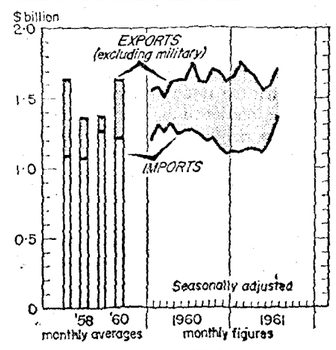
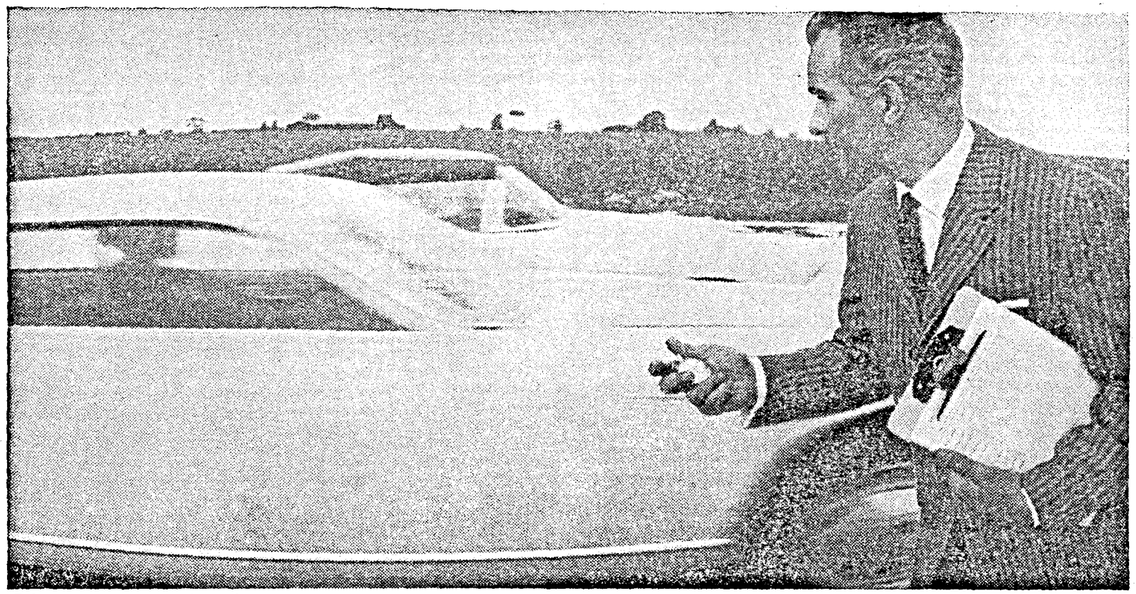
MR WAGNER, the Mayor of New York City, has never looked like a giant-killer, but last Thursday, when Democrats in the city chose him as their candidate for a third term, he walked off with Tammany's scalp. Tammany is the Indian name adopted by the Democratic political machine in Manhattan. It tried to punish the Mayor for turning against the organisation and allying himself with the reform forces in the party by pitting its own candidate, Mr Levitt, against him. Instead a record number of Democrats went to the polls, stirred by Mr Wagner's campaign against the "bosses," and swamped Mr Levitt. The Mayor won 451,458 votes, his opponent only 219,672. The city's reform Democrats, led by Mrs Roosevelt and ex-Governor Lehman, cannot claim a monopoly of the credit, for the machine was rebuffed, not only in Manhattan, where they are strong, but also in the other four boroughs, where they exert hardly any influence. The Mayor carried his own team to victory and won control of the Board of Estimate, which holds the purse-strings in the city, but the sweetest triumph was that of Mr Lanigan, a reform Democrat who ousted Mr De Sapio, the Tammany boss, from his only elected post, that of district leader in Greenwich Village. This defeat, on his home ground, costs Mr De Sapio his leadership of Tammany automatically, though he remains Democratic National Committeeman. In all the reform Democrats won 14 of 16 contests over district leaderships, a big step toward their goal of winning control of Tammany—and eventually of the other city machines—from the inside.



The Republicans have suffered a rude awakening from their dream of capturing Democratic New York City for the first time in a century. This would have been a fine feather in the cap of Mr Rockefeller, the Republican Governor who hopes to succeed himself next year and wants the Republican presidential nomination in 1964. If Mr Wagner had been defeated in last Thursday's primary he would still have stood in November, thus splitting the Democratic vote and perhaps letting through the Republican candidate, Mr Lefkowitz. Now Mr Lefkowitz's defeat is as certain as anything can be in politics, in spite of the evidence of corruption and inefficiency in the city's government.

Whether Mr Wagner and the forces of reform will work as well together in power as they worked to defeat the "bosses" is less sure; already they seem to have different ideas about Mr De Sapio's successor. But the tremendous shaking given to the Democratic machine opens the way for the Mayor and the national leaders of the party to dislodge the short-sighted state and local bosses, who stand in the way of building a more vigorous and united party in New York. Mr Kennedy cannot afford local feuds in New York State, which casts the greatest number of votes in presidential elections—particularly since Mr Rockefeller may be the Republican nominee in 1964.

Strike on Time



IN spite of an agreement which gave the automobile workers everything they wanted in purely economic terms, there have been strikes this week at over two-thirds of the General Motors Corporation's 129 factories. Coming at the beginning of the new model year, when supplies of parts are low, these strikes will soon stop all the company's operations, even at those plants where agreement has been reached on the social issues which are the cause of this week's unexpected troubles.

The main question is that of "relief time," in which the worker can leave the production line to deal with his "personal needs." Supposedly at General Motors 24 minutes are allowed for this in each eight-hour shift. The union claims, however, that not only is this less than is given by other companies but also that it can seldom be taken in practice at GM, "a glorified gold-plated sweatshop," according to Mr Reuther, the head of the automobile workers. While he seems to have come to an agreement on Monday with GM on this point on a national level, details of how this will work out in individual factories must still be settled locally. So

FOREIGN TRADE OF THE UNITED STATES

While exports were higher in July than they had been for five months, they were still running behind last year's figures and imports showed a much larger increase, to the highest level for nearly two years. This was not unexpected but is ominous for the future health of the country's balance of payments.

ALCAN Aluminium makes things cheaper to own

Aluminium castings in Alcan Enfield alloy LM.2

Stand up who wrote alcuminium!

It's not a bad attempt, but whoever wrote it should have made two words: Alcan Aluminium. Now, will you all stand up, please, and examine your desks and chairs to see exactly what I mean . . .

Schools of every kind throughout Britain are equipped with desks and chairs made from Alcan aluminium by E.S.A. of Stevenage. Manufacturers choose aluminium because it can be cast to almost any design, is light to handle, and easy to assemble and transport. Schools favour aluminium for desks and chairs because it makes them strong and stable. The chairs are also simple and safe to stack. They are ideal for export because they are robust and termite-proof and thus keep replacement costs to a minimum.

Thousands of these desks and chairs, highly competitive in price, are produced each week—a fact that is a lesson in itself. For it shows how our children learn to appreciate the modern metal that will help to shape their adult lives.

ALCAN

Britain's most widely used aluminium — from Canada

AMERICAN SURVEY

AMERICAN SECRETARY TO ADMIRALTY 23 SEP 1961 PLEASE RETURN

AMERICAN SURVEY is published partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

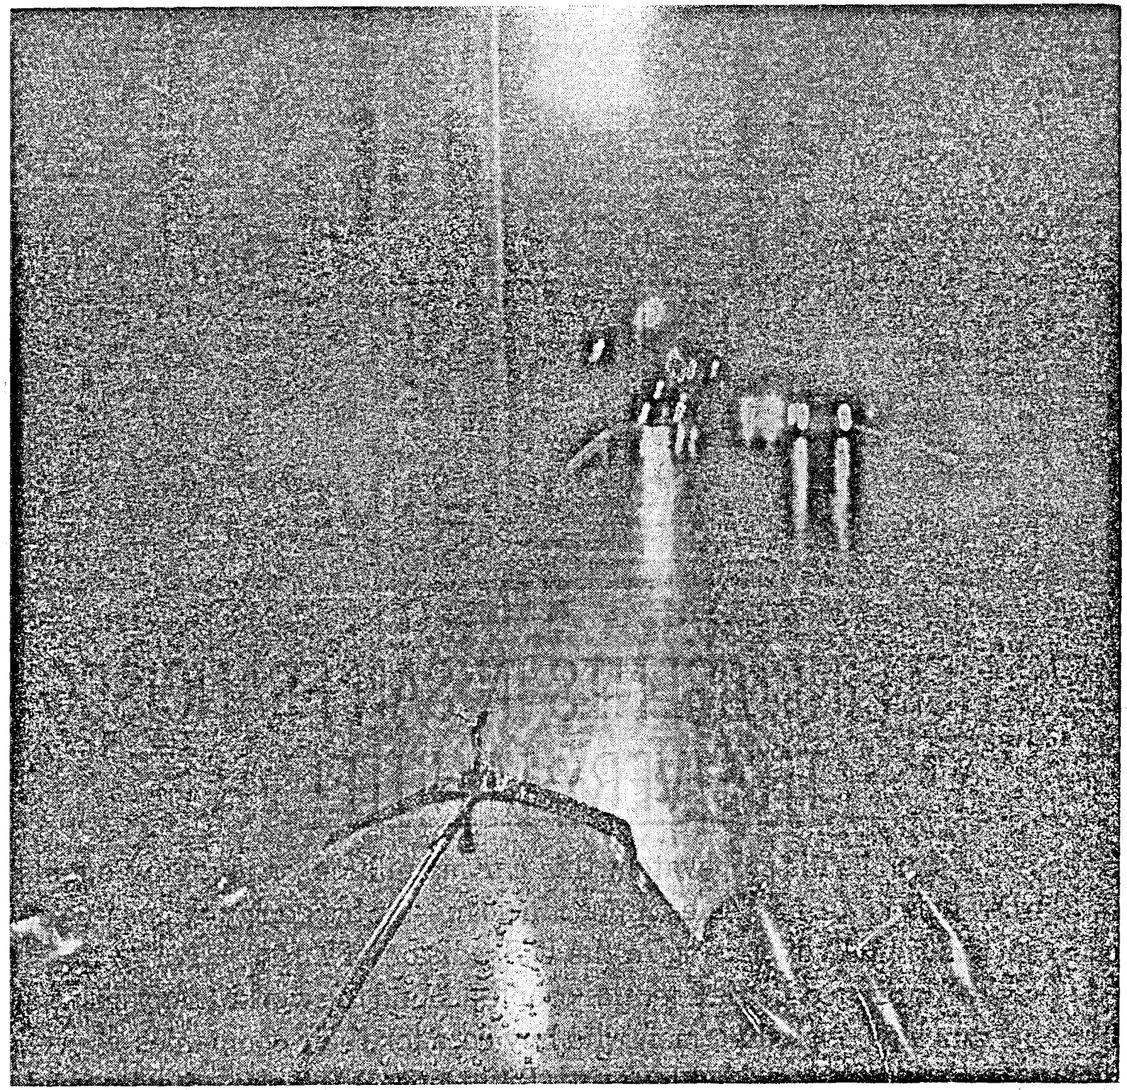
The Pentagon Prepares

WASHINGTON, DC

To outward appearances over the past two months the United States has been methodically placing itself in a position to fight—if it must—a new war in Europe mainly with the weapons and tactics of the last war. The latest, but not the final, stage in this process, for which the ugly word "mobilisation" is avoided, is the reinforcement of the Seventh Army in Germany with 40,000 troops, specialist arms, armour and equipment. The President's plan for strengthening the military forces is taking shape phase by phase; a not unimportant aspect of it is to awaken the country by the repetitive effect (practised so successfully by the advertising fraternity) of a daily stream of military announcements in black headlines.

The Army, which pleaded in vain at the time of the defence budget last February for an additional 50,000 men (the plea was refused partly because it was suspected that they would be wasted in overblown establishments), is to be built up from a level of 860,000 men (10,000 below authorised strength) to 1,008,000 not later than June, 1962. By October 31st the Army's strength will be about 967,000 men, to be achieved by recalling 50,000 reservists, retaining 84,000 enlisted men due for release and increasing the number of conscripts (who are used to man the Army only). The trained cadres and complete units sent to Europe will be replaced out of the reserves; to be ready to replace army divisions which may be sent overseas, four divisions of the National Guard (rough equivalent of the British Territorials) are being built up to strength as fast as the training camps can deliver the men. The Army is thus being expanded not *en masse*, but by formations as they are ready for service. The total number of ready reservists is 4 million, 400,000 of them in the National Guard.

The emphasis is on the Army. However, the Navy is to recruit 26,800 more men, and is taking old ships, mainly for anti-submarine duty, out of "mothballs." The Air Force is recruiting 63,000 more men and its parallel increase in equipment is achieved simply by retaining six B-47 bomber wings (370 bombers) due to be disbanded as obsolete (they require air-tankers to give them the requisite range). Both the Air Force and the Navy are, of course, receiving new equipment, but deliveries cannot be expedited. Nor will the orders placed for new Army equipment materialise quickly. American reporters noted glumly that the 1,500 men sent to Berlin carried weapons most of which were inferior to those of the Russian troops; the shortcomings of the material in the hands of reservists on manœuvres this year have also been observed. The cost of these preparations is $3.4 billion and the men sent to Europe will add about $150 million to the debit side of the American balance of international payments.



But what is the thinking behind all this? The only battle with conventional weapons of which there is any immediate prospect would seem to be against a force (presumably east German) obstructing the *autobahn* leading to Berlin. Few American strategists think that any such battle would be protracted or would involve divisional strengths; either one side would withdraw or nuclear war would explode. The only other conventional contingency would seem to be a Russian attack on the North Atlantic Treaty Organisation's shield (perhaps after an attempted American probe down the *autobahn*)—a quick, but non-nuclear *blitzkrieg* to grab western Europe. If this is really conceivable, it makes sense to strengthen General Norstad's forces to the level of 30 divisions which was planned years ago. A stronger Navy also makes sense; for presumably in that event the Soviet Navy, poised for its Arctic manœuvres, would disrupt the Atlantic supply routes.

But such a supposition contradicts long-held allied views, for not only does the American Department of Defence assume that any attack on Europe would develop into all-out nuclear war, but Mr Khrushchev has also concurred publicly with this opinion. Moreover, the build-up hardly fits in with the American estimate that allied strength in Germany is substantially superior already to the conventional forces which the Russians have in east Germany, that the strengthened Seventh Army alone is equivalent in "force levels" to the immediate Russian divisions facing it. It is fallacious to add up ground strengths in terms of divisions, which are a variable yardstick nowadays. Seventh Army is still rated as having only five divisions, yet will contain nearly 300,000 men; a Russian army of that size would be counted as having up to 20 divisions. Thus on the equation that the attacking force must have a three-to-one superiority, no conventional *blitzkrieg* would seem possible; likewise this equation rules out any successful allied attack eastwards.

Such reasoning dominated Mr Kennedy's military thinking when he took office. Then came, after the Vienna meeting with Mr Khrushchev, the call for "flexibility" and "non-nuclear choice"; but how much additional flexibility this conventional build-up is supposed to confer it is hard to say. One of the justifications now advanced for it is that conventional forces must be adequate to handle several threats simultaneously—Iran, for example, as well as Berlin. The second is, however, more important; it is that the build-up is designed to make the Russians believe that the United States is ready to use nuclear weapons.

The increase in American forces in Europe, it is said, should make it clear that American interests are so deeply involved there that any engagement with them means all-out war. Thus Mr Khrushchev should not be so pleased at having Britain and France as his thermonuclear hostages, because he will automatically have 300,000 American troops, not to speak of their dependents, as his hostages as well—and for such hostages the United States would risk nuclear war. Admittedly, this increased involvement is aimed at stiffening the backbone of the allies; there was an audible sigh of relief in the Pentagon when Mr Watkinson announced that he would get another division ready (a few weeks ago he could only promise to try to get 5,000 men out of a reluctant British Cabinet). But the main intention is to ensure that the Russians must try to break the United States' will first and to remind them that the United States could act independently of its allies.

The Air Force may not accept this logic entirely. It tends to the view that a build-up of conventional forces is irrelevant to the nuclear balance. It believes that it has superiority of overkill; that the Russians could not stage a successful surprise attack; that its main weapon, the B-52s and B-58s huddled on fifty vulner-

The Best Car in the World

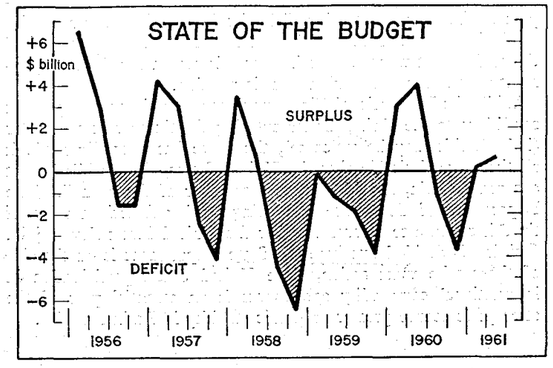
Whatever the weather—full ventilation, air conditioning or heating ensure a journey in complete comfort for driver and passengers of the Rolls-Royce Silver Cloud II.

The powerful 8-cylinder aluminium engine gives acceleration and performance in excess of any previous Rolls-Royce. This, together with fully automatic transmission and power-assisted steering makes it possible to maintain high average speeds without fatigue. An exceptionally high degree of safety is provided by three separate braking systems—two hydraulic and one mechanical, acting independently and in concert.

By Appointment to Her Majesty The Queen Motor Car Manufacturers Rolls-Royce Limited

must thousands of other arguments, which vary from plant to plant, on details such as job classification, shift working, safety regulations, free overalls and how to keep floors from being slippery. Moreover, the long deadlock over relief time has kept the national negotiators in Detroit from getting down to other non-economic questions—production standards, overtime, union representation, working foremen and racial discrimination.

The company blames Mr Reuther for the strikes, arguing that he could have persuaded his members to continue working while local discussions were going on. This might not have been easy, however, for the widespread readiness to strike suggests that there is an underlying dissatisfaction with working conditions in many GM plants. Now Mr Reuther has postponed the meeting of the union's council which was to have ratified the new contract on Thursday. But there can be no doubt that he intends to sign the contract eventually or that much the same terms will be agreed with the other two big manufacturers, the Ford Motor Company and the Chrysler Corporation.



Economically these terms represent a brilliant victory for Mr Reuther, which will enhance his slightly tarnished prestige in the labour movement. The actual increase in wages under the new three-year contract comes to an average of 12 cents an hour, allowing for the fact that the company is now to pay all, instead of only half, the cost of medical insurance for its workers. But more important in the long run are the fringe benefits—increased unemployment pay, so that a laid-off worker will get about 75 per cent of his ordinary earnings for a full year, and compensation for lost earnings when short time is being worked. This means that in effect automobile workers will have a guaranteed annual wage, will become salaried employees, something which Mr Reuther has been demanding for them since 1955.

The Long and the Short

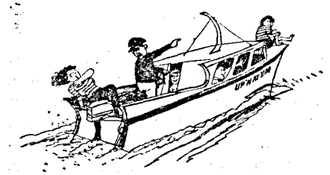
NEW YORK

THE Treasury Department's team of debt managers, headed by Mr Robert Roosa, is continuing its innovations with a $12.6 billion package of both short and long-term issues. It has announced that holders of two outstanding issues of bonds totalling $7.6 billion and paying interest of 2½ per cent will be offered other, long-term obligations paying 3½ per cent and has informed the money market that it will make short-term borrowings of $5 billion in cash over the next two months. It is unusual for the Treasury to announce its programme in advance, but its officials decided on a frank approach because of rumours on Wall Street that the Administration's spending was getting out of hand; if the debt managers had *not* revealed their plans the chances are that the market, which is already nervous about the prospect of a resumption of inflationary pressure, might have pushed up interest costs in anticipation of even larger borrowings. The Treasury had nothing to lose by letting investors in on its intentions, for the way in which it will raise the funds is completely in line with the market's expectations. This is not the first time that the Treasury has tipped its hand but it does mark a change from recent practice and indicates that the Treasury feels that it has its finances under control.

The advance refunding technique is not new either—it was adopted in the latter days of the Eisenhower Administration—but this is the first time that the Treasury is offering a yield which in practice comes to over 4¼ per cent; this is the legal ceiling on the interest paid on government bonds with a maturity beyond five years. Earlier this year the debt managers decided not to ask Congress to raise the ceiling; instead they got the Attorney General, Mr Robert Kennedy, to agree that the limit applied only to the coupon rate on a bond and not to its true yield. Holders of the 2½ per cent bonds issued during the war and maturing in 1970 and 1971 would have to reinvest at yields of over 4¼ per cent to match the actual return on the 3½ per cent bonds which run from 1980 to 1998. In spite of this, the Treasury does not expect that more than about a third of the holders, mainly insurance companies, savings banks and individuals, will accept an exchange which will lock up their funds for a long time. But the managers of the debt hope that at least $2 billion worth of the old bonds will be

exchanged for the longest of the new ones, to offset in part the increase in the short-term debt which will result from raising $5 billion in new money at short term.

The experts had expected a much larger refunding, but evidently the Treasury felt that anything bigger might unsettle the capital market and raise long-term interest rates faster than conditions warrant. It is fairly confident that its present programme will not have a marked effect on the structure of interest rates. Mr Roosa himself admits that the economy is moving on to new high ground, but he feels that interest rates need not follow suit if inflation is avoided. And while the financing and refinancing is going on the central bank will be smoothing the Treasury's path by supplying reserves to the banking system. Finally, the market seems to be accepting Mr Roosa's assurance that the present programme will cover the Treasury's cash needs until the end of the year and that no more borrowing of any substance is likely to be required during the first half of 1962. This should calm inflationary fears and hold down interest rates, at least over the short term. But it may be another story if increased deficit spending forces the Treasury to come back to the market for more money.



Dipping into the Tin

CONGRESS has agreed that the government may sell two million pounds of waterfowl down from the strategic stockpile, since now that suitable substitutes are available for military sleeping bags these feathers are no longer an essential reserve supply for wartime use. They may even be sold immediately without the six months' notice which is required under the Act which set up the stockpile. But it is doubtful whether Congress will find time, in the present rush for adjournment, to be equally amenable on the much more controversial question of sales of tin from the stockpile. How much tin there is in this reserve is secret—a frequent estimate is 300,000 tons—but it is certainly more than is now needed for emergencies, even though the United States imports all its tin.

With tin prices pushed up by shortages of the metal the General Services Administration, which manages the stockpile, is anxious to relieve the pressure on American consumers of tin and to dispose of some of its surplus at a favourable price. So it is asking for permission to sell 10,000 tons at once and another 40,000 tons at the end of the statutory six months. GSA is already selling

2,500 tons of a special stock of just under 4,000 tons, which can be got rid of without congressional approval, in an orderly manner which augurs well for its promise that the much larger quantities will be disposed of, in small parcels, in such a way as to avoid disrupting the tin market. But the sales can hardly fail to prevent the price of tin from rising as high as it might otherwise do, even if it is not actually driven down—after all, that is part of the purpose of the sales. But this will be far from welcome to such tin-producing countries as Bolivia and Indonesia, which the United States does not want to offend. For this reason the State Department may encourage Congress to do nothing.

While the International Tin Council cannot object under present conditions to the United States entering the tin market as a seller (indeed, this may be welcome), the move has naturally made it all the more desirable that the United States, the world's largest consumer of tin, should become a member of the council. The Department of Commerce is meeting leading American users of tin this autumn to discuss whether the United States should join. Opinion is divided but here the State Department is on the side of those who want action, since United States participation in international commodity agreements is an essential part of the attempt to secure greater economic stability in Latin America.

Weekend Vikings

FROM A SEAFARING CORRESPONDENT

As part of his carefully planned campaign for the Presidency last year, Mr Kennedy chose to be photographed on his small sailboat, rather than on a golf course although apparently he would as soon spend his time off there. In this matter Mr Kennedy showed his usual good political judgment : far more Americans own boats than own golf clubs. Weekend boating is both the largest and the fastest growing active sport in the country today. One way and another about one person in five used the lakes, rivers and waterways for recreation last year and during the past ten years the amount of money spent on pleasure boats and boating has increased nearly four-fold—from $645 million in 1951 to an estimated $2.5 billion or more this year. The total number of boats in America is now said to have passed 8 million. With a little crowding, this is a sufficient number of bottoms to carry the entire population—and on a busy summer weekend efforts to do this can be observed at almost any water resort.

There are many reasons for the explosive popularity of boating in America. More money to spend, and more leisure time to spend it in, explains the wage earner's interest. Spectator sports—baseball in summer, football in winter and horse racing all the year round—have their devoted followers but these great American games have at least two drawbacks. They are not family sports, to be enjoyed not only by father, but also by mother and the children, and they offer no chance for active participation. Nor is golf suitable for family recreation ; country clubs are expensive and almost as crowded at weekends as the roads which no longer encourage travel for pleasure. So each year more and more Americans buy a boat so that the family will have somewhere to go on a beautiful day. "As easy to operate as a car and there are no speed cops or traffic laws," the salesman says enthusiastically. Moreover, the purchase of a boat can be financed as freely as that of a car: boat credit is second only to automobile credit in America and many car dealers are going into the boat trade.

The family budget makes it comparatively easy to decide between the bewildering choice of small craft which are available. A modern fibreglass runabout can be bought, complete with motor, for less than $1,000 ; it will be about 16 feet long, adequate for a family of four or five, and will cost about $150 a year to operate. A trailer to carry the boat to the water will cost about $200 more and will serve during the week, and over the winter, as a mobile storage dock. The whole package can be bought for as little as $100 down, with monthly payments of less than $50. More and more "two cars in every garage" are becoming "one car and a boat."

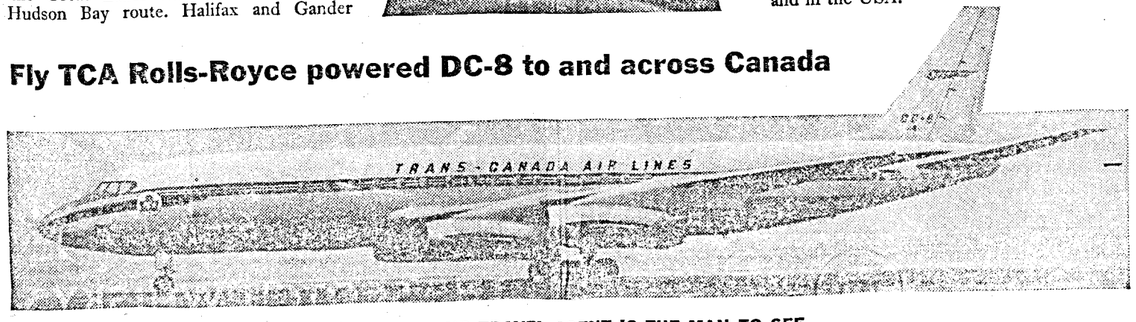
The boat in the garage is a status symbol in the neighbourhood. The children of a new boat owner are elevated immediately in their social set on the basis of promised trips to come. The owner himself is envied openly by less fortunate neighbours still tied to their lawn mowers for weekend exercise and his wife is accorded the esteem associated with the pioneer women who braved the perils of the unknown. From a stranger who hangs around the house at weekends, father is promoted in one stroke (of the hire-purchase pen) to Captain of the Ocean ; on the water his authority is absolute—as it is far from being at home—because even mother, secretly terrified at the ubiquitous possibilities of drowning, is quick to point out that "you can't come back next week if you don't do as daddy says."

Most weekend boatmen leave their business and personal worries behind ; for them and for their families, boating is a way of relaxing—a day or two of leisure between the unending weeks of routine labour. Even the smallest brook in Iowa is a thread in the tapestry of the sea and the man rowing his fishing skiff on man-made Lake Mead is an emphatic descendant of Viking oarsmen. But it is also true that week-end boatmen sometimes exhibit a tyrannical outlook inherited from Captain Bligh which can ruin an otherwise pleasant Sunday cruise—and not only for those aboard his own craft.

THE road hog is also found on the water ; many of them are involved in the growing number of accidents which has accompanied the growth of boating. Three years ago Congress gave the states the right to license all watercraft and, indirectly, to control their operation. The law also requires that all serious boating accidents must be reported to either the state or federal authorities. The figures are still not complete but the total number of accidents seems to be about 1,500 a year and the death rate is lower than for almost any other form of transportation. Alcohol is a negligible factor in these accidents ; the main cause is carelessness, compounded by ignorance, on the part of the person operating the boat.

To combat this, a fraternity of boatmen known as the United States Power Squadrons has for many years offered courses in piloting, small boat handling and even more advanced subjects, including celestial navigation, during the winter. The basic course is usually free, and prospective boat owners are as welcome as the captain of the largest yacht. Every major boating centre in America has one of these brotherhoods and each of the local squadrons is organised with the primary purpose of teaching safe and sensible boating, with the emphasis on skill and knowledge.

Upwards of fifty thousand boatmen took advantage of these courses last year, spending one or more evenings each week during the winter months learning the rules of the sea, how to distinguish port from starboard, and the meaning of the number, colour and shape of the government's aids to navigation. The Coast Guard, which has had to contend with the less pleasant side of the increase in boating activity, has stepped up enforcement of its rules requiring that there must be enough life belts and other safety equipment aboard all craft. The Coast Guard also offers its own courses in piloting and handling boats, so no one need plead ignorance of the rules of the sea or of the best way to handle his craft safely.



Canada is 14 miles from Trafalgar Square

(plus a Rolls-Royce powered DC-8 ride)

Canada starts at London Airport, 14 miles from London. Take a seat in the limousine comfort of a Rolls-Royce powered DC-8—and the whole width of Canada is half a day away. Montreal and Toronto. Winnipeg and Vancouver by a choice of routes—along the Great Lakes via Toronto, or by the Hudson Bay route. Halifax and Gander and Edmonton. Also Cleveland, USA, via Toronto. UNLOADERS

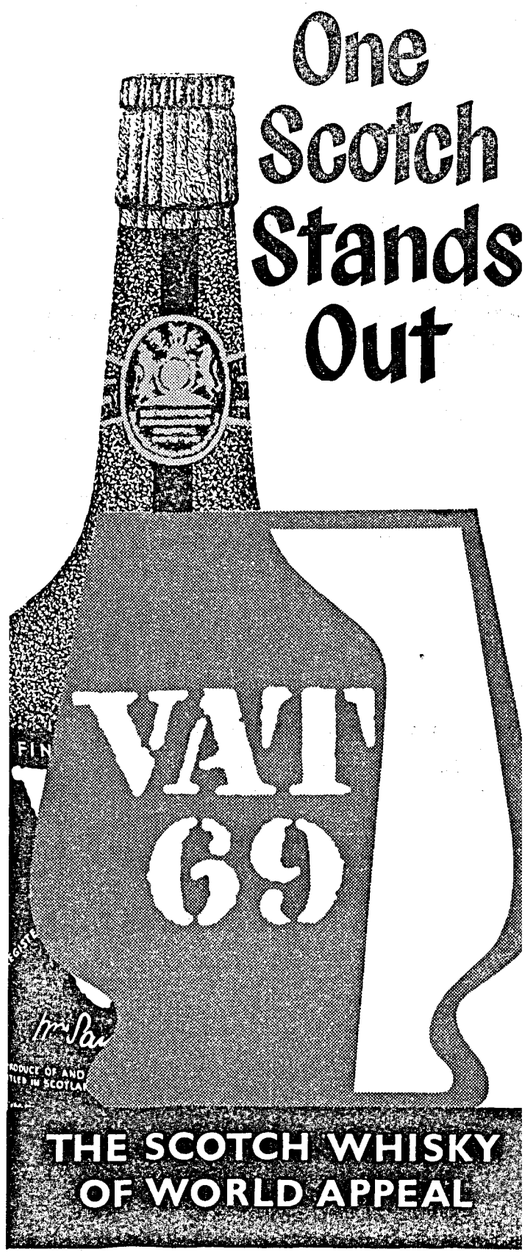
IHI moves 1,000 tons of coal or ore every hour

Large-scale coal and ore carriers demand fast and equally large-scale unloading facilities. This high-capacity, high-speed IHI unloader moves both coal and ore at the rate of 1,000 t/h at the dockside of Japan's biggest steelmaker.

The problem of maintaining the steady 1,000 t/h pace with materials of widely varying weight-per-volume ratios was solved by IHI engineers who designed a huge 20m³ grab bucket capable of hauling 16 tons of coal with every pass.

Design and manufacture of superior materials handling equipment is a specialty at IHI, Japan's leading heavy-industry company.



IHI engineers can recommend the unloaders, bridge transporters, luffing cranes, tower cranes, floating cranes, overhead cranes, and special purpose cranes to meet all your needs. A brochure will be sent promptly on request.

If it's heavy, IHI ask IHI

One index of the growing popularity of boating is the considerable number of boat shows which take advantage of the slack winter season to beguile present and prospective owners. There are now some forty national, regional and local shows scheduled on a regular annual basis across the country. The largest and best is the New York Motor Boat Show now held each January in the city's giant new Coliseum. A total of 420 manufacturers of, and dealers in, boats were allotted space this year—including one stock broker who advertised that "boating stocks are growth industry stocks"—and another hundred or so who applied for space had to be turned away.

The show is in many ways typical of boating in America today. Sail fins, inspired by Detroit's worst, are stuck on small craft to attract the buyer who wants something different and trading up to a larger boat from a small beginning is encouraged by batteries of "hard sell" salesmen. In some cases these have gone so far that the Federal Trade Commission has been forced to issue government rules to prevent gross misrepresentation. Even sailboats are not immune to the high pressure tactics of the new crop of boat builders. Fibreglass craft are more popular than wood; dacron and nylon have made cotton sails as rare as a hemp mainsheet. But despite the hustlers, and not because of them, boating is booming. And it is expected to continue to boom as more and more Americans discover the welcome relief from the tensions of modern living that a day afloat offers, whether on a small cruiser or a 12-metre Cup Defender and whether the man at the helm is a plumber or a President.

No Banking on Justice

DURING the past fortnight Americans have been treated to a strange spectacle: the attempts of the Department of Justice to block, at the eleventh hour, two bank mergers, in Chicago and New York, which had been approved by the appropriate federal banking authorities. In both cases the courts refused a restraining order and the mergers went through. But the Justice Department seems determined to dissolve them, although it admits that it is difficult to unscramble such eggs. Under a law which Congress passed last year to tighten control over the rising tide of bank amalgamations and, ironically, to subject them to more uniform conditions, every merger must now receive the permission of the relevant federal banking authority: the Comptroller of the Currency for national banks, the Federal Reserve System for state banks which belong to it and the Federal Deposit Insurance Company for other state banks. Each agency is supposed to have the power of final decision although they are required to consult each other and to seek the views of the Department of Justice as to what the effects will be upon competition.

But even under the Eisenhower Administration the Department of Justice felt that it had a separate responsibility, under the anti-trust Acts, to halt mergers that threatened to lead to undue concentration in banking, which some people consider particularly dangerous. Early this year it filed antitrust suits to halt three consolidations, two of which had been approved by the Comptroller of the Currency, Mr Gidney, a rather complaisant holdover from the Eisenhower era. To prevent further embarrassment of this kind he was persuaded not to issue any more approvals over the objections of the Department of Justice until the key case, in Philadelphia, had been decided, probably in December. The anti-trust lawyers feel that they have a strong hand to play, on the score of concentration of banking assets, in Philadelphia, but the most important issue is whether banks, which in the past have been held to be subject only to the rather lenient restrictions of the Sherman Act, are subject, as the Justice Department now argues, to the harsher Clayton Act.

In Chicago, however, Mr Gidney felt that there was enough hardship to the banks concerned to warrant an exception to his general truce with the Department of Justice. In New York the department is embroiled with the Federal Reserve authorities, who apparently agreed with the state that the creation of the Manufacturers Hanover Trust Company, now the fourth largest bank in the country and the third biggest in New York, with assets of about $6 billion, would not harm competition unduly—probably because the Hanover dealt primarily with industry, the Manufacturers Trust with individuals. The position of the antitrust lawyers (apart from their desire to discourage stories that they are "going soft" on bank mergers) is that, after the merger, the five largest commercial banks hold 75 per cent of New York City's deposits in such banks and 77 per cent of their loans. What the banking community wants is for someone, either the courts or Congress, to knock all these heads together and make it plain what mergers are acceptable. The alternative route to expansion is the opening of more branches, but this is slower, more costly and, in eleven states, prohibited.

New Life for Civil Rights

THE four-year-old Civil Rights Commission won a short new lease of life—another two years—from Congress this week just two months before it was due to go out of existence. This reprieve falls far short of the permanent status which the President sought, but it is better than nothing for an Administration which has put off all other legislation dealing with civil rights until next year. As it was the Bill had to reach the floor of the Senate as a rider to an appropriations Bill because, as happened two years ago, the Judiciary Committee dominated by Senator Eastland would not report it out. President Kennedy's two new appointments to the six-man commission, one of whom is a Negro, give it a majority which favours the vigorous extension of civil rights and this does not endear it to the South.

It is probably as well that the Senate voted when it did last week. A few days later the commission—which Mr Kennedy plans to use much more than President Eisenhower did in the formation of government policy—issued the first of a series of reports on the denial of civil rights. This dealt with the denial of voting rights, primarily in eight southern states where, in 100 "black belt" counties, most members of the Negro majority are prevented from going to the polls through discriminatory application of the qualifications demanded for registration and voting. The commission praised the Department of Justice for its vigorous use of the weapons given to it by the Civil Rights Acts of 1957 and 1960. The department is examining voting records in six states and ~~has~~ brought suits to protect the Negro franchise in fifteen counties in five states, including, for the first time, the most backward one—Mississippi. But the commission considers that broader legislation is necessary and proposes, with the two Southerners dissenting, that Congress should act, under the Fourteenth and Fifteenth Amendments, to make it impossible for the states to exclude people from voting except for reasons of age, residence, legal confinement or a criminal record. It also thinks, unanimously, that if there is to be a literacy requirement, an elementary education should be considered adequate and that Congress should require election districts to be equal in population. A finding which should recommend itself to the South is that the economic backwardness and one-crop economy of the black belt is closely related to the denial of civil rights to Negroes and that the federal government should try, by special assistance, to promote an economic climate which favours better race relations.

Textbook Marriages

FROM A SPECIAL CORRESPONDENT

HISTORICALLY, book publishing in the United States has been a personal or family industry dominated by small firms. Book sellers, book salesmen and book editors became publishers, usually beginning with small financial resources. Originally financed by credit from their suppliers and in time by loans from banks, these firms expanded as they prospered but the substantial capital needed for more rapid growth was unavailable. To many American publishers, traditionally convinced that financial and editorial control should rest in the same hands, this capital limitation became something of a virtue. The character and the integrity of a publisher's list were more important than making money and he was judged not by the size of his fortune but by the standards which he could maintain in his publications while managing to show a small profit.

After the war the increased cost of producing books, of advertising and selling them and of doing business generally favoured the larger publishers and forced others to consolidate such services as warehousing, billing and shipping. Moreover, the prospects for expanding sales, particularly of school and college textbooks, were so bright that they encouraged growth by the most immediate means—acquisition and merger. In the past few years, and particularly since the autumn of 1959, the dances of corporate courtship among American book publishers have seized the attention not only of the publishing fraternity itself but also of the American investing public.

In each of these recent mergers or acquisitions in book publishing a publisher notable for his work in a given field, that of, say, college textbooks, has extended his range by acquiring, for example, a series of high school social studies or of primary school science texts, or a number of useful reference works, a series of paper-back reprints of classics used in colleges or a first-rate list of general book titles which, printed in paper-back editions, would find a market among students. The direct result has been the creation of several new major publishing firms, offering publications ranging from technical reference books down to juveniles for school and public libraries.

An example is the purchase within the last eighteen months by Random House of Alfred A. Knopf, Inc., Beginner Books, Inc., the L. W. Singer Company, Inc., and Pantheon Books. Another example is the Western Publishing Company, which bought a firm specialising in children's books last February and a publisher of high school and college texts two months later. The rapid growth of such companies and the evident savings obtained by an integration of lines have prompted other firms to think of merger and acquisition, particularly since the necessary capital is now available through public financing.

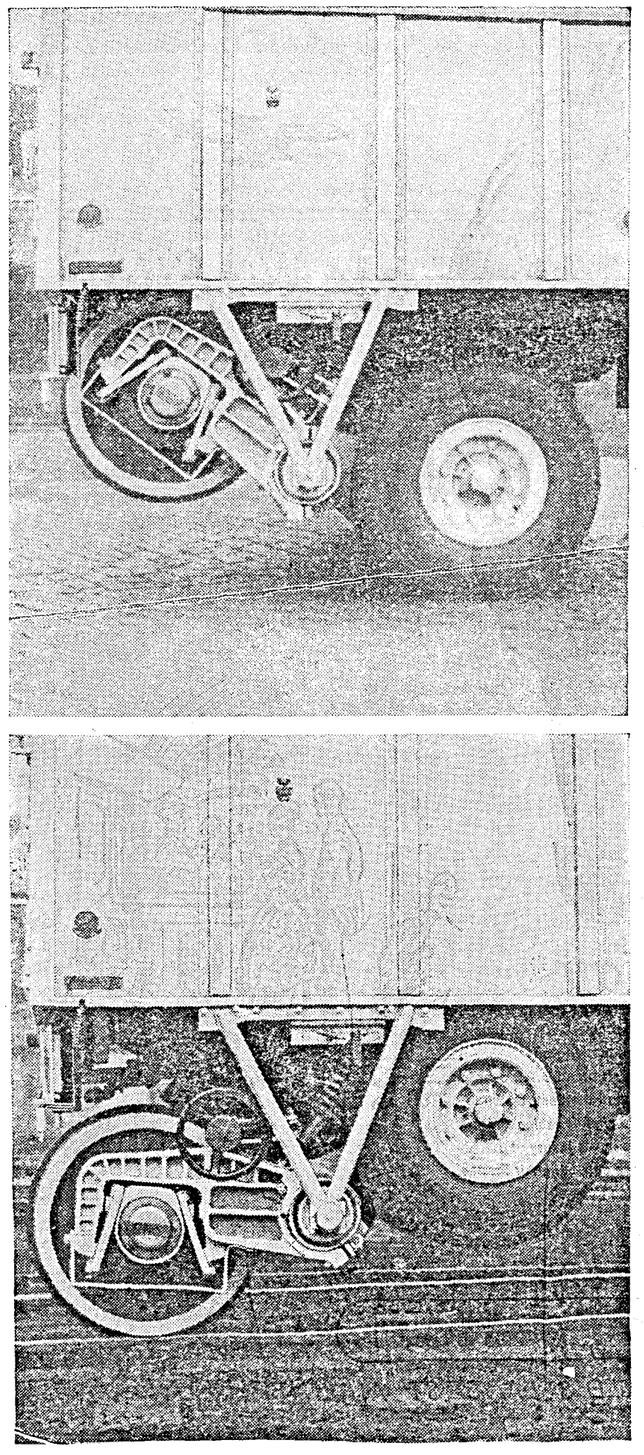
The key to capital by this means was the textbook, a publication which is prepared and sold as an essential educational instrument. Basic textbooks, those required to be purchased for compulsory academic courses, involve considerable capital investment in their development—$3,000,000 in a recent case—but provide a very substantial return if the book succeeds in capturing a significant portion of the total market.

The publishing of successful textbooks has always been very profitable in America. The new elements which made textbook publishing a growth industry during the past year and a half were those of demography and of American investment practice. Projections for the next decade of the numbers who will enter educational establishments in the United States point to increases of 25 per cent in the elementary schools, 60 per cent in the secondary schools, and a full 100 per cent in colleges and universities. This indicated a promising increase in potential markets for publishers of texts but not one which was equal to what in fact happened to publishers' shares between July, 1959, and March, 1961.

THAT period of extraordinary demand must be explained in terms of fashion in the investment business, which depends normally on expectations of rapid growth in markets, sales and profits. The investment world noted the historic profitability of publishing textbooks and the projections of an increase in the academic population. To this calculation was added the scarcity of publishers' shares and there followed the remarkable success of virtually every publishing share put on the market during the period.

Random House, for instance, offered in October, 1959, at 11¼, reached a high of 41 and Western Publishing Company, offered in August, 1960, at 42 went up to 84 and stood at 79 a month ago. Where publishing shares used to go untraded at price-earnings ratios of 6 or 8 to 1, in 1960 they traded as a whole at a price-earnings ratio of 19.2 and the shares of certain major publishing houses averaged a ratio of up to 30 to 1—proof that publishing textbooks was indeed a growth industry, at least in the eyes of the investors.

Few publishers could afford to miss the opportunity of increasing their capitalisation by as much as ten-fold and still retaining control, quite apart from such reasons for public offerings as considerations of death duties or the desire to make a market for an untraded stock. But book publishing was not, and is not, a growth industry in the same sense as earlier favourites of the investors, the electronics industry or the vending machines industry. The market for textbooks will grow (rather than explode) in an orderly fashion.



The investor's romance with publishing shares has cooled perceptibly in the months just past. One reason may be his new found awareness of other less stable kinds of publishing such as general, or trade, publishing where business amounts to some $75,000,000 annually, as compared with $300,000,000 for textbooks. Trade publishing has not made money in recent years except as a result of income from subsidiary rights sold to book clubs, reprint publishers, magazines and film companies. Among the good general publishers, those whose standards restrain them from publishing books of poor quality for their high probable sales, there are few who manage to break even. Only as the new large corporations bring a balance between the speculative trade books and the more stable textbooks are investors likely to continue to regard all book publishing as an attractive proposition. For what after all are a publisher's assets? "Editorial brains up front and unsold books out back," says one expert.

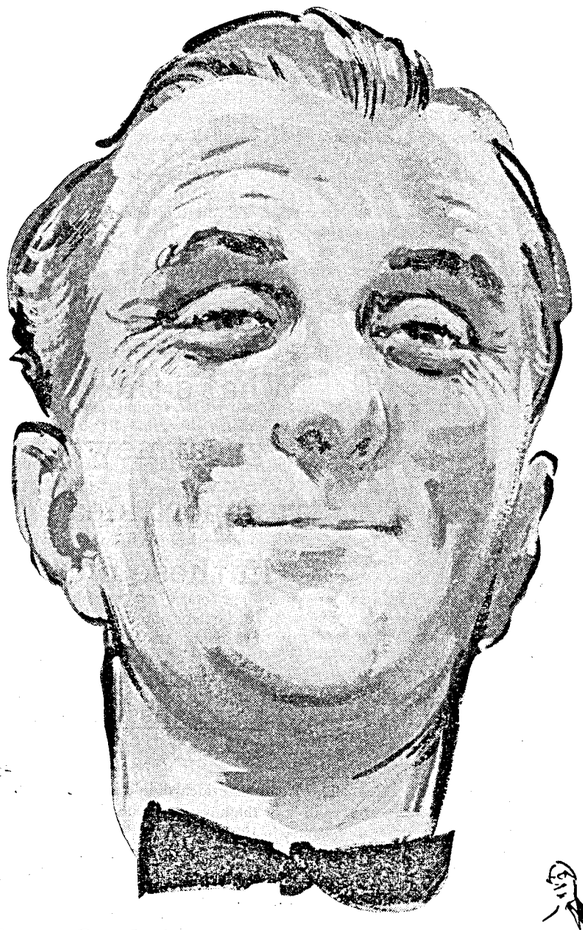
For these companies book publishing will undoubtedly become more profitable but fears have been expressed that the risk of publishing important new books of poetry and non-fiction, and even some of the best novels, will not be taken by a large publicly-owned firm, since they are financed out of profits made on textbooks.

But the size of the publisher has little to do with his standards. The majority of publishing firms are still controlled by their old owners, even when public money has been brought in. And in the unlikely event that the corporate publisher of the future cannot persist in producing culturally-significant work in the general field, such books may, like the poets and novelists who write them, gravitate to the universities for publication, becoming part of the academic contribution to the common good.

As to the consequences for publishing as a profession, it will certainly become more specialised than it is, particularly in marketing. The real concern is that in the end only the one book which meets the market most fully at its lowest and widest will be published. So in the coming years much interest will be taken in the extent to which shareholders are prepared to tolerate unprofitable experimental lines, the early but academically essential revisions of successful texts and the highly speculative but venturesome new techniques for aiding the learning process—for instance, teaching machines—all of which should help to enlarge the market for textbooks.

What's the great new transport idea in these pictures?

ASK PRESSED STEEL



The Roadrailer idea didn't hit the headlines like the sputnik or the hovercraft when it was introduced in this country in 1960. But it is very simple, and very practical, and could mean much more to each of us personally than either of them.

As a nation we have one of the best trunk rail systems in the world, and just about the most concentrated road system. The Roadrailer makes unprecedented use of both. What is it? It's a quiet revolution in freight traffic. It has both rail and road wheels. Capable of switching between rail and road traction in 150 seconds, it couples Rail's 60 mph trunk routes to Road's door-to-door delivery.

The Roadrailer cuts out handling, shunting, transhipping and the complexity of railway sidings. It's quicker than pure road, or traditional road-rail. And above all it's cheaper. It may well bring Road and Rail together. The Roadrailer is made by Pressed Steel, who have a talent for making transport ideas work.

THE BUSINESS WORLD

Mr Dillon's Brief

A correspondent in New York describes the probable line of the United States at the monetary conference assembling in Vienna this week-end

ALTHOUGH the United States is determined to strengthen the International Monetary Fund its delegation to the annual meeting in Vienna does not expect—and will not demand—a radical reformation. Some Administration officials, including the President's Council of Economic Advisers, had originally urged major changes in the international reserve system—last spring Mr Walter Heller, chairman of the CEA, invited Professor Robert Triffin to partake in the founding in Paris of the Organisation for Economic Co-operation and Development. But it is the attitude of calculated moderation suggested by the Treasury Department that has prevailed. The United States will support Dr Per Jacobsson's proposal for an enlargement of the IMF's resources, particularly in the currencies of Western Europe and Japan, by the addition of non-quota standby credits that can be made available to the Fund on an automatic basis. Officials of the Treasury, whose chief, Mr Douglas Dillon, heads the American delegation, see little hope of a permanent increase in quotas, even though this is deemed theoretically desirable. But they are prepared for hard negotiations over the amount of standby credits ($6 billion is the starting point) and the way in which these should be arrived at. Nor will they yield easily on the issue of automatic availability. In anticipation of European opposition, they point out that as these credits have to be repaid in a few years they can never be a means of meeting chronic balance of payments deficits, or of avoiding orthodox self-discipline.

As the Treasury sees it the major problem is not an absolute shortage of reserves but the maldistribution—or imbalance—of reserves. Even the radicals had not argued that an overall lack of liquidity was a clear and present danger; but they were worried that balance of payments considerations would interfere with their reflationary measures to stimulate the American economy. Now that American business activity has staged a brisk recovery the fear that domestic growth might be impeded because of the threat of a run on the dollar has in large part faded. There is general agreement that a more effective buffer against the pressures of international capital movements should be established; but the Administration now holds that this entails reinforcing existing arrangements rather than creating a new mechanism. The last stand of the radicals is evident in a report of a subcommittee of Congress's Joint Economic Committee, which recommends that IMF members should provide funds in the form of medium-term loans (rather than standby credits) in their own currencies, which could be made immediately available to deficit countries, but would not necessarily be. Hot money flows would be almost entirely financed by such credits; structural deficits, requiring shifts in resources, would be partially financed; countries suffering inflationary deficits would get credits only if they agreed to corrective steps. The Administration, however, is not embracing this watered down attempt to increase the reserve base; on the contrary, Mr Dillon himself holds that any attempt to increase reserves or finance basic deficits would accelerate the flow of funds to those countries already possessing an unhealthy surplus.

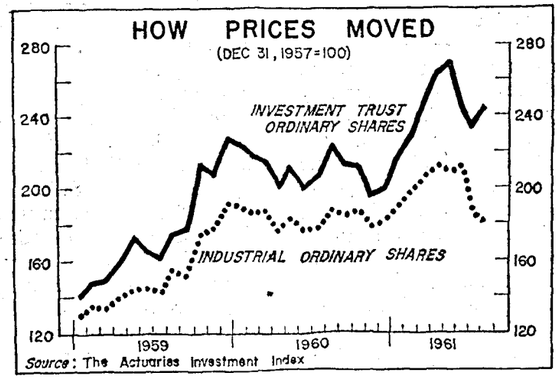
Mr Dillon describes his approach as evolutionary, seeking to strengthen the existing framework by persuading the surplus nations to use their reserves more freely and flexibly. He emphasises that they are under as much obligation to correct the current imbalance as was the United States when Europe was faced with shortage of dollars, and he regards standby credits as a relatively painless way of providing a buffer. But his evolutionary programme also calls for activity on other fronts, or what his aides call a three-layer solution; this would consist of unilateral actions by nations with deficits; bilateral—and multilateral—co-operation between deficit and surplus nations; and action taken in international institutions such as OECD as well as IMF. The United States itself is demonstrating that it is practising what it preaches in its attempt to bring down its own deficit to manageable proportions.

The measures adopted by the United States, both unilaterally and in co-operation with other countries, fall short of what the Administration had sought, but taken together they are significant. Treasury officials were indiscreet enough to admit openly at the time that the German revaluation was inadequate; yet by and large, Washington is satisfied that Europe is responsive to a greater measure of co-operation, citing the lowering of interest rates which reduced the spread between New York and Continental markets, the steps taken by Germany and Switzerland to discourage foreign investments, the Basle agreement for inter-central bank credits, and the close technical co-ordination that has been built up since the United States Treasury began operating in the spot and forward exchange markets. The latest co-operative arrangement involved the issue to Britain of a special short-term Treasury obligation, at a negotiated interest rate of 2.4 per cent, for the dollars drawn from the IMF, thereby circumventing

a rise in domestic money rates. Officials hint that they will be continuing to experiment with co-operative techniques aimed at moderating money flows and to improve the degree of international liquidity.

In its purely unilateral actions, the Administration feels that President Kennedy's pledge to defend the dollar and make available the nation's gold stock to meet international obligations has had an important psychological effect, despite the fact that Congress has taken no action to remove the 25 per cent legal backing for domestic notes and deposits. Several of the Administration's other legislative proposals (including a request to permit commercial banks to increase the interest they can pay on official foreign deposits and a series of tax measures designed to increase revenues from American corporations operating abroad) also met with congressional indifference. Nevertheless, a good deal has been accomplished administratively, from the Federal Reserve's abandonment of "bills only" in favour of operations throughout the range of government securities, which succeeded in maintaining short-term interest rates at a level that did not invite a fresh outflow of funds, to more active use of the Exchange Stabilisation Fund. In this technical area, too, the Administration is not content to stand still, although Mr Dillon recognises that a major part of his job at Vienna will be to convince sceptics that the United States stands ready to combat domestic inflation if it appears and will not merely tinker with new techniques. Mr Dillon will make clear that the United States will practice self discipline, but he wants some assurance that the countries of Western Europe will live up to their responsibilities in return.

Thus strengthening the IMF is not the Administration's sole international financial objective. Like its predecessor, the Kennedy government wants Europe to assume a larger share of the military burden and step up its economic aid to underdeveloped areas; it is planning to bring renewed pressure on Germany and France, as well as operating through the OECD. If progress is made on these fronts, it is felt that a moderate bolstering of the IMF through the use of standby credits ought to relieve the pressures on the dollar and the pound. Obviously none of these measures provides a foolproof defence against a speculative movement that feeds upon itself; but the official United States view is that an evolutionary defence on a broad front can do the job. The crucial question is whether a moderate approach will suffice to prevent a weak compromise that may leave the key currencies as vulnerable as ever.



Trusting the Experts

How the investment trusts are faring

MR JOHN BETJEMAN was reported to have said recently that he would like to imprison the directors of investment trusts for the crime of "murdering our souls." If this statement caused some heartsearching among the experts who manage the 300 or more investment trusts in the United Kingdom their anxiety was needless, for this staunch opponent of much modern architecture was seeking to gaol not them, but various property developers. Mr Betjeman is not the first to be confused by the fact that a few property companies prefer to call themselves investment trusts. Indeed the investment trusts proper—more clearly known in the United States as "investment companies"—should be congratulated, rather than condemned, on their performance in recent years. And the fact that they have so successfully adapted a long-established form to modern ways ought to appeal particularly to him.

The small saver has posed a new challenge to the investment trusts and, in meeting it, they have swept a number of cobwebs away. Many of them, for example, have replaced dreary formal accounts with more imposing documents; now they often include a ten-year record of progress and a classification of investments both geographically and industrially. More realistically, too, they base these classifications on market values rather than book values. In addition, a growing number of trusts publish a full list of their investments; for the largest trusts this is no small matter, for it can lead to reports of sixty pages long. It remains to be seen whether an even more recent innovation of using market values, instead of the conventional book values, to arrive at the balance sheet totals will find general acceptance.

Greater disclosure of information in these various ways is one important element in a general policy of trying to widen the interest of investors in investment trusts. An equally popular one has been to sub-divide heavy shares into £1 or 5s. units; the investment trust share with a nominal value of £100 is now mercifully a rarity and this week Bankers Investment Trust announced a share split into 5s. units and a scrip issue which will have the effect of bringing the market quotation down from £400 to around 13s. The sub-divisions have often been followed by scrip and rights issues. Indeed, in Cable and Wireless and Globe Telegraph, these issues have become virtually annual events and through them investors have received an effective and substantial increase in their income. Such devices have improved the external appearance and investment esteem of the trusts. Nor has internal health been neglected: a number of mergers of trusts from the same management stable have been arranged, primarily to reduce expenses and, secondly, to improve the marketability of the shares. The Mercantile Investment

Trust, which resulted from the merger of four companies, for example, now has an issued ordinary capital of 33½ million shares of 5s. each; it is not surprising that with a capital of this size, its chairman is able to report that "there is a good market in the shares and that transactions take place daily."

The Ashdown Investment Trust, run by the merchant bankers Helbert, Wagg, has used other—and perhaps more original—ways to attract investors to its shares. Two years ago it experimented with a public offer of its shares at a price slightly above the break-up value. This resulted in a satisfactory, if not overwhelming, response; in February, 1960, when some shares originally issued to certain institutions were released to the market, and again in June, 1961, offers of shares were made at prices just below the break-up value. Ashdown, through these issues, has certainly widened the market in its shares, but it faces a dilemma familiar to other trusts. A rights issue to existing shareholders, though clearly equitable so long as shareholders can take up their rights, does not usually have the result of widening the market much. On the other hand, any public offer of shares that aims at widening the market needs to be pitched on favourable terms. Usually, such an issue would have to be offered around the market prices of the existing units and in almost all cases this would be below their break-up value; but to the extent that the issue price falls short of this value the result must be some dilution of the equity attributable to existing shareholders. Such considerations have led a few trusts to adopt the compromise of a public offer with preferential treatment to existing shareholders; this in its turn partly gets in the way of an intention to widen the number of investors. But, in the end, marketability depends directly not on the number of shares in issue but on the propensity of investors to deal in them and it is inescapable that investment trust shares are so highly prized that they are probably the most tightly held of all equities, not merely by individuals but also by institutions who run portfolios of their own, such as the insurance companies. To this, the often suggested divesting by investment trusts of holdings in each other's shares would be only a partial remedy.

Investment trusts have been a profitable investment for the big institutions; and they have plenty of attractions for those smaller investors who are not out for a short-term speculative gain but for the prospect of long-term growth and the near-certainty of steady income. First, they offer the investor a spread of geographical and industrial risks. This has been particularly noticeable since the war, for many trusts have acquired substantial holdings in North American securities and some of them are now beginning to nibble at European equities, though here low yields have discouraged the trusts from taking too big a bite. The importance of geographical spread is clearly evident at this moment, when dividend prospects in this country are clouded but look quite bright in the United States, though some investors may be put off by the low net British tax rate that can result from a substantial investment in overseas securities. Industrial spread is no less important, not least because it protects investors from becoming infatuated by current fashions and "glamour" stocks. In addition, the investment trusts, unlike the unit trusts, can offer the benefit of gearing, for almost without exception part of their capital consists of debenture and preference stocks. Attempts to widen the market in investment trust equities by the issue of ordinary shares have reduced the element of gearing in the last few years and the balance has not been completely restored by cash offers of fixed interest stocks. This has led Sir Edward Wilshaw, the chairman of Globe Telegraph, to argue that it might well be to the benefit of this trust's ordinary shareholders to make some further issues in fixed interest stocks, either in the form of scrip or by way of rights.

UNLIKE a unit trust, an investment trust does not distribute all its income; the average distribution is about 80 per cent of available income and the remainder is reinvested. Some trusts, however, pay out up to the hilt while others distribute little more than 60 per cent of available income. This is

one reason why, as the table shows, many trust shares stand in the market below their current break-up value; this is in contrast to the daily quotations of a unit trust, which are tied to the current market value of the trust's underlying securities. It is possible, however, that too much attention is given to break-up values in comparing investment trust shares, for market prices are also closely linked to the prospective income accruing to the trusts. A considerable time lag is possible between the time when an investment trust receives a dividend and when it pays its own. This is of particular significance now that the Chancellor has made his call for dividend restraint. Should the trusts pass on the higher dividends they have already received to their shareholders? If the trust managers look upon their dividends simply as transfer payments, they could find reasonable arguments for ignoring the Chancellor's request. If, however, they view the request as part of a plan to curb liquidity, they might be prepared to fall in step with the Chancellor. Second Alliance Trust has recently done so, leaving its dividend unchanged, although its income has risen. Will the Alliance Trust from the same Dundee stable take the same stand in January? To the extent that the trusts opt for restraint, they will have to consider whether, in the interests of their shareholders, money that would have otherwise been distributed in additions to dividends should be set aside in a special dividend reserve and held on short-term deposit or whether it should be reinvested in portfolio investment in the ordinary way. As industrial dividends are not likely to rise very much in the coming months, the argument for special treatment has some attractions. On the other hand, there are likely to be good opportunities in ordinary shares and fixed interest stocks that managers taking a longer view may think it advisable to seize. For the moment, at least, a number of them appear to be content to stay outside the market since their available funds are needed to take up new issues either as subunderwriters or as shareholders participating in rights issues.

While investment trust equities have fallen much in line with the general run of equities since their mid-May peaks, the chart shows that they are still well above their end-1960 levels. In contrast, industrial equities, as measured by *The Actuaries Investment Index*, were slightly below their end-1960 level at the end of August. Thus trust management seems to have come out of a difficult period with credit, though the better performance of trust equities in the last few months can be attributed in part to the view that they were suitable investment for trustees. Certainly, for trustees or private investors, investment trust shares are not likely to bring much in the way of worry. But to buy them, investors have to sacrifice a good deal of immediate income, for the average yield on investment trust equities is about two per cent less than a mixed portfolio of industrial equities now offers. In a sense, this is part of the price for management and obviously investors have to be prepared for a long haul. The immediate prospect is for much less rapid growth, both in terms of capital values and income, than investment trusts have enjoyed in the last three years. It may well be that those Scottish trusts which were earliest to buy North American securities will fare the best in the next few months. Mr A. L. Brown, the chairman of Second Alliance, is hopeful, for example, that some increases in dollar dividends will at least ensure that the trust's earnings will be maintained in the current financial year. But, whatever the ups and downs in the months ahead, investment trust shares ought to be held firmly. Investors could do worse than to ponder the remark made by Mr C. H. Villiers, the chairman of Ashdown Investment Trust, that the sales of Ashdown shares by small shareholders a year ago, when the stock market was uncertain, were matched by purchases by "financial corporations."

BUSINESS NOTES

COMMONWEALTH FINANCE

Horse Trading at the Club

It was perhaps fanciful for the British Government to imagine that the Commonwealth finance ministers who have been meeting at Accra this week would be content with the usual leisurely pre-IMF review of common problems. For the overriding economic problem of the moment, that of preparing for the consequences that would follow from Britain's membership of the European Economic Community, is patently not a common one for Britain and the overseas Commonwealth countries. One may strongly hold that the ultimate aim of the exercise, for Britain to prosper as a member of the European community rather than to risk isolation outside it, is indeed a Commonwealth interest. But it does not follow that there is a unity of Commonwealth interests in the negotiations necessary to carry Britain in. The British Government has given an assurance that the trading interests of overseas Commonwealth countries will be fully considered. There are numerous ways in which they can be accommodated. Some would involve acceptance of a less privileged position by Continental producers; others would be at the expense of the British consumer and the British balance of payments. The great complication in getting Britain into Europe is that a trinity of interests is involved at each point, and it is in the nature of the case that an easy compact between any two of them can usually be made at the expense of the third.

It is therefore as a preliminary to serious horse trading that the loud cries from Accra need to be considered. When the Canadian ministers declaim that Britain will find it against its own interest to join the common market, and shouldn't be tempted anyway because it would be unfair to the Commonwealth, their protests should be taken not so much as irrelevant to the point at issue as a routine move in raising their initial bargaining bid. Much the same could be true of Asian and African countries' reported rejection of the possibility of associate membership of the common market for themselves—it is unlikely that this possibility has yet been sufficiently explored. The point of substance is that the loud cries of anguish have their part in setting the scene for the detailed bargaining ahead.

The danger is obvious. If the Commonwealth is "difficult," and the British Government considers it politically difficult to press for a more forthcoming approach, then a scheme that is also acceptable to the Six may be economically and financially very expensive for Britain. Mr Selwyn Lloyd was precluded from letting out his own cries of anguish at the Commonwealth conference table; but it is to be hoped that

Sir Frank Lee will periodically emit them in his capacity as co-ordinator of Britain's common market negotiating team.

OVERSEAS TRADE

Steady Improvement

The improvement in Britain's trading accounts that has proceeded steadily this year was carried a stage further in August. Export shipments, after adjustment for seasonal variations, rose from £307 million in July to £324 million fob, while imports rose by only £7 million, to £361 million cif. Allowing for re-exports of £15 million, this reduced the apparent trade gap from £31 million to £22 million. This compares with shortfalls averaging £43 million a month in the second quarter, £64 million in the first quarter and £72 million throughout 1960. Since the different valuation of imports and exports together with other distortions in the trade figures swells this apparent gap by about £40 million a month compared with the Treasury's payments accounts, Britain has in fact been earning a substantial true surplus on its visible trade this summer after seasonal correction, and even the uncorrected figures for July and August imply a small true surplus.

Taking the four months May-August together—this spans the month to month distortions of the spring dock strike—exports averaged 2 per cent more, seasonally adjusted, than in the three preceding months, while imports were 2½ per cent less. The check to stock-building is helping to keep imports down, and may continue to do so in coming months. In the first eight months of the year as a whole exports were 4½ per cent. above the average in 1960, while imports were down by 2½ per cent. The apparent monthly trade gap in the first eight months has now been brought down to an average of £47 million—still implying a true deficit, but within shooting distance of bare balance. Now that net earnings from invisibles have run off, much more than bare balance in the trade accounts is needed to finance Britain's net capital commitments, and the balance of payments this year still seems pretty certain to be unsatisfactory. But it does seem to be responding.

THE ECONOMY

Investment Rising Again?

Capital expenditure in manufacturing industry, in the second quarter of this year, was 10 per cent higher than in the first quarter and 28 per cent higher than a year before: it amounted to £314.7 million, a new record. But as capital expenditure in the distributive and service industries was slightly down (and significantly below the peak established at the end of last year) total fixed investment in business was only about 5 per cent higher than in the first quarter. The Board of Trade this week began to publish seasonally corrected figures at constant prices for this investment, which now make it meaningful to look at its course throughout the year. The new figures suggest that there may have been a pause in the growth of investment that began late last year, followed by a renewed increase in the second quarter; and the detailed figures suggest, as other indications have, that it was on investment in plant and machinery, not in construction or in vehicles, that the extra money was being spent.

INDUSTRY'S FIXED CAPITAL EXPENDITURE AT 1954 PRICES

£ million; seasonally adjusted

Period	Manufacturing Industry	Distributive and Service Industries	Total
1956	757	519	1,276
1957	792	552	1,344
1958	753	588	1,341
1959	715	667	1,382
1960	838	740	1,578
1959 :—

Second quarter	200	184	384
Third quarter	225	182	407
Fourth quarter	220	192	412
1961 :—			
First quarter	232	179	411
Second quarter	256	177	433

These provisional figures are not fully subdivided as between industries; but the main increases in investment over a year before appear to have come, once again, from iron and steel and chemicals.

COAL

Prices, Mechanisation, and the Market

It was not quite clear, when Lord Robens talked about price stability for British coal last week in Leicester, whether he meant stable prices now or by 1965; but he is known to be determined to avoid increases from now on if it is at all possible. Faced with annual demands for increases in the wagebill that represents about 55-60 per cent of Coal Board costs, this determination may look hopeful; but the board is now concentrating grimly on further mechanisation—the one expedient, within its present ideas about investment and output, that offers a chance to hold prices.

Three or four years ago, with only 15-20 per cent of the country's output produced from power-loading equipment, the board looked forward to the possibility, some time, of making this 50 per cent; today its intentions are considerably larger. Its average for 1960 was 38 per cent; in July this year the percentage power-loaded was 49 per cent; it is now aiming at 80 per cent, eventually, from this more mechanised production, where it may be possible to raise labour productivity enough to absorb the wage increases that have to be reckoned with. These power-loading installations take time to reach their full efficiency; and as their proportion of output passes half the total, their effect upon average productivity will quicken. Nevertheless, since 1947, while the proportion of output from these more mechanised faces has more than doubled, labour productivity "overall" in the industry has grown less than 20 per cent, while earnings per manshift have risen about 40 per cent. Stability will be hard to achieve.

It may be that the Coal Board is determined this autumn to stand out more firmly against wage increases: it will certainly be spurred to do so by the Government, which on this issue is anxious to share out some of its unpopularity. The board, like other nationalised industries, is already no doubt discussing with the Treasury just what rate of return it ought to undertake to earn over the next five years on its steadily growing capital—and what output, and rate of increase in labour costs, it has in mind in helping to set itself a target. This growing burden of capital remains perhaps the strongest financial incentive for the industry to stick to its hopes of still producing 200 million tons a year by 1965. The farther output has to be cut below that, the heavier the margin of capital charges that each ton would carry. But it should be noted that this extra margin would not represent the real cost of producing some lower tonnage. The more that output could be cut towards that core of efficient production that can compete with other fuels, the less coal costs Britain. Those extra capital charges per ton would be merely the accounting cost of over-investment through having misjudged the industry's future market potential.

IN THE MARKETS

Bank Rate Perspectives

THE Bank of England has been quick to stamp down the sporadic talk about an early cut in Bank rate which was started last week by the August gold figures. The idea was obviously premature. The authorities still adhere to their usual view that Bank rate should be reduced as soon as it is safe to do so, to put them in better stance for a subsequent rise and to discourage the "bad" foreign money. But it does not begin to look safe yet, before even the first trial on wages. All in all it would be surprising if 7 per cent were maintained for less than its six months' run in 1957-58.

Bank rate expectations in fact played little part in the small fall, of $\frac{1}{16}$th per cent, in the Treasury bill rate last Friday: the discount houses are simply anxious to keep a good share of the bills in the face of heavy outside competition, and at last week's tender they got it. In the circumstances, however, the Bank felt it should make its intention plain, and on Monday it forced the discount houses to borrow a moderate amount at the penal Bank rate. The official view is clearly that even the short-term recovery from the crisis of confidence cannot yet be regarded as assured and completed. On the exchange market the tide has turned, but only just—£50 million back out of £600 million lost—and the limited nature of the restoration of confidence is evident in continuing high margins on forward sterling.

Much the same mood is evident in the stock market. Gilt-edged have had an undoubtedly firmer base since the Chancellor's measures of July, but there has been little follow through. After looking up at the beginning of this month the market has again drooped, and dealers this week were complaining of unemployment for want of business. New funds available for investment seem to be taken up by the heavy volume of new issues, and investors remain remarkably disinclined to change their existing portfolios. The equity markets, too, have had another very quiet week, with prices falling on balance. In the week to Wednesday *The Economist* indicator dropped by 7.3 to 363.4, only four points above its level at the beginning of the year.

Meanwhile credit supplies are very short at all points, and the curtailment in bank overdraft facilities has enabled other lenders to jack up their rates. The market in mortgage loans for local authorities is still very active, and the local authorities have met almost all their requirements from this source since end-July—there has been no change in the policy that official funds through the Public Works Loan Board are supplied only as a last resort. Market rates have hardened a little in the past week, with seven-day money quoted at $7\frac{1}{8}$-$7\frac{1}{4}$ per cent. This is significantly above the Treasury bill rate of $6\frac{1}{4}$ per cent, even though a seven-day deposit is a still more liquid asset than a three months' Treasury bill. The broadening of the mortgage market that has taken place in the past few years evidently still has some way to go.

WALL STREET

Second Thoughts Near the Peak

A correspondent cables:

WALL STREET is in a nervous and erratic mood and the Dow Jones industrial average, having risen to a new peak last week of 726, suffered its sharpest drop for months on Monday before recovering to 722. This is not the most reliable of indicators and it appears to be performing rather better than the majority of equities; indeed, the market gives the impression of undergoing quite a widespread reaction brought about by profit taking. Investors are still confident about the business outlook, but they are concerned about President Kennedy's letter which suggested that the steel companies exercise restraint in raising prices and they even fear that it may be the forerunner of direct government action to control prices, wages and profits. As a result the demand for equities has waned and buying has been concentrated upon the better quality blue chips whose prices compare reasonably with some of the growth issues selling at extremely high price-earnings ratios. Steel issues have been sold, despite the rise in production and sales, but other major industrial stocks as well as food and tobacco shares have been bought.

A prolonged decline in prices is not expected unless the Berlin crisis deepens or unless the administration goes beyond moral suasion in its attempt to hold wages and prices down. Once the current reaction is over, prices should rise again because business indicators are encouraging and because corporate earnings in the third and fourth quarters should compare favourably with the 1960 figures. The latest survey of capital expenditures, largely compiled before the latest increase in defence spending was announced, indicates a rise in the fourth quarter and hence better business for the capital goods producers. Similarly unemployment is at last beginning to show signs of declining and this should lead to higher sales of consumer goods. While the market in general already discounts a boom, Wall Street may take new heart when its predictions come to pass and though the more speculative issues seem to have fallen into disfavour the good quality stocks, including General Electric (which has been depressed because of the anti-trust suits), Ford and IBM are clearly gaining in appeal.

Ford's purchase of Philco through a share exchange is regarded as part of a long-term diversification policy and it is partly responsible for the rise in the price of its shares. Ford will emerge as a major appliance and defence electronics manufacturer, able to compete with the other giants, and this is yet another indication that the smaller electronics companies which have been losing business to the bigger firms may be in for a prolonged struggle for survival. At any rate Wall Street's vogue for growth stocks in the electronics industry is over—at least momentarily.

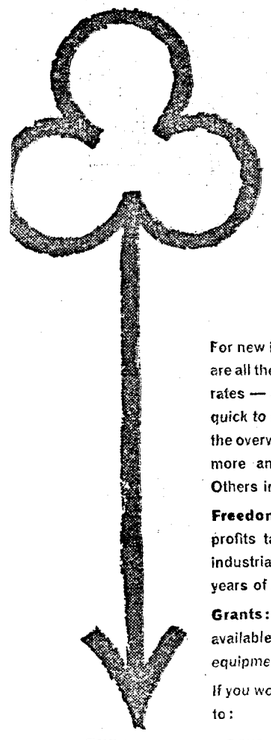
BRITISH PETROLEUM

Unchanged Distribution

IN the spring, the directors of British Petroleum indicated that there might be a scrip issue later in the year and this week, together with the announcement of an unchanged tax free interim dividend of 8d. per £1 stock unit, they have promised a one-for-five scrip issue. As, however, they also say that they consider it unlikely in present circumstances that the distributions this year will exceed in total the 1960 payment, the scrip issue cannot for the moment be regarded as anything else than a book-keeping transaction. In 1960, the tax free interim of 8d. was followed by a tax free final of 1s. 8d. If this is scaled down strictly on the capital as increased by the scrip issue, the tax free final this year will be the odd amount of 1s. 4¾d. per unit. Is 1s. 5d. absolutely impossible?

SALES AND PROFITS
(£ million)

Six months ended	June 30, 1960	Dec. 31, 1960	June 30, 1961
Gross sales	447·5	489·5	479·0
Net sales	312·2	334·8	323·7
Gross profit	62·1	62·7	57·7
Net income	31·5	30·8	26·3
Gross profit/net sales %	*19·9*	*18·7*	*17·8*
Net income/net sales %	*10·1*	*9·2*	*8·1*



The decision to leave the distribution unchanged is not surprising in view of the Chancellor's request, especially in a company in which the government has a big shareholding. Nor is it surprising in terms of the trading results of BP and other oil giants this year. The half-yearly results of BP are set out in the accompanying table. While in comparison with the first half of 1960 the volume of sales has risen from 34.8 million tons to 38.1 million tons and the value of sales, net of excise duties, etc., has risen from £312.2 million to £323.7 million gross profits, after higher operating costs and increased depreciation, have fallen from £62.1 million to £57.7 million. The dividend and other income received by the group has risen from £7.8 million to £10.5 million but a rise in tax from £38.6 million to £41.8 million, reflecting a reduction in the credit for British tax relief, has left the net income £5.2 million lower at £26.3 million. Thus, both gross and net profit margins in the first half of this year were lower than they were in the three preceding years.

MOTORS

Bleaker Prospects

FORD has warned its workers that it expects that the sales of cars in Britain this winter will be cut by 15 per cent as

IRELAND
—where
manpower
is plentiful

For new industries exporting from Ireland there are all the workers you need at reasonable wage rates — and Irish workers are adaptable and quick to acquire new skills. This is just one of the overwhelming advantages that are attracting more and more new industries to Ireland. Others include:

Freedom from Tax: NO income tax, NO profits tax for 10 years on profits from new industrial exports from Ireland, plus 5 more years of reduced taxation.

Grants: Substantial non-repayable grants available towards the cost of site, premises, equipment and training of workers.

If you would like two informative booklets write to:

THE INDUSTRIAL DEVELOPMENT AUTHORITY OF IRELAND
14 ST. STEPHEN'S GREEN, DUBLIN 2. Phone: DUBLIN 61965

See 'IRISH INDUSTRIAL DEVELOPMENT — WINDOW ON SHANNON'
AN EXHIBITION AT THE IRISH EXPORT CENTRE
235 Regent Street, London, W.1. Sept. 20-29 From 10 a.m.–5 p.m.

Mr. Gerard MacCarthy, representative of the Industrial Development Authority, is at the exhibition and will be pleased to provide further information on what Ireland can offer your industry.

Potterton heats hotel or home handsomely

Potterton make boilers—oil-fired or gas-fired—rated from 31,000 to 2,000,000 B.th.u./hr. They are automatic, efficient, economical and purpose designed.

Potterton have been making boilers since the year dot. Very experienced people. Very reliable boilers. Pick Potterton. It pays. **Is your Potterton file up to date?** For all the latest information by return post, just jot "boiler information, please" on your letterhead and send it to us.

Two Potterton FOA oil-fired boilers (outputs: 1,000,000 and 625,000 B.th.u./hr.) heat the Griffin Hotel, Leeds. Heating engineers: Modern Heating Co. (Button) Ltd.

And domestic gas-fired Pottertons, installed in co-operation with the North Thames Gas Board, heat 115 new homes built by Wates Built Homes Limited on the Abbotsbury Road Estate, Kensington. Architects: A. E. Stone, Toms & Partners.

Potterton Boilers at the heart of efficient central heating—oil or gas

Potterton is a registered trade mark

the result of the increase in purchase tax and hire purchase charges; there are indeed signs that sales are falling even more sharply than this. August sales puzzled individual producers, who found that their own figures were lower than they had expected, but that the number of cars reported to have been sold on hire purchase was higher—so that most were reduced to assuming that their share of the market had unexpectedly fallen. Such evidence as is so far available for September suggests that sales remain much below the last year's level. The August figures had not been regarded as conclusive, for sales are always low during the holiday period; but September is normally expected to prove a good month for sales, and if the apparent trend continues during the month, the mood of the industry will quickly turn to gloom.

Managements had already started the autumn in a much more cautious mood than that of a year ago, and therefore are unlikely to let stocks rise as much as they had then done—even though a quick recovery in sales next spring seems no less likely than it was this year. The result of this fall in sales will therefore be short-time working quite soon; Standard-Triumph International was in the weakest position to get its dealers to increase their stocks, and so was the first to cut production. Most makers still have relatively low stocks, and so can build them up considerably. They found last winter that dealers would go on taking all the cars they were offered until their stocks reached the maximum they wanted, but then virtually stopped taking any more cars for a month or two. This year makers will try to keep down the rate of increase in stocks, so that they will not be faced with such a sudden fall in demand, as well as seeking to keep down the level that they reach—which some dealers may want to do also. Production is therefore likely to be cut earlier this year than it was last autumn, when both the British Motor Corporation and Ford continued at high production rates until November. It would not be surprising if short-time working spread in the next month.

From Americans, To America

If General Motors does as expected, and stops importing Vauxhall cars into the United States, and Ford of America were to do the same next year when it starts making its small car, the Cardinal, the companies would only be recognising that it might cease to be economic to import cars if they could satisfy most of the demand for smaller cars from their own production. But logic for the companies concerned could make a significant difference to British car exports. In the summer of 1959, before any of the American compact cars had been introduced, the sales of Fords and Vauxhalls in the United States represented 12 per cent of all British car exports anywhere. By now they only form five per cent of the industry's total current exports, though the long-term potential for the sales of these makes in the United States would probably be rather higher than this: Vauxhall has been selling off stocks of an obsolete model, and if the new Victor were sold there it might expect a useful improvement in sales. But the arrival of the American compact cars may mean that their sales could never return to the 1959 level.

Part of the boom in the exports of European cars to the United States can now be seen as a short-term response by the American manufacturers to a growing demand for cars smaller than the standard vehicles they were already making. In the summer of 1959 33 per cent of British sales in the United States were Fords and Vauxhalls; apart from the Rootes and BMC saloons, the remainder consisted largely of sports cars. Ford and Vauxhall still account for 20 per cent of British sales in the United States, most of these sales being of Ford Anglias. The American-controlled share of German sales in the United States shows an even sharper change; in the summer of 1959 Opels formed 20 per cent of these sales, but by now they are down to less than four per cent.

The prospect for European car sales in America is now that of supplying specialised demands—which may not be large enough for a very big local manufacturer to think it worth importing cars from his foreign subsidiaries, but should still provide smaller foreign groups with a useful export market. The only maker that seems to have found a demand allowing sales in really high volume is Volkswagen, which looks like selling some 175,000 cars in the United States this year out of a total of less than 400,000 imported cars. British makers are unlikely to sell more than about 80,000: the sales of sports cars have been nearly halved, perhaps as a consequence of financial stringency in the recession, quite apart from the fall in the sales of saloons. There seems little chance that British sales could rise next year if Ford and Vauxhall should withdraw from the market, though new models should help to increase the sales of the other makers.

THE EXCHANGES

Mark Time for Vienna

The exchange markets have this week caught some of the lassitude of the stock markets, and London exchange dealers report the quietest week of the summer. Sterling has remained firm at around $2.81⅞ spot; the three months forward discount has remained at 2⅞ cents. But business has been very small. In Germany the mark continues under some pressure against the dollar. In the gold markets private buying continues, though apparently in rather smaller volume this week. The gold price in London has been kept steady at around $35.19.

Just why the exchange markets should have dried up this week is not entirely clear. International politics and the meeting of the International Monetary Fund have both been cited—but both have more often been regarded as the cause of exchange upheavals. It is indeed notable that on the very eve of the IMF meeting all the past speculation about what may happen there seems to have vanished. That, as one dealer wryly remarked this week, may be because so much has happened already. It would be comforting to think that the uncertainties of the exchange markets had now been banished. In fact, most operators still have their fingers crossed. They may be watching the IMF meeting more critically than usual, for signs of what is being done to make the whole system stronger.

