Certainly, Lancashire's re-equipment still has far to go ; less than a third of its looms are automatic—and only a third of these are worked for three shifts. But if most of the industry is waiting for assurances of a kind that practically guarantee profits before it ventures more of its own capital, the re-equipment phase of the reorganisation scheme will be as far from succeeding next year as it is now. With one government-sponsored reorganisation scheme barely completed, it was hardly surprising that the official line with

delegates seemed to be that if the cotton industry was to regain prosperity it had better set about earning it by its own efforts, and not hope to obtain it as a right from the government.

Lord Rochdale had some brave remedies to suggest for the industry's ills. But in accord with the Cotton Board's notion of its position in the industry, they were advanced so tentatively that no delegate left the conference with a clear idea of the direction in which the board was driving. With a wage demand for cotton operatives under discussion—and incidentally holding up implementation of more shift working—the structure of wages in the cotton industry is currently more ticklish than usual. It was therefore no sooner mentioned than dismissed, even though it is certain that without a revision of the wages structure some of the value of re-equipment will be lost. A proposal to launch a sales promotion campaign for cotton goods has been put before the various trade associations within the industry, but Lord Rochdale spoke of it so diffidently that the substantial expenditure that is apparently envisaged has only a modest chance of being approved by the many separate bodies and some of their pinch-penny members.

Lord Rochdale was at least a little more forthright in his implied criticism of the industry's structure, which appears decidedly outmoded in today's conditions. Fifty years ago the mills were said to work from the first whistle to tea break for the export market; what remained of the day was given over to the home market, which then absorbed only a fifth of their output. The respective importance of these two markets is now precisely reversed, and other fundamental changes have transformed practically everything to do with the Lancashire industry—except its organisational structure.

† Adjusted for scrip issue.

The three main processes of spinning, weaving, and dyeing and finishing are still usually carried out by independent firms, with the cloth eventually getting into the hands of the 1,400 or so merchants and merchant converters registered—but currently, it seems, a little unpopular—with the Cotton Board. This horizontal structure undoubtedly makes it easier for overseas manufacturers to enter the Lancashire market. A weaver faced with stiff competition has no incentive to resist imports of cheaper yarn from foreign spinners. In their turn, weavers have been short-circuited by dyers who find that they can maintain their level of production only by processing imported grey cloth.

But it is the merchants and merchant converters that are now seen as the most suspect link in Lancashire's chain. To them attaches much of the "blame" for last year's large imports of foreign cloth. It is also inferred that they are no diligent enough in selling Lancashire's products. When thei trade by-passes the whole of Lancashire's industry, it is hardl surprising that it arouses the animosity of the rest of th trade. Control over marketing, therefore, is now receiving lot of attention; this seems the focal point of the proposal t "verticalise" urged at last week's conference. It is hope that cutting across the traditional divisions of the Lancashir industry will at the same time plug some of the loophole through which foreign goods have streamed and damp the trad swings that appear to floor the industry every third year. Bu the result seems likely to be a dearer end product and hence further weakening of Lancashire's competitive position, unles real economies in costs can be found in the vertical structure The aim is probably to sell a branded product that is les susceptible to price competition.

DESPITE the emphasis at Harrogate on domestic issues, i is nevertheless the international implications to whicl most minds are turned. Negotiations on Britain's entry int the common market, and this week's conference of the Genera Agreement on Tariffs and Trade to discuss a long-term agree ment for controlling low-cost competition in cotton textiles have given the difficulties of the cotton trade a three-cornered aspect, involving the Commonwealth, Gatt and the commor market.

At Gatt, Britain will certainly press other importers tc share more equally the "burden" of importing cheap Asiar textiles. The Cotton Board has asked the Board of Trade tc propose that by 1970 western countries should each take at least 10 per cent but no more than 20 per cent of their domestic requirements of cotton goods from low-wage producers. Britain at present is importing about one-third of its requirements, so that this formula could provide relief for Lancashire. The Cotton Board has also suggested that foreign (as opposed to Commonwealth) imports should be caught in the net of the existing temporary Gatt textile agreement which allows restrictions to be imposed on non-participants whose exports are likely to frustrate the working of the agreement.

From Lord Rochdale's account of his dealings with the Board of Trade over the imposition of a new ceiling in July for cotton imports from Hongkong, it seems most unlikely that the government will negotiate at the Gatt meeting terms such as the Cotton Board has in mind. As was thought at the time of the government-imposed ceiling on Hongkong exports, the terms dictated by the government were far more generous to Hongkong than the Cotton Board expected. It had urged that there should be no increase in Hongkong's basic quota. But Lord Rochdale reminded the conference that without the government's "overt" intervention, no agreement could have been reached.

The common market negotiations, however, may strengthen Lancashire's hand. Continental manufacturers fear that cheap Asian textiles will find their way into their markets through Britain, and unless the Continental countries and Britain bring their import policies into harmony, difficulties will arise. So Britain's relatively liberal treatment of outside suppliers may have to be amended. As far as Asian imports are concerned, Lancashire for once has nothing to lose.

Pricing Electricity

NO announcement about the "target" rate of return that electricity supply will have to earn under the Government's new five-year regimen for nationalised industries has yet been made—or seems likely to be until about the end of the year, when the Minister of Power will have to ask Parliament for an extension of this industry's borrowing powers, and will presumably be obliged to say how much self-financing it has been told to do. But the fact that the Central Electricity Generating Board has now published its bulk supply tariff for the year beginning April 1, 1962, means that this largest piece of the electricity industry, at least, knows what kind of a surplus it needs to earn during the first of the next five years. So the broad average for the industry, which one can express alternatively as a gross or net rate of return on capital employed, a proportion of self-financing of its investment, or a level of surplus after paying fixed interest on its capital, must now be settled, even if targets for some of the area boards are still under discussion.

When this industry published its annual report last month, Professor Ronald Edwards, deputy chairman and chairman-designate of the Electricity Council, said that the industry had anyway been envisaging total surpluses of the order of £55-£60 million a year by 1964-65. The Treasury and the Ministry of Power, considering the record of growth and the huge investment plans of this dependably prosperous nationalised industry, may well have asked it to earn a little more even than that sum—the magnitude of which will not be lost on the industry's trade unionists or its consumers. The industry should not find it hard to earn these surpluses, though keeping them may be another matter. But the way it chooses to earn them—its pricing policy—will have considerable implications for its continued growth, and the vast slice of the nation's capital investment that this pre-empts.

In setting the bulk supply tariff, which is the price at which CEGB sells electricity from the grid wholesale to the area boards who distribute it and sell it retail to consumers, the industry automatically determines the division of whatever surplus it has to earn between wholesaler and retailers. Over the last three years the CEGB's surplus as a wholesaler has declined sharply as a proportion of the industry's total: it amounted to about 35 per cent in 1958-59, only about a fifth in 1959-60, and nil last year, when after paying interest and depreciation on a very conservative basis the board showed a small deficit. It will presumably have eliminated that deficit in the current year by adjusting last autumn its bulk supply tariff for 1961-62 with an increase of 2½ per cent in charges. But over the next five years under the new ground rules of nationalised industry finance, CEGB may well be reckoning to earn a considerably larger slice of the industry's surpluses.

But the wholesale price that it charges for electricity in Britain, and the way in which it charges the price, do more than aim at raising a particular surplus for the generating board. The "shape" of the bulk supply tariff can have fundamental effects upon the kind of tariffs that the area boards in turn can "design," and upon the profitable utilisation of the industry's vast capital employed. The 1962-63 tariff published recently by CEGB is the result of a comprehensive review of just what results it wants this basic price to achieve and how best its details could be adjusted to achieve them.

This is a two-part tariff, like most in electricity. The traditional system is to recover all those costs that do not vary with the number of units actually supplied through a fixed charge per kilowatt of maximum demand upon the system, and the costs that do vary with units supplied—basically running costs—through a charge per unit. In recent years this has meant a continual increase in the fixed "demand" charge, as more and larger power stations have built up CEGB's capital investment but reduced its fuel and other running costs per unit generated. Conventional stations are still getting bigger and more efficient; and the introduction of a growing nuclear component into generation will go on increasing the "demand" charge and cutting down the charge per unit of electricity bought. Until recently, this was accentuated by CEGB's practice of planning to get whatever it needed for its annual surplus out of the "demand" charge, making the unit charge simply cover estimated running costs.

IN principle, this could be fine. The more that an extra kilowatt of demand costs a buyer, the more incentive he has to moderate his peak simultaneous demand in relation to his total annual consumption, the better his average "load factor" on the industry's capital equipment, and the less investment required to support the continuing growth of power consumption. But in practice, the bulk tariff in force now (and until next spring) does not quite achieve that virtuous result. A board's demand charge is reckoned according to its maximum demand in any half-hour during the day; but this is not necessarily the half-hour of the year that gives the bulk supply system the most trouble in supplying that many kilowatts. One area board, not long ago, had an extra cold snap in February that put up its demand by 500 megawatts. That increased its annual demand charge by £3½ million for the year, though the load occurred on a day when meeting it imposed virtually no strain upon the CEGB's generation and transmission system at all. That seemed unfair to the area board; and the CEGB in fact probably had much more trouble in supplying it with less power in a peak hour say a month before, when other boards may have shared much more responsibility for calling in the peak load generated by old stations from which power may cost up to 6d. a unit or more.

Some area boards, again, have better opportunities than others to "shave" their peak demand in one way or another. The high demand charge of extra kilowatts on its peak load has led one area board to investigate and then install a small gas-turbine power plant, operated by remote control, largely for peak load purposes, rather than buy extra units from the grid. That may make good sense: it has set CEGB, too, to looking at peak power costs to see if a new small station could beat an old one. But it also made CEGB less anxious to push up its demand charge. Moreover, the higher the fixed element in the bulk price of electricity and the lower the unit charge, the less are area boards tempted to make their own unit charges to

consumers, and the smaller can be any variations that they can offer in attempts to improve the load factor of consumers' demand.

For 1962-63, CEGB began by loading only half of its planned surplus on to the demand charge and reckoning to recover half through its unit charges. It then refined its maximum demand criterion by charging area boards according to their contribution to the peak demand on the system as a whole, not their individual maximum demands; and set this as the average of each board's contribution to the two half-hours of maximum system demand before and after Christmas in any year. This and certain other refinements will not affect the total sum that CEGB gets from its demand charge, since its charge per kilowatt is revised in retrospect at the end of each year to bring it in a prescribed amount of money whatever the actual maximum demand involved. But it will affect the contribution that each area board makes to this, and should bring it in line more closely with the actual demand that each board makes on CEGB's "capacity costs."

A more obvious innovation in this new tariff comes in the charge for units supplied—a day and night differential. Only about 20 per cent of the electricity Britain uses is taken at night: this base load is met by big power stations running almost continuously, with very low fuel costs. During the day, it costs on the average 17 per cent more to supply a unit of electricity than it does during the night. The differential that CEGB is offering in 1962-63 is quite a significant one proportionally—0.47d. at night, against 0.58d. by day. It should make it more easy for area boards to increase their differentials to commercial and domestic consumers.

The basic unit charge in the British bulk supply tariff is adjusted by a "coal price differential" designed to take account of the fact that some power stations are better located for cheap coal than others—and that some area boards have to sell in the market against cheaper coal and coal-based gas than others do. For next year the size of these adjustments has been reduced by moving up the basic price of coal to 85s. a ton, against the earlier and out-of-date 60s. Area boards pay more or less than this for power generated within their own areas, according to their local coal costs; they pay a nationally-averaged price for power that they import through the grid from other areas; and they pay at this "national" price for power generated in nuclear stations, even in their own area, on the argument that all boards contributed to the national capital costs of this power and gain equally from its exceptionally low unit costs. Over the years one would expect the "coal price differential" to decrease as more and more power is generated in big power stations on the coalfields or at coastal sites for nuclear and oil generation. But moving too fast towards its abolition would mean a sharp increase in unit prices to areas with low costs—mainly industrial—and quite uncovenanted benefits to some of the more rural areas remote from coal.

This is a tariff set for one year and not for three, as the CEGB hoped the last one would be (it had to be revised for 1961-62, its last year). The surpluses aimed at are small in proportion to the industry's turnover. Moreover, a complex tariff such as this one has many ramifications in its effects, some perhaps unexpected. Critics of electricity pricing policy in this country, who have seen some of their arguments accepted and the bases for others utterly overturned in recent years, can at any rate approve the objects of this electricity tariff and respect the hard thinking that lies behind it. But before the industry is much further into its new five-year plan an equally comprehensive and subtle-minded exercise will be required in thinking through its retail tariffs—the point where the final consumer has to pay the price of electricity and ought to pay a price as closely related to costs as maybe. That may be much more trouble to get through.

BUSINESS NOTES

REPAYING IMF

The Alternative Route

WISELY, the Treasury has made a start in using the foreign funds that are flowing into London to repay the International Monetary Fund; and it is doing so in a substantial way. Britain is to repurchase £100 million of its August drawing of £535 million, by early next week—in time to deflate the October gold figures. The Treasury describes the transaction as a "technical redisposition," of Britain's reserves, since the repayment increases *pari passu* the stand-by facilities available to Britain at IMF. The importance of the operation is that it cushions the impact of the flows of private money to London on the centres which the funds are leaving. The object of the operation is largely to check the gold loss from the United States, and for this reason the repurchase is wholly in dollars. Admittedly the currencies which the Fund needs most at present are marks and lire, but special arrangements should soon be completed to replenish these holdings by bilateral borrowings under Article VII.

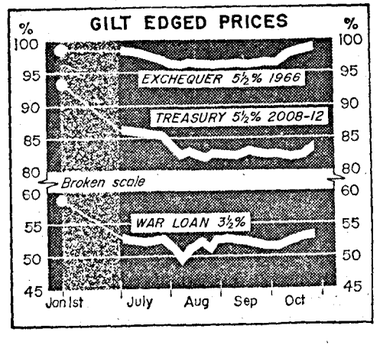
Britain's repayment, it is officially intimated, has been made possible by the "substantial" return of funds over recent weeks. This does not mean that there has been a corresponding improvement in the underlying balance of payments, and provides no justification for any relaxation of the measures designed to bring about a lasting solution of our external imbalance . . . The familiar warning "no green light" makes sense in connection with this technical operation, as it cannot do in connection with a reduction in interest rates. Bank rate was unchanged on Thursday; and one would like to think that the authorities have taken the IMF route as an alternative to a series of Bank rate reductions that would have to go dangerously far before they had any real impact on hot money. The financial markets, however, now regard "the other half," and perhaps more, as inevitable.

Expectations of a cut in Bank rate the next day caused a sudden sale of spot sterling from New York on Wednesday afternoon, accompanied by further bidding of forward sterling. The narrowing of the margin to 2 1/16 cents three months forward, equivalent to an annual interest rate of slightly under 3 per cent, caused the margin on covered interest arbitrage in favour of London over New York on the Treasury bill

comparison to widen to 5/8 per cent. After Thursday's announcement of no change in London Bank rate, spot sterling was gain bid, and the forward rate was unchanged.

Before Wednesday's sudden rumour sterling had been in very strong demand and rose to a new peak of $2.81 1/8. Evidence of the flow of investment funds to London can be seen in the strength of security sterling, which is now at only a nominal discount below the official rate. Overseas money is also streaming in to the mortgage market, and the expectation of a falling away in rates is reflected in the eagerness of lenders to secure their deposits for three months and more. The local authority borrowers, in turn, now prefer to commit themselves for the shortest possible period, and the rate on three months deposits has been forced down from 6 7/8 per cent last week to 6 5/8 per cent. The Treasury bill rate, too, continues to fall. At the tender on Friday of last week the discount houses felt bound to keep their bid competitive, and after pushing the rate below 6 per cent they were not surprised when the authorities responded by forcing them to take loans at the penal rate. The cost of such loans is still relatively small compared with the cost of missing the bills at a time when everyone wants them.

On the Continent, the mark fell below parity on the dollar a week ago for the first time since revaluation; in midweek it recovered somewhat, partly as a result of a rumour that the ban on payment of interest on foreign residents' bank deposits was about to be lifted. Elsewhere the dollar has been relatively weak—at its support point against the lira, and under pressure too in Paris, Amsterdam and Switzerland. In the London gold market the price continues steady at $35.19 3/4; the market has not been affected by the fall in the gold price in Hongkong and Macao, to around $38 an ounce. Business at the London fixings has been of much the same kind and scale as in previous weeks, with a moderate amount of private buying. One special official transaction has been the purchase of £3 1/2 million of gold by the Spanish authorities for their reserves.



IN THE MARKETS

Unasked Question

THE tide has run still more strongly in favour of gilt-edged this week. Buying has been large and widespread, with the general public and the overseas investor increasingly in evidence. Prices have risen daily. The market has suddenly seized on the undoubted uncertainties in equity investment in the 'sixties as a reason for securing a fixed interest return at the high level that is available today—and may no longer be available tomorrow. There is nothing new in the first half of this diagnosis—it was clear a year ago that a mixed bag of equities no longer offered the certainty of growth, and that the assurance of fixed interest in a fixed interest security was regaining its attraction. A few far-sighted institutions realised this, and have been buyers of gilt-edged ever since the bursting of the post-election boom in equities at the end of 1959.

The sudden spreading of the gilt-edged fashion to the wider investing public clearly reflects the expectation that interest rates have now passed their peak, an interpretation that can be backed by the reduction in Bank rate and by one of Lord Cromer's Mansion House questions—but not yet by the Bank of England's tactics in the gilt-edged market. The market is assuming that the authorities will have to yield to market pressures—forgetting that the market pressures themselves arise partly in anticipation of official action. And it is difficult to feel certain that gilt-edged stocks have at last found their base until one feels equally certain that Britain has mastered its external payments problem. It is sterling that has checked the incipient downward movements of interest rates in the past; is its long run future so assured that it need no longer lean on high interest rates now?

For the moment however the City is in no mood to entertain such doubts, and the gilt-edged bandwagon is on the move. The authorities are trying, within self-imposed limitations, to check it. The government broker has allowed the net price of his 5 1/2 per cent Treasury 2008-12 to rise only very slightly: since the beginning of this month, while other long-dated stocks have risen by around two points, the tap stock has been raised by only 1/16. But this is now virtually the only stock which the authorities hold in any substantial quantity, and it is proving increasingly difficult to control the market on this one lever alone. Other stocks are rising and the tap stock is increasingly attractive. It still yields £6 14s. per cent, only 9d. less than in early August; but whereas then it actually offered one-quarter per cent less than irredeemable War Loan and about the same gross redemption yield as 2 1/2 per cent Savings 1964-67, it now offers a margin of 2s. 6d. over War Loan, 3s. 8d. over the almost comparable 3 1/2 per cent 1999-2004 stock, 9s. over the 1982-84s and 18s. 9d. over Savings 1964-67.

. . . Chasing Too Few Gilts?

ON these terms the government broker is doubtless selling large amounts. But if the rise in the market is to be checked he will need a fortification in the supply of medium-dated stocks. Since the Government has budgeted for no new money from the gilt-edged market this year it is not expected to make a new issue of its own. But there are other uses to which a government issue could be put—it could soak up the superfluous bank liquidity that has suddenly appeared, or it could be an excellent alternative to special deposits. More likely however is a further stream of corporation issues. But if these are to restrain the market they will have to be more finely priced than the LCC's recent cash and conversion issue, which opened on Monday at a premium of 3 1/4 and stood at five points premium two days later.

Equities, meanwhile, are the sufferers from the turn-round in Throgmorton Street's thinking. After a small rally last week they were depressed again on Monday by news of further hire purchase losses and on Tuesday by the Chancellor's hint that a capital gains tax could be introduced before the budget and also by his warning that: "If we face facts, something like this [wage inflation] has already been happening, and it can lead to disaster." Just how this can be good for gilt-edged is difficult to imagine—unless the City is wholeheartedly convinced that the Chancellor has wages under control. On Wednesday, investors could turn to more favourable sentiments from Mr Lloyd—"Just because the steel industry is not working to full capacity, because some consumer durable industries also have capacity to spare . . . it does not follow that the economy as a whole is moving downwards." The share markets duly gave themselves a minor lift. just in time to stop the *Financial Times* ordinary index from dropping to a new low point. Over the week to Wednesday, *The Economist* indicator rose by 2.3 to 245.

SHIPBUILDING

Who Has Lost Credit?

IT is even more difficult, after the publication of the report* by Peat, Marwick, Mitchell, the firm of accountants, on British shipbuilding orders placed abroad, to fathom the real reason that moved Mr Marples to commission it. If he wished to silence shipbuilders' complaints about credit facilities in this country and pitch the ball back into the industry's court, arguing in effect that the only thing wrong with British shipbuilding was its own inefficiency, then

* "Shipbuilding Orders Placed Abroad by British Shipowners": HMSO. 1s. 0d.

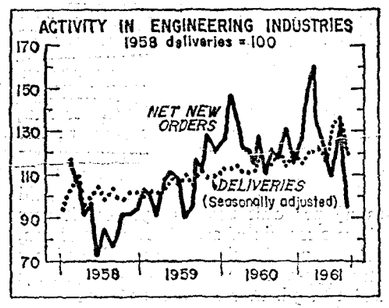
he can hardly be surprised if the industry points out that its complaints about difficulties over the cost or availability of credit primarily concerned orders from foreign, not from British, owners.

Out of the 34 ships, worth some £23 million and totalling almost 200,000 tons, that British registered shipping companies contracted from overseas yards between the beginning of 1959 and July, 1961, the report finds that advantage was taken of credit facilities offered by foreign builders in only nine.

But in none of these nine were credit terms of paramount importance in the decision where the order should go. Price was always of greater or equal consideration, as in twenty-two of the other twenty-five cases studied. Where credit facilities were offered and used, they covered between 60 per cent and 80 per cent of the total contract price over periods of from five to eight years at interest rates ranging from 3 per cent to 6½ per cent. This would seem to support the British shipyards' argument that better terms can often be raised by their overseas competitors.

This may be so. But the position in Britain is not quite as bad as is often made out. Much, for instance, has been made of the recent failure of the Sunderland shipyard of Joseph L. Thompson to land the Naess order for an 80,000 ton tanker, allegedly because no finance could be raised here. It appears, however, that originally the Naess group had ordered two tankers from a German shipyard, but were unable to raise adequate credit. Finance for both ships could have been found in Britain if the orders were transferred to a British yard, but the increased cost of construction would have wiped out the slim margin of profit on the long term charter from Shell. So the group proposed building one tanker, but financing both, in Britain. It then encountered understandable reluctance in London to finance German exports. Since then the Thompson yard has won a contract for an 80,000 ton tanker from the Olsen line of Oslo, also for charter to Shell Tankers, having succeeded in raising the credit that the Norwegian yard, which had previously been given the order, had failed to muster.

These examples, and the Peat, Marwick study, argue that the prime reason why Britain has now become a major net importer of new ships is the inability of British shipyards to compete on price. The cost of credit, reluctance to guarantee delivery, and weaknesses in marine engineering development have also played a part. But the accountants' study does not come up with any significantly new information that has not already been covered in depth by the three previous major Government or industry-sponsored reports on the industry in the last twelve months. Perhaps, Mr Marples intends to maintain a sustained barrage of public criticism of British shipbuilding's faults in the hope that it will shame the industry into remedial action.



THE ECONOMY

The Squeeze Takes Effect

LATELY, there have been increasing signs of slackening pressure in the economy. This is evident in the latest figures (both of engineering orders and of unemployment). On October 16th, there were 365,607 people out of work in Britain, of whom 43,230 were only temporarily stopped. That means for the second month running there was more unemployment than a year before; the latest rate was 1.6 per cent of the labour force compared with 1.5 per cent in October, 1960. Since the previous count, the numbers wholly unemployed had risen by 42,000, the normal increase being around 27,000. As unemployment has edged upwards, vacancies have become fewer; after allowing for seasonal influences, there were nearly 60,000 fewer vacant jobs on the books in October than there had been in June.

Engineering Swings Round?

NEW orders received by the engineering industries in August were 15 per cent below the volume of August last year. Orders from the home market fell by 19 per cent, but export orders were only four per cent lower. These figures fit in with other suggestions that capital spending at home is being cut but that the export demand for capital goods remains high. But it would be hazardous to reach too definite a conclusion on the evidence of one month's

figures, for these orders have a tendency to fluctuate wildly from month to month for no obvious reason. A suspicion that the demand for capital goods has begun to decline at home is therefore all that one can safely hold; until the level of new orders for September is known, it would be risky to assume more.

BANK CREDIT

Advances Still Falling

BANK advances are still falling, though the decline has not surprisingly slowed down considerably from the extraordinary rate of August and September. The mid-October statements of the clearing banks also confirm that, as was apparent in the market, the banks are back as buyers of gilt-edged, having added £49 million to their portfolios in the four weeks to October 18th. The recorded decline in net advances was £69 million; but this was swollen by a reclassification of the bank figures which transfers about £40 million from advances to money at call and short notice. The items involved in the switch are mainly balances held abroad, which the banks have previously classified in different ways. The clearing banks state that since the object of the reclassification, which has been approved by the Bank of England, has been to standardise practice and not to improve the liquidity ratio, some banks have used the extra leeway to increase investments—a movement which, the statement recognises, is also permitted by the increase in liquidity from other sources.

Despite a fall of £15 million in holdings of commercial bills, the banks' liquid assets rose in October by £80 million (or about £40 million without the special transfer). The net Exchequer deficit was no longer running higher than a year before, and the government must have been drawing finance from the gilt-edged market in this period; but working the other way was its increasing need to finance such inflows of

foreign funds that were not directed into government paper. The upshot of all these influences was a rise in the liquidity ratio from the already comfortable 34.3 to 35.0 per cent—even after the freezing of 3 per cent in special deposits. The increase on the month is broadly accounted for by the reclassification.

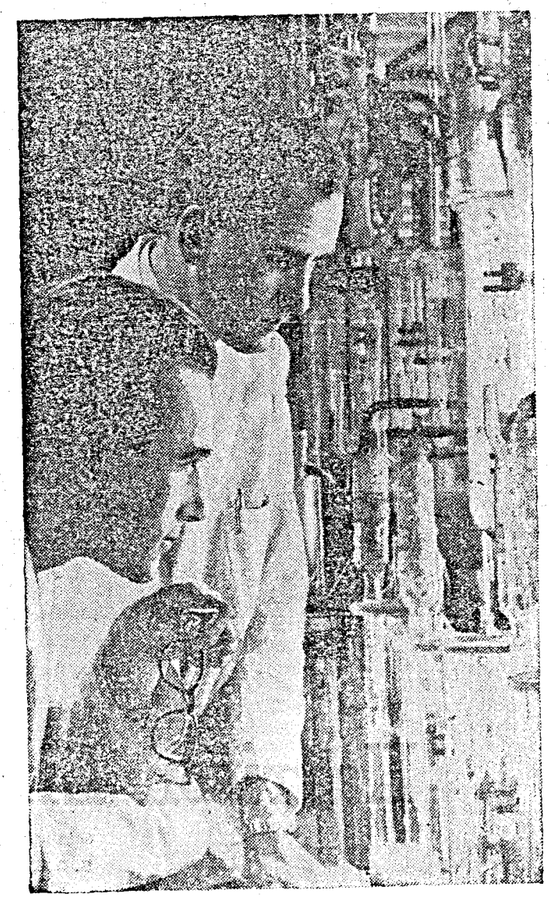
The dramatic transformation in bank liquidity in the past three months is predominantly the result of the equally dramatic reduction in advances, which totals just over £300 million on the recorded figures and £260 million, or 7½ per cent, on a true comparison. Advances by the Scottish banks fell at much the same rate, by £32½ million. The steep fall in bank lending can be attributed to (1) the "toughest ever" directives sent out by the banks in August, received by managers who

IN THE SPACE OF 10 YEARS...

...the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140, no fewer than 100 more than existed a decade ago. Unrivalled banking facilities are therefore available for all merchants trading with the various countries served by the Bank.

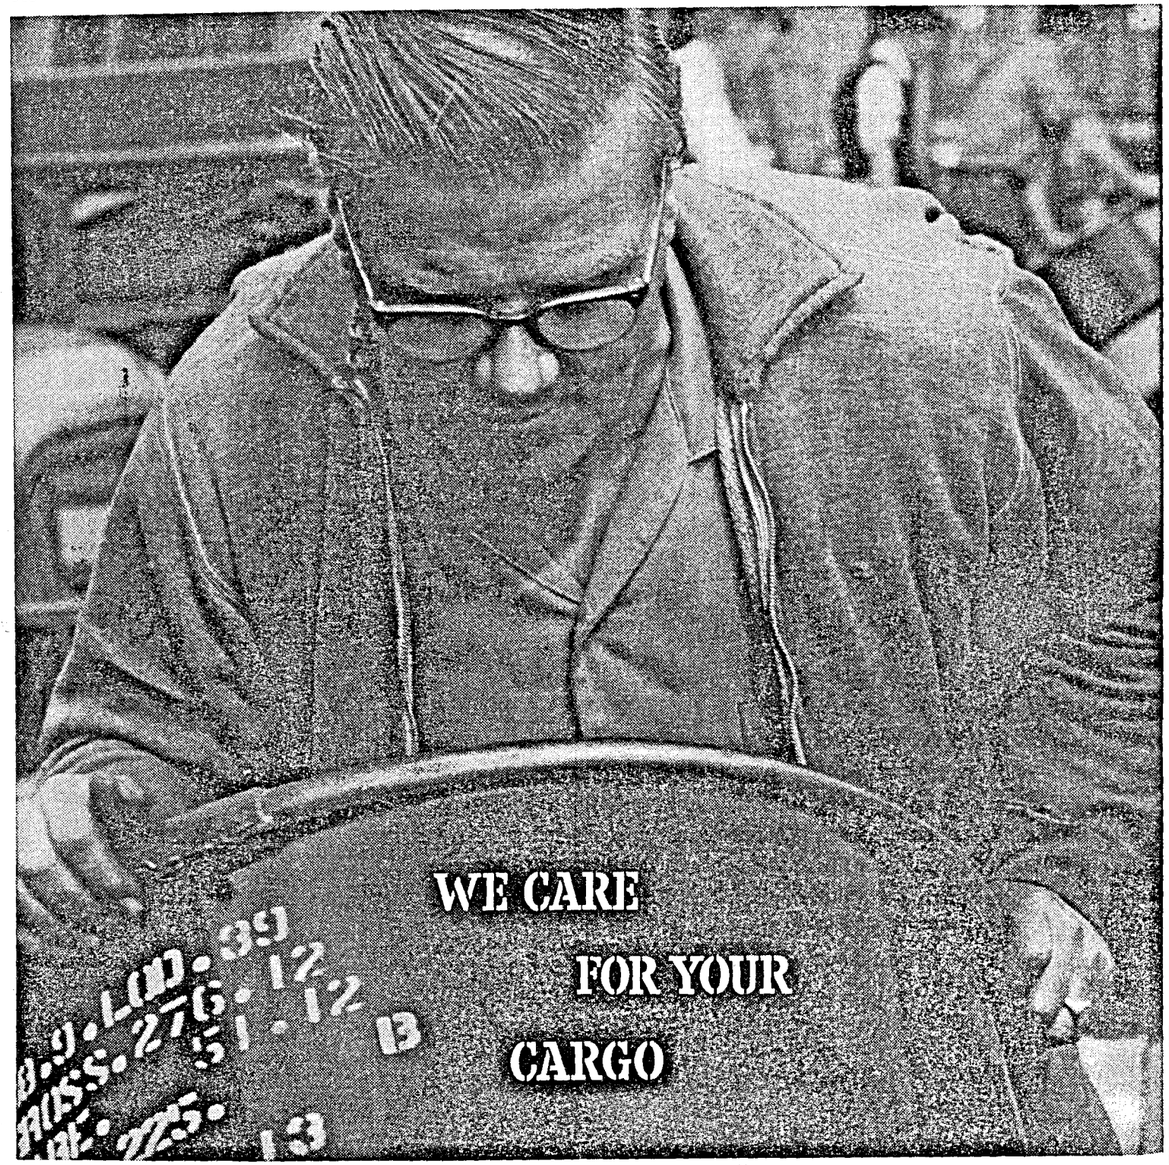
NATIONAL AND GRINDLAYS BANK LIMITED

Amalgamating
NATIONAL BANK OF INDIA LIMITED, GRINDLAYS BANK LIMITED AND THE EASTERN BRANCHES OF LLOYDS BANK LIMITED



HEAD OFFICE: 26, BISHOPSGATE, LONDON, E.C.2.

A comprehensive banking service is available at branches in the following territories:
INDIA · PAKISTAN · CEYLON · BURMA · EAST AFRICA · ADEN SOMALIA AND THE RHODESIAS



Bankers to the Government in: ADEN · KENYA · UGANDA · ZANZIBAR

There is more in banking than the mere possession of a bank account. The first class service, prompt decisions and the ability to obtain friendly and helpful advice and information when required have attracted many firms and companies from all branches of Industry, including some of the largest in the country. The wide experience of the bank is at the disposal of all its customers whether their accounts be large or small. National Provincial Bank could be of assistance to you in your business and its problems.

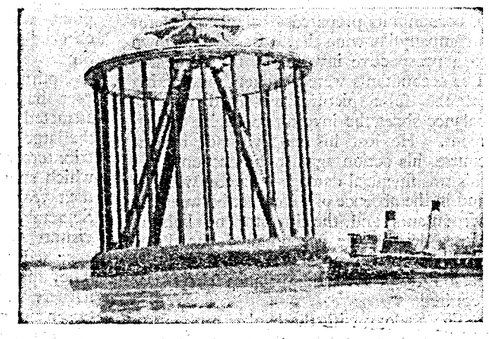
had already been putting on the brakes; (2) the turn-round in sterling, which increases the supply of credit in London and eases the demand in a number of ways; (3) the high overdraft rates; and, not least, (4) the sharp reduction in the rate of stock-building in the economy. The upshot is that the banks have a new worry—how to stop their liquidity ratio looking too lush.

AIR TRANSPORT

"Three Sizes Too Big"



READING between the lines of the address given by the director general, Sir William Hildred, to the International Air Transport Association's annual meeting in Sydney this week, it appears that the airlines would still have been in difficulties this year even if traffic had come up to expectations. The fact that it failed to produce the steady annual rate of growth to which airlines have become accustomed has made a bad situation worse, but the original cause of the trouble lies elsewhere. When the airlines re-equipped with jets—500 are now flying and 400 have still to be delivered—they compressed a decade's growth in capacity into a few years and now find themselves, according to Sir William, in the same situation as "the growing boy who is sent to school with a jacket which is still three sizes too big for him." He went on to predict that "traffic, like the boy, will be bursting the seams of this particular jacket long before it wears out." The listening airlines must have hoped this will be soon.

Sir William did not give them any grounds for optimism; he told the meeting in the plainest language that the only way to fill those empty seats was by tapping new markets with "real low low fares" considerably below the "low" fares of today, which are still too expensive for many pockets. There is room for cuts. The level of international air fares is considerably above the price of travel on the North American continent; indeed, the general level is well above that charged on the North Atlantic where the most thrusting and forward looking airlines have forced the introduction of "economy" fares and of special winter rates that make it cheaper for the first time to fly than to go by sea.

The aim, wherever possible, is to make air travel competitive with surface transport and the airlines have at their disposal now—again for the first time—aircraft that make this possible. But not all airlines have the traffic or the route network to enable them to use big jets to maximum effect; these are currently losing money at an alarming rate, as the accounts of some already show and they are likely to pull a wry face at the tonic recommended by Sir William. These airlines are likely to resist both new fare cuts and the extension of the

LIBYAN OIL

Beneath the Surface

FROM OUR SPECIAL CORRESPONDENT

WHAT would have been the only spectacular thing about the oil terminal, that Esso Standard Libya has built at Marsa el Brega on the Sirte gulf at the end of the 110-mile-long pipeline from Zelten, sank largely out of sight several weeks before King Idris of Libya officially opened the pipeline on Wednesday and may never be seen by man again. This is the 148-foot high bow mooring device that Esso towed all the way from New Orleans. Tankers tied to this tubular steel framework can load oil continuously even while swinging through a full 360 degrees. Esso calls it a "birdcage" but, as it sits on the seabed off the Brega terminal with only the top fifty feet showing, it looks at low tide like a giant lobster pot. The achievement represented by the first shipment from Port Brega, however, was itself spectacular—exports of crude from an oilfield where oil was first struck two-and-a-half years ago and from a country where the first concessions were granted only about six years ago. But at the simple ceremony when the King opened the valve "start flow" for the crude oil from Zelten, there was more below the surface than was obvious.

The oil that flowed into the tanker *Esso Canterbury* at anchor in the bay ranked as the first commercial shipment of crude from Libya. (Fawley had already taken five tanker loads for trial processing; other trial shipments have been sent to France.) It was therefore some of the first Libyan crude oil to be moved at the price of $2.21 a barrel that Esso posted ex-Brega in August—a price that is low in comparison with Middle East postings and more realistically related to the European value of such light crude oils than the postings of Saharan oil, but which is much higher than the discounted prices that some Libyan producers are believed to have contracted for their future output.

THE Libyan government never formally accepted this posting and again on Wednesday refused explicitly to approve it. Formally this may not matter. Esso's concession agreement, dating from 1955, provides that royalties and tax are related to prices realised on actual deals and not on posted prices. And as long as Esso is moving Libyan crude oil to its European affiliates at a posted price realistic enough not to need discounting, the posted and realised prices are identical. Under the agreement Esso is also entitled to a depletion allowance before reckoning Libyan tax. Some companies that made later deals are not; and under the amendments to 1955 law published in July none will be. Neither point was mentioned in the speeches at Brega this week by the King and Mr Rathbone, the president of Standard Oil of New Jersey: questioned afterwards, Mr Rathbone still had no comment to make.

The latent tension over prices and terms need not break surface until the company files its tax return for 1961-62. But another government ploy may tempt Standard Oil of New Jersey to accept new terms. Amendments to the petroleum law in July offered existing concessionnaires three years' extension if within six months—that is by January 15th—they accept a revision of existing agreements which would base their tax liability on posted prices without a depletion allowance. Moreover, no company will be granted any new concessions unless it incorporates these new tax rules in its existing agreement.

Under the 1955 law existing concessions are to dwindle to a third or a quarter of their original size. Jersey appears to put great store by Libyan oil—though "pressure maintenance" in its Zelten field could pose some technical problems. It is hard to believe that the group, as its existing concessions are reduced, will not eventually be interested in further acreage. Below the surface courtesies at Brega, therefore, there was a mild squeeze play by the new host government that only six years ago attracted oil companies by sweet reasonableness. Since oil was found in such abundance, this reasonableness has been somewhat modified. This has emphasised the new handle that "relinquishment" provisions in any oil-producing country can now give a host government. But the market still finally sets the limit to producers' bargaining power.

cheaper North Atlantic fares to other parts of the world. Mr Menzies, when he complained that air transport as a whole was fundamentally uneconomic, was exaggerating; but had he said that certain airlines can never hope to pay their way, few people would have disagreed. The logical conclusion to draw from Sir William's analysis of the current state of aviation is that airlines which cannot, because of their structure and management, contemplate "real low low fares" ought to go out of business leaving the field to those who can. But he could hardly be expected to say this when it would amount to advising a large number of IATA members to close shop.

Some Make It Pay

THE collapse of several small British independent airlines—two more closed down this week—combined with Cunard's doleful admission that its air services were losing money, have goaded the largest of the independents, British United Airways, into demonstrating that there are some who can make aviation pay. It has done this by publishing its accounts for the first time—for the year ending December 31, 1960. BUA is a private company whose principal shareholders are three shipping groups and on last year's showing their investment was paying off. The airline made a trading profit of nearly £500,000 on a capital employed of £16 million; unlike other airlines it gives no details of revenue or expenditure or indeed any information at all about its flying operations, but the financial results are considerably better than those returned by many a more opulent and heavily capitalised airline, even among those rare birds that actually show a profit. It has also written off £1.2 million against profits in the past four years for goodwill—the direct result of the series of mergers that led to the formation of BUA.

BUA has always boasted that the lower overheads possible in privately-owned airlines gave them a competitive edge over big nationalised operators, and the accounts seem to bear this out. But BUA's testing time will come when the results are known during the next few days of its application for a network of services across Europe and Africa. If this is granted, the airline will have to expand the scale of its operations at a rate that could send overheads rocketing. It will have no difficulty in finding the money to do so: the accounts show that the parent companies simply advance cash as and when required. But management and sales organisation will find themselves at full stretch, something for which they have waited ten years.

A BANKER'S REFERENCE

On Inquiry

WHAT is a banker's reference worth? One of the more curious of the law's anomalies was given an airing in the Court of Appeal last week in *Hedley Byrne & Co. Ltd.* v. *Heller & Partners Ltd.* The defendants, merchant bankers, answered credit inquiries about a customer which had been made by the plaintiffs through their own bankers, the National Provincial Bank. These replies were held to have been given negligently, and as a result of acting upon them the plaintiffs lost a substantial sum of money—£15,454. But the Court of Appeal upheld the decision of Mr Justice McNair last December, that the defendants could not be liable for their negligence to a party to whom they owed no contractual duty.

In the memorable case of the snail in the ginger beer, in 1931, it was established that an action for negligence by a third party could succeed, and Lord Atkin said "You must take reasonable care to avoid acts or omissions which you can reasonably foresee would be likely to injure your neighbour," going on to define neighbours as "persons who are so closely and directly affected by my act that I ought reasonably to have them in contemplation" when the act in question is being performed. But in *Candler* v. *Crane Christmas & Co.* in 1951 the Court of Appeal held that the third party action could not succeed when the damage complained of was financial. In that case a firm of accountants prepared a balance sheet for a company knowing that it was to be shown to a prospective investor in the company. The accountants were negligent, and acting on the false picture presented by the balance sheet the investor made his investment. He lost his money, and, in due course, his action against the accountants; this was financial damage—£2,000 worth—and in the absence of a contract between the accountants and the investor no liability arose, despite the accountants' knowledge of both the purpose for which and the person for whom the balance sheet was required.

The analogy with the banker replying to an inquiry is not exact, but it is near enough. The posture in which the law finds itself in this matter is not one that commends itself to the business community. In his dissenting judgment in 1951 Lord Justice Denning (as he then was) analysed the present position, found it displeasing, and showed the path of escape. It has not yet been followed; and in last week's case Lord Justice Pearson went so far as to say that "it would be unreasonable to expect a banker in the bank's time to study his records and files before giving an answer." This is probably just what most people thought a banker did when he answered credit inquiries. In the particular case of bankers' references, as in the general matter of professional negligence causing financial damage, the law is hardly keeping itself commercially up to date.

MOTORS

Stable Outputs Rising Stocks

CAR production showed little change between August and September; the rate of 20,181 a week in September was only about 1,000 a week below that of August, when seasonal effects are allowed for. Though the strike at British Light Steel Pressings probably cost Rootes about two-thirds of its car output, the rising production of the new Vauxhall Victor, few of which had been made in August, seems to have helped to offset this. And though Standard-Triumph put its workers on to a three-day week at the beginning of the month, and the production of the British Motor Corporation was slightly reduced by model changes, Ford was making cars at a slightly higher rate in September than in August. Exports remained, at 28,000, the same as in August or in September last year.

The industry may soon find that it is necessary to reduce output further; stocks of cars seem to have risen by at least 14,000 during September—roughly the amount by which home sales fell short of the 1960 level. Though makers are prepared to see stocks rise during the winter, they are mostly anxious to keep them under control. As sales and output this month seem to have remained at much the same level as in September, stocks may soon have reached the point where their growth needs to be checked—which would mean more short-time working.

Optimism about the prospects for next year has been increased by the interest attracted at the motor show. Apart from the large orders from the United States distributors of BMC, S-TI and Jaguar cars, which suggest that exports to that market next year might be more than treble their September rate of 2,500 a month, private visitors to the show have displayed an unexpectedly strong interest in buying cars. They may not want to buy a car now, but if there were to be a smaller difference between the value of their old car and the cost of a new one in the spring, they might then be prepared to buy. Those who believe that 1962 might find the industry on the upswing of its trade cycle are encouraged in their optimism by this evidence; but much depends on the actions of the government and the strength of the seasonal improvement in demand for used cars in the new year.

WALL STREET

Tax Loss Influences

A correspondent cables:

WALL STREET has been sobered down by reports of corporate earnings in the third quarter, which though they are higher than a year ago are not as high as had been expected, and has also been disappointed by other signs of slowing down in the economy. While the cult of the equity is far from dead and little outright selling is taking place, there was no fresh demand for common stocks this week, and for the first time since mid-September, the Dow Jones average fell below 700. There is little prospect of a swift snapback until the economy

THE JACKDAW AND THE SQUIRREL

an economic fable

ONCE UPON A TIME there was a quite exceptional squirrel. He lived in a large wood in which there were many nut trees. And, like all squirrels, he was a saver. He gathered nuts for the winter. And this is where he began to be exceptional. He was a squirrel who knew what a good nut looked like.

Many other squirrels, in the course of time, had begun to rely on him. He gathered nuts for them, too, and kept them safely. He did not hide them away—he had got rather beyond that. He thought to himself that a nut by itself was just a nut. But, planted, it became a nut tree, from which came more nuts. So he encouraged the planting of nut trees.

One day as he was going about his business, he heard a great squawking. "Hey you! You there!" said a voice. The squirrel looked up from what he was doing. He peered into the branches. And there he saw a large, glossy jackdaw. "That's a nice nut," said the jackdaw. "I'm fond of nuts. In fact, I need nuts to keep going." The squirrel did not reply. "Well, aren't you going to give me that nut I'm admiring?" said the jackdaw crossly. "It's not my

nut," said the squirrel. "Of course it's your nut" said the jackdaw. "You've got it in your paws. I don't think it's at all nice, the way you're hanging on to it. Share and share alike you know!"—"But I do share and share alike," said the squirrel. "When the proper time comes round, I'll be distributing nuts to all the other squirrels. I just look after the nut-crop for them." — "You're a busybody, that's what you are," said the jackdaw. "Running round from tree to tree, gathering up all the nuts. Nobody else gets a look in. *I* intend to have a look in." "Other people plant the trees and get nuts from them," said the squirrel. "In fact, I and the other squirrels have only a small share in any one tree. We don't like to keep all our nuts on one branch, or in one part of the wood. When the trees bear well, every creature in the wood gets a share. Even jackdaws do better—or so I'm told," he added.

"Oh, I know what you're up to," said the jackdaw. "You may not own all the nut trees now. But soon you will. Oh yes, don't bother to deny it. I've been watching you. You've been taking them over one after another."

"Look," said the squirrel, "I'm a squirrel. I'm even a professional squirrel. I have an interest in nuts. And that's quite enough. What good would it do me to carve my name on a lot of nut-trees? All I want is to make certain that there is always enough to feed all the squirrels in the wood. Most nut-trees know how to get on with their own growing without any help from me." And with that he went about his own affairs.

The jackdaw was so cross about this that he swooped down and grabbed the big nut the squirrel was holding. "Hey!" cried the

squirrel. "Mind your own business," squawked the jackdaw as he flapped away.

So the squirrel didn't bother to shout any more. He knew that this particular nut had a worm in it. But he thought that perhaps the jackdaw would like to find this out for himself.

MORAL:

Minding your own business properly leaves little enough time to mind other people's.

RESEARCH AND THE JAPANESE STOCK MARKET

Research has for centuries been associated primarily with science and mathematics. But, with Nomura Securities Co., Ltd., it is the foundation for analysis of the Japanese economy. The complexities of a modern world dictate that the economist can no longer make recommendations from hunches or sudden notions. He must have accurate figures before him in terms which he can analyse . . . figures resulting from research. To aid us in our research we employ a complete staff of experienced statisticians who prepare the many graphs and charts essential to portray fully the economic structure of Japan. The results of data on industry and the general economy are compiled and studied by Nomura analysts and economists to obtain complete information on the complete market picture and the complicated constituents from which it is made. The results of their work are published periodically for our clients, to aid them in the selection of stocks and other investments in Japan.

Also, latest information on new company quotations, present economic status, and future planning are available through our branch offices and representatives throughout the world. Let us do the research for you. Write to the Nomura Securities Co., Ltd. for information on the Japanese stock market.

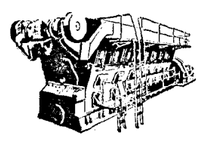
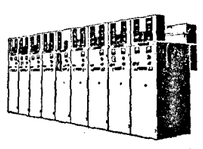
POWER ON CALL



THE WORLD DRAWS GREEDILY on electric power and light. Every day expanding industry, new public undertakings, improved transportation and increasing domestic load call for more and more power. Hawker Siddeley is helping to meet this demand by supplying the vital generation and distribution equipment. Their new subsidiary, Hawker Siddeley Engineering, will engineer and develop comprehensive power schemes—with or without automatic and/or remote control—anywhere in the world.



Fuller Electric builds all types of power and distribution transformers. This is one of a pair built for the new cross-Channel D.C. power link with France and believed to be the largest rectifier transformers in the world. Rating is 95/95/65 MVA 284/83.6/33 kV.

Mirrlees Monarch diesel engines are available as either 6, 8 or 10 cylinder vertical in-line units developing 1600 to 4,340 b.h.p. at 200 to 300 r.p.m. and also in 16 cylinder Vee form developing 7,000 b.h.p. at 375 r.p.m.

TheBrushSwitchgear range covers indoor and outdoor equipment for use on electricity supply and general industrial distribution systems of up to 33000 volts, 1000 MVA. This 440 voltswitchboardisfor a television station.

HAWKER SIDDELEY GROUP

Duke's Court, Duke Street, St. James's, London, S.W.1

shows more signs of strength. Even then, investors are likely to discriminate. This is evident from the current wave of tax selling which has depressed many "glamour" stocks as well as steel and other cyclical issues whose profits are lagging.

Selling for tax purposes, however, is not a serious factor in depressing the market as a whole, for the funds accruing from the sales are largely being reinvested in other stocks. Under the law, an investor can take tax losses and re-establish his investment position by buying back the same shares after a waiting period of 30 days. This is being done by a number of institutions, particularly some of the mutual funds which are seeking to offset some of their earlier capital gains with tax losses without permanently abandoning particular investments. In the absence of a strong movement in market prices either way, tax selling can also be the occasion for switching and it tends to drive down the prices of stocks that are already depressed and to add to the demand for those which already have good earnings. This is what Wall Street is now experiencing; but if the economy booms and profits rise the demand for equities is likely to revive, as there is still no inclination to shift into fixed interest securities.

OVERSEAS TRADE

Sticky Exports

DESPITE the pronounced fall in imports, that has reduced their value quarter by quarter since the start of the year, Britain had the barest surplus on visible trade with the rest of the world in the third quarter after allowing for the uneven basis for valuing imports and exports used in the monthly Board of Trade figures. The contraction in imports (seasonally adjusted) amounted to £32 million a month between the last quarter of 1960 and the third quarter of this year. Exports and re-exports *improved by £16 million a month*; however they appear to have virtually stopped rising early this year. Clearly, a further improvement in either imports or exports is needed in the current quarter.

Seasonally adjusted, the value of food imports was unaltered between the second and third quarters of this year. But this was partly the result of bigger imports of livestock; imports of meat continued to fall. Imports of basic materials dropped quite sharply once more, but while the level of production in Britain's manufacturing industry is rising, it would be over-optimistic to expect this contraction to go on much longer. Imports of manufactures for further processing, such as metals and chemicals, were unchanged between the two quarters; *paper and wood products were partly responsible* for checking their fall. Imports of finished manufactures showed a further sharp rise. Though the increase has come mainly in capital goods, imports of clothing and footwear and other non-durable consumer goods are substantially higher than a year ago.

Between the second and third quarters, exports to North America continued to increase, despite a steep drop in exports to Canada. Obviously, there is reasonable hope for further improvements in exports to the United States. Exports to western Europe, including both EFTA and common market countries are still expanding, but exports to the rest of the sterling area remain bogged down.

CHURCH COMMISSIONERS

Anglican Acumen

SINCE the Church Commissioners first began to invest in equities in 1948, their income has nearly doubled. Most of the rise of £1.5 million to £15.8 million in their income in the year to March 31st last came from bigger dividends on the equity holdings. As the table shows over the past two years the overall yield on its investment portfolio has improved by one per cent to nearly 6½ per cent.

In another year of active dealings, the Commissioners—probably for the first time—were net sellers of industrial equities. Even so new investments in this section amounted to £3.8 million, of which half was absorbed by rights issues and the rest largely by purchases of chemical manufacturing and store shares. They also added to their holdings of industrial debentures and some further switching among gilt-edged securities brought about a good improvement in the average yield on this section of the portfolio.

It has been estimated that the Church Commissioners now provide about three-quarters of the stipends of the clergy and about one-half of the Church of England's annual budget. About two-thirds of their income last year went towards stipends, pensions and the upkeep of parsonages. From their surplus of just over £3 million they plan to allot from next April a further £750,000 a year to raise stipends and, in addition, they will increase the income of every benefice by £50 a year, except in the rare cases where the income already exceeds £1,500 a year. A recent survey showed that less than one per cent of all clergy came in this category. Over 77 per cent received less than £850 a year, net of rates and mortgage repayments, but this calculation ignores any sums received in other capacities such as chaplaincies or the contribution that a growing number of parishes makes towards car, telephone and other expenses.

* At book values which were revalued at market prices on April 1, 1957. †Excluding short term loans.

For further increases in stipends the clergy perhaps should look more towards the Commissioners' property interests which have a book value of just over £69 million. As with stock exchange investments, the Commissioners have pursued a policy of pruning and streamlining this portfolio and since 1956 property sales have realised £20 million. This has been balanced by purchases and capital expenditure and in this period net rental income has risen by 50 per cent. The Commissioners' house properties have now been concentrated in five large estates at Hyde Park, Maida Vale, Kensington, Chelsea and Hampstead. In some of these estates the Commissioners' property development com-

THE SQUEEZE ON PROFITS

The wage and salary bill paid in the second quarter of this year was 9½ per cent higher than last year; and dividends of industrial companies were up by 15 per cent. Profits, however, were 8 per cent down on the year, and this is now being reflected in unchanged dividend declarations.

DRIVE FOR SMOOTH PRECISION WITH INDUSTRIAL DIAMONDS

The finest pistons are turned with diamond tools and, for matching precision, their conrods are honed with diamonds.
Industrial diamond tools cut, grind, and polish with unsurpassed speed and accuracy and so make a vital contribution to increased efficiency and production in thousands of engineering processes.

To find out if diamond abrasives, diamond tools, or diamond impregnated wheels can help you in *your* problem, please get in touch with the Industrial Diamond Information Bureau. This Bureau is backed by the world's largest laboratory devoted to diamond technology–The Diamond Research Laboratory in Johannesburg. For information and advice, without obligation, please write to the address below.

pany, Church Estates Development, is promoting in association with private developers and builders new blocks of flats and houses. But the total commitments of this subsidiary amounting to over £13 million are primarily concerned with the development of commercial properties. Not surprisingly with such vast sums to invest the Commissioners have forged links with Mr Cotton and Mr Clore and other property developers, and they are confident that these developments will give a yield of not less than 8 per cent when they are completed.

COMMODITIES

Inconclusive Conferences

LEAD and zinc producers' earlier forecasts of supplies and consumption in 1961 were shown to have been too optimistic by the behaviour of the market since March. Their new estimates put the surplus in lead supplies this year at 73,000 tons—not far short of last year's surplus which was absorbed none too readily by the United States stockpile. The surplus of zinc is reckoned to amount to 60,000 tons. Earlier forecasts were based on the assumption that supplies from communist countries would not increase beyond their level in 1960, but that hope has evidently not been realised. Zinc has now fallen to £71 a ton for spot supplies: only in 1946 has lead been cheaper. Even after quite a sharp rally on Thursday, spot lead was £62 a ton.

It is expected that the rise in zinc consumption will keep in step with higher production in the first half of 1962; with some producers continuing to restrain their output, lead consumption and supplies are expected to be roughly in balance. No restrictions have been placed on zinc producers and no further curbs have been applied to lead production for the first half of 1962, although this is apparently regarded as only an interim arrangement, because the lead and zinc study group mentions a further review "before the end of the quarter." This would in any case be made at the customary meeting next March, but the group may have immediate restrictions if necessary at that time, in mind. A statement that "a number of countries" will continue to restrict their lead output does not necessarily exclude the possibility that some producers who have done so up to now have not renewed this voluntary obligation.

The sugar conference in Geneva took a long time to come to an agreement to differ—at least for the time being. The conference was adjourned *sine die*, but the intention appears to be that it should recon-

CHANNEL CROSSING

A Matter of Money

WHEN, in a few weeks' time, Mr Marples sits down with M. Buron, his French opposite number, to open ministerial discussions between their two governments on what, if any, new type of transport link should be provided across the Straits of Dover, they will in effect have before them three possibilities—building a road and rail bridge; excavating a rail tunnel; or making do with the existing sea and air services. By then their advisers should have been able to go over in detail the proposals and calculations of the respective pressure groups backing the tunnel and bridge and produce their own estimates of how much capital each of the three will need in order to cater for expected traffic, what tolls each would have to charge in order to cover costs and make a reasonable profit, and what those respective rates of return might possibly be. That presumably ought to be the basis for decision. But both governments will doubtless be conscious also that if either or both the tunnel and bridge can in fact be successfully financed entirely by private capital—as the two sets of sponsors confidently allege—then their budgets would be relieved of having to find further investment for at least the sea ferries. Moreover, both groups claim that most of the money for their projects would come from outside Britain or France.

Of the three, it would seem that the tunnel would probably cost least—about £130 million including interest on borrowings during construction, against at least £220 million for the bridge (excluding capitalisation of "pre-opening" interest payments), and a figure somewhere between the two for keeping the present port, ferry and air services abreast of the growth in traffic during the next fifty years—though this last sum would not have to be spent all at once in the first five or six years. The tolls that the tunnel and bridge groups have in mind are similar; they are lower than the present sea ferry fares and the difference could reasonably be expected to grow with time owing to the heavier wage content in the cost of running the ferries. Comparing possible rates of return it would seem that the tunnel again may come off best. The sea ferries are barely washing their face even now, with written down capital and depreciation based on original cost. The tunnel and bridge groups express their hoped-for profitability in different terms: the tunnellers claim a 14 per cent "time adjusted" return while the bridge-builders promise 4 per cent in the first year, rising to 6 per cent in the sixth, and 8 per cent in the seventeenth year. That would be roughly equivalent to about 4½ per cent on a "time adjusted" basis, or about half that of the tunnel.

Strangely, both groups assume the same traffic potential, differing mainly only in their estimates of the new vehicular traffic the new facility will itself "generate." Yet the bridge would cost almost twice as much to construct as the tunnel (if neither runs into technical trouble) and have a great deal more potential—but for a long time to come little used—capacity. Moreover, while the tunnellers propose to raise most of their capital in bonds, and invite the two governments to assume the head lease of the tunnel so as to "guarantee" bondholders their interest, the bridge group freely claims it expects to raise the whole of its £220 million or more as equity. Apart from an agreement on the inevitable question of tax liability—which also concerns the tunnellers—the bridge group states it asks no more of either government other than permission to go ahead and the freedom to remit dividends to foreign investors.

But some rather oddly phrased references to the possibility of a rescue operation by the two governments in a booklet the group has published in France suggest that its own mind may not be entirely free of doubt:

> We would assert that the general interest of the bridge is so important for the future of Europe that it should be constructed even if its operation were unable to remunerate the invested capital, that is to say both governments, anxious to develop their economies, should build it from budget funds. Fortunately, there is no question of resorting to this method, which would be prohibited by considerations regarding the budgetary balance of public finances within the limits of prosperous economies. Calling up private capital will enable this vast undertaking to be realised, with the assurance that it will be satisfactorily remunerated, without prejudice to any other financing which is imposed by necessity.

Whatever this example of Gallic clarity (subjected to translation) may mean, the group's solutions to the technical problems posed by straddling one of the most crowded, and at times foggiest and windiest, shipping lanes in the world are at least comprehensible. It claims that wind deflectors, similar to those used on ships' bridges, would reduce the effects even of gales on vehicles crossing the bridge to levels that motorists ordinarily encounter from light winds inland. Lighting and the height of the carriageway above sea level, it argues, would limit hindrance by fog; and the very presence of a bridge across the channel, plus the adoption of modern navigational aids, would impose traffic order upon channel shipping where no such regulation exists at present. All this may be so; but it was not so long ago that a radar-equipped oil tanker crashed into the Severn railway bridge. The tunnellers may also not be entirely free of technical risks: the French and Italian contractors painfully cutting the new motor road under Mont Blanc have had some blunt words for the geologists who made the initial surveys.

vene next month. The difference that divides Cuba from probably all other members of the international sugar agreement, including perhaps its communist signatories, is about one million tons of sugar. Cuba wants a very large increase in its quota within the agreement. Although this might not necessarily affect sales to the free world, as the communist countries have agreed to take about five million tons of Cuban sugar a year, there are important principles at stake. Although it is argued that if no solution can be found the current agreement will simply continue to operate, the market is sceptical; the price of sugar in London has declined to £22½ a ton.

LIFE ASSURANCE

One Million Policies

LAST year the business of the life offices was more buoyant than ever before. New sums assured by members of the Life Offices' Association and the Associated Scottish Life Offices, which cover over 99 per cent of the ordinary life and annuity business of offices established in the United

EMPLOYEES' BENEFITS

* Based on current salaries.

Kingdom and of overseas offices operating in this country, rose by 21 per cent to the new record figure of £2,305 million while new annual premium income jumped to £90 million, compared with £75 million in 1959 and £74 million in 1958. Both individual ordinary life assurances and lump-sum benefits on death before retirement under occupational schemes contributed to the record figures and for the first time more than one million individual policies were taken out in a single year.

New business under pension and life assurance schemes more than recovered the ground lost in 1959, when employers appear to have been pre-occupied with the implications of the graduated state pension scheme. So far there has been no sign that higher statutory contributions are materially affecting the market for assured pensions. In contrast, the self-employed pension business has been sluggish: last year about 21,000 new policies were issued at premiums totalling £6.2 million, which was slightly more than the new premiums received in 1959 but less than the income from this source in the two preceding years. About 137,000 policies of this kind are now in force, assuring deferred annuities of £41 million per annum.

TOTAL LIFE OFFICE INVESTMENTS

	1956 %	1957 %	1958 %	1959 %	1960 %
Mortgages	15	15½	15½	15½	16
Gilt-edged	30½	28	26½	25	24
Other fixed interest securities	21½	22	21	21	20½
Equities	16½	17½	19	20½	22
Real property, ground rents and other investments	16½	17	18	18	17½

Ordinary life and annuity funds, as adjusted for transfers from reserve accounts, rose by £405 million last year. This record contribution to personal savings compares with £348 million in 1959 and £215 million five years ago. Combined ordinary and industrial branch funds rose by £519 million to £5,585 million and once again, as the table shows, the life offices added to their stake in equities. They now, however, appear to be less eager to buy ordinary shares, largely contenting themselves by taking up their rights in new issues.

RAIL v. AIR

The Minister Drops a Hint

LAST week, the Air Transport Licensing Board approved a scheme put forward by British European Airways to run combined nightly mail-newspaper-passenger flights between London and Belfast, Edinburgh, and Glasgow. The Transport Commission protested strongly against the £3 3s. fare that BEA proposed to charge in order to tempt passengers to fly in the middle of the night. This, protested the Transport Commission, was lower than second-class rail fare and would hit rail traffic badly. British European Airways retorted that the fate of the railways was none of the business of the Air Licensing Board, whose sole duty was to promote air traffic. The Minister of Aviation has contradicted this in terms that must have revived the Transport Commission's spirits.

The machinery for licensing air service provides for an appeal against any decision of the board and the Transport Commission has just appealed, in vain, against the grant of a licence for flights between Swansea and Birmingham. The commissioner who heard this appeal endorsed BEA's limited view of the board's brief. Mr Thorneycroft upheld the commissioner's decision to throw out the appeal, but added that he "did not agree with the view expressed by the commissioner that the board was neither empowered nor required to take into consideration the question of wasteful competition with rail facilities." The Transport Commission has still some time in which to decide whether to appeal against the Board's decision to approve BEA's £3 3s. fare which it has tended to regard as a test case. Such an appeal might clarify how Mr Thornycroft defines "wasteful competition" between air and rail and how far he is prepared to curb the development of internal air services to enable the railways to survive.

SHORTER NOTES

A correspondent writes from the United States that airlines have recently had first-hand experience of the pitfalls of translations from one language to another by computer. Technical manuals for the French-built Caravelle jets supplied to United Airlines have, he says, been translated in this way and contain frequent puzzling references to "water goat." This should read "hydraulic ram."

★

The Government of Switzerland is to lend the World Bank 100 million Swiss francs (about £8 million) at 3¾ per cent, to be repaid in two equal instalments in 1966 and 1968. This is the second loan to the Bank from the Swiss Government—the previous one of Sw. Fr. 200 million was made in 1956—and it brings the total gross borrowing by the Bank in Switzerland to almost one billion francs (£83 million), of which Sw. Fr. 887 million is outstanding.

★

The New Zealand Government has arranged a $20 million loan in the New York market, in 5¾ per cent bonds maturing in 1976. It is also reported that representatives of the IMF and World Bank have been invited to New Zealand to discuss possibilities of loans. This follows New Zealand's admission to the Fund last April.

NOW— a Computer for *growing* Companies

A short time ago, the Honeywell 800 was announced as leader of 'the new generation' of computers, able to process more data at a time than any other system. Here now is the Honeywell 400 – the most advanced small scale system for small-to-medium size companies, and divisions of large companies. It offers magnetic tape and card processing at card system cost.

HONEYWELL 400

FIRST STEP TO COMPUTER GROWTH
The 400 incorporates the same ancillary equipment as the 800, Honeywell's medium-to-large scale electronic system. The two computers are also compatible in the use of a similar programming language, based on simple words. The 400 is primarily intended for use as an independent data processing system ... but it can also function as a satellite to an 800 for fully integrated data processing operations: programmes run on 'local' 400's can be easily integrated with programmes run on the head office '800'. When greater processing power is needed, graduation from 400 to 800 is a logical and economic step.

BIG SYSTEM PERFORMANCE SMALL SYSTEM COST
Honeywell 400 is a full-scale electronic data processing system complete with magnetic-core memory, high-speed magnetic tapes operating at 96,000 decimal digits per second, input at 650 cards per minute and printing at 900 lines per minute. This powerful combination has been achieved at a cost that compares favourably with that of many punch-card systems, and is lower than that of any comparable magnetic-tape system. Random Access Storage is now available for those requiring immediate access to large files (up to 12 million words).

Enquiries
Honeywell Controls Limited have established in London an Electronic Data Processing Division. A Computer Service Bureau is being set up, at which you will be able to see and use the Honeywell system. Enquiries should be addressed to: Electronic Data Processing Division, Honeywell Controls Limited, Greenford, Middlesex.
Branch Offices in principal towns and cities in the United Kingdom and throughout the world.

ANOTHER RECORD YEAR

Mr. ISAAC WOLFSON, Chairman and Managing Director

THE GREAT UNIVERSAL STORES LIMITED

in his Statement for the year ended 31st March, 1961, said :

FINANCIAL RESULTS FOR THE YEAR. Group Profit for the year, after providing for Depreciation, etc., but before Taxation is £26 million. This is some £1½ million above that of the previous year, and once again it is a record figure. This was achieved in a most difficult year, due to the re-imposition of hire purchase controls. This increase is in excess of the average increase for the past five years. It has been earned almost entirely from internal development.

DIVIDENDS AND APPROPRIATIONS OF PROFITS. We have decided to recommend a final dividend upon the Ordinary and "A" Ordinary Stock of the Company of 25 per cent. less tax, for the year ended 31st March, 1961, which together with the Interim Dividend of 12½ per cent. already paid makes a total dividend of 37½ per cent. less tax. It was our intention to recommend a larger dividend, which the profits of the Company justify, but having regard to The Chancellor of the Exchequer's speech in The House of Commons on 25th July, we have decided not to increase it, but to maintain the same total dividend as last year. Stockholders will of course derive the ultimate benefit of increased retentions.

After appropriations £7,732,256 is retained in the business. The Ordinary Dividend, therefore, is covered some 2·5 times by the net distributable revenue and some 2·2 times by the net profit for the year.

BALANCE SHEET. The Consolidated Balance Sheet shows increased strength. The Capital and Reserves of the Group, including £11 million set aside for future taxation, are £106 million and exceed £100 million for the first time. It is interesting to note that in 1955 the amount was £50 million. The figure of £106 million is reached before taking into account any increase in the value of our properties (£22 million of which are freehold), since they were last valued in 1955, Nor does it include the substantial reserve for unearned profit which forms the larger part of the provision of over £19 million deducted from hire purchase debts. The excess of the current assets over current liabilities is approximately £75 million compared with £68 million last year. Cash in the United Kingdom at £11½ million is ample for our present requirements and will stand us well in a period of credit stringency.

DIVISIONS. Stockholders are by now familiar with the composition and scope of the various trading divisions which go to make up The Great Universal Stores Group. All these divisions have shown sound progress at home and overseas. At home, the Mail Order and Multiple Shops sections, in particular, have shown continued growth.

Overseas, the economic situation in Canada and the political situation in South Africa, in both of which countries GUS has extensive interests, have presented us with particular problems. Nevertheless our trade in Canada was maintained and there was an increase in both sales and profit in South Africa.

CONCLUSION. The problems which face our business are directly related to the economic outlook of the nation. Our organisation is soundly based for long term development and our management well equipped to tackle the immediate difficulties which lie ahead. I repeat, as I have said previously, that our Company will continue to grow as the country's economy expands, as in the long term it will.

I am pleased to report that so far comparable sales and trading profits are higher than in the same period last year. I am hopeful that, subject to no unforeseen circumstances, the trading profits will compare favourably with those which I now have the honour to put before you.

Comparative Figures 1952-1961

Year ended 31st March.	Group Profit before Taxation.	Taxation.	Net Dividends paid to Stockholders of G.U.S. Ltd.	Cash Flow (Profit retained in Business plus Depreciation).	Group Net Assets.

THE GREAT UNIVERSAL STORES LIMITED

OPERATING 2,025 SHOPS AND DEPOTS THROUGHOUT THE UNITED KINGDOM AND OVERSEAS

THE TAP & DIE CORPORATION LIMITED

Salient points from the Statement of the Chairman, Mr D. G. N. Lloyd-Lowles, at the Annual General Meeting on 26th October, 1961.

★ A company is being formed to acquire an engineering business at Biggleswade, mainly for the purpose of manufacturing special purpose machine tools for our own use and for export.

★ Our dominant position in the industry makes us far and away the largest exporters of screwing tools from the United Kingdom, and we are well poised to take advantage of the opportunities for expanding trade which will be offered if the United Kingdom joins the Common Market.

★ Our properties have recently been revalued at £1,200,000 compared with a book value of £520,000.

★ Net Assets now stand at £3,581,125 (excluding the increased value of the properties).

★ Profits before tax amounted to £827,181 for the year to 31st May, 1961, an increase of 17% over the previous twelve months.

★ The dividend of 20% for the year is covered 1.8 times.

★ Turnover is running at a rate well in excess of last year and given normal conditions we can be very confident of the future.

Rael-Brook Holdings Ltd.

PLANS FOR EXPANSION

The fifth annual general meeting of Rael-Brook Holdings Limited was held on October 20th in London, **Mr Harrry Rael-Brook** (chairman and managing director) presiding.

The following is an extract from his circulated statement:

During the year we increased our total sales by some 26 per cent and our export sales by approximately 19 per cent. After making the appropriate adjustments for the minority interest in our Italian subsidiaries, the net profit before taxation attributable to members of the holding company is £323,817 as compared with £231,879 for 1960. We have again placed the sum of £20,000 to general reserve.

Expansion of Interests

Rael-Brook began to manufacture shirts some 12 years ago with a capital of £1,000. It has now become the largest shirt manufacturer in the United Kingdom. This side of our business is still expanding and our share of the market is still growing. However, in order to accelerate our rate of expansion, we do not wish to restrict our activities purely to this field. We feel that the time has come to extend our activities over the men's wear industry as a whole. The basic problems of each section of the industry are the same, and we are satisfied that the management "know how" which we have developed will enable us to invest successfully in the other sections of the men's wear industry.

To pursue this policy, we have formed an investment holding company, Wellpax Investments Limited, to control and manage our existing and future interests apart from our United Kingdom shirt business. These interests at present include our companies in Italy and our most recent acquisition, S. Leader & Company Limited and its associated companies. It is intended that future investments should include all branches of the men's wear industry, both in the United Kingdom and in the Common Market countries, where a successful beginning has already been made.

It is my firm conviction that within a comparatively short period of years the profits attributable to Wellpax Investments Limited should be greater than those of the existing group.

Profit Forecast

Despite the slowness in the retail trade and the unsettled economic climate at the time of writing this statement, our sales are in excess of those for the same period of last year. We are still facing rising costs but subject to unforeseen circumstances, the profits for the year to April 19, 1962, including the initial profits of Wellpax Investments Limited, should show a gratifying increase over those of 1961.

Share Conversion Rights

I feel it is appropriate to draw the attention of those shareholders who own Convertible Preferred Ordinary Shares to their right to convert these Shares into Ordinary Shares on April 19th in each of the next four years. The proposed dividend on the Ordinary Shares in respect of the year to April 19, 1961, amounts to 37½ per cent compared with 33⅓ per cent on the Convertible Preferred Ordinary Shares.

The report and accounts were adopted.

EASTWOODS LIMITED

SUBSTANTIALLY IMPROVED RESULTS

The Annual Meeting of Eastwoods Limite will be held on November 16th in London.

The following is an extract from the revie by **Sir Thomas Moore, Bt, CBE, MP,** chairmar circulated with the report and accounts:

The accounts to March 31, 1961, show a sub stantial improvement over the good results of th previous period. Every department of East woods was extremely busy meeting the urger requirements of the building and civil engineer ing industries and sales of our own product created a new record in the history of the Grou Deliveries of cement, bricks, concrete tiles, con crete pipes, and sand and ballast were at or nea the limit of our productive capacity and ou merchanted sales also expanded to a new hig level of achievement.

In spite of increased costs of production du to substantial wage advances and increases i the price of coal and electricity, satisfactor profit margins were maintained on most of ou various manufactures largely as a result of th economies derived from increased mechanizatio and peak production at all our undertakings.

The net profit of the Group was an all-tim record.

Various schemes of reorganisation and expar sion are now receiving consideration, some c which will require very large expenditure o capital account.

Orders totalling £200,000 have been place for further transport and we have receive planning permission for construction of a kil at our Otterham stock brick works in Ken which will cost £100,000.

The board also have under active considera tion the construction of a new kiln at ou Cement works in Cambridgeshire, to give a output of 200,000 tons of cement clinker pe annum. The cost of this comprehensiv scheme would amount to about £2½ million an would take upwards of two years to complet from the date of placing the order. Th method of financing this project is engaging ou attention and if we proceed it is clear that s some stage it will be necessary to raise additiona permanent finance.

CURRENT TRADING

Building activity has continued at a extremely high level right up to the preser moment, but during the remaining months of th winter, we must expect the usual seasonal declin in building and to what degree, if any, this wi be accentuated by the Chancellor's recer stringent measures it is difficult to gauge. I thin there is certain to be a distinct slackening c impetus in the upsurge of building activit which normally takes place in the spring.

To make a reliable forecast in these uncertai circumstances is impossible, but Eastwood turnover to date is well ahead of the comparabl period in 1960 and it is not unreasonable t hope that the results of the current financial yea will prove to be not less satisfactory than thos at present under review.

In the long term a large building programm is essential to the health, happiness an prosperity of this country and I am confiden that a future of great activity lies ahead for th building industry in which Eastwoods are wel equipped to take an increasing share.

ROBECO

SECOND INTERIM REPORT

Considerable alterations have taken place in the assets composition of your Company since our previous Interim Report. We have reduced liquid resources considerably and have used them mainly for Investment in American securities, whilst we have at the same time increased our interests in many European companies.

Spread of Investments	1.10.61	1.6.61
European Common Market inc. Dutch Internationals	44·74%	(49·19%)
U.S.A and Canada	43·02%	(35·69%)
Great Britain	3·47%	(3·45%)
Other Countries	1·24%	(1·24%)
Cash or Equivalent	7·53%	(10·43%)

United States: In the sectors where the outlook is most promising, e.g., the so-called savings and loan industry, the public utilities and the office equipment and packaged foods industries, we have made considerable additions to our holdings of selected stocks.

Europe: Our preference has been directed particularly to the consumer goods industry, to retail trade and to banks and insurance companies.

ROBECO's growth so far in 1961 has continued. On October 1st the issued capital amounted to f 187,116,450 and the net asset value of your Company reached more than f 865 million. The assets value of a ROBECO share, increased by the cost of issuing new shares, amounted on October 1st to f 242.50. The

income account has shown a satisfactory tendency so far this year.

We are pleased to announce the distribution of an interim dividend of f 4.—(7s. 9d. approx.) per share. On the bearer shares dividend coupon No. 35 was declared payable on October 26th.

Copies of the full Interim Report and the last Annual Report in English can be obtained from the Company at P.O. Box 973, Rotterdam, Holland.

CAWOODS HOLDINGS LIMITED

The thirty-ninth Annual General Meeting was held on October 20, 1961, in Leeds, **Mr E. W. Towler** (the Chairman) presiding. The following is an extract from his circulated Statement:

The Group Trading Profit for the year under review is £497,075 compared with £505,810. Capital and Reserves increased from £1,553,398 to £1,688,971; the net current assets amount to £826,578. The Directors recommend a dividend of 1s. less Income Tax, per Stock Unit.

The Group Profits included the post-acquisition profits of the Morfitt and Heaton businesses and were adversely affected by the trading losses incurred in the closure of the West Drayton Works, the freehold of which has been sold at a substantial capital profit, which will mature in the current year's accounts. More coal was sold both at home and abroad, and the Briquette plants worked to capacity. A new fleet of barges is being built for service at the end of this year to Skelton Grange Power Station. Although competition in the Fuel Oil market has increased in severity our expanding organisation for the distribution of Regent products is expected to produce satisfactory returns. The quarry section of our business, in spite of the keenly competitive market, produced very satisfactory figures.

The trading profits this year show the anticipated improvement compared with last year, and with the inclusion of a full year's earnings from the Thrutchley Group and John Heaton Limited, satisfactorily increased group profits are expected this year.

The report was adopted.

UNION ESPANOLA DE EXPLOSIVOS S.A.

ALEX. LAWRIE & COMPANY

The thirty-seventh annual general meeting of Alex. Lawrie & Company, Limited was held on October 25th in London, **Mr G. W. Gemmell** (the chairman) presiding.

The following is an extract from his circulated statement:

The Parent Company's profits for the year ended June 30, 1961, have shown a slight improvement, the net figure after tax being £105,088 as against £100,758 in 1960. As a result the Board have been able to put a further £45,000 to General Reserve and to recommend a final dividend of 7½ per cent, making a total for the year of 12½ per cent.

The Consolidated Accounts however do not show up quite so well, the net profit being down by £16,381, due I regret, almost entirely to the unprofitable year's trading suffered by our East African company, Kettles-Roy & Tysons Ltd. As a result the Group profit is therefore £91,169 (£107,550 in 1960) of which £47,700 (£55,000 in 1960) has been transferred to General Reserve.

The total interest of Alex. Lawrie & Co. shareholders has risen by £117,114 and stands at £1,824,574. This increase is mainly accounted for by the higher market value of our holding in Balmer Lawrie & Co. and the transfer t General Reserve.

The trading results of the Parent Compan have followed very much the pattern of previou years.

The statement then reviewed in detail the acti vities of the Group's subsidiary and associate companies, and concluded:

Finally, I would like to express the Board' deep appreciation of and thanks for all that ha been done by the staffs both in London an overseas to further the welfare and prosperity c all our companies and associated interests.

The report was adopted.

ARMSTRONG SHOCK ABSORBERS

The twenty-sixth annual general meeting of Armstrong Shock Absorbers Limited was held on October 23rd in London, **Mr Irvin Haylock, FCA,** presided in the absence of the Chairman and Managing Director, Mr William Armstrong, BSc, AMIMechE, AFRAeS.

The following is an extract from the Chairman's circulated statement:

The drop in profits during the Financial Year was due to the severe recession in the Motor Industry which lasted for five months last Winter. A similar and even more serious recession occurred in Australia and unfortunately this is still continuing. Added to these problems has been the general increase in costs due to Wage increases and it has been extraordinarily difficult to obtain even a proportion of these increased costs by means of price increases from our Customers. However the Commercial Vehicle industry continued at full production and our diversification programme, in particular Heli-Coil, was extremely helpful to the position. Also our direct Export business increased very considerably so that all in all your Directors feel that profits are at a level sufficient to maintain the Dividend of 25 per cent.

We are proposing that the name of the Company be altered to Armstrong Equipmer Limited. The object of this is to reflect mor appropriately the wider spread of the Company activities outside the Shock Absorber field bot at home and overseas.

At the time of writing (Mid-September) ou factories at Beverley and York are operating a full load and the Motor Industry is going ahea with its considerable expansion plans so that w feel, with the Overseas and Export positior there are grounds for reasonable confidenc regarding the current Financial Year.

The report was adopted and a resolution wa passed changing the name of the Company t "Armstrong Equipment Limited."

APPOINTMENTS

UNIVERSITY OF CANTERBURY
CHRISTCHURCH, NEW ZEALAND
CHAIR OF ECONOMICS

Applications are invited for the Chair of Economics, this vacancy being due to the death of Professor C. Westfstrate.

The University will be prepared to arrange with the successful applicant a date on which he should take up his duties.

The salary attached to the Chair is at the rate of £2,800 per annum.

Further particulars are available from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on *30th November*, 1961.

THE ECONOMIST INTELLIGENCE UNIT LTD. wishes to make a graduate appointment to the staff of its International Division. This division is concerned with economic research for clients as well as publications dealing with all parts of the world. Applicants should not be more than 28 and should have a good honours degree; this need not be in economics, but in such case they should have experience of economic or related research; a good working knowledge of either Spanish or German is desirable.—Detailed applications should be sent to International Research, EIU, 5, Bury Street, London, S.W.1.

GRANADA TV
require an
ORGANISATION AND METHODS OFFICER
to work from their TV Centre Manchester. Duties will include investigation, recommendation and implementation of systems of procedure. Applicants should have had at least three years' experience of O & M work and be able to operate at all levels in the organisation. This is a senior post for which a commensurate salary will be paid. Five-day week, generous Pension and Dependent Insurance arrangements. Write, giving details of age, qualifications and experience to:
Norman Price,
Personnel Manager,
Granada TV Network Limited,
Manchester.

A NUMBER of vacancies exist in the Market Research Department of a leading London advertising agency for Assistant Research Executive trainees.
The work of the department consists mainly of planning and organising sample surveys of the general public, and of interpreting the results of these surveys to management and other departments in the agency.
Selected candidates will, in the first instance, assist Research Executives by whom they will be trained in the techniques of market research. It is expected that Assistant Executives will eventually assume full executive responsibility for market research on a group of the agency's accounts.
Applicants should possess a first- or second-class Hons. degree in one of the arts, social sciences, or mathematics.
Starting salary will be between £650 and £750 per annum, depending upon qualifications.
Application forms can be obtained from the *Staff Manager*.—Box 1554.

I.T.I.
I.T.I. LTD. is an Anglo-Swiss organisation specialising in industrial marketing research in the British Commonwealth and in Europe. We are associated with GfK, a leading market research organisation in Germany, and with engineering consultants in London, Zurich and Dusseldorf. We have two vacancies in our London office for graduates with a minimum of two and three years' experience, respectively, in market research, marketing or consultancy.
Salary according to age and experience.
The prospects are not unexciting.
Write to:
I.T.I. LTD., 185, Piccadilly, W.1.

For further appointments and other classified advertisements see pages 389 and 390

AUSTRALIAN NATIONAL UNIVERSITY
CANBERRA
RESEARCH SCHOOL OF PACIFIC STUDIES

Applications are invited for appointment to a READERSHIP IN INTERNATIONAL RELATIONS; salary £A3,750. Reasonable travel and removal expenses are payable.
One year's study leave with travel allowances will be granted after each five years' service.
The Reader in International Relations will be expected to engage in and to supervise research into the political, economic and legal relationships between nations, especially, but not necessarily exclusively, in the Asian and Pacific regions.
Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.
Applications close on *8th December*, 1961.

THE EDINBURGH AND EAST OF SCOTLAND COLLEGE OF AGRICULTURE

Applications are invited for the post of Assistant Agricultural Economist. Salary according to qualifications and experience:
Grade III £1,004—£1,570
Grade IV £797—£993
The appointment is eligible for superannuation.
Candidates should hold a degree in Agricultural Economics or Economics or Agriculture.
Further particulars and application forms from the Secretary, The Edinburgh School of Agriculture, West Mains Road, Edinburgh, 9, with whom the application should be lodged within two weeks of this advertisement.
J. A. JOHNSTON,
Secretary.

UNIVERSITY OF SYDNEY
LECTURESHIP IN ACCOUNTING

Applications are invited for the above-mentioned position.
The salary for a Lecturer is within the range £A1,730 x £105—£2,435 per annum plus cost of living adjustments (at present £A49 p.a.) and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.
Under the Joint Members' Housing Scheme, in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.
Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.
Applications close, in Australia and London, on *22nd December*, 1961.

BROWN & POLSON LTD.
SENIOR ASSISTANT
ORGANISATION AND METHODS
Applications are invited from men or women in the age group 23-28 with a good educational background and experience in an O. & M. Department. Based in London now (moving to new offices at Esher within 2 years), some work may be necessary in the Company's Branch Offices and Factories in the U.K. The appointment carries a good salary and participation in a substantial Profit Payment Scheme, Pension and Life Assurance. Applications to:—
Group Personnel Manager,
BROWN & POLSON LTD.,
123/130, Strand, London, W.C.2.

FERRANTI LTD., Hollinwood, Lancs, have a vacancy in the Export Sales Department for a Woman Economist. The work includes the provision of an information service and reports on specific projects. Candidates must have some experience of working on their own initiative. Good salary and staff conditions, including Superannuation Scheme.—Apply, giving full particulars of age, education and experience, to Miss I. Graham.

SALZBURG SEMINAR IN AMERICAN STUDIES
SCHLOSS LEOPOLDSKRON, SALZBURG AUSTRIA.
Scholarships are offered for the following sessions:
AMERICAN FOREIGN POLICY
January 7 to February 3, 1962.
AMERICAN LITERATURE AND MASS MEDIA
February 11 to March 10, 1962.
THE AMERICAN ECONOMY
March 18 to April 14, 1962.
Lectures and Seminars at the post-graduate lev Admission is granted for evidence of abili and accomplishment. General age range 25 40.
For further information and application form please write promptly to: Salzburg Seminar, Upper Brook Street, London, W.1.

BBC requires Producer/Language Supervis African Service in London (British su ject). Duties include writing, adaptation ar production of talks and feature programme language supervision and co-ordination of duti of Hausa staff engaged on translation and broa casting. Recent experience in at least one the West African Territories, high standa of Hausa and keen interest in and knowledg of Africa and international affairs essenti Journalistic and broadcasting experience a advantage. Candidates having passed Low Standard Hausa only may be required to tal oral and written test. Salary £1,380 (possib higher if qualifications exceptional), rising five annual increments to £1,780 max. p. Requests for application forms (enclosi addressed envelope and quoting referen 61.G.496 E.C.1) should reach Appointmen Officer, Broadcasting House, London, W. within five days.

The Wellcome Foundation Limited require for their Biological Control Laboratories a Statistician to take charge of their Statistical Unit at Dartford.
Applicants should possess a degree in statistics or mathematics, or an equivalent professional qualification. The work entails the design and analysis of routine biological assays and of research projects. Previous experience in this field would be an advantage. Salary according to qualifications and experience.—Applications should be made in writing to the Personnel Manager, Wellcome Chemical Works, Dartford, Kent.

COMPANY AFFAIRS

New Problems for Fisons

DESPITE numerous attempts Fisons has been able to establish no more than a foothold in industries other than fertilisers. Bids for Crosse and Blackwell, British Drug Houses and Evans Medical have all been unsuccessful and the bulk of Fisons' profits continue to stem from fertiliser sales. The chairman, Sir Clavering Fison, had already forecast that profits in the year to June 30th last would be lower as the 1959-60 profits had benefited from an exceptional increase in fertiliser sales which partly reflected the very good harvest of 1959 and the introduction of the Small Farmer Grant Scheme. In 1960-61 fertiliser prices were reduced by 4 per cent and it seems unlikely that total sales rose at all, though a 4 per cent increase had been looked for. It was not therefore surprising that profits fell back from £6,840,000 to £5,773,000; the fall in net profits from £2,021,000 to £1,860,000 was much less steep, reflecting an unexpected reduction in depreciation and a much lower tax charge, which presumably results from bigger investment allowances. There had been some fears that the ordinary dividend would be reduced but in fact it has been maintained at 11 per cent, though the cover for it has fallen slightly to 1.7 times.

Fisons' attempts at diversification have been based on its substantial holdings of cash and investments. The size of these balances is always high on June 30th, when fertiliser stocks are low and most of the traders' accounts have been settled. But by June 30th this year, these liquid holdings had fallen sharply from £8.7 million to £3.9 million, the lowest level for some years. As capital commitments at that date amounted to £13½ million, against £2¼ million, it seems unlikely that the fall in liquid assets simply reflects spending on either of Fisons' two major development projects, the nitrogen plant to be built in conjunction with Esso at Milford Haven and the doubling of the ammonia capacity at Flixborough. These plants are expected to cost £12 million and the company plans to devote between £2 million and £3 million on building up its export business. Despite the company's contention that the major part of this expenditure can be met from "existing and accruing resources" the cash flow of about £2.7 million is unlikely to be sufficient in view of the sharp fall in liquid assets and it looks as if Fisons will have to come to the market for new funds before these programmes are completed in 1964. Not surprisingly the £1 shares at 34s. are close to their low point for the year and yield 6½ per cent. This is higher than the average yield offered by blue-chips and it reflects not only the possibility of a further share issue but also the uncertainty over the outcome of the common market negotiations. Fertiliser prices in Europe are generally lower than those in this country and any cuts in the agricultural subsidies could hit Fisons hard.

Rolls-Royce

HOPES of a more significant increase in the trading profits of Rolls-Royce for 1961 have been dashed by this week's interim statement; although this records an increase in sales from £51 million to £59 million in the first half of the year it contains much gloomy news besides. Shareholders are told that development expenditure on aero engines has been at a higher level than in any previous year. Part at least of this must be due to continued trouble with the big turbo-prop Tyne. Thus while the favourable trend in sales is expected to be reflected in the full year's figures it would seem likely that any increase in profit will be absorbed by another very heavy development charge (which in 1960 rose to £7¾ million, to make a total of over £20 million in three years). A substantial increase in working capital and high interest rates have also resulted in "unexpectedly large" charges for loan and bank interest; these should presumably show some reduction in the second half of the year following the issue in June of £12 million of a 6½ per cent debenture. Orders in hand have also shown a sharp fall and at the end of September amounted to £94 million, against £116 million at the end of 1960 when the delayed deliveries had swollen the total.

On the car side of the business, which now accounts for only 10 per cent of total sales, the outlook is depressing with the demand for Rolls-Royce and Bentley cars "severely reduced" following the budget proposal which limited to £2,000 the tax allowance which a buyer can claim on a car used for business purposes. The interim dividend has been doubled to 5 per cent in line with Lord Kindersley's forecast but it is not surprising that the directors say that the total distribution for 1961 will not be increased beyond the current rate of 11 per cent to which the dividend was raised for 1960. The £1 shares, which fell by 7½d. to 40s. on the interim statement, yield 5½ per cent.

Charterhouse

THE Charterhouse Group has passed its interim dividend, which amounted to 4 per cent in 1959-60 when a total dividend of 8 per cent was paid. The reason is further trouble from its hire purchase subsidiary, Charterhouse Credit, which last year made a loss of £1,305,000. Reorganisation of Charterhouse Credit was obviously likely to result in an operating loss in the current year, but after last year's drastic surgery the need to make a further bad and doubtful debt provision was certainly not expected. Sir Nutcombe Hume, chairman of the group, who six months ago was forecasting "a much better report" for this year, now reports that the trading loss and extra debt provision of the credit company may mean a reduction in group profits of "as much as £400,000." Sir Nutcombe does not say how much of this £400,000 is attributable to the trading loss and how much to bad debts. But he does add that it may be prudent to provide for further operating losses. Last year's loss was largely absorbed by the hire purchase company's preference capital and capital reserves so that only £333,000 came out of the group's profits. This time profits will have to bear the full loss. The net profits of the rest of the Group for the year to November 11th are likely to be the same as in 1959-60. Shareholders must now have serious doubts about the size of the final dividend.

Saxone Lilley and Skinner

THE boom in shoe sales continues, but sales depend very much on the whims of fashion and the shoe manufacturers need plenty of skill—and some good fortune—to keep in step with the bewildering changes in them. Now it seems that "stiletto" heels and "winkle-pickers" have passed out of favour and Saxone, Lilley and Skinner is having to cut its prices to avoid being left with stocks of unfashionable shoes. The benefit of higher sales has, in addition, been more than absorbed by higher costs, and the company's chairman, Mr J. S. Abbott, now forecasts lower profits for 1961.

Shareholders received this disquieting and unexpected news in a circular giving details of the one-for-one scrip issue that is to follow the revaluation of the group's properties. This has revealed a surplus over book values of over £12 million, but of this only the surplus of £5.6 million relating to freehold properties is being written into the accounts. The big surplus has drawn attention to the relatively low return Saxone earns on the capital it employs. The return is no more than 4½ per cent if leasehold as well as freehold properties are taken at current valuations. Mr Abbott says that each trading site is now being examined in relation to the contribution it makes to profits and he expects profits to rise again once this examination and the resulting "vigorous action" has been completed.

In the present state of the stock market the normal reaction to a forecast of lower profits would have been to mark the shares down, but, in fact, the 5s. shares were virtually unchanged at 26s. 6d., close to their 1961 peak. They offer a yield of under 3 per cent on the forecast of an effectively maintained dividend. This low return is certainly not justified by current trading prospects but reflects the steady buying of the shares and reports in the stock market

Continued from page 383

that a bid from Mr Clore's Sears Holdings, is possible. If it acquired Saxone's 475 shops, its shoe empire would become even more dominant. However, with the possibility of a bid hanging over them, the Saxone directors who own a sizeable but not a controlling interest in the equity seem to be intent on making a more profitable use of the company's assets. This is not the first time that even the bare mention of Mr Clore's name has made a board of directors take a long, hard look at its policies.

New Placings

DEALINGS have started this week in the shares of three newcomers to the stock market but of these only **Cumulus Investment Trust** is a recently formed company. Cazenove and Co. have placed 129,998 of its 500,000 ordinary shares of £1 each at 28s., as well as £300,000 of a 7 per cent debenture 1984-87 at £99. It is an indication of the directors' confidence in the future growth of equities that it is prepared to invest in them the proceeds of a fixed interest issue on which they are committed to pay the high interest rate of 7 per cent for the next 25 years. Their aim is to maintain a high gearing and they say that this will mean in the trust's early years retaining a much higher proportion of its income than is normal for an investment trust and that hence it is unlikely that any dividend will be paid for the year to October, 1962. Clearly this trust is designed for the surtax payer who will be more interested in the long-term growth prospects than immediate income; the management's undoubted investment ability enhances these prospects and on Thursday the shares rose to 31s. Among the trust's existing holdings are a 10 per cent stake in the discount house, Smith St Aubyn, and an 11 per cent stake in Witan Investment. It also has acquired from one of its directors, Sir Edwin Herbert, his holding of 56,000 "A" shares in the unquoted Associated-Rediffusion.