LONDON TRANSPORT

Cribbed and Confined

Financially 1960 was one of London Transport's less unhappy years. For only the third time since 1949 it actually had some money left over after covering its share of the Transport Commission's central charges. But this net surplus was still pretty measly for an organisation that is soon to regain complete autonomy under its own public board—less than £1.4 million from a business employing rather more than £150 million worth of capital and now earning some £85 million gross a year. Three years ago London Transport reckoned that it ought to make a net profit of at least £5 million a year to cover past deficits, to meet the higher replacement costs of its equipment, and to start building up a general reserve. It has never got even in sight of this amount. And, in the report it has published this week on last year's operations, few hopes are held of being able to do any better in the present year. Recent fares increases are not expected to cover the whole of last year's increase in wage costs; and bus takings are expected to fall further with the continued decline in the quality of service as the result of crew shortages, although the recent wage increases have lately made these somewhat less acute.

London Transport's arguments about its difficulties from traffic congestion and other extraneous factors sometimes give the impression that what it is really saying is that public transport would be fine if only there were no private cars. But the modest improvements in traffic flow—and bus timings—resulting from the handful of new road works carried out in the London area, the extension of controlled street parking, and from the introduction of one-way working and clearways supports the views about the value of some traffic management that London Transport, among others, has long been putting forward. In its latest report, London Transport renews its offensive by arguing, not unnaturally, in favour of spending money on new urban underground railways rather than upon urban motorways; these are not so costly to build for a given traffic

capacity. No doubt it has the Victoria line especially in mind, since the present statutory authority for the construction of this line expires at the end of this year. But there is no obvious reason why this last, and somewhat truncated, survivor of the plans for new underground construction first discussed over twenty years ago should be the only one still to be considered.

Within its present ambit, London Transport has done what it can. By replacing more trolley and ordinary buses with Routemasters and by introducing new types of underground carriages, it has managed to increase its peak carrying capacity, though not quite so fast as peak travel itself has grown. But London Transport's trumpet blowing for public transport would be that much more persuasive if it—and British Railways—seriously undertook to provide car parks at outlying stations for the commuting motorists who are becoming weary of congestion and parking meters.

BIDS AND DEALS

Pastoral Symphony

WHETHER measured in terms of turnover or capital employed, the returns earned by the Australasian pastoral companies are low. In the past this has led the wool brokers to add to their interests in general merchandising and this week it came to a logical conclusion in the merger between Dalgety and New Zealand Loan and Mercantile Agency. Dalgety and New Zealand Loan will be the biggest wool broker in the world, handling about 22 per cent of the Australian wool clip and 27 per cent of the New Zealand clip. The directors believe that "substantial economies will progressively become possible." This will involve redeployment of staff, for a fifth of the 500 branches of the combined company operate in the same areas. Worthwhile savings will take time and the directors admit that at the moment it is impossible precisely to estimate the financial benefits; but ultimately the rate of return on the combined turnover of over £300 million and on the combined net assets of over £42 million should rise.

The merger takes the form of an offer by Dalgety of four £1 ordinary shares and one 5½ per cent preference share for every four £1 ordinary shares in New Zealand Loan. With the Dalgety ordinary at 33s. 7½d. and the preference shares at 13s. this imputes a value of 36s. 10½d. to New Zealand Loan ordinary. This is not much higher than the pre-bid market price of 35s. 9d. but ordinary shareholders of New Zealand Loan will hold nearly 32 per cent of the combined equity (in addition to the preference shares) and while this is in line with the contribution to net assets it is slightly higher than New Zealand Loan's contribution to net earnings. Dalgety proposes to leave its tax free dividend unchanged at 8 per cent for 1960-61, paid from fractionally lower earnings, and on this basis the ordinary shareholders of New Zealand Loan will gain slightly in total income; including their preference dividend they will receive the equivalent of nearly 14½ per cent, against the maintained 14 per cent promised for 1960-61. But the long-term prospect of economies rather than immediate calculations about earnings and dividends should prompt shareholders to accept.

Cider with Showerings

SINCE some of Showerings' ordinary shares were offered to the public in February, 1959, the company has been trying to lessen its dependence upon its branded product "Babycham." In particular, through the acquisition of Coate's and William Gaymer, it has added to its share of the market in cider and, through the purchase of Duval Wines, it has extended its interests to wine. The proposal to merge with Whiteways Cyder and Vine Products thus follows a logical pattern. First it reduces the area of competition in

NEW CARS

Victory Needed

THE new Vauxhall Victor starts life with the advantages of a happier æsthetic design than that of its predecessor, and a price that has not increased—and is therefore lower than that of some of its competitors. Its makers are at pains to emphasise that they have sought to eliminate the weaknesses that gave the old model an unfortunate reputation. The new body is simpler in form, so that there are fewer nooks and crannies into which paint may not always penetrate but which always seem to collect water, and the structure should be less of a nightmare to the production engineer. An extra coat of primer and a new type of cellulose enamel for the top coat are other measures intended to improve the durability of the car; the use of an undersealing compound continues. These changes, and the rise in the cost of materials and labour in the past year, may well make the new car more expensive to build than the old—though the reduction of 80 lbs in its weight will help to offset them. That Vauxhall has not followed the lead of its rivals in setting a higher price level for its new model shows how anxious it is to recover the volume of sales and output that it has lost in the last year; unless it can do so it will be hard put to produce cars economically.

The new Victor shows few major changes in mechanical design; a four-speed gearbox with synchromesh on all forward gears is an optional fitting for £17 10s. extra, the axle ratio has been raised slightly, and there are only four points on the car that need greasing, and this at intervals of 12,000 miles. The engine develops 1½ bhp more; and the springing has been made softer. The result is a car that is noticeably smoother and quieter than the old Victor, with a slightly higher maximum speed of around 80 mph. The riding comfort has also been improved, somewhat at the expense of the good cornering of the old model; there is now more roll, and the degree of understeer has been increased. The effect is to make the car rather less pleasant to drive fast than the old model, though the engine is now more flexible.

Despite sacrificing some of the best characteristics of the old model, the new Victor should be a stronger competitor in its class. Looks may well count for more than cornering ability with many buyers; and the new body also gives rather more space than the Ford Classic provides, at a price, with four-speed gearbox, that is £3 less for roughly comparable models. It does not offer disc brakes, but its reduction in maintenance costs will probably offset this for most buyers; the Victor's drum brakes show good resistance to fade, but will need adjusting fairly frequently if used hard, while disc brakes are self-adjusting. For convenience and cost of maintenance the two features probably cancel one another out. Vauxhall has produced a good average car in the new Victor. In a size where no British maker has yet produced an exceptional car, it should allow the company to get back to a more reasonable level of sales, whether or not it can take Vauxhall back to capacity.

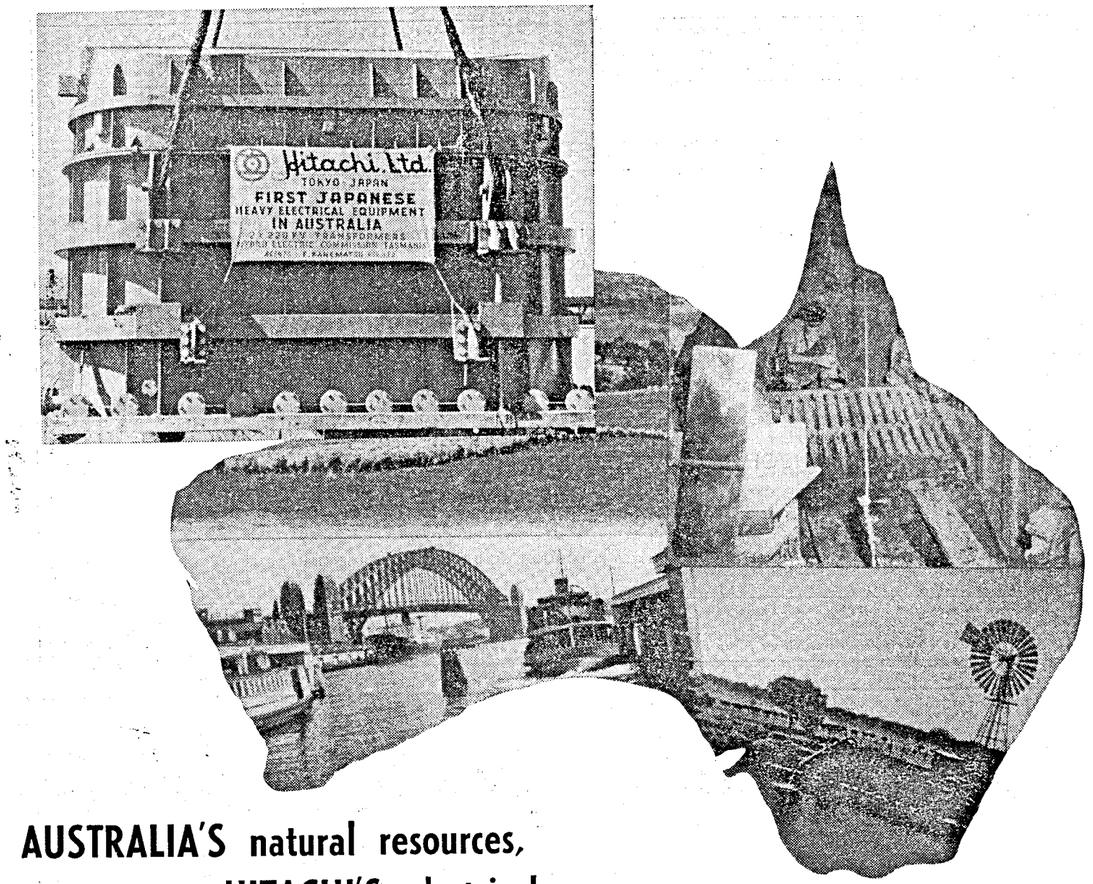
DO YOU FLY BECAUSE YOU ENJOY IT
or just because you're in a hurry?

By his second or third crossing, the transatlantic traveller begins to be critical. He appreciates the speed—but where has the pleasure gone? It hasn't—if you fly on our Shamrock services. On these services, the speed is provided by the latest Boeing jet liners and the pleasure begins at the beginning. Why? Because alone among airlines we offer:

THE 11-POINT TAKE-OFF You can fly to America from any of eleven cities in Britain—London, Manchester, Edinburgh, Glasgow, Blackpool, Liverpool, Leeds/Bradford, Birmingham, Cardiff, Bristol, Isle of Man—saving perhaps hours of cross-country travelling.

THE LUCULLAN INTERLUDE Relaxing, before the long hop, in the comfort of Dublin Airport, you will find a restaurant where the food is as superb as anywhere in the world—each dish a creation cooked and served to highest International standards . . . Dined and wined, legs stretched, lungs freshened—you discover the next pleasure . . .



SMILING IRISH EYES, property of the six air hostesses (three for Golden Shamrock, 1st Class, three for Silver Shamrock Economy Class travellers)—calm, beautiful, soft spoken, thoughtful and efficient. If you're a traveller first class, *your* eyes will light up at sight of

THE GOLDEN SHAMROCK MENU starred with such delicacies as Broiled Liffey Salmon or Limerick Ham Bunratty style, with Pouilly Fuisse 57 or Charles Heidseick 53. Travellers who know, place Golden Shamrock food in a class by itself.

THE 2-POINT TOUCH-DOWN Shamrock services give a choice of flights not only to New York, but also to Boston. On which thoughtful note, we wish you goodbye—until your next transatlantic trip.

DUTY FREE SHOPPING The Shamrock transatlantic service gives you time enough at Shannon to make profitable purchases at the International Duty-Free shopping centre.

IRISH INTERNATIONAL AIRLINES

AUSTRALIA'S natural resources,
HITACHI'S electrical resources . . .
A NEW AND POWERFUL COMBINATIOI

At the height of this event-filled year*, Hitachi, Ltd. of Japan announces a major first — the introduction, for the first time, of Japanese-made heavy electrical equipment to resource-rich Australia.

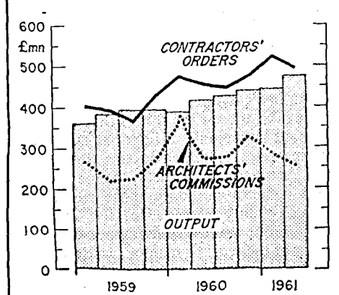
Two Huge Hitachi 30 MVA transformers have already been delivered to a Tasmanian port. The three-phase, 50-cycle transformers, of the self-cooling type and rated at 11 kV delta to 230 kV wye with solidly-grounded neutral are, as usua Hitachi-designed, Hitachi-engineered, Hitach manufactured.

Destined for the important Catagunya Powe Station of Tasmania's Hydro-Electric Commis sion, this equipment is another strong link i Hitachi's chain bolstering international natur resources.

* *Another Hitachi "event of the year":*
Fortune magazine's official announcement lists Hitachi, Ltd. as the 17th largest firm in the world (excluding the U.S.) and as the first company of Japan.

Hitachi, Ltd
Tokyo Japan
Cable Address: "HITACHY" TOKYO

cider and removes the possibility of a clash between Vine Products, already established in the market for British wines, and Showerings, which through Duval seemed to be intent on penetrating this market. Secondly, the combined group can offer a diversity of products and its sheer size enhances its bargaining strength with the brewers, which through their tied houses control the companies' most important points of sale.



The initiative in this merger has not been exclusively on Showerings' side and the chairman of the new holding company will be the chairman of Vine Products, Sir Ronald Howe. The terms of the merger are: six 5s. shares in the holding company for five 5s. shares in Showerings (giving its shareholders 55 per cent of the combined equity); seven holding company shares for five 5s. shares in Vine Products (40 per cent of the equity); and nine holding company shares plus 45s. for 20 shares in Whiteways (5 per cent of the equity). With Showerings ordinary shares at 18s. 4½d., the value imputed to Vine Products is just under 21s. 6d. per share. This is below the pre-bid market price of 25s. 6d., which had been strongly affected by bid rumours; the price has since fallen to 22s. 3d. The merger terms seem to take adequate account of the contributions that the three companies should make to earnings.

STEEL

Stocks Down Much More

STEELWORKERS spent a little more of August this year on holiday than August 1960. But the very sharp fall in production during that month, by a full 20 per cent from an average weekly rate of 422,900 tons last year to one of 338,400 tons this August, must have some other explanation. This, the Iron and Steel Board thinks, was a further running down of stocks by steel users, probably at an even faster rate than before. The turn round in steel stocks began in the motor industry towards the end of last year. It has since spread to many other steel-using industries, although shipyards and constructional engineers have apparently still been adding to their holdings of plate, and steel merchants, who supply the smaller steel users, seem to have been keeping their stocks at roughly an even level.

FEWER NEW BUILDINGS PLANNED

Building contractors took in the first six months of this year orders for new buildings worth nearly 10 per cent more than in the same months of 1960. This is the smallest increase for some time. More significantly, new commissions received by architects (which cover only part of the work eventually reaching contractors) are down this year for the first time since 1959. Both architects and contractors find that demand for new industrial and commercial buildings has slackened most: demand for new housing seems for the moment to have levelled off, while work for public authorities (other than for new houses) is still growing.

STEEL STOCKS

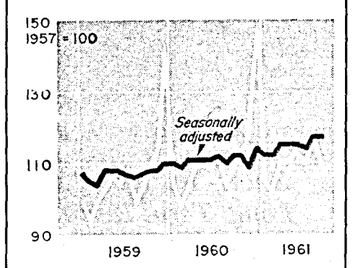
	Consumers' stocks: Sheet	Plate	Tin-plate	Other	Merchants' stocks	Total	No. of weeks' supply
	('000 tons)						
Prev. peak: Mar., 1958	484	836	126	2,774	421	4,641	15·5
Prev. low: Dec., 1959	421	563	124	2,002	364	3,474	11·5
1960: June	565	586	152	2,262	366	3,931	11·9
Sept.	728	594	157	2,316	383	4,178	14·3
Dec.	758	642	162	2,468	464	4,494	13·9
1961: March*	664	729	162	2,525	514	4,594	13·8
June*	569	782	149	2,499	512	4,511	13·5

* Provisional.

The full results of the board's June census of steel stocks confirm its previous estimate of a two per cent reduction in holdings during the second quarter of this year, the first such quarterly drop in total holdings for almost two years. With just over 4½ million tons at the end of June, steel users and merchants had on hand the equivalent of 13½ weeks' supply at current rates of use. This is close to what in the past has been considered a fairly normal level. However, there are signs, the board reports, that since most steel products are now much more readily available, large steel users may be preparing to operate with smaller reserves. If this should be the case, steel output could remain depressed for some time. The low total of output in August, equivalent to only 78 per cent of the steel the industry was capable of producing during that month, suggests that steel users must have started eating into stock about as fast as a year ago they were building them up.

SILVER

More Precious Metal?



CHINA is expected to sell about 40 million ounces of silver in western markets this year. These sales have delayed considerably the expected exhaustion of the stock of "free" silver held by the United States Treasury. Under an Act of 1946, the United States Treasury can sell non-monetised silver at a price of not less than 90½ cents a troy oz, but only to American users. For many years, production of silver has fallen far short of demand, but the gap has been filled by demonetising coinage and, to a certain extent, by sales of Russian silver. But less silver has come from these sources in recent years. Users have therefore drawn heavily upon the US Treasury's free stock, which is available at a delivered price of 91⅛ cents a troy oz. In 1960, consumption of silver for industrial purposes—photography, metal joining, the manufacture of electrical goods as well as sterling holloware and flatware—exceeded production by a substantial margin. Because there was also a rise in the coinage of silver, the gap between consumption and world production, excluding Russian output, widened to about 100 million ozs.

About 52 million ozs were drawn from the free stock last year. The stock was about 124 million ozs at the end of December; now it contains only 63 million ozs. It is one of the impenetrable mysteries of the East how much more silver China has to sell, in what form it is held and where it originated. China produces little or no silver, but as in most Eastern countries large quantities of silver would formerly have been distributed among its population in one form or another. The cause of the urgent sales at a time when many are forecasting a significant rise in the price of silver is obviously China's pressing need for currency with which to pay for its increased imports, particularly of grain, from the West.

Apart from the free stock, the United States holds a further 1,800 million ozs of silver as part of its monetary reserve, but it does not appear likely that Congress will pass the necessary legislation to release any of this metal in order to continue pegging prices at the current level against the wishes of American producers. There is every chance that the free stock will be exhausted

RETAIL TRADE

The tentative figures of retail trade, seasonally adjusted, show that people spent as much in the shops in August as in July, when the index rose 2 points above the level of the second quarter. So the amount of stocking up in advance of the Chancellor's surcharge may have been smaller than first reports suggested. The surcharge has however raised the retail prices by 1½ per cent, in so far as it has been fully passed on, so that the quantity of goods bought in August fell by roughly this amount.

or that the US Treasury will withdraw from the market within the next year. When that happens and the price rises, there is a prospect that further considerable quantities of silver will become available, though not from mining, where the output of silver, which is mainly a by-product of lead and zinc production, is not greatly affected by changes in its value. The lowest official value of silver in American coins is $1.29 an oz. It would, therefore, take a much greater rise than is in immediate prospect to make worth while the illegal melting down of American coins. To obtain silver from the United States market, consumers have to pay an export premium of about one cent an oz and other costs add a further cent to the price. The London price of 79¾d. an oz for spot supplies is equivalent to about 93½ cents.

DOMESTIC APPLIANCES

Short-Term Fall, Long Term Rise?

THE domestic appliance industry seems likely to suffer more from the increase of 10 per cent in purchase tax in the "little Budget" last July than the small size of the increase in the price of its products would suggest. Rumours of the increase in prices to come put up sales in July, and they seem to have remained at this rather higher level during August, while retailers continue to sell their old stock, on which they had already paid tax, at the previous price. But now that goods are being sold at increased prices, retailers find that sales are falling below the level prevailing before talk of an increase in purchase tax began. Refrigerator makers remain those in the worst position, for they are still left with excessive stocks; in June these were more than 150,000 above the normal level for that time of year, and they may well be higher now. Sales in April and May had been well below those of 1960, but they improved in the later part of the summer, as the weather became hotter, to a level little lower than that a year before. Makers are now having to cut back output sharply to prevent stocks getting out of hand during the winter, and several have already dismissed some of their workers.

That there should still be scope for long-term growth in sales of some domestic hardware is shown by the latest market research survey on these appliances published by Odhams.* The last survey was made in September-October, 1958, just before the abolition of the restrictions on hire purchase opened the flood gates of demand; this one was made in the first three months of 1961. It shows that the market for television sets must now be at saturation point, with some 78 per cent of all homes owning one. This is about as high a figure as was ever reached for homes owning one radio set. Radio had reached this point by 1958; since then the proportion of homes owning one radio set appears to have fallen—though there may be an increasing number of homes that possess several. There may still be plenty of scope for more washing machines—so long as present owners have not become disillusioned about whether they save or create labour—and even more for refrigerators.

Something of the change in the competitive position of different firms in the industry is shown by another part of this

APPLIANCES IN THE HOME
(Percentage of all housewives owning one)

	Sept.–Nov., 1958	Jan.–Mar., 1961
Washing machine	28·4	39·4
Refrigerator	10·2	19·7
Vacuum cleaner	64·9	71·1
Television set	62·3	77·9
Radio set	78·1	76·2

survey, which covers the brands of appliances bought in the last five years. In the five years before the last survey—1953-1958—47.5 per cent of the washing machines bought by the housewives interviewed were Hoovers. In the five years 1956-61 this make accounted for only 36.2 per cent, while Hotpoint had come up from 7.7 per cent to 15.7 per cent and taken the place of second most popular brand from Servis. Amongst brands of refrigerators there was an even bigger fall in the share that the leader, Electrolux, appeared to have commanded of sales; during 1953-1958 it was said to have accounted for 31.8 per cent of those that the housewives questioned bought, but during 1956-1961 for only 17.1 per cent of them. In this industry the biggest increases in market share were those of Lec, from 2.7 per cent to 7.4 per cent, and of English Electric, from 2.7 per cent to 6.4 per cent. This year the position of the different companies has changed yet again, as a result of the varying effectiveness of their response to adversity.

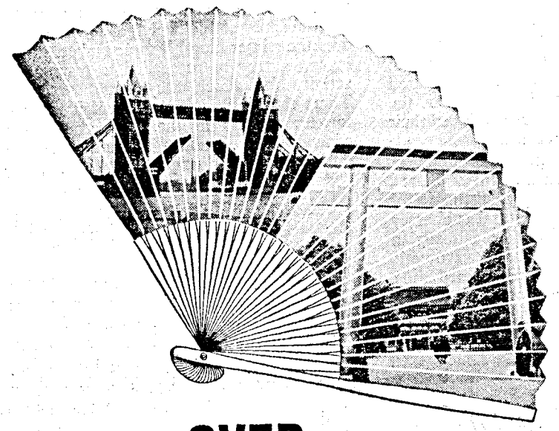
OVERSEAS CONTRACTING

Hit by Competition

IN retrospect it becomes apparent that the successful bid of an Italian firm of contractors for the main Kariba dam contract three years ago marked the beginnings of an era of considerably increased competition for British construction firms doing overseas work. Just how much so is made plain by the latest figures of the Ministry of Works, covering the twelve months to last March. The total value of work done by British firms rose once again, from £124 million in 1959-60 to £135 million, nearly twice as much as in 1955 when these figures were first collected. But the value of new contracts won during the year dropped abruptly from £131 million to £98 million. One year's results should not be taken in isolation, particularly as with the increasing size and duration of individual contracts construction companies are tending not to bid for every major job going. But there has also been a marked decline in the total value of contract work outstanding, from £133 million in March, 1960, to £100 million at the end of March, 1961.

The pace of development work going on in the world has certainly not slowed down—rather the reverse in fact—although there was some slackening in both Australia and Canada, two of the bigger markets for British contractors. Heavy losses in Iraq have for the time at least induced greater caution in accepting contracts in other countries of relative political instability in the Middle East and elsewhere. But the principal reason for the decline in successful tendering by British contractors has been that far more firms from a steadily growing number of countries have become seriously interested in undertaking overseas contracts. Besides Italian companies, contractors in France, west Germany and more recently in Japan, have become very active. Until the terms of export credit guarantees were changed earlier this year, allowing guarantees on loans of more than five years, British contractors claimed that credit difficulties were their chief handicap. Now, with interest rates higher in London than most other financial centres, the cost of credit, rather than its availability, has become the main subject for criticism, plus the growing habit of many countries (not only on the far side of the iron and bamboo curtains) of providing overseas aid in the form of tied loans. British overseas contractors are far from lacking in drive and enterprise: they had rebuilt their organisations virtually from scratch since the end of the last war. But the easier markets of the early and middle fifties appear to have gone for ever.

SUPERSONICS



The Sound Barrier

PERHAPS it is time that the public started to take note of the things that engineers say about supersonic airliners at such technical meetings as that held this week at the Royal Aeronautical Society. Some of these things concern not only those who might eventually buy tickets to fly in these machines but also every living person within earshot of the world's main air routes. These aeroplanes are going to be a public menace, not merely because they are noisy but because they are capable of doing considerable damage. Aircraft makers and users are beginning to wonder how much of this people are going to stand.

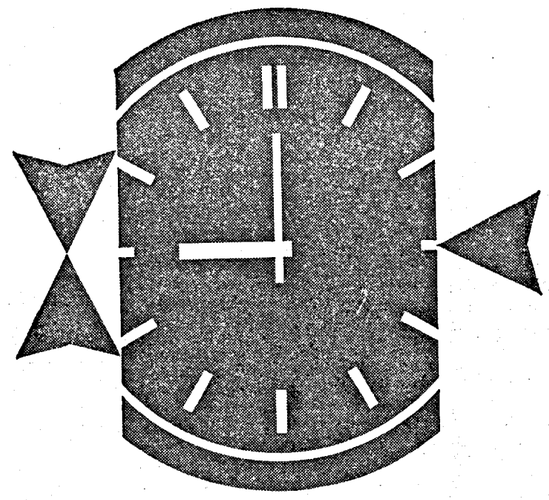
The trouble with a supersonic airliner is its size. Small aircraft flying at more than twice the speed of sound attract nothing worse than a few round curses from people on the ground. The shockwave they create eventually hits the ground however high they fly, but it is small and the disturbance it causes is small enough to get overlooked.

A supersonic airliner, several times bigger

LONDON—TOKYO

OVER THE POLE

ALSO VIA U.S.A. TRANS-PACIFIC TO TOKYO



Japan Air Lines add a delightful new flavour to flying on their twice weekly polar flights London-Tokyo. You can also enjoy this wonderfully different world of courtesy and serene beauty when travelling between Japan and West Coast U.S.A. Dainty kimono-clad hostesses pamper you with unaccustomed luxuries like *sake* and *o shibori* hot towels. First class passengers have colourful, comfortable *happi* coats to wear. You'll find that relaxation comes easy aboard the big, swift DC8C International Jet Couriers of Japan Air Lines.

Also frequent services first and tourist class between Singapore, Bangkok, Taipei, and Okinawa.

lock around the clock

Time is a wonderful ally in the fight against burglary. And most of Chubb's efforts are devoted to putting time on your side. As, for example, in the Chubb Time Lock for safes and strongroom doors.

As he leaves work, the person responsible sets the mechanism for an appropriate hour in the morning—say 9 o'clock. Until the clock inside (duplicated for safety's sake) reaches that hour, an inhibitor arm holds the bolt firm. Duplicate keys, or knowledge of the combination, become useless to the burglar.

A Chubb Time Lock completes the defences of important safes and strongroom doors. But like all security devices, it does need to be in position *before* the burglar arrives. He can be defeated. With Chubb and time on your side, he probably will be. Pass your security problems over to Chubb today.

CHUBB

Please write for details to: Chubb & Son's Lock and Safe Co. Ltd. 14-22 Tottenham Street, Tottenham Court Road, London W.1.

Chubb counter the crime wave

than the biggest supersonic bomber now flying, would cause a shock wave hitting the ground over which the aircraft passed with a pressure of about 1½ lbs per square foot. This is the figure given in papers read at this week's meeting by Farnborough engineers, and it is 50 per cent above an acceptable limit. A pressure jump of 1½ lbs might not do damage at the heights at which supersonic airliners would fly, but it might sound to people on the ground as if someone had tiptoed up and hit a big bass drum close to their ear. Moreover, this "noise carpet," as it is disarmingly called, could perceivably be as much as 80 miles wide. This sonic boom would be nothing like thunder; its characteristics would be sudden, unexpected and frightening. If North Atlantic air traffic went supersonic, these bangs might recur in a busy period every ten minutes. There is considerable room for doubt, therefore, whether governments would tolerate such disturbances over their territories; and if supersonic flying is banned over land, the airlines would have no interest in supersonic transports at all. All advantage would be lost if an airliner after flying supersonically from London to the coast of North America then had to throttle back to subsonic speeds onwards to Chicago or San Francisco.

Physical damage caused when a supersonic airliner accelerated to supersonic speeds would be something quite separate. Then the shock wave might cause a pressure jump on the ground of as much as 2½ lbs per square foot—and 2 lbs upwards is likely to damage windows and buildings. To keep the airliner at subsonic speeds until it has reached a safe cruising altitude assumes that an aircraft with the right shape for supersonic flight will also be right for such long climbs. On the contrary, aircraft engineers suspect that this trick will never be worked without adopting "variable geometry," which means, in fact, changing the shape of a supersonic aircraft's wings during flight. When that is done, perhaps, supersonic travel will be several stages nearer.

RUBBER

Half-Hearted Recovery

THE best grade of rubber rose one penny a lb. in London last month to 25½d. a lb. It is generally accepted that since the end of August the prospect of a stronger economic recovery in the United States has been strengthened by the early settlement of the major issues involved in General Motors' wage dispute while the political trouble in Berlin has worsened. But the rubber markets have not responded. It had been assumed that a strike at General Motors would be short-lived and the market is far from unanimous about either the seriousness of the difficulties in Berlin or their potential effect on markets.

Last month's improvement in prices partly reflected an upsurge in demand from east European countries which might have been because they were better informed about the development of the Berlin crisis. Shipments of rubber for Czechoslovakia, for example, normally pass through west Germany, and last month's purchases might have been made to forestall any retaliatory dislocation of trade.

The most tangible sign of the impact of America's economic revival on rubber probably lies in the narrowed price differential between the best and the lower grades of rubber, which the United States, because of its more advanced technology, is best fitted to make use of, though it is said that the communist countries have also reduced their dependence on the top grades.

If there were a lengthy disruption of motor car production in the United States, rubber might weaken sharply. Estimates of potential consumption of natural rubber by the United States this year are already in danger of not being realised; synthetic rubbers appear to have strengthened their challenge. Natural rubber output is seasonally high, and but for larger purchases by communist countries, stocks might have become embarrassingly high.

SHIPPING

Fairer Weather for Tramps

TRAMP shipowners are becoming more confident that freight rates may make a significant advance during the coming months, when seasonal demand is normally at its height. The reserve of laid-up tonnage is no longer a millstone round the neck of the shipowner who is negotiating with a charterer, although in the grain trades the surplus tankers available still form a deterrent. Even the tankers are succeeding in getting higher rates: last weekend 110,000 tons of tanker space was fixed for grain from the US Gulf to Holland or Belgium at rates up to $5.15 fio for October loading. The highest previous rate for this type of tonnage so far this year has been $4.82½ for four consecutive voyages. The higher rate reveals a shortage of free shipping in the North Atlantic area, which has probably been accentuated by the delays and congestion now affecting Japanese ports, which have found themselves unable to cope adequately with the greatly increased quantities of coal, grain, iron ore and scrap which have been converging on them from all over the world.

Another sign of strength is that charterers appear to be more ready to cover their requirements well in advance, and there also appears to be more interest in time charter fixtures for periods of up to twelve months at current rates. Cuba and China have contributed greatly to the provision of employment for tramp ships. The United States now has to import its sugar over much greater distances, such as from Australia and the Philippines, while the diversion of Cuban exports to such distant parts as Communist China and the USSR absorbs much tonnage which otherwise might have been idle. China's succession of poor harvests has also boosted demand for tramp ships; and it is satisfactory for shipowners to know that both these conditions are likely to remain effective for at least a few more years. With the chances of demand for the sea transport of oil likely to be increasing over the winter months, some tankers carrying grain may be persuaded to resume the activity for which they were designed. There can be little doubt that if it was not for the tankers in the grain trades the general level of tramp freights would be much higher than at present.

SHORTER NOTES

The meeting of the International Tin Council which was to have taken place this month has been postponed until October 9th. This is the second postponement of the meeting that was originally planned for August. All bids for the 1,000 tons of tin from a stock controlled by the General Services Administration of the United States were rejected last week. Cash tin recovered to £952½ but subsequently reacted to £945½ a ton.

★

Rover has made some minor changes to its 3-litre model for 1962, but it is continuing to make the 80 and 100 models unchanged. The 3-litre has been given different engine mountings and various changes have been made to the body; if an automatic transmission is fitted, there is now a control to hold it in the lower gears. This model now costs £30 more, while the price of the 100 has been increased by £10.

★

The terms of the one for five rights issue already foreshadowed from Chartered Bank have now been published. The new shares amounting are to be issued at 40s. to raise £2.2 million. With the existing units at 53s. the rights are worth 2s. 2d.

COMPANY MEETINGS

MANNESMANN AKTIENGESELLSCHAFT

DÜSSELDORF, GERMANY

RECORD TURNOVER OF DM 4,572M.: STEEL OUTPUT EXCEEDS 2,300,000 TONS

FOREIGN SUBSIDIARIES DO WELL

The Annual General Meeting of Mannesmann AG was held in Düsseldorf on June 28th, and the following are details of the report presented by the Board of Directors:

TURNOVER

The business year 1960 was particularly successful for Mannesmann AG. The Company participated in the economic progress of the Federal Republic, and was able to improve its position in the world market in spite of increased competition.

Total group turnover of Mannesmann AG and all its German and foreign subsidiaries amounted to DM 4,572 million, and external sales rose by 16.6 per cent to DM 3,535 million.

Total sales of the Mannesmann consolidated domestic companies reached DM 4,092 million, while sales to outside customers reached DM 3,174 million against DM 2,739 million in 1959.

Although exports did not increase in the same proportion as home sales, they reached DM 883 million, an increase of 10 per cent on the previous year, and represented 27.8 per cent of total turnover as against 29.3 per cent in 1959.

The increase was shared equally by all continents with the exception of the Americas, but the major part continued to go to the countries of Europe. Details of exports are shown in the following table:

	DM m.		DM m.
Europe	610	South America ...	56
Africa	30	Asia	134
North America ...	52	Australia	1

DIVISIONS

The following are details of developments in the various sectors of the Mannesmann Group:

A. Mining

Essener Steinkohlenbergwerke AG, the Group's coal mining subsidiary, had a favourable year as a result of higher productivity and further rationalisation. Output increased by 0.8 per cent to 6,373,000 metric tons.

Coke production, which included the output of the new central coking plant at Huckingen, also rose by 15.9 per cent to 2,238,000 metric tons.

Pithead stocks were reduced by 57.3 per cent from 871,000 metric tons to 372,000 metric tons.

Output of the *Mannesmann ore mines* in Germany showed a rise, principally because of the higher output of the Königsberg mine near Wetzlar, and reached 373,400 metric tons, an increase of 24 per cent.

B. Steel Works and Rolling Mills

Crude steel production in the Company's plants rose by 13 per cent compared with 1959 and reached a new high level of 2,368,000 metric tons. Nonetheless, the Company's share of crude steel production in the Federal Republic fell from 7.1 per cent to 6.9 per cent. A breakdown of steel production shows an output of 1,640,000 metric tons of open-hearth steel, 662,000 metric tons of basic Bessemer steel, and 66,000 metric tons of electric steel.

Production of rolled steel at 1,529,000 metric tons was 20 per cent higher than in the previous year.

Raw material supplies were adequate. A large proportion of scrap imports came from the USA. Iron ore supplies totalled approximately 2.7 million metric tons with the share of home produced ore dropping from 34.5 per cent to 31.9 per cent. In order to secure ore supplies on a long-term basis at stable prices, the Company concluded long-term agreements for the supply of West African iron ore with the *Liberian American-Swedish Minerals Company (LAMCO)* and the *National Iron Ore Ltd.*, both in Monrovia.

C. Tube Plants

The production of steel tubes in the Federal Republic rose by 13.5 per cent to 2,340,000 metric tons in 1960.

Tube production of the German Mannesmann companies, i.e., of the plants of the Parent Company itself and of those of its German subsidiaries, including *Röhrenwerke Bous/Saar GmbH*, was 18.8 per cent higher than in the previous year (excluding large-diameter pipes). Whilst the production of seamless tubes rose to 661,000 metric tons, an increase of 21.8 per cent compared with 1959, the output of welded tubes of up to 318 mm diameter rose by 8.3 per cent to 166,000 metric tons.

The production of welded large-diameter pipes fell by 35 per cent to 156,000 metric tons owing to the lack of large export orders. This total, however, was still approximately the same as that in 1958. Tube production in the plants of the Parent Company increased by 14 per cent to 637,000 metric tons over the previous year.

The Mannesmann foreign subsidiaries in Brazil, Canada and Turkey produced altogether 137,000 metric tons of tubes, bringing the overall Group total to 1,120,000 metric tons as against 1,074,000 tons in 1959.

A. Steel Processing

Röhrenwerke Bous/Saar GmbH, Bous/Saar

Output rose by 66 per cent during the year, and reached 93,300 metric tons of seamless tubes. The company erected a new 50-ton electric steel furnace which came into operation in February 1961.

Grossrohrwerk Mannesmann-Hoesch GmbH, Duisburg

Output and turnover, which had risen considerably in 1959, fell by about one-third during the year. At the end of 1960, however, the order book position again improved and it is to be expected that capacity will be fully utilised in 1961.

Kronprinz AG, Solingen-Ohligs

Turnover was 33 per cent higher than in 1959, but the export ratio fell from 27 per cent to 24 per cent. Output of cold strip increased by 40 per cent, hot strip rose by 28 per cent and seamless tubes advanced by 26 per cent. The present volume of orders will ensure a high level of activity for some time to come.

Kammerich-Werke AG, Brackwede

Turnover rose by 25 per cent compared with 1959. Exports increased to 26 per cent of output as against 22 per cent last year.

Mecano-Bundy GmbH, Heidelberg

The company produced 53 million metres of Bundy tubes during 1960, compared with 36 million metres in 1959, an increase of about 50 per cent. The production of thermostats rose by 40 per cent and total turnover increased by 35 per cent.

Mannesmann-Stahlblechbau GmbH, Düsseldorf

Owing to the strong demand the company increased particularly the production of oil-tanks and of transport containers. Turnover was 19 per cent higher than in the previous year and a new plant for the production of oil-tanks will be commissioned in the summer of 1961.

Mannesmann-Rohrleitungsbau GmbH, Düsseldorf

Turnover was 12 per cent higher than in 1959, and the export ratio rose from 22 per cent to 31 per cent. Current orders, about 50 per cent from foreign customers, ensure full employment for about twelve months. The company has half a share in an important pipe-laying contract in Assam (India).

Mannesmann-Meer AG, Mönchengladbach

Turnover increased by 44 per cent and the export ratio rose from 46 per cent to 57 per cent.

The large-diameter tube mill erected at Rourkela (India) last year was responsible for the major share of the increase in exports. The erection of this plant, which was built and brought into operation in 15 months, was a remarkable achievement.

Porsche-Diesel-Motorenbau GmbH, Friedrichshafen/Lake Constance

The company was forced to make changes in its tractor production programme.

The resulting teething troubles led to a fall in output, which at 13,000 units was about 30 per cent lower than in 1959. The new types of tractor introduced early in 1961 were well received both at home and abroad, and it is to be expected that the relatively high levels of production and turnover reached in 1959 will be equalled in the current year.

B. Coal Chemistry and Plastics

Ruhrchemie AG, Oberhausen-Holten

Mannesmann increased its interest in this company from 25 per cent to 33⅓ per cent. The rationalisation measures initiated in 1959 proved fruitful during the year. A new polyethylene plant came into service halfway through 1960.

Süd-West-Chemie GmbH, Neu-Ulm/Donau

Production of synthetic resins and plastic moulds continued to rise. The company began the manufacture of paper impregnated with synthetic resins for use in the building and furniture industries. Turnover was approximately one-third higher than in 1959.

Mannesmann-Plastic GmbH, Düsseldorf

The rapid upward trend continued in 1960. PVC tubes were particularly well received, and their production constituted 50 per cent of the total output, which itself nearly doubled during the year.

Owing to the rising demand for plastic tubes production installations are currently being extended.

C. Trade and Shipping

Turnover of the Mannesmann tube and steel selling companies in Berlin, Düsseldorf, Frankfurt, Hamburg, Hanover, Munich and Nuremberg rose by 17 per cent during 1960. Tubes increased by 20 per cent, steel sheets by 10 per cent and rolled steel by 22 per cent over the previous year.

The following table gives details of MANNESMANN foreign production and trading companies during 1960:

	North America	South America	Other foreign countries	Total
Total sales (in DM '000)	154,468	91,840	86,661	332,969
Labour force	516	3,914	1,385	5,815
Production capacity:				
Crude steel (in tons per year)	—	110,000	—	110,000
Tubes (in tons per year)	200,000	90,000	25,000	315,000

Mannesmann-Export GmbH, Düsseldorf

Turnover was higher than in the previous year although the rise was limited by supply difficulties.

The tube sector, with more than 60 per cent, again accounted for the major share of the total turnover.

D. Foreign Activities

Mannesmann Tube Co. Ltd., Sault Ste. Marie/Ontario (Canada)

Production continued to rise in the first half of 1960. Sales, however, fell below expectations. Oil companies reduced their development programmes owing to a world surplus of oil, and as a result the company's production dropped from 92,000 tons in 1959 to 75,000 tons in 1960. Some reduction in personnel and rationalisation of production helped to achieve stability.

Companhia Siderúrgica Mannesmann, Belo Horizonte (Brazil)

Crude steel output rose by 16 per cent to 111,000 metric tons, rolled steel production increased by 14 per cent to 107,000 metric tons, and tube production advanced by 5 per cent to 44,000 metric tons.

The company's turnover was 36 per cent higher than in 1959, and the order book was twice as large as at the end of 1959. The second tube pressing plant was commissioned in the spring of 1961 and is now working to capacity.

Companhia Siderúrgica São Caetano, São Paulo (Brazil)

Total output rose by 50 per cent to 15,700 metric tons. Main products are structural iron and high quality rolled steel.

Mannesmann Mineração SA, Nova Lima (Brazil)

Increased demand by *Companhia Siderúrgica Mannesmann* and ore deliveries to the Huckingen steel works resulted in more than double the previous output during 1960. 60,000 metric tons of high quality ore were delivered to Huckingen.

In 1960 the company took over *Mineração Serra do Curral SA*, Nova Lima.

Construções Tubulares Mannesmann SA, São Paulo (Brazil)

Progress was again satisfactory during the year. Orders were received for pylons in connection with the electrification of the railways, and considerable orders are also in hand from the motor vehicle industry.

Mannesmann-Sümerbank Boru Endüstrisi TAS, Izmit (Turkey)

In 1960, following an adequate allocation of foreign currency for strip imports, tube output rose to 25,000 metric tons. As a result the factory worked to full capacity for the first time and turnover rose accordingly. Further expansion was delayed owing to changes in the political situation.

PERSONNEL

The number of people employed by Mannesmann AG and its German subsidiaries rose during the year, owing to the favourable employment position, and reached 76,721, an advance of 1,946. Employees abroad increased by 524 to a total of 5,815, bringing the Group total to 82,536.

The continuing shortage of labour caused the Company to employ an increasing number of foreign workers. This presented problems of housing and of general integration which were solved satisfactorily.

Voluntary social security expenditure totalled DM 114.5 million, representing 17 per cent of labour costs.

Further progress was made in housing schemes on which expenditure amounted to about DM 6.5 million. The number of dwellings completed was approximately 700, bringing the total of accommodation provided since the Currency Reform to some 23,900 dwelling-units at a cost of approximately DM 162 million.

BALANCE SHEET AS AT 31st DECEMBER, 1960 (SUMMARY)

LIABILITIES	1960 DMm.	1959 DMm.
Capital	580	580
Statutory Reserve	65	77
Free Reserve	188	147
Welfare Funds	2	2
Interests of Minority Shareholders	15	14
Reserves for Special Purposes	156	162
Adjustments (dwellings and ships)	158	163
Provision for pensions	216	204
Amount set aside towards the Capital Levy	60	60
Other long-term provisions	85	42
Long-term liabilities	393	387
Proprietors' investment and long-term borrowings	1,918	1,838
Medium-term and short-term liabilities and provisions	875	804
Net Profit	82	71
	957	875
	2,875	2,713

ASSETS	1960 DMm.	1959 DMm.
Fixed Assets including Assets in course of construction and Prepayments for capital additions	1,213	1,189
Investments and interests in the nature of investments less capital not yet called up	302	286
Long-term receivables less adjustments	208	163
Total long-term assets	1,723	1,638
Stocks and Prepayments made less Prepayments received	513	425
Other medium-term and short-term current assets less adjustments	639	650
	1,152	1,075
	2,875	2,713

PROFIT AND DIVIDEND

Net profit for the year amounted t DM 80,964,508.84 which, added to the balanc of DM 1,073,639.19 brought forward fro the previous year, produced a total o DM 82,038,148.03 available for distribution. I was accordingly proposed to distribute dividend of 14 per cent, equivalent t DM 81,110,118.60, and to carry forward th resulting balance of DM 928,029.43.

ANNUAL GENERAL MEETING

The report, the accounts, and the proposal put forward by the Board were adopted.

Copies of the Annual Report are nov available in English and can be obtaine from Mannex (London) Ltd., Universa House, 60, Buckingham Palace Road London, S.W.1.

SUPERVISORY BOARD

(Aufsichtsrat)

Dr Wilhelm Zangen, Düsseldorf (Chairman); Professor Dr Karl Hax, Seeheim an der Bergstrasse (Deputy Chairman); Walter Arendt, Wattenscheid-Eppendorf; Franz Berensdorf, Duisburg-Huckingen; Ferry von Berghes, Eisenschmitt/Eifel; Dr Hans Constantin Boden, Frankfurt/Main; Professor Helmut Duvernell, Dortmund; Dr Dr Friedrich Haas, Berlin; Rudolf Hahn, Birmingham (UK); Dr Rol Hanschmann, Essen-Bredeney; Dr Paul Ferdinand Hast, Goslar; Rudolf Nungesser, Düsseldorf; Heinz Pohl, Düsseldorf; Bernhard Pott hast, Wanne-Eickel; Dr Hans Reuter, Wittlaer near Düsseldorf; Professor Dr Carlo Schmid, Bonn; Dr Eduard von Schwartzkoppen, Falkenstein/Taunus; Dr Hermann von Siemens, Munich; Heinrich Sträter, Dortmund-Berghofen; Franz Heinrich Ulrich, Düsseldorf; Franz Westhoff, Düsseldorf.

BOARD OF DIRECTORS

(Vorstand)

Dr Hermann Winkhaus, Düsseldorf (Chairman); Hans J. Braune, Essen-Bredeney; Dr Walther Eisenbraun, Düsseldorf; Peter Keller, Bad Schwalbach/Taunus; Adolf Klein, Ratingen near Düsseldorf; Heinrich Müller, Kettwig/Ruhr; Ulrich Petersen, Düsseldorf; Günter Vogelsang, Düsseldorf; Heinz Hufnagel, Düsseldorf (Deputy Member).

Dalgety & Company Limited

New Zealand Loan & Mercantile Agency Company Limited

PROPOSED AMALGAMATION

The Directors of Dalgety & Company Limited ("Dalgety") and New Zealand Loan & Mercantile Agency Company Limited ("N.Z.L.") announce that they have agreed in principle to recommend that the two companies be amalgamated.

The Directors of both companies believe that the proposed amalgamation will be in the best interests of their shareholders and clients alike.

It is, of course, impossible precisely to estimate the financial benefit which should accrue from the amalgamation. However, it is considered that substantial economies will progressively become possible.

Both companies have played a significant role in the development of primary production in Australia and New Zealand and the proposed amalgamation is designed to serve the interest of clients to the best possible advantage. The business of each company with the primary producer will be integrated as soon as practicable, but clients are asked for the time being to continue to deal with their existing agent.

Both companies are fortunate in having a loyal and able staff upon which their success in the future, as in the past, will largely depend. The need for talented staff in the new amalgamation is likely to be greater, not less, than if the two companies continued in competition and, while the integration will probably involve changes in deployment, the interests of the staff of both companies will continue to be a major consideration of the amalgamated Board.

It is proposed that the two companies shall be amalgamated under the name "Dalgety & New Zealand Loan Limited" and the Board will be composed of members from the present Boards of each constituent company. The operation will be carried out by offers made by Dalgety to the shareholders of N.Z.L. as follows:—

1. Dalgety will offer 21 5½ per cent. Cumulative Preference shares of £1 each for £20 N.Z.L. 5½ per cent. Cumulative Preference stock.
2. Dalgety will offer 4 Ordinary shares of £1 each and 1 5½ per cent. Cumulative Preference share of £1 for £4 Ordinary stock in N.Z.L.

These offers will be conditional upon acceptance in respect of 90 per cent. of the two classes of stock involved.

These terms have been recommended to both Boards as fair and reasonable by Lazard Brothers & Co., Limited who had been requested to make an independent proposal on behalf of both companies. The existing Dalgety Company is being used as the vehicle for the proposed amalgamation primarily from considerations of convenience and expense.

In order to facilitate complete integration of the two companies proposals will also be made to the holders of the 1st and 2nd Debenture Stocks of N.Z.L. to surrender their present holdings in exchange for Debenture Stock of Dalgety & New Zealand Loan Limited. The amalgamation will also be conditional upon the necessary consents of the Debenture stockholders of N.Z.L. to this exchange.

Full details of the financial proposals will be posted to the members of both companies and the Debenture stockholders of N.Z.L. within the next few weeks. Clients and staff will be kept advised from time to time of any organisational changes that may affect them. These changes will be gradual and become effective in some localities sooner than in others. It will be the object to cause as little disturbance and as much benefit as possible to clients and staff of both companies.

THE LUNGLA (SYLHET) TEA COMPANY LTD.

The sixty-seventh annual general meeting was held on September 12th in London, **Mr J. McFarlane, MC** (the chairman), presiding.

The following is an extract from his circulated statement: Stockholders who read my last statement would be prepared for a big falling away of crop compared with Season 1959 and the advices issued in February 1961 would give them a close idea of the final figures. The actual outturn proved to be 40,444 mds. as against an estimate of 54,950 mds. and a crop of 53,068 mds. for Season 1959.

Whilst the drought of record severity experienced during the first few months of the year was undoubtedly the main cause of the poor crop, hail damage at Shumshernugger was responsible, so it is estimated, for the loss of 420 mds. of tea at that division.

Trading profits fell from £212,389 for 1959 to £83,652 and the upshot was a net profit of £42,633 to which our subsidiary the Looksan Tea Co. Ltd., contributed only £625 by way of a Preference Dividend, whereas for 1959 the income from our subsidiary amounted to £25,115.

Crop prospects for the current Season are quite good but it is too early to say whether or not it is likely that we will make the estimated crops—54,200 mds. for the Lungla Company and 8,000 mds. for the Looksan Company. To August 31st the outturn was Lungla Company 29,890 mds., Looksan Company 4,540 mds., totalling 25,155 mds., which is 12,125 mds. ahead of last year.

The report was adopted.

WEST CUMBERLAND SILK MILLS LIMITED

The twenty-second annual general meeting of West Cumberland Silk Mills Limited was held on September 8th in London, **The Rt Hon Lord Wilmot of Selmeston, PC, JP** (the Chairman), presiding.

The following is an extract from his circulated statement:

The main event in your Company's activities this year has been the decision to enter the field of Interior Decorating Fabrics.

Judging by the favourable reception, I feel that the expense involved is justified, and can be regarded as an investment, the benefits of which will not be seen until later.

We hope steadily to increase our business in this field and thus to achieve a diversification of our activities.

Trading conditions throughout the year were difficult, especially in some of our Main Export markets. Trade with Australia was adversely affected, not only by credit restrictions in that country, but mainly by large scale imports of Japanese fabrics, which enter Australia as freely as do British Textiles. Licensing has restricted exports to New Zealand, and this Commonwealth country is also importing more and more of its requirements from Japan. Whilst the volume of our production is fully up to last year, intense competition is affecting our profit margins. This fact coupled with the expenses in launching our Interior Decorating Fabrics may result in somewhat lower profit figures during the coming financial year.

The report and accounts were adopted and a dividend of 24 per cent, less tax, was approved.

THE PURNELL GROUP
(Printing, Packaging & Publishing)

WATERLOWS OPERATING PROFITABLY
SUCCESS OF NEW PUBLICATION

The Twenty-seventh Ordinary General Meeting of Purnell & Sons Limited will be held on September 29th in London.

The following is the circulated statement of the Chairman and Managing Director, **Mr W. Harvey**:

You will observe from the Consolidated Profit & Loss Account that the profit of the Group for the year before providing for taxation is £762,642, being an increase over the previous year of £27,053. After providing for taxation the balance of profit for the year is £377,948, showing an increase over the previous year of £14,909.

In these Accounts it was the intention of your Directors to declare a dividend in excess of the previous year's distribution, but having regard to the Chancellor of the Exchequer's request we have decided to recommend the same final dividend. At the same time we wish to point out to our Shareholders that, as soon as the Chancellor can see his way clear to relax the present conditions, we propose when considering our dividend policy in the future to take into consideration that we have a balance on Profit & Loss Account of £898,856, and we will feel justified in recommending an increased dividend.

In my review of the Accounts for the year to 31st December 1958 I pointed out that our Fixed Assets were greatly in excess of the figure shown in the Balance Sheet, and this is now so to an even greater extent in view of the fact that we have taken a larger share interest in some of our Subsidiary Companies whose Fixed Assets are also of greater value than the figures which appear in their Balance Sheets.

WATERLOW & SONS LIMITED

You will remember that during 1960 we were successful in securing control of Waterlow & Sons Ltd. At that time we had voting control only through the Preference and Preferred Ordinary Shares in that Company. I am pleased to be able to report that we now hold a much larger proportion of the Deferred Ordinary Shares. As has been reported, Waterlow & Sons Ltd. made a loss for the year to 31st December last, and we are not, therefore, able to enjoy any profit from this Company in the account now before you. I am happy to report, however, that since we became interested in this Company and placed behind it the experience of our organization, its trading conditions have improved, and it is now operating on a profitable basis. We hope to include a substantial profit in respect of your Company's interests in Waterlow & Sons Ltd. in the Consolidated Accounts for 1961.

I have to report that before the Chancellor of the Exchequer introduced his interim budget we had committed ourselves to a large capital programme within this Group for our expanding Packaging, Photogravure and Rotary-Litho Divisions. Considerable improvements have in recent times taken place in printing-machinery construction, and you have always supported your Directors in their view that this Company should be in the forefront with such developments. To finance this programme we propose, at an appropriate time, to raise further capital, and when this is done, whether in the form of a Rights Issue or Loan Stock with Conversion Rights, such additional capital will be offered in the first instance to our shareholders.

During the year we decided to launch a weekly magazine for children, printed in colour by lithography, and the first number of *Knowledge* was launched in January 1961 with the support of a most distinguished advisory editorial board. That there was a need for this unique venture in educational publishing, presented in a manner to stimulate the interests of boys and girls, has been proved by its success. The magazine, which is designed to grow into an encyclopaedia, has been welcomed widely by parents and teachers and has added considerably to our publishing goodwill.

CURRENT TRADING POSITION

You will wish, I am sure, to know the position of our trading during the present year, and I am glad to be able to report that the trading of the Group for the current year is in excess of the corresponding period of 1960. We have, however, now to meet immediately very much greater direct labour costs in consequence of national agreements with the unions associated with the printing industry which were negotiated before the Government's recent economic measures. It remains to be seen how far the additional costs can be met by more efficient production methods, which is the constant aim of the Company's management. The rate of increase of direct wages in recent years, and the extent of the capital equipment taking place in European countries, underline most emphatically the importance of ensuring that the Company's plant and methods of production are completely up-to-date.

I wish to pay tribute to my colleagues on the Board, all of whom are full-time executives, and to express my thanks once again to the staff and all our employees for their services and co-operation. It has been a period in which they have been called upon to assist with success from their wide experience gained in our own organization in widening fields of printing and publishing.

AMALGAMATED ANTHRACITE HOLDINGS

MR JOHN WADDELL REPORTS
RECORD PROFITS

The Thirty-seventh Annual General Meeting of Amalgamated Anthracite Holdings Limited was held on September 13th in London, **Mr John Waddell**, the chairman, presiding.

The following is an extract from his circulated statement:

Our trading activities are reflected in the results of our wholly owned subsidiary company, The British Anthracite Company Limited. The trading profit for the year totalled approximately £1,025,000 compared with £705,000 in the previous year. The Board are recommending a dividend of 16 per cent.

I mentioned in my last year's statement the predictions of an improved picture at the end of 1960, and scope for an increased dividend distribution. I think I can say that these predictions have been justified and we have come out with record profits for the year.

Our Coal and Transport activities generally showed an improvement and a steady holding up in turnover.

Our Engineering Companies also did better, although both heavy and light engineering had a thin year, and in certain cases involved us in losses. This situation has been slow to improve, but it is now in better shape.

For the first half of 1961 we have more than maintained our position and shown a moderate expansion in profits. The benefit of the better order books of some of our Engineering Companies should bring about further improvements in the second half of 1961. I look to a progressive future with confidence.

The report and accounts were adopted.

THE STRAITS PLANTATIONS, LTD.

Directors: Sir Eric Macfadyen (*Chairman*), H. B. E. Hake, CBE, W. E. Wallis, Major V. N. B. Were, J. F. E. Gilchrist, OBE.

Summary of the Directors' Report and circulated statement of the Chairman for the year ended March 31st, 1961.

OUTPUTS			NET PRICES	
		(*Previous year*)		(*Previous year*)
Copra	8,264 tons	(7,894)	... £60 1s. 2d. per ton	(£77 3s. 0d.)
Palm Oil	3,958 tons	(3,736)	... £71 3s. 0d. per ton	(£77 6s. 10d.)
Palm Kernels ...	1,206 tons	(1,137)	... £41 11s. 5d. per ton	(£53 2s. 10d.)

PROFIT AND DIVIDEND: The profit before tax was £377,149 compared with £480,252 last year. A final dividend of 14 per cent is recommended, making a total of 21 per cent for the year.

ESTATES: The estates were maintained in good order. 520 acres of oil palms and 46 acres of coconuts were planted or replanted during the year.

CURRENT FINANCIAL YEAR: Apart from unpredictable political and other factors, the Chairman anticipates approximately similar results.

The Sixty-second Annual General Meeting will be held at 12 noon on September 29th at 1-4, Great Tower Street, London, E.C.3.

(The Company's shares are quoted in Stock Exchange lists under "Rubber.")

STEVINSON, HARDY & CO., LIMITED

(Oil Importers and Distributors, Tanker Agents and Charterers)

INCREASED TURNOVER BUT LOWER MARGINS

The twenty-fourth ordinary general meeting of Stevinson, Hardy & Co. Limited was held on September 7th in London, **Mr H. L. Stevinson** (chairman and joint managing director) presiding.

The following is an extract from his circulated statement:

The Group Profit for the twelve months ended March 31, 1961 amounted to £428,912 compared with £466,028 for the previous twelve months; in the latter you will remember we included a figure of £63,772 for profits not strictly earned during that year. In effect the true comparison should be with £402,256.

The tax position of the Group is still affected by the impact of the Investment Allowance on the new tanker and, depending on the profits of the Group, will be so for one or more years. The final cost of the "EDWARD STEVINSON" is £3,240,000 approximately.

On February 27th we took delivery of the "EDWARD STEVINSON," which was a few months later than anticipated, and she commenced trading on February 28th on behalf of Stevinson Hardy (Tankers) Ltd., the company we formed to operate her, so you will realise that apart from the management and other remuneration her operations have had little effect on the current year.

Turning to our usual review of the activities of the Company, our experiences have been very similar to those of several of the large oil companies and other concerns, namely, satisfactorily increased turnover which is barely big enough to compensate for the lower margins under which we have had to work.

Contrary to my forecast last year, we were surprised and very disappointed at the tax imposed on fuel oils in the last Budget. A tax of this magnitude, £2 per ton, is bound to have an effect on manufacturing costs and in our opinion it is bound to slow down the increase in consumption that the oil trade has been confidently expecting.

The Chartering Department on a flat market that was no more cheerful than the previous year did well to hold its own, but it does not appear likely for some time that the return of profitable rates for ship owners and consequently higher brokerages will be secured.

Our general international Trading Department and the Bunkering Department both improved their figures, the former being the more successful, but both can be regarded with confidence as regular contributors to the Group Profit.

As regards the current year, the start has been good. It is impossible to estimate how far the trend of lower margins will develop, particularly on the distribution side. The Board look forward to current and future years with reasonable confidence that your Company will be able to maintain its position.

The report was adopted.

COMPAGNIE FRANÇAISE DES PETROLES
(French Petroleum Company)

PARIS

The Annual General Meeting of COMPAGNIE FRANÇAISE DES PETROLES was held in Paris on June 23rd, and the following are details of the statement made by **Monsieur Victor de Metz**, Chairman of the Board of Directors, and a summary of the annual report:

MONSIEUR VICTOR DE METZ

After reviewing the progress made during the first three months of the current year, when CFP handled 4.8 million tons of oil, representing an increase of 9 per cent over the same period in 1960, Monsieur de Metz spoke of the problems arising out of the entry of the USSR into the world oil market. He said: "In our opinion, it would be a very short-sighted policy if the Western consumers allowed those countries which are our traditional suppliers to be weakened, in order to benefit from the artificial advantages to be derived today from the purchase of Russian oil."

The Chairman also gave some information on the deposits recently discovered in the Persian Gulf at Murban, by *Petroleum Development (Trucial Coast) Limited*, in which CFP has a 23.75 per cent interest, and at Umm Shaif by *Abu Dhabi Marine Areas Limited*, in which CFP has a one-third interest. Recoverable reserves are estimated at some 500 million tons and should contribute some 4 million to 5 million tons per year to CFP's supplies in the near future.

He concluded: "Finally, the diversity of the Company's outlets, which are to be found in continents and countries as far apart as Australia, Japan, Africa, Europe and parts of America, constitutes a safeguard against a serious market depression.

Of course, much work remains to be done, but in spite of current difficulties, we look to the future with confidence and optimism."

The following are details from the Annual Report:

REVIEW

As output of Middle East oil continued to rise, the share of CFP also increased; it obtained 14,216,000 metric tons through its participations of 23.35 per cent in the *Iraq Petroleum Company Limited* and associated companies, and of 6 per cent in the *Iranian Consortium*.

Much development work, including the sinking of new wells and the laying of pipelines as well as the erection of storage installations, continued in Iraq, Qatar and Iran.

In North Africa, through its controlling interest in *CFP(A)*, CFP obtained 3,200,000 metric tons of crude from Hassi-Messaoud.

In Libya, exploration carried out near the Tunisian border by *Compagnie des Petroles Total Libye*, a CFP subsidiary, resulted in a recent discovery on which further testing is now in progress.

Despite conditions which prevented Western Canadian deposits from being operated at capacity, output of the *French Petroleum Company of Canada* showed an increase of 20 per cent over the 1959 figure. The Canadian Government's policy in regard to the oil industry favours an appreciable increase in production during the years to come, and CFP's Canadian subsidiary will not fail to take full advantage of improved conditions.

Refineries operated by subsidiary companies in France and Italy all recorded results in excess of the previous year's figures; in France, output from *Compagnie Française de Raffinage* refineries was 8,460,000 metric tons, most of which was sold on the French and Algerian markets. Sales of refined products abroad, including bunkering supplies and aviation spirit, amounted to 4,906,000 metric tons.

The Company continued to develop foreign marketing networks through subsidiary sales companies. The first "*TOTAL*" filling stations were opened in Great Britain.

CFP sales of crude oil to companies outside the Group showed an appreciable increase over 1959.

PROFIT AND DIVIDEND

Net profit of CFP alone amounted to NF.104,206,070.62 and after sundry provisions, including the allocation of NF.51,725,673.41 to the Contingency Fund, it was decided to distribute NF.46,058,040 in the form of a gross dividend of NF.6 per share of NF.50, equivalent to last year but in respect of a share capital increased by 5 per cent.

COMPANY AFFAIRS

Rank Organisation Redeploys

THE immediate postwar years saw a great boom in all kinds of entertainment and sport functions, notably at the cinema, football and cricket matches and the speedway tracks. They provided excitement and glamour in a drab era of austerity and restriction. But in the last ten years these attractions have fought a losing battle against falling attendances. In this field it was the film industry, challenged directly by television, that has been the hardest hit and this is why it has been the quickest to adjust its thinking to the changing demands of the public. Since 1957 over 1,000 cinemas have been closed and the Rank Organisation alone, shutting down another 63 last year, has closed down or converted to other uses no less than 121 cinemas. Now the Rank circuits operate just under 400 cinemas and claim they have completed the first stage of the rationalisation plan, designed to offset declining attendances and the shortage of films.

The reasons for the sharp fall in attendances from a peak of 1,650 million in 1947 to just over 500 million by the end of 1960 are pinpointed in a chart in the Rank Organisation's report, which compares the fall in attendances with the rise in ownership of television sets, motor cars, washing machines and refrigerators. But Mr John Davis, the managing director, also believes that the "do it yourself" movement and the fact that more people are taking longer holidays are contributing factors. He is fully alive to changes of fashion in entertainment and the Rank group has been adjusting its policies to them. The current Bingo craze has, for example, provided a use for some of Rank's closed cinemas and morning bookings for some of those still showing films, notably at holiday resorts. Other cinemas have been converted to bowling alleys, but planning permission has not always been readily available from local authorities. Under Victor Sylvester's guidance ballroom dancing is also flourishing, while Health Clubs represent the latest venture into wider fields of entertainment.

It was, however, the cinemas themselves that provided all the increase in the Rank group's profits in the year to June 24th last, but this was largely due to a full year's benefit from the abolition of entertainments tax, against only 11 weeks in 1959-60. In the current year Lord Rank estimates that, although the fall in attendances is levelling out, cinema profits will fall, but he is hopeful that this will be more than offset by "other activities." Earnings from these sources were affected in 1960-61 by the sharp setback in the profits of Bush Radio, reflecting the slump in television sales. Elsewhere, Rank-Xerox made a profit for the second year running, while the profits of Rank Precision Industries, in which the Rank Organisation has added to its stake, were practically unchanged. For this company, which makes the Bell and Howell ciné cameras, Lord Rank foreshadows the possibility of a rights issue to ease the "financial stringency" largely brought about by a sharp increase in stocks.

SALES AND GROSS PROFITS

Years to end-June	£'000s 1960 Sales	1960 Profits	1961 Sales	1961 Profits
Exhibition in Britain	25,627	2,272	28,226	3,628
Exhibition overseas.	4,293	460	3,601	340
Film production and distribution	10,421	217	10,115	529
Film studios and labs.	3,534	407	3,909	481
Manufacturing	18,373	1,532	20,362	1,148
Miscellaneous	5,502	234	6,862	325
Total	67,750	5,122	73,075	6,451

In May this year, the Rank Organisation itself made a £2.7 million rights issue, but at the end of June bank loans still amounted to £6.9 million, against £6.1 million, and short term advances, relating largely to the hire purchase trade, amounted to £3 million. Against these debts can be set a cash balance of £4 million; but some of this cash appears to be earmarked for property development projects. Clearly it is upon the redeployment of the group's assets that Lord Rank's hopes for "steadily increasing profits" are founded, but the expectation of a reasonable degree of success in these wider and more diverse ventures appears to be well discounted in the price of 25s. on the 5s. shares and in the yield of 4.3 per cent on the ordinary dividend as raised from 15 to 22½ per cent.

General Electric

THOUGH Mr Arnold Lindley's statement at last week's annual general meeting of General Electric was not one of unrelieved gloom, it clearly indicated that legacies from the past hang like millstones round the necks of the directors who are attempting to impart a new vigour to the company's management and policies. The allied problems of an unsatisfactory level of profit and of finance are serious and pressing. Since the end of March, the group's net overdraft has risen from £11¼ million to £13 million and acceptance credits from £2 million to £3½ million. The production of ever larger units of plant in the electrical and telecommunication industries has led to an increase in work-in-progress which, in turn, requires more finance.

In particular, the Hunterston nuclear power contract has absorbed £8½ million more than payments received on account by GEC. Presumably, as work progresses on this contract, this burden will be reduced and this may be one reason why Mr Lindley believes that while the overdraft may remain

at its present level for a short period it should then be reduced as a result of "realisations, seasonal factors and a more satisfactory cash flow." The directors, he adds, are not proposing to make a rights issue. Indeed, with the shares standing at 29s. to yield almost 7 per cent on the short-earned dividend of 10 per cent, it is difficult to see how the terms of such an issue could be satisfactorily framed. The announcement that there is not to be a rights issues does not of course conjure the financial problem away. Much of the cash flow will be generated by normal depreciation provisions and if the growth of big contracts in the order book is permanent long-term capital in some shape or form will eventually be needed.

The increase in Bank rate, moreover, has added to the cost of short-term debts and is a serious additional burden in the export business where "credit is often long and financing charges are high." The cost of servicing the overdraft will again eat into profits this year; on these Mr Lindley does no more than indicate that on the basis of trading results in the first four months of the current financial year, there are good grounds for expecting a recovery from the exceptionally low level of 1960-61. There was much to put right in GEC and shareholders will have to be patient while the directors wield the new broom and should not entertain excessive hopes about the immediate prospects for earnings.

British Electronic Industries

THE first trading results from the newly formed British Electronic Industries make gloomy reading; but at least shareholders will not have been taken by surprise by them for at the time of the Pye and E. K. Cole merger in November the directors said that profits would be substantially lower unless there were to be "a marked upsurge in sales of television sets." This did not occur and in January Mr C. O. Stanley, the chairman of Pye and of BEI, reinforced the earlier warning by saying that the impact of hire purchase restrictions was affecting trade "most seriously." How seriously can be seen in the fall of Pye's profits before tax by 37½ per cent in the year to March 31st and by the even more depressing announcement that E. K. Cole made a loss of £665,000, against a profit of £675,000. That Pye weathered the storm more easily than E. K. Cole is clearly due to its wider spread of interests, particularly overseas. It secured a full year's profits from its Australian subsidiary and in this country it received a bigger dividend from British Relay and Wireless and incorporated six months' profit from Telephone Manufacturing.

At the time of the merger some Ekco shareholders were dissatisfied with the terms of the offer, which valued the Ekco shares at about 24s., compared with a pre-bid price of 30s. Now, however, they have to recognise that it is from Pye's profits that the 15

per cent dividend forecast for BEI is being paid. Even so, the dividend is short earned, as earnings, before taking account of exceptional credits, amount to no more than

Years to March 31	Pye 1960 £'000s	Pye 1961 £'000s	E. K. Cole 1960 £'000s	E. K. Cole 1961 £'000s	British Electronic 1961 £'000s

*After outside shareholders interests in subsidiaries of £151,000.

5½ per cent. Whether the directors' decision to pay the forecast dividend means that they see a break in the dark clouds overhanging the industry will be clearer after Mr Stanley makes his statement; but immediately this decision certainly cushioned the fall in the price of the 5s. shares. They have been a weak market for some months and at 10s. 10½d., down 6d. since the results were announced, they yield just under 7 per cent.

Fitch Lovell

PRACTICALLY every aspect of the wholesale and retail provisions business is conducted by Fitch Lovell, and the group has grown rapidly in the last few years. Turnover rose by £10 million to over £100 million in 1960-61; but gross profits earned from these sales amounted to not much more than £1.4 million and the directors were content to leave the dividend rate of 15 per cent and tax-free capital bonus of one per cent unchanged on the capital as increased by the one-for-four rights issue. This is not surprising, for, as the chairman, Sir Ambrose Keevil, says, the development of the group's factories and the modernisation and extension of its retail outlets and overseas interests has involved substantial capital outlays, reflected in part in the net overdraft of £1.5 million. Sir Ambrose hopes that benefits from the capital outlays will appear in the future; the gross return on capital employed has fallen from 26.0 per cent in 1958-59, through 19.2 per cent, to 16.5 per cent in 1960-61.

This is common throughout the provisions business and it is the direct outcome of the fierce nature of the competition. Like the other big groups, Fitch Lovell has had to adapt its policies to pre-packaging, quick freezing, wholesale distribution through voluntary chains, self-service stores, supermarkets and discount shops. Like them, it has had to spend money on its factories; to add to the number of its retail outlets; and to convert some of its stores to self-service or supermarkets, of which it now has 56 in operation and plans to have another 52 by the end of 1962. Sir Ambrose quotes a "recent responsible research" estimate as saying that by 1965 about half the groceries in this country will be sold in self-service stores and supermarkets but that afterwards the trend may change. To secure any increase in sales and profits, as Fitch Lovell did in the first quarter of the current financial year, the big grocers have to follow the trend towards self-service. This often

leaves them short of liquid resources and it is not surprising that Fitch Lovell is yet another group taking advice on the "development potentialities and values" of its properties. In view of the declining return on capital outlays so far, it is just as well that investors have never attributed the same dynamic qualities to Fitch Lovell's 2s. 6d. shares, which at 11s. yield 3¾ per cent, covered 2¼ times, as they have to some highly glamorous "supermarket" equities.

Doom Dooma Tea

STOCKHOLDERS in Doom Dooma should be grateful for Brooke Bond's offer of 45s. each for their units, not because the bid was exciting in terms of asset values but because it has stirred the Doom Dooma directors into positive action. The directors confess that hitherto they had not given any consideration to the possible realisation of assets; but in the circumstances now prevailing "they feel it is their duty to consider any proposition which might obtain for stockholders a higher price than that offered by Brooke Bond." They have, in fact, received an offer in cash from Indian interests for three of the five Doom Dooma estates which (as the directors do not anticipate that the Reserve Bank will block the remittance) should make possible the distribution of 35s. per stock unit. The estimated value of the other assets is put at 45s. per unit, compared with a market price which rose from 43s. to 47s. this week. Whether the other assets could be realised at this price is still a matter of conjecture, but in the circumstances stockholders must turn Brooke Bond's present offer down.

Cyril Lord

THE prospects of Cyril Lord emerging successfully from the difficulties of recent years have already been enhanced by the bright start made by the carpet group, now fully integrated into the Cyril Lord group, and they should be further strengthened by the link up with Burlington Industries of the United States. Treasury consent has been given for Burlington to make a £1 million five-year loan to Cyril Lord; the loan will be partly convertible into ordinary shares. So far public interest in Cyril Lord is confined to the 6½ per cent redeemable preference shares, since all the £1 million ordinary capital is held by Mr Cyril Lord and Mr W. H. McMillan, the deputy managing director. No details have been given of the conversion rights attaching to the loans, but it seems likely that Burlington will take the opportunity to acquire a sizeable stake in the equity. Three of its directors are joining the Cyril Lord board.

Burlington is the world's biggest textile manufacturer, with sales of over £300 million, and Cyril Lord should gain not only from the exchange of technical information, but it should be well placed with its partner to compete in the common market. A more immediate benefit is the easing of the group's financial problems.

London Stock Exchange

FIRST DEALINGS:	Aug. 21	Sept. 4	Sept. 18
LAST DEALINGS:	Sept. 1	Sept. 15	Sept. 29
ACCOUNT DAY:	Sept. 12	Sept. 26	Oct. 10

OVER the week to Wednesday's close, the London stock market was once again in a quiet mood. Before the weekend, prices of industrial equities were firm, largely reflecting Wall Street's rise to a new peak on Thursday, and there was some small-scale investment and trustee buying. This firmness, however, was not maintained after the weekend, when a combination of small sales, a reduction of investment demand and the reaction on Wall Street, led to small losses in almost all sections. As a result, *The Economist* Indicator showed a net fall of 7.3 points to 363.4 over the week to Wednesday's close. The few notable price changes of the week were mostly the result of company announcements.

Gilt-edged stocks have also been idle. Short and medium-dated maturities were helped by some pension fund investment; Conversion 4½ per cent 1962 gained 1/16 to 99 5/16 and Conversion 5½ per cent 1974 gained ⅛ to 89⅝. Funding 5½ per cent 1982-84 gained 5/16 to 89⅝, but most long dated and irredeemable stocks were slightly lower and War Loan 3½ per cent lost 3/16 to 53¼ over the week.

Bank and hire-purchase shares generally shed a few pence over the week and UDT lost 3s. 9d. to 137s. 6d. Brewery and associated issues showed irregular movements; the merger news resulted in Showerings gaining 1s. 6d. to 18s. 6d. while Vine Products lost 1s. 6d. to 22s. 3d.xd. In chemical shares ICI lost 2s. 10½d. to 66s. 1½d., but Fisons gained 1s. 3d. to 38s. Following the chairman's statement, GEC made a net loss of 2s. 3d. to 29s. Other electrical shares were also lower, and British Electronic Industries lost 7½d. to 10s. 9d. following its poor results. Among stores shares GUS "A" were firm after an encouraging chairman's statement and gained 1½d. to 49s. 10½d.xd, but Marks and Spencer "A" lost 3s. to 100s. Motor and steel shares followed the general trend, Leyland losing 10½d. to 88s. 4½d. and Stewarts and Lloyds 9d. to 42s. 4½d. Shipping shares were also mixed with Cunard gaining 6d. to 15s. while Furness Withy fell by 1s. 3d. to 36s. 3d. Oil shares have been overshadowed by the uncertain outcome of negotiations between Iraq Petroleum and the Iraq Government, and Shell lost 2s. 3d. to 114s., but British Petroleum gained 3d. to 45s. Property shares were better than most, and City of London Real Property gained 1s. 6d. to 73s. 9d. Paper shares were generally dull; Bowater continued to drift lower, losing 1s. 9d. to 48s. 9d. British Match reacted still further, losing 4s. 6d. to 32s.

Tin shares followed the fluctuations in the metal price, and consequently suffered a fresh setback on Monday, but improved later in the week. Tronoh gained 1s. to 68s. 6d. xd, partly on the news of its scrip issue.

THE MONEY MARKET

BY raising its bid by 4d. to £98 6s. 10d. at last Friday's Treasury bill tender the syndicate of discount houses achieved its purpose of boosting its dwindling bill portfolio. Total applications for the offer of £260 million of bills rose sharply by £62 million to £442 million but the syndicate received 60 per cent of its application and apparently the bulk of the allotment. The average rate of discount fell by 1s. 1.69d. to £6 14s. 8.51d.

But these successful tactics brought swift retribution. The Bank of England was anxious to counter any suggestion that this first fall of any substance in the Treasury bill rate since Bank rate was raised to 7 per cent heralded any relaxation in interest rates, and on Monday four or five houses were forced to borrow a moderate amount at Bank rate. Credit has generally continued to be tight but conditions have been patchy, with the stringency concentrated on those houses that have had to repay amounts previously borrowed from the Bank of England. Day to day money has generally commanded 6¼ per cent and often 6½ per cent for larger sums from the clearing banks—particularly on Tuesday when the authorities gave a large amount of help.

APPOINTMENTS

Unilever

ECONOMISTS

UNILEVER INVITES APPLICATIONS FROM MEN WHO WOULD BE INTERESTED TO JOIN ITS ECONOMICS AND STATISTICS DEPARTMENT THROUGH THE MANAGEMENT DEVELOPMENT SCHEME.

'E. & S.', which is situated at Head Office, provides an advisory service for the parent Board and for the operating companies in the U.K. and abroad. Its scope is therefore wide-ranging. It covers, in particular, the provision of information on current economic affairs, the assessment of long-term trends and their effect on future planning, and the application of statistical techniques to the conduct of day-to-day operations.

Entry through the Management Development Scheme provides the opportunity of moving on later from E. & S. to Company management. Only those who consider they have management potential should therefore apply. You should also have a first, or a very good second, in Economics, or in a subject which included Economics as a main element.

Starting salaries will be attractive, and the prospects are first-class. The upper age limit is 28 or near.

If you would like to learn more about E. & S. and about Unilever in general, with a view to joining us, write for further information, giving brief details of yourself at the same time. All applications will of course be treated in strict confidence.

The address is: PERSONNEL DIVISION (E/104),
UNILEVER LIMITED, UNILEVER HOUSE, LONDON, E.C.4.

THE SECRETARIAT OF THE INTERNATIONAL RUBBER STUDY GROUP

Applications are invited for the post of STATISTICIAN. The salary scale is £900 x £50 — £1,100 (assistant grade) and £1,200 x £60 — £1,680 (statistical grade); the initial salary will depend on qualifications and experience. There is a Provident Fund Scheme.

Applicants should be graduates not over 30 years of age with a good knowledge of statistical methods and preferably some knowledge of economics. A capacity for detailed and accurate work and the ability to compile reports and memoranda are required.

All applicants should be able to express themselves clearly and concisely in written and spoken English and should have or undertake to acquire on appointment a working knowledge of French.

Detailed applications should be sent not later than October 10, 1961, to the Secretary-General, International Rubber Study Group, Brettenham House, 5-6 Lancaster Place, London, W.C.2.

UNIVERSITY OF MELBOURNE

Applications are invited for the following Chairs:
(1) CHAIR OF COMMERCE AND BUSINESS ADMINISTRATION;
(2) CHAIR OF ECONOMICS.
The salary for each position is £A4,250 per annum and superannuation similar to F.S.S.U. in Great Britain will be provided.

Further information and conditions of appointment can be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London, on October 31, 1961.

NATIONAL INSTITUTE FOR SOCIAL WORK TRAINING

LECTURESHIP IN CASE WORK
and
LECTURESHIP ON THE SOCIAL SERVICES AND SOCIAL CONDITIONS

Applications are invited by October 7th for a Lectureship in Case Work and for a Lectureship on the Social Services and Social Conditions. Salary scale £1,050 to £1,850, with superannuation and family allowances. Commencing salary according to age, qualifications and experience. Further particulars from: The Registrar, National Institute for Social Work Training, Mary Ward House, Tavistock Place, London, W.C.1.

For other appointments see page 1112

UNIVERSITY OF WESTERN AUSTRALIA

SENIOR LECTURESHIPS IN COMMERCE

Applications are invited for appointment to two Senior Lectureships in Commerce in the Faculty of Economics and Commerce to teach the subjects Accounting and Economic Organisation for the degree course in Commerce to be introduced from the beginning of 1962.

Applicants for both positions should hold a degree in Economics. In addition, applicants should be either qualified accountants or have an interest in applied economics with special reference to business organisation and finance.

The salary range for both positions is £A2,450-£A2,950 p.a. with superannuation similar to T.S.S.U.

It is important that intending applicants obtain details of the procedure to be followed in applying for the posts and a copy of the conditions of appointment before submitting their applications. This information is available from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London on October 31, 1961.

FERRANTI LTD,
HOLLINWOOD, LANCS.

have a vacancy in the Export Sales Department for a Woman Economist. The work includes the provision of an information service and reports on specific projects.

Candidates must have some experience of working on their own initiative.

Good salary and staff conditions including Superannuation Scheme.

Apply giving full particulars of age, education and experience to Miss L. Graham.

GOVERNMENT OF NORTHERN IRELAND

ECONOMISTS

Applications are invited from men or women with first or second class honours degrees in Economics or related subjects for the following posts in the newly formed Economic Advisory Office.

(a) ECONOMIST. Candidates must be at least 30 years of age and should have experience in teaching or research in Economics or in an economic advisory capacity.

(b) ASSISTANT ECONOMIST. Candidates must be at least 21.

Salary Scales (a) £1,716-£2,418; (b) £738-£1,222. Starting salary according to age and experience. Appointments superannuable under the Federated System for Universities. There are one or two vacancies in each grade. Preference for ex-Service applicants.

Application forms obtainable from Director of Establishments, Ministry of Finance, Stormont, Belfast, 4, must be returned by October 16, 1961.