After the placing of 20 per cent of the equity of **Caffyns**, the directors and their families will hold about one third of the ordinary shares but will control almost 59 per cent of the votes through their holding of voting second preference shares. Caffyns has been in the motor trade since the turn of the century and while its business has grown steadily it has confined its operations to Kent and Sussex, where it has 56 properties. It is one of the principal motor agents in those counties but over 50 per cent of its profits come from the service and repairs side of the business. In the past two trading years pre-tax profits have been around £350,000, much higher than the levels of earlier years. Turnover in the first five months of the current year was 5 per cent higher than in the corresponding period in 1960 and the directors expect profits at least to be maintained so that the forecast dividend of 15 per cent would be covered 1.9 times. Placed at 10s. 3d. the shares rose to 10s. 9d. and yield 7 per cent.

The placing of just over one quarter of the ordinary capital of **Frank Cooper** will provide the company with £128,000. This will be used to finance a new factory in Oxford, which will enable the company to add to the production of its Oxford marmalades and other branded products. Exports at the moment account for about 15 per cent of total production. Cooper's profits are vulnerable to fluctuations in the prices of its raw materials but in the first half of the current year turnover was 11 per cent higher so that the directors forecast pre-tax profits of not less than £70,000, almost double the average of the previous five years. On this basis the forecast dividend of 8 per cent would be covered 1.8 times and the 5s. shares closed on Thursday at 9s., against the placing price of 7s. 3d., to yield 4½ per cent.

Daily Mirror

THE sharp rise in the profits of the Daily Mirror group in the six months to August 31st, from £2,320,000 in 1960 to £5,688,000 naturally owes a great deal to the inclusion of Odhams' results into the latest accounts. If Odhams did as well as in 1960 its profits would have been about £2¼ million in the half-year and on this reckoning the profits of the Mirror group, excluding Odhams, would have been about £1 million higher even though only one month's profit from Imperial Paper Mills, which was sold at the end of March, was included.

Higher profits from the group's original interests are possible because the price of the *Daily Mirror* has been raised and because some immediate savings in promotional costs following the acquisition of Odhams may have been achieved. But the directors say that the second half of the year will show less satisfactory results because additional expenses will arise in consolidating the merger of women's magazines and that "the full benefits from these operations" should appear in the 1962-63 results. The interim dividend has been left unchanged at 5 per cent on the increased capital of £31.2 million and on the forecast of a total payment of not less than 15 per cent the 5s. ordinary shares at 12s. 4½d. yield 6 per cent.

Johannesburg Consolidated

THERE are few shares where the relationship between the net asset value and the market price is so out of line as the £1 shares of Johannesburg Consolidated. They stand at 42s. 3d. to offer a yield of 11¾ per cent, but at June 30th last the shares had a net asset value of 90s. a share. This valuation, moreover, is based conservatively on London prices which, because of South Africa's restrictions on capital outflows, stand at about a 20 per cent discount on Johannesburg prices.

This mining finance house is registered in South Africa, but it pays taxes in this country. It was thus faced with difficult

problems when the exchange control regulations were imposed in June, but the South African authorities have now agreed that it should be regarded as a "non-resident" company. This agreement enables it to remit to this country any of its South African income which is not needed there. "Johnnies'" principal interests outside the republic of South Africa are in Rhodesian copper through the investments it owns in the operating companies and "Chartered." Copper, together with diamonds and platinum, contributed over two-thirds of its total income in 1960-61 of £2,888,000, against £2,521,000. This level is unlikely to be maintained in the current year, for the copper producing companies have recently reduced their final dividends and so has the major platinum producer, Rustenburg. Nor does a bigger payment from De Beers seem to be in prospect and the directors of "Johnnies" do not expect income arising from investments in the gold mines to alter significantly this year. "Johnnies" has substantial investments in two developing mines, Western Areas and Freddies, and to the latter it has made a temporary loan of £625,000.

The 11¼ per cent yield, well above the returns given by other leading mining finance shares, clearly reflects the political risks on both sides of the Limpopo as well as the prospect of a lower income. Even so, the dividend of 5s. a share was covered over 2½ times (or just under twice if the special tax relief for investment depreciation is excluded) and a reduction in it appears unlikely.

Wall Paper Manufacturers

THE steady climb in Wall Paper Manufacturers' profits since 1957 was halted in the year to June 30th last but the fall in profits was less sharp than had been expected. At the time of the rights issue in June the directors forecast that profits would amount to £5 million but in the event they came to £5,160,000, compared with £6,078,000 in 1959-60. WPM acquired control of two major paint and wall paper manufacturers, K.L. Holdings and Smith and Walton early in the year, but the directors say that these acquisitions contributed comparatively little to the consolidated results. Net profits have fallen by as much as 22½ per cent from £3,353,000 to £2,693,000 so that the cover for the dividend of 25 per cent on the increased deferred capital has fallen from 3 to 2.1 times.

The fall in profits has not unduly worried the stock market, for the directors have forecast that earnings in the year to June 30 1962, should improve because of "greater efficiency as a result of capital expenditure on plant and buildings." Both the new acquisitions should also contribute more to profits in the current financial year. The rights issue raised almost £10 million and as this lessens the group's dependence on bank overdrafts (which amounted to £8½ million at the end

of June) the reduction in gross interest charges should boost net earnings. The prospect that factors such as these will produce a recovery in earnings is reflected in the yield of 4.1 per cent offered by the £1 deferred ordinary shares at 12½s. 9d., which is well below the peak for the year.

Rover

SALES by the Rover Car Company rose to record levels both at home and abroad in 1959-60 and profits rose sharply. But a year ago the chairman, Mr S. B. Wilks, warned shareholders that the outlook was by no means as bright and the preliminary figures for the year to August 5 now show that trading profits have fallen by 23 per cent. Gross profits after depreciation fell by 9 per cent from £2,765,000 to £2,234,000 and as the tax charge has been reduced by £581,000 to £1,007,000, net profits have actually risen by nearly 5 per cent from £1,174,000 to £1,229,000. This is an unusual result and it may arise from an exceptional combination of circumstances. The reduction in depreciation may reflect the decision to write off completely body dies in the current models in the 1959-60 accounts while the fall in the tax charge may partly reflect the incidence of capital allowances arising from the company's development programme, which in keeping with the company's restricted share in the vehicle market is a comparatively modest one.

The dividend has been maintained at 15⅝ per cent on the capital as increased by the one-for-five rights issue, but inevitably the cover has fallen, from 3 to 2½ times. Rover differs from most of the big motor manufacturers in that it earns its bread and butter from Land-Rovers, whose share of production and contribution to profits is much higher than cars proper. The prices of these models are below the £2,000 limit on tax concession cars for companies, but so far this has done nothing to boost sales and the difficulties of such a small manufacturer as Rover, which remains dependent on the continuing success of the Land-Rover, is reflected in the yield of 6¼ per cent offered by the 5s. shares which currently stand at 11s. 10½d.

Brooke Bond

THOUGH Brooke Bond's gross profit for the year to June 30th fell from £4,395,000 to £4,062,000, there is certainly no sign yet that this thrustful group is losing its grip on the market for packet teas in this country. Turnover of the group rose by £5 million to £108 million, and most of this improvement was apparently in sales of packet teas at home and overseas. But as well as blending and distributing tea, Brooke Bond has substantial plantation interests. Whether the group was more affected by the complex changes in the factors affecting its widespread tea growing interests or by narrower profit margins on its sales of packet teas will probably be made clear in the chairman's statement. The total dividend for the year has been maintained at 4d. a share, free of tax, giving a yield of 4.2 per cent on the 5s. "B" shares at 13s. Brooke Bond has consistently followed the policy of ploughing back a big proportion of its earnings into the expansion of its distribution and growing activities. Not surprisingly, there is to be a one-for-five scrip issue to bring issued capital more into line with capital employed in the business. The group has plenty of liquid resources, of which the recent bid for Doom Dooma will absorb about £1½ million.

Robeco

SHAREHOLDERS of General Accident, Rawlplug, Tesco and Transport Development can find support for their confidence in the long term growth prospects of these companies across the Channel for Robeco (Rotterdamsch Beleggingsconsortium NV), the big European investment trust, added these companies to its British portfolio between June and October. Only one of these four shares yields over 2 per cent gross, which is equivalent to 1¼ per cent net to the trust. It has also added to its existing holdings of other low yielding shares such as Beecham, Davy-Ashmore, Glaxo, International Computers and Tabulators, Jaguar "A," Sears "A" and Associated British Foods. Robeco now also has a much bigger stake in Marks and Spencer. But it has sold part of its holdings in Imperial Chemical Industries, Tube Investments and Great Universal Stores and shareholders in these companies should note that Robeco's investment policy has been to sell or reduce its stake in companies "the long term prospects of which do not indicate a steady increment of profit."

British companies however account for only 3½ per cent of Robeco's portfolio which on October 1st was worth about £86½ million. American stocks now represent 40 per cent of the portfolio, against 29 per cent at the end of 1960, and with the management taking a favourable view of the American economy its cash holdings have been halved since the beginning of the year to 7½ per cent of the total in building up the dollar portfolio. At the same time Robeco has added to its interests in many European companies, although the managers note that the rate of increase in production in Europe is levelling out.

The shares of Fl.50 in this trust are to have a London quotation soon and dealings just in this country will be possible in subshares, representing one tenth of a Robeco share, which at the current price of about £25½ yield 3½ per cent gross. Their attraction for the English investor is not the high dollar content of the portfolio (which can also be found in a number of English trusts) but as a means of obtaining a stake in common market securities.

London Stock Exchange

FIRST DEALINGS:	Oct. 2	Oct. 16	Oct. 30
LAST DEALINGS:	Oct. 13	Oct. 27	Nov. 10
ACCOUNT DAY:	Oct. 24	Nov. 7	Nov. 21

THE outstanding feature of the stock market over the week to Wednesday has again been the continued rise in gilt edged prices, helped by the Chancellor's statements on the state of the economy; prices are already discounting a further fall in Bank rate. Before the weekend equities met enough investment buying to push prices up but these gains were lost on Monday and Tuesday when the market was unsettled by the possibility that a capital gains tax might be introduced before the budget. However a slight rally among the leaders on Wednesday following a more optimistic statement from the Chancellor helped to offset the falls of the previous two days. Over the week to Wednesday, *The Economist* indicator rose for the first time in seven weeks gaining 2.3 points to 345.0

The demand for gilt-edged has brought good gains throughout the range of maturities. Exchequer 5½ per cent 1966 gained ⅝ to 98⅜; Funding 5½ per cent 1982-84 rose sharply by 2⅛ points to 92½ but among undated stocks 2½ per cent Consols were a bare ⅛ higher at 39⅝. The LCC 6½ per cent 1971-72 loan issued at 96½ rose to a premium of 5⅛.

Bank shares showed mixed movements over the week, but Standard Bank of South Africa was prominent with a gain of 2s. 6d. to 37s. 6d., but among hire purchase houses falls were commonplace; Charterhouse lost 2s. 7½d. to 14s. after the news of further losses by its hire purchase subsidiary. Insurance shares were also dull and Guardian dropped 2s. 3d. to 45s. 9d. Breweries however maintained their strength of recent weeks and Whitbread "A" gained 1s. to 34s., helped by the news of the link with Heineken's. Chemical shares rose with ICI gaining 2s. 9d. to 60s. 10½d. Among stores, Macowards lost 9d. to 11s. 3d. on the bid for Thomas Wallis and some leaders lost small amounts though Marks and Spencer gained 2s. to 101s. 9d. The Cunard decision naturally hit shipping and shipbuilding shares; Cunard lost 3s. to 14s. and John Brown 2s. to 30s. 4½d. American buying helped Beecham to put on 3s. to 49s. 4½d. and the formal application by Unilever for a New York quotation brought in American buyers and led to a further rise of 3s. 9d. to 153s. 9d. American orders for British cars also boosted motor share prices with Jaguar "A" gaining 2s. 1½d. to 82s. 1½d. and Leyland Motors 4s. 7½d. to 82s. 4½d. BMC showed a more modest rise of 4½d. to 13s. 3d. Textile properties and steels were subdued and oil shares fell slightly. Kaffirs were firm before the weekend but fell back afterwards until local investment buying raised prices on Wednesday. Anglo American made a net gain of 5s. to 132s. 6d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended October 21, 1961, there was an "above-line" surplus (after allowing for sinking funds) of £4,577,000 compared with a deficit of £6,513,000 in the previous week and a deficit of £18,556,000 in the corresponding period of last year. There was a net credit "below-line" of £19,099,000 leaving a total cumulative deficit to date of £643,584,000 compared with £666,081,000 in 1960–61.

THE MONEY MARKET

THE City is now confident that the next cut in Bank rate is very close. At the Treasury bill tender on Friday of last week the syndicate of discount houses chose to ignore official pressures designed to check the slide in short term-rates, and increased its bid by 5d. to £98 10s. 5d. The average rate of discount fell by 1s. 8.93d. to £5 18s. 5·35d. per cent. Following the tender two or three houses were forced to borrow at Bank rate from the Bank of England, but the amount involved was small. On Monday, this marginal borrowing from the Bank was repeated, and on Tuesday four or five houses were forced to borrow a moderate amount from the Bank.

Although the prospect of a fall in the Bank rate has stimulated a keen demand for Treasury bills the market has been notably successful in maintaining its allotment. Last week it received 51 per cent of its application, and over the past seven weeks its quota has averaged 56 per cent.

Credit has again been tight this week, and the rate for overnight loans has stayed very close to bill rate, at about 5¾ per cent. But on Wednesday credit suddenly became comfortable and the authorities sold a small amount of bills to mop up the surplus credit.

COLLEGE OF ADVANCED TECHNOLOGY, BIRMINGHAM

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

Applications are invited for the following posts:

SENIOR LECTURER IN ECONOMICS

Candidates must be graduates, or possess equivalent professional qualification. A knowledge of marketing techniques would be a distinct qualification.

LECTURER IN FINANCE AND COST ACCOUNTING

Applicants should be graduates and/or professionally qualified accountants and should be able to assist in the teaching of finance and cost accounting, management accounting and data processing. Experience in industry is desirable.

Salary: Senior Lecturers £1,550—£1,750
Lecturers £1,370—£1,550

Further particulars and forms of application from the Bursar, College of Advanced Technology, Gosta Green, Birmingham, 4. Applications to be received within 14 days of this advertisement. Please quote: W/1061.

K. R. Pilling, Clerk to the Governors.

CITY OF SHEFFIELD EDUCATION COMMITTEE

COLLEGE OF TECHNOLOGY

DEPARTMENT OF COMMERCE AND MANAGEMENT

Applications are invited for appointment as LECTURER in MARKETING. The person appointed should have academic qualifications and practical experience in the field of marketing and market research, and will be required to continue the development of teaching and student research in these subjects, particularly in block release and day courses for the new Diploma in Management Studies. A sound knowledge of economics and other related subjects will be an advantage. Previous teaching experience or teacher training is also required.

Duties will commence on 1st January, 1962, or as soon thereafter as possible.

Salary (Burnham Technical Scale): £1,370 x £35–£1,550 per annum.

Application Forms, obtainable from the undersigned (s.a.e.) at P.O. Box 67, Sheffield, 1, should be returned within 14 days of the appearance of this advertisement.

T. H. TUNN,
Director of Education.

The Electricity Council

PRINCIPAL ASSISTANT

(ECONOMICS and STATISTICS)

Applications are invited for the superannuable post of Principal Assistant in the Commercial and Development Departments at Headquarters in London. Duties will be to assist in the provision of a statistics and economic intelligence service, the organisation of consumer sampling and market surveys and the formulation of long and short term estimates of electricity requirements. Candidates should have an honours degree in economics and a sound knowledge of modern statistical techniques.

● *The salary for the post will be within the range £1,300–£1,550 p.a. inclusive of London Allowance, commencing at a point dependent on the applicant's qualifications and experience.*

Applications, stating age, qualifications, and experience, present position and salary, to E. Landucci, The Electricity Council, Winsley Street, London, W.1, by 11th November, 1961. Quote Ref. ECO/134.

THE REPUBLIC OF THE SUDAN

The Ministry of Education invites applications for Senior Lecturers in Accountancy in the School of Commerce, Khartoum Technical Institute which adopts the syllabuses of the Association of Certified and Corporate Accountants for both the Intermediate and the Final.

(i) Candidates for these posts must (a) possess an appropriate University Degree; (b) or must be Chartered or Certified accountants; and (c) must have had considerable experience either in business or government departments.

(ii) Appointment will be on contract (with bonus) for a period up to five years. Salary scale ranges from £S.2100 to £S2225 (£S.1= £1 0s. 6d.). Starting salary in accordance with age, qualifications and experience. In addition to salary quoted a cost of living allowance, which is reviewed every two months, is payable at present between £S.168 and £S.180 per annum. An initial outfit allowance of £S.50 is payable on appointment. Leave accrues at the rate of seven days per month.

A special re-settlement gratuity to British Lecturers will also be paid on satisfactory completion of the contract.

Applications, in writing, stating full details of age, qualifications and experience, should be made to the Appointments Section, Sudan Embassy, Cleveland Row, St. James's, London, S.W.1.

Closing date: November 15, 1961.

SPILLERS LIMITED

require

A COST ACCOUNTANT

to take charge of all costing matter for their Milling and Grocery interests.

—Applications giving details of age, present salary, education, qualification and experience, should be sent to the Chief Accountant, Spillers Limited, Old Change House, Cannon Street, London, E.C.4.

APPLICATIONS invited for the post of Principal of the Catholic Workers College, a residential college for adult social students. Duties to commence with session 1962-1963. Salary £1,800 x £75 to £2,100. Accommodation for priest or single woman; rent allowance for married. Superannuation and children's allowance.—Application to be made before December 1st, 1961, to the Clerk to the Governors, Catholic Workers College, Boars Hill, Oxford.

For other appointments see pages 382 and 390.

UNIVERSITY OF SYDNEY

LECTURESHIPS IN ECONOMICS

Applications are invited for two positions of Lecturer in Economics. It is desirable, but not essential, that one appointee be qualified in labour economics or industrial relations.

The salary for a Lecturer is within the range £A1,730 x £105—£2,435 per annum plus cost of living adjustments (at present £A49 p.a.) and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme, in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London, on 8th December, 1961.

NORTH WESTERN GAS BOARD

HEAD OFFICE—MANCHESTER

ASSISTANT STATISTICIAN (MARKET RESEARCH)

Applications are invited for the above pensionable appointment in the Statistics Department, at a commencing salary within the range £770/£1,015 per annum according to qualifications and experience.

Candidates should preferably be not more than 27 years of age and must hold an appropriate graduate or equivalent qualification. Preference will be given to Honours graduates in Economics combined with Statistics.

The Assistant Statistician will be concerned mainly with planning, preparation and analysis of market surveys but may also be required to assist in general statistical studies in the field of demand forecasting, load research, etc. The work is interesting and offers scope for imagination and initiative in the application of statistical techniques to business problems.

Detailed applications, giving the names of two referees, should reach the Secretary of the Board, Bridgewater House, 60 Whitworth Street, Manchester, 1, within 14 days.

NEWCASTLE UPON TYNE EDUCATION COMMITTEE

General Manager.

23rd October, 1961.

HUDSON'S BAY OIL AND GAS COMPANY LIMITED

Charles A. Perlitz of Houston, Executive Vice President of Continental Oil Company has been elected Chairman of the Board of Directors of Hudson's Bay Oil and Gas Company Limited, and J. R. Murray Winnipeg Managing Director of the Hudson's Bay Company, has been elected Vice-Chairman.

Mr Perlitz succeeds L. F. McCollum Houston President of Continental, who continues as a Director of Hudson's Bay Oil and Gas. Mr Murray was elected to the vacant Vice-Chairmanship on the company board.

The other directors of the company are: James A. Richardson and E. E. Woods of Winnipeg, Ira H. Cram, New York, A. J. Foley, Quebec, P.Q., Herbert H. Lank, Montreal, G. T. Pearson and L. J. Richards, both of Calgary.

HUDSON'S BAY OIL AND GAS COMPANY LIMITED

M. B. Morris, General Manager of the Exploration Department, has been appointed a Vice-President of Hudson's Bay Oil and Gas Company Limited, it was announced today by G. T. Pearson, President. Mr Morris joined the company in December of 1957, when he was appointed Assistant Exploration Manager. He was appointed Exploration Manager in June of 1959. Prior to joining Hudson's Bay Oil and Gas Company, Mr Morris held various assignments with *Continental Oil Company*. He received his BSc degree in geology from the University of Texas. He is a member of the Alberta Society of Petroleum Geologists and the American Association of Petroleum Geologists.

APPOINTMENTS

DEPARTMENT OF TECHNICAL CO-OPERATION
APPOINTMENTS UNDER THE COLOMBO PLAN
FOR
INDIAN STEELWORKS

GENERAL SUPERINTENDENT

A General Superintendent is urgently required for a fully integrated modern steel plant of 1 million ton capacity with expansion planned to 1.6 million tons, in course of commissioning at Durgapur in India, with complete responsibility to the General Manager for control of operations. The duties of the post would include, but be somewhat wider than, the duties of a Works Manager in the United Kingdom.

This post calls not only for considerable experience of up-to-date steelworks practice, but also for a proven record of successively increasing management experience, including preferably service as *Works Manager or equivalent.*

Candidates must possess appropriate technical qualifications and experience and should be preferably in the age range 35 to 55.

It is intended that this appointment will be for a minimum period of three years with every chance of extension for the right man. Where applicable, every effort will be made to arrange with the successful candidate's present Company for the safeguarding of seniority, pension rights and promotion prospects during secondment.

Pay and allowances will be subject to negotiation, but for the right man they will be about £9,000 (single) and £10,000 (married) including tax free overseas allowance. Annual home leave, passages and medical attention for self and family, accommodation and *transport* provided.

ASSISTANT GENERAL SUPERINTENDENT

An Assistant General Superintendent is also required for the same Works in India. He will be responsible to the General Superintendent. The post requires a man with wide knowledge of engineering maintenance who is prepared to undertake pioneering work of national importance in what may sometimes be exacting conditions.

The appointment will be for an initial period of three years. The pay and allowances for a suitable man would approximate to £5,500 (single) and £6,500 (married) including tax free overseas allowance. Apart from pay his conditions of service would be broadly the same as those of the *General Superintendent.*

Successful applicants for both these posts *will be appointed and paid by* the Department of Technical Co-operation but will be engaged to serve Hindustan Steel Ltd.

Applications, in confidence, giving full details, should be addressed to the Director-General, Department of Technical Co-operation, 2-6, Carlton House Terrace, London, S.W.1, and should be received not later than 22nd November, 1961, and the envelope should be marked "Posts at Durgapur Steelworks."

MSL *have been retained to advise on this appointment.*

MANAGER INVESTMENT ANALYSIS AND INTELLIGENCE DEPARTMENT

for a firm of stockbrokers dealing principally with institutional clients. He will be expected to develop the intelligence service which is available to the partners (more than 12 of them) and through them to their clients, by ensuring that current information is available quickly and that important trends in markets, industries, companies, and political activity are analysed to provide the best possible basis for advising on probable future developments.

Candidates, age 35 to 45, must have had experience of directing and supervising similar work in a firm of stockbrokers or a large investing organisation.

Initial remuneration £3,500 to £4,500. Please send brief details in confidence quoting reference S. 4642 to T. E. Watson.

In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED,
17 Stratton Street, London, W.1

BBC requires Production Assistant for "Tonight" to contribute generally to programme formulation and content; help producers in programme preparation and administration; in research, selection and direction of film stories and presentation of studio items. This requires developed visual imagination, wide range of interests and ability to translate programme ideas into practical television. Essential qualifications include ability to work at sustained speed on location and in studios, and upon preparation of commentaries and other written matter; positive interest in current affairs; experience in handling scripts or films; ability to work constructively as member of a highly-professional team. Experience of journalism and working for a magazine programme, preferably in television, would be advantages. Salary £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 max. p.a. Requests for application forms (enclosing addressed envelope and quoting reference 61.G.498 ECT.) should reach Appointments Officer, Broadcasting House, London, W.1., within five days.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of LECTURER or ASSISTANT LECTURER in STATISTICS to begin duties on 1st January, 1962, or as soon as possible thereafter. Salary scales: Lecturer, £1,050×£50—£1,400×£75—£1,850. Assistant Lecturer, £800×£50—£950, with F.S.S.U. provision and family allowance. Initial salary on either scale according to qualifications and experience. A grant towards removal expenses will be made. Further particulars may be obtained from the Registrar to whom applications (4 copies) should be sent by 18th November, 1961.

For further appointments and other classified advertisements see pages 382 and 389.

PSYCHOLOGIST. Ph.D. level, with some commercial experience in marketing to be Research Director of company specialising in Market Surveys. Salary depending on experience and qualifications. Box 1556.

BRITISH COUNCIL
EDUCATIONAL CO-OPERATION IN THE COMMONWEALTH
INDIA

Applications are invited for the following posts:—

(a) OSMANIA UNIVERSITY, HYDERABAD: (i) VISITING PROFESSOR of ECONOMICS and (ii) VISITING PROFESSOR of POLITICAL SCIENCE. Appointment to be taken up in 1962. Contract with University and British Council for two years.

(b) UNIVERSITY of RAJASTHAN, JAIPUR: PROFESSOR of or READER in ECONOMETRICS and PUBLIC ADMINISTRATION. Appointment to the Professorship or Readership will depend upon the calibre of the successful candidate. If the appointment is made to a Professorship it will involve the establishment of a Department. Commencement of appointment, July, 1962. Contract with University and British Council for two years renewable.

Candidates must be British graduates with appropriate qualifications and experience.

In both cases, salary on a scale, for a Professor, of £2,700 to £3,700; for a Reader, of £1,980 by £75 to £2,505. Overseas allowance. Children's and home education allowances. Free furnished accommodation. Installation grant. Medical scheme. Outward car freight paid. Fares paid, and for family (including mid-tour passages for children in U.K.). Employer's portion U.K. superannuation paid. Secondment from home employment may be arranged.

Write, quoting L.10M (61) for the University of Rajasthan, and L.12M (61) for Osmania University, and enclosing stamped addressed foolscap envelope to Director, Recruitment Department British Council, 65, Davies Street, London, W.1, for further particulars and application form to be returned completed within two weeks of receipt.

(continued in next column)

CONSUMER RESEARCH

A leading business service organisation is looking for a

MANAGER

for its Consumer Research Division. He will be in the age bracket 28-40 and will have been for some years in a position of Executive responsibility for Consumer Research Surveys Sales and Servicing, and therefore used to negotiating with Senior Executives in Client companies. This appointment will offer him a very good working environment, with considerable opportunity for both the development of his division's operations and personal progress in a Company with high standards.

Joined for strength and owned by two great banks

two important finance houses are organized for expansion

Two long-established finance houses, Olds Discount and Scottish Midland Guarantee Trust, are now linked together in Lloyds & Scottish Finance Limited which, in turn, is owned jointly by Lloyds Bank and the National Commercial Bank of Scotland.

With a capital of £15,000,000 and assets exceeding £100,000,000, the Group offers comprehensive hire purchase and block discounting facilities for the distributive trades, industry, commerce and the individual.

Traditionally, a large proportion of its turnover is in the motor vehicle business: cars, commercial vehicles and motor cycles. The manufacturing and building industries, and other large scale users of capital equipment and machinery, including agriculture, are employing the Group's financial facilities on an increasing scale. In the field of household equipment—radio, television, refrigerators, washing machines, furniture, etc.—its block discounting and direct collection facilities are used extensively by enterprising traders. Convenient payment arrangements are provided for individuals for central heating installations, marine craft, garages and garage extensions, boarding school fees and other such personal requirements.

Through a nation-wide network of over 100 branch offices the Group has established a reputation for efficient, courteous and understanding service to all its customers.

Enquiries are welcomed at any office of Olds Discount and Scottish Midland Guarantee Trust; or may be addressed to the head office.

GUIDE TO CONTENTS SEE OVER

The moving and storage of materials with efficient and time-saving handling equipment can decimate overhead costs and increase productivity considerably. Lansing Bagnall, the largest and most experienced manufacturer of materials-handling machinery in Europe, design and develop methods and equipment that cut the cost of handling and the time involved. Each machine is specially designed and built for individual companies and their specific handling problems; as no two handling problems are alike, it takes the knowledge and craftsmanship of Lansing Bagnall technicians to achieve the right solution. One Lansing Bagnall fork lift truck, for example, operated by one man, can cut the time of any handling operation by 25% and increase the storage capacity of existing buildings by 30%.

Lansing Bagnall offer the most efficient and comprehensive after-sales service in the industry –available for the whole life of any truck. Recognise your need for improved handling–and Lansing Bagnall will show you how it can be done, promoting greater efficiency and economy for you. Write, or if urgent telephone, for advice on any problem of handling and storage. Lansing Bagnall will recommend, without prejudice or commitment, the most suitable solution.

INTERNATIONAL

COMMUNISTS' GREAT DIVIDE

Mr. Khrushchev's giant bomb has obscured the loud noise of fission between himself and the diehards of world communism. The middle-men inside Russia, however, like Mr Khrushchev, combine a desire for unadventurous foreign policies with anxieties about Germany and a wish for negotiation (p. 411).

This has been brought no nearer by tankmanship in Berlin (p. 417). The Russian squeeze on Finland is both a means of pressure on the West to talk and a military insurance (of doubtful value) in case talks fail (p. 418).

AFRICA FOR AFRICANS

Security for the whites of **Northern Rhodesia** depends on coming to just terms with the black men who must one day rule the country. To put off the unavoidable day will only make the African nationalists more difficult (p. 415).

Jomo Kenyatta has come down from the mountain into the political battlefield as leader of the Kanu party. Wiser leadership will be required from him if the tribalism now rife in **Kenya** is to be contained (p. 460).

Men must come before **game** in Africa; but wild life might be preserved if it were put to economic use (p. 456).

QASIM AT BAY

The troubles General Qasim has to cope with—oil, Kurds, Kuwait—will plague his successor too. But his way of doing things has alienated such important groups in **Iraq** that he now has a struggle to keep power (p. 416).

Since the elections **Turkey** has been groping vainly for a government (p. 425); in **Greece,** by contrast, Mr Karamanlis has been given a clear mandate (p. 425).

RENDEZVOUS

Mr Macmillan is to meet President de Gaulle; the general occupies a key place both in East-West exchanges and in Britain's European negotiations (p. 423).

France is still troubled by tales of violence by the Paris police (p. 459); and there have been more deaths in Algeria; but bit by bit the French and Algerian leaders are moving towards negotiation (p. 425).

In Bonn Dr Adenauer continues to make forcing bids with poor cards (p. 455).

AMERICA: PAUSE . . .

The present economic pause may be the prelude to a risky boom, but the Administration is prepared to take the risk (p. 465).

Economists now have a do-it-yourself kit for forecasting (p. 466).

. . . AND PARTIES

Republican v Democrat: General Eisenhower and President Kennedy are engaged in party battle (p. 466).

Pilots v Engineers: A proposed settlement of grievances in the cockpit has yet to be accepted by the unions involved (p. 470).

Cross Currents: Upstream users of **Missouri** waters for electric power are at odds with downstream sailors (p. 470).

HOME

GOOD INTENTIONS

The Whyatt recommendation for the appointment of a British equivalent of the Scandinavian ombudsman to protect citizens against bureaucrats is a good one: but its supporters will have to be prepared to make concessions to prejudice—and alert to improve upon the proposals (p. 413).

Exporters are agitating for better credit facilities: and, though their complaints are often wide of the mark, there is indeed room for improvement (p. 475).

Parliament faces the prospect this session of more than 20 new pieces of legislation—and more, if time allows (p. 418).

FALSE STEPS

Thursday's Bank rate cut is another move in a dubious direction (p. 479).

Planned cuts in public spending seem sensible: but the economies already made are without any sense whatever (p. 423).

Treasury acquiescence in recent wages council awards seem to presage a deliberate end to the Pause next April—whence may come the deluge (p. 420).

POOR RELATIONS

The bill designed by the Government to sop up the spilt bile of its anti-migrant wing is so bad as to be almost unworkable; and this is no bad thing (p. 418).

Some Independent Television programme contractors seem more willing than others to meet their striking actors' demands for more pay (p. 426).

The Rhine Army's gravest need is for technicians, whom the present recruiting measures do little to supply: another need, for money, may be temporarily eased by hand-outs from Germany (p. 420).

BAD BLOOD

Local complexities abound in next week's three Parliamentary by-elections: but Labour's goal is simple—a massive swing (p. 424).

Nottingham's Tory council has proved incapable of elegant patronage of the theatre, and has aroused the town's ire (p. 428).

Grimsby fishermen, disappointed in the Transport and General Workers' Union, have formed their own: the competition has spurred the TGWU to a show of militancy (p. 431).

BON ACCORD

Hopefully bilingual Harrogate, Spa of the North, is still, in its way, as Dickens left it (p. 432).

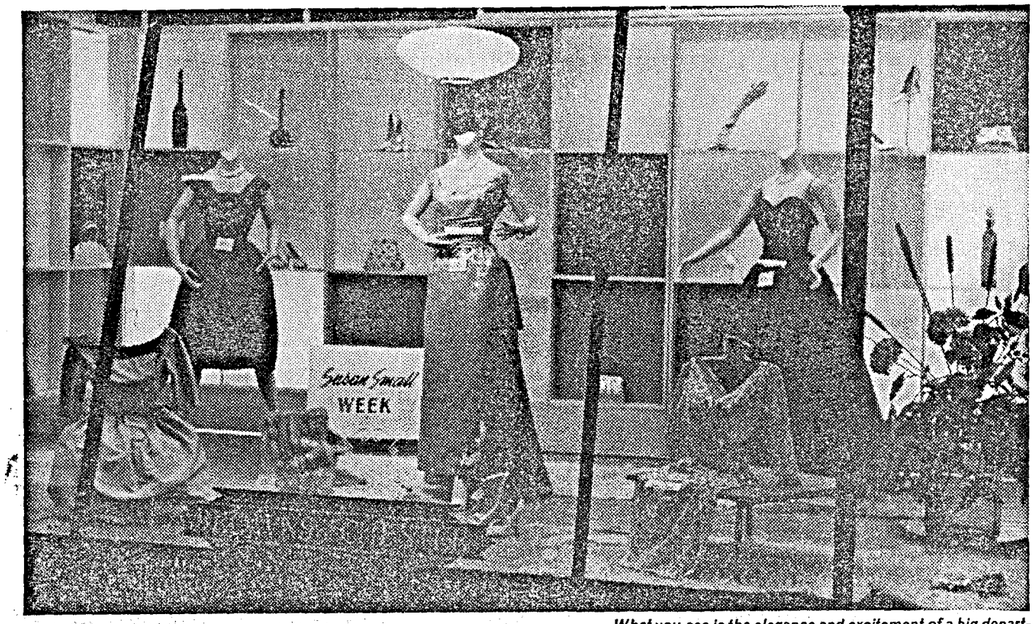
"By my estimate, that's a saving of some 25% on *today's* lighting costs"



Fluorescent lighting is, in any case, economical, but a remarkable new ATLAS development enables further big cost reductions to be made:

15% saving on capital cost of lighting fittings
15% saving on cost of installation wiring
35% saving on cost of electricity
25% saving on total annual lighting costs
(compared with standard twin 5 ft. 80 watt fittings)

A new ATLAS 8 ft. 85 watt tube, operating at over 80 lumens per watt, combined with new low loss control gear – THE SUPER-8 CIRCUIT – has made this possible. The Super-8 circuit is available in twin 8 ft. sizes of the ATLAS ATLANTIC 2 range of fittings, which can be used to build complete modern lighting installations for almost any industrial or commercial purpose.

There are few lighting problems these days which cannot be solved from the extensive ATLAS range of fluorescent and tungsten fittings, and the ATLAS LIGHTING ADVISORY SERVICE is at your disposal, without cost or obligation, to offer technical assistance and provide complete lighting specifications. Ask your secretary to write for further information, or to arrange an appointment with an Atlas lighting engineer. ATLAS LIGHTING LIMITED, Thorn House, Upper St. Martin's Lane, London, W.C.2.

What you see is the elegance and excitement of a big department store, but behind the scenes is a complexity of figurework—firmly controlled, at Browns of Chester, by Burroughs machines.

THIS IS THE NEW FASHION IN FIGURES

BROWNS OF CHESTER is the big department store well known as the 'Leading Fashion House of the North.'

PROBLEM—to keep ahead of the masses of figurework involved in the Purchase Ledger.

SOLVED—with one *Burroughs Director* accounting machine.

RESULT—staff saving of 20% paid for the machine in the first eighteen months. The machine has streamlined the Purchase Ledger: management is quickly supplied with day-to-day information, and production figures are available a week earlier. A survey was requested of work in other departments and, as a result, four more Burroughs machines were installed.

DECIMAL CURRENCY!
All Burroughs machines can be converted to decimal currency

SIMILAR PROBLEMS ARE BEING SOLVED EVERY DAY WITH BURROUGHS MACHINES

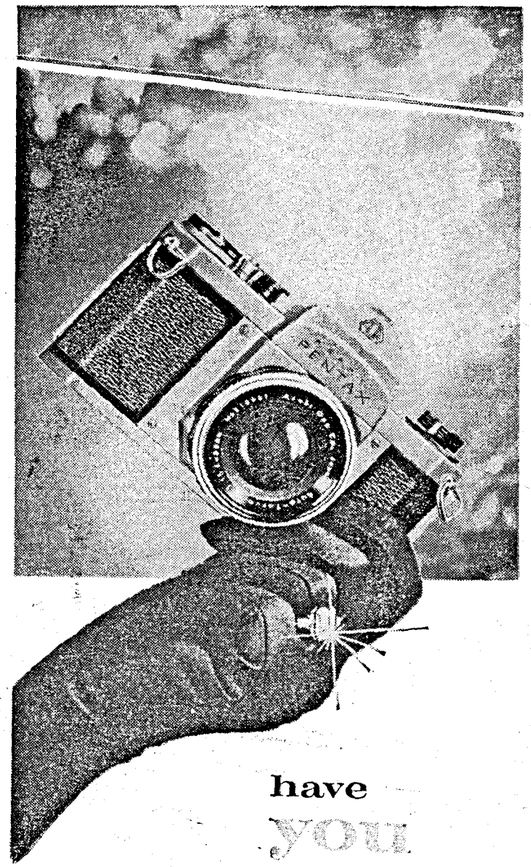
BEHIND THE DUNLOP SYMBOL

DISTRIBUTORS IN 140 COUNTRIES

100,000 EMPLOYEES

103 FACTORIES



£275 MILLION TURNOVER

90,000 ACRES OF RUBBER PLANTATIONS

20 RESEARCH LABORATORIES

This hut bearing the Dunlop sign stands on a South Pacific Island so isolated that a boat calls only once every three months. But communities everywhere demand Dunlop products and so even in this remote place there is a Dunlop distributor. This depot is one of many hundreds, small and large, covering the world. Recent years have seen such an expansion of Dunlop operations that today there are distributors in 140 countries, providing an increasing range of products and services. Wherever men build, mine, farm and travel, a Dunlop distributor is near at hand to supply their essential needs.

Please forgive the Italian, but we must all eat sometimes and this is my favourite meal. Mind you we don't believe in lunch hours at Elliotts. When you're as engrossed in your work as we are, you get plenty of thought for food!

Show you what we mean...

Last year we made more, sold more, delivered more computers than ever before. What does this add up to – well for us it means success. And when you live, eat and sleep computers, as we do, you deserve a bit of success, so don't grudge us our trumpet-blowing, please.

Now we didn't just sell computers, we sold *know-how* as well. What's the prime demand in computing today? Speed, reliability and low cost! To answer these demands we used the know-how of two years success – a long time computerwise! The result is the 503. A top class, high speed computer that gives you the best of everything, because it's built with experience. That's our formula for success – and we don't need a computer to tell us the result.

It's amazing – the number of things our computers can do. From chemicals to custard is a big step, but our computers take it in their stride. Whatever your problem, Elliotts can help you.

Why not call on us and see how we work? We can't promise you a plate of paper-tape, but we can promise you a most palatable answer!

. . . the *new* and *better* galvanized steel sheets

Do you have a job that requires top quality galvanized steel sheets? If so, our LEONITE sheets are just what you need. Our fully integrated and modernized strip mills and Sendzimir continuous galvanizing line are working at full capacity to produce superior corrosion-resistant LEONITE galvanized steel sheets. There is ever-increasing overseas demand for LEONITE because it has a special-processed non-flakable zinc coating which makes it ideal for deep drawing. It is widely used for building material, ducts, furnaces, automobiles, refrigerators and numerous other household appliances.

This is just one integral part of NKK's mammoth enterprises. As the Orient's largest steel producer engaged in both steelmaking and shipbuilding, NKK's 30,000 engineers, specialists and workers are producing high-quality steel products.

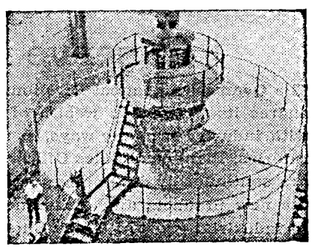
Symbol of the new direction in Australian life, Sydney Opera House is now nearing completion

—and the next ten million Australians will take a big load of **power**

AUSTRALIA'S population has reached the ten million mark. Time now to look to the next ten million. And whether they are born there or arrive on a boat, they'll be joining a nation exulting in new life and strength.

Already the post-war flood of immigrants from Europe has given Australia a broader world view: new citizens with new intellectual contributions to make, different cultural ideas, specialized skills and knowledge. The community has never been more *alive*—healthy, enquiring and full of purpose—as Australia takes wing to wider horizons.

If the Sydney Opera House symbolizes the new direction of living, other monuments now shooting up mark the pulsating economic prosperity which makes this richer life possible—skyscrapers in the cities, new steelworks and, perhaps greatest of all, the huge dams in the Snowy Mountains scheme, bringing the power which is vital to all development.



In a country expanding so vigorously, the importance of electric power cannot be overestimated. Power consumption is the yardstick of any country's prosperity, and those new Australians, as they join the present ones, will need an ever-growing supply of power for industry, commerce, transport and the home.

English Electric in Australia. In all these spheres The English Electric Company is busy in Australia, providing the means to *generate, distribute* and *use* more and more electricity. Hard at work in the enormous Snowy Mountains hydro-electric scheme, English Electric is also building 200-MW generating sets for the Vales Point steam power station on Lake Macquarie; while at Rocklea in Queensland, at one of English Electric's two flourishing factories in Australia, locomotives and rolling stock are being built.

And so the fruitful relationship grows. Australia knows she can depend on the resources of technical knowledge, skill and research which lie behind every contract with English Electric, while the company gains further valuable experience which it can use for work in other countries and at home.

One of five 1,500-h.p. locomotives for the Queensland Government Railways, who also placed repeat orders for twenty-five 1,650-h.p. units with The English Electric Company of Australia Pty Ltd.

Tasmania's island economy is based on her considerable resources of hydro-electric power. This English Electric 45,000-h.p. water turbine generating set is in the Lake Echo power station.

Fission in Moscow

IN NOVAYA ZEMLYA, the biggest-ever hydrogen bomb was exploded by Russia on Monday in cold disregard of the appeal of 87 governments through the United Nations. In Berlin, the chain reaction set off by the building of the communist wall in August reached a critical-looking stage on October 27th, when Soviet and American tanks confronted each other through the night; but it did not reach flashpoint. It is from Moscow that the biggest shock waves of all have gone out to rattle the political seismographs. The blast of the Communist party congress there blew Stalin's corpse out of the granite mausoleum beneath the Kremlin wall, flung Chou En-lai back to Peking, and left the whole socialist camp quivering.

Is it all according to plan? One of the difficulties for a westerner, peering at the "other side of the hill" to try to make out what is really going on, is to distinguish what was intended to happen from what was not. He has to peer through the murk of a system designed to obscure everything that has not been officially approved for revelation. He has to discount the buoyant dexterity of a Soviet leader who can never afford to admit defeat or error, and who is uncommonly good at representing either as a triumph.

No doubt Mr Khrushchev's renewed lifting of his Berlin deadline was as deliberate as his denunciation of his Albanian comrades or his new squeeze play in Finland. But under what pressures did he feel impelled to explode his monstrous bombs in the face of worldwide remonstrances, and to pursue his demolition of Stalin, regardless of the impact on China and other parts of the communist world? And did the explosions in both cases exceed his precise intentions?

The present Soviet leader is a bolder gambler than Stalin was. But did he consciously arrange his congress so that the attention of his own people, as well as of the outside world, was diverted from his gleaming vision of 1981 to the chilling reality of pre-1953 tyranny? The launching of the programme for achieving full communism within a generation has been synchronised both with a trial of nerve with the West, and with a public split in the world communist movement. Was this timing deliberate?

Even after Chou En-lai's demonstrative departure, Mr Khrushchev assured the congress that "the socialist camp has again shown the monolithic unity of its ranks." An eyebrow or two must have twitched even among his well-drilled audience. According to Moscow's versions of the speeches, his charges against Albania were dutifully repeated by most of the European and Latin American delegates and by those from Mongolia, Ceylon, Iraq, Persia, Syria and the United States, in disregard of the Chinese protest against any such airing of quarrels. But 25 foreign representatives—including those from North Korea and North Vietnam, from India, Indonesia, Japan, Malaya, Burma, and North Africa, and from Britain, Australia, Canada, and Scandinavia—failed to pronounce the required anathema. (The delegates from the friendly, but not quite fraternal, ruling parties of Ghana, Guinea and Mali were also silent on the point; but this scarcely indicated their alignment, as neither of the disputing big brothers is exactly a blood relation of theirs.) The absent Albanians themselves have now got to the point of accusing "Khrushchev and his faction" of preparing a *Putsch* against them. The Chinese have followed up Mr Chou's public rebuke to Russia in the congress hall by devoting whole pages of their press to praise of

Albania, while almost suppressing the Moscow speeches.

If Mr Khrushchev had planned it all the way it came out, he did not give his comrades fair warning. In the darkness of Monday night a clean sweep had to be made of the wreaths honouring Stalin, "the great Marxist-Leninist," that had been freshly placed in and around the mausoleum not only by Mr Chou but also by many other foreign delegates to the congress. In his opening addresses, the present Soviet leader had referred to his predecessor's offences with judicious restraint. But when he wound up the main debate on October 27th, he joined full-throatedly in the swelling chorus of damning accounts of mass murder and torture:

> [Shelepin] did not tell you anything like all that has now been revealed. Thousands of absolutely innocent people perished.... Here among the delegates are comrades who were many years in prison. They were "persuaded"—by certain methods—that they were German or British spies, and some confessed. Even when told that charges of spying against them were being dropped, they themselves thought it better to stand by their false evidence, so that the torture might end sooner, and death come sooner. That is the meaning of the personality cult!

His famous "secret speech" in 1956, which reached the Soviet public only through the party's discreet filters, had contained only a short list of guilty men. Now the congress speeches, as reported in the Moscow press, name virtually the whole of Russia's past leadership (except for the new leader himself, and a few secondary figures who have climbed to sanctuary on his careering bandwaggon) as either executioners or victims during what Mr Khrushchev now calls "the times, hard for our party and our country, when nobody was safe." And there are hints of further revelations still to come. Bold as always, the Soviet leader took the calculated risk of letting his congress whip itself up into wrath over crimes in which he himself played no small part. With his characteristic skill, he contrived to show as much indignation as anybody, yet applied a well-timed brake in his winding up speech by recalling Lenin's clemency to "traitors to the party." Today's fallen idols ought, indeed, to be able to count on more clemency than they deserve. To put them on trial might lead some of them to inculpate their conqueror; but drastic punishment without trial would be an embarrassing breach of the new regime's claim to have restored "revolutionary legality."

The whole bizarre affair has freshly exposed the profound schizophrenia of the system and society over which Mr Khrushchev now presides. He felt it necessary to begin with a lengthy defence of the decision to reveal facts that "might arouse bitterness and discontent in the party and people." Even eight years after Stalin's death, his revelations remain very selective, and do not justify his claim that "the party has honestly and frankly told the people the whole truth." Still less convincing are the present claims that all risk of any reversion to tyranny has now been removed by constitutional reforms, and that collective leadership has been so far extended that, in Mr Brezhnev's words, "nowadays no important decision is taken without consulting the people." (The resumption of nuclear explosions was summarily decided at the top and kept a secret from the Soviet people for seven weeks.) The alarm among the *apparatchiki* at each sign of movement in a democratic direction is still, as has often been pointed out, one of the factors that Mr Khrushchev must reckon with. But what the congress showed most clearly was his awareness of the need to go along as far as he dared with the angry pressure from below for a clear break with the absolutist past.

Trimming his sails to the wind of change, he has made his bid for popularity and outmanœuvred the diehards by branding his defeated rivals as men who would have restored Stalinist tyranny if they had won power—a charge that was not brought against them either when he overthrew them in 1957, or during the later campaigns of defamation. The fact that the charge is made now gives some indication of the strong undertow in Russia, with which Mr Khrushchev has to go along even at the cost of a public dispute with the Chinese, a dispute in which the Chinese must enjoy support in quarters much nearer to the Kremlin than Albania.

The Soviet undertow is in favour of an unadventurous foreign policy as well as of liberalisation at home. The maturing Russian society is naturally attracted by Mr Khrushchev's gospel of the inevitable victory of communism in peaceful competition, and correspondingly repelled by Peking's bleak vision of desperate conflict. As a long-term trend, this offers nothing but encouragement to the democratic world. But what of the short term? It is not easy for western eyes to identify the man who insists on showering the globe with fallout, and who puts the squeeze now on Berlin, now on Finland, now on some other vulnerable area, as "the best Soviet prime minister we have," the essential figure in the transformation of the communist world into something its neighbours may be able to live with more comfortably.

WHAT one can say is that the motives for Mr Khrushchev's rocket-rattling are clearly mixed; the difficulty is to assess the proportions in which they are mixed. However exaggerated the official Soviet caricature of Germany may be, there lies behind it a real fear of German reunion and military revival. Moreover, this is one issue on which Mr Khrushchev can count on evoking genuine popular support both in Russia and in eastern Europe. A Russian who insists that there is no incompatibility between his leader's sometimes violent pressure for a settlement in Germany and the general doctrine of peaceful co-existence is not necessarily a blinkered moron. And Soviet impatience for a German settlement is obviously one of the major reasons for the breaking off of negotiations on disarmament and nuclear testing, for the testing of the megaton monsters, and for the new pressure on Finland.

To what extent the hydrogen bomb blasts and other shows of toughness are directed towards Peking is a more speculative question. But it is on public record that the Chinese government officially approves of a wider dissemination of nuclear arms, while Russia has gone along with most other nations in officially deploring such a trend. If the big Soviet bangs have a message for Peking, it is not only "don't accuse us of showing weakness to the enemy"; it is also "shed your illusions about emerging from a nuclear war in good shape"—and, incidentally, "remember we've got the things, and you haven't yet."

Finally, it must be remembered that Mr Khrushchev's expressed preference for victory without war rests on the massive foundation of the world's most heavily militarised state. Marshal Malinovsky's speech to the congress was a proud claim that "the might of the armed forces has grown immeasurably" thanks to unceasing efforts made ever since the 1956 congress; and that, as the West was "making mad plans for armed attack on the Soviet Union," both rockets and conventional forces were "in constant combat readiness." The defence minister insisted that, while any conflict involving nuclear powers "will inevitably become a universal nuclear rocket war," nevertheless "any future world war will be fought by mass armed forces in all their millions."

The Soviet marshals' insistence on having their old armies as well as their new arms is another factor Mr Khrushchev must allow for. He himself, in a revealing juxtaposition, coupled the usual claim that the communist world would soon outstrip the capitalist in peaceful production with the claim that it had already outstripped it in the military field. Such an order of priorities may appal an idealistic socialist; but the Soviet leader went on to argue that, precisely because Russia was militarily superior and the "imperialists" knew it, war could be avoided. The outside world may feel that he could walk a good deal more softly while carrying his big stick than he is doing at present. But at least the internal Soviet evolution that now seems to be carrying him along is of a kind that could, in time, enforce a whittling down of the stick that must otherwise remain a colossal burden on the shoulder of both leader and people.

Ombudsmanship

A private report has given Parliament good grounds to act on behalf of citizens' complaints against officialdom

THE Whyatt report on ombudsmanship for Britain (see box on page 414) is a fairly cautious document; in most respects, but not all, it is the better for this. The important thing now is to push its main ideas (and some new ones) through into parliamentary action. For that reason liberals should think out carefully which compromises they should be ready to accept to placate the people who would sincerely resent reforms, and which they should try to resist.

The centrepiece of the Whyatt approach is a distinction—which is not altogether tidy, but which is acceptable—between two sorts of complaint that aggrieved individuals may have against officialdom. First, individuals can sometimes complain that they have no right of appeal to an independent body against the discretionary decisions which civil servants may make against them; the Whyatt remedy here is to set up appeal tribunals against bureaucracy *ad lib.* At present, individual English farmers (but not Scottish ones) can appeal to their county agricultural executive committees if they think that departmental officials have denied them their fair share of production grants and other agricultural subsidies; all applicants for national assistance can go to appeals tribunals if they think the general means test has been applied unfairly against them; and there are formal tribunals for appeals against most planning decisions, against many decisions on pensions (but not military pensions) and in national insurance, against deportation orders for aliens and the like. But English parents (unlike Scottish ones) cannot at present appeal past the Ministry of Education if their children are directed to particular state schools that they do not like; nobody can appeal against the Post Office if he is not allowed immediate installation of a telephone (even if his business makes this essential); there is no formal avenue of outside appeal against some Board of Trade decisions on import duty obligations, against the application of the means test for university awards, against refusal of naturalisation, against a lot of actions by the War Office in regard to damage to private property, and against several dozen other types of decision that can be made by perhaps a dozen other Government departments.

Sir John Whyatt's recommendations here are that new tribunals or inquiries should be establishable by statutory order (i.e. without special legislation being required each time) whenever the independent council on tribunals judges that there is scope for one; and, in particular, that a general tribunal, on the Swedish model, should be set up "to deal with appeals from miscellaneous discretionary decisions which cannot suitably be allocated to specialised tribunals." This last recommendation is the all-important one, and deserves full liberal support.

The Swedish General Tribunal works informally and inexpensively, largely because proceedings before it are for the most part in writing (only exceptionally does it hold oral hearings). Government departments are asked each year to submit lists of the classes of discretionary decisions which should come within its competence; and outsiders can then raise an annual fuss whenever any department seems to be trying unreasonably to keep particular sorts of decisions free from appeal. The volume of work falling on a British General Tribunal would soon show which types of administrative decision raise so many complaints that they deserve a specialised appeals tribunal on their own.

Admittedly, this mechanism of appeals tribunals and systems of inquiry would not put an end to outcries such as arose over the recent Essex chalkpit case, when there was an inspector's inquiry and the minister turned the recommendation of the inspector down. It is not meant to. In many planning questions and many other fields that affect the public interest, the minister concerned should still keep the ultimate power of decision under his own control. But when a minister makes a decision that is contrary to the recommendation from a court of inquiry, he knows that he will run into a major row; that is why in many such cases (including the Essex chalkpit one) cool assessment after the event often suggests that he had a good reason for what he did. Anybody who has studied this problem knows that the real, as distinct from the most publicised, cases of injustice to an individual more often occur when a government department can make a decision against which the aggrieved citizen has no opportunity of making an appeal or calling for an inquiry at all.

The second sort of complaint against officialdom occurs when an individual wishes not to appeal from its decisions, but to make actual accusations against it. These may range all the way from accusations that policemen or prison officials

treated somebody too roughly, through to complaints at some civil servant has sat on a businessman's letter so long that the letter-writer has suffered personal loss. It is to deal with these varied "accusations of maladministration" that the Whyatt report recommends that a British parliamentary commissioner, on the model of the Scandinavians' ombudsman, should be set up.

The duties of the ombudsman in Sweden are described in the box on this page, but in Britain Sir John Whyatt would hedge them round with certain safeguards. What may be called the "emollient" rather than the "exclusive" safeguards in his report—the ones designed to make the system more acceptable in Westminster and Whitehall, rather than those designed to keep the ombudsman out of certain fields—have been attacked in some newspapers; but liberals would be wise to accept them in order to have any hope of making headway at all. For example, Sir John recommends that at first only MPs should be allowed to pass on complaints to the ombudsman, although later "consideration should be given to extending his powers to enable him to receive complaints direct from the public." The logic here is that some MPs might be the fiercest objectors to the Swedish sort of ombudsman system, because they might feel that he would devalue their importance as the orthodox channel of complaints from their constituents. Anyway, nobody knows how many quite lunatic complaints might pour in on an ombudsman unless there were some intermediary to sift them, and MPs are as good sifters as anybody; this proposal should be accepted.

AGAIN, Sir John believes that the ombudsman should have access to an accused department's file of inward and outward correspondence on any matter he is reviewing, but not to internal minutes and documents recording discussions within the department; in cases of exceptional difficulty he could ask to see internal minutes, and record the fact when his request is turned down. The logic here is that Whitehall's loudest and most reasonable complaint against the ombudsman system is likely to be that "if every civil servant has to draft every minute in a way that is designed to guard himself against possible later public criticism, the administrative process will be slowed down considerably"; the informal system suggested in the Whyatt report seems to be a sensible and respectable safeguard against this real danger. The Whyatt report has also been criticised for recommending that a minister should have the power to veto any proposed investigation by the ombudsman of a complaint against his department; if he did this, however, his veto would be publicised and the minister would obviously have to defend himself against strong public complaints. Under these circumstances, this is a reasonable reserve power for a minister to have.

The sorts of safeguard in the Whyatt report that seem much less reasonable are those that might limit both the publicity given to the ombudsman's reports and the general field over which inquiries could roam. First, the report seems to suggest merely that the parliamentary commissioner should make an annual report to a select committee of MPs "on the more important cases that he has investigated, and special reports from time to time on cases of particular interest." But the whole essence of the Swedish system (see box) is the day-to-day publicity which the ombudsman's reports can attract; and that is what is also needed here.

Secondly, the Whyatt report would exclude too many fields from the ombudsman's purview. It suggests that consideration of complaints against the police should be held over pending the royal commission's report; but dealing with complaints against the police should be an important part of the ombudsman's work—as should the airing of possible complaints against prison authorities, hospital authorities, old people's home authorities and any other officials who have British citizens in their custodial care. Secondly, the report rather throws up its hands at the difficulty of dealing with complaints against local government authorities, because there might be so many of them. But that is precisely why ombudsmanship in the field of local government is so badly needed, and so is the extension of appeals tribunals within it (for example, tribunals to deal with the ways in which some local authorities arrange "priorities" on their housing waiting lists).

Finally, it is worth noting that the Swedish ombudsman can issue reports about some actions by the local magistracy; and that the Swedes and West Germans even have special "military ombudsmen" to provide soldiers with the means of making complaints without necessarily submitting them through their superior officers. Eventually, one would like to move towards the same system here; but perhaps the public should be willing to compromise in these two fields at present, if the other reforms can be battered past the resistance of Whitehall and Town Hall. All together, now, push.

Definitions

(1) The **Whyatt report,** although published privately by "Justice," the British section of the International Commission of Jurists (as "The Citizen and the Administration," Stevens, 10s. 6d.), is the nearest approach to a royal commission report that the British taxpayer has ever got private citizens to pay for. Sir John Whyatt himself is a former chief justice of Singapore. His committee included Lord Shawcross (for a time), two very distinguished academic lawyers, and the director of the London School of Economics. Government departments supplied the committee with memoranda and statistical material; and Mr Macmillan told Parliament that he was waiting "until the results of this study are known before coming to any final conclusion" on whether Britain should appoint an ombudsman.

(2) **Ombudsmen** exist in Sweden and Denmark; the system is to be started in Norway this year, and a bill to introduce one is now before the New Zealand Parliament. The Swedish ombudsman, who is the best prototype for Britain to copy, examined just over 1,000 complaints against officialdom in 1959. Of these 803 were found to necessitate no action or to be without foundation; but 247 resulted in admonitions to officials, and 5 resulted in prosecutions against officials. The Whyatt report comments: "In practice, the real sanction is the publicity which is given to the ombudsman's criticisms of the administration in his annual reports to Parliament but more especially in the daily press. Every day at 11 a.m. a representative of the Swedish Press Bureau calls at the ombudsman's office to examine the complaints and the decisions of the previous day. The files are laid out on a table ready for the Pressman's inspection and contain all the inward and outward correspondence and any reports relating to the particular complaint or decision. The Pressman selects those cases which are of general interest and circulates the information to the national newspapers; if a case is of merely local interest, he sends the information only to the provincial newspapers circulating in the locality concerned. Almost every day, the Pressman has something to report. . . . The wide and continuous publicity resulting from this system . . . is much feared and respected by the civil servants."

So Little Done

Hard as it is, the white Rhodesians can assure their future better by seeking black friendship than by clinging to power

VERY soon the British Government will have to make up its colonial secretary's mind about Northern Rhodesia. There is plenty of advice. The prime minister of the federation of Rhodesia and Nyasaland, Sir Roy Welensky, arrives in London this weekend; he will oppose giving African nationalists an early majority in Northern Rhodesia's legislative council. It would surprise no one if Mr Kenneth Kaunda, leader of the United National Independence party, turned up soon to insist on keeping the white nationalists out of power in Northern Rhodesia. The white-led Liberal party of Northern Rhodesia has been represented in London for the past three weeks by its chairman, Mr Harry Franklin; he is staying on for another week to support proposals that might enable his party to share power with, perhaps, Mr Kaunda's. On Monday and Tuesday, Sir Glyn Jones, governor of Nyasaland, met Mr Maudling at the Colonial Office; he will have been instructive about what can happen when African nationalists are given their head. When the Nyasaland legislative council opens on November 28th, Dr. Banda's nationalists are likely to be more instructive still.

Whatever the decision, it must be made quickly. It is like this: Mr Macleod's February proposals for a new constitution for Northern Rhodesia looked like putting the African nationalists and the Liberals in power, while keeping the white nationalists in opposition. Sir Roy objected, strongly. Mr. Macleod's June proposals looked like putting the white nationalists back into government. Soon afterwards the black nationalists lost patience; and since then, twenty or more (the figure is disputed) Africans were killed by the police in disturbances; 2,715 were arrested; 2,072 were convicted on charges of stoning, pass-burning, arson, road-blocking, and the like. On September 14th the British Government said that once violence ceased, it might think again. On Wednesday the governor of Northern Rhodesia said that violence had ceased. Now it is time for the new colonial secretary, Mr Maudling, to do the new thinking; the decision is grave enough to require full cabinet and prime ministerial backing.

It is quite clear what the decision must be: as gently as possible, to bring white rule in Northern Rhodesia to an end. Gently, because it was the fear that, in their turn, the white nationalists might lose patience that caused the February plan to be replaced by the June plan; and the same fear is causing hesitation over what should be the November constitution. This is said without benefit of slide rule. The mathematical juggling that may have prevented civil war in Northern Rhodesia must not now be allowed to obscure the real logic of the situation. The future of the white Rhodesians will best be assured if an attempt is made now to win the friendship and trust of the black Rhodesians who, inevitably, will govern within a few years. This way gives the best chance now of political peace and economic recovery. If it is too late to keep the federation together, it may not be too late to bring all of its people into some other kind of beneficial association. The federation has meant rule by Southern Rhodesia's whites: that is why it cannot last. The new association will have to be, primarily, black.

None of this means that all white Rhodesians are devils who must be put down; or that all black central Africans are angels waiting to elect wise governments; or the opposite. Giving African nationalists power is a risk, but necessary. In Ghana things have gone awry; in Nyasaland, Dr Banda's first words on attaining an overwhelming majority in the legislative council were that he wanted more white immigrants, albeit of a kind willing to accept ordinary citizenship of a black country. There is no guarantee that Northern Rhodesia's future African government will be as tolerant; all that is certain is that delaying the nationalists' advance unduly is more likely to make them worse than better. It must be hoped that when in power they will see their need of the white men in their midst, and that they will not attempt to revenge past grievances by means of new oppression. Mr Kaunda is likely to be that sensible; those who will take his place if he continues to be thwarted are not. Either way, there can be no security without goodwill.

IT is hard for white central Africans to move forward from their comfortable past into so uncertain a future. But moving forward is the safest way, however dangerous it may seem. It is sometimes hard, too, for the outside world to understand that white Rhodesians are no more, and no less, than ordinary people in a highly unusual situation. Their first and most frequent sight of the Africans around them seems to them (and to many visitors) to bear out their descriptions of an ignorant and uncivilised lot; that the black men should be treated as less than equal seemed to follow.

Rare perception is required if men on the spot are to see through the fallacy of this; and, together with perception, the opportunity of meeting the educated, responsible Africans who prove that the black man's need of human dignity is as great as anyone else's. The Rev Colin Morris, a Methodist minister in Northern Rhodesia and a liberal, has described his own experience of this well in a new book.* He went to his African pulpit in 1956 burningly indignant at white Rhodesians; he soon saw their point of view and accepted their way of life. It took him many months to regain his initial sense of indignation and this time it was tempered with compassion. The white Rhodesians may rightly be judged in Britain, where responsibility rests, and they must certainly be persuaded to do what is in their own ultimate interest—but neither judgment nor persuasion is ever the worse for compassion.

Qasim's Bequest

The Iraqi ruler is pursuing several unpromising ambitions at once ; but survival has become his first interest

GENERAL QASIM, who has the respect for detail of a well-trained army officer, is not the man to do even the wrong things in a hurry. On October 11th, when he finally called off his shadow boxing with the team from the oil companies, he warned his adversaries, politely enough, that legislation had been prepared to expropriate all the Iraq Petroleum Company's unexploited concessions (the company had already agreed to relinquish 75 per cent of these concessions straightaway and another 15 per cent later). Three weeks have passed since then, and the Iraqi government's only action so far has been to set up a committee to study these laws and to submit them to the cabinet. But the caution suggested by this delay should not becalm anybody into underestimating the grievous effect of the probable legislation or the personal ferment behind the pounce, when it comes.

A second military virtue attributed to General Qasim is singleness of purpose. But, latterly, this purpose has narrowed to self-preservation. Seeking safety in the principle of divide and rule, he has found, as others have, that the labour of dividing and crushing a conspiratorial opposition increasingly absorbs the work of government. Although the concept of "hero personality" is going through a bad patch (as far away as Moscow and as near as Cairo), General Qasim strives to preserve the lonely image of himself as Iraq's Faithful Leader. But the question in Iraq has become, who has faith in him?

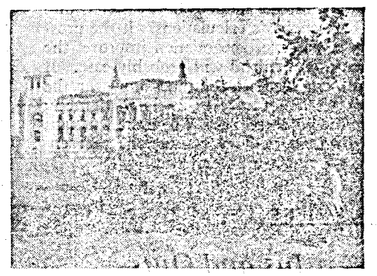
Behind the barricade of the army, the secret police and his own stringent security arrangements, General Qasim has been pushing policies that are bound, in themselves, to appeal to all good nationalists. Needling the "imperialist" oil companies for more money is a well-tried bait ; the much more ambitious project of absorbing Kuwait, and so making Iraq the richest of the Arab countries, is mightily tempting. But although most Iraqis wholeheartedly support the theory behind General Qasim's policies, they feel no enthusiasm for his methods ; the lack of trust in his ability has become general among them. This more than anything else explains the apathy that most western travellers to Baghdad hopefully report. It is surely misleading to interpret the prevailing inertia as indifference to the lure of Kuwait, or, even more sanguine, to see it as sympathy for the oil companies' difficulties. Rather, it is a mark of scepticism and, possibly, a form of insurance against General Qasim's possible departure. There is no convincing reason to expect any succeeding regime to be any less ambitious or exacting. General Qasim himself made this point during the negotiations with the oil companies, when he commented:

> You think the situation in Iraq will change . . . I wish to emphasise to you that this is a chain that has no end.

Recordings of the last three sessions between General Qasim and the companies' delegation, led by Mr Fisher of Standard Oil of New Jersey, have been broadcast by the Iraqis. They show what a sad travesty of negotiations these long drawn-out talks had become. At no stage was there the down-to-earth horse trading that might have produced a workable compromise. The basis of the discussion, according to the companies, was the list of demands that General Qasim had made during the course of earlier negotiations. This put Mr Fisher and his colleagues permanently, and uncomfortably, on the defensive, while General Qasim drew rings round them with his own brand of logic. The companies offered concessions that came too late ; among other things Mr Fisher proposed that the Iraqi government should be offered the option of a one-fifth share in a new venture that would take over from IPC certain areas in which oil had not yet been found, but which the company did not intend immediately to relinquish. But General Qasim's demands fluctuated ; he explained that, as the oil companies had taken so long to comply with his earlier requests, the terms had meanwhile stiffened. He dropped his demand for a 20 per cent share in IPC. But his final three-pronged proposal—that 90 per cent of IPC's concession should be relinquished immediately, that the Iraqi government should have a share in the remaining tenth, but not of "the existing wells," and that the government's revenue should be increased—brought the talks to an end.

AT his leisure, General Qasim is now preparing legislation that is expected to take over everything but the area actually producing oil; the exact size of this area may be a subject of controversy. He may also impose new taxation. The Iraqis will then be faced with this alternative: to try to interest other oil companies in the expropriated rights (and it is questionable whether the commercial attraction will offset the political uncertainty) or to work it themselves—and, subsequently, to look for markets for the oil they may find. To this extent, the initiative is, at least partly, in Iraqi hands. But the IPC has to decide at what rate it continues production. At present, the company is producing 48 million tons of crude oil a year ; its expansion programme will have raised capacity to 70 million tons by the beginning of 1962. An act of *force majeure* by the Iraq government would render this increase problematic, and could lead to a cut in production.

If the short-term result of all this is a drop in Iraq's oil revenues, General Qasim's lonely eminence will be even more precarious than it is already. The money is needed pressingly to pay the army. The Kurdish revolt in the north was halted last month by ruthless bombing, and the sizeable guerrilla force hiding in the mountains, still led by Mullah Mustafa Barazani, is unlikely to make much headway during the winter. Militarily effective as they were, General Qasim's brutal tactics will have done nothing to endear him to his Kurdish subjects. The danger of a better organised, more united Kurdish rebellion has been postponed, not ended ; and General Qasim will probably find that having been brutal once, he has no alternative but to be brutal again.



The collapse of the union between Egypt and Syria has strengthened General Qasim's position, but only marginally. His jubilance, unlike King Hussein's, was veiled under diplomatic propriety. But since pro-Nasser elements have been behind most of the important conspiracies against him, General Qasim, no less than King Hussein, welcomed the setback to Nasserism and the banishment of Egyptians from his Syrian frontiers. The repercussions in Kuwait are of more immediate interest. Clearly Iraq's main hope of getting any sort of toehold in Kuwait is by way of the dismemberment of the Arab force now stationed there. In this respect the Egyptian withdrawal from the force, evidently in consequence of the Syrian secession, was, at least, a beginning.

With the arrival earlier this week of a Syrian economic delegation in Baghdad, a start has already been made to improve the trading relations between the two countries. The Syrian government's proposal for an Arab confederation has not caught fire in Iraq, although the Syrian army officers who accompanied the economic ministers to Baghdad are reported to be pleading the cause of some form of union. The present Syrian regime carries small guns, and General Qasim is by now too discredited a warrior to be able to bring his country into the promised land of Arab unity. But his battle for survival has, as he said, started a chain of events from which there can be no going back. Kuwait, Kurdistan, and oil may be written on General Qasim's heart ; but these disputes are also the inheritance he will pass to any successor.

NOTES OF THE WEEK

BERLIN

The Tanks that Bloom

A PRINCIPLE must have been at stake in the sixteen tense hours on October 27th and 28th, when American and Soviet tanks confronted each other directly at the Friedrichstrasse crossing-point in the centre of Berlin. What is difficult is to isolate the precise principle involved. Applying a recent regulation, the east German guards on the crossing-point had insisted on seeing the identity papers of western official visitors not in uniform before allowing them into the eastern sector. The American authorities in west Berlin sent a series of officials and soldiers in civilian clothes, but in cars with American military number-plates, to demand admittance without showing papers.

What happened when this was refused depended on the officer's mission. One or two, with real business to get done, changed into uniform and went through. Some waited for a Soviet officer to be brought so that their papers could be shown to him. A few were given an armed, motorised escort across the boundary line, drove round the block, and returned.

In support of this dangerous manœuvre, the American authorities on October 25th brought up tanks ; on the 26th, a bigger force of Soviet tanks entered Berlin (it is said, for the first time since the suppression of the 1953 disorders), and on the 27th they confronted the American tanks directly at the Friedrichstrasse. Amiable Germans brought flowers to the tank crews on either side, a proceeding that made the situation look a shade less warlike than it had looked, but a good deal more bizarre. On the 28th, the Soviet tanks withdrew from the boundary, though not from Berlin, and the Americans followed suit. Throughout the whole incident, Soviet and allied officers, properly dressed, had been pottering to and fro across the line, each observing the other side's activities with its consent.

In two ways these events have been claimed as an American success: the Russians withdrew first ; to have brought them in at all was to have extorted a Soviet admission of responsibility and therefore to have asserted the four-power status of the city. As to the first claim, the Russians withdrew after an American intimation that there were to be no more visitors out of uniform for the present. As to the second, Moscow has never made any secret of its readiness to give armed support when necessary to the east Germans, its allies in the Warsaw Pact ; and this is what it claims, with some plausibility, to have been doing.

The Forgotten Casualty

LOOKED at in this way, to have enticed Soviet armour into Berlin does not appear as a triumph for western policy at all. The triumph would be to get the Russians moving east. Indeed, one would have preferred to see some awareness in the western governments that the deliberate turning of a political imbroglio into a direct military confrontation is not particularly in their interest, and puts them in an unfortunate posture in the eyes of the world, including their own peoples. That any such awareness is sternly suppressed may arise from the present almost obsessive fear of being thought weak or irresolute, which makes it actually an end of policy to display readiness to go to war. A contributory factor is the now widely accepted, and surely false, idea that the western powers either could or should have taken violent action to "stop" the sealing off of east Berlin on August 13th. The recent tactics look like an effort to compensate for a fancied omission.

For the present, this pinpricking has been allowed to lapse; and whatever principle

was involved seems to have been buried with Wednesday's decision to entrust the west Berlin police with the duty of checking the personal papers of Russians and other foreigners, not in uniform, coming in from the east. This, in reverse, is precisely what the Americans had been refusing to accept.

In the sense that the shooting did not start, it can be said that no harm has been done. There is, however, a casualty. When Mr Lewellyn Thompson and Sir Frank Roberts, the American and British ambassadors in Moscow, arrived back at their posts a week ago it had been intended that they should resume the diplomatic "probe" laboriously begun in New York, to find out if east-west negotiations about Berlin and Germany are possible. Instead, they were at once involved in the acrimonious exchange of protests about what was happening at the Friedrichstrasse crossing-point. The "probe," therefore, is still in abeyance, and not (as Mr Heath suggested in the Commons on Thursday) because of the government crisis in Bonn. The problem is to get it going again.

FINLAND

Bearspaw

When the midriff of the Soviet Union is agitated by events in central Europe, its right paw closes convulsively on Finland. This reflex, which the Finns have already experienced twice (in 1939 and 1948), occurred again on Monday. Two possible motives may underlie the Russian request for consultation under the Russo-Finnish pact of 1948, which provides for such talks if there is a "threat of military aggression" against Russia by Germany, or by allies of Germany, across Finland.

One explanation, to which *Helsingin Sanomat*, the leading Finnish paper, seems to subscribe, is that the Russians are genuinely exercised by the possibility that the Berlin crisis may lead to war. This might make them anxious to strengthen

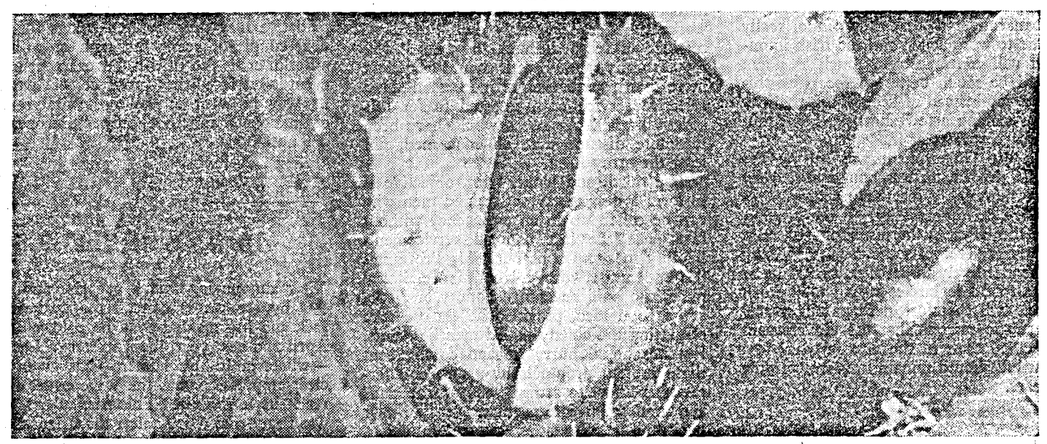
their defences against air attack from the north-west and, possibly, against submarines operating in the Baltic. They may have decided that they want to reoccupy the base at Porkkala, which they gave up in 1956, although it will puzzle strategists to work out what good this would do them when they already control the southern shore of the Baltic as far west as Lübeck Bay. A likelier objective might be to force the Finns to let them share a radar warning system in Finland's north-west.

The other explanation is that the Russians' motive is more political than strategic: that the renewal of pressure on Finland, like the events of last weekend at the Friedrichstrasse crossing in Berlin, along the autobahn to Helmstedt, and in the atmosphere over Novaya Zemlya, is a reminder that Russia can make life unpleasant for everybody unless the West agrees to negotiate about Berlin and Germany. A demonstration of unpleasantness on the Finnish front has, from the Russian point of view, a double virtue. It not only reminds the West that the Finns can be held hostage to its willingness to come to terms; it also enables Russia, because of the form in which the 1948 treaty was cast, to play upon the other Nordic countries' fear (still not entirely dead) of a German military revival. Quite possibly both the political and the strategic motives have entered into Mr Khrushchev's calculations. If the prospects of east-west negotiation improve, the pressure on Finland will probably ease. If the present deadlock continues, however, the Finns are likely to feel the clutch tighten; up to the point, perhaps, where the Russians will demand military concessions that endanger Finnish independence.

PARLIAMENT

Ins and Outs

The 21 or 22 new bills specifically foreshadowed in the Queen's Speech aim, in approximate order of political interest, at controlling immigration; filling the gaps in the army; reorganising the railways; a useful trio for education (one mitigating disruption of the last year of compulsory schooling by saying that no child may leave school before the Easter after his 15th birthday, the second reforming the award of university scholarships but still leaving some sort of means test, the third reforming the Burnham committee); another trio for Scotland (bringing some sense into its extravagant system of council housing subsidies, its ridiculous drink licensing laws, and making necessary adjustments in Equalisation Grant procedure); an attempt to cut down the normal waiting period between committal and trial to under eight weeks, either by appointing more assize judges or cutting judges' holidays; recognising or according a new constitutional status for South Africa (not too vindictively, please), Tanganyika, Uganda, Southern Rhodesia and the West Indies; reintroduction of the Road Traffic Bill; providing for orderly development of privately-owned pipelines; giving another unnecessary subsidy to fishing (on the lines of the Fleck report) and forbidding drift-netting of salmon; raising the limits on the liabilities that may be borne by the Export Credits Guarantee Department (see page 475); establishing long-needed national training councils for health workers and social workers as recommended in the Younghusband report; and making some very small and largely self-balancing changes in the social services (family allowances will no longer be paid for 15-year-old apprentices earning over £2 a week, but there are to be some improvements for workmen disabled before 1948 and a few other disabled people, while a man can earn slightly better increments for his widow by deferring his retirement).



The expected bills that were not mentioned were those dealing with weights and measures (which may still just be squeezed in), with working conditions in offices and other non-industrial establishments, with Mr Lloyd's proposed short-term capital gains tax, and with control of various financial institutions that invite deposits from the public. The first two seem to have been omitted because the Government fears they might take up too much parliamentary time; the last two are presumably delayed because the Government sensibly wants to take an adequately long time over the very complicated task of drafting them in any conceivably workable form. There was no mention in the speech of reform of local government in London, but apparently a white paper may be published. The speech also promised Parliament that "plans will be laid before you for the development of the hospitals over the next decade, within the framework of the National Health Service as a whole"—which, with Mr Enoch Powell as the Minister concerned, could be interesting. But immediate legislative controversy will centre on railway reorganisation, immigration, and the army stopgap measures; and details of all three of these bills have already been published.

IMMIGRANTS' BILL

Attemptedly Innocuous

The details of the Commonwealth Immigrants' Bill, which were published on Wednesday, at least have the grace to show some symptoms of the Government's guilty libertarian conscience. Commonwealth citizens will still be allowed to come here without restriction if they can show that they have a job to come to, or that they can support themselves and their dependants from their own resources, or that they possess "training, skill or educational qualifications likely to be useful in this country." This last clause presumably means that the Ministry of Labour will issue its permissive "vouchers" automatically to skilled workers, and it is very welcome. Even un-

THE WEEKEND IS THE MOST NATURAL BREAK OF ALL

Out of the husk breaks the shiny new conker: after the weekdays comes the weekend break. Natural breaks both...

...but the weekend is the most natural break of all. A break for leisure and relaxation. A chance to sit by the fire and talk... and listen ...and look.

At weekends half the ITV homes in England and Wales turn to ABC Weekend Television. It's part of the weekend way of life—something all the family enjoy together. This is the time your product story gets real attention from 15 million relaxed 'weekenders' in the North and Midlands—the ABC Weekend Television audience.

The largest coverage of any single ITV company...

skilled workers who have not tied up jobs for themselves in Britain from abroad can still apply to come, but the numbers accepted will be "subject to any limit which the Government may from time to time consider necessary." Presumably this quota system will move up and down in accordance with such variable factors as the relative pressure or slack on the British labour market, and the relative importance or unimportance of Sir Cyril Osborne.

A great deal of new discretionary work, in a bill which is largely a blank cheque for administrative discretion, will be thrown upon immigration officers. They will have to decide lots of marginal cases such as of Commonwealth "students" who are not really students, of compassionate cases, and of Commonwealth citizens whom they regard as undesirable immigrants for medical or mental reasons. Inevitably they will make some mistakes and involve the Government in some nasty rows; it is significant that the Treasury expects that the bill will increase the cost of operating immigration controls by about £500,000 a year. In order to pretend that the bill is not motivated by racial prejudice, the new controls are supposed to apply to Irish citizens too; but Mr Butler is discussing with the Irish Republic how these can be made to work vis-a-vis the Irish. It seems a reasonable guess that he will thankfully find that they cannot really be made to work at all, and the Irish immigration will continue very much as now; it would be much better to recognise this straightaway instead of keeping up the pretence of making a few short-lived and unnecessary pinpricks at it.

Once the Government was set on the course of this bill, it was bound to make it either a thoroughly reactionary measure or a ramshackle monstrosity. It has rightly chosen the latter as the lesser of two evils, and perhaps deserves some credit for doing so; but it is likely to get little sympathy as it spins round in circles trying to make it operate. It is therefore perhaps not wholly for altruistic reasons that the Government has decided that, in the first instance, the present bill should remain in force for only five years.

DEFENCE

Ever Ready...

THE Government has conceded an inch to the critics of its defence policy on both sides of the Atlantic. It seems to have had three objects in doing so. The first is simply to make a political gesture, both to Mr Khrushchev and to Nato, by determining to do the fashionable thing in arranging to retain more men with the colours in Germany next year. The real extent of the manpower shortage in the Rhine Army is still a nice point for argument; men still insist on going sick or on leave even when Mr George Brown has arranged a visit. But in the immediate Berlin situation even the present British army, which still has about 50,000 national servicemen, has had some difficulty in keeping British forces in Germany up to their nominal strength of 55,000, especially in certain technical arms. And this has reinforced the apprehension that an all-regular army of only 165,000 men would prove too inflexible an instrument to meet Britain's Nato commitments in central Europe on a properly active footing, especially if it has to be assumed that the Berlin crisis is likely to persist through next year and that the present dispersal of British garrisons round the world is to continue.

The Government's second, and more important, aim is therefore to bridge the gap between January 1, 1963, when the last national serviceman was due to go, and the notional date sometime in the mid-nineteen sixties by which it is hoped that regular recruitment may have lifted the army's strength from 165,000 to over 180,000 (the Sandys "ceiling"). In this period it will obviously be very useful to the War Office to raise as many of the missing 15,000 from non-regular sources as circumstances require. By far the easiest tap to turn on and off is that controlling the recall of trained national servicemen, who are already under a part-time service liability for a further 3½ years. This is bad luck on some individuals—although the extent of real hardship will depend on how the system is worked, and it is certainly right that those retained or recalled should be paid at full regular army rates. But it should not affect more than 15,000 even at the outset. Had selective service been resorted to for this strictly limited purpose it would have been far more disruptive to all concerned, not least the army itself.

The third, and longer-term, objective is to form a new reserve of trained men who can be called up in an emergency without fuss once the last national servicemen's liability to recall runs out. Mr Profumo's "Ever Readies," drawn from the Territorial ranks and paid an annual bounty of £100, are a good idea, provided he can be sure of getting the chiefly skilled men he wants. But he should hurry up and complement these present proposals by a new and far-reaching effort to attract young technicians and tradesmen into a three or four-year period of regular army service, in return for which they should be assured of a first-class technical college education. The army would thus not only be helping itself in its gravest problem of technician-shortage: the training would also be an investment for the national economy.

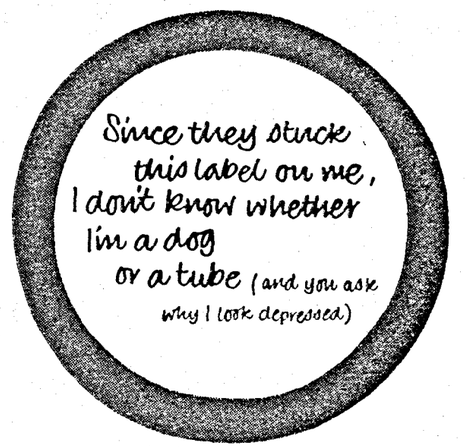
...Ever Needy

AS it happens, the most important news for the future of the British Rhine Army has come this week from Bonn, not London. West Germany's concurrence in the Nato Council's ruling that Britain has been justified in seeking financial help from its allies means that something will be done to reduce the expenditure of over £70 million a year in D-marks that the Treasury currently has to meet for the British forces in Germany. Exactly how much is to be forthcoming, and in what way, remains uncertain. The west Germans are to reimburse the Americans (who have now begun their serious conventional build-up) to what is reported to be the tune of £220 million, but chiefly by buying American military equipment and supplies for their own forces. This seems to close the door on the purchase of any substantial amount of British arms. It will not be very long before west Germany's own defence budget equals the British one, at which point Mr Lloyd's chief remaining argument is going to fall to the ground. In any event the receptiveness of Nato ears to British financial pleas is likely to diminish sharply if this country remains stiffly outside a new conventional strategy for central Europe.

The immediate prospect seems to be that west Germany, without having any truck with the previous system of "support costs" (which had declined to £12 million a year under the last agreement, now expired), will contribute something towards the wage bill for the 40,000 German civilians employed by the British forces. Britain seems to have threatened, if it is not satisfied, to withdraw up to two divisions from the continent once the Berlin emergency eases. The present west German palliative may now sweeten things for the next couple of years, but with or without a Berlin crisis the British Government must eventually face the prospect of paying its way in what is the most vital sector of national, and not only "European," defence.

WAGE PAUSE

April Foolishness?



BY announcing that a pay rise awarded by the wages council for workers in sack and bag making shall be paid as from April 2nd next year, the Minister of Labour —whatever his disclaimers—has given the clear impression that the wage pause is to reach its term then. This particular award was negotiated wholly after the Chancellor's statement of July 25th, and therefore cannot possibly be explained as having been a "prior commitment." There have been one or two other guarded hints, notably in the timing of the wage offer made by the nationalised electricity industry, that after about April 1st the freeze might be allowed suddenly to thaw out. Doubtless the Government hopes to have prepared its planning machinery by then, including its machinery for offering guidance about the "nationally sustainable" level for wage increases. If this meant that all wage increases coming into effect after April 1st were to be closely vetted in this way—if statements were issued that most settlements offering wage increases above the 3 per cent or so that is likely to be the initial target rate for annual increases in national production must be expected to last for more than a year—

Every Electric Resistance Welded Pressure tube that leaves our works has a TRU-WEL label attached. This means it has passed the most exacting inspection during all stages of manufacture and that its quality, accuracy and reliability based on over thirty year's experience are ensured. TRU-WEL ERW pressure tubes are made in a wide range of sizes and thicknesses up to 5½" o.d. by ¼" wall thickness. They are used in locomotives, land boilers (including finned tubes for nuclear power stations both here and abroad), in super tankers, and in the Cunard 'Queens'. Tube Products were first with ERW tubes in Europe, first to make ERW pressure tubes in the U.K., first to develop ERW tubes with a Resistance Welded helical fin, and first in Europe to produce ERW tubes of 5½" o.d. We are the most experienced makers of ERW precision tubes in Europe.

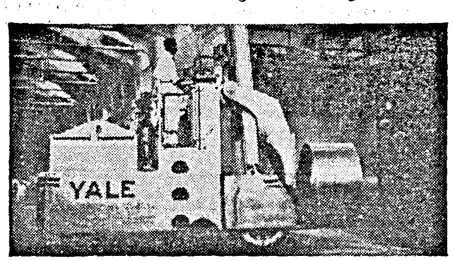
A TI Company



ANYWHERE IN THE WORLD YOU'LL FIND THE PRODUCTS OF YALE & TOWNE!

SUNDERLAND, England.—Always present in the glass industry is the danger of breakage during handling and storage. A major glass dinnerware producer in England has chosen the Yale fork lift Worksaver for the job. The smooth operation of these trucks assures handling the dinnerware loads gently; their compactness makes them ideal for congested storage areas. Yale fork lift Worksavers are available in capacities up to 7500 pounds, all equipped with battery-powered electrical systems that keep these trucks on the job for longer periods of time-giving you big truck operation at small truck cost. Yale Worksavers are highly manoeuvrable, simple to operate, and are ideal for handling on floors with limited load capacity.

VOLTA REDONDA, Brazil. – At the largest steel plant in Latin America, Cia. Siderurgica Nacional in Volta Redonda, 30,000 pound capacity Yale electric trucks are used to move steel coils in the cold reduction mill. These Yale trucks and others are used throughout the mill, easily handling the flow of materials to and from production and storage areas. Yale electric trucks are designed to stay on the job . . . to give long life with minimum maintenance.

this new policy might be all right. But it is noteworthy that no such careful analysis has been applied to the sack and bag offer; the Minister of Labour has simply accepted the wages council's recommendation off the cuff.

The danger is obvious. It is that April 1st may become All Fools' Day indeed. If the impression gets around that that is the scheduled end of the pause—and if the Government and others choose to avoid strikes and other unpleasantnesses by assuming, whenever they come under pressure, that any increases that are post-dated until after April 1st are perfectly all right—then the whole point of the present stringency will be lost. The piled-up water will crash over the dam with the spring, following upon a winter when the external defences for sterling will have been further whittled away by the Bank of England's present ill-considered policy of making successive reductions in Bank rate. Inexorably, this would lead on to another summer crisis for sterling, and another brutal necessity to clamp down into stagnation of production again. This premature setting of a target date when inflation may break loose again—this careful positioning of a ladder which all who wish to avoid the awkwardness of standing up to the pause may choose to climb down—is a heavy price to pay for maintaining the good-natured traditions of the Ministry of Labour towards wages councils, and towards sack and bag makers.

PUBLIC EXPENDITURE

Unplanned Axe

THE Queen's Speech contained a significant phrase about the Government's determination to "keep public expenditure within the limits justified by national resources." In its new public sector investment programme for 1962-63 (discussed on page 480), the Government seems to be carrying out this policy of moderate restraint through a system of sensible long-term planning. Public investment is to continue to rise at the reasonable rate of rather under £100 million a year, and most of both the increases (e.g. on roads) and the economies seem to be being directed towards carefully thought-out places. But, despite Mr Brooke's new appointment, there is no sign of a similar approach to long-term planning of the restraints to be imposed on government current expenditure. Indeed, the two latest examples of departmental current economies could not easily be more unplanned or madder.

Last week the Ministry of Labour discussed plans with the civil service unions to save £750,000 a year by closing down two government centres for training unskilled school leavers and unemployed people in Nottinghamshire and London; by cutting the intakes at the country's 15 industrial rehabilitation units where disabled workers are trained to overcome their disabilities; and by closing the Government's register of scientific and technical jobs, which at present lists some 5,700 vacancies. This week the Ministry of Works admitted that it may be going to economise by retiring some of its servants at the age of 60 instead of 65.

Could somebody in the Treasury please explain to these departments what Government economy campaigns are supposed to do? The object of making economies in government expenditure during a period of presumed inflationary pressure is to cut general demand and to create a pool of more active unemployed, so that they are then free to move to more productive jobs. You do not further these objects by deliberately arranging, in one department, that the people you throw out of work should be immobile sexagenarians; and by directing your economies, in another department, precisely to those parts of the Government's services which help people to undertake more productive jobs once they do become unemployed or handicapped.

FALL-OUT

What Goes Up

MONDAY'S monstrous Soviet explosion, so big that it took even its designers by surprise, could double the amount of fall-out deposited into the atmosphere by the present series of Russian tests. Since the radioactive matter is now aloft, it becomes acutely important to know where it has gone. Scientists have produced during the past few days a comforting hypothesis that has yet to be confirmed by events. Although an exceptionally big explosion of 50 to 60 megatons might be expected to produce up to fifty or sixty times as much fall-out as a one-megaton bang, they say, it might also be expected to propel a high proportion of that debris to such heights that it would enter a region of stagnant air high above the winds and currents that normally carry fall-out to the ground within six to twelve months of the explosion. They cannot suggest how long the fall-out might stay suspended in this celestial garbage tip above the stratosphere. But the longer it does, the less radioactivity it will contain when it ultimately sinks to earth.

Had the main object of the Russian tests been to let loose so much fall-out as to make it impossible for the United States to resume testing in the atmosphere, this end could have been achieved more easily by exploding fifty or sixty one-megaton bombs than by one 60-megaton monster. However, scientists have never suggested that all the fall-out from a multi-megaton explosion would be thrown clear of the stratosphere. The most they have ventured is a guess that, in terms of radioactive contamination, big explosions might yield diminishing returns. Thus Monday's explosion still poses a frightening danger to health, even if the hazard proves to be confined to the amount of radioactive iodine babies may drink in their milk.

Since mankind has to live for the next few years with Soviet fall-out (and perhaps American too, if the United States resumes atmospheric tests), it would be just as well to take collective steps to find out where it is coming down and in what quantities. Outside one or two countries, methods of collecting fall-out are rudimentary, and techniques for analysing and measuring it even worse. Even among scientists, there is no standardised system of analysis or measurement. The sophisticated, for example, distinguish among the hundreds of fall-out products between two separate forms of strontium; the unsophisticated do not and therefore record levels of radioactivity 200 times greater. International agreement on techniques is needed, if scientists are not to find themselves talking at cross-purposes.

EUROPE

Channel Soundings

LIKE a rock in a current, President de Gaulle's view of world affairs often stands out in lapidary contrast to the views of friends and foes alike. But it is more difficult to make out the shape of the considerations that lie beneath the surface and support his obstinacy. In international affairs, as in French domestic ones, his magisterial opinions acquire mystery through inaccessibility. All the more important are the occasional personal meetings that give his fellow statesmen the chance to penetrate the gloom.

This time the French President is to visit Mr Macmillan at his Sussex home. The Prime Minister has now been twice to Rambouillet for talks, but though President de Gaulle paid a state visit to this country in April 1960, the visit on November 24th will be his first political visit here for talks with the Prime Minister. For one so conscious of his representative dignity, to come to the English Colombey, Birch Grove, is a friendly gesture.

High on the list of topics for discussion will be Berlin and east-west relations. It is here that the French President has been standing out most craggily against the judgment of the Anglo-Saxon allies, and here that the Prime Minister may desire—for all the British Government's anxiety to show loyalty to the European allies—to persuade him to be a little more flexible. Whether he will succeed is another matter. Report has it that in President de Gaulle's interpretation, Mr Khrushchev's pressure on Berlin is designed, above all, to split Germany from its western friends—and that firmness, and firmness alone, is therefore called for.

The Prime Minister will at least be able to cap the argument with the suggestion that nothing could serve western unity better

than British participation in European integration. Mr Macmillan may also learn more from President de Gaulle about the latest French proposals for a political treaty between the Six countries. These seem to envisage a systematic and obligatory co-ordination of foreign policies—in which, however, the inter-governmental method would be preserved. From what is known so far they would not deter this country, if it were asked to join in. There are still, of course, extremists here who fear any kind of European political institution. Others may one day come to feel that strong parliamentary or community-style institutions are more what is needed. But at the moment President de Gaulle's conception of *L'Europe des patries* fits well enough with the general British preference for cautious first steps.

Dry Land

WHAT President de Gaulle and Mr Macmillan can do for the actual negotiations for British membership of the common market will be limited. By the time they meet the negotiations, which start next week, will be in the hands of the technicians. All the same, meetings with President de Gaulle have a way of producing bigger results than appear at the time. Mr Thorneycroft's European space club, for example, which has been moving a stage further this week at a conference in London, was given a valuable prod forward when the Prime Minister met General de Gaulle at Rambouillet in February. That meeting may even have encouraged the spring thaw in French attitudes to British membership of the common market.

The talks in Brussels next week will not do more than get the negotiations under way. The first wave of goodwill in reaction to Mr Heath's Paris speech has been followed, in Brussels and elsewhere, by the recollection that all the old economic differences have still to be solved. Next week the ministers of the Six will meet on their own to prepare their position on Monday and Tuesday, and with the British on Wednesday and Thursday. The ministers will presumably set up official working parties or committees to deal with the various questions and then meet from time to time themselves when the officials get stuck. By Easter the outlook may be predictable.

With the various applications for membership, and others coming along, the Brussels institutions have their hands full. On October 26th the first meeting with the Danes (equivalent to the meeting with the British in Paris on October 10th) took place. The opening statement by Herr Krag, the Danish foreign minister, closely followed the lines of Mr Heath's, except that agriculture loomed larger and the Commonwealth did not loom at all. Full negotiations with Denmark (like those with the British which start next week) will begin on November 30th.

BY-ELECTIONS

Autumn Trilogy

THE by-election season starts next week with confused and multi-candidate fights in three Conservative constituencies—next Tuesday in the mixed-up Manchester constituency of Moss Side (two trim suburban wards, and two pretty slummy ones), next Wednesday at Oswestry (in Shropshire) and East Fife (in Scotland). The best bogey figure to remember is that Labour will need a net swing of 3½ per cent from Conservative at the next general election in order to topple the Tories from power. The latest Gallup poll, reporting a post-conference Tory recovery, suggests that the net pro-Labour swing since 1959 is now just under 3 per cent. In constituencies with new Liberal appearances—as at Moss Side and East Fife—Labour ought to be able to expect a net swing that is somewhat higher. But the table below shows that to capture seats next week Labour would need a net swing of 12.3 per cent at Moss Side, and more than that elsewhere. So far in this Parliament, as distinct from in the last one, there has been no sign of so large a swing against the Government anywhere.

	1959 % of Poll			% Net Labour Swing Needed*	No. of Candidates Next Week
	Con.	Lab.	Lib.		
Moss Side	62·3	37·7	...	12·3	(4)
East Fife	69·9	30·1	...	19·9	(3)
Oswestry	55·9	28·0	16·1	14·0	(4)

*This means swing relative to Conservatives. For example, Labour could get a winning net swing of 12·3% at Moss Side if the intervening Liberal and Mosleyite picked up 24·6% of the poll between them, drawn wholly from the Tory and leaving Labour's percentage of the poll unchanged.

At Moss Side next week the two newly appearing candidates are a Liberal and a Mosleyite; and the rather right wing Conservative candidate is campaigning loudly about the constituency's "coloured immigrant" problem, to an electorate which includes increasing numbers of West Indians and Irishmen on its register. A Tory setback here—to Labour's advantage—would be no bad thing for the country.

In Oswestry, the pattern of candidates is very different. Here a young Bow Group Conservative who got a First at Cambridge is campaigning against a Gaitskellite Labour candidate who got a Second at Oxford, while the Liberal is (of all things) an assistant editor of the *Sunday Express*; to complete this odd cross-section, the fourth candidate is Mr Drayton of the "Patriotic Front" who hopes to draw votes from the Tories by campaigning against the common market.

At East Fife, a land of farmers, fishermen and the University of St Andrews, the Liberals can claim that they won the seat (Tory majority in 1959 of 15,164) last time that they fought it with anything like the determination they are showing this time; but that was in 1929, and ever since then (until this week) the local Tory candidate called himself some sort of a Liberal too. There are therefore plenty of little local complications which each party can use to explain away any peculiar results. But the general trend will be well worth watching.

INDOCHINA

Elusive Visions

MOMENTS of truth, in Indochina, are liable to shimmer, blur and vanish like a mirage. General Maxwell Taylor, who went to south Vietnam on October 18th to see whether American troops ought to be sent there to support the guerrilla-harassed government, was due back in Washington late this week to present his report to President Kennedy. It seems likely that, contrary to many people's expectations at the time he left for Vietnam, General Taylor's advice is going to be against sending troops.

One reason may be a feeling that President Diem's government, which combines the autocratic with the nepotic, ought to reform itself before American units go into action on its behalf against the rebels. Other reasons, perhaps more telling ones, include the difficulty of proving that the guerrillas include actual north Vietnamese troops; doubts whether American soldiers would be more useful than local ones in a paddy-field war; and a suspicion that other measures, such as a substantial increase in the number of American military advisers with the south Vietnamese army, might express American solidarity just as effectively without provoking open intervention by the communist powers. Mr Joseph Alsop, the columnist camp-follower of General Taylor, reports that the general had convinced President Diem of the force of these arguments before he left.

In the long run, however, neither Vietnamese nor American troops can deal with the guerrillas decisively until order is established in neighbouring Laos, at present the main supply route for the Vietnamese guerrillas. On October 8th, in another false

moment of truth, the three rival princes jockeying for power in Laos agreed to nominate the middle one, Souvanna Phouma, as prime minister. But since then, exhausted, they have been unable to agree on the next step, the distribution of cabinet posts. The Geneva conference on Laos, which on Wednesday held its first full meeting for more than a month, cannot make much progress until it includes the representative of a unified Laotian government. Like the kingdom that was lost for want of a nail, the stability of all Indochina is in peril until a thread is found to bind the princes together.

ALGERIA

Grim Anniversary

THE eighth year of the Algerian war begins with violence once more overshadowing the expressions by French and Moslem leaders of a wish to talk. On instructions from their leaders in Tunis, the Moslem population celebrated November 1st, the seventh anniversary of the rebellion, with systematic, though generally pacific, demonstrations throughout Algeria. French forces and police tried to confine the demonstrators to the Moslem quarters to forestall inter-racial riots; and in Algiers they succeeded. But in the small towns where troops are thinner on the ground they were less successful; in several places a shot fired by one side or the other led to a violent melee. Some seventy were killed, and many more wounded. The rebel leaders have succeeded in reminding President de Gaulle of the popular power they can enlist at will, but at the price of heightened communal bitterness.

Two factors mitigate the tragedy. Wisely, the Algerian leaders made no attempt to repeat the demonstrations in Paris which were put down with such severity in October (the conduct of the French police is discussed on page 459). And in Algeria itself the right-wing secret army, the OAS, did not use the occasion to strike a counter-blow. That could be a sign, not that the ultras are weak, but that they are waiting for a propitious moment, which this clearly was not. The OAS secret radio had told the Europeans on Tuesday not to get involved.

General de Gaulle is reputed to believe that peace must be attained by the end of the year. The French wish for an early resumption of talks was borne out on October 27th in a speech by M. Joxe, minister for Algerian affairs. M. Joxe rejected the Moslem rebel proposal for a new two-stage timetable which would put independence before the negotiation of the details. But he did reaffirm the French desire for a united Algeria, implicitly rejecting partition; and, among French interests, he emphasised only the need to guarantee the security of the Europeans in Algeria. Although the violence goes on, the public attitudes of the two sides are converging.

GREECE

Steady Pendulum

MR KARAMANLIS has experienced no swing of the pendulum. His performance in the Greek general elections last Sunday will make most democratic politicians in the West green with envy; after six years in office, he has increased his share of the popular vote from less than 42 per cent (in the last elections in 1958) to more than 50 per cent. This means that his party, the National Radical Union (ERE), with probably 170 seats, will have an

Enviable: Mr Karamanlis

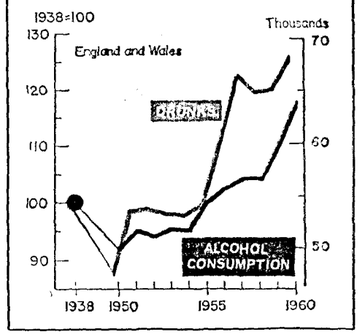
absolute majority of some 40 seats in the new parliament. The Greek voter, it seems, in spite of his reputation for volatility, likes a steady, stable government as much as the next man. This, on the whole, is what he has been getting; and if Mr Karamanlis cannot boast of any spectacular success in solving Greece's social and economic problems, he has at any rate made a reasonably energetic beginning.

Mr Karamanlis also had the advantage of unexpected and no doubt involuntary allies in Moscow and Sofia. The verbal onslaughts directed against Greece from eastern Europe in recent months may well have helped to alienate non-communist voters who in 1958 voted for the communist-led EDA because they found Mr Karamanlis too far to the right, but did not want to waste their votes on one of the small, disunited centre parties. This time the extreme left, now calling itself the Pan-Democratic Agrarian Front (PAME), polled 15 per cent of the votes (as against nearly a quarter in 1958) and will probably have 24 seats. In the new parliament the extreme left will be supplanted as the official opposition by the Centre Union, an alliance of centre parties which won some 106 seats.

Thus Greek politics are no longer dangerously polarised between the extreme left and the centre-right ERE. Mr Karamanlis himself played an important part in securing this desirable state of affairs, since he deliberately accepted an electoral law which might have jeopardised his own party's absolute majority, but improved the chances of the centre parties against the extreme left. For this statesmanship the centre parties are now less than grateful. Disappointed in their hopes of at least sharing in Mr Karamanlis's next government, they are now accusing his party of intimidation during the elections. This, however, is not really the best way to win the next election. Since many Greek voters doubt their ability to stick together for worthwhile ends, the centre parties might be better advised to concentrate on turning themselves into a united constructive opposition.

TURKEY

Dangerous Deadlock



IN Turkey they do not have to worry, as they have been doing in Greece, at the possibility that the communists might legally come to power. There, the problem is that the politicians are apparently unwilling to play the political game according to the rather special rules that the army insists they should observe if they are again to start playing the game at all.

Ten days ago, on October 25th, the army, which since May last year has been governing Turkey, bowed itself off the stage, and in theory handed over to the civilian politicians. General Gürsel, who had worn uniform for his inaugural speech to the new parliament, appeared again next day in civilian clothes to take the oath of office as president of the new republic; he had been elected unopposed and by a large majority. So far, so good. But after that the rivalries of the politicians seem quickly to have gained the upper hand.

A member of the Justice party, Mr Suad Mayri Urguplu, was elected president of the senate without too much difficulty; but

STRONGER HEADS?

The number of women found guilty of drunkenness (4,248 in 1960) and the number of those driven to drinking methylated spirits (152 in 1960) have diminished since 1950 and were far less than before the war. As the chart shows, the total number of cases of drunkenness proved has increased, but last year's rise of 4½ per cent was less than that in the country's consumption of alcohol.

Whitehall 1511

angry words and numerous ballots failed to secure the election of a Speaker of the national assembly last week. On Wednesday the assembly tried again and after nine ballots managed to elect Mr Fuad Sirmen, a Republican. But on Thursday the government was still being carried on provisionally by General Ozdilek, who was formerly a member of the military junta. General Gürsel's failure to nominate a prime minister is presumably due to the reluctance of the politicians to collaborate in a four-party coalition, which is known to be what the army would like. He himself may well be under pressure from the more radical elements in the army to take a tough line with the politicians. Behind the scenes, the army is obviously still active.

Meanwhile the fourteen officers belonging to the radical Turkes group of the military junta, who were sent into exile a year ago, have met together. At a press conference in Paris this week some of them guardedly expressed their disapproval of the latest developments in Turkey; they added that although they were now free to return home, they preferred to bide their time. The politicians in Ankara, who are now finding it difficult to co-operate with General Gürsel and his friends, may if they are not careful find themselves landed with less amiable masters.

TELEVISION FEES

Striking Posture

The expected deadlock between the performers' unions and the independent television companies has come to a head: Equity and the Variety Artistes' Federation are maintaining their claim for the payment of a performing fee to players graduated by the size of the audience that sees a particular programme, and have firmly rejected a compromise offer by the companies (although there is to be another meeting between them and the companies next Monday). Both sides include some pretty tough nuts: the unions have been particularly annoyed by one statement from the employers which put inverted commas round the word "earning" a fee. The normal rules of economics may not apply in this strike. The ordinary man might suppose that in a rambling profession like acting, with heavy unemployment, a strike is unlikely to prove very solid; but a more general view in the profession is that actors are well used to periods without work, and that a strike will provide a topic of self-righteous conversation that is lacking during a normal "rest." The only real sufferers, even if the strike led as far as a temporary return to a BBC monopoly of the air, would be the incurable addicts of some soap operas and a few advertisers.

For those in neither class, the most interesting question could be how long solidarity will last among the employers if the strike persists; some contracting companies have seemed more ready to negotiate with the actors than others, and television tycoons are surely not the people to have scruples over stealing marches on each other by reaching separate independent agreements to get their advertisers' favourite programmes back on the air. Among the employees, the technicians' unions have indicated that they will refuse to handle "black" material designed to replace a stricken programme. The companies appear to have no shortage of such material, whether in the form of old movies or of plays filmed during the last few months in the expectation that a strike might be brewing (some actors, incidentally, have done very well out of this unaccustomed volume of work). Equity proclaims that it is determined to win its own battle. Perhaps what the actors fear most is that too close an alliance with the Electrical Trades Union might make them unpopular with the public—and actors are the last people to relish the notion of unpopularity.

PORTUGAL

Heretic of Passage

Whatever one's opinions on Portuguese politics, the treatment of Senhor Galvão at London airport on October 26th seems rude and silly. Senhor Galvão, the man who seized the Portuguese liner *Santa Maria* in the Caribbean in January, was passing through London on his way to Stockholm. At London airport he was met by police at the aircraft, was prevented from seeing reporters, was asked a number of questions about the purpose of his visit to Sweden (a matter which is of doubtful concern to the British Government); and, according to his own account, was then locked in a room until it was time for his plane to leave.

Views may vary on the *Santa Maria* exploit, a political protest with regrettable as well as admirable aspects. Whatever view is held, there seems no excuse for treating Senhor Galvão as an undesirable, even if he had wished to visit Britain. If people who want to protest against tyranny in their own countries cannot get a hearing in Britain, the outlook for civil liberties in the world generally looks poor. But in fact Senhor Galvão was a mere heretic of passage. This kind of officious nosey-parkery gives the British immigration authorities a bad name.

OBITUARY

Luigi Einaudi, scholar-statesman, liberal economist and second president of the Italian Republic from 1948 to 1955, who died on Monday, was surely the most distinguished of all foreign correspondents of *The Economist*, for which he wrote regularly from Italy in the years before the last war. **Albert Henry Chapman,** who died on Friday last week, was certainly the longest-serving member of *The Economist*'s staff, which he joined in June, 1897, and took leave of only in January this year, after a loyal lifetime's work.

LETTERS

German Elections

Sir—You and Senator Fulbright are, of course, right when you speak, in the case of Germany, of a "fledgling democracy," but a journal of which Walter Bagehot was at one time the editor should not judge the outcome of the recent election without reference to the system of voting. Under the British electoral system there would have been a clear-cut popular decision as between the two major parties, the Christian Democrats and the Social Democrats; they were the only ones to secure any of the 247 seats distributed in Germany on the basis of pluralities, the CDU/CSU obtaining 156 and the SPD 91.

Had the plurality system actually obtained, there would, of course, have been a change in the distribution of the votes, but certainly one of the major parties would have had an overall parliamentary majority. Thus there would have been no more of a need for coalition and no more of a chance for partisan jockeying than there was after the recent British elections.

Germany is not the only recent case where proportional representation elections were followed by awkward results. In Ireland Fianna Fail lost its overall majority by a margin as tantalizingly narrow as that of the Christian Democrats in Germany; in Norway the Labour Party lost by even less. Mr Gerhardsen may nevertheless find it possible to hang on and Mr Lemass may do the same, though neither seems to be happy about the prospect.

In Israel the splintering effects of PR have reached the point that the strongest party no longer enjoys a commanding lead; its four potential coalition partners have formed a kind of cartel which is determined to put the highest possible price on their support. Boys will be boys and parties which have developed according to the rules of PR follow a natural bent if they act that way. Still, it is equally natural if public opinion fails to be impressed with that kind of democracy.

In all these cases there were, of course, a number of factors involved; also, there was leeway of action for the political leaders. Still, if PR is used, certain risks are run which are not a necessary consequence of democracy.—Yours faithfully,

F. A. Hermens
Cologne University

Teachers' Pay

Sir—Can there be any economic justification for the contrast which now exists between honours graduate teachers' pay in England and Scotland?

A Scottish honours graduate aged 32 (10 years' experience) receives £1,600 a year, or about £22 a week net. In contrast, the English honours graduate at the same age receives £1,190 a year or just over £16 net a week. He climbs to approximately £20 a week 6 years later. He does the same job as his Scottish counterpart, has the same qualifications and the same length of teaching service, yet receives £6 a week less for it. To make the contrast more absurd Scotland has a lower industrial wage level and lower rents than we have. The French *lycée* teacher with equivalent qualifications has a maximum salary of £1,700 per annum which usually rises to £2,000 with special family allowances.—Yours faithfully,

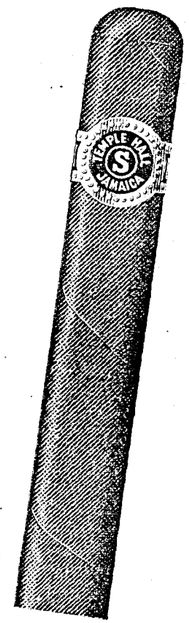
A. Birney
Felling-on-Tyne

Tangier

Sir—In the issue of *The Economist* of September 16th, your correspondent, referring to King Hassan's visit to Tangier last summer, writes with obvious irony, "The royal party made a special effort and arrived only an hour late."

Having been invited by His Majesty to accompany him on his journey to Tangier, I can explain the true nature of that "special effort." The journey from Rabat to Tangier took 12 hours, since at many places along the way the king had to perform various official functions. What, however, delayed our arrival in Tangier was the fact that one of the cars in the royal party suffered a fatal accident. The chauffeur was killed and his two passengers were seriously wounded. The king refused to continue his journey until the two wounded were safely transported, one by helicopter and one by ambulance, to Rabat. We spent at the place of the accident exactly 55 minutes.—Yours faithfully,

Rom Landau
California



Ghana Cocoa

Sir—On page 143 of your issue of October 14th, your correspondent in Accra stated: "Cocoa farmers in some areas, for instance, are receiving promissory notes instead of cheques for their sales to the cocoa marketing board . . ." and this was instanced as an example of "the Government's inability to meet its domestic debts."

It has never been the practice to pay cocoa farmers by cheque, but rather by hard cash. Promissory notes have never been issued to the farmers by the Ghana Farmers' Marketing Co-operatives Ltd, the Cocoa Marketing Board's sole buying agent. The Farmers' Marketing Co-operatives Ltd, has received sufficient funds from the Cocoa Marketing Board to pay the farmers for any cocoa delivered to the buying centres. The Government of Ghana does not interfere in any way with cocoa sales.—Yours faithfully,

Martin Appiah Danquah

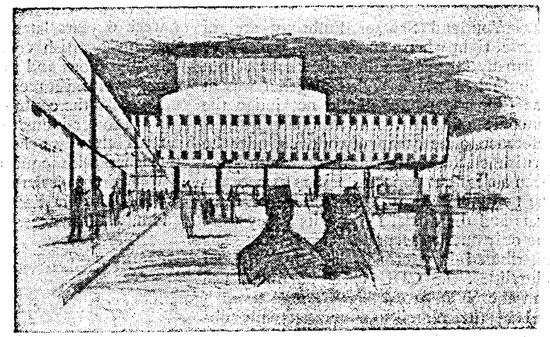
Tories Off Stage

FROM OUR SPECIAL CORRESPONDENT

New readers begin here:



WHEN Nottingham, "Queen of the Midlands," lost its gas undertaking to the nation it was recompensed with £250,000, to be used for "the improvement of the borough and the public benefit of the inhabitants"—a directive that was thought compatible with the building of a civic theatre. Estimates of the cost of such a theatre, to house the local repertory players as well as touring companies, rose rapidly from £150,000 in 1956 to £400,000 in 1960 for a design which was condemned by the (Tory) opposition in the city council as wasteful and grandiose. The lowest tender received, from a local firm, was for £358,000, which was accepted by the casting vote of the (Labour) Lord Mayor. Work began last March, when the estimate had risen to £386,000, the Tories swearing the while to cancel the project (penalty for breach of contract: £100,000) when they came to power—as they duly did in May.

Now read on:

THE electors' hope that Conservative rule in Nottingham would be less dictatorial than that of their Socialist predecessors was, it must now be reported, groundless. The Tory handling of the civic theatre affair has been marked by just such ineptitude, obstinacy and lack of tact as that of the breaking of Captain Popkess had been under the *ancien régime*. (And let it not be imagined that *that* sorry affair has been amended by the new council: in spite of election promises to "rehabilitate" the reputation of their maligned chief constable—supposedly by granting him the freedom of the city—no move has been detected since the Conservatives took office.)

The theatrical dilemma in which the Tories found themselves (which, indeed, they had fashioned for themselves) was certainly a formidable one. On the one hand they had promised that the theatre would not be a charge on the rates; on the other hand, the demolition and site-levelling had already been completed, and the penalty for suspension would be the waste of £100,000, leaving little of the nest-egg for any alternative venture. They had either to go ahead with what they believed would be a recurring burden on a rate already at 23s. per £1 ("If Moss Empires and Prince Littler can't make theatres pay, how can we hope to?") or abandon the darling of much of the town's heart.

A disingenuous scheme to save both face and money was therefore evolved and put to the Theatre Trust (governing the present repertory Playhouse), who rejected it. It would have involved the loan by the council to the trust of £100,000 interest free, the grant of fees up to £35,000, and the reduction of the site rent to a nominal £100 a year—leaving the trust, in charge of the project, to raise £205,000 (in addition to the £60,000 it has already promised to the building) by mortgage and debentures; expenses

Vanishing vision: theatre design by Peter Moro

would then be met from a putative Arts Council grant of £15,000 a year. It was a neat ploy to offload the council's burden, but the trust would not wear it: the payment of rates and the servicing of loans alone would cost it £19,000 a year.

The council then fell back on secret plans and, during the three months following its rebuff, refused to comment on anything to do with the theatre. During this time, ABC Television presented the Theatre Trust with £1,000; and the Gulbenkian Foundation followed suit with £5,500, to be used for the restoration to the planned theatre of facilities that had already been struck out for economy's sake.

In September the council's decision was announced. Negotiations were in progress with Moss Empires whereby Moss would take over the site for a new theatre of "spectacular" size to replace the existing Empire and Royal theatres, due for demolition and development. At one blow this would, it was explained, relieve the council of its commitment, provide a far bigger building and insure against any incursion into the rate fund; nor would penalties be incurred for, in return for the virtual gift of the site to Moss, the same contractors and architects would continue to be used.

BUT the flaws in this gambit were promptly seized on by supporters of the civic theatre. The immediate loss of capital would be no less (might, indeed, be more); and the avowed purpose of the gas compensation could as little be served by this wastage of a third of it as by simple abandonment. Nor was there any guarantee that the work already done could be modified to accommodate the new plan, or even that the site was suitable. And if, as the Tories claimed, the gas money was the property of the ratepayers, how could they justify this expenditure of it?

The Socialists (now, for all their past authoritarian excesses, fortuitously on the side of the angels) are determined to obtain an injunction against any favourable decision by Moss. But it may not be necessary: Moss's managing director is quoted as saying: "There are so many intangibles—and we don't want to be mixed up in politics, or to interfere with the civic theatre." The decision, expected daily now, will hardly be a victory for commonsense, but it could well be a defeat for philistinism.

Nottingham's Tories are not, of course, alone in the Midlands in sustaining a philistine democracy. Now Leicester, by refusing to spend £2,000 on a Henry Moore reclining figure (described by one councillor as "a heap of junk, a mediocrity masquerading as the magnificent") is catching up in a modest, but neighbourly, way.

A career is what it's worth

If you divide the population into two groups—those who take THE TIMES and those who don't—you find this: those who *don't* take THE TIMES are in the great majority. Those who *do* are either at the top in their careers, or are confidently headed there.

THE TIMES both by its seniority in experience and by its incomparable prowess as a modern newspaper, naturally commends itself to successful people. There is no high level conference, no board meeting, no top executive's private office into which THE TIMES is not apt to be taken.

This choice of a newspaper by people who get on is indisputable.* In which of the two groups do you place yourself?

Read THE TIMES

*** There are few greater benefits you can give your children than to bring them up on THE TIMES. If they are at school or college, they can get THE TIMES for the student rate of 2½d. They should write to The Circulation Manager, THE TIMES, London, E.C.4.**

WHAT DO YOU WANT? If you spent another three hundred pounds, you *might* get as much performance. As much car. But with the new A110 you don't have to. It's the shrewdest investment on four wheels.

EXTRAVAGANT POWER. Austin realise that a top-calibre car should be *more* fun to drive. So they've designed the new A110 to give you instant response. You get 2912 cc giving 120 bhp giving up to 100 mph. (All right, you won't often want to touch the heights, but when you do you'll think you're cruising.) You get sensitive sports car control (gear-lever where it should be—down on the floor: disc brakes). You get real sports car élan (with overdrive).

EXTRAVAGANT COMFORT. The new A110 takes five top people in the kind of luxury they're used to. A glance inside will show you the kind of car it is. The richly grained facia: the subtle harmony of fine leather: thick carpets: extra touches everywhere. But we won't harp on this aspect of the A110—it's what you expect.

UNEXTRAVAGANT PRICE. And so to the price. The A110 costs £1,269.19.9. That means you're getting the most performance per pound paid in Britain. You lay your money on something very tangible—pure performance, pure unimpeded line. And for really very little extra, you enjoy automatic transmission.

Price £870, plus £399.19.9 Purchase Tax and Surcharge.

Grimsby's Breakaways

FROM A CORRESPONDENT

THE big taxis wait as usual outside the dock gates in Grimsby, ready to take the men just off the trawlers on the ritual round of pubs and clubs. There seems to be plenty of money about, despite the six weeks' fishing lost in the spring when the skippers and mates refused to sail in protest against the fishing limits agreement with Iceland. Though heavy landings of foreign-caught fish were made during the stoppage, British landings are now said to be almost back to normal ; markets have not been lost, and only two elderly trawlers failed to put to sea again.

But the strike did give birth to the breakaway United Fishermen's Union that now claims a membership of over 2,000, some 90 per cent of Grimsby's deckhands. The UFU has shown its milk teeth by calling for a closed shop (against non-unionists rather than against those who stick to the Transport and General Workers' Union). This is probably just the beginning of its activities.

Trawlermen are difficult to organise. After three weeks at sea, with only a break of sixty hours before the next trip, they have little inclination to attend branch meetings, which are bound in any event to be unrepresentative since at least two-thirds of the fleet is normally at sea. Since 1924, when it absorbed the British Fishermen's Union, the TGWU has been the main trawlermen's union (though in some ports the skippers, mates, engineers and firemen have guilds or unions of their own) and has represented them on the port committees and the national joint industrial council.

One consequence of the skippers' stoppage was that the deckhands, though they played no part in the dispute, were all together in port with little to do and no money for drink. In these unusual circumstances a group of deckhands went to the local secretary of the TGWU and demanded that the union should tell the owners that they would not sail again until the basic wage was increased to £10 a week. The secretary replied that any claim would have to be put in due course through the proper negotiating machinery. The men decided to break away from the TGWU, and approached a local figure of some legend, Skipper C. W. Chapple, to lead them.

Skipper Chapple is a vigorous giant who commanded a minesweeper flotilla during the war, and at the age of 72 must be the oldest man ever to have started a union. His first move was to sound out the General and Municipal Workers' Union, but it had to stand by the Bridlington agreement. So the deckhands struck out on their own. Up to now, however, the UFU has not been recognised by the employers as the men's representatives.

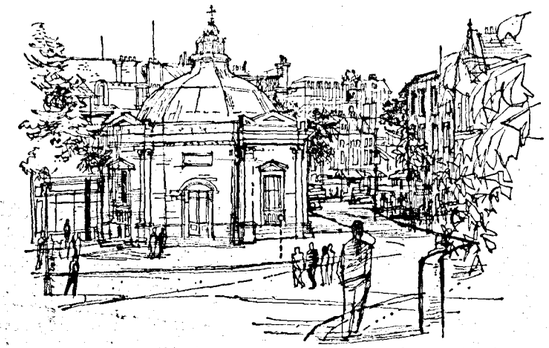
The UFU wants to increase the basic wage rate under a system that recognises different levels of skill more generously. It is true that most deckhands' annual earnings are high, and for a sixteen-year-old "deckie learner" there is the not impossible hope of becoming a skipper (they all have to work their way up) making anything up to £8,000 a year. But most trawlermen know they have a pretty low chance of making the grade, and some try to leave the industry when they get married. They are usually drawn back, for they have acquired expensive habits during their short shore spells, and are too old to take up anything but unskilled work at less than half what they earned at sea.

PERHAPS even more important in deckhands' conversation is the feeling that undermanning is adding an unnecessary extra hazard to a job that already has one of the highest death rates in Britain. Fatigue is the great danger, particularly on distant-water trawlers that are now having to go even further afield to new grounds north of Newfoundland and west of Greenland. The Fleck Report made a (so far disregarded) recommendation that at least one additional officer should be carried. The UFU wants four extra men : one deck officer, one fireman, one deckhand and a second "deckie learner."

The new union has its headquarters in a rickety, condemned house near the docks. A hundred yards away is the equally drab, though structurally sounder, office of the TGWU, whose officials are openly hostile to "that creek of hooligans down the street." The TGWU complains that the owners have always refused it facilities for collecting subscriptions aboard or at the pay office, and since previously no sort of closed shop has been worked there has been little but moral pressure on a trawlerman to keep his subscription up to date. The union also says that it won "through the proper negotiating machinery" all but 6d. of the rise the rebels were demanding in April.

The TGWU is determined to win the trawlermen back—or at least to prevent the UFU getting on the negotiating bodies. It has been hinted that the "lumpers"—the dockside porters—will be called out if the owners look like giving way. The TGWU could virtually paralyse the whole port if it wished. Five organisers are now at work in the docks and a leaflet is being distributed calling on the men to come back to the recognised union that "has the resources to fight injury cases." As one trawlerman remarked, if the TGWU had shown this sort of activity a little sooner the breakaway would never have happened.

Olé?



IMPASSIONED cries of "The fox—si! El toro—no!" will possibly be heard at the next general meeting of the Royal Society for the Prevention of Cruelty to Animals. It appears that a concerted drive may shortly be made to bring blood, sand and slight abrasions in the afternoon into the staid grey lives of British bingoists. "I think the people need something fresh in entertainment," says Mr Ernest Shepherd, the Clore of York, "and . . . humane bullfights are the answer." If "humane" seems an odd word, Mr Shepherd will reply that he feels Spanish bullfighting to be cruel, but sees no tint of shame in the Portuguese style, in which the bull is not actually killed.

But the high hopes of this enterprising exploiter of boredom (and of another impresario presumptive in London) are unlikely to be realised. The Protection of Animals Act of 1911, amended in 1954, simply cannot be overlooked by any future director of *corridas*. Clause 1 of the Act defines as an offence the causing, procuring, or assistance at, the fighting or baiting of any animal ; and it backs the prohibition with heavier penalties than are usually prescribed for cruelty: £50 and/or three months. There are, of course, omissions in the Act (you may be cruel to a fox or a stag without penalty); but since it applies to domestic animals and wild animals in captivity (even a rat in a trap), there seems no loophole. This is already a source of inconvenience to other Northerners in the Lake District in their private pursuit of the old English sport of cockfighting.

The RSPCA could not fail to prosecute the new *aficionados*, and its prosecution could not fail. Thus other questions, such as whether resting (or striking) Equity members could be pressed to don the spangles, whether HM Customs would be persuaded to grant permits for the import of fighting bulls, and whether the planned use of the local football ground would meet with Football Association approval, fall to the ground. The whole project, indeed, suffers from improbability. There would be rain, and mud, in the ring ; plastic macs and newspaper hats the only colour in the steaming crowd. York must stay content with Rugby League.

Harrogate-sur-Moor

The Pump Room: a nauseous past.

FROM A CORRESPONDENT

WITH its "delightful tree-lined boulevards," Harrogate, says a town brochure, "is the ideal place for a Continental holiday in an English setting. . . ." It is not, however, to be recommended for surf-riding. The point must be made because, with the progress of education, more and more families go there on a day-ticket, dash out of the station and ask the nearest policeman the way to the sea. "Which one do you want, love?" he replies. "T'Irish or t'North?" The town is, in fact, midway between the two, firmly landlocked in the heart of northern England.

As is well known, England's human geography is slightly cockeyed. The Normans, dourest of northerners (ask any Frenchman), conquered the south, driving the southerners up north. England's present *de facto* northerners are thus, morally, *méridionaux*. Yorkshire folk, in particular, chatter like starlings, laugh like *pétanque*-players, and exaggerate like Marseillais. They articulate their vowels with Castilian fastidiousness and are not in the least surprised to learn that the French Ministry of Education's leading authority on English acquired his mastery of the language in their county ("Where else," they ask, "could he have gone?"). When, eight years ago, a young idealist named Jean-Marie Bressand was in the throes of launching his Bilingual World movement (its aim is the promotion of English-French bilingualism), nothing could seem more natural than that the first municipalities he approached for support were those of Luchon, in the furthest south-west of France, and warm-hearted, clear-spoken Harrogate.

M. Bressand irrupted into Harrogate's municipal council-chamber with the incisiveness of an archangel and made a powerful speech in impassioned French; and, slightly to its surprise, the town council (Tory to a man) found itself voting for bilingualism. Precisely what swayed the issue—whether it was natural Yorkshire idealism, the fact that no one could on the spur of the moment think of a devastating anti-bilingual argument (and translate it into French), or simply the gleam in the publicity manager's eyes—has never been determined; but Yorkshire doggedness did the rest. While its officials polished up their French at night-school, the corporation organised or pump-primed a succession of Anglo-French entertainments ranging from existentialist plays to poodle-shows; and, through all the political storms that broke over Bressand's head in France, Harrogate—unlike Luchon—remained loyal.

Virtue was, of course, rewarded. As the movement spread, ultimately receiving the endorsement of both Mr Eisenhower and Mr Khrushchev, journalists and delegations poured into Harrogate from every continent. This summer alone, one medium-sized hotel reported 3,315 overseas visitors, 898 of them from Scandinavia, 724 from France and 73 from the Far East.

HARROGATE has naturally been accused of exploiting bilingualism as a tripper-trapping gimmick. But its economy is no longer dependent on tourism. The town's own official guidebook now pokes fun at its nauseous waters, only 30 glasses of which are sold daily compared with 3,000 a day before 1939. Electrotherapy and physiotherapy have all but dislodged hydrotherapy in what is still nominally Britain's biggest spa, and where princelings preened themselves the national health service now holds court. Smokeless light industries—notably ICI's Terylene Research Centre—have been enticed into the town, and Harrogate's vast Victorian hotels are kept alive by an average of 180 conferences and trade fairs a year.

But conferences can be as hazardous as an overdose of sulphur water. One evening not long ago the mayor's wife was delivering an address of welcome to the British Women's Temperance Association while the mayor was assuring the Association of Licensed Victuallers of his lifelong sympathy. When the National Association of Schoolmasters and the Association of Women Teachers arranged, unknowingly, simultaneous conventions in Harrogate, the town clerk hospitably suggested a joint reception and ball to pair them off—and was almost lynched.

At the end of September Harrogate played host to the twentieth joint conference of the Association of Burial and Cremation Authorities. The 550 delegates and their wives were a gay crowd and discussed with animation the merits of plastic coffins, multi-charge incinerators, ice-cream-type cartons for the despatch of ashes by post, and rival systems for smoke control and the pulverisation of residues; they advocated the use of inflammable embalming-fluid, and appeared downcast only when the highly topical problem of handling radio-active remains was raised. But the Royal Hall and its annexes began to look like Naples after a plague as exhibitors of coffins and other funereal gadgetry moved in to boost their wares.

"No practical demonstrations!" the manager warned them, wanly. But in the early hours of the morning after the delegates' last session and lively farewell party, bottles were heard exploding in the Royal Hall bar. Firemen arrived just in time to save the main building. Exhibitors hurriedly moved out their coffins and combustible shrouds.

A few hours later an elderly Frenchman of professional mien was seen beside the Royal Hall contemplating a row of coffins. "*Ah!*" he sighed, removing his hat. "*Quelle catastrophe!*" "Oh, I don't know," a municipal official said brightly. "The bar needed redecorating." The Frenchman's eyes glazed as they fell on two workmen who were sitting on a coffin drinking tea. . . .

One likes to think of him, in some still provincial villa, honing the subjunctives and shunting the subordinate clauses in the account of the scene—with asides on the Anglo-Saxon Mentality—that he will be preparing for a local paper. He might be comforted to know that even Dickens was baffled by Harrogate. "The queerest place," Dickens wrote in 1858, "with the strangest people in it, leading the oddest lives."

AUTUMN BOOKS

A Book Trade in Search of Authors

FROM OUR BONN CORRESPONDENT

BRING any two German publishers together these days, and it is as likely as not that you will hear them talk much more of the marketing than of the making of books. For during the last ten years—ever since Rowohlt introduced the first paper-covered pocket books to the German public in 1951—the German book trade has been adjusting itself by trial and error to the difficult conditions caused by the division of Germany and by the rising costs of production and distribution. It is because several of their experiments have been surprisingly profitable that the publishers like to dwell on them. It is always possible that in the process some other rewarding ideas may be conceived.

There are as many as 1,837 firms publishing books of one sort or another in the Federal Republic. Last year they produced between them 22,524 titles, of which 17,639 were first editions. But roughly half these firms publish only one or two books a year, and some thirty per cent bring out from three to ten. The remaining twenty per cent account for the bulk of output. Concentration of publishing, with the consequent building up of publishing empires, has not yet been pursued in Germany to the same extent as in England. And there is no national publishing centre in Germany, such as London and Paris. The centre used to be Leipzig. Today 238 publishers are in business in west Berlin, 222 in Munich, 180 in Stuttgart, 179 in Hamburg, 119 in Frankfurt, 69 in Cologne, 54 each in Hanover and Wiesbaden, and 51 in Darmstadt.

Although Berlin has the largest number of individual firms, they publish together only eight per cent of all the books. (The Berlin houses specialise largely in medical and other scientific works, as those of Hanover do in schoolbooks). It is the publishers of Baden-Württemberg (mainly Stuttgart) who are the most productive, accounting for approximately 24 per cent of all west German book titles. They are followed by those of the Rhineland and Westphalia (Cologne and Düsseldorf) with 19 per cent; Bavaria (mainly Munich) with 19 per cent; Hesse (Frankfurt, Wiesbaden and Darmstadt) with 12 per cent; and Hamburg with 8.2 per cent.

The common interests of these widely scattered houses are represented by the *Börsenverein des Deutschen Buchhandels*, whose offices at Frankfurt are within a stone's throw of the house in which Goethe was born and spent his boyhood. The Börsenverein claims to be one of the oldest, if not the oldest, professional book trade association in the world. It was founded in Leipzig in 1825, with the primary object of easing book trade clearing at a time when it was exceedingly complicated by currency arrangements. Eventually it grew into an organisation watching over the general interests of publishers and authors. It championed the freedom of the printed word in Germany in the nineteenth century, and the protection of authors and publishers against pirating. In 1945, when the east German communists began to fetter publishing as cripplingly as their Nazi predecessors had done, the Börsenverein moved to Frankfurt. There it now concerns itself with such matters as collective publicity for the German book trade, market research, promotion of the import and export of books, and staging book shows at home and abroad. It was the Börsenverein that organised the international book fair held at Frankfurt last month; of the 1,843 exhibitors 1,143 had come from abroad, among them Russians, Poles, Hungarians, Czechs and Slovaks.

Like so many of their fellow countrymen most of the west German publishers were faced after the war with the problem of reconstructing their businesses more or less from scratch, their former connections with east Germany completely severed. They had to take into consideration new techniques, and presently the demands of a public with more money to spend and simultaneously more opportunities for spending it. Noting the success of the paperback in England and America, several of them wondered

DENYS HAY

Professor Hay goes back to the basic texts and monuments of art and architecture of the period to make a completely fresh appraisal of the Renaissance, what it was and how it spread. *24 plates.* *30s. net*

The Holstein Papers Volume III

EDITED BY NORMAN RICH & M. H. FISHER

The third volume of Friedrich von Holstein's selected papers is the first of two large volumes of letters (1861–96) to and from him. *682 pages.* *£5. 5s. net*

The Journals of Captain James Cook Volume II

EDITED BY J. C. BEAGLEHOLE

The first volume of this authoritative edition of the great explorer's journals (to be completed in four volumes and a portfolio) was published in 1955. Volume 2 is now available and covers the voyage of *The Resolution* and *The Adventure*, 1772–5. *1192 pages* *£6 net*

Fathers of the Victorians

FORD K. BROWN

A new assessment of the Anglican Evangelical revival in the early nineteenth century. Mr Brown has written a brilliant introduction to the change of mind between two ages, and shows how much the Evangelicals influenced the later Victorian age. *576 pages.* *55s. net*

CAMBRIDGE UNIVERSITY PRESS

whether it could be introduced to Germany. Rowohlt was first in the field in 1951, and Fischer followed a year later. Much to their surprise—for they had supposed the German reading public was extremely conservative in its approach to books and reading—Rowohlt alone has since sold fifty million *Taschenbücher* and Fischer thirty-five million. They are called *Taschenbücher*—that is, pocket books—not paperbacks; and no book in this category costs more than DM 2.50 (4s. 5d.), Rowohlt publishing the cheapest at DM 1.90 (3s. 4d.). The English word "paperback" is used untranslated in Germany to denote paper-covered books of more scholarly content that may cost up to DM 10 each (nearly a pound).

On September 1st this year, inspired by Rowohlt's and Fischer's success, eleven smaller publishers banded themselves together as the *Deutscher Taschenbuchverlag*, with headquarters at Munich, for the purpose of publishing and distributing pocket books under the one imprint. It is too soon to be able to report on their progress. But their enterprise has sufficiently alarmed the big three of the pocket book world—Rowohlt, Fischer and Ullstein—to drive them into an arrangement to pool their pocket book advertising. This is not the first time since the war that German publishers have joined forces in order to keep down costs and prices. In 1953, calling themselves *Die Bücher der Neunzehn*, nineteen of the leading houses (among them Fischer, Piper, Rowohlt, Suhrkamp and Ullstein) began jointly to publish volumes of fiction and belles lettres at half the customary price. Their practice is, for instance, to market at DM 10 under the common imprint a first edition of 17,000 copies. Subsequent editions of the same work are published by the originating house at DM 20 the copy.

Stocking little but garish tales of crime and romance, the German lending libraries as a whole do virtually nothing to help the serious publishers dispose of their wares. But the many book clubs (*Buchgemeinschaften*) help considerably. Bertelsmann, which, with two and a half million members, claims to be the largest book club in the world, counts on selling some 300,000 copies of its chief recommendation for the month. In return for a subscription of DM 11.70 (about a guinea) quarterly, Bertelsmann offers members a wide choice of books at approximately half the shop price.

German publishers reckon they are well served on the whole—probably better than English publishers—by the booksellers. Of these there are at present 4,121 firms in 985 towns. German booksellers and their assistants are comparatively highly trained. And many of the bookshops in the Federal Republic have been attractively modernised over the past few years. Book tokens are coming increasingly into fashion. Some booksellers have installed automatic vending machines outside their shops for selling pocket books after closing time.

The sterile years of Nazi dictatorship and *Gleichschaltung* did immense harm to publishing houses, which had formerly cultivated a profitable export trade. They have only recently begun to recover. Today some fifteen per cent of German book production is exported, mostly to German-speaking Switzerland and Austria, and to the United States and Russia. The value of the books exported in 1960 was DM 115.2 million. Each year east Germany buys from west Germany technical and scientific books worth DM 15 million.

A striking feature of German publishers' lists is still the relatively large number of translations from foreign languages. There were 2,613 in 1960, compared with 1,605 in 1959; and some forty per cent of these were translations from English. German readers have always been keenly interested in foreign, and particularly English, writing. Galsworthy, Shaw and Maugham, for instance, have for years brought in a steady income to their German publishers. But ever since 1933 there has been a dearth of native creative writers. As one publisher has put it: "A whole generation of writers is missing—and now the east Germans are missing too." That is another reason why, when German publishers meet nowadays, they talk so much more of their salesmanship than their authors.

Tutored in the Classics

Augustan Studies

By Geoffrey Tillotson.

Athlone Press. 266 pages. 35s.

THE epithet "Augustan" applied to English literature has always had a slightly pedantic flavour, and nowadays necessitates a good deal of explanation to make it even faintly plausible to the average student, who is untutored in the classics. Whether Professor Tillotson is improving matters by extending its normal time-range to include Spenser at one end and Tennyson at the other may be doubted, though no doubts can be entertained of his learning or powers of persuasion.

This book is made up for the most part of reprinted articles, lectures and broadcasts that have appeared at intervals over the last twenty years or so. Some are too narrowly detailed to attract anyone who is not already a connoisseur of Pope, Gray or Dyer; but the group on poetic diction and the way in which certain eighteenth and nineteenth century poets set about composition is of greater general interest.

The modern notion that any kind of vocabulary can be used in serious poetry departs radically from the doctrine of poetic "kinds," which since the days of Aristotle has favoured the choice of such language as is felt to be specially appropriate for heroic, elegiac, pastoral and so on. Professor Tillotson's Augustans are united in their veneration for ancient practice, their intimate acquaintance with Latin exemplars, and their highly conscious craftsmanship.

Manifesto

Mycenaeans and Minoans

By Leonard R. Palmer.

Faber. 263 pages. 30s.

EVER since Schliemann brought archaeology into the middle of the Homeric question good rows have not been wanting about the early history of the Greek lands. In this century they were fomented by the fact that Sir Arthur Evans combined astonishing achievement with a very strong character: he did things in his own way. The late Michael Ventris was the most generous and least quarrelsome of men, but disputes inevitably arose around and from his discovery, unexpected by everyone including himself, that the Linear B inscriptions, which had first been discovered in Crete by Sir Arthur Evans, were written in Greek. Professor Palmer is the last and not the least of the *plastiqueurs*, as readers of the press learned not long ago, when he alleged that Evans had misstated some of his evidence in support of his pet theories.

That explosion in the press was what gunners call a premature, and did Professor Palmer's discovery little good: it was dramatised into a general attack on Evans, and it was described as uprooting our whole concept of the origin of our civilisation. Neither point is true. The allegations about Evans are serious but limited, and Professor Palmer is careful to make this plain and to avoid any ascription of motive. The issue makes no difference whatever to the ordinary man, nor does it shatter the basis of our life: it is concerned with the course of events in Crete between the fifteenth and twelfth centuries BC.

This is the part of the book that will attract most attention, but it is by no means all of it. Professor Palmer started with the intention of writing an uncontentious book for the general reader about Linear B; but

A monthly ration statement from Knossos

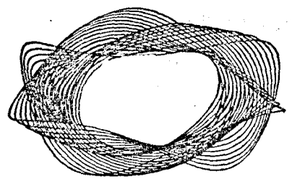
the pace of his own discoveries and theories swept him away. The first part of the book, based mainly on the Pylos tablets, gives an admirable account of the civilisation which they disclose, most of it quite new to the non-specialised reader. Then comes the Cretan part. Sir Arthur Evans's thesis was firmly based on Knossos: there was a great Minoan civilisation, which collapsed when the palace was burnt about 1450 BC, after which only squatters occupied the site. Ventris's discovery that tablets, apparently preserved by being burnt in this conflagration, were in Greek, seemed to prove that the civilisation at that time was from the mainland, not Minoan. Professor Palmer sets out to show that Evans's date for the tablets rests on distorted evidence, and that they were written (and baked) some three hundred years later. This implies that the earlier period is restored to the Minoans, but that the conflagration was followed not by decay and squatters but by a vigorous Greek monarchy, which lasted as long as the Mycenaean kingdoms on the mainland (this, after all, is what Homer said) and, like them, was destroyed by the Dorian invasions.

So far so good, and for the second time Professor Palmer sent his book to the press; but then he made another discovery, and decided to put it in for good measure. He believes that he has equated the language of the earlier Cretan inscriptions (Linear A) with Luvian, an Indo-European language of ancient Anatolia. This, and other arguments, lead him to query the hitherto accepted theories of the entry of the Greeks into Europe. After that the book only had to be pulled back a few times more for the addition of one more minor theory, some fresh evidence on Evans and a postscript or two.

The result is very rare: not one but two major new theories, covering archaeology and philology, presented for the first time to the public, with fragments of shell on their beaks, in a work of vulgarisation. Until Professor Palmer, in a forthcoming book, has published his full argument and evidence, even the learned will not be able to judge the validity of his argument. On the Cretan question, one can only say that there is a strong case to answer and that it sounds convincing; but one must wait for quarter sessions. Professor Palmer is a philologist, and it will take a massive amount of archaeological work to prove or disprove his thesis. Whatever happens, he must be congratulated on having excavated the original documents of the Knossos digs from the lower strata of the Ashmolean.

The Hero's Wife

Adrienne: *The Life of the Marquise de la Fayette*



By André Maurois. Translated by Gerard Hopkins.

Cape. 496 pages. 42s.

NEITHER his contemporaries nor historians could ignore Gilbert Motier de la Fayette, "Apostle of liberty," "Hero of two worlds," "Statue in search of a pedestal." But they have almost ignored his wife; and she has long deserved the biographical admiration which she now receives from M. Maurois, inspired by his sympathetic study of documents recently found in Gilbert's Chateau de la Grange. The distress the Marquis tried to express in a long and typically mannered letter to a friend soon after her comparatively early death was genuine; but it is doubtful if he really appreciated her worth.

THE BIRTH OF BROADCASTING

ASA BRIGGS

Early experiments in wireless telephony, the coming of organized broadcasting, the first four years of the BBC as a private enterprise, the forging of the instruments of public control, and the formation of the public Corporation. The book—the first volume of THE HISTORY OF BROADCASTING IN THE UNITED KINGDOM—is based upon hitherto unpublished material from BBC archives, Lord Reith's diary, and other original sources. *50 illustrations* *42s net*

THE INSPIRATION OF SCIENCE

SIR GEORGE THOMSON

The author writes of the intellectual aspect of Science and its place as one of the major achievements of the human spirit. He shows how the scientist thinks and works, especially when engaged on research. In language suited to the intelligent layman, he explains some of the most important ideas of modern physics, and provides biographical notes on eleven great physicists of the recent past. Sir George Thomson, Fellow of the Royal Society and a Nobel Laureate, is Master of Corpus Christi College, Cambridge. He was President of the British Association, 1960-61.

Touraine, and Brittany he married the fifteen-year-old Adrienne de Noailles in 1774 for the influence her family could exercise at court. He owed his early fame to his well-advertised use of his opportunities in the American War of Independence and the prelude to the French Revolution. He owed his solvency to Adrienne who, when he left her without warning for America, insured his ship and raised funds for his volunteers. And later on, while he led, or was led by, his national guards in and out of the increasingly bloody disorders that preceded the monarchy's fall, she maintained domestic order in a house in the Rue Bourbon continually crowded with his supporters, and corresponded with his neglected land-agents.

Bewildered though he was by the storm he had helped to raise and could not ride, he had the sense to send her into the country soon after the "massacre" on the Champs-de-Mars. But his flight from his mutinous troops into Belgium marked her as a "suspect." Local sympathy delayed her arrest long enough for her to put her affairs in order and her children in safe keeping; and she was not taken to Paris till June, 1794. There in the prison of Plessis she waited for the tumbril which had carried her grandmother, mother and sister to the guillotine. The fall of Robespierre saved her head with scores of others; but it did not at once open the prison door: she was the wife of a *ci-devant*, a sham republican "who had glaringly betrayed his country."

But she was also the wife of Washington's friend; and in January, 1795, the American Minister, Monroe, obtained her freedom—which she at once prepared to sacrifice; she had learned of Gilbert's imprisonment in Olmutz and was determined to join him. For six months she insistently pleaded with members of the new government, and with Monroe—reclaiming her property, raising money for her journey, and, with difficulty, acquiring a passport. With this she and her daughters reached Hamburg where she induced the American consul to provide another, describing her as Mrs Motier of Hartford (Conn), which ensured a safe passage to Vienna. Her usual persistence won an interview with the Emperor Francis and permission to share her husband's cell; in which she remained, "in hideously unhealthy conditions" that shortened her life, till Bonaparte's victories in 1797 ended their imprisonment.

But La Fayette was not allowed to go to France; neither his parade of inflexible principles nor his previous performances appealed to the careerists in Paris. He remained in Holland with his children till Brumaire and Bonaparte's subsequent invitation to exiled Frenchmen of goodwill. Meanwhile, it was Adrienne who saved the La Fayette fortunes: she worked unceasingly despite crippling ill-health; impressing her claims and her personality on lawyers, officials, individual members of the moribund Directory, even on Bonaparte. Adrienne's achievement was the resettlement of her husband and children in France on their ancestral lands. Gilbert's was the creation of his own political legend—a curious compound of obstinate idealism, ill-timed gestures, and a theatrical sort of courage. Her early death on Christmas Eve, 1807, was, perhaps, the price of both.

The Wistful Years

The Frontiers of Privilege: *A Century of Social Conflict as reflected in The Queen.*
By Quentin Crewe.
Collins. 255 pages. 55*s*.

Cavalcade of the 1920s and 1930s.
Edited by Cleveland Amory and Frederic Bradlee.
Bodley Head. 327 pages. 60*s*.

A Picture of the Twenties.
By Richard Bennett.
Vista Books. 224 pages. 30*s*.

THESE are the wistful years. It sometimes seems that nobody since "1984" has tried to look ahead. Burke said "People will not look forward to posterity who never look backward to their ancestors"; now a generation with no surety about its posterity looks back at its ancestors all the time. Out of the radio and on the television screen the memories stream in song and story. Mostly, the souvenirs are of the years between the wars: the generation which began by being "postwar" and found itself "prewar." This is where we came in.

Whether we listen or look or read, we are always wistfully turning over the leaves of our family album. Two of these books are family albums in their own right: *The Queen* is a hundred years old now, and puts together here what it has said and, better, how it illustrated what it said, since 1861; for "Cavalcade" the most significant pieces and pictures have been picked from the American *Vanity Fair*, which lived excitingly from 1914 to 1936. "A Picture of the Twenties" is just the simple, emotive newsstills of a decade.

When *The Economist* became a hundred years old, eighteen years ago and during the last war, one idea was an article called "We Were Wrong," setting together the leading cases of *The Economist's* false prophesying; the article was never written, for lack of space in wartime and because the easiest examples came from only one (or two) editorships during the century. In "The Frontiers of Privilege," it is frankly confessed that, for a hundred years, "*The Queen* was wrong almost always about general affairs"—though "right and accurate in the things it knew about—fashion, decoration, royalty (most of the time) and behaviour." So, though the running commentary is fun, and sometimes very revealing, the pictures are the thing.

The pictures are the thing, too, in *Vanity Fair's* "Cavalcade"; even though articles and poems are reproduced, a few of them well worth revival, by such writers as Anita Loos, Arthur Symons, Gertrude Stein, Dorothy Parker, P. G. Wodehouse, Robert Benchley, Hugh Walpole, G. K. Chesterton, Noel Coward, Carl Sandburg, Jean Cocteau, T. S. Eliot, Somerset Maugham, Aldous Huxley, Colette, Robert Sherwood, Theodore Dreiser, Walter Lippmann, André Maurois, Alexander Woollcott, Max Beerbohm, Compton Mackenzie, André Gide, Paul Gallico, Lord Dunsany, Clare Booth, Harold Nicolson, George Jean Nathan, John Gunther, John Van Druten, Thomas Wolfe, G. B. Stern and the inimitable editor, Frank Crowninshield himself.

Both *The Queen* and *Vanity Fair*, very different though they were, suffered, at any rate until *The Queen's* very recent and still cocky pseudo-emancipation, from the same impediment. They were, like *Punch*, written from inside the establishment of the day—even though the springboard of *Vanity Fair* was ostensibly anti-establishment: the anti-establishment that was becoming, and still is, part of the establishment of letters itself.

The Duke of York and Lady Elizabeth Lyon. (*From The Frontiers of Privilege*)

So the pictures tell the story. And what a story it is, to our wistful, elderly eyes. These books are worth getting just to look again at the young and ageless Garbo: to see again in the quite splendid illustrations of "Cavalcade" the inexhaustible Barrymores, the everlasting Hoovers, Lillian Gish, Katherine Hepburn and Mistinguett, Bertrand Russell with a beady eye and, all when young, Somerset Maugham and Noel Coward, Eugene O'Neill, Harold Ross, Sinclair Lewis and Aldous Huxley, Tallulah Bankhead and Gertrude Lawrence, Rudolph Valentino, Leslie Howard, Gary Cooper, the Sitwells, Jesse Owens and Mrs Roosevelt.

And so, too, with the habits and pastimes of the women of *The Queen's* first hundred years and the pointedly, sometimes astringently, picked pictures of during, between and since the two world wars: ranging from war-working women in 1914-18 to Ted Hill, the Duke of Edinburgh and the supposititious "establishment" of today; from royalty, the Astaires, Charlie Chaplin and changing fashions to Garbo again, the Baldwins, the Chamberlains, Mr Macmillan and Mr Grimond getting married, Churchill, Roosevelt, General de Gaulle with Cardinal Hinsley, the Mountbattens, royalty again, the welfare state, Somerset Maugham again, Gilbert Harding, Marilyn Monroe, Albert Finney and the Earl of Snowdon. It was obviously all great fun while it lasted; but was it what was really happening?

Class Issues

The Schools

By Martin Mayer.
Bodley Head. 416 pages. 30*s*.

THIS is a highly readable and occasionally illuminating study in educational comparisons: it covers the American, English and certain west European school systems. Although it is always intriguing to discover what the outsider feels about our failings ("class bias" *et al*) the weight of the book, despite commendable efforts at translation, is American for American readers. If the immediate illumination to be received from Mr Mayer is rather less than, say, the political critic of the English system may have hoped for, it is because Mr Mayer, for all his readiness to enter a good-going argument, is sensibly undidactic in his final conclusions. It is certainly difficult to discover a preference between the "overdone" specialisation of the English grammar school, the "cruel" strain of the *lycée* and the American "A" student who must be "'A' in everything."

It is important to know what the Americans are doing, if only because the bad as well as the good elements in the American debate eventually find their way across the Atlantic; it may soon be more important still to know about the French. But if Mr Mayer helps to break down our insularity, it does not necessarily mean that all our priorities are wrong. It is useful to be reminded of the parental class influence that still determines the quality of education an American child may expect to have; the postwar tendency in this country has been to make the child's academic ability the criterion of its future class. Neither may be admirable, nor in the end acceptable, but is the English bias worse, given the conditions of the time? There are several chapters that one would wish to underline for critical consumption on this side of the Atlantic, particularly those on teaching methods and the tools and technology of the trade. As for principles, a word Mr Mayer is rather shy of, both sides have a lot that they can learn from the other: this book is a considerable contribution to the dialogue.

King Bomba Reclothed

The Last Bourbons of Naples

By Harold Acton.

Methuen. 584 pages. 50s.

If the Bourbons of Naples had not existed one feels that Mr Osbert Lancaster would have invented them. There is a wonderful pointlessness about them which, set against the grandeur of their palaces and the magnificence of the Neapolitan scene, recalls the stout awkward and impish figures that delight us in "Pillar to Post" or "Homes, Sweet Homes." In this handsomely produced and agreeably written volume Mr Harold Acton concludes his account of the dynasty. The period covered runs from 1825 to 1861. Apart from the brief reign of Francis I, with which the book opens, and the even briefer one of Francis II, which ends the story, it is the period of Ferdinand II or "King Bomba" to give him the nickname by which he was known to contemporary Englishmen. Indeed it is to redeem him from the furious invective of Mr Gladstone—"the negation of God erected into a system of government"—that the author is most concerned. Ferdinand, he argues, was gentle and humane. If his politics were somewhat negative this was because of his sympathetic understanding of the Neapolitan temperament. His subjects liked things as they were: only mischief could result from importing ideas of reform and constitutional government. The imprisonment and execution of political offenders were unpleasant necessities forced on the king by the violent and bloodthirsty activities of his so-called liberal opponents. Had it been possible, or thinkable, to hold a plebiscite in the kingdom of the two Sicilies the vast mass of the population would have expressed their satisfaction with the rule of King Ferdinand and, by extension, with the indefinite continuation of the Bourbon monarchy.

Such, in brief, is Mr Acton's contention. To its support he brings an unrivalled knowledge of the personal memoirs and diplomatic reports of the period, an intimate familiarity with Italian life and an aesthete's contempt for moralising. With such an equipment he has no difficulty in disposing of Mr Gladstone. The intemperate language of political propaganda is quickly shown up by contrast with the sober tones of the historian. Even the more guarded strictures of Nassau Senior and Dr Arnold are easily seen, in the clear Neapolitan light of the author's sympathies, to be the dyspeptic utterances of foggy northern prigs. So far so good. But when the author attempts to enlist our sympathies for Ferdinand instead of demolishing his more extravagant critics, his path lies uphill. It is one thing to convince us that the king was kindly, conscientious and brave: it is quite another to convince us that he was interesting. Distinction of mind was not among his qualities. Indeed the only discernible signs of intellectual life are the expansion and contraction of his prejudices according to the temperature of the prevailing political climate. With so inert a hero even so skilful a producer as Mr Acton cannot hold us spellbound in our seats.

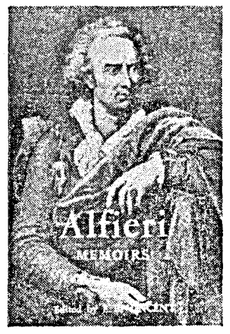
Perhaps to counterbalance the secondrateness of the Bourbons the author loses no opportunity of running down their opponents. Garibaldi, though allowed a certain military talent, is treated with scorn and those historians who have admired him, notably Dr G. M. Trevelyan, are put, somewhat superciliously, in their place. Liberals and Nationalists in general, it seems, acted from motives of low ambition or mere selfishness. Those who having had the honour of employment under the Bourbons subsequently obtained office in a united Italy are treated with particular distaste. (It is pleasant to record that Captain Acton of the Neapolitan warship *Stromboli,* who later became Italian Minister of Marine, is an exception.) In his concluding paragraph, the author points out that the tyranny of Fascism "made the Bourbon tyrants look like gentle lambs." He is on strong ground here; in negative qualities the Bourbons could take on all comers. The heady influence of Mr Gladstone is no doubt responsible for Mr Acton's lapses into political sermonising. His amusing and sympathetic account of Neapolitan court life gains nothing from such excursions.

Trail Erratic

Trail Sinister: *An Autobiography*

By Sefton Delmer.

Secker and Warburg. 423 pages. 30s.



As is natural, the *Daily Express* ("There will be no war in Europe this year or next") has been the most adamant of newspapers against any reconsideration of Germany's possible place in European life. Nobody wants to make the same mistake twice; therefore the possibility that the German nation, too, may have learnt something from experience is ruled out.

Mr Delmer is no longer the foreign conscience of the *Daily Express*—one of the most engaging things in this first volume of his autobiography is the preface with its graceful acknowledgment to Lord Beaverbrook, to whom "I owe not only most of the adventures recorded in this book but the final push to write it." But he does incorporate, in a singular degree, the European experience of the most newspaper-like of English newspapers in our time, which has also been the time of the most total British involvement in, and the most emphatic British revulsion from, European affairs. To see Mr Delmer on a story has always been an experience; not only because he is a masterly newspaperman, but also because the involvement and the revulsion are to be observed, plainly as nowhere else, ebbing and flowing, fighting it out within one, admittedly ample, person.

And here it is, the story-hunting, the connoisseurship of German grotesquerie, the feeling for Weimar Berlin not surpassed by Mr Isherwood's, the bizarre conspectus of a changing European scene observed for thirty years through the bifocals of Mr Delmer's love-hate relationship with the foreign country where he was born and where he spent his childhood. There are interludes, some of them vivid, in the Spanish civil war, Palestine, Prague, and Moscow, but it is always Berlin that is the centre of the action. That action is a jumble, as life is.

Mr Delmer always had a special affinity for the men and the women between the fronts, the ones whom events were almost bound to catch and destroy. He had a feeling for the eccentrics, the quacks, exhibitionists and miracle men who came and went briefly in the doomed society of Weimar Germany; men with hypnotic power, or theories of cosmic energy, or formulae for making gold. On a stage crowded with such characters it was easy to miss the Nazis, as Mr Delmer recalls that he did one day in 1929 when he came across Hitler admonishing the Germans to stop eating foreign fruit like oranges; another crackpot, he thought, and left. The lapse was later fully repaired, and Delmer made himself accepted by the Nazi bosses as a western watchdog they could not shake off and might as well, therefore, talk to. (He was even able to see the Reichstag fire in their company and send his paper a political report which got him no thanks: he was asked, "How many fire-engines?") Those who want to know how Berlin came to be the place it is should read him, though he will prudently beware of taking this Delmer's eye view as the whole scene, which it is not and never was.

This volume goes up to 1940; the second, one hopes, may throw some light on the British at war through the hardly less bizarre medium of the British political warfare organisation. Although the writer's entire postwar experience (which ought also to be worth reading) is left to a later volume, an earnest little chapter is tagged on setting out his view of the menace of German irredentism at the present day. It is a plea not to be ignored. But it would carry more weight if he had found room, in his parade of the grotesqueness of German twentieth-century life, for a look at the honourable, civilising stream of German intelligence that has always fought, sometimes dominant, sometimes submerged, against the dotties and the barbarians. If this other Germany is left out of the reckoning, who is to understand what has happened, much less lay down the law about what ought to happen next?

The Oxford Library of Italian Classics. General Editor, Archibald Colquhoun. *Oxford University Press.*

English people have always liked to visit Italy, but many even of those who do not go merely to lie on the beaches do not acquire more than a very exiguous knowledge of the language. This does not, of course, stop them from enjoying the pictures and the palaces; it does mean, however, that they can read very little of what was being written when the pictures were painted and the palaces built.

The Oxford University Press has now decided to remedy this deficiency by publishing, with the support of the Italian Institute and the Anglo-Italian Cultural Commission, a series of translations by Italian writers of the past, some of which will have been barely heard of by the average English reader. The first five volumes are:—Vittorio Alfieri: *Memoirs,* the anonymous translation of 1810, revised by E. R. Vincent (310 pages, 16s.); Machiavelli: *The Literary Works,* as distinct from "The Prince" and other political works, with selections from his private letters, edited and translated by J. R. Hale (202 pages, 16s.); *Italian Regional Tales of the Nineteenth Century,* selected and introduced by Archibald Colquhoun and Neville Rogers (268 pages, 16s.); Carlo Goldoni: *Three Comedies*; *La locandiera* (Mine Hostess) translated by Clifford Bax; *I rusteghi* (The Boors), translated by I. M. Rawson; and *Il ventaglio* (The Fan), translated by E. and H. Farjeon (293 pages, 16s.); Dante: *The Inferno,* translated by Warwick Chipman into English verse which retains Dante's pattern of triple rhymes (151 pages, 12s. 6d.). The books are well and elegantly produced.

Birthday Surprise

Picasso's Picassos

By David Douglas Duncan.
Macmillan. 271 pages. £7 7s.

STILL vigorous, agile, intriguing and legendary, Pablo Picasso must surely have derived an impish pleasure in keeping a surprise to spring on his public on his eightieth birthday. After many rumours and much unsatisfied curiosity about this man's collection of his own paintings, he has at last let the cat out of the bag. What an outsize one it turns out to be. In his villa in the hilly inland part of Cannes, he has kept to himself over five hundred of his paintings, a store which, according to one estimate, may be worth over £15 million. (And there are still more in his chateau near Aix-en-Provence.)

This sumptuous volume contains small black and white reproductions of all the paintings at Cannes and large tip-in colour plates of *102 of them*. *Mr Duncan* is responsible for the photographs, having spent six months on taking them with great care. The outcome, printed in Switzerland, is of the highest quality.

The small amount of text accompanying the pictures has its irritations. Was it necessary to call Picasso the Maestro or to use phrases such as "the strings of the instrument which is Picasso"? Yet, as this reviewer turned the pages and read the informal, intimate captions to some of the pictures, he found his irritation lessening. *Picasso's comments, when he looks back on* his own works, are often revealing.

There are examples of his work as far back as *1895* and as recent as 1960. Except perhaps in one or two of the earliest ones, no new styles are revealed by this publication, but there are important examples of many periods. In particular there are some haunting portraits painted in the first decade of the century in the first steps towards cubism, and there is a series of twenty-three canvases, all painted in a single month in *1936*, which, so it is believed, have not hitherto been seen together since those days by anyone, not even Picasso. Restless, concerned with his own emotional problems, in this one month's output he painted some compelling portraits of Marie-Thérèse, mixtures of fantasy and reality, in which only the tracery of her features is discernible. This book is a find for those who are susceptible to Picasso's power, and for the world it is one more reflection of his ceaseless energy and the variety of his art.

Not for Burning?

Letters to a Friend, 1950-1952

By Rose Macaulay. Edited by Constance Babington Smith.
Collins. 382 pages. 25s.

ROSE MACAULAY was born and bred in a tradition of decent reticence about the privacies of life. She was an extremely sensitive woman, as well as a highly intelligent and erudite one. At her death, in 1958, all the personal papers in her possession were, at her express wish, burned. Among them was a long series of letters from her spiritual adviser, Father Hamilton Johnson. "They're not for other people to see," she tells him, in the last of the letters printed in *this collection. In the same letter she says*, "I'm *glad* you like to have my letters. Really too? I think you'd better get rid of them, or any that you have kept, in that incinerator!" But Father Johnson did not *take this advice. They were*, indeed, letters to treasure: spontaneous, warm-hearted, amusing, sometimes nakedly revealing of the woman who wrote them. One sees why he was reluctant to destroy them. But that he should have *authorised, indeed encouraged*, their publication so soon after her death would surely have shocked Rose Macaulay to the heart. How it can be regarded as anything but the betrayal of trust it is very *difficult to see.*

Two plausible reasons can be alleged, the one literary, the other propagandist. The first appears in the publishers' blurb, to the effect that these letters are a wonderful find, and Rose Macaulay "one of the great letter-writers of this century." This is a large claim. Her novels and broadcasts had great charm and wit, but she never ranked as a major figure in the English literary scene. It is questionable whether these letters, certainly intensely characteristic, do exhibit qualities of mind, heart and spirit that she did not distil into her published works. To many readers they will appear repellently full of churchy small-talk; the blending of seriousness and flippancy is not always attractive; and a vast deal of time is spent on establishing a distant kinship, which meant much to both of the people concerned, but less to us.

The second reason for publishing these letters is, no doubt, that they may be supposed to influence, for good, people who have become estranged from their church. They do exhibit, to sympathetic eyes, the process of release from a long-lasting sense of guilt and the joy of restoration to full participation in the common life of prayer and the sacraments. But there is all the difference in the world between Rose Macaulay's rather fastidious and literary concern with the externalities of worship and the deep religiousness of Simone Weil, the rare quality of whose spirit fully justified the publication of her letters to her spiritual adviser. *One doubts whether anybody but* a lapsed Anglican could derive much stimulus from Rose Macaulay, whereas Simone Weil speaks to anybody who has ever pondered the mysteries of faith. It must, however, be added that the collection of letters as a whole gives a far less distressing impression than the first selection printed in *The Observer* as advance publicity for Miss Babington Smith's book. This, in its concentration on the most intimate disclosures, distorted the tone of the correspondence, which was conducted in the most civilised and often entertaining terms. Far worse than that, it shocked and alienated many, even of the devout, who might now *think* twice about opening their hearts on paper to a priest. Unquestionably, it exposed Rose Macaulay's innermost life to a publicity she would have abhorred.

King and Emperor

Citizen-King

By T. E. B. Howarth.
Eyre & Spottiswoode. 344 pages. 30s.

Democratic Despot

By T. A. B. Corley.
Barrie and Rockliff. 413 pages. 42s.

LOUIS-PHILIPPE and Louis Napoleon (better known as Napoleon III) are, beyond question, rewarding subjects for biographers. Both came to power in the wake of successful insurrections, thus confirming the axiom that they who make a revolution seldom finish it; both fell because of their own incapacity and the inadequacies of the systems they had created, thus confirming the other axiom that revolutions are successful not by virtue of their own innate strength but of the incompetence of their opponents; the lives of both gave them exceptional experience of the world of their time (each had a period of exile in America); above all, each experimented in what still seems to be the impossible task of pacifying and stabilising French politics. Their careers fulfil that prime requisite of the rewarding historical subject, by throwing light on the enduring and on the present, as much as on the transient and the past. These books* about them are therefore to be welcomed with special eagerness.

Neither, perhaps, quite measures up to the challenge of its theme. Mr Corley, principally concerned, as the matter of his book makes plain, to chronicle a reign and analyse a regime, has nevertheless tried to force his material into the shape of a straightforward biography. This means that the reader too frequently loses sight of the principal figure in a maze of explanatory and exploratory matter, while, by a perverse paradox, failing to grasp wholly the nature of the crises, conflicts and systems, both national and international, among which Napoleon worked out his destiny. Mr Corley, in short, has written a flat and reliable textbook, which will be useful to

* "Citizen King" is to be published on November 9th.

Garth Christian's
"DOWN THE LONG WIND"

Many more people than ever before are taking an interest in wild birds and this absorbing and original book is a personal and scientific study of bird migration. Illustrated with superb photographs by Eric Hosking and Jane Burton. Jacket design by Peter Scott. 21s.

Philip Wills'
"WHERE NO BIRDS FLY"

It is acknowledged throughout the world that no man has done more for gliding than the author of this book, Philip Wills. After thirty years' experience, including the winning of the World Championship in 1952, he tells here with humour and modesty of many of his famous flights. Foreword by Peter Scott. 21s.

Ernest Raymond's
"PARIS"

A fascinating insight to this enchanting city . . . a look beyond the normal sightseeing views of Paris written by a master story-teller who has a deep love and a sincere fascination for his subject. Not a guide book but rather a companion for all who enjoy this lovely city. 25s.

DARTON, LONGMAN & TODD

students. It has certain blemishes: for example, the author is much too uncritical of his hero, and never seriously questions his judgment, still less the significance of the entourage of shady financiers and shady politicians who governed under the Emperor. Mr Corley is an economist by profession, and has much of interest to say on the business aspects of the reign; but he does not always avoid the jargon of his calling.

Mr Howarth is a schoolmaster, but, except for his uncomradely gibes at Louis-Philippe's brief career as an usher in Switzerland and its effects on his character, one would never guess it. The only real criticism of his book is that it is too brilliant, too wise, too short. The author has confined himself strictly to the life of Louis-Philippe, never allowing himself a tempting excursion into irrelevant fields of social, economic or diplomatic history. But in resisting the temptation to write a general textbook for his pupils (not that it can be a very pressing temptation for a man who tells a *risqué* anecdote so well as Mr Howarth) he has also denied himself the privilege of saying the last word on the July Monarchy. He makes plain the fundamental instability of that patched up defence against the liberal tides of the first part of the nineteenth century, and demonstrates yet again how the king's refusal to countenance an extension of the franchise and Guizot's refusal to depart from the strictest form of *laisser faire* (each of course supporting the other) led inexorably to the regime's collapse; but the reader is surely entitled to feel that a man who is capable of doing what he does so well could have successfully attempted a great deal more. As his own bibliography makes plain, a modern, full-dress, account of the July Monarchy is much to be desired and wholly lacking. Perhaps Mr Howarth may yet turn his hand to the job.

Meanwhile he has given us this just and graceful work. In it he convincingly presents Louis-Philippe as both amiable and able, making us feel that, though perhaps he came to his throne too late, France was lucky in being ruled by him at all: he kept the country at peace and fairly prosperous for nearly twenty years, which is more than can be said for either of the Napoleons. Mr Howarth's sketches of the king's ancestry, upbringing and daily life are done with rare charm and vivacity. His quick outlines of the personalities of the men he deals with, though seldom more than a sentence long, are almost invariably just—one might except his remarks on Lamartine, though he hits off the poet's weaknesses precisely. He is very seldom too charitable to his subject, and when he is so, makes an honest man's botch of the business, as on the question of the king's avarice. He includes effective

short accounts of the three French Revolutions. All in all, an excellent book.

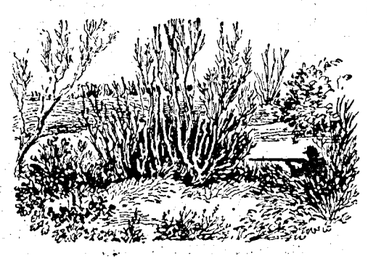
Of Rats and Men

Behaviour

By D. E. Broadbent.

Eyre & Spottiswoode. 215 pages. 21s.

PSYCHIATRISTS and clinical psychologists, confronted with desperate problems of human happiness, have used their experience of the clinical situation to evolve systems of treatment with considerable success. In the urgency of the consulting room, however, they have been able to devote little of their hard thinking to the theoretical background that co-ordinates their methods. Indeed, they have diverse theories which, although mostly stemming from Freud, are incompatible in many ways and yet cannot by their nature be evaluated against each other—they are based too much on intuitive judgments, and have structures too flexible to permit rigid tests.



Less well known than the clinicians, perhaps because most of them live in ivory towers, are the experimental psychologists. Although the monastic tradition does not permit its ivory towers to be comfortable in a material sense, their inhabitants are shielded from some of the external pressures, and can afford laboriously to lay brick upon brick, to erect and reject theories of behaviour with tangible and repeatable evidence. It is with this latter group that the present book is concerned, and the author demonstrates that the bricks are being used not to make the towers more impregnable, but to build a causeway to ordinary life so that facts, ideas and theories can flow in either direction. Most of these experimental psychologists can be described as "behaviourists" as they are concerned with directly observable behaviour rather than subjective feelings—although this does not eliminate so very much, for speech is directly observable behaviour. This emphasis on behaviour was formulated by J. B. Watson at the time of the first war as a reaction against the introspective psychology of the preceding decades. The progress made possible by the change in the climate of opinion that followed Watson's publications is traced in this book.

Most behaviourists work in a laboratory, and many of them use the white rat as an experimental animal. Some may question the relevance of work on the rat to human problems, and they should certainly read this book. Throughout the author alternates between controlled experiments on animals and issues of everyday life. What is the best way to teach children? Is it true that punishment produces more long-lasting effects than reward? If so, can rewards be given in such a way as to produce a long-lasting effect without production of the anxiety which punishment entails? What sorts of conflict are most likely to produce profound disturbances of behaviour, and why? How can they be avoided, or their

effects reduced? Just how does learning occur, and how complicated are the processes by which we learn our way from Liverpool Street to a restaurant in Piccadilly? For these and many other problems behaviourists are producing new evidence, and evidence which is based on precise observation whose reliability can be assessed. Their approach is providing a sure foundation on which to base both clinical practice and many decisions of everyday life.

However, the progress they are making has not gone to their heads. "The discrepancy between our partial success . . . and the human problems which surround us, is appalling." But even a realisation of the complexity of the problem of how a rat learns a maze is sufficient to justify a mistrust of many of the dogmatisms passed in newspaper editorials, pulpits and school prizegivings.

Rightly, the book reflects the author's own interests. There is scant mention of the non-learned origins of behaviour, or of the behaviour of animals other than rats and men; and physiology receives only a sincerely respectful but cursory nod. But the author has succeeded in covering a fairly clear area of study, in laying bare the controversies within it, and in demonstrating its significance, with an almost complete lack of technical jargon and a clarity that could well serve as a model for other scientists writing for the non-specialist.

An illustration by Lynton Lamb for James Hawker's Journal: **A Victorian Poacher,** edited and introduced by Garth Christian. *Oxford University Press.* 136 pages. 12s. 6d.

In this year 1850—when I was 14 years of age—I first commenced to Poach. My Father Had Tried to Better our Position Lawfully and had failed. So I was determined to try some other means. I was surrounded by every Temptation. The Class that starved me certainly tempted me with all their Game and Fish. Having no Gun, no net, no Dog, I was content for a time to Poach Fish with a Ball of String Hooks and Small Baits. I would catch Pike Ranging from one to ten Pounds each.

Until he died in 1921 Hawker went on poaching, for food, for love and for excitement. His recollections written at the age of sixty-five are sharp, short, vivid documentary notes with the force and honesty of Daisy Ashford's and Frank Norman's unschooled style.

METHUEN

The War at Sea 1939-1945

Volume III Part II

BY CAPTAIN S. W. ROSKILL, D.S.C., R.N.

The final volume in the series describes the climax of the seaborne offensive in all theatres of war. Told in the author's distinctive style, it gives a stirring account of such events as the Allied landings in Normandy and the South of France, the Battle of Leyte Gulf and the end of Japanese sea power, the destruction of the *Tirpitz,* the surrender of the U-boats, and the defeat of Japan. The concluding chapter examines the lessons to be learnt from a war in which maritime power exerted such a profound influence. Fully illustrated with maps and photographs. 45s. (*post* 2s. 6d.)

Dudley Pope in John o'London's:
"A gifted writer with an almost unique understanding of maritime strategy."

Coming early November

Principles of Modern Building

Volume II. Floors and Roofs

Completes the publication of a work which is designed as a textbook for the student and a reference book for the practitioner. By instilling a knowledge of the principles of the subject, it enables them to cope with whatever new techniques are demanded by changing circumstances. Volume I, published in 1959, dealt with the principles of the functional performance of the building as a whole and their application to walls. This volume carries on the application to floors and roofs. No manufacturer of building components should be without a copy. Fully illustrated and indexed. **17s. 6d.** (*post extra*)

Volume I is obtainable at 20s. (post 2s. 3d.)

The National Builder reviewing Volume I:
". . . has been described as a 'must' for architects. It is a 'must' for everyone concerned with building."

THE FORGOTTEN SMILE

From *The Constant Nymph* to *Lucy Carmichael* and *Troy Chimneys* Margaret Kennedy has been one of the consistent best-sellers of our time. Here is all the old story-telling magic in this story of how a sleepy, sun-soaked isle defied the twentieth century in the form of an archaeologist and his household. 18*s.*

MACMILLAN

The Art of Persuasion

Dust in the Lion's Paw: *Autobiography 1939-1946*

By Freya Stark.
Murray. 297 pages. 25*s.*

THE Almighty dealt Miss Freya Stark some aces and a joker, and the latter is her capacity for perceiving the essence of a human situation and fixing it for us in some neat phrase, either uttered or on paper. This volume of her autobiography opens with the home truth that our own lives always seem to us three dimensional "against the apparently flat and simple surface of our neighbours." But, she adds, "as we unravel our thread we find—there, in the lives that touched us—the origin or echo of every mood we thought of as our own." This again is true, but this volume does not illustrate the point. In contrast to the best of its predecessors ("Traveller's Prelude") it fails to show others in the round. Perhaps this is too much to ask, for, whereas, then, Miss Stark was a girl and needed a supporting cast, here she is a mature, experienced and confident woman—one of dimensions enough to fill any book without digression upon the admirers, hosts, employers, warders, escorts, letter-boxes and victims who criss-cross her way.

The book is the story of her war. At its outset, she joined the Ministry of Information, which judiciously employed her at point after point where she could use her tongue. And so we follow her from contests with the Italians in the harems of the Yemen to a threatened Egypt where, in 1940, "if we took to leaning against anything it would be a fifth column," and on to Iraq where, in 1941, the cloven hoof was often "hidden in official slippers" but where, later, perhaps her best work was done. But not the most exacting. This was in the United States and Canada, where she was given the distasteful task of explaining to hostile audiences that there were Arabs as well as Zionists in need of Palestine.

Much of this was costly in effort, both physical and mental. To be paid to be pleasant mars human relations; so does feeling bound to bring the talk round to Palestine during every chat, in between lectures to "awful open beaks like unreasonable fledglings"; "but I have enjoyed all my work during the war so much that I feel rather glad to make a sort of offering of something I don't like to do."

She contends that "persuasion looks like the weapon of the future" ("with annihilation as the alternative") and, using the war as a training ground, she distils the essence of the art. First, you must have some goods to purvey; propaganda was an uphill job when we were "singing Land of Hope and Glory notwithstanding the fall of Singapore." Next, you must have complete faith in your own message; thirdly, you must be able to show that all or part of it is in the interests of those to whom you speak. In the course of distillation, she utters some shrewd remarks about past British shortcomings in the field of public relations in the Middle East—notably, about failure to proffer education alongside administration and justice. She has also much of interest to say about the value that can be obtained if, far beneath the level of ambassadors who are bound to deal with *ancien régimes* and vested interests, lower forms of life are employed to make friends with the opposition and the juvenile kickers-against-the-pricks.

Psychologically, she is penetrating; politically, her judgments are more facile and less valuable. For instance, her contention that Britain lost the commanding position it held in the Middle East in 1945 simply because it infringed the basic rules of persuasion by its Palestine policy entirely leaves out of account at least fifty per cent of the reason for its decline. This is that, given the relations with Stalin that led to the lip of war over Berlin in 1948, a government that was keen to behave to Egypt and Iraq as it was doing to India judged that it could not do so because of the greater vulnerability of the Middle East, and so hung on to bases long after it was possible to do this and remain persuasive.

But this flaw, if it impairs the instruction, does not mar the entertainment. All must award a doff of the hat and a wave of the hand to a woman ingenious and resilient enough to evade imprisonment by telling an Iraqi frontier guard that she cannot possibly be imprisoned unless he supplies a lady's maid. This argument, unanswerable at Khanikin in May, 1941, speeds her on her indomitable way.

Nothing Nasty in the Wodehouse

Wodehouse at Work

By Richard Usborne.
Herbert Jenkins. 224 pages. 21*s.*

A PERSONIFICATION of the wistful years we live in is Mr P. G. Wodehouse still busily writing at eighty years of age—and still being busily read—about some of the (imaginary) things we are wistful about. The best books about Mr Wodehouse's books are his own autobiographical writings; he has lasted so well because he writes so well and works so hard; never sentimental (or serious or reverent), and always a craftsman, he has not wilted with time. Mr Usborne's book is really a series of footnotes to what Mr Wodehouse has told us of himself—and to what we have glimpsed ourselves from our reading, and re-reading, of the Works.

But for all Wodehouseians these jottings are jewels. This book has the fascination of the Wisden file for connoisseurs of ageless cricketers; of old Bradshaws for amateurs of railways; of the scholarly cantrips that have made Sherlock Holmes (to whom Mr Wodehouse owed a lot) a bit of history; of back-numbers of *Chums,* the *Boys Own Paper,* the *Captain,* the *Magnet* and the *Gem* (that other octogenarian, Mr Frank Richards, hardly gets enough credit here for his part in the Wodehouse story; when we are ancient history, some smart pundit may well prove that Wodehouse wrote Richards as well, or even vice versa).

What Mr Usborne is after is quite simple. From what *ambience* did Mr Wodehouse draw his characters, their language or lingo and their attitude to the familiar society that never existed any more than did the wood near Athens or the coast of Bohemia? What is the line of descent, from contemporary and literary "influences" and in the course of the Works themselves, of the great ones: Psmith, Ukridge, Jeeves and Wooster (Mr Usborne would say Wooster and Jeeves)? Where did Mr Wodehouse's butlers, girls and, above all, aunts spring from? In what heaven is laid up the idea of the Drones Club, Dover Street, London, W.1?

That should be enough to send the fans flocking to find out how far Mr Usborne confirms, or contumeliously flouts, their own fancies. It is all provocative stuff, if a bit bitty. The best section deals with the genealogy of Psmith, with among the gems a little comparative study of "Mike" and Ian Hay's "Pip," nodding, too, to Kipling's "Stalky." This makes it timely to protest now against the absence from the bookshops and from the projected Wodehouse reprints of "Mike" itself (with the two parts in one), "Psmith in the City," and "Psmith Journalist."

NOT SO DUMB

Harpo Speaks!

By Harpo Marx with Rowland Barber.
Gollancz. 475 pages. 25*s.*

JULIUS, Adolph, Leonard, Milton and Herbert Marx were born poor on New York's East Side in the nineties. In 1918 in Rockford, Illinois, over a poker game they became Groucho, Harpo, Chico, Gummo and later Zeppo. They were on a vaudeville circuit. Gummo got drafted. Four went on to Broadway and then to Paramount. Metro Goldwyn-Mayer gave us just three and made a bit of cinema history: Groucho with greasepaint, moustache, cigar and doubled up walk; Chico, the Italian organ grinder's monkey, the one finger piano player; Harpo, the dumb zany klaxon honking loon.

Harpo can speak, and here he writes; he produces nearly twice as much as Groucho did two years ago. Throughout the recollections Harpo is always reminding us how meagre his education was, how bad his intellect, memory and sense of direction are. In spite of this, and probably with Mr Barber's help, he has made a book that is fast and racy, very American and played for laughs and occasional sobs. It does not miss the almost inevitable traps of theatrical autobiographies—the insensate name dropping, the constant cataloguing of celebrities, the fawning before top people and royalty. Death in the family and the growth of Harpo's own family are given a sugary sentimental treatment—schmaltz is the word.

The films are incidental to the book; no check list appears, and only a rough guide can be assembled from the captions of the photographs sprinkled erratically through the book. But then this is about Harpo, and in short jabs of colourful recall, often with a throwaway gagline, he punches his way through nearly seventy years.

Those fortunates who are insane Marx Brothers addicts will read and enjoy the book for the information and belly laughs it brings; maybe they will be a trifle disappointed at its faint slickness and the lack of some of the anarchic fire of the other Marxes. Those who simply like the Brothers will like the book, provided they can tolerate American vernacular. The remaining two per cent are beyond the pale: how can they bear not to be human?

THE STRUCTURE OF INDUSTRY IN BRITAIN
G. C. ALLEN

'This brief but comprehensive account of the transformation that has come over British industry since 1900 is the best that has been offered, to students at least, for a long time . . . .'
The Times Educational Supplement

'Particularly timely . . . . He bridges the gap between the problems of individual firms and those of the economy as a whole.'

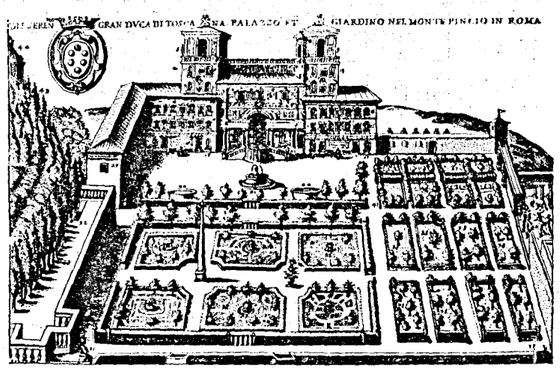
Light, Shade and Space

Italian Gardens

By Georgina Masson.



Thames and Hudson. 300 pages. £4 4s. (To be published on Monday.)

As one turns the illustrated pages of this book, looking over the shoulder of Miss Masson as she takes her photographs from the window or the terrace of one great villa after another, it is difficult not to exclaim aloud at the boldness with which men have moulded nature to their will. This is not the conquest of space ; it is the creation of it. Here the warmth of the sun, there the cool of water are trapped to comfort the body and gladden the senses ; but above all light is related to shade, snug enclosure to liberating space.

Miss Masson tells us that as she studied these Italian gardens she became more and more aware that "in the eyes of their creators at least they were replicas of the gardens of classical times." This led her to a study of the antique architectural sources at the disposal of the Italian garden architects of the Renaissance and of their predecessors. As with the other arts the classical idea was revived long before it was generally talked about. As early as 1070, when St Benedict rebuilt the Abbey of Cassino, he called it a "Paradise in the Roman fashion." This compulsion to follow classical precepts was perhaps even less constricting to the Italian creative spirit in gardening than it was in painting or sculpture or architecture. There were fewer models to imitate, though enough of Hadrian's villa had survived to inspire, for instance, the famous water parterre at the Villa Lante at Bagnaia and the *isolotto* in the Boboli Gardens in Florence.

Miss Masson not only has fewer rivals when she writes about the Italian garden than about the villa upon which it depends ; she seems more at home in it. The sixteen years which she tells us she has spent on the preparation of this book, during which she discovered many gardens not before recorded, especially in the Marche and Northern Italy, were evidently enjoyable to her and will be as fruitful for us. She has given us a chapter on Roman gardens and another on mediaeval ones, while the more abundant gardens of later time are grouped by regions in a way that should prove convenient to the intending traveller.

Lastly, there is a botanical appendix which will be both absorbing and useful to anyone who has tried to identify or name flowers that are to be found in Italian Renaissance pictures.

An early print of the Villa Medici, Rome

Complex Relationship

Elizabeth and Leicester

By Elizabeth Jenkins.

Gollancz. 384 pages. 21s.

"Gods death, my Lord, I have wished you well, but my favour is not so locked up in you that others shall not participate thereof. . . . I will have but one mistress and no master."

"And they say she is in love with Lord Robert and will never let him leave her."