AER LINGUS
IRISH INTERNATIONAL AIRLINES
INVITES APPLICATIONS FOR A POSITION IN GREAT BRITAIN AS
SALES DEVELOPMENT SUPERINTENDENT

The position will entail responsibility for providing economic intelligence in relation to airline traffic potential in various areas served by the Company in Great Britain. The person selected will also be required to formulate and develop proposals on commercial activities in the Company. He will be based in London.

The successful candidate will be under 27 years of age and will possess an Honours Degree in Arts or Commerce, or its equivalent, preferably with Economics as a major subject. The position offers good promotional prospects and the starting salary will not be less than £1,000.

Special travel facilities at reduced rates operate for Company employees.

Applications, giving details of age, qualifications and experience, should be sent to the Personnel Manager, Aer Lingus — Irish International Airlines, Dublin Airport, to reach him not later than September 30th.

HATFIELD COLLEGE OF TECHNOLOGY
Hatfield, Herts.
Principal: Dr. W. A. J. Chapman, M.Sc.(Lpz.)

LECTURER IN MARKETING

Applications are invited for this post in management studies. Applicants should be graduates in Economics and/or Statistics, with experience in Marketing of Sales Management and in training or teaching.
Salary £1,370-£1,580 according to experience. Details from Academic Registrar on application.

LEEDS EDUCATION COMMITTEE

LEEDS COLLEGE OF COMMERCE
WOODHOUSE LANE, LEEDS, 2
Principal: E. V. Roberts, B.Com., F.C.A.

Applications are invited for the post of LECTURER in STATISTICS. A lively well-trained mind with a strong practical bias towards the application of statistics to management control, including Operational Research, is looked for. Research and consultancy work with local industry are encouraged.

Salary: Burnham Technical Scale for Lecturers, i.e. £1,370 x £35 to £1,550 (at present under review). An appointment may be made above the minimum of the scale. Further particulars and application form from the Principal at the College.

GEORGE TAYLOR,
Chief Education Officer
Education Department,
Leeds, 1.

PERSONAL SECRETARY required with office experience and modern languages.—Applications, stating salary, to the Director, International Co-operative Alliance, 11 Upper Grosvenor Street, W.1, marking envelope "Confidential."

THE DISTILLERS COMPANY LIMITED

ECONOMIST

The Plastics Group of The Distillers Company wish to appoint an Economist in the Market Development Department to join a small team undertaking studies within an extremely wide range of industries in which plastics are or can be used, both in the U.K. and the Common Market. The work of the Department is growing rapidly and prospects are excellent.

Applications are invited from men or women aged 23-27 with a good honours degree in Economics. Some knowledge of statistics, and experience in industrial market research or plastics, would be helpful, though not essential.

The Company operates a non-contributory pension scheme.

Write:
STAFF MANAGER
THE DISTILLERS COMPANY LIMITED
21 22 BOLTON STREET

Quote reference: 70 61 E.C.

MSL *have been retained to advise on this appointment.*

ECONOMIST
London

for a British group of companies associated with one of the largest electrical manufacturing and marketing organisations in the world. He will be the Head of an economics research department responsible for establishing an advisory service on a wide range of economic problems. He will be concerned with reporting the general economic and social effects on industry arising from Government economic policy, European integration, overseas developments, financial and economic trends within industry generally and the specific implications of these for the Group.

Candidates must have graduated with honours in economics. They must have had at least 5 years' experience, preferably in a major industrial/commercial organisation, advising senior management on long term policy based on sound economic considerations. Initial remuneration will be by negotiation and can be up to £3,000 p.a. Contributory pension scheme. Please send brief details in confidence quoting reference S.3031 to G. V. Barker-Benfield.

In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17 Stratton Street, London, W.1

UNIVERSITY OF WESTERN AUSTRALIA

READERSHIP IN ECONOMIC STATISTICS

Applications are invited for appointment to the above-named position in the Faculty of Economics and Commerce. Applicants should have experience of teaching and research and should have published work in the field of economic statistics. A knowledge of econometrics would be an advantage.

The salary range for the position is £A3,010-£A3,250 p.a. with superannuation similar to F.S.S.U.

It is important that intending applicants obtain details of the procedure to be followed in applying for the post and a copy of the conditions of appointment before submitting their applications. This information is available from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London, on *October 31, 1961.*

CALTEX

CALTEX SERVICES LIMITED

The Caltex Organisation has openings for QUALIFIED ACCOUNTANTS in London and Overseas.

Preferred candidates are those 25-30 years of age, having a broad experience in industrial or public accounting and accustomed to supervisory responsibilities. Knowledge and experience of modern budgetary techniques would be useful. The work is wide in scope and selected candidates will have the opportunity to adapt their knowledge and experience to many branches of commercial accounting and auditing.

Commencing basic salaries will be dependent on qualifications and experience and for Foreign Service additional living allowances are paid, and free medical attention provided plus an initial kit allowance and attractive Vacation and Benefit Plans.

Will interested persons please send a short outline of their qualifications and experience, to "ACC," Caltex Services Limited, Caltex House, Knightsbridge Green, London, S.W.1, and request an Application Form.

NORTH WESTERN GAS BOARD
HEAD OFFICE, MANCHESTER

Assistant Statistician

Applications are invited for the above pensionable appointment at a commencing salary within Grade A.P.T. 7 (£770/£870 per annum). Candidates must hold a graduate or equivalent qualification in mathematical statistics, preferably combined with economics.

The successful candidate will be engaged under the direction of the Board's Statistician in specialised investigations in the field of market survey, operational research, sales forecasting, etc., which call for the use of mathematical and statistical techniques. The work is interesting and offers scope for imagination and initiative in the application of these techniques to business problems.

Detailed applications, giving the names of two referees, should reach the Assistant Secretary of the Board, Bridgewater House, 60 Whitworth Street, Manchester 1, within 14 days.

THE METAL BOX COMPANY LIMITED

have a vacancy for an

ECONOMICS GRADUATE
(early 20's)

to assist in the Economics Section of the Information and Statistics Division. The work includes the review of economic and market trends at home and overseas and covers the whole range of consumer packaging.

Apply to:
Head of Staff Division,
THE METAL BOX COMPANY LIMITED,
37 Baker Street, London, W.1.

quoting reference ISX/2.

AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES
Research School of Social Sciences

Applications are invited for a RESEARCH FELLOWSHIP in the DEPARTMENT OF HISTORY. The Department, under Professor W. Keith Hancock, has concentrated hitherto on the study of the history of Australia and of the British Commonwealth.

To broaden the work of the Department a new Research Fellowship has been created. Applicants with qualifications in Modern European History will be given the highest priority.

The salary will be within a range at present £A1,625-£A2,450 p.a. Appointment will be for three years, with possible extension to five years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid, and assistance with housing is provided.

Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London, on *October 31, 1961.*

A CAREER IN SOUTH AMERICA

An international firm of public accountants wishes to increase its permanent professional staff in Argentina, Bolivia, Brazil, Chile, Paraguay and Peru and invites applications from qualified accountants at all levels of experience, from those newly qualified to those capable of assuming senior executive posts, including men who have had experience of management consultancy work.

The positions advertised are not replacements; they are new posts. The work is varied and interesting with opportunities for travel, and there are excellent prospects of speedy advancement in countries whose economies are expanding rapidly.

Contracts are for an initial period of three years, renewable by agreement. Terms include an allowance for the expenses of moving to South America, a salary (payable partly in hard currency) on a scale sufficient to permit a comfortable standard of living together with a margin for savings, annual bonus, first-class return passages for staff members and their dependants, and three months' fully paid leave at the end of each contract in addition to local leave during its course. Salaries are subject to merit increases and are reviewed from time to time to take account of changes in the cost of living. Additional benefits, differing from country to country, are provided by advanced social legislation. A partner of the firm will shortly be in London to interview applicants.

Please send particulars of experience and qualifications, together with a passport type photograph, to Box 1541.

SECRETARY
of the
UNITED NATIONS ASSOCIATION

Applications are invited for the above. Salary: £1,180 x £30 to £1,360 p.a. with *children's allowances and contributory pension* scheme. Form and further information will be sent on receipt of addressed foolscap envelope to UNA, 25 Charles Street, London, W.1. Closing date for applications: October 2, 1961.

AN opportunity exists for a Market Researc specialist to participate in the developme of an organisation in the field of Industri Market Research. This will be an extension t the activities of an Engineering Sales Compan in Birmingham.

Applicants should preferably have a degree i Economics, and should have actual experien of the conduct of Industrial Surveys. A know ledge of Languages would be advantageous. Replies in confidence to Box 15.40.

For other appointments see page 1111

UNIPULVER

GRINDS

FINER

ALL
THE
TIME

If your product is one which calls for the grinding of raw materials; and if by achieving a finer grind than has previously been possible, you could make a better product, you need UNIPULVER.
If you already own a grinding machine and wish it didn't need so much maintenance; or so much downtime for cleaning, you need UNIPULVER.
If your problem is irregularity of fineness, insufficient output, or running cost; you need UNIPULVER.
We would like to quote the names of some of the very big concerns who have installed Unipulver Mills during the past ten years. Unfortunately, most of our customers prefer not to tell their competitors just how and why their product has suddenly become so much better. But if you will tell us your problem, we will gladly prove how UNIPULVER would solve it.

In The Economist this Week — September 23, 1961

INTERNATIONAL

SUCCESSION

Mr Hammarskjöld's death has left the United Nations Organisation headless, with one of its limbs grievously enmeshed in the Congo. The great-power struggle over a successor (or successors) must not be allowed to deal the death blow to the UN itself (p. 1129).

In **Germany,** Dr Adenauer's Christian Democrats have fishily asked their leader to stay on for a time as Chancellor. Other parties anticipate an earlier retirement (p. 1171).

In **Turkey,** the soldier-successors to Mr Menderes have introduced violence into what was a bloodless revolution, and cast a shadow over the democratic government they say will succeed them next month (p. 1136).

In **Hungary,** Mr Kadar has appointed himself successor to Mr Münnich as premier; for the people, no change (p. 1142).

SECESSION

Katanga: Mr Tshombe's mandate to demand independence is not self-evident; the UN says it has been carrying out its own mandate to remove foreign advisers and soldiers (p. 1131).

How the UN—and the foreigners—have gone about it (p. 1170).

Jamaica: Mr Manley's new mandate is to take Jamaica out of the West Indies federation; that is not what he wanted (p. 1142).

The wider Caribbean horizon (p. 1176).

Iraq: The Iraqi Kurds are not fighting mainly for secession; they are fighting for a fairer deal (p. 1142).

Uganda: Politicking at Lancaster House in London may, after all, dissuade the Baganda tribe from seceding when Uganda becomes independent (p. 1144).

SESSIONS

• **President Kennedy's** first session of Congress has been more productive than it appears to the liberals (p. 1152).

• Both the Russians and the West have a responsibility to be reasonable over **Berlin**; it is hoped that Mr Rusk and Mr Gromyko were, at their session on Thursday (p. 1137).

• The Americans hope that they may be able to postpone a debate on admitting **China** to the United Nations for another session (p. 1153).

• **General de Gaulle** is to relinquish his emergency powers; the French parliament will be in ordinary session again next month (p. 1141).

CESSATIONS

Now that it is over, it can be seen that Carla, the most observed hurricane in history, did less damage than might have been expected (p. 1154).

The semi-strike against General Motors is over at last (p. 1153).

Credit cards have not had the success that was hoped (p. 1158).

San Francisco hopes to stop being off the rails (p. 1157).

HOME

SECURITY PREMONITIONS

The International Monetary Fund is running short of money and Dr Jacobsson has proposed selective increases by borrowing strong currencies. But even these moderate proposals are having a difficult passage in the Vienna conclave (p. 1179).

Many developing countries have reached the limits of safe commercial borrowing, and are setting problems for the World Bank (p. 1181).

Before the Chancellor's measures, productivity in Britain had begun a slight upswing: but it may not last long (p. 1184).

Nearly 300 people died in air accidents in a month: a factor in this continuing toll may be the efficiency of ancillary equipment (p. 1188).

Sir Robert Hall's second special article on Britain's economic predicament (p. 1132).

SECTIONAL PREOCCUPATIONS

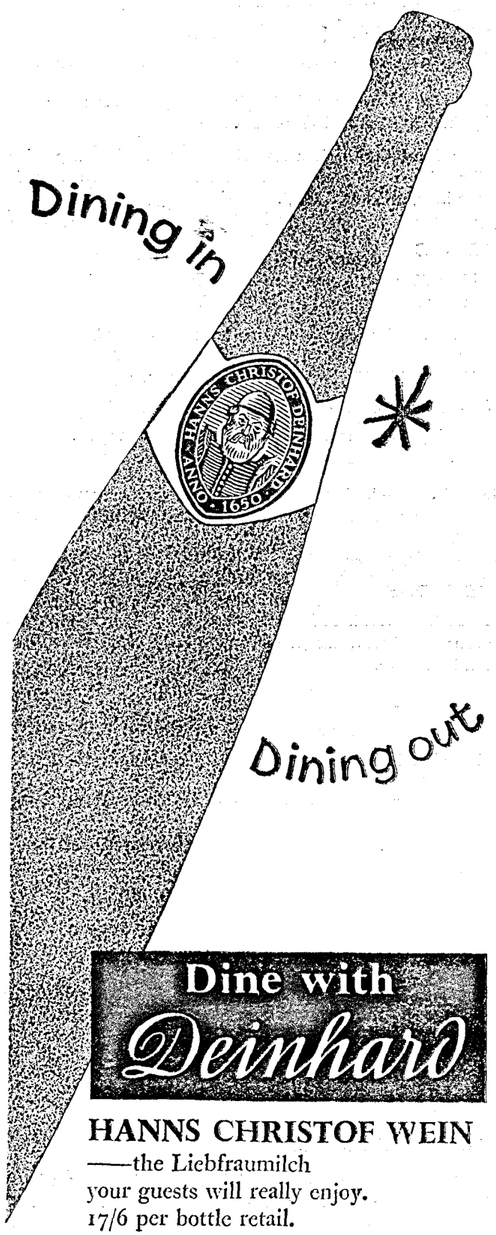
The Liberal Party, in conference this week at Edinburgh, has not taken all its opportunities to achieve an electoral breakthrough: its promise could founder on contradictions in its economic thinking (p. 1134).

The Accra conference of Commonwealth worriers about Britain and the common market has marked out several areas—notably agriculture—in which negotiations will be delicate (p. 1138).

Ford's offer to its workers is not anti-Chancellor but ante-Pause: the workers thought it not worth the loss of a cup of tea (p. 1137).

Teachers and their Minister are sticking to their guns, but the battalions on the teachers' side are not united (p. 1141).

Equity's case for a rise in TV actors' fees is less outrageous than some programme contractors would like to make out (p. 1141).



SECULAR PENANCES

The militancy of advocates of Britain's nuclear disarmament is not in doubt after the weekend: their sagacity is, and is more difficult of demonstration (p. 1149). On the other side, Civil Defence is still attracting recruits (p. 1144).

The Isle of Man is not, after all, to have a casino this year (p. 1147).

The recall of Parliament may not significantly affect the primary crises of international life (p. 1138).

Dresser is everywhere in the WORLD of PIPELINES

"Nearly everything but the pipe itself — anywhere in the world!" That's Dresser's contribution to the pipeline industry. Pipeline men know it, and know what a *big* contribution it is.

Just to give you an idea:

To *join the pipe together* — you need tight, permanent couplings.

To measure *how much gas flows through* — you need accurate, unfailing meters.

To *keep the gas moving* — you'll require sturdy, dependable compressors, engines and gas turbines.

To push *liquids* through the line — pipe-mounted vertical centrifugal pumps do the best job.

To keep track of what's happening *inside* the pipeline—it's good to have an automated control system to monitor and govern, from a remote location, such things as *valving sequence, pressure, speed of flow.*

All these necessary items of equipment can be provided by Dresser Industries, Inc., anywhere they are needed.

This far-flung group of integrated companies and licensees is uniquely able to meet supply and delivery requirements for any pipeline project.

Look to Dresser experience, Dresser technology and Dresser initiative — it can be of great help to planners, builders and operators, *everywhere in the world of pipelines.*

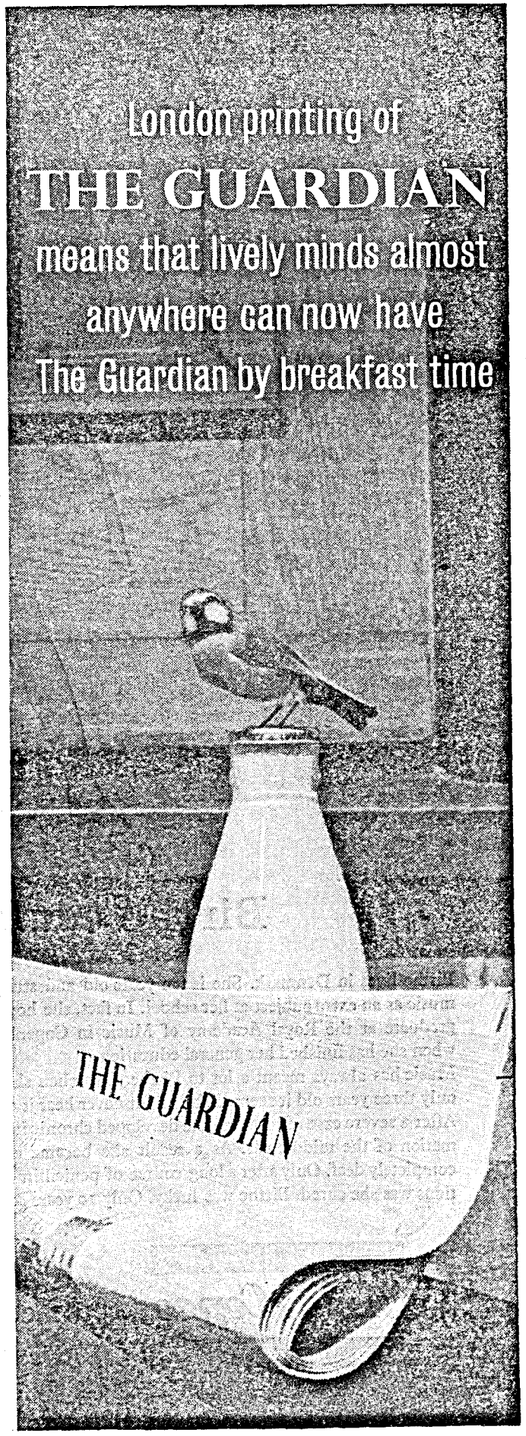
Lynx-sign of Tufnol



Those people born under the sign of the Lynx pounce on the jobs at the top of their professions. Lynx men become chief purchasing officers, chief engineers, chief designers and chief draughtsmen. Lynx men are in the dark until their eyes light on one material that combines the properties of many materials—a material that is light yet strong and hardwearing, resistant to corrosion and a good electrical insulator. They also find that this ideal material is resistant to deterioration in storage and machines easily with ordinary tools. Most Lynx men have already discovered this remarkable material—"LYNX" brand Tufnol. They have also discovered that Tufnol is available in eleven other brands, each with pre-determined properties. *All* brands of Tufnol are laminated plastics and *most* are available in sheets, tubes, rods, angles and channels. *Each* brand is formulated to satisfy specific requirements—*your* requirements. If your birthday falls between January 1st and December 31st, this could be your lucky week—the week you discovered Tufnol. *'Phone or write to your local Tufnol Branch Office and we predict you'll thank your lucky stars.*

Birthe couldn't hear a note

Birthe lives in Denmark. She is ten years old and studying music as an extra subject at her school. In fact, she hopes to graduate at the Royal Academy of Music in Copenhagen when she has finished her general education.
Music has always meant a lot to Birthe. But when she was only three years old it seemed she might never hear it again. After a severe case of measles, she developed chronic inflammation of the middle ear. As a result she became almost completely deaf. Only after a long course of penicillin injections was she cured. Birthe was lucky. Only 10 years earlier, before Sir Alexander Fleming's great discovery, her hearing might easily have been affected for life. Nowadays the synthesis and mass production of antibiotics is carried out by chemists all over the world. At Leo Pharmaceutical Products in Copenhagen, one of the largest chemical works in Europe, sterile oil-free air for the cultivation of penicillin and streptomycin is provided by Atlas Copco compressed air equipment. And this is only one of the great enterprises in which Atlas Copco & Sandvik Coromant equipment plays a part. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Think Fast

DAG HAMMARSKJÖLD is dead. Is the United Nations, as an effective instrument for peace, to die with him? At first sight, it would seem absurd to suppose that the removal of one man should prove fatal to so great and so widely supported a cause, however unusual his talents, however close his personal identification with the organisation he served. To term him irreplaceable would be an abject confession: a confession of mankind's inability to arrange its affairs without mortal dependence on one man's life. No mystic secret died with him, no alchemist's formula for transmuting dangers into peace and security. Other men can surely be found capable of sincerely dedicating great qualities to the same task.

Yet the question stands. The United Nations' effectiveness has come to depend increasingly on its secretary-general. Deadlock in the Security Council and sluggish cumbrousness in the 99-member Assembly created this dependence: not Hammarskjöld. The vacuums in which he had to take decisions without clear instructions from above were thrust upon him. Perhaps his readiness to go out alone into the void, as a diplomatic explorer in search of peace, encouraged the member governments to "leave it to Dag" more often. But there is no evidence that either council or assembly would have been roused to take effective action itself if, at such times, he had refused to accept responsibility for trying, with his own patient persistence, to ease the danger. Neither body is equipped to give continuous and decisive direction to the UN's executive arm when new complexities are swiftly unfolding, as they have done in the Congo.

Now the executive is left headless, while one of its limbs, the UN force in the Congo, is grievously enmeshed in its effort to oust European soldiers of fortune from Katanga and to reunite the Congo republic; while the assembly meets in the shadow of the crisis in great-power relationships; while debate rages over the structure of the UN secretariat itself, and Russia presses its plan to cripple permanently the United Nations' capacity for executive action.

For the problems that have now arisen, the drafters of the Charter must carry their share of the blame. At San Francisco, in 1945, they made no provision for the prompt replacement of a chief executive who might die or be suddenly incapacitated during his term. No single deputy was envisaged. The great powers jointly proposed that four or five deputy secretaries should be appointed in the same way as the secretary-general—by the assembly approving a nomination made by the council. The smaller nations shot this down, suspecting, and with reason, that the powers meant these posts for their own men. New Zealand's delegate gave warning that this "would produce a crisis in the secretariat at the beginning of its work." In the upshot, the secretary-general was left free, in theory, to pick his men; in practice, the great powers secured high places for their nominees. Neither Mr Trygve Lie nor Mr Hammarskjöld found it possible to appoint a true deputy whose authority would be whole-heartedly accepted; Mr Lie's appointment of a general co-ordinator in 1948 was a more modest experiment, and even that failed. Thus Mr Hammarskjöld left no heir.

Even in a political calm, a successor acceptable to the veto-wielding powers and to majorities in both council and assembly could hardly be found overnight. In a calm, however, an interim makeshift might be easy to arrange. In the

Bunche and Narasimhan: deputies without a chief

storm of the moment, a mere interim arrangement must be controversial, and agreement on the regular appointment of a new executive is hard to visualise at all.

A year ago this Saturday, Mr Khrushchev, addressing the assembly, committed his personal prestige to the Soviet campaign that had already been launched against Mr Hammarskjöld, and demanded that the post of secretary-general should be abolished and replaced by a "collective executive" of three persons, representing respectively "states parties to the military blocks of the western powers, socialist states, and neutralist countries." The Russians' personal abuse of Mr Hammarskjöld later sank to the depths, and they ceased to recognise him as secretary-general (a treatment they had earlier applied to Mr Lie). It was predictable that, when the 1962 assembly came to discuss the approaching end of Mr Hammarskjöld's second five-year term, Russia would use its veto in the council to block the appointment of any one secretary-general, whatever his identity.

The 1962 assembly might have simply extended Mr Hammarskjöld's term, as it had extended Mr Lie's in 1950 over Soviet protests. Even so, it would merely have been postponing the real crisis. Now, the crisis that had loomed a comfortable year ahead is upon it immediately, and without the chance of falling back on an extension.

MR GROMYKO confirmed on Tuesday the general assumption that the Russians will now press their "troika" demand without even agreeing to an interim device that might help to fill the immediate vacuum. Both uncommitted and western countries had already canvassed the idea that the incoming assembly president—Mr Mongi Slim of Tunisia has now been elected—should undertake the general direction of the secretariat for the time being. Mr Slim is reported to be unwilling to assume such a role in the face of Soviet opposition. Soviet delegates have been finding no enthusiasm for their proposal that an interim "troika" should take over—a committee comprising the three present political under-secretaries, the American Dr Bunche, the Russian Mr Arkadyev, and the Indian Mr Narasimhan.

Moscow presumably hopes to exploit the confusion resulting from Mr Hammarskjöld's untimely death in such a way that it will be able to force the yoke of the troika upon an assembly whose members have overwhelmingly shown their distaste for it. Some of the uncommitted countries have ideas of their own for the reform of the UN mechanism; but their rejection of the Soviet plan has just found substantial confirmation at the Belgrade conference, where Mr Adoula, the new Congolese prime minister, made the telling point that nothing could have been done to help his country if Mr Khrushchev's formula had already been adopted.

In quieter circumstances, there would be no reason to oppose a general discussion of the structure of the UN, which has long needed an overhaul in several respects. The enlarging of the Security Council to reflect the increase in African and Asian membership has been generally agreed, and held up only by Soviet insistence on first transferring the Chinese seat to the Peking government—an obstacle that may not exist much longer. Western predominance in the active political staff of the organisation is as much a thing of the past as western predominance in the assembly; the political and military apparatus in the Congo is in the hands of men from uncommitted countries, Indian, Irish, Swedish, and a variety of Africans. In June, after an Egyptian-Ghanaian-Indian proposal that the secretary-general should choose three political deputies "taking into account the main political trends in the world today," Mr Hammarskjöld himself trumped this card with a recommendation that he ought to be authorised to have five principal political assistants and advisers, one American, one Russian and three from "countries outside any power-blocks." At Belgrade, the Jugoslavs suggested the establishment of a small advisory committee to help fill the gap between the secretariat and the slow-moving assembly.

Circumstances, however, now call for swift decision. There is no time for a leisurely and exhaustive review of all the possible permutations. The vacuum left by Mr Hammarskjöld has to be filled without delay—and without surrender to the Soviet demand, which, it need hardly be said again, would mean the destruction of the United Nations' infant, but growing, capacity to act effectively against international dangers.

Much now depends on the smaller member states, of whom so many belong to the uncommitted group. The United Nations, as Mr Hammarskjöld repeatedly pointed out, is first and foremost their organisation, their shield against the unrestrained jarring together of the giants, their best means of uniting their strength and making their voice heard. It is they who will be most gravely imperilled if the UN is stultified, either by an unbroken deadlock over the succession to Mr Hammarskjöld or by the imposition, through the Soviet troika plan, of a straitjacket of vetoes on executive action. There is little if anything to choose between the two prospects: open deadlock might, indeed, be preferable because it would be more honest than deadlock sanctified and swathed in reassuring terminology.

WHEN Russia resumed its nuclear test explosions at the very moment of the Belgrade conference, many people concluded that Mr Khrushchev had revealed his utter contempt for the uncommitted nations, his confidence that they could be browbeaten but were not worth wooing; some western commentators hastened to express very similar opinions about them. The struggle over the future of the United Nations provides a fairer test of them. The tragic removal of Mr Hammarskjöld at a time of such urgency and peril confronts the smaller member nations with their moment of truth. Will they show themselves capable of setting aside

for the time being their various pet projects for UN reform, of joining hands in defence of the simple proposition that the world organisation must grow if it is not to wither? Nothing less than overwhelming solidarity on this basis can now save the United Nations from the reduction to a "static conference machinery" of which Mr Hammarskjöld gave warning, only a month ago, when he introduced his annual report with what now reads like a political testament. That warning stands, and his catastrophic, catalytic death has added to it a terse message of exhortation: Think fast.

Think Hard

What is the United Nations doing in the Congo?

WHAT has been happening in Katanga is unusually difficult to find out; so are the precise motives of action. The events that led up to, and followed, the fighting for the post office in Elisabethville at dawn on September 13th are described on page 1170 by a correspondent on the spot. Since the swoops of the first day, fighting has taken place mainly in three centres: in Elisabethville, at Kamina air base, and at Jadotville. No reliable count of casualties is available, but reports suggest that they are far smaller on the UN side than on the Katangan side.

White officers led the resistance to the United Nations forces; and some of the most telling damage was done by non-Katangans. A single jet fighter harassed the Irish at Jadotville, bombed Kamina, strafed Elisabethville, and made passage unsafe for UN aircraft; there are no Congolese trained to fly jet fighters. The UN says that most of the fighting in Elisabethville took place in the European quarter, and that the African city remained calm. But behind all officers there must be troops; most of these were Katangans. The UN undoubtedly underestimated the resistance it would meet, wherever it came from.

Observers on the spot—and many in Britain—say that the fighting started because the United Nations wanted to bring down the provincial government; the UN explanation is that its force took the action it did to prevent civil war, and to neutralise the radio station and post office, while it went about the other part of its mandate, the expulsion of foreign officers. Otherwise, according to Dr Sture Linner, head of UN operations in the Congo, the violence that was being fomented by the foreigners would in any event have come to a head; or, alternatively, the Congolese central government might have invaded the province in an attempt to overthrow Mr Tshombe itself. (This danger remains while Katanga, with 12 per cent of the Congo's people and 60 per cent of its wealth, holds aloof from the rest of the country.) The action of September 13th was, Dr Linner implies, designed to get rid of the foreigners, silence the radio and other agitation, and stop the *mounting trouble at its source.*

Originally, the United Nations went into the Congo to stop foreign interference. The first UN resolution on the Congo called on the government of Belgium to withdraw its troops; every resolution since then has centred around a call for the removal of "foreign military and para-military personnel and political advisers," other than those under UN command. The presence of these *ultras*—there are now fewer Belgians but more Rhodesians, South Africans, French malcontents from Algeria, and others—has all along been the main cause of Afro-Asian complaint. Most other Africans believe that by using them to run his state and support his demand for independence, Mr Tshombe has allied himself with people who are using him for their own ends—the retention, wherever possible, of white power in Africa. Once these people were expelled the United Nations' next task was, or should be, to try—by peaceful means—to bring about a conciliation between Mr Tshombe's faction and the rest of the Congo. Why is this necessary? It is not only because of the riches of Katanga, although that is perhaps the single most practical reason. The tribes of Katanga have no less of a moral right to claim independence than any other of the world's tribes; but no more. In Africa, where there are countless tribes, few nations, and many artificially-drawn boundaries, it is sometimes argued that the existing boundaries are not important. If this idea prevailed, Northern Rhodesia would lose Barotseland; Uganda, Buganda; Kenya, the Masai, the Somalis and the coast people; Nigeria a dozen parts of itself. There would be a thousand states in Africa and no Congo for Mr Tshombe to secede from—indeed, some tribes might secede from Mr Tshombe, taking (according to their present whereabouts) large chunks of Katanga's rich mining territory with them. Most Africans recognise that Africa is more likely to become modern, prosperous, stable and free if units are large—even when they prefer federal states to unitary ones. Most Congo federalists have given up declaring their provinces independent.

WOULD Mr Tshombe follow their example if it were not for his foreign courtiers? The question has to be asked, but is hard to answer. Support for his Conakat party comes mainly from the Lunda tribe. Conakat won 25 seats out of 60 in the provincial elections in May, 1960; Balubakat, which wants a unitary government and calls Mr Tshombe a white man's stooge, won 22. Most of the other 13 members support Mr Tshombe, who has made plain his distaste for the rule of Leopoldville ever since Conakat was formed in 1959. But the elections were not about secession; the question then was whether an independent Congo should be federal or unitary. Geographically, Mr Tshombe's support is solid in the extreme southern tip of Katanga. He commands pockets of strength elsewhere in the province but not, paradoxically, in Elisabethville or Jadotville. For these reasons his mandate to demand independence is not self-evident; nor is it clear what his precise demands would be if he were free of white influence. A politician quick to seize opportunities—and perhaps, to grasp realities—, Mr Tshombe might be a different man at a conference table, with no non-Congolese whispering in his ear.

Certainly it is worth doing what can be done to keep the Congo whole, for the country's sake and in the general interest of Africa. But, equally certainly, it cannot be for the United Nations to pursue this objective by violent means; it is to be hoped that the truce arranged at Ndola on Wednesday can be made to last. After the shock it has had (and the tragic loss it has suffered) the United Nations need not abandon its objectives, but it urgently needs to get back to political methods, methods in which the object is to reconcile conflicts of interest, not to fight them out. That is what Mr Hammarskjöld was trying to do when he died.

Britain's Economic Problem

This is the second of two special articles for The Economist *by* **Sir Robert Hall,** *who retired this year from his post as Economic Adviser to the Government, after having been the top professional economist in the Treasury for fourteen eventful years*

LAST week's article concluded with the argument that under a rational policy for prices in this country it would be necessary to remove the idea that the Government's duty is to mediate between the parties to a wage dispute ; its job ought to be to think about the national interest, and to state plainly, in specific cases as they arise, that the national interest is harmed when settlements exceed or fall short of some figure that is consistent with reasonably stable prices. It is only common sense, however, to recognise that no policy in a field which touches the ordinary citizen so closely can succeed for long unless public opinion is behind it. This will require a great effort. Among other things, any government which attempts a wage and price policy will have to recognise that the national income can be redistributed to some extent by tax policy and that taxes must be seen to be fair.

The points where our system is most vulnerable are probably the absence of any taxes on capital gains, and the treatment of business expenses, which leads many firms to somewhat extravagant competition with one another. While it is no doubt very difficult to devise suitable taxes in these fields, we ought to recognise that these are sore points with those who do not enjoy capital gains or expense accounts, and that the whole operation of securing reasonable price stability is immensely more difficult than that of defending a certain amount of roughness in the justice of our taxes. Everyone will have to make compromises.

There is also the problem of economic planning. It is much easier to condemn the absence of planning than to think of effective ways of doing it, beyond the general allocation of resources which goes with a full employment policy. But it is very likely that investment planning could usefully be carried a good deal further than we have done, and that we could spend with advantage a good deal more than we are now doing in finding the answers to the questions that this would involve.

Anything like a national plan would also help towards the acceptance of a national wages policy, if it allowed the body of the community to associate themselves with it, in the form of a challenge. It is almost certainly true that most of us respond better to demands on us than to offers of an easy life, so long as we feel that the demands are made on everyone, just as we prefer on the whole to be law-abiding but resent others being allowed to break the law with impunity.

The Problem of Growth

The revolution in public opinion which would be necessary for a successful policy for stable prices, of the kind outlined above, would be easier to bring about, as indeed would many of the other objectives of national policy, if we could secure a faster rate of growth. Just as our attitudes towards wage bargaining rest on popular beliefs now completely out of date, so in the field of production we suffer from out-moded ideas now quite inappropriate to our situation.

The forces which cause productivity to increase are reasonably well understood: they are the division of labour, the use of capital, and the discovery of better ways of production, the latter usually but not invariably associated with an increase in the amount of capital employed. It is very likely that in recent years Britain has lagged behind its main competitors in the proportion of national income devoted to investment. But the experience of the period from early 1960 onwards suggests that there is something else that is wrong. Although investment had been increasing, industrial production (from which the most rapid increase in productivity must be expected) was almost stationary, until recently, while the number employed rose steadily and unemployment fell to very low levels. Even allowing for some reduction in hours, either production should have increased or employment decreased. It is difficult to avoid the conclusion that labour was being hoarded, that is that employers in general were using more labour than they needed, presumably in the hope that sooner or later the Government would take steps to increase aggregate demand. Something of the same kind must have happened between early 1956 and late 1957.

One of the virtues of the competitive system is supposed to be that it induces employers to cut down their costs so that their profits will be increased. But if the Government takes the responsibility for maintaining a high level of demand and thus a high general level of profits, there may be no actual necessity to seek economies: no doubt there is also an expectation among individual producers that the demand for their product will expand some day and that it is better to hold on to labour than to get rid of it and be faced with difficulties of recruitment later on.

Any tendency to hold on to labour is accentuated by the widespread belief, inherited from prewar days, that employment is an end in itself and that it is an anti-social act to throw men out of work. Trade unions in general resist the process and in many cases seem to prefer work-sharing arrangements, and even try to maintain the numbers employed when labour-saving machinery is introduced. When the demand for a product falls or a cheaper substitute becomes available, every kind of pressure is brought on the Government and the possibility of unemployment is used as an argument that is self-evident and automatically convincing, in favour of some kind of subsidy or protection.

Yet when there is full employment, it cannot be doubted that it is in the general interest to use labour as efficiently as possible. To resist this process is not to prevent employers from exploiting labour, but to allow the industry to exploit the rest of the community. It is against the interests of workers themselves that they should be held in works where they are not needed or in industries that have to be subsidised. This is particularly the case where there

are long delivery dates for exports. This is, of course, recognised as a general proposition and the Trade Union Congress has itself tried for many years, though perhaps not very strenuously, to educate its members in the need for higher productivity. But neither management nor labour finds it easy to apply in particular cases a general doctrine which all would accept.

Encouraging Competition

This is an intractable problem and almost the reverse of that of wages. There it is necessary that competition should not have its full effect, because the result would be instability in costs and prices. Here it is necessary that behaviour should be more competitive, in spite of the fact that full employment has blunted its sharp edges. Various suggestions have been made, such as lower tariffs, more severe action against restrictive practices, and a payroll tax, the purpose of which would be to increase the inducement to economise in the use of labour. A reduction in tariffs obviously increases competition when the tariff has in fact been protective: from a balance of payments point of view, it would increase the need for a national price policy. It is very encouraging, to those who believe in British industry, that so many British employers are now willing to explore the possibilities of the common market. On the other hand, it is difficult to see why a moderate payroll tax should make anyone more careful in the use of labour if the existing level of wages has not done so already. But anything that conveyed to the country that the Government really wanted economy in the use of labour would have an impact effect. (Compare the belief that the repayment of tax under pay-as-you-earn when a man was out of work was a proof that the Government did not want him to look for another job too quickly.)

The Restrictive Practices Court has done a great deal to make collective price maintenance more difficult, but even when such agreements have been completely banned there is a strong incentive not to cut prices, arising from the belief that markets are inelastic and price wars expensive. Unfortunately, both beliefs are likely to be correct in most cases. It will always pay a firm to cut its costs, but it may not pay it to reduce its prices far enough to squeeze out its less efficient competitors. Here again, however, attitudes derived from the days of under-employment and deep recessions need to be re-examined. What is needed is a change in the climate of opinion, and a lead could be given by a general revision of Government attitudes. For instance, an industry which was getting into difficulties could be told plainly that if it could not make better use of the resources which it was using, these ought to be employed elsewhere. At the same time it ought to be recognised, more clearly than it is at present, that redeployment of resources is in the national interest and that something more should be done to soften the blow to those immediately affected. It is much easier to advocate the free movement of resources if one's own business or one's own job is not involved. More could be done for those who are forced to change their jobs : and it would often be cheaper in the long run to compensate declining industries once and for all, rather than to go on burdening the community by bolstering them up with subsidies or protection. No one should have the right to determine both what he should do and the income he should receive, but he can more reasonably claim that he should not carry the whole burden of change.

The Changing Role of Investment

There is, however, some reason to hope that the competitiveness of British industry is increasing and will continue to do so under the operation of economic forces if these are not resisted. Full employment, which has made profits generally high and provided a cushion for industry generally, has also produced a disequilibrium position, in that the earnings on capital invested in industry have been in general higher than the amounts at which capital could be borrowed. This situation could not be expected to last for ever and it has been slowly correcting itself through an increase in interest rates on the one hand, and the ploughing back of large amounts of profit and the raising of new capital on the other, to take advantage of the investment opportunities. It seems likely that as this process continues, and the amounts of capital employed increase, there will be increasing amounts of surplus capacity, in the special sense that there is more capital available than can be used with the existing labour supply. This no doubt explains the very marked tendency in advanced countries with high employment to draw labour from less fortunate countries.

Additions to capital nearly always contain elements of three different constituents : entirely new processes (which may destroy the value of existing capital), or deepening the capital structure (that is, using more capital with the existing labour), or widening the structure (that is, duplicating existing facilities). But a combination of high profits and of labour shortage will give a greater gain from deepening the structure than from widening it, and thus there should be an increasing incentive to those who make the best use of their labour.

Many economists have been somewhat indiscriminating in their calls for an increase in the amount of the national income going to investment, without much consideration of the form which this should take. There is little to be gained from duplicating a plant when there is no labour to operate the extension, yet with full employment this must be the case for all investment which merely adds to existing plants (unless the balance of demand is shifting). Partly as a consequence of this habit of mind, there is then a call for an increase in the total of final demand, because there is "surplus capacity" in the country, even though there may be at the same time over-full employment. It is right to say that we want more investment, but it should be recognised that this will make its greatest contribution where it is most efficient compared to existing capacity and its least where it duplicates it. Surplus capacity and over-full employment together should suggest strongly that we have the wrong kind of capacity. We could, of course, open our doors widely to labour from other countries ; failing this we should give them our old plant rather than stoke up the fires at home in the vain hope that it will all come into use. What is needed, then, is more encouragement to those who use their labour efficiently, and more price competition from those who are able to do so. It is very doubtful whether this can be done efficiently by attempts at price control, though we have perhaps set our faces against it even more than we need. But we can hardly expect either a national price policy, or the best use of our resources, until the practice of passing on cost reductions, which is already the habit of many enlightened concerns, becomes almost automatic.

Labour Relations

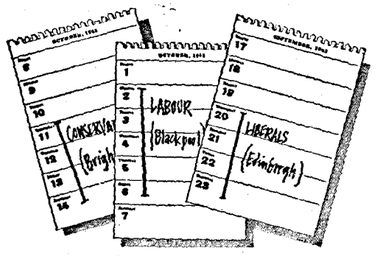
Finally, there are reasons for thinking that the whole field of labour relations needs to be overhauled in the light of modern conditions. This is not to say that there are not firms, and indeed industries, in which great improvements have been made. It is certainly more widely appreciated than it used to be that it pays management to improve the conditions and morale of their employees: at the same time there has been a change in political and social values, while full employment itself means that workers are no longer compelled to put up with bad employers. But it would be surprising if the weakening of harsh disciplinary forces in any system did not produce conditions in which there was a danger of freedom leading to chaos, which obviously takes place in any organised system without self-control.

In the nineteenth century the worker was very much the underdog, and the history of trade unionism itself is to some extent a history of struggles to modify the law so as to make trade unions first legal and then effective. In the process the tradition of "solidarity" developed and in its time it was a noble tradition.

But the founders of trade unionism would certainly have been far from wishing that this should be divorced from social responsibility, which is one of the dangers that we face today.

Nobody would wish for a situation in which people cannot give up jobs which they do not like, or withhold their labour in agreement with one another. But equally it cannot be right that small groups should be allowed to hold the community to ransom, by appealing to a blind loyalty that had its roots in a different world. The community, which after all consists mainly of workers of one kind or another, should be allowed to protect itself.

Everybody knows about demarcation disputes, the light regard in which agreements are sometimes held, the limitation on apprentices and trainees, and especially about unofficial strikes. In a very interesting article ("Making Industry a Team," *Financial Times Annual Review*, July 17th, 1961) Mr Ted Fletcher wrote recently :



> The strike weapon is hardly ever used officially; it is rarely necessary. The typical stoppage is now the unofficial strike, usually of a handful of men at least initially. And because of the changed pattern of production and the interdependence of processes, a very small group can and often does stop an entire works.

This could be extended, since some stoppages can spread to damage much more than one works: a dock stoppage, for example, can undo the painful labours of many exporters over long periods. Mr Fletcher, who has had a long experience in this field, believes that most of these troubles could be overcome by better machinery for consultation, and by a more enlightened attitude, both by employers and by workers. He calls the outmoded attitudes to which he refers "tribal customs" and his conclusion is that : "A major act of leadership seems to be needed to break the deadlock. Only the Government can fill the bill."

No doubt a great deal more can be done to follow the practices of the more enlightened firms, already referred to. But it is also necessary that public opinion should be brought to understand what is going on, since in the end it is the public which suffers. The questions which need to be examined are the improvement of labour relations from both sides, and the helplessness of the community both against breach of agreement and in its inability to do anything to protect itself from unofficial strikes. Even when a works or a wider area has been brought to a standstill by a strike which is against the advice and support of the union concerned, it is extremely difficult for employers and other workers to do anything to help themselves, because of the danger that goods will be declared "black" and the strike spread. Since the prosperity of the community depends on the size of the national product, the result of action of this kind falls on everyone. But it is more likely to fall on the employers immediately concerned than a general increase in wages, which can be passed on. There is, therefore, a strong incentive to make a settlement, the cost of which can be recovered from the public, rather than to stand out.

All the problems which have been discussed in these articles are thorny ones. Our traditions are such that it is repugnant to liberal opinion of all shades to say that there are dangers about the welfare state as well as its obvious advantages. But surely it is our duty, as it was that of our predecessors, to keep up with the times. No one can deny that we have had rising prices, that our productivity does not increase as fast as we think it could, or that anti-social action is found in all classes of society, and not only in the privileged classes of the past. Unless we are willing to think out afresh the problems of our own day, our descendants will have to deal with them. While we wait, our weaknesses will get worse and our prospects in relation to other countries will get worse too. We do not want to be regarded as the somewhat discreditable life tenants of what we received as a great estate.

PARTY CONFERENCES—I

Liberals First

A discussion of the prospect before the Liberals, who have started the season of party conferences at Edinburgh this week

THE most important point to make about the Liberals' 1961 assembly at Edinburgh is that the prospects before it do not yet look sufficiently unlike those that the party faced at Eastbourne a year ago. The Liberals are consolidating, and indeed still noticeably pushing forward, after a period of considerable advance. But somehow the real breakthrough has still not happened—and this in a year when there once seemed to be a unique opportunity for expecting it. The ordinary man still looks at the by-election figures to see how the Liberals have done, rather than whether they have won; it still is not quite true that there are three great political parties in Britain today. Perhaps, rather, there are two and a half.

Let it be said straightaway that a Liberal breakthrough this year has been a pretty close-run thing. The figures that the Liberals like to point to are that they have polled an average of 25 per cent in recent by-elections, compared with about 17 per cent in similar constituencies at the 1959 general election. If they could raise their average poll by another 8 per cent again they would go above the magic figure of 33 per cent; and above 33 per cent any party in a three-cornered by-election, by definition, has some possibility of getting in. This would be the point of psychological breakthrough; one suspects that, once beyond it, public attitudes to the Liberals might change much more radically than most commentators yet realise.

But the breakthrough past this point ought to have come during the past year, when the Liberals were particularly well-placed to draw in votes from both the bigger parties at once. And there is a special defensive reason why it is important for the party that the breakthrough should come quickly. At least two of the Liberals' six parliamentary seats seem to be held mainly because the Tories did not oppose Mr Holt and Mr Wade at the last election, while a third may be held only because the 77-year-old Mr Clement Davies (majority 2,794 in Montgomeryshire) has a local personal vote behind him. At the next election the Conservatives may well fight very seat, and Mr Davies's candidacy cannot be counted on or ever; on present form, that election could conceivably see a moderate rise in the Liberals' general percentage of the poll, and a disastrous drop in their membership of the Commons from six to three.

To say this is not to deny the Liberals ought, in all logic, to have derived some enduring sustenance from their brave advance in vote-collecting in the last few years; and, at first sight, one can point to several fields where they seem to have done so. Perhaps the Liberals' most important achievement is not that they have attracted youth and so many young hopefuls to their banner—that is a relatively easy thing for any small and unusual group, including the nuclear disarmers, to do—but that they have held on to the first generation of young hopefuls whom they attracted when their post-1954 recovery first began. The young recruits of those days have felt sufficiently encouraged by their party's advance to stay on with it, instead of drifting away with the feeling that Liberal exuberance is a thing to discard when student days are over.

As a result, the Liberals have quite an impressive team of candidates and workers scattered in constituencies across the country, often now men and women in their thirties rather than their twenties, more and more of them coming to be regarded by local voters as in some way mature, often nowadays of the pushful young executive type. This pushfulness plays an increasingly large part in the organisation of the party both at local and national level, although admittedly sometimes with mixed results; while the organisations of the other two parties sometimes seem to be sunk in torpor, the Liberals always appear to be trying to implement enthusiastic but not always successful reforms in efficiency, which sometimes seem to involve them in sacking older party workers every other Monday week.

Two other achievements of the Liberals, which are partly associated with the new air of greater maturity, are that they have begun to infiltrate members into local councils in some areas; and that in lush Conservative seats, because of socialism's damaged image, they have often replaced Labour as the second party (so that in posh suburbia it now frequently seems that supporting Labour, not supporting the Liberals, is the way to waste one's vote). Yet the blunt fact remains that these are invariably fights to come second, not to win; and that this past year's record has not quite matched up to the opportunities that once seemed to beckon. During the last Parliament, between about 1956 and 1958, Liberals were sometimes taking up to 20 per cent of the vote from the Conservatives at by-elections; they have been taking votes again from the Tories this year, but generally not quite on that scale, although the Tories' recent governmental record has certainly not been brilliant. Similarly, after Labour's third successive general election defeat, and especially just after Scarborough (when many of this past year's by-elections were held), the Liberals really ought to have won a mass desertion of votes from Labour; but they did not, and now that Mr Gaitskell's image has been restored in the Labour party they may take even less.

It is therefore very difficult to be too rosily optimistic about the Liberals' electoral prospects. If one may hazard a guess, it is that, some time soon, they may begin to attract more temporary protest votes away from the Conservatives, but that these will be insufficient to push them past the breakthrough point, and that anyway such votes will almost certainly prove easier to pick up at by-elections than to hold at general elections. This would be a confirmation that, under a system without proportional representation, there is a limit beyond which a party that relies largely on ogling for protest votes probably cannot expect to go. Instead, the Liberals' brightest hope now lies in striving for a respected national image as "the party that generally proves right in the end," in constantly shouting today (sometimes at the apparent risk of annoying certain temporary protest voters) what most of the country is likely to be wise enough to think tomorrow.

In at least two of the great issues of the day the Liberals have triumphantly achieved this. On the common market (and the associated issue of generally freer trade) and on the most sensible attitude to Britain's changing position in the world (as exemplified by their discounting of the need for Britain's independent nuclear deterrent so long as America has one), they got much more quickly than the other two parties into the position where it has for some time been obvious that most of the rest of the country is likely eventually to go. In the broader fields of foreign policy it is perhaps unfair to say that the Liberals have not contributed many new ideas, because nobody else has either. But in domestic economic policy—which generally has the biggest electoral impact in the end—the Liberals have missed many buses. Worse, they have not always learned the clear lesson from Mr Gaitskell's disastrous 1959 election campaign: which is that the surest (and most ignominious) way of losing votes in this country nowadays is to chase after them so assiduously and self-contradictorily that one can become a bit of a national joke.

The Liberals will deny hotly that they have become this, and—as a sign that they do know where economic policy must soon go—will point to a planning resolution on their Edinburgh agenda calling for "a national income policy . . . relating to wages, salaries and profits, and at keeping increases in personal incomes within the bounds" set by productivity. But these words simply do not square with the recent resolution passed by the Liberal party council calling Sir David Eccles "high-handed and contemptible" for applying precisely that principle to teachers' pay; and they sit on the Edinburgh agenda beside other motions—which are likely to be passed—saying that the Government is "cynical" not to place a redemption date on War Loan, calling for the repayment of postwar credits, the abolition of Schedule A, the channelling of more factory building to areas of high unemployment (side by side with another motion saying that Britain must become more "cost-conscious"), and for half a dozen other demands to provide more welfare for less taxes. "Contemptible" and "cynical"? Samuel Johnson, that hammer of all whigs, once gleefully ascribed his success over certain contemporaries to the fact that "the dogs don't know how to write trifles with dignity"; two centuries later, in Boswell's Edinburgh, Liberals might do well to ponder whether there is not sometimes a damaging element of truth in this.

Democracy and Violence

Turkey's return to parliamentary rule may have had a grave check from the hanging of Mr Menderes

TURKEY is independent, and entitled to run its affairs in its own way. But the Turks do claim to be attached to western standards; they can hardly complain if western opinion is dismayed by the hanging of Mr Menderes and two of his former colleagues. By those standards, to execute men for political offences, even though the act be covered with a white sheet of legality, is wrong. In this case it is also inexpedient and self-defeating.

The present military regime, led by General Gursel, itself came to power in May, 1960, by what was, after all, an illegal act. Its justification was that Mr Menderes's policies were gravely undermining Turkey's young parliamentary democracy. Most people outside Turkey were prepared to concede that Mr Menderes had gone too far, and to accept, at any rate for the time being, the soldiers' protestations that they wanted to preserve, not destroy, parliamentary rule in Turkey. Since then, in spite of a good deal of disagreement among themselves, the new rulers have worked steadily towards the restoration of parliamentary government. A new constitution has been drawn up which contains provisions (for example for a second chamber) designed to check any tendencies towards autocratic rule. Political activity has gradually started up again (there are five main parties), although in a rather restricted way. According to present plans, the military regime is to hand over to whatever government emerges from the elections to be held on October 15th. Now, however, the soldiers have introduced violence into what had been a bloodless revolution. This could be disastrous for them; and for Turkey it is certainly a step backward.

On September 15th, the judges of the High Court on Yassiada passed fifteen death sentences on the ground that the accused had violated the constitution, an offence which carries the death penalty. But in deciding whether to commute or confirm these sentences the National Unity Committee, the military junta, was clearly guided not so much by legality as by political expediency. Evidently the view prevailed in the committee that some deaths were necessary in order to demonstrate that what the soldiers did sixteen months ago was necessary; and who would be better out of the way than Mr Menderes himself? Some reprieves were necessary in order to demonstrate the regime's generosity and humanity, and who more suitable for reprieve than the ex-president, Mr Bayar, an old man of 78? But if the army's desire for blood was not satisfied by one death, why, among those sentenced to be hanged, pick on Mr Zorlu (who, whatever his personal failings, had at any rate served his country well as foreign minister) and Mr Polatkan, the former finance minister? Could it be that their deaths would impress without causing trouble, since neither was a popular man?

Yet if the decisions of the junta inevitably arouse revulsion and misgivings, the compulsion behind them is not difficult to understand. Turkey has come to be accepted so completely as a member of the western community that it is easy to forget that the Turks have had a brief forty years in which to accept a new identity as a nation-state, assimilate profound religio-social changes, and learn new techniques of government. Moreover, there has been no deep grass-roots yearning for more modern ways except among an educated, westernised minority. The Turks have had change and reform thrust upon them and they have not always been pleased. Kemal Ataturk tried to propel them forward by administering a series of symbolic shocks, like the abrupt prohibition of the fez. His successors in General Gursel's military junta staged the Yassiada trials, partly no doubt to justify their own coup, but partly also to teach the Turkish people in the most dramatic possible way how their rulers should not behave. It may well have been argued inside the junta that the shock of some death sentences was necessary to hammer the lesson home.

A DEATH sentence, final though it is, can arouse controversies and passions that go on incalculably. The NUC itself was not, it seems, altogether of one mind about what it had done. Mr Inönü, Turkey's elder statesman, pleaded against it. The whole of the cabinet resigned, apparently in protest, although all were later persuaded to change their minds. What the press and the general public think is hard to judge, since discussion of the Yassiada verdicts has been strictly banned. Yet it could well prove that in its effort to demonstrate with finality that there must be no more Menderes regimes in Turkey, the junta has merely helped to keep alive the discords and ambitions that surrounded the former prime minister.

Moreover, by making themselves responsible for the death of Mr Menderes the members of the NUC have themselves stepped down into the political arena. In a sense they had already done so in their efforts to guide the politicians along what they feel to be the right paths. Now they will have a much more direct personal interest in the sort of government that emerges from next month's elections. They will have an additional, and personal, reason for refusing to experiment with a free play of political forces—for this might bring to the top men who would want, in their turn, to challenge the dubious legality of the May, 1960, coup. Thus the shadow of political violence will not be easy to dispel.

This prognosis may prove too gloomy. One must hope so. But at this stage the army is getting more, not less, involved in politics. With the hangings, Turkey's chances of restoring parliamentary democracy peacefully and reasonably quickly have become a good deal worse.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out next week:

ARGENTINA

The recent resurgence of Peronist power in the unions and the worsening political situation, are analysed. There are several new and disturbing features among the pressures on the government's economic policy. The review discusses the recent LAFTA conference, reports new development projects, and gives the latest crop reports.

NOTES OF THE WEEK

BERLIN

A Door Ajar

WHEN is a basis for negotiations not a reasonable one? When either party tries to get the other to concede in advance something that is to be negotiated about. One hopes that Mr Rusk and Mr Gromyko got the conundrum right when they met in New York on Thursday, while *The Economist* was going to press, to see if they could find a "reasonable basis" for negotiations on Berlin. If the Russians insist that the negotiations must be specifically designed to draw up a German peace treaty, which is the position they have sometimes appeared to take, the West will almost certainly tell them that this is unreasonable. The inch-by-inch progress in the last few weeks towards a conference will be halted; and it may not then be resumed before Mr Khrushchev signs his separate treaty with the east Germans and a wholly new, and more dangerous, situation confronts the world.

But the West, too, has a *responsibility* to be reasonable. Mr Khushchev has said several times that Berlin can have the social and political system it wants, with freedom of access. The question is whether he will let these mere promises be converted into guaranteed rights. The West cannot require the Russians, however, to commit themselves in advance to the discussion of a particular list of guarantees. What they can fairly be asked to do at this stage is to agree that guarantees should be discussed. This much may be possible; Herr Ulbricht, the east German leader, said on September 15th that if the allies wanted to stay in Berlin they should talk things over with the Soviet Union.

If Mr Khrushchev wants to add that he will not allow these negotiations to delay the signing of his peace treaty with east Germany—the position he took in his message to the Inter-Parliamentary Union on September 13th—the western powers need not retire sulking to their tents. It *is* too late for the allies to hope to stop Mr Khrushchev signing this treaty; what they can try to do is to pin him down to the necessary guarantees first. This gives them perhaps ten weeks. Once the treaty is signed, the period during which the Russians admit to having a direct responsibility for Berlin will be at an end. The West may then have to choose between seeking an agreement with east Germany alone, and having no agreement at all. The first would be unpalatable, the second full of danger. The door to an agreement that might bind the Russians is ajar now, but may not stay so for long.

DISARMAMENT

On the Right Track

SOME commentators have been over-quick to see nothing but futility, indeed deadlock, in the joint Russo-American statement of principles for disarmament that was offered to the United Nations on Wednesday. Admittedly, Mr McCloy and Mr Zorin have cut no Gordian knots between them; did anybody seriously suppose that their talks could have had any such result, against the background of recent weeks? But the text they have agreed on, while no more than a summary of principles, has its encouraging aspects.

The United States has now spelt out, in a document of which the Soviet Government is joint author, its commitment to the goal of "general and complete disarmament." One trusts that the Soviet press will report the fact. What will now replace the steady drumbeat of Russian charges that America rejects general and complete disarmament? What, in particular, of Mr Khrushchev's frequent, and, to put it mildly, disingenuous promises that if the West would accept this goal, Russia will accept any system of control and inspection the West cares to propose?

The transparency of those promises is newly exposed by the Soviet refusal to include in the joint statement a paragraph providing that, at each stage of disarmament, the amount of arms and the numbers of the forces retained should be verified. Mr McCloy has explained that he agreed to this omission in order to facilitate further negotiation, but without prejudice to the American position on this important point.

Russia's agreement that a United Nations peace-keeping force should be provided with adequate manpower as disarmament proceeds is also spelt out in the joint statement. There are still many problems to be solved in regard to the control, composition and authority of such a force; but it should not be forgotten that little over a year ago Mr Khrushchev and his echoes were tirelessly denouncing the whole idea of a United Nations force as an imperialist crime, an instrument of western ambitions for domination. It is interesting that their conversion, if only in principle, should have occurred during the year of the Congo.

FORD MOTOR

Tempest in a Teacup

WHILE General Motors in America ends its strike over breaks for making water, Ford Motor in Britain looks as if it is to start being strike-bound over breaks for drinking tea. The leaders of the 22 unions representing the 45,000 work people at Ford agreed on Wednesday to a new "wages and hours" offer that would give the men 4½d. extra an hour, but negotiations broke down because the company insists either on replacing the ten-minute morning tea break by a tea trolley that would be brought round to men on the job, or else on stopping the afternoon tea service altogether. The Ford wages offer would not have been such a breach in the Chancellor's wage pause as some people have made out. The company promised in June to make an offer if productivity improved and unofficial strikes abated; and these improvements had occurred. On the other hand, the company's insistence on getting rid of the tea breaks is also not as absurd as it may seem. Presumably its insistence has been bolstered by the facts that it does not much mind a strike in the present state of the motor trade, and that it does not regard a "tough" attitude by employers as being bad public relations just now, but these tea breaks have long been a real thorn in its side. Quite apart from their inordinate expense as interruptions to an integrated system of assembly line production, it is during the morning tea breaks that agitating shop stewards make most trouble among the men; and last June Ford had to report that "trouble" meant that it had suffered some petty unofficial stoppage or other on every day except three during the preceding eleven weeks.

The union leaders decided to recommend an official strike on Wednesday because they believed that the "tea service" clause would cause the shop stewards to call an unofficial strike anyway. This is therefore not so much the long-awaited "crunch" in the battle of the wages pause as another round in the union leaders' struggle to control their left wing elements, a struggle which the leaders wage by alternately running after the troublemakers and running ahead of them.

The main wage claim in the engineering industry as a whole will reach a new stage when the unions meet the central employers' body next week; and a massive wage claim for power station workers has been tabled this week by the ETU's Mr Foulkes with four other big unions behind him. Yet it still seems probable that the real showdown strike on the wages pause will not come in either of these industries; the most likely battlefield still seems to be road haulage,

where the wages council has duly sent on a unanimous recommendation for a wage increase, which in the wider national interest Mr Hare simply cannot afford to confirm. It is an awkward outlook that the two main faults of the British trade union system—the struggle for voracious wage inflation which it breeds and the internal competitive struggle for power between union leaders and shop stewards which it incorporates—should now seem to be reaching flashpoints at once.

PARLIAMENT

Reasons for Recall?

In democratic theory there is obviously ample justification for the plea by Mr Gaitskell and Mr Grimond that Parliament should be recalled early from its recess; and it now seems that Parliament will be brought back a week earlier than was arranged. There is unfortunately no lack of interesting issues for it to discuss, ranging up to the possibility of the imminent destruction of the planet itself. But the practical man must still dispute whether the case for this recall has been made out. The two main issues mentioned by Mr Gaitskell as requiring debate were the crisis caused by Mr Hammarskjöld's death (which Parliament could and would deplore, but hardly affect) and the situation in Katanga (which the Government, if a recall of Parliament set Tory backbenchers breathing down its neck, would be liable to handle rather less appropriately than it is handling it now). Moreover, the "inconvenience" of recall is not just a matter of calling backbenchers to Westminster from all over the earth. The few weeks between the end of their summer holidays and the re-opening of the Parliamentary grind are the most fruitful weeks of many ministers' working year; among other things, there is a busy schedule of legislation to prepare.

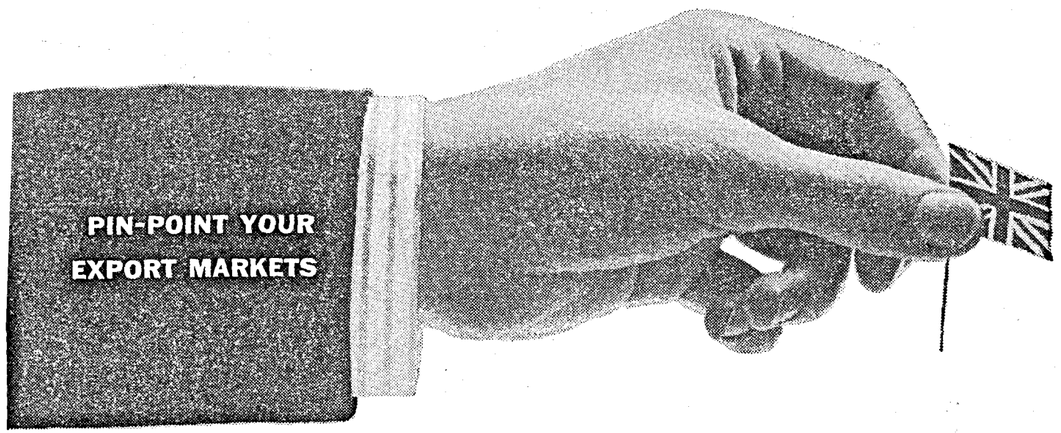
It is always dangerous to carry these "practical" arguments of "convenience" too far. It would be wrong to risk a major inter-party row for their sake. A foreign affairs debate in the week before the House was due to return has been increasingly likely. Parliament must be sitting when great decisions are taken and great initiatives set afoot. But politicians should be careful not to disrupt arranged timetables for reasons of demonstration of eagerness rather than of practical effect. To point out

COMMONWEALTH AND EUROPE

1. The Old Dominions

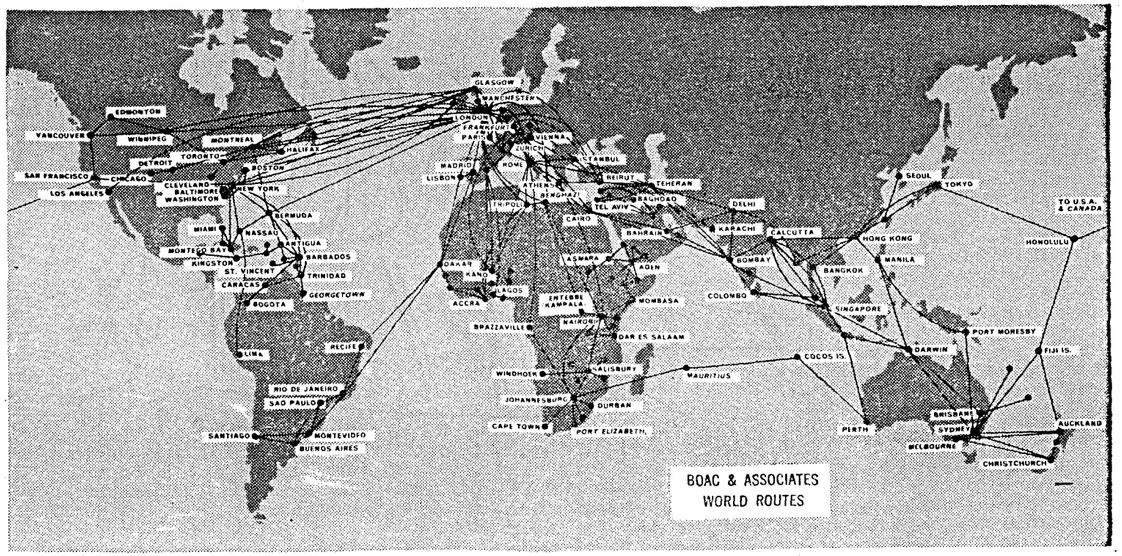
It was perfectly clear from the Accra conference last week, and from the detailed official discussions that began in London this week, that the Commonwealth's attitude towards Britain's application to join the common market has grown both more complex and more bitter. The problems divide under the three familiar heads of the Australasian dominions, Canada, and the underdeveloped countries.

For Australia and New Zealand, the especially tough problems concern their dairy products, meat and soft wheat. Because Britain imports so much of its food, and continental countries do not, Britain would be bringing into the European community a huge potential market for Europe's farmers; even as a minimum condition those farmers can reasonably be expected not to grab for it all at once, and to agree that for the time being quotas of the British market should be left aside for traditional (and at present much more efficient) Commonwealth suppliers. (Whether those quotas should be dutiable or "duty free" quotas could become an awkward issue between Britain and the Commonwealth; because the common market's agricultural policy will require Britain's retail food prices to rise to the continental level, "duty free quotas" or even the common market's complicated system of "variable levies" would be an invitation to Commonwealth producers to raise their selling prices to Britain sharply, which could massively swell Britain's import bill.) But the Australasians are probably right to complain that, in the long term, no short-term quota arrangements will matter a damn if the common market's farm prices are set so high that Europe-including-Britain is encouraged to become gradually self-sufficient in foodstuffs; in that case the Australasians would eventually be squeezed out of the British market altogether. So it looks as if one of Britain's principal obligations to the Commonwealth will have to be to act constantly as a pressure group that advocates the lowest possible off-farm prices inside the European community; and both British and continental farmers will not like this. New Zealanders also have some reason to fear that when Britain's retail butter prices rise to the continental level masses of British housewives may switch to margarine.



Since Europe does not grow hard wheat, Canada's main problem is going to concern manufactured goods; this can presumably only be met by Britain trying to negotiate that the common European tariff should be low on those manufactures and semi-manufactures in which Canada is especially interested. Such negotiation is not going to be at all easy, especially as it cannot easily be separated from the common market's bargaining *vis-à-vis* the United States in Gatt.

2. Association Misunderstood



For the underdeveloped Commonwealth countries, the escape route from real difficulties has always seemed easier: they would benefit greatly by applying to become associate members of the common market themselves. Perhaps the greatest disappointment of all at Acora was that it now looks as if none of the young Commonwealth countries except the West Indies is ready to do this, because they think that they scent some sort of neo-imperialism in the idea. This seems to be a bad mistake. It is true that the relevant passages of the Rome Treaty were drawn up when the French territories in Africa (which will be the main associate members) were not yet independent, and thus have some smack of colonialism about them; but the new draft proposals circulated by the European Commission this summer clearly envisage association as being an agreement between independent sovereign states—including a council of association with equal representation of associates and full members, etc. One wonders whether the Commonwealth countries in Africa have read these latest proposals before voicing their objections to an associate membership which, by giving freer access for their exports into Europe, must be heavily in their economic interest.

The same applies to all the Asian dominions, from India down. Even before the Accra conference it seemed unlikely that India would apply, and it was recognised that Britain might have a tough task to persuade the Six to open their markets in this way to big Asian associates. But the reasons that seem to be prompting smaller Afro-Asian dominions not even to apply are baffling. Logically, indeed, associate membership would also be the best course for a country like New Zealand, if only the Six would accept it.

Finally, although some of the shrillness of the outcry at Accra can be attributed to the approach of the Australian and Canadian elections, discussion about measures to meet the Commonwealth's difficulties would be much easier if each dominion could coolly draw up a list of what its main requirements for negotiation are: at the moment in each dominion these seem to be matters where three or four cabinet ministers have an equal duty to utter protests at once, and this is an administrative machinery for expostulation rather than negotiation. Would not those dominions that will be most severely affected be wise to pick out, during the bargaining bouts ahead, their own equivalent of a single Mr Heath?

BOAC ROUTES COVER THE WHOLE WIDE BUSINESS WORLD

Nobody wins big export business just sitting at a desk. And nobody keeps it—unless they keep giving sales and technical service on the spot. But what's the best way to get down to big export business *fast*? Take a look at the BOAC world map. Your people at all levels—chasing new business, following it up or seeing it completed—can fly *anywhere* in a matter of hours by BOAC and its associate airlines. No other airline can match it.

Any BOAC Appointed Travel Agent or any BOAC office will gladly help you.

that this recess's crises have not provided any obvious occasions when Britain could and should take great initiatives after careful parliamentary exposition and debate is not to denigrate Britain's ancient system of parliamentary government; it is, rather, to comment on Britain's new and necessarily less powerful position in the world.

FRANCE

Parliamentary Symptoms

On Wednesday, the eve of his departure for yet another provincial tour, General de Gaulle let it be known that by the end of this month he would drop the emergency powers which he has held since April. Article 16 of the present constitution allows the president to take "measures required by circumstances" when the regime is in danger. The only other provision of this article is that parliament is entitled to sit during the emergency and that the National Assembly cannot be dissolved.

When General de Gaulle invoked article 16 following the April revolt in Algiers, there were no protests, though there were critics who argued that the weakness of the Fifth Republic did not spring from any legal obstacles to executive action. But protest mounted as the months went by and General de Gaulle kept his special powers in his hands. The feeling grew that the coup had been used as a pretext to deprive parliament of its already limited prerogatives. M. Mollet's socialists, the radicals, the "independents," and even the Christian democrats showed signs of restiveness. With the support of the neo-Gaullist UNR alone, the government felt its position to be awkward.

During the emergency session, the deputies were denied recourse to a vote of no confidence by which they might have sought to bring M. Debré's government down. It was not clear whether they would be allowed to do so in the ordinary session opening next month. Nor could the government use the threat of dissolution against such a move. General de Gaulle has finally decided to drop article 16. Had he done so earlier, his move would have been taken as a sign of collaboration with parliament. Now it is being taken in Paris as a sign that he yields only to pressure. But too much importance should not be attached to parliamentary quarrels; this is not where the battles of the Fifth Republic are being fought. More significant may be the reception General de Gaulle is getting on his tour.

BIZERTA

Acts of Grace

A green light has flashed in Bizerta to allow some traffic in goodwill. Less than two weeks after President de Gaulle's discouraging comments on the subject in his press conference of September 5th, French troops in Bizerta had begun on Tuesday to remove barbed wire barriers and make themselves less conspicuous on the streets. This voluntary French action provided a soothing accompaniment to the talks going on between the governor of Bizerta and the French consul general, which both believed would lead to a return to normal in the town.

So sudden an unwinding of events has come to pass through President Bourguiba's and General de Gaulle's joint efforts to interpret each other hopefully. General de Gaulle has not disputed Mr Bourguiba's view that the Berlin crisis (but this alone) justifies French retention of the base. Each leader has thus performed his act of grace. New vistas open up from them. If French soldiers can withdraw, without anxiety, to their various cantonments—as now seems possible—talks at a higher level will begin on the future of the base. The note from Paris, delivered on September 6th, that gave President Bourguiba the signal to yield some ground, is reported in Tunisia to have spoken of a "reconversion" of the base and a "transitional phase." These are malleable ideas.

TEACHERS

Standing Pat

Neither the Minister of Education nor the National Union of Teachers has budged an inch from previously prepared positions this week. Sir David Eccles's ideas on the distribution of the extra £42 million he has available proved to be almost exactly on the lines of his answer in the Commons on August 4th. Such slight changes as there are have been sensibly in favour of better qualified teachers in responsible posts: one's preference would have been to arrange the distribution to give these people even more than they would have got under the Burnham recommendations. Under the Minister's plans no teacher will be more than £30 worse off immediately than he would have been had the Burnham recommendations been accepted: the difference for many will be as little as £5 or £10 a year.

But despite Sir David's cautious observation of the Burnham differentials (and still ignoring his broad hint that in 1963 the teachers can expect another rise, giving them more than Burnham within the period up to the end of March, 1964) the NUT is going ahead with its peculiar strike plans. The union may be commended for its intention to continue teaching the children (its members drawing strike pay, not their salaries), but this tactic also seems to be a confession of uncertainty. It may conceivably attract support in the referenda from some teachers who would have voted against normal strike action, but then the special delegates' conference on October 7th may demand normal strikes after all. Anyway, it is by no means certain that all local authorities would be complacent about the legal position of classes taught on the union's responsibility (and liability?), not their own. Withdrawal from the school meals service after November 1st may also be interpreted as a breach of educational regulations, as well as a shifting of the burden on to those colleagues who still accept this part of their duties.

The NUT's continued determination to demonstrate had the unintentional effect this week of attracting unusual publicity for the one-day strike (closing 1,000 schools) by the National Association of Schoolmasters, with whom the union is barely on speaking terms. The NAS has doggedly persisted with its plan of campaign over recent months without getting much more than a yawn from the national press. The devaluation of the Burnham committee (on which the NAS was not represented) has removed one of the association's bitterer rallying cries. Presumably it can now expect to present its future salary proposals direct to the Minister for official consideration, as the excluded teachers' bodies in Scotland have done there. But without its big grievance the NAS is likely to appear increasingly as little more than an anti-feminist organisation, and now feels bound to compete with the NUT in being more-promptly-militant-than-thou.

TELEVISION FEES

Acting Tough

The actors, of all people, appeared this week in the role of militant trade unionists: Mr Wills, chairman of Associated Rediffusion, took the opportunity of his annual report to shareholders (advertising revenue up 16 per cent) to denounce the "ridiculous demands" of Equity, interpreted by him as a claim for a 260 per cent increase in the minimum fee. Equity points out that, for programmes put out in the smaller regions, it is asking for a 10 per cent increase on the present ten guinea minimum fee—and, strange though it may seem, both sides are telling a version of the truth.

Minimum payments for actors in independent television were originally negotiated when there were only a few contracting companies, and when the maximum audience was some two million. For programmes put out in areas where this is still the approximate size of the audience, Equity is asking only for another 10 per cent. But it argues that an actor should get more for a performance which is "bought" by half a dozen companies other than that for which he is directly working, and which may go out to as many as twenty million viewers: its idea is thus to work out something analogous to a performing right based on the number of people who might see the programme (and thus, tacitly, on the profits made by the producing company from selling its programme to other contractors).

The 260 per cent increase is therefore for the performance fee of an actor whose face is liable to be seen on screens throughout the country ; and it should be noted that the union is not asking for any increase in the rehearsal fee which makes up much of the small-part television actor's income. Equity also points out that it has no control over any but the minimum price for actors, and that the market for middle-price performers is freely negotiated. It claims a cultural do-gooding purpose because, by making the minimum payment depend on the size of audience, its scheme would encourage the production of cheap plays by regional networks using local actors. And to those who say that the massive surplus of "resting" actors makes it a weird proposition in market economics that actors' fees should go up now, it retorts that television has created a need for a reserve of rarely-used bit-part players, since one or two appearances in the most popular plays or serials may make an actor's face so familiar that producers will not use him again for months.

Not all of these arguments carry conviction, particularly not the last one. But if a strike does break out on the television screens from November 1st, this—not a wage claim of 260 per cent—will be what it is about.

WEST INDIES

Without Jamaica

MR NORMAN MANLEY'S gamble has failed. Despite all the compromises that Jamaica's prime minister wrested from the West Indian constitutional conference in June, the Jamaicans have decided to leave the federation. At the referendum on Tuesday, 54 per cent of the voters refused to accept even the very watered-down form of federation to which Mr Manley was trying gently to lead them. Sir Alexander Bustamante, who for reasons of his own is now leading the anti-federalists, had much to help him. The Jamaicans feel themselves remote from the islands of the eastern Caribbean ; the majority of them still believe that a link with the others would be a millstone on their own development. Not rich themselves, they have shuddered away from the thought of supporting even poorer relations. Whether or not they are right in thinking that they can do better on their own, the next stage can only be a series of constitutional moves to extract Jamaica from the federation and set it up as an independent state.

What happens to the federation depends largely on the reaction in Trinidad. Dr Eric Williams, Trinidad's prime minister, is on record as having said that if Jamaica secedes, Trinidad will not carry the other little islands on its own shoulders. It is possible that this was said to bolster Mr Manley's cause. But if Dr Williams does agree to carry on without Jamaica, he will probably revert to his earlier insistence on a strong central government. He may win his way. Although it would have meant abdicating a good deal of autonomy, most of the smaller islands have in the past supported the idea of a tighter rather than a looser federation. This is partly because it would mean lower administrative costs ; partly because the promise to allow the free movement of people has always been pegged to the idea of a central government that is strong enough to direct such movement. The federation has been floundering unhappily for several years ; now that Jamaica has left, it is up to Trinidad to prevent it sinking altogether.

IRAQ

Smouldering Kurds

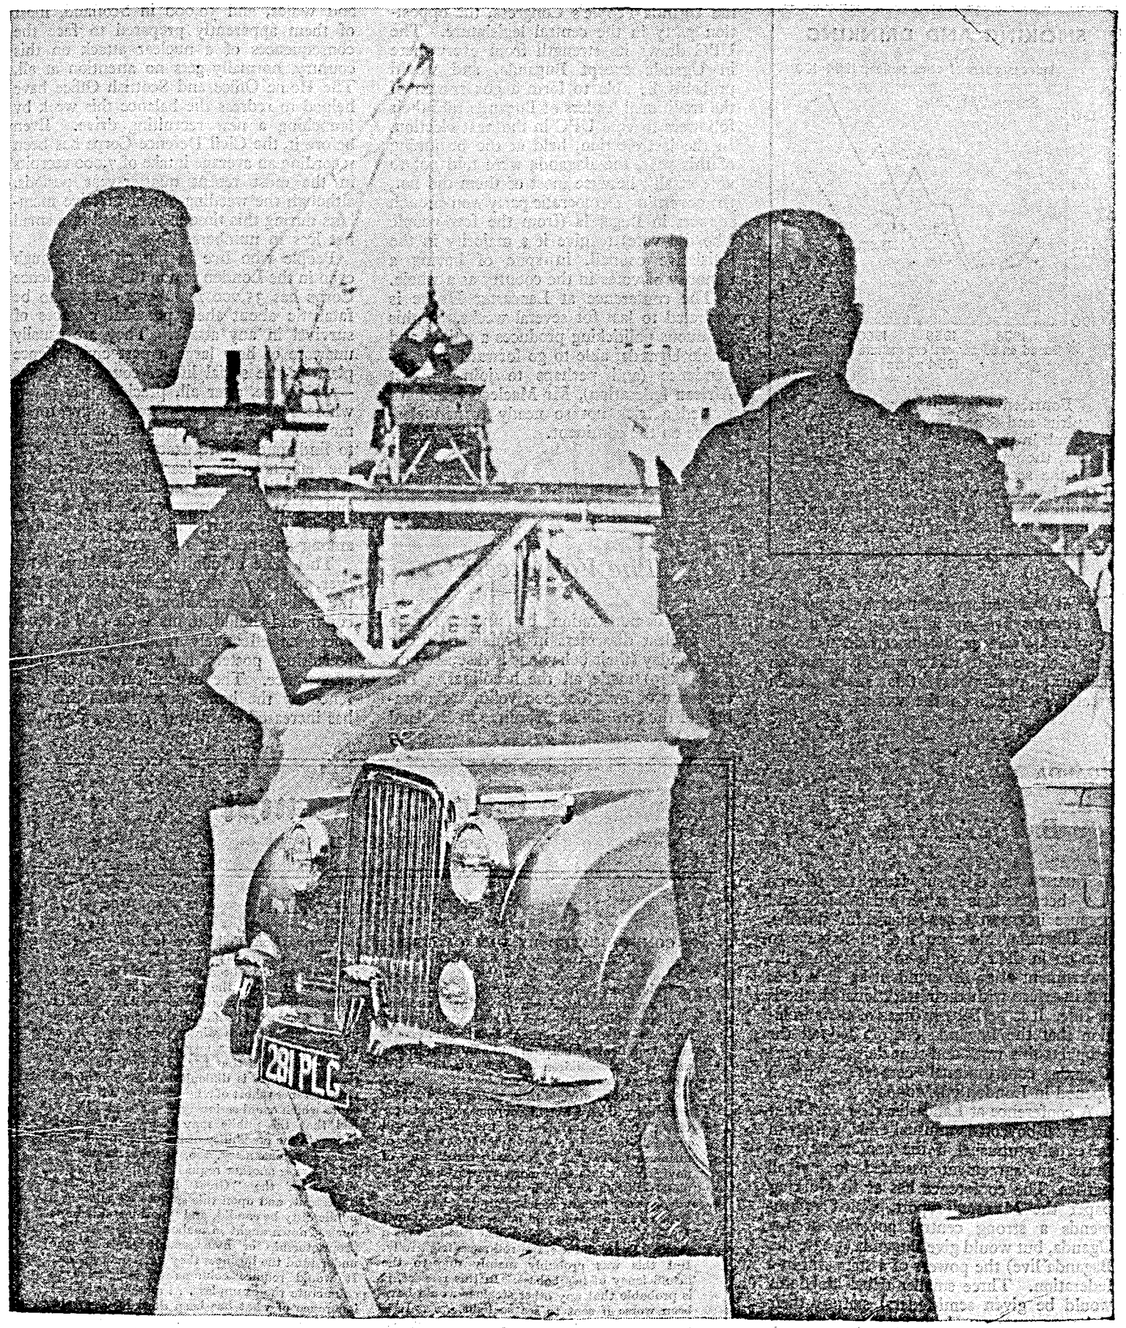
SPORADICALLY, the aversion that most Kurds feel for being governed by somebody else erupts into boisterous protest. This is now happening in northern Iraq. The large Kurdish minority, disillusioned by the broken pledges of the government in Baghdad, and banking, perhaps, on its frailty, have roughly patched up their intertribal bickering and asserted their formidable, if unorganised, power. For the past three or four weeks, Kurdish tribesmen have been challenging the central authority by setting up road blocks and causing general disarray. General Qasim, faced for the first time by a major Kurdish upheaval, has dispatched ground and air forces to the north. But the army, working over a mountainous terrain, is seriously hampered by the road blocks, and the bombing of a few Kurdish villages is unlikely to dampen the smouldering rebel spirit.

The Kurdish leaders had high hopes of General Qasim's "Arab and Kurdish republic." But there has been a long series of disappointments, arising mainly from the procrastination and tactlessness of the central government. The Kurds were irritated by the inefficiency of the land reform scheme, by the order to stop tobacco growing in the area, by new tax laws and by the transfer of Kurdish officials to other parts of Iraq. Their gradually increasing discontent showed itself, at first, in inter-tribal jealousies and warfare. Skirmishes, mainly started by the Barazani tribe, grew serious during July and August. The Barazanis were probably trying to impose their will on tribes less anti-government than themselves.

Because of the years that Mullah Mustafa Barazani, the tribe's most dynamic leader, spent in Moscow, he is sometimes thought to be a communist ; if so, the brand is unique. The Soviet Union, which puts out a regular Kurdish broadcast, has been discreetly silent about the Iraqi revolt ; it is probably not in Moscow's interest at the moment to help in the overthrow of General Qasim. Outside interference of any kind is unlikely ; the Kurds, who are a tough, gay and courageous people, are capable on their own of giving the Iraqi army a very hard time indeed. Their exiguous unity is almost certain to collapse once the battle is over, and the pipedream of an independent Kurdistan—uniting the Kurds of Iraq, Persia, Syria and Turkey—is nowhere taken very seriously. The Iraqi Kurds are not fighting mainly for secession ; they are fighting for a fairer deal.

HUNGARY

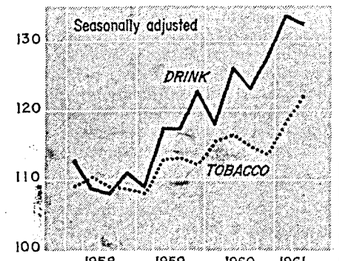
Budapest Reshuffle



CHANGES in the Hungarian government and party leadership were announced on September 13th. They are the most extensive since the 1956 revolt, but they are unlikely to herald any significant changes for the Hungarian people. Mr Kadar has decided to take over the premiership from Mr Münnich, who is old and ailing and whose retirement has been expected for some time. In deciding to combine the leadership of the government with the leadership of the party (as he has done once before, from November, 1956, to January, 1958) Mr Kadar is falling in with the trend started by Mr Khrushchev in 1958 and since followed in Czechoslovakia, East Germany and Rumania. Collective leadership has been going out of fashion in eastern Europe.

The other changes in the government and the party do not suggest a struggle for power, but an attempt to strengthen the regime by improving its efficiency, especially in economic matters. For instance, Mr Arpad Kiss has been put in charge of a new committee for technical development, and has been succeeded as head of the economic planning office by Dr Miklos Ajtai ; both are distinguished economists, and both have been given full cabinet rank. Mr Bela Biszku, who has been a tough minister of the interior since February, 1957, has been promoted to be a deputy premier, and succeeded in his old job by Mr Janos Papp, who got a medal for his part in the fighting against the revolutionaries in 1956. These appointments suggest that there will be no slackening of the regime's internal security.

On double shift : Mr Kadar



Mr Kadar may have been encouraged to refurbish his regime by the likelihood of increased discontent. Over-hasty collectivisation has already alienated the farmers ; the townspeople are annoyed by frequent food shortages, and industrial workers by the recent raising of production norms. Last

Take a Bentley into partnership

SMOKING AND DRINKING

Index numbers of consumption; 1954=100*

* Based on consumers' expenditure revalued at 1954 prices

Fourteen per cent more wines and spirits and 6 per cent more beer were drunk in the first half of this year than last, though the increase was checked in the second quarter. On the other hand tobacco consumption rose again quite sharply in the second quarter of this year after being stable in 1960.

week it was announced that the targets of the current five-year plan (1961-5) are to be raised, while capital investment is to be cut back so that more can be spent on defence; presumably this means even greater demands on the worker.

UGANDA

Britain's Katanga

UGANDA is different from the Congo because it is not yet independent and because its most secessionist-minded tribe, the Baganda, have no foreign friends to lean on in their struggle to ensure that the government of an independent Uganda does not interfere with their traditional methods of rule. It is perhaps because of their isolation that the Baganda confounded all the prophets this week and sent delegates to the Uganda constitutional conference which opened in London on Monday.

A conference at Lancaster House without an initial boycott is unusual enough; it will be equally unusual if the conference produces an agreement assented to by all parties. The conference has as its working paper the Munster report, which recommends a strong central government for Uganda, but would give Buganda (where the Baganda live) the powers of a state within a federation. Three smaller tribal kingdoms would be given semi-federal status; their claims to autonomy have been strengthened by Buganda's. There is, in fact, some chance of general agreement on such a constitution.

The reason is that a political accommodation has been reached between Buganda and the Uganda People's Congress, the opposition party in the central legislature. The UPC draws its strength from everywhere in Uganda except Buganda, and would probably be able to form a government if the traditional leaders of Buganda told their followers to vote UPC in the next election. In the last election, held at the beginning of this year, the Baganda were told not to vote at all; because most of them did not, the governing Democratic party won enough support in Buganda (from the few people who did vote) to give it a majority in the legislative council, in spite of having a minority of votes in the country as a whole.

The conference at Lancaster House is expected to last for several weeks. If this assiduous politicking produces a united and stable Uganda, able to go forward to independence (and perhaps to join an east African federation), Mr Macleod will have turned a trick not so neatly turned elsewhere on the continent.

CIVIL DEFENCE

The Volunteers

THE demonstration by under 10,000 nuclear disarmers in Trafalgar Square last Sunday (their behaviour is discussed on page 1149) made all the headlines. The existence of over 600,000 voluntary members of the civil defence services in England and Wales, and 50,000 in Scotland, most of them apparently prepared to face the consequences of a nuclear attack on this country, normally gets no attention at all. The Home Office and Scottish Office have helped to redress the balance this week by launching a new recruiting drive. Even before it, the Civil Defence Corps has been recording an average intake of 7,000 recruits in the most recent quarter-year periods, although the weeding-out of inactive members during this time has resulted in a small net loss in numbers.

People who live in big cities (although even in the London region the Civil Defence Corps has 35,000 members) are apt to be fatalistic about their personal chances of survival in any attack. They are usually unaware of how large a part civil defence plays in the social life of country districts —which are, after all, precisely the places where rescue attempts would have to be mounted after a catastrophe. It is normal to find much more exact knowledge about the effects of nuclear bombardment in women's institutes and church guilds up and down the country, which have had the benefit of lecturers and lantern slides, than among anti-nuclear squatters.

This state of affairs does nothing, however, to remove the general conviction that the authorities are failing to do all that they could, and should, to make the civil defence corps an effectively modern force. The recruiting posters have a coy, 1939-ish appearance. The expenditure on civil defence by the home departments this year has increased slightly, to £18.6 million, but

The Economist

SEPTEMBER 21, 1861

THE GREAT EASTERN

COMMUNICATED BY ONE OF THE PASSENGERS ON BOARD

Is the "Great Eastern" destined to revolutionise ocean voyaging as her sanguine projectors have anticipated? or, is she fated to be ultimately moored in some river as a floating hospital and exhibited to our passing grandchildren as one of the most monstrous crazes of the nineteenth century? The disastrous voyage from which she has just returned will give weighty support to the latter view; but a narrative of the passage will probably be read . . . as not being *conclusive* of ultimate failure. . . . Never in the history of navigation was a ship more severely and completely tested, and from the experience of this voyage very *definite conclusions may be arrived* at as to the qualities and powers of the "Great Eastern." In the first place, her steadiness is a myth. Never did a vessel roll more frightfully. But this was probably mainly due to the insufficiency of her ballast. In this respect, it is probable that any other steamer would have been worse if sent to sea so light. . . . It is different, however, as regards her *pitching*. Of that we have had positively none; and as her rolling was slow and dignified, there was hardly any sea-sickness on board. We have seen more in crossing from Folkestone to Boulogne on a calm day, than among our 400 passengers for the week we have been to sea. In this respect, then, we consider the principle of the ship a great success. Any one who would be sick on board of her would suffer in the same way crossing the Mersey on a windy day. Secondly, as to the strength and safety of her hull. In this respect she is all that her advocates have ever represented. It is difficult to conceive of any circumstances short of a hurricane on a rocky lee shore which could seriously affect her hull. We feel that the public may dismiss from their thoughts the possibility of its wreck in the open sea. The machinery, too, is magnificent. . . . But there is another requisite to the safety and success of the "Great Eastern" not less *important*, and upon this subject we must as a public duty be candid, and "nothing extenuate nor set down aught in malice." She needs the proprietorship or *management* of men who understand the business they have undertaken. It would require columns of our space to enumerate the examples . . . of the most utter ignorance of what has been done for years by other Companies to overcome the difficulties involved in carrying a large number of people several thousand miles in an orderly and comfortable manner.

Mortarboards for middle management

Until recently the only way to the top jobs in commerce and industry was through a long education in the hard school of experience. It was impossible, clearly, to cram decades into years, years into months. Until recently . . . Then a new technique called *Management Strategy* made its appearance – a technique which made it possible to shorten the time it takes for middle management to graduate to top managerial jobs. Already proved in Government departments and internationally famous commercial corporations, the Management Strategy system works likes this:

Those taking part are set a problem in manufacturing, marketing, distribution, or selling. They have all the data – costings, product variations, market conditions, budget limitations, and a host of other details – and are asked to make decisions as the operation proceeds – stage by stage. At each stage a specially programmed electronic computer indicates exactly what would have happened as a result of the decisions made, and provides a situation report and all the data for the next stage of the project. Realism is added by the introduction from time to time of 'unforeseen' events, which call for new decisions and the revision of previous ones. Such exercises can be taken by individuals, groups, or teams working in competition with each other.

The Management Strategy System is only one of the many *scientific management techniques* offered by C-E-I-R, the largest computer services organization in the world. At the London C-E-I-R Centre, with its advanced on-the-spot computer facilities, C-E-I-R are handling on behalf of clients a wide variety of operations ranging from routine Data Processing on a regular contract basis to the solution of the most complex industrial and commercial problems. If you have any problem, large or small, which can be solved by logical or mathematical means – then send for C-E-I-R.

Brandy this good has no stars on its label

No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good.* In a word, Remy Martin cater for the one man in a hundred who refuses to offend his palate—or his guests—with any brandy less good than Fine Champagne V.S.O.P. Just ask for Remy Martin.

IS IT PICKLES & WALLOP FOR WELDED STAINLESS TUBES? Fighting arguments come out into the open

[Illustration by unknown artist, circa 1850, modified to bring it up-to-date]

IF it were not for the well-known fact that nobody (except the Directors of Accles & Pollock) ever reads advertisements we should now be in the difficult position of explaining what this one is all about. As it is, all we need do is to state clearly what the Directors would like to read. **HERE IT IS:–** For a long time past Accles & Pollock (sometimes miscalled Pickles & Wallop, Anchors & Poppycock etc. etc.) have been known as skilled makers, manipulators and fabricators of cold-drawn seamless precision steel tubes. The Directors would like all fifty-two million of you to know that, not only are they the country's largest producers of seamless stainless steel tubes but that they are also the leading makers of **WELDED** and **DRAWN WELDED STAINLESS** steel tubes. For many purposes, **WELDED** and **DRAWN WELDED** stainless tubes offer considerable economic advantages.

We should be most obliged if all manufacturers—potential users of stainless steel tubes—would sign the affidavit alongside for the Directors—

We/I the undersigned hereby declare that I/We have read and nearly/fully understood Accles & Pollock's Directors statement about Stainless Steel Tubes and would like a technical booklet about them (the tubes, not the Directors).

this is still extraordinarily low by American or Russian standards. Mr Khrushchev's fistful of hydrogen bombs for Britain would, if delivered, leave very little that would be recognisable in the major conurbations: and the ultimate pollution of the northern hemisphere by fall-out would probably mean lingering deaths for most survivors. But there is the strongest humanitarian case for ensuring that what can be done in the event of an attack, and in the cataclysmic days that would follow it, should be done. Britain has a good deal still to learn from other thickly populated areas on both sides of the iron curtain.

EDUCATION

Wandering Scholars

To the members of the European community, economic integration is the spearhead of an attempt to merge their societies and face their problems in common. Their plan for a European university in Florence, and their hopes for a gradual harmonisation of examinations which will permit freer movement between their schools and universities, fit naturally into the design. The British, on the other hand, are in process of realising that their European decision has political implications; the idea of it as an influence on every aspect of the nation's life is virtually new.

The teachers' conference on Britain and the common market, organised this week-end in London by the European Movement, is therefore welcome. There are few fields where the opportunities for greater contact and exchange with Europe are more inviting, or the work to be done more urgent, than in education. In university studies, movement between British and Continental faculties has grown considerably in recent years, but differences in curricula and in methods of financing study still stand in the way. Outside the modern language faculties it is still almost impossible for a British undergraduate to take a year at the Sorbonne or Heidelberg and count it as part of his tripos.

It will take a long time to adapt syllabuses sufficiently to enable schoolboys and students to move freely from one country to another without getting out of the stream. France and Italy have aligned their studies sufficiently to make the baccalaureat in one country a passport to a university in the other. And there is considerable academic movement among Scandinavians. There are exceptions. And while, in education, all countries are different, England (though not Scotland) is, as usual, more different than others.

The state of upheaval in British education must inevitably make teachers and educationists fight shy of further problems. But there is a strong case for trying to meet domestic needs for altered and improved curricula in ways that open the door to Europe at the same time. The scholar's liberty of movement was one aspect of the mediæval united Europe for which nostalgia seems justified.

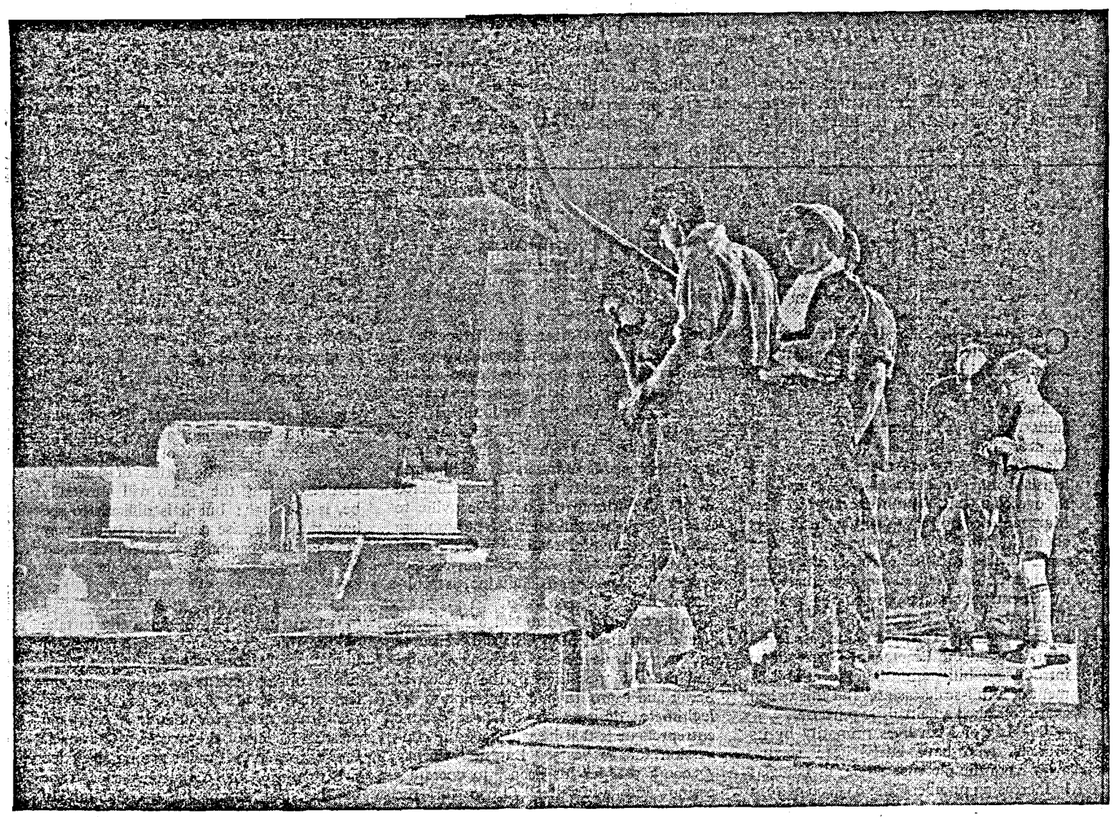
The Manx Flutter

FROM OUR SPECIAL CORRESPONDENT

Careful of the morals of its electors, the United Kingdom government has taken pains, in its liberalisation of betting, gaming and lotteries law, expressly to exclude the possibility of large individual gains from the management of games of chance. Not so in the epiphytic state of Man in the Irish Sea: there, the power to legislate independently has been invoked to overcome such unprofitable scruples. Manxmen see no reason why governments should shrink from battening on one aspect of the acquisitive instinct more than on another, no essential difference between a percentage on chemmy and a tax on dividends; and last year, in the full splendour of its Tynwald Court, its legislators begged the Lieutenant-Governor to introduce a bill permitting the establishment of a full-scale casino. But this naked avarice cloaked an altruistic purpose.

The Isle of Man lives primarily by its tourists, who have lately been staying away from the pleasure domes of Douglas in increasing numbers (the 635,000 of 1913 have become the 471,000 of 1960). A commission of inquiry set up in 1955 recommended the dual solution to the island's ills of opening its public-houses on Sundays and setting up a gaming enterprise.

The resultant bill directs that the business shall be in two sections. The casino is planned to cater for those cartophiles whose interests run to luxury with their *jeux*. A lesser establishment, a *kursaal*, is to provide for those who, like Bentley buyers in the Rolls-Royce advertisements, feel diffident about penetrating the society of nobs; and undoubtedly the general run of Isle of Man tourists will flock to this. But whether the first can draw appreciable numbers of wealthy and enthusiastic gamblers from the undoubted delights of Monte Carlo or Deauville to the British-boarding-house atmosphere and cold seas of Douglas or the second swerve many happy punters from courses set for Blackpool or Llandudno, is problematical.



In fact the bill is a model of business-like discouragement—perhaps because of the vestigial puritanism of the legislature and the flat opposition of the Bishop of Sodor and Man. Its one concession to the legitimate desires of the prospective entrepreneur is that he will have the concession for 20 years. But he will pay £5,000 a year for his licence to operate a casino and a further £1,000 for the *kursaal*; he will pass over to the Manx exchequer 15 per cent of the gross product (i.e. turnover) of all games, whether he has a losing run of £250,000 (as Monte Carlo had recently) or not; what games he may conduct will be decided by the Manx Gaming Board of Control, as will the size of the stakes; he will lose his licence if some desperate lout twice disgraces himself in a drunken manner during any year in his gaming rooms (in which liquor may not be sold); his business must cease promptly by 3 a.m. no matter how far the game has gone, and for mismanagement (only vaguely defined) he may be fined from £250 to £1,000.

Even the premises, which he will have to erect before being granted a licence, are defined in the bill. The casino will comprise a 100-bedroom hotel (half the rooms with private baths), a public restaurant of "adequate size" for eating, dancing and entertainments, a swimming pool with sun lounge, a lounge for the sale and consumption of liquor, and a gaming room. The price of land in Douglas, where the casino will inevitably be, is not high: but it is difficult to see how the enterprise can be got under way on an initial capital investment of much less than £300,000.

The question of who is actually to take on this enterprise is not, however, of immediate import. Tynwald (the combined upper and lower houses of the legislature) resolved on the advantages of the project last year, but that is by no means the end of the matter. The lower house, the Keys, fought among itself for five years to achieve a slender acceptance of the idea before its presentation in Tynwald: but the Legislative Council contains, among its appointed members, the Lord Bishop, bound to oppose the bill, and he and his supporters have now delayed its passage for six months, as it is in their power to do, by a majority of one. So the entire process will have to be gone through again. There is little doubt, however, that after next year's elections the bill will find a wider acceptance and eventually pass into law.

boy joins teem

Teeming is what they call it when they run the molten steel out of ladles into moulds to cool down into ingots and the big arc furnaces at Samuel Fox make about 80 tons of steel at a melt which are turned into ingots before being taken to the rolling mills and made into hundreds of shapes and sizes of stainless and alloy steels because that's what Samuel Fox which is part of US is famous for.

HOME REPORT

In HOME REPORT members of the editorial staff and local correspondents report on life and happenings in and around Britain.

SCOTT's homily (from *The Bride of Lammermoor*) ends with cold comfort: "Easy live, and quiet die." It was in the hope and belief that they might be postponing their easy—and untimely—deaths, as well as maintaining their quiet lives, that Sunday's demonstrators sat still in Trafalgar Square while K and K were arming. Whether this postponement can be achieved by such means is doubtful, in spite of the illustrious intelligences which harbour that hope.

The British campaign against nuclear armaments hardly causes any stir outside Britain. Sunday's sedentary exercise was the largest demonstration of its kind to be seen in London, and the mass arrest of over a thousand people is unprecedented; Fleet Street gave it the full treatment. But, beyond brief factual reports of what had happened, most European papers ignored the lengthy stories cabled by their correspondents, and only *Le Monde* allowed that disarmament and pacifism were actually in the British air; its correspondent cautiously added that "a great and peace-loving people" would come to its senses in a crisis.

The Americans were less restrained, more concerned with incipient neutralism. The Ghanaians were unimpressed by the demonstration, more impressed by the arrest of Bertrand Russell ("In the name of humanity release this poor old man"), as was Mr Nehru. Even the Russians refused to take the demonstrators at their own valuation, and talked of "workers doing battle for peace"—not quite accurately, but predictably.

It is in the light of this small impact on the outside world that the Campaign for Nuclear Disarmament and the Committee of One Hundred ought to be mulling over their future policy. The aims of both organisations have broadened appreciably since their inception, but their main policy remains the "moral" gesture of scrapping Britain's bomb, contracting out of Western defence obligations and ejecting the Americans, to whom they, like the rest of the country, would look if their plans went awry.

The unilateralists have to ask themselves whether, now that they have seen their influence on the Labour party and the TUC slipping away, their original policy still seems the most efficacious way of promoting the general disarmament that the great bulk of their followers (except those who defend Mr Khrushchev's bomb and his new tests) want to see. What has transpired since the CND came into existence has served to confirm that American and Russian policies (and these are the policies that matter) are based on the balance of power and that any weakening in either alliance is an invitation to exploitation by the other side. Nerve-racking as a stalemate of terror is, those who seek the deterioration of that balance will have much to answer for.

Secondly the disarmers have to ask themselves whether their antipathy to the bomb in Britain is based on their own desire to live or on a desire to defend humanity from destruction. If the former, they have no claim to morality: if the latter, it is possible to deplore their judgment while applauding their moral courage. But the British are prone to overrate their moral influence with other countries. It is not British sentiment that is restraining the Indians from making their own bomb. Is it still seriously contended that General de Gaulle or Chairman Mao would desist if this country did?

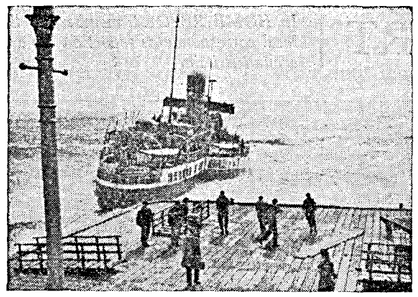
There is every reason for making fears and wishes known by demonstration. But merely reviling one's own government is seldom the best way of earning public sympathy; the demonstrators cannot be unaware that when they crossed swords with the Russian and American ambassadors they had a much more favourable press and earned for themselves a good deal more private applause. One mildly encouraging event that unilateralists might ponder is the informal meeting held at the Russell Hotel last week—including two people from the eastern block, one of them Ilya Ehrenburg—which managed to agree on a resolution calling for general disarmament. This multilateral gathering was not incapable of compromise and construction; pressed rightly, other and greater gatherings might do more. As private gestures go, civil disobedience in the puddles of Trafalgar Square may be thought to yield, in conscience, to the tiny, pathetically forgotten band of moralists who this week crossed the Russian border on the last lap of their long walk from San Francisco to Moscow.

Trafalgar '61

FROM OUR SPECIAL CORRESPONDENT

THE *Spitfire on its plinth* sat quaintly beside the RAF's shiny rocket missile; passing by, a young graduate asked: "Is that old thing really what they won the Battle of Britain with?" For last Sunday was the occasion of the annual parade to commemorate the gallantry of the Few of twenty years ago: led by a splendid moustache, a troop of banner-carrying veterans marched past to the music of a powder-blue band of air force ladies. But it was not for their sake that police in their thousands were lining the streets and huddling into alleyways from Scotland Yard to St Martin's-in-the-Fields. And to most of the young people massing in Trafalgar Square the Battle of Britain was as much a part of dead history as Nelson on his column.

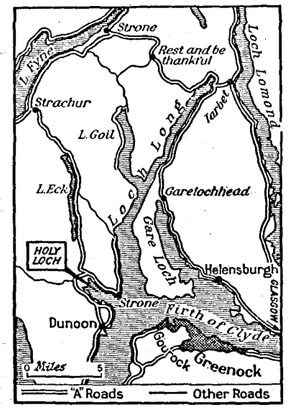
At 5.30 in the afternoon the RAF veterans marched off through the Horse Guards; leaving the following balance of forces in the area: 4,000 police, 7,000 intending demonstrators, another 5,000 curious or idle spectators (and a few malicious ones)—and press, television and radio reporters by the score. The demonstrators' aim was to win publicity for their belief that Britain's possession of nuclear weapons presents a threat to the very existence of humanity. They succeeded beyond the adman's wildest dreams, but not without help from the authorities. All aid short of sympathy might, in fact, have been Mr Butler's policy.



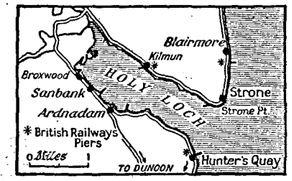
The initial and irretrievable mistake was thus to jail the natural leaders of the demonstration, including the world's most eminent living philosopher, beforehand, thereby ensuring that the affair got the maximum advance attention as well as a certain amount of libertarian sympathy. The authorities indeed removed the organisers who could (had things got ugly) have been expected to keep the demonstrators within the bounds of discipline.

The strategy of the police was to prevent the demonstrators from moving down Whitehall towards Parliament Square; to contain the crowd within Trafalgar Square, which is conveniently enclosed with barriers against jay-walking; to keep those outside the square on the move, preferably away from it: and to remove the groups of squatters progressively as each one became an obstruction. The few exhibitionists and would-be martyrs were dealt with sometimes more than firmly: the orderly majority were carried with indignity, but not undue roughness, to the waiting buses, trucks and other *ad hoc* Black Marias.

The first local problem for those enclosed in the square was that the area splashed by the fountains was obviously undesirable, either for sitters or spectators: another was that a seated person takes up far more ground-space than his standing neighbour, and the spectators had some difficulty in avoiding walking on the prone (although some press photographers trampled indiscriminately in the race to get a good picture of Mr Osborne or the photogenic Miss Redgrave). The crowd thus became more and more tightly packed—your correspondent spending an immobile twenty minutes compressed against a group of Italians eagerly discussing this un-Mediterranean *tecnica della manifestazione*—and pressure at the fringes compelled the police to arrest those who were overflowing into the road like toothpaste from a burst tube.



THE major victory for everybody was the comparative lack of violence. The mounted police are obviously too dangerous for use against a sitting adversary, so that these unpopular figures, often dangerously preoccupied with the safety of their mounts rather than of the public, were not called in. Most of the police showed good humour and common sense. Fortunately this was largely matched by the demonstrators, save for a few tiresome exceptions. A group of young men confessed their disappointment at the general restraint—and their allegiance to Sir Oswald Mosley—to your correspondent. Many of those in the square were members of the comparatively moderate Campaign for Nuclear Disarmament; others were Quakers who could be heard, in the most dignified way imaginable, appealing to the spectators: "Tourists, go home."

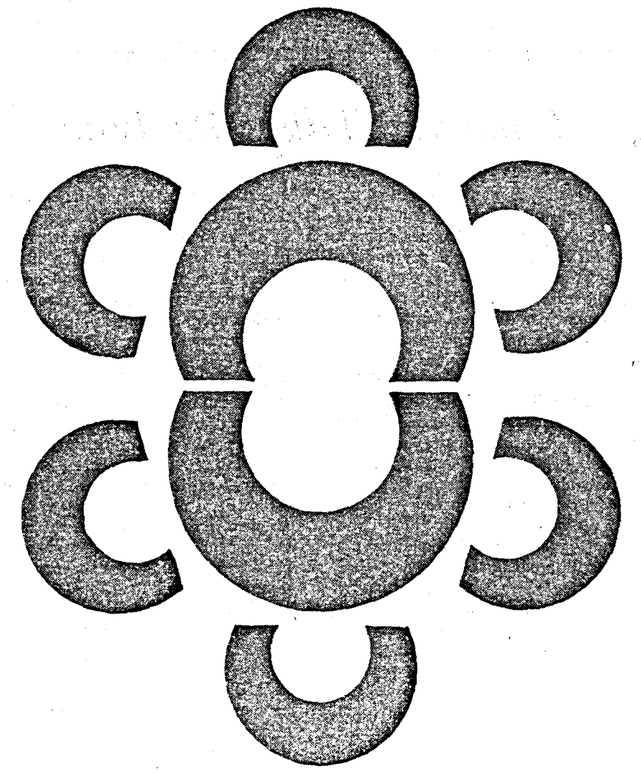


But there seemed to be a genuine wish even among some of the most extreme to remove the impression of unwashed artiness that the movement has in the public mind—and which is probably the most effective reason for its poor success among the respectable backbone of the Labour party. Not a few young women sat in, and ruined, their skirts rather than turn up in the blue jeans that would have caused them to be classed as "beatniks." And when the time for reckoning came, most protesters paid up without the speechifying that has sometimes been inflicted on the magistrates trying these difficult cases. No doubt they felt a ten bob fine was not too dear a price for a clean conscience.

Rough Road to Holy Loch

FROM A CORRESPONDENT IN GLASGOW

THE little Anglo-Scots army of less than 1,000 who marched on the Holy Loch for their Sabbath sit-down had perhaps an even more spectacular day of it on the Saturday in a wild summer gale that stopped practically all the cross-firth steamer services from Gourock to Dunoon. More than half the task force organised by the Committee of 100 was stranded on the wrong side of the water. This group, including the veteran Scots poet, Hugh MacDiarmid, staged an orthodox demonstration at Greenock before most of them slipped off home; across the firth, 140 police from four counties arrested 351 of their comrades who had reached Holy Loch ahead of the gale.



Scottish justice at Dunoon Sheriff Court was almost as severe as the storm. The bench was occupied for most of the time by Hon. Sheriff-substitute D. J. McDiarmid, who handed out average fines of £10 (with 14 days to pay) which made the Trafalgar Square penalties seem nominal indeed. The Crown thus netted £2,542 for the weekend's work. Miss Pat Arrowsmith, one of the organisers, was sentenced to three months in jail; in July she had been fined £7 in the same court.

Miss Arrowsmith had sought imprisonment and she got it. She had certainly stood out at Holy Loch as almost the sole identifiable leader. Some muttering was heard in the ranks about the London leadership's preference for Trafalgar Square, but the criticism was not sustained on a day when even some of the top Scots failed to appear. The churches, too, were not conspicuous apart from a couple of Presbyterians and a handful of Anglicans, led by Canon Stanley Evans of Southwark; the clergy were fined £15 with the option of 60 days. The local end of the Committee of 100, which handled the pre-planning from the Glasgow offices of the Independent Labour Party, was aided noticeably by the communists' efficient Scottish machine, but most of the inspiration and all the orders seemed to come from London.

That much was apparent when Miss Arrowsmith announced at Gourock pier (at the height of the gale) that she had telephone authority from London to hire coaches for the 100 miles to Dunoon by road. This idea, however, appealed to only about 80 of the demonstrators, although not a few of them were still asserting that the weather was a put-up job engineered by British Railways on behalf of the Establishment. The charge for the coaches, Miss Arrowsmith said, would be six bob but those who could pay the full fare ought to do so. Two buses were filled and safely crossed the Clyde up-river at Erskine to take the rough sub-Highland road by Rest-and-Be-Thankful and Loch Eck. They arrived at Holy Loch about 1 a.m. when the police were either in bed or having a sedate *ceilidh* in the hotel, and the pickets had to wait for dawn to start squatting.

SINCE the *Proteus* arrived in the Holy Loch, Dunoon's burghers (who are largely retired and wholly respectable) have experienced much that was undreamed of in their philosophy. Nothing surprises them now: tarts from Clydeside, Polaris protesters, even the submarines lying alongside the depot-ship with death in their bellies. On the whole, they prefer the Americans.

The Argyll constabulary were greatly helped by neighbouring police, but hardly an incident ruffled tempers at any time. American sailors came and went unmolested on Ardnadam pier, apart from the odd Glaswegian gibe thought proper to the occasion. Both the police and Dunoon's citizens eulogise the affair in comparison with the rowdy demonstration at Whitsun initiated by the Direct Action group. It is generally allowed in Argyll that the Committee of 100 are far more genteel people.

Cape Co-operative Cape chaps like nothing better than to get together with customers round the table and have their brains picked. They are brought up in this spirit of eager co-operation—all companies in the Group sharing their experience with one another. That is why you may deal with only one Cape company and yet draw on the accumulated knowledge of them all—knowledge that is always being supplemented through restless curiosity and research. Cape co-operation has led to the development of a most diverse range of thermal insulation products, sound proofing and fire protection materials, brake and clutch linings, bricks and garage equipment.

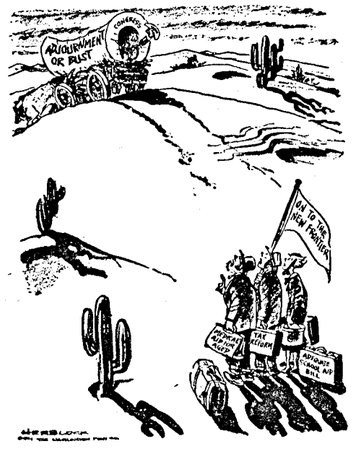
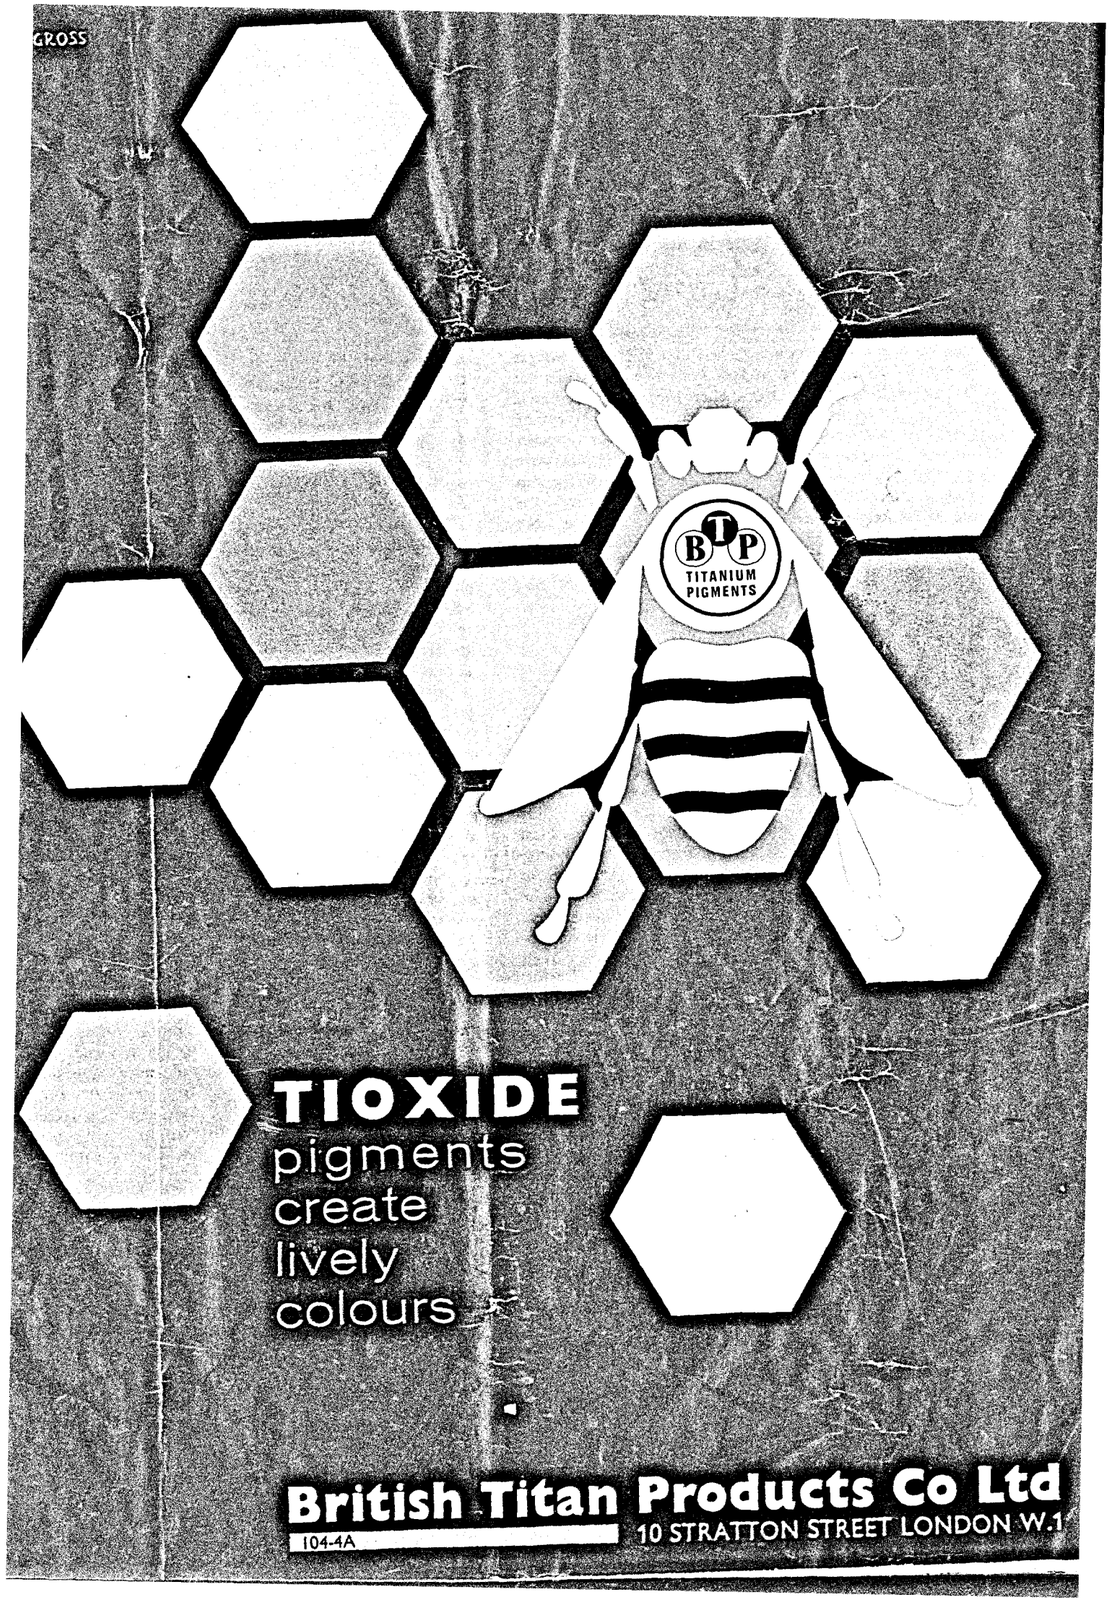
Congress Takes its Bow



WASHINGTON, DC

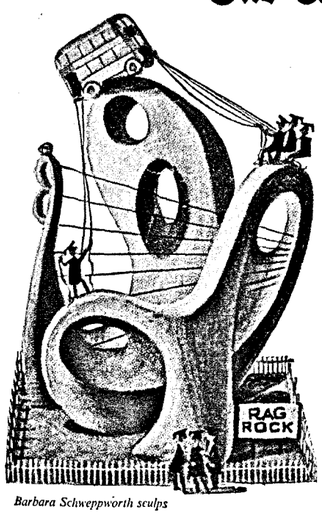
WHEN President Kennedy was elected by a wafer-thin margin and the forces of liberalism lost some twenty seats in the House of Representatives last year, the gloomier political pundits drew the conclusion: Mr Kennedy would get nothing really substantial through Congress and he could either go down with his colours flying or he could strike them. Liberals said once again that the congressional system just did not work for this day and age. Now, with Congress panting limply towards the end of one of its longest and most exhausting sessions, the story is different. Liberals may think that their worst fears are visibly confirmed. But the White House, the Democratic leaders in both Senate and House of Representatives, even Republicans (if they put pride in congressional prowess above pride in party) are claiming that this session has been the most productive since 1938.

The effort has left both houses with more than the usual fatigue of the session's end. By common consent the Senate is avoiding another of the inevitably long-drawn-out fights over the liberalising of its rules and the House has dissolved into intrigues over a possible successor to the Speaker, the redoubtable Mr Sam Rayburn. He became ill a few weeks ago, though he says that he will take up his gavel again. His mantle may fall on Mr McCormack of Massachusetts, the Democratic majority leader, but he is not loved by the White House, partly because of his perfidy over the education Bill this year, partly because of past political vendettas in his home state which is also that of the President. Nevertheless, looking back at the broad pattern over the eight months since the bitter narrowly-won battle which gave the Administration control of the strategic House Rules Committee, it can now be seen that a Democratic President allied to a Democratic Congress has given the country viable government in both domestic and foreign affairs, notwithstanding the cross-bench alliance of conservatives of both parties.



This is not just a matter of totting up the considerable score of the Administration's victories and setting that against its defeats —which, culminating in the rejection of the education Bill and the refusal of the House to surrender its annual control over foreign aid, have produced some very disheartening moments. But a large part of the Kennedy programme, even if trimmed, has become law: an extension of unemployment insurance benefits and of aid to dependent children, help for depressed areas and for Latin America, a $5 billion housing programme, widened coverage by minimum wages and social security, improved provisions for financing highways and purifying waterways, important anti-racket and crime measures, establishment of the Peace Corps and of a new disarmament agency, farm, sugar and grain Bills, the creation of a record number of new judgeships and American participation in the Organisation for Economic Co-operation and Development. Along with all this and a mass of minor legislation has gone the necessary business of appropriating the funds for the Kennedy version of the Eisenhower Budget of 1961-62, including three successive increases in the defence estimates, of which the last was rushed through both houses in a fervour of patriotism; there is money available to go to the moon and money to bury oneself under the earth from the nuclear wrath to come.

"You're Sure You'll Be Back For Us?"



The President's worst defeat was the comprehensive education measure which is stranded, perhaps forever, on the sandbanks of sectarianism; the minor school Bills finally passed merely mark time until a new approach can be thought out. There have been other casualties. For example, the Senate rebuffed attempts to reform the Securities and Exchange Commission, which regulates the stock market, while the House turned down the reorganisation of the Federal Communications Commission, which regulates the air waves, so that the needed new deal for these independent government agencies is now far off. The farm Bill, which was passed, was merely another round in the successive struggles to make terms with the vested agricultural interests instead of the imaginative new approach which the President had hoped for. Again, the minimum wage Bill extended coverage to less than half the 8 million work-people promised in the election campaign. Almost every Bill has been whittled down except when Congress insisted on 70 more judges instead of only 58 and provided money for bombers that the Secretary of Defence does not want. It has also refused to raise taxes on road users to cover the costs of the new highways or postal rates to cover the costs of the Post Office; nor would it close loopholes or make other changes in the tax laws. The Republicans have used the rising cost of defence as a pious argument against spending money on welfare or social reform.

To liberals this is the real, heartrending truth: the session has seen a Judas-like emasculation of brave undertakings, with billions of dollars for defence and a pittance for social betterment in a society leprous with abuses but calling on the world to emulate its free virtues. But such a dour verdict leaves out of account the factor that is only now getting the credit it deserves: a working relationship has been forged between President and Congress, which is based on both his respect for congressional susceptibilities and congressional realisation of his growing strength in the country. Mr Kennedy has not—or not yet—appealed to the people over the heads of Congress. His replies to leading questions on domestic imbroglios in his press conference show, when analysed, a desire to lead and educate, not to ridicule or alienate Congress. He has chosen to handle his relations with "the Hill" as a strictly technical and professional

Barbara Schweppworth sculps

DEGREE DAY. Traditional climax of Oldbrick's year is tradition, when nobody must do anything which everybody hasn't done always. Degree Day starts the evening before, with the seizing and release of the printing press (twenty minutes) meeting of protest (five) and outbreak of insubordination in Rag Square which, with its Rag Monument and dummy proctors, often extorting dummy fines, is especially set aside for the people set aside to be exuberant.

The actual Procession of Recipients gains in picturesqueness from Oldbrick's more catholic acceptance of the truly pertinent, as distinct from the traditionally O.K., Subjects. We see, proudly displaying their gowns of office, the Bachelors of Film Studio Lighting, the Doctors of Light Reading Suitable for the Family, a Quizmaster of Is There Anything In It, two Ph.D's of Do It Yourself, Disputants in the History of Intercolonial Cricket Part One, a Passman of the School of Examination Passing, two Phobeharmonic Readers in Sunday Paper Musical Criticism, an Honorary Dame Electant of Woman's Magazine Editing, and a group of Public Demonstrators of Ceremonial, Circumstance and Pomp.

SCHWEPPERVESCENCE LASTS THE WHOLE DRINK THROUGH

problem between political managers, a matter of deals between practical men who know each others' power and its limits, as an exercise in the art of the possible.

At the end of the session, after the bitter battles on education and foreign aid, President Kennedy is remarkably popular in the Capitol, where he is from time to time seen unassumingly walking on errands of his own. He has cultivated enemies as well as friends ; unlike his three predecessors he harbours no malice against those who go against him. He poses as the young President who modestly desires to weigh advice from his seniors on both sides. As a President hobbled by an evenly divided Congress, he humours —without quite appeasing—the grassroots conversatism this seems to reflect. In time of crisis, he calls for a national unity which sometimes eases one of his projects past the more recalcitrant lobbies and pressure groups.

An image has been created that has gone down well. Mr Kennedy's popularity "rating" in the country remains consistently high (Americans measure by popularity as naturally as Rome and Moscow do by orthodoxy). The liberals are left to warm their chilled hands on oblique hints that their time is coming. Meanwhile the President presides over an undoubted economic upturn, and has therefore been able quietly to offer to work with Congress in getting the respectably balanced Budget for the next financial year which probably will come in fact almost automatically.

The continuous infighting that seemed inevitable after the opening battle over the House's rules has not happened. Apart from the fierce but spasmodic debates generated by foreign aid and education the session has even been called dullish. The fights have been in committee, on Congressmen's telephones, over coffee in the White House. What is of importance for the future, therefore, is to decide how effective the White House's technique of handling the Legislature has become. The President's own congressional experience has proved invaluable—but its deployment has been limited by his preoccupation with the crisis abroad. The performance of his aides has been very uneven. The farm Bill was mishandled, for example, and so was foreign aid in the House of Representatives ; the worst gaffe was over the education Bill. The Democratic leaders in Congress certainly failed the President both on this and to a lesser degree on foreign aid.

The Speaker must be credited with much of what success the Administration had in the House. In the Senate the new leader of the Democratic majority, Senator Mansfield, had an easier task than his predecessor, Mr Lyndon Johnson (now the Vice President) ; but his authority has grown fast and his aide, Senator Humphrey, who seemed a political castaway when the session began, is now one of the President's closest congressional confidants. But unfortunately relations between the White House and Senator Fulbright, who heads the vital Foreign Relations Committee, have grown steadily cooler.

Margins of victory have been narrow even for compromises, but then they usually are for controversial legislation in the United States. Their very narrowness is an indication that when the President has won he has won something important. And he has been piling up a record of having worked loyally with Congress to get the maximum possible out of it, taking the incidental knocks with good humour. The stage has been set for the trickier session next year when controversial measures like reciprocal trade legislation and medical aid for old people cannot be avoided. This may not be the New Frontier ; but it may be as close an interpretation of the electorate's collective will as can be made through American institutions. Possibly there has been too much appeasement and not enough hustling of Congress. But those who think so have yet to argue their case convincingly.

Is China Major?

One of the many dangers threatening the United Nations at the moment—and the Soviet Foreign Minister made it clear this week that this one is immediate—is that it will be disrupted by a struggle over the representation of China. If the Communists are seated this would be a serious defeat for the United States and might dissipate the new determination and purpose which President Kennedy hopes to inspire in the United Nations by his personal appearance before it. If they are seated this would also alienate many Americans, some of whom are already far from enthusiastic about the United Nations, just at the time when American faith in that organisation is essential to its future. To many Americans with memories of a missionary past and of the Korean war, any dealings with Communist China are a personal affront ; an important section of public opinion is reflected in the repeated congressional resolutions, the latest just last month, against recognition of Communist China or its admission to the United Nations. And even though the leading members of the old China Lobby, the Nationalists' American subsidiary, are now dead or retired there is a strong reactionary trend in the United States at the moment and the Administration can hardly afford to be accused of "softness" on Communist China.

Faced with this situation and with the virtual certainty that this year it would no longer be possible to avoid consideration of membership for Communist China in the United Nations the Administration worked out a new strategy. When the matter comes up the western allies will contend that it is not a mere question of credentials and procedure, to be settled by a simple majority vote, but a "major question" which demands a two-thirds majority for decision. This number of votes, the United States feels fairly confident, will not be available in support of the Communists. Then the United States will propose that the whole issue of Chinese membership and of representation on the Security Council in general should be studied by a special committee to report in 1962, thus in effect postponing the show-down for another year at least.

But this strategy depends at several points on the help of a substantial number of the new African states. They are determined that one of themselves, Mauretania, must be admitted to the United Nations this year. The Soviet Union has said that it will veto this unless Outer Mongolia is admitted also. The Nationalist Chinese, who consider that Outer Mongolia belongs to them, refuse to allow this. In revenge, many of the Africans are likely to vote for the replacement of the Nationalists by the Communist Chinese in the United Nations and against the American plan. To appease General Chiang Kai-shek the United States has now given up for the present any idea of recognising Outer Mongolia. But there is still no guarantee that Nationalist China will not wreck a plan which has been designed only to save it from its fate.

Auto Inflation

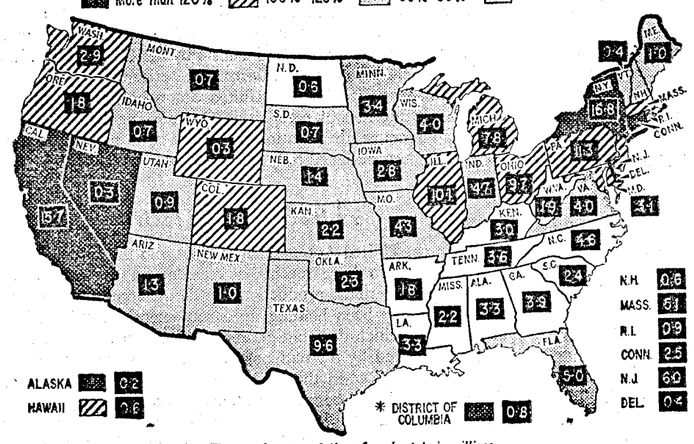
At last the United Automobile Workers and the General Motors Corporation have reached agreement on the non-economic issues—relief periods, production standards, compulsory overtime etc—which had been holding up a settlement. Any local branch of the union which does not get its men back to work at once will now be censured by the national leaders. Only about 25 factories were still closed when the final contract was signed and the production lines should be working almost full out by early next week. Other companies hope to reach similar agreements without any stoppages. So the new 1962 cars can be unveiled with certainty that they will in fact be available for the customers who are expected to pour into the showrooms and to boost this year's poor sales to record levels for the last quarter.

They will find plenty to choose from; 400 or more different models, for the motor manufacturers are no longer confident that they know what the public wants and so are offering a confusing variety to suit every taste—they hope—and to match everything their competitors may have thought of. This year's novelty is the medium sized car, really an inflated version of the compact which was last year's favourite ; 35 per cent of sales were of these compact models, America's slightly larger version of the imported cars which had been 1959's great success. So far prices, which will probably run slightly higher than in 1960, have not been announced, partly at least because manufacturers have been waiting to know what wages they will be paying from now on. They also want to know how much they will be paying for steel but no satisfactory answer has come out of the exchange of letters between the President and the steel manufacturers. The latter will not promise not to raise prices when steel wages go up on October 1st but it is thought unlikely that they will in fact raise them, although later there may be selective increases for particular types.

The automobile workers contend that General Motors can easily pay the costs of the new contract—coming perhaps to as much as 50 cents an hour over the three years—out of profits without putting up prices. While this may be true for the motor industry, or most of it, this does not necessarily mean that the settlement is non-inflationary. For it will set a pattern which other unions will try to match and in other industries, with lower productivity, it may not be possible to absorb the additional cost at current prices.

All Eyes on Carla

HURRICANE CARLA had two distinctions as she swirled up from the Caribbean : she was a monster—her "eye" was 50 miles across and her total diameter 350 miles—and like all monsters she moved slowly, at only about 10 miles an hour, although the wind at her centre reached 173 miles an hour ; she was the most looked-at woman there has ever been, partly as a result of her deliberation, with naval airmen flying around her all the time and the Tiros weather satellite keeping a television eye on her from space. All this enabled the Weather Bureau to give very efficient warnings of her advance. As she moved across the Gulf of Mexico onto the low-lying coasts of Texas and Louisiana 28 towns and cities, including Galveston, Freeport and Texas City, were evacuated successfully ; 500,000 people, America's largest mass migration to date, moved out. They were wise to do so for, if their homes and businesses were not destroyed by either Carla or her attendant tidal waves and tornadoes, they were badly flooded. As she proceeded inland she deteriorated into drenching rains which did serious damage in Oklahoma, Kansas and as far north as Michigan.

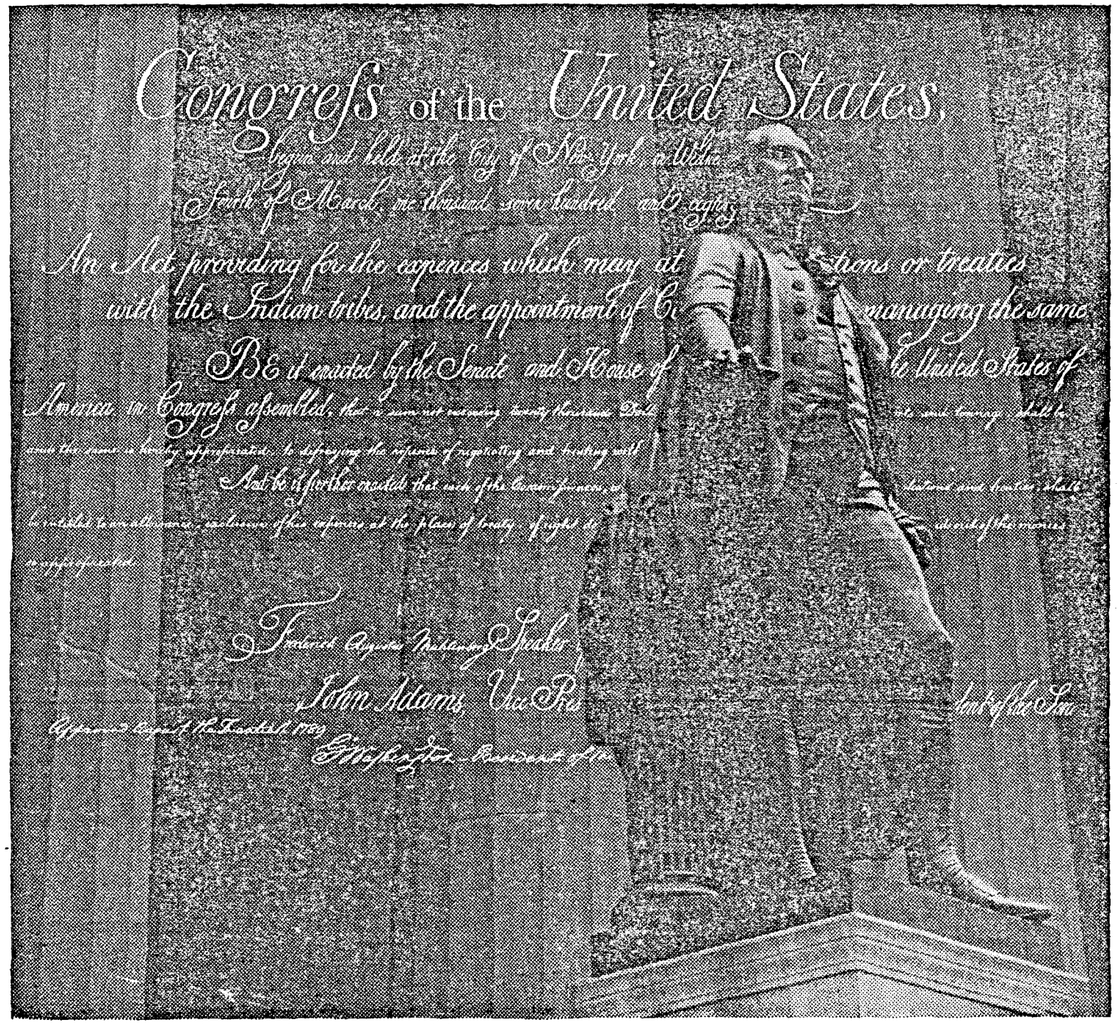


Thanks to the advance warning only forty lives were lost, which compares unfavourably with the twenty taken by Donna, last year's worst hurricane, but is a vast improvement on the hundreds killed by such predecessors as Audrey in 1957. Advance warnings did little, however, to reduce the financial damage, which is valued at perhaps $500 million with crop losses in Texas alone, mainly rice and cotton, amounting to $140 million. Some 4,000 insurance assessors rushed into Texas and Louisiana almost before a stream of cars had brought back the evacuees. But claims are expected to amount to less than the $100 million odd which was paid out after Donna, largely because she travelled up a long stretch of the heavily industrialised and built-up north-east coast—not that the Gulf coast is unindustrialised nowadays. But much of Carla's devastation came from her trail of floods and these cannot usually be provided against financially. Perhaps Congress will now turn again to the matter of government insurance against flood damage ; it has considered this before but always puts the matter aside once the emergency is over. The government does insure farmers against losses of crops. But such flood insurance would in any case be too late to comfort the refugees and relief workers who are now cop-

DISTRIBUTION OF AMERICA'S WEALTH

Average personal income a head for whole United States in 1960 = $2,223

Shading indicates each state's percentage of national average in 1960



More than 120% | 100%–120% | 80%–99% | Less than 80%

Figures show population of each state in millions

High average incomes and a large population make New York the wealthiest state in the union, with California an increasingly close rival for first place. At the other end of the scale is the small state of Vermont (where total personal incomes amounted to $727 million against New York's $47 billion in 1960) and the sparsely-populated state of Wyoming. Spread evenly over each man, woman and child, the averages were highest in Delaware ($3,013), the national capital, Connecticut and Nevada (where tourists' gambling makes profits for a very small resident population) and lowest in the two southern states of Arkansas ($1,341) and South Carolina.

Over the last ten years, personal income a head has increased nearly 50 per cent for the country as a whole. Generally speaking the poorer states (and particularly those in the South) have been gaining ground on their richer neighbours. Alabama has increased its average income by 69 per cent since 1950 and Arkansas, Oklahoma, Hawaii, Kentucky and Mississippi have all registered gains of over 60 per cent. The slowest-growing states over this period have been Montana (an increase of 26 per cent in income a head), Rhode Island, Michigan, Iowa, South Dakota and Washington.

ing with Carla's ruins and with the threats of typhoid from polluted water and of poisonous snakes driven in to town from their swamps by tidal waves. And the hurricane season is not over yet; Carla's successor, Debbie, caused discomfort only to travellers on the Atlantic but Esther is now threatening the eastern seaboard.

San Francisco on Rails?

FROM A CORRESPONDENT IN CALIFORNIA

URBAN sprawl, that dreadful disease of which the automobile is the main carrier, has seldom attacked a more delightful region than the San Francisco Bay area, with its dramatic land and seascapes, benign climate and cultural individuality. The 1960 census showed 3.6 million inhabitants enjoying (or in a position to enjoy) these advantages. There were only half that number in 1940; there will be twice as many by 1990. Motor car registrations are increasing at the rate of 200 a day. Meanwhile public transport has shrunk: surveys show that almost nine-tenths of weekday interurban trips in this region are made in private cars. To accommodate them, great motorways have been built and magnificent bridges span the Bay. But at peak hours the traffic moves along these arteries at a snail's pace. Here, as elsewhere, the dream of the detached house in the suburbs, linked with the office by a freely moving car, is fast becoming a nightmare of wasted travelling hours and frazzled nerves.

For ten years, public agencies created by the State Legislature have been studying the possibilities of building a system of metropolitan railways that would break this vicious cycle of multiplying motor cars and expensive, space-devouring highways. The services of top-flight engineers, economists and other specialists were enlisted; before a start could be made, basic plans for the use of land and estimates of future development of the region had to be formulated, for the first time. The result, published in 1957, was a general blueprint for a rail system, 123 miles long, linking the five central counties of the region, with emphasis upon providing access to the San Francisco-Oakland-Berkeley core. Over this network would run lightweight, air-conditioned and very nearly noiseless trains, at speeds up to eighty miles an hour, directed by a central computer for maximum safety and efficiency.

The plans made ingenious use of existing facilities and rights of way, such as those of once prosperous, now abandoned, suburban railways or the centre strips of motorways. In heavily built-up areas, the lines would run underground; where feasible, they would be on the surface; but over more than half the system they would be up in the air, mounted on pre-stressed concrete structures. To reach San Francisco from Marin County, to the north, the trains would cross the Golden Gate Bridge, using a new level to be constructed beneath that of the roadway. At the very heart of the system, a four-mile underwater tube would connect San Francisco and Oakland, leaving the present Bay Bridge to carry motor cars on two levels and to provide financing for the tube from their tolls.

The advantages of such a system are impressive. Each line could carry 30,000 seated passengers an hour each way—as many as could travel on five six-lane motorways. Travel times could be cut; well sited stations would improve the lot even of those favoured commuters to the south of San Francisco who still have a railway to bring them to town, but who find themselves dumped at journey's end in a dismal section of the city, far removed from offices and shops. Vital space would be saved; San Franciscans shudder at the example of Los Angeles, where streets, motorways, parking and loading facilities now take up two-thirds of the land area of the central business district.

DESPITE such alluring prospects, and the horrors of the only alternative in sight—more motorways and greater congestion—approval of the Bay Area Rapid Transit District plan is no foregone conclusion. It must first be passed by the Board of Supervisors (the chief governing body) in each county concerned; failure of a board to approve the scheme will mean abandonment of that county's portion of the project, a step that would be damaging from any of the five and fatal from the central ones, San Francisco and Alameda. Even with the Supervisors' approval, there will remain the necessity of winning at least 60 per cent of the votes cast in a popular referendum next year in these same counties on the financing of the scheme. The State Legislature greatly improved BARTD's chances of success by substituting this figure for the two-thirds approval normally required in referenda on bond issues. Typically, the sponsors of the new scheme were careful to refrain from pressing legislators officially on this Bill; a hallmark of their performance to date has been consummate skill in the intricate diplomacy that is involved in carrying through such a huge and complex project.

Local groups who want the lines underground instead of in the air (this doubles the cost), enthusiasts for radical devices such as monorail who consider the automatic trains of BARTD old hat—these and countless others must be cajoled, educated, or in the last analysis got around, if the plans are ever to materialise. The latest and most alarming road-block is the refusal of the officials in charge of the famous Golden Gate Bridge to allow it to be altered to carry lightweight trains. Just this month they even refused to seek the opinion of a board of impartial engineers, but conceivably they may change their minds when people in Marin County (which would be excluded unless the bridge can be used) realise how costly such isolation would be. Fortunately the general routing of the system is dictated by topography; mountains and bodies of water, although they increase the cost of construction, also prevent much haggling over the location of lines.

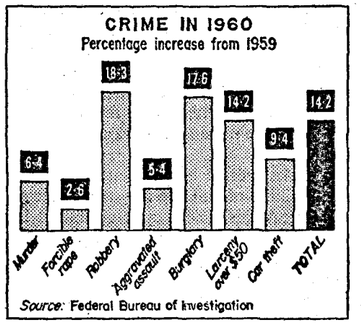
But the biggest problem remains the ordinary householder and his unreasoning love for his automobile. BARTD is not out to replace the private motor car; on the contrary, its plans include parking spaces for 43,000 of them at stations. But the new scheme would probably add from $25 to $35 a year to local rates for the owner of a middle-class house. Fares will cover only operating expenses and the purchase of rolling stock, not the cost of construction. The mere mention of a $1,078,000,000 bond issue has an intimidating sound. In contrast to the huge interstate highway programme, metropolitan transport cannot count on federal subsidies; Congress is now providing some money but only for planning and related purposes, not the kind of capital that San Francisco needs. To the citizen, the costs of driving his car to the city every day are not fully apparent; BARTD plans an intensive campaign to educate him, as well as to point out that the alternative to a billion dollars for public transport is almost certainly a billion and a half dollars for more motorways. Some have suggested brief broadcast reminders of the delights of

rapid travel by rail, timed to reach the radios of motorists tied up in traffic on the Bayshore Highway at five pm every weekday, but no one can tell whether such shock tactics would overcome the inevitable core of "No" votes which any bond issue brings forth.

The relation of BARTD to the broader problems of metropolitan planning and government is not yet clear. Part of its success so far has come from sticking firmly to its business: getting the transport system built. A major attempt to create a Golden Gate Authority, aimed at eventual co-ordination of all transport facilities—bridges, airports, seaports and public transport—recently failed in the Legislature, despite support from the Governor and a series of concessions to the critics; these ended by doing more harm than good, by taking most of the point out of the proposal. One thing seems certain, at least: the BARTD plan, made a reality, would bind the Bay Area together in a tangible way; the important intangibles might well flow from that.

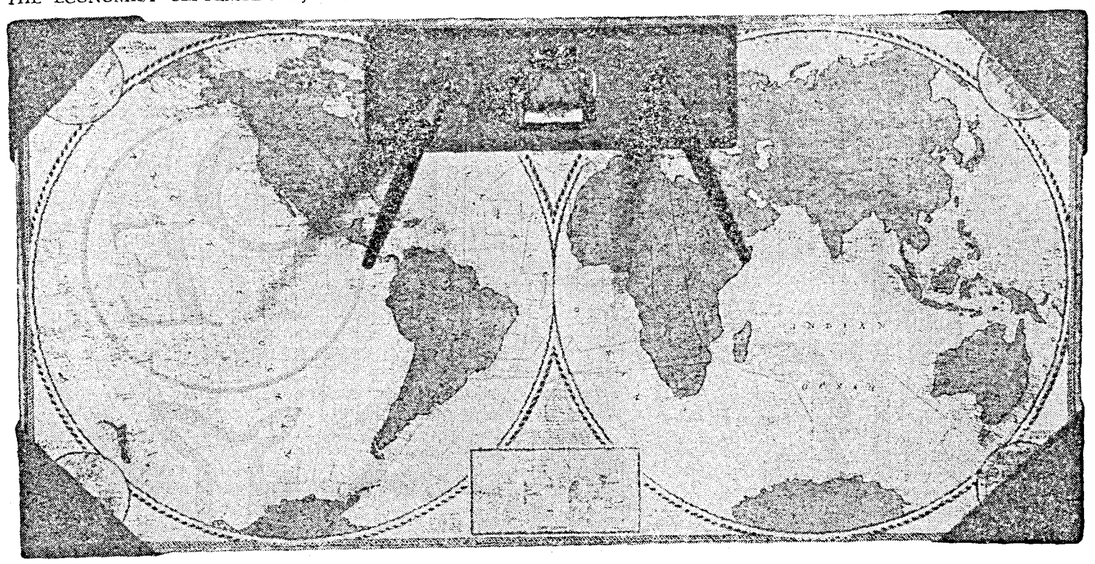
Credit Cards In Debt

ALTHOUGH Americans are well known for their addiction to buying off the cuff, the promoters of multi-purpose credit cards (which enable holders to purchase without paying cash from long lists of restaurants, hotels, shops, airlines and so on) have found the business a good deal less lush than they had hoped. Apart from the credit operations of banks and finance companies, only three credit cards are still in the running and even this is proving too large a number for comfort. Indeed, the only company to be showing a profit is Diners' Club Inc., which introduced the first such card with conspicuous success to begin with and which can now claim over a million card holders running up bills to the tune of $140 million a year. So far the American Express Company, which introduced its credit card nearly three years ago with the firm intention of dominating the field, has failed (with its 750,000 members) either to dislodge Diners' Club from first place or to make its credit card operation profitable. The third and least happy of the triumvirate is Hilton Credit Corporation, whose Carte Blanche lost $4.2 million in its latest fiscal year.



The present unprosperous state of the credit card companies (even Diners' Club has been slipping) is due mainly to the fact that they have been unable to build up their volume sufficiently to justify the very large investment in the business machines that offer the only economic method of processing a mass of small bills. The general public has not taken to the credit card in a big way; a survey by the Federal Reserve Board showed that it is still used mainly for business wining, dining and travelling. Moreover, in trying to increase their respective shares of a definitely limited market, the companies have had to keep their annual charges to members unreasonably low; this week, however, American Express has taken the plunge and revised its fee from $6 to $8. In many cases the companies claim that they have made excessively generous arrangements with the retail outlets which honour their card (and who pay a commission on the resulting business). Yet another problem is the tendency of restaurants and shops to accept the cards as an indication of credit worthiness and then to bill the customer directly to sidestep the commissions charged by the clubs.

For some time now the credit card companies have been looking to another round of mergers to solve their problems. Diners' Club and American Express have repeatedly explored the possibilities of joining forces, but so far these talks have produced no results; a major obstacle is their belief that the Justice Department would not look kindly on such a marriage. Now Diners' Club has turned its eye to Hilton's Carte Blanche which, though a dubious asset at present, would bring the large chain of Hilton hotels into the fold and which also shows substantial past losses that could be used advantageously for tax purposes. Meanwhile, the potentialities of cash are not being altogether overlooked: members of the Cash Card International Club qualify for discounts of 5 to 40 per cent at shops which belong—providing that they pay cash.



Arresting Crime

CONGRESS has given the federal government three sharp new tools for dealing with organised crime—the most sweeping strengthening of the federal arm for thirty years. It would not have been easy for the legislators to go home without doing something in view of the report of Mr Edgar Hoover, the head of the Federal Bureau of Investigation, that serious crimes have virtually doubled since 1950—the year before Senator Kefauver's sensational hearings. In fact Mr Kennedy, the Attorney General, has obtained only about half of the new laws which he requested but it is the more important half. The federal government needs to be brought into the picture because criminals have become too wealthy, too powerful and too mobile to be controlled by the states, which are responsible under the Constitution for dealing with most crimes. But to get authority to intervene the crime-busters have had to ask for some oddly designed new laws—odd, at least, to foreigners.

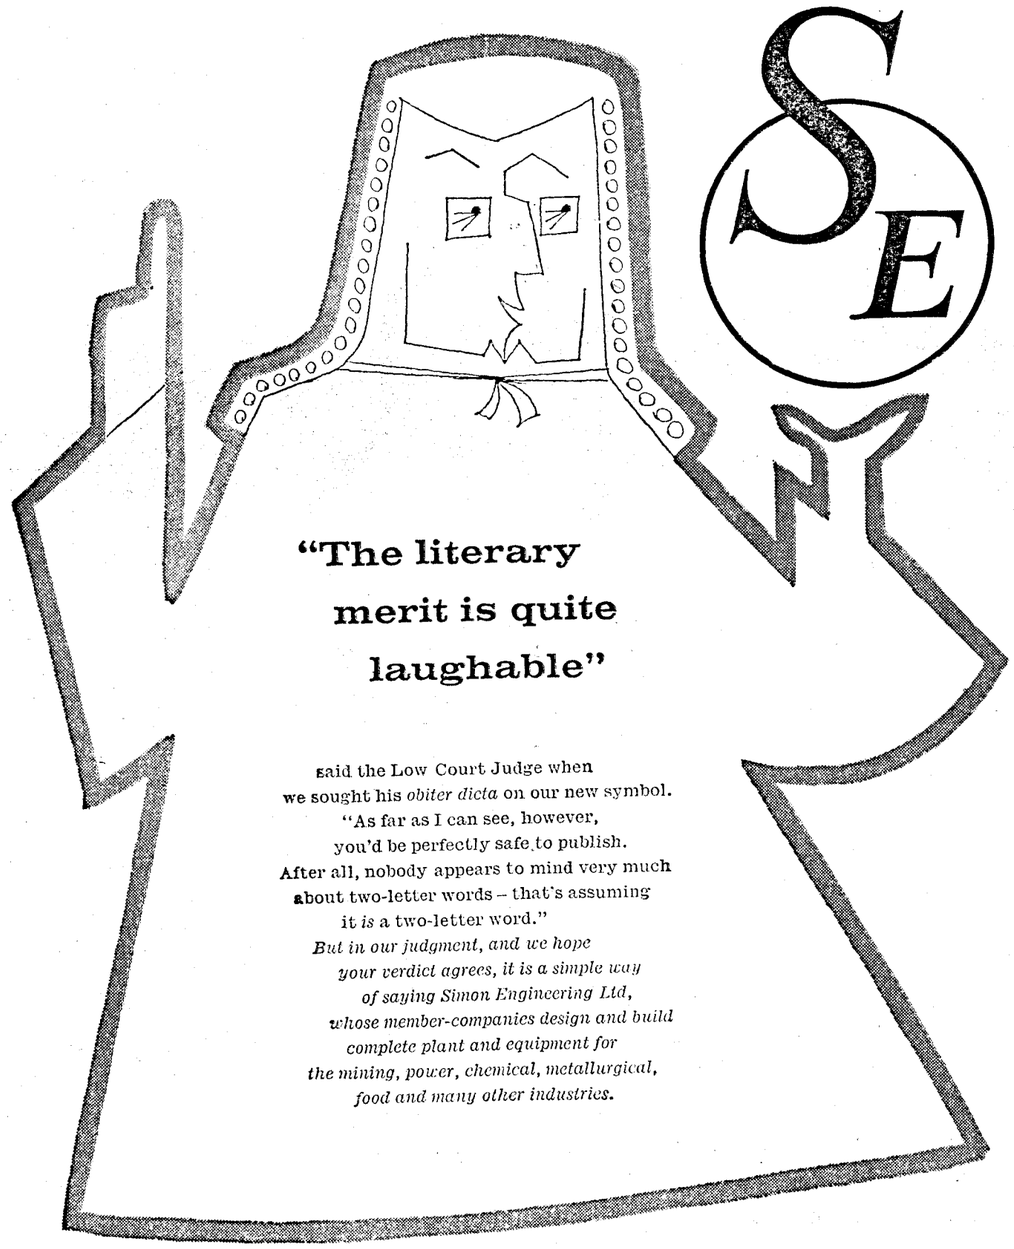
One of the new trio makes it a federal crime to cross state lines or to use the post to distribute the proceeds of gambling, prostitution, sales of narcotics or illegal liquor. This is because many of the king-pins of organised crime or vice sit comfortably in one state, out of the reach of the law-enforcement authorities in the state from which they draw their income. Another of the new laws makes it illegal to ship the paraphernalia of gambling across state lines, except where such gambling is clearly legal in the states concerned (pari-mutuel betting at race-tracks is legal in many places). The third makes it a federal crime to use interstate communications, such as telephones and telegraph lines, to transmit information useful to gamblers. All this emphasis upon gambling may seem strange in view of the fact that gambling in itself is not illegal under federal law; indeed, some years ago Congress passed legislation—which has been ignored almost completely — ordering professional gamblers to register with the federal government and pay a licence fee. But the Attorney General and most experts in this field are convinced that gambling provides much of the financial life-blood—to bribe state authorities, for example—needed to carry out more serious crimes.

So important is gambling considered that Senator McClellan has been holding hearings into the operation of the race wires which provide information with the speed that is essential to bookmakers. But most of the witnesses have taken refuge in the Fifth Amendment to the Constitution—which provides that a man may not be forced to incriminate himself—and little that is sensational has emerged. But big-time criminals would now be wise to watch their steps, not only because of the new laws but also because the Attorney-General seems to have succeeded in his task of getting the various federal law enforcement agencies—there are 24—to work together instead of in splendid isolation. The main thing still lacking is for the public to rouse itself from its apathy and demand that organised crime be stamped out.

World-wide economic trends delivered to your desk

If you were a client of First National City Bank you would receive a first class international banking service. But First National City pride themselves on providing their clients with many valuable *extra* services.

One important example of these extra services is the Monthly Economic Letter. This is a round-up of world-wide business and economic conditions with special reference to the United States; information of great value to any British businessman who is interested in expanding his export trade.



The Monthly Economic Letter, published in four languages, goes not only to the bank's clients, but is also sent to the influential leaders of public and business opinion all over the world, with more than two hundred and fifty thousand copies being distributed every month.

MANY OTHER SERVICES Clients of First National City can call on many other services, too. For instance, letters of introduction can be arranged to the manager of any overseas branch or correspondent—a valuable passport to local business and local trading conditions.

There are travelers' checks, up-to-date credit information on any foreign company, and with eighty-three branches in twenty-nine countries there are many other ways in which First National City can help.

If you would like to benefit from the services that First National City provides, contact the bank at 117 Old Broad Street, E.C.2 (London Wall 1221) or 17 Bruton Street, W.1 (Mayfair 6600).

FIRST NATIONAL CITY BANK

LETTERS

The Health Service

SIR—In their letter of September 2nd, Professor and Mrs Jewkes go beyond the argument of their booklet on the genesis of the national health service. Now, it seems, they are contemplating the service's exodus. To call the service "a hoax" is to impute deliberate deceit to its initiators. To argue that we might "do better" for ourselves if we "started to pay privately on a much larger scale" is to beg a number of questions.

Questionable figures apart, one flaw in their booklet is its failure to notice the crucial role played in the genesis of the service by the trend of opinion (or emotion) among doctors themselves. This trend can be traced from the British Medical Association's plan of 1938, through the Medical Planning Commission's interim report of 1942 (which notably influenced official thinking, the Beveridge report, and, through them, the public at large), to a climax of idealism in the "doctors' plebiscite" which the Gallup Poll conducted for the BMA in the summer of 1944.

In that poll majorities voted for a public service open to 100 per cent, not 90 per cent, of people; for "free" hospital facilities; for regionally planned hospital services (but overwhelmingly against any control of medical services by local authorities); for control of the geographical distribution of general practitioners; for "health centres"; and for abandoning the sale of practices. This voting expressed a genuine desire to shift medical care out of the semi-charitable, semi-commercial and competitive circumstances in which it had long been practised, into conditions in which doctors and hospitals could serve patients undistracted by what they individually could afford to pay, by the intrusion of approved societies and similar agencies, by the limitations (psychological as well as financial) of charitable arrangements, or by considerations of personal financial gain. It was this movement of professional sentiment which gave Mr Bevan the strength to attempt to remove medical care from the realm of the market. Naive, romantic, utopian certainly, but surely something more than a hoax?

For good or ill, medical care in 1948 abandoned a basically individualist and competitive form of medical practice, with a commercially tinged professional ethic, and is now committed to collaborative forms of practice founded on a public service ethic. Solutions to the vexing problems of our health services will have to be sought within a framework of non-commercial, non-charitable, and non-sectional values. At another extreme, in another society with different values, private purchase of medical care (whether by individuals or by self-selected groups) coincides in North America with a larger and more rapidly growing allocation of resources to medical care (nationally on average, not necessarily at every social level). But this does not validate the assumption that the medical care of Britons—as distinct from the incomes of British doctors—would be improved if American methods were adopted.

I do not deny our health service's central paradox: that a system intended to enlarge consumption of medical care is operated by machinery which readily lends itself to restricting consumption. But it has to be established, not just asserted, that paying privately "on a much larger scale"—for which services and on what scale?—would be better for the health and wellbeing of the British people. It is not self-evident in our type of society that the quantity of resources devoted to medical care is a reliable measure of the quality and medical effectiveness of the services obtained. Nor was the whole argument at the genesis about quantity or distribution of resources. Manners and attitudes seemed nearly as important—the relations between the givers and receivers of medical care, the psychological as well as the financial terms on which patients were accorded access to facilities they needed. The social psychology of medical care is perhaps outside the scope of economists. But it is a vital factor in the medical services both of Britain and of the USA, and not always to the advantage of the latter; and it was very much in evidence in the great controversies of 1944-48.—Yours faithfully, FRANÇOIS LAFITTE
University of Birmingham

Computer Errors

SIR—Having been a user of high speed digital computers on both sides of the Atlantic for six years, I think your comment (August 26th) on the recent order by the Atomic Energy Authority of a £3½ million Atlas computer is not really fair to either the computer or its programmers.

Experience suggests that a computer is probably less, rather than more, likely to make an error after working for a long time without a break, although obviously the chance of an error occurring in any particular calculation will be greater for longer calculations.

Errors can occur of course in the best of computers even if only due to rare power supply failures, and a wise programmer will therefore divide a long programme into sections each running for approximately 30 minutes (perhaps less on very fast machines), and so arranged that the calculation can be restarted after an error from the immediately preceding restart point.

The automatic detection of such errors and initiation of a restart will be almost certain if the programme is well planned in relation to the checking facilities built into the machine, and this will permit reliable operation for a 2½ day run should this be necessary. It is probable that such very long runs will still be made even when Atlas becomes available, because problems tend to become more complicated at just about the same rate as new machines are produced to solve them.—Yours faithfully,
G. B. GRIFFITHS
Woodford Green, Essex

Berlin

SIR—I am puzzled by the defeatism about Berlin in both the leading article and your special correspondent's report in *The Economist* of September 2nd.

Your leader says that if a separate peace treaty is signed between the Soviet Union and east Germany, the allied "presence in the city will rest on no agreement at all," and, according to your correspondent, we cannot prevent Mr Ulbricht obtaining "juridical power" to interfere with western access to Berlin. This seems to concede the whole of the communist case, which is, however, unfounded. The four-power agreements which give the allies the right to be in west Berlin cannot be altered without their consent, and remain valid until the West agree to a change, irrespective of unilateral action by one of the signatories. Similarly, the Soviet government cannot give Mr Ulbricht any "juridical power" which it does not itself possess. In fact, the Soviet Union granted "full sovereignty" to east Germany several years ago, without suggesting that this affected western rights in any way; any more than the independence of west Germany affected the Soviet right to maintain military missions there.