These two quotations, the first said by Elizabeth herself to Leicester in public, the second written by the Spanish ambassador, are the pivotal points of this book, for they give the two extremes of the complex relationship between Queen Elizabeth and Lord Robert Dudley, Earl of Leicester, which is its central theme. Miss Jenkins has theories of considerable interest to offer. Like Lytton Strachey, she thinks Elizabeth was incapable of a normal relationship with any man, and that beyond any political considerations there was a mental bar to marriage that could never be broken. Burghley's careful and revealing memorandum on the relative merits of Leicester and the Archduke Charles as possible husbands for the queen was therefore so much waste paper. Even the desperate need of the country for an heir to continue the Protestant succession was not sufficient. In "Elizabeth the Great" Miss Jenkins gave the reasons for this most clearly ; to Elizabeth marriage was in her childhood associated with violent death. Her mother, stepmother and the virile Thomas Seymour had all been executed. The difficulties before Leicester were therefore insuperable, but it was some years before he accepted the fact.

That Elizabeth loved him is borne out by innumerable details, and this explains why she continued her favour in spite of Leicester's many shortcomings, in spite of the scandal over Lady Sheffield and his marriage to the Countess of Essex. At his death she shut herself away for two days until Burghley had to force open the door.

Leicester himself is a far from admirable character. He was vindictive, egoistic, and politically inept. He was even capable of intriguing with Spain to re-establish Catholicism in England if he could marry Elizabeth. Burghley's estimate of him as a potential husband is that he would study nothing but to advance his friends to wealth and to offend others. In 1586, in defiance of the queen's instructions, he allowed himself to be made Governor-General of the United Provinces, thus wrecking Elizabeth's policy of "brinkmanship" in the ticklish business of supporting rebels against their sovereign: an indiscretion which called forth one of Elizabeth's more scathing letters:

> Jesus! What availeth wit, when it fails the owner at greatest need. Do that you are bidden, and leave your considerations for your own affairs.

In spite of contemporary scandal, Leicester was probably not guilty of murdering his first wife. The latest theory, based on medical evidence, is that she suffered from a malignant cancer, which indirectly caused a broken neck. The disputed question of Leicester's marriage with Lady Sheffield is dealt with in some detail. The evidence produced by Miss Jenkins makes it probable that no valid marriage was contracted, but adds a touch of humour to the wedding ceremony with Lady Essex, when her father, Sir Francis Knollys, took care to be present with reliable witnesses.

In contrast to the darker side of his character, Leicester was patron of artists like Edmund Spenser and Nicolas Hilliard, and his love for the queen, though selfish, was deep and sincere. Their affection lasted throughout their lives, and is revealed most poignantly in their letters.

History concerns people, not shadows. Miss Jenkins is keenly aware of this, and writes about people for people rather than affairs for scholars. As a result, the book is full of descriptions of clothes, furniture, jewellery, which she uses as a background to her characters to intensify their reality.

VIEW FROM THE WEST. By Claud Cockburn. *MacGibbon and Kee.* 208 pages. 21s.

This is the third volume of Mr Cockburn's own story. The guest star in the first volume was Sir Wilmot Lewis of *The Times*, who nearly stole the show; this time it is Mr Malcolm Muggeridge of *Punch*, who so won Mr Cockburn's affection and admiration that he tries hard here to unlock that far from stony heart.

But Mr Cockburn's best creation is himself. Mr Cockburn in hospital facing tuberculosis, cancer and death ; Mr Cockburn astounded to find himself alive, uproariously and abortively planning new papers for Hulton's, and a Muggeridge's *Punch* writer; Mr Cockburn coping, movingly, with the onset of polio upon his family; Mr Cockburn thinking aloud, mordant but kindly, about everything under the sun. It is all well written because it is all freshly and honestly felt.

The Beecham Legend

Sir Thomas Beecham

By Neville Cardus.

Collins. 126 pages. 12s. 6d.

Thomas Beecham

By Charles Reid.

Gollancz. 256 pages. 21s.

Two well respected musical critics here offer us two notably different assessments of Sir Thomas Beecham. Mr Cardus, it seems, was nominated by Beecham as his biographer ; but his modest book is much more a portrayal and memoir and does not attempt a detailed pursuit of Beecham's life from that Wednesday in December, 1899, when he stood in for Richter ("those damned foreign importations") to conduct the Hallé Orchestra at St. Helens, ordered up from Manchester by his father Joseph to make an occasion, with the lobsters and foie gras, at his mayoral reception. Beecham opened this concert with the Mastersingers overture. Twenty-five years later, he opened a concert at another desolate provincial town with the London Symphony Orchestra with the same work, and by it set more than one young listener on the road to musical appreciation—and to adulation of Beecham ; on this occasion, as on so many others, he made a typical speech, too subtly rude for the Midland "squares" but vividly cosmopolitan for the teenagers of that time, who were with it and him. For how many thousands is the Beecham legend an equally vivid personal experience?

Mr Reid's book is featured as "an independent biography." Just what this formula means does not emerge too clearly from the pages. He gives all the details—the divorce proceedings in 1911, for example, so boring fifty years after, and Beecham's financial troubles after the first war. (Mr Frederick Maugham, KC: "My client has spent a fortune in advancing music"; Mr Justice Eve: "And what good does that do anybody ? ") But his assessment of Beecham's musical limitations is remarkably close to that of Mr Cardus:

> With only minor and expedient or experimental deflections his career ran clean against the Stravinsky-Bartok axis which, at this writing, seems likely to dominate European musical history over the first half or more of our century. Apart from Delius, the only composer among his contemporaries to whom, a little belatedly, Beecham responded roaringly and consistently was Jan Sibelius, the Finnish sage and seer, as many deem him.

So Mr Reid—very fairly said both about Beecham and Sibelius. Mr Cardus recalls that Beecham's detractors said that he was at his best conducting second-rate music. What he could do with his "lollipops" was indeed staggering. His musical range was limited, particularly in his response to German music, among which he found time for some Haydn, some Mozart, some middle Beethoven and one symphony of Brahms. How many in a generation's time will be listening to Delius or *Ein Heldenleben*, which Beecham glorified ? Yet as Mr Cardus fairly claims, no other conductor has equalled Beecham in the consistent dispensing of musical pleasure. Mr Cardus, who had long known Beecham, became his friend in, of all places, Australia in 1940. It must have been a strange tour, but evidently a warming one. The two had quarrelled six years earlier when Mr Cardus took Beecham to task for some outrageous cuts he made in *Der Rosenkavalier*. They settled it a year or two later, meeting by chance in a hotel lift. "It is time," said Beecham, "that we buried the hatchet—but let us carefully mark the place."

Uncle Sam's Burden

Little Brown Brother

By Leon Wolff.

Longmans. 383 pages. 30s.

Disapproval obviously inspires Mr Wolff's pen. His first book was about the bombing raid on Ploesti, his second about Passchendaele and his third about the venture of the United States into imperialism in the Philippines at the turn of the century. To say that it is less good than his second is not to be insular, for all that judgment recognises is how good "In Flanders Fields" was. Judged by any other standard than what Mr Wolff has created for himself, this is a fine piece of historical reconstruction. His researches are meticulous, his eye for detail or a character alert, his style lively and his theme just.

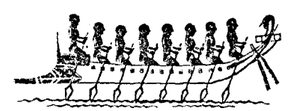
The American essay in jingoism reads very much like essays in colonialism by other great powers at the end of the nineteenth century. The United States, or at least some sectors of its society, wanted to be in the act. Plausible pretexts were found for an annexation that at this distance of time does not appear to have been morally justified. The American Army, like others before it and since, found it practically impossible to impose its government's will on a hostile population that had the heart, courage and means to resist and whose leaders had the sense to see that the strength of their cause was best expressed in guerrilla warfare. Savagery often accompanies such fighting and in the Philippines brutality was matched by brutality, reprisal by reprisal and there is some evidence that both sides on occasion tortured prisoners. It is much to the credit of such men as Mark Twain that they protested at the time against these aspects of enlightenment and civilisation. The Americans were neither the first nor the last to ask in the words of a parody that appeared in the *New York World*:

> We've taken up the white man's burden
> Of ebony and brown ;
> Now will you tell us, Rudyard,
> How we may put it down?

Graham Greene
IN SEARCH OF A CHARACTER

Two African Journals. From the "Congo Journal", which is the first part of this book, came much of the material used in *A Burnt-Out Case*.
The other, shorter journal, "Convoy to West Africa", covers a voyage from Liverpool to Freetown in 1941. 10s. 6d.

100,000 YEARS OF DAILY LIFE



A superbly illustrated volume, giving a complete panorama of man's daily life in every age and continent. The narrative is keyed to the illustrations—863 of them (33 pages in colour). Size 11¾" x 9¼". 90s.

CAVALCADE OF THE 1920s and 1930s

The great and famous of the era appear in photographs and other illustrations, or as contributors in this anthology from the cosmopolitan American *Vanity Fair*. 476 illustrations (8 pages in full colour).

BODLEY HEAD

Plays and Players

Each Actor On His Ass

By Micheál MacLiammóir.

Routledge. 248 pages. 25s.

George: *An Early Autobiography*

By Emlyn Williams.

Hamish Hamilton. 461 pages. 25s.

THE title may cause sniggers in the United States. It even has a double meaning in Irish, the language from which it was translated, for "ar an asal," "on the donkey (or ass)" means the same as "footless" does in English. Mr MacLiammóir wrote these two long theatrical essays in diary form for a Dublin publisher who specialises in Irish books. It is as brilliant as everything he undertakes and naturally of course sometimes as superficial.

If a man writes in one language and translates himself into another—taking it that he is bi-lingual—nobody, presumably, can argue with him. But it would still be fascinating to know how any other translator could put this passage of Mr MacLiammóir's English back into the original:

> I like your boldness, *cher ami*! cried he (really it is a pity Bram Stoker never met him). You are Micheál, yes? I am Ali! *Salute*! Ali, Micheál, Micheál, Ali! ..(Was convinced it was going to be something like Haroun al Raschid or at least Marco Polo, but no: Ali, just like that, so I firmly quelled well-nigh irresistible impulse to sing "Sally, Sally, don't ever wander, away from our Ali and me" fearing it would date me.)

It would be a genius who could bring out those hints of "Dracula" and Gracie Fields without resorting to footnotes. More lyrical, less brittle passages are easier to imagine in translation, as:

> And here we are tonight at the end of our season. We played *Seagull* to the best audience it has found so far, I think, and was of course followed by emotional speeches and by subsequent emotional drinking of champagne . . . this Island will never walk into those parts of my being where Egypt lives: it has a place, small yet vivid, all to itself. The plays are played, our work is done, the devious, festive, sad and laughing journey is over, the invitations to make holiday in a series of houses flow in. . . .

The serious intent is never deeply buried beneath Mr MacLiammóir's bubbling and squeaking. He can take anything seriously, if forced to it, even himself. Equally he can be wickedly witty about anything, including himself: for instance, when he gives a sparkling description of tarting up beyond any reasonable needs of the part to play the Prince of Aragon in *The Merchant of Venice* in Cairo then swaggering on to the stage "... unhesitatingly into the Prince of Morocco speech . . . of which I delivered five whole lines before realising it had been played by Reg Jarman half-an-hour before. . . . A shameless exhibition." Yet one expects he enjoyed the doing of it as much as the describing of it.

Orson Welles, Eartha Kitt and Hilton Edwards are other leading characters in this traveller's diary-tale. It does not shake any theatrical theory or enunciate any new faith —but it is a book to be read by all who think of the theatre as a place of colour and joy and perfumes mixed with grimness and frustration and smells. It is a book of the actors' theatre, not of the press-agents'.

THIS is a very remarkable book. If it has a fault, it is that Mr Williams, being an exceptionally clever man, is sometimes almost too clever; he writes so well that sometimes he is tempted to write even better, and by verbal virtuosity to embellish material that needs no embellishment.

"George" is a long, detailed, fascinating account of Mr Williams's first twenty-one years, before he earned the fame that came to him later under his other name of Emlyn. It is an extremely moving account of how a boy, under the most unlikely circumstances, succeeded in becoming the man he was intended to be; and it is at the same time an extraordinarily vivid social document, describing a way of life that by now has almost ceased to exist. In the richness of its detail, observed with an extremely sharp eye and preserved by an astonishing feat of memory, one may distinguish three dominating themes.

There is first of all the story of an astonishingly gifted boy, who from a small Welsh primary school made his way up the scholarship ladder to Oxford and Christ Church. This was over forty years ago, and the qualities required then for such an achievement are even rarer than those which qualify for success in the educational rat race of today. The story is all the more dramatic because, academically, it ended in the catastrophe of a nervous breakdown.

There is also the theme of the poverty stricken Welsh environment in which Mr Williams played his part of the clever schoolboy, which he continued to play until at Oxford he discovered that his true gifts were for the theatre. His mother had been a domestic servant; his father was a drunkard. One was puritanical, narrow-minded and thrifty; the other weak, generous and openhearted. Mr Williams describes both with the same love and gratitude as pervade the whole of his book, as if he felt that in all things he had been lucky, down to the most sordid and squalid details of lives that were hardly ever above the poverty line, and sometimes very near the subsistence level. Indeed he was lucky; only it requires a man of his own sensibility to see it, and to make us see it too.

Lastly, there is the theme of how George, in these unpromising circumstances, and amid his scholastic preoccupations, seized upon every scrap that could nourish his imagination, so that all the time we are watching the growth of a mind that was to find its true fulfilment in the theatre.

Each of these three themes enriches and illuminates the others. Sometimes in reading "George" one has the sensation of *déja vu*, because so much of it, particularly the portrait of Mr Williams's astonishing schoolteacher and patron, Miss Cooke, has provided material for *The Corn is Green* In the end one is left with the feeling that here the material has been put to even better use, and that the book deserves an even greater success than the play.

Which Way Round?

An Experiment in Criticism

By C. S. Lewis.

Cambridge University Press. 143 pages. 15s.

THIS is a highly engaging squib. Professor Lewis is a good writer, a learned man, and far too honest to put anything out on the world without adequate backing. But how seriously are we to take him? Here is the insoluble question which one must ask about anyone who dares to turn the world upside down. This is his thesis: we normally judge people's taste by asking whether they read good or bad books; would it not be more sensible to judge books by asking whether they are read by good or bad readers? Hence, very felicitously, he proceeds in many directions.

Let us jump at once to the polemic end of the book. The squib lands on the tail of what Professor Lewis calls the Vigilants, those evaluative critics who lay down the law to the young, condemn certain books and authors, and thus at the start prevent that fruitful conjunction which he describes as "reader meets text." It follows from his thesis that if any serious reader, not casual in his approach to literature, has read and re-read any book with delight, it is hard to claim that this book has no virtue, however far it has fallen out of fashion. If one accepts this, final condemnations of books once seriously admired are impossible, and vigilant criticism is out at one blow—but of course so is much else. Are all reversals of literary fortune and judgment meaningless?

Let us leave the polemics to the polemists. There remains a core of something serious. This approach to literature has several clear weaknesses. The first lies in defining a good, or serious, reader: Professor Lewis, as a religious man, is at home with moral concepts and takes this in his stride, not altogether convincingly. The second lies in the difficulty of application. The third is the muzzling effect on critics, who can only dispraise what has never been seriously praised. But there are two great strengths in his approach. The first is a practical warning to teachers, not to condemn too absolutely, lest a coming generation which will have a different taste be discouraged from forming their own views about works that have given serious pleasure in the past The second, more important, strength is his emphasis on what actually happens when people read. In a short book he cannot carry this far, but the experiment—his work —deserves to be carried further: dare one say scientifically? Pending more exhaustive researches, all serious readers can be assured of getting some very stimulating ideas and a lot of fun from this book.

Bushman of the Kalahari

The Heart of the Hunter

By Laurens van der Post.

Hogarth Press. 256 pages. 21s.

THIS remarkable and moving book is Mr van der Post's second instalment in his story of the Bushman of the Kalahari Desert, a labour of love and true reverence for humanity that is rare and memorable. The present volume is a much better book than its immediate predecessor, "The Lost World of the Kalahari"; for here Mr van der Post steps over the petty worries and annoyances of his hard journey, and tells us directly what he knows and feels and believes about the remote Bushman communities and individuals whom he encountered and came to know and respect. Anyone who reads "The Heart of the Hunter" will surely want to read its companion volume but will come back, just as surely, to the greater pleasure and satisfaction of the later book.

Here he takes up the story of his Kalahari wanderings when they are nearing an end: "on the way out from the central desert" but "still deep in the Kalahari, moving slowly through a difficult tract of country into which the rains as yet had been unable to break": the "Great Thirstland" of grim and mortal memory and reputation. There is shortly a wonderful encounter with a little group of Bushman, men, women and children, who stumble out of the empty land in the last stages of exhaustion and are revived by the water-cans of Mr van der Post's expedition. With this incident, as repeatedly through his book, the author brings off to perfection his difficult enterprise of "personalising" the Bushman for a modern and an urban audience. Suddenly and splendidly the familiar focus shifts, and the vague and squalid figures of a small stone age community are refined, and grow into people, into persons one can know and understand, into human beings one can even love and admire.

All this is strange and good alchemy, and the magic continues when the writer turns in the second part of his book to his description of Bushman myth and motive and cosmology. At this point the reader may shift a little uneasily in his armchair, and the brutal and licentious reviewer, if he has managed to retain any feelings of decency, will put a bridle on his clattering typewriter and tread the keyboard more softly. For here, indeed, he is treading on Mr van der Post's dreams, and entering upon "a great lost world to be re-discovered and rebuilt, not in the Kalahari but in the wasteland of our spirit where we [have] driven the first things of life, as we [have] driven the little Bushman into the desert of Southern Africa." Bushman metaphysics, as they are illuminated here, are very beautiful; but it is sometimes hard to know where they end and where van der Postian metaphysics begin. And it is sometimes hard to understand what is being said.

> The passion of the spirit, which would inspire man to live his finest hour dangerously on the exposed frontier of his knowledge, seemed to me to have declined [in our modern world] into a vague and arid restlessness hiding behind an arrogant intellectualism. . . .

For Mr van der Post, the Bushman stands for Man's pure innocence before the Fall, and nobody has argued more cogently than he that a lot of knowledge is a dangerous thing; but the manner of his argument, once he passes from his experience in the Kalahari, becomes sadly obscure. Perhaps you have to be Pascal to do this kind of thing with any success: as it is, we can be grateful to this writer for an unmatched description of an almost unknown branch of *Homo sapiens*. There are some excellent drawings by Maurice Wilson.

Retreading Africa's Past

The Lake Regions of Central Africa

By Richard F. Burton.

Sidgwick and Jackson. 2 volumes. 436 and 476 pages. £4 4s. 0d.

BRITAIN'S new frontiers in the nineteenth century, whether in industry or trade, learning or technology, or empire-building, were manned by a remarkable crop of "characters," men of gusto, originality and, above all, curiosity. One of these was Richard Burton, an angry young man from the Indian army who went venturing into Africa. The sun is setting quickly now on the British Empire in Africa, and it is astonishing to realise how very short the day has been. A hundred years ago the simple geographical facts were still being sought.

This book, splendidly reprinted with the original illustrations after just a hundred years, is by a brave, difficult, irritable and irritating, highly intelligent and highly articulate man who had bad luck but ranks high indeed among both explorers and nineteenth-century Englishmen. Its reprinting is another sign of the lively interest of the retreating Englishman today in his brief African past, which matches the interest of the indigenous and emerging Africans in the longer past they have lost. It makes the best of reading because it is a great journey very well told.

Yet Burton was wrong about the source of the Nile and the dogmatic guesswork of his unhappy companion, John Hanning Speke, turned out to be right. The publishers are much to be thanked for these volumes, and Mr Alan Moorehead for his preface and his part in the project. Now we want in the same style, not perhaps Speke's own inferior works on the discovery of the Nile's sources, but "The Albert Nyanza," by Samuel White Baker who, indefatigably and with his indomitable wife, sewed the story up.

Old World's Roundabout

Between Oxus and Jumna

By Arnold J. Toynbee.

Oxford University Press. 223 pages. 21s.

ANYONE who has travelled east of Teheran knows that a normal requirement is the gift of time. ("The bus is not full today; perhaps on Wednesday. . . .") But Professor Toynbee, needless to say, is not in the normal category. Though he was able to allot only four months and ten days to the huge tract of wild country that he was determined to see, he was blessed with compensating advantages. He is a celebrity, and an eager one, and quickly infects companions with his enthusiasm. These three boons brought him endless assistance in enriching his experience: good fellow-travellers; good drivers; not one but two Landrovers with strong chains; provincial pundits commanding enough men and shovels to fill each chasm wrought by each frustrating torrent; and British Council officials ready to get him to his lorry by dawn even if this meant forming a rugger scrum to push him on to the train. (In the end, it never did, and the glarry that was pressed into service when the Landrover jibbed always just got through, and hardly ever was he deflected from "making a dash" for a snowline on which he had set his sights.)

The best feature of the book is the sense of fulfilment that it imparts. Maybe his companions began by saying to themselves that he was seventy-one, and they must not flag first, but—at a guess—they soon became as eager as he for more, when he began to alter the landscape for them by unfolding layer on layer of its history. For, as he explains, Afghanistan and the passes through it into India are the Old World's greatest roundabout. Round it have swirled conquerors and languages, alphabets and religions. From its high rank as a channel of communication, it was demoted for some centuries by the Portuguese invention of ocean-going ships. Now, aircraft are bringing it back into service; some years hence, when the Russians have built the tunnel that will link Kabul with their ports on the Oxus, it will once more be a main thoroughfare. Perhaps he did well to see it before it becomes so.

His book, though an exciting one, is here and there hard for ordinary readers to follow. Not everyone responds to a visual comparison with the Ghutta of Damascus, or can jump into the right century when Antigonus or the Ghaznavids are mentioned. Yet anyone can share a traveller's joy at being alive, or standing where Alexander stood, or feel nostalgia at numbering a fast-decaying British reproduction of Aldershot (Razmak in Pakistan) among the relics of past conquests. "Today I have seen Balkh with my own eyes"; to one reader, at least, the satisfaction in this sentence is equivalent

to that conveyed by Robert Curzon at first sight of Jerusalem.

For those unready to read with a good atlas at their elbow, there is one real drawback to a book issued at a reasonable price. The map supplied is hopeless. Tiny numbers denote place-names ; these, which are based on date order, have to be hunted up in a key that hangs on dates, yet the dating in the text is intermittent. A dated itinerary is printed separately, but why not have helped by printing the date at the top of every page ? As things stand, hunting in three places is tedious, and the hand holding the book has not enough fingers for the job.

Arbitrary Fellow

Growing

By Leonard Woolf.
Hogarth Press. 256 pages. 25s.

THIS second volume of Mr Woolf's autobiography covers his time in the Ceylon Civil Service, from 1904 to 1911. It ends when he decides that he is in love with his future wife and is tired of imperialism: the two motives combined lead him to send in his resignation at the end of his first home leave. But this is in no sense the record of lost years or failure. Mr Woolf had been a remarkably successful young civil servant, had got early promotion, had gained a reputation for efficiency and some severity and (like so many others) had immensely enjoyed the experience of early responsibility in outstations.

Some fifty years after these events one of Mr Woolf's admirers asked an old hand in Colombo what he remembered of him. The old hand said : "Woolf ? Woolf ? Yes, I remember him. Very able, but the most arbitrary fellow in the service." And one sees what he meant. The trouble about Mr Woolf is that he is altogether too many people rolled up into one, and his friends in Ceylon must have had some surprises, culminating in his resignation at the beginning of a brilliant career. There is the Trinity intellectual ; the anti-imperialist (only just poking his nose out of the pupa-case); the lover of all games ; the lover of animals ; the severe magistrate and the believer in strict administration ; the hater of flogging and capital punishment (here alone in the book, when he describes what he had to witness and supervise, passion flares out); and half a dozen others.

On the whole the administrator, the magistrate and the lover of nature have the upper hand in this volume, as they should: one gets an immensely intelligent and detached view of a forgotten world ; and, if it comes to that, a view of a partially, but not entirely, submerged Leonard Woolf that makes one regret that not all the half-dozen potential men whom he contains could come to maturity. One would have liked to see that character who, as he says, would have emerged if he had stayed on—His Excellency Sir Leonard Woolf, KCMG.

Other Autumn Books

In time for the Christmas market, the usual large crop of picture books for grown-ups has appeared. With the growing competition in this sphere, publishers can no longer rely for sales on beautiful illustrations alone, and there is an increasing tendency for a more scholarly text to accompany the pictures. Here are brief notices of some illustrated books not noticed elsewhere in this issue.

The main text of **The Horizon Book of the Renaissance** (to be published on November 6th) has been written by Dr J. H. Plumb. "Into the pursuit of art," he writes, "both money and social energy were poured, and the effect was as dramatic as the investment of capital during the nineteenth century in technology and invention—and in many ways similar in its results." Yet with its masterpieces staled by centuries of reproduction, it is no easy task to recapture for the general reader the freshness, the early uncertain and diffident promise, the vitality of the art, poetry, philosophy and religious life that fused into the intellectual richness of the Renaissance in Italy. It is a tribute to the many who have had a hand in this book that it succeeds in such a large measure. Dr Plumb describes the world of violence and war in which the Italian achievements took place, the cities, their buildings, their societies and their great artists who were "as common as peaks in the Himalayas." There are also biographical sketches by other contributors ; Sir Kenneth Clark, for instance, writes on Michelangelo, Professor Trevor-Roper on Francesco Foscari, the Doge who enjoyed the longest ducal reign of the Venetian republic.

Printed in the United States and published simultaneously there and in Britain, this volume contains close on five hundred well-chosen and well-captioned illustrations.

Ships and Seamen is by a well-known naval historian. The illustrations are well chosen and the captions lively, apt and informative. The book begins with a picture of a Viking ship, where the beautiful and the practical were combined, and ends with a photograph of a Polaris missile, where the flurry of foam and smoke have their own beauty, but the rocket looks like a bottle. At sea, art and utility often go hand in hand and this book respects the tradition.

From the same publisher comes **Great Houses of Europe.** Forty of Europe's outstanding country (and occasionally town) houses are here illustrated by large photographs to the accompaniment of textual descriptions of reasonable length. The book will be appreciated both by those who prefer to do their country house viewing from the armchair and by the serious minded who want to brush up on the facts before and after their tour of inspection: the tome is definitely too heavy to take along. The houses illustrated cover the Renaissance, Tudor, baroque, rococo and classical periods, including some interesting less well-known establishments. There are examples from fourteen countries, with Italy holding pride of place. The specimens from England are Hardwick Hall, Wilton, Blenheim, Syon, Claydon and Arbury. The descriptive articles are by different authors, including Ralph Dutton, John Sparrow, Sir John Summerson and Hugh Thomas. The photographs are good and well chosen, though the colour reproductions are disappointing. But on the whole the publishers have done a fine job.

Also from these publishers comes a new series called **Pleasures and Treasures,** attractively produced and illustrated books which have been printed in Italy. **Silver** and **Clocks** both trace the evolution of a craft of many centuries' standing. The exquisiteness of some of the pieces of sixteenth century silver may come as no great surprise ; the elaborateness of medieval clocks, on the other hand, may, although it should be added that they were wanted for their snob value, sundials and sandglasses still being more trustworthy timekeepers.

Paintings of the World's Great Galleries contains short histories of thirty of the world's art galleries and a guide to what is rather grandly called the principal works in each. The list is highly selective. London's National Gallery, for instance, contains about 2,000 pictures ; 79 are annotated here with rather less than half of these illustrated and described. From the Tate's even larger collection, 49 are selected. (Users of this book should note that since it was printed Seurat's *Une Baignade, Asnierès* has been transferred from the Tate to the National Gallery.) Nevertheless this book will be useful for brief visits to art galleries, although the faithfulness of the colour reproductions leaves much to be desired.

The first edition of *Phaidon's* **Egypt** was published over twenty years ago ; this third and revised edition incorporates further study. It is an elegant survey of ancient Egyptian art with 260 handsome plates of tombs, temples, statues and relief work—monuments of fantastic technical, as well as artistic, achievement.

English Furniture for the Private Collector is a helpful short guide to pieces of antique furniture that might be within the reach of the ordinary buyer: it is not concerned with the exceptional. "Antiques for the Small Collector" advises the amateur collector in a more personal style, ranging over a wide field.

The third volume has appeared in the *Macdonald Illustrated Library.* Called **Geography : Our Planet, Its People and Resources,** it has many two-page spreads, a glossary of geographical terms and statistical information. Designed by Hans Erni, it is extremely well produced.

Lastly *The Bodley Head* has produced the second volume in its visual history series. Unlike the first, which was confined to Europe, **100,000 Years of Daily Life** ranges all over the world, beginning with the cavemen and their paintings and ending with modern cities and a colour photograph of the Parliament building, Brasilia. Like its predecessor, the book has a ready reference from text to illustrations, and at the back there is a chart comparing the details of daily life through the ages in different parts of the world.

THE HORIZON BOOK OF THE RENAISSANCE. By J. H. Plumb and other contributors. *Collins.* 431 pages. £5 5s.

SHIPS AND SEAMEN. By Christopher Lloyd. *Weidenfeld & Nicolson.* 223 pages. 50s.

GREAT HOUSES OF EUROPE. Edited by Sacheverell Sitwell ; photography by Edwin Smith. *Weidenfeld & Nicolson.* 320 pages. 90s.

SILVER. By Richard Came. CLOCKS. By Simon Fleet. *Weidenfeld & Nicolson.* 128 pages. 27s. 6d. each.

PAINTINGS OF THE WORLD'S GREAT GALLERIES. Described and annotated by 29 authors. *Thames and Hudson.* 584 pages. £4 4s. (£4 14s. 6d. beginning 1962).

EGYPT. By K. Lange and M. Hirmer. *Phaidon.* 372 pages. 70s.

ENGLISH FURNITURE FOR THE PRIVATE COLLECTOR. By Anthony Bird. *Batsford.* 216 pages 30s.

ANTIQUES FOR THE SMALL COLLECTOR. By Gil Thomas. *Arthur Barker.* 160 pages. 16s.

GEOGRAPHY. Editorial board: Gordon Manley, with G. Barry, J. Bronowski, J. Fisher, J. Huxley. *Macdonald.* 360 pages. 50s.

100,000 YEARS OF DAILY LIFE. By J. Brosse, Paul Chaland and Jacques Ostier. *The Bodley Head.* 295 pages. £4 10s.

Backbench Opinion in the House of Commons 1955-59

S. E. Finer, Hugh B. Berrington, D. J. Bartholomew
University College of North Staffordshire

The division list is accepted by the electorate as useful only as an index of party loyalty. How a Member of Parliament spoke and voted at the critical binding debate in that private meeting upstairs is known mostly by rumour or leakage. Yet there *is* a means of detecting an M.P.'s personal sympathies—means which can provide an X-ray of the two great British Parliamentary parties. The picture that emerges is somewhat blurred; but it is nevertheless an exceptionally interesting image.

This book presents the picture of the two parties as they were in the Parliament 1955-59. It provides a critical analysis of the relationship between the social make-up and the shades (or divisions) of political opinion to be found in each of them. It establishes the political views of individual M.P.s on the one hand, and their political and social histories on the other. The task has not previously been attempted in any shape or manner, nor has the basic material (The Order Paper of the House of Commons) been explored systematically before.

Studies in Immigration from the Commonwealth

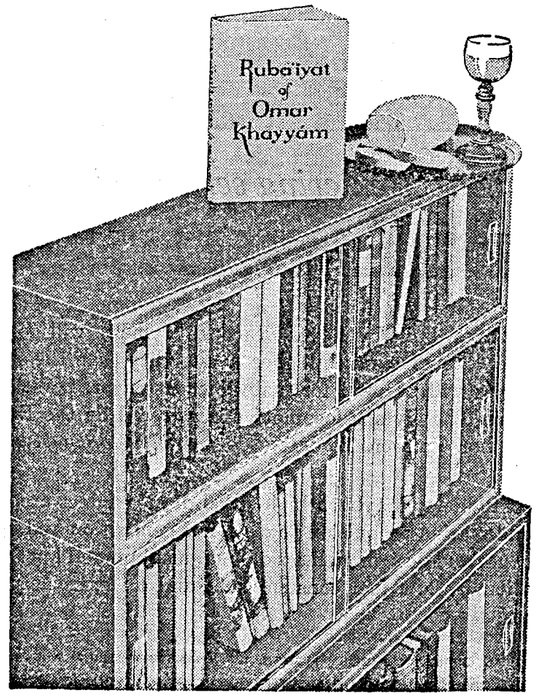
No. 1 Basic Statistics

The first of a series of booklets giving the factual background to the immigration problem. The first one—to be published on November 8th—collects together for the first time estimates of the number of immigrants from the individual countries of the Commonwealth and from Ireland.

8 pages; price 1s. (1s. 3d. including U.K. postage).

If Britain Joins

A short guide to the economic effects of membership of the Common Market, including summaries of the effect on: the iron and steel industry, motor vehicles, paper, building materials, chemicals, electrical engineering, machine tools and wool textiles.



32 pages; price 6s. (6s. 6d. including U.K. postage).

Obtainable from any bookseller or from:—

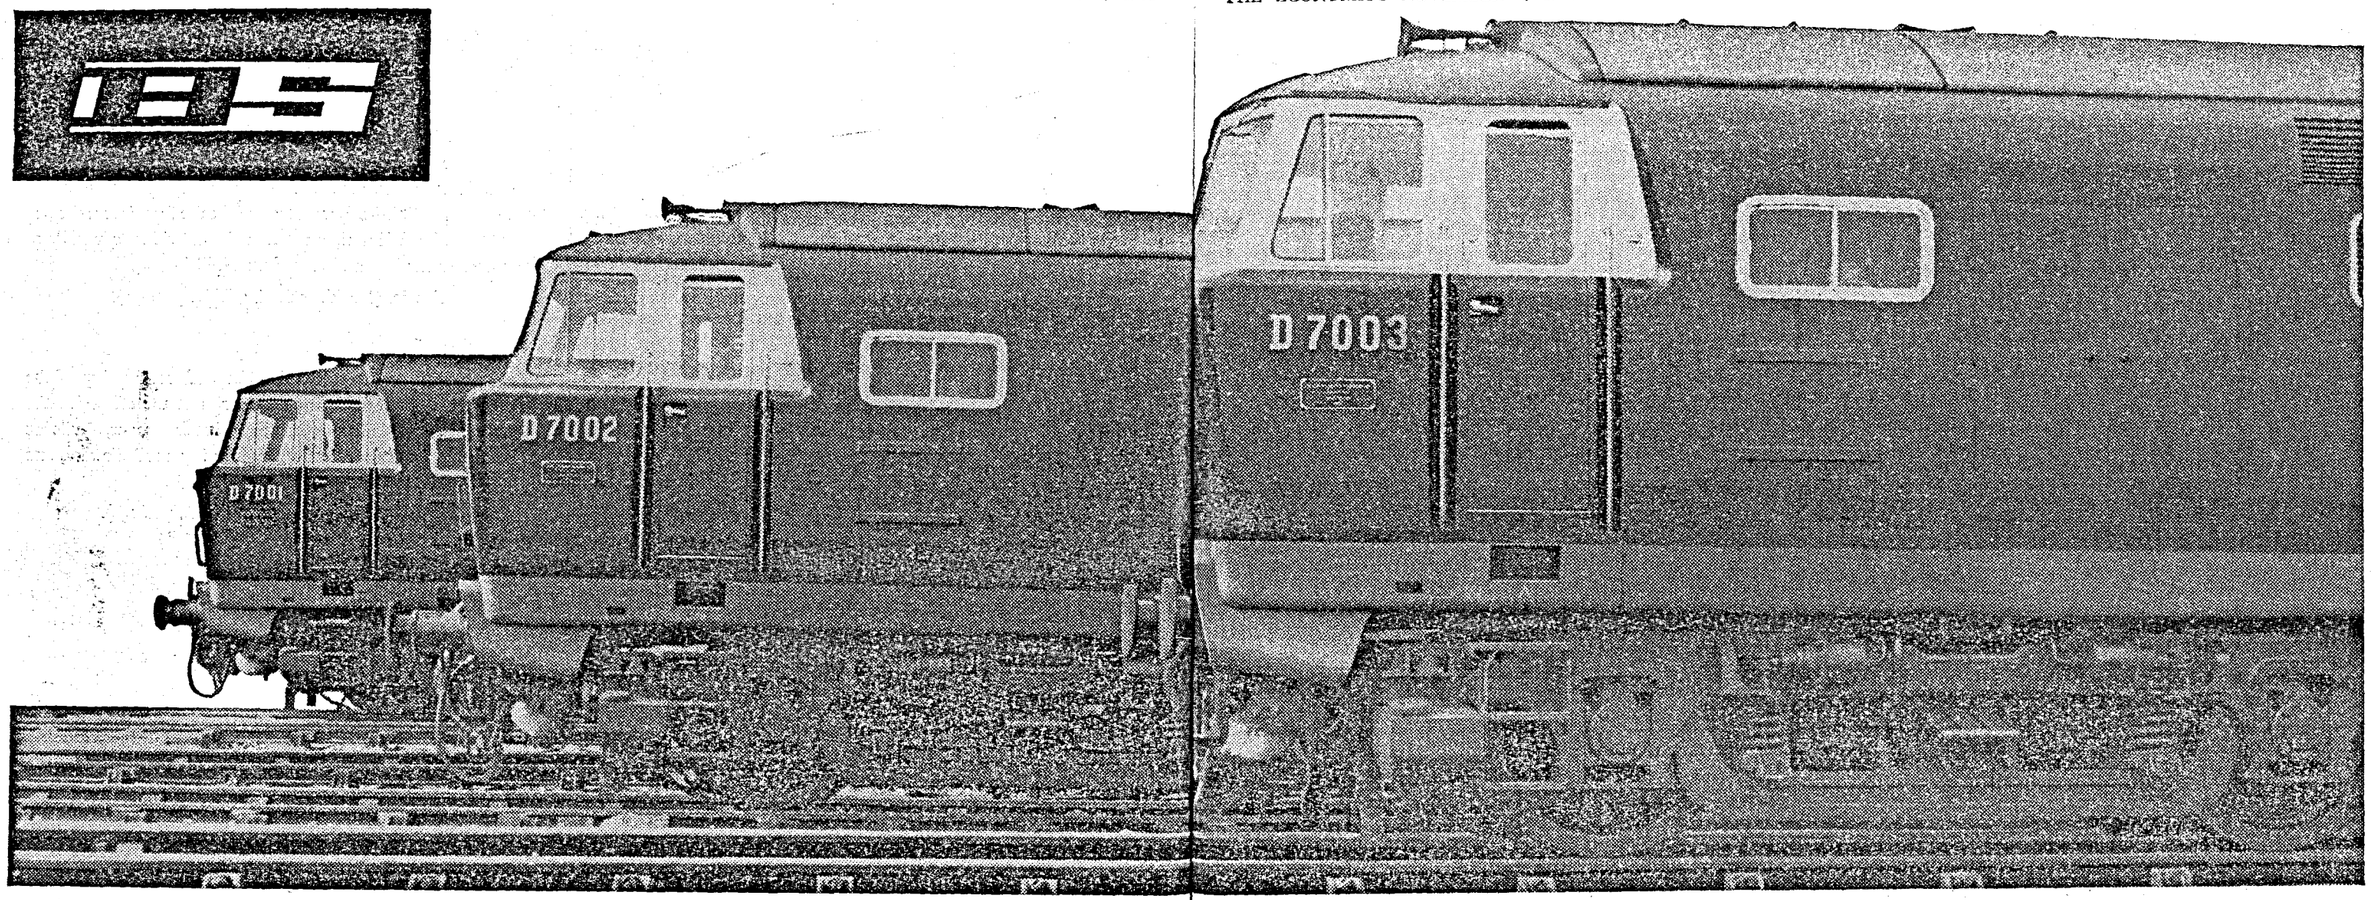
Come, fill the case...



Breadless, wineless, sadly songless in an unpoetic wilderness known as "the doghouse." Such poetic justice may well descend upon that dream-filled head of yours. For if you scatter your quatrains to the four corners of the living-room, don't feign surprise when you're hauled onto the carpet—Persian or otherwise—and faced with a wife waxing anything but lyrical. The gist of her few-thousand-word sermon being: "The proper place for books is a bookcase." Who can deny it?

Minty have specialised for years in making superb bookcases that house your many-splendoured books in dust-free distinction behind very elegant sliding glass doors. Easy on the eye—and the pocket—they allow you to go your merry way reading books, buying books, for Minty bookcases are sectional and may be started for as little as £10.16.0—on deferred terms if you prefer.

Only at the Minty Centres shown below can you see and buy Minty bookcases (and furniture). The Centres are so placed that Minty furniture is within reasonably easy reach of most people. If, however, for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post ordering. Write to Dept. E.17 Minty Ltd., 44-45 High St., Oxford.

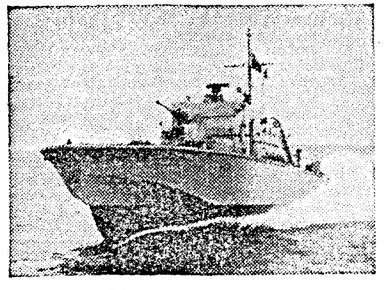
95 new Hymek diesel-hydraulic locomotives entering service with British Railways...

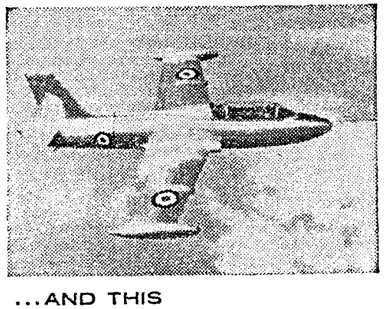
...AND BRISTOL SIDDELEY SUPPLY THE POWER

Between now and 1963, 95 new diesel-hydraulic locomotives, built by Beyer Peacock (Hymek), will go into service with British Railways Western Region. Designed to give much higher availability than the steam locomotives they are replacing, these Type 3 locomotives will be used for main-line passenger, parcel and freight services in the West of England and South Wales. The Hymek locomotive is powered by the Bristol Siddeley Maybach MD 870 diesel engine of 1,700 brake horse-power. To date, *286 Bristol Siddeley Maybach diesel engines have been ordered for British Railways alone.*



Covering a power range from 300 to 3,000 hp, Bristol Siddeley Maybach high-speed diesel engines are built for a wide variety of applications, from rail traction and marine propulsion to electrical generation and other industrial installations. They combine the best performance and design qualities of high, medium and low-speed diesel engines: light weight and compactness; exceptionally low fuel consumption; and an extremely low wear rate.

BRISTOL SIDDELEY ENGINES LIMITED CENTRAL OFFICE: MERCURY HOUSE, 195 KNIGHTSBRIDGE, LONDON SW7
AERO-ENGINE DIVISION: PO BOX 3, FILTON, BRISTOL, ENGLAND. POWER DIVISION: PO BOX 17, COVENTRY, ENGLAND.



POWER FOR THIS

The Bristol Siddeley Pegasus lift/thrust turbofan powers the Hawker P 1127 strike aircraft—the world's first VTOL jet aircraft designed for operational service.

...AND THIS

The Bristol Siddeley Marine Proteus powers the world's fastest naval vessels, the "Brave" class 50-knot Royal Navy 96-ft patrol boats, built by Vosper Ltd.

...AND THIS

The Bristol Siddeley Viper powers the Macchi MB 326 tandem-seat trainer, recently adopted by the Italian Air Force for all-through jet training.

Electrical Aids in Industry — Data Sheet **20**

Load Factor Improvement

Most industrial electricity tariffs consist of a fixed charge based on the maximum demand for electricity by the works and a running charge for each unit (kWh) of electricity used. Broadly speaking, the fixed charge covers the capital cost of generating, transmitting and distributing equipment for the particular demand and the running charge covers the cost of generating the units.

Thus, if the factory maximum demand is reduced for the same level of consumption or is held constant for an increased consumption, the cost per unit will be reduced. This is termed improving the 'load factor': load factor being defined as the ratio of the number of units supplied during a given period to the number of units that would have been supplied had the maximum demand been maintained throughout the period; it is usually expressed as a percentage. Some ways in which load factor can be improved are:

CONTROL OF MAXIMUM DEMAND

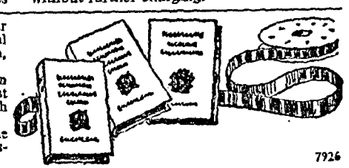
A maximum-demand alarm gives a warning when the maximum demand is about to be exceeded. One of the simplest devices has two warning contacts, but, as a useful addition, an auxiliary relay can be supplied so that non-essential load can be tripped automatically.

The Load Limiter, an automatic device, meets the requirements of medium and large consumers who wish not only to control their system loading to some target maximum but also to improve the load factor in order to increase the overall economy of the plant.

EXAMPLES OF REDUCTION IN MAXIMUM DEMAND

Broadly speaking, loads which contain some storage element can be transferred from on-peak to off-peak times. Examples are: charging electric batteries used in industrial trucks and road vehicles; pumping loads in drainage schemes; water pumping in quarries, gravel pits and other open-air workings; large cold-storage warehouses; ice-making factories in which cost of power is a sufficiently large item of the operating expense to make a reduced charge acceptable.

Many processes at times of peak demand can, under controlled conditions, tolerate a temporary reduction, or even cessation, of supply without any serious effect on the product. With electro-chemical processes such as in the manufacture of hydrogen peroxide no difficulty arises from periodic interruptions at short or even no notice.



In a plastics factory the management arranged for dies to be switched on by time switches one after another early Monday morning so at the beginning of work all dies had reached their operating temperatures.

In a certain chemical works compressed air is used for blowing out containers for plastic material. The nature of this operation is such that the consumption of air is spasmodic and irregular. The demand-recording meter in this works showed that the 18-kilowatt motor driving the air compressor was frequently cutting in on top of the factory load, thus incurring a higher maximum-demand charge. In this case all that was necessary was to ensure that the air receiver only required charging at night-time or at other off-peak times. It was found that the existing receiver had such a small capacity that the pump had to operate to recharge it almost every time the blowing operation took place. This small receiver was therefore replaced by a receiver of large enough capacity to maintain the blowing requirements over the peak periods without further charging.

For further information, get in touch with your Electricity Board or write direct to the Electrical Development Association, 2 Savoy Hill, London, W.C.2. Telephone: TEMple Bar 9434.

Excellent reference books are available on electricity and productivity (8/6 each, or 9/- post free)—'Higher Industrial Production with Electricity' is an example.

B.D.A. also have available on free loan in the United Kingdom a series of films on the industrial uses of electricity. Ask for a catalogue.

THE WORLD OVERSEAS

Bonn's Crisis of Confidence

FROM OUR BONN CORRESPONDENT

HERR ULBRICHT'S embarrassment over sundry conspicuous memorials to Stalin in the Democratic Republic may have been relieved this week by a tremor of *Schadenfreude* at the spectacle of the agonies of government-making in Bonn. Yet it did not take the whoopings of east Germany's *Neues Deutschland* to awaken the west German public to the shortcomings of their freely elected representatives. "The situation is shameful. The situation is dangerous," cried the *Frankfurter Allgemeine Zeitung* with unaccustomed staccato in an editorial on the question, "Is Bonn like Weimar after all?". The protestant Bishop of Hanover, Dr Hanns Lilje, had sounded a sternly warning note in his sermon at the service for protestant deputies before the opening of the new Bundestag. "Anyone who believes that he can do everything himself," the bishop declared, naming no names, "is already on the way to dictatorship. Anyone who presumptuously believes that he alone knows the way leads the nation inexorably to disaster." A fortnight later, seven weeks after the general election, the professor of political science at Tuebingen University, Dr Theodor Eschenburg, branded the coalition manœuvrings of the Christian Democrats and the Free Democrats "an unworthy scuffle for power." In at least one breast disgust flamed into active wrath. Dr Manfred Freise, a Godesberg dentist who voted for the Free Democrats on September 17th, has started legal proceedings against Herr Mende for "grave breach of promise"—in that, he alleges, the Free Democrats' chairman has broken an election pledge not to take part in a government led by Dr Adenauer.

In the eyes of the German public all but one of Bonn's prominent political personages have lost personal stature in the bickering of the past seven weeks, and they are seen collectively to have reduced the likelihood of a strong federal government being formed at an extremely grave moment in the nation's affairs. The admirable exception is Herr von Brentano. The foreign minister's statement on Monday of the reasons for his resignation, after six years in office, breathed a spirit of personal disinterestedness rarely displayed in postwar German politics. There has been only one voluntary resignation from the cabinet since the Federal Republic was founded—that of Dr Heinemann, Dr Adenauer's first minister of the interior, in 1950; he dissented from the government's defence policy, and has since joined the Social Democrats. For the most part the three successive governments headed by Dr Adenauer have shown themselves to be manned, from the top downwards, by ministers determined to cling to office at almost any price. Herr von Brentano's withdrawal from the foreign ministry, and his rejection of any other post in the contemplated coalition government, have introduced into Bonn politics a discordant note of personal dignity.

With Dr Adenauer directing foreign policy more or less all on his own, Herr von Brentano has long been in an uncomfortable position at the foreign ministry—and looked as if he was. Even the many admirers of his latest action remark in the same breath that he had been "little more than a postman." The Free Democrats' demand for a new foreign minister, and Dr Adenauer's apparent willingness to compromise by considering the appointment of a Free Democrat as a minister of state alongside Herr von Brentano, have implied an intolerable lack of confidence. Dr Adenauer has since been toying with the idea of installing the trusty Dr Hallstein at the foreign ministry, but to the Free Democrats Dr Hallstein and his famous doctrine (that the Federal Republic should have no relations with any government, except Moscow, which recognises Herr Ulbricht's regime) are an even more offensive symbol than Herr von Brentano of the heavy Adenauer hand on foreign policy. On Wednesday Dr Hallstein settled the matter by announcing that he would not accept the foreign ministry. Herr Schröder, hitherto minister of the interior, is being mentioned as a generally acceptable successor. So is Herr Kiesinger, the minister-president of Baden-Württemberg, who specialised in foreign affairs when he was in the Bundestag. But the awkward truth is that nobody—well, hardly anybody—wants to be foreign minister under Dr Adenauer.

IT is this Adenauer-laden atmosphere of mutual distrust, which Herr von Brentano has refused to breathe any longer, that has been the chief impediment to the coalition negotiators in their efforts to reach a working agreement. The Chancellor's revocation of his decision to resign in 1959, and his continuing delight in office, have led the Free Democrats to question the credibility of his verbal assurance that, should he be re-elected chancellor, he would hand over to a successor well before 1965. And it is Dr Adenauer's record of high-handedness—and in some particulars of sharp political practice—that has prompted the Free Democrats to insist on getting as much as possible of the coalition agreement in writing. Having drafted a sixteen-page document outlining the policies that could conceivably be pursued in common, the Free Democrats persuaded their Christian Democratic partners, including Dr Adenauer, to accept it with only a few unsubstantial modifications.

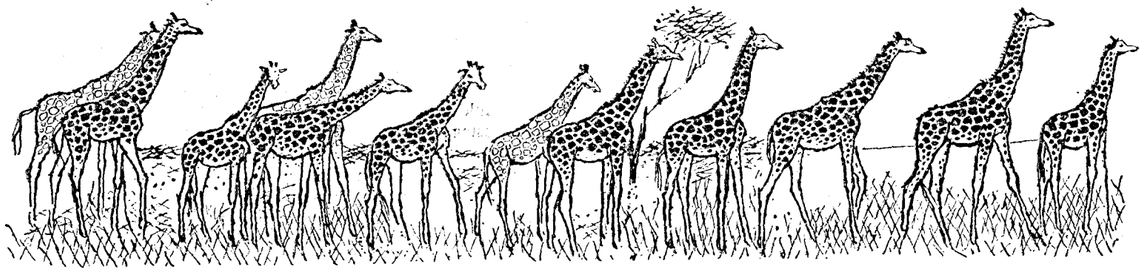
But nobody signed, and Dr Adenauer was ready in subsequent talks to belittle the document's validity after some of its points had come under fire from more literally-minded Christian Democrats. (He did not actually call it a "scrap of paper," but the phrase attributed to him, in reports of a private CDU meeting on October 24th which later reached Free Democrat ears, sounds not very far from that.) The contemplated foreign and defence policies are so vaguely worded as to have scarcely come into dispute. It is some of the Free Democrats' domestic recommendations which their prospective partners are hesitating to commit themselves to. These include devoting the proceeds of the petroleum tax wholly to road building, guaranteeing farmers' fixed prices, empowering the Bundestag (not the government alone) to proclaim a state of national emergency, and accelerating war damage compensation payments. The Christian Democrats have been trying further to limit the competence of the present permanent Bundestag coalition committee, in the establishment of which the Free Democrats see something of a safeguard against subjection to their stronger partner.

On Thursday it looked, once again, as though the two parties were managing to bridge their divergences sufficiently to agree to make a go of it in harness under Dr Adenauer. If they could not, the expectation had grown that President Lübke would wait no longer: he would next week nominate his own choice of a chancellor.

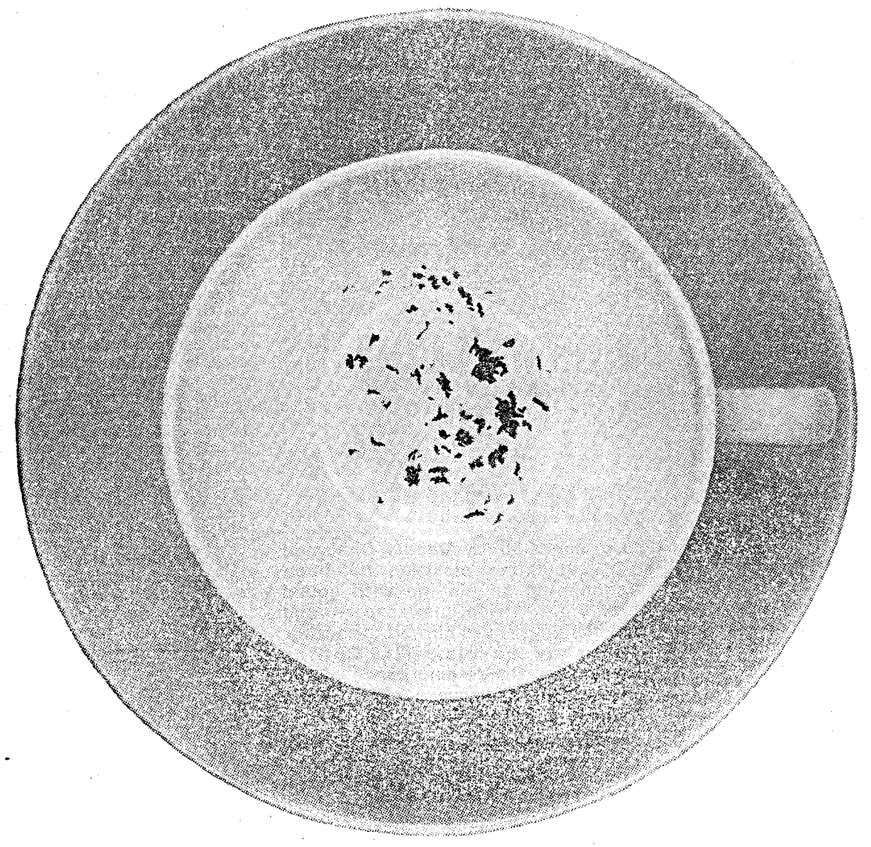
Men Against the Animals

BY OUR SPECIAL CORRESPONDENT

THE animals that have killed and cropped their way across the African continent for millennia are in danger of extermination, according to the experts. The animals are in retreat because the land on which they feed is needed for farming, and an improvement in living standards (in itself pathetically small) is increasing the pressure on grazing land. They are also in danger of drowning in an ooze of sticky sentiment which argues that the interests of, say, 2½ tons of evil temper called a rhinoceros should be put before the economic progress of the African people. But it is not only unreasonable, it is also cruel to suggest that the clock should be put back and large tracts of Africa made into an animal museum for the rest of the world to gape at. And it is unrealistic to think that African governments would accept such a policy.



The mistake lies in treating the animals of Africa as if they were nothing more than museum specimens. They are indeed wonderful to behold and a rich source of material for the zoologist, but it so happens that most of them are edible and the few that are not have valuable pelts—the current black market price for cheetah skin in Nairobi is estimated at £50. There are parts of Africa (and other parts of the world, too, from Scotland to Russia) where game animals of all sizes thrive better than domesticated cows and sheep and there is a strong theoretical case for arguing that such areas should be deliberately stocked with mixed game which could be butchered on a commercial scale, at a rate scientifically calculated to keep the herds in equilibrium.



If this theory could be translated into practice it would have three advantages. First, and most important for the long-term prosperity of the continent, it might check and perhaps even reverse the process of soil erosion that is turning areas of once-fertile land into deserts resembling the Sahara. This is the direct result of over-stocking with domestic cattle. African vegetation is as gloriously varied as its animal life; but cows select from it only three kinds of grass, which they proceed to eat to destruction. This creates the bare patches that encourage erosion, and the process is helped by scanty and erratic rainfall; meanwhile the coarser vegetation, including thorn scrub, grows unchecked. At the end of the cycle, nothing remains of the original pasture but bare soil, thorn scrub and elephant grass. Mixed game avoid similar damage for the simple reason that the different species live off different plants. All vegetation is cropped evenly giving the coarser types no opportunity to get out of hand. But there must be a proper assortment of game, starting at the top with giraffes and elephants to keep the trees under control and working down to the more toothsome venison.

The second advantage rises naturally out of this: since the game eat more of the available vegetation, the yield in terms of meat is also much higher; estimates suggest that a square mile of marginal land stocked with mixed game would yield 95,000 pounds of meat (10 per cent of which would be eaten by lions, hyenas, leopards and other predators unless these were checked) compared with a yield of 45,000 pounds for the same area under European cattle, and a mere 16,000 pounds if it were stocked with Masai cattle, which are, in certain regions, the biggest competitors for grazing. The Masai, who are not on the whole meat eaters, but who keep their cattle as a source of blood rather as other farmers keep cows for milk, are not particularly impressed by these figures; but the point has been taken in other parts of Africa. So has the fact that many game animals mature within one to three years compared with 5 years for cattle and yield when dead a higher ratio of virtually fat-free carcase. Some experiments are starting in parts of East Africa to rotate game with cattle in a 4-year cycle.

The third advantage of systematic game cropping is that it does still leave a spectacle for the tourist; indeed it has been suggested that the tourists might pay handsomely for the privilege of being allowed to cull the animals while the butchers followed at a discreet distance to whisk the carcase to market. Although the African tourist industry is in its infancy, Kenya alone earned £8 million revenue from tourists last year despite a marked shortage of hotels in the best game areas. The difficulty, however, in duplicating such successful enterprises as the Tree Tops hotel, which provides game-watching de luxe at £6 a night, is to find similar sites traversed by large numbers of game in sufficient variety to attract the average holidaymaker who merely wants to see as many wild animals as possible in the shortest time. A non-stop air service at just under £200 return takes much of the hardship out of reaching the game areas of East Africa; and the average outlay per head is then estimated at perhaps £6 a day, making the animals useful earners of foreign exchange. But until there are more "packaged holidays" to compare with the three-week tours at £200 available to German tourists going round the Tanganyika game parks, people who want to see a gnu will continue to take a Green Line bus to Whipsnade. The first step that the newly independent African states might take would be to find themselves a good travel agent.

Until the separate economies of Africa become as dependent on tourist revenue as, say, the Swiss economy of today, game cropping offers the best means of reconciling the conflicting interests of Africans on the spot with all those, mainly outside Africa, who genuinely believe that the world will suffer a real loss if Africa's wild life dies. There are, however, a number of difficulties about putting its theories into practice, most of them concerned with marketing. Farmers in the Transvaal who have experimented on a small scale with game on their marginal land earned £2 million from its sale last year, but outside similar heavily fenced, European-style farms it will not be easy to get the carcases to market.

WELL INFORMED CIRCLES

De La Rue rely on skill for their future, not the chance concatenation of tea leaves; but they are pleased to see the auguries are favourable. With renewed vigour a young and lively management will address itself to the task of further expanding the business, to the gratification of well-informed circles who look to a bright future for the company. And they should know.

ADVERTISER'S ANNOUNCEMENT

"A very exciting paper..."

You are a television man, Mr. Collins. Do you think television has had a great influence on newspaper readers, or do people exaggerate this?
No, I don't think they do. The effect has been very great. The process started with sound radio, of course. A person who comes down to breakfast having listened to an early morning news bulletin is an entirely different kind of human being from a person who has not heard any news, and is looking to his newspaper to bring him up to date. For that reason, I think the function of a newspaper has changed absolutely fundamentally since radio and television came on the scene.

And do you feel the newspapers themselves have fully realized this? That they have adapted themselves to a changed situation?
I think that, to an extraordinary degree, most of them haven't. That, in fact, is what I find so encouraging about the new Daily Herald; it shows an awareness no other paper has shown of a completely changed set of circumstances. It's the only paper in Fleet Street in which one is conscious that *something is going on.*

Do you think that ordinary people, who have not got a Fleet Street background, as you have, are already aware of this?
They must be, I'm sure. (I don't think the process of change is complete, yet; I'll tell you why in a moment.) Because the Herald is unique in Fleet Street at present. There are other papers which are admirable pieces of presentation, but no more admirable than they were two or, if it comes to that, ten years ago. The Herald is really evolving.

Could you give an example of the way the Herald is emerging as a documentary *newspaper; explaining and commenting on the news?*
Yes. This issue, for example, to take one at random. On page 3, where once you would have had another page of miscellaneous news, there is an article about the United Nations' plans for peace. Now, that was written on the assumption that most of the readers had already heard the news of Hammarskjöld's death, and were now really concerned to know more about its implications, and about the working of the UN as a whole.

You have probably noticed that these page 3 articles are a regular feature, under the headline "The Daily Herald Explains." What do you think of the series as a whole?
Oh, very good. I thought the ones on the Common Market, for instance, were excellent; and I know what a difficult subject it is to give a lead on, because I've already sought to do something about it on television. Of course, the Herald has an advantage over us in this respect, because people can go back and re-read . . . important with such a complicated subject. The whole series is an excellent idea.

Grand old men are out

It certainly seems to be a success. Now, what do you feel about the leading articles in the Herald?
Well, frankly, I think the leading article as such is out of date. It belongs to the nineteenth century, when there was a grand old man in the back room laying down the law. The only purpose a leader achieves is to induce certain thoughts in readers, and you can achieve that more successfully by informative and intelligent comment elsewhere in the paper—as the Herald does in those articles we've just discussed, for example.

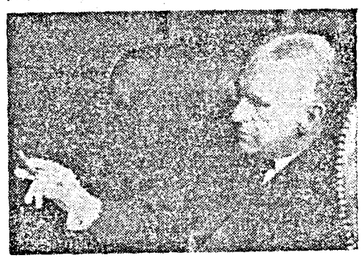
NORMAN COLLINS LOOKS AT THE NEW DAILY HERALD

Norman Collins, Deputy-Chairman of Associated Television, has been connected all his life with sound radio, television, newspapers and publishing; and is himself the author of many novels. Mr. Collins welcomes the re-emergence of the Herald as a newspaper for people whose minds work.

Do any other examples occur to you?
Well, Malcolm Muggeridge, for instance. I'm schizophrenic about him. I disagree with nearly everything he writes, but he's a superb journalist . . . the best of his kind in the country, and the Herald is entirely right to give space to such first-class writers as this. Which brings me to another thing. I very much welcome the reversal of the policy which says that you can't have any articles more than three hundred words long. This is very exciting and I hope it's the beginning of a general trend. You really have *something to read* in the paper and surely that's what you want.

Yes, indeed. Also something light, even frivolous, to read, don't you think? Do you approve of Henry Fielding's column—or do you feel that a gossip column is out of place in a radical paper?
I'm quite sure it isn't. I don't think this one *looks* sufficiently like a social column at the moment, though. One thing I feel is important in a feature like this is that the contributors should be the sort of people who normally would enjoy the sort of life they are describing.

You think the Herald must forget all about political or social gulfs here?
I do. And just have a really brilliant social column. Effectively illustrated, too—that's important.



Is there any one step you feel the Herald could take that would be a really major step forward?
Yes, there is. The Herald is in process of becoming a very exciting paper. In my opinion, it would be even more exciting if the make-up and typography matched the contents more. I don't think it *looks* as good as it *is*, yet.

Aim: the new young people

I see. And now, what about the new Daily Herald advertising theme: "People whose minds work know the Daily Herald gives it to you straight"? This means the younger people, from late teenage upwards; and particularly the better educated, more thoughtful and critical generation that is growing up now. Do you agree they're the Herald's coming readers?
I think the aim is absolutely all right, and I think the Herald is moving in that direction. But I feel (and my 17-year-old daughter confirms this) that the paper could still get much closer to this generation; give them much more than it does now of the things that interest them.

Do you mean serious things, or lightweight things?
Oh, they want both. It's a curious generation; quite different from the one before; it's musical both in terms of classical music and pop; its tastes in art and entertainment are far more catholic, and I think you must have a much wider cultural sweep to reach large numbers of them. It would be a terribly clever thing if the Herald became a paper known widely for its music and its ballet and its discs and its theatre and books. That would be getting *really* close to the late teenage and upwards. And, of course, much more about science. That's vital to this generation, too.

You made it clear that you are not a Socialist. Could you say why, then, you feel able to say a good word (because, in spite of your criticisms, you have been enthusiastic) for a paper which is definitely left of centre? Is it just because, as a former journalist, you admire the Herald's improvement professionally?

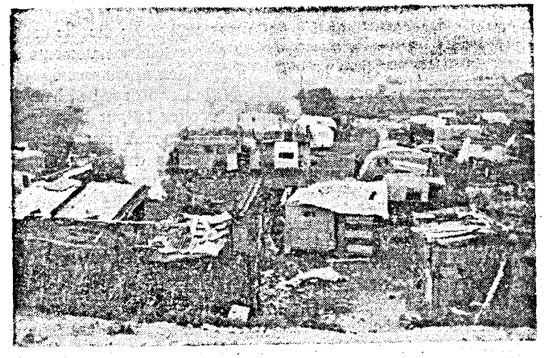
Oh, no, certainly not. Two reasons. Firstly, I deplore the passing of the News Chronicle. I know the Herald is in no sense another Chronicle, and has, fundamentally, another type of reader in mind. Nevertheless, I very much hope that it will also take over a large number of dispossessed Chronicle readers who have nothing whatever in common with the baby they found on their doorstep on that amazing morning of the Daily Mail take-over.

And the other reason?
That I believe it is very, very important indeed that one should have all shades of political opinion in the Press. I think it is absolutely vital that the Herald should exist; that there should be a real radical alternative to the other popular papers. I *feel that very deeply and fervently.* One need not be a Socialist to feel that. . . .

Assuming that most of the cropping would take place inside today's game reserves, the carcase might lie 20 miles from the nearest road and hundreds of miles from the nearest market. Butchering an animal the size of an elephant deep in the bush, and removing a ton or more of meat, is not going to be easy. A fair success has been achieved in Uganda where butchers systematically cull hippopotomus on the river banks and get the meat to native markets in still-edible condition, but the project obviously presents a challenge in terms of transport and refrigeration.

A second difficulty arises from the meat surplus already existing in some of the biggest game producing countries, and most particularly in Kenya, where local Africans cannot afford to buy what is already on the market however heavily subsidised. And the game meat that could be produced cannot be exported to the Rhodesias and South Africa where it could command a premium, because these countries will not allow in meat from areas where rinderpest is prevalent. Canning the meat in small tins for export makes it uncompetitive, while big cans, which could be sold at competitive prices, need to be sterilised at temperatures that destroy the palatability of the meat. It is not proving easy to find ways of preserving game meat without making it prohibitively expensive. The traditional biltong (dried salted meat which can be made, among other things, from elephant) is cheap and still finds a market, but more sophisticated African palates are said to be turning against it; the Food and Agriculture Organisation of the United Nations is sponsoring experiments with dried meat powder. Too much, however, still seems to be left to the energy and initiative of the local game departments who between chasing poachers and fighting cuts in their budgets have neither the time, resources nor staff to carry out proper scientific trials. The first step may, indeed, be to raise the professional qualifications needed for the job of game warden on which the success of any game cropping experiment will depend. Very few have qualifications in any of the biological sciences, yet if they are to supervise the building up of game herds to levels where they will provide a yearly surplus for market (numbers today are well below this level) they will need more than the ability to hold a rifle and a devoted willingness to meet expenses out of their own pocket.

If game cropping is viable it could become an important part of the African economy. As much as a quarter of the continent infected with disease and tsetse fly, to which game is apparently immune, might be stocked permanently with these mixed herds. If it is not viable, wild game in the numbers known today must disappear from the continent. It is no use crying over dead zebras unless the people whose land they occupy are given some good reason for keeping them alive. African politicians politely explain that Europe and North America are not still stocked with wolves, bears and buffalo although a baby brown bear is every bit as cuddly (and dangerous) as a baby lion.



La Peste

FROM OUR PARIS CORRESPONDENT

STORIES of sadistic practices need not, just now, be bought under the counter in Paris; they are to be found in such respectable papers as *Le Figaro* and *La Croix*, and, with a wealth of repulsive detail, in the political weeklies. The stories told are of men and women beaten up in cold blood; broken limbs left unattended for days; victims strangled in the woods around Paris; half-dead people dropped into the Seine for the river to finish them off. The victims are Arabs, their alleged persecutors the forces of law and order. All this is the sequel to the Algerian demonstrations in Paris on October 17th.

When, on that night, thousands of Algerians swarmed into the centre of Paris to protest against the curfew, nobody expected that the police would treat them gently; the Paris police claim that 14 of their members have been murdered by Algerian terrorists since April. But the full story is only now beginning to be told. First, no weapons whatsoever were found among the demonstrators. Secondly, those detained in a stadium for further "investigation" were not all demonstrators. The policemen, it is widely reported, picked their "culprits" throughout Paris on "looks." The public was not supposed to know what was happening to the Algerians herded in the Palais des Sports. Journalists were not allowed in, but a soldier, there on duty, sent an eye-witness account to *Témoignage Chrétien*. He describes the frightened Algerians emerging from a Black Maria, their hands protecting their heads, and being made to run the gauntlet of the policemen's violent blows; the rest of his account contains further horrifying details of the ill-treatment meted out to the detained Algerians. As to the Moslem dead, those picked out of the Seine from time to time are alleged by the survivors to be only a small proportion. Too many questions are left unanswered.

Few believe that, the Algerians having been taught their "lesson," order will now reign in Paris. The Algerians have too little to lose. The 8.30 p.m. curfew imposed on them was the final blow. To understand why, it is not necessary to go far away from

Nanterre: Algerians in Paris

the famous tourist places. The Goutte d'Or is within walking distance of the bright lights of Pigalle; the shanty town of Nanterre is within easy reach of the Champs-Elysées. There are some 150,000 Algerians in the Paris area, including only 8,000 women and 22,000 children. Even those who have their next of kin with them send money back to Algeria for the maintenance of entire families. Poor, and spurned by most landlords, the bulk of the Algerians live squalidly, five or six to a room. For them to be confined to their "homes" for the evening is much worse than for the members of the affluent television society. Many Algerians claim that they dare not even go out shopping for fear of being picked up by the police.

The Arabs came to France from North Africa looking for higher wages and a better life; and, as the Algerian war has disrupted the life of their home country, to escape the rigours of *Algérie française*. They now have cause to wonder whether France is not turning *algérienne*. The French authorities have argued that the curfew is designed to protect the Moslem community from the FLN (rebel) organisation. But the FLN could not have invented any better tactics for a recruiting drive.

It is not the purpose here to analyse the full cycle of colonial rule, revolt, repression, terrorism and war. What is now interesting is the reaction of Paris to this new phenomenon. Letters from liberal Frenchmen, indignant and ashamed, have been published in

the press. Former resistance people have recalled the time when it was the Jews who were being herded into the sports grounds of Paris. But most people, perhaps becoming inured, seem to be taking it all in their stride. The pressure for an investigation into the alleged cruelties expresses the fear that the French public may get accustomed to such practices, and the spread of the Algerian disease may be blamed on the victims alone.

In truth, the allegations about the treatment of these Algerians in Paris ought not to have come as a shocking revelation. Worse things have been happening in Algeria, where few now deny that torture has been widely practised for years. There have even been some prosecutions for torture, though, as yet, no sentences. Thus the war has turned even the horrible into the routine. Ordinary Frenchmen could claim that they knew what went on in Algeria only by proxy, through the tales of their national servicemen. It is now beginning—but only beginning—to come home to them that it can happen here in civilised Paris, where the minister of culture is the author of a novel called "Man's Estate." And where next? War has always been the best carrier of the plague.

Facing Mount Kenyatta

FROM OUR CORRESPONDENT IN NAIROBI

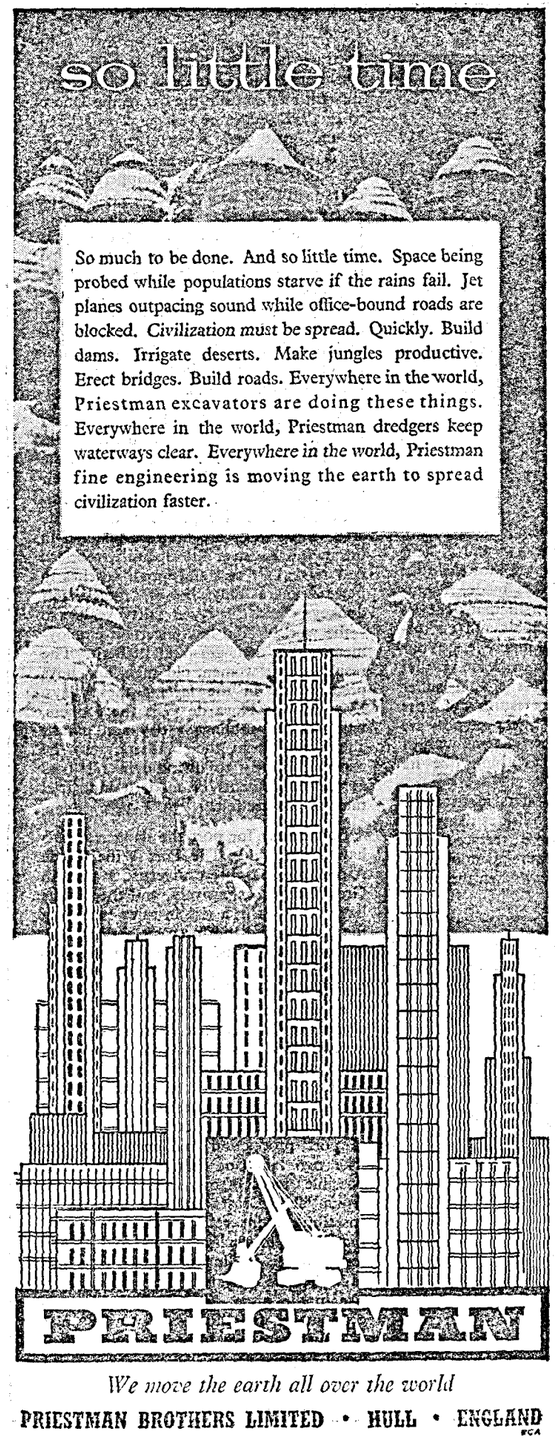
TEN days ago Mr Jomo Kenyatta was explaining that he could not be held responsible for some of the wilder statements of Kenya politicians because he was in no position of command. He was "a general without an army." Within two days he changed this situation by accepting a month-old offer to put himself at the head of the country's largest party, the Kenya African National Union. In the present tense mood of Kenya the metaphor he chose was perhaps too belligerent for comfort, but judgment may be suspended until it is seen in what direction he intends to march his troops.

Nearly all his supporters accept that his first task is to reorganise his army, whose discipline has been lax in many units. Ever since rival Kanu candidates crowded into the February elections and thus lost several seats for the party on split votes, it has been notorious for brotherly strife. Recently there have been some improvements: Mr Oginga Odinga, the party's vice-president, once relished his vendetta against his fellow Luo, general secretary Mr Tom Mboya. But since Mr Odinga was assaulted by a political opponent two months ago, his public utterances have been almost saintly in their exhortations to tolerance and unity. Others have followed his example.

Even so, Mr Kenyatta needs—and knows that he needs—to close further the ranks of his party. The squatters who have moved in anticipation on to European farms; Mr Paul Ngei, who has encouraged the squatters by repeatedly demanding the eviction of white farmers; even the clandestine actions of the proscribed Land Freedom Army, are all associated with Kanu and the Kikuyu. This has damaged the party's reputation.

This week Mr Kenyatta said in an interview that he does not like dealing in names but only in policies—his way of avoiding censuring Mr Ngei. But he added, "I intend soon to lay down the framework of policy for my party and I will discipline anyone who fails to speak inside that framework." He has also emphasised two points particularly relevant to his own Kikuyu: there shall be no revenge for anything that happened during the Mau Mau emergency, and the time for oath-taking is past.

Plans for party reorganisation will become apparent this month. Elections to official posts in the party are due. They should bring into the executive not only Mr Ngei but other ex-detainees known more for ability than for recent extreme statements. One such is probably Mr Fred Kubai. There will also be a drive to win members in areas hitherto conceded to the rival Kenya African Democratic Union, both in Nyanza province and on the coast. One sensible scheme Mr Kenyatta is known to favour is the creation of a number of party vice-presidents who would be placed strategically throughout the branches.



In face of the new offensive by Kanu its rival, Kadu, has become more eager to divide Kenya into regions, with an upper house of its proposed federal parliament holding powers to check the democratic lower house. Kadu has avoided setting out in any detail its plans for the division of powers and resources, so that it cannot easily be attacked before the constitutional conference that will probably be held early next year. But probably half the projected regions are economically unviable and it seems impossible that such a structure would be flexible enough to fit into a federal framework embracing east and central Africa as its supporters claim it could.

Despite the vagueness of the plan, Kadu leaders are busy gathering allies abroad. The president, Mr Ronald Ngala, had little success when he approached Mr Nyerere at the opening of the University College at Dar-es-Salaam last week. But Kadu claims that both main Uganda parties are in favour of regionalism and plans to hold a conference with them soon. At home the drumming up of support for regionalism has taken a sinister turn because Kadu speakers reject as too sophisticated for their audiences any explanation of checks and balances and simply resort to tribal emotionalism. Replying to an opposition motion this week which deplored speeches by two Kadu parliamentary secretaries, the minister for internal security admitted that tribalism had never been so rife as now, or the country so close to an explosion.

THE Kanu tacticians are aware that regionalism has its roots in the fears of smaller tribes that the Kikuyu may dominate the central government and district administration—and that these fears centre on land, education and the civil service. Kanu is preparing a policy statement which offers to strengthen the powers of local government. This may go as far as giving local authorities power to control land transfers and education through secondary school. It also points out that most civil servants in the provinces will anyway be under the control of local authorities, who engage and pay them. But a strong central government is necessary in a country whose economy will tend to be unstable for several transition years.

The migration of the governor, the finance minister and the minister of agriculture (and Mr Mboya) to London during the past fortnight has hinted at the perilous state of the economy. Mr Blundell is particularly worried that the scheme for resettling the Highlands has proved unacceptable to the white farmers and feels that until the scheme is altered the economy, based mainly on European agriculture, is bound to decline. A farming member, Mr Maconochie Welwood, has moved that the government declare the true financial position and say what it intends to do "to avert the grave peril of moving to independence in a bankrupt country."

The most effective action to avert this peril can come from Kanu and Mr Kenyatta. If they take the initiative to remove the fears of the regionalists, and further display some unity in support of their policy, tension would ease considerably and Kanu might be seen as a worthy government-in-waiting. They need to appear worthy to Mr Maudling when he visits Kenya soon—and they must have proposals ready well in advance of the constitutional conference. Like Tamburlaine, Mr Kenyatta has a choice of white, red or black banners for his troops to hold. If he marches them forward with black banners as a sign that a unitary government must crush regionalism before anything else, tribalism is likely to develop to Congo proportions. If he sends them out with white banners to symbolise tolerance and understanding, Kadu leaders will have less occasion to speak—as they do ominously now—of civil war next year. •

We move the earth all over the world

PRIESTMAN BROTHERS LIMITED • HULL • ENGLAND

Have you one of these in your boardroom?

Yes, an ordinary penny. Cheapest and simplest piece of boardroom equipment on the market. Heads, we do it this way, tails we do it that. Decisions without tears.

More seriously, though, even in the best-regulated boardrooms chance still plays its part in the making of decisions–and in really big business an unlucky guess can cost thousands, even millions, of pounds.

By helping top-level management to cut the element of chance to a minimum, C-E-I-R, the world's largest independent commercial computer services organization, has already saved literally millions for government and industry. Backed by a staff of highly qualified economists, mathematicians, statisticians, scientists, and computer specialists, and equipped with the most powerful force of independently operated computers in commercial use today, C-E-I-R can handle on your behalf any problem, large or small, capable of solution by logical or mathematical means. And that means practically any marketing, distribution, production, or development problem.

At the new C-E-I-R Centre in London, with its IBM 7090 and 1401 computer facilities, your own staff can work with ours if you wish, with offices provided–and they can use the computers on a by-the-hour hire basis. Ask your secretary to write or telephone for more details.

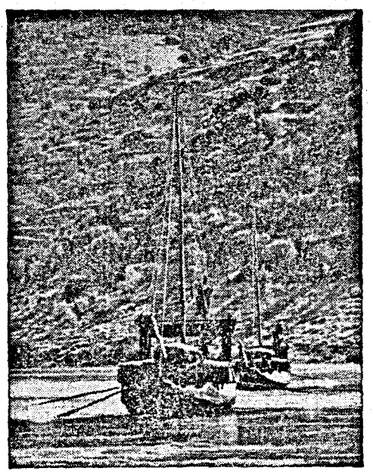
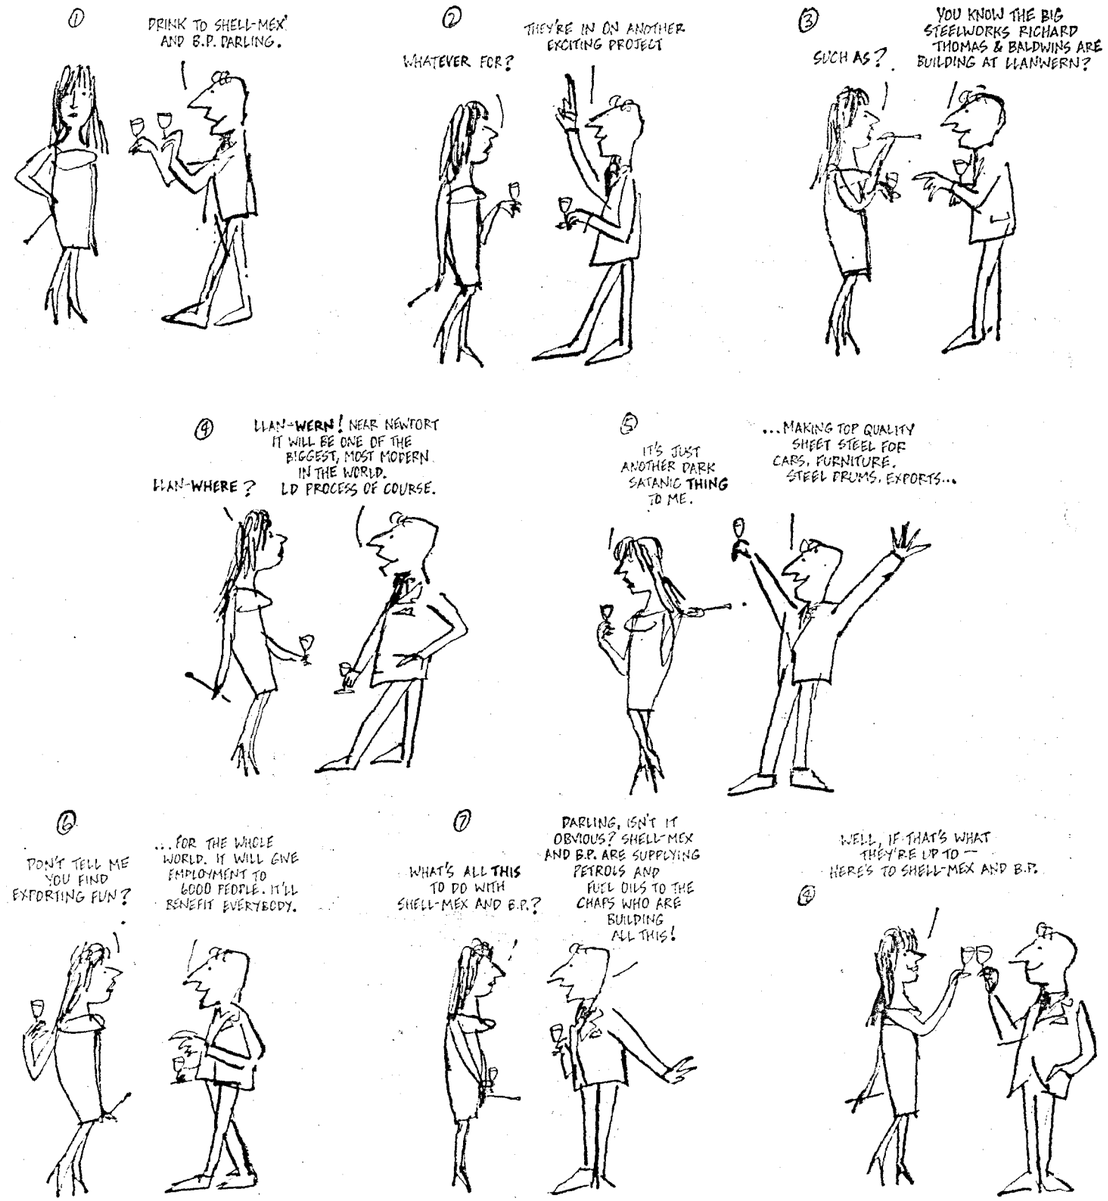
Port in the Twentieth Century



BY OUR SPECIAL CORRESPONDENT

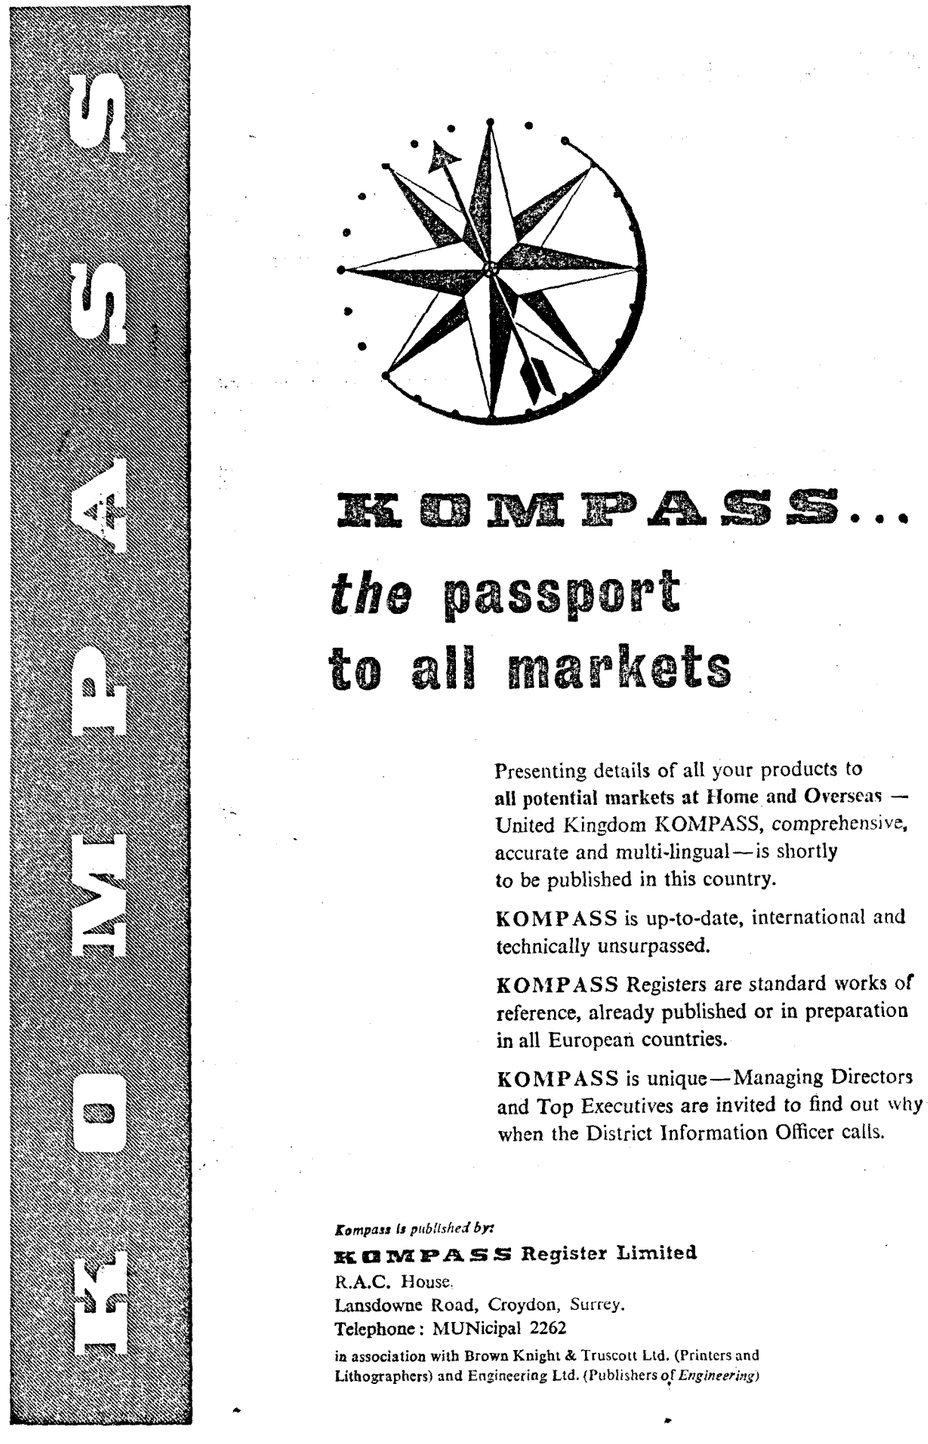
PORT wine, everyone knows, is less a drink than a national institution, traditionally used for the Loyal Toast. The business of making, shipping and selling port is less a trade than a way of life. All the essential characteristics of both the wine and the way of life date back to the eighteenth century, when the Methuen Treaty (1703) first guaranteed the wines of Oporto a market in England. This can best be appreciated in the Factory House at Oporto, finished in 1795, where the shippers can seat sixty to dine at one table, surrounded by the splendours of Ionic pilasters and Chippendale furniture, eighteenth century porcelain, glittering chandeliers and, of course, the best of food and drink. Perhaps the amenity of the trade is more characteristic of Portuguese than of British commerce today, but to the visitor from England it appears as refreshing and old-fashioned as the way of life at a Cambridge college or an Inn of Court, and more graceful, more removed from twentieth century squalors than either.

Port has always been produced in the same way since the technique of blending brandy with wine, and one wine with another, was perfected. At the vintage—earlier than usual this year, thanks to an exceptionally fine summer—the bunches of grapes are heaped into shallow stone tanks, known as *lagares*, and trodden. For two days or more the treading continues, while the juice ferments into wine. When the wine is ready (a judgment related, like everything else in the process, to the type and quality of port desired), it is drawn off, and brandy is added to stop the fermentation. In winter, after heavy rains have swelled the waters of the Douro, the wine is carried downstream to the entrepot opposite Oporto at Vila Nova de Gaia by boat, or, less romantically, by train. There it is stored until the moment of shipping, and there it is nursed into the various types of tawny, ruby and white, which go all over the world but particularly to Great Britain. There, too, the tasters create the glories of the trade, the vintage ports, blended from the best wines of the best vineyards of the best years.



The whole process has all the appeal of any immensely accomplished and ancient craft. The coopers in Oporto, for example, make, as they have always made, magnificent oak casks with a skill that depends very little on scientific tools and enormously on a sure hand and eye. Your correspondent is far from wishing that either port or its makers should suffer unduly under the pressures of the twentieth century. But the pressures are there, and must be come to terms with, if port is to survive in anything like its present form.

Port has survived disasters in its time. One can still see whole hillsides along the Douro which were once terraced and covered with vines, but were abandoned in the late nineteenth century when the phylloxera struck. Nor did the last war and its aftermath help the trade, since it became difficult to ship from the bar of the Douro to England (hence no vintage was declared in the great year of 1945) and because fewer and fewer people laid down port in the old style. The shippers were cushioned from feeling the effects to some extent by the exceptionally low cost of labour in Portugal, but now this prop is being removed, as it is being removed from all forms of agriculture throughout the West. Almost 37,000 persons, most of them young men, emigrate from Portugal each year. In a predominantly peasant nation such a rate is bound to affect agriculture severely; and in the Douro region there are other factors.



At the time of the vintage men and women used to come from all over Beira and Tras-os-Montes to pick and tread the grapes, for six shillings a day and their keep. But since the present regime embarked on extensive public works in the area—three dams are built or planned in the mountains near the Spanish frontier; new roads take cars and motor-coaches to places where only horses, mules and donkeys could carry you thirty years ago—the workers find less uncertain employment within their grasp, and take it. The result is that women, old men, and boys predominate in the *lagares* these days. Even in Vila Nova de Gaia the coopers, who get ten shillings a day and inherit their craft from their fathers, may be expected slowly to dwindle in numbers as the enticements of modern industrial rates of pay are felt.

Fortunately for port the danger signals have been seen. The Port Wine Trade Association has been advertising port in Great Britain extensively, and the results have been felt in a rise in sales exceeding the most optimistic forecasts—stimulated, no doubt, among other things, by the substantial reduction in the duty in 1958. Habits of port-drinking are changing too, it appears: it is no longer the drink of charwomen, squires and dons alone. Port as an aperitif, port as an all-the-year-round drink, port for women; these are the new selling points. Certain rationalisations now in progress between the companies should facilitate the better organisation of port production and merchandising. The two kinds of change may make it possible to confront the difficulty of rising labour costs and the expense of installing more refrigeration plant and machinery to replace "good old smelly feet" in the making of wine. It is just as well: the only alternative is a steady rise in the price, with its probable concomitant of dwindling sales, to the point of—but there, we must all hope that it won't happen.

Two facts worth remembering: (1) Shell-Mex and B.P. are supplying Sir Robert McAlpine & Sons with all the fuel-oils and petrol needed in the construction of Richard Thomas & Baldwin's new strip mill at Llanwern and when it's completed Shell-Mex & B.P. will supply the huge quantities of fuel-oil needed to run it. (2) This mill when completed, will be among the most modern in the world: it is just one of the big new projects that Shell-Mex and B.P. are concerned with.

SHELL-MEX AND B.P. LTD HELP BUILD FOR THE FUTURE

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Lull before the Boom?

FROM A CORRESPONDENT IN NEW YORK

LIKE a tropical storm with a personality of its own, the upward movement of the American economy seems to have lost some of its force and direction. The new mood of uncertainty among businessmen and economists who had been confidently expecting a prolonged period of expansion is reflected in Wall Street, where the climb in equity prices that began well before the rise in business activity has been arrested, with many industrial issues losing most of the gains they had registered over the past year. The slowdown has been most disconcerting to professional forecasters; a poll of business economists revealed that, while most of them still expect industrial production and the gross national product to reach new records next year, their latest projections are below their earlier predictions.