Short of open military attack on the territory of west Berlin, which they probably cannot risk, the worst the communists can do is to impose a new blockade. A new air-lift would be an adequate reply to this, unless the communists were prepared to start the shooting by firing on allied aircraft. The capacity of an air-lift can, of course, be restricted by jamming radio communications, and by buzzing, but this alone cannot prevent enough supplies being flown into Berlin to keep the allied garrisons, as well as the civilian population, going indefinitely. As there are now large stocks of all essential supplies in Berlin, and as transport aircraft are much larger than those in use thirteen years ago, the supply of the city by air should be a considerably simpler problem than it was then.

The main difference between the present situation and that of 1948 is not that the communists have mysteriously acquired new "juridical power" to interfere with western access, but that they have given us notice of their intentions. Unlike Stalin, Khrushchev is preceding the blockade (if there is to be one) by a war of nerves. In the United States and France, this seems to be having little effect, but the British press is showing signs of defeatism. If this defeatism leads the people of west Berlin

to believe that the West is about to abandon them, they may start drifting away to west Germany. Lack of confidence in the West is the one thing that can give Mr Khrushchev a gratuitous victory in the struggle for Berlin.—Yours faithfully,

JOHN KISSIN

Reading

Women's Magazines

SIR—You rightly say (in your issue of September 9th) that the surviving women's magazines may continue if they differentiate the readerships for which they cater more sharply. It has long been the complaint of the woman of middle age that all the existing women's weeklies cease to be interested, in stories, fashions and features, in women once they are past 30. Yet the older women *en masse* have every bit as much purchasing power as young ones or the vaunted teenager class and perhaps more. Salvation for these magazines may be easier than their youthful-minded editresses permit it to be.—Yours faithfully, EILEEN E. KLAPPER

Bromley, Kent

Kenya

SIR—Like your correspondent Mr John Connell I wear an old school tie and regard European farmers in Kenya as my brothers. Unlike him I did not go to school with them; one reason is that I went to a girls' school. I was taught that the black Africans as well as the white farmers were my brothers, and my fears for Kenya therefore differ from those of Mr Connell.

African leaders have frequently said they welcome Europeans who will remain and share the ups and downs of the country, and work for the good of everyone, and not expect white supremacy. They have criticised those who, not content to remain, not content with the arrangements already in hand to help them emigrate to Australia, have insisted that they will go to a country like South Africa where there is still a colour bar. Liberal-minded Europeans, headed by Mr Blundell, have also complained of such Europeans, saying they are harming Kenya.

Like Mr Connell I agree we have a moral responsibility for Kenyans and must show compassion. Like him I agree the European farmers must have "fundamental human rights."

I would, however, remind Mr Connell that when Britain signed the Charter of Human Rights it said no commitment could be entered into regarding its colonial territories. Perhaps therefore we expect too much in thinking that Africans know what human rights are, and that they can apply them to those who wish to hurry out, many of whom have already removed their capital. Nevertheless I believe the Africans do know, and will maintain their promise to the Europeans for fair treatment. In any event I believe they must have the chance to do so.—Yours faithfully, EILEEN FLETCHER

Guildford, Surrey

BOOKS

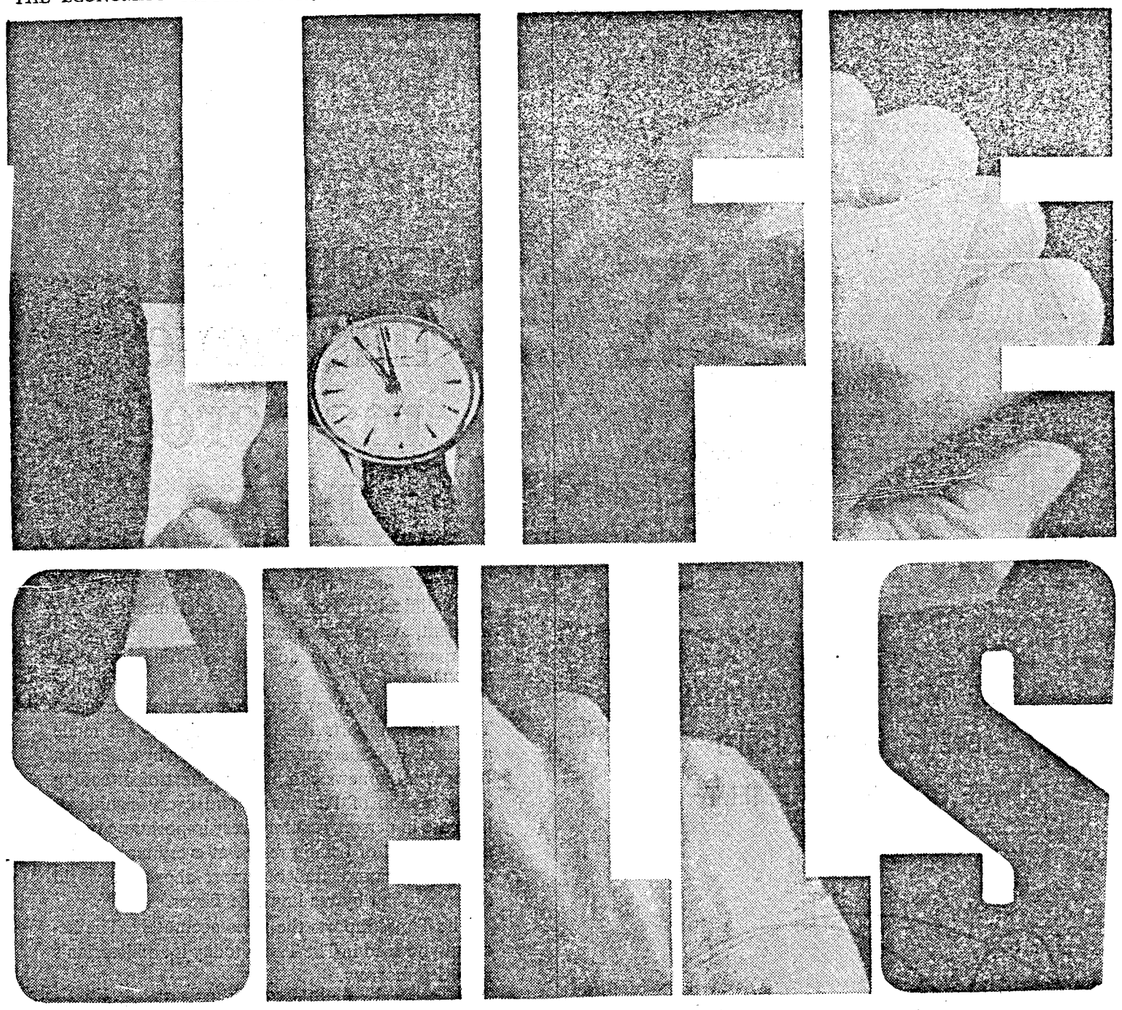
Organised Triumph

The Franco-Prussian War

By Michael Howard.
Hart-Davis. 525 pages. 63s.

Moltke: "dour common sense"

MILITARY fashion being essentially imitative, it was not long after the Franco - Prussian war that the clumsy *pickelhaube* replaced the more dashing *képi* in the British army. Emulation on the Continent went deeper: each of the major powers adopted its own variant of the Prussian citizen army; all drew up detailed plans for rapid mobilisation—only to be caught in a trap of their own devising in 1914, afraid to postpone mobilisation or to arrest it once it had begun, for fear of surrendering the advantage of superiority to the enemy in the opening engagement. It might even be claimed that the British army's neglect of the lessons of this war and its failure to spin theories based upon them, as Foch for example did, worked at first to its advantage in 1914; at least, having been taught a sharp lesson by the Boers, the British Expeditionary Force appreciated the virtues of disciplined rifle fire better than the German and French armies.



Except in so far as the strength of its navy kept France's supply lanes open throughout the conflict, the Franco-Prussian war was a land war. This goes a long way to explain why it was not studied really closely in Britain, preoccupied with a marine strategy and the problems of the "small wars" of imperial expansion. Superficially, of course, the British officer and military commentator looked at the war, touring the battlefields and listening to the staff lectures. The gunners, in particular, learnt a lot. The Prussian success was avidly seized upon as an argument by the advocates of short-service and later, in the 1900s, by those preaching the necessity of conscription. But at bottom this remained a war alien to British military thinking, and not until Mr Michael Howard produced his present study has any British historian written a book comparable in depth or perception with those written on the Continent.

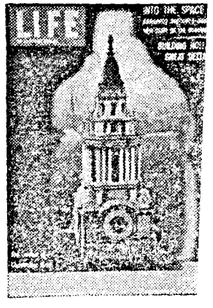
This appears the more startling when it is compared with the careful and occasionally brilliant studies made in this country of the American Civil War. In neither case is there any lack of sources, either primary or secondary, and the neglect cannot simply and cynically be ascribed to a reluctance to learn German. The excessive concentration upon the American conflict and the comparative neglect of the European struggle introduced a bias. The cliché, for instance, that the American Civil War was the first of the modern wars often carries with it in this country the unspoken implication that in some ways the subsequent Franco-Prussian war was old-fashioned. Yet, it pointed just as clearly to the future and, in the use of artillery, even more clearly. Shelling by breech-loading guns and fire from breech-loading rifles dominated the battlefields. The French staff were aware of the advantages of the tactical defensive; their failure to exploit these tactics properly, however, swung the balance the other way and throughout much of the 1914-18 war their successors preached the virtues of the offensive and the will to victory. It was only perhaps because the war lasted so short a time and was so decisive in its initial encounters that field entrenchments on the scale of those in Virginia in 1864-65 were not developed. Even so, trenches were beginning to appear before the war ended; casualties in frontal infantry assaults were appallingly high; and at Le Bourget the Prussian Guard experimented with the modern tactic of infantry dispersion, only to neglect the lesson, as Mr Howard points out in a telling aside, when they next fought the French.

The failure to read the lessons of this war properly had serious repercussions in 1914-18 and it might even have unfortunate effects today. For the United States and Britain, building up their military strength and economic resources from scratch to fight a total war ending in unconditional surrender, the problems of the American Civil War seemed singularly pertinent. Today, however, with total war pointing to the absurdity of mutual annihilation, a war fought by a great power with organised military forces for a limited political end may be more relevant.

This is one reason for welcoming what not unfairly can be thought to be the test-piece of one who has long been ranked among the most promising of the younger generation of military historians. The other, and no less important one, is that, unlike some of the shoddy stuff which is passed off as military history these days, this is a work of scholarship, compassion and insight.

Each page bears witness to the scholarship. Apart from regimental histories, it looks as if no important secondary source of material has escaped Mr Howard's attention; and, on occasion, he has made use of primary documents. Each piece of evidence appears to have been weighed with scrupulous care by Mr Howard before he arrives at his sober, unprejudiced judgments. All the

LIFE SELLS FOR GIRARD-PERREGAUX



Girard-Perregaux, internationally famed Swiss watchmakers, have a lot to say for LIFE. Advertising Manager Charles Weber comments:

"*LIFE International's large size page, plus uniform excellence in colour reproduction, lends LIFE especially well to Watch advertising, where the product illustrated must look truly magnificent in order to make a big enough impact on customers to induce them to buy.*

"*We feel that LIFE International has been most helpful in bringing this about in the markets in which it circulates. Furthermore, the merchandising support LIFE has offered us has been very productive.*"

Backed by a world-wide network of reporters and photographers, the editors of LIFE International and LIFE en Español report and analyse the world to the world every fortnight.

Business and community leaders everywhere turn to its pages regularly to know what is being said and done, advertised and sold.

LIFE can sell for you, too. For more information about LIFE International, its new advertising edition for Europe, and LIFE's Spanish language editions for Latin America—write to Robert H. Garey, European Advertising Director, Time & Life Building, New Bond Street, London W.1.

The newspaper you read has never mattered more

The more the world demands understanding, the more difficult it becomes to understand. At this moment, when so much depends upon your newspaper, can you do with anything less than The Times itself?

The Times equips you to understand because The Times reports the news straight—not made agreeable by omissions or entertaining by additions. It reports the news completely. Short of attending every session of Parliament and every significant law case in person, reading every important government report, or being present at every major news event, you cannot find out more about the world each day than by reading The Times.

The Times reports the news accurately. The account you read in The Times today is an historian's record tomorrow.

Upon this structure of facts The Times throws the light of every shade of opinion. You will find the opinion of The Times itself conveniently labelled as such. You will also find, on its letter page, a most vigorous and varied exchange of views by other people.

If you take the world seriously, you should take The Times.

Read
THE TIMES
tomorrow

apparatus of research supports a forceful, lucid and apparently effortless narrative.

The compassion which underlies his comments is displayed, for example, in his treatment of Bazaine, whom he castigates for incompetence, and even at one point for moral cowardice, but convincingly relieves of the charge of treachery. An example of the insight which illuminates the whole of the book can be taken from Mr Howard's concluding paragraphs:

> The small, introvert professional army, more conscious of its social than its professional status, was no longer an effective form of military organisation; and any continental power which wished to escape annihilation as swift and overwhelming as that which overtook the Second Empire had to imitate the German pattern and create a Nation in Arms—a nation whose entire manpower was not only trained as soldiers, but could be mobilised, armed and concentrated on the frontiers within a few days. The military revolution which ensued in Europe had repercussions in spheres transcending the military. Its importance has perhaps never been fully appreciated or been subjected to adequate historical analysis.

Thus, firmly, does this book, in which the politics and diplomacy and the strategy and tactics continually inform each other, come to its conclusion. It can sit securely beside the continental volumes. It is a model of how military history should be written.

Count Witte's Bear Squeeze

A Dynamic Theory of Forward Exchange

By Paul Einzig.
Macmillan. 573 pages. 60s.

FORWARD exchange, one can agree with Dr Einzig, is a neglected subject; and while to anyone other than a foreign exchange dealer it appears hideously complicated, it can have an important bearing on broad economic policy. Keynes in the twenties was the first to toy with the idea of official manipulation of forward exchange to influence international arbitrage, and thus provide a new freedom for domestic interest rates. The idea has been taken up periodically by a number of writers since then, and official intervention in the forward exchange market has become more common—the latest new entrant is the United States Treasury. But the essays in intervention have been limited and tentative; central bankers have been feeling their way rather uncertainly, handicapped by the lack of an adequate guide to what the consequences of official intervention will be.

Dr Einzig's new book, which is a radically revised edition of his prewar "*Theory of Forward Exchange*", will help them in one direction at least. It is an unmatched record of forward exchange operations of the past. Dr Einzig provides some exotic examples—from the transfer of Papal collections in the fourteenth century to Count Witte's bear squeeze in the Berlin forward market for rouble notes in 1894. Then there is the forward rate policy of the Austro-Hungarian Bank, which in its practical operations apparently anticipated Keynes in the early years of the century. Of more practical interest today, Dr Einzig also discusses official intervention in recent years, by the authorities in Britain, Germany and other countries; but the available information here is limited.

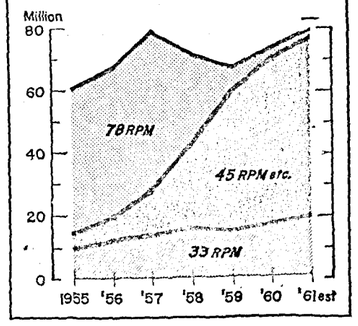
When it comes to analysis, Dr Einzig's book is much less satisfactory. His attempt to grace the theory of forward exchange with the coveted "dynamic" is not very impressive; it seems to add up simply to saying that forward exchange can in some cases instigate changes as well as merely reflecting them. This is clearly true, but, as Dr Einzig applies it, not always very helpful. "During 1958-60 much of the gold outflow [from the United States] was due to the intrinsic discount on the forward dollar": but what was the intrinsic discount on the forward dollar due to? On policy, Dr Einzig favours limited intervention, and shrinks from the extremist view on familiar and reasonable grounds. The analytical chapters are also at least three times too long; there is endless repetition and labouring of the same point, which is apt to leave the general reader confused as well as irritated in the end. The specialist reader will find irritation in plenty from Dr Einzig's proprietorial air on the whole subject. Thus his book is put forward to meet the shortcomings not only of other textbook writers and theorists but of the financial press since Dr Einzig left it. An "outstanding instance" was his discovery of the market in European dollar deposits, which had been "completely ignored" until Dr Einzig wrote about it in *The Banker* in January, 1960. He could have read about it in these columns months before.

Poetry and Reform

The Imagination of Charles Dickens

By A. O. J. Cockshut.
Collins. 192 pages. 16s.

MUCH recent Dickens criticism has been marked by a note of testiness and Mr A. O. J. Cockshut's study is no exception. The reason surely lies in a point that Orwell made in the first sentence of his Dickens essay: "Dickens is one of those writers who are well worth stealing." He is a writer actuated by strong moral indignation, whose power over his readers is so great that people holding strong views and desiring to bring other people round to them naturally wish to enlist Dickens on their side, and are, in their turns, annoyed when Dickens refuses consistently to toe their party lines. Orwell was testy because Dickens's understanding of the class struggle was so imperfect. House was testy because Dickens's views on social reform were so naive, so unrelated to practical politics. And Mr Cockshut is testy because, among other failings, Dickens "has absolutely no conception of sanctity," and was, in his religious attitudes, "cut off from the spiritual and intellectual treasures of the Christian tradition."



To start from such positions inevitably entails, as in the case of these three critics, that most space is devoted to showing where Dickens failed to measure to the standard set, and that the profound admiration felt, which was undoubtedly the prime motive for each critic's choice of Dickens as a subject, appears rather in the nature of a caveat. The critic's first aim is not to try to discover why Dickens makes so powerful and so effective an impact but to point out where he could have done better.

Mr Cockshut's approach is by way of examining certain images and concepts potent and recurrent in Dickens's novels—notably, prisons, social reform, crowds—and then to discuss the more important novels in some detail. He makes many useful and illuminating comments, as when he notices that the empirical justice of the people, which Dickens deplores in the Paris Tribunals of "A Tale of Two Cities," is apparently what he would prefer to the cold legalisms of Chancery depicted in "Bleak House." But throughout his study Mr Cockshut seems to be looking for a consistency and balance in Dickens that it is not necessarily proper to seek. Thus he says that in "Bleak House" Dickens came near to "that great and perhaps unattainable target of being fair." This may be a right target for life. It may be a target that Mr Cockshut likes to find in novels. But one must surely show that Dickens sought to be fair before blaming him for not being so.

Again, in drawing together Dickens's various uses of the symbols that moved him most deeply, such as prisons and rivers, Mr Cockshut seems to expect a consistency not of the nature of all writers' imaginations and almost certainly not of Dickens's. It is hard, he says, to resist the idea that in "Our Mutual Friend" "the river has a sacramental, baptismal character" and so, as he shows, at least at one point it has. But

GRAMOPHONE RECORDS

The heavy 78 r.p.m. record is not quite extinct: it looks as if it will account for 2 million of the 60 million short, mostly "pop", records produced this year. Total sales will probably rise to 78 million but exports continue to dwindle. In the first seven months of this year they were 19 per cent of the total value whereas in the same period last year they were 25 per cent.

HMSO

The Strategic Air Offensive against Germany 1939-1945

by Sir Charles Webster and Dr. Noble Frankland

A vivid account of the strategy and tactics of the attack, the intelligence appreciations on which these were based, and the controversial decisions that were taken. The operations, and the crews who took part in them, are fully described and an assessment is made of the achievements of the offensive. In four volumes. **Each 42s.** *(post 2s. 3d.)*

baptism is only one of the associations that must come into the writer's mind when he thinks of water; at one time he may reject this association, at another find it evocative, and such an *ad hoc* use of appropriate images is, one might suppose, of the nature of Dickens's genius.

In the last resort, of course, Mr Cockshut, like all Dickens's critics, fully acknowledges his power and perhaps the most significant of the epithets he gives him is "poet." Dickens is, he says, the poet of the things he most feared and falsified—money, prisons, crowds, factories—the poet of industrial society. It is undoubtedly as a poet, and as a poet should, that he rouses pity and fear in his readers. If he does not then present the practical tools for utilisation of the emotions roused—socialism or religion or political reform or some other fully worked out panacea of his own—it may be that the critics are wrong to ask it of him. "If men would behave decently the world would be decent" is, says Orwell, the whole of Dickens's moral message, and it is not, Orwell finally admits, such a bad one. It might, perhaps, be more illuminating if critics accepted Dickens's morals without cavil and turned their attention to his poetry.

Trial of a Regime

The Queen's Necklace

By Frances Mossiker.
Gollancz. 636 pages. 30s.

THOUGH it is said that while history seldom repeats itself, historians invariably repeat each other, Frances Mossiker runs little risk; for few writers could imitate her style or would wish to do so. Yet her work has virtues without which literary graces are barren: enthusiasm, an instinct for clues, and the ability to sift and arrange what she finds. Her comments are clear—even if expressed in stridently anachronistic Anglo-American colloquialisms. She pronounces no irrefutable verdicts; but the evidence of her contemporary witnesses is presented and summed up fairly for the many readers who will form her jury, and who can scrutinise the accused and the fabulous necklace itself in the book's superb illustrations.

This is one of those cases in which the truth is rarely pure and never simple: on the face of it the guilt of Cardinal de Rohan, Bishop of Strasburg, Grand Almoner and member of the most powerful feudal family in France, was indisputable. In fact, he was the victim of a cunningly laid plot: lured by vanity and ambition he was robbed of the necklace, suspected of fraudulent conversion by the jewellers who had believed him the queen's agent, and accused by Marie Antoinette of a presumption barely short of treason. Any king less obtusely uxorious than Louis would have settled the affair privately; for de Rohan was willing to pay the jewellers and retire to his estates. But the queen's smouldering detestation of him was fanned by self-seeking advisers determined to bar him from any position of influence; and both she and the king were typically blind to the dangers of public proceedings in the traditionally anti-monarchical Parlement of Paris, whose doings were dramatised in the advocates' "briefs" printed and hawked with squibs and ballads in the streets.

Napoleon asserted that the Revolution began with this trial. It can certainly be regarded as a dynamic contributory cause. The Cardinal acquitted, applauded by mobs as a victim of royal spite, went into provincial exile a popular hero; the "Countess" de la Motte, descendant of a Valois bastard, was found guilty of forgery and theft, publicly whipped and branded, and given a grim term of imprisonment which she shortened by escaping to England, whither her husband had fled with the jewels before her arrest. There she published her memoirs whose obscenely vindictive libels provided deadly ammunition for the queen's enemies. And the mysterious Cagliostro, denounced in la Motte's attempts to shift the blame, was acquitted, but deported—leaving an odour of Rosicrucian-Masonic-Orleanist conspiracy which still taints some versions of the "Necklace Scandal." Why were forgeries so inept accepted by those who knew the queen's writing and real signature? Was the foolish queen privy to her impersonation by a young prostitute to whom the infatuated Cardinal promised the necklace? Was Jeanne de la Motte's escape effected by friends of the queen who thought her likely to be harmless, or by enemies who hoped she would be more dangerous, in England? These widely asked questions were, in a sense, answered when Mirabeau thundered "What a country, what men, what flabbiness, what corruption!" He saw that the Old Regime itself was on trial.

A Measure for Mammon

The Theory and Measurement of Business Income

By Edgar O. Edwards and Philip W. Bell.
University of California Press. London: *Oxford University Press.* 341 pages. 60s.

IF we were told to find a good measure of a child's development, we might well start by asking who wanted the measure and why. Then, knowing the aim, we might decide that the best figure would be the child's growth in height, or weight, or skill at games, or vocabulary, or something else—or a mixed index. Some of these measures would be harder to apply than others; and none might meet all the needs of the case. Similarly, the growth of wealth can be viewed in many ways, and we must choose the most suitable for the task in hand. Our safest assumption is that all measures of income are full of flaws.

Professors Edwards and Bell give us a most satisfying study of different concepts of business income. They start by pointing out the faults in the accountant's profit, which fails as a guide to the current performance of managers because it does not record asset appreciation as it arises, or separate all such gains, when realised, from current operating profit, or allow for changes in the value of money. Having thus swept aside the accountant, the authors turn to the economist. His concept of income—the increase in the present value of expected future receipts—is the only one that comes anywhere near to logical elegance. Unhappily we find it very hard to quantify expectations at any one date, let alone compare those of two dates; a firm's directors can scarcely "probe into the nebulous question 'Do you now feel as you thought you would feel about the still futuristic aspects of the selected course of action?'". Something between these extreme concepts is needed.

The authors put forward two new measures, to be used in parallel. The first they call *business income*, the second *realised income*. Both take ordinary accounting as a starting point, but add simple "valuation adjustment accounts" to show extra information about asset values. To clarify the meaning of "value," the authors give a neat array of eighteen possibilities (of which, fortunately, a dozen prove unserviceable). Realised profit is based on historical cost, and thus is the same in total as accounting profit; but it is split up into two components—the realised gain from asset appreciation (much of which must belong to earlier years); and current operating profit (inputs being charged to operations at current market price.)

Business profit is a more radical affair, being based on the replacement values of assets; it, too, is split up—into current operating profit (identical with the second component of realised profit) and asset appreciation (during the current year only, and whether realised or not). Thus both sets of profit figures throw light on management's skill and luck at two very different functions—operating and buying assets. The authors suggest that both sets of figures might be given side by side in the revenue account—as alternative glimpses of truth—and explain how the two can be carried thence to a balance sheet that shows both the accountant's much-loved historical costs and also useful current values.

It will be noted that neither brand of profit segregates the effects of general price changes. The authors argue that, for the purpose of testing management's efficiency, such general changes are less important than changes in the prices of the firm's own assets; if the latter are allowed for, managers have all that they need for decisions. (One may question this view in so far as managers must take charge of finance.) The authors concede that general prices are relevant when trends have to be studied, and ought to be relevant for tax; and they show how easily their revenue account and balance sheet can be adapted to allow for general price changes.

The last chapter asks whether the proposals are practicable. The book-keeping of reform is simple enough; a few adjustments at each year's end serve to graft the new figures on to historical ones. Finding objective market values for assets may be a much more awkward problem; in many trades, however, quotations for the main types of input are ready to hand, and other assets might well be revalued with the special indices now available.

It is rare to find authors so much at home in both economics and accounting. As they themselves suggest, time may show that their programme needs amendment; but they state the problem clearly and provide an excellent starting point. In passing, they give help on many other questions—when to replace plant, how to measure depreciation, which rate of compound interest to use in budgets, and so on. Beyond doubt their book is the most wise and original contribution to accounting theory since Professor Bonbright wrote "The Valuation of Property" a quarter of a century ago.

Paperback Selection

Batsford have entered the paperback market this month with reissues of their own books. The first eight titles include six of their well-known guide and travel books. Each contains 32 pages of photographs, and it is a pity that, presumably to keep the price down, they sometimes have to be squeezed in so tightly, without margins. Oliver and Boyd have another four titles in their "Writers and Critics" series; and, among the new titles in Collins Fontana Library, R. H. Tawney's "The Acquisitive Society" will be particularly welcome.

Below is a guide to some of the paperbacks received by this journal in recent weeks.

Art and Archæology :—

THE GOTHIC IMAGE. By Émile Mâle. Translated from 3rd edition by Dora Nussey. *Collins Fontana.* 439 pages. 12s. 6d.

ARCHÆOLOGY IN THE USSR. By A. L. Mongait. Translated by M. W. Thompson. *Penguin.* 320 pages. 5s.

Biography :—

SAMUEL PEPYS: *The Saviour of the Navy.* By Arthur Bryant. *Collins Fontana.* 451 pages. 7s. 6d.

JOAN OF ARC. By R. Pernoud. Translated by J.U. Duell. COLUMBUS. By M. Mahn-Lot. Translated by H. R. Lane. *Evergreen Books.* 192 pages each. 6s. each.

Economics :—

THE THEORY OF ECONOMIC DEVELOPMENT. By J. A. Schumpeter. Translated by R. Opie. *Oxford University Press.* 267 pages. 8s. 6d.

AN ECONOMIC INTERPRETATION OF THE CONSTITUTION OF THE UNITED STATES. By Charles A. Beard. *Macmillan Co., New York.* 351 pages. 12s.

Guidebooks :—

THE LAND OF ITALY. By J. More. 231 pages. SHAKESPEARE'S COUNTRY. By J. Russell. 192 pages. ENGLISH CATHEDRALS. By J. Harvey. 188 pages. ENGLAND'S HERITAGE. By Bell, Birmingham, Blunden, Brown, etc. 207 pages. SPAIN. By S. Sitwell. 203 pages. PARISH CHURCHES. By J. C. Cox and C. B. Ford. 187 pages. *Batsford.* 5s. each.

History :—

MEDIEVAL PANORAMA. Vol. I: *Foreground: Society and Institutions.* Vol. II: *The Horizons of Thought.* By G. G. Coulton. *Collins Fontana.* 479 and 475 pages. 9s. 6d. each.

Literature and Literary Criticism :—

BAUDELAIRE. By Pascal Pia. Translated by P. Gregory. *Evergreen Books.* 192 pages. 6s.

WHITMAN. By G. Dutton. 128 pages. COLETTE. By M. Davies. 128 pages. D. H. LAWRENCE. By A. Beal. 134 pages. ARTHUR MILLER. By D. Welland. 130 pages. *Oliver and Boyd.* 3s. 6d. each.

THE ACHIEVEMENT OF SAMUEL JOHNSON. By W. J. Bate. *Oxford University Press.* 259 pages. 8s 6d.

THUS SPOKE ZARATHUSTRA. By Nietzsche. New translation by R. J. Hollingdale. *Penguin.* 343 pages. 5s.

LES LIAISONS DANGEREUSES. By Laclos. New translation by P. W. K. Stone. *Penguin.* 396 pages 5s.

THE MODERN AGE. Pelican Guide to English Literature, Vol. 7. Edited by Boris Ford. *Penguin.* 560 pages. 7s. 6d.

THE DISINHERITED MIND. By Erich Heller. *Penguin.* 282 pages 4s.

Politics, Political Science and Philosophy :—

THE ACQUISITIVE SOCIETY. By R. H. Tawney. *Collins Fontana.* 191 pages. 5s.

LITERATURE AND REVOLUTION. By Leon Trotsky. *Michigan University Press.* London: *Cresset Press.* 256 pages. 12s. 6d.

EDUCATION. By Immanuel Kant. *Michigan University Press.* London: *Cresset Press.* 121 pages. 8s. 6d.

THE SUBLIME. By Samuel H. Monk. *Michigan University Press.* London: *Cresset Press.* 250 pages. 12s. 6d.

THE MIND OF PLATO. By A. E. Taylor. *Michigan University Press.* London: *Cresset Press.* 148 pages. 9s. 6d.

METAPHYSICS. By Aristotle. Translated by R. Hope. *Michigan University Press.* London: *Cresset Press.* 394 pages 16s.

Science :—

THE WORLD OF THE SOIL. By E. John Russell. *Collins Fontana.* 285 pages. 8s. 6d.

THE CLOUDS. By R. Clausse and L. Facy. Translated by J. Ferrante. *Evergreen Books.* 192 pages. 6s.

SCIENCE SURVEY 1961. Part 1 edited by Arthur Garratt; Part 2 edited by S. A. Barnett and Anne McLaren. *Penguin.* 239 and 251 pages. 6s. each.

Miscellaneous :—

THE VINTAGE MOTOR CAR. By C. Clutton and J. Stanford. 232 pages. VETERAN AND EDWARDIAN MOTOR CARS. By S. Scott-Moncrieff. 244 pages. *Batsford.* 5s. each.

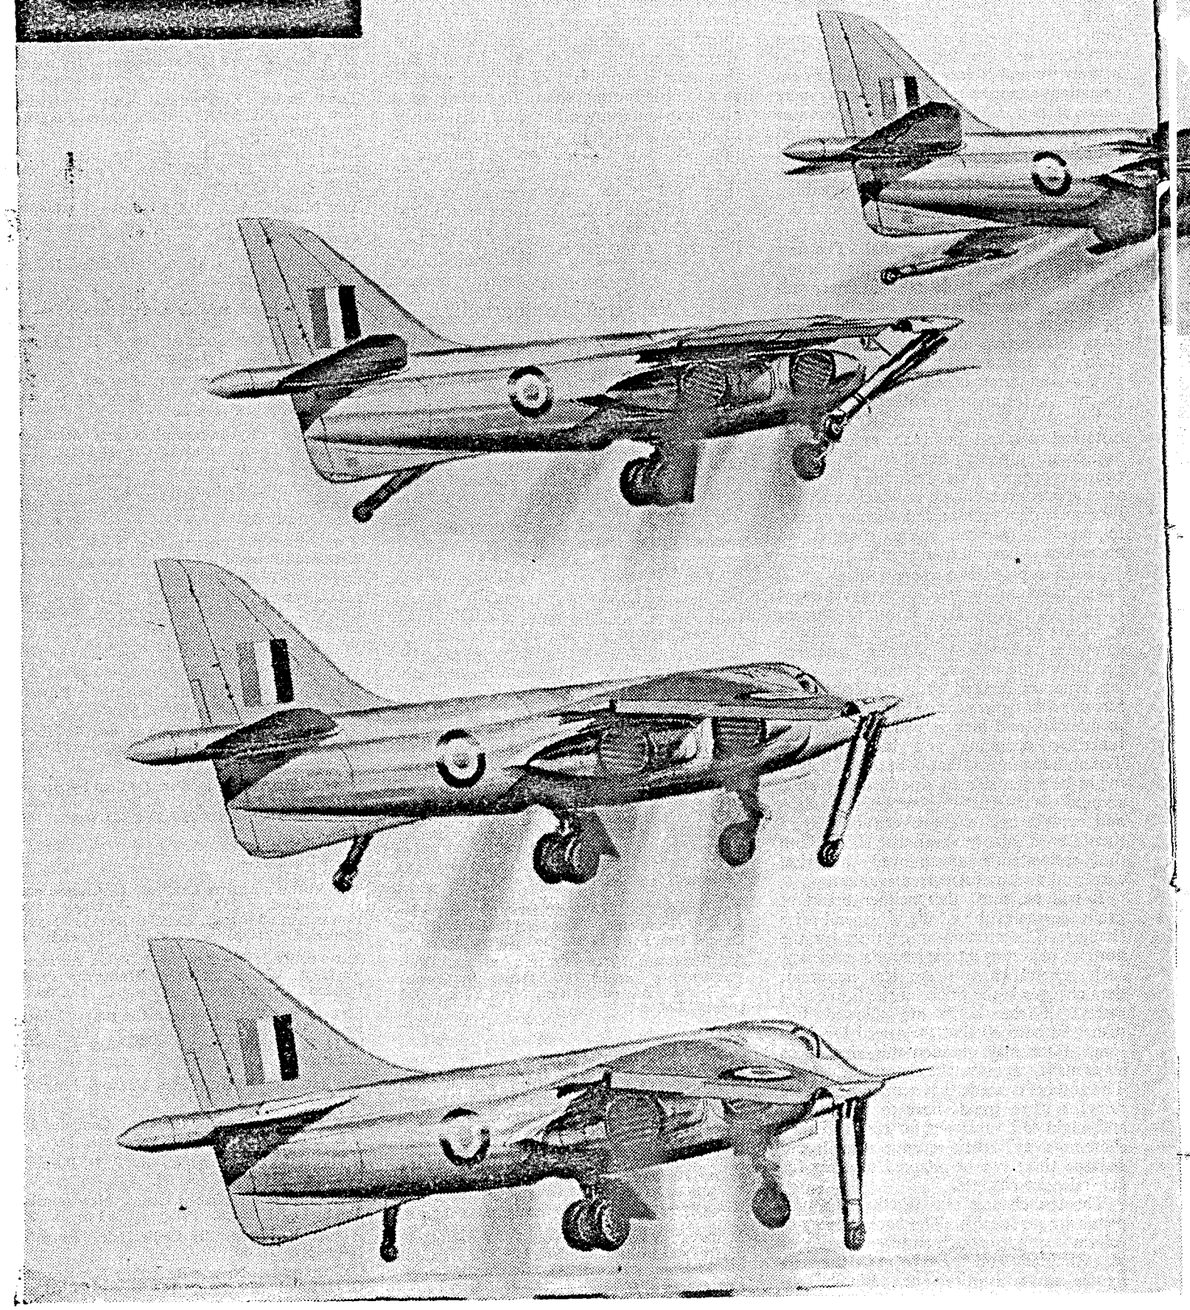
ANTHROPOLOGY. By Edward B. Tylor. Abridged by L. A. White. *Michigan University Press.* London: *Cresset Press.* 285 pages. 12s. 6d.

LIFE IN THE TWENTY-FIRST CENTURY. Edited by M. Vassiliev and S. Gouschev. Translated by H. E. Crowcroft and R. J. Wason. *Penguin.* 222 pages. 3s. 6d.

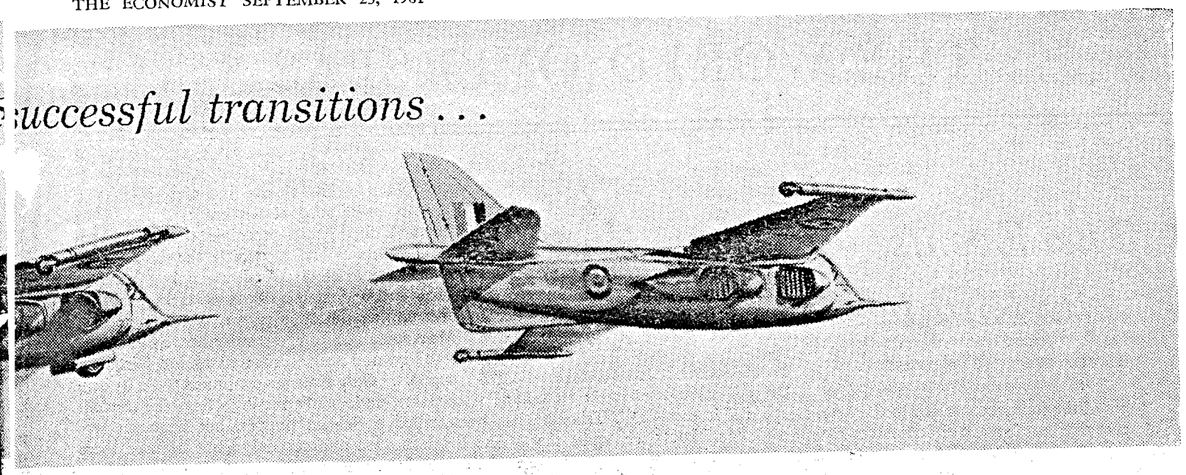
THE JAZZ SCENE. By Francis Newton. *Penguin.* 303 pages. 4s.

THE PENGUIN RUSSIAN COURSE. Compiled by J. L. I. Fennell. *Penguin.* 366 pages. 5s.

A DICTIONARY OF SAILING. By F. H. Burgess. *Penguin.* 237 pages. 3s. 6d.



DEAD SOULS. By Nikolai Gogol. New translation by D. M. Shack. *Penguin.* 383 pages. 5s.



HANGED IN ERROR. By Leslie Hale. *Penguin.* 160 pages. 2s. 6d.

HANGED BY THE NECK. By Arthur Koestler and C. H. Rolph. *Penguin.* 143 pages. 2s. 6d.

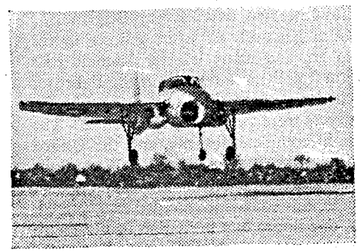
Revolutionary VTOL aircraft achieve successful transitions . . .

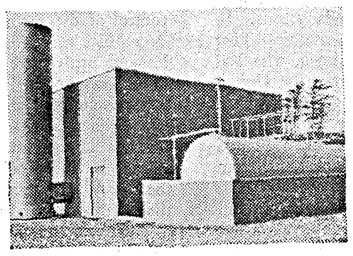
. . . AND BRISTOL SIDDELEY SUPPLY THE POWER



The Hawker P 1127 strike aircraft has made its first transitions—from vertical take-off to forward flight and from forward flight to vertical land. The world's first jet-sustained VTOL (vertical take-off and land) aircraft to be designed for operational service, the P 1127 obtains both lift and thrust from the same engine. The engine that has made this historic advance possible is the Bristol Siddeley Pegasus turbofan.

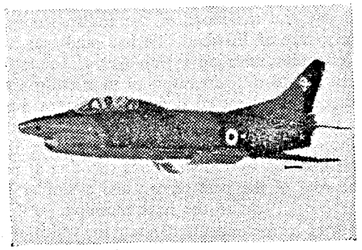
These successful transitions—coming so early in the P 1127 flight test programme—are an eloquent testimony to the rightness of the Bristol Siddeley VTOL philosophy; which asserts that the total installed thrust of an aircraft's *main* powerplant must be available for vertical take-off and *landing*, hovering, as well as for forward flight.

A unique feature of the Bristol Siddeley Pegasus is the use of four controllable jet nozzles which can be directed downwards for lift, backwards for thrust, or in any other *direction required*. This feature makes possible the design of single or multi-engined subsonic or supersonic aircraft in which the total installed thrust is available for vertical take-off and for transition between vertical and horizontal flight.



Where ground conditions permit, a Pegasus-engined aircraft can equally well make a *short take-off* in order to carry a heavier load or a conventional take-off if a large overload is required.

The Bristol Siddeley Pegasus is supported by the Mutual Weapons Development Programme for NATO.



POWER FOR THIS

The Bristol Siddeley Viper turbojet powered the Bell X 14 research aircraft. The X 14 was the world's first jet-sustained VTOL aircraft to achieve transition from vertical to horizontal flight. The Viper family of engines ranges from 1,600 to 3,000-lb *thrust and* powers many different aircraft.

. . . AND THIS

The Bristol Siddeley Industrial Proteus gas turbine engine powers a 3,000-kW turbo-generator. Designed for peak-lopping and emergency stand-by generation, this new pocket power station, two of which are already in service, delivers full power within 2 minutes of a cold start for a low capital outlay.

. . . AND THIS

The Bristol Siddeley Orpheus medium-thrust turbojet powers the NATO standard lightweight strike fighter—the Fiat G 91. The Orpheus has been selected for 5 different aircraft types which are in production for the air forces of Britain, India, Germany, Japan, Italy, Finland, Greece and Turkey.

THE WORLD OVERSEAS

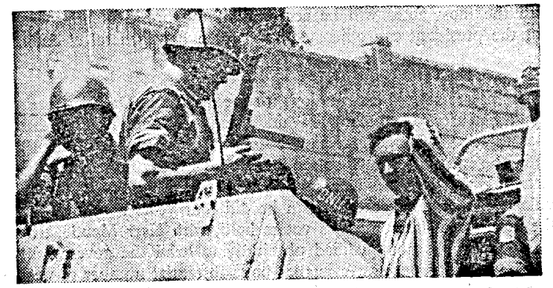
The Events in Katanga

FROM A SPECIAL CORRESPONDENT

On tour on September 12: Mr Tshombe

NONE of the journalists asleep in the hotel Leopold II in Elisabethville on the night of September 12th to 13th could know that the single rifle shot that woke them at 3.45 a.m. was to have such fateful consequences. It was the signal for the storming of the post office in the central square, and of Radio Katanga a mile away, by Indian Dogra and Gurkha troops of the United Nations. The attack was well mounted in accordance with a plan prepared several days previously whose execution had been held up for political reasons.

Every weapon of the modern infantry battalion was used: FN rifles, heavy machine guns, bazookas and mortars. At both places a company of Indian troops (125 men) outnumbered the defending Katanga gendarmerie and para-commandos by nearly two to one. They were also greatly superior in fire power and were supported by Irish and Swedish armoured cars. In the residential part of the city a company of Swedish troops was detailed to capture the heavily guarded home of Mr Godefroid Munongo, the rash and ruthless minister of the interior whom the United Nations had singled out as the arch-secessionist of Katanga.



Very heavy fighting was still going on at dawn, and the three objectives were not attained until nearly three hours after the attack began. But the end was only the beginning. The Kantangese commandos launched an unsuccessful counter-attack on the post office, more United Nations reinforcements were brought up, and casualties mounted. Sporadic fighting continued all day and the mood of the Indian troops grew dangerous. In the centre of Elisabethville hate and fear hung in the air. That Wednesday morning a jeep-load of Katanga policemen, who had returned to duty in response to a radio appeal from the United Nations, were mown down by a Dogra machine gun entrenched in the Red Cross hospital 70 yards away. A clearly marked ambulance which arrived soon after to remove the dead and wounded was disabled by Indian troops shooting at point blank range from the roof of the post office; and a similar incident took place in the central square the next morning. All this happened in full view of correspondents standing the width of a street away. Nor did correspondents find any evidence whatsoever for a counter-charge, later made by the United Nations command when its attention was drawn to these events, that the Katanga army was misusing ambulances as vehicles of war. The flagrant disregard by UN troops of the immunity of the Red Cross hospital on Avenue Youlou has still to be explained.

Throughout the night of September 13th to 14th the firing in Elisabethville grew in intensity; the United Nations garrison at Jadotville was gravely threatened, and later capitulated. It was clear that the UN operation, conceived as a swift *coup d'état*, had failed. Responsibility for a tragic miscalculation falls equally on civilians and soldiers. But where did things go wrong, and was the action justified in the first place?

At the beginning of September time pressed for the United Nations secretariat. The sixteenth General Assembly, at which the UN Congo budget would be discussed, was only a fortnight away and a demonstrable success in pacifying and uniting the country was urgently needed. Mr Adoula's central government gave promise of stability, and seemed assured of Mr Gizenga's support. Only Katanga continued to fly its own defiant and embarrassing flag. President Tshombe has been called a Belgian puppet, but he never was quite that. The Belgians used him certainly; but he used them even more in the name of the emergent Katanga nationalism whose strength has been demonstrated in the past few days. Mr Tshombe has many tribal enemies and his writ has never run in the Baluba strongholds of the north. His regime has often been oppressive towards political opponents; waste and corruption have been widespread, but to the casual observer—the visiting MP or businessman—southern Katanga seemed, after the rest of the Congo, a well-ordered and prosperous clearing in a dark jungle.

To sustain his rule Mr Tshombe leaned heavily on European advisers and in the circumstances it was natural that most of them should be Belgian. With some notable exceptions, these hangers-on from the earlier regime exerted a baneful influence on government thinking. The Security Council resolution of February 21st required their prompt removal together with all mercenaries and Belgian, and other foreign, military and para-military personnel. But it was not until September, six months later, that the decision was taken to expel them by force if necessary; the man chosen to do it was an Irish intellectual, Dr Conor Cruise O'Brien, the personal nominee of the late Mr Dag Hammarskjöld as UN representative in Katanga. For once the United Nations moved swiftly. On September 4th troops took over the post office, some ministries and other key centres in Elisabethville with deceptive ease. No one was hurt, hardly a shot was fired; United Nations control of the town was absolute that day. Every Belgian *chef de cabinet* was removed from his post, all white officers in the Katanga army were told to go, and many left for Kamina base to be flown home. The term "political adviser" in the February 21st resolution was stretched to cover "*conseillers occultes*"; irate Belgian editors and lawyers were peremptorily expelled. The Katanga administration was in complete disarray, and the United Nations remained poised for the next move. Brigadier K. A. Raja, the UN military commander, was completely confident that he had the situation in hand; to some, this confidence seemed exaggerated.

Then came a fatal pause, due not to any hesitation in Elisabethville but to second thoughts in New York. The late Secretary-General was under heavy pressure, especially from the British Government spurred on by Sir Roy Welensky, to avoid the use of force, and a week passed with no decision. During this interval a number of things happened whose significance was not grasped at the time. The United Nations' drive lost its momentum, Mr Tshombe and his ministers recovered their morale and decided to fight to the end, more than a hundred white army officers and mercenaries disappeared underground in Elisabethville or into the bush, and Baluba refugees from South Kasai who live in the town flocked in their thousands to seek United Nations protection. were imprisoned without trial, they had been reasonably contented

Dr O'Brien and Swedish escort.

before, but recent events had unnerved them. A week passed in mutual recrimination between Dr O'Brien and Mr Tshombe, and served only to underline the total lack of confidence between them. A battalion of Gurkhas arrived as reinforcements, while Mr Tshombe made his own dispositions and set up a secret radio in the bush. New York was still silent, but it was clear that decisive moves were at hand. The white officers who had remained behind were, by and large, a contemptible bunch but they emerged from hiding and were invaluable to Mr Tshombe at this stage. On Tuesday, September 12th, it was announced that Mr Hammarskjöld was flying to Leopoldville at the urgent request of Mr Adoula. At Elisabethville United Nations officials were taken by surprise at the news and were plainly disconcerted, but by then the die had been cast; the attack was launched to end the secession of Katanga.

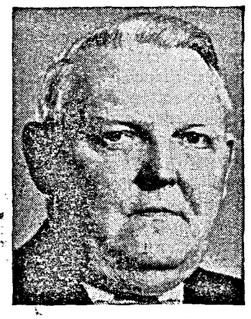
It did not, however, take Mr Tshombe by surprise; his intelligence had worked well. The previous day the Katanga police guards at the post office and the radio station had been replaced by much more formidable para-commandos who were later to die bravely when all their ammunition was spent. In the fighting that continued throughout Wednesday the Belgian civilian population grew hostile to the point of hysteria and the men in the blue berets felt themselves isolated in a strange land with white and black ranged against them. This goes a long way to account for their indiscriminate attacks on ambulances and private motor cars in the full light of day. The operation achieved its immediate objectives in Elisabethville but not its wider purpose. The UN military command greatly underestimated the bitter resistance it would meet and had seemingly ignored the situation outside Elisabethville. Dr O'Brien's miscalculation was equally grave: Mr Tshombe, the puppet, was not so easily toppled. For his people of the powerful Lunda tribe he was, and remains, a hero. As for the role of the whites in the events of September 13th to 14th, they played a significant part, but never at any stage a decisive one.

The Twilight of Dr Adenauer

FROM OUR BONN CORRESPONDENT

THE new Bundestag has been summoned to meet at 3 p.m. on Tuesday, October 17th. As soon as it has despatched such preliminary business as the election of a president (speaker) and his deputies its duty will be to choose a federal Chancellor; in the opening stage, this must be by a majority of the whole house obtained in secret ballot. The Christian Democrats having lost their absolute majority, a fascinating bout of coalition bargaining, canvassing, and bluff has begun in Bonn with the object of determining who this powerful personage is to be. On Tuesday the executive committee of the Christian Democratic Union—with a resigned swallow here and there—unanimously asked eighty-five-year-old Dr Adenauer to stand once again for office, on the understanding that he would retire in time to give his successor an opportunity to establish himself before the next general election in 1965.

But anguished moves are afoot in all three parties, including the Christian Democratic Union, to find another way. Before the end of the week it was clear that a majority of deputies in the Bundestag were convinced that they would be most faithfully representing their constituents if they voted next month not for Dr Adenauer, the only chancellor the federal republic has experienced since its inception twelve years ago, but for Herr Erhard, the present economics minister, vice-chancellor, and Dr Adenauer's willing though much-slighted heir presumptive.



In theory, the Social Democrats and the Free Democrats, who do contrive on a humbler level, in the Länder of Bremen and Hamburg, to govern together, could now elect a chancellor from one or the other of their own leaders and put Dr Adenauer, Herr Erhard, and the Christian Democrats altogether out of office. In practice this will not happen—not unless Herr Erich Mende, the leader of the Free Democrats, undergoes a violent change of heart. Both before and immediately after the election, and again on Tuesday, Herr Mende swore that his party would not go into coalition with the Social Democrats. Some further blows from the east might compel him and the Christian Democrats to reconsider admitting the Social Democrats into their confidence. But, until those blows fall, the business of government will be conducted as far as possible in agreement between the Christian Democrats and the Free Democrats. Dr Adenauer has declared that he is ready to collaborate, and a first post-election meeting between the two party leaders was thought to be imminent when *The Economist* went to press.

BUT this week Herr Mende dramatically raised the price of co-operation. Before and immediately after the election he had said that the Free Democrats would prefer to serve under a chancellor other than Dr Adenauer: Herr Erhard, or Herr Krone, or Dr Gerstenmaier, would be acceptable. After meeting his parliamentary party on Tuesday, Herr Mende announced that the Free Democrats would not, on any condition, serve in a government led by Dr Adenauer. Remembering Dr Adenauer's tergiversation over the federal presidency in 1959, the Free Democrats, Herr Mende declared, viewed with the utmost suspicion the suggestion that Dr Adenauer should continue as chancellor only for "a certain period" at the end of which Herr Erhard would take over.

Between now and October 17th the principal players in the game of in and out will be attempting in countless conspiratorial huddles to ease the deadlock. Herr Mende's refusal to play vice-chancellor to Dr Adenauer has been too emphatic to be wholly bluff. So it is possible that, for the sake of an interim solution, and with an eye on their rising stock, the Free Democrats might abstain from voting against Dr Adenauer next month and thus (in one of the later ballots, when a simple minority suffices) admit a Christian Democratic minority cabinet. But the instability that would follow such an arrangement is hardly compatible with the Free Democrats' election call for a more representative government capable of dealing robustly with the alarming times that everybody sees ahead.

How far the Christian Democrats are bluffing is at the moment obscure. But bluffing they certainly are. There is something fishy about their executive committee's unanimous vote on Tuesday, given the amount of open grumbling that has been going on for so long in the party at the prospect of another four years of octogenarian domination. Do the Christian Democrats really believe they have nobody else qualified to direct the Federal Republic's

policy as a whole? They are in considerable confusion. When, at his last pre-election press conference, Dr Adenauer vigorously denied rumours of his impending retirement and said nothing about a successor, Herr von Hassel, a deputy party chairman and head of the Schleswig-Holstein Land Government, butted in to remind the journalists that eventually Herr Erhard would be taking

Heir-presumptive: Dr. Erhard

Arbiter: Herr Mende

over. In the early hours of Monday morning Herr Gerstenmaier, the president of the Bundestag and a man of high ambitions, remarked to reporters that the result of the poll would mean the formation of a coalition government whose chancellor would not necessarily be Dr Adenauer. Almost simultaneously Herr von Hassel was atoning for his earlier impetuosity by proclaiming that the next chancellor would undoubtedly be Dr Adenauer. Herr Mende and his coalition committee are in for an enjoyable time during the next three weeks, delicately exploiting the differences and resentments within the long-established governing party.

Herr Ollenhauer, the Social Democrats' party chairman, was expected to call upon the federal president, Dr Heinrich Lübke, on Friday in order to tell him what the Social Democrats would like to happen next. This is that the Berlin crisis makes it expedient to form a national government from all three parties—yet another dream government without Dr Adenauer. But the other two parties will not advise a national government. Herr Lübke's influence as federal president—he took over reluctantly two years ago as a makeshift for the defaulting Dr Adenauer—is still in the stage of development, and still indeterminate. A Christian Democrat himself, and Dr Adenauer's former minister of agriculture, Herr Lübke will surely find it interesting, if at moments embarrassing, when old cabinet colleagues come to discuss the merits of his former chief. The Basic Law rules that the president shall first propose a chancellor to the Bundestag, but only once; and the vote on the president's motion is taken without discussion. Should the president's nominee be rejected the Bundestag must itself nominate and adopt a chancellor within fourteen days. Should no chancellor thus emerge, the candidate with the most votes will be accepted, if the president approves. But the president can object and call for a new general election.

WEST GERMAN ELECTION RESULTS

		1961		1957		1953	
Parties	Votes	%	Seats	%	Seats	%	Seats
Christian Democrats	14,239,894	45·3	241	50·2	270	45·2	244*

* With Zentrum Party.

THERE are several explanations for the decline in Dr Adenauer's popularity. His great age is understandably one. It is not that—as the Social Democrats have been putting about since August 13th—he is by any means so senile as to be already imperilling the state. It is that Dr Adenauer, spry as he is still, tires nowadays more quickly and more markedly than he did four years ago, and that the majority of last Sunday's voters hold, with Herr Mende, that so old a man is not qualified physically to head the government for another four years. A smaller but substantial number of west Germans have also come increasingly to doubt whether Dr Adenauer is mentally flexible enough to adjust himself to the tasks ahead. They are disappointed by the progressive cementing of the division of Germany over the last twelve years, and alienated by Dr Adenauer's unrepentant zest for party strife. Among the Bundestag deputies who will elect the chancellor next month will be those—and they include cabinet ministers, party leaders and senior committee men—who not only share these misgivings, but also have themselves felt excluded from information and from a say in things through Dr Adenauer's habit of working mainly with a very small group of old, not always happily chosen, confidants.

A larger number of west Germans than ever before have, it seems, seen in voting for the Free Democrats a relatively gentle way of countering the disadvantages of unqualified Christian Democratic rule and the personal failings of Dr Adenauer. So much has been made of the youthfulness of Herr Brandt (47) that it is often overlooked that Herr Mende is three years younger. And although the distinctions between the two parties' domestic and foreign policies are largely obscure, the Free Democrats are reputed to be interested in such good causes as improving west Germany's relations with Poland and reducing state spending. Nobody anticipates that a coalition government under a new chancellor would greatly change the general trend of policy in any field. The Free Democrats, being a shade or two less enthusiastic than the Christian Democrats about the west German commitment to the West, and appearing to be more practically concerned about reunification, have, perhaps, a special appeal to the more nationalist-minded Germans. But there is no extremism in the wind. None of the small parties that harbour the fanatics did well enough last Sunday to win a seat in the new Bundestag. In the first Bundestag there were ten parties: in the second there were six: there were four in the third. Only three parties will sit in the new Bundestag. The neo-nazi German Reich party has never done so badly.

Grief and Realism in Cairo

FROM OUR MIDDLE EAST CORRESPONDENT

THE news of Mr Hammarskjöld's death has been received here in Cairo with grief, anger and anxiety. The name of the late secretary-general has been respected in Cairo to the point of reverence ever since the Suez crisis. The speed and completeness with which the invaders then withdrew from Egyptian soil are attributed in large part to his stout and energetic insistence on the fulfilment of the General Assembly's resolutions, and he is also given the lion's share of the credit for the United Nations Emergency Force, which, in the words of an obituary in a leading Cairo newspaper, "has shielded Egypt from Jewish incursions."

The recent United Nations action in Katanga, of which the UAR government wholly approved, went far towards blotting out the memory of the disagreements early this year when the failure

WELL INFORMED CIRCLES

De La Rue is a many-sided organization. Every facet reflects the clear-cut vision of a young, highly trained management. Whichever way you look at it, the world-wide expansion of De La Rue has been spectacular. Well-informed circles need no further clues to verify their prediction that the company's future is equally bright.

We sell Overcoats for every occasion

The export tycoon cooling his heels in the Kremlin's corridors will appreciate the warmth of this fur lined overcoat. For the man about London we have snug formal-cut Chesterfields; our Raglans and "shorties" are equally at home in town or country; and requests for Inverness Capes do not disconcert us in the slightest. Indeed we have been specializing in fine quality ready-to-wear overcoats of every type and description for upwards of 100 years. Prices from £22.15.0.

Open Thursdays till 7p.m.

Interested tycoons may like to know that the overcoat illustrated is lined in musquash with a beaver collar and costs £140 (or can be hired).

IRELAND

—where new export industries get maximum help

New industries exporting from Ireland are eligible for substantial non-repayable grants. These can, in some cases, amount to the full cost of the site, the premises and the training of workers, and half the cost of equipment. This is just one of the overwhelming advantages that are attracting more and more new industries to Ireland. Others include:–

Freedom from Tax: NO income tax, NO profits tax for 10 years on profits from new industrial exports from Ireland, plus 5 more years of reduced taxation.

Labour: All the workers you need — at reasonable wage rates.

If you would like two informative booklets write to:

THE INDUSTRIAL DEVELOPMENT AUTHORITY OF IRELAND

AN EXHIBITION AT THE IRISH EXPORT CENTRE

235, Regent Street, London, W.1. Sept. 20–23 10 a.m.–5 p.m.

Mr. Gerard MacCarthy, representative of the Industrial Development Authority is at the exhibition and will be pleased to provide further information on what Ireland can offer your industry.

of the UN to support Mr Lumumba was bitterly denounced here. That quarrel is all the more easily forgotten since it is now generally conceded that President Nasser acted overhastily in withdrawing his troops from the Congo, if only because it deprived him of the only means of exerting influence there.

The anger arises from the strong conviction that Mr Hammarskjöld's death was directly or indirectly the result of imperialist intrigue in Africa. The first official statement here said forthrightly that colonialist policies were "responsible for shedding the blood of the secretary-general."

Unofficial reactions go further and reflect the chronic local belief that conspiracy is afoot. As soon as the news became known foul play was talked of. In the general view Mr Hammarskjöld's death fits too neatly into what are supposed to be the plans of Sir Roy Welensky and Mr Tshombe. Suspicion was aroused, too, by the long delay in finding the aircraft wreckage less than eight miles from the airfield where it was to have landed. Thus a myth is already growing up which any number of inquiries will be unable to scotch completely. Britain, because of its obvious displeasure at the United Nations attack on Katanga troops, is being cast by public opinion in the role of accessory, before or after the fact according to taste.

ANXIETY arises from the awareness that the problem of finding a successor to Mr Hammarskjöld in the present critical state of the world is both urgent and likely to present appalling difficulties. It is thought certain that Mr Khrushchev will exploit this heaven-sent opportunity to push his troika plan by the simple expedient of blocking any other solution. President Nasser has taken no clear public stand on this issue, but it is known that he dislikes the troika plan on principle. Mr Khrushchev's proposal flows from the assumption that there exists a third block of neutralist nations analogous to the eastern and western blocks. President Nasser, like Mr Nehru, has always rejected that view. Still, the certainty that the issue will be thrown open to public debate in New York is causing uneasiness here; this is just the kind of east-west quarrel in which President Nasser, like other neutralists, dreads having to take sides. At the same time, he cannot wash his hands of it without having his pretensions to world standing called in question.

The uneasiness in Cairo on this subject arises from two fears: first, that the debate will be acrimonious and may raise east-west tension dangerously; second, the unity of the non-aligned powers painfully born in Belgrade last month is threatened by a new dispute which was not foreseen and therefore was not discussed. Although the representatives of the non-aligned powers left Belgrade with an agreed statement in their briefcases, agreement was only reached with great difficulty. On one side, Ghana, Guinea and Indonesia, with Cuba and Afghanistan in general and often somewhat freakish support, argued that the whole gamut of national grievances should be spelt out. India and Burma offered strong resistance. Marshal Tito and President Nasser came down on the side of moderation, and the final resolutions embodied general principles instead of (with the exception of Guantanamo) specific grievances.

Depressed as Cairo is at the prospect of another hard-fought debate among the non-aligned powers, this time on the question of Mr Hammarskjöld's successor, all the indications are that President Nasser will continue to pursue a moderating course, leaning towards the Indian position rather than the Ghanaian. The spirit of Casablanca, the most militant expression of non-alignment, has been diluted in recent months, partly by the wrangling between Cairo and Accra on the subject of an African high command, and partly by President Nasser's disappointment at the failure of Morocco to provide troops for the defence of Kuwait. Another sure indication that the UAR delegation at New York has instructions to walk warily is that the Cairo press is already warning its readers not to expect fireworks on the subject of Israel. With the new wind of realism blowing through Cairo, the UAR government is beginning to limit itself to goals that are practicable.

A Fresh Mandate for Mr Karamanlis?

FROM OUR CORRESPONDENT IN ATHENS

WHEN the international situation reaches the stage of nuclear oversimplification it tends to influence not only a general election, such as is to be held in Greece on October 29th, but even the everyday political mentality of the Greek man in the street. When a month ago Mr Khrushchev made his notorious crack about the atomic annihilation of "olive groves and the Acropolis" he probably never realized in what a personal way he had touched Greek susceptibilities. Perhaps the psephological effects of this and the many other blunders committed recently by the communist block towards Greece will become more obvious after the general elections.

It was the present international tension more than any other single factor that induced Mr Karamanlis to speed up the elections by some seven months. To do this his closest advisers had to argue him out of his perfectly legitimate ambition to carry on for his full four year term. But there were two leading considerations against this, one affecting the nation, the other his own party, the National Radical Union, which has now been in power for nearly six years.

The likelihood that the world crisis would demand bold and determined leadership in Athens made it necessary to have a government with a fresh popular mandate; and the prospect of tension, coupled with the recent attempt of the communist block to intimidate the Greeks, strengthened the possibility that Mr Karamanlis's party, because of its homogeneity and solidity, would be returned with a renewed mandate. The Soviet attitude has also had another effect on Greek politics. The nationalist parties of the centre were so much at sixes and sevens that they could easily have been enticed into a popular front with the Greek communists. But the Greek reaction to the communist campaign of intimidation has been so indignant that this possibility has now been largely offset.

Until a week ago the political forces in Greece were roughly polarized between Mr Karamanlis's party and the solid, well-disciplined pro-communist EDA party. Between them lay a multitude of splinter groups which for several years have been wallowing in an unparalleled state of confusion. It was across this blurred horizon that General Grivas's chances of a political career suddenly, like a bright shooting star, flashed and sank within the space of ten months. The parties of the Centre lost precious time searching for a regrouping which might one day spare Greece the dilemma of a limited choice between "Karamanlis or EDA." This week they made a frantic last minute effort at compromise. On Tuesday they announced

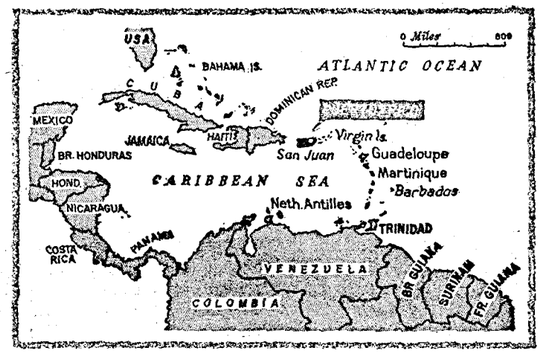
Mr. Karamanlis: four more years of power?

that they had founded a "Centre Union." The formula employed to reconcile individual ambitions—the main obstacle to a pure and simple merger under one head—was to set up a committee of eight leaders among whom Mr Papandreou, the Liberal ex-premier be *primus inter pares*.

The Centre Union party now comprises mostly the former deputies of the Liberal party with certain right and left wing appendages. The Liberal party has been defeated in all Greek elections since 1952. This is why the future position of the small Progressive party under its dynamic leader, Mr Markezinis, may tip the balance, not perhaps in the electoral contest but at least by adding a novel flavour to a party now aspiring to rally its own votes, the votes of discontented former supporters of Mr Karamanlis, and above all the numerous non-communist partyless votes which gave the pro-communist EDA second place in the parliament elected in 1958.

The failure of the Centre to achieve structural unity may arouse mistrust among its own supporters. These may grumble against the Karamanlis government, but having become accustomed to the blessings of political and economic stability, they might hesitate to bring to power a mosaic of the Centre which, as so often in the past, might disintengrate into its component parts after its electoral victory. What they need apparently is a guarantee of continued unity which has not yet come from the Centre Union.

Mr Karamanlis and his advisers could hardly have chosen a better time or devised a better set of circumstances for their party, which after six years in power would normally be suffering from wear and tear. Yet if what is at stake on October 29th is the future of Greece rather than the next four years, many Greeks are filled with forebodings at the possibility that another defeat of the centre forces would leave Greece, when it came to an emergency, with none but a communist alternative to its present government.



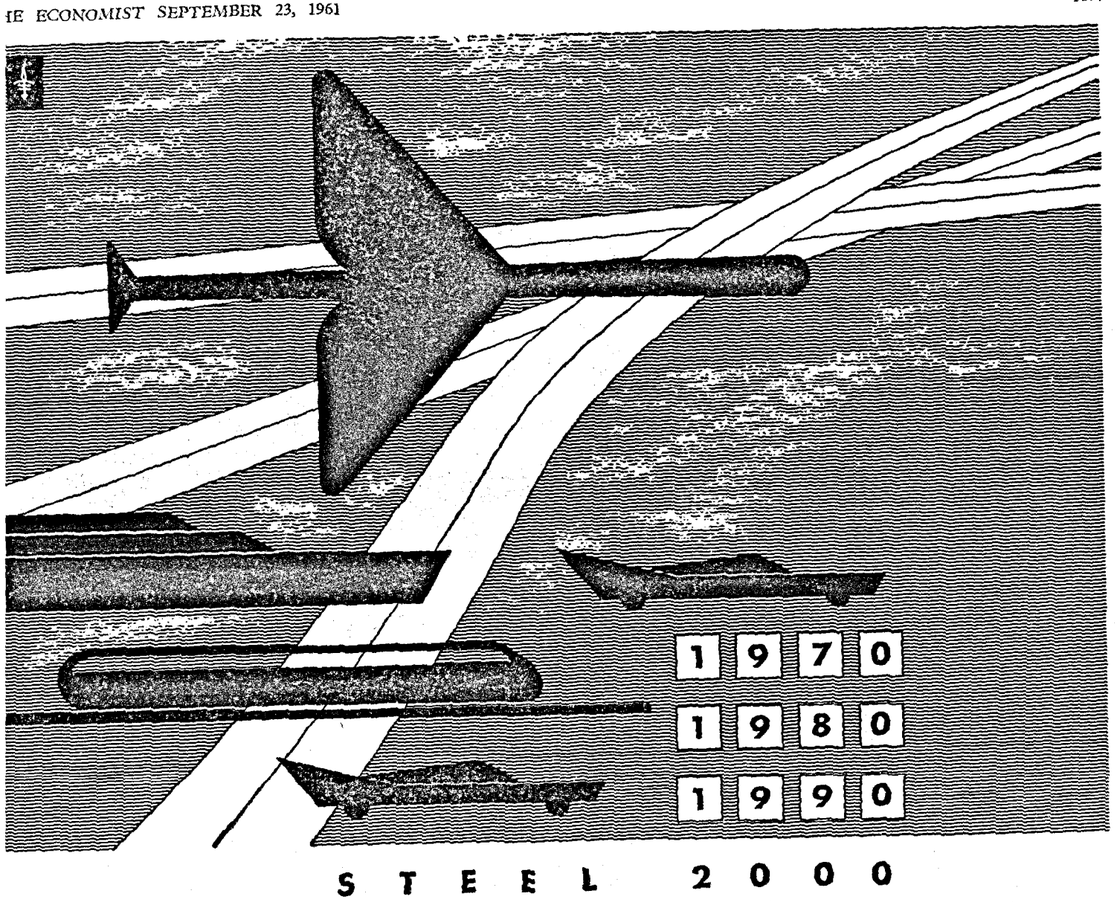
New Caribbean Club

FROM OUR SPECIAL CORRESPONDENT

A MINOR but odd anachronism ended a couple of weeks ago when the fifteen-year-old Caribbean Commission was reborn with a new name and a more up-to-date membership. On September 6th, at San Juan in Puerto Rico, the four members of the commission—France, Holland, Britain and the United States—held their last meeting, followed immediately by the first meeting of the Caribbean council, the governing body of the new Caribbean Organisation which is to come into formal existence next year. Of the four old members only France, by virtue of the status of Martinique, Guadeloupe and French Guiana (which are departments of metropolitan France), claims full membership of the newly refurbished club: the other three will now be represented by observers only. The new members will be Puerto Rico, the American and British Virgin Islands, Surinam, the Netherlands Antilles, the West Indies Federation and British Guiana.

The conference ended on September 15th with all its main decisions effectively postponed. Nobody seemed at all clear what the Caribbean Organisation is expected to do, and the size of its first annual budget—$378,000—suggests that it is not expected to do very much. Its declared objective is to foster economic and social development in the region, and this met with general expressions of goodwill. But during the conference some sharp differences of emphasis made their appearance. The Dutch (who were the best prepared of the delegations) visualised the evolution of an eventual common market between the territories. The Puerto Ricans hoped simply to show the rest what intelligent development could do. The British territories hoped vaguely for a sort of Colombo Plan. The French were clearly suspicious of the whole thing, and their delegates wasted a great deal of the conference's time with punctilious argument over almost every one of the draft rules.

Nevertheless, it was the French who had prepared, with the aid of a young economist detached from the Commissariat du Plan, the document that came to be known as the draft Caribbean plan. In fact, this was not a plan at all, but an incomplete survey that led only to the conclusion that 1.8 million jobs ought to be provided in the area by 1975. The Dutch were the most anxious to put some teeth into the draft, and the final agreement to set up technical working parties, and to hold a further meeting at Georgetown next spring, is a partial victory for their point of view. Another Dutch triumph was the recognition in the final communiqué that the plan, when approved, should not only cover the promotion of industry, tourism and communications, but should



also concern itself with tariff adjustments between the territories as a means of stimulating regional trade.

Even the plan's most ardent sponsors do not suggest that the new organisation should be given any executive authority. Detailed planning and its carrying out will remain the responsibility of the member governments; the organisation will merely provide a forum for discussion and study. The difficulties that the West Indies federal government has been having in reconciling the viewpoints of its own territories have been shown up bleakly by the negative result of last Tuesday's referendum in Jamaica. Without Jamaica the whole future of the federation is in jeopardy, and effective co-ordination with the non-British territories would be far beyond the resources of the Caribbean Organisation.

Every delegation expressed the hope that somehow the organisation would bring more external aid into the area, though none would give it the power to allocate such aid. Conceivably, the organisation may be able to press for help from the United Nations and other sources of assistance, but such pressure would have to be exacted in the most general terms. The old commission had once applied for recognition as a specialised agency, but had been turned down; there was no suggestion at San Juan that this application should be renewed. While the older independent republics in the area remain outside the club, the organisation cannot be called truly regional, and this is a serious stumbling block to recognition.

Some of the delegates to the conference suggested privately that Haiti, the Dominican Republic and even Cuba should in time be invited to join. But there is no chance of such invitations being issued in the near future; in particular, Cuba is unlikely to be accepted either by Puerto Rico or by the West Indies Federation, whose delegates constantly made reference to the part the organisation might play in stopping the spread of communism. The shadow of Dr Fidel Castro hung over many of the discussions, and Mrs Janet Jagan of British Guiana was perhaps the only delegate who was not intimidated by it.

STEEL 2000

By the year 2000, the world population will probably have grown from 2.8 billion to more than 6 billion *). The net of communications connecting cities, countries and continents is growing tighter and tighter.

From the construction of bridges to radar-towers, from motor-vehicles to ocean liners, from crank-shafts to jet engines, steel determines progressive communications techniques.

On the road to the year 2000, communications, like all other important fields of civilization, will have an immensely growing requirement of steel.

In 1960, about 350 million tons of steel were produced throughout the world. Experts estimate that world requirements of steel will rise to between 1.5 and 2 billion tons. This huge demand for steel calls for world-wide cooperation.

During the last decade PHOENIX-RHEINROHR increased its annual production of crude steel from 1.5 to 3.2 million tons. Intensive long-range research and planning characterize our work for the world-wide markets of the future. Our most important products: pig iron – semi-finished products – sections – steel tubes and tubular goods – plates and plate products – clad plates – SICROMAL- and RHEINROHR-special steels. One of our subsidiaries, PHOENIX-RHEINROHR-INTERNATIONAL, Düsseldorf, Thyssenhaus, delivers pipelines, refineries, fertilizer plants and water supply systems.

All steel users trust this brand:

PHOENIX-RHEINROHR AG VEREINIGTE HÜTTEN- UND RÖHRENWERKE DÜSSELDORF GERMANY

THE BUSINESS WORLD

Congress in Vienna

Touch and Go at the Fund

FROM OUR SPECIAL CORRESPONDENTS IN VIENNA

THE Vienna meeting of the International Financial Organisations has been a tense and tricky one—twenty-four hours before the meeting ends the outcome is still in the balance—but perhaps the most notable feature has been its sober mood. As the big shots of finance ascend the great stairway of the Hofburg Palace under the coldly contemptuous eye of old Franz Josef and work through the social round that takes in the Habsburgs' other remarkable essays in capital formation, the delegates as a whole keep firmly to shop. This is a meeting that has *something to do: to strengthen* the International Monetary Fund sufficiently to protect the world exchange system against the risk of breakdown. The need for such action is no longer seriously questioned. This is a remarkable transformation from the mood of the Washington meeting only a year ago, but since then there have followed, in quick succession, a flare up in the gold market, an attack on the dollar and, when this was fended off, an upheaval in European exchanges with the biggest-ever run on sterling.

The bankers have been chastened in another way by all the threatening and swift-moving events in international politics—with the tragedy of Mr Hammarskjöld bursting upon the meeting on its first day. No one feels sure what side effects these adverse turns in the political prospect will have on schemes for international financial co-operation between the countries outside the Soviet block; but, equally, no one can put the overriding politics out of their minds. The nuclear holocaust, so a conference story goes, left just two people alive on the globe, and Dr Jacobsson was saying to Professor Triffin: "I still think your scheme is too revolutionary." Certainly the monetary conservatives and those who make a fetish of national sovereignty look increasingly outdated; and the vacuum at the United Nations contrasts sharply with the growing strength and influence of its specialised agencies, the Fund and the World Bank. Simultaneously, both these organisations have reached a new stage in their evolution.

The main emphasis of the Vienna conference has been directed to the Fund's problem. The trouble in simple terms is that, once again, the Fund is running out of money. After an active year of lending, which involved drawings equivalent to $2,500 million, the Fund's effective resources are very low. Drawings by twenty-one primary producing countries totalled together around $1,000 million, but Britain alone took up $1,500 million. This emphasises again the great disparity between the needed size of stablisation credits for different kinds of currencies. Clearly the Fund would be quite incapable at present of meeting a drawing by the United States, and it is for this that the new facilities are primarily designed.

THERE has not been any serious thought of an early increase in quotas. The 50 per cent increase arranged three years ago has been successful, but it required a formidable amount of formal negotiation and has yielded relatively small results in the form of currencies that the Fund wants. The emphasis now is on a selective increase in resources through a new form: borrowing. An existing article of the Fund, article seven, already gives authority for this, and the Fund was not formally obliged to seek the sanction of the Board of Governors (the finance ministers and central bankers). In some countries, however, legislation is necessary to permit such lending to the Fund, and Dr Jacobsson concluded at an early stage that borrowing should not be left to be done *ad hoc* but should be arranged through an agreed scheme. As he pointed out on Monday, universal experience is that the assurance of a line of credit itself effectively wards off actual drawing on it.

Dr Jacobsson's aim has therefore been to get agreement in principle among the governors at Vienna for an adequate line of supplementary resources on which the Fund can draw. He has tried to meet some of the reservations by the French and the Dutch, in particular, without compromising the vital elements in the scheme; and his lobbying has been backed up by a major effort by the United States delegation. The Chancellor, as befitted the spokesman of a country that has been by far the biggest borrower at the Fund, stood diplomatically in the middle of the seesaw.

The argument ranges over three main matters—what say the creditors should have in the granting of certain credits; the amounts of the credits; and the limitations on their use. The aim is to get total credit lines equivalent to $5-6 billion. The United States would commit itself to $2 billion, the

European Six (or rather five, without Luxemburg) to some $2½ billion, and Britain for $¾-1 billion. Other possible participants are Canada, Sweden, Japan and Austria, though Mr Fleming has stated that Canada can undertake no commitment at the moment. One rumour to be heard in Vienna is that there may even be special arrangements to draw off surplus money from the Swiss; the World Bank has found that Switzerland's non-membership is no barrier to its raising money there, and the same should be true for the Fund.

Confident assurances that the Americans had everything sewn up looked distinctly less convincing on Wednesday morning after an inflexible speech from France, delivered not by M. Jaques Brunet, who is France's Governor for the Fund, but by M. Wilfred Baumgartner, the French Finance Minister. In a cold speech he asserted his role as the apostle of monetary order. He made no attempt to hide his distrust of the Fund. This year's co-operation among the central banks had been very successful; if a second line of defence for the industrial countries is needed, he said, this could eventually be arranged outside the Fund. France recognises that there is no alternative to the gold exchange standard—and that is why France "could possibly go a little beyond its present outlay, but under certain conditions."

M. Baumgartner intimated that France was not alone in Europe in its reservations. This was soon borne out by Doctor Holtrop, the widely respected President of the Netherlands Bank. His reflective and original analysis of the present exchange system, which leads him to conclude that in one sense our current troubles arise from excessive liquidity, will be discussed long after this conference has dispersed. He pulled no punches about the contentious matter of safeguards:

> The lending countries when the Fund should make a call on them shall have the opportunity, by a collective judgment, to confirm that also in their opinion the special emergency, for which the additional resources have been set aside, has indeed arisen.

The real point here is not consultation—it is inconceivable that the Fund would attempt to use the currency of any member country against its wishes. It is that the creditors are to get together by themselves and then inform the Fund management whether or not it can have the money. The authority of the Fund and of its managing director will not be enhanced by this procedure. For Germany, however, Dr Blessing, while laying first emphasis on domestic adjustments and monetary discipline, threw his weight behind the Jacobsson plan at the key points. He favours "firm commitments"; lending countries should be "fully consulted"; and, while the borrowing powers are intended primarily for support of key currencies, they should not be automatically ruled out for other purposes. Signor Carli of Italy spoke helpfully and with wisdom: "It would be a mistake to indulge a sentimental predilection for the monetary systems of a now distant past."

Provided the hoped-for statement of general intent does materialise at the end of the meeting, the next step would be for the executive directors to work out a detailed scheme, and submit this to the governors by mid-December. Those countries that need to pass legislation to make the scheme effective would then be expected to do so in the course of next year. Dr Jacobsson seems to have few worries about the United States Congress: Mr Dillon himself has indicated that the United States balance of payments is likely to show the deterioration normally associated with a domestic boom, and in six months' time Congressmen may be positively keen to get the scheme launched. There will be a gap of many months during which the Fund's capacity to lend will be pretty low. But it is now likely that special credits will be granted by Germany and Italy in advance of the multilateral scheme, to replenish the Fund's depleted holdings of marks and lire.

Undoubtedly it has been a chilling experience to find that even these moderate proposals have been so difficult to steer through the necessary channels; plainly there is no hope at all at present for any really radical schemes. No one in Vienna questions that Dr Jacobsson is getting the biggest advance that is immediately practicable; yet clearly there is a danger that what emerges from these discussions may be inadequate. But there is a positive side, too, that should not be ignored.

In many ways the past year has seen a major advance in international credit arrangements. When Mr Selwyn Lloyd suggested at the Fund meeting in 1960 that drawings from the Fund should henceforth be in the currencies of surplus countries, this was a new doctrine. Now, a year later, it is a commonplace. Drawings have been made in eleven different currencies, including Japanese yen; Italy has exported capital by lending not only to the IMF but also to the World Bank. Now a scheme is under way which is at any rate geared entirely to the use of the strong currencies; and one that will cater for rapid turnrounds in surplus or deficit positions.

The argument whether the International Monetary Fund creates reserves has always been rather academic; now, if there is adequate assurance that the Fund can raise the resources to honour the quotas, there will be a strong case for counting them among effective monetary reserves. On the assumption that all members were eligible to purchase 100 per cent of their quotas, drawing rights in the Fund amounted to the equivalent of $18.1 billion at the end of 1960—almost as much as the total of all foreign exchange reserves held by national monetary authorities. Arrangements for credits from surplus countries would give the Fund's operations more of a genuine banking character. They represent a broadening as well as a strengthening of the gold exchange standard—and a gold exchange standard at its broadest does, after all, incorporate many of the principles of an international clearing.

The present plan is therefore one step towards a new system as well as a bolstering up of the old. The important task now is to get the plan through and then to accentuate its forward-looking features. It would be an obvious help if one started giving IMF money a name; and if Germany lends marks to the Fund, could these not be passed on as IMF units, which could be freely transferred, so economising in the Fund's resources and forming the basis of a world currency? There is much to be said, too, for centralising dealings in gold between central banks in the International Monetary Fund. Certainly one is bound to wonder how long the link of all currencies to gold can be pivoted simply on a unilateral undertaking by the United States and an informal market understanding with the Bank of England.

There has been no sign of complacency at this year's meeting. The monetary conservative of today differs from the radical not so much in his analysis of present weaknesses as in his inborn feeling that sound financial principles must involve an unavoidable element of retribution for the backslider. Gold, the dollar, and the pound: fears about all of them form the undercurrent of the Vienna discussions. One growing fear this week has been that the new scheme may be compromised not so much by its arithmetical limitations as by the want of enthusiasm of some countries for it. Every grouse against the "burden" of putting sterile gold into interest-bearing, gold-guaranteed and readily encashable paper dilutes the usefulness of the credits agreed. The United States now realises in full its own direct interest in a smooth flow of world payments; must one wait for the next run on the franc to prick the indifference of the Europeans?

A fanatic, as Mr George Ball reminded the conference on Tuesday, has been defined as a man who redoubles his efforts when he has forgotten his aim. One must not become a fanatic about international credit, either a conservative fanatic or a radical one. The best credit scheme does not remove any of the need for adjustments in domestic policies, nor should it dam up indefinitely necessary adjustments in exchange rates. The bankers' job, internationally, is the limited but crucial one of ensuring that credit or the lack of it does not get in the way.

Mr Black's Two Hats

In fifteen years under Mr Black's leadership the World Bank has made a prodigious contribution to economic improvement. It now faces problems of its own success. In the year to June the Bank undertook new loans of $610 million; the previous year's figure was $658 million. Of its total disbursements of $4,320 million to June, $1,452 million had already been repaid or sold by the Bank to investors. These figures might almost suggest that the Bank is reaching its zenith at an age when most financial institutions would be in their infancy.

Most of the reasons for this stem from the fact that the Bank has from the first been a commercial operation and will remain so. Its interest charge, slightly reduced last year to 5¾ per cent, is close enough to market rates to deter some would-be borrowers. Again, genuinely bankable projects are becoming increasingly scarce, particularly in countries that have already borrowed quite enough abroad to service from their unimpressive foreign earnings. Mr Black, though wise and liberal in his banking, has long been anxious about this.

But the significant fact to emerge from this Vienna meeting is that Mr Black is becoming less of a banker and more of a universal uncle in economic development. A short and remarkable achievement in the bank has convinced him that commercially-based lending operations that merely scratch at a gigantic surface of want are unavailing for the needs of many of the developing countries. On the India and Pakistan Consortium he says "too much of the capital will be provided on terms that bear too heavily on the balance of payments of the recipients." An enquiry by the Organisation for European Economic Development found that more than half of the official capital provided to underdeveloped countries in 1956-59 was made in outright grants; and the United States and France provided nine-tenths of this uncommercial credit. But the ratio of hard credit is now increasing again, and if development is to go on moving ahead, aid will need a greater component of funds by grant or on terms comparable to IDA's.

This young lady (International Development Association for the precise) began her operations in November last year and has made six advances of $137 million to date. Each of these loans (typical examples are for highways and agriculture to Honduras and the Sudan) runs for fifty years with no interest charges and no repayment of capital in the first ten years. This pattern of lending, not necessarily fixed, may scare some bankers; but it does not scare Mr Black. IDA indeed applies the same tests to an applicant—for example, its readiness to mobilise its internal resources for development—as does the World Bank. Its concession—and it is a big one—is to provide interest-free money for as long as fifty years to countries that would be unable to borrow abroad at all on conventional terms.

Indeed, Mr Black's two hats sport the same band, because IDA is jointly run by the Bank and serviced by its staff. So far IDA's operations have been joined with collateral loans by the Bank—evidently a large element of judgment must govern the apportionment of the two kinds of credit. But some projects would never be suitable for the Bank, such as the municipal water supply that IDA is financing. Already IDA faces a major job of expanding its resources. These are always likely to be short in relation to the amount of capital that would be demanded at zero interest. But they are short in the more urgent sense that India and Pakistan could easily mop up the whole of IDA's present resources, with nothing left over for the many projects that are coming forward from other countries. There were observers at Vienna this week who suggested that the decline of the World Bank's business on commercial terms might not be unrelated to IDA's entry into business on uncommercial terms. But in many developing countries the limits of safe commercial borrowing have been reached; several of them have a pile-up of repayments to make in the next few years and already the service of their external debt is imposing increasing strain on their precarious balance of current payments. The safe and sane way, Mr Black says, of averting financial trouble for such countries is to maximise the flow of official capital provided for long periods and at token interest.

It hardly needs saying that all this was well received by the developing countries. Listening to the spokesman for Pakistan, for example, one caught all the expected echoes—criticism of consortium credits supplied on hard terms; no likely prospect of expanding the foreign exchange earnings of the developing countries; and a demand for a substantial increase in IDA's resources. Increasing IDA's resources will indeed be the cry of the future for the "Part II" countries, who subscribe only 10 per cent in convertible funds and the rest in their own money, usable only with their consent.

Machinery for bigger subscriptions to IDA will involve some statesmanlike engineering on the Bank's part, in addition to much supplementary technical work such as the new development advisory service. Mr George Ball voiced

American recognition of the need for enlarged IDA funds very soon. The British Chancellor of the Exchequer managed to sound less enthusiastic for the idea when he noted that, in spite of our own financial stringency, we had not cut foreign aid: the question of IDA's resources, he suggested, did not seem to be a problem for immediate decision ; we would hope " to be in a position to play our part in enabling it to continue its activities when the time comes " ; but even this was footnoted by the need to take into account the relative capacities of the different members to make additional contributions.

This is clearly the way that much of the aid has to go, with no pretentious undertakings about quick repayment or economic interest rates. But a free-handed, altruistic international exercise of this kind may not be the only means of increasing the total funds that would be available for lending to underdeveloped countries. Private capital is often enough invested in some of them with no serious expectation of return for a decade or more. The Bank is looking into the possibility of insurance for private investment against non-commercial risks and of arbitration in disputes.

Complaints against " commercial terms " will be redoubled if there are significant prospects of plentiful money at an exiguous service. And if, as is only likely, there are plenty of nervous " Part I " capitalists, bankers and taxpayers, they have the proved efficiency and skill of the Bank's procedures of enquiry and assessment in borrowing countries to calm their fears. When bankers turn to lending money for nothing, eyebrows ought to be raised. But this time they have to be raised imaginatively towards the practicalities of an economic job that cannot be shirked.

Stronger Props for Prices?

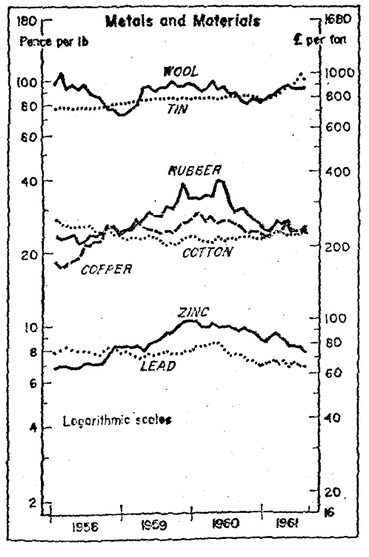
THE Commonwealth sugar agreement aims at reconciling the interests of consumers in this country with the claim of Commonwealth producers for a decent income. A British official who took part in these negotiations some time ago said that the task would be simple but for the producers' double scale of values. The prices they paid were always reckoned to be too high, and those they received were invariably considered to be too low.

If producers then believed that there were two sorts of prices, they will have been strengthened in that belief by the course of prices over, say, the past decade. Since the end of the Korean boom, commodity prices have ebbed steadily in spite of efforts by primary producers to halt the slide: yet the cost of manufactured goods has continued to creep up in spite of all attempts to stamp out inflation by the industrialised nations. Primary producers are therefore paying more for imports of manufactures and getting less for each unit of exports than at any time since the war, while the development schemes which they hope to finance through bigger exports have grown more ambitious.

The idea of a stark contrast between busy industrialised countries self-confessedly pre-occupied with getting rich quick and neglected and miserable underdeveloped states having to struggle increasingly hard for a living seems to have gripped the authors of recent United Nations economic reports. One of the latest claimed that international control of production and exports " remained a possibility still unexploited except for a few products." Officially, it seems the United Nations does not recognise the existence of any sort of stabilisation scheme that has no elaborate mechanism for representing the interests of consumers. Yet the price of several key commodities, including copper and nickel, and to a minor degree also jute and soon, perhaps, wool is partly influenced by the main exporters. The " few products " subject to the full rigours of international agreements sponsored by the United Nations are formidable. Agreements already cover wheat, tin, sugar and coffee. An international cocoa stabilisation scheme awaits ratification, and lead and zinc output is regulated when the occasion demands by voluntary curbs accepted by producer members of the UN lead and zinc study group.

Participation in commodity stabilisation schemes has sometimes been painful, but considerable experience in working them has now been gained. Existing stabilisation schemes do not seem to have brought producers very substantial benefits ; the prices of some of the commodities they affect are among the weakest. *The Economist* commodity price indicator (base 1958 = 100) has relapsed to 93.2 and is now lower than at the beginning of the year. Then western Europe and Japan were booming ; they are advancing still, but less certainly. The long-awaited American economic revival has arrived, but with industrial production in nearly all the dozen or so industrialised countries at or near its peak, commodity prices remain depressed.

Metal prices have been held down by disappointing consumption in western Europe, and if Britain's experience is typical, consumers may wish to reduce their stocks quite substantially. With the exception of the two American companies that have announced the resumption of maximum production, all the major *copper* producers are continuing to keep their output or sales below capacity. Even with a nominal reduction of 10 per cent, there was a prospect of a surplus this year of more than 100,000 tons. Although consumption in the United States has been strong enough to absorb this potential surplus, the relatively small further increase in consumption forecast in western Europe is less likely to happen. The ending of the complete stoppage at all important mines in Chile has exposed the weakness that underlay the market, and this week spot copper slipped to £228 a ton.

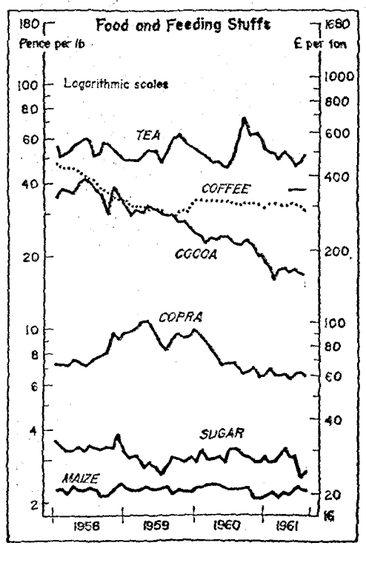


Restriction of *lead* production, and the connected barter deals under which the United States absorbed the surplus lead that producers voluntarily held off the market last year, has not produced the expected rise in lead prices, which at £64 a ton for spot supplies have relapsed to January's level. But the expected decline in *zinc* following an increase in production has occurred, and spot supplies have fallen to £74½ a ton. The price of *aluminium*, which competes with the older metals, particularly copper, has been left unaltered this year at £186 a ton, but nickel was raised £60 to £660 a ton in July, after being maintained at £600 a ton for more than four years by International Nickel, which controls about 60 per cent of the West's supplies and is therefore confident that it will enjoy the wider market that its policy creates.

Tin producers could scarcely conceal their joy at the failure of the buffer stock managers' attempt to prevent the price rising above £880 a ton. They have already seen a rise of £150 to £939 a ton this year, and feel that they have been baulked of still larger gains by the proposed release of metal from the United States stockpile. The vehemence of their denunciation of this American initiative, which may in fact have been inspired mainly by the prompting of the International Tin Council, should strengthen the United States' wish to join the Council and by accepting its decisions shift some of its present unpopularity on to other shoulders.

Fibres have failed to show the improvements this season that had been expected. *Wool's* shaky performance at this month's auctions reflects the sudden worsening of Japan's balance of payments ; Japanese buyers were the main prop when prices recovered earlier this year. Without that support, there is little chance of much further improvement in prices this year. At their peak in May, merino 64's fetched 98d. a lb.; the price has now slipped back to 93d. a lb. *Cotton* growers have been afflicted by storms in the United States and unusually severe attacks by pests in Egypt, but neither the medium staples grown mainly in the United States or the long staples grown principally in Egypt and the Sudan have yet shown any marked response in prices.

Jute has fallen from the unsustainable level of £210 a ton for " firsts " that throttled trade in this fibre in the early part of this year. Supplies of jute from the new crop will be adequate in Pakistan, the main exporting country, and in India, which since partition has made itself independent of Pakistan's jute on which Calcutta's jute mills once depended. In contrast to the restriction of output at the jute mills which was made necessary by the scarcity of jute last season, these mills will be strained this season in absorbing all domestic supplies. The quality of Pakistan's crop is poor and has caused a wider spread between the best and lowest grades of fibre. After falling to £118 a ton, firsts have rebounded to around £137 a ton, but are likely to recede again later in the season.

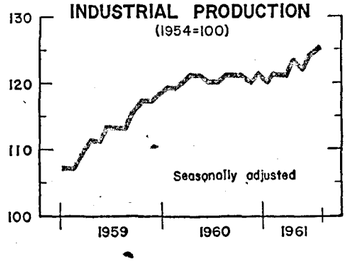


Though the current temporary surpluses of basic materials are not serious if allowance is made for a continuation of the steady rise in consumption, the glut of foodstuffs seems a more intractable problem. More confidence in *coffee* prices will follow the strengthening of the new International Coffee Agreement now under discussion, particularly if the United States becomes a member. But while much of the coffee that is produced is not actually drunk, there can be little hope of a significant reversal of the downward drift in prices. Uganda robustas remain at £143 a ton, compared with £170 a ton last October.

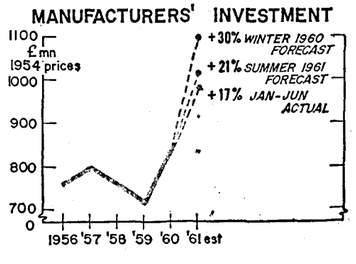
A hefty surplus of *cocoa* remains from the last two crops, and quite a large surplus will probably be left over from the new crop. But the price has remained firm at £161 a ton, and since a stabilisation scheme was first discussed the possibility of its general acceptance has increased perceptibly. The " free " price of *sugar* has not recovered beyond £24 a ton, though the working of the present international agreement is now being reviewed in Geneva, and many delegates would probably support an attempt to regain more effective control of prices during the two years' life of the current scheme.

With so many commodities in distress, Britain's decision to apply for membership of the common market has come at an embarrassing time. Nearly all primary producers, directly or indirectly, have something at stake in these negotiations, and their fears are magnified by the failure of a high level of production in the industrialised countries to guarantee them a satisfactory price for their exports. Many of these primary producers feel outraged by the adverse turn in their terms of trade, which have run in favour of the industrialised countries ever since the elimination of post-war scarcity.

When farmers in industrialised countries are frustrated in this way, they usually have ample opportunity for letting off steam at price support discussions, or even have the occasional opportunity to shy a rotten egg or tomato at an official representative. But primary producers seldom have such an opportunity. The result is usually to embitter trade discussions or to encourage excessive optimism among them over trade with the communist countries, which buy a narrow range of commodities in a small number of markets and thereby make a greater impact politically than the volume of their imports would seem to warrant. After years of refusing to consider the merits of stabilisation schemes seriously, the American government appears to have decided now that support for these agreements is a sound political policy, even where there are lingering doubts about the economic wisdom of interfering with prices. If the United States goes beyond its present announced intention of considering membership of the international coffee and tin agreements, price support schemes would be given a timely shot in the arm ; confidence in their effectiveness has been given a severe jolt this year.



BUSINESS NOTES



THE ECONOMY

One-legged Expansion

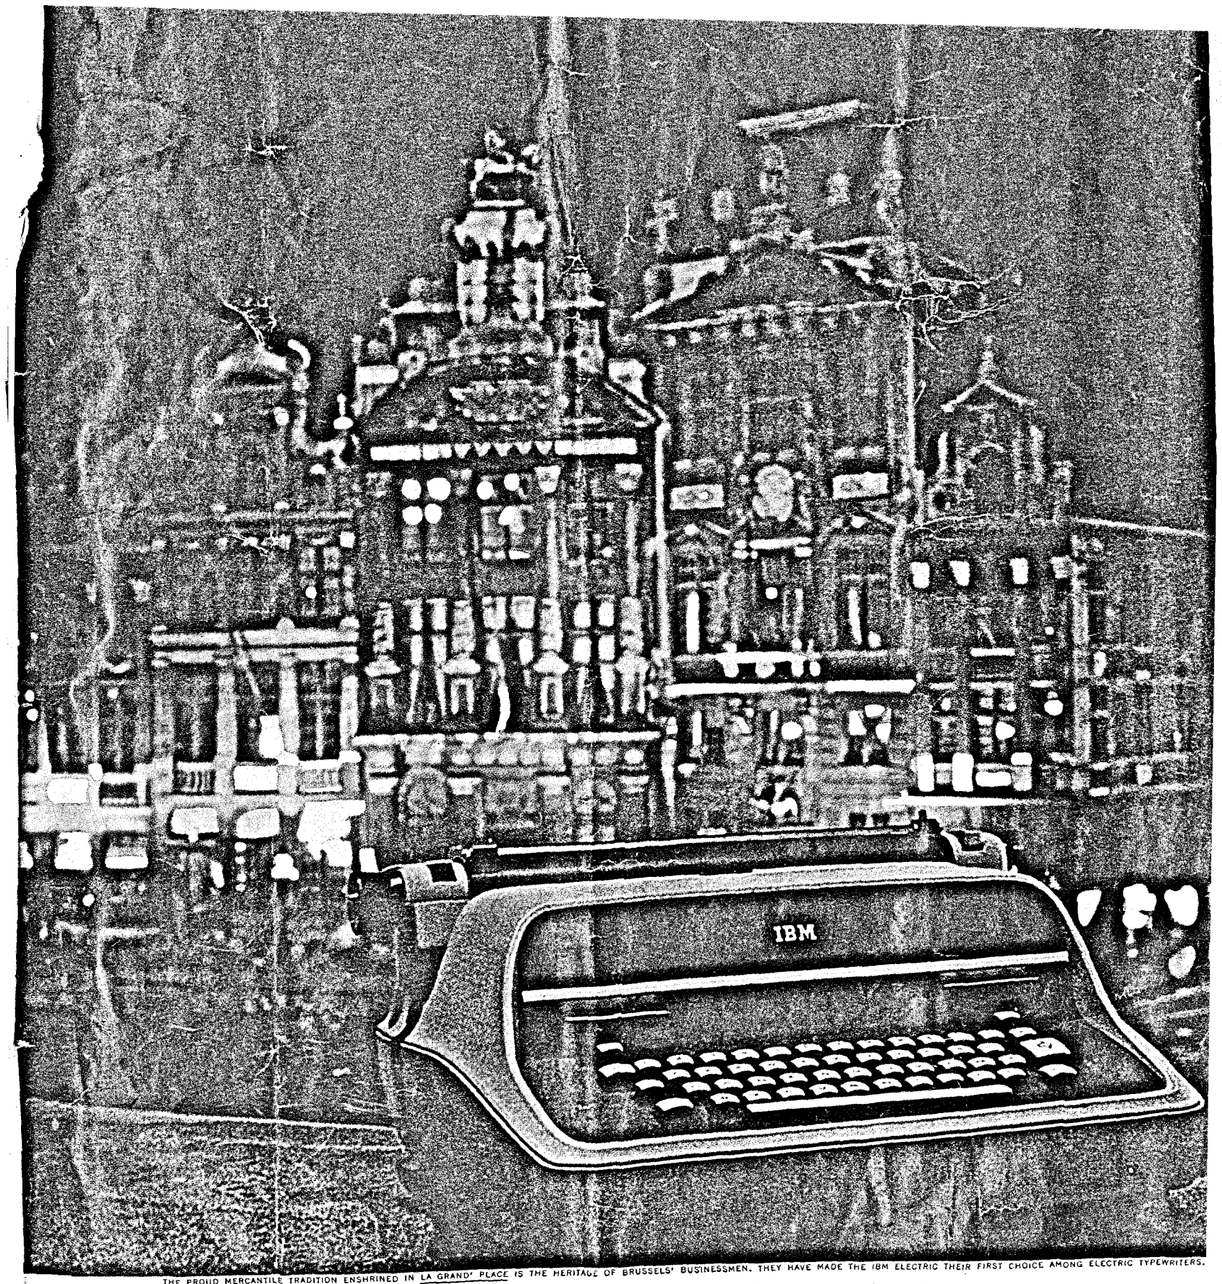
When the Chancellor was devising his measures two months ago to restrain Britain's demand for other countries' output, almost all available evidence pointed to the continuing stagnation of this country's own industrial production. In fact, at the time it had been rising. By July, figures published by the Treasury this week show, industrial production was about four per cent higher than at the beginning of 1961, allowing for the purely seasonal differences that can affect rates of output between different months, and manufacturing output was about five per cent higher. Previous calculations for certain of the earlier months of the year have also now been revised upwards, with the result that for the second quarter as a whole production is now reckoned to have been about two per cent larger than during the first quarter. As manufacturing employment has remained approximately level during these six months, this has meant some slight, though wholly welcome, increase in productivity—in direct contrast with the record of the previous twelve months or so.

This is not quite so fast a rate of growth as in the same months of 1959, when the British economy was last undergoing a bout of expansion. Nor is it quite so broadly based. Significant gains in output so far this year have largely been confined to the engineering and construction industries—generically, the capital goods suppliers—and a few others, principally some of the food and chemical trades. Vehicle output has also been rising, but it is still running well below the peak levels of the spring and summer of 1960. Perhaps more notable, on the other hand, is that this extra production has been registered in face of a very marked pause this year in stockbuilding by manufacturing industry (chart on page 1185). During the first six months of 1961 manufacturing stocks rose by only £37 million (1954 prices, seasonably adjusted), as against increases of £297 million in the second and £164 million in the first halves of 1960: most of this year's small overall increase has stemmed, moreover, from the growth of work in progress in engineering, plus some accumulation of finished goods stocks in textiles and clothing. The cutting back of the import bill for raw materials and partly-processed manufactures arising from this virtual cessation of stockbuilding is welcome: less so is its depressing effect upon the current production rates of certain industries. The steel makers, for one, have now been hit badly by a complete turn round in their customers' stock policies: since July the run down of steel stocks appears to have gathered considerable pace. If this process should spread—and distributed stocks in the hands of wholesalers and retailers have risen more sharply this year, especially in the first three months, than during any comparable period since at least 1957—then the nascent upswing in industrial output may not survive for very long.

For How Long?

Of equal, though perhaps not quite so immediate, import for the prospects of sustaining this long awaited sign of growth are the Board of Trade's latest soundings of industry's capital expenditure plans. Since last winter investment programmes for the present year have in total been revised quite sharply downward, largely because a number of motor manufacturers and their suppliers have decided to take rather longer over the completion of their new capacity. Instead of the thirty per cent increase then reckoned for capital outlays in 1961, manufacturers now expect to spend only about 21 per cent more, roughly in line with their original forecast in summer 1960. For 1962, the initial feeling, from soundings before the Chancellor's measures in July, seems to have been that of spending no more than this year. Commercial investment is still expected to be about ten per cent larger this year than last, and to show almost as large an increase again in 1962. By mid-year, it should be noted, however, actual spending by manufacturers had reached an annual rate only 17 per cent above the whole of 1960, while commercial investment was three per cent down.

Hitherto these six-monthly soundings have failed to earn any reputation of real reliability—this time last year, for instance, manufacturers quite inaccurately raised their estimates for 1960 very sharply upwards. But the less ambitious target set for manufacturing investment in 1962 does fit in with the recent decline in engineering orders and in industrial building contracts received by contractors and architects. The capital goods suppliers still have a heavy volume of work in front of them and they should be able to maintain or even increase their present output rates until at least well into 1962. Beyond then, prospects are now decidedly doubtful.



ATOMIC ENERGY

Better Bookkeeping

Someone—to be precise, the Committee of Public Accounts—has at last taken the Atomic Energy Authority to task for the way it presents its annual report, that monument of non-information designed to conceal not only the cost of the AEA's military work but pretty well everything else as well. While the committee accepted the security restrictions as perfectly sensible, it could see no reason why the AEA should not be a modicum more forthcoming about its purely commercial operations, especially since these seem to be involving a sizeable loss, and there is nothing that stimulates a PAC's terrier instincts more than the scent of a buried deficit. At one point during the AEA's evidence the following exchange occurred:

> Col. Crosthwaite-Eyre: Looking at your balance sheet, is there any way in which the average person could discover that you had waived £10 million in royalties on the first four (civil nuclear power) stations. There is no defence secret about that in any shape or form?
>
> Sir Alan Hitchman for the AEA: No, it does not appear in the balance sheet.
>
> Col. Crosthwaite-Eyre: There is no way in which anybody could possibly discover that unless he were a member of this committee. . . . Am I right in that?
>
> Sir Alan Hitchman: It is a matter of public knowledge.
>
> Col. Crosthwaite-Eyre: No, it is not a matter of public knowledge, it should be reflected in your balance sheet. . .

Nor did the PAC and the Authority appear to see precisely eye to eye on what constituted a profit and what a loss. The

THE PROUD MERCANTILE TRADITION ENSHRINED IN LA GRAND' PLACE IS THE HERITAGE OF BRUSSELS' BUSINESSMEN. THEY HAVE MADE THE IBM ELECTRIC THEIR FIRST CHOICE AMONG ELECTRIC TYPEWRITERS.

How to succeed in a wise old market place

As a headquarters for the six-nation Common Market, bustling Brussels is a centre of a new surge ahead of European trade. This comes as no surprise to students of history. Here in Brussels, directly in front of the gilt houses in our picture, was once one of the great mediaeval markets of Europe. For centuries, merchants and craftsmen from all over the continent gathered here to display and sell their wares.

This renowned market drew its vitality from a very simple idea: when goods are free to compete openly, the better product will win out, to the profit of both buyer and seller.

We have great respect for this idea at IBM—and with reason. Our typewriter is a good example. We designed it for uncompromising performance and built it with a craftsmanship that is measured in thousandths of an inch and millionths of a second. The quality that resulted won immediate recognition: the IBM Electric has been from its beginning Europe's most widely used electric typewriter.

The concept that made the historic market of Brussels great seems to work as well as ever in the Europe of today. IBM is proud to share in a great tradition.

hority, for example, said in its evidence : while a small loss would be made on manufacture of fuel elements for the : four power stations, it intended there- :r to recover its costs. But, said the com- :tee in its final report, " It appeared, how- :r, that the Authority have incurred large ses (not small deficits), mainly through :r-provisioning of materials for the clear power programme and these losses, iich include substantial writing down of ocks . . . are not separately identified in the ithority's accounts." Indeed the Authority id flatly during the summer that it had ot written down any stocks in the latest alance sheet available, for March, 1960, hen its holding of raw materials was shown : a book value of £80 million, a rise of 30 million in 12 months.

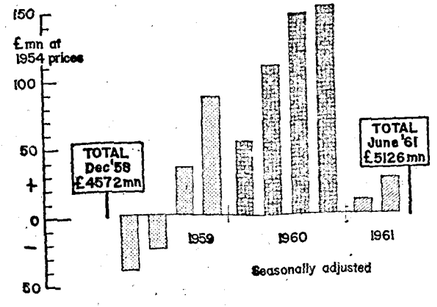
The outcome of this series of fairly tart exchanges is the likelihood that the Authority will in the future publish a good deal more information to satisfy the kind of questions on which the committee pressed it hardest, namely the cost of its research, and details of its trading operations such as royalties from power stations, sales of fuel, losses on stocks. It is difficult to see why the AEA should ever have been so reticent. To have stated its position more openly would have greatly strengthened its hand in bargaining with its main and most formidible civil customer, Sir Christopher Hinton, who has certainly got the better of the Authority on the question of royalties and seems likely to get his own way in fuel too. And a little more information might make it easier to discover what, precisely, nuclear power is costing Britain—a great deal more, by all accounts, than Sir Christopher is paying for it.

BANK ADVANCES

The Pressure Revealed

IT would appear that the bankers have at last got their advances under control. For almost two years now they have been pulling hard on the reins with little effect and the earlier checks always proved to be short-lived. The latest quarterly classification of bank advances by class of borrower, however, shows that the banks' tighter scrutiny is taking effect ; advances by all members of the British Bankers' Association rose by only £31 million in the three months to August and only £4 million of this increase came from the clearing banks. This is the smallest quarterly increase since February, 1958, and compares with a total increase of £316 million for the first two quarters of this year.

In the latest three months ten of the twenty-six borrowing groups show a reduction in advances. But the reductions are in unexpected places : seven of the ten are in the industrial section. The groups that were expected to bear the brunt of any cutback show in some cases relatively large increases. Advances to hire purchase (due for a 20 per cent cut by next January) and the other financial groups, which includes the property companies, both rose by £12 million in the three months, bringing their respective increases so far this year to £22 million and £44 million. On the other hand the growth in personal and professional advances, one of the fastest growing groups in the past, has been checked, while advances to the local authorities rose by only £1 million.



BRITISH BANKERS' ASSOCIATION
(£ million)

	3 mths. to Aug., 1960	3 mths. to Aug., 1961	12 mths. to Aug., 1961	Total at Aug., 1961
Personal & professional	+11	Nil	+ 15	705
Hire purchase	− 5	+12	+ 15	158
Retail trade	−11	−17	+ 10	368
Industry and other trade	+64	+11	+317	2,115
" Other financial "	+ 4	+12	+ 24	350
Other groups	− 4	+13	+ 20	221
Change in total	+59	+31	+401	3,917

Advances to industrial borrowers rose by only £11 million in the three months. This follows an increase of £235 million in the first half of 1961 and compares with a rise of £64 million in the same quarter of 1960. The only increases of any size were in engineering (up by £13 million to £490 million) and in building and contracting (up by £7 million to £175 million) while falls were registered by chemicals (down by £12 million to £53 million), iron and steel (down by £3 million to £95 million) and in food, drink, and tobacco (down by £11 million to £215 million) where, as in the retail trade, seasonal influences tend to reduce advances in the summer. The sharp check in the growth of industrial advances has already been reflected in the number of new issues in the capital market.

The Stockbuilding Pause

The stockbuilding boom in manufacturing industry came virtually to an end at the beginning of this year. Small gains were registered in the first two quarters, but they were the smallest since 1959. Stocks of wholesalers and retailers rose very sharply in the first three months and rather less so in the second quarter, but not to change the general picture of only a marginal increase in total stocks so far this year.

IN THE MARKETS

Under Restraint

IN the last six weeks, leading equities have moved no more than one per cent either way of a mid-point, as established by the *Financial Times* index, of 310, and no more than 1½ per cent of a mid-point, as established by *The Economist* indicator, of 365. This reflects the low level of business in the stock exchange, but it also helps to emphasise that the volume of selling has not been heavy at these comparatively low levels. A small fall in prices, indeed, has usually encouraged a little buying but any thought that this might produce a more sustained rally has been frustrated, first, by the continued uneasiness about the British economy and, secondly, by the disturbing influence of international tensions. This was again the case on Monday when the market broadened and prices rose, only for this rally to be nipped in the bud by the news of Mr Hammarskjöld's death. In all, equity prices were little changed on balance, with *The Economist* indicator falling slightly to 361.2 in the week to Wednesday's close. Investors have not lost their faith in the long term prospects for equities and this was illustrated this week when dealings took place in the Courage Barclay and Simonds convertible debenture at premiums ranging up to 8½ points on the issue price of £99 per cent (£25 paid). This issue was over-subscribed four times, not because of its 6¼ per cent coupon but because the conversion rights into the equity were attractive. But at the moment investors seem to prefer to take a two-way bet like this rather than to go whole-heartedly back into the equity market.

There has not been much movement in gilt-edged prices, though the market in the medium dated issues was looking rather firmer in the middle of this week. In the mortgage market, on the other hand, short term rates have again hardened and some of the smaller councils have paid 7⅛ or 7¼ per cent for seven days money. The hardening of the rates reflects not only the approach of quarter day but the withdrawal of funds by some big industrial companies and the cutting-back by the banks of temporary loans to the local authorities. The capital market, too, continues to feel the impact of the credit squeeze and of the curtailment of advances by the clearing banks.

Further Rights Issues

THIS was evident this week in the announcement of further rights issues. The directors of Debenhams, for example, have been forced by the rise in interest rates to review the capital expenditure programme and to extend it over a longer period. But they have decided to go ahead with fifteen major schemes that are in an advanced stage of development. Their completion will cost about £4.2 million over the next eighteen months and as the group only has the minimum cash balances required for trading purposes and as, presumably, the banks were not prepared to lend, the directors have decided to raise about £4½ million by a rights issue. One new ordinary share at 42s. 6d. for every fifteen shares held is being offered on the basis of higher profits in 1960-61 and a maintained dividend of 1s. 11d. per share on the bigger capital. Thus, with the shares standing at 51s., the rights are worth 6d. and the ex rights yield is 3.8 per cent.

Morgan Grenfell has underwritten this issue and also the rights offer by Laporte Industries of one new ordinary share at 18s. for every five held, designed to raise about £4¾ million. This money is required to complete the group's expansion programme, including that of Howards and Sons which Laporte acquired in February. Just over a year ago, this chemical manufacturing group raised about £2¾ million by a rights issue and its shareholders will no doubt be relieved to hear that while the first call on the latest issue is in October the final call will not be made until January. But it remains to be seen how far shareholders will be prepared to support this issue, for the directors indicate that profits are falling though they expect to maintain the dividend at 10½ per cent on the increased capital. The immediate reaction in the stock market was to mark the shares down by 2s. 9d. to 20s., to make the rights worth 4d. and the ex rights yield 5.4 per cent.

Doubts in Wall Street

A correspondent cables:

NERVOUSNESS on Wall Street increased this week and equity prices fell sharply as a result, with almost all groups coming under pressure. Dealers attribute the sales to the heightening of international tensions and to increased fears that the administration is pursuing an aggressive policy towards business practices, particularly in anti-trust actions. The Dow Jones industrial average fell close to the 700 mark before a renewal of support brought it back to 707 on Wednesday. Pundits in the market think that the average may go lower because of the absence of any widespread demand for equities.

A really marked decline, however, is not considered likely because the prospects for the economy and industrial profits are good. Institutional investors are prepared to add to their purchases if selling by private investors increases as they take the view that the latest fall is typical of a maturing bull market and that it should be followed by another rise, in which, however, buying is likely to become increasingly selective. With the Federal Reserve continuing to pursue an easy money policy, largely because the demand for credit remains moderate, the public has funds available both for speculation and longer term investment. But expectations that the Dow Jones average might rise to 800 before the end of the year are now thought to be too optimistic and until the Berlin and Congo crises are settled the brokers are advising their clients to be cautious.

SHIPBUILDING

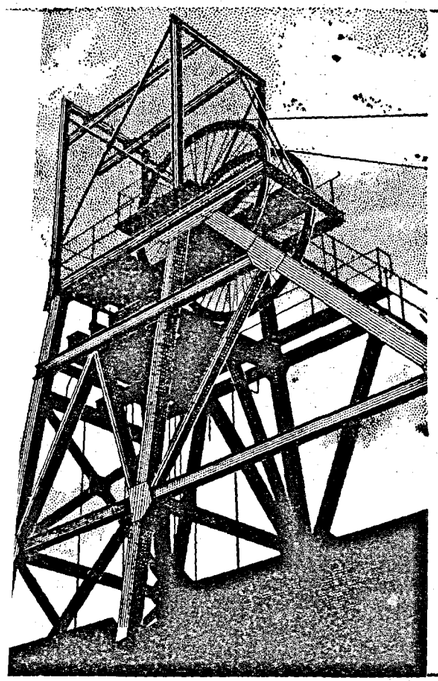
Accentuating the Obvious

PERHAPS one should not begrudge Mr Marples his study tour of continental shipyards. Personal impressions usually sink deeper than—if they only serve to confirm—the succinct monochrome of other peoples' reports, such as the industry's own productivity report on Swedish shipbuilding, finally published two weeks ago, and perhaps also the report he should receive next month from the firm of accountants set the task of finding out why British shipowners have been placing more of their orders overseas. But, judging from his replies to questions on his return at London airport, the Minister of Transport did not discover anything new. The quality of British-built ships is admired, he said. But British yards are behind on prices and delivery dates, and one of the main reasons for this is the "greater harmony" between continental managements and their men. There, most shipyard managements divulge to their workers the full facts of the firm's situation, thus creating an atmosphere of trust. This, in turn, is greatly helped by the fact that all, or most, shipbuilding workers are represented by a single union, which in practice has long meant the complete

BALANCE OF PAYMENTS

The Right Direction

PROVISIONAL estimates of the United Kingdom balance of payments for the second quarter of 1961 are broadly as expected. The improvement in the balance of visible trade recorded in the previous quarter has continued, with a fall in the estimated deficit to £40 million, against £87 million in the same quarter of 1960. Exports and re-exports were virtually unchanged, but imports fell by £29 million compared with the first quarter of 1961. Invisible transactions showed a sharp improvement, from being literally "invisible" in the first quarter, to a surplus of £25 million in the second. The identified balance on current account was a deficit of £15 million, compared with a deficit of £68 million in the first quarter of the year and £50 million in the corresponding quarter of 1960.



On the capital account net private investment abroad was £83 million, a high figure which gives some point to the Chancellor's announcement in July of a "more severe" test of investment projects in non-sterling countries. The support operations of the European central banks are included in "monetary movements." Without this support the fall of £175 million in the sterling holdings of the non-sterling area countries would have been considerably larger, but equally any such fall would have been balanced by an equivalent fall in the United Kingdom's assets. As it is, the fall of £89 million in the gold and convertible currency reserves is partly offset by a reduction of £13 million in overseas sterling holdings and an improvement of £15 million in other monetary movements. The balancing item, a little surprisingly in view of the outflow of short-term capital, remained positive at £25 million.

SAFETY + PROFIT

You get the best of both words with **ABBEY NATIONAL**

SAFETY Abbey National has the complete confidence of over 700,000 members. Furthermore, Shares and Deposits in this Society are Trustee Investments.

INTEREST The rate is 3¾% per annum (as from 1st October) with income tax paid by the Society. This represents £6.2.5d. per cent when income tax — is paid at the standard rate. Build-Up Shares will yield 4¼%—equivalent to £6.18.9d. per cent when tax is paid at the standard rate.

EASE OF WITHDRAWAL Should the need arise, sums up to £100 may be withdrawn on demand—larger sums at short notice.

Write now for Investment and Build-Up Share booklets.

ABBEY NATIONAL Building Society

absence of demarcation rows and a considerable degree of flexibility for moving men from one section of a yard to another.

Repetition of the blatantly obvious may perhaps be called for to induce any real change in this industry, although Mr Marples's anxiety to promote harmony in shipyard labour relations may run him into his own kind of demarcation difficulty with the Minister of Labour. But there is a world of difference between willing something and achieving it. The craft unions in shipbuilding have been talking about amalgamation for at least five years. So far the blacksmiths have joined forces with the boilermakers, and now the executives of the two biggest unions, the boilermakers and the shipwrights, have just decided to recommend a kind of amalgamation to their members. But in the proposed joint organisation the 'platers' and 'corkers' would retain "full autonomy" to deal with matters concerning their respective trades; they would still elect their own officials and control their trade procedure.

However, this is a step, albeit limited, in the right direction: traditions die hard. But Mr Marples could indulge his fondness for action in his own direct dealings with the shipbuilding employers. There can be no response without prior initiative, and the first step towards productive harmony in British shipyards can only be taken by management. Lack of imagination and a deep-seated frigidity towards the idea of genuine co-operation characterises the labour policy of too many British yards. There are some exceptions, but their productivity record and relative success in winning orders has not yet helped many of the others to see the light. Possibly the hard tack of depression, which they now face, may make some difference, though slumps are not always effective medicines. One point is certain, however. Mr Marples is right to turn his back on the idea of government subsidies; they even more rarely cure inefficiency.

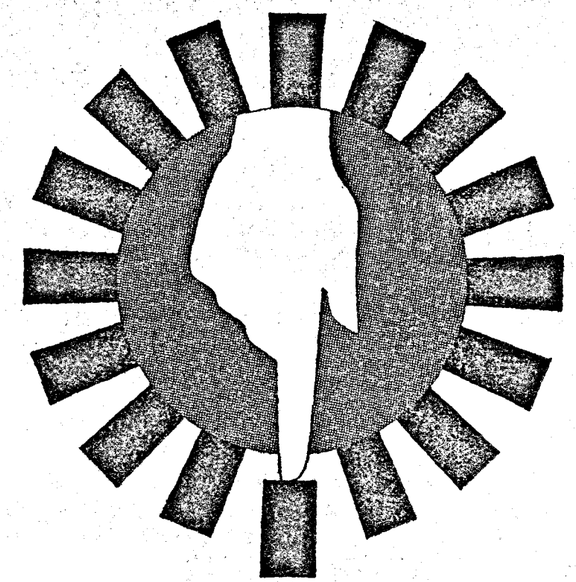
SYNTHETIC FIBRES

Enter Polypropylene

POLYPROPYLENE is one of the most versatile plastic materials; apart from its normal use as a moulding powder, it can be made into a fibre like nylon or Terylene. Now that Imperial Chemical Industries has begun to produce it under the trade name "Ulstron" in a pilot plant at its Wilton plant, one can begin to see how much of a price advantage this material has over the other synthetics. Only yarns that are suitable for ropes and fishing nets are being made so far: but these are nearly 25 per cent cheaper than comparable nylon or Terylene and, ICI claims, they have some advantages for such uses. To produce polypropylene yarn for clothes requires first solving the problem of dyeing a material that is even more resistant to normal methods than are the other synthetics, and ICI will not commit itself to any date for the introduction of such materials. Montecatini, the Italian chemical company that *pioneered the development of polypropylene* and from which ICI has the exclusive rights to produce polypropylene yarn in Britain for clothes, is doing much research on the problem and seems to have obtained some success; but the methods used seem still too expensive to be practicable for use on what should be a cheap synthetic material.

Industrial applications, therefore, will be the only ones for polypropylene in the *immediate future*; but ICI evidently expects that these will prove substantial, for its first full-scale plant, which will start production at Wilton at the end of this year, will have a capacity of 2,250 tons a year. This will allow it to use more than 20 per cent of all ICI's output of polypropylene polymer, which amounts to 11,000 tons a year now and could reach 22,000 tons in 1963. But in the long run, if the problem of dyeing the material can be solved, fibres are expected to account for at least 30 per cent of production. Carpets are likely to form a substantial market for it as well as clothes; and when production of the yarn and of the polymer reaches the really large

AIR SAFETY



Death in the Sky

EXCLUDING the crash that killed Mr Hammarskjöld and 12 of his companions, there have been five major accidents within the month to civil airliners on routine commercial flights and close on 280 people have died in them; the pilgrims who stepped out of their wrecked aircraft on the Dublin main road last Tuesday night might well think it miraculous that the total did not exceed 350. Nearly 1,000 passengers and crew have been killed in civil air accidents in various parts of the world so far this year, not counting those who crashed in privately-owned aircraft. This is not a record of which the airlines can feel proud; it suggests that the casualty rate by the end of the year may show little, if any, improvement on 1960, an especially black year when between 1,200 and 1,400 people died in commercial air accidents (and a further 835 were killed in accidents to private and business aircraft in the United States alone). The trend is more disturbing because fewer accidents seem to have taken place this year in South America, a notorious black spot for aviation.

With the exception of certain accidents to the Electra, it has been rare in recent years for any to arise out of structural or mechanical failure in the main components of an aircraft: indeed the structural strength of some modern jets has saved several nasty crashes from turning into tragedies. But a troubling number of fatal accidents, perhaps 40 per cent of the total, occur when an aircraft is coming in to land, a much higher proportion than accidents at take-off, which are usually due to some form of engine failure. This prompts the suspicion that ancillary equipment is lagging some considerable way behind actual aircraft design, a suspicion that is at least partly confirmed by the current report of the Daniel and Florence Guggenheim Aviation Safety Center. This lists more reliable components as one of the items needing urgent study, along with improved air traffic control, and methods for protecting passengers from the results of accidents—among them fire, *à propos* of which the Safety Center has some scarifying comments to make about complacency. To its general request for a closer look at all aspects of landing, from undercarriages to runway lights, pilots might add their own plea to designers for jets that are easier to land. Several of these have hit the runways of the world in recent years with an undignified scrunch that fortunately hurt no one but the machines, yet showed what disconcerting results can arise from a hair's breadth deviation from the prescribed landing techniques.

The Air Safety Center's remarks about the need for better training for private pilots applies for the time being purely to conditions within the United States, where private flying is conducted on a larger scale than elsewhere. In this country, however, there have been comments about a different aspect of training, namely, that of pilots of chartered aircraft. Now that the joint foibles of the British system for licensing airlines and the international system for controlling air fares have made charter flying an important part of civil aviation, technical opinion is asking whether the regulations governing these flights are sufficiently stringent.

The mechanical standards required on charter flights are as high as those expected of aircraft on regular scheduled flights; but how, it has been asked, does the pilot on a charter flight make himself familiar with the route? There have been questions, especially in the technical journal *Flight*, which is the official organ of the Royal Aero Club, whether some recent accidents to aircraft on charter flights might have been avoided if the pilot was more familiar with the country over which he was flying. This issue is bound up at least in part with another equally disturbing question. Why do so many experienced pilots apparently fly their aircraft headlong into the ground or into the side of mountains? Is it beyond the wit of man to design an altimeter that cannot be misread, or instruments that will warn him of impending danger?

ELECTRONIC COMPUTER EXHIBITION

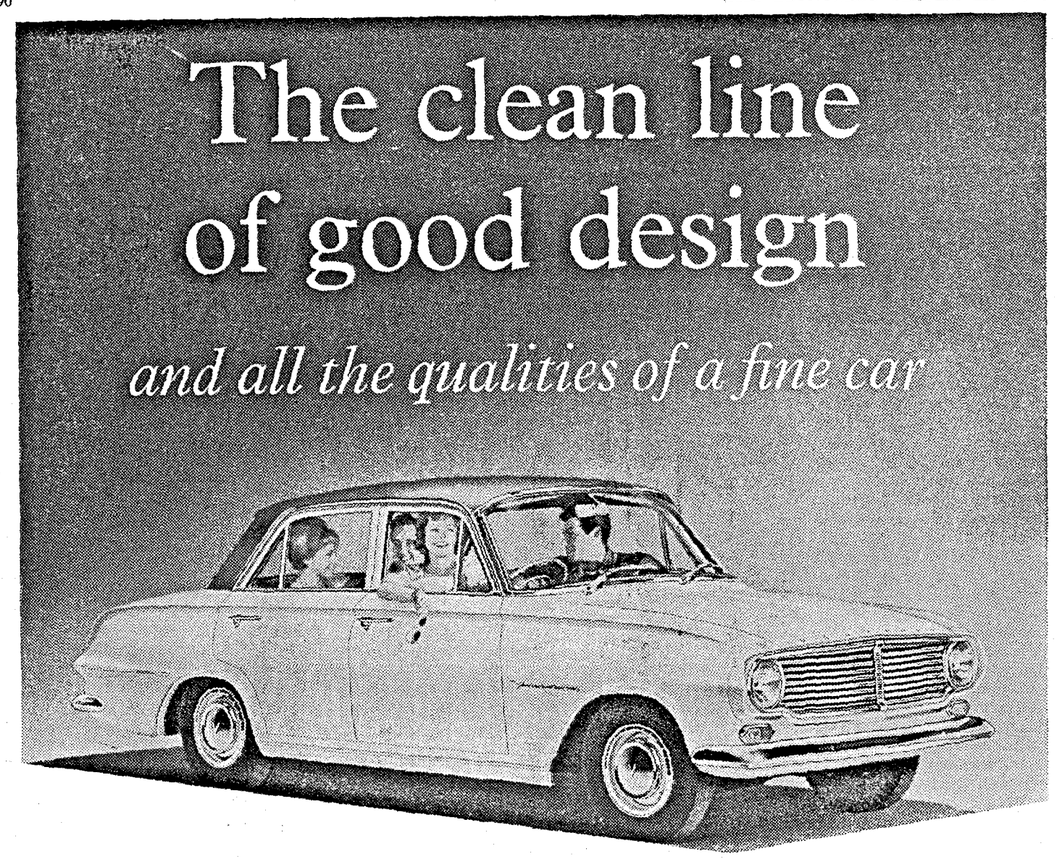
AND THE ELECTRONIC DATA PROCESSING SYMPOSIUM

NATIONAL HALL OLYMPIA London

OCTOBER 3rd-12th 10·30am to 7pm

October 3rd only NOON - 7pm Saturday 10·30am to 4pm

Visitors to Olympia can see a working demonstration of some of the most up-to-date electronic computers and ancillary equipment in the world. Britain's leading manufacturers will display their latest equipment, and experts on the various stands will be ready to offer information and advice about electronic data-processing of every sort. Whatever the size and nature of *your* business, here is an exhibition you cannot afford to miss. If you cannot attend yourself, you should at least send an observer.



THE ELECTRONIC DATA PROCESSING SYMPOSIUM

During the Exhibition a three day symposium will be held. Executives, well versed in computer techniques, will come from a wide range of concerns—both State and private enterprises—to give registered delegates the benefit of their user knowledge and experience. All six sessions will be informal, and a highly useful exchange of ideas and information will result. For further information contact Mrs. S. S. Elliott, M.B.E., 64 Cannon Street, London, E.C.4. Telephone: CENtral 7771/2.

SEE THE NEW GENERATION OF COMPUTERS AT WORK

The clean line of good design

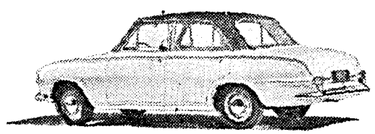
and all the qualities of a fine car

THE NEW VAUXHALL VICTOR

The new Vauxhall Victor is a car of outstanding quality and grace. Every contour bears the hall-mark of good design. Every detail has been planned with scrupulous care to match the clean good looks and superlative performance.

Engine, transmission, brakes, suspension—all have been engineered for quiet, safe, efficient motoring. Inside and out, every feature is designed for lasting satisfaction and lasting quality.

Run the rule over the new Victor at your Vauxhall dealer's. Then get behind the wheel and let good design speak for itself.



3-speed or 4-speed ALL-synchro gears
(3-speed column change, or optional 4-speed floor-mounted lever).

More comfort, more space for 4 or 5 adults
(extra legroom front *and* rear. 21½ cu. ft. luggage space)

Maintenance costs cut by two-thirds
(only 4 nipples which require lubricating only every 12,000 miles)

Superb, long-lasting paint finish
(in new formula synthetic-cellulose enamel. 14 attractive colours)

Victor Saloon £510 plus £234.19.9 P.T. (£744.19.9).
Victor Super £535 plus £246.8.11 P.T. (£781.8.11).
Victor de Luxe *Equipped with individual front seats, leather upholstery, heater, etc.,* £580 plus £267.1.5 P.T. (£847.1.5).
Victor Estate Car £590 plus £271.13.1 P.T. (£861.13.1).

See and try the new Victor at your local Vauxhall dealer's. Or write for catalogue to Vauxhall Motors Ltd., Luton, Beds.

e that is expected, the difference in price ween polypropylene and nylon or Tery- may well be much greater than the per cent set by ICI's introductory prices.

E EXCHANGES

Quiet but Firm

HE exchange markets have again been *quiet* this week. There is an unwilling- s in the market to pinpoint any reason this inactivity, although the present ernational crisis usually underlies any nment that is ventured. The market now pears to be inclined to wait and see. The ath of Mr Hammarskjöld had no effect on exchanges, and most dealers showed le more than academic interest in the nual meeting of the IMF in Vienna. Sterling, however, continued to improve is week and the spot rate, mainly on mand from Germany, rose to $2.81\frac{3}{8}$ on uesday, its highest level for ten months. his rise was attributed to a general shortage of sterling with so many operators covering short positions taken up in June. The Bank of England appears to have been the only substantial seller of sterling on the first two days of this week. Demand from the continent was not maintained on Wednesday and the spot rate eased slightly. There is still little evidence of an inflow of hot money attracted by Britain's high interest rates, and the funds that have come in are certainly covered against the exchange risk. The cost of this cover is still around 4 per cent, with the three months forward discount at $2\frac{7}{8}$ cents, which leaves less than $\frac{1}{4}$ per cent on the interest arbitrage with New York.

BUTTER

No End of Dumping

A YEAR ago, at Denmark's request, an OEEC working party on dairy products met in Paris to discuss the surplus of butter on the British market. Denmark and New Zealand had previously had talks with British officials about the threat to their main export market. Apart from a further fall of 30s. a cwt in the price of New Zealand butter, reducing its price from about 350s. to 250s. a cwt in a year, the situation was virtually unchanged in July when Denmark again raised the matter with Britain following two abortive meetings with butter suppliers at GATT. In August, Denmark and New Zealand formally applied for protection under Britain's anti-dumping legislation and the United Kingdom referred the matter once again to GATT.

Under GATT's rules, approval of contracting parties is necessary before anti-dumping or countervailing duties can be imposed. With the government's pontifical observation that "it would be the expectation of the United Kingdom Government that . . . agreement would be reached on the immediate adoption of appropriate measures to secure a proper relationship between supply and demand" it seemed that the farcical series of talks would soon be at an end.

NEW CARS

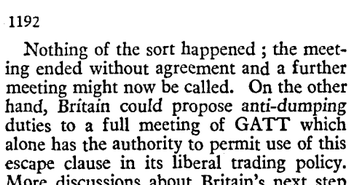
Sporting Types

THE British Motor Corporation and Ford have chosen the same week to announce new models aimed at the market for sporting cars. They have selected diametrically opposed means of doing so, and their cars are clearly aimed at quite different sections of this market: BMC has fitted a more powerful engine into the unchanged body shell of the Austin Seven and Mini-Minor, while Ford has produced a coupé body on the otherwise unchanged basis of the Classic. But the intention in each case is to improve profit margins by selling in a specialised market, where the competing products do not have the advantage of being based on a car that is made on so large a scale.

BMC will be exploiting a market that it already reaches with these new versions of its baby cars, which are called the Austin Seven Cooper and Morris Mini-Cooper—the engine shares some features with the units used in the Cooper Formula Junior racing cars. But this is not a market that they were originally intended to tap: it has been the popularity of the cars among those who want a small sports car, and realised that these were potentially the best small sports cars made in Britain, that determined BMC to make its own sports version instead of leaving the profit from producing one to the tuning shops. It has been able to do better than they can, and to enlarge the engine from 850 cc to 997 cc as well as to adopt the normal tuning procedure of fitting two carburettors, enlarging the inlet valves and raising the compression ratio.

The result of these measures is that the engine develops 55 bhp instead of the 34 bhp of the standard engine: to cope with the extra power the only change needed in the chassis has been to fit disc brakes on the front wheels. The suspension proves fully capable of meeting the demands of a car that can now reach over 85 mph; the only noticeable effect of the greater power is that there is a sharper transition from understeer to oversteer if the throttle is shut on a corner.

At a price of £679, which includes a fresh-air heater and more elaborate interior trim, BMC is offering a car that has a performance not far short of that of a Ford Zephyr or Vauxhall Velox costing some £250 more, roughly similar to that of the Fiat 1300 that would probably cost nearly £100 more in export markets, and much superior to that of the Triumph Herald that costs £49 more. And, compared with BMC's smaller sports cars, it offers rather better performance and road-holding—and two more seats—for much the same price. In this strong competitive position the demand for the Coopers may well surprise BMC, which has been assuming that it might sell up to 200 a week. To meet the demand for a small car that is just better equipped than the ordinary Austin Seven and Mini-Minor, BMC is also marketing a Super de luxe version, which is the Cooper with the normal mechanical specification; this costs £592, £39 more than the ordinary de luxe model.



Where BMC is exploiting a market that its car found for itself, Ford is entering one that has hardly been touched in Britain before. Its Capri coupé is a relatively expensive car at £915 and is perhaps intended to sell mainly on account of extra elegance in styling: it is really the first British equivalent of the Kharmann-Ghia Volkswagen. It may appeal to some of the buyers of Triumph Herald coupés, which cost £157 less, or to buyers of the Sunbeam Rapier that costs £114 more. But it is hoped that the car will find a new market among buyers who want a car for their personal transport, not that of their family, and who want a smart car.

Nothing of the sort happened; the meeting ended without agreement and a further meeting might now be called. On the other hand, Britain could propose anti-dumping duties to a full meeting of GATT which alone has the authority to permit use of this escape clause in its liberal trading policy. More discussions about Britain's next step will probably follow. Meanwhile, Denmark's butter has been reduced to 252s. a cwt ex quay, compared with 335s. a cwt at the beginning of the year.

The main European milk producing countries have maintained a high level of output rather late in the season, and butter production has had to be increased to absorb more of the surplus. In this country, three times as much milk was used in the manufacture of butter in the first seven months of this year than in the same period of 1959. The Milk Marketing Board sells milk to butter manufacturers at a price which is governed by the market price of butter. This price is currently 1s. a gallon, compared with about 8d. a pint normally paid by housewives. Britain produces less than a tenth of its butter supplies; to maintain its average receipts, the Milk Marketing Board tries to limit supplies of cheap milk for the manufacture of butter here. But in a year such as this, that outlet is indispensable. The current low price for butter reduces farmers' incomes and could raise the cost of milk subsidies. But Britain has the benefit of a large quantity of French butter at less than half its cost in France, while New Zealand is losing about 65s. a cwt on its exports to Britain.

SPACE RESEARCH

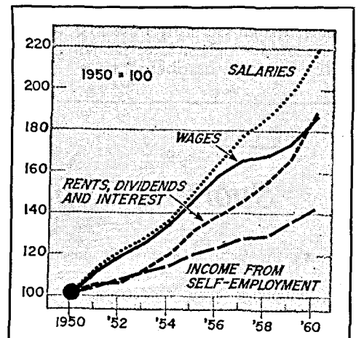
With a Pinch of Salt

A BRISK correspondence erupted in the scientific journal *Nature* this week about how the oceans got their water. Earlier this year, C. M. de Turville put forward a novel theory, namely that vast solar winds (nicknamed "hydrogen hurricanes") sweep gusts of hydrogen gas off the face of the sun through space which gets trapped, as they pass the earth, in its magnetic field. This trapped hydrogen then combines with oxygen (from where? released from rocks, says de Turville, by the sun's ultra violet radiation) to form water vapour that has condensed over the millenniums to fill the oceans and which is still being deposited at a substantial rate. This theory has attracted some attention because it offers a satisfactory explanation for a phenomenon that has been puzzling meteorologists, namely how clouds of what appear to be water vapour, but which have previously been described as dust, can possibly exist at altitudes of 50 miles and upwards. The water vapor could not possibly have got up there from the ground. Scientists at the Meteorological Office find the thesis offers a neat explanation.

To other scientists, however, it appears riddled with inconsistencies. They simply do not believe that the earth can capture the volume of hydrogen from space suggested; there are technical reasons, put forward by E. R. Harrison of the Atomic Energy Authority, for suggesting that the belts of radiation that circle the earth would act as a shield to prevent the solar winds from penetrating the atmosphere to this extent. Such huge quantities of hydrogen would surely, they protest, have been discovered by high altitude research rockets and satellites by now, yet no mention has been made of them and—more ribaldly—if water vapour were truly being formed at a rate adequate to account for the oceans, by now we would all be fish. (Perhaps we are; at least, one reviewer who has read Leo Slizard's recent work on dolphins is convinced that Dr Slizard is a dolphin himself.) The truth may lie between the two theories. Some water vapour may indeed be formed by hydrogen from space, certainly enough to explain the troublesome presence of the meteorologists' noctilucent clouds, but hardly enough to account for the oceans. Some of his estimates have already been revised by de Turville in the light of later evidence collected from some of the American space probes about solar winds; this, indeed, is just the kind of scientific puzzle that space research is designed to unravel.

GOLD SHARES

Still in the Doldrums



IN this month's issue of *Optima*, Dr J. E. Holloway, who recently led the South African trade mission to Europe, quotes a Swiss banker as saying: "Judged by purely investment criteria there is no more promising field in the world than South Africa." This may be true. What is equally true is that foreign investors do not care for what Dr Holloway calls the "psycho-political atmosphere" in the Union and whether they would respond, as Dr Holloway thinks they might, to a change in emphasis in the Government's policies and to a reversion to a liberal attitude towards foreign capital must remain an open question. So far, the restrictions imposed in June on capital withdrawals have had their desired effect of easing the pressure on South Africa's reserves and there now seems to be no danger that the government will close the last remaining door by restricting the payment of dividends to non-residents.

Though they have brought some immediate relief, the restrictions are not likely to be lifted at an early date as the reserves have to be built up to a level at which they could withstand further pressures, if these develop. Thus the discounts between the prices of Kaffir shares in London and Johannesburg are likely to remain. They have widened in recent weeks to an average of about 20 per cent and the slight revival

GOLD MINING DIVIDENDS

	Mar., 1960	Sept., 1960	Mar., 1961	Sept., 1961

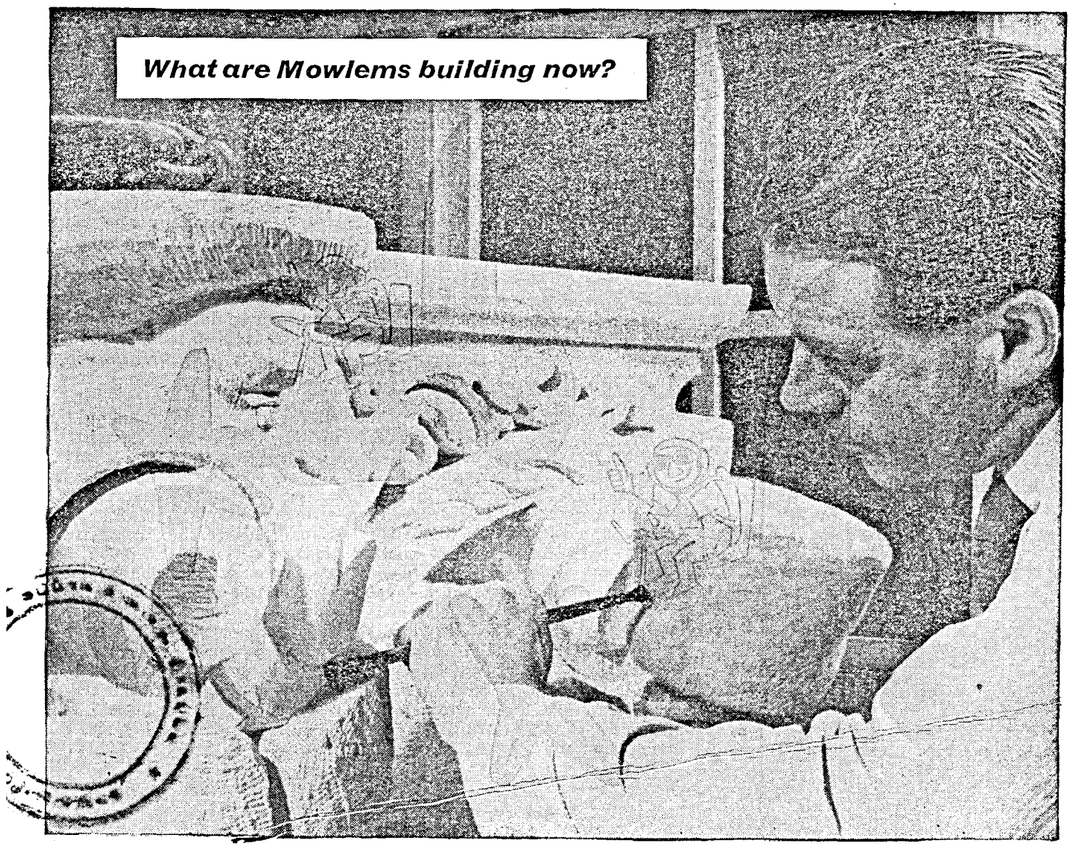
of interest in gold shares, which centred upon the finance house issues, proved to be short-lived. The *Financial Times* gold mines index, which does not include any finance house shares, had risen from its all-time "low" of 52.4 in mid-July to 58.0

INCOME AND OUTCOME

One of the outstanding features of the British economy in the fifties was the really impressive resurgence of private saving—if the official calculations, which arrive at total annual savings as a residual item, are accepted. While personal incomes barely doubled, savings increased almost fifteen-fold. Among the various sources of personal income, salaries rose more than any other, while by 1960 rents, dividends and interest payments had just about caught up with wage earnings.

Flying hot 'n' cold

Did you think hot 'n' cold problems were confined to the bathroom? You couldn't be more wrong. We have experts who get heated at the very mention of the phrase.



It's aircraft they are thinking about — those whistling jets that whizz across continents as regularly as clockwork. And, more specifically, it's the temperature of the fuel that each engine is using in every moment of flight.

Actually, the cold problem was beaten some time ago. This was when the airlines were first considering jets, and something had to be done about the way that, at the high altitudes of jet flying, the cold tended to thicken the fuel and form particles of wax. Shell Research produced a fuel with a good low-temperature performance, and most of the international airlines are now using it.

But research can never stand still. As soon as we had overcome that problem, we were facing another one — hot fuel! When the speed of commercial aircraft climbs beyond the sound barrier, the heat generated by the aircraft could 'cook' the fuel. Well, some of the snags have already been smoothed out and, as designers push the speed of aircraft higher and higher, Shell Research will go on solving the problems of fuelling them.

YOU CAN BE SURE OF SHELL

Capital for the Treasury

Mowlems are now reconstructing the Treasury in Whitehall for the Ministry of Works.

Virtually the whole block, known as the Old Treasury Building, is being rebuilt from the foundations up.

When the work is finished the familiar facades will be restored. But most of the stonework, like this Corinthian capital, and the joinery will be new, carved and made by craftsmen at Mowlems' Cambridge company, Rattee & Kett Ltd.

Mowlems combine fine craftsmanship with the most modern techniques. Long experience and high traditions help the biggest building jobs to go through smoothly.

Chief Architect to the Ministry of Works: Mr. E. Bedford, C.B., C.V.O., A.R.I.B.A.

MOWLEM

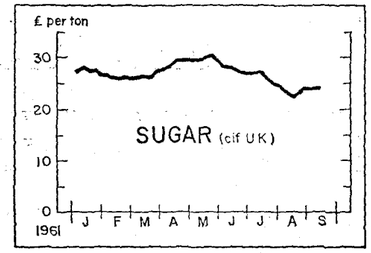
by the middle of August but since then it has slipped back to 55.2. Nor did the OFS dividend declarations, even though some of them were higher than had been expected, stir the market. Among those paying good dividends were St Helena, which is now liable to pay tax but whose development holds out the promise of a higher average grade, and Western Holdings, which is now making operating profits of over £1 million a month. The cut in President Steyn's dividend was expected, as the mine is faced with rising costs and heavy capital commitments. Harmony's dividend, whose odd amount reflects the change to a decimal coinage in South Africa, was in line with expectations but with it came the first of the eleven tax-free payments of 3.6d. per share resulting from the sale of some of Harmony's claims to its neighbour, Virginia. Outside the OFS, Winkelhaak, one of Union Corporation's three mines in the Kinross area, has paid its first full year's dividend of 15s. 1.2d. and its earnings are now running at a yearly rate of 3s. 6d. per share. But with a new mine such as this capital expenditure is heavy and is likely to restrict future increases in the dividend.

ELECTRIC VEHICLES

Saving Current



A SIGNIFICANT improvement in the efficiency of electric vehicles is promised by a development that has been introduced by Smith's Delivery Vehicles, one of the principal British makers. It consists of replacing the conventional means of controlling the flow of current from the batteries to the motors, which involves the use of resistances to convert excess current into heat, by semi-conductor devices that simply turn the current on or off as needed. The strength of the current reaching the motors when the vehicle is being started has to be restricted; otherwise the torque that the motors develop would be excessive, and either they would burn out or the vehicle would break its transmission. If a resistance is used as a controller, about 20 per cent of the battery's capacity is wasted in heating the resistance. The semi-conductor controllers that Smith's have adopted, developed by Joyce, Loebl and Co., eliminate this loss and, it is claimed, the size of the battery can therefore be reduced by 20 per cent or a greater speed and range can be obtained from the same battery.

Such improvements should help to increase the advantage that electric delivery vehicles already have over petrol or diesel where many stops and starts have to be made, for the saving in current is made at the point where its superiority is already greatest—when the vehicle is started. And another application of semi-conductors, to produce a battery-charger small enough to fit on the vehicle, will make these vans more versatile, for their batteries can be recharged anywhere.

SUGAR

Pressing Problems

OFFICIALS used to the normal leisurely pace of international co-operation in commodity matters, must be winded by the number of problems for immediate attention that have tumbled into their in-trays this year. The Ministry of Agriculture, Fisheries and Food already has several of its staff engaged in Washington on coffee matters, in Geneva on the review of the international sugar agreement and presumably at home on deciding whether to support the proposed international cocoa scheme. This week it seems to have accommodated the South African minister for economic affairs, here to discuss South African sugar exports to this country, only with difficulty. The ministry sensibly intended to leave settlement of this problem until after South Africa's independent membership of the international sugar agreement had been settled. Dr Diederichs could not wait: next month South Africa goes to the polls and loss of South Africa's privileges under the Commonwealth Sugar Agreement was politically inopportune. The ministry, which was not expecting this visit, seems to have been forced to recall certain of its staff from other negotiations. Because of the special circumstances it is quite likely that some important decisions will be taken at these meetings.

After recovering to £24 a ton, the "free" price for sugar declined by 10s. a ton this week. The international conference which has to revise the sugar agreement to increase its effectiveness in dealing with a sugar surplus that has produced the lowest price for sugar since the war, has its own urgent problems. Britain and the United States have separate arrangements with their main suppliers. Cuba, which has been excluded from the American market, and Russia want these exports put under article 14 of the agreement which fixes export tonnages. That would give the sugar council power to control them.

SHORTER NOTES

Registrations of new cars in August were 46,016, about 11 per cent fewer than in August last year. This figure is rather higher than some makers had expected; it suggests that the initial effect of the increase in purchase tax at the end of July was smaller than had been feared, for sales in that month had been seven per cent lower than a year before.

★

Metal Box has received Treasury approval for its revised expansion plan in Italy. The original plan was turned down following the "little budget." The main change is that part of the capital involved will now come from abroad—in line with the Chancellor's desire to ease the short-term strain on Britain's balance of payments.

★

Shell Transport and Trading has maintained its tax-free interim dividend at 2s. per unit on the capital as increased by the one for five scrip issue. The £1 units are to be split into 5s. shares.

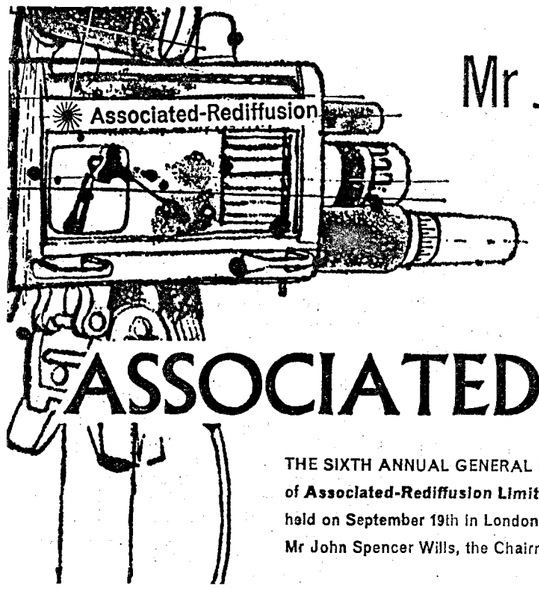
★

In the table of investment trusts published on page 1087 of last week's issue the earnings of Nineteen Twenty Eight Investment Trust were calculated after deducting pre-acquisition profits. If these were included, earnings in the latest year would amount to 18.1 per cent, against 16.4 per cent.

★

The increase of 20 per cent in the break-up value of Anglo-Celtic ordinary shares in the year to April 5th, 1961, compares with a corresponding increase of 12.2 per cent in *The Economist* Indicator and not an increase of 27.1 per cent as stated last week.

★



Following the negotiation of higher quotas for imports of cotton manufactures from Hongkong, larger quotas have been granted to India and Pakistan. India has been given a supplementary quota of 11 m. sq. yds. for 1961, and next year its quota will be a minimum of 186 m. sq. yds. Pakistan gets a supplementary quota of 2½ m. sq. yds. this year and a basic quota of 42½ m. sq. yds. for 1962.

Mr John Spencer Wills reports.

What is the future of ASSOCIATED-REDIFFUSION?

THE SIXTH ANNUAL GENERAL MEETING of **Associated-Rediffusion Limited** was held on September 19th in London, Mr John Spencer Wills, the Chairman, presiding.

Moving the adoption of the Report and Accounts for the year ended April 30, 1961, the Chairman said:—

"You will have seen from the Accounts that the profit was just about the same as it was last year. It only appears to be more because we did not consider it necessary to repeat the £500,000 provision for obsolescence which we made last year and the year before that.

ADVERTISEMENT REVENUE

A gratifying feature of the year is the continued growth in advertisement revenue, which shows an increase of some 16 per cent over that for the previous year. This must be accepted as a striking indication of the value of television advertising in the London area, which now has a potential audience of over nine million viewers. We have been glad to welcome many new advertisers.

In this year's Budget, television advertising was singled out for special taxation in the form of Television Advertisement Duty. This was at the rate of 10 per cent as from May 1st but was increased to 11 per cent as from July 26th.

Any comment by me about this new impost would probably be regarded as wholly selfish, so I will content myself with quoting the well-known economist, Mr Graham Hutton:—

"The oddest new tax is that (ostensibly) on advertising by television. It is almost a classic offence against all of Adam Smith's famous canons of taxation. Purporting to hit at the profits of the programme-contracting companies, it was admittedly expected to be passed on to advertisers. Since these people and their advertising agents work to budgets of their own, and TV has the biggest impact on their markets, its effect will be completely to by-pass TV advertising, and come to rest on all other forms of advertising. It would have been far better (as Lord Hinchingbrooke and many others in all three parties in the Commons pointed out) to come out into the open with a straight tax on all advertising."

We took special steps to assist those advertisers whose budgets could not immediately be adjusted to meet the Duty. In the case of bookings which, under our General Terms and Conditions of Contract, were subject to eight weeks' notice of cancellation, we reduced the cancellation period to one week for bookings within the eight-week period following the imposition of the Duty. In cases where advertisers had entered into non-cancellable contracts for guaranteed expenditure before the imposition of the Duty, we agreed that the advertisers concerned could, if they so desired, include the appropriate Duty in their guaranteed expenditure, the rate of discount remaining unchanged and continuing to be payable on guaranteed expenditure excluding Duty.

In 1960, over £134 million was spent on advertising in the United Kingdom Press. This is 17½ per cent more than the £114 million spent in 1959 and is the highest annual expenditure ever recorded by The Statistical Review of Press Advertising. Expenditure on TV advertising also reached a record figure, the total for 1960 being just under £77 million.

Television still has a considerable distance to go to catch up. Any tax upon advertising is a burden upon the export trade. But this new tax burden is more a matter for complaint by the advertisers than by the advertising medium.

OPERATING COSTS

Our operating costs have continued to rise and show an increase of some 14 per cent over the previous year's figure. There will be a further substantial increase in the current year. The production of television programmes is indeed an expensive business.

Our new million pound Studio 5 at Wembley, now in continuous use, has proved its worth; the additional space and improved facilities which it provides have, I think, been reflected in improvement in the range and in the artistic and technical quality of our programmes.

It is not wholly surprising that an industry which earns large profits should be a target for the Trades Unions concerned. Very large increases in pay have been negotiated and it is inevitable that our friendly rivals, the BBC, should also have been affected. There is one application, however, which shocks even me, who has been closely concerned in wage negotiations, in different industries, for a large number of years. And that has been lodged by The British Actors Equity Association, commonly called "Equity."

When Independent Television started, the minimum fee payable to an actor in a BBC production was 6 guineas; this sum was "earned" by an actor who walked on and said, "My Lord, the carriage awaits." By negotiation, this minimum for a national appearance on Independent Television was, from the start in 1955, increased to 7 guineas and, in 1958, was raised again to 10 guineas. Equity have now demanded, for a comparable actor, a minimum fee of 36 guineas, an increase of 260 per cent. They have also demanded, for the national appearance on Independent Television of an actor speaking more than ten words, a minimum payment of 44 guineas, an increase of 340 per cent.

It is not normally considered good practice to discuss Trade Union negotiations whilst they are in progress but, in this case, Equity have publicly announced the calling of a strike. They have issued an instruction to their members not

to accept any engagement in any ITV programme (except commercials) which involves any work on or after November 1st.

The demands in support of which the strike has been called are so fantastic that negotiations are at an end. We, in television, need actors; we, in television, have given them very considerable support in many directions. We are not, however, prepared to accede to ridiculous demands.

It is not surprising that, in their latest instruction to their members, the Council of Equity said, "Our original proposals were made with full knowledge that we might well not achieve a new deal in Independent Television as a result of discussions over the negotiating table. . . ."

PROGRAMMES

It has always been the Board's policy to give the maximum possible responsibility and freedom of action to our programme planning and production staff, and I think the staff are again to be congratulated upon the results of their work.

Although size of audience is not the sole criterion of success, it is pleasing to note that Associated-Rediffusion productions continue to figure prominently in the weekly lists of top-rating programmes. It seems to me that the test of success for any public service—particularly where an alternative is available—must, in large measure, be the extent to which the public use that service.

An outstanding event during the year was the production last March of "Laudes Evangelii," a presentation of episodes in the life of Christ told in music, mime and ballet. This programme, which was transmitted at peak viewing time on Good Friday and seen by some four and a quarter million viewers, received unqualified praise from leaders of the main branches of the Christian religion in this country. This was, in every way, a most challenging production and, apart from the public and press response to it, the spirit in which the challenge was accepted by the very large number of staff concerned made the occasion memorable. The critic who accuses Independent Television of programme parsimony may be interested to learn that the cost of "Laudes Evangelii" was £28,000.

INTERTEL

Another outstanding and adventurous programme development during the year was the formation of the International Television Federation, known shortly as "Intertel." This is an association of major television organisations in the English-speaking world which came into being on the initiative of Associated-Rediffusion. Our Controller of Programmes has been elected the first Chairman of the Federation Council. The member organisations have undertaken to produce, exchange and distribute, throughout the world, high-class documentary feature programmes on current world problems. Our first two contributions, "The Quiet War" and "The Heartbeat of France," each costing £20,000, have been shown to peak-time audiences in this country, Australia and Canada and on sixty stations in the United States of America. We believe that Intertel can do much to increase the knowledge and understanding of current situations and problems throughout the world.

I mentioned last year the recent establishment of an International Division. Measured in terms of revenue, it cannot yet be described as a major activity but you will be interested to know that Associated-Rediffusion programmes, including plays and drama series, documentary feature programmes and schools programmes, have been sold in thirty-three different countries. Some of our schools programmes have been sold in such remote and differing places as Ethiopia, Thailand, Saudi Arabia, Nicaragua, Southern Rhodesia and Australia, and America and a number of European countries may shortly be added to the list. Whilst these developments are not yet of great financial significance, you will, I am sure, be glad to know that an international reputation is gradually being established; the sort of reputation that could be of great value if, during the next few years, the international exchange of programmes by satellites were to become practicable.

Increasing use is being made of television programmes for schools, which Associated-Rediffusion pioneered four years ago. The number of schools taking the programmes has risen from eighty to fifteen hundred and may well exceed two thousand during the fifth year just commenced. We are grateful to Sir Ifor Evans, Provost of University College, for having taken over the Chairmanship of our Educational Advisory Council in succession to Sir Sydney Caine, whose resignation, on his appointment as a member of the Independent Television Authority, I mentioned last year.

At our meeting four years ago, I suggested that if you had not seen our schools programmes, you should take an opportunity of doing so. They are well worth viewing by adults and I repeat the suggestion now. Our French language series, "Chez les Dupré," has, in fact, been transmitted in evening programmes and seen by audiences of over two million in the London area. The fact that close on 45,000 explanatory booklets were sold to viewers indicates the interest which was taken in this experiment in adult education. Another of our schools programmes, "*London*, Capital City" is now being transmitted in evening programme time.

THE FUTURE

To the Pilkington Committee of Inquiry which was appointed last year to consider and make recommendations on the future of broadcasting services in this country, we have submitted our views and evidence. The Committee's Report is expected some time next year.

The facts that the Independent Television Authority is to cease to exist in 1964; that the contracts of programme contractors terminate in the same year; that there has been a great deal of publicity given to an enormous number of irreconcilable recommendations made to the Pilkington Committee—all these facts have caused, and are bound to have caused, some unrest and uneasiness among our staff. Are their jobs safe? Are they reasonably certain of continued employment? Is there any risk that they may have wasted their time? In my opinion there is no cause for alarm, no justification even for misgiving.

The main shareholders in Associated-Rediffusion have been engaged in the provision and management of public services for two-thirds of a century—ever since 1896. I myself have been so engaged for forty years. Railways, tramways, trackless trolleys, radio stations, television stations, the generation and distribution of electricity, the manufacture and distribution of coal-gas, airlines, wired radio, wired television, motor omnibus services, road goods transport—all these activities, not only in the United Kingdom, but in countries all over the world, have been our life. The bus interests alone embrace 13,000 public service vehicles. Is it surprising that we should have been entrusted with the task of furnishing television programmes to the largest city in the western hemisphere? Sixty-six years of public service and, let it be said, of *successful* public service, on a large scale, cannot lightly be disregarded.

Railways, tramways, electricity undertakings and gas undertakings were mostly operated under individual Statutes. The air services were operated under short term licences granted by a Statutory Authority. The wired radio and television undertakings are currently operated under long term licences from the Post Office but, for many years, could have been stopped at short notice. The omnibus services have, for the last thirty years, been operated under short term licences. But always it has been the practice, provided that the operators properly discharged their responsibilities to the public they served, for the licences to be renewed without question.

My personal belief is that our staff have no reason to fear any departure from the licencing practice established over so many decades.

Our shares are widely held. The British Electric Traction Co. Ltd. have 37,500 shareholders, Rediffusion Ltd. have 12,000 shareholders and they, between them, are the virtual owners of Associated-Rediffusion Ltd.; that is to say, we are owned by nearly 50,000 individuals.

Why should any Government wish to shatter the existing scheme of things?

The main criticism hurled against us is that the State does not take a sufficient share of our profits. Let us examine the figures for the year under review. The Associated-Rediffusion Group's gross revenue was in excess of £21,000,000. From this the State takes (including a substantial part of our payment to the Independent Television Authority) £5,000,000 and our 50,000 shareholders will, if you accept your Board's recommendation, receive £2,250,000. Had the Television Advertisement Duty been in operation during the year, the State would have taken another £1,470,000.

Our shareholders took the risk of losing all their investment. At one stage, in 1956, they had, in fact, lost the enormous sum of £3,250,000. The State took no risk at all. If the Company had gone into liquidation, the State would not have lost one penny.

As it is, out of the profits which have succeeded the losses, *the State will receive nearly three times as much as the shareholders.*

It seems to me that, if there is cause for complaint, the shareholders have more right to complain than anyone else!

The main criticism of the Independent Television Authority is that a large part of their work is done behind the scenes, that they do not publicly admonish their programme contractors if anything goes wrong. Those of us in the business know that the Authority keep an eagle eye and a firm hand upon all that goes on. In my submission it is in the interests of all concerned—the public, the Government, the advertisers, the employees—that control should continue to be exercised quietly and tactfully. To me, personally involved in the settlement of an enormous number of problems during the formative years and since, it has been a matter of surprise and of considerable admiration that there has not been more friction between the Authority on the one hand and the Contractors

on the other. No Government can possibly afford to throw over a body which has so happily and successfully carried out its difficult task.

My conviction is that whatever the Pilkington Committee may recommend about alternative or competitive programmes or any other of the many subjects to which they are devoting so much time and attention, two steps are certain:—

(1) The Independent Television Authority will be given a new lease of life.

(2) The existing programme contractors will continue to provide television programmes.

SUBSIDIARY COMPANIES

The subsidiary companies this year have made a considerably increased contribution to the group profit and we are confident that this trend will continue.