This change in mood caused by the shift in the economic weather is not shared by the Administration's policy-makers who, paradoxically, had been slow to acknowledge the end of the recession (partly because they were seeking congressional action on a series of stimulating measures) and had been surprised by the rapid pace of the recovery. Now, however, Washington appears undismayed by the current lull; indeed, officials seem to be making up for their tardiness by almost excessive optimism. They put on a bold front before the newly renamed Business Council, an organisation composed of the leading executives of the nation's major corporations which holds periodic consultations with government officials. A rift had developed between the Kennedy team and the council, so that the recent meeting was devoted largely to dispelling the notion that the Administration was anti-business; but the officials in attendance also spoke about the economic outlook in a manner calculated to bolster the sagging spirits of businessmen.

The Administration is not unaware of—or insensitive to—the statistical barometers that indicate a slackening in the pace of the advance, a slackening which is keeping unemployment and excess capacity at relatively high levels. But its officials do not think that the slowdown justifies any great alarm and argue that some let-up should have been expected after so rapid a rise from the low point of the recession. While private economists interpret the mild demand for bank credit as a sign that demand as a whole is sluggish, this can also be viewed as evidence of the healthy degree of corporate liquidity. In the Administration's view the current situation may be no more than a pause for the regrouping of expansionary elements.

The storm cloud that Washington fears is not the one on the mainland, arising from the cross-currents in the economy, but the one out at sea: the deficit in the American balance of international payments. President Kennedy's recent call to his cabinet to hold down government spending was motivated, at least in part, by the prospect of renewed pressure on the dollar, and Mr Walter Heller, the chairman of the President's Council of Economic Advisers, warned the Business Council that if "creeping inflation" in 1962 required restraints, these might stifle the economy before full employment was achieved. In recent weeks the Administration has been demanding that both wages and profits be held down in order to assure non-inflationary growth and to lessen the need for overt government action, whether by tightening credit or cutting government spending.

While Washington is demonstrating that it is heeding some of the sermons delivered at the meeting of the International Monetary Fund in Vienna, the business community has been wholly absorbed in conditions at home. Although the output of goods and services increased from an annual rate of $516 billion in the second quarter to $526 billion in the third, the rate of advance slowed down and it will take a sharp rise to reach the Administration's estimate of $540 billion in the fourth quarter. The strikes in the motor industry—and stoppages in the factories which supply it—were clearly responsible for most of the slip in the production index from 113 in August to 112 in September; now that output of cars is being raised to provide dealers with a full line of new models, the downturn should be reversed quickly. But a sustained rise in production depends upon an increase in demand, which so far has been quixotic as far as cars are concerned; sales of other durable goods are reported to be rising although much more slowly than manufacturers and retailers had expected. Stocks of such goods are still fairly low, but the fear is that hesitancy on the part of consumers may sap the momentum provided by such building up of stocks as has taken place.

THE becalmed state of consumer demand is not altogether surprising. In the last three business cycles consumer spending was a sustaining element during the decline and did not make itself felt as a stimulant until well along in the recovery. The pattern seems to be repeating itself, although the lag has lasted somewhat longer than usual in spite of the fact that personal incomes have increased at a faster rate than in past recoveries. This makes some people wonder whether the confidence of consumers has been shaken by three recessions within six years and by increasingly intractable unemployment in each successive recovery. But there has been no real consumer strike; instead, spending on services is rising, suggesting that consumers are turning away from durable goods in favour of the new status symbols—education, investments, travel and recreation—that come under the category of service expenditures. War scares usually stimulate buying, but the Berlin crises—and the Soviet resumption of nuclear tests—seem to have had the reverse effect, while prospective buyers ponder whether or not to put their money into fall-out shelters.

With consumers responsible for about two-thirds of total spending on goods and services, they are a key element in the business outlook and even a marginal shift in their habits could have profound repercussions. Their laggard performance is disturbing, but surveys indicate that they plan to increase their spending on appliances, cars and soft goods; with personal incomes at record peaks and with hire purchase debt declining, there is no doubt that they have the means to do so. But until there is more concrete evidence about what people think of the new cars the strength and the duration of the expansion in activity will be hard to measure.

This is because the level of consumer demand has a major impact on business spending for new plant and equipment and

...g in sales seems to have caused some postponement of capital outlays. But a strong pickup in consumer demand would almost surely set off a rise in business spending, particularly now that the Treasury has announced its intention of liberalising its tax depreciation policy and providing tax credits for industrial equipment as well. It is estimated that in 1961 such expenditures will fall only a little short of the 1960 total of $35.6 billion, which is a remarkably good showing compared with the sharp drop that followed the 1957-58 recession. The estimates for 1962 indicate a rise of about 5 per cent, which does not constitute a boom level, but if consumers as well as the government are lending encouragement the possibility of a much higher rate cannot be ruled out.

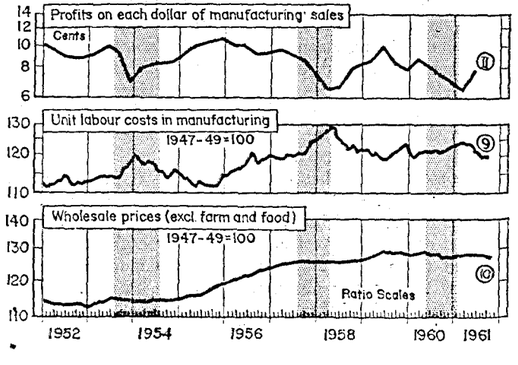
Washington is understandably anxious to see the economy moving forward at a fast pace ; it does not want to repeat what happened in 1959, when the Eisenhower Administration was forced by balance of payments difficulties into a restrictive policy before the economy had reached the boom stage. The Federal Reserve Board is continuing its easy credit policy, with the result that in September the money supply increased by $1.2 billion, the largest monthly rise in over three years. The obvious intention is to make funds available for increased borrowing by corporations and consumers, at least until demand shows signs of straining resources. And in spite of its insistence on a balanced budget in fiscal 1963 and its determination to economise on non-essential spending for the remainder of the current fiscal year, the fact is that the Government's outlays, particularly for defence, are scheduled to increase during the next six months; this will help to stimulate a new surge in economic activity.

The current pause, in fact, may be an ominous one, like the calm before a storm. For the slackening in the rate of the advance does not seem to reflect a basic change in the economic climate, but merely a short-lived hiatus between the period of recovery and the period of expansion. The elements of a far from moderate boom are present and the danger is that the forces of the government, consumers and business will move forward in concert. This would pose a formidable problem because it would inevitably put pressure on wages and prices and might force the government into unpopular restrictive measures. But Washington would rather encourage a boom, and risk having to keep it under control, than sit back and let nature take its course.

Politicians-in-Chief

IT is not merely the usual reluctance of old soldiers to fade away that has brought General Eisenhower back into the forefront of politics, nor merely boredom in his retirement, nor even his alleged jealousy of President Kennedy's vaulting popularity. The Republican party is already running hard for the congressional elections in 1962, and since Mr Nixon bowed out to concentrate on California, where he is trying for the governorship, there has been no national leader to bridge the gap between left and right, to rally the fainthearts and revitalise the weary. Mr Eisenhower has always been the party's most popular bridge-builder. And, finally, though General Eisenhower continues to urge loyal support for Mr Kennedy over Berlin, he is not above girding at such lesser targets as the Peace Corps—"a juvenile experiment" was how he described it during a speech made last week in the mayoral campaign in New York—and he continues to believe profoundly in the sacredness of a balanced budget. "Immoral deficit spending must stop" he proclaims, and asks "What's going to happen to this country if it can't pay its debts?"

It was, apparently, the slighting allusions to the Peace Corps which made President Kennedy abandon his attempts to remain on friendly terms with his predecessor and decide to intervene in person in the election for Governor in New Jersey. Last week it seemed certain that the President would not risk his prestige by committing it too heavily to the support of the Democratic candidate, Mr Hughes, who seemed certain to be beaten by the liberal Republican, Mr James Mitchell, President Eisenhower's Secretary of Labour ; his victory seemed all the more certain after the ex-President, in his new role, had made a triumphal tour in his friend's support. But reports that Mr Hughes was gaining ground in New Jersey, reports also that Mr Wagner, the Democratic Mayor of New York, who is seeking re-election, might be losing it, may have helped to decide Mr Kennedy. At any rate, he announced that he would make personal appearances on Thursday in both places.



General Eisenhower has also been campaigning in San Antonio, Texas, where a non-liberal Republican is challenging the traditional Democratic hold on the House seat in a special by-election. The

Economists' Weather Map

THE three charts on the right are taken from "Business-Cycle Developments," a new monthly publication* of the Department of Commerce which brings together, in chart form, some 70 of the most important measurements of economic activity, with other data to aid the reader in forming a judgment about the future. It has been circulating in government offices for some time and is now offered to the public in the hope that its extremely up-to-date information (made possible only by the use of computers) will help economists, knowledgeable businessmen and others to determine what is happening and, perhaps, to smooth out some of the fluctuations in the business cycle—for example, by regulating their stocks more wisely. The figure in the circle on the charts gives the latest month or quarter which is plotted ; for wholesale prices it is October.

In addition to its promptness, the great virtue of the report is that it groups indicators according to their relation in time to the changes in the business cycle (recessions, from peak to trough, are shaded in the charts). About 30 are classed as "leading" indicators because they reach their peaks or troughs before the "roughly coincident" ones which move with economic activity as a whole. There are also 7 lagging indicators. Of the three shown at the right, that for profits (before taxes) is a leading indicator, wholesale prices a "roughly coincident" one and unit labour costs a lagger. These classifications, as well as the fixing of the historical turning-points, are the work of the National Bureau of Economic Research.

"Business-Cycle Developments" contains no interpretation or forecasts and those who use it must not expect automatic guidance ; they must also make allowances for factors such as strikes and international tension. But at his press conference introducing the publication last week Mr Hodges, the Secretary of Commerce, pointed out that with profits rising so sharply in the second quarter, wholesale prices stable and unit labour costs falling, at least until September, the omens for further expansion were favourable—even though some other indicators were pointing downward.

DO YOU FLY BECAUSE YOU ENJOY IT
or just because you're in a hurry?

By his second or third crossing, the transatlantic traveller begins to be critical. He appreciates the speed — but where has the pleasure gone? It hasn't — if you fly on our Shamrock services. On these services, the speed is provided by the latest Boeing jet liners and the pleasure begins at the beginning. Why? Because alone among airlines we offer:

THE 11-POINT TAKE-OFF You can fly to America from any of eleven cities in Britain—London, Manchester, Edinburgh, Glasgow, Blackpool, Liverpool, Leeds/Bradford, Birmingham, Cardiff, Bristol, Isle of Man—saving perhaps hours of cross-country travelling.

THE LUCULLAN INTERLUDE Relaxing, before the long hop, in the comfort of Dublin Airport, you will find a restaurant where the food is as superb as anywhere in the world—each dish a creation cooked and served to highest international standards . . . Dined and wined, legs stretched, lungs freshened—you discover the next pleasure . . .

SMILING IRISH EYES, sparkling property of the air hostesses—beautiful, soft spoken, thoughtful and efficient—that you will meet whether you fly 1st Class Golden Shamrock or Economy Class Silver Shamrock. If you're a traveller first class, *your* eyes will light up at the sight of—

THE GOLDEN SHAMROCK MENU starred with such delicacies as Broiled Liffey Salmon or Limerick Ham Bunratty style, with Pouilly Fuisse 57 or Charles Heidseick 53. Travellers who know, place Golden Shamrock food in a class by itself.

THE 2-POINT TOUCH-DOWN Shamrock services give a choice of flights not only to New York, but also to Boston. On which thoughtful note, we wish you goodbye—until your next transatlantic trip.

DUTY FREE SHOPPING The Shamrock transatlantic service gives you time enough at Shannon to make profitable purchases at the International Duty-Free shopping centre.

contest is an interesting one. The Republican candidate, Mr Goode, is a new-style conservative of the grimly anti-communist, anti-spending type of Mr Tower, who carried off Vice President Johnson's senatorial seat in May in the first such Republican victory Texas has known since Reconstruction. The Democrat, Mr Gonzalez, of Mexican extraction, is a liberal who would be a valuable asset to Mr Kennedy but the President is confining his support to heartening messages.

Best Deficit Forward

THE estimate of a $6.9 billion deficit in the federal budget for the 1962 fiscal year, which ends next June, is vulnerable to attack from two quarters—from the liberals who think it is not big enough to sustain economic growth and expansion and from the conservatives who think it shocking to have a deficit at all in a year of recovery. The President's call to his cabinet to dismantle all anti-recessionary spending and economise elsewhere and the tenor of the mid-year budget review which appeared last weekend show that it is the Republican charges of fiscal recklessness—particularly trying to a man who is "very hard with a dollar"—which concern

Mr Kennedy most. Last year's deficit, which was mostly Mr Eisenhower's responsibility, was $3.9 billion and in January the outgoing President prophesied a surplus of $1.5 billion for the present year. But revenues are still held down by the recession to $82 billion while expenditure, put at $88.9 billion is growing, mainly because of defence costs, which are non-political, but also because of the misfortune of a bountiful harvest and the failure of Congress to limit agricultural production.

The authors of the budget review insist that a $6.9 billion deficit is non-inflationary while unemployment and excess capacity continue to loom so large and that neither the domestic price level nor the balance of payments is likely to suffer. For the first time they have included charts showing that both budget expenditures as a whole and domestic civilian spending still remain a fairly stable proportion of the growing national product. But the most striking innovation is the discussion of a third measure of budget deficits and surpluses and their impact on the economy—the calculations in the national income and product statistics issued by the Department of Commerce. The so-called cash budget, which differs from the regular accounts in that it includes the giant government trust funds and excludes certain intergovernmental transactions, is by now fairly familiar; it shows an estimated deficit of $8.4 billion for the present fiscal year.

The national income accounts yield a very different figure—a deficit of only $0.2 billion. This is because they exclude all capital and credit transactions and record federal receipts and spending on an accrual rather than a cash basis. For example they include the tax liabilities of corporations, the most volatile element in federal revenues, as they accrue and not when payment is made—which is on average about six months later—and so give a more realistic picture. On the basis of the national income accounts the budget, which has stimulated the economy throughout the calendar year 1961, may exert a mildly restraining effect in the second half of the present fiscal year. This may be offset, as the Director of the Budget suggested early this week, if it is possible to continue an easy monetary policy. But Mr Kennedy's liberal critics may be hard to satisfy if he submits a conventionally balanced budget for fiscal 1963 (as he has promised to do unless there are unforeseen increases in defence spending), if unemployment shows no real signs of falling.

Saturnalia

AT six minutes past eleven local time last Friday week, American space scientists lost their collective inferiority complex, the cure being effected by the sight of a Saturn rocket 20 storeys high disappearing from view with all eight engines firing full blast. Whether the cure proves permanent is going to depend on how Saturn behaves during subsequent trials. The American space programme has been ham-strung from the outset for want of big rocket engines equivalent to those used by the Russians. This has put severe limits on the size of payload that could be put into orbit and, what is worse, has obliged engineers to cut corners, in an attempt to save ounces, in ways that explain the failure of a good many space shots made in the past. It is still touch and go whether Project Mercury can muster sufficient power to get an astronaut not only off the ground but also into orbit, even under conditions infinitely more cramped than those endured by the Russian space men.

Saturn will change all this; the first version fired last week had a total thrust of 1.3 million pounds against less than 400,000 for the Atlas, which up till now has been America's biggest rocket. The fully developed Saturn should achieve 1.5 million pounds of thrust, which puts it in the same class as the big Soviet space launchers. With this amount of power in hand, the National Aeronautics and Space Administration has told contractors that

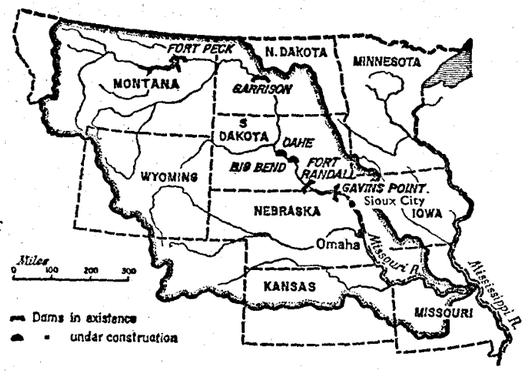
The Economist

NOVEMBER 2, 1861

THE CIVIL WAR

"There can be *no question* that the severance into two of the great American Republic materially diminishes its immediate grandeur, and impairs its prestige in the eyes of Europe. Its power is indisputably curtailed, and its empire, both over the territory of the New World and the imagination of the Old World, considerably shaken. It is one thing to reign over a whole continent, and another to reign over only half. It is one thing to command thirty millions, and another thing to command only twenty. It is a heavy blow and a great discouragement to lose a splendid territory, which is vast in extent even now, and which is capable of indefinite extension to the South. But this, we are assured, is not the real ground on which Secession is so vehemently dreaded and denounced by the citizens of the Free States,—and we credit the assurance. They fear that Secession once permitted will not stop short of wide and general dismemberment;—that severance between North and South if consummated—at least if consummated without a terrible and deterring conflict—will be speedily followed by severance between East and West, between Pacific and Atlantic States, perhaps even by indefinite and continuous separation;—and that, ultimately, in place of one great Republic—which was very grand and which every one dreaded and admired, America will present half a dozen moderate sized Republics—which will attain no marvellous dimensions, and which no one need adulate or fear. In a word, they apprehend the fate and the character of the South American revolted colonies of Spain. We take leave to say that the apprehension is not complimentary either to the moderation of their views or to the vigour of their nature.

it plans to put a three-man space capsule into orbit round the earth within the next two to three years, but for its ultimate target, the moon, much bigger engines than Saturn's will be needed. This will require a technical advance in some ways much bigger than that which divides the Saturn from smaller rockets like the Atlas. The German-born designer, Mr von Braun, obtained the power required by Saturn by harnessing together eight rocket motors of individually modest thrust, a system that is also used by the Russians, but that has never found much favour with other American rocket engineers. The Nova family of rockets intended to take men to the moon and beyond calls for completely new rocket engines each of which will have as much power as all Saturn's eight put together. NASA expects the first manned orbital flight round the moon to take place by 1965.



Jets' Third Man

FROM A SPECIAL CORRESPONDENT

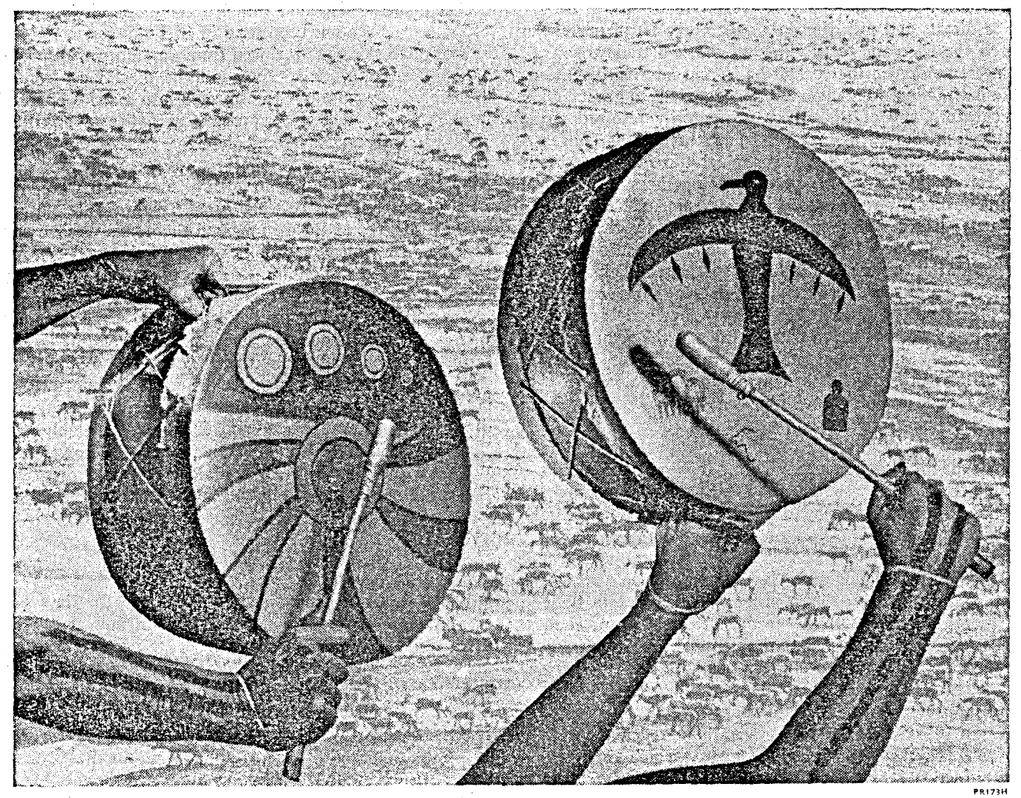
THE three-man commission appointed by President Kennedy to suggest a solution for the long-standing and complicated dispute which grounded most of the nation's airlines for seven days in February has finally completed its task and made public its unanimous recommendations. The dispute arises from the conflicting claims of two trade unions—one representing the pilots and the other the flight engineers—to supply the third member of the crew in the turbojet aircraft which most of the large American airlines now use on their long flights. All previous attempts to resolve the issue have failed, including one by the

Tug of Water

FROM A CORRESPONDENT IN MINNESOTA

AFTER seventeen years the programme for developing the resources of the Missouri river basin is now about one-third complete, and both the benefits and the problems involved are becoming clearer. About $2 billion has been spent, of a federal investment expected to total about $6 billion. Four of the six huge earth dams spanning the wide, shallow river valley are now virtually finished and the other two are under construction. Lakes up to 200 miles in length cut like a blue slash through the brown prairie; they have brought a new world of water recreation to the people who live in this semi-arid region. Though the great floods which prompted the programme have not recurred, the dams, and the levees along the lower river, were credited with averting some $183 million in damages in 1960. In 1954 the improvement of the channel made possible the start of commercial navigation as far upriver as Sioux City, Iowa; this is tiny, but growing steadily. The output of power from the dams has made possible the rapid electrification of the sparsely-settled Great Plains. Some 847,000 kilowatts of generating capacity was installed by the end of 1960; about 900,000 kilowatts more is being built. Storage capacity for about 87 million acre-feet of water has been constructed. Irrigation—the top-priority use for this stored water—has been the notable laggard; fewer than 250,000 acres are receiving water, compared with the target of 4 million.

The next few years are likely to bring the sharpest test yet of the peculiar administrative arrangements for managing this river development in which 10 states and 7 federal agencies are involved. The idea of a public corporation, like the Tennessee Valley Authority, was rejected when the programme was authorised in 1944. Instead, Congress merged the divergent proposals of the Army's Corps of Engineers and the Department of the Interior's Bureau of Reclamation; it gave the former the responsibility for flood control and navigation and the latter the responsibility for irrigation and electric power, thereby building in the conflicts which have beset the programme ever since. Projects are co-ordinated by an elaborate framework of committees, through which serious disputes sift upward to Congress or to the President.



IT would be difficult enough under normal conditions to provide "balanced multiple-purpose service" to all the diverse interests involved in a river basin whose 529,000 square miles cover one-sixth of the continental United States, from the high plains of Montana to the humid lowlands of Missouri. The job has been made more difficult by eight successive years in which the run-off of water into the reservoirs has been only about 75 per cent of normal. The principal controversy to emerge has been between the consumers of electric power upriver, who want water to go through the generators in the winter, and the cities, shippers and barge lines downstream who are interested in releasing water during the summer to maintain the channel depths for navigation.

The dispute was carried to the White House last spring when three Democratic Senators from upriver states—Mr Mansfield and Mr Metcalf of Montana and Mr Burdick of North Dakota—formally asked President Kennedy to make the Army stop "unwise and illegal" releases of water from the reservoirs for navigation. An amendment to the basic legislation gave "beneficial consumptive uses" priority over navigation where waters rising in the upper basin are concerned. The Attorney General now has the task of determining whether electric power can be considered such a "beneficial consumptive use."

One solution to the dispute—but a costly one—would be resort to "slack-water navigation," which employs frequent dams to economise on water. Another way out would be to build steam electric plants, perhaps using the local lignites, to supplement power from the dams when the river is low; one local group of consumers has already asked for a government loan to do just this. Partly to block such a development and to discourage the building of more government transmission lines, 14 private mid-western electricity companies have just offered to supplement the supply themselves—a move in tune with the strategy that has been adopted by private electricity firms all over the country.

Whatever the Attorney General decides, the tug of war over the Missouri's waters is certain to continue. Irrigation unquestionably has priority over navigation and as it develops will add to the demand. Nothing, at this point, would help as much as another of the great floods of the nineteen forties, caught and held in the reservoirs.

Drums (non-returnable) along the Athabaska

PR173H

Under the midnight sun of Canada's far North-West, a line of barges creeps into Yellowknife—a gold-mining settlement on the desolate shore of a great lake. Their load—cyanide in drums—is prosaic, perhaps; but it has completed an adventurous journey that started 10,000 miles away at an I.C.I. factory in England: by sea across the Atlantic and through the Panama Canal to Canada's Pacific coast; down-river by barge, overland again for many a rugged mile, down-river once more to the waters of the lake itself.

Such odysseys are not uncommon for I.C.I. chemicals, and least of all for I.C.I. cyanide. Known for 50 years as the key for unlocking gold and silver from their ores, it is used almost everywhere these precious metals are mined—in the Australian deserts, in the rolling hills of Southern India, in the mountains of Colombia and the uplands of Fiji. And, like so many I.C.I. chemicals, it is no stranger to the engineering industries of Europe. Cyanide case-hardening salts from I.C.I., as well as degreasing solvents and metal pre-treatments, play a part in the production of everything from hypodermic needles to agricultural machinery.

The influence of I.C.I. research and production is felt today in every corner of the globe

Imperial Chemical Industries Ltd., London, S.W.1

ICI

American Federation of Labour and Congress of Industrial Organisations, to which both groups are affiliated.

The airlines have had no agreed policy among themselves for dealing with the problem and for years there have been strikes, strike threats and picketing in almost every set of negotiations between the companies and either of the two trade unions. There was great tension in the cockpit itself, and internal disputes raged within each union. Finally one airline, anxious to get its jets into the air before any of the others, temporarily resolved the dispute by putting four men in the cockpit: three pilots and an engineer. But this "solution" was costly for those airlines that adopted it, especially since some of their competitors flew with only the three-man crew required by the government. The situation ultimately exploded into a seven-day strike by the flight engineers' union which led, because of the public interest involved, to the creation of the commission headed by Professor Feinsinger.

The panel's preliminary report, issued in May, was received with great disfavour by all the groups involved and its final judgment may not fare much better, although the commission worked hard to find a solution acceptable to everybody. Its recommendations call for bringing the size of the crew down from four to three on the airlines which have four men in the cockpit. In the transitional period engineers with mechanical backgrounds will be given enough flight training, at the airlines' expense, to enable them to relieve the pilots in an emergency and manipulate the flight controls. But they will not be required to take off or to make landings. This is the recommendation that will undoubtedly be the most difficult for the pilots to swallow, since up to now they have insisted that the engineer be a fully qualified pilot. An equally bitter pill for the engineers is the commission's recommendation that they give up their existence as a separate trade union and merge with the pilots' group. A number of their branches have done this already, but the national leaders bitterly oppose the idea of giving up the union's separate identity.

If the commission's proposals are followed, all engineers hired by the airlines in the future will be pilots. Any pilots now employed are to be safeguarded for at least a year, and perhaps for as long as four years, from any loss in pay which they may suffer if the reduction in the size of crews means they have to fly aircraft on which the scales of pay are lower. The engineers would receive similar guarantees. The presidents of American, Eastern, Trans-World and Pan-American Airlines have all agreed to accept the recommendations (in spite of the heavy financial burdens they would impose on the companies at a time when money is short), because they represent a fair solution to a complex problem. But what the two unions will do is still uncertain.

Britain in the Middle West

FROM A CORRESPONDENT IN ST LOUIS

An increased interest in British quality goods, from woollens to motor cars, is expected after the two-week "Festival Britannia" in St Louis which ended last Saturday. This prosperous metropolitan region has a population of about two million and accounted in 1960 for some $2.5 billion in retail sales. French and Italian goods have been promoted successfully by similar means in recent years, but the market has been virtually untapped by British exporters although Britain buys considerable quantities of food, machine tools and consumer goods in the Middle West.

Festival Britannia was sponsored by Stix, Baer & Fuller, perhaps the most enterprising of St Louis's three big department stores, in co-operation with British exporters and the British Board of Trade. In addition to elaborate displays in the firm's downtown store and in its two suburban outlets, various civic events were keyed into the festival. The Essex and Kent Scottish Regiment from Canada performed with the St Louis Symphony and the City Art Museum and public library put on special events. To arouse interest two sergeants from the Household Brigade performed the ceremony of the Changing of the Guard and a double-decker bus from London rumbled about the city's streets; buses of this type have not been used in St Louis for many years.

The plate glass was removed from a number of display windows at the firm's downtown store and the block-long frontage along Washington Avenue was transformed into a series of English shop fronts. Inside the main store was a replica of an 18th-century pub, where beer, stout and ale were dispensed at appropriately warm temperatures. All three stores were stocked with British edibles—part of $1 million worth of merchandise accumulated by 18 buyers from the store who visited Britain for the purpose. The recorded chimes of Big Ben marked the hours. Ballad singers and bagpipers performed, and Sotheby's, behind a replica of its London front, displayed a Cézanne still life valued at $160,000; outside British newspapers and magazines were on sale.

The festival marked the opening of a special exhibit by the British Board of Trade, "Britain Past and Present," which henceforth will be on display elsewhere in the United States. It depicts through scale models the old and new in architecture, transport, industry, inventions, art, education, farming, textiles, interior design and other subjects and includes, inevitably, models of Buckingham Palace, Windsor Castle and the Tower of London. But the Tower is dwarfed by Calder Hall and the 16th-century Harvard House is compared with new blocks of flats in St Pancras.

Cross of Silver

Silver has not caused such a stir since the days of William Jennings Bryan and bimetallism. But now it is the price of silver itself which is in question, not its possible monetary effect upon the price level in general. Today silver plays a modest part as legal backing for the American currency and the Treasury buys and sells the metal at prices that have remained unchanged since 1946. Since then the demand for silver for industrial uses has grown, particularly for photographic film, but the Treasury's willingness to sell at a fixed price has prevented the market price from rising; buyers can always count on satisfying their needs there. The result is that the Treasury's stock of "free silver" (silver not needed as currency backing) has been shrinking; this year it has fallen from 124 million ounces to 45 million.

To prevent its stocks from being completely exhausted in six months or so (and the Treasury itself is constantly in need of silver for minting new coins) the Administration is having to make a rapid reappraisal of its silver policy. Several courses of action are open to it. It could raise the official price of silver or it could suspend its own sales, thus freeing the commercial price. Either of these steps would disappoint silver users, but would gratify the producers, the representatives of the western silver states, and the struggling lead and zinc miners; silver is produced largely as a by-product in these mines. Alternatively the Treasury could take steps to liberate part or all of the 1.7 billion ounces of silver reserved at present as legal backing for the currency; this would provide more silver for the coinage and please the industrial users, though not the producers.

Recently the Treasury launched a full-scale study to help the Administration make up its mind. It is under the direction of Mr Roosa, to whom control over all matters concerning silver and gold was quietly transferred last month. Up until then authority over official silver policy rested, at least nominally, with the Director of the Mint. Since September she has been Miss Eva Adams, long an assistant of Senators known as spokesmen for the silver producers. But the unsuitability of this appointment was realised in time and she was not allowed to take over the office until this week when it had become an empty honour.

(Time you talked to IMPALCO about Aluminium!) You may be surprised at the progress made in properties such as strength, machineability, castability, costability, malleability and all-round ability. Aluminium is a very senior member of the metals family these days. Many firms of unimpeachable respectability are using it.

THE BUSINESS WORLD

Improving Export Finance

THERE has been a distinct change in the past year or so in the British Government's reactions to the ever-present complaints from exporters that they are being handicapped in world markets by inferior credit facilities. The Treasury can (and should) still point out that the balance of payments benefits not from the physical shipment of goods overseas but from payments for those shipments; and it can also point to the always sobering reminder that manufacturers in the United States, Germany, France and the rest are also complaining to their own governments that their credit facilities are inferior. Britain has a clear interest in avoiding an export credits race, which is most likely to be won by the country whose foreign exchange purse is the longest; and for this reason the Government for many years laid prime emphasis on the conventions embodied in the Berne Union.

It has become quite clear, however, that to all intents and purposes the Berne Union is dead. In particular, its limitation of export credit insurance to a period of five years has become increasingly unrealistic, as competition for major capital projects has intensified and as the buyers in countries short of foreign exchange have been able to demand and get credit for ten and fifteen years. Last April the Export Credits Guarantee Department made a major new departure, still not sufficiently appreciated in British industry: its arrangements for long-term financial guarantees give British exporters of capital goods a flexible facility that is the envy of their rivals. But the critics in Britain still have two main worries—first about the availability of adequate finance under the long-term guarantees; and secondly about the rate of interest on it.

The City has been talking a good deal about the handicap that high interest rates impose on export finance, and this has been seen as a general argument for getting rates down. Those who believe that the recent level of interest rates should be regarded not as a crisis level but as the norm in Britain's present circumstances have the more reason now to consider some special easing for export finance. Export credits, admittedly, initially appear in the balance of payments book-keeping as burdensome exports of capital, but they are the form of capital exports that is most quickly and most surely requited in future receipts. In the world trading conditions of the sixties, Britain must regretfully set its cash preference a little lower.

What form should any improvement in export credit facilities take? This is the question now being debated, not without heat, within the Government and between it and the City. It can certainly be maintained that the actual facilities now available to the British exporter—leaving aside the interest rate for the moment—are extraordinarily good. Finance up to five years is available without much difficulty. The ECGD provides credit insurance cover up to 95 per cent—in the United States the Export-Import Bank has only just entered this field. This business has been expanding so fast in Britain that the Government now needs to raise the present limit of £1,000 million on ECGD guarantees. Finance in this range could nearly always be raised from the clearing banks even before the Bank of England gave them facilities for re-discounting this export paper once it was within eighteen months of maturity—which has meant that a five- or seven-year advance for export finance holds the promise of a future addition to the bank's liquid assets. Similar facilities exist in other countries; but by and large access to the capital market is easier for the average firm in Britain than in Continental countries, where the capital market is much narrower. The closer connections of the banks with industry there may make finance easier for the big, well-connected firm—but may cause difficulties for the firm that lacks such connections.

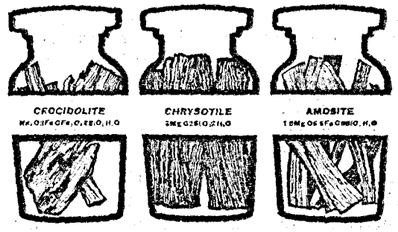
BANK money in Britain is limited, however, to a term of five and at most seven years, and this is also the limit of the normal credit insurance cover provided by ECGD. Its new facilities for guaranteeing longer credits, which are granted direct to the overseas buyer and thus get away from the form of "supplier's credit" which technically is all that is affected by the credit insurance conventions, are limited to major capital projects, and applications are subject to special scrutiny. But the scheme has got off to a resounding start; since April, cover has been agreed in principle on five projects valued at about £69 million, of which the loan element will be some £53 million. A number of other projects are in the pipeline. The finance is being provided mainly on a joint basis between the clearing banks, providing credit up to seven years, and the insurance companies, which take the later maturities—even the maximum of fifteen years or so is rather short for their liking. A number of insurance companies, and also pension funds, have joined a consortium arranged by Lazard Brothers, in which the participants have each indicated their maximum commitment, standing prepared to put up money to that limit as the need arises. Some other merchant banks have made approaches of the same kind, but so far no second consortium has been set up. Finance can, of course, be raised without such arrangements—Hambros and M. Samuel are active in shipping finance. So far, it seems, no serious project put before ECGD under the new scheme has fallen down for lack of support in the City. Looking to the future, however, one cannot feel sure that existing channels are sufficient to cope

with a substantial continuing demand for five- to fifteen-year money; and although the present scheme does provide for recourse to Government money under Section III of the Export Guarantees Act, this is essentially a last resort.

What of interest rates? No exact international comparisons are possible. The current rate in London has recently been 7½ per cent—1 per cent above Bank rate charged by the clearing banks, and a small turn on the rate on industrial debentures asked by the insurance companies for taking up an unquoted security. The half per cent cut in Bank rate and the fall in fixed-interest yields may now reduce this to 7 per cent. These rates are not above the effective lending rate charged by banks in many Continental countries—though Holland, Switzerland and the United States are clearly cheaper. Other countries, however, do offer specially favourable rates on export finance. Thus the Belgian National Bank has quoted two re-discount rates, one for export paper and one for the rest. The Bank of France maintains a stable, and normally lower, rate for export paper. In Germany the agency dispensing the old counterpart funds from Marshall aid provides export finance at 6 per cent, and the Government has been plagued by angry shipbuilders to give them credit at 5 per cent. Official finance at these rates is undoubtedly cheaper than London market rates—which in turn set the rate for Government money through Section III. It has to be remembered, however, that in most cases the cheap Continental finance is available in strictly limited quantity; the average rate for export finance there is appreciably higher.

So far, the City and ECGD have been able to find few indications that the current level of London rates has resulted in a loss of business, though the City would add that it has fears for the future. High interest rates are of relatively small significance on a short or medium term credit. It is for the large capital projects that they may be decisive—such as for a ship that has been chartered out at a fine margin. This was one of the considerations in the much publicised difficulty in financing a tanker for the Naess group, but here it was not the decisive one. The project fell through because while City institutions agreed to finance the ship that was to be built in Britain they refused to provide parallel finance for a companion ship to be built in Germany—it was there that construction costs were cheaper but the builders were initially unable to arrange the credit. A complicating element in this case, which is often found in tanker finance and generally works to the advantage of British builders, is that where the long-term charter from the oil company is in terms of sterling, the shipowner is nowadays reluctant to commit himself to a long-term commitment to repay over the years in another currency such as marks or guilders.

The broad picture that emerges is thus that Britain's present framework of financing facilities is good, but may need underpinning by the assurance of finance for the "difficult" period; and that interest rates, while they cannot be said to be greatly out of line with those in overseas capital markets do penalise the British exporter where he has to compete with an overseas competitor who has access to specially favourable official facilities. Against this background, here are the main alternative routes of reform.



(1) **An exporter's Bank rate.** If the Bank of England established a special and lower re-discount rate for export paper, Britain's competitors in the General Agreement on Tariffs and Trade could hardly inveigh against a form of export subsidy that some of them use themselves. And it should be possible to establish a preferential rate for this quite distinct purpose without running into the major difficulties that would be involved in a general move to a two-tier structure of interest rates. But any such innovation would have major implications for the banking system and official finance. If the preferential rate is to be passed on to exporters in cheaper bank overdrafts, the re-discount facilities must be used by the banks (in contrast with their existing facility for export paper, which does the trick simply by permitting a book transfer from advances to liquid assets). Thus the mass of bank finance for exports would be refinanced from official funds. Given the flexibility of official financing arrangements in Britain this would raise technical rather than fundamental difficulties. The question is whether this is the most economical route to achieve the desired result. On the one hand it gives a general boost to all exporters. The obverse of this, however, is that it is unselective, and indeed misses altogether the really important cases—the relatively few capital projects needing finance for ten or fifteen years.

(2) A special **Export Finance Corporation,** believed to be favoured by the Bank of England. This is an old friend. There is nothing to be said for a corporation set up in the traditional City way, with the banks, insurance companies and other institutions putting up the capital. The warning is visible. ICFC, FCI, CDFC—how many people even remember what they mean? The fate of all these institutions has been that the sponsors, jollied along into putting up the initial capital, have thereafter neglected their charge and even regarded it as a rival.

(3) If the new corporation leans on City finance it must do so in a form that appears attractive to the sponsor. Some bright new thoughts are needed. One possibility would be for the **insurance companies** to set up their own corporation and put 20-year money into it, which the Government would guarantee to service every year; the insurance companies would hold the equity of the corporation and derive an equity profit from the commissions which would ordinarily go to the bankers. This idea would, of course, cause loud cries in the City. But a new corporation must have independence.

(4) The other way of achieving this is to set up a **quasi-government body** that can raise finance for itself, either from the Exchequer or by gilt-edged issues of its own. The days when fixed interest finance could not be raised in London are over. Nor is there any real problem of management—the thrustful ECGD is fully at home in this field. Whatever form the corporation takes, there should probably be a special credit line with the Bank of England or the Exchequer through which finance can if necessary be provided below the market rate. This line should be used sparsely and selectively, only with special ministerial approval. It would be a last resort to be avoided unless particular circumstances pointed overwhelmingly the other way.

No one can say which of these alternative approaches will be most suitable to conditions that lie ahead. Certainly there is now a strong case for an export finance corporation, but it must be of the right kind. The Government will do much better to risk a little competition with City institutions than to goad them into setting up a Cinderella of their own. Official finance would still be used only when market finance was not forthcoming; in the jargon, it is just a question of streamlining Section III.

Changing Face of Asbestos

In this age of the mineral, oil and coal have set the pace in opening up a wealth of new materials for industry. Almost unremarked, the group of materials known as asbestos—and a perplexing string of other names picked up in the course of time—has contributed a scarcely less important range of new products. Asbestos has a past almost as long as written history, yet it can only boast a real working life of just over three-quarters of a century.

In its long unproductive past, asbestos was habitually cloaked in mild mystery. Vestal virgins traded on the apparently supernatural life of their lamp wicks, and Charlemagne pitched his unburnable blanket on to the fire to impress his visitors. To a degree, some air of mystery has in the past shrouded the facts about the asbestos industry, and history, too, has played some confusing tricks in shaping it. Major discoveries of asbestos were made in South Africa in the early 1800's, and in 1878 a forest fire in Quebec laid bare a rich asbestos deposit. Raw fibre from this deposit reached this country in the following year, Turner Brothers of Rochdale had been trying for eight years to make gland packings for superheated steam engines from cotton. They succeeded with asbestos and pioneered the spinning and weaving of asbestos on power-driven machinery. At the same time the significance of asbestos for dealing with superheated steam was recognised by John Bell, who acquired the original Bell Asbestos Mine in Canada, still one of the most important in the world. By developing spun and woven asbestos for brake and clutch linings, packings, gaskets, protective clothing, insulation cloth and plastic reinforcement, Turners became the largest asbestos spinners in the world. In value, the textile side of the industry, which absorbs the longer, more expensive fibre, still accounts for about a third of asbestos consumption in this country.

But by volume, the principal user is the building industry which now absorbs about 80 per cent of the raw material imported into this country. Asbestos was first combined with Portland cement to make asbestos cement building products in the form of flat sheets or slates in 1913. The exceptional plasticity of this material in its wet state and its ease of handling were soon recognised, and exploited in a variety of corrugated forms. By 1918 there were four major manufacturers in this country. Bell's United Asbestos amalgamated with an asbestos cement company in 1922; seven years later the three major manufacturers of asbestos cement were combined within the Turner and Newall group, which then supplied almost all these products used in Britain. Through a complicated series of transactions, T and N got Bell's Canadian mine; the rump of the Bell organisation became the nucleus of the thriving Bell's Asbestos and Engineering; and two of Bell's key personnel left to become the mainspring of the equally thriving Universal Asbestos, which with Atlas Asbestos is now Turner's competitor in asbestos cement in this country.

The other major asbestos concern in Britain, Cape Asbestos, has a slightly less colourful history. Francis Oats of De Beers formed Cape to snap up South African asbestos deposits at the turn of the century. Cape also acquired, and still has, a manufacturing subsidiary in Turin. Asbestos had been mined at the foot of the Italian Alps throughout the dark ages and a modern asbestos textile industry was developing from the centuries-old hand spinning and weaving establishments. In 1925, Cape bought a number of mines in the Transvaal producing a fawn asbestos known as amosite. For a considerable time Cape held a near monopoly of this material, which gives good heat insulation though it is too stiff to spin. Using this material, Cape developed its asbestos interests in a larger range of finished products, especially insulation board and lagging materials, after the war. To widen the market for its asbestos fibre, it licenses the manufacture of its products abroad. But different types of asbestos vary so greatly in their properties that Cape and Turner and Newall have to sell fibre to each other.

In Britain, the asbestos industry now consists of two integrated producers, who also sell raw asbestos (T and N on a vaster scale than Cape); several medium-sized manufacturers, principally Universal, Bell's and British Belting and Asbestos; and many smaller manufacturers each following a special bent in asbestos and often with more than a foothold in other industries such as plastics, which compete fiercely with asbestos at some points. In a sense every smaller manufacturer in Britain must live

in the shadow of Turner and Newall, which has net capital assets of over £100 million and tries to market most of the asbestos products needed by its customers. Only one other asbestos group, the Johns-Manville Corporation of America, operates on this scale. In asbestos cement the group claims to control as much as three-quarters of Britain's output, though this is disputed by its competitors. But no manufacturer is at a disadvantage when it comes to purchasing fibre; it can rely on T and N for its supplies or get them freely from alternative sources. In fact, T and N's chief competitors claim on their profits record to have made the greater progress since the war; their shares have been among the leading growth stocks.

But competition is beginning to develop to a less comfortable pitch. Good profits are still being made, new plant is being installed and the immediate prospects for this industry must be considerably more comforting than for many others. But in the asbestos cement business, delivery dates are shortening and the customer is being more attentively served. Costs of production continue to rise and more of them may have to be absorbed in thinner profit margins. Cement has gone up—T and N is the biggest user in the country—and wages depend on the efficacy of the "pause." The cost of asbestos itself has also been edging steadily higher, though it appears to have temporarily reached its peak. Substantial savings in costs have already been achieved, but the manufacture of many asbestos products is already near the technical optimum and new savings will be harder to win. The size of the market for asbestos products and its rate of expansion are little guide to profitability. America is the largest consumer of asbestos in the West, but the degree of competition there at times borders on the frenzied.

When competition begins to bite, it is not necessarily the giant who is bound to win. Any large organisation must have its weaker spots. The smaller rival has the choice of time, place and materials in attacking the market of its bigger rival. Some rivals were prepared to say that as a manufacturer, Turner and Newall had grown a little flabby a few years ago. But accusations of this kind have to be weighed against the burden of holding down a dominant role in any industry. T and N feels compelled to develop and research on an institutional scale, and extend its range over products which give varying margins, rather than concentrate its efforts where the immediate gain is greatest. Whatever illusions T and N's thrustful competitors might hold about its past performance, few would be wise to bank on gloved competition in future. All the signs suggest that Turner and Newall has no lack of vigour: it absorbed half of the fibre imported into this country last year, but its net profit was more than four times as great as all its principal competitors combined.

In its main use, building, most factors seem to be on the side of asbestos. The trend toward dry pre-fabricated construction and the greater fire protection necessary in light buildings are helpful. In Africa, where bad neighbours commonly set fire to each other's thatch, asbestos sheeting has proved a godsend. Even termites refuse to eat it; asbestos cement is relatively cheap and can be manufactured locally without great difficulty, though temporarily at somewhat high cost. Both the major British asbestos cement manufacturers have opened plants in former British colonies in Africa. Asbestos products have long made their mark in cheap agricultural buildings, which local farmers are reasonably able to afford. Asbestos can be sprayed on interior surfaces or supplied as moulded panels. An important use is in asbestos pressure pipes for water supply which are not affected by corrosion in soft water districts.

The greater use of aluminium in ships increases the use of asbestos products for fire protection, manufacturers are under greater pressure to keep down fuel bills by proper lagging and the electrical industry is an important customer for insulating materials. New chemicals, machinery and boilers are increasing the use of asbestos for pipes, flues and packing, and many companies in the asbestos business produce some form of brake linings.

Competition for asbestos stems from new materials like plastics, and supplies of relatively inexpensive local materials like tiles. Asbestos deposits are fairly common, but commercially workable ones less so. Canada is by far the largest supplier and T and N has a sizeable stake—direct and indirect—in its production of white chrysotile asbestos, some grades of which spin well. As well as amosite, South Africa is the principal source of blue crocidolite which fiberises into greater volume, is more resistant to acids and is used extensively for the production of pipes. New deposits are being explored and supplies of asbestos fibres will probably remain adequate. In his efforts to industrialise Russia, Peter the Great tried to start an asbestos industry. As in his other ventures, the communists have completed his work. Russia claims to have the largest reserves of asbestos in the world. It intends to double its production by 1965, and though all this output could undoubtedly be used within the communist block, Russia's need for foreign exchange will govern its sales to outside markets. At present Russian exports of asbestos are only about 125,000 tons a year, of which 3,000 tons (1.6 per cent of imports) reach this country. For asbestos, expansion is still the keynote; Turner and Newall has a £3½ million expansion programme for brake linings and a £1 million factory for moulded asbestos cement goods to be completed next year. Cape has acquired Small and Parkes to become probably the second largest manufacturer of brake linings in this country. Investment in asbestos has produced a satisfactory rise in dividends, though these also reflect higher profits from non-asbestos interests, but the next stage of the struggle for markets may prove tougher.

BUSINESS NOTES

BANK RATE

Slippery Slope

To nobody's surprise, Bank rate came down another half per cent on Thursday, to six per cent. The City had noted the Bank of England's milder treatment of the discount market earlier in the week, and the Bank was for once content to forego a technical surprise. This further cut follows directly from the first move a month ago: once the downward spiral was set in motion it was, and is, very difficult to stop. For the prime object of both the reductions has been to check the inflow of foreign funds by reducing the interest rate differential in favour of London; and since Bank rate would have to be reduced at least to 4 per cent for that differential to be eliminated, the main effect of the present reductions may be to whet the City's appetite for more—and encourage foreign holders of liquid funds to get in while the going is good. The foreign exchange markets, in expecting a reduction of a full point on Thursday, may have appeared unfamiliar with the Bank's customary ways: but a wholehearted move might indeed have had a logic that these tentative, partial moves lack. As it is the authorities find themselves on a slippery slope.

Thus the flow of funds to London clearly increased substantially after the first Bank rate cut. The cost of forward exchange cover fell more than proportionately, so that the margin in London's favour on covered arbitrage widened, to around ⅝ per cent. The gold figures for October, published a few hours after Thursday's Bank rate posting, reflect an extraordinarily high inflow. There were repayments of £100 million to the International Monetary Fund, of £4 million under the old European Payments Union, and of a further "small amount" to Continental central banks, which discharge the whole of the Basle debts except the £18 million which is to be funded in the Swiss loan. In addition, Nigeria converted £11 million of its sterling reserve into gold and dollars. After these payments adding up to £115 million, plus Basle, the reserves fell by £8 million—so that the true intake was something over £107 million.

THE NEW MONEY RATES

	From per cent	To per cent
Bank rate	6½	6
Overdraft rates:		
England	7–8	6½–7½
Scotland (minimum)	7½–8½	7–8
Deposit rates (7 days' notice):		
Clearing banks	4½	4
Discount houses	4½–¾	4–4¼
Local authorities	6½	6⅛
Building societies	No change 3¾ (tax paid)	
Nat. Savings Certificates	No change 4 3/16 (tax free)	

Domestically, this Bank rate reduction, like its predecessor and indeed like most Bank rate reductions that one remembers, is not intended to mark any relaxation in credit restrictions as a whole. The Governor has made this clear to the clearing banks, and also to representatives of the finance houses and building societies. Nor do the authorities at present contemplate any change in their funding tactics in the gilt-edged market—though they might indeed need to reinforce the funding drive if a significant fall in yields, and a further rise in bank liquidity, is to be avoided. While Bank rate at six per cent is still traditionally high, the two reductions have undoubtedly eased the pressure in the City, and elsewhere. Thus the building societies now see more scope for attracting funds, as their lending rates have become more competitive, and they may be able to grant mortgages more freely.

STOCK MARKETS

In Their Stride

Stock markets, having offered odds-on that the Bank rate would be reduced this week, took the cut of one half of one per cent in their stride. Anticipation that the reduction would come this week had been so strong that short term money flooded into the local authority mortgage market and did not find many takers. Gilt-edged prices, too, continued to move up; but a reduction in Bank rate had been discounted in the earlier sustained rise, so the advance was not quite at the pace of previous weeks. Indeed, War Loan, having gone ex-dividend, slipped back a little and the tap price on the 5½ per cent Treasury, 2008-12, was left unchanged at a net price of 82⅛ in the three days preceding the Bank rate. After the reduction was announced it was raised to 82⅛ and though some profits were taken elsewhere in the gilt-edged market prices were still higher on balance at the close. The continued strength of the gilt-edged market ensures success for the £6 million cash-cum-conversion offer by Bootle Corporation of a 6½ per cent stock, 1971-72, at 99. The coupon and dates are the same as those on the recently successful LCC offer, but the price is 2½ points higher, taking some account of the rise in prices since the LCC carried through its cash-cum-conversion operation. The Bootle terms, like those on the LCC stock, were clearly generous, but this is inevitable in rising markets when the conversion lists have to be left open for ten days.

The most significant change in the stock market, however, occurred in industrial equities. In the week to Wednesday's close *The Economist* indicator gained 11 points to 356.0, its highest point since the middle of September. The volume of business broadened a little as investment and some short-term speculative buying (including some bear covering) took place. Investors may simply have thought that prices had hit bottom, and that selective buying would not offer too much of a hostage to the future. But the renewal of interest owed

* Ex dividend. † Adjusted for scrip issue.

something to the realisation that not all company reports contain depressing news; the results from Tube Investments, for example, played their part in the rise in steel and engineering shares.

Equities continued to rise immediately after the reduction in Bank rate, but gloomy announcements from Courtaulds and Hawker Siddeley put the market into reverse on Thursday afternoon. Buying up to noon on Thursday had lifted the *Financial Times* index by 2.8 points to 298.9, but by the close it had fallen to 294.7, representing a gain of 6 points in four days' trading. Anticipation of the reduction played nearly as an important role in the industrial market this week as it had in the gilt-edged market earlier. However much official spokesmen labour the point that the reduction can be made without detracting from the force of credit restrictions, investors see in the two successive reductions a hope of economic recovery. Doubts about the future course of Britain's balance of payments remain, but investors can argue that this is as bad for gilt-edged stocks as equities and that a slight rise in equity prices is not entirely out of place.

THE EXCHANGES

Bank Rate Anticipated

Strong expectations of a cut in Bank rate, as well as technical end-month influences, kept the London exchange

market subdued this week. Sterling fell slightly to just under $2.81½. On Thursday morning it dipped to $2.81¼, but after the Bank rate reduction had been announced, buying of sterling from Germany brought a recovery in the rate. There is no reason to believe that the official exchange account has given any support to a rate that is artificially high for the season; the market guesses indeed that even this week the control may again have taken in dollars. The pause in buying that occurs in anticipation of a Bank rate reduction is based on the assumption that the reduction will be accompanied by a fall in the spot rate, so that operators who need sterling to cover their commitments are tempted to hold back in anticipation of getting their sterling cheaper. There is, however, a contrary influence from operators in possession of liquid funds; they are naturally keen to make their investment before the interest rate falls. Those investors who believed that the cut in Bank rate would not be sufficient to choke off the inflow of hot money, and would not therefore cause more than a temporary fall in the spot rate, took the opportunity to buy sterling; but apparently they were in a minority.

The other facet of the anticipation of a Bank rate reduction in the exchange market was a continuing fall in the forward discount, to under 2 cents on New York three months forward. This is also in line with the sharp reduction in the Treasury bill rate at last Friday's tender, to under 5¾ per cent, or 8s. below the rate on the morrow of the cut in Bank rate from 7 to 6½ per cent four weeks ago. The margin on covered arbitrage in Treasury bills has remained at about ⅝ per cent in favour of London.

On the Continent the dollar has remained weak on all the main centres, and even in Germany has slipped below parity. The main Continental markets now appear to regard the Berlin crisis as over, and some of the money that went out of marks into gold or Swiss francs is reported to have returned. The Bundesbank's reserves of gold and foreign exchange were still falling in the third week of October. At 27.69 billion marks ($6.9 billion) they were 2.7 billion marks lower than in July, though part of this reduction reflects Germany's contribution to Britain's IMF loan.

COURTAULDS

A Penny Cut

It is hard to find in Courtaulds' results for the six months to September 30th any evidence of the improvement in profits since the end of June promised by the chairman in his last report. Profits in the first quarter of Courtaulds' financial year were lower than in the corresponding period in 1960, but not, one can assume, £2 million lower, which is the extent of the fall in profits before tax for the half-year. Gross profits contracted from £9,569,000 to £7,586,000 in those six months, and if, as the directors forecast—though without a great deal of confidence—profits in the second half run at about the same level as in the first six months, they will show almost as large a decline as in the first half.

Things are evidently not going quite as well as was hoped, and it must be a considerable disappointment to the directors that, despite the considerable diversification of interests, they have been forced to cut the dividend—as they did in the textile slump of 1958. The interim payment has been cut by 1d. to 9d. per share and it appears quite likely that the total dividend for the year will be trimmed by, say, 3d. to 1s. 9d.

Turnover in the six months to September 30th at £83½ million was £3½ million higher than in the corresponding half of 1960, but lower than in the second half of that year. But it seems that much of this increase occurred in exports, which though gratifying from the balance of payments point of view is not so attractive from the business angle since margins are far lower. In this half-year, exports rose substantially and therefore must have accounted for about a fifth of the group's turnover. It is known that though the group's exports of fabrics have been practically unchanged this year sales to the Commonwealth have fallen heavily and exports have been switched to western Europe, at the cost, one would guess from the level of tariffs, of some significant reductions in profit margins.

Last year Courtaulds was still enjoying the tail end of a textile boom; this year rayon fibre factories have had to cut production and Courtaulds has embarked on some further rationalisation of the industry through mergers. Its non-textile interests have not yet paid the dividends expected of them, but by next spring the group will have completed the re-equipment of its weaving mills, which will by then have been reduced from nine to four, and all but 10 per cent of the looms will be automatic. It would therefore seem that apart from a revival of the growth in consumption of older man-made fibres, better margins may be obtainable from its textile interests in future. But to some extent imports of cheap cotton manufactures from low-cost Asian producers also compete with certain goods made from man-made fibres.

THE ECONOMY

Planning Public Investment

Fixed capital investment in the public sector, which was rising even more sharply than private investment in the first half of this year, is expected to be about 7 per cent higher in 1961-62 than in 1960-61; and the Treasury has authorised a further increase of nearly 5 per cent for 1962-63. This would have been more but for "the immediate contribution from the public sector" that the Chancellor said in July would be needed "towards relieving the overall pressure upon the economy," and also as "part of the process of bringing the rate of increase of total expenditure into a better relationship with prospective resources and thus of strengthening the nation's efficiency and competitive power." In the white paper* on public investment that it published this week the Treasury comments that its recent adjustments have been designed to moderate the growth of public investment rather than to stop any increases.

In this, its second annual white paper on the subject, the Treasury recognises that different criteria apply to investment in the nationalised industries, which are responsible for about half of public investment from those applicable to social investment in the public sector. Capital expenditure by the nationalised industries and public corporations at least ought to earn a commercial return—what this white paper calls "their contribution to financial performance"—and the Treasury does not try to control individual projects in their long-term investment. In the capital expenditure of the public services, no such criteria can readily be applied; "decisions have to be taken on broad grounds of public interest." In practice, the distinction is not always as hard and fast.

The Treasury and other Government departments are, formally at least, not yet finished with the new exercise of setting the nationalised new target rates of return to aim at earning on their capital investment—and their prescriptions, so far, are couched

PUBLIC SECTOR INVESTMENT, 1959/60 TO 1962/63

	1959-1960 Out-turn	1960-1961 Esti-mated	1961-1962 Fore-cast	1962-1963 Ap-proved
Investment by the nationalised industries and public corporations:				
Coal	108	94	97	95

Total (rounded)	735	775	870	925
Grand total (rounded)	1,620	1,640	1,735	1,840

* Cmnd 1522.

in terms of averages over five-year periods on the whole capital employed in these industries, not as criteria for the returns to be required from new investment. The Treasury, again, is concerning itself with "five years forward" planning of public service expenditure. But the effects of neither of these exercises appear directly in his white paper.

Whitehall planning of public investment is generally exerted to adjust the total balance of supply and demand in the economy; but in this week's white paper there is evidence of more specific restraint to avoid overloading the construction industries. By the end of June publicly-financed housing under construction had risen to a level that was tending to delay actual completions; it has therefore been decided to hold back new starts on house-building in "the months immediately ahead" and to exercise restraint in letting projects out to tender, in order to get quicker progress on those already begun.

OIL

Refinery for Regent

Five years ago, after control of the Regent Oil Company in Britain passed wholly into American corporate hands through the purchase of Trinidad Oil by the Texas Oil Company, it was announced that Regent was to be supplied from a refinery in Britain. The company, which had been owned half by Trinidad and half by Caltex, the jointly-owned international marketing subsidiary of Texaco and the Standard Oil Company of California, had been, under the direction of the late Mr Simon Voss, the last large-scale marketer of petroleum products in Britain to rely on importing the actual products from overseas refineries, notably in Trinidad and Bahrein, instead of importing crude and refining it here. Mr Voss had indeed been notably sceptical about the whole postwar swing to refining near centres of consumption rather than at source. But within a few months of the takeover Caltex announced that it was going to build a refinery of up to 100,000 barrels a day, or 5 million tons a year, in capacity.

That refinery was never built: Caltex ran into strong local opposition on grounds of amenity in Southampton Water, suspended the scheme, and finally, only three months ago gave it up, selling the site it had already bought. But this week a refinery for Regent was on again. Mr Augustus Long of Texaco told a meeting of security analysts in New York that his company planned to build a refinery of a similar size in Britain to supply Regent, without saying exactly where it would be put. The difference this time is that Standard of California will not be called on to contribute a half-share to the investment—which at say £7 an annual ton might run to £35 million.

Regent is believed to have 7-8 per cent of the total market for petroleum products in Britain; but its main strength is in gasoline and diesel fuel for vehicles, which it sells through nearly 4,000 service stations, and here its proportionate shares may be about double its average for the whole products market. It is a somewhat sporadic and occasional seller in the fuel oil market—this is one field in which its association with a refinery that will add perhaps 10 per cent to Britain's total capacity may press it towards much more active selling than at present. Texaco has not announced where its refinery will be planned; it is presumably seeking somewhere freer of amenity objections than Southampton.

PROFITS AND DIVIDENDS

One Month's Reckoning

In the stock market, prices have lately been adjusted to the fact that British industry as a whole is earning smaller profits and to the prospect that, even without the Chancellor's request for restraint, dividends would not rise at all quickly. The estimate by the Government's statisticians that profits earned in the second quarter of this year were about 8 per cent lower than in the second quarter of 1960 came, therefore, as no surprise to the stock exchange. It is always difficult to reconcile such national income estimates with the collation of profits reported by public companies in any quarter or month. The first is an estimate from an Inland Revenue sample of what has been earned in a particular quarter, while the second relates to the profits returned for a full financial year which happened to be published in a particular period.

PROFITS AND DIVIDENDS
(£ million)

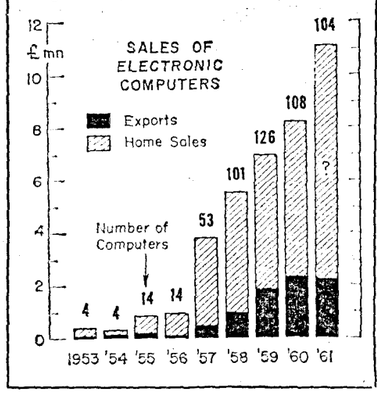
138 companies reporting in October	Previous year	Latest year
Trading profit	63·4	67·1
Gross profit*	42·1	43·0
Net equity earnings*	19·9	19·9
Net ordinary dividends	9·6	9·9
Times covered	2·1	2·0
Net equity assets	245·7	277·3
Gross profit/net assets	16·5%	15·5%
Net earnings/net assets	7·8%	7·2%

* After deducting non-recurring credits.

It is upon the second method that the analysis of published reports made in this office is based and the customary collation of the accounts of 138 companies reporting in October still showed a rise in trading profits of about 5¾ per cent. Most of these companies ended their financial years in June and thus earned their profits around the mean date of December 31st. This is one reason why the statistics do not square with the national income estimates. Another is that in any one month the profits of individual companies will have a marked effect on the total result and it happened that in October Decca Record and Calico Printers loomed large and both of them reported a good rise in profits.

As the accompanying table shows, the rise in trading profits was not accompanied by an increase in net equity earnings and this kept dividend payments on a tight rein. Moreover, it shows that the average rate of return on capital employed is still falling. This has been apparent now for more than a year and it should impress investors who return to the equity market, as some of them did this week, with the need for caution in appraising individual securities.

RAILWAYS



Making Them Pay

The Government's new Transport Bill, which will be designed to reorganise the railways and the rest of the nationalised transport industry, was not published until after this edition of *The Economist* went to press; it was drafted to carry out the new policy on railways outlined in the white paper of December last year. By now Dr Richard Beeching, who was appointed to run the reorganised railways, has been a member of the British Transport Commission for seven months, and chairman for five.

The process of improving commercial efficiency, however, has to be a day-to-day one that cannot wait upon major changes in structure; on Thursday the Southern Region announced that it is reducing the number of stations that handle freight wagons from 650 to 300, the number of depots that handle small consignments from 130 to 25, and marshalling yards from 40 to less than 30. All this will allow it to run longer, fewer and faster freight trains,

THE COMPUTERS ARE COMING

The chart below shows clearly the increasing use of British-made electronic computers. A machine is classified as "sold" only when it is fully installed and delivery can take as much as two years. This means that the 1961 figures (an estimate made by doubling the half year sales) does not take account of this year's orders. IBM are reported to have taken orders worth over £10 million for their 1401 computer and ICT 61 orders, worth about £6½ million, for their 1301 computer.

and should save £2 million a year on operating costs when it is completed in some three years' time. Other railway regions are working on the same lines, but the Southern, where freight traffic forms the smallest proportion of the total, is able to get on quickest.

CANADIAN DOLLAR

Lower, Not Higher

WHEN Mr Donald Fleming, the Canadian finance minister, proclaimed in his June budget that he would use the exchange fund to drive the Canadian dollar to a "significant discount," he took upon himself the job of deciding what rate was "appropriate to Canada's economic position." The Canadian authorities have in fact intervened in the market in both directions. The exchange reserves actually fell by $61 million between end-June and end-September, which would appear to indicate that the Canadian authorities have on balance been holding the rate up: but part of this loss reflects Canada's contribution to the IMF loan to Britain. Since the budget the discount on the US dollar has remained obstinately stable at 3 per cent.

In a speech last week, however, Mr Fleming injected a new element of uncertainty into the market. Following press reports that the government had been purchasing US dollars in order to keep the Canadian dollar down in the face of active demand for Canadian funds, Mr Fleming said that it was a "misinterpretation" to believe that the government intended keeping the Canadian dollar at its present 3 per cent discount. This was taken as an indication that the discount was likely to narrow. Later however Mr Fleming was reported as having said that he meant to imply the opposite—that the Canadian dollar might go lower and not, as some observers had assumed from his speech, higher. This week it has duly fallen, though not too steeply—from 97.06 to 96.80.

At the end of 1960 the premium on the Canadian dollar was about 3 cents, which means that the rate has fallen by something like 6 cents in all. Given the close links between the United States and Canada, with keen price competition over a range of directly competitive products, a movement of this size is by no means ineffective. Canada's current account balance has in fact been improving—in the second quarter of the year the deficit was $323 million, compared with $470 million a year before, and preliminary indications suggest a further improvement in the third quarter. This improvement, together with the maintenance of the volume of direct investment from abroad, has offset the expected slackening in the inflow from short-term capital and new issues in New York by Canadian companies, following the narrowing in the long-term interest differential from 1¼ to under one per cent. Thus the improvement in the current account appears to have offset the fall in demand for Canadian funds on capital account, and may explain why the Canadian authorities have so far been content with a 3 cent discount. Now they have made it plain that this is not set policy: their determination to maintain orderly markets does not imply a commitment to stable rates.

BMC

Sir Leonard Retires

RETIREMENT of Sir Leonard Lord from the chairmanship of the British Motor Corporation on November 7th is bound to be regarded as marking the end of the first stage in the combine's life, as he has been so closely responsible for its birth and growth. But if he is succeeded by the present deputy chairman and managing director, Mr G. W. Harriman, there will be no sharp break in management; since 1958 Mr Harriman has been responsible for the day-to-day running of the company. And Sir Leonard will remain a non-executive director and vice-president. He is leaving the chair at a time when BMC seems to be strengthening its competitive position; despite the fall in home sales this autumn, the demand from dealers at home and abroad for its new range of cars should allow it to produce at its capacity of 15,000 a week until the end of January. Model changes every year are expensive, but they may be the only way of avoiding short-time working in the winter. If the industry follows this American habit, the position of the bigger firms like BMC will be again strengthened.

RUBBER

Selling Stockpiles

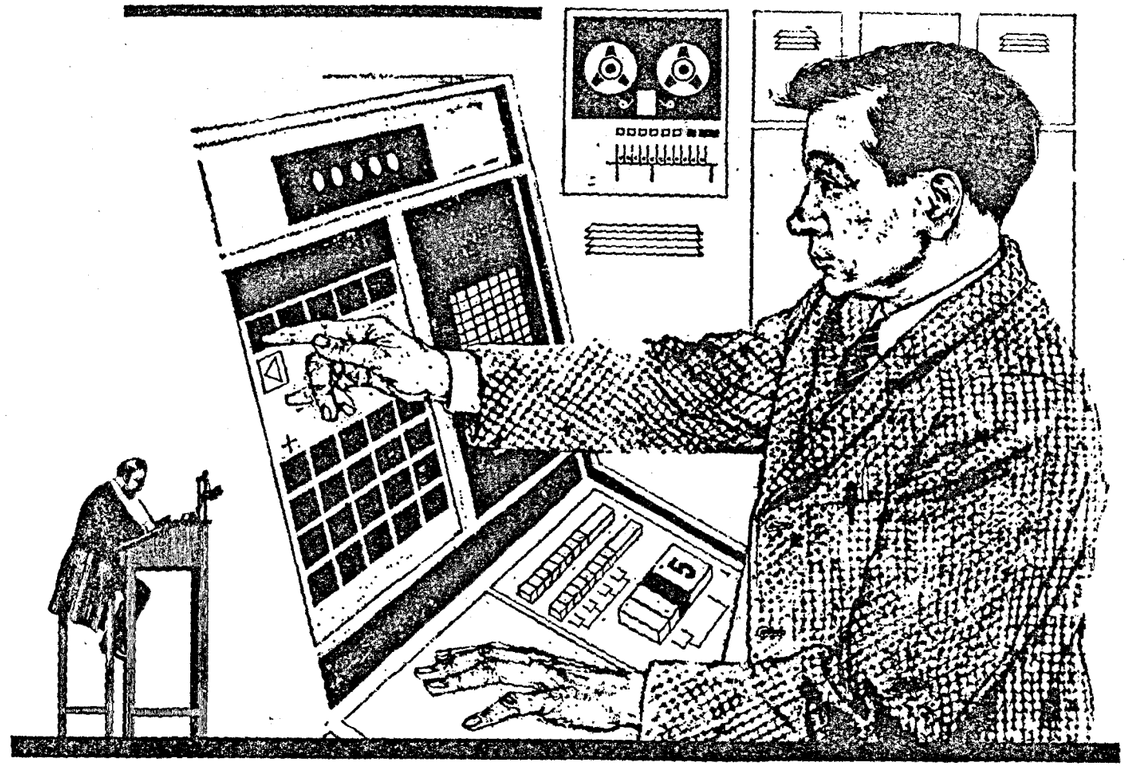
FAITH, it is said, can move mountains, but it seems that the controllers of the British and American rubber stockpiles are prepared to wait no longer for the revival in rubber prices that would allow them to resume disposals of their surplus stocks. The United States announced two years ago that it would dispose of 470,000 tons of rubber over nine years; Britain said it had 100,000 tons to sell. Tripartite discussions between Britain, the United States and rubber growers produced a price scale for these disposals which got rid of nearly 100,000 tons of American rubber and 68,000 tons of British rubber by the end of 1960. There were no complaints about the pace of selling until this year when sales by the United States dipped to 21,000 tons and Britain disposed of only 4,000 tons.

The original scheme prevented disposals below 25½d. a lb and did not permit significant sales below 27d. a lb. The price of grade one rubber in London has barely exceeded 27d. a lb at any time this year, and for much of the period has resided just inside the "safe" zone below 25½d. a lb. The season of peak output is now approaching, manufacturers have not been avi buyers, synthetics have made more progres than expected this year and a fairly larg surplus of natural rubber seems certain Sales to communist countries also petere out recently and left the market drifting. is into this rather dispirited market tha more stockpile rubber is to be injected.

The Board of Trade announced the sus pension of the old price scale for its sale last Saturday; now up to 1,000 tons a mont may be sold below 27d. a lb at an unspeci fied price. This arrangement, dubbed "tem porary," will remain in force for a year an is liable to suspension if it "unduly de presses" the market which has alread wilted to 23d. a lb under the strain.

Not the least singular aspect of thi change was that it became effective on th last day of October, so that 1,000 tons o rubber were theoretically available on Tues day when Board of Trade rubber wa actively dealt in by the market and a further 1,000 tons became available on Wednesday Rumours of changes in the United States selling policy have abounded since June when discussions were held between the affected government agencies. The Board of Trade did apparently consult the United States and growers before changing its policy. That lent strength to the sugges tion that the United States, whose remain ing stock is now really the only one with great significance, set this ball rolling. The market was therefore chiefly concerned with parallel changes that it expected in Ameri can policy, and on Wednesday it was an nounced that the United States would sel 5,000 tons of rubber a month below 32 cent a lb.

Malaya which is now the biggest produce of both rubber and tin, appears to be absorb ing most of the kicks from stockpile releases The price of tin rose too high and has been restrained by the threat of releases from America's stock; because rubber was too weak it has brought these changes upon itself. Malaya's exports and re-exports of rubber amounted to $Malay 2,500 million last year out of total exports of $Malay 4,70 million.



SPACE RESEARCH

Shaking Down

THE silly season in space research is over for Britain. With delegates from nine countries spending the week at Lancaster House drafting a convention which will lay down (a) how much each member will con tribute towards the cost of a Blue Streak space rocket and (b) what they will do with the rocket when built, companies that have been actively lobbying for a share of the hardware are faced now with the need either to justify their words or eat them.

The Hawker Siddeley Group had no stake in the space business before it bought the de Havilland Company nearly two years ago. It sought to acquire one by

in a changing world

If ten Dickensian clerks with ten pens worked ten hours a day for ten years, how many sums would they have done? Fewer, no doubt, than one modern electronic computer can do in ten hours.

In commerce, in industry, in research and in defence, the computer is performing prodigious tasks today—saving time, saving money, saving valuable manpower.

And Mullard's contribution to this revolutionary development? Principally in the shape of memory cores and assemblies, transistors, valves and other specialized devices, but also to some extent in know-how.

Mullard research and applications laboratories play an important part in satisfying the urgent and critical needs of the designers of modern electronic equipment. Could they also be of service to you? If you would like to find out, please write to us at the address below.

Mullard products used in computers include:

FERRITE CORES · MATRIX ASSEMBLIES
COMPLETE STORAGE SYSTEMS
HIGH SPEED LOGIC AND CORE DRIVING TRANSISTORS
SEMICONDUCTOR DIODES
SPECIAL VALVES · THYRATRONS
COLD CATHODE TRIGGER AND COUNTING TUBES

BIP BRITISH INDUSTRIAL PLASTICS LIMITED

WOULD IT BE BETTER IN PLASTIC?

THE WALNUT. One of Nature's most craftsmanlike jobs: beautifully sealed sutures, a bony shell tough enough to crack your teeth on. Keeps for ages. But couldn't we simplify the inside? So many convolutions, it's difficult to get at the bit you want.

Fortunately nobody has yet asked us at BIP to use plastics to design a simpler walnut. Our job is to improve *manufactured* objects—like your product, perhaps. There's hardly anything made by man which can't be improved by plastics and a bit of thought. At BIP we provide both, and the thought is free.

British Industrial Plastics have been in the industry from the start. We're interested in plastics used on their own and with other materials: with wood to make furniture, with metal to make model railways, with paints to protect cars, with fabrics to make drip-dries—today's plastics are versatile collaborators.

What next! What's your product! Ask us what BIP can do for it. Whatever it is, our Advisory Service will take it in hand (without charge or obligation) and come up with suggestions. We know what plastics can and cannot do (we process the raw material, make the press and tool plant and our own range of moulded products). So we can offer a Product Design Service, working in with your designers or independently, without fee. We are full of ideas—now it's your move.

BRITISH INDUSTRIAL PLASTICS LIMITED, OLDBURY, BIRMINGHAM
A Member of the Turner & Newall Group

GO ON-ASK US!

WOULD IT BE BETTER WITH PLASTICS?

setting up a small "advanced projects" research group headed by Dr Hilton who, since his company had no big rockets, was obliged to confine his work to probable satellite developments. Thus Hawker Siddeley was able to claim a vested interest in any future space programme, although it is doubtful whether the company ever gave or intended to give Dr Hilton the staff or the money that he would have required to make a serious contribution to such a complex undertaking as, say, communication satellites. But with the purchase of de Havilland, Hawker Siddeley became the prime contractor for Blue Streak, the one part of any European space launcher certain to be built in Britain, and the employer of an energetic group of salesmen headed by Geoffrey Pardoe, whose occupation has been thinking up new uses for Blue Streak.

Last week, against the background of the Lancaster House conference, Hawker Siddeley decided there was no future for an aircraft company in the satellite end of the space business and it summarily dismissed Dr Hilton and most of his team. The company's peculiarly inept sense of public relations has managed to make Dr Hilton's dismissal appear brutal and tactless; but whatever decided the management to choose this particular time to close his department, it must have been obvious for months that a company like Hawker Siddeley, with no experience of electronics, had little chance of winning any contracts going for satellite instrumentation. The excuse that the Government was showing no interest is a thin one. The Government has done a considerable amount of work on satellites—at Farnborough with far more extensive resources than those available to any aircraft company. When some of this work was shown to visitors this summer, scientists were heard drily to comment that few manufacturers and not many scientists realised quite what engineering problems were raised by even the simplest of satellites. Dr Hilton's dismissal may be only the start of a wholesale reorganisation inside the Hawker Siddeley Group.

COTTON TEXTILES

No General Agreement

GATT is no cure-all for every sickness: the industrialised western countries that passed to that body the increasingly troublesome problem of imports of cotton goods from low-cost Asian producers seemed to have asked a lot of it; and that it is having some difficulty in producing a solution to which all parties can agree is hardly surprising. However, the Gatt textile group appeared at its meeting in July quickly to have achieved the seemingly improbable with a makeshift scheme for limiting imports from Asian producers in the year to September next to their average level in the twelve months to June this year. The "impossible"—a fair long-term solution that would successfully reconcile the many conflicting interests—still seems a distant vision, though delegates were pushing on determinedly with the project at last week's conference in Geneva.

But it became obvious at this meeting that even the short-run arrangement has hit snags. Britain—or perhaps more accurately Britain for Hongkong—has not yet accepted these proposals, though it might soon do so as Hongkong has apparently dropped its objections. However, exports are classed in 64 categories under the scheme, and Hongkong wants, among other points, a clearer indication of how the United States will apply the Gatt agreement to individual classes of manufacturers. Under the Gatt agreement, the United States could in any case impose restrictions without Hongkong's concurrence on any categories of imports which reached a "critical" level.

Before the next Gatt meeting at the end of January, it is hoped that a long-term plan will be put forward by a sub-committee. The short-run pact was particularly favourable to the United States, whose imports fell in the first half of this year, and it appears that its representatives pressed for the replacement of the temporary scheme with a slightly modified five-year agreement on similar lines, to which Britain at least raised objections.

The form in which "liberalisation" of imports will be written into the long-term agreement is far from settled. Manufacturers in this country and the United States have recorded their preference for the more comfortable "fixed percentage of total consumption" formula, though an automatic increase in the size of import quotas would seem to fit the needs of the Asian producers better. Hongkong also wants the right of an importer to impose restrictions on imports following disagreement with the producer to be transferred to an impartial body under the long-term agreement.

ATOMIC ENERGY AUTHORITY

Exodus

DR J. V. DUNWORTH, deputy director of the Atomic Energy Authority's reactor research station at Winfrith and one of the original members of the small team that re-started atomic research in Britain after the war, is the fourth senior member of the Atomic Energy Authority to resign in the past few weeks. Nor have they necessarily resigned to take up nuclear jobs with industry. Dr Dunworth is leaving atomic research entirely to become deputy director of the National Physical Laboratory and several of his colleagues have also turned their backs on nuclear research.

These resignations leave the Atomic Energy Authority thin at the top, Sir Leonard Owen, another founder-member, who has just reached retiring age, must have had his own experience at the AEA in mind when he complained recently of the difficulty of getting men for top management. But these changes are also a sign to be welcomed that an element of mobility is beginning to appear in scientific research. The authority is over-staffed. The big heave both in nuclear weapons and nuclear power took place some years ago, and the vast machine has been running wastefully at half-power for several years. This is frustrating for able men of energetic mind, but all too often their transfer to other laboratories where their talents are needed is made unnecessarily difficult by the inability to carry their pension rights with them. Much has been heard lately about the need to keep big research institutions lively by encouraging a constant flow of migrant researchers from the universities through their laboratories. But it is easier to get into these big institutions than it is to get out again.

INTERNATIONAL TRUSTS

Investing Overseas

JUST as investment trusts and unit trusts in this country offer an opportunity for those wishing to spread their risks, similar trusts overseas, particularly in Europe, offer the same facilities. With them, the investor has to "back the management" even more than with domestic trusts, not least because information about individual investments in overseas companies is not so readily at hand.

The popularity with British investors of these managed trusts is growing and following the official quotation for Interunie and a similar application by Robeco, shares in a third Dutch trust, N.V. Vereenigd Bezit van 1894 (United Holdings 1894) are being introduced in London. Like other Dutch trusts, Vereenigd Bezit combines the features of the conventional investment trust and unit trust in this country, for while its shares can be dealt in only through the stock exchange the company always maintains a tap in its shares, which it releases through the market at a price based on the value of the underlying assets plus duties and issue costs. The trust is not obliged to buy back its shares but it usually will.

At the end of June Vereenigd Bezit's portfolio was worth Fls. 82¼ million, of which almost 80 per cent was invested in Dutch stocks and nearly all the remainder in dollar securities. Vereenigd Bezit has a far greater proportion of its funds in local Dutch securities and a much smaller stake in dollar stocks than the other big Dutch trusts have. Dealings are expected to begin in this country at about £14½, so that the yield is just over 2½ per cent on a 7½ per cent dividend. For the last six years, however, this payment has been supplemented by a small stock bonus and on the increased capital the dividend has usually been raised.

Further afield, an investment trust, the Anglo-Nippon Trust, has been formed to invest in Japanese equities. The size of its capital has not yet been decided, but almost all of it will be issued to the public. Prices

of Japanese securities have fallen sharply in the past few months and the Dow Jones index which reached an all time high of 1,829.7 in July now stands at 1,360.2, at which the average yield is 4⅛ per cent. The Japanese brokers to the trust will be Yamaichi Securities which handled over 20 per cent of the total volume of business on the Tokyo Stock Exchange last year. The trust, which is looking for investments with long term growth prospects, is unlikely to be worried about the regulations which prevent non-residents from repatriating funds for two years unless the transaction is between non-residents.

COCOA

Better Times Ahead?

IN this year of crumbling commodity prices, no one begrudges a primary producer a sudden change of fortune, though a rise of nearly £40 a ton in the price of cocoa to about £190 a ton within the space of a month might be reckoned a little steep. But because this is a topsyturvy world the chances of establishing an international cocoa price stabilisation scheme are that much slimmer following last month's violent fluctuation. The peak of this rally coincided with a meeting of a committee of the UN Food and Agriculture cocoa study group to review the draft of an agreement to stabilise prices. That committee was therefore able to defer with few qualms taking any immediate action to help producers. The next meeting of the full cocoa study group will be held in May.

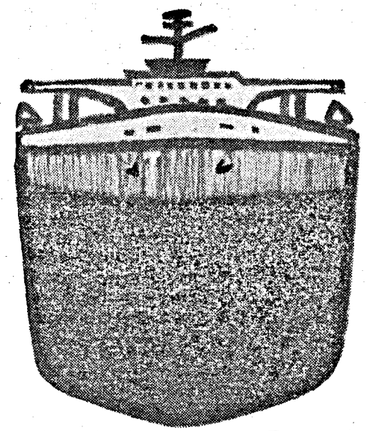
In view of the large surpluses in the two preceding seasons, it is encouraging that prices can still respond so sharply to early forecasts of production in the new season, particularly as the FAO's estimates suggest that consumption will only barely exceed production. Early forecasts, however, are not very reliable, though they are supported by exceptionally small purchases of cocoa from farmers so far this season. The FAO cocoa group might have a built-in bias towards underestimating production which it puts at 1,069,000 metric tons this season, and perhaps towards understating consumption which the FAO reckons will increase by 84,000 tons to 1,080,000 tons in 1962.

In the light of present knowledge, the recovery could be running ahead of events, and large manufacturers appear to withdraw from the market when prices are advancing. But at the current shipment price of £190 a ton, cocoa might still look cheap compared with average prices of about £225 a ton in 1960 and £285 a ton in 1959. Following its decision to sell cocoa in Accra, Ghana has unexpectedly stopped sales through London. Nigeria has also decided to offer cocoa in Lagos, and though, like Ghana, Nigeria's sales have been extremely heavy for this stage of the season, all the business is being transacted through its London agency, until the Lagos office opens at the beginning of next month.

Exchange Rates on a Moving Average

A correspondent in Oxford puts forward a simple but ingenious way of achieving controlled flexibility in exchange rates:

THIS is a proposal to change the present rules governing the levels at which exchange rates between different currencies are pegged. The present system embodies an endemic dilemma—between maintaining exchange rates that have become inappropriate to changed circumstances, and of provoking speculation by allowing the belief to arise that any currency may suddenly be devalued by a large amount. At the same time, a simple widening of margins of fluctuation allowed around existing parities has the disadvantage that it allows the possibility of a major fall in a short period when a currency is at or above parity, while once a currency has fallen to the permitted floor, no further downward movement is possible except by alteration of its par value.



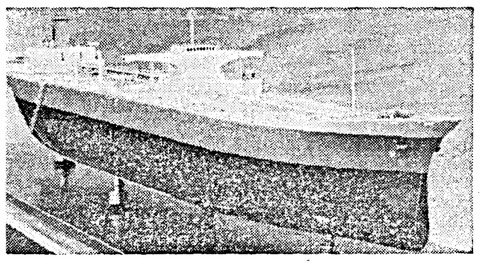
What one would suggest is the adoption of a method of frequent minor adjustments —e.g. daily adjustment of registered par rates. The registered par rate of any currency against gold could be made equal to the daily average of market rates over some past period, such as a year. The official exchange account of any country would then be committed to maintaining the market rate within one per cent of this parity at any moment. Thus any country whose currency had fluctuated in a given year within the permitted range, with an average equal to its parity at the beginning of the year, would commence the next year with the same par value as at the start of the year before. If on the other hand a country's currency pressed continuously on its lower limit it would be able in time to go still lower, since the average for the past twelve months would be decreasing. If the rate were kept continuously at its permitted minimum, thus always equal to one per cent below its average for the past year, the annual rate of fall could approach two per cent. If the currency did not press continuously on its lower limit, the permitted fall would be slower; and no country which did not wish to allow its market rate to fall would be forced to do so, though after a year it would find that any market rate it had held consistently had become its official parity.

IF it is thought that the speed of alteration of exchange rates which this system would allow would be too rapid, this could be countered by lengthening the period over which the average of market rates should be calculated. In practice, however, the possible effects on speculation of the prospect of a maximum rate of appreciation or depreciation of 2 per cent per annum should be easily controlled by equivalent variations in interest rates.

Some special provision might be thought necessary during the first year of such a scheme, as its immediate introduction would permit an immediate fall by 1 per cent of both the parity and the market rate of any currency that had stood consistently at its lower limit during the year before the scheme was introduced. The expectation of such a fall in the price of a currency might lead to disequilibrating speculation in the period immediately before the scheme came into effect. A simple way to avoid this would be to provide that in the calculation of the average market rate for the past year, the old par value of the currency should be used for dates before the scheme came into force, and the actual market value only for dates after this, so that the new arrangement would come into effect only gradually during the first year of its operation.

Obviously, such a reform would not solve all exchange rate problems; countries which started with their exchange rates far removed from their equilibrium values might still find it necessary to make major, once-for-all, shifts in their parities, and there would be nothing to prevent them from making these changes, any more than there is now. It would still be necessary to avoid major inflationary or deflationary movements which would make any exchange rate in the neighbourhood of the old parity untenable. The scheme would however provide a useful measure of long-run flexibility combined with short-run stability for countries whose problems are less extreme, but none the less real and persistent. It can for example be maintained that the deutschmark troubles of the past few years, for which a 5 or 10 per cent appreciation were suggested, could have been coped with more smoothly by a movement spread over three to five years than by the actual method of a jump of 5 per cent, the size and timing of which had attracted wholesale speculation for half a decade.

Finally, the proposed reform has the advantage over more drastic reforms that its introduction need involve no violent upsets, so that it can be subjected to rational discussion in public before being adopted. If adopted it would be a small but useful improvement in the world's payments mechanism.



SHIPS

IHI selected to build world's largest tanker

SOON 185,400 CUBIC METRES OF OIL WILL GO TO SEA IN A GIANT 130,050 DWT TANKER NEARLY 300 METRES IN LENGTH. THIS TANKER WILL BE THE LARGEST IN THE WORLD, AND IHI HAS BEEN SELECTED TO BUILD IT.

IHI IS ONE OF JAPAN'S LARGEST SHIPYARDS. IT ALSO BUILDS CRANES, PRIME MOVERS, AND HEAVY EQUIPMENT. IT CAN DRAW ON THE SKILLS OF MORE THAN 17,000 EMPLOYEES TO HANDLE BIG JOBS OF ALL KINDS AROUND THE WORLD. A 46-PAGE BROCHURE ON IHI SHIPBUILDING ACTIVITIES WILL BE SENT ON REQUEST.

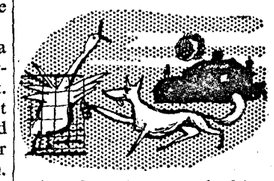
THE FARMER AND THE GOOSE

an economic fable

ONCE UPON A TIME there was a farmer who was blessed by fortune. He had broad acres, cows which gave rich milk, hens which laid many eggs. But this is the lot of other rich farmers. Where he was superior to them all was in his ownership of a goose who laid golden eggs. This goose was a faithful and obedient creature, and for a long time the farmer treated her with the consideration which was due for the help she gave his finances. The goose foraged happily for herself and laid many eggs for the farmer. And the farmer drove an expensive car and smoked only the best cigars.

Then the farmer married a wife. This lady had many virtues, but one serious defect. She couldn't bear to think that anyone around her performed any task which wasn't under her own personal supervision. She chased the maids, she chivvied the hens. And she took a great interest in the goose who laid the golden eggs.



"It's not right," she told her husband night after night in

the privacy of the double bed. "The creature can't be left to look after herself."—"She's done all right up till now," said the farmer. But in the end his wife had her own way, as women will.

So she had a special goose-run constructed, and shut the poor goose up in it. She was no longer allowed to forage for herself. Instead, her diet was strictly controlled. Strange and outlandish foods were given to her, as the farmer's wife had the idea that these would make her lay yet more eggs. All they did, unfortunately, was to give the poor creature the hiccups. In other moods, the farmer's wife would economise at the goose's expense, and force her to eat all the leavings which no-one else wanted. "After all, she's there to make herself useful," said the farmer's wife. The farmer, however, was a bit put out to find the golden eggs growing fewer and fewer.

Until one day, or rather one night, there was very nearly a tragedy. The farmer's wife had insisted that the goose-run be built right out in the open, where she could see it from her kitchen window. The goose, who was a wary bird and wise to the ways of foxes, complained that the spot was not safe. The farmer's wife told her to hold her tongue. But, sure enough, the fox came. He lifted the latch. He stepped into the run. And he had the goose cornered and was on the very

point of making an end of her when her cries brought the farmer running out in his nightshirt.

The farmer set the goose free again. But the damage was done. Thenceforth she laid only ordinary goose-eggs. The farmer grew poor and blamed his wife for it. One day he turned her out of doors, and that was the end of the marriage.

MORAL:

There's more than one way of cooking one's goose.

FIRE

Up in Smoke

WITHIN the past three years Britain seems to have become a more inflammatory country. Up to 1958, losses caused by fires used to amount to about £24 to £28 million a year. But in 1959, the total jumped suddenly to an annual £44 million and has stayed at that level ever since, this present year being no exception. Nor is the casualty list growing any shorter. Last year at least 529 people died in major fires and more than 700 died altogether from burns and scalds; 23 of them were firemen. Another 257 firemen were injured out of a total casualty list of nearly 4,000.

Analysis of the causes of the 133,484 fires that were bad enough to need Fire Brigades does not really explain why the country is going up in smoke. Outdoor fires vary with the weather—up spectacularly in a dry summer like that of 1959, down in a wet one like that of 1958 but generally bobbing around the 70,000 a year mark. Fires inside buildings are, however, rising at such a steady rate—51,500 in 1956, 62,500 in 1960 (half of them in people's homes)—that one is led to infer that something must

be wrong with the buildings themselves and the fire regulations governing their construction and maintenance. And this seems to be borne out at least in part by the Government's move to bring fire regulations gradually under the Home Office instead of leaving them to the discretion of local authorities that take markedly different views of the urgency of the fire risk.

It is easy to say that most fires are caused by carelessness: to argue, for example, that the reason why more and more fires apparently start in or on electric cookers is because more women are leaving fat on the stove to catch fire (nearly one fire in six started in a building is due to electricity; mainly to wiring, with cookers second and fires or heaters the third main cause). But carelessness is part of the human make-up, and before they blame the rising number of fires on scatterbrained housewives, smokers and kindergarten incendiaries, the experts might ask themselves about their designs and choice of materials. Most pertinent of all, how many of the new possibilities of making buildings resistant to fire have been incorporated into local by-laws? Perhaps the underwriters, who have had to meet bills for some spectacular fires in the

past three years, might like to ask developers and their architects a few searching questions?

FRUIT IMPORTS

More Apples

IN September, the Board of Trade announced that it would consider applications from canners or processors of apples for additional licences to import apples for processing. In the past, cider manufacturers and the like have been helped out of a difficult spot caused by partial failure of the home-grown crop such has happened this year by a liberalisation of import quotas. Production of dessert apples in this country has fallen by about a third this year and cooking apples by about two thirds. The wholesale price of "Cox's" has more than doubled to 165s. a cwt since a year ago and some cooking apples are four times as expensive. The 40,000 members of the Retail Fruit Trade Federation anxious lest their customers will not be able to afford apples by Christmas, also asked for a temporary liberalisation of imports and have had their request granted. Ten per cent of next year's January-June quota can be imported before the end of this year.

The chosen method of protecting British apple growers is a seasonal import quota. From January to June non-sterling exporters can ship 68,750 tons of apples to this country; in the second half of the year quotas are reduced to 15,200 tons. The 10 per cent advance quota therefore represents a considerable relaxation for the second half of the year. Imports from the sterling Commonwealth are not restricted, but they arrive mainly in the slack season when prices are high. South African apples are normally the first to arrive, followed by New Zealand's with Australia's apples filling in the gap before the arrival of the new crop. Import quotas for apples were not fully used in the first half of this year, and few apples come into this country during the main harvesting period; imports under quota were negligible in July and August, though in September they were more than twice as large as a year earlier. The biggest exporters subject to quota are Italy, the United States and Argentina. Despite the restriction of the large British market, Italy and Argentina have expanded their exports phenomenally since the war.