The TV Times, owned by our subsidiary TV Publications Ltd., now publishes a Border Edition containing the programmes of Border Television Ltd., the new Independent Television programme company which commenced transmissions at the beginning of this month. Arrangements have also been made for the publication of a Grampian Edition to cover the programmes of Grampian Television Ltd., which is to commence transmissions very shortly.

We now hold all the ordinary capital, and all but an insignificant amount of the preference capital, of Wembley Stadium Ltd. The Board of that company has, during the past year, given very considerable thought to future development with a view to enhancing the world-wide reputation of the Stadium and Pool as first-class sporting and entertainment centres.

Plans for a 48-lane bowling alley, with the most modern restaurant and other necessary amenities, are now far advanced and this project will be proceeded with as soon as possible.

Another interesting development is the recent acquisition by Wembley Stadium Ltd. of a 25 per cent interest in Wembley Trust Ltd., similar interests having been acquired by Allnatt (London) Ltd., Central and District Properties Ltd. and Warnford Investments Ltd. The Wembley Trust company owns valuable properties on some 15 acres of land adjoining the Stadium grounds. It is too early for me at this stage to do more than report the acquisition.

MANAGEMENT AND STAFF

I have already paid tribute to our programme planning and production staff. You will, I know, wish me to express grateful thanks to all those who work for you, for their enormous contribution to the success of Associated-Rediffusion."

The Report and Accounts were unanimously adopted.

ULTRAMAR COMPANY LIMITED

FACTORS AFFECTING RESULTS

SIR EDWIN HERBERT'S REVIEW

The twenty-fifth annual general meeting of Ultramar Company Limited was held on September 14th in London.

Sir Edwin Herbert, KBE (the Chairman), presided and, in the course of his speech, said:

While the operations have produced a cash flow sufficient to justify your directors in recommending a capital surplus distribution of 1s. per stock unit, the combined result of all the companies concerned (some of which, of course, do not appear in the consolidated accounts) show that after allowing for depletion, depreciation and for other proper charges against revenue, a profit attributable to Ultramar Group of £138,000 in 1959 has been converted into a loss of £300,000 in 1960.

I told you last year that the period of transition while we are building refineries, establishing markets, and going out for geographical diversification in our producing activities, would be difficult.

We have faced up to all these difficulties and we hope and believe that our worst difficulties are now behind us. We expect gradually to emerge as a more diversified and stronger group, with a future which will not be so dependent on price variations in any one area or on oil production in any one country.

OPERATING COMPANIES' AFFAIRS

Venezuelan operating subsidiaries have maintained oil and gas production despite a severe cut-back in drilling. In addition there are several thousand barrels per day of oil production in outlying fields which is now shut in because of lack of pipeline outlets or because of high lifting costs.

During the first half of 1961 the Venezuelan operating subsidiaries drilled six wells of which four development wells were completed as oil producers and two exploration wells were abandoned. Early in 1962 Caracas Petroleum expects to do some exploration drilling on its 100 per cent owned concessions in Barinas which if successful could open up a big field

In Western Canada, Canpet is developing satisfactorily. For the past three months production has been averaging over 1,000 barrels per day. During the first half of 1961 Canpet participated in drilling 25 wells of which 14 were completed as oil wells and six as gas wells. Canpet also has a substantial quantity of gas shut in awaiting a market which we believe is bound to develop during the next few years.

In the United States oil and gas production is gradually increasing and at present CPUS's share of oil production is averaging about 200 barrels per day and gas production about 2 million cubic feet per day. During the first half of 1961 CPUS participated in the drilling of nine wells of which three were completed as oil wells and two as gas wells. In the United States, as in Canada, production rates would have been higher but for pro-rationing by regulatory bodies. The total share of oil production of the Group for the first half of 1961 was some 14,400 barrels per day and the total share of gas production 38,500,000 cubic feet per day. The 1960 figures are therefore being at least maintained.

The Group is striving to replace reserves partly with new reserves in Canada and the United States. However, the older fields in Venezuela are bound to be on the decline. There is still considerable property in Venezuela which has not been tested by the drill and additional drilling will have to be carried out gradually over the next few years as finances permit and oil prices make it economically attractive.

REFINING AND MARKETING

Work on the 7,500 barrels per day Newfoundland refinery was delayed during the winter because unusually severe winter conditions made it desirable to suspend work for several months. However, the main units, the dock and the refinery storage tanks are finished and the refinery will be on stream before the end of 1961.

Marketing of products in Quebec and Newfoundland began last autumn, the products being brought in from Caracas Petroleum's Venezuelan operations. Gasoline stations with the brand name of Golden Eagle are beginning to appear along the highways of Quebec and Newfoundland and some interesting supply contracts have been negotiated. A large deepwater storage terminal on the St. Lawrence River in the Montreal area was completed last November at a cost of $1,500,000. Other smaller terminals along the St. Lawrence River and in Newfoundland are under construction.

We have known from the beginning that we should need a partner for the Newfoundland and Quebec operations and for Panama. The Newfoundland and Quebec operations, including the refinery, terminals, marketing facilities, and working capital represent an investment of over 13 million dollars. This partner has been found in the Canadian-Caribbean Oil Company (Can-Carib organised by our director Mr Shaheen with the support of New York banks and other financial interests). Can-Carib has taken over 50 per cent of the Newfoundland and Quebec operation and 50 per cent of Golden Eagle of Panama to which it will also furnish financial support.

The refinery in the Republic of Panama, which includes a petrochemical plant, is under construction and is expected to be operating towards the end of 1962. This is a 55,000 barrels per day refinery and the total cost, including working capital, is estimated at 45 million dollars. Most of the equipment is to be supplied from the United Kingdom.

In California, Golden Eagle is facing a difficult problem. The land pipeline system, terminals and marketing facilities owned by Golden Eagle of Californa represent a considerable asset value. Unfortunately the extension of United States import restrictions to the west coast and the inclusion within those restrictions of petroleum products as well as crude oil, involved a setback for the Group. In addition a severe gasoline price war has broken out in California mainly between the major companies. There are various alternatives before Golden Eagle and it is expected that a solution to this problem will be arrived at shortly.

The Report and Accounts and the Resolutions set out in the Notice convening the Meeting were adopted and the Capital Surplus Distribution of one shilling per 10/- Stock Unit was approved.

THE Powell Duffryn GROUP

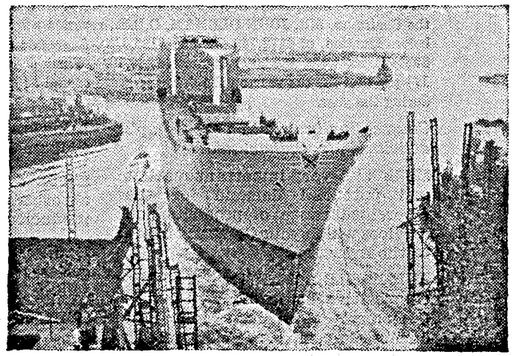
Continued Growth and Expansion

IMPROVED RESULTS WIDELY SPREAD ACROSS THE GROUP

The Annual General Meeting of Powell Duffryn Limited was held on September 20th in London, the Chairman, Sir Henry Wilson Smith, KCB, KBE, presiding.

The following is an extract from his circulated statement:

RESULTS



Consolidated Group Profits, after depreciation but before tax, at £2,564,000 show an increase of £407,000 or 19 per cent; net profits, after tax and after deduction of minority interests, at £1,385,000 show an increase of £204,000 or 17 per cent.

More importantly, in my view, the Group Trading Profit, after depreciation, is the highest in our history at £2,211,000, representing an increase of £406,000 or 22½ per cent over the previous year. What is particularly pleasing is that the improvement in trading results, far from being concentrated in one or two places, was widely spread across the Group. We earned more under each of the five main headings—shipping, coal, oil, timber, engineering and heating. Looked at in another way, we had increased profits from the activities of the Group as they existed, say, two years ago and, in the case of new acquisitions, better results than we had expected or forecast.

DIVIDEND

Against this background, your Directors had intended to recommend an increase in the Final Dividend on the Ordinary Shares from 10 per cent to 12 per cent, which would have made 18 per cent for the year against 16 per cent. Before their decision could be taken, however, they were confronted with the statement by the Chancellor of the Exchequer that he does not consider that a further general increase in dividends in the coming year is justified. In its precise words, this statement would clearly not rule out the contemplated increase in the Powell Duffryn dividend, which has remained unchanged since 1955 and, in equivalent form, since 1947. Nevertheless, after most careful consideration, your Directors have concluded that it is their public duty to comply with the spirit of the Chancellor's statement and for this reason they are recommending an unchanged dividend.

SALIENT FEATURES:	1961	1960
	£	£
Consolidated Profit after Depreciation	2,563,854	2,156,500
Taxation	1,059,560	863,607
Net Profit after Taxation	1,504,294	1,292,893
Capital and Reserves	21,653,563	20,963,613
Capital Commitments	2,100,000	1,060,000
Total Group Assets	38,693,540	35,380,628

MV "Gilsland"—10,500 tons—one of two new general cargo ships for the Stephenson Clarke fleet.

REVIEW OF GROUP ACTIVITIES

Shipping: With the completion this autumn of three ships now building, the fleet owned by Stephenson Clarke will consist of 40 ships compared with a pre-war fleet of some 16 ships.

Despite the many problems associated with coastal shipping and despite deep sea freights which are still too low from the ship-owners' point of view, the fleet has continued to trade profitably.

In addition to the fleet which it owns, Stephenson Clarke has continued to manage a further 53 ships.

Coal: It is comforting to record that, during 1960, there was an increase of some seven million tons in the total quantity of coal consumed in the United Kingdom and that there was also some increase in coal exports. This was reflected in the trade of our Companies engaged in the distribution of coal. We are considering certain possible developments calculated to enable us to play an even fuller part in the United Kingdom coal trade.

Oil: Apart from the expansion of our coastal tanker interests, and the steady development of fuel oil inland sales, we have recently given special attention to the Group's oil storage business. This is a responsibility vested in Cory Brothers who, with the completion of certain additions to previously existing capacity, will have 275,000 tons of oil storage available at Barry, Birkenhead and Ipswich. A high proportion of this tankage is let under long-term contract and there is no lack of current demand for the balance.

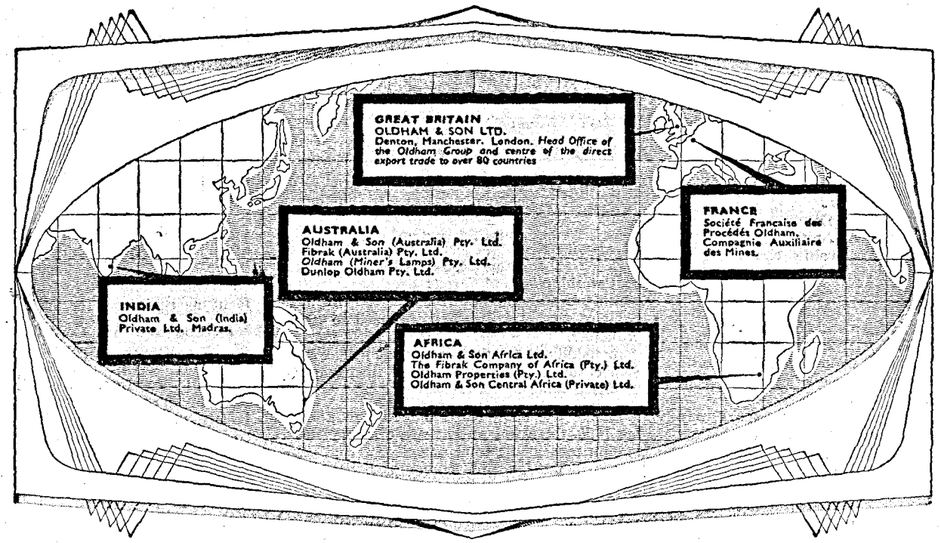
After a careful survey of the demand for oil storage in this country and of alternative sites, the decision was taken to embark on a major expansion by the erection of an entirely new installation at Purfleet, on the Thames. When the development is complete it is estimated that 600,000 tons of storage will be available for oil, chemicals and other bulk liquid products.

Timber: In 1960/61 our timber businesses made steady progress. Additions have been made to our existing importing and distributing activities centred mainly in South Wales.

Capital expenditure has been devoted, and is still being devoted, to enable us to expand our sales of coated, flame-retardant and other special types of insulation board and related special products.

Engineering: Powell Duffryn Engineering is still wrestling with the many problems arising from the drastic cut-back in British Transport Commission orders for the building of railway wagons which have in the past constituted about 50 per cent of the Company's turnover. This has involved the Company in a complete re-orientation of this side of its business and in the development of new lines of activity. Powell Duffryn Carbon Products is engaged in machining graphite for the Hunterston atomic power station and in manufacturing equipment for the chemical industry.

Heating and Air Conditioning: This side of the Group's activities is one in which important developments have occurred and are still occurring. We are now substantially involved in the manufacture and sale of boilers, steel hot water radiators, oil filled electric radiators and related equipment. Apart from the long-term prospects which, despite the growth of competition, must be regarded as encouraging, current demand is heavy. To further the process of integration and co-ordination the activities are now grouped in a new Company, Powell Duffryn Heating Limited.



The Chairman then outlined a number of other important developments and reviewed the substantial capital expenditure programme.

FUTURE PROSPECTS

Commenting on future prospects the Chairman said: The general outlook for the Group remains satisfactory. In the short-term, it is virtually impossible for me to be at all specific, at this date, on the likely out-turn of the current financial year, because so high a proportion of the Group profits is earned in the winter months and is dependent among other things on winter temperatures and weather. More generally, it still remains to be seen to what extent the Group will be affected by factors outside our control arising in the national and international economic sphere or directly resulting from action taken by the British Government. None the less, I have no reason to expect any deterioration in our affairs in 1961/62.

The report and accounts were adopted.

Copies of the full Chairman's Statement giving details of developments in the various sections of the Group can be obtained from the registered office of the Company 8 Great Tower Street, London, E.C.3.

"...a period of considerable activity and healthy expansion in the Company's affairs at home and overseas"

MR. JOHN OLDHAM, O.B.E.

The Annual General Meeting of Oldham and Son Ltd., was held at Denton, Manchester, on September 20th, 1961. In his statement circulated with the Annual Report and Accounts, the Chairman, MR. JOHN OLDHAM, O.B.E., reported a net profit of the Parent Company, before taxation, of £172,749 (against £125,473). Aggregate net profits of Overseas and other Subsidiaries were £343,302 (against £285,497). Final dividend was 10 per cent, making 17½ per cent for the year on the ordinary share capital as increased by the scrip issue made during the year.

Commenting in detail on the Group's activities, Mr. Oldham said:

MINING: "A very important market and potential demand for the diversified range of products and services which your Company offers to the Industry."

AUTOMOBILE BATTERIES: "A highly competitive business . . . but the Company's sales have increased during the period.... We can look forward confidently to securing a rewarding share of this increasing business."

COMMERCIAL VEHICLE BATTERIES: "Britain's output of commercial vehicles has continued to climb. This has been reflected in the demand for the Company's batteries."

MECHANICAL HANDLING: "A new Division has been created to provide a variety of batteries and associated services for Britain's growing mechanical handling industry . . . Substantial progress is being made in establishing the Oldham Group in this new market."

EXPORT: "Direct exports now absorb about 25% of the Company's production."

Dealing individually with the Group's overseas Companies, Mr. Oldham said:

SOUTH AFRICA: "I believe that.... those who, like ourselves, have staked a claim in the Republic's Industry, will have no cause to regret having done so."

INDIA: "A substantial increase in the Indian Company's business . . . accompanied by a further increase in the use of local materials and labour."

AUSTRALIA: "Our Australian subsidiaries are making steady progress."

FRANCE: "Considerable re-organisation and re-equipment have been proceeding in the French Subsidiary Company . . . Situated as it is in the centre of the Common Market, plans are now moving forward for the French Company to take advantage of the opportunity which this vast new market offers."

THE FUTURE: **"The present is probably the most difficult period in which to make any predictions about the future. Britain faces fierce and increasing competition in many markets. The road ahead is not going to be easy . . . From my present report and the continued progress which it reflects, I hope that shareholders will share with me the measured confidence I feel in the Company's ability to meet the challenge of the future."**

OLDHAM AND SON LIMITED, Denton, Manchester.

FRANCE. SOUTH AFRICA. CENTRAL AFRICA. INDIA. AUSTRALIA.

FURNESS WITHY AND COMPANY

A SOMEWHAT DIFFICULT YEAR

The seventieth annual general meeting of Furness Withy and Company Limited was held on September 20th in London, **Mr Frank Charlton, FCA,** the chairman, presiding.

The following is an extract from the Report of the Directors for the year ended April 30, 1961:

The proportion of the Group profits for the year carried to the Appropriation Account is £1,028,735, from which the Directors have set aside to Fleet Replacement Account £400,000. After adding the amount brought forward there remains a balance of £1,118,349. The Directors recommend the payment of a Dividend of 10 per cent on the Ordinary Stock of the Company, less Income Tax.

The Directors regret that the amount of Group profits available to the Parent Company shows a decrease as compared with last year's figures but, apart from the difficulties which are to be expected in general trading, the Shipping Industry as a whole has suffered very greatly from labour disputes and increasing expenses, which have had their effect not only in the results of vessels' operations but in the results of some of the ancillary businesses as well.

REVIEW OF SERVICES

The service to the Pacific Coast of North America has been maintained with six ships throughout the year. The two passenger vessels *Queen of Bermuda* and *Ocean Monarch* have continued to fulfil the conditions of the Contract with the Bermuda Trade Development Board and in addition have completed a number of cruises from United States ports. Competition in this field has and will become increasingly severe.

The seasonal trade between the North East Coast of the United Kingdom and London to Canadian and United States ports in the Great Lakes has not come up to expectations despite its potentialities, but the Company is continuing, as in the previous year, to provide regular sailings with two vessels.

The two refrigerated vessels normally engaged in the South American trade have been continuously employed during the year.

The results of the Johnston Line Service to Greece, Turkey and Black Sea ports have been affected by difficult trading conditions which continue to exist in this area.

Freight earnings on the Warren Line passenger/cargo service to Newfoundland, Nova Scotia and Boston have continued at a reasonably high level. Whereas last year there were signs of a modest improvement in the Mediterranean trade, this has unfortunately not been maintained.

The import restrictions imposed by New Zealand and Australia brought about by the unsatisfactory prices realised for their primary exports to overseas markets have had an adverse effect on the results of the Shaw Savill trades.

EXPANSION IN TRINIDAD

Reference was made last year to the continuing expansion of the Company's trading activities in Trinidad. Increasing competition has, during the last year, affected the profits, but the Directors take an optimistic view of future prospects, and have contracted since the close of the year for the construction of a new building on property now owned, to provide additional office premises and showrooms.

The report and accounts were adopted.

Winget

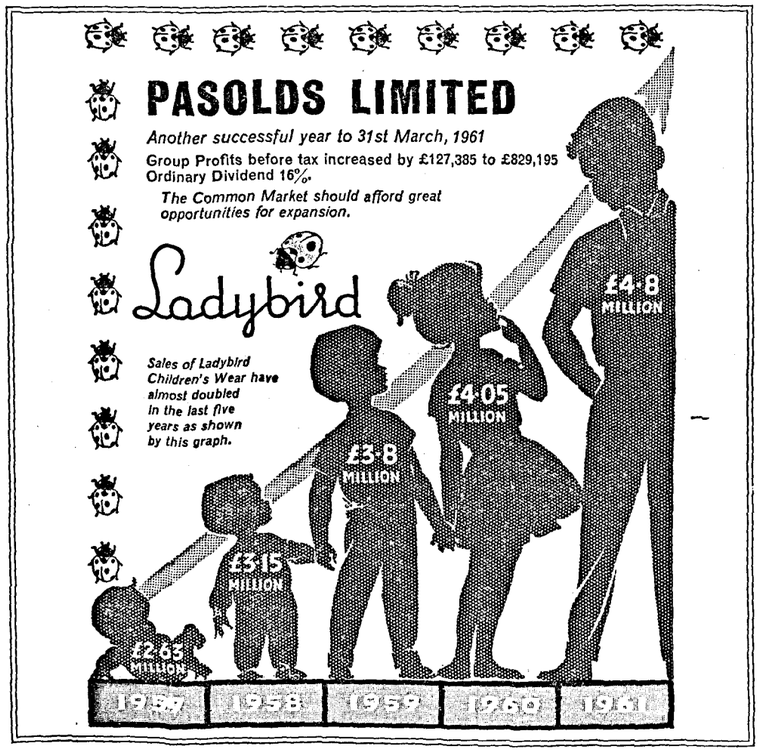
Plant and Concrete Mixing Machinery for the Construction Industry—
Refrigeration Equipment—Wire Mill Machinery—'Mechanite' Iron Castings

Salient features of the Directors' Report and Accounts for the year ended March 31, 1961

	1960-61	1959-60
Group Profit	£308,941	£268,688
Taxation	155,186	131,923
Ordinary Share Dividend (net)	47,223	36,382
Share Capital and Reserves	1,507,780	1,224,925
Total Net Assets	2,179,130	1,610,802

GENERAL REVIEW. Sales achieved again showed a substantial increase over the previous year. However, the general upward trend in wages had an inflationary effect on practically all items of cost. Consequently the benefits arising from the increased Group turnover were very largely offset by a fall in profit margins.

GROUP EXPANSION. Since the date of last year's report the Group activities have been expanded by



(1) The acquisition of Slater & England Limited, a company engaged in the design and manufacture of small Dumpers

(2) The purchase of the outside shareholders' interest in Moore's Plant Limited

(3) The acquisition in April, 1961, of Hanson & Edwards Limited, Warrington, manufacturers of Stranding and Ancillary Equipment for the Wire and Cable Industry.

PROSPECTS. The immediate future is overshadowed by the current economic position at home and the general uncertainty in the international political situation. The Directors, however, have every confidence in the longer term prospects.

Winget Limited, Rochester, Kent.

PRANG BESAR RUBBER ESTATE

SUCCESSFUL CONSOLIDATION

The Annual General Meeting of Prang Besar Rubber Estate Limited will be held on October 17th in London.

The following is an extract from the statement by the chairman, **Mr R. O. Jenkins**, circulated with the Report and Accounts for the year ended March 31, 1961:

The purchase early in 1960 of Galloway and Bukit Damar estates and the sale of Taipin brought together our main plantation interests in one locality. The past year was therefore one of successful consolidation in a planted area of 6,000 acres managed as a single unit with facilities for processing all crops for some years ahead centrally at our Prang Besar factory.

The crop of 4,198,417 lb which was 856,446 lb more than in the previous year represented a yield per acre of approximately 900 lb. The net profit before tax was £231,200. Taxation took £88,070, leaving a net profit of £143,130—about £20,000 more than for the previous year. We allocate £65,000 to Capital General Reserve, £16,477 to Replacement of Planted Areas Reserve and recommend a final dividend of 40 per cent, making 50 per cent for the year.

There has been an unsatisfied demand for our seed but with Gough Garden 2 now in full bearing and Gough Garden 3 coming on we hope that rationing of available supplies may not again be necessary.

Progress in polymer science is unmistakable and a number of factors stick out which portend a growing challenge to our industry's competitive strength. But while taking a cautious view of the future your directors have confidence in the stability of Prang Besar and in its capacity to counterbalance lower price trends with operational efficiency.

APPOINTMENTS

AGRICULTURAL ECONOMISTS

THE UNITED NATIONS

has two vacancies in the Secretariat of the United Nations Economic Commission for Africa, in Addis Ababa, Ethiopia, to plan, conduct and direct investigations into the problems and progress of agricultural development with special reference to African countries, and to formulate agricultural development projects.

Qualifications desired are advanced university education in economics or agricultural economics; substantial experience at governmental or inter-governmental level in handling practical economical problems in the agricultural sector, preferably in those of less developed countries; and excellent knowledge of English or French (working knowledge of the other desirable), with demonstrated ability in drafting reports.

One vacancy is at the First Officer level with a salary range of US $7,300-US $9,500 net, free of tax, per annum, while the other is at the Senior Officer level with a salary range of US $8,750-US $11,000. In addition, there is a cost of living allowance of $2,375 for the First Officer and $2,500 for the Senior Officer posts, net, for persons with dependants (somewhat less for single) plus dependency allowances and benefits.

In accordance with the principles of the United Nations Charter, recruitment of staff for the Secretariat is made on as wide a geographical basis as possible. Accordingly, in recruitment for the above vacancies preference shall be given to nationals of Member States which have at present disproportionately few or no nationals on the staff.

Applications should be sent to the Personnel Officer, Economic Commission for Africa, P.O. Box 3001, Addis Ababa.

VICTORIA UNIVERSITY OF WELLINGTON
New Zealand

CHAIR OF BUSINESS ADMINISTRATION

A Chair of Business Administration has been established at the Victoria University of Wellington and the University Council invites applications from suitably qualified persons for the first appointment.

The appointee will be expected to have high-level qualifications in an academic field relevant to business and high-level experience in business. According to the background and qualifications of the appointee the Council may require him to spend a period (i) examining from the University and business standpoints the New Zealand position in respect of studies in Business Administration; (ii) investigating work in Business Administration in overseas universities. He will, in the discretion of the Council, and subject to certain conditions, be entitled to the right of private practice in a consultative capacity.

The salary will be at the rate of £2,800 per annum.

Approved fares to Wellington will be allowed for the appointee, his wife and his dependent children. In addition, actual removal expenses will be allowed within certain limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in New Zealand and London, on 16th October, 1961.

RESEARCH DIRECTOR with organising drive and writing ability, salary £2,000 and upwards according to qualifications, required for new national and economic research institute concerned with consumer problems.—Apply, Box 1543.

VICTORIA UNIVERSITY OF WELLINGTON
New Zealand

CHAIR OF POLITICAL SCIENCE

Applications are invited for appointment to the above-mentioned post which is at present vacant, owing to the sudden death of Professor K. J. Scott. The appointee will be required to act as Head of the School of Political Science and Public Administration, to maintain close relations with administrative agencies and to promote co-operation with official and unofficial bodies in furthering research and higher education relative to administrative work in New Zealand, and to manage and edit the departmental journal "Political Science."

The salary will be at the rate of £2,800 per annum.

Approved fares to Wellington will be allowed for the appointee, his wife and his dependent children. In addition, actual removal expenses will be allowed within certain limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in New Zealand and in London on 31st October, 1961.

CITY OF PORTSMOUTH COLLEGE OF TECHNOLOGY
Principal: W. Davey, B.Sc., Ph.D., F.R.I.C.

DEPARTMENT OF COMMERCE

LECTURER in Business Administration. Applications are invited for Appointment as Lecturer in Business Administration to commence in January, 1962, or earlier if possible. Candidates should be graduates in Economics or Commerce with special interest in Business Administration and Statistics, and have practical experience in either Production Management or Marketing. Details and form of application from the Registrar, College of Technology, Portsmouth.

FERRANTI LTD.
HOLLINWOOD, LANCS.

have a vacancy in the Export Sales Department for a Woman Economist. The work includes the provision of an information service and reports on specific projects.

Candidates must have some experience of working on their own initiative.

Good salary and staff conditions including Superannuation Scheme.

Apply giving full particulars of age, education and experience to Miss I. Graham

ECONOMICS GRADUATE required by pharmaceutical company with modern offices at Queensborough, Kent. Position suitable for young lady 25-30 years of age who has knowledge of statistics as applied to market research and who has initiative and the drive needed to build new department.—Apply in writing to (Ref. AEW), Abbott Laboratories, Limited, 8, Baker Street, London, W.1.

MARKET RESEARCH

Philips Electrical Limited invite applications for SENIOR appointments in their expanding Market Research Department. These posts, involving direct contact with various levels of marketing management, demand a sound experience of all aspects of market research work. Scope exists for the application of the full range of research techniques to the wide variety of products marketed by the Company. Conditions of employment for these posts will be attractive and applicants are asked to give information on qualifications and experience to Personnel Officer, (D/7792/D), Century House, Shaftesbury Avenue, W.C.2.

For further appointments and other classified advertisements see page 1209

MONASH UNIVERSITY
Melbourne, Australia

LECTURESHIPS AND SENIOR LECTURESHIPS IN POLITICS

Applications are invited for appointment to Senior Lectureships and Lectureships in Politics. Applicants should possess a degree, with honours or its equivalent. The level of appointment will be determined by the successful applicants' qualifications. Courses in Politics are offered in the Faculties of Economics and Politics, and Arts. Teaching for the second and third years at both pass and honours level will be introduced in 1962 and 1963. The successful applicants will be given every assistance to pursue their individual research interests.

Salary scales: Senior Lecturer £A2,480/100/2,950; Lecturer £A1,660/100/2,360; with provision for superannuation on the F.S.S.U. basis.

Detailed conditions of appointment may be had from the Registrar of the University, or from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London, on 23rd October, 1961.

PRESSED STEEL COMPANY LIMITED

wish to recruit a

CHARTERED ACCOUNTANT

to assist in all aspects of accounting and financial control. In addition to the preparation of routine accounting statements he will be expected to contribute to the development of the Company's system of Management accounting to keep pace with the needs of its expanding business. Age range, 25-30.

The appointment will be at the Head Office of the Company in Oxford. A Contributory Pension Scheme is operated and good welfare facilities are available. Application forms are obtainable from the **Staff Officer, Pressed Steel Company Limited, Cowley, Oxford.**

CENTRAL OFFICE OF INFORMATION requires an INFORMATION OFFICER (unestablished). Main duties are to write reference information papers on British and international economic affairs and to share in the work of current affairs. Candidates should have a university degree in economics or a related subject, research experience and the ability to present factual information concisely and accurately, and should be able to supply examples of written work if required. Some knowledge of finance and international trade is desirable. Salary £1,282-£1,490.—Write, giving age, full details of experience and qualifications, to Manager (PE/5346), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

LIBERAL PARTY

Research Assistant required in the Liberal Party Research Department. Graduate in Economics, Politics or related subjects.—Write, with full details, to Director, Liberal Research Department, 56, Victoria Street, S.W.1.

INVESTMENT ANALYSTS required commencing October for newly constituted research bureau sponsored by group of prominent international banking institutions.—Write fully in strictest confidence to Box 1541.

CENTRAL OFFICE OF INFORMATION requires an INFORMATION OFFICER (unestablished). Duties are chiefly to write reference information papers on international affairs. Qualifications required are an honours degree (preferably in history), research experience and the ability to present factual information concisely and accurately. Applicants should be able to supply examples of written work if required. Salary £1,282-£1,490.—Write, giving age, full details of experience and qualifications to Manager (PE/5542/PC), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

JOSEPH ROWNTREE MEMORIAL TRUST

APPOINTMENT OF ASSISTANT DIRECTOR

Applications are invited for the post of Assistant Director of the Joseph Rowntree Memorial Trust at York. The person appointed will assist the Trust's Director in implementing under the Trustees' direction the powers to engage in social research and experiment contained in the Joseph Rowntree Memorial Trust Act, 1959.

Applicants should have an Honours degree or produce evidence of ability to work at that level. They should be interested in the development of social institutions and their impact on those they are intended to serve.

Applications, which should include the names of two persons to whom reference may be made, should be sent to the Secretary, Joseph Rowntree Memorial Trust, Beverley House, Shipton Road, York, from whom further details of the post and of the Trust's work may be obtained.

COMPANY AFFAIRS

Calico Printers Association

IN the year to June 30th the gross income of the Calico Printers Association rose by 6 per cent from £5,145,000 to £5,430,000. The interim report in March showed that the royalty income, derived from sales of "Terylene" made by ICI and polyester fibres manufactured under sub-licence abroad, was still rising. In the full year net royalty income rose from £854,000 to £1,033,000. But the volume of business in printing and finishing services has shrunk and as a result net profits from CPA's traditional interests have fallen, limiting the rise in total net income to little more than 3 per cent, from £1,851,000 to £1,910,000.

The final dividend has been limited by the directors in deference to the Chancellor's request to the equivalent 1959-60 rate of 7½ per cent plus a bonus (related to royalty income) of 6¼ per cent. The interim dividend in March was raised from 6½ to 7½ per cent because of the higher royalty income, so that the total payment has been effectively increased from 20 to 21¼ per cent, covered about 3½ times.

Income from royalties in this country will cease in 1963 and the last of the overseas patent rights, which now contribute over 60 per cent of CPA's royalty income, run out in 1968. The importance of royalties for CPA looms even larger at the moment because of the difficulties it has experienced in its own trade. The poor summer weather led to a serious contraction in demand for commission printing and finishing and current orders do not, the directors say, indicate any immediate improvement in the general level of activity at CPA's printing and finishing works. Merchanting has been similarly affected and export sales have been hit by credit restrictions and import controls. However, the group's manufacturing interests overseas have done well and the reorganisation of the British spinning and weaving mills has produced higher profits from them. The directors also describe the profits earned in retailing as satisfactory. This does not make particularly heartening reading for investors who have to think of the future of CPA after the patent rights expire, and the stock market's reaction was to mark the 5s. shares down by 7½d. to 12s. 10½d., to yield 8.4 per cent on the total payment of 21¼ per cent, of which 13¾ per cent may perhaps be attributed to the royalty element.

Saxone, Lilley and Skinner

As with many other shoe companies Saxone, Lilley and Skinner (Holdings) has had an enviable record of growth in recent years and this is reflected in the 2½ per cent yield offered by the 5s. units at 26s. 6d. But another factor accounting for the high price of the shares has been the prospect that the shop properties of the group would be revalued. The revaluation has now been completed and, as expected, it reveals a substantial surplus over their book value. As valued at July 31st the properties were worth £15,665,000. Of this sum only the surplus of £5,600,000 arising on freehold properties is being written into the accounts; the leasehold properties, on which there is a surplus of over £5,800,000, are to be left in the accounts at their original book values.

The figures are impressive but they draw attention to the fact that the real rate of return on capital employed is low. Before the revaluation the net return on equity capital employed amounted to 12 per cent but that return comes down to 4½ per cent if both the freehold and leasehold properties are taken at their up-to-date valuations. This suggests that some of the assets might be more profitably employed in other uses, or that some of them might even be sold. It also points to the wisdom of the group's policy of expanding business by leasing and running shoe departments in a large number of department stores rather than by establishing its own shops.

Immediately, the revaluation has resulted in a one-for-one scrip issue for ordinary shareholders, part of the surplus being capitalised in writing up the nominal value of the shares from 5s. to 10s. In addition the company proposes by a debenture issue to raise £2 million to repay temporary borrowings and to provide additional working capital.

Doom Dooma Tea

SHAREHOLDERS of Doom Dooma Tea have to make a decision this weekend. The choice before them is between Brooke Bond's revised offer of 55s. a share in cash or the slightly more remote possibility that over 80s. a share might ultimately be realised from the sale of Doom Dooma's estates. The increase of 10s. in this final offer from Brooke Bond, which remains open until September 26th, followed a circular from the Doom Dooma directors disclosing that they had received a firm offer worth about 35s. a share for three of its estates and that the value of the two remaining estates was equal to 45s. a share. Thus Brooke Bond's revised offer still falls far short of the total asset value, but it gives Doom Dooma shareholders 55s. in cash immediately and Lazard Brothers, which has sent out the offer, suggests that shareholders may prefer "a bird in the hand to two in the bush."

Further circulars from Doom Dooma suggest that the two birds have an attractive plumage. They say that the offer by Indian interests for three estates has been increased from the equivalent of £300 to £315 an acre, compared with Brooke Bond's offer which is equivalent to £165 an acre. Taking into account stores, which would be taken over at an agreed valuation, the directors estimate the amount realisable at nearer 40s. than 35s. a share. They add that though the two remaining estates are smaller in acreage they contributed over half of the profit in 1960. This obviously goes a long way to justify the high valuation put on them. In advising shareholders not to accept the Brooke Bond offer and any who have already accepted to withdraw their acceptances by this Friday the Doom Dooma board, advised by Baring Brothers, says it "will do everything in its power to meet the wishes of the majority of members when they have decided which course they wish to follow." Most of the 40 shareholders who attended last week's annual meeting were prepared to reject both offers. This may only be a minority view, for the prospect of gain sparked off by the Brooke Bond bid is hard to resist when it is compared with the price range of 34s. 3d.-20s. 6d. on the 5s. shares in the last five years.

Eastwoods and London Brick

BUILDING activity in this country has remained high this year and the demand for materials has continued to run ahead of available supplies. The results from **Eastwoods,** which makes cement, bricks, tiles and pipes, show that it has done well from the boom: in the year to March 31st its gross profits rose by 24 per cent from £1,001,000 to £1,242,000. The market was expecting good results, as in May the directors had said that the turnover in the first six months had reached a record level and that they hoped that the 1960-61 profit would amount to about £1,200,000. At that time the interim dividend was raised from 5 to 7½ per cent and a total of 20 per cent was forecast, compared with 17½ per cent paid for 1959-60; a final of 12½ per cent has duly been declared and the earnings cover has risen from 2.2 to 2.4 times. As long as building activity remains high the group should continue to prosper though the credit squeeze and its fuel factoring business, hit by falling house coal sales, could limit the gain in profits. The stock market, however, is more impressed by the continued demand for building materials and marked the £1 ordinary shares up by 1s. 9d. to 84s., to yield 4¾ per cent.

London Brick also produces a wide range of building materials. Last year its results were good, though not spectacular, and now its directors have left the interim dividend unchanged at 5 per cent. But they say they would have paid more, had it not been for the Chancellor's request, as trading results so far are "very satisfactory." Since this announcement the £1 ordinary

shares have put on 1s. 4½d. to 90s. 3d. xd, to yield 3.9 per cent.

News of the World

THE confidence expressed by Sir William Carr, the chairman of the *News of the World* Organisation, at the last annual general meeting about the immediate prospect was clearly well-founded, and an interim report has now revealed that in the six months to June 30th gross profits rose from £700,000 to just over £900,000. The average weekly circulation of the *News of the World* rose by 280,000 copies in that period and the increase in the price in Sunday newspapers announced in January will have improved margins. It is impossible to assess how much of the increased profit has come from the *News of the World* alone but it appears to be making a better showing than it did in 1960, when the trading profit it earned slumped from £1,040,000 to £570,000. Then higher profits from the group's other interests cushioned the fall in total gross profits, which declined in all by only £50,000 to £1,520,000. These interests accounted for nearly 60 per cent of the profits in the first half of 1961, as the two most recent acquisitions, Vactric Precision Tools and Vactric Control Equipment, made their first contribution to profits, and as a full six months' earnings from Convoys, against only two months' in the corresponding period in 1960, were included.

The interim dividend has been raised from 5 to 5½ per cent and the increase would have been more had it not been for the Chancellor's call for dividend restraint. As Sir William Carr expects profits in the second half of 1961 to be better than those earned in the first six months shareholders can expect a bigger total payment, which is usually made up of two interims and a final. On the basis of the latest increase the minimum total payment would seem to be 27½ per cent, against the 25 per cent paid for 1960. On this assumption the 5s. shares, which have gained 1s. 9d. to 22s. 3d., yield just under 6¼ per cent and the non-voting shares, which are 1s. cheaper, yield 6½ per cent.

Tootal

IN 1959-60, following a sharp rise in profits, Tootal raised its ordinary dividend to 10 per cent after four years' payments of 7½ per cent. The group had extended its activities beyond its traditional business in cotton wear for men by acquiring Thermo-Plastics and Vetrona Fabrics, which specialises in glass fabric products. In the year to June 30th it went a stage further by acquiring the Yates Duxbury paper company and after tax and the payment of a bonus to employees, the group's net profits amounted to £340,000. This was £61,000 more than the net profit earned in 1959-60 but it is less than, on the basis of Yates Duxbury's earnings in 1959-60, this new subsidiary should have contributed for the nine months it has been owned by Tootal. It is therefore apparent that profits somewhere in the group have actually fallen. Shareholders must wonder where the weakness lies. Tootal's textile and clothing interests should have done well, but fierce competition in plastics and paper has been squeezing margins. Since the results were published the £1 Ordinary shares have lost 1s. 1½d. to stand at a new low point of 27s. 6d., to yield 7¼ per cent on the maintained 10 per dividend. Clearly the market has some doubts about the virtues of Tootal's diversification policy.

British Relay and Wireless

WHILE the manufacturers of television sets have suffered heavy losses as a result of the reimposition of hire purchase controls, the rental and the relay side of the television industry has continued to prosper and expand. British Relay and Wireless has, for instance, lived up to the forecast made at the time of the rights issue in February that trading profits in the year to April 30th would show a similar increase to that recorded for 1959-60 by reporting that its profits in 1960-61 rose by just over £1 million to £3,517,000. Almost all this increase has, however, been matched by a rise in depreciation from £1,677,000 to £2,560,000. In addition £200,000 has been put to a special reserve for contingencies in view of changes in set design over the past year and the possibility of further changes following the Pilkington report so that, even though investment allowances left the tax charge at only £1,000, net profits fell from £566,000 to £530,000.

As forecast the ordinary dividend has been maintained at 17 per cent, with the final of 10 per cent being paid on the capital as increased by the one-for-eight rights issue. On the basis of the enlarged capital, earnings as shown in the preliminary report amount to 23½ per cent, to cover the dividend 1.4 times. If, however, the special reserve is added back earnings amount to 32½ per cent, to cover the dividend nearly twice. On the other hand, as investment allowances at £355,000 are equal to about half of net available profits (including the special reserve) earnings before crediting investment allowances would amount to no more than 16¼ per cent, which would not fully cover the dividend. This is but one way in which the problems facing the investor in the TV rental and relay shares can be illustrated. It follows that if new business were hard to come by, the depreciation provisions would fall but so too would investment allowances, leaving profits largely dependent upon the volume of business contracted in the past and upon the rate at which the rented and relay equipment had been written off. As a whole, this possibility appears to be assessed more realistically in the current yield of 4 per cent offered by the 5s. shares at 21s. 3d. than it was a year ago when the yield was only 3 per cent.

London Stock Exchange

FIRST DEALINGS :	Sept. 4	Sept. 18	Oct. 2
LAST DEALINGS :	Sept. 15	Sept. 29	Oct. 13
ACCOUNT DAY .	Sept. 26	Oct. 10	Oct. 24

THE opening of a new account on Monday brought a revival of buying on the stock market but this was soon halted by the news later in the day of Mr Hammarskjöld's death. The number of bargains marked fell on Tuesday and on Wednesday was the lowest of any day this year. Share price indices moved slightly lower each day and over the week to Wednesday *The Economist* indicator lost 2.2 points to 361.2. The market was also influenced by two large rights issues announced this week, and by news before the weekend of the drop in steel output and the forecast from Ford Motor of a 15 per cent fall in car output because of the Chancellor's measures. Wall Street was dull after the news from the Congo and this contributed to the uneasy time in London, though the rally in New York on Wednesday helped sentiment on Thursday morning.

Interest in the gilt edged market centred upon medium dated stocks, and both Conversion 3½ per cent 1969 and Conversion 5¼ per cent. 1974 gained 3/16 to 81 9/16 and 89 12/16 respectively. Short dated and undated stocks altered little over the week.

Last Thursday bank shares fell back but they later recovered to close the week unchanged or with small gains ; but Barclays gained 1s. 9d. to 73s. 6d. Movements among brewery shares were irregular but Courage Barclay gained 1s. 6d. to 60s. after its debenture issue was well received and Truman Hanbury gained 6s. 6d. to 80s. Before the weekend the results from Eastwoods and the interim report from London Brick led to a revival of interest in building shares but they fell back later, leaving London Brick with a net gain of 1s. 3d. to 90s. and Associated Portland with a similar net loss to 72s. 1½d. Chemical shares declined over the week, falling on Wednesday on the news of the Laporte Chemical rights issue ; ICI lost 7½d. to 65s. 6d. Stores were mixed ; on the rights issue Debenhams fell 2s. 4½d. to 50s. 7½d. but Burton and Marks and Spencer 'A' each gained 1s. 6d. to 84s. 6d. and 101s. 6d. respectively.

Among engineering shares Davy-Ashmore were outstanding, gaining 6s. 9d. to 148s. 6d. in an otherwise firm market. Swan Hunter rose 2s. to 31s. 3d. following news of the reorganisation of its shipyards. Steel shares rose over the week with United Steel gaining 2s. 10½d. to 45s. 4½d., and Colvilles, 2s. 3d. to 55s. 7½d. Insurance shares fell back as did newspaper and textile shares. Among motor shares BMC gained 5¼d. to 13s. 8¼d. helped by the announcement of new models. Kaffirs were extremely dull with Wednesday's dealings the lowest for many years. Oil shares eased on BP's interim figures. The rumour of a Cunard-P. and O. merger caused rises in some shipping shares, though P & O lost 6d. to 35s. 7½d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended September 16, 1961, there was an "above-line" deficit (after allowing for sinking funds) of £55,663,000 compared with a deficit of £6,655,000 in the previous week and a deficit of £20,323,000 in the corresponding period of last year. There was a net deficit "below-line" of £12,517,000 leaving a total *cumulative* deficit to date of £529,322,000 compared with £524,741,000 in 1960-61.

THE MONEY MARKET

WITH the discount houses still short of bills it was not surprising that the syndicate raised its bid by a further 3d. to £98 7s. 1d. at last Friday's Treasury bill tender and the average rate of discount again fell by about 1s. to £6 11s. 10.99d. per cent. Total applications fell by £35 million to £407 million and only £240 million of the £250 million bills on offer were allotted, but the syndicate again secured a satisfactory allotment of 59 per cent against 60 per cent in the previous week.

Houses have had a slightly easier week than for some time past. On Thursday and Friday of last week the rate for day to day money was pegged at 6⅛ per cent and below ; on other days rates up to 6⅜ per cent have been conceded. The authorities gave a moderate amount of help on Saturday, but on Monday one or two houses were forced to borrow a very small amount at Bank rate. The market was severely tested on Wednesday, which was both the banks' making-up day and the last day for increasing special deposits with the Bank of England to 3 per cent. Calling from the clearing banks was not as heavy as expected but most houses needed all their privilege facilities to balance their books.

(1) Current statistics of employment by industry, based on the 1958 Standard Industrial Classification, go back only to May, 1959. *Manufacturing* employment for earlier dates is shown on the old basis (1948 SIC). (2) Engineering and electrical goods, shipbuilding and marine engineering, *vehicles, metal goods.* (3) Textiles, leather goods, clothing, food, drink and tobacco, *timber*, furniture, paper, *printing and publishing.* (4) Number registered as *unemployed expressed* as a percentage of the *estimated* number of employees. (5) Dorset (*excluding* Poole) was transferred from the Southern to the South Western Region on May 12, 1958. (6) Deliveries. (7) Great Britain. (8) Excluding all screening losses normally amounting to around 5,000 tons a week. (9) Average for second *quarter.* (10) England and Wales. (11) Generation for public supply. (12) Average for third quarter. (13) September, 317·1. (14) September, 1·4. (15) September, 328.

APPOINTMENTS

A CAREER IN SOUTH AMERICA

An international firm of public accountants *wishes to increase* its permanent professional staff in Argentina, Bolivia, Brazil, Chile, *Paraguay and Peru* and invites applications from qualified accountants at all levels of experience, from those newly qualified *to those* capable of assuming senior executive posts, including men who have had experience of management consultancy work.

The positions advertised are not replacements ; they are new posts. The work is varied and interesting with opportunities for travel, and there are excellent prospects of speedy advancement *in countries* whose economics are expanding rapidly.

Contracts are for an initial period of three years, renewable by agreement. Terms include an allowance for the expenses of moving to South America, a salary (payable partly in hard currency) on a scale sufficient to permit a comfortable standard of *living together* with a margin for savings, annual bonus, first-class return passages *for staff members* and their dependants, and three months' fully paid *leave at the end of each contract in addition to local leave during* its course. Salaries are subject to merit increases and are reviewed from time to time to take account of changes in the cost of living. Additional benefits, differing from country to country, are provided by advanced social legislation. A partner of the firm will shortly be in London to interview applicants.

Please send particulars of experience and qualifications, together *with a passport type photograph, to Box 1541.*

(For other appointments see page 1202)

CIVIL SERVICE COMMISSION, DUBLIN

VACANCIES FOR UNIVERSITY GRADUATES AND OTHERS

A competition *for 5* posts as *ADMINISTRATIVE OFFICER* will begin on 31st October, 1961. The competition is open to men and women who on 1st November, 1961, were 20 years and under 26 years and

(a) who hold a FIRST OR SECOND CLASS HONOURS UNIVERSITY DEGREE, *or an equivalent qualification, or*

(b) who are established Civil Servants with certain service.

Pay : £780 rising to £1,100 (woman or unmarried man) or £1,360 (*married man*). *Plus children's allowances.*

Prospects : Promotion guaranteed after 7 years if certified suitable.

Tests : Essay, Précis and Interview. Qualifying test in Irish.

Intending candidates should write to Civil Service Commission, 45, Upper O'Connell Street, *Dublin*, 1. The latest time for the acceptance *of completed* application forms is 5.0 p.m. on 13th October, 1961.

Further competitions will be held in the *Autumn* of 1962 and 1963. *It is hoped* to offer not less than 4 posts on each occasion. Details will be announced in due course.

UNESTABLISHED DISTRICT COMMISSIONERS NATIONAL SAVINGS COMMITTEE

Several vacancies, mainly in the Provinces, for men or women with knowledge of economics, organising ability, preferably with experience of public speaking and voluntary organisations. University education desirable. National salary £775 (age 25 and over) to £1,430. Possible establishment later. Application forms from Manager (PE 3543), Professional and Executive Register, Ministry of Labour, Atlantic House, Farringdon Street, London, E.C.4. Closing date for completed application *forms Wednesday*, 11th October, 1961.

INDUSTRIAL RELATIONS

OVERSEAS APPOINTMENT—MAURITIUS

Applications are invited for the post of Executive Officer to the Mauritius Employers' Federation for one tour of two years.

Sound knowledge of labour relations, with particular emphasis on overseas *conditions*, essential, preferably in a plantation *industry. It will be an* advantage if the candidate has had practical experience in negotiations, and is fluent in the French language.

Salary *£2,500 per annum*, plus two *free air passages to and from Mauritius*, free house, car and travelling expenses.

Only applicants with appropriate *qualifications* will be considered. Applications *(in duplicate)* giving full particulars of age, education, qualifications and experience, especially overseas, present salary, married or single, should be addressed to the *Mauritius* Employers' Federation, c/o the Director, Overseas Employers' Federation, 58, Clifford's Inn, Fetter Lane, London, E.C.4.

Closing date for applications, 21st October, 1961.

INTERNATIONAL AFFAIRS

CENTRAL OFFICE OF INFORMATION requires a SENIOR INFORMATION OFFICER (unestablished) to write reference information papers on *international affairs* and, on occasion, to supervise the work of others similarly engaged. Qualifications required are an honours degree (preferably in history), research experience and the ability to present factual information concisely and accurately. Applicants should be prepared to supply examples of written work if required. Salary £1,573-£1,937.—Write, giving age, full details of experience and qualifications, to *Manager* (PE 2030), Ministry of Labour, Professional and *Executive* Register, *Atlantic House*, Farringdon Street, London, E.C.4.

BUSINESS AND PERSONAL

THE LINCOLN GALLERY, 8, Sloane Street, Knightsbridge, S.W.1. BELgravia 6639. Sept. 25th to Oct. 21st "*Art and energy*"—a Schetini retrospective.

YOUR DAUGHTER would enjoy finding her job through STELLA FISHER BUREAU in the STRAND.

B.Sc.(ECON)

LONDON UNIVERSITY

U.C.C., founded in 1887, successfully prepares students for this Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or *industry, government or municipal* posts.—Prospectus, *giving* details of Courses for other London Degrees, G.C.E., Law Exams., etc., from Registrar, University Correspondence College, 60 Burlington House, Cambridge.

HE'S A SOCIAL LION : not because of his fame as a big game hunter, not because he's a best-selling author—but because he always serves superb EL CID Sherry to his grateful guests.

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.Econ. (three if entrance is included) at *moderate fees.* 1,431 Wolsey Hall students passed London Univ. B.Sc. Economics exams. 1950-60. Tuition also for G.C.E., Law, Statistical, other exams. —Prospectus (mention examination) from E. W. *Shaw Fletcher*, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

SECRETARIAL TRAINING, *especially for* university graduates and older students. Six-month and intensive 14-week courses.—Write *Organising* Secretary, Davies's, 158 *Holland* Park Avenue, W.11. PARK 4654.

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, *Management, Export, Commercial*, General *Certificate* of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. *Established* 1910.

ADVANCED STUDIES IN MARKETING PRACTICE AT HOME AND ABROAD

A series of one- and *two*-day seminars exclusively for the Director and Senior Executive.

Full programme from:

London School of Marketing, Ltd., Newspaper House, Great New Street, London, E.C.4. Tel. Fleet Street 3519.

ESCORT FOR FAROE ISLAND FISHING VESSEL

PETERHEAD, ABERDEENSHIRE. At 3.34 on the afternoon of the 9th March, 1960, the life-boat Julia Park Barry of Glasgow was launched one hour before low water to go to the help of the fishing vessel St. Jacques of Vaag, Faroe Islands, which was in difficulties in heavy weather off Buchan Ness. There was a south-easterly gale and the sea was very rough. The life-boat escorted the fishing vessel into Peterhead harbour and reached her station at 4.50.

A Scottish Coxswain

This is another true story of the Life-boat Service — typical of the work that is going on day and night, year in, year out.

The Royal National Life-Boat Institution is supported wholly by voluntary contributions.

Two important finance houses have joined forces for strength and development

Owned by two great banks

Two long-established finance houses, Olds Discount Company Limited and Scottish Midland Guarantee Trust Limited, are now linked together in Lloyds & Scottish Finance Limited which, in turn, is owned jointly by Lloyds Bank and the National Commercial Bank of Scotland.

With a capital of £15,000,000 and assets exceeding £100,000,000, the Group offers comprehensive hire purchase and block discounting facilities for the distributive trades, industry, commerce and the individual.

Traditionally, a large proportion of its turnover is in the motor vehicle business: private cars, commercial vehicles and motor cycles. The manufacturing and building industries, and other large-scale users of capital equipment and machinery, including agriculture, are employing the Group's financial facilities on an increasing scale. In the field of household equipment—radio, television, refrigerators, washing machines, furniture, etc.—its block discounting and direct collection facilities are used extensively by enterprising traders. Convenient payment arrangements are provided for individuals for central heating installations, marine craft, garages and garage extensions, boarding school fees and other such personal requirements.

Through a nation-wide network of over 100 branch offices the Group has established a reputation for efficient, courteous and understanding service to all its customers. Enquiries are welcomed at any office of the two operating companies, Olds Discount and Scottish Midland Guarantee Trust; or may be addressed to the head office.

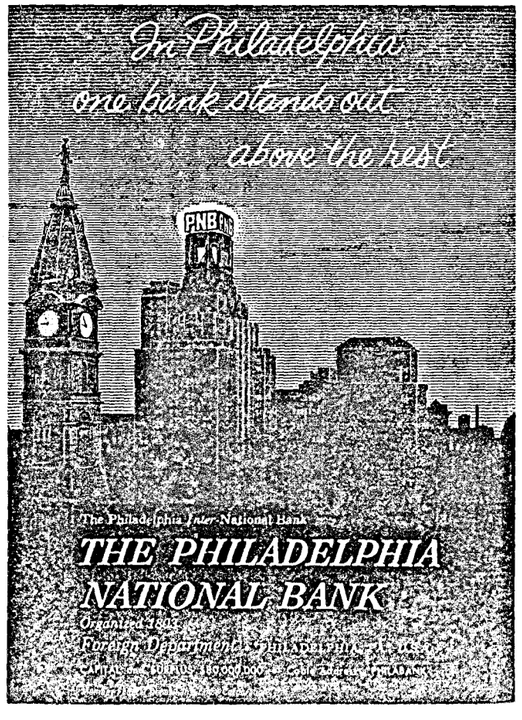
GROWTH OF A NATION: In a series... No. 6

STEEL WOOL reaches the hands of the Japanese "OKU-SAN"



Steel has even found its way into the hands of the westernized, Japanese "Oku-san" (housewife)—in the form of steel wool—and demands for steel continue to increase. Expansion of Japan's steel industry during the last decade has been spectacular, now reaching fourth place for the first time in the history of world steel making.

We are proud of the growth of this industry and the part that the Nippon Kangyo Bank has played in its development. In keeping with its name, "Kangyo" which means "industrial and commercial promotion", our worldwide facilities are available to foreign firms engaged in commerce and industry. May we suggest that you avail yourselves of the facilities of the Nippon Kangyo Bank.

Invest in The West Indies

How Federation benefits new investors

Economic and foreign trade policies are co-ordinated, the aim being to establish a fully diversified economy. Transport, communications and power facilities are being expanded—new harbours and roads, larger airports, all these are creating new opportunities for new secondary industries.

THE RESOURCES ARE THERE:

Oil, bauxite, water power and many minerals. Fruit, cocoa, cotton, coffee, sugar, spices, crops of all kinds. And 3½ million people.

THE SKILLS ARE THERE:

Considerable progress in education has been made in recent years and much more is planned. Research programmes of The Agriculture Faculty of the University College of The West Indies (formerly the Imperial College of Tropical Agriculture) and its other Faculties benefit the whole region.

THE MARKETS ARE THERE:

Both Americas are prosperous near-neighbours. The tourist possibilities of The West Indies are far from fully realised.

Customs Duty and income tax concessions are available

INDUSTRY AFTER INDUSTRY, all around the world, has found that new Polysar* rubbers, produced by the Polymer Corporation Limited, have helped to solve a wide variety of raw material problems. The result has been a steady growth in production, leading to the present pre-eminence of Polymer among world rubber suppliers. Additions are constantly being made to these versatile elastomers. One of them could supply you with the answer to your raw material problems. A letter to the Marketing Division, Polymer Corporation, Sarnia, Canada, will put you in touch with a Polymer representative in one of 43 countries.

INTERNATIONAL

LOOKS AT REALITY

The Berlin crisis and General Clay's bluntness have stimulated a far-reaching reappraisal by the Germans of their future between East and West (p. 1230) which is causing them to think again about the most expedient way of reuniting Germany—which the West, in *its* reappraisal, must still pursue (p. 1229).

The national anxiety may help Dr Adenauer to remain in office (p. 1265).

Mr Kennedy's speech at the United Nations on the present deadly perils of international anarchy was addressed not only to the Russians and the uncommitted countries, but also to the Republicans, who have been contending that his foreign policy has seemed weak (p. 1249). **A look at his disarmament proposals shows them to be the most rational of their kind yet produced (p 1231)**; and a look at Russian and neutralist attitudes after his speech suggests that prospects, on Berlin, disarmament, and the UN, may not yet be utterly black (p. 1265).

Meanwhile Russia, after an otherwise realistic evaluation of the state of its economy, has backed itself to outdo the United States in this field by the end of the decade (p. 1268).

OUTLOOK FOR TALKS

World Credit : agreement *en principe* is well short of total agreement, and the outcome of the International Monetary Fund's congress of Vienna is dangerously inconclusive (p. 1275).

General de Gaulle's renewed efforts to negotiate successfully with the Algerian nationalists are expected to cause another storm at home before long (p. 1236) and the long-term prospects for Algeria are as uncertain as were those for Palestine in 1947-48 (p. 1271).

The Common Market : The Six and Britain have at last announced their betrothal ; but hagglings over the degree of love in this *mariage de convenance* still make the date of the wedding uncertain (p. 1233).

A LOOK AT AFRICA

Leopoldville, Elisabethville and Stanleyville remain at odds, but there is a ray of hope (p. 1266).

Britain has yet to remedy its recent maladroitness over **Katanga** (p. 1236). **Belgium** is trying to avoid another Congo in Ruanda-Urundi (p. 1242).

Ghana has, naturally perhaps, an inferiority complex (p. 1237).

South Africa is standing up to the rigours of a "siege economy" better than was expected (p. 1287).

MIDDLE EASTERN OUTLOOK

The major oil companies are not accepting **Iraq's** demand for a share in the ownership of existing oil operations (p. 1278). General Qasim has also got a Kurdish revolt, or its aftermath, to preoccupy him (p. 1238).

As a result of this week's officers' revolt in Syria, it is perhaps necessary, and may remain so, to speak of the Disunited Arab Republic (p. 1235).

A LOOK AT AMERICA

The achievements of television in American schools are well worth a close look by European educational authorities (p. 1252).

Passage of the appropriations for foreign aid has at last allowed Congress to go home (p. 1250) while the report of the Civil Rights Commission on segregation in the schools will probably provoke a storm in the next congressional session (p. 1252).

Economic recovery has not yet made itself felt in increased sales of consumer goods (p. 1250).

HOME

PCW-WCW

The **Labour Party's** conference decisions at Blackpool, thanks to Mr Gaitskell's work over the past year, may be all but irrelevant to his and the party's real problems (p. 1234).

The **Liberal Party** looked more balanced than of yore at Edinburgh : but being right—and going Left—is not enough (p. 1244).

At Brighton, the **Conservatives** at their conference will have to contend with a strong contingent of hangers, floggers and keep-out-the-woggers (p. 1236).

POTENTIAL

Sales of **electricity** continue to outrun the forecasts ; but this can reduce the industry's operating surplus ; and to invest more and catch up with demand, larger surpluses are needed (p. 1277).

The English north-east holds splendid promise both socially and industrially : it is hardly beginning to be realised (p. 1245).

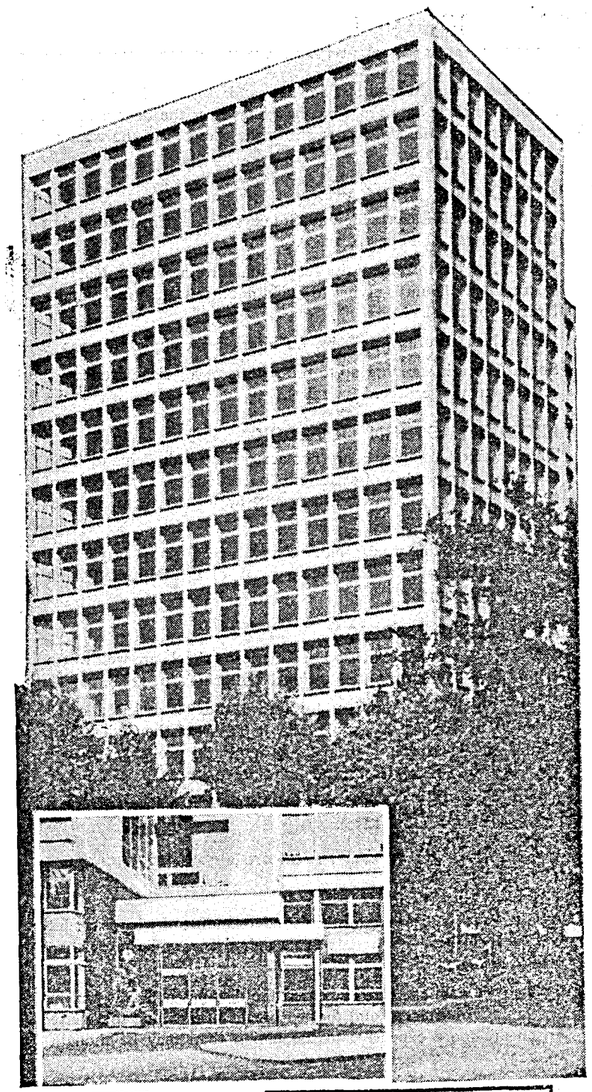
PARLEY

An apparent—and dangerous—misunderstanding of what is meant by "free negotiation" among trade unionists may be more than a little disingenuous (p. 1232).

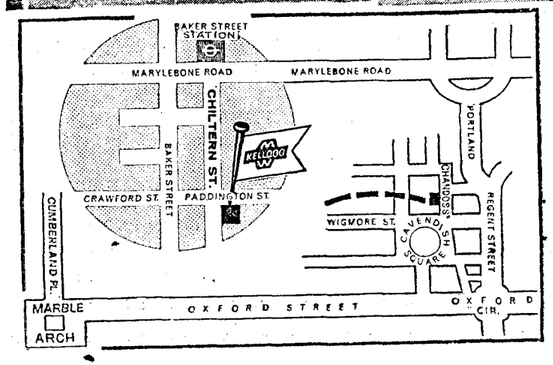
So far no amount of talk has eased the disputes at Fords and in the building industry : and the **tea breaks** over which they have arisen are more expensive to the nation than may be thought (p. 1237).

PERIL

The recent spate of **air fatalities** highlights the low compensation that airlines are prepared to pay to the victims' dependants (p. 1288).



The sharp increase in the rate of **industrial accidents** might be lowered by tough measures from the Government (p. 1238).



PLUNGE

Britain's TV advertisers are poised for entry into the common market, armed with statistics and audience ratings (p. 1292).

On November 8th Wales will resolve the biggest issue there since Glendower's rebellion—the opening of pubs on Sundays (p. 1238).

Squirrels have the right idea or do they?

You probably thought this advertisement was going to draw a neat little parallel between the nut-storing efficiency of the squirrel and Lansing Bagnall equipment. So did we. Regrettably, the squirrel let us down.

Contrary to what seems to be a common supposition, squirrels do *not* efficiently stock-pile their winter food in holes in trees. They randomly bury it all over the place, one nut at a time, and then have to go scratching around whenever they feel hungry... Never mind; delightful little creatures, aren't they! Even so, and our strong British love of animal life notwithstanding, it might be an idea not to introduce squirrels into any discussion you may raise with us. Mention "Mechanised Muscle" by all means – no disillusion there! "Mechanised Muscle" gives your handling and storage the high efficiency which modern conditions demand. You can depend on it.

MECHANISED MUSCLE Regd

What you see is the fruit for your dessert. But behind the attractive end-product is the complex organization of a big factory, with at least one problem solved by Burroughs.

PLANNING FOR CANNING

SMEDLEY'S LTD., OF WHYTELEAFE, SURREY have eight food freezing and canning factories in Great Britain.

PROBLEM—to plan production and control the stocks of all varieties of canned and frozen foods held at factories and depots.

SOLVED—with 7 *Burroughs Sensimatic* accounting machines.

METHOD—'Stock' and 'Programme' cards for every factory are compared with orders placed. Where stocks need replenishing, transfers can be made immediately between factories to meet commitments.

RESULT—the stock and production programme in each of the factories is immediately accessible from the Burroughs cards, giving greater flexibility in planning production and distribution.

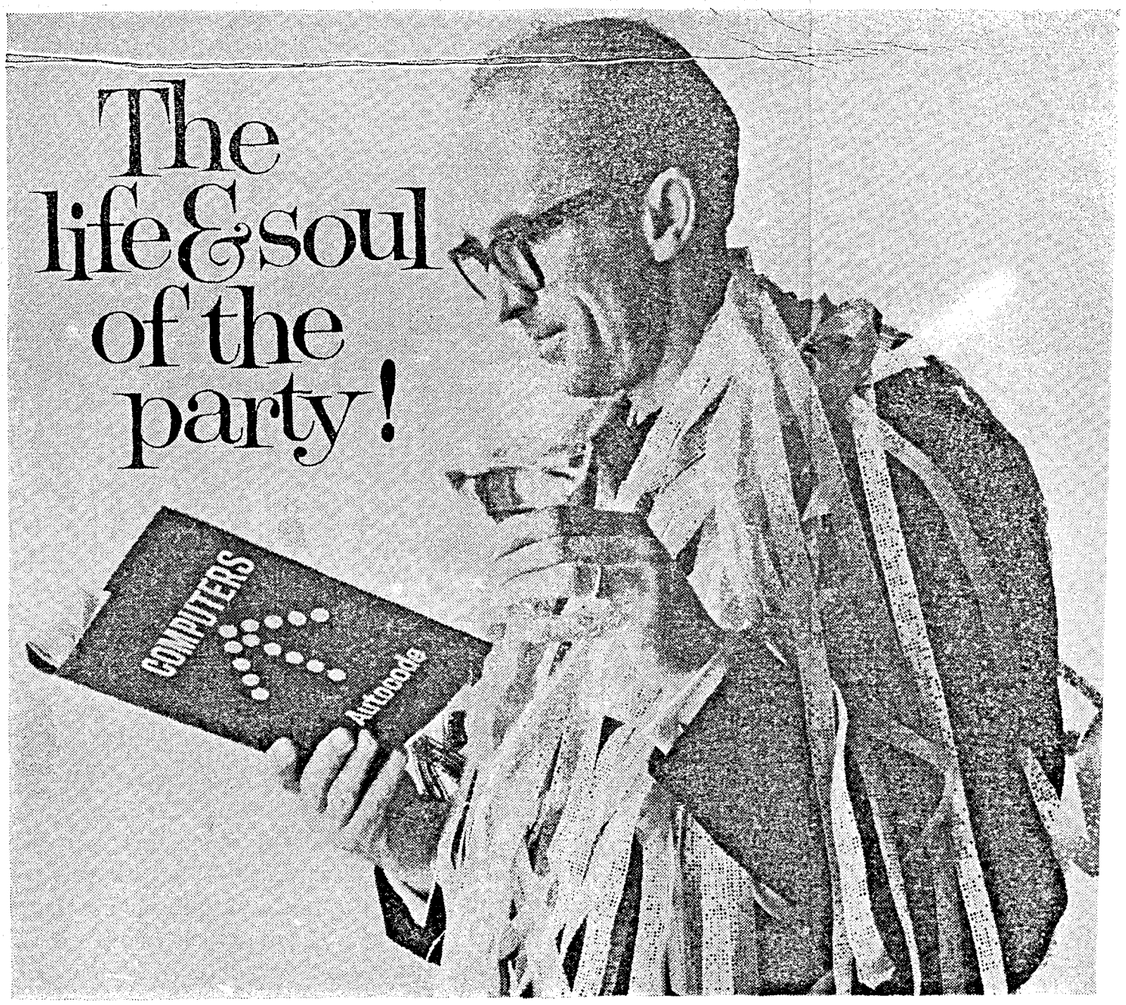
Collector's Corner



A Painted Lady perhaps . . . what a prize for a youthful collector ! But the obsolete machinery and metal scrap in the factory yard is a collector's item, too—for an organisation like Thos. W. Ward Ltd. who have the facilities to handle it on a large scale.

Scrap metal accounts for more than half the metallic charge fed into Britain's iron and steel furnaces. Much of this passes through Ward's depots where mountains of metal are sorted and processed every day. In these modern times, scrap has become an industry itself, and, as in many other fields, Wards are in the forefront of the industry.

G.P. 111

That's me! I'm the life and soul of the Elliott computer world. Then what's all this about a party? Well, I don't need a computer to answer that one. I'm celebrating success. The reason's simple. I am successful.

Here's how . . .

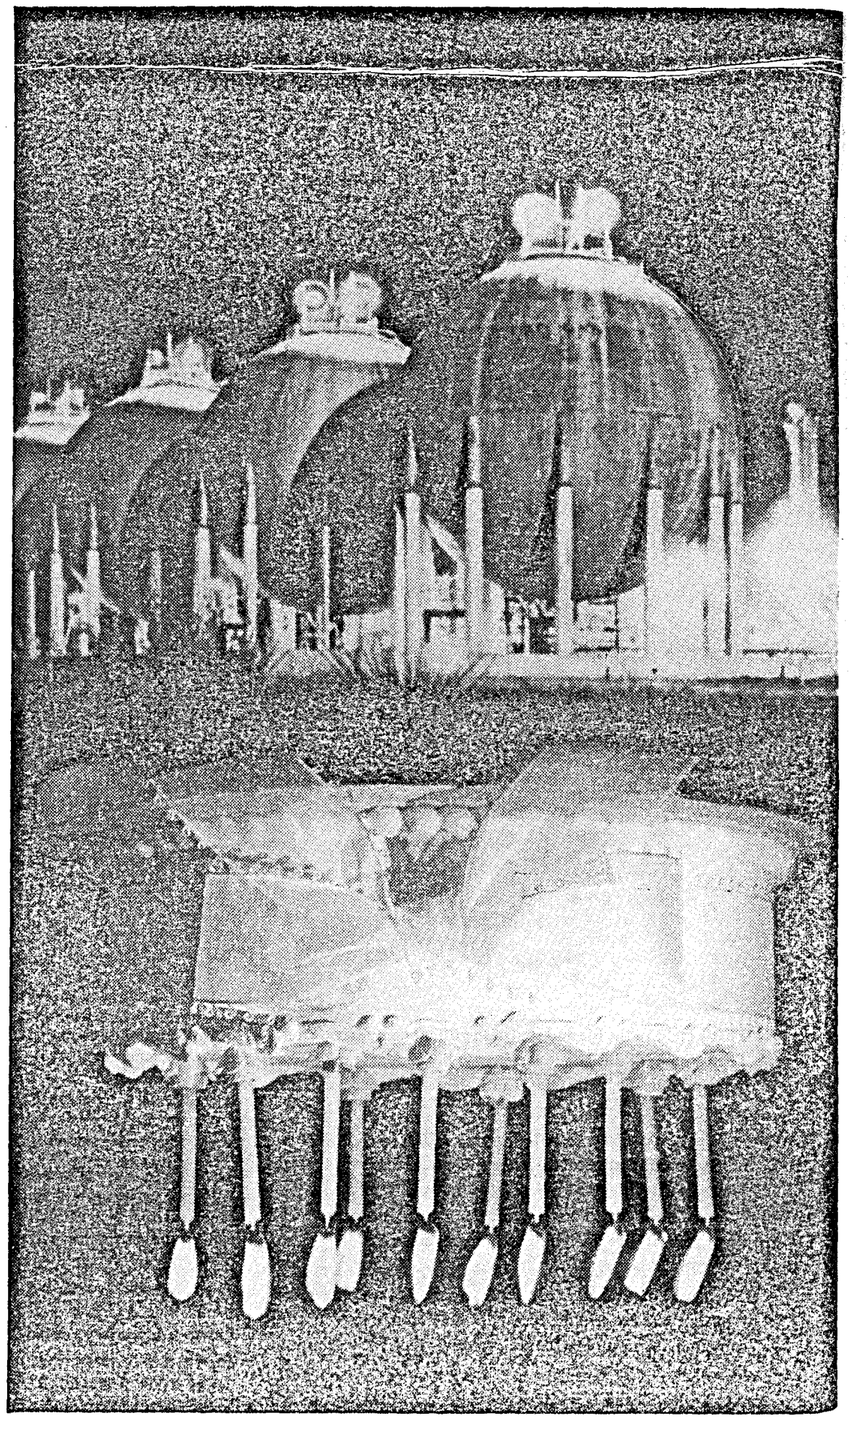
Last year at Elliott's we sold more computers than ever before —not just computers, but *know-how* as well. That's why we had success. Now it doesn't come that easily you know, even when you eat, live and sleep computers, as we do.

Take the National-Elliott 803 *for example . . .*

You say the 803 what? It could be a train, a flight number, or even a space-launching count down. But it's not. It's a computer. A pretty marvellous computer too! We've proved that by selling 70 of them.

Now, with all the experience of the 803 to back us, we've designed another computer. The 503. We've built into it all *the ingredients for success plus one more—speed! Speed at a* sensible price too! 503 is a hundred times faster, yet barely twice the cost. Top speed. Top reliability. Top quality. In fact a top flight computer that needs no new programming library, no new programming training.

What more could anyone want?



Why not pay us a visit and learn more about this fabulous computer? We're quite willing to let a little of our success rub off on you. Drop us a line first, and I'll open a case of champagne—vintage '803, naturally!

ELLIOTT COMPUTERS

COMPUTING DIVISION, ELLIOTT BROTHERS (LONDON) LIMITED
BOREHAM WOOD, HERTFORDSHIRE, ENGLAND

(STAND 14, COMPUTER EXHIBITION, OLYMPIA, OCT. 3-12)

A Member of the Elliott-Automation Group

Ten years ago the Esso Refinery at Fawley was officially opened. It was the largest refinery ever to be built in Britain or the entire Commonwealth. It still is.
Since then: It has nearly doubled in size, and its original cost has more than doubled. The average earnings of its 3,500 employees have doubled.

TEN YEARS AGO...

IT IS A BIG REFINERY

For example:
This year it will produce more than enough petrol to run all of this country's 5 million private cars for 4,000 miles each.
In one *hour* it will produce enough paraffin to keep your convector heater burning night and day for 5 years.
In one *minute* it will use as much electricity as most households do in three months.
In one *day* it will use as much salt water for cooling as it takes to fill King George V dry dock in Southampton twice over.
Every day it processes nearly 8 million gallons of crude oil.
It handles about one-third of all ships using the port of Southampton.
That means 37,700 ships to date.

IT IS ALSO A FACTOR IN THE COUNTRY'S ECONOMY

For instance:
It provides between one-quarter and one-third of all the oil products on which Britain depends for its land, sea and air transport; for its industry, its agriculture, and its domestic heating.
It has an important and increasing part to play in the British chemicals industry.
It has provided the country with £70 million worth of exports to date.
If it were still necessary (and possible) to import from United States sources the products now made at the Esso refinery, Britain's dollar spending would go up by 200 million dollars a year.

IT HELPS THE LOCAL ECONOMY, TOO

For example:
Through its payroll, its purchases and its payment of rates, it makes available to local trade about £6½ million a year.
Its rate payment is more than the combined total of all the New Forest's domestic ratepayers put together, and 2½ times that of all the other industries in the area.
For the port of Southampton it provides additional revenue of £60,000 per year in harbour dues.

VOLUME CC - NUMBER 6162

To One via Two

THREE words at a cocktail party have turned General Lucius Clay from probably the most popular American in Germany into quite possibly the most unpopular. Talking to a group of journalists in Berlin on September 22nd, General Clay suggested that the west Germans ought "to accept reality" in their attitude towards east Germany. No one, it might be thought, is better qualified to make this suggestion without being misunderstood than the man who faithfully defended Berlin against the Russian blockade thirteen years ago. Yet General Clay is already being told that his proposal amounts to capitulating to the Russians. Herr Lemmer, the minister of all-German affairs in Dr Adenauer's government, said on Monday that any recognition of east Germany would be a decisive surrender to the Russians; other German comments, unofficial but even more vehement, are reported by our Bonn correspondent on page 1265.

Plainly, the search for a peaceful solution of the Berlin crisis has reached a fork in the road. If the policy General Clay was urging is rejected—that is, if the West cannot bring itself to offer some accommodation on east Germany in return for a real guarantee of Berlin's freedom—the chances of negotiating a settlement with Mr Khrushchev will sharply diminish. If such a policy is to be accepted, on the other hand, many people have first to be convinced that it is right. There are not all Germans; there are sceptics in Washington, too, not least perhaps among the advisers President Kennedy has inherited from Mr Truman's Administration.

It is not even certain that the ideas General Clay expressed will become official American policy. Senator Mansfield, the President's party leader in the Senate, said last Sunday that some acknowledgment of east Germany's existence might be inevitable, and on Monday the President himself told the United Nations that he was committed to "no rigid formula" on Berlin; the phrase is vague, but it suggests that he might be willing to let the east Germans join in a new agreement guaranteeing the city's independence. The most that can be assumed, however, is that Mr Kennedy is ready to offer some kind of recognition to east Germany provided the western alliance can stand the strain this puts upon it. Presumably he is now trying to judge, from the reactions to General Clay's remark, whether the strain is bearable.

This strain, it is clear, may well be considerable. The argument against recognising east Germany in any way—which is most ably set out by Mr Sebastian Haffner in the current issue of *Encounter*—cannot be dismissed out of hand. To recognise Herr Ulbricht's regime, say those who oppose such a move, would be to violate the promise the allies made to west Germany when they enrolled it in Nato in 1954. The resulting disillusionment of the west Germans would be so great that they might well break away from Nato and seek an alliance with Russia as the only way left to them of reunifying their country.

But there are two reasons for thinking that this argument stretches the evidence; that the strain caused by some expedient accommodation with the puppet regime in east Germany will not, in fact, be intolerable. The first reason is that no one is suggesting the abandonment of the attempt to reunify Germany. The proposal now under consideration is merely to abandon one method of trying to achieve unification, which has proved totally ineffective, in favour of another that might be more effective in the long run. The basic promise the allies made to west Germany in 1954 is contained in Article 7 of the main convention signed

in Paris that year. In this, the western powers undertook to seek a "reunified Germany enjoying a liberal-democratic constitution like that of the federal republic." Until now, the pursuit of this end has consisted of a sustained effort to bring about the collapse of communist east Germany by denying it recognition and by encouraging unrest among its population. How completely this effort has failed can be judged from the remoteness of the prospect that unity is going to be achieved in this way, now or ever. At no time since 1954 has east Germany looked like tumbling into the West's lap; the last real hope that it would do so was removed by the measures Herr Ulbricht took on August 13th to stop the flow of refugees through Berlin.

THERE is no cause to believe that a policy which has been barren for seven years will suddenly bear fruit now. A dragging crisis over access to Berlin, which is inevitable if Mr. Khrushchev hands over supervision of the access routes to Herr Ulbricht and the allies refuse to recognise Herr Ulbricht's competence to accept it, will simply stiffen attitudes on both sides of the Elbe. The one remaining hope of reuniting Germany lies in a policy that seeks to diminish the hostility between the two parts of Germany, not increase it. Such a policy must necessarily begin with an acceptance of the fact that, however distasteful it may be, the east German state exists. Only when the two halves of the country start to feel at ease with each other will there be a chance of a more liberal regime in east Germany, and hence of a gradual growing together of the two fractions. This path to togetherness is undoubtedly long, and it, too, may run into the sand, but it is the only one left. As often, the truth may lie in an apparent paradox: the best way of proving that Germany is ultimately indivisible is to acknowledge the fact that it is now divided.

In the second place, it is most unlikely that the west Germans would react to a change of this kind (which is a change of method, not of objective) as violently as the pessimists assume. In 1954, after a long inward debate, Federal Germany made a fundamental decision. It chose to link itself to the West, rather than seek reunification on Russian terms, even though this meant prolonging the division of the country. Nothing has happened since then to make this decision worth reversing. The practical advantages of the link with the West (and the link itself) have grown visibly stronger in the last seven years. West Germany has become almost inextricably entwined with its western neighbours, through a process of economic and political integration, and is profiting greatly from the fact; the Germans have regained an army, and consequently a voice of authority in the world; and they have had time to reflect, as they gaze into eastern Europe, on the dangers of subservience to the Soviet Union. The decision of 1954 was made just as much for Germany's benefit as for Nato's. The benefit remains, and therefore the decision should remain, the same. It is hard to believe that German businessmen and politicians will abandon these benefits for the sake of a perilous commitment to Russia, undertaken in a fit of pique.

There is only one real difference between 1954 and now. Then, the federal republic tried to combine its basic decision to join the West with an approach to reunification which some people said at the time was incompatible with the basic decision—and has indeed turned out to be so. This incompatibility could be ignored at the time, since the West was still militarily superior to the communists. Now, however, it can be ignored no longer. The communists have acquired nuclear equality; the hope that they could be browbeaten into letting eastern Germany slide into the western orbit, remote when Russia was relatively weak, has disappeared altogether now that Russia is relatively strong. And the communists can rub home the point because Berlin, deep inside the territory they control, is a hostage to the West's willingness to recognise the existing balance of power in central Europe.

On the evidence, there can only be one solution to the problem. It is neither to destroy the present balance of power, by detaching west Germany from the West, nor to give up the objective of reunifying Germany; but to seek reunification by means that take the present facts of life in middle Europe into account. If this means recognising east Germany in some way, one consequence would be to improve the chances of getting an agreement on Berlin's future, as well as lessening the risk of war; but the results might go deeper. Just possibly, the tangle of nerves, hostility and suspicion in the area might begin to be unwoven—and thus the conditions created in which Germany may, one day, be peacefully united again.

Two Minds in One

The west Germans re-examine their future

FEDERAL Germany's agonised reappraisal of its eastern policy did not begin with what General Clay said in Berlin a week ago. It has been going on ever since Herr Ulbricht sealed off east Berlin on August 13th. The Berlin coup, it is true, was not by itself responsible for the electoral shift that has put an end to Dr Adenauer's parliamentary majority and brought German politics back to life. There was already a widespread desire for a change at the helm. All the same, the events of August 13th were a catalyst. The mood of prosperous euphoria which had persisted until then was pricked like a balloon. There followed an earnest and worried examination of Germany's future which could prove a turning point in the country's post-war history.

Outsiders may find it hard to understand the depth of this response to the events of the last six weeks. Herr Ulbricht, after all, did no more when he wired off the Russian sector of Berlin than Stalin had done when he wired off the Russian zone of Germany. But it would be a vast mistake to minimise the impact of his action on the German people. Despite the fact that the prospect of national reunion has steadily receded through the years, a multitude of ties, and the intangible sense of nationhood, still make the desire for unity a compelling factor in German life. The open door in Berlin was precious because it was the last remaining breach in the wall between the two parts of Germany. Its slamming awoke a sense of national emergency.

As with any Russian attack, one reaction to this was (and is) an enhanced demand for a strong western-oriented government. But Herr Ulbricht's barricades not only scarred the map of Berlin. They also exploded the comfortable myth of the Adenauer era: that firm loyalty to the western cause, and that alone, would bring not only the gingerbread of material prosperity but also the gilt of reunification on western terms. The one apparent result of this month's election is to show that Dr Adenauer's policy—of sticking to the West to the exclusion of all else—has lost ground. But Dr Adenauer's loss may be the gain of either of two widely different points of view. It could swell a revival of nationalist feeling, or it could encourage the Germans, in General Clay's words, "to accept reality" in central Europe: which, it is too early yet to say with certainty.

SOME Germans, at any rate, have responded by asking whether progress towards the goal of national unity does not demand acceptance of the changes in eastern Europe during the past fifteen years. Those Free Democrats who have been stoutly belabouring the failings of past policies, and modestly advocating such things as better relations with Poland, have undoubtedly gained from this new questioning. If Dr Erhard were to become Chancellor, all the indications are that he would reflect a similar current of feeling in the Christian Democratic ranks. This kind of readiness to show flexibility towards the East by no means implies worse relations with the West, still less a nationalist plunge away from Germany's present loyalties.

But other currents of feeling can also be discerned. From his Berlin outpost, where the shock was greatest, Herr Brandt has already warned the West of the danger of a nationalist revival. As yet, the feeling is no more than latent, but the ingredients of a new nationalism can be seen. Anyone present at the great gathering outside the Berlin Senate House on August 17th, when Herr Brandt gave the warning against another Munich that so disquieted some western commentators, knows that he was trying not to whip up feeling, but to calm his audience; he was attempting to guide their impulse for action into modest and practicable channels, to reason with their mounting irritation against the western allies, and to lead them in spirit (as the authorities had done in practice) away from the barricades to a calm discussion of Berlin's problems. But the instincts Herr Brandt was then seeking to control could take disturbing forms.

It is thus a troubled patient that may now be asked to swallow a further dose of unpleasant medicine: that is, a recognition by the West of the Oder-Neisse line and, in some form, of the east German regime too. This medicine would be even more unpalatable to some Germans than the dose administered by Herr Ulbricht; to them it would be giving away all-Germany in order to preserve, precariously, the free half of Berlin. The Oder-Neisse frontier, it is true, is increasingly accepted in private by Germans of all parties, despite their public claims to the 1937 frontiers. But the idea of recognising the east German state in any way still sticks painfully in their throats. To most Germans, self-determination for the east Germans is synonymous with national unity, and any recognition of Herr Ulbricht's hated regime is tantamount to acquiescence in division. The fact that the policy of boycotting east Germany has in practice brought unity not a whit nearer has made little impression.

Here then is food for some Germans' resentment against the West, for the irritated desire to "go it alone"—in short, for a revival of nationalism. What is still lacking is any kind of practicable nationalist alternative to the policy of building up Germany's links with the West, while remaining open to the possibility of negotiating with the East about reunification. Those Germans who feel most indignant about recognising the existence of Herr Ulbricht's "concentration camp" are hardly likely to apply to join it. Chastened by the bitter experience of defeat, strengthened by its present prosperity, the Federal Republic has acquired a remarkable political sobriety, for which the West should be grateful. The unhysterical electorate which has now eliminated not only the neo-nazis but even the mildly nationalist All-German party from the Bundestag is far removed from the unhappy people that brought nationalism to power in Germany thirty years ago.

If there is a danger of a nationalist revival, it lies not in the threat of an immediate outburst but in the sowing of seeds now which might ripen later if things went badly. Suppose that Russian policy, instead of thrusting Germany into the arms of the West, made a systematic effort to detach it; suppose, too, that the economic climate took a turn for the worse. With bustling characters like Herr Strauss elbowing their way forward, it would be a brave man who predicted that leaders more alert to nationalist ambitions will not one day take charge of Germany. What west Germany has achieved so far, for itself and, no less, for the West, inspires confidence. But its place in the cockpit of the East-West struggle places strains on a twe-e-year-old nation that are inconceivable in Britain.

In short, it would be a dangerous mistake to assume that the division of Germany offers any neat solution of the German question. The desire for national unity remains; it is a force that could still emerge to trouble the world after decades of frustration, as it did after the far longer hiatus following the Thirty Years' War. The steady pursuit of German unity within the legitimate limits of the present frontiers must therefore remain a basic western objective—both for the sake of a more durable peace and, in fulfilment of a pledge, as a precondition of trust between Germany and the West.

Planned Peacekeeping

A moment when the perils of armed anarchy are starkly clear may offer a chance to start moving toward a disarmed—and ordered—world

"WE must create even as we destroy"; that is the nub of the programme for more-than-disarmament which the United States published on Monday, while Mr Kennedy was presenting its outlines in his speech to the General Assembly of the United Nations (which is reviewed by our Washington correspondent on page 1249). America has here "caught up with and surpassed" Russia. "General and complete disarmament" is not only accepted, but shown to be insufficient, by itself, to escape from Armageddon. The argument is put more frankly than any government has yet put it. Nations will not disarm, and stay disarmed, unless they can be sure of international protection. "There is an inseparable relationship between the scaling down of

national armaments . . . and the building up of international peace-keeping machinery."

President Kennedy showed himself aware that he was liable to be accused of insincerity or unreality, or both, if he made such sweeping proposals while the powers were girding themselves for a trial of nerve, if not of strength, over Berlin; while the September sky grew heavy with Soviet strontium-90; while the ninety UN members who mourned the death of Mr Hammarskjöld wondered whether the nine non-mourners could succeed in paralysing the organisation's present limited capacity to protect the peace. The President met the challenge head-on: "While we are compelled against our will to rearm, we look confidently beyond Berlin to the kind of disarmed world we all prefer." Advance may, indeed, require alarm. The best chance of moving toward a peaceful world may come at a moment when the perils of armed anarchy are plainest.

But the new American programme should not be seen as the product of an atmosphere of fear and urgency. It is perhaps the most rational document of its kind yet produced; and it deserves rational appreciation. Much of the fluff that marred earlier western disarmament proposals is here eliminated; none of the cheap tricks that give Soviet proposals too much of their appeal has crept in. There is equal stress on all the vital elements: *on completeness; on immediate* action, wherever practicable, without waiting for completeness; on balance, both between nuclear and conventional disarmament, and between the differing interests of the nations; on effective inspection and verification; and on the development of the peace-keeping capacity of the United Nations—"the only true alternative to war"—alongside the dismantling of national armaments.

Mr Gromyko has been quick to turn down two of the specific points made in the programme and in the President's speech. No treaty banning nuclear test explosions can, in the *Soviet view, be concluded until there is full agreement* on disarmament as a whole. And, despite all Mr Khrushchev's personal pledges that he would accept whatever controls were asked if the West would only agree that disarmament should be complete, Russia will not permit any verification that arms retained do not exceed the agreed levels at any stage in disarmament. This rejection of verification makes nonsense of all hopes of progressive reductions to lower and lower levels—and thereby makes nonsense of all the Soviet disarmament plans hitherto presented.

Moscow ought to be more attracted—if west German desires for nuclear arms are a major factor in its current calculations—by the American proposal to ban, from the beginning of the process of disarmament, any transfer of control over such arms to any nation that does not yet own them. But the Soviet reaction to the American stress upon rapidly evolving peace-keeping machinery must be, to put it mildly, ambivalent. While Russia has lately accepted the *idea of a permanent UN force in principle, its present aim is* clearly to ensure that such a force could never be effectively *employed to keep the peace. This is one of the crucial points* on which it is now urgently necessary for the smaller nations to make up their minds and speak them, if they are sincere in their pleas for disarmament. Neither they nor others can hope to see a disarmed world until there is agreement on the constructive aspect of the problem—planned peace-keeping.

Freely Negotiated?

There is a lamentable misunderstanding of what "collective bargaining" means in a free society

Two common complaints during the battle of the wages pause are going to be that the Government has "interfered in settlements freely negotiated between trade unionists and their employers" and "is sabotaging the whole system of industrial negotiation based on free collective bargaining." The first of these phrases has already been applied (pretty oddly) to the Government's rejection of the Burnham committee's recommendations; and it will certainly be heard again if the Government rejects the proposal made by the employers' representatives and other members of the Road Haulage Wages Council, who want the Minister of Labour to *make a new wage increase obligatory on all employers in* that industry. The second phrase is being used because the Treasury has duly refused, as last month it specifically said that it would refuse, to accept a recommendation from the industrial court that it should increase its wage offer to certain employees of the Admiralty. It is important that ordinary people should get their definitions in these matters straight.

A freely negotiated or collectively bargained wage increase is one which an employer decides to pay under pressure from the workers and trade unions facing him, but without pressure from any other source. The employer may decide to make it in order to attract more labour, or to enjoy better labour relations *at his works, or (in a free society) simply to avoid a* strike; the wage offer made by Ford Motor last week was of this sort. There are some people (including, to judge from his interesting recent articles in this journal, Sir Robert Hall) who doubt whether untrammelled free collective bargaining is consistent *with full employment if inflation is to be avoided*; but *The Economist* does not regard this doubt as proven yet. For our part, we welcome the Ford offer. Where we and Sir Robert and now presumably the Government do agree, however, is that inflation is likely to be inevitable if those who pay wages are to be forced into bigger settlements by any factors other than their own assessments of the balance of interests before them.

Such an extraneous factor is clearly introduced if one says that all employers always "must accept" the recommendation of any outside committee or arbitration court or wages council. In the case of the Burnham committee, the Government is the chief paymaster of the teachers, and one really cannot argue that it is "interfering with a freely negotiated settlement" when the settlement is one to which it itself has never agreed. In the case of the industrial court, automatic acceptance of all its recommendations would thrust Britain back into its worst economic sickness of postwar years—which has not been the "irresponsibility" of trade unions, but blind

acceptance by the "responsible" public of constant inflation through arbitration. In the case of wages councils, nobody should complain if the particular "employers' representatives" on the Road Haulage Wages Council pay their recommended wage increase to their own men, and if some other road haulage employers follow them. But if other haulage employers are allowed to try to stand up to a strike rather than do so, this really cannot be called an interference with "free collective bargaining." The fact that some nominally responsible newspapers are once again encouraging the public to use these disingenuous phrases, without for a moment thinking through what they mean so long as "recommended" increases run well ahead of increases in real national production, is one of the most depressing economic features of the present time.

Engagement Announced

In Paris, on October 10th, between Britain and the Six . . . the size of dowry to be agreed later

At last, the prolonged affair between Britain and the Six has moved beyond the courting stage. A proposal has been made and, very provisionally, accepted. A date, October 10th, has been fixed for the start of talks on the terms of the marriage. Full-scale negotiations will not get going until the middle of November. But Tuesday's decision by the Council of Ministers of the European Economic Community in Brussels is nevertheless a milestone. The Six have now clearly accepted the British offer to negotiate about membership of the common market, and proposed a time-table for the talks.

Just how tough the talks will be, and how large the interests at stake are, has been shown by the tussles over procedure that have been going on within the European community. Just as in the earlier, fruitless, phase of the cross-channel courtship the organisations taking part (the Organisation for European Economic Co-operation on one side, the Six on the other) symbolised different views of Europe, so in the present, more hopeful, phase the arguments over time, place and method of negotiation have their bearing on the more substantial struggle to come. Within the community, France has been pressing for the negotiations to be held in Paris, and for the governments to be the negotiators. Others favour Brussels as the site; and federalists have been pressing for the European Commission to speak for the Six.

On the whole, the results of this first move in the procedural round are encouraging. In their own internal arguments, the Six have compromised. *The main talks are to be held in* Brussels, the preliminary exchange in Paris; the commission is to be brought into the talks, but the main responsibility is to be left to ministers of the various governments. More important, from the British point of view, the Six have not stuck to the extreme demand put forward *in recent weeks* by the more sceptical Europeans in Brussels and Paris: that, before negotiations even start, Britain should present a written outline of its special difficulties, with its own suggested solutions. Such a document would have hamstrung the British negotiators from the start, and drawn embarrassing fire from both the Commonwealth and the Europeans. The demand for it would have been a striking indication of the strength of those who do not want the British in. In the event, the Six have merely asked Mr Heath for a verbal exposition of the British intentions and problems. They have even agreed on a ceremonial signing of the treaty (if there is one) in Bonn.

The British Government is thus entering on the trickiest as well as the most exciting phase of the journey it embarked upon in July, 1960, when its European policy first felt the wind of change. Inevitably, its balance on the tightrope between Europe and the Commonwealth will now become more nerve-wracking than ever. The Accra conference on September 12th-14th showed that the Commonwealth countries have, naturally enough, no inhibitions about stating their claims, now that negotiations are in the offing; during the past fortnight there have been further, no less frank, talks in London between British and Commonwealth spokesmen. Now, and during the negotiations, the Government will have the hard task of combining the closest Commonwealth consultation with a right resolute determination to keep control of the negotiations in its own hands, as a free and sovereign partner in the Commonwealth should, and to avoid giving too many hostages, either way, to fortune.

Politically, at home, the Government may have its work cut out to ensure that the protestations from the Commonwealth do not have a wrecking effect inside the Conservative party. There are, it is true, signs that the vehemence of the cries from across the sea is beginning to rebound upon the protesters. Tory back-bench patriots do not relish the idea of being dictated to by Africans or even Australasians, any more than by Europeans. All the same, the leadership which the Prime Minister and other Ministers have provided this year will be needed more than ever. The first meeting with the Six in October is to take place on the first day of the Conservative party conference; Mr Heath will have the chance to give his report to the faithful.

On the Continent, consistent effort has to go on to convince the Six of British sincerity. Much has been achieved by Mr Heath's patient diplomacy, and by the bold (and surely correct) references to the value of political unity in the Prime Minister's application to join. But there are still real, as well as tactical, doubts across the Channel. The French have noted that the moment of Britain's conversion was determined, not by the ideals which originally created the community, but by the disadvantages of being outside. Will this new, hard-headed convert share the zeal and determination of the other members to develop the community once it is inside?

Here the immediate crux is agriculture. It has long been apparent that, if Britain accepted a common agricultural policy, *it would find itself (mindful, as it must be all the time, of* Commonwealth exporters) sharing the French interest in low prices. But this factor, which could give the French an incentive to have the British in, cannot work helpfully in the deliberations until they are persuaded that the British are, in

fact, prepared to accept a common agricultural policy. The Commonwealth interest, after all, might be satisfied even more easily by an alliance between the British and the Germans to stop the common market from embracing agriculture at all. With the tussle over agriculture within the Six themselves now coming to a head, the French are hardly likely to befriend the British with a good will in the coming negotiations until they feel sure that the British, once in, will play the agricultural game their (it is to be hoped more liberal) way.

Do the British mean business? That is the European question. Do the members of the community really want Britain, with its special interests and problems, among them? That is the fair retort of the British, who do not enter upon these historic talks as suppliants but as would-be partners. Everything is going to depend on the development of a climate of trust from the outset. Ultimately, most of the Commonwealth's trading interests will have to be safeguarded, not by negotiating exceptional arrangements for Britain, but by orienting the community's common policies in the right direction; and much of the hard horse-trading will not be capable of settlement unless, step by step, Britain becomes involved itself in the community's own thought and planning.

In the growth of trust, factors beyond the immediate negotiations will count for much. Next month the heads of government of the Six are to meet again to discuss further political collaboration. Whether they will invite the British in at this stage is not yet clear. But, if they do, Britain would be worse than foolish not to accept and make its own constructive condition. Whatever British hackles some of the possible implications of European integration may raise, this nation of shopkeepers has always recognised, over the world and through the generations, the primacy of politics.

PARTY CONFERENCES—II

And Fight Again

A discussion of the problems before Britain's marvellously-revived Labour party, whose annual conference starts on Monday

THE most important thing about next week's Labour party conference at Blackpool is that it looks as if it is going to be wonderfully unimportant. It is no doubt conceivable that Mr Gaitskell might be "beaten" in a vote about the training of German troops in Wales, or about the Polaris bases if the Amalgamated Engineering Union should for once fail to fudge its mandate, or about the proper socialist attitude towards moral rearmament, the House of Lords or Timbuctoo. But everybody except the expostulating delegates concerned knows now that these votes cast annually in some seaside pavilion do not matter. By fighting again after Scarborough Mr Gaitskell has devalued the Labour party conference to its proper secondary status; it is no small achievement towards "saving the party he loves."

But saved for what purpose? Experience abroad has made it clear what Mr Gaitskell's aggressive purpose for his party should be, now that his defensive battle seems to be largely over. His aim should be to establish what might be called a Kennedy or Brandt image within the British Labour party before the next election. Unless the Conservatives make a really massive mess of things, it still seems probable that his hopes of winning that election will depend overwhelmingly on achieving this: on his success in getting a mass of middle-of-the-road voters to look upon Labour as the pushful, imaginative, undoctrinaire party that might "get Britain moving again." What should be even more important to him, the prospects that the next Labour government might do any good for the country depend on such an achievement absolutely.

If one speculates on the possibility of such a Brandt image being achieved, one arrives at an interesting conclusion. The prospects now seem much better that Labour may look like an attractive alternative to the Tories in the field of foreign affairs, where Mr Gaitskell has had to fight for his policy through a welter of blood and sweat and tears. They seem much worse in the field of domestic affairs, where Labour can look back on a recent history of careful compromise, hum, haw and ink. Just as Mr Cousins did much to win the last general election for the Conservatives by his challenge to them in the 1958 bus strike, so he now seems to have won a much-respected status for Mr Gaitskell in foreign affairs by his opposition to him last year; how, with or without the aid of some overt move of opposition from Mr Cousins, can Mr Gaitskell win a similarly respected status for his party in domestic policy as well?

This is not a matter of reviving the fussy attempt to rewrite Clause Four of the party's moribund constitution; nationalisation is now a supremely irrelevant issue, and if Mr Gaitskell gets into the right posture on other fronts he can probably simply omit all mention of steel nationalisation from the next Labour election manifesto when (but not before) the time to write it comes. Nor is it entirely a matter of which lieutenants Mr Gaitskell has under him, although it should be obvious that it will be easier for Labour to achieve an attractive image when and where its main departmental ministers are men like Mr Healey than when and where they are twirling weathercocks like Mr Wilson. Certainly, too, the road to a new look for Labour in home affairs does not lie through writing more policy documents; the history of these pamphlets, which have had to be raddled (meaning, painted red) with compromises, has been an utter disaster.

Instead the real question that worries the floating voter about all aspects of the Labour party's home policy—about planning, prices, restrictions on the growth of production, and even some problems affecting individual freedom—is the one question that Mr Gaitskell has hitherto never dared to face: namely, whether the Labour party is tied too closely to the vested interest of the trade unions.

ALTHOUGH nobody will dare to mention the matter at Blackpool, it is almost certainly on this front that Mr Gaitskell should determine to fight his most delicate battle of disengagement during the coming year. Unfortunately, all the complicated factors of party finance, personal temperament and current press comment will make it terribly tempting for him to avoid it. Party finance is a barrier because the unions are now more than ever the paymasters of Labour's organisation, as the industrialists are of the Tories'. But the Tories, in measures like the Restrictive Trade Practices Act and in their many (indeed often undesirable) increases in profits tax, have managed to show that their paymasters do not control their policy; yet they continue to gather in their cash because the industrialists know perfectly well that the other party would be liable to hit them worse. The degree of independence from control by the trade unions which the Labour party now needs to show need be only of that same order.

Personal temperament will be a barrier to any such struggle for disengagement, because Mr Gaitskell, as an intellectual middle class leader of what was once a proletarian party, is bound to feel a lonely man unless he can always instantly whistle up the personal support of the big trade union battalions against the attacks of his fellow middle-class intellectuals on the party's far left; and because he must feel that it is the return to loyalty of the big trade union vote that has enabled him to reverse the Scarborough vote at Blackpool. But, in fact, the trade union vote came back to him after the public's vote at by-elections had begun to do so; and this happened after his disciplinary action against the Foot rebels had shown the electorate that he was able to outface the nuclear disarmers of Scarborough on his own. The real lesson of the past year is that power in the Labour movement still resides with the Parliamentary party and the broader electorate, not with the caucus of trade union block votes and constituency delegates at the annual conferences.

Finally, the tone of current press comment may at first encourage Mr Gaitskell to neglect his real problem, because at a time of widespread strikes the newspapers always overflow with descriptions of how angry the striking voters are supposed to be with the Government; but, in fact, the one proven psephological point of recent years is that in the sort of industrial conditions that are likely to obtain this winter the floating voter gets very cross with the strikers. In 1958 the Labour party, by refusing to make a real declaration of independence from the leaders of the London bus strike, managed to get put in the pillory with them. After seven months of brave advance in public esteem, it is reasonable to guess that the big political examination question of 1961-62 will be whether Mr Gaitskell is going to make the same mistake again. And unfortunately it is this examination, together perhaps with that over his ambivalent attitude to the common market, which the Labour leader's admirers must still feel least confident that he will pass.

NOTES OF THE WEEK

UNITED ARAB REPUBLIC

Not So United

IN getting rid of Colonel Sarraj, his Synan vice-president of internal affairs, on Tuesday, President Nasser took a gamble on the Syrian army's loyalty to the United Arab Republic. But early on Thursday a group of army officers stationed at Qatana, a camp outside Damascus which has become the traditional starting point for Syrian *coups d'état*, seized the radio station in Damascus and announced that they were restoring "freedom and dignity" to the Syrian people. On Thursday afternoon, as *The Economist* went to press, the officers first of all called off their rebellion and then reinstated it because their demands had not been met. The separatist aims of the rebels were underlined by President Nasser's prompt denial that the UAR could be dissolved and by the dispatch of the First Army to Damascus. The First Army, which is usually stationed near the Israeli frontier, is a Syrian force, but President Nasser has been trying to stiffen its loyalty with a scattering of Egyptian officers.

In Syria there is still considerable loyalty to the concept of union, but little any longer to its practical effects. Nearly all the results have so far been for the worse; Syrians fret over their loss of parliamentary and press freedom, they hate taking orders from people they believe their inferiors in Cairo, and they are bitterly irked by the country's economic decline. All troubles are blamed on the union—even the three years of drought that have turned Syria from a wheat exporter into a wheat importer. The discontent is widespread, but this does not mean a general rallying to the rebellious group in Damascus. While nearly all Syrians would dearly like more autonomy, fewer would happily accept the backward step of a complete break. And if, as seems likely, Colonel Sarraj is behind the coup he seems to be too much detested to offer a tempting alternative.

Colonel Sarraj was one of the young Syrian officers who pressed strongly for unity with Egypt. Once the UAR was established, his task, under various titles, was to look out for "subversive elements" in Syria, and to silence them. For the first couple of years or so, he performed the function of an invaluable watchdog for President Nasser, but, in a country that seethes with outspoken individualists, it proved impossible to silence all the people all the time. Colonel Sarraj's identification with repressive policies had long become a liability to President Nasser, and it was only a question of time before his "promotion." Promoting a Syrian politician to a vice-presidency in Cairo is not unlike turning a recalcitrant member of the House of Commons into a lord; it has become a stage in President Nasser's suave system for getting rid of people.

Many of the politicians who led Syria into union with Egypt have been removed in this way. President Nasser looks for obedience rather than wit from his henchmen, and Syrians of high calibre are as notably lacking in the one as they are blessed with the other. But in this case suavity alone has not worked. The revolt has happened, and Syria's neighbours, as well as the Syrians, are on the watch.

CONSERVATIVE CONFERENCE

A Real Debate

THE Conservatives have been promising for some time that the agenda for their Brighton conference (on October 11th to 14th) would show that last year's vehement criticism of the National Union—for allowing its annual gathering to degenerate into a combination of idolatrous adulation and ministerial beauty show—has been heeded. Some of the changes in the agenda, which has now appeared, are minor and procedural. Ministers are no longer to be allowed to monopolise quite so much of the microphone time; fewer motions have been tabled, which will mean longer debates from the floor; and on the Saturday morning there will be the interesting experiment of a "sort of parliamentary question-time." But the real question to which an answer was awaited was whether the party's leaders would still stick to the traditional Tory practice of holding the main debates only on the most comprehensive motions, which can be interpreted to mean practically anything, leaving the more controversial motions to moulder undebated on the order paper. And the answer is that, in at least one instance, the Tories have now opted for controversy. More of the selected motions this year have teeth or at any rate a tooth, and the selected motion on crime and punishment has been given a whole set.

This motion on crime frontally attacks the Government's whole penal policy and calls for an extension of capital punishment to cover all murders (insane murderers are mercifully excluded) and for corporal punishment for all crimes of violence. Mr Geoffrey Howe, of the Bow Group, has put down an amendment to delete these gentle suggestions; his amendment endorses recent Government policy and calls for a constructive approach to the problem of crime, including the introduction of a scheme to compensate victims of crimes of violence. The debate should produce a dramatic clash between the old and new Toryism. Mr Butler courageously and rightly will throw his weight against the motion and seems bound to support the amendment which underpins his policy. Probably the hangers and floggers will win their usual majority, but their selected motion is so extreme that this is not absolutely certain. In any case, so long as it is made crystal clear that the conference has no power at all to tell the Government what to do, the Tory leaders should be congratulated rather than castigated for thus at last allowing their party workers' voting to come right out into the open.

Restricting Immigrants?

MOST of the other starred motions at the Tory conference can be accepted by ministers in one form or another, and they are therefore again chiefly of interest for the opportunity they may afford for ministerial pronouncements or intimations about legislation to come. Unfortunately, it looks as if the Government may be going to announce (or hint at) new legislative restrictions on immigration. The motion on this subject is pretty specific, and Mr Butler himself will be answering the debate. Certainly, party feeling on the matter is strong. Forty resolutions are down on the subject: of these all save one call for some form of restriction, the sponsors apparently seeing nothing inconsistent in the pro-Commonwealth party putting forward such demands. Among the other starred motions, that on Africa calls in the time-honoured manner for safeguards for "the economic interests of all the racial communities concerned," but goes on to make a special plea for Europeans, whose interests are considered to be more economic than others. The motion on pensions is an unusually thoughtful one, suggesting that the Government should consider "developing a more selective system . . . with a view to concentrating help in the fullest measure on those who for one reason or another most require it"; but it seems unlikely that Mr Boyd-Carpenter will reveal any major new thinking here. The motion on trade unions "would welcome" an inquiry into trade union affairs and believes that "the nation would support Her Majesty's Government if subsequently it decided to introduce reforming legislation"; this is a pretty cautious motion and will enable Mr Hare to say much or nothing, as he chooses.

Although the most dramatic Tory debate will be that on crime, the most important debates should be on the common market and on the British economy. The starred motion for the first of these merely calls in ministerial jargon for a close association with the Six, with, of course, safeguards for the trinity of Commonwealth, agricultural and EFTA interests. But it is possible that the anti-Europeans may table a specific amendment at the conference itself. The deep anxiety felt within the party is indicated by 43 motions on the agenda, many of them asking for safeguards or expressing reservations. The main starred motion on economic affairs is designed merely to allow Mr Selwyn Lloyd to tilt at the dragon of inflation, but he will presumably have something to say about his projected new machinery for planning too.

FRANCE

When Days Draw In

AUTUMN has brought storm signals in France's political weather. The forecasts of trouble to come are no longer based only on the echoes of gelignite explosions, which are now routine, or on the ease with which officers sentenced to jail vanish into thin air. There are some real changes in the atmosphere. General de Gaulle, in spite of a fairly successful provincial tour last week, has rediscovered the existence of political parties and has invited their leaders for talks. The Socialists, for long known as HM Opposition, have now begun to criticise not only the government but the very regime they have helped to bring about. The critics are outspoken, and their favourite topic is the general's successor. M. Mendès-France finds the situation so alarming that on Monday he urged "men of goodwill" to fill the political void by preparing an alternative government which would have two months after taking office in which to make peace in Algeria and provide a new constitution for France.

General de Gaulle's relinquishment of his special powers, and his new interest in politicians, may not be unconnected with the new tactics of the military underground. The advisers of the secret army organisation must have convinced its leadership that soldiers can take power in France only under a political cloak. General Salan, in letters to the press and to parliamentarians, is now parading as a liberal who aims at rescuing democracy from the gaullist dictatorship.

The president's decision to see the parliamentary leaders does not mean that he has been converted to a parliamentary system. Indeed, he has asked the party leaders not to bother him during his new attempt to make peace in Algeria. Is this attempt based on any new proposals? For the moment, the only new suggestion seems to be that a provisional executive for Algeria will no longer be used as an alternative to the FLN, but, on the contrary, as a transitional mechanism to enable the men from Tunis to return. But, if the Moslem insurgents show interest in the new gaullist proposals, what will be the reaction of the European insurgents and their military allies? It is no wonder that Parisian forecasters are expecting new storms in the last quarter of the year.

BRITAIN AND KATANGA

How to Be Suspect

BRITAIN is now saying the right things about Katanga; unfortunately, it has been suspected, partly because of its own maladroitness, of doing the wrong things. Many British investors have, through Tanganyika Concessions, an indirect interest in Union Minière du Haut Katanga, the company that dominates the province. To the persistently anti-colonial heart this is a nagning memory. The Foreign Office, a trifle clumsily, has made many people think that what Britain wants is Katanga's secession. Its heated demands to know what the United Nations was doing when fighting broke out in Elisabethville on September 13th were seen as evidence of this. The federation of Rhodesia and Nyasaland has seemed to support Mr Tshombe, and this reflects on Britain, which is ultimately responsible for the foreign policy of the federation—in spite of the contrary impression given by Sir Roy Welensky, the federal prime minister. It has been reported that pressure by Sir Roy on the British Government led to British pressure on the UN, in the weeks before fighting broke out, to go easy on Mr Tshombe. Several correspondents have reported that the result of this was to give Mr Tshombe a chance to gather his forces.

For this reason the British Government's stated policy, as described by Mr Edward Heath a week ago and assiduously put forward by many official spokesmen since then, is to be welcomed. Britain supports the UN resolutions on the Congo: it supports the expulsion of foreign soldiers and advisers; and it is in favour of attempts to bring about a peaceful reintegration of Katanga into the Congo. Mr Heath said, "The British Government has never supported the secession of Katanga from the Congo, nor do we favour it now." What is opposed is the use of force—and especially UN force—against Mr Tshombe. This puts the British Government on the side of much of former French Africa, if not of many English-speaking Africans. Britain's unpopularity over Katanga can be further diminished if, in future, the Government's views are expressed solely in the United Nations headquarters and the General Assembly. Direct pressure on the UN forces on the spot is too easily interpreted as interference.

GHANA

Valley of Suspicion

GHANA is becoming its own worst enemy. Introspective, and sometimes irrational, the nation seems to be in a mood of black anger. On his recent tour of communist capitals, President Nkrumah violently attacked colonialism, which he has every right to do. But his language, and his choice of platform, made it look as if he were specifically and bitterly attacking Britain—which, in all fairness, he is less justified in doing. Similarly, Dr Nkrumah, worried about his own left wing, and suspicious of Britain's policy in Katanga, has felt obliged to dismiss General Alexander, his British chief of staff. This is Ghana's own business; but the manner in which the dismissal was conducted was inept, and made Ghana look more sulkily introverted than ever.

The events in Katanga have led to what Ghana's acting High Commissioner in London, Mr Kwesi Armah, calls "the recent controversial exchanges between a section of the British press and a section of the Ghana press." The section of the Ghana press that is free to say what it likes because it almost invariably says what the government likes has been so bitterly anti-British (especially in its references to Mr Hammarskjöld's death) that the Ghana government has felt obliged to dissociate itself from some of the more hair-raising passages. But, unfortunately for Ghana, Mr Armah is not the best choice of man to explain this sort of thing. In spite of his diplomatic post, he is also chairman of the Committee of African Organisations, a London umbrella for all the radical and revolutionary African groups important enough to have London representation. This committee has every right to exist, to organise marches and demonstrations, and to disapprove of British policy in Africa. It is not in Ghana's interests, however, for its acting High Commissioner to be the committee's chairman.

None of this is a reason for cancelling the Queen's proposed visit to Ghana; indeed, the visit may help to restore some of the country's easily wounded pride. And the Americans, perhaps wise to make Ghana wait for their signature to the loan for the Volta river dam, would not be wise to hold back altogether. Ghana is suffering from a national inferiority complex, and cannot be expected to come out of the valley of suspicion unless treated with care and sympathy.

TEA BREAKS

The Cost of Tea

AS the date of the threatened strike in a tea-cup at Ford Motors draws steadily nearer, it is beginning to look as though the union leaders are not all that anxious to launch a major official strike on an issue that can only lead them into public ridicule (especially as a sterner struggle on their new £350 million a year wage demand for all engineering workers may yet lie ahead). The lengthy process of getting official union backing from all the 27 unions involved at Fords may yet allow some way out of the tea break dilemma there to be found. But, by a silly coincidence, the building workers are now involved in a controversy over this mainstay of the British way of life. A new agreement for building workers comes into force on Monday, allowing for a reduction in hours to 42 a week, and a wage increase of 6d. an hour: the agreement provides a maximum of one hour's break or breaks a day "for refreshment," including a minimum half-an-hour for the midday meal. The employers say that this can mean that the other two quarter-hours may be spent, unpaid, consuming tea. The unions say that the agreement does not mention the time-hallowed tea-break, and that they intend to go on as before—which means taking two quarter-hours off each day being paid for drinking the cup that cheers.

The building employers estimate that they could save as much as 12½ million man-hours a week if ever they could cut out the paid tea-breaks altogether; theoretically this could enable Britain to build about 20,000 more houses a year. More dramatically, a correspondent in the *Daily Mail* has estimated that, in British industry and commerce as a whole, tea breaks may cost the country 50 million man-hours every week—or about as long as it took to build the whole of the M1. Whether or not this is a reasonable guess, there is plenty of evidence that the effects of tea breaks can be disastrous, when a production line has to be stopped while men down their cupfuls, or work carelessly while drinking on the job. But it is also quite clear that British workers are not willing to do without their breaks altogether, whatever other inducements are offered. Probably the most that can be hoped for at present is that (a) British industry may start to work out more efficient ways of getting tea to men on the job, so that there is less queueing and hanging around before and after the service of it; and (b) that tea breaks should become more fixed and organised, instead of being spun out (as they often are in the building trades) to twice their theoretical length.

LOCAL GOVERNMENT

Reforming Aldermen

ONE of the papers down for discussion at the Conservatives' conference on local government, which will be held on October 10th in advance of the main jamboree at Brighton, is a lively dissertation by Mr Bryan Keith-Lucas of Oxford: it calls for more experiment in the structure of municipal government, questions the value of aldermen and seeks to increase public interest in local administration. And three of the motions tabled for the main conference itself, one of which might just conceivably be drawn in a ballot for debate, also call for reform of the aldermanic system.

It is good that local Tories should be taking this problem seriously. This year has seen, once more, local parties with an actual minority of elected councillors hanging on in power for the next three or more years because they controlled enough aldermen to swing the vital vote for the mayoralty. The law should be altered, quite simply, to stop minority parties practising this deceit. Where parties have dead-heated, the issue is more complicated; but it is anomalous that parties should cling on for as long as they can do by packing the aldermanic bench. The suggestion made in *The Economist* of May 20th was that, when there is a dead-heat of elected councillors in the boroughs, the existing aldermen should continue for another year, when one-third of the councillors would again be due for re-election and the voters would have another chance to make their wishes felt. Reform along these lines seems more desirable than scrapping aldermen altogether. When a party has won fairly and squarely in a popular vote, it should be entitled to take enough extra seats (for aldermen) to make its control effective, and not be dependent on whether one councillor falls ill or takes a holiday. Other changes that should be advocated at Brighton are that the parties should take much more care in picking the right kind of aldermen and co-opted committee members (i.e., they should generally be people with special

financial or other expertise); that the normal renewable aldermanic term should be limited to three years instead of six; and that all councils should allow much freer reporting of important committee debates, so that the electorate can be fully aware of how council decisions are reached.

DRINKS IN WALES

Challenge to the Chapel

WALES will hold its referendum about whether to open its pubs on Sundays on Wednesday, November 8th. All thirteen counties (Radnorshire was the last to lodge its request) and the four county boroughs of Cardiff, Merthyr Tydfil, Neath and Swansea have applied for a local option poll—a unanimity of application which, however predictable, has rejoiced the heart of the Sunday Opening Council, whose eager volunteers have been tramping twenty miles a day to rustle up signatories. The openers' campaign has developed into the biggest direct challenge that the chapel influence on Welsh life has had to meet in recent years, and the consequent national debate is ranging far wider than those households where the very word brewer is as much a symbol of alien domination as landlord. Fierce differences have arisen inside the Welsh Labour party, and the nonconformist establishment has come into bitter collision with the Anglican Archbishop of Wales, who dared to designate alcohol as a gift from God.

But this rumbling of traditional artillery in defence of the Welsh Sunday is not likely to be the decisive factor in the November vote: nor is the last stand of the temperance brigade itself. If the chapels have any hope in the present fight it does not come from the appeal of abstinence, but from the self-interest of the established Sunday drinking clubs. Some of these clubs satisfy the drinking classes so fully that those who run them are hoping that their clientele will not bother to turn out to vote for the superfluous additional opportunity of Sunday drinking within the prim legality of licensed public house hours.

There is much to be said for the distinctive qualities that the chapel instilled into an older way of life. But the chapel's real decline of power has been the steady, and in some districts almost total, drift from Sunday worship at Bethel and Bethesda. Its influence is unlikely to be recovered by inflexible resistance to a legal change that is calculated to regulate the consumption of God's gift in a way that the private clubs do not.

IRAQ

Old Perfidious

ON the credit side of Britain's Middle East policy are the number of Iraqi booby traps that have not been fallen into. Since the Iraqi revolution in 1958, there have been a number of occasions when, under less skilful piloting, Britain might well have taken a header into just such a tangle of abuse and suspicion as knotted up Anglo-Egyptian relations for several wasted years. Diplomatic relations with Iraq have, more often than not, been provoking, but the British Government has stuck stolidly to the line that General Qasim is the best prime minister the Iraqis have got. But the notion of Albion's perfidy is much too deeply embedded in Iraqi minds to be dislodged by the evidence of a few years of correct behaviour. It is sad but not surprising, therefore, that General Qasim has swung so easily and so vigorously into accusing the British of helping his rebellious Kurds.

The charge, first made by General Qasim at a press conference on September 23rd and repeated during the week by Baghdad radio and newspapers, is that the British, backed by the Americans, helped to instigate the Kurdish revolt by supplying the rebels with money and munitions. The implication is that Britain, with Kuwait and the Iraqi oil negotiations in mind, was bent on creating serious trouble in the Kurdish north of the country in order to weaken General Qasim's stern resolve. The charge will probable fizzle out on its own. But it

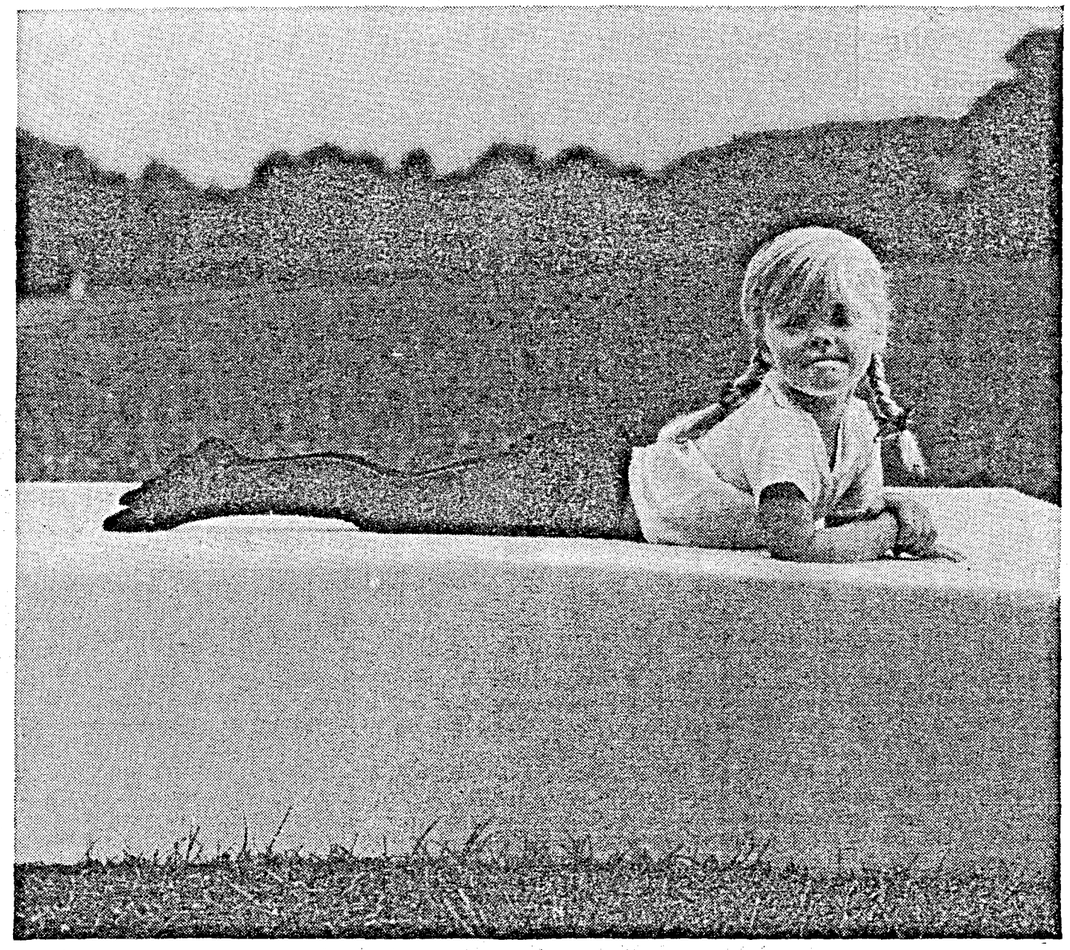
Mullah Mustafa Barazani and friends

does make the atmosphere for the talks between the Iraqi government and the oil companies, which were once again resumed on Thursday, even more inauspicious than it was already.

At his press conference General Qasim indicated the extent of the Kurdish revolt by admitting that it had spread to cover one-third of the country; he also claimed that it had now been stamped out. This seems as doubtful as the conflicting reports about Mullah Mustafa Barazani's capture and whereabouts. There is still no evidence that the Kurds had the help of any outside government. General Qasim, who is expecting a considerable assignment of arms from the Soviet Union, specifically absolved Russia from any involvement in the revolt. From time to time, it has been in Moscow's interest to stir up trouble among the Kurdish minorities; now, the Russians may feel that their interests would be better served by simply waiting for the outcome of the oil talks.

INDUSTRIAL ACCIDENTS

Danger at Work

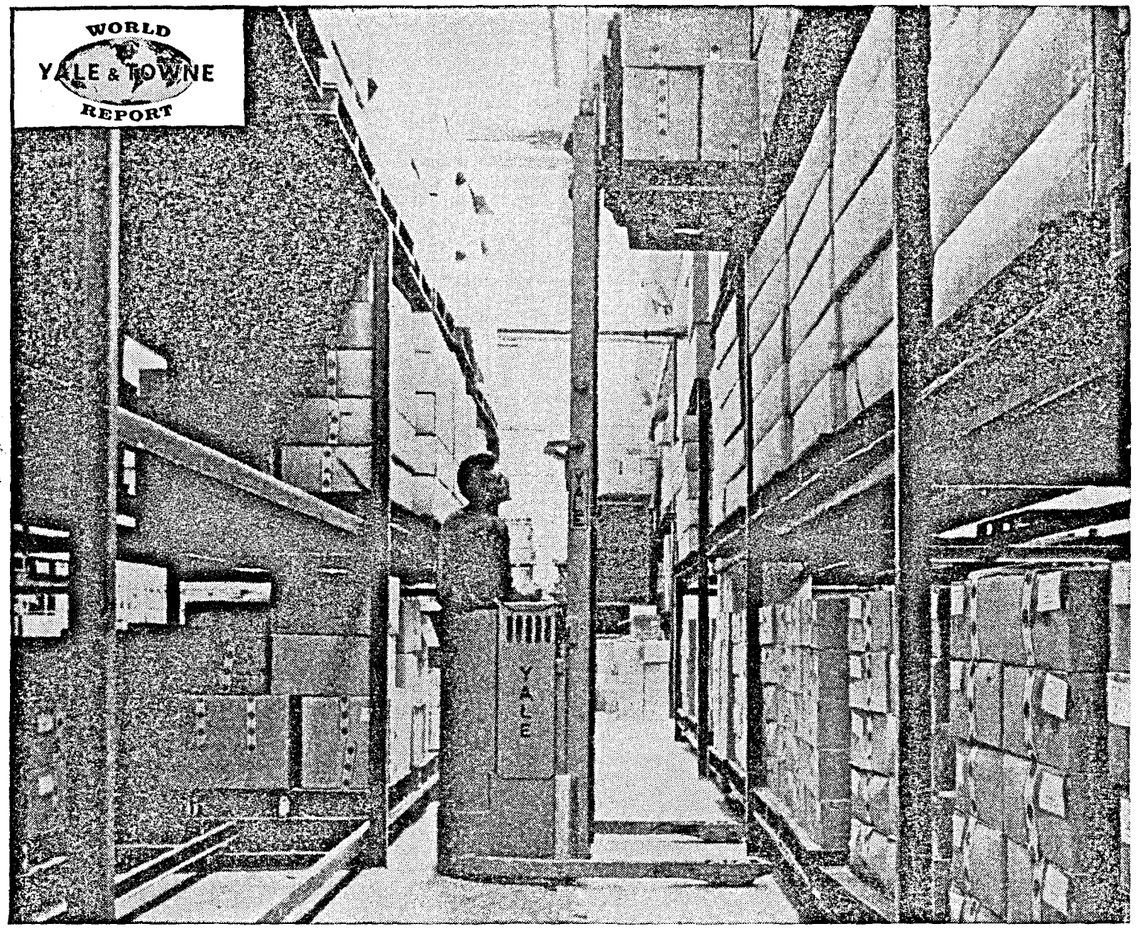


THE annual report of the Chief Inspector of Factories is a grim document this year, with industrial accidents up by 9 per cent; in particular, there has been an increase of 17 per cent in the number of accidents to boys and of 10 per cent to girls.

The Economist

SEPTEMBER 28 1861

CHECK TO AMERICAN PRIDE



The great Republic of the West had grown in population, in prosperity, and in power at a rate and in a way which was not well either for her neighbours or herself. Her course had been so triumphant, so unparalleled, so free from difficulties, so unchequered by disaster or reverse, that the national sense and the national morality had both suffered in the process. A boundless territory, an exhaustless soil, a commerce almost unequalled, mineral wealth quite unfathomed and apparently unlimited, a people rapidly increasing in numbers and endowed with most of those qualities which ensure empire and predominance to their possessors,—had fairly, and not unnaturally, turned the heads of the whole nation. They believed that no other nation could stand up against them, that none had a claim to interfere with them or thwart them, that the rest of the world had no rights which could for a moment be suffered to stand in the way of their interests or their designs. They were so rough, so encroaching, and so overbearing, that all other Governments felt as if some new associate, untrained to the amenities of civilised life, and insensible alike to the demands of justice and of courtesy, had forced its way into the areopagus of nations;—yet at the same time they were so reckless and so indisputably powerful, that nearly every one was disposed to bear with them and defer to them, rather than oppose a democracy so ready to quarrel and so capable of combat. . . . This being so—and who can gainsay it?—with what colour or consistency of reason can we be charged with selfishness or want of generosity, because we rejoice that an excess of power which was menacing to others and noxious to themselves has been curtailed and curbed; that we are spared the painful alternative of ceaseless squabbles and ceaseless endurances or of a desperate and decisive conflict; that pride which was fast becoming a disease has met with a salutary check; that the weak places and the radical faults in those democratic institutions which they were accustomed to worship with a blind idolatry have been laid bare in time?

Superb cushioning

Cushioning is something we all need for our daily comfort—to lie on, sit on, rest our weary heads (and jump on if we feel like it). Today, the blows of life are increasingly softened by polyurethane foam, the newest material to inspire the industrial designer with its lightness, flexibility and versatility. Polyurethanes are made from polyether polyols, on which Shell have done a great deal of successful research and gained a mass of practical knowledge. This information—with a range of polyether polyols of the highest consistency—is now at the service of all foam manufacturers. To carry this a stage further—write to the Information Officer, Industrial Chemicals Division, Shell Chemical Company Limited, 170 Piccadilly, London W.1

ANYWHERE IN THE WORLD YOU'LL FIND THE PRODUCTS OF YALE & TOWNE

TURIN, Italy—High stacking in extremely narrow aisles by Yale Warehousers increases storage capacity in this plastics factory which supplies components for Fiat and Lancia automobiles. Not only do these compact manoeuvrable Yale Warehousers save warehouse space but time and money too. Yale industrial lift trucks, in capacity ranges from 1,000 to 200,000 pounds, assure you of fast, efficient, dependable movement of goods. Ask your Yale representative how Yale trucks can help reduce your handling costs.

STOCKHOLM, Sweden–Yale's pneumatic-tyre petrol truck at the Scania Vabis plant quickly loads truck cabs on this unique over-the-road carrier. Yale lift trucks keep up with fast shipping schedules – help move goods to market to meet delivery dates.

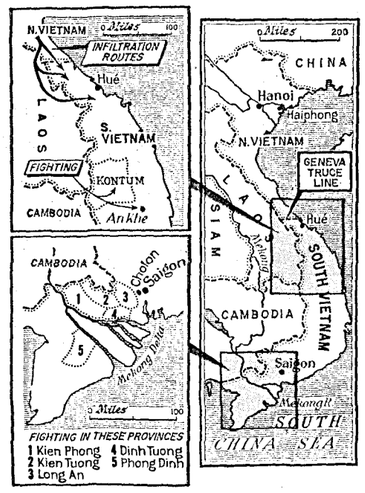
In part, this growth may be due to the arrival at work of the first wave of the school-leaving bulge, with a corresponding increase in the numbers of young people at work. But these trends merely point to the need for better training, and stricter enforcement, of the existing safety laws for young people in their first jobs. Accidents are reported to the inspectorate if they cause a minimum of three days' inability to work at the usual rate: 190,266 people suffered such accidents last year, causing the loss of some 800,000 working days. Most tragically of all, 675 people were killed by accidents at work last year.

The Minister of Labour, in presenting these figures, rightly described this as a "wholly indefensible waste of manpower." He is to call special meetings with employers' associations in various industries with bad records to see what can be done; but it does not appear that he intends either to strengthen the force of 400 factory inspectors, or to spend any more money on education or advertisements. His insistence that the preservation of safety is the employers' job is perfectly correct: but it is open to doubt whether they in fact do it adequately. Many factories see an inspector only once every other year—which is not the fault of the inspectors, but is inadequate when both employers and workers often have a positive incentive to become mildly careless, and thus expose themselves or their workpeople to danger. Men on piecework may well find that effort is reduced and speed increased by leaving a guard off a machine, by not wearing heavy protective boots, or by failing to wear a hot and cumbersome helmet. Employers in building and civil engineering have the worst safety records: it is not a pure coincidence that these industries often work against time to complete a contract.



Fines for disregarding legal safety provisions have recently been raised to a maximum, for employers, of £60 for milder and £300 for graver offences, and for workers of £15 and £75. But in 1960, when cases were heard against 982 defendants, the average fine was only £18. There is a case for much more toughness here. It is true that, on the figures available (which are not always strictly comparable), Britain still appears to have a better record of industrial safety than most other big industrial nations; but it is important that the country should keep things that way.

INDOCHINA

The Other Menace

PRESIDENT KENNEDY was right to remind delegates to the United Nations General Assembly that Berlin is not the only place where international peace is in peril. The insidious character of the "creeping war" in south Vietnam disguises its seriousness, but, as the President put it, aggressions are no less real because men are knifed in their homes and not shot in the field of battle. Latterly, in fact, the assassin's knife and the terrorist's bomb have been supplemented by military action on an increasing scale.

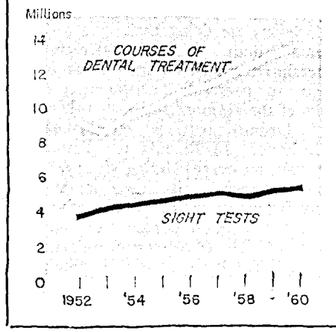
Such graduation is disquieting, but it is also an opportunity. In the Malayan emergency, the terrorist bands never graduated to full-scale war and therefore remained elusive to the last. In south Vietnam, the bands have grown to battalion size and are often intercepted and encircled by the south Vietnamese army. Casualties are high on both sides; even if communist claims are suspect, they do provide a yardstick of intensity, and the latest claim is that 700

government troops were wiped out by "people's self-defence units" at the end of August and the beginning of September. The main areas of recent fighting are shown on the map.

If these incidents were merely of a local nature, they would be disquieting enough, but they form part of a communist offensive directed from north Vietnam, in which Laotian territory is used both as a base and as an infiltration route. The Russians are indirectly involved because of their assistance to the Laotian communist guerrillas, and the Americans because of their help to President Diem's government in south Vietnam. Precise details of the communist build-up in the south were given to Lord Home, as co-chairman (with Mr Gromyko) of the Geneva conference on Laos, in a south Vietnamese note on August 17th.

The communist delegations at the conference, however, still steadfastly refuse to admit north Vietnamese assistance to the Laotian guerrillas or to discuss the use that is being made of Laotian territory. At south Vietnamese insistence a clause prohibiting the use of Laotian territory for aggression against neighbouring countries has been included in the western draft proposals for a protocol to protect the neutrality of Laos. As Mr Harriman, the head of the American delegation at Geneva, pointed out in Saigon last week, the crux of the problem is there. Indeed, the problems of Laos and Vietnam cannot be solved in isolation, either from each other or from the wider issues of the cold war.

TRADE UNIONS



Knowing their Unions

TWO new spotlights have been thrown this week on the affairs of British trade unions. First, the peripatetic investigating team from the International Labour Office, which has already made cautiously diplomatic surveys of trade unionism in Russia and America, has published its pamphlet* about Britain. It is perhaps useful to be reminded that to a foreign eye there is a remarkable agreement in Britain that the unions are to be accepted as a necessary and useful national institution. Less cosily, if still fairly obviously, the team remarked on the survival in British unions of "machinery and methods that appear outmoded" ("appear" is nicely diplomatic). Unions would do well to ponder the remark that sometimes "the protection of the interests of organisations and of the trade union movement as a whole seems to have priority over the protection of individuals." But the real audience for this useful factual summary is abroad—it is tempting to wonder

* The Trade Union Situation in the United Kingdom. *ILO.* $1.75. 7s. 6d.

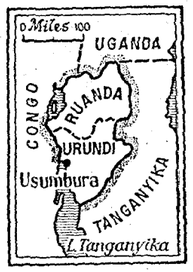
EYES AND TEETH

Last year nearly 5 million pairs of glasses were supplied under the national health service. The minimum charge was then 25s. as it had been since 1951; it was increased to 30s. in May this year. The charges offset a third of the gross expenditure on the ophthalmic services. 13½ million courses of dental treatment were completed in 1960, excluding any carried out under the school health service.

how one renders "a tortious act under common law" in Spanish?

More substantial food for thought is contained in a new Penguin Special by the doyen of British industrial correspondents, Mr Eric Wigham of *The Times*.† Mr Wigham really knows his stuff: as a piece of analysis, and as a summary of the main contentious incidents in which the unions have been involved since the war, his book could hardly be bettered. Unofficial strikes, union elections, communist plots, the political levy, the feebleness of the TUC's leadership and—briefly, but still pointedly—the inadequacies of employers' organisations: all these are explained with chapter and verse, in a skilful feat of condensation.

Mr Wigham's last chapter contains his recommendations about what should be done, as much by government and employers as by the unions themselves. Particularly topical and reasonable is his suggestion for new legislation to control the conduct of union elections and to protect the rights of those threatened with victimisation after a strike, or by the imposition of a closed shop—but nothing more. Trade unions would certainly be able to do their job *more efficiently* if they accepted Mr Wigham's suggestions: the question is whether the job he wants them to do is the right one. His approach to wage bargaining is Guillebaudian: a fair price should be paid for work, irrespective, it seems, of the profitability of the industry involved. This leads to a rather vaguely adumbrated scheme for a planned share-out of wages, with the unions playing an active part in deciding who gets what share—and restraining their members when an increase is not due. It is engaging, if not surprising, that the author ends with a confession of his certainty that few of his suggestions will be adopted.



† What's Wrong with the Unions. By Eric Wigham. Penguin. 3s. 6d.

RUANDA-URUNDI

Belgium's Twins

UNDERSTANDABLY anxious to avoid presenting the world with another Congo, the Belgians are doing their best to bring Ruanda-Urundi, a small, overcrowded trusteeship territory on the border of the Congo, to peaceful independence. The results of the elections in Ruanda this week and in Urundi two weeks ago do not give much hope. In Ruanda the Parmehutu party won an overwhelming victory. This is not surprising; it draws its support mainly from the Bahutu people, who comprise more than 80 per cent of Ruanda's population. Their former overlords, the tall Watutsi, have been politically eliminated and the monarchy—a Watutsi institution—has been decisively rejected.

The situation is complicated, however, by the close co-operation that has arisen between Parmehutu and the Belgian administration. Parmehutu needed Belgian help to overthrow the Watutsi; it also believes in delaying independence until it can consolidate Bahutu rule. The Belgians, hoping to keep more influence in an independent Ruanda than they have been allowed to keep in the Congo, have given unqualified support to the Bahutu; this has made other African states (including neighbouring Tanganyika) look on Parmehutu with suspicion and toy with the irresponsible idea of supporting the autocratic Watutsi and their deposed monarch, Kigeri V. There is talk of Ruanda-Urundi joining an east African federation with Kenya, Uganda, and Tanganyika. But these political complications are likely to present a formidable obstacle.

In Urundi, the Uprona party, which draws both Bahutu and Watutsi support, won the elections; it is willing to retain the monarchy and is strong because tribal divisions are less marked in Urundi than in Ruanda. But Uprona is anti-Belgian, and has had contacts with the late Mr Lumumba's Mouvement National Congolaise. It does not at first sight look like the sort of party that would easily co-operate with Parmehutu in Ruanda. It seems as if it is going to be as difficult to keep Ruanda and Urundi together as it will be to keep the separate elements of Ruanda in one piece.

INDUSTRIAL TAXATION

To Him that Hath . . .

ONE of the most interesting movements of economic opinion in recent months has been the retreat from the idea that governments should help lame dog industries over stiles, towards the view that they should actively encourage industries which are contributing most to growth. To him who is expanding should more be given; to him who is losing that which he hath should a sharp clout from the fiscal knobkerry be applied. The most extreme instance of this viewpoint has now appeared in an interesting paperback book* written by nine American economists. It is a rather turgidly written and academic treatise, dropping into differential calculus here and there, but its central proposal is simple.

The authors suggest that a new system of taxes and rebates should be applied to business firms, based upon a target rate of growth. If the target rate of growth in output (or in value added) were set at 5 per cent, then all firms that exactly attain that target should have these new taxes exactly offset by rebates. Firms that grow by more than 5 per cent in a year would receive a rebate larger than the additional tax, and firms whose rate of growth fell below 5 per cent would receive a rebate smaller than the additional tax. The authors suggest that very small firms should be allowed the alternative of opting out into more normal systems of taxation, although "once having entered into the scheme they would not be permitted to withdraw, at least until their payments into it had matched the rebates received." But among bigger businesses "requests for exemption of firms in declining industries or in situations in which market forces make it very difficult to achieve growth . . . must be firmly rejected."

The authors explain that people "will still be able to get the products of declining industries, but only if they are willing to pay the price. . . . A change in the social priorities . . . would be reflected in higher prices of those products that serve as a drag on the expansion of output." In an economy that has grown used to subsidising (instead of quickly killing off) declining industries like fishing and shipbuilding, this would be a revolutionary idea. But, for a trading country that needs to expand its growth industries and shed its stagnant ones, is there not something in it?

* What Price Economic Growth? Edited by Klaus Knorr and William J. Baumol. *Prentice-Hall International*. 184 pages. 15s.

Correction.—Our issue of September 9th contained a series of articles on the Press in the course of which, in an article entitled "Can Provincials Prosper?," we stated that Mr Thomson was undertaking a consolidation of his interests in Ulster and that he was "selling off the machinery of the morning *Northern Whig* and printing it on that of the evening *Belfast Telegraph*."

This was and is not, in fact, correct. *The Northern Whig* is an independent private company owned by the Cunningham family and is not owned by Mr Thomson as our article implied.

Chemicals from Oldbury

. . . and Susan Yeoman's nightie

Wise father — Henry Yeoman. Insists on his children having flame-resistant nightclothes. So when Susan has her bedtime romp with daddy, everyone's relaxed. No danger of her nightdress going up in flames. That's where chemicals from Oldbury come in.
Proban Ltd. — a company owned jointly by Albright & Wilson and The Bradford Dyers' Association — makes Tetrakis Hydroxymethyl Phosphonium Chloride at Oldbury. And Tetra . . . what we said . . . is an essential part of the Proban finish applied to fabrics to ensure that they won't catch fire. Less risk for wearers and less worry for parents like the Yeomans who believe in prevention — and Proban!
This is only one of the ways in which A & W chemicals play a part in the life of Mr. Yeoman. As one of the biggest organisations in the British chemical industry, the Albright & Wilson Group contributes — but we could go on like this . . .

Left and Right is not Enough

Bonham Carter

Bannerman

Mr G. in the Heart of Midlothian

Thorpe

Bonham Carter

FROM OUR SPECIAL CORRESPONDENT

MARY QUEEN OF SCOTS would have found it depressing, but the Liberals, as they converged on Edinburgh last week for their annual *talkfest,* with the international storm clouds gathering and a thin drizzle of national rain wrapping the city in a pall of grey, were expectant and gay. As they flocked in unprecedented numbers into the Usher Hall—built in 1914 when Mr Asquith was Prime Minister—nothing could dampen their spirits: not even a row of *Daily Herald* posters which were someone's idea of suitable platform decoration. Earnest, enthusiastic, dedicated, they were assembling to give the face of Liberalism a final polish to dazzle the supposedly watching electorate. Eminently respectable, without a beatnik or a horny hand showing, they looked comfortably middle class; and later betrayed their precise social origins by cheering wildly not for liberty or for justice, but for the abolition of snobbery and class barriers.

Visually the party is beginning to look much more balanced, and is matching appearance with behaviour. Telegrams were despatched to the usual totems—Lord Samuel, Lord Thurso, Lord Beveridge; and one very alive, brilliant and sparkling one, Lady Violet Bonham Carter, turned up on the platform. But, on the whole, the elders were content to stay away and let the leadership pass to younger hands. Mr Jo Grimond, urbane, charming, good looking and eloquent, was suitably balanced by the new president, Mr Edwin Malindine, a businessman and veteran candidate, a down-to-earth figure whose job was to appear to anchor the proceedings to reality. Behind them were ranged the technocrats, Mr Byers, Mr Bonham Carter (although he is an intellectual as well), Mr Wigoder, and others, who have streamlined the party—flattening a number of stalwarts in the process—men who know their minds and can act and speak with authority. Seated beside them, less of an organisation man but no less ruthless, was Mr Jeremy Thorpe, who made the outstanding speech of the assembly in support of Britain's entry into the common market, and who is regarded by some as heir apparent and by others as heir presumptive.

These in turn were backed by solid ranks of men and women in their twenties and thirties, who have genuinely and unselfishly thrown in their lot with the party and include a high percentage of those fiery enthusiasts who were close to the heart of John Morley, but whom Bagehot found so tiresome. Mr Richard Moore, secretary of the Liberal International, is their acknowledged doyen. He scattered a fine shower of Miltonic sparks on behalf of the people of east Germany in the Berlin debate, and went on at the subsequent Liberal rally to lay bare his faith and history for the public edification (he is Mr Gladstone's grandson). These are the seasoned staff officers of the future and they have been joined by such promising recruits as Mr Julian Grenfell, a windfall from the Bow Group.

There were also—and what Liberal conference would be complete without them?—the comic turns. Mr Oliver Smedley overdid his usual free trade act: Mr William Douglas Home provided some posthumous light relief by resigning from the party on the eccentric ground that he was called to speak only once: Mr Simon Nott unmasked the common market as a Vatican plot: and a twice-defeated Conservative convert candidate, in a moment of lucidity, spoke of the party conference as the most loathsome form of political organisation perverse man had yet devised. But these characters came from the fringe, and were promptly pushed beyond it by the main and impetuous Liberal stream.

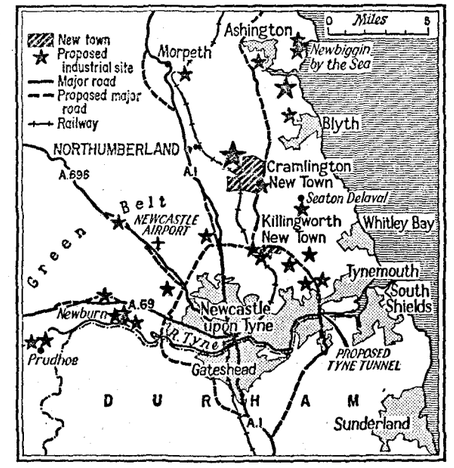
THIS year the party took another sharp turn to the left by coming out in favour of central planning, local development agencies and regional education boards. It called for reform of local government finance and more penal reform (including the provision of productive work for prisoners and compensation for victims of crimes of violence). Liberal support for entry into the common market was confirmed; and the shade of Adam Smith, who lies buried in nearby Canongate, was appeased by tacking an amendment to the main resolution stressing that the market was only a first step to wider free trade. Opposition hopes were pinned on Miss Manuela Sykes, who is supposed to combine the qualities of Mme Defarge with those of Mrs Barbara Castle, but she proved feeble and disorganised.

Two anodyne emergency resolutions were put forward, one on the United Nations, the other on Berlin, but at least the temptation to scoop up the disgruntled teachers' vote was avoided. The Berlin resolution, which called for a firm stand and negotiations to safeguard the city's freedom, was clearly too vague for the delegates' taste. They demanded—not particularly originally, since the suggestions had all been made by Mr Grimond earlier—the inclusion of specific proposals such as the *de facto* recognition of east Germany, acceptance of the Oder-Neisse line and the stationing of United Nations bits and pieces in Berlin. All these were resisted by Mr Bonham Carter, the very reincarnation of Sir Edward Grey, as if he were already in the Foreign Office. But he had to do a half bow to the floor and accept the amendment on *de facto* recognition with his own personal addendum attached.

All this, plus the nasty things that people had been saying about Germany, was too much for the Free Democrat fraternal delegates, and they flounced off back to Bonn. Despite their pique, events now seem to be justifying the amenders. The Liberals are clearly determined to be proved right, right, right and right again.

But in politics to be right is not enough, and few at the assembly seemed to be aware that the tide may have gone out without taking the Liberal boat with it. Certainly the expectancy of last year of an immediate dissolution of the Labour party and a consequent realignment on the left has gone; but the seriousness of the Liberal failure to achieve a breakthrough despite successes in by-elections and local government elections did not appear to have sunk in. If the conference was intended to show that the Liberals themselves believe that within the next decade they can really form a government, it more or less succeeded. But the point is: do the electors believe it? To generate such an act of faith, hope and charity requires more than an annual display of heady enthusiasm and optimism. A help would be if the tiny Liberal parliamentary party could start acting at full instead of at half strength. But even so the ineluctable fact is that the Liberals are still dependent on events for their big chance: and *that,* despite the savage anti-Tory sentiment of the delegates, is only likely to occur if the detested government is returned to power at the next election, and the decline of socialism then really does begin.

Northumbrian Vision



FROM OUR SPECIAL CORRESPONDENT

THE north-east coast of England, with its industrial clusters on Tyne, Wear and Tees, its scattered grey mining villages, and its wild encircling moors, is one of the most distinctive regions of Britain. Its 2¾ million inhabitants (a population the size of Wales) sometimes feel neglected by the London policy-makers. They live off the main industrial axis of England (although linked with the south by excellent trains and a developing air service), but lack the special patriotism or nuisance-value which strengthens the industrial claims of Scotland, Wales, and Ulster. All the same, the north-east, with development area assistance, has made a fair start in diversifying its industrial economy since the war. Now it needs to do more.

Northumberland has specially interesting opportunities, and its county council is now engaged on a vigorous campaign to realise them. Northumberland presents a fascinating contrast between the dense urban mass of Tyneside and the great open space, resplendent with fine ducal estates, lonely hills, and a hardly spoilt coastline, which start only a few miles from the centre of Newcastle. It is the county's aim to treasure this rural estate, while developing on its declining coalfield two new communities for overcrowded Tynesiders and for redundant miners. This vision cannot be realised unless industrialists, too, see the values of Northumbrian life.

The county council has at present to go it alone. This is because Northumberland (save for two small areas) has not so far qualified for assistance under the 1960 Local Employment Act. Nevertheless, it clearly needs more employment. The Coal Board, which inherited 70 mines, is steadily concentrating production in a dozen modernised pits, which may require only half of the 1957 labour force of 42,000 miners. Since shipbuilding may also shed labour, and since Northumberland has an above-average birth-rate, a faster rate of migration than the present 6,000 a year seems certain to occur unless new industry comes in.

Local patriots complain that the advantages of living and working in Northumberland are too little known. One advantage is a reliable labour force with a good record in honouring agreements. Before the war there was little work for women, but incoming industrialists have found female labour "unspoilt" and adaptable. Tyneside undeniably has its grim and squalid aspects, but Newcastle has streets and buildings of distinction (which badly need cleaning), good shops, and a growing cultural life. Perhaps the most impressive fact is that the greatest enthusiasts for life in Northumberland are executive and professional people who have moved there since the war.

The two "new towns" which the county council is promoting are quite unlike those elsewhere. The first, at North Killingworth, which is about to get started, is not really a new town, since it is only 7 miles from the centre of Newcastle and many of its 17,000 inhabitants will continue to work on Tyneside. The second and much larger new town at Cramlington, which is to have 50,000 inhabitants, is still at the planning stage. It has a slight resemblance to Peterlee, inasmuch as it will provide a new heart and centre for a declining part of the coalfield. Its most interesting feature, however, is that it is to be mainly developed by a private company, acting under the general control of the county council, and that much of the greater part of the housing will be built by private enterprise.

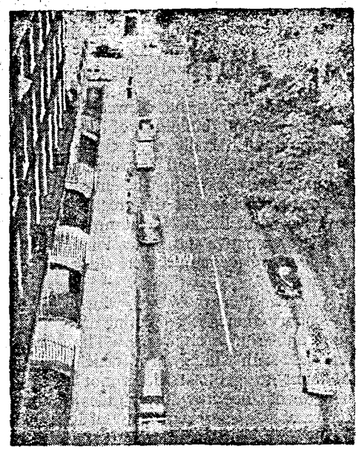
THESE new towns are part of a much wider strategy. The county council has the Minister's approval in principle to the creation of a closely restrictive green belt which will seal off the open countryside to the north and west of Newcastle. New development is to be concentrated to the north-east of Newcastle, in the declining coalfield area, and it is hoped that perhaps half of all private enterprise housing on North Tyneside will be concentrated at Cramlington.

This is a bold plan which leans on certain special circumstances. One is the ability of private builders, helped by lower land costs and more efficient labour than exist in the South or Midlands, to produce large numbers of houses for a price of £2,000-£2,500. So long as designs are improved (as the county council is now insisting), this advantage in building costs is a large point in the region's favour. A second factor is the chumminess of Tynesiders which (coupled with colder springs) makes gardening less of a fetish and reduces the pressure for urban spread. Cramlington is intended to have a net residential density of 53 persons an acre, which means much denser development than would be acceptable in the south. North Killingworth (mainly a public housing project) has the higher density of 63, which will involve a considerable proportion of flats.

Even so, present plans for guiding urban growth are not really adequate. It is hardly sensible for Newcastle to be building 16 and 20 storey blocks of heavily subsidised flats with so much open land on its doorstep. "Overspill" arrangements between the numerous local authorities are hanging fire, and the renewal of the older and uglier Tyneside housing is frustrated by local shortages of both finance and land. The richer Tyneside citizens live on the coast or in country towns like Morpeth and Hexham, but too much commuting of this kind would be a blow to the civic vitality of Tyneside. These problems seem to call for a more

integrated and perhaps more expansive approach to the growth of Tyneside than the county plan provides. The common interest of counties and cities in the north-east in industrial promotion has not yet been matched by any common effort to produce a worthy regional environment.

Northumberland's present plans certainly take some steps in this direction. A wise use of planning control is doing much to preserve the beauty of the countryside and market towns; and by becoming the first city to appoint a planning officer as one of its chief officials, Newcastle has recognised its potentiality as an attracting regional centre. The county's plans, however, in particular its plan for Cramlington new town, depend closely on the attraction of industry. With new industries, Cramlington could offer a good life to many Tynesiders or miners who will otherwise drift south or remain unemployed; without industry, it might become a rather inconvenient dormitory settlement. The county's programme rather slips between present Government schemes of help, but it may be that these schemes, introduced in 1960 in the belief that the old forms of help had been too unspecific and wide-ranging, have in the event proved too piecemeal and shortsighted. It is surely wiser to help industrial development at the best growing-points in a region than to seek too localised a remedy for unemployment; and it is also germane that Northumberland, without Government new towns or expensive housing subsidies, is working hard to retain people who (in devious ways) may cost public authorities a lot more if they go south.



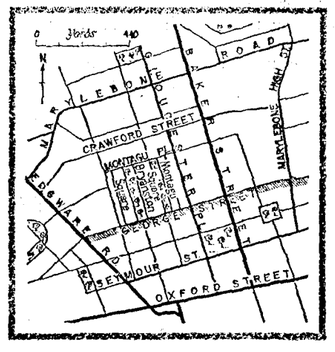
Metric Matters

FROM OUR SPECIAL CORRESPONDENT

As street furniture, parking meters do not rate highly, but the primary interests of the Ministry of Transport and the local authorities are not aesthetic. The meters' purpose is to return the streets to their "true function"—the passage of traffic—by minimising obstruction. Profits from their working are to be devoted to the provision of off-street parking.

Westminster has now had its meters for over a year and the results are instructive; parked traffic has been reduced by 50 per cent, income has exceeded expenditure by £85,000 and congestion (as measured in journey times in the central area) has been reduced by 9 per cent; during the same time a large number of wardens received employment in supervising the meters, and no off-street parking was provided. Parkers deprived of their normal places have overflowed into streets outside the "C" zone, thus shifting rather than removing congestion. Worse still, several buildings in the area have been completed without any provision to accommodate the extra parking demand created.

WESTMINSTER has been followed in London by St Marylebone and three other boroughs, and in the provinces by Brighton, Bristol and Manchester. Everywhere the meters have gone they have been opposed, sometimes unreasonably (as in Woolwich, where a multi-storey garage was provided at the same time). The latest row, over plans to extend the controlled areas in St Marylebone, has produced probably the biggest flurry of local politicking yet. The residents in the area affected, between George Street (below which, as the map shows, meters are already installed) and the Marylebone Road, are not so acquiescent as the borough council had hoped about the prospect of another 1,300 meters outside their front doors. Even so, the protests that have fallen thick and fast on the ministerial desk were brushed aside this week and a public inquiry has been refused.



St Marylebone: dignity and serenity

From their residences of dignity and serenity west of Marylebone High Street the protesters first asserted that the meters would inflict considerable inconvenience. The Ministry replied that no special privilege on the roadway attaches to residence next to it. The residents countered with the proposition that, should the meters succeed, their quiet squares would be exposed to the nuisance of out-of-borough commuters; and, should they fail, the rates levied for their installation would be so much wasted money. (It remains to be seen what effect parking meters will have on rating revaluation.)

A COUNT of parked cars in Bryanston and Montagu Squares in the peak times (about 12 noon and 3 p.m.) suggests that the meters may succeed, at the cost of driving between 100 and 120 cars into other, less accessible areas (thereby possibly creating a flow problem where none at present exists) and failing to lessen present obstruction (since meters will be installed where cars already park—and they will be, in the two areas most affected, 5-hour meters).

The meter scheme was suggested at the same time as another traffic improvement by which Baker Street and Gloucester Place will become one-way streets, at a cost of £40,000 (of which £12,000 will come from the borough's rates). The council members were not unanimously in favour of either scheme, and the whip was put on to the Tory majority to ensure a beginning. Two Tory councillors have since become convinced that both schemes are against their ratepayers' interests and have threatened resignation; and they are backed by the Labour opposition. The Automobile Association, which in principle supports meters, has added its voice as far as the area west of Baker Street is concerned.

The real question is whether the Ministry and borough councils regard meters as a complete solution in themselves or whether they are fitting them into integrated and broader long-term plans. The Marylebone protesters have a case: just off Bryanston Square another large building has gone up without any provision for extra parking.

Do you take one of these to board meetings?

Yes, an ordinary pin. Just as good for making business decisions as it is for picking winners. Every director should have one ready in his lapel.
More seriously, though, even in the best-regulated boardrooms chance still plays its part in the making of decisions—and in really big business an unlucky guess can cost thousands, even millions, of pounds.
By helping top-level management to cut the element of chance to a minimum, C-E-I-R, the world's largest independent commercial computer services organization, has already saved literally millions for government and industry. Backed by a staff of highly qualified economists, mathematicians, statisticians, scientists, and computer specialists, and equipped with the most powerful force of independently operated computers in commercial use today, C-E-I-R can handle on your behalf any problem, large or small, capable of solution by logical or mathematical means. And that means practically any marketing, distribution, production, or development problem.
At the new C-E-I-R Centre in London, with its IBM 7090 and 1401 computer facilities, your own staff can work with ours if you wish, with offices provided—and they can use the computers on a by-the-hour hire basis. Ask your secretary to write or telephone for more details.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Questions of Credibility

NEW YORK

THE apocalyptic parts of President Kennedy's address to the United Nations General Assembly this week accurately reflected most Americans' notion of what Armageddon will be like if it comes. Mr Kennedy said that we must all contemplate the day when this planet will no longer be habitable and that this generation may be remembered (but by whom?) as the one that turned the earth into a flaming funeral pyre. But although the Public Health Service plans to begin this very autumn training at least one person in every family in "basic medical procedures, like radiation fall-out protection," hardly anyone seems really alarmed. There has been no discernible rush to buy items like portable, pocket-size kits to measure radiation ("now . . . you can survive radiation fall-out") that are being advertised by firms with names such as the Radiation Survival Corporation and Survival Products Inc. Not a single member of either Mr Kennedy's cabinet or the National Security Council has built a bomb shelter for his loved ones. One reason may simply be that the majority of the President's fellow Americans doubt whether they would survive anyway. Forty-three per cent said recently, when questioned on behalf of the Gallup Public Opinion Poll, that they believed their personal chance of living through an all-out nuclear war was poor and another forty per cent rated theirs no higher than fifty-fifty.

It ought not to be inferred from this by any non-American, and least of all by Mr Khrushchev, that most Americans expect soon to be either dead or red. The real reason they are proving so unflappable is that, while they do not think much of their individual chances of surviving a nuclear war, they do not yet seriously believe that there is going to be nuclear war to survive. They hope to avoid one by standing immovably in the path of whatever Hitler-like conquests Mr Khrushchev may have in mind, though not in the way of reasonable negotiations concerning any fears he may entertain regarding his own country's future security.

Most Americans (sixty-four per cent, according to the Gallup Poll) think that the United States and its allies should fight their way into Berlin if the communists close the land routes and the airways. Heart and soul they agree with General de Gaulle that truckling to dictators means that you start out giving your hat, then you give your coat, then your shirt, then your skin and finally your soul. They would add that you then probably find yourself in a world war anyway. All the same, well-informed Americans, including some top officials in the Kennedy Administration, are seriously worried about a nuclear war breaking out because of Mr Khrushchev's inability or wilful refusal to believe that his opponents really would fight. Some rate the chances of war from this cause as the same as the chances of individuals surviving it: fifty-fifty.

One disgruntled view is that Mr Khrushchev's scepticism springs from the alleged lukewarmness of America's allies. The United States, it is said, has a quarter of a million soldiers in Europe, but the Europeans in the North Atlantic Treaty Organisation continue to drag their feet. It is also said bluntly that America is willing to fight a thermonuclear war if need be, but her allies are not. Among key figures in the Administration there is real appreciation of the frightful dilemma with which thermonuclear war confronts America's allies. But this might wilt if popular resentment in America against the allies' alleged dragging of their feet were to be turned against the Kennedy Administration itself.

THERE is danger of this happening now. The Republicans claim that Mr Kennedy is also to blame for Mr Khrushchev apparently not having got into his head the all-important message that America is really determined to fight a nuclear was if pushed too far. The President said in his letter to the neutral countries after their meeting at Belgrade that the United States will meet force with force. But the Republicans insist that Mr Kennedy lacks "nuclear credibility" despite America's nuclear capability. Mr Khrushchev has thus now received a sort of assurance from Mr Kennedy's domestic political opponents that, when he professes to disbelieve that the man he met at Vienna possesses the will to wage nuclear warfare, he is in fact quite right. Consequently President Kennedy had to insist yet again, in his speech to the General Assembly, that "the United States has both the will and the weapons." But he also voiced this misgiving:

> Every man, woman and child lives under a nuclear sword of Damocles, hanging by the slenderest of threads, capable of being cut at any moment by accident or miscalculation—or by madness.

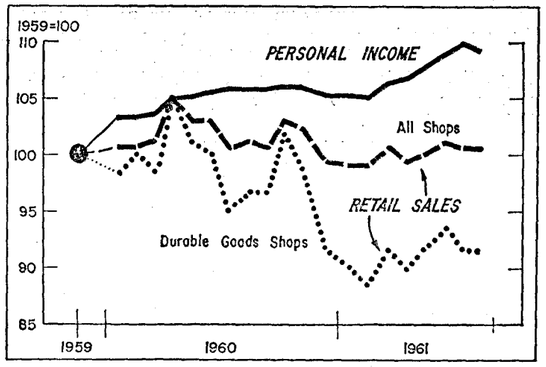
It may be an exaggeration, but probably not too wild an exaggeration, to say that madness of a sort is what the Kennedy Administration most fears in Mr Khrushchev and his military chiefs. The Soviet Prime Minister, some American officials feel, may have become too deaf politically to catch even the loudest warnings coming from the West. Mr Kennedy told the General Assembly that "we shall never negotiate out of fear, and never fear to negotiate." But many Americans are apprehensive that western willingness to negotiate may be interpreted gleefully by Mr Khrushchev as their bowing before what he has called "the tide of events which reflect the natural development of society." He might therefore simply be emboldened to go on demanding concessions and planning for more communist gains by encouraging communist onslaughts on weak points and exposed salients. Mr Kennedy went out of his way at the United Nations to draw attention to the dangers in the Far East, where American "special forces" are increasing their strength and their preparations to act as guerrillas behind the enemy lines in countries that are overrun by communist forces. Mr Khrushchev, in short, is suspected by