MACHINE TOOLS

Still Virtuous

THE machine tool industry continued to get more orders from export markets during August, while those from the home market remained below the 1960 level. But the fall in orders at home was smaller than it had been in the first seven months of the year; though differences in the part of August that industry may have spent on holiday make it difficult to be sure why variations in output or orders have occurred,

these figures hardly suggest that industry had then begun cutting back any more on this part of its capital spending. The industry's order book has continued to grow throughout this year; even home orders exceeded home deliveries during the summer, despite the fall in orders, while export orders have been well above the rate of deliveries.

This evidence of the international competitive strength of the machine tool industry is welcome if unexpected; but the continued increase in its order book could be a danger to this if delivery periods are allowed to become excessive. Deliveries have risen, however, and were nearly 13 per cent higher in July and August than they had been a year before. Even greater increases in output may be needed if the industry is to maintain its competitiveness—unless home demand should start to fall again.

SHORTER NOTES

In view of the Chancellor's request Butlins is raising its interim dividend by only 2½ per cent to 15 per cent, but it forecasts a final payment of not less than 40 per cent to make an effective increase of 15 per cent in the total distribution. Gross revenue for 1961 is likely to rise by over £1¼ million which would bring it over the £10 million mark. Butlins will consider opening holiday camps in Europe if Britain joins the common market.

★

Vauxhall announces that it will be starting night shift working again at the beginning of January, for the first time since the recession in the motor industry began last autumn. The reasons for this increase in output are that shipments of the new Victor to the United States will begin in December, the good reception that the car is reported to have had in other export markets and that production of the VX90 sports version of the Victor will then begin.

★

The Council of the London Stock Exchange has appointed Trollope and Colls, which has had long experience of the existing Stock Exchange building, as contractors for the rebuilding of the stock exchange. The Council decided against inviting tenders for the contract after taking the advice of the architects, Legal and General Assurance (which is providing the finance) and other consultants. The shares of Trollope and Colls are to be quoted soon in London.

COMPANY MEETINGS

JOHN WALLACE & SONS LIMITED

SUCCESS OF BOARD'S DIVERSIFICATION POLICY

The thirty-seventh annual general meeting of John Wallace & Sons Limited was held on October 27th in Glasgow, **Mr Charles Kemp** (Chairman and Managing Director) presiding.

The following is an extract from his circulated statement:

The financial year ended March 31, 1961, has been a most eventful one. At the beginning of that year the issued capital stood at £100,000; by the close of that year it had increased to £779,625. The profit, before tax, for the year to March 31, 1961, amounted to £295,033 compared with £47,076 for 1960. Shortly after the end of the financial year the issued capital was increased to £995,300, with current earnings estimated at some £440,000.

ACQUISITIONS

In a review of the Company's history, Mr Kemp said: In 1955 we took the first step to widen the scope of the Company's activities by acquiring the whole of the Ordinary share capital of A. Baird & Sons Ltd., a substantial part of whose business lies in the distribution of motor vehicles and the retailing of electrical goods and equipment. This purchase proved to be highly satisfactory.

In the early part of 1960 your Company was able to acquire on advantageous terms substantially the whole of the issued share capital of a number of first-class industrial companies, with eminently satisfactory results.

The first new acquisition was completed in August, 1960, when we entered the field of printing, purchasing the whole of the Ordinary Shares of Claridge, Lewis & Jordan Ltd. and its wholly owned subsidiaries, Expedite Publicity Ltd. and P. Cassin Ltd. At the same time, Praills (Hereford) Ltd., Automobile Engineers and Distributors of Commercial Motor Vehicles, came into the Group.

Following these initial purchases, the Ordinary Capital of seven further companies has been acquired, namely Arthur Productions (Clydebank) Ltd., Rookery Bridge Refining Co. Ltd., Associated Metal Works (Glasgow) Ltd., Graham & Wylie Ltd., Maurice Lipkin & Co. Ltd., Bates Bros. (Engineers) Ltd., and R. W. Haughton Ltd.

The last three were taken over after March 31, 1961, and in consequence they are not included in the Accounts now before you, but will figure in the Accounts for the year ending March 31, 1962.

CURRENT POSITION AND PROSPECTS

Commenting on the current position, Mr Kemp said he had prepared a table showing, on what he believed to be a realistic basis, the earnings now accruing to the Company from all sources, which showed that approximate percentage earnings on Ordinary Capital in issue at 30.9.61 was 51 per cent.

He continued: When it is recalled that for the year ended March 31, 1960, the percentage earnings on the Ordinary Capital then in issue was under 17 per cent as against over 51 per cent currently, it will be seen that the diversification policy we have pursued over the past year has indeed already been of great benefit to the Company.

I am hopeful that the current year will contribute markedly to the further progress of the Company, basing my hopes on two main features—the current position and prospects of the companies now in the Group and arrangements contemplated for the acquisition of further ancillary and complementary interests.

Firstly, the turnover of the majority of the companies acquired during the past 15 months has shown, and continues to show, an upward tendency. Moreover, all our main subsidiaries have growth prospects; quite a few are indeed actively engaged in programmes of expansion, one of them on a considerable scale. On the other hand it must be borne in mind that in some cases profit margins are reduced or overhead expenses have risen, and there is, of course, always the possibility of an unexpected setback in one or other of the companies. However, I have no reason to think that your Directors will have any occasion to revise their estimate of last May of a Profit of £432,000 from these sources for the year ending March 31, 1962—a figure which did not include the profits from R. W. Haughton Ltd.

Secondly, negotiations are now in progress for the acquisition by your Company on advantageous terms of certain further companies of a nature complementary to those already in the Group and, incidentally, larger in size than any so far taken over. The total purchase price will probably be in the region of £900,000.

NEW CAPITAL ISSUE

Discussions have lately been taking place with influential financial bodies both in London and Glasgow regarding the underwriting of a public issue (in which existing shareholders would be entitled to preferential allotment) of Unsecured Loan or similar stock, partly convertible into Ordinary Shares at prices somewhat higher than the present market price.

DIVIDENDS

In the circular letter to shareholders of May 1st it was intimated that, in the absence of unforeseen circumstances, your Board would consider a distribution of 25 per cent for the year to March 31, 1962, to be reasonable and that it would be their intention to declare an interim dividend of 10 per cent payable in November 1961. With nearly six months still to go before the end of our financial year, I am obviously not in a position to give a definite forecast of the total dividend likely to be paid on the Ordinary Shares for the year to March 31, 1962. All I can say at this juncture is that, after taking all the known factors into consideration, your Directors have felt justified in declaring an interim dividend of 12½ per cent on account of the year payable on November 30, 1961, as against the 10 per cent interim foreshadowed.

In May 1961 two new Directors, General Sir Leslie Hollis, KCB, KBE, and Mr A. H. Cortez-Leigh, were co-opted to the Board of your Company.

The report was adopted and the total dividend of 20 per cent for the year to March 31, 1961, was approved.

H. A. SAUNDERS LIMITED

(Car Distributors)

SATISFACTORY OUTCOME OF A DIFFICULT YEAR

The twenty-sixth Annual Meeting of H. A. Saunders Limited was held on October 31st at Hendon, N.W.4. **Mr G. W. Saunders** (Chairman of the Company) presided and, in the course of his speech, said:

The net profit before Tax has been held in a difficult period to within 5¼ per cent of last year's record, which gives more than adequate cover for the 12½ per cent Ordinary Dividend which we are again recommending for the year.

It has been felt by the Board for some time that the Company needs to increase the Authorised Ordinary Capital, so that we can more readily adapt ourselves to trading conditions, either by raising fresh money or using authorised but unissued capital to purchase other business which may be offered. We are fortunate in having a wonderful new range of Austin vehicles, which I am confident will give us a greater share of the increasingly competitive market.

Our preliminary unaudited figures for the period from March 31st to date, show us to be running approximately level with last year, and although it is very early to forecast, providing we are given a reasonable run by the Chancellor, we may well be able to equal last year's figures.

The report was adopted and at the subsequent extraordinary general meeting a resolution was passed increasing the capital of the company to £1,500,000 by the creation of an additional 5 million Ordinary Shares of 2s. each.

CICELY RUBBER ESTATES

COMPETITIVE ESSENTIALS

The fifty-sixth annual general meeting of The Cicely Rubber Estates Company, Limited, was held on October 26th in London, **Mr F. S. Physick**, chairman, presiding.

In his circulated review the chairman said that increasing crops from the replanted areas coupled with the advantages expected to accrue from their recently completed centralised modern factory should lead to lower estate costs. Thereby it was hoped to place themselves in a position to compete with the rapidly expanding synthetic industry. To keep pace with developments the vital need of the plantation industry was to produce more rubber not only at a lower cost but, just as important, be enabled to deliver at a competitive price.

In this connection it behoved the Governments of natural rubber-producing countries to bear in mind that manufacturers of synthetic substitutes were not called upon to pay export duties. In their own case the cost of export duty and cesses amounted to £23,128 in respect of the year under review.

A warning had been given by the far-sighted framers of the Mudie Report (1954) of this aspect, as well as of the need for continuous replanting operations. The industry indeed was much indebted to them as also to the Government in Malaya for its co-operation as regarded replanting.

The planted acreage as at March 31, 1961, consisted of 2,542 acres mature and 649 acres immature.

The report was adopted and the recommended dividend of 27½ per cent was declared payable.

GRAFTON INDUSTRIAL SECURITIES LIMITED

Rapid and Substantial Growth

The Annual General Meeting of the Company was held on October 31st in London

The following are extracts from the Report and Accounts and the statement by the Chairman, **Mr Gordon Heynes, C.A.,** *for the year ended June 30, 1961.*

	1961	1960	1959	1958
	£	£	£	£
Group Profit before Tax	**122,076**	**63,126**	**88,090**	**70,228**

In his review of the subsidiaries' activities, the Chairman said: Of all the companies in the Group, Quicktho Engineering Ltd. has the greatest potential for fairly rapid growth. The company's turnover for 1960/61 was over double that for 1959/60.

We now cover the whole of the United Kingdom mainly by direct employed technical representatives or in one or two areas where there are special problems by independent agents.

Peak Engineering Company Limited and the Non-Ferrous Die Casting Company Limited: Both these companies have made satisfactory progress.

Air Engine Services (U.S.-U.K.) Limited: Turnover and profits were considerably greater than in the previous year. As some indication of the very high quality of our work, I am pleased to report that British European Airways and their associate Cambrian Airways Limited have recently entrusted us with a three-year contract for the reconditioning of a substantial number of their engines.

Current trading has so far confirmed the continuing improving trend on which I have been happy to report.

Copies of the full accounts are obtainable from the Secretary, 5 Grafton Street, London, W.1.

SATISFACTORY ACHIEVEMENT

LT.-COL. C. P. DAWNAY, C.B.E., M.V.O., CHAIRMAN OF DALGETY AND CO., in his review for the year ended 30th June, 1961, said: Last year I mentioned that a decline in profits for the year 1960-61 must be expected, and events have proved this forecast to be true. However, because of the effort made by all concerned to control expenses and to increase earnings from other activities, the reduced quantity of wool available for sale and the lower prices it fetched did not diminish profits to the extent they might otherwise have done. I feel that in the circumstances we have reason to be satisfied with our achievement, and it is encouraging that the current wool selling season has opened with an improvement in prices.

Your board decided that substantial and continuing benefits could best be achieved by the amalgamation of suitable competitors in our field of activity. The Board of the New Zealand Loan and Mercantile Agency Company Limited had reached a similar conclusion, and a merger was mutually agreed to be beneficial to both Companies.

DEVELOPMENT: The year has been marked by the stringent credit policies pursued in Australia and New Zealand, and now in England. Such policies were undoubtedly necessary to correct the slide towards inflation which was everywhere all too apparent.

AUSTRALIA: Steps have been taken recently to continue to improve administrative efficiency and thereby results, by the formation of two subsidiary Companies. The Australian pastoral business will also benefit from the establishment of some twenty new sub-branches and staffed agencies, and the acquisition of the South Australian livestock business of Coles Bros. Limited. The Company is directly established in 222 centres in all states of Australia.

NEW ZEALAND: Expansion of existing interests has been effected by the acquisition of a majority shareholding in Tasman Vaccine Laboratory Limited, the products of which are vaccines for veterinary purposes and agricultural chemicals.

EAST AFRICA: The whole economy has been impeded by political conditions and profits have not been maintained at a satisfactory level. Given more settled conditions, the benefit of integration and rationalisation of the Company's operations will become apparent.

UNITED KINGDOM: The Company's interests have continued to expand quietly.

FINANCE AND ACCOUNTS: The Group Net Profit for the year is £940,429, a decrease of £134,587 compared with the previous year. We are recommending a Final Dividend of 5 per cent. free of tax on the Ordinary Shares making 8 per cent. for the year, the same as for the year ended 30th June, 1960.

OUTLOOK: The measures taken by Governments to control inflation are having a dominating effect on our business. If they are successful it is to be hoped that costs can be brought under control. Wool prices have improved and are now on a more reasonable level, and demand for meat and grain is good. We must, however, now face a period of major reorganisation.

Dalgety
and Company Limited

SECOND BROADMOUNT TRUST LIMITED

GROWTH OF EARNINGS

The thirty-third annual general meeting wa held recently in London. The following ar extracts from the remarks of the Chairman, **E. B. Montesole, JP,** at the meeting.

Gross receipts show an increase from £66,44 to £74,836 and after deducting expenses an taxation and certain non-recurring items, ne revenue is £43,194 compared with £37,483 Dividends totalling 3¼ per cent or 3¼d. pe Ordinary 1s. share are recommended.

A valuation of the investments at Septembe 14, 1961, amounted to £1,672,280 compare with a book value of £506,758; the characte and class of these remain as before and consis mainly of selected equities.

We are proposing to make a free issue o Ordinary shares in the proportion of one to four Your Directors are of opinion that revenue fo the current period may show some recession bu they anticipate that unless unforeseen circumstances affect the present flow of income it wil be possible to distribute, for the current year, no less than the same amount in dividend, tha is, 25 per cent on the increased capital; it i intended that the interim dividend shall b maintained at 1d. and the final adjusted t accord with results.

The report was adopted.

SOUTH AFRICAN COAL, OIL AND GAS CORPORATION LIMITED

The following is a summary of the addre delivered by **Mr P. E. Rousseau,** the Chairma of the South African Coal, Oil and Gas Co poration Limited (Sasol) at the Eleventh Annu General Meeting held in Johannesburg on Oct ber 11, 1961.

Profit after charging depreciation for the ye ended June, 1961, at R2,594,678 (£1,297,33 was more than double the previous yea R1,259,412 (£629,706). Total sales increas from R16,436,000 (£8,218,000) to R17,917,0 (£8,958,500). Exports increased by nearly on third to R2.4 million (£1.2 million).

Profit plus provision for depreciati amounted to R5,291,567 (£2,645,783.10 while a net amount of R3,648,354 (£1,824,1 was spent on new capital assets. As a result cash resources of the company increased R1,643,213 (£821,706.10.0) to R4,238, (£2,119,101.10.0.). Mr Rousseau stated that t cash build-up, which is expected to contin will be a major source of finance for the exp sion and diversification of the company's p duction facilities at Sasolburg.

In the processes employed by Sasol for production of oil and chemicals from coal, essential intermediate step is the manufact of synthesis gas. Such gas can be used as a f Likewise, in converting the synthesis gas to and chemicals, quantities of gaseous hyd carbons are produced which are at pres further processed to petrol. These gase hydrocarbons can also be diverted for purposes and accordingly the possibility installing a gas pipeline to feed the South Transvaal and Witwatersrand is under deta study.

THE MUAR RIVER RUBBER COMPANY LIMITED

SIR JOHN BARLOW'S STATEMENT

The Forty-First Annual General Meeting was held in London on November 2nd.

The following is a summary of the Review of the Chairman—**Sir John D. Barlow, Bart, M.P.**

The profit for the year ended March 31, 1961, was £226,800. *Investment* income, mainly from tea and rubber companies, accounted for over a third of the profit. Taxation requires £89,050,

the transfer to Replanting Reserve is £59,000 and the dividend is 4½d. per 2s. Share, which will require £78,501 less income tax.

The rubber crop was 5,197,000 lbs. It is hoped to harvest 5½ million lbs. in 1961/62. 561 acres were replanted in 1960/61 and 438 acres are to be planted in the current year. The policy of selling reserve land on Sapong Estate to smallholders is being continued and this is encouraged by the Government.

MALAYA

The effect of the United Kingdom's entry into the Common Market on Malaya would be small. Natural rubber which accounted for 63 per cent in value of Malaya's 1960 exports and tin which accounted for 17 per cent would not be affected as no import duties on these two products are envisaged under the Rome Treaties. About 25 per cent of Malaya's rubber goes to the United Kingdom, 25 per cent to the Common Market countries and 11 per cent to the European Free Trade Area countries; the remaining 39 per cent is sold to America and Communist countries.

Malayan exports such as copra, vegetable oils, coffee, tea, spices, pineapples and timber would be liable to duty under the Common Market tariff. These commodities account for about 7 per cent of Malaya's total exports to Europe. It is hoped that during discussions on the terms of the United Kingdom's entry into the Common Market that favourable arrangements will be made for Malaya's secondary exports to Europe.

NORTH BORNEO

Tunku Abdul Rahman favours the formation of an expanded Malaysia which would comprise Malaya, Singapore, North Borneo, Sarawak and Brunei. Although North Borneo and Sarawak, which are still Colonies of the United Kingdom, are developing; they are not so advanced as Malaya and Singapore. Few of the people in North Borneo and Sarawak are politically conscious and there is little sign of any strong desire among the majority of people for rapid political development. It would be best for all concerned for both North Borneo and Sarawak to develop further under the Colonial Office.

The report and accounts were adopted.

Fisons plan expansion at home and overseas

Sir Clavering Fison anticipates opportunities in the Common Market and expresses confidence in the future

THE following is an extract from the Statement by the Chairman, Sir Clavering Fison, which has been circulated with the Report and Accounts for the year ended 30th June 1961.

Group sales were £54,576,000 against £51,343,000 last year and profit before taxation was £3,607,000 compared with £4,509,000. The net profit after tax was £1,860,000 against £2,021,000.

We did not expect the exceptional level of profits earned in 1959 to be repeated last year but, nevertheless, the level of profit earned was the second highest in the Company's history.

Fertilizers

The estimated usage of plant nutrients in fertilizer compounds increased by only 1 per cent over last year against the previous year's exceptional 15 per cent increase. This check in the rate of growth in fertilizer application must be viewed against the background of a difficult farming year. Even so, sales of Fisons Fertilizers Limited exceeded the 1959-60 level and our share of the trade increased by a small amount.

Modernisation of the Company's granulating plants to enable them to produce compounds of higher concentrations has continued.

A large expansion of our nitrogen capacity is proposed and a major project with the Esso Petroleum Company Limited is expected to involve a capital expenditure of approximately £10 million.

Fisons Horticulture Limited had another very successful year and continued the previous rate of growth.

Results from our overseas fertilizer interests are satisfactory and total profit available to us is higher than last year.

Chemicals and Other Interests

Our chemical companies again showed profits although in total the overall profit was lower than the previous year due to the special difficulties encountered by Benger Laboratories Limited. The profits of Fisons Pest Control Limited have risen increased, especially overseas. Benger Laboratories Limited returned a much lower profit because of special difficulties with an important product. Expansion continues at home and abroad; a new plant in India owned by Fisons in association with Tata Industries Limited is nearly complete and is expected to contribute to profits next year. The progress of Vatosan Limited was not maintained; but the improvement noted last year is expected to be resumed. Our food interests have been fused into one company trading as Fisons Foods Limited which is concentrating on the production of processed foods, based largely on milk. The Loughborough Glass Company, making laboratory apparatus and instruments, and Whiffen & Sons Limited, our industrial chemical company, both had a satisfactory year.

Fisons Overseas

During the year we carried out a major reorganisation of our overseas activities. All export selling has been concentrated under the direction of a unified organisation, Fisons Overseas Limited. Direct export sales of chemicals and pharmaceuticals rose by 14 per cent and compares favourably with the figures for UK chemical exports generally. Conscious of our duty to increase overseas sales in the national interest, it is our intention to increase export sales wherever possible and to seek investment opportunities for chemicals and fertilizers throughout the world.

The Future

The conditions affecting the chemical industry as a whole must of course concern the future of this Company. It seems necessary for this country to prepare itself for sterner competition within a freer market. The chemical industry is highly protected and some general adjustment of prices is inevitable. Therefore, like most other companies, we have been reconsidering our projections for the future to take account of changing conditions. There has been in any event a tendency for profits, measured by return on capital employed, to decline in the last few years as the shortages arising from the war have been made good and the backlog of inventions worked off. These facts would in any case have made for more competitive conditions and the process will merely be accelerated by the possible need to compete in the conditions of the Common Market. We are confident about the future and do not doubt that we shall fare as well as other companies in the chemical industry. We are well equipped to do so with a strong organisation, a group of products for which there are expanding markets, and efficient research teams. As regards the current year, of which of course only three months have passed as this is written, the deflation of prices continues, costs are increasing, and the economic situation remains confused. It would not be justifiable, therefore, to hold out hope of higher profits.

JOKAI (ASSAM) TEA

The eighty-first annual general meeting of Jokai (Assam) Tea Company Limited was held on November 3rd in London, **Mr G. A. Rainey** (the chairman) presiding.

The following is an extract from his circulated statement:

1960 has been a most successful season, with each of your fifteen gardens showing increased profits. Some areas in North Eastern India suffered a very severe drought, but so far as your own Company is concerned, although certain sections were affected, to some extent, the crop produced is only fractionally down on last year. Considerably higher prices were achieved in both the London and Calcutta markets and, despite an increase in revenue expenditure of some £100,000, the profit on tea at £782,474 shows a most satisfactory increase of £214,000.

Transfers totalling £300,300 have been made to General Reserve, Development Rebate Reserve and the Renewals and Replacement Account, and from the balance your Board propose to pay a final dividend of 11 per cent making 14 per cent free of tax for the year.

Crop prospects are most promising, but with lower prices ruling generally on both the London and Calcutta markets, it is yet too early to forecast the current season's results with any reliability.

The British African Tea Estates Ltd., in which your Company has a substantial interest, enjoyed an excellent year to 30th June, 1961. A record tea crop of over 3,000,000 lbs. was produced and the prices realised compare favourably with those obtained for the previous season.

The report was adopted.

BRITISH OVERSEAS STORES LTD.

MR R. J. BLACKADDER'S REVIEW

The Fortieth Annual General Meeting of *British Overseas Stores Limited* was held on October 27th in London, **Mr R. J. Blackadder, MC, CA** (Chairman), presiding.

The following is an extract from his circulated review:

The Accounts disclose a serious recession during the year under review. In fact, the position is not such as the combined figures seem to indicate as the majority of our interests earned total profits roughly equal to the results achieved by the same Companies in the previous year, and it was out of these profits that dividends were declared by certain of our Subsidiaries. Only in four cases did the results deteriorate so seriously that the profits were drastically reduced and appear in the Group Accounts as £42,515, compared with £121,189 last year. Indications to date suggest that this deterioration in the Group results should be largely corrected during 1961/62.

The London Subsidiaries have improved on the results attained last year. This is a satisfactory achievement, having in view the growing difficulties experienced in maintaining orders from overseas. These difficulties have been largely due to import restrictions which have encouraged the growth of secondary industries. Returns received so far this year indicate that the exceptional losses experienced in 1960/61 will not be repeated.

The report was adopted.

HALLMARK SECURITIES LIMITED

The Annual General Meeting of the Company was held on October 31 in London. The following are extracts from the statement by the Chairman, **Mr Sidney Bloch,** circulated with the Accounts.

GROUP PROFITS DOUBLED

The Group Profits before tax amounted to £542,369 (*£259,689*). After Tax profit is £288,227 (*£137,318*).

CAPITAL, RESERVES AND SURPLUSES TREBLED

Share Capital, Reserves and Surpluses amounted to £1,936,481 (*£679,063*). The Share Premium Account has increased from £10,779 to £402,854, Group Capital Reserves from £286,798 to £694,440, and the Group Revenue Reserve and undistributed profits from £166,520 to £329,608.

FINAL DIVIDEND AS FORECAST

The final dividend is held at 30 per cent less income tax, making 60 per cent less income tax for the year. Profits would clearly have justified a final dividend in excess of that forecast, but the Board have observed the Chancellor's plea for restraint.

BONUS ISSUE: ONE FOR TEN ORDINARY

Bonus issue proposed of one share for every ten held. Preliminary figures to August, 1961 are encouraging. In the absence of unforeseen circumstances, the Board will be able to recommend a dividend to the year April 30 next, of not less than 60 per cent less income tax on ordinary share capital, as increased by the bonus issue.

COMMERCIAL AND SHOP DEVELOPMENT: *£4.25 MILLION*

The Group now have under construction, or in an advanced stage of planning, office and commercial developments comprising a total lettable area of office space of 476,000 square feet, and a number of shops, stores and supermarkets, estimated to produce ultimately a gross rental income of £473,000, subject to servicing of mortgages. The total capital commitment of these projects is estimated at a sum in excess of £4,250,000, provision for all of which has been made on a long term basis. This is undoubtedly the most significant feature of the Group's activities during the year. Progress has, however, also been made in building up the Group's investment portfolio.

SUN LIFE FINANCE: SECOND TRANCHE

Provision for a long term advance of £5,000,000 was made with Sun Life in August, 1960 and in June a basis was agreed for further finance to be made available to the Company.

HOUSING DEVELOPMENTS

Actual sales in the year were lower than the previous year, due solely to production difficulties. Demand for houses continues to be high, and to maintain the programme, building land costing approximately £1,200,000 was purchased in the year to August 31, 1961. Land stock has never been higher than it is to-day. The Board are determined to expand this side of the business as much as is prudent.

SUBSIDIARIES

Barking Brassware Co. Ltd., manufacturing quality taps and and other sanitary fittings, had a full order book throughout the year and earnings have exceeded estimates at the time of purchase. Industrial Banking Division which began to restrict investment and hire purchase two years ago, is doing good and profitable business in the form of secured short term property finance. No serious losses in hire purchase have been sustained, neither are they anticipated.

DIRECTORS

Sidney Bloch (*Chairman*)
Herbert Ashworth (*General Manager*)
P. N. Bower — I. R. Crammond
A. C. Draycott, FRICS, FAI — J. Hamilton
R. W. Matthews, FCA (*Secretary*)

Registered Office : 26/27 Regency Square, Brighton, Sussex.

ISSUED CAPITAL

222,000 6½ per cent Cumulative Preference Shares of £1 each.
5,751,575 Ordinary Shares of 1s. each.
Ordinary dividend for the year to April 30, 1961: 60 per cent (less income Tax).
Ordinary Share price at October 31, 1961: 26s.

CAPITAL & COUNTIES PROPERTY

The twenty-seventh Annual General Meeting of Capital & Counties Property Company Limited was held on October 26th in London, **Mr Leslie Marler, OBE, TD,** the chairman, presiding.

The following are extracts from his circulated statement for the year ended April 30, 1961:

Your Company continues to expand and prosper, and although our greatest volume of development lies in the years immediately ahead my colleagues and I are satisfied that the Company's foundations are broadly based and soundly laid and we look forward with no small degree of confidence to many years of steady prosperous growth.

Our rental income has risen by over £230,000 to the new record figure of £1,202,404 and our net profits before the tax collector takes his share to £476,991. The carry forward at £157,581 is nearly doubled, a useful reserve to fill in the occasional revenue gaps which are bound to occur in a development programme as large and varied as is ours.

Mr Marler referred to some fifteen major developments now in progress, including:

Knightsbridge Green, London, S.W.:—Great progress has been made with the plans for this development which will assuredly provide one of the most spectacular group of buildings in Europe.

The London County Council have passed a resolution to designate the area as one of Comprehensive Development, our layout has received the approval of the Royal Fine Arts Commission and has the support of the Multiple Shops Federation.

It is with this programme in view that we have been able to come to an arrangement with our good friends, the Norwich Union Life Insurance Society and The Prudential Assurance Company Limited to make available to us the sum of £18.3 millions during the next few years. The Institutions concerned have expressed a wish to be able to convert some portion of this loan into Ordinary Shares of your Company. As this conversion right will not arise for some years and then in conditions which it is impossible to foresee at the present time, it seemed appropriate that the option price should be based on a yield related to the dividend then being paid rather than on a price fixed in relation to today's market conditions.

Your Board have estimated the income which should be available for dividends on completion of these developments and consider that the basis which has been agreed of providing a yield of 6 per cent on conversion would result in the issue of shares at a figure in excess of the present market price.

In conclusion may I say that as we are continually exploring further opportunities of adding to your Company's profitability and taking into account our known reversions it may well be that our view of our future earnings is conservative.

The report was adopted.

PRETORIA PORTLAND CEMENT COMPANY LIMITED

(Incorporated in the Republic of South Africa)

The Sixty-sixth Ordinary General Meeting of Shareholders will be held in Johannesburg on November 23, 1961.

The following is an extract from the circulated Statement by the Chairman, **Mr B. G. Twycross,** dated October 4, 1961.

During the second half of the financial year, mainly as a result of the material decline in building activity, the demand for cement decreased. This has had its effect on the Company's sales, and the trading profit was lower than the previous year by R251,058. Our associate companies experienced similar conditions which are reflected in the reduction of our income from investments.

Slurry Factory.—The second dry process kiln with its ancillary equipment was commissioned during December, 1960, and has operated satisfactorily.

Jupiter Factory.—Construction has commenced on the modernisation of the packing and despatch plant. Orders have been placed for new coal milling units. In connection with the manufacture of Portland-Blastfurnace Cement, extensions to the Raw Material Store, to accommodate Granulated Blastfurnace Slag, have been put in hand and plant to dry that material is due for completion in the near future.

Hercules Factory.—During the current year a modern packing and despatch plant will be erected and an outdated finishing mill department will be replaced by a modern plant.

Work is in progress on the installation of plant to deal with the manufacture of Portland-Blastfurnace Cement on a larger scale than hitherto.

Pre-Mixed Concrete.—Two companies have been formed on the Witwatersrand to provide a service for supplying pre-mixed concrete delivered on site. Your Company, in conjunction with the other cement producers in the Transvaal, has decided to take an interest in these concerns.

SUBSIDIARY AND ASSOCIATED COMPANIES

Eastern Province Cement Company Limited.—The Trading Profit was maintained at much the same level as in the previous year albeit a decline in sales was experienced. It was not possible to export surplus production.

The Premier Portland Cement Company (Rhodesia) Limited.—Sales were again adversely affected by the unsettled economic conditions in the Federation of Rhodesia and Nyasaland.

Cape Portland Cement Company Limited.—Productive capacity was materially in excess of demand, which reflected the lower level of activity in the area served by the company.

MARKET CONDITIONS

The fall in sales over the year ended June 30, 1961, as noted above, has continued during the first two months of the current year in respect of your Company and the Cement Industry as a whole.

Durban Cement Limited.—Since the close of the year negotiations in regard to the establishment of the processing of Blastfurnace Slag in Natal have reached the point where it is agreed that your Company will participate in the formation of a company for that purpose, to be designated Durban Cement Limited, with a factory in Durban.

HOSCOTE RUBBER ESTATES LIMITED

Harrisons & Crosfield, Limited

RUBBER CROPS AND PRICES: Year ended 30th June

1960/61	**3,273,900 lb.**	**23.51d. per lb. net**
1959/60	***2,889,800 lb.***	***30.78d. per lb. net***

PROFIT AND DIVIDEND: The profit before tax was £98,526 compared with £119,376 for 1959/60. A dividend of 20 per cent. is recommended and in addition a special non-recurring bonus of 5 per cent. in respect of a tax adjustment.

CURRENT FINANCIAL YEAR: The estimated crop is 3,477,000 lb. and prospects are that this figure will be realised. Replanting to be resumed next year after a pause this season.

Annual General Meeting 12 noon Wednesday, 29th November, 1961.

WHITELEY STEVENS (HOLDINGS) LTD.

"The activities of your Company are now diversified and form two main groups . . ."

THE EXPORT-IMPORT MERCHANTS' GROUP
Carters (Merchants) Holdings Ltd.

Carters (Merchants) Ltd.
E. C. Sunningdale & Co. Ltd.
Charles Gane & Co. Ltd.
Clark, Wilson & Co. Ltd.
B. E. Cooper & Co. Ltd.
J. C. Hodson & Co. Ltd.
Willis, Sindall & Syrett Ltd.
Fruit Juice Importers Ltd.

THE TEXTILE AND FASHION GROUP
Whiteley Stevens & Co. Ltd.

Kirkland & Clemerson Ltd.
The Danda Knitting Co. Ltd.
George Newton (Nottingham) Ltd.
S. Travers Ltd.—ESTRAVA.

The first report since the expansion of the Group includes the following points:

NET TRADING PROFITS after deducting all charges and taxation to 31st March, 1961, covering seven months of Whiteley Stevens & Co. Ltd., and five months of Carters (Merchants) Holdings Ltd. were £45,024.

DIVIDEND: 10 per cent paid on Ordinary shares for seven-month period (equal to 17.14 per cent for a full year) an increase of approximately 40 per cent over the previous year.

LIQUID POSITION: Net current assets stand at £333,708 including £154,323 in cash and quoted investments.

The Prospects—by Mr E. C. Sosnow (*Chairman*).

Mr Sosnow reports that trading has been well maintained, the volume of orders substantially exceeding those for last year. Export and re-export business is unaffected by the credit squeeze, raw materials shipments to Eastern Europe are increasing. Entry into the Common Market could bring great opportunities. Export experience of the import-export group will now be available to help development of textile group.

Binding Cases

Binding cases for THE ECONOMIST *are available from* EASIBIND LTD. *The cases are in stiff, dark blue cloth covers, and are gilt-lettered on the spine; they provide an extremely effective and firm binding and will hold 13 issues of the normal edition together with the quarterly Index, or 26 issues of the air edition with two quarterly Indexes. The year can be stamped on the spine. The cost per case, post free throughout the world, is 12/6. Orders, stating requirements clearly and enclosing a remittance, should be sent,* **not** *to* THE ECONOMIST, *but to—*

(Dept. E),
84 Newman St., London, W.1

SEAPORT (SELANGOR) RUBBER ESTATE

WELCOME INCREASE IN CROP

The Fifty-first Annual General Meeting of Seaport (Selangor) Rubber Estate Limited will be held on November 23rd in London.

The following is an extract from the Statement of the Chairman, **Mr J. A. Clubb**, circulated with the report and accounts for the year ended June 30, 1961:

Our crop of 1,104,000 lb which represented a yield per mature acre of over 800 lb exceeded last year's harvest by 240,000 lb and was a record for the Company. This welcome increase in crop came mainly from areas of budded and clonal seedling rubber following the introduction of new tapping techniques. While we hope to improve on this level of cropping, the results from the new tapping techniques cannot be precisely estimated and a material increase in crop for the current year should not be expected. Despite the lower selling price crop proceeds were more than maintained and, including the refund of three-quarters of the anti-inflationary cess due to us amounting to £2,777 before tax, the profit after taxation was £39,327 (£34,652). From the balance available £2,000 has been transferred to Capital General Reserve and £14,327 to Replacement of Planted Areas Reserve. The increased profit has permitted us to restore this latter Reserve to its former £35,000 and to recommend a dividend of 20 per cent less tax, the same as last year.

The usual high standard of field upkeep has been fully maintained and immature replantings, including 50 acres replanted in 1960 with high-yielding material, are reported to be developing well. No further mining has been done on the estate by Petaling Tin. Your Board is keeping the situation with regard to the Mining Leases under review and when the time is opportune will consider renewing the Company's application to the Selangor State Government for reconversion to agricultural title of 300 acres held under Mining Lease.

The crop for the three months to September 1961 was 321,000 lb as against 262,000 lb for the similar period in 1960. Although technical advances in the development of synthetic rubber continue, I am confident that Seaport, with its present acreage and a progressively improving rate of production per acre as replantings come into bearing, will be able to maintain a competitive position in the industry.

APPOINTMENTS REQUIRED

EXPORT—SALES—ADMIN.

37, Single, British. Linguist. 12 years' experience after B.Com. degree, mainly Scandinavia, S. Afr., Contin., U.S.A. Seeks position Britain or abroad.—Box 1557.

ECONOMIST, lady 30's, languages, experience (government (administration), secretarial (industry), travelled, seeks responsible position London area.—Box 1561.

EDUCATION AND COURSES

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ., B.Sc.Econ. (three if entrance is included) at moderate fees. 1,431 Wolsey Hall students passed London Univ., B.Sc. Economics exams, 1950-60. Tuition also for G.C.E., Law, Statistical, other exams. —Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

SECRETARIAL TRAINING, especially for university graduates and older students. Six-month and intensive 14-week courses.—Write, Organising Secretary, Davies's, 158 Holland Park Avenue, W.11. PARK 4654.

APPOINTMENTS

MANAGER required for a medium-sized private Bank in West Germany. Aged about 45. Financial experience and fluency in German essential.—Handwritten applications, which will be confidentially treated, to Box No. 1559.

FERRANTI LTD., Hollinwood, Lancs, have a vacancy in the export Sales Department for a Woman Economist. The work includes the provision of an information service and reports on specific projects. Candidates must have some experience of working on their own initiative. Good salary and staff conditions, including Superannuation Scheme.—Apply, giving full particulars of age, education and experience, to Miss I. Graham.

APPLICATIONS invited for post of Librarian to the Labour Party. Duties include selection and organisation of Library of books, pamphlets, photographs and periodicals (Congress classification); running of extensive press-cuttings collection; supervision of staff of six; and reference work. Applicants should be Associates of Library Association, or have equivalent qualifications, and be familiar with reference or special library methods. Labour Party membership is condition of service. Salary £800-£980, 5-day week, superannuation scheme. —Application forms from Administrative Officer, Labour Party, Transport House, Smith Square, London, S.W.1, to whom they should be returned not later than Monday, November 13th.

MEDICAL RESEARCH COUNCIL have a vacancy at their Statistical Research Unit for a suitably qualified graduate to advise and assist research workers in medicine and allied sciences in the application of electronic computing methods to their problems, to undertake programming and computing in conjunction with the staff of the University of London Computer Unit and to develop independent research. Appointment for three years in the first instance. Commencing salary, with superannuation benefits under N.H.S.S. scheme and child allowances, determined by age, qualifications and experience. Applications, giving personal particulars and names of two professional referees, to the Director, M.R.C. Statistical Research Unit, London School of Hygiene and Tropical Medicine, Keppel Street, London, W.C.1.

AUSTRALIAN NATIONAL UNIVERSITY
CANBERRA

RESEARCH SCHOOL OF PACIFIC STUDIES

Applications are invited for appointment to a READERSHIP IN INTERNATIONAL RELATIONS; salary £A3,750. Reasonable travel and removal expenses are payable.

One year's study leave with travel allowances will be granted after each five years' service. The Reader in International Relations will be expected to engage in and to supervise research into the political, economic and legal relationships between nations, especially, but not necessarily exclusively, in the Asian and Pacific regions.

Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close on *8th December*, 1961.

For other appointments see page 502

UNIVERSITY OF NATAL
DEPARTMENT OF ECONOMICS

Applications are invited from suitably qualified persons for appointment to the posts of: SENIOR LECTURER OR LECTURER IN ECONOMICS, DURBAN; RESEARCH ASSISTANT IN ECONOMICS, DURBAN.

The salary scales attached to the posts are:—

Senior Lecturer: R3,180 x 120—R4,140 (£1,590 x 60—£2,070)
Lecturer: R2,340 x 120—R3,300 (£1,170 x 60—£1,650)
Research Assistant: R2,340 x 120—R3,300 (£1,170 x 60—£1,650)

The commencing notch on the above salary scales will be dependent on the qualifications and/or experience of the successful candidate.

Application forms and further particulars are obtainable from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in South Africa and London on November 30, 1961.

BBC requires Senior Research Assistant in Projects and Developments Section of Audience Research Department. Duties include design and supervision of special enquiries with analysis and tabulation of results; preparation of tests and questionnaires, and administration of these to experimental groups; writing of reports. An Honours degree, preferably in Psychology, followed by at least two years' practical experience of social enquiries, market research or similar work essential, and knowledge of statistical methods desirable. Salary £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 max., p.a. Requests for application forms (enclosing addressed envelope and quoting reference 61.G.499.Ec.) should be sent to Appointments Officer, Broadcasting House, London, W.1.

CITY OF PORTSMOUTH COLLEGE OF TECHNOLOGY

DEPARTMENT OF COMMERCE

Applications are invited for appointment as Lecturer in Economics and Statistics from January 1, 1962. Candidates should hold a degree in Commerce or Economics and be able to teach these subjects to Degree level.

Applications should be made as early as possible in writing to the Registrar, College of Technology, Park Road, Portsmouth.

NORTH WESTERN GAS BOARD
HEAD OFFICE—MANCHESTER

ASSISTANT STATISTICIAN (MARKET RESEARCH)

Applications are invited for the above pensionable appointment in the Statistics Department, at a commencing salary within the range £770/£1,015 per annum according to qualifications and experience.

Candidates should preferably be not more than 27 years of age and must hold an appropriate graduate or equivalent qualification. Preference will be given to Honours graduates in Economics combined with Statistics.

The Assistant Statistician will be concerned mainly with planning, preparation and analysis of market surveys but may also be required to assist in general statistical studies in the field of demand forecasting, load research, etc. The work is interesting and offers scope for imagination and initiative in the application of statistical techniques to business problems.

Detailed applications, giving the names of two referees, should be forwarded to the Secretary of the Board, Bridgewater House, 60 Whitworth Street, Manchester, 1.

THE UNIVERSITY OF MANCHESTER
EXTRA-MURAL DEPARTMENT

Applications are invited for the post of STAFF TUTOR in Holly Royde College with the salary and status of either Lecturer or Assistant Lecturer in the University. Applicants should hold a good Honours degree in one of the following subjects:—*Literature, Philosophy* or Sociology. Salary scales per annum:—Lecturer, £1,050 to £1,850; Assistant Lecturer, £800 to £950. Membership of F.S.S.U. and Children's Allowance scheme. Initial salary and status according to qualifications and experience. Duties to commence on January 1, 1962, or as soon as possible thereafter. Applications should be sent not later than Monday, November 20, 1961, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of INVESTIGATIONAL OFFICER in the DEPARTMENT of AGRICULTURAL ECONOMICS. Candidates should have academic qualifications and/or practical experience in Agriculture, Economics or Accountancy. Salary scale £650 x £25 to £750 x £50 to £900 with membership of the F.S.S.U. and Children's Allowance Scheme. Graduates would have an initial salary of £725 per annum. Investigational officers may be considered on reaching a salary of £800 per annum for promotion to the grade of Senior Investigational Officer (salary scale: £1,050 x £50 to £1,300 (merit bar-line) x £50 to £1,550). Applications should be sent not later than Monday, November 20, 1961, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

BENGUELA RAILWAY COMPANY

The following preliminary traffic results for the first nine months of 1961 compared with the first nine months of 1960 have been issued.

	1961		1960	
Kilometres run		6,019,057		5,839,050
	Tons	Escudos	Tons	Escudos
Passenger Traffic	948 —	10,284,000	1,278 —	13,665,000
Local Traffic:				
Minerals	315,861 —	35,931,000	334,270 —	39,936,000
Other	439,117 —	63,206,000	447,792 —	58,494,000

Net Operating Receipts		208,485,000		213,873,000

Tanganyika Concessions Limited owns all the Debentures and 90 per cent of the equity of the Benguela Railway.

COMPANY AFFAIRS

TI's Pleasant Surprise

As the chart shows the £1 shares of Tube Investments have fallen sharply from this year's peak of 85s. 6d. and clearly there was little prospect of any increase on the 1950-60 payment of 14 per cent. On the face of it the results for the year to July 31st certainly live up to the chairman's forecast of "satisfactory" results. Trading profits rose by £3 million from £24.1 million to £27.2 million but these figures included the profits of the British Aluminium group which fell from £6.3 million to £4.7 million. Thus profits of the group ex-BA rose by over 25 per cent from £17.9 million to £22.4 million, but the 1960-61 results included for the first time profits of recently acquired companies, including Raleigh Industries and Loewy Engineering; earlier this week it was announced that profits of Raleigh, which has now taken over all TI's cycle interests, had fallen from £2.7 million to just over £2 million. Thus even allowing for profits from other acquisitions some or all of the group's other three main divisions, steel tubes, iron and steel and engineering have apparently earned higher profits. This is only an assumption, but if it is correct it is a highly satisfactory outcome to what must have been a difficult year. Higher depreciation and tax have absorbed most of the rise in profit to limit the increase in net profits from £8.3 million to £9.1 million.

The results reflect the first benefits from TI's capital programme. Commitments in July 1960 amounted to £12¼ million but since then the group has undertaken a major steel expansion project; at first it was planned to spend £58 million at Park Gate but early this year the company announced it had decided to rephase its plans cutting the cost of the scheme to about £33 million. While these are vast sums they are perhaps not beyond the resources of a company whose cash flow is running at over £12 million a year. Not surprisingly the maintained ordinary dividend of 14 per cent is covered over three times. It must not be forgotten, however, that £3 million of this cash flow relates to British Aluminium, which had capital commitments of its own of £15½ million at the end of this July. Lord Plowden, the chairman of British Aluminium, says it is difficult to forecast any immediate improvement for the aluminium industry in this country. It remains to be seen whether Sir Ivan Stedeford, the chairman of Tube Investments, can paint a brighter picture of the current prospects for the group as a whole. Meanwhile the £1 shares, 4s. 6d. higher at 65s. 9d., yield 4¼ per cent.

Fisons

While Fisons does not intend to raise any new capital in the current financial year the chairman, Sir Clavering Fison, has told shareholders that if all the present projects are carried through some more permanent capital will be required. As was pointed out in these columns last week capital commitments of £13½ million at the end of June even if spread over several years—and it now seems that payments for these schemes will not be completed until 1965—could not be met from the present cash flow of about £2¾ million, especially as Fisons' liquid holdings in the year to June 30th had been run down from £8¾ million to under £4 million. It now seems however that the estimate of £13½ million is on the high side and that a good deal of rethinking has been done at Felixstowe since the announcement of Britain's decision to negotiate entry into the common market.

Most of the proposed spending is tied up with the Milford Haven "nitrogen complex" and part of this project has now been abandoned. Fisons is also examining ways of reducing the working capital it employs and thus hopes to be able to free considerable sums for other investment. The sharp reduction in its cash funds at the end of June, which partly reflected new acquisitions, also reflected an increase of £1¼ million in debtors resulting from special bargain offers of fertilisers in May and June towards the end of the financial year.

These sales at special discounts were mainly responsible for the rise in the group's total sales from £51.3 million to £54.6 million but, as the table shows, these sales at smaller margins and the earlier reduction in prices has had a considerable affect on profits; the ratio of gross profits to sales fell sharply from 10.8 to 8.3 per cent while the return on capital employed fell from 12.6 to 10.3 per cent. It is not surprising that the £1 shares have fallen from 58s. 9d. early this year and now stand at 35s. 7½d., to yield 6¼ per cent on the maintained dividend of 11 per cent. There is little in the report to suggest that in the short term at least this decline in the share price has been overdone.

Sir Clavering says that he would not be justified in holding out hope of higher profits in the current year. Fisons should clearly benefit from the fine autumn and there can be no doubt that more fertilisers have been used in this season than at the same time last year when as a result of the very wet weather the total area sown was one million acres less than in 1959. But some of the fertilisers were no doubt bought in the "bargain basement" period and will not be reflected in the current year's sales and profits.

At the present time however investors have to look much further ahead—towards the possibility of Britain joining the common market. As far as Fisons is concerned, this is also tied to the question of agricultural subsidies in this country. On these issues shareholders will find Sir Clavering reassuring; any big reduction in subsidies will in his view have only a short term effect on fertiliser consumption and he looks for a greater use of fertilisers by farmers to combat the pressure of more competition from abroad. While fertiliser prices in Europe as a whole are slightly lower than prices in this country, transport costs, both externally and internally, are an important factor and on this basis the directors believe that prices for compound fertilisers in this country are comparable with the average European price, particularly as Fisons already has plants at "strategic points" all over the country.

Years to June 30	1960 £'000s	1961 £'000s
Consolidated earnings:—		
Sales	51,343	54,576
Trading profit	4,315	3,292
Other income	594	734
Depreciation	1,902	1,742
Tax	2,484	1,740
Net profit	2,021	1,860
Ordinary dividend	1,043	1,043
Retained profits	860	699
Consolidated balance sheet:—		
Net fixed assets	21,385	22,318
Net current assets	15,606	12,975
Stocks	9,484	10,845
Debtors	4,462	6,254
Liquid assets	8,723	3,902
Reserves	7,585	8,284
Ordinary capital	15,480	15,480

Clearly however there can be little prospect for fertiliser exports to Europe beyond, say, Northern France and the low countries. But exports of chemicals and pharmaceuticals by Fisons are rising following the reorganisation of the group's export and overseas management. Interests other than fertilisers in the home market now produce about one third of the total profits and the management looks for further substantial gains from these businesses, particularly in the underdeveloped areas. Nevertheless the pharmaceutical and chemical businesses seem unlikely to grow as they would have done had some of Fisons' earlier bids been successful and, despite the tone of the chairman's statement, uncertainty about this company's growth potential is unlikely to disappear overnight.

Crompton Parkinson

In the last few years the profits of Crompton Parkinson have held up well in the face of unfavourable trading conditions in the heavy electrical manufacturing industry. Even the optimists, however, did not expect that Crompton Parkinson would report an 8 per cent increase in trading profits from £2,509,000 to £2,722,000 in the year to June 30th. A higher tax charge has restricted the rise in net profits to only £45,000 to £1,306,000 so that the maintained dividend of 12½ per cent is covered 2.3 times.

There is no indication with the preliminary figures as to which of the group's many sections made the biggest contribution to the rise in profits and so helped to offset the effects of rising costs and intense competition. The cable making section may have done rather better after the sharp setback in profits in 1959-60 following the ending of price agreements in the cable industry. The battery side of the business was picked out by the chairman last year as one which had shown particularly steady growth in the past and which held out the prospect of further growth. But from wherever the better profits stem they give force to the chairman's remark last year that "diversification of our activities has been and will continue to be of great influence in maintaining a steady and even trading performance." Having risen by 1s. 1½d. since the results were published the 5s. shares at 12s. 10½d. yield just under 5 per cent; this is well below the return offered by most shares of electrical manufacturers with a similar range of interests.

Fairey

The passing of Fairey's interim dividend in May and the directors' statement that the results would be disappointing put shareholders on their guard. But they were still taken aback when the directors announced that for the year to March 31st the final dividend was to be cut from 12½ to 7½ per cent, bringing the total dividend down from 20 to 7½ per cent. In the market the 10s. ordinary shares were marked down from 13s. to 11s. 6d. to yield 6.8 per cent. No direct comparison can be made between profits in 1959-60 and 1960-61 as Fairey sold Fairey Aviation to Westland in December, 1959, and the group subsequently used £1,139,000 to buy Siebe, Gorman and distributed £1,650,000 in Westland shares to its own shareholders. Thus the results for 1959-60 included 9 months' profits from the aviation interests, and the 1960-61 figures included 15 months' profits from Siebe, Gorman.

In 1960-61 the group made a gross profit of £166,000 after a much heavier depreciation provision that reflects the expenditure on new plant and equipment by Fairey Engineering and a Canadian subsidiary, but the profits have been struck after crediting profits relating to earlier years and after debiting losses on certain contracts. In all profits on deliveries in earlier years included in the latest accounts amounted to £805,000. This includes profits in Fairey Engineering amounting to as much as £490,000 that have been brought into the account on the basis of estimated prices in respect of goods delivered before the end of the financial year which had not been subject to a firm price settlement. This is a major change in accounting procedure, as in earlier years Fairey Engineering consolidated only the profits arising in contracts on which a price settlement had been made. Such profits have been largely offset by provisions made against future losses and include £500,000 relating to nuclear power contracts and £150,000 relating to a contract for hydraulic power controls on a civil aircraft. In addition, two of the group's subsidiaries, Aeroplastics and Avions Fairey, made a total loss of £367,000. In all, therefore, the group, after providing for tax, made a loss of £61,000, compared with a profit of £389,000 in 1959-60. This is a dismal start for Fairey in its new guise, but shareholders will hope that the payment of a dividend for a year of so many losses means that the worst is past.

Dalgety

The past year has been marked by stringent credit policies in Australia and New Zealand, the main area of operations of Dalgety the merchants and wool brokers. Although Dalgety has been forced to keep advances to clients on a tight rein these still rose from £18 million to £19.8 million. With stocks and debtors also higher the group's liquid balances have been squeezed; investments have been reduced by £1¼ million while net bank overdrafts, which virtually did not exist at the end of June, 1960, amounted to £4¼ million by the end of last June. The chairman, Lieutenant-Colonel C. P. Dawnay says that the rising demand by clients for financial assistance still gives cause for concern and clearly this was one factor behind the proposed merger with the New Zealand Loan and Mercantile Agency.

As a result of the merger the new company Dalgety and New Zealand Loan will be the world's biggest woolbroking firm with a turnover exceeding £100 million a year. But size is not so important as the considerable benefits that should accrue to both shareholders and clients of the two companies from the substantial economies which should arise when the pattern of the 500 trading stations of the group is revised. The group will begin its trading life as the credit squeeze in Australia virtually ends; wool prices have improved and there is a good demand for both meat and grain. The immediate benefits of the merger are not likely to be big for the chairman warns shareholders of both companies that the group "faces a period of major reorganisation which cannot be quickly achieved." The yield of 7.9 per cent offered by the £1 shares at 33s. 3d. xd (on the forecast of a maintained tax free dividend of 8 per cent on the increased capital) seems to allow for teething troubles.

Harris Lebus

The fall in the pre-tax profits of Har Lebus in the year to mid-July fr £514,000 to £169,000 bears out the fo cast made in June that profits would "very considerably lower." Then the dir tors passed the interim dividend but th have now declared a final dividend of per cent. This compares with a total p ment of 7 per cent for 1959-60 and abso £31,000 of the £37,000 available for dist bution (representing equity earnings of o 3 per cent). But for a moderate impro ment in business in the spring it does seem likely that earnings would have jus fied the payment of any dividend at Harris Lebus, like other furniture manuf turers, was badly hit by the reimposition hire-purchase restrictions. Its effect been most marked on the sale of inexpens furniture, with which Harris Lebus mainly concerned. As a result short ti working was in force at its factories for major part of the financial year.

On the results the £1 shares fell by to 14s. 1½d. so that the shares yield 3½ cent on the latest dividend. In his sta ment the chairman, Sir Laurence Watk son may be able to paint a slightly l sombre picture of the company's curr trading and the high gearing of the capi structure means that any recovery in pro will be quickly reflected in equity earnin But the prospect of any quick recovery the price of the shares is not enhanced the likelihood that bank overdrafts will higher than they were in July, 1960, wh they amounted to £626,000 and when holding in cash was no more than £48,0

Stone-Platt

If the directors of Stone-Platt intend the cut from 4½ to 4 per cent in company's interim dividend as a gen warning that prospects had deteriorat since the chairman's review in June, th badly misjudged the impact which such announcement was likely to make. T stock market has recently been unsettl by several unexpectedly poor company sults: following the cut in dividend, Sto Platt's £1 units immediately fell by 7s. to 40s. But this fall seems to have elicit a hasty explanation from the directors. Th said that it was too early to say what pro would be for the year (of which only t months remain) but they considered "prudent" to reduce the interim divide to the rate prevailing from 1954 to 19 though they still hope that the chairma forecast last June of maintained profits w be proved right.

Doubts about Stone-Platt's profits w persist until the full year's accounts a published. But it is not unreasonable think that despite the directors' explanatio their doubts are not confined entirely to th year's profits. The re-equipment of t cotton textile industry in this country w probably not now bring the additional bus ness that was once expected, and two oth

industries which the group supplies, shipbuilding and oil, may also be giving the directors some cause for disquiet. In many of its engineering branches the group is probably finding it difficult to maintain profits, and its bank overdrafts stood at £2¼ million on December 31st. It is quite likely that in view of the uncertain outlook, the directors have in mind a possible reduction in the total ordinary dividend this year of no point to 15 per cent, reversing last year's increase. On a dividend of 15 per cent, Stone-Platt's shares would yield 7 per cent at the current price of 42s. 9d. xd.

Grampian Holdings

Grampian Holdings, the Scottish industrial holding company, recently added the technical publishing house of Leonard Hill to its miscellaneous collection of eleven subsidiary companies. The price paid for Hill, a private publishing house of technical scientific and trade journals and books, was £425,000, made up of £345,000 in cash and a balancing issue of 61,420 Ordinary shares of 5s. each, now standing at 25s. to yield 5 per cent. Of the total value imputed to Hill by this purchase, £225,000 was regarded by Grampian as being in respect of Leonard Hill's net trading assets, including goodwill.

Grampian was created from the "shell" of Bowlana Tea Estates in March, 1955, and adopted its present name in 1958. It has a wide spread of interests, including light and heavy engineering, textiles, electric lighting and radio components, furniture and road haulage. The rationale of Grampian, the directors claim, is threefold. First, it provides the means whereby owners of private companies, faced with surtax and death duty problems, can sell out, as in the case of Leonard Hill. Secondly, it has set up a Scottish finance company to provide facilities which hitherto had only been available in England. Thirdly, it offers a diversified spread of interests to the investor. It can, moreover, take a more active part in the management than an investment trust could, though the chairman, Sir James Hutchison, has said that the directors prefer as far as possible to leave the subsidiaries' management undisturbed. So far this has worked well; in 1960 gross profits, including those of new acquisitions, amounted to £583,000, against £400,000, despite falls in the profits of the structural engineering and furniture divisions. Unlike many other industrial holding companies, Grampian publishes separate profit and net asset figures for its subsidiaries, so that shareholders have the opportunity of judging the worth of its acquisitions. This year they certainly appear to be a mixed bunch, including a woollen producer, a sporting equipment maker as well as Leonard Hill. But the Grampian directors presumably keep a close eye on the price and the management of the companies they take over; in Leonard Hill, for instance, they believe there are substantial growth prospects in the market for technical information.

Shipping Results

The news from shipping companies has been bleak in recent weeks, with Cunard's operating loss underlining the warning given by the chairman of P & O. The interim statement from **British and Commonwealth Shipping** adds to the tale of woe. Though the dividend has been maintained at 6½ per cent the directors say that profits are running at a lower level and that the 1961 results will fall below the estimates given at the annual meeting in July. Sir Nicholas Cayzer then said that profits would be below those for 1960 but would be higher than those for 1959, when they amounted to £2,553,000 after tax.

Last year the dividend of 20 per cent was covered twice by earnings but if equity earnings fell to, say, £2 million such a dividend would be barely covered. British and Commonwealth has no doubt found costs, particularly wages, rising and squeezing its margins. The worsening of the situation since July suggests that other factors have been at work; of these, a slight fall in the South African traffic might be the principal culprit. The 10s. ordinary shares at their low point for the year of 29s. 9d. xd. yield 6½ per cent on a 20 per cent dividend.

In contrast, **Reardon Smith Line** has published results which the chairman, Mr A. J. Reardon Smith, describes as "not unsatisfactory." The group made a working profit of £220,000 in the year to March 31st, compared with £78,000 in 1959-60. Investment income raised the total from £209,000 to £358,000. The ordinary dividend has been maintained at 2½ per cent but this is not fully covered by net earnings. The chairman believes that the outlook is brighter than it was a year ago, although the continued operation of tankers, which might otherwise have been employed in carrying oil in the grain trade is still a source of concern. But freight rates are higher than they were and the directors have shown their confidence in the future by ordering two new motor vessels of 15,000 tons each. The 10s. shares at 12s. 7½d. yield just under 2 per cent. This price, which is well below the 1961 peak of 17s., reflects the company's big holding of cash and investments worth almost £5 million.

Motor Components

The recession in the motor industry has taken its toll among the industry's component suppliers. Birmid sells a high proportion of its products, which include castings, cylinders and brake drums, to the motor producers and for the year to July 31st net profits fell by 23½ per cent from £1,761,000 to £1,346,000. Lower sales must have contributed to the fall in earnings from the record level of 1959-60, but they have probably been squeezed from the other side too, as the engineering wages award has pushed labour costs up. The ordinary dividend has been left unchanged at 20 per cent and the £1 ordinary shares at 69s. yield 5.8 per cent.

With a fall in Bank rate already discounted buyers of gilt-edged held off at first after the recent sharp rise in prices, but the general tone of gilts was firm, however, and the further fall in the Treasury Bill rate last Friday had led the market to expect this week's cut to 6 per cent. Equities behaved in sharp contrast with their performance in recent weeks and the new account opened with a notable recovery in prices. The demand for equities broadened as more public and institutional buyers appeared on Wednesday and over the week *The Economist* indicator gained 11 points to 356.0.

The gilt-edged market has been firmest at the short end and medium and long dated stocks were quiet until Tuesday. Savings 3 per cent 1955-65 gained 27/32 to 91 and Conversion 5¼ per cent 1974 gained 7/16 to 94 11/16. Funding 3½ per cent 1999-2004 gained 3/16 to 57 13/16, but the irredeemables were very dull until Wednesday when there was a slight rally; but this was not enough to counter earlier falls and 3½ per cent War Loan lost ¾ to 52½ xd. Dominion and Corporation stocks remained firm, with continued interest in the new LCC 6½ per cent 1971-72 loan; the new Bootle issue shares the same coupon and is thought to be heavily over-subscribed at its issue price of £99.

Banks were firm over the week and made widespread gains; both Barclays and Lloyds gained 5s. to 82s. 9d. and 68s. respectively. Insurance shares also showed notable rises, with Prudential "A" 2½ higher at 25. Breweries were also in demand, and Watney Mann put on 4s. 6d. to 97s. 6d. Among building shares, Associated Portland lost earlier gains after the interim dividend but gained 2s. 3d. over the week. Early losses in ICI were also made good to result in a net rise of 2s. 6d. to 63s. 4½d. Stores were among the shares attracting investment buyers; Marks and Spencer "A" gained 2s. to 101s. 9d. Rank Organisation gained 4s. to 30s. 9d. ahead of the full merger terms with Gaumont. Mecca was in strong demand and the voting shares gained 12s. to 70s. 6d. Many industrial shares gained after the new account opened; Turner and Newall made good early losses to put on 2s. to 57s. 6d. and Unilever gained 1s. 6½d. to 40s. after the subdivision of the shares. Electrical and motor shares were also higher and oils came back after losses before the weekend on news of growing competition; but even so Shell lost 1s. to 114s. The revival of local demand pushed tin shares up, and despite profit taking Tronoh gained 2s. to 30s. 6d. A rise in demand for Kaffirs on Monday, which centred mainly upon the finance houses was not sustained. Anglo-American gained in all 4s. 4½d. to 136s. 10½d.

EXCHEQUER RETURNS

For the week ended October 28, 1961, there was an "above-line" deficit (after allowing for sinking funds) of £42,594,000 compared with a surplus of £4,577,000 in the previous week and a deficit of £20,898,000 in the corresponding period of last year. There was a net expenditure "below-line" of £22,509,000 leaving a total cumulative deficit to date of £703,687,000 compared with £714,289,000 in 1960–61.

THE MONEY MARKET

THURSDAY's cut of ½ per cent in Bank rate was followed by a corresponding cut in the fixed rates in the money market (see page 479). The move to 6 per cent was widely expected. Rarely have the day-to-day dealings between the Bank of England and the discount market been so closely watched and assessed by the financial public—and the Bank of England kept to the "rules of the game." It followed this week's comparatively mild treatment of the market with a cut in Bank rate.

At the Treasury bill tender before the Bank rate change, the syndicate of discount houses again ignored its several visits to the Bank and raised their bid by 1s. to £98 11s.5d.; the average rate of discount fell by 3s. 10.78d. to £5 14s. 6.57d. per cent. The market's quota of bills was 66 per cent, bringing its average quota since the first cut in Bank rate on October 5th to a very satisfactory 58 per cent. Following the tender five or six houses were forced into the Bank for a moderate amount. On the two days before the Bank rate change the market was again in the Bank, but this time the amounts were small and were taken only after the Bank had provided special help through the purchase of bills.

APPOINTMENTS

BRITISH HYDROCARBON CHEMICALS LIMITED

(Manufacturers of Petroleum Chemicals)

requires for its London Office

COMMERCIAL ASSISTANTS

Applicants should be approximately 25-30 years of age with a science degree and preferably some experience in the chemical, petroleum or allied industries. Administrative experience also an advantage with a background in marketing research, sales promotion or technical sales service.

Posts carry attractive starting salaries. They are pensionable (non-contributory) and will lead to increasing responsibility.

Apply with full particulars, quoting Serial No. 81, to:

Personnel Department,
British Hydrocarbon Chemicals Ltd.,
Devonshire House,
Mayfair Place,
London, W.1.

SOCIETE FINANCIERE

constituée par d'importantes

Banques européennes et américaines

recherche

un ECONOMISTE très expérimenté

(grande pratique des études de conjoncture et de branches industrielles, formation mathématique souhaitable, connaissance *du français et lecture de l'allemand nécessaires*)

rémunération en rapport

(résidence Paris, logement assuré)

envoyer curriculum vitae détaillé

à Box No. 1558, *The Economist,*
22 Ryder Street, London, S.W.1.

MARKET RESEARCH OFFICER

An outstanding opportunity arises in a leading International Organisation for a Market Research Officer interested in the functions of marketing nationally advertised toilet and cosmetic preparations.

The duties will include the direction of the Company's consumer and market research, analysis of test market results and the preparation of sales forecasts.

Salary will be in line with qualifications and experience and applicant would possess a degree, preferably in Statistics or Social Sciences, with a sound knowledge of statistical methods. He will report to the Marketing Director.

Age preferably between 25-30. The Company operates a non-contributory Pension Fund.—Box 1560.

STANDARD TELEPHONES AND CABLES LIMITED

FINANCE ANALYSIS

Applications are invited for the post of

FINANCE ANALYSIS CLERK

in the London Headquarters of a world-wide Electrical Engineering Company.

The job is concerned with the analysis of the financial position of some of the Company's overseas assets and will entail the accumulation of data to determine courses of action regarding these matters.

The post would probably be attractive to a man in his middle thirties who has experience in a banking, insurance, accounting or similar environment but sees his prospects there as too limited. Considerable demands on intelligence, initiative and accuracy will be made, and those are more likely to be met by someone with a "back room" rather than an extrovert temperament.

An initial salary of up to £850 p.a. is envisaged and the Company offers attractive fringe benefits—pension scheme, etc.

Formal qualifications in accountancy may be an advantage but, if you have appropriate experience, their absence should not deter you from applying.

Write, giving details of education and experience, to:

Standard Telephones and Cables Limited,
Manpower Section, Connaught House,
63 Aldwych, London, W.C.2.
Quote Ref. E/24.

INVESTMENT ANALYST

Leading International Bank with expanding investment activities in Europe requires experienced ANALYST to develop research in Continental securities. Candidates should have at least 5 years' experience in Investment Analysis, including at least 3 years in Continental securities, and covering comparative company and industry studies. Experience in interviewing management is essential. This is a genuine "growth" opportunity offering commensurate remuneration for the right man. Preferred age 30/40 years. Replies, which will be treated in the strictest confidence, should indicate breadth of fields covered, as well as the usual brief business history and educational qualifications.—Box 1562.

THE ECONOMIST INTELLIGENCE UNIT LTD. wishes to make a graduate appointment to the staff of its International Division. This division is concerned with economic research for clients as well as publications dealing with all parts of the world. Applicants should not be more than 28 and should have a good honours degree; this need not be in economics, but in such case they should have experience of economic or related research; a good working knowledge of either Spanish or German is desirable.—Detailed applications should be sent to International Research, EIU, 5 Bury Street, London, S.W.1.

For further appointments and other classified advertisements see page 494

UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

Applications are invited from graduates with qualifications in Economics and Statistics. The appointment may be full-time or part-time and the salary will be according to qualifications and experience within the range £425 to £675. Applications, with the names of not more than two referees, to the Clerk to the Faculty of Commerce and Social Science, the University, Birmingham 15, from whom further information may be obtained, by Friday, November 10th.

From all corners of the earth, people come to

MONTANA

the popular health and sports resort situated on a lovely plateau, perched on mountain slopes facing the Valaisian Alps. With its pure and bracing air, and its remarkable record of sunshine (averaging 8 hours 14 minutes daily in January alone), Montana is an ideal spot to enjoy happy holidays at any time of the year. Winter sport enthusiasts in particular, appreciate the advantages of two cable cars and five ski lifts. All visitors are glad to know that they can cash their Travellers' Cheques or Letters of Credit at the Montana Branch of the **Union Bank of Switzerland.**

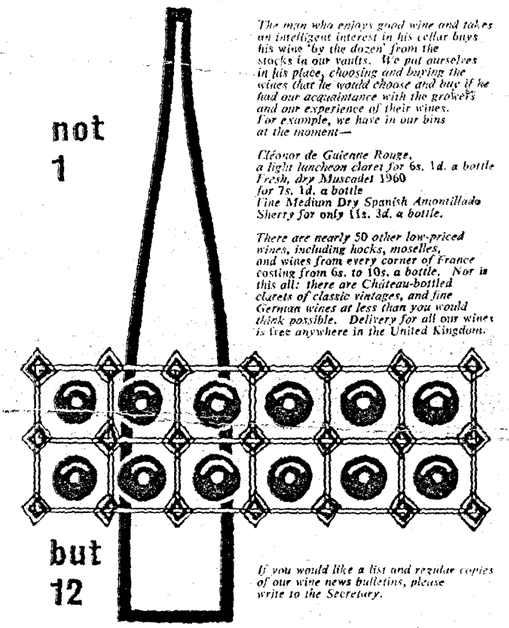
money is

A SOURCE OF INNOCENT MERRIMENT

We can scarcely think of a more agreeable sentiment, but it's also true that money can be the source of more money—which is why people invest and why we're in business.

Investing in the Japanese market is an easy way to put your money to work reproducing itself. To find out where in Japan it will work hardest, you need facts and figures, and that's where Yamaichi comes in.

Besides our regular weekly and monthly publications, industry-wide surveys, and other English-language pamphlets and brochures, Yamaichi puts out a continuing series of Special Reports on leading individual corporations. They give in concise form the major activities, plans, production, sales, and profit records, and other detailed data the wise investor wants to know.



If your money means more to you than innocent merriment, you will do well to consider taking a stake in Japan's booming economy. Yamaichi is waiting to help you.

but 12

The man who enjoys good wine and takes an intelligent interest in his cellar buys his wine 'by the dozen' from the stocks in our vaults. We put ourselves in his place, choosing and buying the wines that he would choose and buy if he had our acquaintance with the growers and our experience of their wines. For example, we have in our bins at the moment—

Eléonor de Guienne Rouge, a light luncheon claret for 6s. 1d. a bottle
Fresh, dry Muscadet 1960 for 7s. 1d. a bottle
Fine Medium Dry Spanish Amontillado Sherry for only 11s. 3d. a bottle.

There are nearly 50 other low-priced wines, including hocks, moselles, and wines from every corner of France costing from 6s. to 10s. a bottle. Nor is this all: there are Château-bottled clarets of classic vintages, and fine German wines at less than you would think possible. Delivery for all our wines is free anywhere in the United Kingdom.

If you would like a list and regular copies of our wine news bulletins, please write to the Secretary.

INTERNATIONAL

LOOKING AT LEADERS

A YEAR ON THE NEW FRONTIER

President Kennedy has shown an unexpected lack of assertiveness since he was elected a year ago. His reluctance to do battle with America's vocal right wing has flawed his conduct of foreign policy (p. 523). There is now a danger of an ill-considered resumption of nuclear tests (p. 529).

But Europe would do well to remember that the Administration of the United States seems to be about to launch a drive for freer trade; and that during the past six months President Kennedy has been trying to revolutionise the western philosophy of aid. In both fields Europe can and should help (p. 527).

As in the formulation of foreign policy, so at home: Mr Kennedy's chief problem is the shaping of American public opinion nearer to his aspirations. He is embarked on a large educative process to that end (p. 549) particularly to liberalise America's trading policies (p. 553). Some election results suggest that the auguries may not be unfavourable (p. 550).

Accusations that the Administration is hostile to business are exaggerated; it cannot afford to be (p. 550).

•

Dr Adenauer has patched together a coalition that will be under attack from within and without the Bundestag (p. 564). His own position is much the same as before; but the way the long governmental crisis has been conducted has raised doubt in Germany about the life expectancy of the Bonn system (p. 526).

Mr Khrushchev has to display great dexterity if the post-Stalin wind of change is not to blow him away before his time (p. 563).

President Nasser, partly in order to regain momentum after the collapse of the United Arab Republic, is embarking on a large, and largely obscure, process of democratisation (p. 568).

Mr U Thant, amid general relief, has at length been chosen as the Acting Secretary-General of the United Nations (p. 532).

The President of **Ecuador** succumbed to riots, and his successor had to meet army opposition; none of the Andean republics is doing more than postpone further explosions (p. 531).

London has been having a look at **Mr Kenyatta** (p. 530).

LOOKING AT PLACES . . .

In **Brussels** the negotiations for Britain's entry into the Common Market are now much concerned with the difficulties in the way (p. 570); **France** has been assuming British approval for *l'Eitrope des patates* (p. 532).

Mr Dean Rusk has been having a look at **Japan's** isolated economic position and its problems (p. 537).

Mr Duncan Sandys had a look at Ghana, and decided that it was safe for the Queen to do so too (p. 529).

HOME

UP

. . . in the air

Britain is not building enough houses, and those that are being built—particularly by local authorities—are not often available to those who really need them: the answer lies not in controls but in the freer play of market forces (p. 525).

The regional planning which might ease the housing situation is notably lacking in drive: but new ideas are available (p. 548).

Mr Lloyd's capital gains tax is tangled in nice definitions: it ignores the changing tide of opinion about the probity of such a tax (p. 573).

. . . to the minute?

The shanty town at London Airport North has at last been replaced (p. 575).

Brewers are putting their money on new ideas—lager and "container" draught: but consumption will need to double in the next decade if they are not to be out of pocket (p. 576). Americans, with "instant" beer, are answering a different problem (p. 559).

The prospects for new newspapers at home (p. 537) are at best weakly glowing. But in America three national newspapers are to try to span the continent within the year (p. 557).

. . . in arms

The long-expected wages showdown, averted in other fields, could conceivably come in the electricity supply industry (p. 531).

DOWN

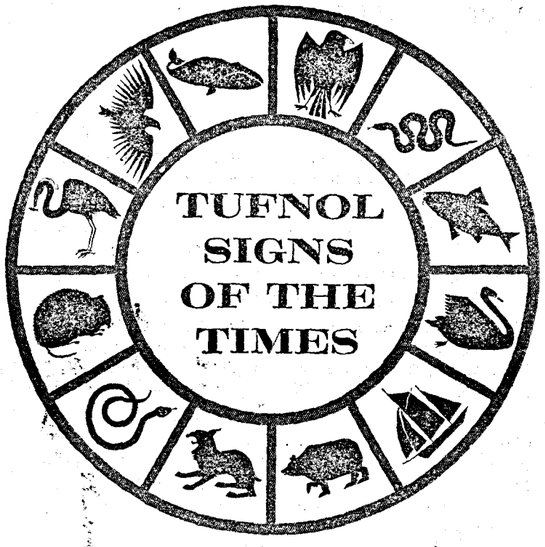
. . . in the mouth

Lord Robens and the prophets of Lurgi have been cut to the quick by ministerial approval for methane imports (p. 580).

Tired, inept or merely vindictive, MPs—and more particularly front benchers—had little cause to feel self-satisfied last week (p. 530).

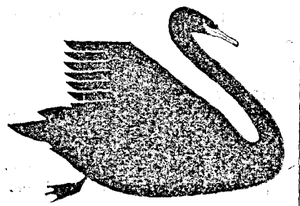
The proposed restrictions on immigration worry the nourishers of Ireland's chief export—people (p. 546). Some questions by Sir Cyril Osborne—and some answers (p. 538).

. . . on the table



New legislation goes ahead: in Criminal Justice Administration, to reduce the law's delays (p. 532); in Education, to reduce the price to parents of their children's university education (p. 531); in the training of Social Workers and Health Visitors, to reduce confusion and overwork (p. 538); in Transport, to leave managers to make their own decisions (p. 588).

. . . among the dead men



De mortuis nil . . . but the latest volley has just been fired in the posthumous war over Lord Cherwell's work (p. 541).

How the pound nearly floated—a chapter from Cherwell (p. 584).

Swan-Sign of Tufnol

Those people born under the sign of the Swan fly high to the top of their profession without ever flapping. They glide smoothly over troubled waters in their jobs as chief purchasing officers, chief engineers, chief draughtsmen and chief designers. Swan men are perfectionists who travel far when they find one material that combines the properties of many materials—a material that is light yet strong and hard-wearing, resistant to corrosion and a good electrical insulator. They also find that this ideal material resists deterioration in storage and machines easily with ordinary tools. Many Swan men have already discovered this remarkable material—"SWAN" brand Tufnol. They have also discovered that Tufnol is available in eleven other brands, each with pre-determined properties. *All* brands of Tufnol are laminated plastics, and *most* are available in sheets, tubes, rods, angles and channels. *Each* brand is formulated to satisfy specific requirements—your requirements. If your birthday falls between January 1st and December 31st, this could be your lucky week—the week you discovered Tufnol. *'Phone or write to your local Tufnol Branch Office and we predict you'll thank your lucky stars.*

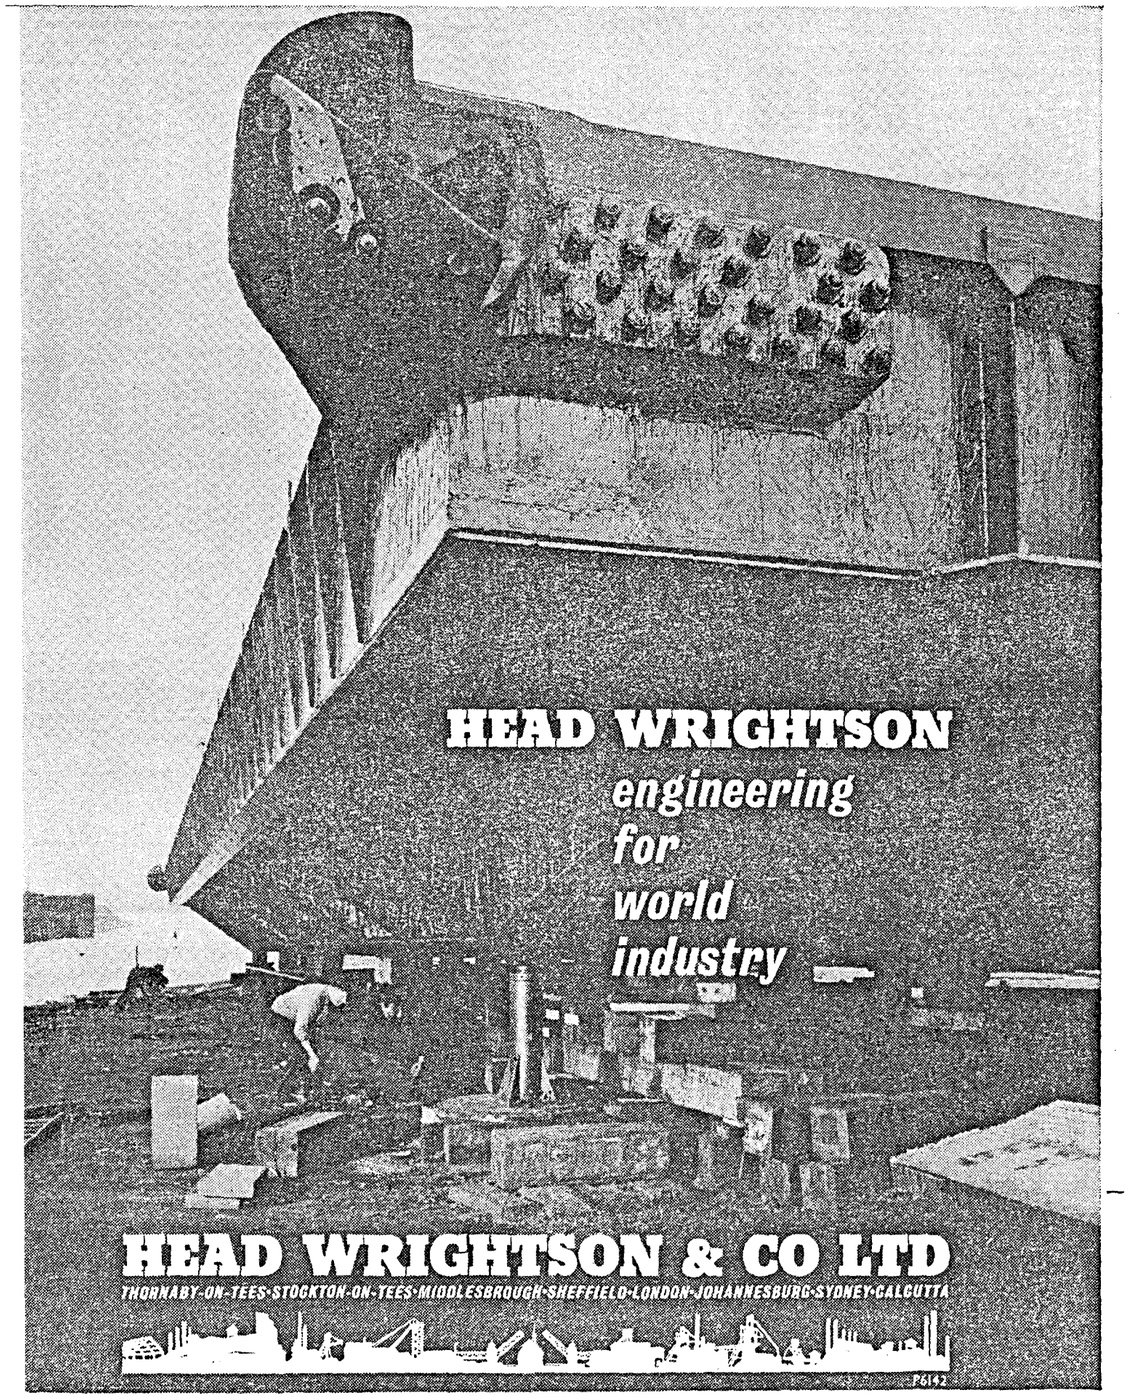
LIVELY MINDS WRITE THE GUARDIAN

DOWN-TO-EARTH SPACEMAN...

Whenever anyone puts a man into space, the circulation of The Guardian registers a noticeable tremor.



Even people who (for reasons best known to themselves) take run-of-the-mill newspapers on run-of-the-mill days prefer The Guardian when something special's happened in the world of science. They recognise that here is science reporting which treats them neither as B.Sc.s on the one hand nor as little children on the other, but as intelligent adults with their adult wits about them.

John Maddox, who looks after our scientific side, is himself an atomic physicist and lectured at Manchester University before joining us. On The Guardian he is given unlimited (well, nearly) scope to follow up promising lines of scientific development, whether it's the low-down on the lemming's love-life or the latest loggerheading between the neo-Freudians and the neo-neo-Freudians.

This determination to cover the exciting developments of our world even when they demand some attention from the reader is what keeps some people away from The Guardian. Such folk don't care for thought in any form, particularly when it's they who have to do the thinking: and The Guardian is not for them. The Guardian is for readers who have lively minds and like to keep them lively by exercising them from time to time.

Is this why some of your competitors are stealing an export march on you?

To many of Britain's leading manufacturers, BEA air freight is not an "emergency only" affair—it's a normal, routine move in the business of getting firmly entrenched in European markets.
To the bread-and-butter advantages of incomparable speed, savings in packing cost, lower insurance rates and great reduction in pilferage and damage troubles, BEA air freight adds the jam of extra prestige and good salesmanship.
Seeing that you can get all this at a cost which—in terms of overall despatch costs—is sometimes little if any higher than you are paying now, would it not be wise to study the facts and figures of BEA air freight with a new and imaginative eye? Ring your local BEA Office, or your usual shipping agent.

BEA's new 300 m.p.h. Armstrong Whitworth Argosy freighters, with Rolls-Royce Dart engines, are starting regular scheduled cargo services to Paris, Frankfurt and Milan. The Argosy's large nose and tail doors allow quick loading and unloading of heavy and bulky freight.

Mallory are at home in many fields

Mallory are the only firm to specialise in powerful miniature batteries. Some are as small as a ladybird; many are not much larger. Yet they can push a signal across more than 400,000 miles of space; have helped the airborne recovery of a satellite from orbit; made 'invisible' hearing aids more than a dream; fostered the trend towards pocket-size radios, tape recorders, paging systems . . . All this could be achievement enough. But remember the transmitter swallowed like a pill?—essentially a Mallory battery. A substitute pacemaker for the human heart?—also Mallory. A battery driven wristwatch that runs for more than a year; self adjusting camera shutters and lenses; illuminated novelties of many kinds—these and more are Mallory powered. Mallory pioneered miniature cells for field transmitters during the war. Uniquely dependable and long lived, they can be of great help to all manufacturers who plan to make their products smaller and retain full power.

THE Budd COMPANY

One of the world's great names in the design and construction of stainless steel railway cars

For more than 25 years, Budd has been the pioneer developer and producer of stainless steel railway cars. This type of construction has resulted in new records of dependability, lengthened intervals between overhauls, and lower maintenance and operating costs on railroads in many parts of the world. Notable Budd developments include the original Pioneer Zephyr . . . the RDC (rail diesel car) . . . and the All-Room Coach Sleeper now in use on five major railroads. Today, Budd ranks high among the 200 largest industrial concerns in the world, with sales in 1959 of nearly $322,000,000. The Budd Company, Philadelphia 32, Pa., U.S.A.

THE TRUCK THAT'S GOING PLACES...

When Leyland introduced their Power-Plus range, they knew it would be a record-breaker in the way of economy. A recorded increase in m.p.g., on some services of up to 33⅓%, has certainly proved them right...

...but there's more to Power-Plus economy than that. Shrewd operators have found that the Leyland 0.680 engine's extra power enables their trucks to complete normal two-day hauls in one. And that means a saving on drivers' subsistence allowance, tighter delivery schedules and, in the long run, a reduction in fleet numbers. Whether the last item is a good thing for Leyland is open to question. But it certainly is for the operator.

IN HALF THE TIME

the decision takers...the computer-minded

A business lives—or dies—by decisions. More and more, successful decision-takers are turning to the speed, the accuracy of computers. Slashed costs, decreased wastage, higher output, greater profit, all flow from computer use . . . but *which* computer? Your needs may be for a full-scale system, a small machine, five minutes at the Computer Centre—or perhaps a computer is not the answer at all. Pioneers in computer development, Ferranti can give you the benefit of their experience—and if you choose a computer, undertake its installation. And Ferranti offer a wider range of computers, programs, training facilities and services than any other company. Current Ferranti activities include Nebula (Natural Electronic Business Language for commercial programming), Orion (revolutionary "second generation" computer) and Atlas (most advanced super-speed computer in the world).

PERMANENT WAYS British Railways have made a new senior appointment — a Ferranti Sirius computer to calculate incentive bonuses for six hundred track repair gangs in 5 Midland Region districts. Weekly repair analysis is an extra duty Sirius takes in its stride. Small, economical, very adaptable—that's Sirius.

AIRWAYS The wide blue yonder becomes more congested every flying hour — making traffic control over the Atlantic an ever-increasing nightmare. The Ministry of Aviation asked Ferranti for help; result, Apollo—a new computer at Prestwick Airport designed to bring a skyful of planes to happy landings.

ROADWAYS Road designers Maunsell and Partners took their Hammersmith Flyover problems to a Ferranti computer centre—hired time on a Pegasus and completed weeks of development work in minutes. Maunsells are engineers not computer experts—but Ferranti autocodes allow anyone to use a computer.

Kennedy the Cautious

LAST TUESDAY, collectors of coincidences will note, was the first anniversary of the election that brought President Kennedy to power in the United States, and the forty-fourth of the revolution that brought the communists to power in Russia. Neither event has worked out in quite the way people expected at the time; in President Kennedy's case, the past year has not borne out either the main hope, or the main fear, his election aroused.

The chief misgiving felt about Mr Kennedy last November was that he might make mistakes of judgment, particularly in foreign policy, through exuberant self-confidence. In fact, so far he has been if anything too diffident; his one undoubted error of judgment, the decision to permit the invasion of Cuba, seems to have been committed because he lacked the self-confidence needed to overrule the experienced men who favoured military action. The chief hope he raised, on the other hand, was that he would be the kind of President he talked about in his campaign, a leader who would mould public opinion rather than conform to it, and if necessary defy it in order to do what he believed right. This expectation, too, remains largely unfulfilled. So far Mr Kennedy seems to have looked upon his popularity as an object of value to be hoarded, instead of as capital to be invested. The result is a distinct danger that American public opinion, not having been pushed in the right direction by him, may now push him in the wrong direction.

If the President has been unexpectedly cautious, it is partly because he came into office with his foot extended for a bold step forward—only to find it poised over thin air. His first weeks in the White House were marked by two major decisions: to accept a neutral government in Laos, and to negotiate seriously for a treaty banning nuclear tests. Both decisions marked an abrupt and courageous change from the policies of Mr Eisenhower. Unfortunately, Mr Khrushchev turned out to have lost interest in both of them by the time they were taken. Laos remains divided, and a source of infection to the whole of Indochina; nuclear tests remain spectacularly unbanned.

These rebuffs have apparently qualified Mr Kennedy's whole approach to the relationship between the communist and non-communist world. Like Mr Eisenhower, he seems at one time to have flirted with the idea that a process of intelligent negotiation might usher in a new period of tolerance, perhaps even of goodwill, between East and West. The President still believes in the value of negotiating, but he now regards it simply as a means of avoiding the worst dangers of what he clearly expects to be a long and intolerant tussle between America and Russia; and he seems reluctant to press even this cautious proposition on those people in the West who do not share it.

But Mr Kennedy's current wariness cannot be explained entirely in terms of disappointments received at the hands of Mr Khrushchev. No assessment of his conduct of foreign policy is complete that does not take into account the marked change in the climate of American opinion in the past year. It may be misleading for foreign observers to pay too much attention to the pronouncements of men like Mr Dealey, the Texan publisher who recently told the President over the White House lunch table that he was a "soft sister," and General Walker, the officer who prefaced his declaration of war on the Administration last week by announcing that he was resigning the commission which he had held "by God's grace." These voices of the militant Right, it will be pointed

out, are heard at regular intervals in America; in a country which longs to find a final solution for every problem, the frustrations of a divided world inevitably produce a crop of angry men bent on kicking impediments, such as communism, out of the way.

All this is true (and Mr Khrushchev has his own counterparts of Mr Dealey to deal with). Yet it is hard to resist the conclusion that in America these voices have become louder, and better concerted, in the past year; that they have agreed upon the rudiments of the course of action they want the United States to follow; and, worst of all, that they have begun to have an effect on public opinion—which, in its turn, may have an effect on Mr Kennedy.

This lurch towards militancy was partly responsible for the pressure that thrust the President into the Cuban adventure. It has also led him to abandon, at least for the time being, the ideas he seemed to entertain last year of a new approach to the problem of communist China; the result being that the West's policy towards China, like its policy towards central Europe in Mr Dulles's day, still consists of clinging to the *status quo* without thought for what will happen when the loss of western nuclear superiority makes the *status quo* untenable. But undoubtedly the main danger presented by the growing vigour of the radical Right is that it may prevent a peaceable settlement of the dispute about Berlin and central Europe. The militants have now made their views on this subject bleakly plain. They oppose negotiations with Russia, not merely because they are unwilling to offer any accommodation whatsoever but also because they decline in principle to talk to the forces of evil. They would fight not only for the protection of west Berlin, on which the West stands unanimous, but also to prevent any further acknowledgment at all of the authority of the east German government. They look forward to a prolonged struggle designed to achieve "victory over communism," for which they propose to prepare by substantial rearmament, starting with a resumption of nuclear tests in the atmosphere and an extension of the civil defence programme.

Mr Kennedy's own views on the subject are almost certainly quite different. He may have modified his earlier ideas about the extent to which negotiation is likely to resolve the hostility between East and West, but the evidence suggests that he still regards negotiation as a necessary means of preventing the hostility spilling over into war. Clearly, the preservation of peace strikes him as a more practical objective than total victory over the communists; and, although determined to maintain the military strength of the United States (if necessary, it seems, even by starting atomic tests in the air again), he sees military strength as the underpinning of diplomacy, not a substitute for it.

Unfortunately, Mr Kennedy has not yet fully committed the authority of the Presidency to a declaration of these beliefs. Some members of his Administration, such as Mr Harlan Cleveland on October 20th and Mr Chester Bowles on November 5th, have attacked the notion that "toughness in foreign policy is measured by a belligerence that needs neither brains nor skills," as Mr Cleveland put it. But the President himself, except for an occasional reference, as in his speech at the University of North Carolina last month, has so far not reinforced these voices of reason through all the methods of amplification—press conferences, public speeches, television appearances—available to him. One's impression is that he is still weighing the balance of opinion among his advisers, and in the country; he has not yet got down into the scales himself.

There are probably several explanations for the immoderate self-restraint that has delayed Mr Kennedy's plunge into the debate. One reason, as our Washington correspondent suggests on page 549, lies in the way the President organised the White House when he took office. His determination to surround himself with as many different points of view as possible, and his reluctance to delegate the task of sorting them out, have very likely made decisions slower to come to—even though, when reached, they are better informed than Mr Eisenhower's were. Undoubtedly, a second reason is Mr Kennedy's preoccupation with next year's elections to Congress; he is naturally chary of doing anything that might cost his party the support of voters who confuse peace-preserving with appeasement. On both these counts there is a straightforward reply. Sooner or later, a President must turn his ear neither to the conflicting voices of his advisers, nor to the gurglings of the floating vote, but to his own judgment.

Perhaps the real reason for this strange cautiousness lies deeper. Mr Kennedy is called a politician-President, as Mr Roosevelt was (and Mr Eisenhower was not). But there are two different ways in which the skills of the politician can be used to serve the purposes of the Presidency. One way, the Rooseveltian one, is predominantly concerned to use the art of political persuasion to rally the country behind policies which the President deems necessary. The other is predominantly concerned to use the art of political analysis to find out what policies the President can safely advocate. Mr Kennedy has not yet made it clear where he puts the emphasis. He may be carefully waiting until he has built up a sufficient fund of prestige before he employs it in the way Mr Roosevelt did. But events in central Europe may not allow very much more waiting.

If peace is to be saved, America and Russia must both stay under the leadership of moderate men who can control the instincts of their anti-communist and anti-capitalist extremists. The recently ended congress of the Soviet Communist party suggested that in Russia the moderates have stayed in command, though still with difficulty and at the cost of concessions. The mirror-image of the same struggle is now beginning in the West. Mr Kennedy may have to deploy the full strength of his convictions if it is to end the right way.

Home Truths | A discussion of present housing policy

Almost every housing debate nowadays demands to be translated from politicians' catchphrases into economists' English. Last Monday's affair in the Commons was no exception. There were two quite separate questions that ought to have been at issue. The first, which should have special relevance at a time when Britain is thinking of indulging more in economic planning, is: how many new houses a year should Britain try to be building? There are indications that Britain is now at a stage of its evolving new living standards when it would be sensible for the rate of housebuilding to be stepped up. The other question is: what should be done, as a social service, to provide decent housing for people who cannot afford to pay the market price for it? By this one does not mean the arbitrarily selected group of people who happen to be enjoying council housing subsidies or rent-controlled dwellings at the moment. One means people who are actually and genuinely in need and yet are sometimes outside these sheltered sectors: especially—to cite one group particularly in the news just now—low income families with large numbers of children in big towns like London.

First, then, about the total rate of housebuilding that would seem to be sensible. The rate of completion of new houses in Britain is now just over 290,000 a year, which appears to be about half the rate (both absolutely and as a proportion of national income) recently current in west Germany. Dr Hill found some comfort in the fact that Britain's present building rate would suffice to provide the 6 million new houses that he deemed might be needed in the next twenty years, although it would not suffice for the "8 million houses in twenty years" which was the figure some Labour speakers were bandying about. Much of the arithmetic underlying these estimates that are cast as far forward as twenty years is irritating and absurd, because nobody can really know what the marriage rate (which is very volatile) will be in the 1980s. But the main reason for suspecting that, in the next ten years, a continuing rate of around 300,000 new houses a year would be too low is that the Minister of Housing has almost certainly underestimated what he himself called "the quite incalculable factor of the extent to which greater prosperity is leading, and will lead, people to expect higher standards of housing and amenities"; however incalculable this factor, it seems reasonable to calculate nowadays that a house becomes obsolescent for modern needs before it is a hundred years old, which is the age of obsolescence that Dr Hill assumed in his figures. And, for those who find all statistics tiresome, the logic of stepping up the rate of housebuilding and house-replacement in future is surely suggested by comparing the improvement in the consumer durables that people have recently put into their houses with the much slower rate of improvements in the houses themselves—or else just by looking at Wigan, or parts of London, Liverpool, Birmingham and even Edinburgh.

The next question is therefore: why has the supply of modern houses not increased to meet demand in a free market—as, for example, the supply of luxuries such as television sets has done? The big answer to this is that there has not been a free market in housing; private building of new houses for rent has been rendered unprofitable by years of rent control, and local authorities' building has been rendered unprofitable by their habit of not charging a rent anywhere near to the level that would pay for the new houses built. (This last factor is implicity admitted when local authorities say that "they cannot afford to build the increasing numbers of houses they need unless Exchequer help is increased.") But there are admittedly three other subsidiary damping factors, which tend to keep the rate of housebuilding below the rate that consumers would demand in a free market. They are: (a) the shortage of land for building in the areas where demand is greatest; (b) planning restrictions; and (c) the effect of high interest rates.

Part of the solution for (a) must lie in measures to steer the increase in jobs, and thus in demand for new housing, away from overcrowded wens like London to other parts of the country; some new suggestions for ways of doing this are discussed on page 548. The reverse of a solution would be any scheme that provided a disincentive to the supply of new land for building in scarcity areas; Labour's scheme to "deal with land speculators"—which would dispossess an owner of his freehold precisely as soon as he did offer land for new building—would do exactly this, and a welcome feature of Monday's debate was that Labour speakers were already plainly preparing to retreat from it. Dr Hill's remedy was to encourage the bringing forward of "enough land in the right places within the existing urban areas as well as beyond the green belt." But, although he recognised that "by protecting agricultural land by the green belt policy, we ourselves are helping in the process of putting up the price of land which is allowed for development," he wanted "to make it perfectly clear that we intend to adhere to the green belt policy." Some of the fetishes—as distinct from the real social advantages—of that green belt policy ought to be looked at anew. So should some other planning restrictions—including the way that local authority bye-laws inhibit a growth in building productivity by making the construction of some sorts of non-traditional houses virtually impossible, and the way in which local residents can often block the building of three or four new houses on sites where only one house has stood before, because they say it would spoil their view.

Next, interest rates. Those who, like *The Economist*, believe that high interest rates are an essential concomitant of running sterling as an international currency have a particular responsibility to consider whether there should be special easements for things like export finance (discussed in an article last week) and housing. One obvious remedy would be to introduce an investment allowance for new housebuilding; there are various other tax inducements that could easily be worked out, in order to see that the burden of running an international currency does not have an entirely illogical effect in cutting the proportion of national income that Britain would otherwise devote to new housing. In the local authority sector, there would then be a good case for restoring a subsidy to *new* building of council houses for general purposes—but to make up for this by cutting the subsidy still "contractually" paid

out on houses built a long time ago at much lower building costs than now. The general level of local authority rents should then be raised to the proper market level: an authority should recognise that it is subsidising a tenant whenever his rent does not cover the cost of a newly built house minus a depreciation factor (to make up for the fact that old houses are not as nice as brand new ones) minus this general subsidy. Rebates should be given only to tenants who could not afford to pay these full rents.

This leads on to the second main question discussed in Monday's debate: the social problem of certain large and hardly-hit families who cannot afford a free market rent under present conditions. These are precisely the people for whom council houses were originally intended, and the real long-term answer to the London County Council's present problem of its 628 homeless families was provided on Monday by Dr Hill:

> If [local authority] rent policies were framed so as to require those who can afford to pay an economic rent to do so and so encourage them to find their own accommodation, a great many houses would be released for occupation by those who really need assistance.

But there is clearly also a short-term, human problem for London here. So long as London is overcrowded, and landlords can be choosers, decent young families with large numbers of children, who lose their home for any reason, are liable to take a considerable time over finding a new one. It should be said straightaway that after a time most of them do find one; although something like 45 London families now become homeless every week, the total now on the LCC's lists (628) is only 348 higher than four years ago, which indicates that the turnover out of the welfare committee's homes is usually very quick. It should also be emphasised that the effect of the Rent Act in causing the recent growth in evictions has been grossly exaggerated; about five out of every eight of those who have recently become homeless have come from furnished accommodation, which was not affected by the 1957 Act; others had been sub-tenants, who were not affected by that Act either; anyway, the vast majority of even unfurnished tenancies of working class houses still remain subject to control and restraints against eviction. But, once again, those who believe that remaining rent controls should be abolished have a special responsibility to propose remedies for this numerically small, but sometimes humanly disastrous, problem.

While the long-term solution must be to make more room for lower-income families on council estates by pricing some better-off tenants out of council houses, the short-term need is to provide more temporary accommodation for people while they are seeking a new home. The LCC is empowered to buy empty properties for this purpose, and it ought to hasten to do so—and to maintain more temporary accommodation of this sort as a permanent feature of its social policy. In order to dissuade people from using these temporary resting places as permanent homes, it should charge pretty tough rents for reasonable temporary accommodation; indeed if people who could afford to find outside homes did start to make long stays in the new temporary accommodation, they should be charged rents, increasing with their length of stay, above the outside market level (while those who plainly cannot afford to pay full market rents are precisely the people who should be given priority for council housing vacancies).

To those who say that this would be cruel, the answer is that it would be much less cruel than the system which now keeps the turnover of these temporary homes so high: namely, the sheer nastiness of some of their marginal accommodation and the fact that families have to be split up when entering most of it. This, indeed, is another example of the way in which politicians, not economic forces, have created the bitterest anomalies of Britain's housing problem. Politicians start by saying that it is inhuman to allow a scarce social service to be ruled by market economics; and they end by building fewer houses, by running a "controlled" market in which there is always an insufficient revolving stock of empty houses standing ready and by causing more inhuman treatment of hard cases, than a policy of genuine economic freedom would have done.

Bonn's Seven Weeks War

What lessons will the Germans draw from the struggle to form the fourth Adenauer government?

MERELY to have been re-elected chancellor by the narrow, but sufficient, margin of eight votes is not enough in itself to dismay or weaken Dr Adenauer. When he was first elected, in 1949, his margin was only one vote (his own, as a wag pointed out), but all the same, once elected, he was firmly in the saddle. Tuesday's ballot for the chancellorship was one of the rare secret ballots which the Bundestag's rules of procedure allow; the members of the two coalition parties, Christian Democrats and Free Democrats, who abstained or dissented then are unlikely to be so ready to go against their parties in an open vote on any major question. To the extent that the monstrous new procedure of coalition management allows him to use it, Dr Adenauer commands a working majority in the Bundestag.

What is more, the west German Basic Law makes a chancellor's removal extremely difficult. The motion that asks the Federal President to dismiss him must simultaneously name his successor, an elaborate operation to arrange, and one which the chancellor, unless actually incapacitated, has means of frustrating. Dr Adenauer is not likely to be troubled much by the thought of a combination to remove him without his consent. There is, it is true, an understanding that he will not serve the whole of the new parliamentary term. The next elections are not till 1965; an exchange of letters between the coalition partners has named 1963 as a likely year for the hand-over. Dr Adenauer may choose to respect this understanding; but the effective choice probably remains his.

In short, the government at Bonn is still an Adenauer government, and the power of decision remains where it was. Neither policies nor methods are likely, in the short run, to change perceptibly, and it may even be doubted whether the elaborate arrangements for control, laid down in writing in the coalition agreement, will effectively prevent Dr Adenauer from doing whatever he chooses to do, or make him do anything important that he would not have chosen.

POLITICS in west Germany have undergone a change, for all that; the west Germans themselves seem not to doubt that things will never be the same again. The government crisis that ended on Tuesday night has been the longest Bonn has known, the most heated and the most alarming; and the manner in which it was conducted has spread disgust and disquiet among those Germans (not, as yet, very many) who think seriously about politics. West German newspapers have been describing the political spectacle in language of un-German pithiness: "Ambition, opportunism, unscrupulousness," said the Hamburg weekly *Die Zeit*.

Normally loyal and orthodox, the *Frankfurter Allgemeine Zeitung* searched its vocabulary to no less purpose: "Insolence and blindness, cunning and dogmatism" were the words it found for the charmed circle of Bonn politicians on whom government rests. Faithful anti-socialists have admitted that only the opposition, the Social Democrats, have come through the crisis with credit. *Die Welt*, the Hamburg daily, has explained the moral collapse of west German political life as the reverse side of west German economic achievements: since 1945 the men of quality have gone in for business, heart and soul, leaving public life alone. This is now being paid for.

And, indeed, it is. The strictures are just. They have extended to political fundamentals: it is being asked whether the German Federal Republic has any greater inner cohesion, or any more effective will to live, than the Weimar Reich had in the days when another octogenarian, Hindenburg, was the national father-figure. Admittedly there is now no direct threat, Communist or Nazi, to the republic from within; and Bonn has been, to put it mildly, spared the economic storm that wore down the Weimar state. On the other hand, the Germans feel that the Soviet pressure on Berlin means a more bitter external strain than the Weimar Republic knew; and they doubt, more explicitly than ever before, whether their institutions are in shape to stand such a strain.

What has been revealed is that the Bonn institutions have as yet acquired little content, beyond that provided by the authority of Dr Adenauer himself. If this had not been so, neither the erosion of public confidence in Dr Adenauer (inevitable, after all, as the years passed) nor his party's modest electoral losses on September 17th would have been a disaster. The institutions have not proved unworkable at all; to work them, they need men who must be willing to take over from Dr Adenauer and govern, supported by a public ready to spare some attention from its private concerns. If these conditions had existed, there would have been no need for the seven weeks war to produce a fourth Adenauer government restricted (ineffectually, it must be hoped) in its power to govern.

Just possibly, the west Germans may now be allowed time for the lessons of their autumn crisis to ferment, and may use the time to prepare themselves to make their institutions work. The limit is set for them by the approaching renewal of the East-West crisis about Germany. In that field it is too much to hope for any early German policy contribution. For that, the flight from reality has gone too far; the task of reversing it will fall to the men who come after Dr Adenauer.

America Discovers Europe

Like Britain before it the United States is being forced by the European common market to re-examine its future

SLOWLY, American opinion is awakening to the fact that if Britain joins the European common market, together with other new members and associates, the result will be a very large economic union indeed, implying possibly a shift in the structure of world power. For a decade America has supported European integration without stint, for the sake of the political gains it would bring. Now that the goal is being approached, Americans are realising that their country cannot remain a mere benevolent spectator. Some—protectionists and isolationists, becoming increasingly vocal on the American right—are already reacting with cries for more protection in self-defence. But other signs suggest a more positive response. Outstanding among these was the bipartisan report to a joint Congressional committee by Mr William L. Clayton and Mr Christian Herter, published in Washington on November 2nd. (Mr Herter was Mr Eisenhower's Secretary of State; Mr Clayton, a Democrat, was one of the architects of Marshall aid.) Their report urges that the United States should take "a giant step" by forming a closer trading partnership with Europe.

In the life of the Atlantic community this report could possibly be a turning-point comparable in importance to General Marshall's Harvard speech in 1947. It is merely a report to a committee of Congress, but there is little doubt that it reflects Administration thinking. On the day the report came out a lance was broken for freer trade by Mr George Ball, the former collaborator of M. Monnet, now at the State Department. Indeed the only uncertainty in Washington seems to be not if, but when, the President will throw his weight into the scale. The Washington debate is examined on page 553.

In domestic American terms, the immediate objective is to get radical new powers for the President to negotiate on tariffs when the present Reciprocal Trade Agreement Act expires in June. It is, after all, the common market's outer tariff that will bite first on American interests, as it has bitten on Britain's. It is this that is giving the protectionists an excuse to demand higher tariffs, and a paring of the President's powers, when the act runs out. The liberals, by contrast, see attack as the best defence. In the General Agreement on Tariffs and Trade, as the Herter-Clayton report points out, bargaining with the common market has already got stuck because of the meagre size of the President's powers to bargain about individual tariff items. The time has come, it argues, to give the President—"as a minimum requirement"—new powers to make sweeping cuts across the board in the

merican tariff in bargaining with Europe, to enable "the xample of the common market" to be followed on a wider cale.

The specific tariff point is backed by a good deal of argu- nent reflecting the dawning awareness in America that much nore than trade is involved in the challenge from Europe. Phrases like "a trade partnership with the common market" and a "free world economic community" are indeed vague, too vague, but they do imply an interest in integration as well as in free trade.

Already, immediate American interests have prompted the administration to be active in the new Organisation for Economic Co-operation and Development, which formally took over from the Organisation for European Economic Co-operation on October 1st, with America and Canada as full members. In agriculture, for instance, it has used OECD as a forum for pressing the Europeans to be liberal in their policies and to consult closely with America. Neither of these processes can go far unless the United States reciprocates. The Administration attaches even more importance to the co-ordination of economic policies in OECD, and it has been sending top men—like Mr Heller, chairman of the President's Council of Economic Advisors—to the economic policy committee of OECD.

One pragmatic reason for this deep interest is, of course, the new weakness of the dollar. The more far-sighted boffins in Washington even see the European Monetary Agreement—the OECD's monetary arm—as the place for a pooling of western reserves, if present efforts in the International Monetary Fund turn out to be inadequate. But the interest also springs from the hot debate inside America about economic growth. All western countries have begun to realise that not only welfare but also power, in terms of defence, aid and social peace, depend on a high rate of growth. In OECD, Mr Heller explained on a recent visit to Paris, the United States hoped both to develop a co-ordinated growth policy for the Atlantic countries and to learn from western Europe's recent experience of high rates of growth. One leading Congressman has said that OECD could be the West's economic high command.

THERE have been few signs that the Europeans have yet taken in the implications of the possibly portentous change in America or begun to respond to it. Britain, as well as the Six, is now preoccupied with European affairs, and has so far shown little zeal for the work of OECD. On the Continent, too, there are the inevitable apprehensions that a vast extension of the common market—a "*mondialisation*" to use the latest jargon—will lead to precisely that watering down of the European communities, the fear of which long haunted the community's creators in their relations with Britain. Such misgivings may well be nourished by suggestions like Mr Harold Wilson's last weekend—that Britain should hold up its own common market negotiations after all until it had sounded the United States to see if it will join. They will not have been allayed by some of the comment in Washington on the new report. "Trade partnership," it is explained, is distinguished from membership of the common market by the avoidance of political implications. This kind of talk has been heard before nearer home.

American opinion is, indeed, now teetering on the brink in the same uncertain way as Britain did in the days of the free trade area. And it may have to be treated to some of the same bitter-sweet medicine that the Europeans inflicted on Britain. On the one hand Europe has to press ahead with its own integration, to which the present evolution in America is, after all, a response. But the liberals in America are embarking on a struggle as fateful and as difficult as Britain's decision last July; if Europe can help them, it should. A united Europe makes little sense if it is not a part of a uniting West.

WHAT kinds of arrangement should be devised to give the new stirring in America practical effect? If President Kennedy gets his new powers—and a long, hard battle has still to be fought—a series of big tariff cuts between western Europe and America, together with a growing co-ordination of policies, is on the cards. Ultimately these ingredients might have to be made more formal and durable in some kind of Atlantic Economic Community. Certainly the constitution of OECD, created as it was amid the cross-currents and confusions of its predecessor's demise, is still a blank to be filled in.

The wider the circle of integration of the rich Atlantic countries, the more essential it becomes that they shall not unite at the expense of poorer regions. It is a refreshing feature of the new thinking in Washington that it recognises this and indeed puts at the centre of a possible new Atlantic partnership a joint trade and aid effort to help the undeveloped, uncommitted countries. The most radical and precise suggestions in the Herter-Clayton report are for abolition of raw material tariffs by developed countries and a series of 10 per cent cuts in their other tariffs in return for 5 per cent cuts by the undeveloped ones. Such ideas may be needed, not in the distant future, but in the next twelve months, as Britain's negotiations with the common market bring the question of trading policies with the undeveloped countries to a head.

Aid is a no less urgent matter. Here again western Europe has been slow to respond to American appeals and slow to realise that its new prosperity and its potential new power give it new responsibilities. It has been widely missed on this side of the Atlantic that President Kennedy has been trying, in the past six months, to introduce a revolution, not so much in the quantity of western aid as in the philosophy behind it. His aid message in March was a stimulating appeal for a new kind of joint aid effort by western countries. With Europe recovered, and the burden of the East-West conflict shifting to the economic field, it was time, he suggested, to move the main effort away from the propping up of the protégés of military policy towards sustained assistance to the countries capable of self-sustaining growth. Aid was to have a social purpose and encourage the receivers to help themselves.

While the cold war goes on, the fine new principles are not proving easy to put into practice; their future success may be much influenced by the amount of European support they get. In a new Atlantic partnership the Europeans thus have a double opportunity—a chance to bring America into the system pioneered by the common market, and a chance to repay America's wise generosity to Europe in the last decade by doing as much, in the decade now opening, for the newly independent nations.

NOTES OF THE WEEK

BY-ELECTIONS

Swing to Liberal

THE usual mid-term swing from Tory to Liberal is on, but so far any real swing to Labour is not. In this week's three by-elections the proportions of people who had voted Conservative in 1959 but who did not turn out to support their party this time ranged from 40 out of every hundred (at both Oswestry and East Fife) to 57 per cent (Manchester Moss Side). Over all, it looks as if under half of these Tory "deserters" switched to the Liberals and rather over half simply represented the usual crop of by-election apathetics who failed to vote at all. Labour's proportion of deserters ranged from 19 per cent (Oswestry) through 22 per cent (East Fife) to 55 per cent (Moss Side). Despite the bigger anti-Tory swing (shown and explained in the table below), these by-elections should probably be regarded as even more worrying for Mr Gaitskell than for Mr Macmillan. The Conservatives did after all hold all three seats as expected, while Labour dropped to third place behind the Liberals in two of them, and only avoided a trio of third places by a margin of less than a hundred votes at East Fife. More important, what is probably the penultimate session of this Parliament is now under way, but there is no sign of the ground swell that could bring Labour back to power at the next general election.

CHANGES IN PER CENT SHARE OF POLL

	Conservative	Labour	Liberal	Hesketh/Dayton
Manchester, Moss Side ..	−21·2	−11·9	+27·9*	+ 5·2*
Oswestry.....	−15·1	*Nil*	+12·3	+ 2·8*
East Fife	−22·4	− 3·7	+26·1*	—

* No candidate in 1959, so these figures represent total share of poll.

Note:—Figures shown represent changes in share of total poll and therefore, in these reduced poll by-elections in safe Conservative seats, probably tend to exaggerate the relative revulsion from the Conservatives. For example, at Moss Side, just over 55 per cent both of last time's Labour and Conservative voters did not bother to support their party now, but the total "swing" away of Conservative voters is shown as much larger because there were many more of them.

What does seem to be in prospect now is that there might well soon be some Torrington-style by-elections in which some ostensibly safe Tory seats could fall to the Liberals. The Liberals secured between 26 and 28½ per cent of the vote at each of this week's three by-elections; the scale of their present advance since the general election was best shown at Oswestry where their share rose from 16.1 per cent in 1959 to 28.4 per cent now. The anti-common market candidate Mr Dayton secured only a derisory 839 votes (or 2.8 per cent of the poll) at Oswestry; the Mosleyite Mr Hesketh secured 1,212 votes (or 5.2 per cent) at Manchester Moss Side. This Moss Side result was perhaps the most interesting—although also the most apathetic—of the three. The constituency had once been advertised as seething with indignation about its inflow of coloured immigrants, but less than half of the electorate turned out to vote. The swing away from Labour was larger here than elsewhere (some of the Mosleyites' tiny proportion of voters no doubt came from working class people in the immigrants' wards), but the swing to the Liberals was also the biggest and most surprising of all. Very largely this was due to the apathy of both Conservative and Labour voters, but it seems clear that some Liberal voters must have been former Tory supporters who could not stomach their new right-wing candidate's anti-coloured-immigrant (and pro-flogging) views.

NUCLEAR TESTS

Stay for an Answer

WHAT is necessity? says President Kennedy; or should say, preferably without jesting. The President repeated on Wednesday that the United States would start testing nuclear weapons in the atmosphere again if an analysis of the recent Russian tests showed it to be "militarily necessary." Preparations have begun, and many people in Washington think that this further contribution to the contamination of the air is settled.

But before Mr Kennedy gives the order to go ahead, he should make quite sure what the advocates of atmospheric tests mean by "military necessity." If there is solid evidence that the Russians are making progress with weapons that might tilt the whole balance of power (such as an anti-missile missile, though there are other possibilities), and if these weapons must be tried out in the air, then it is right, though repugnant, for the Americans to do what is needed to keep abreast. The same is true if there is serious doubt whether the hitherto untested warheads of the Polaris and Minuteman missiles will work; but one is entitled to comment that, if Mr Kennedy was willing to trust these warheads before the Russian tests began, there is no reason why his trust should be less valid now.

Grim necessity, however, is no relation of marginal desirability. It may be cheaper and more convenient to test small warheads for tactical weapons in the air rather than underground; it may be desirable, from the point of view of air force generals, to make minor improvements in the existing warheads. In both cases the military advantages seem to be outweighed by the disadvantages of adding to the volume of fall-out, and giving yet another twist to the spiral of the arms race. Mr Khrushchev said on November 3rd that the Soviet Union might extend the series of tests it held in October if the United States resumed explosions in the atmosphere. The reason he gave was the same as Mr Kennedy gave on Wednesday, and the same as Mr Macmillan gave to the House of Commons on October 31st to justify a possible British resumption of tests: the need to protect his country's security. The nuclear powers' lunatic search for security through measures that increase everybody's insecurity can be arrested only if one of them has the intellectual honesty to distinguish between what is truly necessary, and what is not, and the courage to act on the distinction.

GHANA

Brave Duncan

DISPLAYING admirable courage, and a nice sense of the dramatic, the British Government risked its Commonwealth Relations Secretary on Tuesday to prove that it was not risking its Queen. Last Saturday two explosions occurred on the route the Queen was due to follow during her visit to Ghana, beginning on Thursday. One of the explosions broke the ankles of a statue of President Nkrumah; a second very slightly damaged the Independence Arch in Accra. The next day Mr Duncan Sandys flew to Accra to find out how dangerous Dr Nkrumah's nearly-authoritarian state had become.

Reasonably dangerous, the answer seemed to be, for on Monday there were two new explosions. If British public opinion was to allow the Queen to carry on with the tour planned for her, a demonstration had to be made. On Tuesday it was: Dr Nkrumah and Mr Sandys travelled together along the entire length of the route proposed for the Queen. It was an impressive demonstration, so much so that after a visit to the old imperial palace, Christiansborg Castle, Britain's dashing Duncan could return to his Prime Minister and—perhaps—report:

This castle hath a pleasant seat; the air
Nimbly and sweetly recommends itself
Unto our gentle senses.

In Parliament on Wednesday Mr Macmillan was able to declare, in effect, that he did not believe the Queen would suffer the fate of the Duncan who entered Macbeth's castle. There is no way of telling who set off the explosions; the saboteurs could have been extreme left-wing or extreme right-wing Ghanaians, or simply Ghanaians perturbed

at the undemocratic way in which the president has been running things. But, on Wednesday, there seemed to be no evidence that they would attack him openly or endanger the Queen.

Only a genuine fear for the Queen's safety could have justified calling off her trip. The consequences of cancelling it would probably have been Ghana's *exit from the Commonwealth* (and entry into the communist camp). The fall-out from such an explosion might have poisoned all of West Africa, to Britain's disadvantage. So courageously setting aside its distaste for authoritarianism, the British Government advised the Queen to spend her eleven planned days in Ghana, courageously by the side of the king of the castle.

KENYA

Traveller's Return

BACK in London after 16 years, Mr Jomo Kenyatta has had some trying moments. Two eggs were thrown, a thing that could not have happened in 1945. A woman poked at him with an umbrella. Britain's lunatic fringe cannot, it seems, be denied these futile exhibitions of temper. More disturbing, Kenya's politicians—of all colours and parties—seem themselves not to have moved very far out of the umbrella-poking, egg-throwing stage.

This is a criticism especially of the Kenya African National Union, of which Mr Kenyatta is now leader. After the elections in February, the African nationalists—and Kanu—could, constitutionally, have had the government in their hands. This was the time to stop fighting the British, and to start working with them. Mr Nyerere, of Tanganyika, knows when to fight and when to co-operate ; his country will be independent on December 9th.

But Kanu chose then—and is choosing now—to keep out of government so long as it could not have precisely the government it wanted. Good reasons for Kanu's behaviour have not been lacking. In February there was the need to get Mr Kenyatta out of restriction (and keep an election promise) ; since then there has been the struggle against the equally intransigent Kadu, the minority party that came into power because Kanu would not. But Kanu is not yet in government: in a long statement this week it tried to show how patient it had been with the other side, and how (in its view) the British Government was gratefully bolstering Kadu in power.

But even if this is so, it is still up to Kanu—the strongest force in Kenya and undoubtedly its future government—to exercise self-control. In its own interests Kanu should realise that Kenya is being held up because the British Government—and the settlers—are frightened. When Mr Kenyatta has demonstrated his ability to put Kanu's own house in order ; when the party itself begins to play politics in a more reassuring way ; independence will probably come so rapidly that it might take everyone by surprise.

PARLIAMENT

House in Travail

SIX weary days of debate on the address, a grand inquisition into every aspect of Government policy from Berlin to what Mr Selwyn Lloyd really said to a certain Councillor Smith at Leicester, staggered to its fore-ordained close on Tuesday night with a Government majority of 108. No minister added to his reputation. Mr Macmillan returned to the House looking like a cadaver and indeed speaking like one. For some months past the Prime Minister's enemies have been gleefully drawing comparisons between him and Mr Ramsay Macdonald: after two tired performances in one week, some of his friends have begun to draw much more sinister parallels between him and the Earl of Avon. Among his principal lieutenants, Mr Butler sat bereft and glum. Mr Macleod could have summed up the debate on the address with either a rabble-rousing party speech or else an elegiac and statesmanlike one, but choosing to try both he succeeded in making neither, and left his audience bewildered. Mr Selwyn Lloyd floundered about in the economic debate like a stranded whale, mercilessly goaded by the Opposition.

Yet Mr Gaitskell, although personally as incisive as ever, can hardly be much happier than Mr Macmillan ; and in view of the calm passage his party seems to be giving to the Government's immigration plan, perhaps he does not deserve to be. It must have been a shock to him that, after his year-long effort and Blackpool triumph, 59 Labour MPs last week still voted that Mr Greenwood should be leader of the party ; last year with the unilateral controversy at its height and a much more significant rival in Mr Wilson, the left mustered 81 votes. Of the 22 votes it has lost since then, five are MPs who have been expelled from the Parliamentary party ; only about five seem to have switched right over to Mr Gaitskell (he got 171 votes against last year's 166); and most of the rest must have abstained.

Of the 248 Labour MPs entitled to vote, 18 failed to cast their ballots, presumably because of either deliberate neutralism or quite invincible apathy, since personal attendance is not required.

Only Mr Grimond had any real cause for satisfaction this week. At long last and deservedly, he has been made a privy councillor, which is a nice distinction. More important, it will give him a right of precedence in speaking in the House. Formerly he had to rely on the courtesy of the chair in getting the Liberal voice heard on major Commons occasions.

THE ECONOMY

An Unsatisfactory Debate

TUESDAY'S economic debate did not show either front bench at its best. For the Opposition both Mr Gaitskell and Mr Wilson spent an absurd amount of time jeering at the Chancellor's recent impromptu admission that he had at one time underestimated the damage that rising personal incomes would wreak upon the economy—and then showed that Labour itself is plainly underestimating that damage still ; Mr Gaitskell also calculated the balance of payments "saving" and Mr Wilson notionally redistributed the tax "saving" that they pretended would arise from the inflationary expedient of putting interest rates down ; and Mr Gaitskell sententiously explained that British trade union leaders are "able and patriotic men," and that the Chancellor's duty is therefore to secure their co-operation by being as irrelevantly beastly to capitalists as possible. Yet in one sector of their assault—their complaint that Mr Lloyd is now beginning to hold back production—the Opposition plainly had the best of the argument.

The main impression that the Chancellor gave in his speech is that he is now waiting for Godot, who is unfortunately not turning up. Again and again, he said that he must hold back domestic demand and production until exports rise ; but exports at present are not noticeably rising. They ought to start to rise soon, because of the revival of world demand, but Mr Lloyd had better realise now that the least successful part of his July measures, so far, has been the assumption that moderation of "the pull of the home market" was the remedy needed to put exports up. The most successful features of his July measures have been the reversal of the run on sterling (which was almost wholly due to his policy of high interest rates) and the hopes that he aroused of a new wages policy. Unfortunately, it is precisely these features that one fears he might be abandoning first. Mr Lloyd's speech contained no defence of his action in twice reducing Bank rate before making any reduction in the purchase tax regulators ; and, under pressure from Mr Gaitskell, he yielded another hostage to fortune by promising that he will look again at the state of the wages pause "early next year."

WAGES

Electricity Strike?

IT is just possible, although not necessarily likely, that the long-expected national wages showdown could come in the electricity supply industry, where there are to be crucial meetings between the unions (who include the ETU, both the big general workers' unions and the AEU) and the employers next Wednesday and Thursday. The unions' position of strength is that the Electricity Board is obviously very willing to give a wage increase, largely because (in this capital intensive industry) wage increases do not put up its total costs by very much ; this, and the fact that it is the one large nationalised industry earning a current surplus, always makes it a good first front for the unions to drive against.

Electricity's basic wage rates, ranging from £9 9s. to £12 10s. 3d. a week, are actually higher than those in engineering. But its average earnings (£14 9s. 11d. a week last April) are lower, largely because the electricity board—like most nationalised industries—thinks that it would be "provocative" to the unions to introduce district differentials and bonus schemes in areas where labour is short. Job security in electricity is excellent (short-time working is virtually unknown), and there is therefore not in fact—*pace* some newspaper reports—a serious difficulty in recruiting or keeping workers in electricity supply in most parts of the country. But there is such a difficulty in a few districts, especially those near motor works and steel works. Nevertheless, sticking resolutely to its refusal to introduce district differentials, the board has already made an offer of the usual nationalised industries' sort—one that would be uneconomically small in peak wage districts and uneconomically large in the rest of the country.

For the three quarters of electricity supply workers with more than three years' service, the board has offered increases from next April 1st ranging from 8s. 6d. a week for unskilled workers to 13s. 3d. for skilled workers (short service men would get less). Very sensibly, manual workers with more than three years' service are also to be offered the same status and privileges as office staff (which, among other things, could give them longer holidays). The communist Mr Foulkes, who is chairman of the unions' negotiators and who is aided by a communist-organised unofficial workers' movement in some power stations, has said that this offer is unacceptable. A strike in electricity supply would be (a) a plain breach of contract (the unions and the board have signed an agreement that arbitration should be binding) ; and (b) actually illegal (legislation dating from 1875 makes anti-contractual strikes in electricity supply a punishable offence). But Mr Foulkes has said that if his men give a week's notice of termination of employment, that would not be a strike ; one doubts if the courts would agree.

Now that the board has made its offer from April 1st next, it cannot presumably go back on it. But it would be inexcusable for it to go further next week, except in offering district differentials and in defining more closely what "office status" means. As usual, an electricity strike would almost certainly prove less apocalyptic than most newspapers are saying ; the technical staffs could—and would—go on operating the power stations for a good while, although there would be a long hold-up in making repairs when and if breakdowns occurred.

LATIN AMERICA

Andean Fires...

AS the inter-American "Alliance for Progress" creaks slowly into action, the fires of social discontent simmer and spread. In Ecuador, a backward Andean republic that suffers, intensely, from the endemic Latin American disease of two segregated cultures, the flames have crackled to the surface. Serious riots in Ecuador's three main cities led, on Wednesday, to the president's resignation and to open conflict between the army and the air force about the succession. Sr Velasco Ibarra, a shrewd veteran, has only once been able to last out a full term in office ; this is the third time he has been deposed. But this time it is no longer just a question of rivals struggling for the plum job.

The clash over the new president recalls the recent political crisis in Brazil. According to the constitution, the vice-president, Dr Carlos Arosemena, should automatically succeed and his candidature is backed by air force jets and congressional argument. But Dr Arosemena is a shade too far to the left for some factions in the army, who are trying to push through the appointment of a less controversial figure, Sr Gallegos Toledo, the president of the supreme court. Dr Arosemena visited Moscow earlier this year, and came back primed with arguments for closer relations with the communist world and for some sort of social reform at home. Predictably, he was charged with communism.

...and Firemen

THE governments of the other two Andean republics are also running serious political hazards. Peru shares with Ecuador a situation in which a small, largely Spanish élite of landowners, business and military men decide what is best for the appallingly poor Indian workers and peasants. In both countries a budding middle class of teachers, students, trade unionists and others has begun to dispute this state of affairs. A fortnight ago, the Peruvian government suspended constitutional guarantees for a month after a strike of school teachers led to riots in Lima ; the prime minister, Dr Beltrán, braved a hail of rock and stones when he visited Cuzco a few weeks ago. In its foreign policy Peru has got out of step with the other Latin American republics ; by stubbornly pressing for some kind of collective action against Cuba. In his home policy, Dr Beltrán is credited with understanding the urgency of social reform ; but nothing much gets done.

Bolivia's revolution in 1952 ended racial segregation and encouraged a less feudal outlook. The United States handed out generous financial help although not, until recently, to the decrepit nationalised tin mines which provide Bolivia with most of its foreign currency. Poverty in all its wretchedness persists, and President Paz Estenssoro has clashed with left-wing politicians in his own party, including his vice-president. Two weeks ago, several people were killed in La Paz when transport workers led a protest against the removal of some domestic subsidies, including petrol ; a state of siege has been imposed. This, like most such emergency measures, may buy a little time ; but, by itself, it only postpones the next eruption.

EDUCATION BILLS

Substantial Half

THE more contentious of Sir David Eccles's two education bills, that to reform the Burnham committee which negotiates teachers' salaries, will not be introduced until after Christmas. The one that has been published reduces the parental contribution to the cost of university education, and will oblige 15-year-olds in England and Wales to stay on to the end of the Easter and summer terms in their last year of compulsory schooling (from 1963 onwards).

The concessions on university fees are complicated and not inconsiderable ; they will cost the taxpayer an extra £10 million a year. Many middle-class parents will want to study them in detail. Under the present system parental contributions are assessed at 14 per cent of the balance of income above £450. In future, the contribution will be 8 per cent of the balance of income between £600 and £1,400 (those earning under £700 being fully exempt) and 10 per cent of the balance above £1,400. No less important, parents will still benefit from the income tax child allowance. The following examples from the proposed scales assume that parents have an only child at the university, and make an allowance of 5 per cent in the balance of income for insurance premiums and mortgage interest:

Parental incomes (£s)		Parental contributions (£s)		Tax allowance (£s)
Gross	Balance	Present	Revised	
800	760	43	13	46
1,000	950	70	28	57
1,400	1,330	123	58	58
2,000	1,900	203	114	58
3,000	2,850	336	209	77
4,000	3,800	Full cost	304	84

It will be seen that the tax allowance exceeds the new parental contribution up to an income of £1,400. The changes should mean that 10,000 more families with children at the university will no longer pay anything, and that 40 per cent of students will receive full grants, compared with 25

per cent hitherto. This is a sizeable step towards the total abolition of contributions which the majority of the Anderson committee recommended; it means that the sum, minus tax allowance, to be asked of a parent earning, say, £2,000, will be much less than most parents spend on cigarettes.

On school-leaving dates, as on his implementation of the Anderson report, Sir David Eccles said that he would have liked to go further, but that half a loaf is better than no bread. He has been held back from making all 15-year-olds stay on to the end of the summer term by fears of juvenile unemployment in some areas if too many school-leavers came on to the labour market at one time. One would certainly prefer the eventual introduction of a single leaving date to be complemented by an earlier ending of the school year itself, to encourage staggered holidays and allow proper time for GCE "A" and "S" level examination results to be digested by the universities.

CRIMINAL JUSTICE BILL

Law's Delays

THE prompt introduction of the Criminal Justice Administration Bill, which will implement the main recommendations made by the Streatfield committee last year, deserves a hearty welcome. Britain's criminal courts have long been creaking at the joints: delays between committal and trial have in many cases been scandalous, and excessive rigidity has increased inefficiency further. This is now to be remedied, not by setting up new courts, but by improving the present ones.

The bill provides for the appointment of five additional high court judges (above the present authorised complement of 48), who presumably will be allotted to the Queen's Bench Division. If there is difficulty in finding the right men at the Bar, the Lord Chancellor would be wise to follow American precedent and look to the university law faculties for some of his new judges (including, dare one say it?, to Dr Radzinowicz's new criminal law department at Cambridge—a criminologist on the bench could revolutionise judicial attitudes, which is one reason why he is unlikely to be appointed). In magistrates' courts, the bill proposes that justices be made to work harder. Courts of Quarter Sessions in counties and boroughs are to sit a minimum of four times a year (which is the present maximum), and in addition as often as "the court thinks necessary or the Lord Chancellor directs." Such a change is essential if the principle informing the second half of the Streatfield report, that sentencing should become scientific and be based on the fullest available information, is to be implemented. Only with courts in almost continuous session can the adjournments between conviction and sentence be made, which are needed to collect relevant information.

The assize system is also to be reorganised by orders in council, and extra officials appointed to enable assizes to be held in two towns on the circuit simultaneously. The power to commit to assizes or quarter sessions in a neighbouring county where trial in the original county would be delayed (the so-called "convenient court" procedure) has long existed but been little used. The bill provides that it *may* be used where a person is unlikely to be dealt with within one month of committal, and *must* be used if the case is otherwise unlikely to be dealt with within eight weeks. Any sentence of imprisonment is to be reduced by the period of committal spent in custody before trial. One would like to see the "convenient court" procedure applied also when there is an unduly long delay between the issuing of a summons and a trial, even when there has been no committal (especially in some criminal charges in motoring cases).

Some important changes are to be made in borough quarter sessions. These are presided over by recorders who sit alone, but who are only part-time officials; they are also practising barristers and sometimes even MPs. The post is really honorary although some remuneration is paid and is accepted by the ambitious as a stepping stone to the high court. In the past recorders have been allowed to appoint deputies only in exceptional circumstances, and have had to pay them themselves. The bill allows them to appoint deputies if required and permits these to be paid out of public funds. Since the recorder is required to hold four sessions a year personally there is no danger of the office degenerating into a sinecure.

EUROPE

Frankness and Reticence

THE encouraging thing about Mr Heath's first working encounter with the Six this week in the negotiations for British membership of the common market was that it got straight down to business, and specifically to the Commonwealth problem. The danger had seemed to be that the two sides might circle coyly round each other, discussing principles and showing goodwill, but evading practical details out of fear of giving away positions or getting stuck in rigid ones. This did not happen; thanks in part to the Commission of the common market, whose collective view was stated by Professor Hallstein, the talks moved on a stage from Mr Heath's good start last month in Paris.

In this and other speeches from the common market side some common ground with the British appeared. The Six, it seems, like the British, feel that the problems of Commonwealth countries might be solved in three ways—by association, protocols, or tariff cuts and quotas. But of course, as an article from our Brussels correspondent on page 570 points out, there may be differences on how far these should go. This is what the negotiation is about.

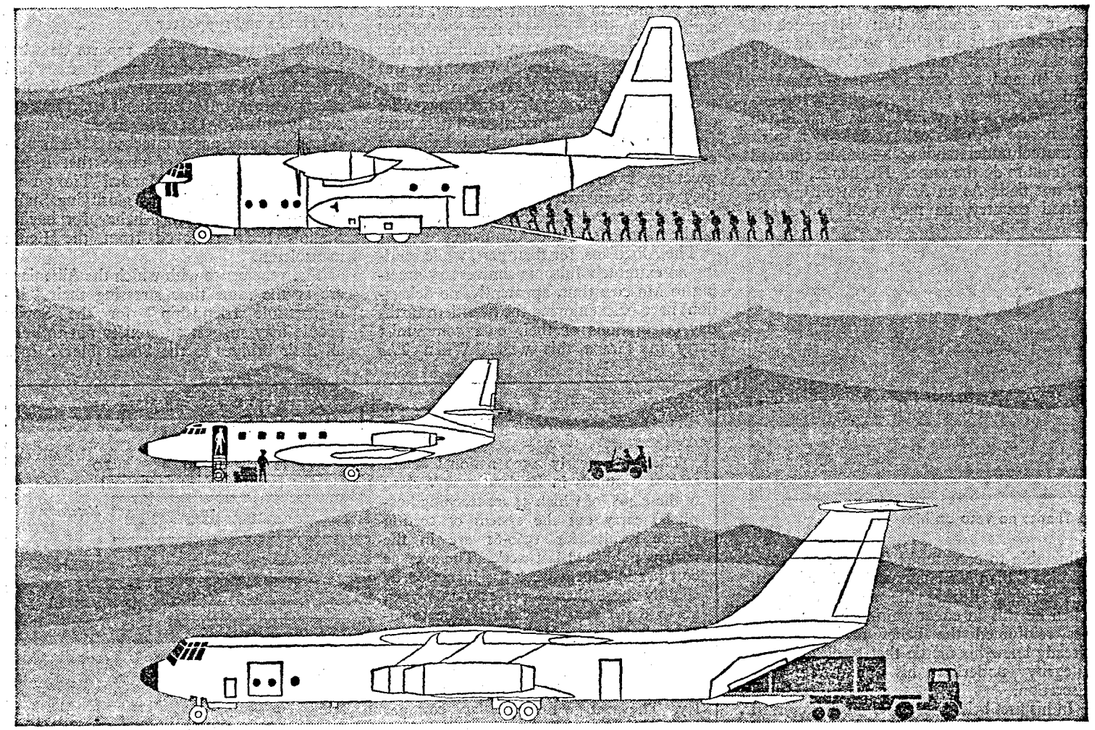
One major topic—agriculture—was also conspicuous by its absence from this week's discussions. On this the Six evidently wish to postpone negotiations with the British until they have made progress among themselves. Instead, the most substantial discussion concerned the outer tariff. The British Government, while willing to accept the common market tariff, would like the present provisional 20 per cent cut in it to be permanent. Professor Hallstein argued that it would be wrong for Europe to give away tariff positions without getting a return from the United States. With the debate about America's relationship with Europe beginning, this is a live issue.

Whose Sovereignty?

LURKING in the background of the Brussels talks are the ideas for further political co-operation now circulating among the Six. The new French plan, which received much publicity last week, is only one of several drafts from various common market governments now being discussed by a special commission set up by their chiefs in July. But by leaking their plan efficiently the French have (as usual) given it a better start than the rest.

From what is known of its views the British Government is not unsympathetic to the kind of ideas put forward by the French. The French draft provides for consultation on foreign policy and regular meetings of ministers, but it carefully provides for unanimous voting when decisions are taken. The smaller countries of the community continue to press for community-style institutions and a strengthening of the parliament. The new Bonn government seems to share French reluctance to surrender the power of decision, but it may support the stronger parliament.

The British Government has as yet no actual part in these discussions and it has not even seen the draft schemes. Hence, when a French foreign ministry spokesman gave the impression at the end of last week that Britain backed the French plan, there were mild disclaimers in London. Some degree of reserve is bound to persist until more is known of the defence proposals in the French plan. In substance, however, the French can reasonably argue within the Six that their conception of *l'Europe des patries* suits the British taste.



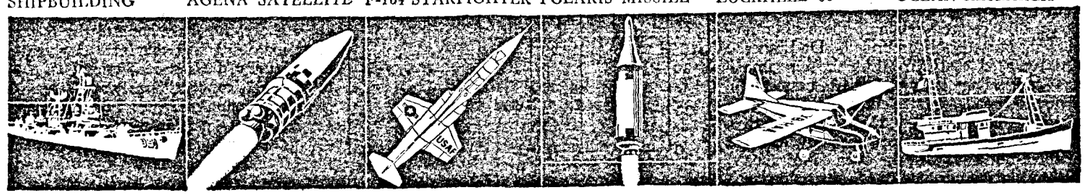
UNITED NATIONS

U New

SEVEN weeks after the death of Dag Hammerskjöld, the now 103 members of the United Nations unanimously elected U Thant on November 3rd as acting Secretary-General, to serve until April, 1963. This quietly pertinacious Burmese diplomat's appointment was itself a feat of quiet pertinacity. Last year Mr Khrushchev had told the Assembly that it would be impossible to find any single man who could be trusted to do the job. After Mr Hammarskjöld's death, the Russians demanded the immediate introduction of the

LOCKHEED TODAY

AIRLIFT FORCES grow more important daily. They must be kept ready to supply freedom's needs fast, anywhere on earth. Here are three types by Lockheed. Top: the famous prop-jet Hercules Airlifter. Centre: the JetStar — a compact jet transport for high-priority airlift missions. Bottom: the C-141 — a huge, fast, long-range jet now being developed. All three embody advanced design principles that have grown out of Lockheed's long and productive cargo airplane experience.



LOCKHEED

Helping promote free world security and progress in: Electronics, Missiles, Aircraft, Nucleonics, Satellites and Space Vehicles, Rocket fuels, Aircraft Maintenance, Airport Management, Shipbuilding, Heavy Construction, Steel Fabrication and Cranes.

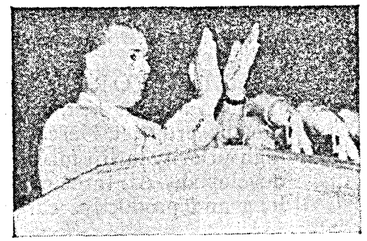
SHIPBUILDING AGENA SATELLITE F-104 STARFIGHTER POLARIS MISSILE LOCKHEED 60 OCEAN RESEARCH

Khrushchev "troika" system, hinting that if the demand was not accepted there would simply be a long vacuum. When they found the uncommitted countries as firmly opposed to the troika as the West was, the Russians gave ground, but still fought hard to secure a concealed power of veto over the new chief executive's actions. Even this bid was defeated by the stubborn loyalty of the great majority of members to the principle, embodied in the Charter, that the secretariat's allegiance must be to the organisation alone.

Mr Thant announced in his speech of acceptance that his chief political advisers would (at least to begin with) include a Russian and an American—Mr Arkadyev and Dr Bunche, who were already undersecretaries. He would seek, he said, to collaborate with his colleagues "in a spirit of mutual understanding"—and he counted on them to do the same. His hands, in fact, are not tied. As an Asian from an uncommitted country, he may well prove less

U Thant: no veto on him

vulnerable to communist "character assassination" than Mr Hammarskjöld had been. His conduct during the awkward weeks when he was in effect waiting in the wings has reinforced the belief of those who already knew his mettle that a solid core of integrity underlies his preference for discretion.



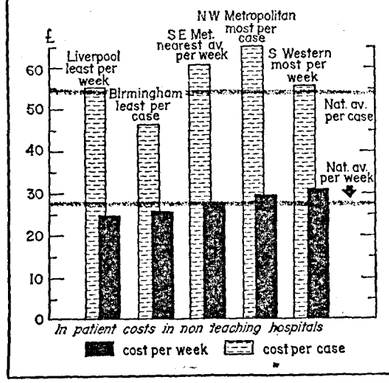
In his first brief speech, U Thant referred to only one specific problem, the Congo, where "an urgent solution" was needed. This is indeed the field in which he must take immediate decisions, if neither the Assembly nor the Security Council can clarify his mandate for him. On the day of his election, Dr Sture Linner, the chief UN official in the Congo, reported that bombing raids in Kasai province by Mr Tshombe's new fleet of European-manned aircraft (which may or may not have been justified by the central government's offensive into Katanga, now renewed) had led him to warn the Katanga authorities that the UN would take counter-action if these aircraft were not immediately grounded. Dr Linner also reported that Mr Tshombe's regime was continuing to violate the cease-fire terms, to broadcast false and violent propaganda against the United Nations, and to employ white mercenaries not only as an air force but also, with the open connivance of the Belgian consulate in Elisabethville, as a staff for the armed gendarmerie.

COMMUNIST BLOCK

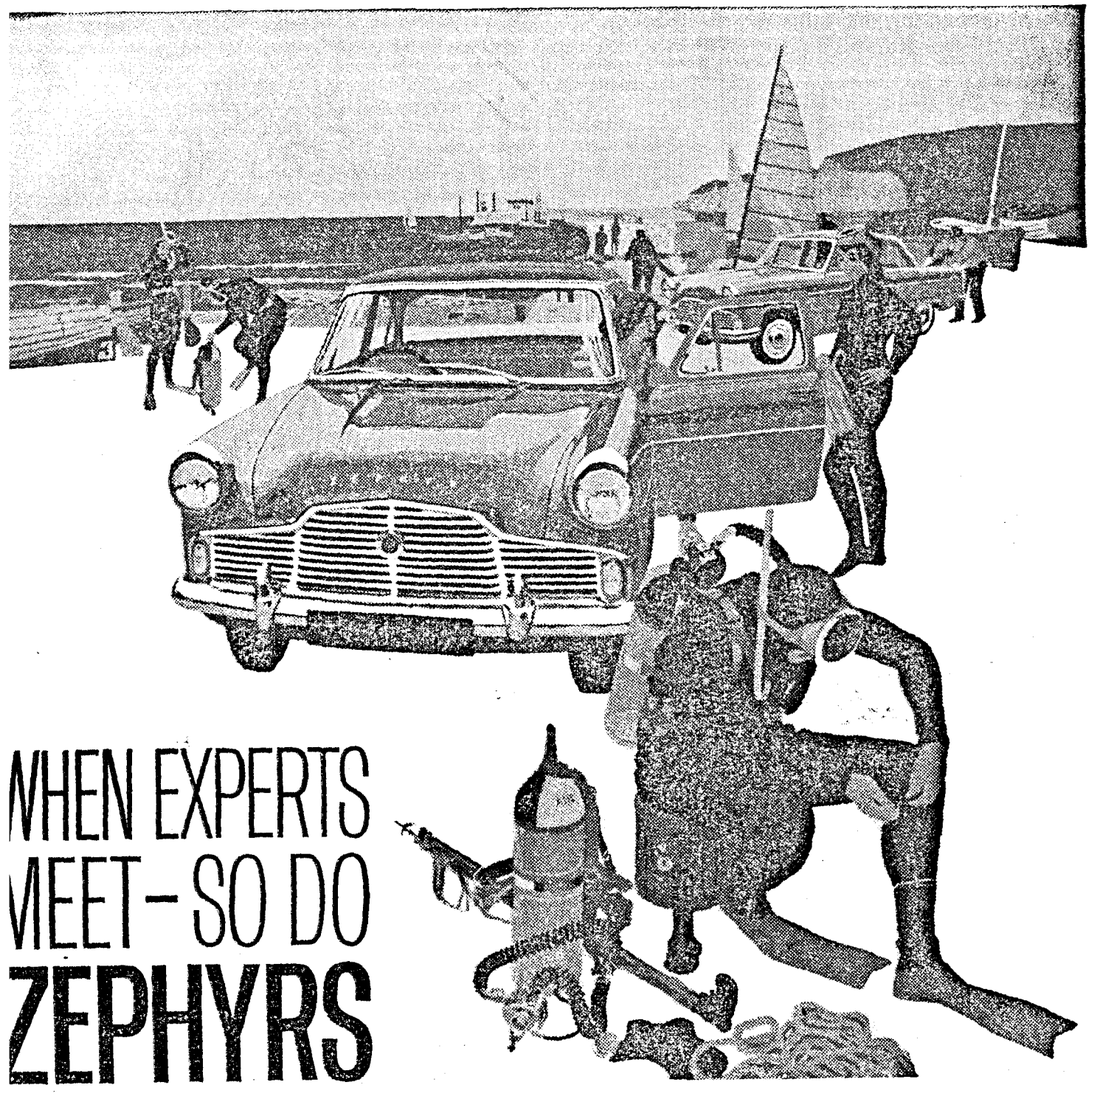
Tirana Unbowed

CONTRARY to tradition, no top Soviet party leader made a speech this year at the reception held in the new Kremlin congress hall on Monday, the eve of the 44th anniversary of the October revolution. Perhaps, after all the speechifying in the same place over the past three weeks, they had no more to say. But next day, at the anniversary military parade through the Red Square, there was a sharp reminder of the party congress as Marshal Voroshilov was ignominiously turned away from his customary place among the communist élite on top of the Lenin mausoleum. There were further reminders of what had happened at the congress in the official anniversary greetings from other communist parties; they were sprinkled with condemnations of Stalin's excesses, of the personality cult and of the misdeeds of the Albanians.

The Albanians, for their part, while sending an extremely fulsome anniversary greeting to Moscow (but, apparently, no delegation) have been enjoying the twentieth birthday celebrations of their own communist party in Tirana this week. When *The*



Mr Hoxha and supporter



Economist went to press, reports on what had been said, and what foreign guests had turned up, were still scanty. But Albanian reactions to Mr Khrushchev's strictures are already plain. On November 1st the Albanian party paper attacked Mr Khrushchev with the kind of abuse that it has hitherto reserved for Marshal Tito; next day it published a leader glorifying Stalin and attacking Mr Khrushchev for having Stalin's body removed from the Lenin mausoleum.

The vehemence with which the Albanians are at the same time stressing their "indestructible friendship" for the Soviet people may suggest an anxiety not to burn all their bridges to the Soviet block. In a

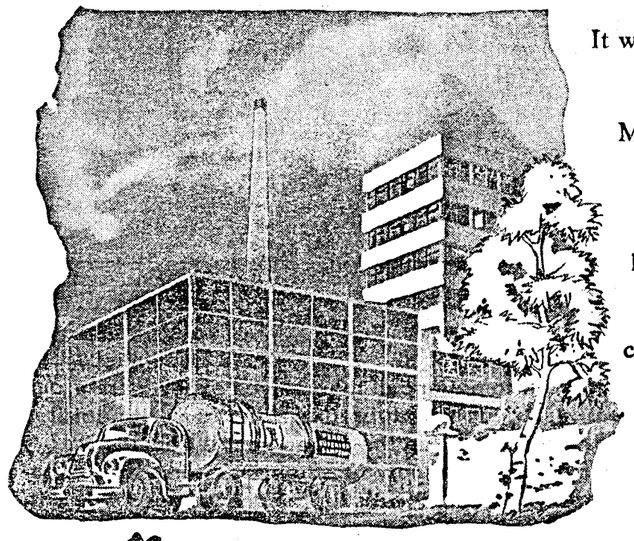
Hospital Costs

There are nearly 2,500 national health service hospitals in England and Wales; of these 468 (of which 34 are teaching hospitals) carry out the system of costing whose results for 1960-61 are in the returns published last week. The average cost per in-patient week has increased by slightly more than 8 per cent this year, about 6 per cent of which is due to increased wages and salaries, shortened hours for nurses and higher prices. This breakdown of accounts shows that it is nurses' salaries which are the greatest outlay. The average nurse's salary cost per in-patient week in maternity hospitals is just over £10; in children's hospitals in the category "acute" (i.e. where not more than 15 per cent of the beds are allocated to diseases like tuberculosis, or to the chronic sick, etc.) it is about £7 15s., while in mental hospitals it is less than £3. Medical salaries take much less: almost £3 in children's hospitals, about £1 in maternity hospitals and under 10 shillings in mental hospitals. Drugs seldom take much over £1 per in-patient week. The cost per case in all types of non-teaching hospitals (among them those listed in the chart above) has only gone up by 6 per cent, indicating that the increasingly intensive use of beds is continuing. Teaching hospitals are considerably more expensive than non-teaching: the average London cost per in-patient week is £39 7s. 4d. and per case is £89 4s. 7d. In the provinces the costs are £33 16s. and £61 0s. 5d. respectively.

WHEN EXPERTS MEET—SO DO ZEPHYRS

The underwater expert is an on-the-road expert too—for the Zephyr is a specialist's car, designed for the connoisseur. Yet plenty of people who never call themselves experts are proud to be Zephyr owners. You don't need expert knowledge to appreciate this car — its spirited engine, its ready response, its cracking performance right up the speed scale. Add the luxury finish, the painstaking construction, the power disc brakes now fitted as standard, the 6-seat spaciousness, and you see that, if the experts choose the Zephyr, it's for the best of good reasons.

FORD FRUGALITY TOO. Your Zephyr promises you other qualities not so apparent but just as vital—Ford economy and Ford service. Wherever you go throughout the world, quality Ford Service keeps your Zephyr running smoothly. And like all Ford cars, your Zephyr promises you low insurance rates, better hp terms, low running costs with fixed-price service, and a better-than-average trade-in price. **£628 + £289.1.5. = £917.1.5.**



AUTOMATIC TRANSMISSION OR OVERDRIVE OPTIONAL EXTRAS. ESTATE CAR AND CONVERTIBLE MODELS ALSO AVAILABLE. **ZEPHYR FROM FORD OF BRITAIN**

The Old World made Hercules . . .

Hercules and the Augean Stables.

. . . to-day Hercules is helping to build the NEW WORLD

It was by meeting the challenges of his age that Hercules of old earned immortality . . . . To-day, Hercules still meets challenges. More—he anticipates them. For in industrial chemistry, research by Hercules Powder Company has produced many a "breakthrough" leading to better things. Take packaging for instance. Packaging materials need to be sized, given strength when wet, printed, protected, stuck together. Hercules can claim many important advances in these fields. If the New World is better off for better packages, Hercules has a hand in it. Hercules has some key-words for his successes. Words like Pexol—Kymene—Pentalyn—EC—Neolyn. You should know what they mean.

HERCULES POWDER COMPANY LIMITED

ONE GREAT CUMBERLAND PLACE, LONDON, W.1

Telephone: AMBassador 7766

mammoth speech on Tuesday, Mr Hoxha suggested that he was not without friends in the "socialist countries" and hinted that Mr Khrushchev might be in trouble with his own opposition. However that may be, the Albanians can take comfort from Chinese support and from the pointed references, in Chinese messages and speeches about the Soviet October anniversary, to "the twelve socialist countries"—that is, including Albania. It remains to be seen, however, how far the Chinese will carry their support.

JAPAN

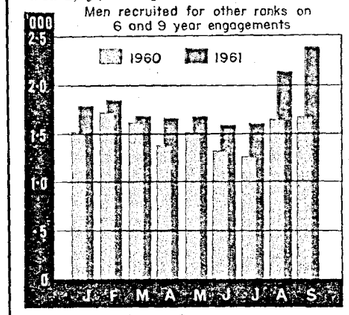
Pacific Isolation

JAPAN has long occupied an anomalous position between Asia and the West, in economics as well as politics. Amongst Asian countries it provides an example of successful industrialisation which has had less attention than it deserves. But in the eyes of Lancashire the name of Japan still stands, unjustly, for exploited labour and "unfair" competition, and Britain is not the only industrial country that continues to treat Japan as a black sheep by denying it most-favoured-nation treatment. Japan's isolation is now being aggravated by the formation of regional communities in many parts of the world. If, as the article on page 527 suggests, America is one day to join Europe in a vast new trading group, Japan would be the one major industrial country left outside.

There was thus a special significance to the visit to Japan last week of Mr Rusk, the American Secretary of State, to attend the first meeting of a joint cabinet committee on economic policy set up last June by President Kennedy and Mr Ikeda, the Japanese premier. American policy is evidently designed to bring Japan fully into the fold. Because Japan is a useful ally, and is in a position to make an important contribution to aiding poorer countries in Asia, the United States last year helped Japan to become a member of the Development Assistance Group, now the aid committee of the Organisation for Economic Co-operation and Development. But Japan inevitably asks whether it is going to get trade benefits in return for assuming new aid burdens.

For some ten years the United States has treated Japanese exports a good deal more liberally than some other western countries do; Britain, for instance, still refuses Japan the full benefits of Article 35 of the General Agreement on Tariffs and Trade. The time may be coming when this country may have to reappraise its attitude. If membership of the common market is to mean that other western countries "share the burden"—in the quaint phrase—of importing cheap cloth from Hongkong, Britain may have to share more of the "burden" of importing Japan's excellent cheap cameras and transistors.

MAGAZINES



How Topical?

THE reading classes will always buy a first issue and a centenary one. It is the years between that are harder. The new magazine *Topic* ("the British newsweekly") did not quite sell out on its initial appearance at the end of last month, and since then, although its content has become more tabloid, its sales seem to have followed the expected droop downwards. *Topic* has tried to carve out a place for itself among the middle-brow public (usually designated as "the busy reader") which is thought to like a mildly newsy, encouragingly illustrated magazine around the house—but which has unfortunately allowed a long series of precisely such magazines either to fall by the way or find their last resting place in the uneasy amalgam of *Today* (formerly *John Bull*). The initial blend that *Topic* tried was gossip-length news coverage with longer stories on the Snowdons and Mrs Khrushchev ("the woman behind the bomb") that seemed deliberately geared to the woman's angle and written in a style reminiscent of *Woman's Own*. This could conceivably click, but as yet it is an uncertain brand image beside the professional slickness of *Time* with its wider transatlantic resources.

The scepticism with which Fleet Street has greeted the new venture has been based on the obvious difficulty of achieving freshness of content with a deadline which appears to be set early on Monday, when the news of the new week is only a gleam in Mr Khrushchev's (or anyone else's) eye. This looks a serious liability among a readership which already has the "quality Sunday" habit. It may have been what Mr Cecil King had in mind when he sent his (potentially classic) telegram: "Wish you every success with your brave new venture. Thank God none of my money is invested therein." The victim promptly retaliated with best wishes for rebirth this week of Mr King's "valued little magazine," the *Statist*, with (so *Topic* said) its circulation of 1,100 a week.

MORE ARE JOINING UP

Recruiting for long service engagements in the army has been considerably more successful this year than last. The balance of total intake over wastage among other ranks (including boys) was 55 in June, 212 in July, 320 in August and 2,654 in September.

Old Friend in New Dress

NEITHER the *Statist* nor its new editor, Mr Paul Bareau, is in any sense a stranger to *The Economist*. Its bid, now that it has become a contingent part of Mr King's empire, to win more readers' attention and more influence where influence counts could be applauded by *The Economist* as flattery's best form. But this would be unfair. The *Statist*, which was founded 83 years ago by a group including Robert Giffen, previously the best and best-known assistant to Walter Bagehot, *The Economist's* own greatest editor, who had suddenly died a year before, makes its bid in its own long-established right; and it does so under an editor who, for a quarter of a century, has been, among many other things, one of *The Economist's* best friends and colleagues. We have shared with paper and editor these many years a belief in competitive enterprise. They have our handshake.

The Economist

NOVEMBER 9, 1861

WOMEN'S MAGAZINES

The "English Woman's Journal" continues to bring forward and advocate every rational scheme for the advancement of education and the means of self-support among women. This journal deserves credit for the good sense with which it avoids aimless talk and unpractical suggestions, confining itself to the forwarding of actual work, and the awakening in women themselves of a feeling of responsibility and a spirit of mutual helpfulness. The last two numbers report the progress made by the "Society for Promoting the Employment of Women" during the years it has now existed; they draw attention to a plan for helping our over-numerous governesses to emigrate to places where their services would be valued and well remunerated; they give some graphic sketches of "Slavery in the South"; and the usual fairly written articles on celebrated women, on various reformatories and charities, and on general literary topics.

The "Englishwoman's Domestic Magazine" keeps its contributors well supplied with the latest fashions and inventions in dress and needlework. The pattern sleeve accompanying the number will, we have no doubt, be welcome to many fair readers; while the tales, some of them we are inclined to think translations from the French, will serve to amuse an idle hour innocently at least, if not very profitably.

COMMONWEALTH PRESS

Polylithic Unity

A CYNIC might say that if the Commonwealth countries were less plentifully informed about each others' doings, they might get into fewer rows. There have lately been needlessly bitter exchanges between newspapers in Britain and India (about Katanga), and in Britain and Ghana; strong words recur in exchanges between Indian and Pakistani papers; South Africa's departure from the sorority has reduced the field of Commonwealth controversy, but it remains large. And controversy will go on as long as Commonwealth countries take a special interest in one another and judge each other by standards somewhat higher than they apply to countries about which they care less.

At the conference of the Commonwealth Press Union last week at Rawalpindi, Karachi and Delhi, special attention was naturally paid to the fate of the Pakistan press under military government. President Ayub Khan, in his opening address, admitted with characteristic frankness that martial law had involved some limitation of journalistic freedoms, and leant on the argument that, in a country where many people are still unfamiliar with print, there was no such self-regulating discipline as a more sophisticated readership would impose on newspapers. Mr Gavin Astor, the chairman of the union, answered the president with matching frankness. It may be that the very fact that such a public exchange of arguments can be held in Pakistan now is an encouraging pointer.

The present trend is ominously in the other direction in Ghana, where an already weakly opposition press has been further reduced to silence, and in Ceylon, where Mrs Bandaranaike's government is now preparing a Bill for the compulsory transfer of the principal newspapers to public corporations. Ceylon's press has lingered long beneath this Damoclean sword, and there is obviously much anxiety in the country (and some in the cabinet) at the prospect of an enforced "monolithic" press structure. Even now it would not seem too late for the government to search for a better alternative, which need not necessarily mean just leaving the newspapers as they are, admittedly over-concentrated in two main groups. Ceylon might learn much from the experience of other Commonwealth countries in this respect. Somewhere in the essentially "polylithic" variety of the sisterhood there must be an answer.

HEALTH AND SOCIAL WORKERS

In Search of Status

ALTHOUGH the Government has been rightly castigated for its laggardliness in bringing forward several overdue pieces of social legislation, it has at least made one minor attempt to work off part of the lengthening backlog. The origins of the *Health Visitors and Social Workers Training* Bill go back as far as the Jameson report on health visiting in 1956 and to the Younghusband report on social workers in 1959. The experience in the light of the Mental Health Act has made it even more important to hasten it along.

The services concerned are so heterogeneous that generalisation about their *specific needs is difficult.* The Jameson report recommended a total force of 11,500 whole-time health visitors, an increase of some 3,500. The Younghusband committee, confronted with the varying circumstances of mental welfare officers, home teachers of the blind, hospital almoners and the rest, and having to reckon with a long tradition of part-time work in many categories, concluded that no reliable estimate of the recruitment problem, or any part of it, was possible at that time. Its working figures, however, suggested that there should be an establishment of the equivalent of 5,500 whole-time officers with a general training in social work (an increase of 2,500), and the equivalent of 800 whole-time officers (psychiatric social workers, almoners and family caseworkers), an increase of 700. Not the least important task for all those concerned is still further research into duties, caseloads and general co-operation.

The new bill, while providing for research by central and local authorities, will create two training councils, one apiece for health and social work, to supervise the provision of training facilities, courses and examinations. These councils will also have responsibility for research in training matters. One primary result of the councils' establishment should be to increase the status of the ordinary social worker; this should be one aid to recruitment, but most of these whole-time workers deserve more pay as well.

LETTERS

Immigration

SIR—Since you couple my name with the Immigration Bill may I ask you a few questions? Coloured immigration is now running at the rate of 200,000 per annum, and the influx from India's 500 million has scarcely started, though its poverty is the greatest. How soon will it be before there are more coloured than white people in England (assuming the recent rate of increase continues and there is no legislation to curb it), and do you seriously advocate the English people should ultimately become a minority in their own country?

The seeds of crisis are already present among the workers who are directly involved in the social strains of competing with immigrants for homes, hospital beds and social services. Do you advocate this crisis be deepened by unlimited immigration until inevitably there is a social explosion and bitter hatreds? Do you believe the entire Commonwealth of nearly 600 million people should have the undisputed right to dump in England its criminals, its lunatics, its lepers and its own vast un-numbered unemployed? Are we not entitled to impose at least a quality control? And would *The Economist* apply its high-minded principles of unlimited entry even if we had serious unemployment at home?

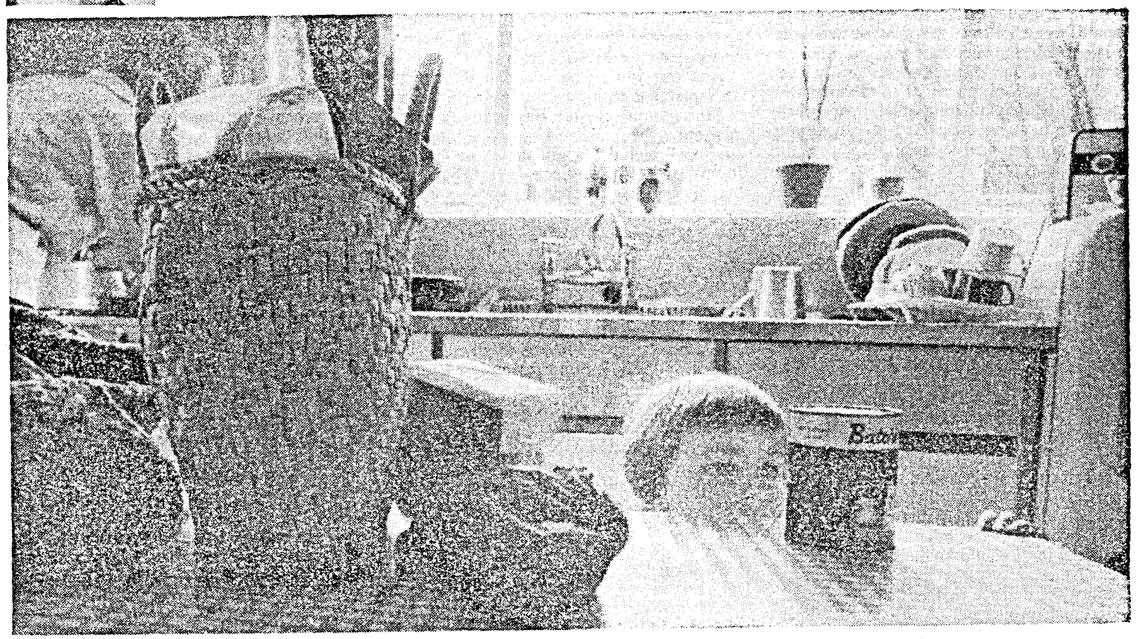
I posed similar questions to you in my letter of June 26th, which you refused to answer. Sir, since you tie my name to the Bill, will you please answer these questions?
—Yours faithfully, CYRIL OSBORNE
House of Commons

[(1) There are now estimated to be about half a million coloured people in this country, compared with perhaps 300,000 two years ago. At this level of increase, they would outnumber the 52 million native-born Britons some time around the year 2480, by which date colour prejudice (itself a product of the post-slavery century) will be forgotten. (2) If serious unemployment appeared at home under a government of Sir Cyril's party, we would recommend chucking that Government out in favour of one that followed Keynesian policies before heaping the blame on the immigrants. Meanwhile, because some of these immigrants unfortunately live 50 or so to a house, they add far more to the productive (including building) labour force than they do to the demand for houses; this will remain true even when we at last start to house them better. And the theory that it is not decent workers who afford the fare to Britain—but lunatics, lepers, criminals and unemployables—is a figment of Sir Cyril's imagination and prejudices.].

★

SIR—Would you explain why West Indians represent our Brother Man any more than other Europeans or Americans or Chinese, all of whom are already much more securely banned from this country than Commonwealth citizens will be under the legislation proposed by the Government? Surely a nationality bar must be nearly as wicked as a colour bar and its abolition would enable you to fill up this overcrowded little country even faster than at present.

Has it ever occurred to you that what we can do for our most important coloured guests, meaning students, trainees or even ordinary visitors, may be gravely damaged by the racial strife that will follow the unrestricted coloured immigration you appear to advocate?—Yours faithfully,
London, SW3 RICHARD WHITEHEAD



Arms and Men

SIR—Your article "Arms and Men" (October 28th) underlines the main objection to the proposal to increase NATO's ground force: a large, modern conventional force would be very costly. But you do not adequately state the case for a larger ground force: you do not indicate what risks

FAY BATEMAN SAYS:

It's nice to have a can about the house

Cans even help to keep you young

REMEMBER THE DAYS when you were first married, and cooking seemed exciting? And so did the shopping? And even the housework? Now, as the mother of—say—three children under five, those innocent days may seem a long way off. And if your watch (or worse, your mirror) begins to tell you that time is your enemy, why then—you've got to do something about it.

Meals in minutes

And what you've got to do is to get yourself organised. Be adaptable again, the way you used to be. Go shopping twice a week instead of every morning. Keep your cupboard full of cans so you never have to worry. Knock up meals in minutes, instead of spending hours in niggling preparation. And so set yourself free, just sometimes, to do what you want when you want. Which is the best and pleasantest way in the world of keeping young.

Cans for the housework too

How do you find time? Well, you don't always scrape the carrots, you open a can instead. They're just as nice. You don't peel and gouge away at the neighbour's windfalls, just gratefully received: you throw them out (tactfully) and open a can of raspberries. They're *nicer.* Now that so many different and delicious kinds of fruit and vegetables come in cans (with vitamins and flavour intact) you make the very most of them.

Then you simplify your *housework—with aerosols.* After all, they'll clean the shoes, polish the furniture, starch the washing and accomplish any number of otherwise dull and unrewarding household chores *just for the press of a* button. It's being so very much up to the minute, in short, that keeps your brow so very unclouded.

WHAT NEXT? New aerosols for home dry-cleaning save bills and time. Just a whiff and a puff and the grease stain's gone. Your local supermarket probably stocks them. And what about keeping the telephone germ-free now the flu season is here? Aerosols will do this, too.

LUNCH NOTE: *On the table in just twenty minutes. Hot soup, then canned steak and kidney pudding, baked beans and those peas nicely hotted up with a sliver of onion and a knob of butter.*

Europe is running if it does not increase its ground defence, particularly in conventional forces. It is only by taking the risk into account that it is possible to decide whether the cost is too high.

The first risk has been widely discussed: the danger that, in relying on a nuclear defence against major ground attack, the West may find itself paralysed if the Soviets should ever challenge the western position. It is one thing to stick to a policy of nuclear threats to deter a nuclear strike by the Soviets; it is quite another to take the responsibility for initiating nuclear war because we have no other way of resisting a serious conventional attack. The present strategy leaves the West dangerously open to pressure and blackmail.

The second risk arises from the fact that it is an American nuclear threat which deters a Soviet invasion under the present strategy. It is a source of weakness in an alliance that one member should bear disproportionate risks. Since the United States has become aware of its vulnerability to nuclear attack, it has been seeking an alternative way of deterring those military threats which fall short of an attack on the United States itself. To this end, the United States is incurring substantially increased costs. It would seem unwise for Europe to refuse a similar effort, on the ground that it is too costly. Furthermore, the present differences on strategy themselves weaken Nato, and it is not likely that the Americans will give up their conviction that a large conventional force would be the safer policy for the alliance.

Since the defence budget has represented a declining proportion of Britain's national income for nearly a decade, it would not be an intolerable sacrifice if the proportion should be increased.—Yours faithfully,

J. L. RICHARDSON

Cambridge, Mass.

Katanga

SIR—At the time I read your recent "Mysteries of Katanga" (October 21st, page 215) I thought you were less than fair to President Tshombe over his failure to hand over his Irish prisoners. The release of prisoners was promised by Mr Tshombe as soon as the terms of the cease-fire were ratified at UN headquarters. As the Communist and Afro-Asian blocks were obstructing this ratification, Mr Tshombe's reluctance to observe his side of the bargain until it was clear that the UN could follow suit was understandable. As soon as the terms of the cease-fire were conditionally ratified (whatever that may mean), the Irish prisoners were promptly released.

You furthermore dismiss the alleged atrocities committed by UN troops on the grounds that these were "carefully investigated" by the UN (forgive me for saying that this is about as convincing as a housebreaker being acquitted by a packed jury of burglars!) and "that, apart from cases of unintentional involvement in crossfire, the only 'ambulance' attacked was one carrying four Europeans and a bazooka with which they had killed three Irish soldiers and injured others." The result of this investigation does not agree with other eye-witness reports, including those of your own special correspondent who gave instances he had witnessed in an article "The Events in Katanga" (September 23rd), or the statements of certain Swedish and Irish UN officers who were reported to be sickened and disgusted by atrocities they had seen committed by other UN troops.

And can you be so sure that the action on September 13th was simply a resumption of the round-up of European military advisers (the UN's bag of "military advisers" included a sanitary inspector!)? In an article in *The Economist* of September 30th, your special correspondent referred to "the failure of the UN to defeat the Katanga gendarmerie" and the UN's "failure to bring Mr Tshombe to heel." Is this the language with which to describe a police action? Apart from isolated incidents, the "war" broke out when UN troops attempted to storm the Post Office which was defended by African troops led by African officers. Simultaneously—though somewhat prematurely—Dr Conor Cruise O'Brien announced that Katanga's secession had come to an end. This, to me, gives the impression that the UN action was undertaken on somewhat broader lines (and outside the spirit and letter of the UN resolutions), to bring Katanga under Leopoldville's authority by force of arms.—Yours faithfully,

E. D. O'BRIEN

London, W1

Kenyatta

SIR—I read in Mr Macleod's "open memo" to Mr Maudling (October 14th): "Kenyatta has been a disappointment." To whom? To his fellow-tribesmen bestially slaughtered for Christian faith and loyalty to the Crown?—Yours faithfully,

JOHN BIGGS-DAVISON

House of Commons

After the Pause

SIR—Your article, "Pay after the Pause" (October 21st), repeats the usual answer to the complaint that a pause "will react unfairly on those who were next in the queue when the chopper fell." The implicit assumption that the spiral is continuous, and that the principal motive for all wage claims is the maintenance of relativities (with each union choosing to maintain those most favourable to its own members), is mistaken. Surely the real motive for pay claims is the growing expectation of union members that they should enjoy an annual increase in real and/or money wages. Some smaller unions may base their claims upon changed relativities, but that is a matter of tactics. In principle, at least, it is quite possible to distinguish between those unions which are setting the pace and those which are trying to bring the pay of their members up to the level received by workers doing comparable work.

Your article also shows the same confusion of thought that colours much of the discussion of the role of wage differentials. It has been too readily assumed that expanding industries need to offer higher wages in *order to attract workers from contracting* industries. A contracting industry cannot attract young workers (who may be needed to some extent still) nor retain its older workers if it allows the wages it offers to fall far below those being paid by expanding industries to those workers who can easily change jobs (the semi-skilled and craftsmen whose skill is in demand in both contracting and expanding industries). Why not recognise this and put wages up in contracting industries to the level paid to similar workers in other industries? This is not incompatible with the re-allocation of labour, since higher wages will force employers in the contracting industries to release workers they can no longer profitably employ.—Yours faithfully,

J. JACKSON

Dundee

* * *

SIR—The reluctance of employers to stand firm in the face of wage demands which, if conceded, would be inflationary, is firmly buttressed by the fact that the Government does, in effect, find approximately half the cost of any increase conceded—the sum involved being a charge against profits for income and profits tax purposes.

The deliberations of the National Economic Development Council will eventually, one assumes, produce a figure for what the Government will regard as a reasonable and attainable rate of economic growth. Could not fiscal teeth be given to this yardstick by disallowing for tax purposes any wage increases beyond this figure? Thus supposing that the forecast rate of growth were 3 per cent per annum, if a pay award of 5 per cent were conceded by an employer, the additional 2 per cent would not (say for the first year) be allowable as a deduction from taxable income. Since it would be necessary to allow for changes in the labour force employed, the calculation could be based on the average weekly pay per head for the previous year; this rate, grossed up by 3 per cent (or whatever the appropriate figure might be), would then be applied to the average labour force for the tax year in question to obtain the total allowable charge for wages (and salaries of course).—Yours faithfully,

Harwich, Essex R. B. GIBBS

Burma

SIR—In the article "Burma Dreams and Realities" in *The Economist* of October 21st, it is stated, ". . . the minister of industry, U Raschid, has promised that the government will establish an Industrial Development Bank. The bank has not yet reached the planning stage, however, and it will certainly take time to establish it."

In fact, the Industrial Development Bank had, as promised by U Raschid, already been established and it was officially opened *on October 2nd, 1961, by U Nu, the Prime* Minister.—Yours faithfully,

Rangoon KHIN MAUNG SOE

BOOKS

Churchill's Cherwell

The Prof in Two Worlds
By Lord Birkenhead.
Collins. 383 pages. 45s.

IT is around his performance as scientist-politician, not as economist, that the battle about Lord Cherwell's reputation and personality has been, and still is, bombinating. Yet his largest influence during the war upon his prime-minister patron was exercised through the agency of a deft team of (mainly) economist and statistician intruders under Sir Donald MacDougall. And certainly the chapters in Lord Birkenhead's new biography of him with the largest special interest to *The Economist* are the two which set out succinctly Lord Cherwell's stance on the great issues of international economic policy after the war. One tells in a few pages how, in the post lend-lease discussions from the mutual aid agreement of 1942 to the Bretton Woods agreement two years later, he threw his weight behind accord with the United States and an international system. The other tells, discreetly, how in 1952 he opposed the plans for a floating rate for the pound and for immediate convertibility, which were splitting the cabinet, but sponsored instead an "Atlantic payments union"; this chapter is discussed separately, for its contribution to the historical record, on page 584.

The aim of Lord Birkenhead's book about his father's and his own close friend, Frederick Lindemann, Viscount Cherwell, the greatly gifted and well endowed, tennis-playing, piano-playing, sybaritic, vegetarian, bowler-hatted, intransigently Tory and intellectually cocksure "Prof," is to put a rounded portrait of him in place of earlier caricatures. Before the first world war Lindemann walked, as a young scientist in Berlin, with Planck, Einstein and Nernst; during the war, at Farnborough, he turned his acuity of thought, and his personal courage, to the problems of military aircraft; after the war, in his Oxford chair, he took the run-down Clarendon laboratory and built it into the first rank. Then, midway between the first world war and the second, his mind became fixed on the perils of air attack, and the need for proper defences. So he sought, and through Winston Churchill he got, political influence and power; it is about his exercise of these that the argument rages.

Lindemann entered politics, and history, through society. The precise date was August 1921, when he first met Churchill at the town house of the Duke of Westminster. He is one more classic case of the outsider in England who makes his way, and finds his fulfilment, on the inside station. With his cosmopolitan background, his German father and his American mother, he was, though an Englishman, always ill at ease among Englishmen at large. Only among those who themselves felt at ease and were ready to accept him for what he was, and for what he had to give in thought and talk (and tennis), did he feel comfortable and relaxed: among the top people at Charlton, Eaton Hall, Blenheim Palace, Taplow Court, Welbeck Abbey and Mount Stewart (as in the earlier days when he mixed with Kaiser and Tsar at the Grand Duke's in Darmstadt); in the Christ Church common room; with always admiring undergraduates; and feeding the bright young men in his laboratory with brilliant ideas. For the rest he made his own shell, with his still-life rooms (and modern conveniences) in college, his Rolls-Royce and the faithful servants to whom he was unfailingly kind.

This was not just snobbery; he knew where power, as well as comfort, was. To Winston Churchill he was at once "one of the most attractive and fascinating minds with which I have ever been brought in contact," and became his friend and confidant in the wilderness while the storm was gathering. Then, when the war brought Churchill to the top, Lindemann was there to be his essential tool: he "could decipher the signals from the experts on the far horizons and explain to me in lucid, homely terms what the issues were." That was the justification in history for Lindemann's role; Churchill could not do without him. Churchill was (exceptionally) literate; he was (exceptionally) numerate; the two fused.

IN power, Winston Churchill, ceaselessly fertile of ideas, needed men about him to sift the good among them from the bad in his out-tray: his Ismay and his Bridges. And for the projects and ideas that filled his in-tray he needed a translator, a simplifier and ready-reckoner: the ever-loyal Prof. Sometimes Lindemann, in this process of explication, had the quality of the best journalism, which is first to simplify (truthfully) and then to exaggerate (to drive the point home). But too often he had the quality of the worst journalism, which is first to exaggerate (in order to press a preconceived idea) and then to simplify (in order to rule out other choices). That is the gravamen of the case against him, against the kind of power that he had and the way he used it; that, and not any personal adjectives or inaccurate anecdotage, was the real point of Sir Charles Snow's recent attack on him in "Science and Government."

Lord Birkenhead, whose book is a very honest job of work, fairly brings in Sir Robert Watson-Watt to prove that the Prof, with his passionate concern for air defence and his alert attention to every trick of science, did not obstruct, could not have and would not have obstructed, the development of radar. Yet, at the end, Sir Robert gives the game away: "As a mere tactical diversion Prof may have made a flourishing feint against radar, so that he might better the chances of those projects of his own which were being coldly received."

Lindemann, who sought comfort so persistently in his own and his social life, was the most uncomfortable of all men in committee. There, except when he had behind him the fiat of his master, Churchill, he was deliberately the opposition, crying up his own contribution and crying down the rest. That is why war-time ministers who had to cope with him and his intruders still call his interventions in other departments' policies "unhappy and mischievous," however "hopeful and right" his planting of science in the forefront of public policy might be. His real enemy was not either Tizard or Blackett or Snow; it was himself.

None of this Lord Birkenhead really denies. For all the "teeming ideas" which Einstein ascribed to him, despite the fact that Tizard himself said at the end that he was "as clever as Rutherford," the Prof, who would never play bridge for fear of playing it badly, would overplay his hand. Unable to understand or even to consider some other points of view, rancorous towards those who would disagree with him, arrogant, sarcastic and aloof when made to back his views in counsel, he cantankerously diminished the special function that he, by his qualities, had invented.

So the argument rests. Lord Cherwell is entitled to praise for the causes he pursued: safe air defence; the proper place of science and scientists and education; the crucial contribution in national growth of technological education: he made a lasting mark, for himself, his patron and his country, by backing these. But, for all his arithmetic, when he had a cause or a ploy of his own to press he seemed to care hardly a hoot for the balance of priorities.

Lord Birkenhead's advocacy is fairly rounded, but not yet the last word. It is just to end with the judgment, which he quotes, of one of Lord Cherwell's faithful intruders, an economist and a civil servant:

> He displayed admirable tact and could be a most fascinating companion. That he could be and often was intolerably grumpy, spoilt, unjust, etc., cannot possibly be denied—too many who only met him once or twice saw nothing else. But if all was well he could be entrancingly funny, understanding and kind. . . . I do not think any of us failed to perceive that he had a real scale and greatness in the depth, clarity, speed and severe simplicity of his thought. Certainly in my experience he can be compared only with Keynes.

On the inside, the Prof could be a great man; outside he was not.

Whose Image?

The Moulding of Modern Man

By T. H. Pear.

Allen & Unwin. 220 pages. 21s.

It is a fact, unfortunately, that a book called "The Moulding of Modern Man" by a professor-emeritus of psychology will arouse foreboding in the mind of the prospective reader. Opaque technicalities and unfounded generalisations are what his experience may lead him to expect. Mr T. H. Pear is never like that. His professional colleagues of the more solemn sort may sometimes raise an eyebrow as he skips nimbly from topic to topic, but the intelligent layman cannot but be instructed and entertained.

This volume is a sort of commonplace book, in which a shrewd observer of the present scene has jotted down his reflections. It is unsystematic, prejudiced, humane and often penetrating. The theme that holds it all together is the extent to which modern man is subjected to a range of influences—social, political and commercial—so that his existence as an individual is increasingly threatened. Society will no longer let us be ourselves. In making his case Mr Pear does not fall into the romantic fallacy of the self-sufficient human microcosm whose mind is its own place, but he does perhaps underrate the psychological pressure of past times. The middle ages exacted a considerable conformity in most things, and the early rebels against eighteenth century rationalism went mad in breaking their shackles.

But these are small matters. Anyone concerned at the effects of propaganda, advertising, brainwashing and the rest of the less explicit pressure towards conformity will find no comfort here. There may have been times when pressure was exercised in similar ways. A morality play may have advertised a sure way to salvation, and brainwashing was not unknown in various kinds of dungeon. But now we are putting at the disposal of those who would exercise psychological pressure the tools and concepts of modern research. As we improve in efficiency so the individual becomes more vulnerable. This, at any rate, seems to be the gist of the argument.

Perhaps things are not quite so bad as they seem. A literate man is rendered more accessible by his literacy, but an educated man can evaluate what he reads and hears. Recently a schoolmaster was reported to have used television programmes to analyse with his pupils the wiles of the advertiser. The children learned quickly. Madison Avenue and Big Brother can be ingenious, but we must not overrate them. The man is hard to hide behind the "image." This book itself and others like it help to weaken the influences which they deplore.

It may be that Professor Pear has suffered under one handicap through becoming emeritus—he is less aware than he would otherwise be of the questioning nonconformists that are our young people today. An Organisation Man among them has rather an old-fashioned air.

Fall of a Monarchy

The Break-up of the Habsburg Empire, 1914-1918

By Z. A. B. Zeman. *Oxford University Press.* 292 pages. 30s.

This valuable study of so hotly disputed a theme is stiff, specialist reading. Mr Zeman keeps strictly within his terms of reference. Apart from one introductory paragraph about the extent of Austria-Hungary in 1908, he gives his readers no historical help, but plunges them straight into the confessional and racial conflicts of Austrian Galicia on the eve of the first world war: were one not fairly familiar with the wrangles between Poles, Ruthenes and other kinds of Ukrainians, and with the social and linguistic nuances, which the slow and only partial industrialisation of eastern Europe had made more bitter, one might well feel lost. The *Ausgleich* is very briefly sketched in, but no indication is given of the constitutional development of either Austria or Hungary after 1867, except for several bare references to the introduction of manhood suffrage in Austria in 1907; the relation of this measure to the relations between the nationalities within Austria is scarcely indicated.

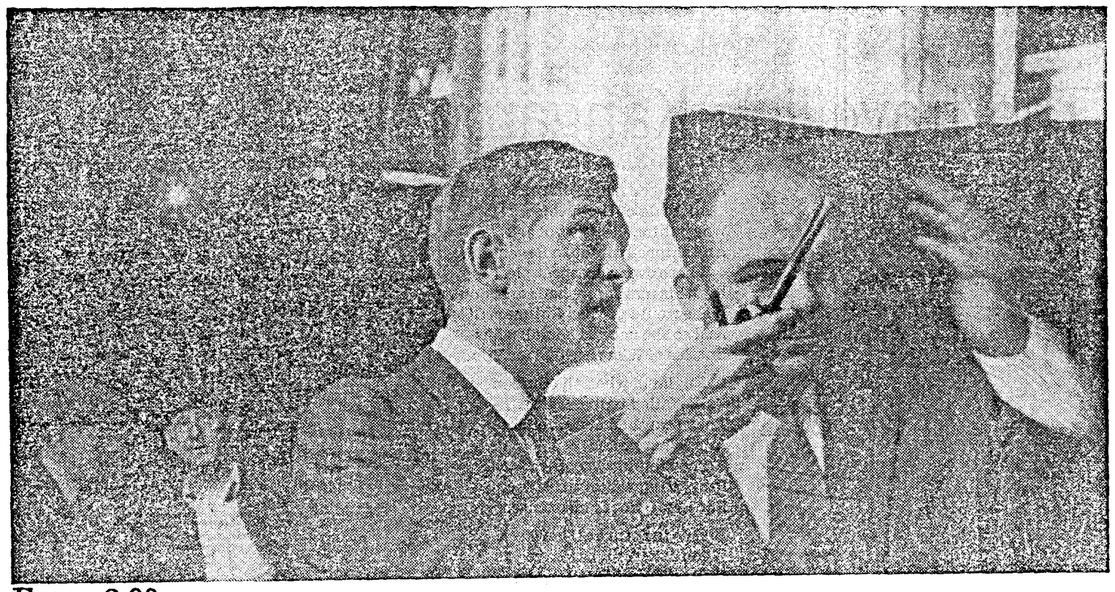
The analysis of the four war years is all the more precise. Interesting contrasts are made between the position of Poles, of the Southern Slavs and of the Czechs. The Poles were favoured stepchildren, as it were, of the Austrians and, for that matter, of the Magyars as well, though Mr Zeman does not touch upon this. But there were Russian and Prussian Poles outside the monarchy, and the sense of partition remained while this was so. There was also the fatal question of the Polish-Ukrainian relationship: this created the biggest problem of the post-war Republic of Poland and provided some justification for the eastern frontier upon which Stalin insisted in 1945.

The southern Slavs had two *points d'appui*: one within the monarchy in the nominal autonomy of Croatia within Hungary; and one beyond in the independence of Serbia, which since 1903 had been under Russian patronage. As Mr Zeman writes, "Serbian terrorist activities in Bosnia . . . had pushed the monarchy into its last war," and it seems that Russian secret service money had not been lacking. Even the Rumanians of Transylvania and the Bukovina had an independent Rumanian monarchy to which to look. And yet Mr Zeman believes, and few of the *cognoscenti* would disagree, that the Czechs, with no political or racial sponsor or patron within the Habsburg Empire or outside it, through their leaders in exile, were probably the most important single factor in that empire's undoing. This is difficult to understand with so little background information. It is not only in the light of subsequent events that the claim may be made; there were observers who in 1914 were aware that the unending quarrel between the Czechs and Germans in Bohemia would be fatal to the Habsburg regime. Masaryk used the war to end this quarrel in what seemed to him the best way.

Mr Zeman is right to wish to correct the version offered by Masaryk and Benes of the history of the Czechs during the war. In exile they undoubtedly anticipated events in Prague by a good deal and ignored what they preferred not to know; but perhaps only visionaries can make their dreams come true.

"The argument," Mr Zeman concludes, "that the Allies wilfully broke up the [Habsburg] monarchy in October, 1918, or, still worse, at the peace conference, completely lacks substance. . . . The ultimate responsibility for the disappearance of the Habsburg monarchy rests squarely on the shoulders of its rulers."

History in the Future Tense



What Is History?

By Edward Hallett Carr.

Macmillan. 155 pages. 21s.

"Nobody," says Mr Carr in his Trevelyan Lectures, "is obliged to write or read history." This little book will certainly be read by historians, and not least by those mystics, sceptics, indifferentists, conservatives (Mr Carr does not say obscurantists), theologians and mere men of letters at whom Mr Carr points his most polished darts. The point to make here is that it ought to be read by politicians and diplomats—and journalists—as well. It is not necessary for any of them to agree with all the closely joined links in Mr Carr's characteristic argument. But his plea for a "bold readiness . . . to present fundamental challenges in the name of reason to the current way of doing things and to the avowed or hidden assumptions on which it rests" is not addressed only to historians and sociologists. It is addressed also to all the "political thinkers of the English-speaking world." Mr Carr's apprehension is that, when the world is changing more rapidly and more radically than at any time in the last four hundred years, Britain may "lag behind the general advance and relapse helplessly and uncomplainingly into some nostalgic backwater."

These are fighting words. What have they to do with the meaning of history? Mr Carr has tasted Marx appreciatively, without quite swallowing him; he denies that he himself (or Marx either) can be called determinist; and he cocks his snooks urbanely against Sir Isaiah Berlin, Professor Popper, Professor Oakeshott and the late Sir Lewis Namier who would take the other view vigorously. He leans rather, without resting, upon Acton, Collingwood and, unexpectedly, Powicke—as well as upon Marx and himself—in his interpretation of what

AESOP-TO-DATE

The travelling Kangaroo

A Kangaroo from Dublin Zoo,
A female of the species,
Was put inside a sort of ark
And shipped direct to Regents Park
Where every prospect pleases.
But this marsupial had some doubt
If she would get her Guinness Stout,
And so she packed herself a few
Bottles of What is Good for You.

In England, when the Customs men
She failed to understand,
They searched her . . . ouch!
And in her pouch
They found the contraband.
Protesting was of little use
For ignorance is no excuse.

And so in future all beware,
When asked, "What have you to declare?"
Declare in accents loud and free—

Guinness is good for you—and me

G.E. 3627

it was vital in 1944

The Company's task?
To produce ten concrete caissons each as tall as a five-storey building and weighing 7,700 tons: each to be towed across the Channel and sunk at Arromanches to form a part of an artificial harbour equal in size to that of Gibraltar. This was the Company's contribution to Mulberry Harbour—with an unarguable completion date of 150 days from start to finish

it is vital in 1961

For British industry in 1961 D-day is today. The construction of modern factories to a planned construction programme with assurance of completion on time is of vital importance

completion on time

The need for new factories to expand production demands that construction shall be carried out rapidly and economically to a planned programme, and the installation of costly plant and machinery must not be delayed. The resources of the Laing Companies all contribute to rapid and efficient construction through detailed planning, mechanisation, new operational techniques, and the development and use of new materials. Completion on time we regard as an obligation and not as a virtue

JOHN LAING AND SON LIMITED GREAT BRITAIN AND OVERSEAS

history is, both the process of it and the writing of it.

The historian is inextricably the product of his times ; so is history of its times, and so is its selected recording. The best historian —Mr Carr would really say the only historian—is the one who, by frankly recognising the contemporary involvement both of himself and of his facts, can rise above it. And his job in writing about the past, or the present, is to spot the winners in the future.

This is where Mr Carr goes to Professor Powicke for the plea made thirty years ago for "a constructive outlook over the past." History is, as it were, a dialogue between the historian of the present and the facts of the past ; and it "acquires meaning and objectivity only when it establishes a coherent relation between past and future." It can be written "only by those who find and accept a sense of direction in history itself."

What is the direction ? There will be more losers than winners in detecting it, according to what historians think most important in their own society when they write. Mr Carr looks for his winning number in de Tocqueville, who wrote of men seeing "the gradual and progressive development of equality as at once the past and the future of their history"; and he applies this both to the deepening of change and choice in developed societies and, especially, to the widening of change and choice among what we nowadays call the underdeveloped. Change, he claims, is to too many historians and sociologists and politicians and economists "an object of fear." To him, in "a world in tumult and a world in travail," it is both fact and hope.

The argument of the pundits will, no doubt, wax hot over all the implications, some of them starkly contemporary, of Mr Carr's contentions. That is one reason why journalists as well as politicians should read this tendentious book. The other is that the taut reasoning, the felicity of illustration, the breadth of example and the sharpness of phrase make it plain that Mr Carr's withdrawal first to Oxford and then to Cambridge was, while scholarship's great gain, a real loss to the more public disputation in which for a time he engaged.

In and Out of Whitehall

Memoirs of a Public Servant

By Lord Salter.

Faber. 355 pages. 30s.

LORD SALTER signed the preface of his latest book on his eightieth birthday. It is the story, told with frank self-analysis and great charm, of a long and full life, which includes an unusual variety of occupations. Born and brought up in a riverside home in the middle of Oxford, he went up to the university with the help of a scholarship at Brasenose. There he duly achieved his double first and in 1904 passed high into the civil service.

From the day of his entry into the service the story falls clearly into two parts. The first covers the span of his official career—at first as a member of the home service and in the decade following the first world war as an international civil servant. His entry into Whitehall was marked by an instructive—and amusing—little tragedy of errors, as a result of which Salter found himself in a small backwater of the Admiralty dealing with the chartering of civilian ships engaged in naval service. But this he found irksome and he was glad to escape and join the lively group of those who were busy drafting and subsequently launching Lloyd George's national health insurance scheme. But the wheel turned. When war came Salter was recalled to the humble Transport Department, which quickly grew into the Ministry of Shipping, with, by 1917, most of the world's ships on its great card index. Salter found himself at a pivotal point of the shipping and supply system and ended the war as chairman of the Allied Maritime Transport Executive. This was the first peak of his career.

After the war Salter was appointed Secretary-General of the Reparations Commission—an institution which the peacemakers of Paris hoped would smooth out some of the absurdities they had left unsettled. But its efforts were constantly overruled by a succession of governmental conferences that did not allow the commission to exercise any independent authority. So Salter, who had accepted the post rather unwillingly, resigned and rejoined the Secretariat in Geneva as head of the Economic and Finance Section of the League of Nations. It was in Geneva that he took charge of the various reconstruction schemes that brought first aid to the new states of impoverished Europe. He also organised the first world economic conference in 1927, which made a great effort to restrain the economic nationalism that was rampant in Europe. Salter's ten years of wrestling at Geneva with Europe's financial reconstruction were the second peak of his official career.

But in the end he was disillusioned here too. In his opinion the League had not got adequate powers and he was anxious to speak his mind. So in 1931 he resigned and resumed his freedom to take his part in public life.

In the subsequent thirty years Lord Salter has been author, journalist, don, Independent MP for Oxford University, junior minister, and for three years of the second world war head of the British Shipping Mission in Washington. He was Chancellor of the Duchy of Lancaster in the caretaker government, Conservative MP for Ormskirk 1951-53, and second minister to the Treasury. This second half of his life has been varied and colourful ; but he does not conceal, rather he takes pride in, the fact that his years as an official have been those of his greatest achievements. It is they that have shaped his habits and his thinking, for his general outlook has remained more that of an official than that of a politician.

Lord Salter regrets that so little has been

The Economist Diary

Specially designed to create an atmosphere of peaceful co-existence between the busy man, his secretary, and the world at large.

written about the profession of civil servant, and he holds out hope that he may yet make a modest contribution to the science —or art—of administration. To such a debate the present book makes no pretence to be more than a background. But it has a theme of its own. Salter's story is designed to show that, properly used, there are ample opportunities for initiative, enterprise and achievement in both national and international service. For that reason his book will make a special appeal to the growing army of civil servants of all nations.

To the wider public it will be a peep behind the scenes—not merely of the how and the wherefore, but also of the actors themselves on and off the stage. Yet Salter has done something more than tell his story; for as the play has unrolled the reader realises that he has been given the details of a most interesting self-portrait in which, from a mixture of frank comment, ambition, disillusion and loyalty, there has emerged the idealism that has been the driving force of Lord Salter's long career.

True Patriot

The Beloved Land

By Vladimir Dedijer.

MacGibbon & Kee. 375 pages. 30s.

SIGNIFICANTLY, the two distinguished Jugoslavs who in recent years have published autobiographies have chosen to call their books after their country. Mr Djilas's description of his youth, published some three years ago, was called "Land without Justice" and referred specifically to his native Montenegro. Mr Dedijer's book, in which he describes his life up to his visit to San Francisco in 1945 as a Jugoslav delegate to the inaugural meeting of the United Nations, is called "The Beloved Land." Both men have fallen out with Marshal Tito's government; Mr Djilas is in prison and Mr Dedijer is in exile in England. But it is a safe bet that if any of Jugoslavia's present rulers found time to write their autobiography, it would be filled with the same profound and dominating devotion to their native land as fills these two books. For the Jugoslav communists, their ideology is above all a means to make their country united, stable, prosperous and of consequence in the world.

Vladimir Dedijer was born and brought up in Belgrade. His mother, a woman of great character and a strong, even fanatic, feminist, came from Bosnia, and his father, who began life as a shepherd boy and became a distinguished academic, from Herzegovina. The description of the background of both his parents forms an illuminating and important part of Mr Dedijer's book. He himself, while still a very young man, became a star reporter and foreign correspondent of *Politika*, which although known as "*The Times* of Belgrade" was at that time an opposition paper whose staff had to show a great deal of ingenuity to circumvent the censorship. In 1937 the paper, under pressure from the government, which was then falling increasingly under the influence of the Axis powers, sacked Mr Dedijer for his left wing views in general and some articles on Spain in particular.

From then until the outbreak of the war, Mr Dedijer became increasingly involved in opposition to the government and hence increasingly caught up in the activities of the illegal Communist party, whose members were the most determined and dynamic enemies of the regime. When the war came, it was a natural step to become a party member and join Tito's partisans. Mr Dedijer has already published his detailed war diary. His account of the partisan campaign in this book is impressionistic, rather disjointed, but often vivid and moving.

There is no political disputation in this book, no hint of the controversies that have now unhappily alienated Mr Dedijer from his former comrades. What emerges most clearly is his passionate concern that the South Slavs, who achieved political unity only in 1918, should learn to overcome completely the hatreds and discords that bitterly divided them during the long centuries of alien rule.

OTHER BOOKS

NEW FRONTIERS OF THE KENNEDY ADMINISTRATION. *Public Affairs Press.* 175 pages. $3.75.

This book makes available, for the first time, the texts of all the reports submitted to President Kennedy by his various task forces. Whether or not these reports are implemented, they illuminate the thinking of the intellectuals whom the President likes to consult on subjects ranging from space policy to cultural dilemmas.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain.

The Exiles' Home

FROM OUR SPECIAL CORRESPONDENT

MIGRANT labour is an ugly word: exile is somehow a gracious one. In London, New York or Sydney the strong Irish myth of exile can still impel many a native-born son to song, but along Europe's most western seaboard it is a less attractive reality. The rocky parish of Cluain Cearban, fifteen miles by five between the end of the mountains and the sea in West Mayo, can now sustain only 2,200 souls, having (despite its high Roman Catholic birth rate) lost over 12 per cent of its people in the last thirty years. To England alone it has sent 12 doctors, 6 graduate engineers, 4 priests (there are 20 in America) and some 40 qualified nurses.

But the bulk of the uncounted emigrants wield the shovel or the mop and they are precisely the people who have most to fear from any attempt by Britain to restrict the flow of workers from overseas. If this outlet were cut off the outlook for the parish would be black indeed. In the past few years the region has welcomed electricity, the telephone, tarred roads and afforestation. The Irish government's scheme for converting peat into industrial fuel has foundered on rocks in the machines and high transport costs. There are rumours of an impending German holiday camp, and the first waterproofed English caravaners have faced the August gales.

In London (left) and Mayo

There are lavish government grants for house improvement and subsidies for drainage. But still the people leave.

With the railhead 20 miles off, and Dublin 160 miles from there, transport charges handicap any industry from the start: the profits from mountain sheep, wiry black cattle and virus-free potatoes can enable only the lucky and hard-working few to lift themselves on to a cash economy.

At least half of the 550 families in the parish receive regular remittances from abroad, which provide quite literally the jam on the subsistence bread. English or American money buys the old Ford, builds a bathroom or enables a child to stay on at school. The new barn or the tractor are bought from savings made overseas, where with the incentive of a cash wage these people are famous workers. People are the only export.

Except at holiday times there are not even enough young people to pay for a dance band in the village on Sunday evenings. There is no cinema, no other collective diversion for 20 miles. One long mountain valley sent 60 children to its school in 1900; now there are 16.

Perhaps half of the emigrants go to America—the next parish westward is Boston—and quota restrictions present no barrier to people so amply supplied with American cousins to act as sponsors. But from England home is at least accessible and work is easier to find. The days when teams of Irish left for the English harvest at the end of June and returned flush with cash and flushed with Guinness for Christmas are over; yet many of the jobs they do are in fact seasonal in sugarbeet factories, in hotels or on the inevitable building sites. This, of course, is precisely why, despite threats of British action to limit all immigration, the Irish know they are needed.

Responsible locals would even welcome some measure of control if it did not mean outright restriction. England is widely regarded as a sink of moral iniquity and is known to present infertile soil for maturing Catholic minds. New regulations might prevent unprepared young people from lighting out for the cosmopolitan joys of Wolverhampton as soon as they quarrel with their parents or find themselves bored with the long, chaste evenings.

Finally, the Irish are well used to soft talkers, and no special perspicacity was needed by the Dublin paper that remarked: "The real purpose of the proposed new legislation is to control the flow of coloured immigrants into Britain." Irish immigrants to the United States, *pace* the Clan Kennedy, have never been specially tender to the coloured people who compete for unskilled jobs. A limit on negro or Indian migrants to Nottingham or Notting Hill might well reduce tension while raising casual wages for their Irish competitors. But, as a philosopher on a hill farm queried, in the blandest of brogues: "Wasn't it us that chose not to be British?"

Lunch with the Board

FROM OUR SPECIAL CORRESPONDENT

BALANCING their lunches in plastic and cardboard boxes on their laps, five thousand directors sat suspended between Sir Roy Welensky's cry for a return to Victorian glory and Mr Macmillan's prayer for a peaceful—"or at any rate, a non-warring"—future for the world. The annual outing of the Institute of Directors on Wednesday had about it an air of unreality. It seemed as if the Royal Albert Hall were a blown-up flying machine, charting its course between Britain's imagined past and its feared-for future. A pair of smart hostesses saw to the needs of the superior directors in the three front rows, but there was, otherwise, equality.

Every man was given the same box, with a cold airliner lunch, nearer to first than tourist class. To get it right, flap A had to be tucked into slot A: at a casual count only about a fifth of the directors seemed able to follow the instructions printed on the label. The rest struggled with the flap as they struggled with their conversation, and with their fellow-directors who had made take-over bids for their seats during the pre-lunch drink. "Sir Roy was good, eh?" Most of them seemed to think so; he was given frequent applause during his hour's oration and if the intermittent "hear hears" from the front row came from the direction of Lord Salisbury, that was all to the good.

The chairman of ICI, Mr Paul Chambers, was for going into the common market, but against dumping; for a "sound non-inflationary budget," but against waste by national industries or subsidies to inefficient private industries; for a new tax system without the "jungle of complexities and gimmicks" that bedevilled it, but against spending money on "sentiment and political expediency" or penalising initiative and enterprise. It was not a very radical opening speech. It was well received. Sir Edwin Herbert asked: "Is Your Board Really Necessary?" (capitals included), and attracted a great deal of bored-room coughing as he spoke up admirably for the principles of democracy—and "responsibility" in company practice. At the flying lunch, few of the sentimentally bald heads and red gin-and-tonic faces discussed his speech. What they liked was the "sound common sense" of Sir Roy.

FROM him they learned of the dangers created by communism's victories in Africa: these were the result of the tragic reversal of colonial policy undertaken by the colonial powers after the war. It was bad for the country, it was bad for all the peoples of Africa, it was bad for business.

In the federation they had long acknowledged that the days of white privilege were over; today "greater progress is being made on the march to freedom in the Federation of Rhodesia and Nyasaland than anywhere else in Africa." Wiping his forehead with his handkerchief in a manner more characteristic of Mr Macleod, Sir Roy declared: "I am asking for a change of policy, a rededication to the proven ideals of the past." When he had finished, the applause lasted for a full 40 seconds.

Not as long, however, as the standing ovation given to Mr Macmillan when, lunch-boxes cleared away, he came in with a broad smile and apologised, as it were, because a funny thing was going to happen to him after he left the hall. The Prime Minister was a scream: four years ago, he said, he had addressed the institute as the head of a government that had just raised Bank rate to 7 per cent; made money scarce and expensive, and knocked a great block off the equity market. He had felt then, too, that he owed them an explanation.

This time's explanation turned out to be that there had been since 1948 a 120 per cent rise in income; only a 40 per cent rise in output; and a 50 per cent rise in prices. Even racing cars had to have brakes. The other big gag was about a foreign country where it "doesn't matter much to your corpse what they do with it when you're dead."

In the flying machine

Seemingly answering criticisms made in Parliament on Monday, and certainly striking a chord in some directorial hearts, the Prime Minister said that economic advances could not be brought about by talk and persuasion alone. The Government must themselves take decisions. Apart from looking forward to a national wage policy, he did not announce any.

The Prime Minister left; so did many directors. The cardboard box lunches were explained by an institute man: "If you let them go out for lunch they never come back." Clicking their free ball-point pens (made in UK) the directors of Britain followed the funniest Prime Minister we've got into the murky afternoon, and the future.

Checking the Drift

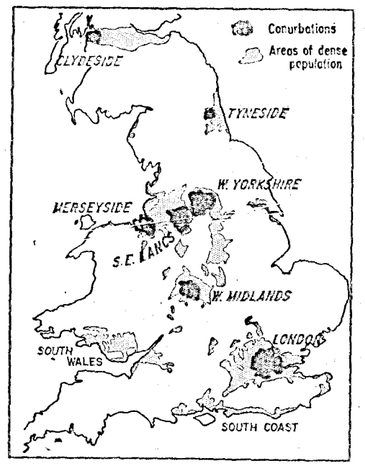
Is regional planning ever going to get out of the doldrums? Dr Hill, the new Minister of Housing and Local Government, told the Commons on Monday that he had been studying the claims for wider conceptions in planning "with particular and peculiar care." He was prepared to concede that the existing local authority structure might not be ideally suited for some functions. But not a word escaped him to suggest that his would be the ministerial axe to thin out the tangled undergrowth. And ministers are likely to remain as coyly retiring until the Local Government Commission really bulldozes a clearing somewhere. Manchester, where there have always been some imaginative ideas on setting the government of the local conurbation to rights, is one place where the commissioners could still be educated in realities.

It happens that on Merseyside, next door to the south-east Lancashire conurbation, something has just stirred in a special issue of the Town Planning Review,* written very largely from Liverpool university. Its chief message has to do with the future of all the great northern conurbations which are now facing the major problem of their own rejuvenation and physical expansion (slum clearance and overspill) at a time when the general drift of industry and employment is increasingly into the west Midlands and south-east England.

The plight of the Unfavoured regions of the north and west which ever since 1914 (with some arrestation after 1945) have steadily been losing population to the Favoured regions is by no means new. Yet, if anything, it is likely to get worse. It is perfectly possible that, with the advent of entry into the common market, this population drift will increase, not only into London but also into the growing south coast complex.

Professor Myles Wright offers three stimulating, if not equally acceptable, suggestions to meet the present drift, on the basis that the north should properly hold more of its population to the particular relief of London and Birmingham, which are each bursting at the seams. What is attractive about his analysis is that it need not cause the jarring interference in economic development, involving the arbitrary relocation of reluctant industry into every dying town, that most Labour planners from the north and west seem to hanker after.

His first contention is that the major effort to stop the migration should be in and around the Scottish and northern conurbations themselves, where skills and services already exist and where there is a substantial drawing power attracting population from the local hinterlands. This is entirely sensible, although in a particularly cramped area like the Clyde valley there is a case for thinking (as the Scottish Office is doing) of a completely new start for a modern industrial complex in the Bathgate-Livingston area further east. Merseyside, too, may have to come to this in the end.



Jobs are only part of the equation for rescue. It is the degeneration of the conurbations, their physical dilapidation and sense of non-enterprise, that is helping to drive away the more energetic and socially ambitious, despite the migrants' local loyalties and despite the higher cost of living (especially of housing) that offsets better rates of pay in London and the Midlands. Regeneration must first be internal: without it the task of getting new industry from outside will always be hard.

Professor Wright's second point is that planning for the best use of land should be concentrated within 20 miles of these provincial conurbations. One would have preferred him to have gone wider, for the modern urban region in the age of private transport is a much larger entity. He wants to see development commissioners for each peripheral zone to estimate overspill, find sites for development and map out a communications framework. Presumably from despair at the prospect of effective local government reform he does not go into how the commissioners' proposals would work out in practice among *disputing authorities*. But this has to be tackled, and the Government, with large regional projects like the Tyne and Mersey tunnels to underwrite, should realise that it has plenty of opportunities to knock some thick parochial heads together.

The third proposal is that private enterprise should be closely connected with the development and house building schemes in these peripheral zones, and that (most important) it should be given sites extensive enough to encourage the rationalisation of building for the maximum in speed and economy. These plans must, of course, be complemented by the reconstruction of the city centres with proper services for the surrounding region—another reason for ensuring that the suburban areas are brought into the plan as a whole.

This kind of expansion probably means the end of the green belt in the rigidly constricting sense (the green "girdle") that we know now. This is not necessarily a disaster, provided the alternative still gives sufficient open space for amenity and, in fact, produces the proper satellite planning that was notably lacking in the period before the green belts were conjured up expressly to stop reckless urban sprawl. The geographical conditions around each conurbation are sufficiently dissimilar for there to be no standard solution to the best use of their space. The real need is to get people to think in a regional context about their own problems. Dr Hill should be putting his shoulder behind every administrative push in this direction.

* Land Use in an Urban Environment. 35s.

Separate Sundays

The local option polls taken in the 17 counties and county boroughs of Wales, to decide whether pubs should open on Sundays or not, have had the expected *results*: the four county boroughs and the heavily populated and industrialised counties of the south and far north have decided to drink when they feel like it; and rural north west and mid-Wales have stuck to the "traditional" Welsh Sunday. Some counties did not run true to form: Brecon and Radnor are wet, Denbigh and Cardiganshire dry. The balance is slightly in favour of the openers, who led in 10 polls. In their strongholds the poll was generally marked by apathy (but Carmarthen scraped together 61 per cent of its voters). In the areas carried by the closers the polls were high (in Merioneth it was 65 per cent). This proves something, perhaps that while you may take a drinker to a petition, you cannot make him vote; or that the influence of nonconformism, where it exists, is not to be sneered at.

The effects of having two more or less distinct Waleses on Sundays will probably be no more stirring than the conduct of the polls; but among them may be considerable migrations of thirsty and deprived Welshmen from dry to wet areas, thereby realising the fear of the closers that the Sabbath roads would be full of drinking drivers. There will be rage mixed with triumph in the chapels, calm acceptance in the Anglican church, gloom in the headquarters of Plaid Cymru and disappointment among the openers. But they can all take heart; it will all happen again in seven years' time. The new Scottish bill will not give the "drys" the same opportunity.

AMERICAN SURVEY

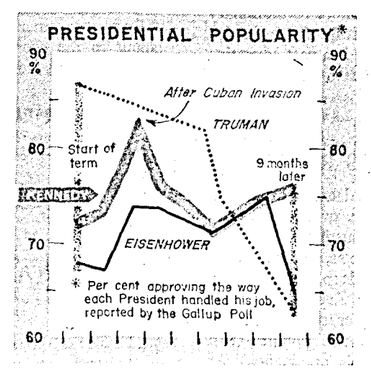
AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

A Year on the New Frontier

I—BUSY CRITICS

WASHINGTON, DC

A year ago, just after the election, when asked what Americans expected of their new President, someone tartly answered "too much." This is being proved right. There were fears then that the power behind the rocking-chair might turn out to be the Pope. Now some Americans almost seem to wish it were, for their discovery that Mr Kennedy is no more infallible than *any of his thirty predecessors* is causing them dismay and chagrin. The "new frontier" a year later looks to many people suspiciously like the same old frontier. Mr Kennedy's penchant for placing Republicans in high posts and low—for instance, Mr McNamara as Secretary of Defence and Mr Foster in charge of disarmament—has caused some blunt-minded Democrats to call his "the third Eisenhower Administration." Last month a soured critic from the other end of the political spectrum told the President to his face that instead of being a man on a horse he has turned out to be a man riding a child's tricycle. Weightier accusers like Mr James Reston of the *New York Times* charge that the President is not providing the people with enough guidance and is failing to command public opinion.



This month Mr Kennedy and members of his cabinet are taking up the latter challenge. They are fanning out across America, from Seattle to Saint Louis and from San Francisco to New York, to tell people what the Administration is doing and to find out how people feel about them. They will engage in all-day verbal grapplings with state and local officials and representatives of civic groups and the public is *cordially invited to attend the soul-searching seminars*. Mr Kennedy hitherto has operated on the rather aloof theory that the way to get things done smoothly is to work out carefully devised political compromises with his fellow professionals of the powerful committees of the House of Representatives and the Senate, freely employing the tool of patronage whenever necessary. Also now being refurbished are some of Mr Eisenhower's methods of administration, of which the frontiersmen made considerable hay when they first entered the White House. Last week it was announced that the President, who began by by-passing his cabinet and the National Security Council, will meet them henceforth on alternate Thursdays. It was Mark Twain who drew attention to the fact that the laughable ways of one's elders become surprisingly less risible as one grows up.

Mr Kennedy began his Presidency by putting the White House on speaking terms with poets, playwrights and other eggheads. Though at first the shock was great, there is now fairly widespread understanding that this is good for American prestige. But the *new frontiersmen* also laid their busy axes to Mr Eisenhower's cherished chains of command. Persons were admitted and papers ascended to Mr Eisenhower's tidy office in an orderly and dignified fashion, through channels. This meant that Mr Eisenhower took decisions but did not help to make them, and had no way of knowing about possible alternatives that failed to reach his desk through his human screens and filters, especially on foreign policy. (Some critics of the Eisenhower regime put it more pithily, saying that the late Mr Dulles was his own President).

Mr Kennedy largely replaced this system by picking up a telephone to summon people whose views he wanted to hear and by taking an active part in decision-making and energetically pursuing his own and others' ideas up and down the rapidly rising and falling graphs of White House enthusiasms and deflations. But the Kennedy method of impromptu conversations, quick-fire suggestions, task forces and crash programmes has been under fire from winded civil servants and critics who openly doubt if it really makes for clear decisions—or even decisions. Mr Kennedy, as well as holding regular cabinet meetings, has now decided to see fewer people.

In the twelve months that have passed since his narrow victory over Mr Nixon, Mr Kennedy has suffered various serious frustrations. He finds himself deeply engaged in what is basically an old-fashioned armaments race, whose only novel features are that it involves a fight for control of the moon and a threat of race suicide as a by-product. This is hardly all that he had in mind when he first set his ambition on the Presidency. He and Mr McNamara have succeeded to some extent in curbing the military men whose massive five-sided headquarters in Washington, the Pentagon, is enormous enough to swallow the House of Representatives and the Senate five times over. Mr Eisenhower also knew all about that problem and before he laid down the burden of office specifically drew attention to the combination of the Pentagon and the munitions interests that employ hundreds of retired generals and have more power than was ever dreamed of by Andrew Undershaft, Bernard Shaw's merchant of death. Pressure from the Pentagon—and the arms plants and the trade unions—caused Congress to thrust several hundred million dollars into Mr Kennedy's reluctant hand for unwanted bombers, just as it did into Mr Eisenhower's; like his predecessor, the President is declining to spend it.

But at the same time as it gave him money for arms and the moon, Congress frustrated Mr Kennedy's request for federal aid to education, so that children by the hundred thousand will continue to learn their lessons in double and triple shifts in hallways and basements, in the richest country in the world. The successful passing of the most important housing legislation since 1949 opened up a prospect of a decent home for every family in America; but people are told to build their own fall-out shelters. The President's foreign aid programme had a qualified success with Congress, and if there is no retreat from its commitments almost as much will be spent on development loans

in the next five years as on taking shots at the moon.

Mr Kennedy is a politician of over fifteen years' experience and he has accepted his setbacks and his hard-won modest victories with philosophical calm. But even his coolness seems to jar on some critics, who scold him for failing to show "a sense of Churchillian exuberance in adversity," though the secret of his continuing personal popularity with a great many people is their belief that in a crisis his blood pressure soars to normal. Others grumble that Mr Kennedy's score to date is scarcely worth all the tumult and upset that the new frontiersmen are alleged to have introduced into an American political scene whose torpor was for them its chief charm.

After nearly ten months of his Administration there is still widespread perplexity among the conventionally minded over whether Mr Kennedy is a liberal who has been slowed up by his fellow Americans' conservatism, or a conservative who is driving a liberal bandwagon with the brakes on. It seems probable that the President—and with him a growing number of young Americans—is as untouched by such labels as he and they would be by disputes between Big and Little Enders. They are a new breed, and old slogans leave them cold (many who fought the old battles find a curious coldness in them about most things the older generation held dear). But whatever it is they want to do—and quite likely this is not at all clear even to themselves—their room for even tactical manœuvre seems to be fearfully limited. Even if it is assumed that approximately half the voters are willing to go forward slowly with Mr Kennedy, to whatever his goals are, the other half show indications of trying to find refuge from a troubled present in reviving or reliving a simpler—and simplified—past.

It is to those voters that Mr Eisenhower appeals when he denounces the Peace Corps as a juvenile experiment whose members would be better employed on the moon, "which is also an underdeveloped country," and when he attacks increased social security benefits as "fiscal irresponsibility." Mr Kennedy seems inclined to stake his future on his belief that Americans are now sophisticated enough to prefer even unpalatable reality to such bumblings. But he is unlikely to shed his habitual caution or try to rush things. He knows that in 1962 Republicans hope to gain even more seats in the House of Representatives than they did last year and that their chances of doing so look good. Some of Mr Kennedy's supporters, who feel that the President could have shown more political courage in Congress this year, argue that the way to "buck the trend" is for him to play a bolder hand next session. For example, they would like him to try to get a much broader trade policy through Congress despite anticipatory howls of outrage from protectionists. Mr Kennedy has not yet made up his mind.

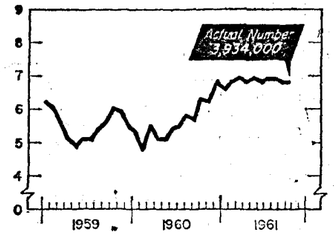
He is young enough to have time for the waiting game. The new frontier is essentially an adventure in new ideas. Building an integrated Atlantic community may prove a more revolutionary project than landing on the moon. These ideas still have to sink in. Some, indeed, still await proper formulation. It is a vast educative process that Mr Kennedy, after nearly ten months in office, finds himself willy-nilly about to embark upon.

II—WHISPER FROM THE GRASS ROOTS

Scattered elections in an off-year do not add up to a national referendum, but the Democrats' jubilation over this week's victories is, from the party's point of view, fully justified. They had feared the loss of a congressional seat in Texas, the loss of a Governor's mansion in New Jersey and the deep slashing of a Mayor's majority in New York. Instead, the Republicans were defeated in all these places. It is too much to interpret these results either as amounting to a resounding affirmation of popular faith in the President, or as a crushing blow for his opponents. At most, they demonstrate that he is somewhat stronger and they are somewhat weaker than was thought. But there is nothing like winning elections for a party's morale.

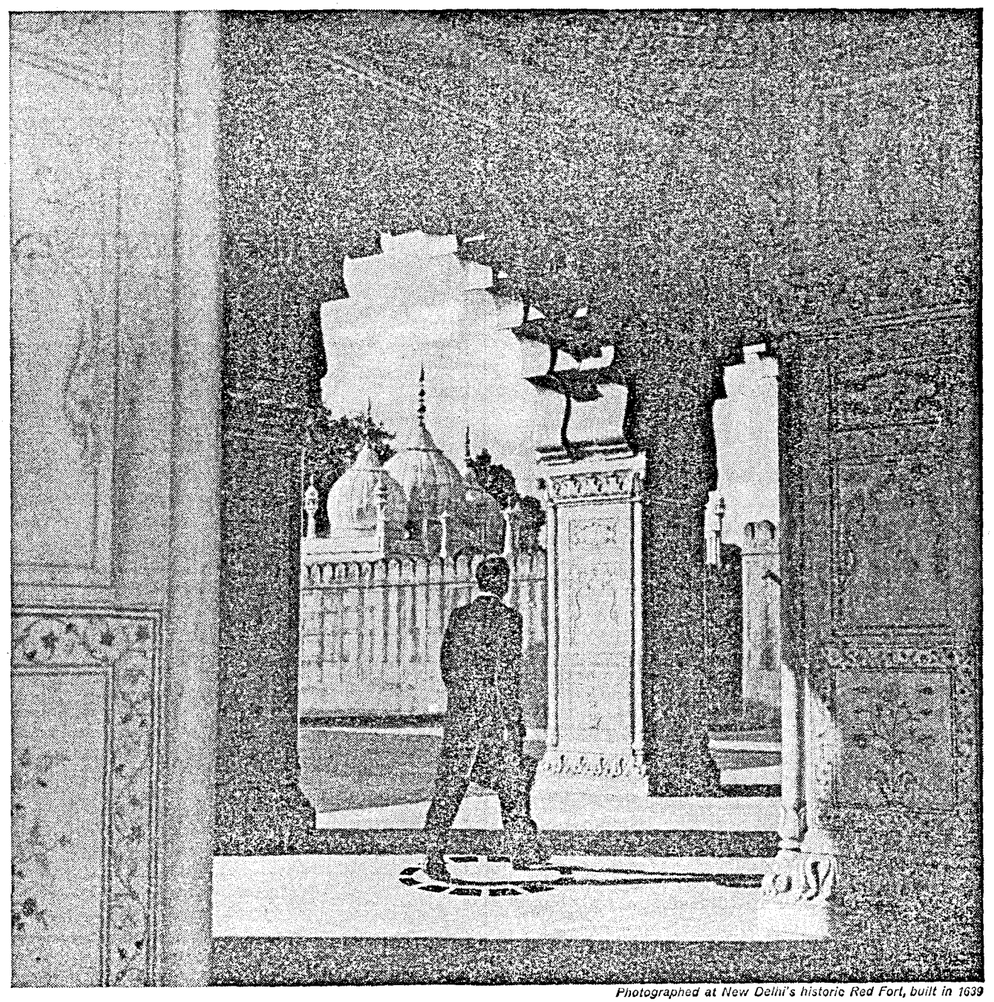
Beyond that, it is difficult to relate the three results to each other, except by stating that each was a special case. Mr Mitchell seems to have been beaten in New Jersey as much by ill-luck as by bad management. He broke his leg before the campaign was well started and was immobilised for months while Mr Hughes, his lesser-known opponent, ranged indefatigably up and down the state. This advantage, Mr Mitchell's refusal to meet him in public debate, the death of his father, which may have earned him a sympathetic vote, Mr Kennedy's last-minute personal appearance, perhaps even popular satisfaction with the past eight years of Democratic rule, explain Mr Hughes's victory. In New York, Mr Wagner lost some strength to a dissident Democratic candidate, but won comfortably, in spite of an increased Republican vote and in spite of the efforts of Governor Rockefeller and General Eisenhower. As Mr Mitchell also benefited from the support of these two, it is easy to see why their prestige, and the prestige of their moderate wing of the Republican party, have been slightly damaged.

Among those quick to draw this conclusion was Senator Goldwater, leader of the Republican right, who has said that liberal Republicans can "almost never" win. But his own wing's drawing powers are also open to doubt as a result of the Texas election, where a liberal Democrat beat a right wing Republican by a comfortable margin. This was the only straight fight between conservatism and liberalism. Mr Gonzalez, the victor, was helped by his Mexican blood in a city (San Antonio) with a very large Mexican-American population. But there is a stubborn suspicion in Republican circles that he was also helped by the fact that, as a Democrat, he will be in a good position to bring in the federal funds on which the city depends. "You just can't beat Santa Claus" said one politician. This could prove true of more places than Texas next year.



III—CRITICAL BUSINESS

WASHINGTON, DC



Politically and internationally President Kennedy may have failed to make his mark so far, but economically he seems to have come up to expectations. America's relations with Russia, and indeed with the rest of the world, may have deteriorated since he took office and Congress may have refused to co-operate with him, but at least the recession is over at home and the balance of America's payments abroad has improved. But in fact even these successes are superficial and temporary. Nearly seven per cent of the labour force is still as obstinately unemployed as it was a year ago, and America's reserves of gold are now threatened once again. The problem of how to encourage economic growth domestically without undermining confidence in the dollar internationally has become a semi-permanent one.

By next summer the excesses of industrial capacity and of skilled labour in the economy which prevent the current deficit in the federal budget from being inflationary will have been absorbed.

UNEMPLOYMENT
(as a percentage of the labour force)

But almost certainly there will still be some five per cent or so of the work force unemployed, the hard core of the unskilled who have really no place in the labour market today. Even the growth enthusiasts at the President's Council of Economic Advisers admit that these people will not find jobs unless the economic pressure

SHERATON HOTELS

IMMEDIATE CONFIRMATION

EXCELLENT accommodations reasonable rates

From New York to San Francisco, from Montreal to Dallas, there's a Sheraton Hotel waiting to welcome you. Each is located in the heart of the city, near business districts, theatres and shops. In addition to fine food and superb service, Sheraton Hotels offer many extra values such as the Family Plan (children under 14 FREE when they share your room), air-conditioning, free TV and radio. If your ship or plane is delayed, Sheraton will hold your reservations. To get reservations at any Sheraton Hotel, see your travel agent or Sheraton's General Agent:

- With the facilities and depth of experience to handle even the most specialized needs.

CONTINENTAL ILLINOIS NATIONAL BANK AND TRUST COMPANY OF CHICAGO

Member Federal Deposit Insurance Corporation

builds up to inflationary levels—but sustained unemployment at a rate of five per cent of the labour force is not an easy proposition to defend politically.

Yet over at the Treasury those in charge are already aware that the combination of higher interest rates in Europe than in New York with the foreign bankers' tendency to think that any deficit in inflationary is drawing money away from the United States at a rate which is disturbing. It is particularly so at a time when prosperity has brought a rise in imports and international tension one in military spending overseas; the surplus on America's trading account is being eroded just as calls on it are growing. The Treasury's answer to this situation would be higher interest rates and a really effective curtailment of government spending, were it not that either or both might check the economic recovery. So far, at least, the Treasury has had to make do with increasingly firm statements from the President that the budget will be balanced next year.

But European businessmen are disinclined to believe that he really means this and their lack of conviction is encouraged by the American colleagues with whom they have such frequent contact nowadays. The Administration has been making special efforts to please business in recent weeks, with meetings all over the country being attended by speakers from the highest levels of government, notably by Mr Dillon, the Republican Wall Street banker who is Secretary of the Treasury. But to many other Wall Street bankers Mr Dillon is suspect because of the high premium which he puts on the foreign aid programme while to Republicans in other parts of the country he is suspect because he is a Wall Street banker.

Businessmen certainly welcome the tax concessions which the Treasury has just offered them to encourage industrial expansion, but these are not enough to make them forget that the Treasury also wants to withdraw tax allowances for entertainment expenses. Nor has it lessened their annoyance at the constant harassment of the inquiries from the anti-trust division of the Department of Justice and from the various regulatory agencies, looking for evidence of illegal practices, particularly of price-fixing. These inquiries have been stepped up, according to businessmen, since the new Administration came in largely, they believe, because with Democratic officials at the top the zeal of subordinates is no longer held in check as it was under the Republicans, although the Republicans showed no lack of zeal in anti-trust prosecutions.

BUSINESSMEN assert that by these and other types of interference in their concerns the Administration is trying to control prices indirectly since it has no power to do so directly. Special resentment was caused by the President's peremptory request to the steel companies not to raise their charges to their customers when wages went up in October, a request based on what to the industry seemed very dubious calculations of how much constitutes a fair profit. It did not in fact put up its prices, for reasons of its own, and is now waiting to see if the President keeps his promise to deal equally firmly with the steel trade union when it demands another increase in wages next year. Businessmen do not believe that he will, for they feel that no Democratic Administration can afford to offend labour and they say that they detect a new assertiveness in trade unions even though so far the Administration has been careful not to favour labour.

Underlying all this is a certain sense of guilt by association—few people deny that there was justification for both the charges of price-fixing against the electrical equipment companies earlier this year and for the current investigation of the stock exchanges—and a conviction that, however, conciliatory the present Administration may try to be towards businessmen, it will never sympathise with them as its predecessor did. The President, hard as he may try, has little in common with businessmen and his brother, the Attorney General, is antipathetic to them. They do not trust either the Secretary of the Treasury or the Secretary of Commerce to fight hard for them or against inflation, although they have more faith in the chairman of the Federal Reserve Board and the Under Secretary of the Treasury. The President's other economic advisers are all professors and bright young intellectuals who respect and admire businessmen even less than businessmen respect and admire them.

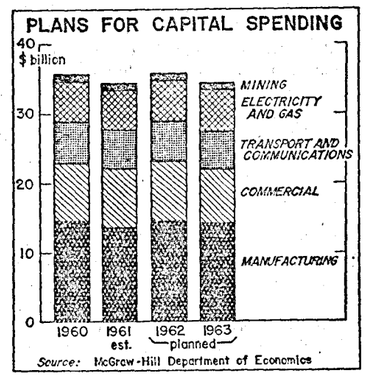
In fact, businessmen are probably receiving more consideration in Washington at present than they have under any previous Democratic Administration. Here again President Kennedy is clinging cautiously to the middle of the road instead of pushing on to the new frontier as his liberal critics would like. And here, perhaps more than anywhere else, he is probably wise to do so, given the peculiar nature of the economic dilemma with which he, unlike any of his predecessors, is faced.

Timing the Trade Battle

THE opening shots have now been fired in the battle to determine whether the United States is to liberalise its trading policies in step with Europe. Two reports to the subcommittee of the Congressional Joint Economic Committee which is to hold hearings next month—that of Mr Herter and Mr Clayton and that of Congressman Reuss—actually go far beyond Mr Ball, the Under Secretary of State for Economic Affairs, who is the Administration's spokesman, by advocating a free-world-wide common market. Indeed at his press conference this week the President said candidly that it will be two or three weeks before the Administration decides whether to beard Congress at its coming session, or wait until 1963, though his own feeling is that "the time to begin is now."

With the expiry of the Reciprocal Trade Agreements Act next June, there is much to be said for moving forward without a pause to take up the new challenges and opportunities provided by the common market and Britain's probable entry into it. Simply to extend this worn-out Act for another year would leave the President with virtually no effective powers to negotiate lower tariffs and would invite new protectionist amendments. Simply to let it die would be to haul down the symbol of freer trade with which the United States has become identified for nearly thirty years. Whether the President needs new negotiating powers immediately is open to more argument. He said himself this week that the full significance of the common market for the United States would not be apparent until 1963 or 1964, but many of his officials think that the power to negotiate is essential if America is to influence the course of the common market in the next year or two.

The decisive question is whether the Administration can be more certain of success by waiting until 1963. An election year like 1962, when every member of the House and a third of those in the Senate is particularly vulnerable to pressure from his constituents, is a far from ideal time to debate sweeping reductions in tariffs. But with the rise in protectionist feeling, the Congress elected next year may be even more hostile than the present one. A more important consideration is how quickly the Administration



can educate the average American (and through him Congress) in the dangers of restriction and the immense benefits—political as well as economic—of freer trade in the free world.

Mr Ball marshalled the arguments convincingly for a sophisticated audience (the National Foreign Trade Convention) when he underlined the importance of the power to make broad bargains with Europe, which accounts for a third of America's trade, both on behalf of the United States and of the underdeveloped countries; when he pointed to the risk that without tariff reductions American firms might feel forced to export employment by setting up even more plants inside the common market; and when he emphasised that the way could be opened to a tremendous increase even in America's high living standards. The Administration's view that the main burden of the structural changes needed should be borne by industry and that only in exceptional cases should government help be provided will be less palatable. It can be argued that it is already too late to put this in terms the common man can understand in time for action in 1962. But it can be argued even more convincingly that a whole-hearted fight for a big cause—with every ounce of the President's determination committed to it—may be the best schooling of all and the best foundation for a victory in 1963 if this eludes the Administration next year.

Little Fuel for a Boom

NEW YORK

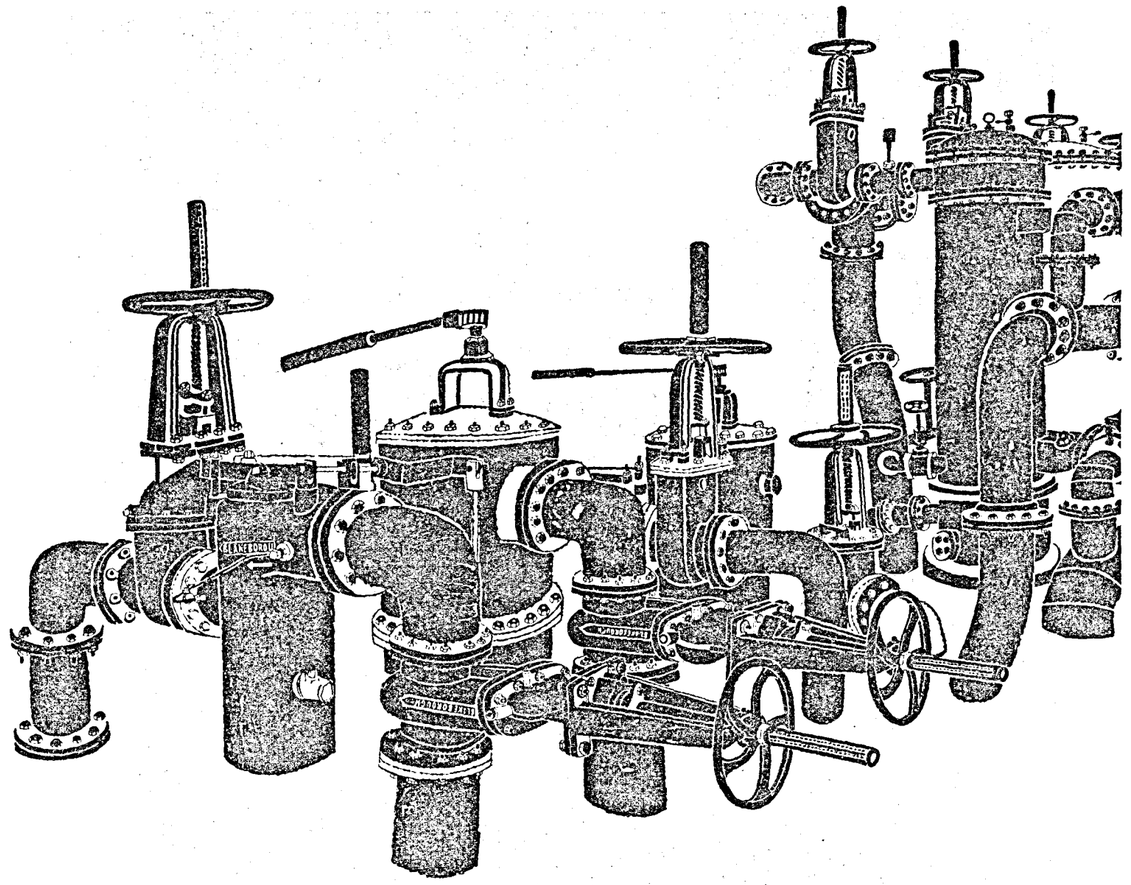
HOPES for a boom in business activities are not supported by the latest McGraw-Hill survey of industry's preliminary plans for capital spending in 1962. American business expects to increase its investment in plant and equipment by 4 per cent over this year's level and, while the total would be second only to the record achieved in 1957, this is not a big enough rise to assure a rapid and vigorous expansion. Normally businessmen tend to underestimate both increases and reductions in their capital expenditures so it is possible that better consumer demand, rising profits and more liberal tax provisions on depreciation of equipment may raise spending above the preliminary estimate. But the survey, which was taken in October, makes it clear that American industry is still plagued by over-capacity and that corporations are reluctant to add to their plant until they feel certain of increased demand.

The survey indicates that businessmen are hoping for a 7 per cent rise in their physical volume of sales next year, but as they are now operating at an average of 81 per cent of capacity they have considerable leeway before their present plant will be under strain. Though output is rising industrial production continues below the rate at which corporations enjoy maximum profits and profits are a big factor in the decision to make new outlays. To better their competitive position businessmen are evidently counting on tighter control over present costs as much as on fresh outlays for cost-cutting equipment. Moreover, the price of plant and equipment does not seem likely to rise much so the incentive to buy before prices go higher is lacking.

The hesitancy of most corporations is not shared by those which are doing well or expect to do better soon. Manufacturers who account for about forty per cent of total corporate investment report that they will increase their spending by 7 per cent compared with the overall average of 4 per cent. The steel industry, for example, will be increasing spending by 15 per cent. On the other hand, electrical machinery and chemical firms are planning to decrease their outlays partly because they have been maintaining a very high level of investment and partly because of excessive capacity. This sort of rational planning may be a blessing in disguise; if present plans for 1962 fall below boom proportions, they hardly imply a retreat. Furthermore, the survey notes that preliminary plans for 1963 are already close to the projected 1962 level, which indicates that corporate investment should be a sustaining force if not a stimulant.

Schooling the South

FROM A CORRESPONDENT IN VIRGINIA



IN recent years the difficulties connected with imposing racial desegregation on schools in the South have obscured a larger question: is the education available to young Southerners in general good enough to fit them for life in the United States in the latter half of the twentieth century? The South contains a third of the population of the United States, but at present its colleges and universities are granting only a quarter of the bachelor's degrees and only 12 per cent of the doctorates being earned in the country as a whole. In 1950 more than a fifth of the population in six southern states was nearly illiterate and ten of the eleven states in which about half the population had had only an elementary education were in the South. The non-South is spending 60 per cent more for each pupil than is the much poorer South.

The South's poverty aggravates its problem in another way: the prospect of earning more money—and more recognition—in other parts of the country has long been drawing able people out of the region. For instance, though teachers' salaries have been going up faster in the South than elsewhere, they are still far below the national level. The State of California, which pays its teachers the highest salaries in the country, raids the South regularly; teachers in its elementary schools earn an average of $6,175 a year compared with $4,925 in Florida and its high school teachers average $6,950 as against Georgia's $3,868.

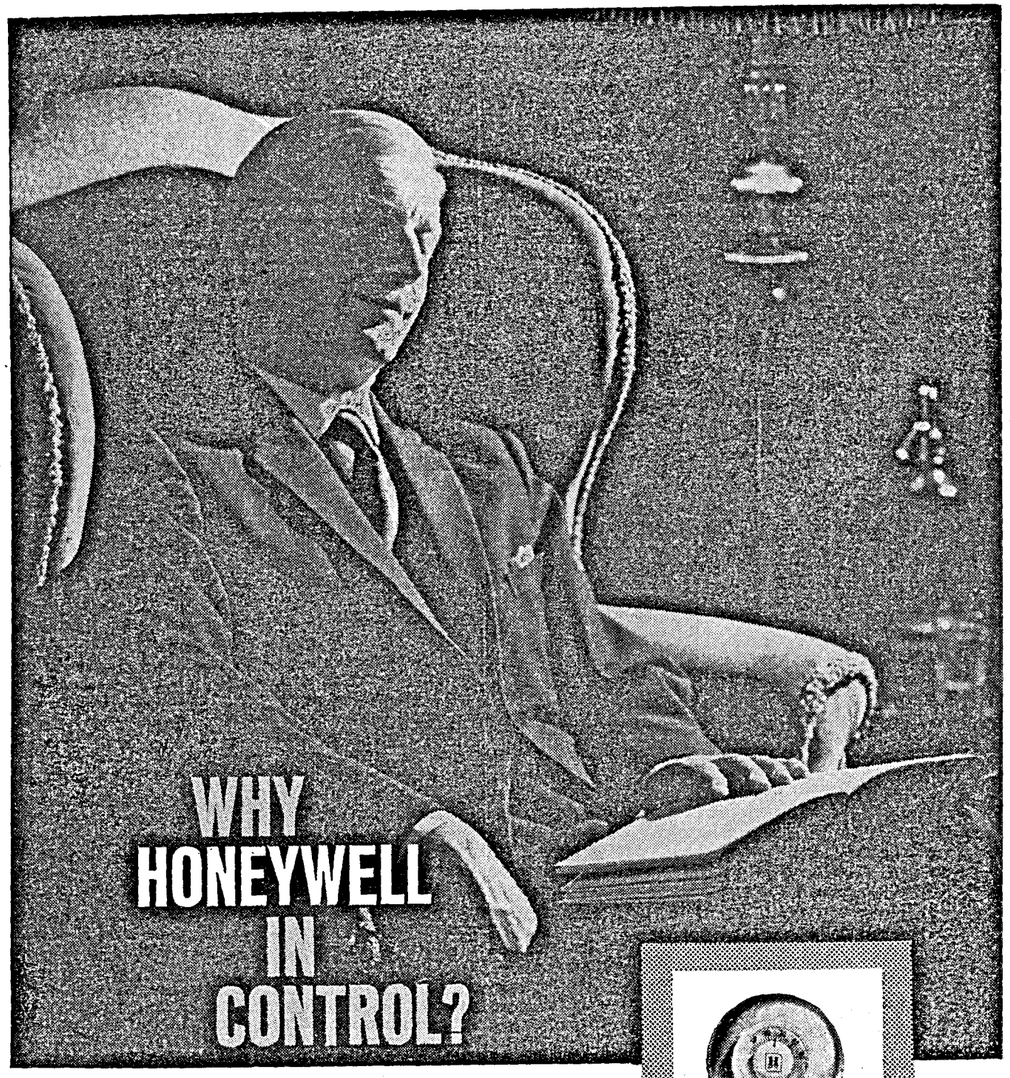
Yet to set against these rather dismal examples there is hopeful evidence of a growing appreciation of the desirability of education and of a new concern for its quality. Many state universities in the South have been tightening up their entrance requirements, which used to be lower than in other states. The three states with the highest proportional increase in expenditure a pupil for public education between 1950 and 1960 were southern and in all three the increase was over 100 per cent; in Mississippi, with the lowest income a head in the country, it was 142.9 per cent and seven of the twelve southern states did better than the national average in this respect. These increases, moreover, came at a time when the number of pupils was rising rapidly.

Some of the ways in which these new funds have been raised have been devised to call public attention to the desirability of more education as well as to bring in more dollars. West Virginia's up-to-date medical centre at Morgantown represents the conversion of "cokes" into clinics; its cost of $32 million was financed by a tax of one cent on every soft drink sold in the state. For a decade North Carolina's farmers have paid a "Nickels for Know-How" levy of five cents a ton on the feed and fertiliser they buy; the proceeds go to the State Agricultural College.

Recently, certain educational facilities in the South have been

THE MONEY THAT MANAGEMENTS SAVE THROUGH MOBIL ECONOMY SERVICE

More than £1,360 saved in a year at J. Blakeborough & Sons Limited



TAKING POSITIVE ACTION to cut maintenance and lubrication costs, J. Blakeborough & Sons Ltd, world famous valve manufacturers, consulted the experts—Mobil. After accepting their recommendations, and applying the correct lubrication programme, Blakeborough found that they had made direct savings of over £1,360. Indirect savings were estimated at a further £2,100.

World-wide experience of industrial lubrication
This example of the value of Mobil Economy Service is typical of many that could be cited from almost every industrial area of the world. In all these areas, the world-wide Mobil organization is applying more than 90 years' experience to the cutting of lubrication and maintenance costs.

One plan to meet all lubrication needs
The value of Mobil Economy Service is the value of expert knowledge methodically applied: it is a matter of assessing all the lubrication needs of a business collectively; considering how they can best be met with the fewest different lubricants in the smallest quantities; and making sure that everyone concerned knows how to use the lubricants to the best effect with the absolute minimum of work. The astonishingly large savings that are often achieved are the measure of the experience and skill that Mobil bring to the consideration of every lubrication problem.

SINCE 1885

treated as a regional whole to their great advantage. Training in engineering is being expanded co-operatively at the University of Florida, Georgia Institute of Technology, North Carolina State College and the University of Texas as a result of a grant from the Ford Foundation. The Oak Ridge Institute of Nuclear Studies links southern institutions and thus facilitates concerted specialisation in this field. The broadest and most official pooling of resources occurred in 1949 when the legislatures of sixteen states, from Delaware and West Virgina to Oklahoma, established the Southern Regional Education Board. This helps the states to make combined use of their funds and works to create a public atmosphere favourable to greater expenditure and greater attainment. At the end of last year the board set up a special and authoritative Commission on Goals for Higher Education, which is to report shortly on how to

> *provide a wider range of opportunities for the increasing student* enrolments and at the same time achieve excellence and competence that will enable its graduates to contribute to the expansion of a better and more abundant society.

Some groups which have been active in inducing southern

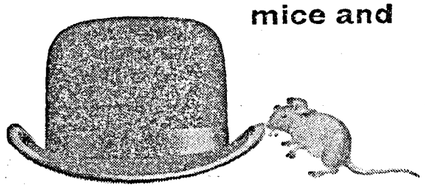
National Newspapers

NEW YORK

THE United States, doing things in a big way as usual, is to have three new national newspapers within the year, at a time when the newspaper business is supposed to be in a bad way and in a country which is supposed to have only local newspapers. The first of the new publications, the only one which has actually appeared and the one with the most ambitious title, *World,* is the one thought least likely to succeed. This "compact national newspaper," published weekly in Washington, at 15 cents a copy, by a middle western millionaire with no newspaper experience, is a shoddy affair with no advertising and no leaders. It claims to be non-political, but its editor is a known conservative and it may appeal more than the experts allow for to the reactionary groups which are gaining strength all over the country.

They are particularly strong in the West and this may make difficulties for the liberal and internationally-minded *New York Times* when in the second half of next year it turns itself in practice into the national newspaper which it has long been in fact, by printing a west coast edition in Los Angeles—to the annoyance of San Franciscans. But commercial printing capacity is available in Los Angeles as are facilities for distributing the paper by air to all major centres west of the Rocky Mountains, and possibly to Alaska and Hawaii, on the day of issue. Distribution will be mainly by postal subscription although the paper will also be available on news-stands. The price will be 10 cents which is the normal charge both for the *Times* outside the New York area and for Californian papers.

In this operation time, running three hours behind New York on the west coast, is on the publisher's side as it is not in the case of the European edition of the paper. For this reason and because production and distribution will be easier in Los Angeles than in Paris, the new paper should be more successful financially than the European one has been. Both are being printed by linotype set by electronic signals transmitted from New York. The west coast edition will be substantially larger than the European one and will carry everything that appears in New York except for matters of purely local interest. Advertisements will be accepted for both editions or for either. There will be no special coverage of western news and no open attempt to compete directly with western papers—but the *New York Times* news service will no longer be available to them.



The decision to print on the west coast was largely the result of the spontaneous and unprecedented demand from the region after publication in Europe was begun last year. But the west coast edition, like the European, will not appear on Sunday. The Sunday *Times* is especially popular in distant parts of the country; its circulation is twice as large as that of the weekday paper but so is its content without counting its special sections. Quite apart from the virtual impossibility of printing so much on the west coast there are no facilities for postal distribution on Sundays. Here, however, the gap may be filled eventually by the third new national newspaper, the *Wall Street Journal's,* or rather the Dow Jones company's, *National Observer,* to appear from February on Sundays only.

BUT for the present the *National Observer* is to be printed in Washington and will therefore be available on the day of issue only to the 40 million people, nearly a quarter of the population, who live on or near the east coast. They will be able to get the new paper by home delivery or from news-stands, probably for 25 cents a copy; elsewhere in the country distribution will be by post, at $9 a year for advance subscribers, and even without airmail the paper will arrive earlier in the week than do the weekly news magazines which are considered to be its main competitors. The Washington plant can handle up to 200,000 copies but the hope is naturally that demand will grow enough to justify printing at the *Journal's* six—soon to be seven—other plants all across the country, the evidence of its own success as a national newspaper in the last decade. This would enable the Sunday paper to be delivered almost everywhere on the day of issue.

Washington was chosen to begin the operation rather than New York because it is an easier place in which to live and work, because modern communications mean that today a paper can be edited almost anywhere and because Washington is the source of most of the background information in which the *National Observer* is to specialise. It will carry a certain amount of late Saturday news but it will contain mainly interpretative articles covering all aspects of national and international life, including sport and culture, not just the business and industrial topics on which the *Wall Street Journal* concentrates. It will have a separate staff.

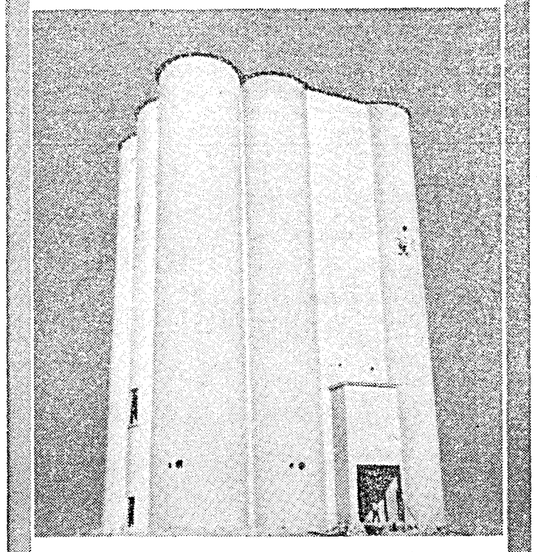
There will be plenty of pictures and other illustrations in the paper, which will have a maximum of 32 pages and no special sections, a relief to Americans who feel overburdened on the day of rest. The effect will be something like the British *Sunday Telegraph* and the editors insist that in so far as they had any British model at all it was this paper, and not, as has been reported, the *Sunday Times* or the *Observer.*

The aim is to produce a paper for the general public to read at home, as opposed to one for the specialist to read in his office, which is what the *Wall Street Journal* is intended to be although its appeal has spread far beyond that. In its narrower field the *Journal* already does on weekdays what the *National Observer* hopes to do on Sundays; it brings the news that people need to know to them in a way that enables them to understand it and to enjoy it.

Of mice and management

'The best laid plans of mice and men . . .'
For *'men'* read *'management'*—and consider how often even the most minutely planned commercial or industrial operation can go astray—not because of any fault or failure on the part of management, but because of the sheer complexity of commercial and industrial organization today. Making the very most of resources in labour, money, time, plant and materials is an essential part of management's job—but with so many interacting variables the human mind is sometimes baffled. Can such problems be solved? The answer is: They can, quickly and relatively cheaply, by the technique of *Linear Programming* aided by a high-speed electronic computer. How does the system work?

At its simplest, Linear Programming is a system which helps management to achieve the maximum results from any given organization, with the minimum wastage in time, labour, and materials. More than that: while the system shows how best to use present facilities, it indicates with no less precision *what* needs to be done, and *when* it needs to be done, to achieve even better results with a minimum of re-arrangement and expenditure.



Linear Programming is only one of the many scientific management techniques offered by C-E-I-R, the largest computer services organization in the world. At the London C-E-I-R Centre, with its advanced on-the-spot computer facilities, C-E-I-R are handling on behalf of clients a wide variety of operations ranging from routine Data Processing on a regular contract basis to the solution of the most complex industrial and commercial problems. If you have any problem, large or small, which can be solved by logical or mathematical means—then send for C-E-I-R.

How Mitsui builds world trade

This giant grain elevator, a joint venture between Mitsui and the Farmer City Grain Co. in Illinois, holds some 10,000 tons of grain, ensuring a ready supply and smooth flow of this American produce to markets in Japan. It is one of many instances where Mitsui, Japan's largest trading company, promotes economic growth on an international level.

All of Japan's quality products are available through Mitsui. It maintains close contact with hundreds of leading companies to give you quotations based on an intimate knowledge of the current market. In addition, Mitsui is a member of the Mitsui Group, and can call on the experience of 50 "Group" firms in virtually every field to expedite your imports.

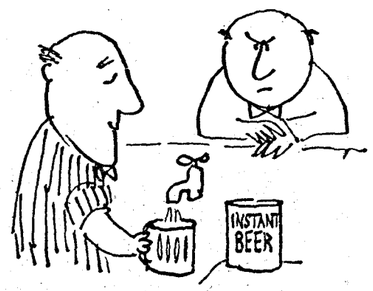
communities to accept Negro children in white schools are now turning their attention to improving the cultural background of those children so that they will not pull down the standards of the schools when they enter them. Another result of the low incomes and lack of educational interest among many parents in the South, whether white or coloured, is that the region probably contains more than its share of the many gifted children in the country who are not able to develop their potentialities to the full. To remedy this, experimental classes for superior students have recently been established in all high schools in Atlanta, and in Florida and Texan colleges have started summer "Step Ahead" programmes for promising high school students. In a parallel effort educational television is being used increasingly to spread the coverage of specially gifted teachers; seventeen—almost half—of the country's educational TV stations are in the South, the country's first state-wide ETV network was in Alabama and at Austin, Texas, ETV has been used for all laboratory courses in chemistry for the past two years.

As the numbers of students grow and adult education becomes more widespread the need for classroom and laboratory space is leading to year-round and round-the-clock use of existing buildings. With this in view, air-conditioning is increasingly common in newly built facilities in the Deep South. Shortages of space are also causing a trend towards community colleges, especially two-year "junior colleges," which students can attend while living at home, at less cost to themselves and to the institution concerned, since capital outlays for providing bed and board are no longer needed.

SOUTHERN education is certainly being stimulated by new ideas. But equality with the rest of the country is still a long way off. A recent study of persons who take PhD degrees showed marked weaknesses in the South: in New England, the rate of those taking such degrees was 11.23 out of every thousand graduates from high school; in the East-South-Central states, 2.84. The difference was greatest in the physical and life sciences—the fields which, over the country as a whole, are favoured by the very top students; the South's relative showing was better in the arts and humanities (after all, it produces disproportionate numbers of America's best writers) and was best in education.



But perhaps the most striking result of the study was its demonstration of the extent to which the size of the high school is a limiting factor on post-graduate achievement. And of the fourteen states in which 90 per cent or more of the high schools are too small for adequate education, six are in the South. Moreover, by 1970, the region will need 50,000 new college teachers, yet it is not expected to produce more than 15,000 PhDs during that time. Inadequate training among new additions to college and university staff was already marked in the nineteen-fifties.

Undoubtedly the South is catching up with the rest of the country educationally as it is economically. But is it catching up fast enough? Or will its economic growth, its transition from an agricultural to an industrial way of life, continue to be hampered by deficiencies in its educational system and in the training of its people, children and adults alike?

Beer for Proserpine

STUNG, perhaps, by the secretary's defiant cry in "Candida," "I'm a beer teetotaller, not a champagne teetotaller," the brewers of America have applied themselves to ways of luring Prossy into their fold. Those who share her scruples can now drink a beverage called Fox Brew, which has a head of foam and contains everything except alcohol—its ingredients are malted barleys, maize, brewers' yeast, seedless hops and wheat germ. It even tastes something like beer—the light, frothy, lagerish beers that Americans prefer. According to the manufacturing company it is meant to compete with soft rather than with alcoholic drinks, and it has only 70 calories to the 12 ounce can. If Prossy is worried about her figure it is hard to see how she can resist this bowl which cheers but neither inebriates nor fattens; she may, of course, still prefer champagne.

Some women, no doubt, will be immune to the lure of a sinless tipple. For them Piels, a New York brewery, has invented a slimming beer called Trommers Red Letter. It was first put on sale in early September, and has apparently been selling nicely. It is, admittedly, slightly less alcoholic than other beers, but as it is also two-thirds less fattening, with fewer than 100 calories to the can, the brewers probably feel they are on to a good thing, since 35 per cent of the population is reported to be worried about its weight. They have launched it with an advertising campaign costing more than $1 million a year. Piel's enterprise has provoked sour comments from rival firms, who dislike anything that associates the idea of fatness with beer, however negatively.

But the ire caused by Trommers was as nothing to the annoyance provoked by something called Instant Beer, which has been developed by the Union Carbide Company in co-operation with the Miller Brewing Company, one of the top ten brewers in the United States. It is made by dehydrating beer to a quarter of its liquid bulk for convenience in shipping and storing. Before sale it is "reconstituted" by the addition of the right amounts of water and carbon dioxide. It is alleged to be indistinguishable from the conventional types of beer, and could be a boon to big companies who would like to sell their products throughout the country. By the same token it is a threat to the small local brewers at a time when consumption of beer a head is dropping, although more people are buying the drink. At present federal regulations forbid the sale of beer concentrate, so the sponsors of the new processes are lobbying for a revision of the law. The hearing was due to open this week.

SHORTER NOTES

At his press conference this week Mr Kennedy was delighted to announce that General Eisenhower had accepted the post of first chairman of a new private "people to people" organisation designed to further contacts between Americans and other peoples. This is work in which Mr Eisenhower has always been interested and for which he has great talent. But Mr Kennedy's pleasure may have been heightened by the fact that General Eisenhower's new task will give him less time and inclination for partisan politics.

* * *

The Department of Justice won a notable victory for Negro rights recently. It persuaded a federal court of appeal to issue a temporary order restraining Mississippi from prosecuting Mr John Hardy, a leader in the drive to enable Negroes to vote in the state. Mr Hardy was charged with breach of the peace after he had been hit over the head by a white registrar of votes. If the Department of Justice can prove that the prosecution was part of an effort to frighten Negroes from voting, the order is likely to be made permanent. Usually federal courts never interfere in state criminal proceedings.

THE ECONOMIST NOVEMBER 11, 1961

Production under way 2 months before completion!

One of the fastest construction projects ever carried out on Merseyside, this new £3¼ million Fisher & Ludlow factory, was built by Cubitts on a 50-acre site at Kirkby. Just 15 months from initial planning to completion—with sections of the factory being made available for machinery installation as they were finished! This allowed Fisher & Ludlow to start production of domestic appliances two months before completion of the factory.

Speedy construction was made possible only by precise planning and exact timing of every building operation: and 100% co-operation between the client, architect, Cubitts and their 40 sub-contractors. At regular meetings they devised methods of streamlining operations using the most modern equipment, thus keeping construction time to a minimum and ironing out problems as they arose. This close collaboration resulted in the 17 bays of the main production building being erected in 17 weeks—half the normal time!

ARCHITECTS: Harry W. Weedon, F.R.I.B.A., & Partners.

Mr. Philip Wyatt, Managing Director of Holland & Hannen and Cubitts (North West) Limited, says:
"One of the most important industrial projects on Merseyside, the Fisher & Ludlow factory required a construction team able to build at speed with close attention to economy and quality. Detailed planning and co-operation at all stages between client, architect and contractor has led to early completion of this project. It demonstrates the advantages of working closely together with an efficient construction team."

Mr. J. R. Stanfield, Works Director of Fisher & Ludlow Ltd., Birmingham, says:
"Teamwork has been the essential factor that has ensured the completion of this vast undertaking within the time scheduled for occupation. Large areas of the factory are devoted to specialized process plants involving complicated foundation work and numerous underfloor services. Only the closest of co-operation throughout between architects, contractors and our own planning and engineering departments has enabled construction to proceed without interruption."

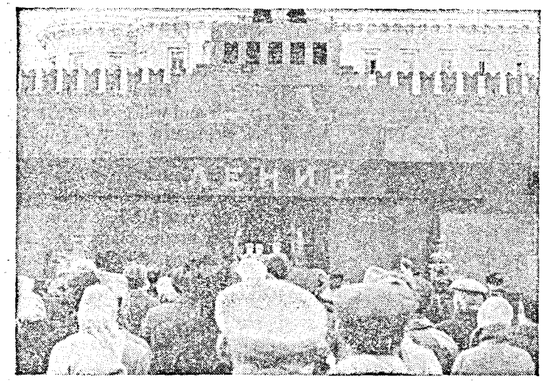
THE WORLD OVERSEAS



The Khrushchev Interlude

STALIN'S vacant place in the mausoleum and the monument that is to be erected to honour his victims will be permanent reminders of the 22nd Soviet party congress. Symbolically, they will mark the end of an era, although in fact iconoclasts were at work in Moscow as far back as March, 1953, the month of Stalin's death. Mr Khrushchev—who had organised Stalin's funeral—delivered his indictment of the dead Russian leader less than three years later. What he then said in secret session, and more, has now been proclaimed from the congress platform. It has been publicly admitted that, under Stalin, Russia went through a reign of terror. Each speech that recalled the crimes of the Stalin era included a promise that in future the five o'clock knock would always be the milkman's. "Never again" was the congress's refrain and its chief message for the Soviet people.

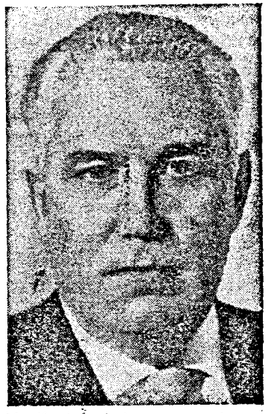
The traumatic effect of Stalin's posthumous fall should not be underestimated. For the Russians Stalin was not only a symbol of blood, tears and fear. Millions were taught that all their achievements were due to this "Leader of Genius." In this nightmare adoration was mingled with horror, and the awakening has consequently been all the more painful. Even Mr Khrushchev's "secret" version, although watered down by the time it reached the ordinary party member, was enough to shake the world communist movement to its very foundations in 1956. Today Communists, not only in Russia, must be better prepared for the ostentatious revelation of Stalin's crimes. All the same it is bound to stir up fresh ferment in the communist world. Last week, the real debate over Stalin did not take place in the congress hall, but outside among ordinary Russians putting forward their different and often contradictory views. It was, almost certainly, only a foretaste of things to come. When a myth is destroyed, the disillusioned are forced to think for themselves.

Stalinism, however, was not only the Byzantine cult of the Georgian leader; it was a system of government, in which the omnipotent ruler held all the reins of command and in which the tiniest voice of dissent had to be punished. The 22nd congress shows both the progress made since Stalin's time and the limits of that progress. With the exception of the aged marshal Voroshilov, all the members of the "anti-party group" have apparently stuck to their views. Mr Molotov, in particular, had tried to express them in *Kommunist* and, on the eve of the congress, criticised the party programme in a letter to members of the central committee. Yet the heretics apparently remain untouched. The process of expelling them from the party, which starts in their own party cells, will only now begin. This is a long way from the inquisitorial trials of the nineteen-thirties.

On the other hand, the views of the opposition (or oppositions) are only known to the public through the distorting mirror of the accusation. None of the culprits has been allowed to give his own reasons for disagreeing with Mr Khrushchev's conduct of foreign policy, his managerial reform or his drive to conquer the virgin lands. Still less have they been allowed to reply to accusations of complicity in Stalin's crimes with a *tu quoque*. It would have been easy to turn the tables on Mr Khrushchev, even without delving into the archives of the NKVD. The following is an extract

Lenin without Stalin

from his speech at the 18th congress, in 1938, in a debate that Stalin opened by taking a cynical pride in the extermination of all his opponents (including Marshal Tukhachevsky):



> Every citizen of our Soviet land is clear in his mind that our success, our victory in defeating the fascist agents—all these despicable trotskyists, bukharinists and bourgeois nationalists—we owe above all to the personal effort of our great leader, comrade Stalin. . . . Long live the towering genius of all humanity, the teacher and guide who is leading us victoriously to communism, our beloved comrade Stalin.

Mr Khrushchev looks strange in the censor's mantle. And his embarrassing posture may explain part of his conduct. Aware of the need for change, sufficiently adroit to swim with the popular anti-stalinist trend, Mr Khrushchev is trying, in the intervals between his spectacular interventions, to slow down the process that he himself has helped to accelerate. For years he has tried to limit the list of Stalin's crimes to the executions of faithful stalinists. Now, in order to tarnish his rivals, he has gone back to 1934 and raised the Kirov affair. Henceforward it will be increasingly difficult to ignore the Moscow trials of 1936-38, when Stalin's ideological opponents from the Bolshevik old guard stood in the dock. It will be increasingly difficult, too, for Mr Khrushchev to appear on the side of the angels; again, last week, he contrasted his own generosity with the stalinist methods that the "anti-party group" would have used in case of victory. Yet, his own victory, in that June of 1957, had something odd about it, the "arithmetical" majority of the heretics in the presidium having been turned into a unanimous vote against them in the central committee. Mr Khrushchev's magnanimity did not, of course, extend to a free debate in which the whole party would decide which side was right.

On this fundamental question it was idle to seek an answer in the new party statutes. Mr Kozlov, who as second secretary now seems to be confirmed as the heir-apparent, introduced the new rules to the congress and had plenty of democratic gimmicks in his bag. But he also added that the party would not be drawn "into sterile discussion at the whim of some muddle-headed or immature people, in which individual anti-party elements could undertake actions leading to the subversion of party unity"; this was his negative answer to the question whether any dissenting

activity should be allowed within the party. Where no "dissenting activity" is allowed, elections are merely a confirmation of the establishment.

In fact, the congress did not produce any spectacular changes at the very top. Mr Khrushchev had thoroughly renewed the party presidium after his victory in 1957. The only new full member is Gennadi Voronov, who has risen rapidly to the top; he is a firm supporter of Mr Khrushchev's agricultural policy. The four who are downgraded are not remnants of Stalin's old guard. The secretariat is, once again, increased from five to nine people and will probably have a closer control over day-to-day work. The inclusion in it of the former Comintern official, Mr B. N. Ponomarev, in addition to the veteran Mr Kuusinen, is a sign of the importance attached to relations with other Communist parties. Finally, the ranks of the central committee have been swollen to include 175 full members and 155 candidates. Here the turnover is bigger, but the gaps to be filled were largely caused by Mr Khrushchev's recent purges for political and agricultural offences. The central committee may, one day, become the party's parliament. For the time being its members are not elected on any platform, but chosen by Mr Khrushchev, or through a compromise among the leaders.

Mr Kozlov: heir presumptive

Hopes for Russia's political awakening are based on the changing structure of Soviet society. Most Russian leaders agree on that, even if they differ about the best method and pace of change. They did not wait for Mr Khrushchev to introduce reforms before making it clear that they wanted them; and his political skill has been demonstrated by the way in which he has appeared to the public as the champion of the new, fighting against the upholders of the old, order. The image is only partly true. There are indications that Mr Khrushchev was often prompted into action by more zealous reformers and then tried to apply the brakes. He may now try to do so again. But having been told about the sins of its former infallible ruler, the Russian people is likely henceforth to watch more critically the actions of its present leaders. It is aware of the relationship between the government's policies and the people's own comfort. And increasingly the word comfort is being used not only in its narrow material sense. In keeping with an old tradition, the writers, and the intelligentsia as a whole, are the most articulate spokesmen for popular aspirations.

To maintain his position, Mr Khrushchev will have to rely increasingly on popular support. Khrushchevism, too, to use the marxist diagnosis, contains the seeds of its own destruction. How this will come about will depend on a combination of factors, in which diplomatic successes will not be the least important. The immediate effects of the tensions in the communist world are unpredictable, but the general direction is towards a revival of politics. Stalin, through his spectacular fall, will posthumously contribute to this awakening.

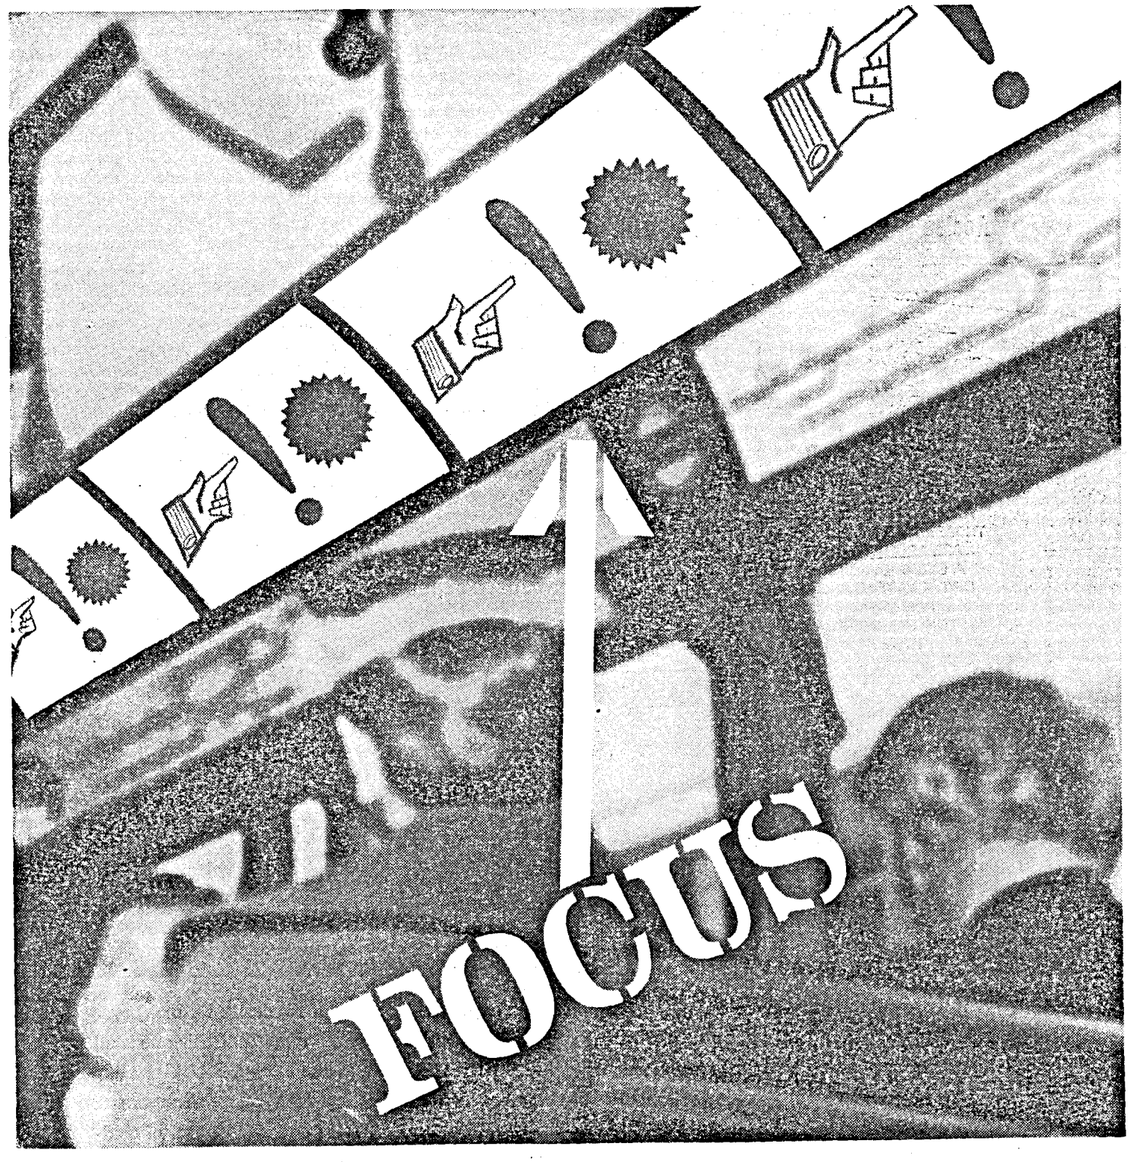
Makeshift Government



FROM OUR BONN CORRESPONDENT

DR ADENAUER entered the last lap of his long run as Federal Chancellor on Tuesday evening. His party colleagues clapped respectfully, but with little warmth, when the president of the Bundestag announced the result of the secret ballot. Dr Adenauer had cleared the hurdle of 250 votes out of 499 with eight to spare. Most of the Free Democrats looked as though they did not quite know what to do with their hands. Herr Mende went on writing, or pretending to write. But later he joined the group gathering round the Chancellor to congratulate him. Dr Adenauer stood in their middle—as old, upright and impassive as the hills.

That Dr Adenauer's fourth term of office will not last the full four years of the legislative period is stipulated—unconstitutionally, some are saying—in the written coalition agreement on the strength of which the Free Democrats reluctantly undertook to help the Christian Democrats re-elect him. The precise timing of his exit has been left to Dr Adenauer himself. His colleagues anticipate that he will choose to go later rather than sooner—probably in the summer of 1963. Yet perhaps, after all, the Chancellor may weary before then. He will be 86 in January, and the unfamiliar obstruction and growing impatience with which he is now bound to be confronted can also be expected to take some of the spring out of his step.

Dr Adenauer's list of ministers has yet to be submitted to the Bundestag, but its salient features were fixed during the coalition negotiations. The Free Democrats have secured five of the eighteen federal ministries—those of the interior, finance (or possibly justice), federal assets, refugees and either a new-fangled ministry for development aid, or one other yet to be determined. They have insisted further that one or another of these five ministers shall have the right to scrutinise the uses of the mounting secret budget for "promoting goodwill" for the Federal Republic at home and abroad. (This budget, whose allocations out of approximately a million pounds annually are known in full to the Chancellor alone, has come to be affectionately known to the uninitiated as the *Reptilienfonds*.)

Even more vexatiously for Dr Adenauer and the constitutional puritans, the Free Democrats have engineered a standing Bundestag coalition committee in which they, with only 67 seats in the

Bundestag, will enjoy equal representation with the Christian Democrats, who have 241 seats. The committee's chief business, it is laid down, will be to discuss proposed government legislation before it reaches the cabinet. The committee, which is due to meet on the first working day of every week while the Bundestag is sitting, will be composed of the chairmen of the two coalition parliamentary parties, their deputies and the two chief whips. The two chairmen will have the right to attend cabinet meetings. And so Herr Mende, who has ruled himself out of a ministerial post for the time being through having protested too much that he would never serve under Dr Adenauer, will be as good as in the cabinet all the same. In addition to all these potentially troublesome intruders, Dr Adenauer will be having to cope with many restive spirits in his own camp. Not for the first time, he has publicly slighted several highly placed Christian Democrats in the course of his self-absorbed coalition making—most notably the important trio Erhard, Brentano, Gerstenmaier. And the thought of his pending retirement must naturally set ambitious juniors scheming according to their various hopes.

DR ADENAUER will now be putting the finishing touches to his cabinet list, and preparing to set off to see President Kennedy in Washington on November 20th or thereabouts. There is not much of importance left to be done, for the salient appointments were allotted in the coalition negotiations. Herr von Brentano's successor at the foreign ministry is to be Herr Gerhard Schröder, 51, hitherto minister of the interior, who left the law for politics soon after the war. One of Dr Adenauer's most loyal, ambitious and at the same time contented ministers, Herr Schröder can be counted upon to work with conviction along the lines of foreign policy laid down by the Chancellor. As the coalition agreement states them, these are to be directed in general to the maintenance of peace, the reunification of Germany and the strengthening of the Federal Republic's ties with the West—in that order. It is further stated, in particular, that Dr Adenauer's new government will continue to press for closer political consultation and military integration within the North Atlantic Treaty Organisation—on the understanding that the Bundeswehr shall have access to "all the modern weapons, including modern means of delivery," together with an equal voice with the European Nato partners in the control of the warheads.

With a streak of anglophile in him ever since he read law at Edinburgh University in the nineteen-thirties, Herr Schröder can be relied upon also to implement as best he can the new government's declared intention of encouraging Britain to come into the European common market. The Berlin Christian Democrats have misgivings about Herr Schröder because he opposed the holding of the presidential election in Berlin in 1959, disputed the Berlin deputies' right to vote on that occasion and is alleged to have remarked that the West could not hold Berlin in the long run. But if for no other reason than that of his own future prospects, Herr Schröder is not likely to show any sign of wishing to deviate from the new government's solemnly proclaimed repudiations. These include not only any weakening of west Berlin's political and economic ties with the Federal Republic, but also any form whatever—"technical contacts" apart—of recognition of the east German regime, or any frontier settlement before the conclusion of a peace treaty with all Germany. That does not mean that Herr Schröder believes such developments are wholly avoidable.

Herr Erhard continues his long wait as vice-chancellor and economics minister. His patience in the face of Dr Adenauer's repeated slights is admirable. Yet it is losing him place in the rough and tumble of the struggle for the highest office. Herr Erhard has been doing his utmost this week to prevent the coalition spawning a new ministry for development aid that would poach to some extent on the economic ministry's preserves. But on Thursday it looked as though he was losing this particular battle. Herr Erhard's prospects of cutting a more powerful figure in German politics seem to be waning. Professor Carlo Schmid, one of the Social Democrats' leading minds, has observed that the trend is towards a coalition that will be headed eventually by Herr Strauss, the defence minister, with Herr Mende in support. Herr Strauss is expected to take part in the coming Kennedy-Adenauer talks in Washington.

The five new ministers likely to be drawn from the Free Democrats are scarcely known to the public at large. Dr Wolfgang Stammberger, who is expected to succeed Herr Schröder at the ministry of the interior, has been chairman of the health committee of the Bundestag. A passionate local patriot, he says that his real ambition is to be elected chief burgomaster of Coburg in two years' time. His departure from Bonn in 1963 would coincide, on present form, with Dr Adenauer's; thus he would make way for Herr Mende, then free of his present inhibition, at the ministry of the interior. Dr Heinz Starke, who is provisionally earmarked for the ministry of finance now that Herr Etzel is retiring on grounds of health, is a Munich lawyer and an administrative force at the Bayreuth chamber of commerce. He has played an active part in the European organisations at Luxembourg and Strasbourg. Herr Starke will be working closely at times with Herr Hans Lenz, who is to be the new minister for federal assets in place of Herr Wilhelmi, a Christian Democrat. Herr Wolfgang Mischnik, 40, a lanky refugee from east Germany, is taking over the ministry of refugees—not wholly to the satisfaction of the refugees' organisations, which would rather see in this job an "expellee" from one of the lost territories than a voluntary fugitive from Saxony.

According to the consensus of opinion among political fanciers, Dr Adenauer's coalition government is likely to be weak. The two parties concerned are not only inordinately suspicious of each other, they are also each impaired internally by conflicting motives and ambitions. The opposition Social Democrats are happily sharpening their knives in expectation of some fun at last. But domestic noises outside the Bundestag are probably troubling the coalition leaders rather more. Several trade unions—among them the million-strong engineering union—are responding to the rising cost of living by threatening not to renew their present wage agreements. The drying up of the stream of east German refugee labour since August 13th puts the unions in a strong position. A severe bout of industrial strife, combined with the unrelenting pressure from the east, could soon put Dr Adenauer's makeshift regime under strain.

Mr Fleming and the Market Monster

FROM OUR OTTAWA CORRESPONDENT

THE squat, earnest figure of Mr Donald Fleming is not of the type you would expect to find at the centre of a cliff-hanging serial of suspense and adventure. Yet his term of office as Canadian minister of finance continues to provide one thrilling instalment after another. In contrast to the summer assault on Mr James Coyne, then governor of the Bank of Canada, which was played with almost as much violence and villainy as a story by Mickey Spillane, the new autumn volume has a parlour setting more appropriate for Lord Peter Wimsey or, say, Miss Silver. The threads are more complex, the weapons more subtle; and the dénouement will turn on a clash of motives which puts this in the class of "psychological thrillers."

Mr Fleming's antagonist this time is not a solitary bank governor fighting out in the open, but the cloaked, anonymous, many-faced monster known throughout the underworld by the dreaded name of "the Market." To be fair to the monster, its ways were peaceable until Mr Fleming himself challenged it to battle in his June budget when he announced his determination to reduce the exchange value of the Canadian dollar by use of his official exchange fund. The blow appeared at first to have had the decisive effect of David's slingshots at Goliath. The Canadian dollar, thoroughly weakened by the fight between Mr Fleming and Mr Coyne (recounted in an earlier volume), dropped by mid-July to a discount of three per cent on the US dollar and stayed there right through September. The market monster appeared to have submitted to Donald Fleming, Canada's intrepid David of finance.

But the monster's meekness turned out a sham. Early in October it struck back. In vain Mr Fleming hurled million after million of dollar pebbles in the face of the speculators who were resolved to buy Canadian dollars. Towards the end of the month he ran out of millions and had to run to the brook for more. In the last week of October the Canadian government borrowed $45 million from the Bank of Canada. During the month Mr Fleming poured $186 million into the exchange fund to buy American dollars, just enough to enable him to hold his own. The discount was kept down to three per cent.

It was the first time Mr Fleming had resorted to the hard weapon of dollar millions instead of the soft weapon of quiet talk; and as dusk fell over the battlefield in the closing days of October he saved the day by returning to psychological warfare. His intelligence staff, busy as always identifying the enemy's forces, told him that the October assault came primarily from Canadians who had been keeping their foreign currency earnings abroad until they were sure they could not get a better price in Canadian dollars. They had concluded, said the intelligence officers of the Bank of Canada, that the lasting three per cent discount was what Mr Fleming wanted and that the exchange rate was henceforward more likely to go up than down. So they rushed in to buy Canadian dollars.

On this advice, in the closing days of the month, Mr Fleming issued at last a clear statement that the market monster was all wrong. The government still wanted the dollar to go down rather than up. The intelligence officers and psychological warriors were quickly vindicated. Mr Fleming's statement had more effect than all his millions, and last week the discount widened by more than a quarter of a point without official intervention.

The first round of the fight went to David. But the result of the next round has still to be seen, and the conditions are bound to be different. Mr Fleming has exposed his heavy dependence on psychological weapons, at the same time as he has revealed the limited supply of pebbles to back them up. When his cash deficit for the year is already known to be at least $1,000 million, he cannot go on hurling nearly $200 million a month against the market monster. His only hope of defeating it is an appeal to its self-interest. This, of course, was always so. Self-interest was what had kept the monster shamming dead throughout August and September. The difference now is that the fact is openly exposed.

The policy of Mr Fleming's June budget depended on two promises: a lower exchange rate and lower interest rates. The first now depends entirely on the second. The spread between Canadian and American rates has already been narrowed enough to stop the Canadian provincial governments from offering new issues in New York, but not enough to stop some foreign buying of Canadian issues. If Mr Fleming can reduce the interest differential, or the exchange rate, or both, enough to discourage any inflow of foreign funds, he will have the market monster prostrate. Theoretically it could be calculated just what spread of interest rates is needed in combination with a given exchange rate. But in practice, no mathematical calculation can subdue the monster; everything depends on his frame of mind. Mr Fleming is out of the Mickey Spillane book. His new thriller is strictly psychological.

Pyramid in the Fog

BY OUR MIDDLE EAST CORRESPONDENT

Having cracked down hard on "reactionary" elements in Egypt, by means of arrests and sequestration of property, President Nasser announced last Saturday a new scheme, pyramidal in size if not in simplicity, for giving his regime a more democratic aspect. A preparatory committee is to present within a month a report on how to convene, through free elections, a national congress of the popular forces. This congress, which is to meet in January, will represent the peasants, workers, industrialists, merchants, free business men and other "popular forces" or, to simplify, social groups. The congress will debate in public a charter of national work, to be introduced by President Nasser himself. The charter will form the basis for the election, later on, of constituent committees of the National Union; these in turn will be the foundation of the general congress of the National Union, which is destined to be the supreme popular authority.

Posterity will doubtless discover what all this is about, for the pertinent questions that now suggest themselves are numberless. Who is to decide which are the true popular forces? Will the election of the representatives of those forces be really free? Will the debate on President Nasser's charter of national work be uninhibited? What will happen if the supreme popular authority clashes with the government? Will it ever be allowed to do so? *The Economist* is not alone in its fog of incomprehension. The political commentator of Cairo radio, in a brave attempt to explain the new plan to the Egyptian people, pithily remarked:

> The public discussions on the level of the whole homeland during the successive election operations which will be held horizontally and vertically should be a main springboard for the development of the popular consciousness which is the basis of any sound democratic organisation by which the people can specify their position and objective as well as the method for the achievement of their objective with all their potentials and might.
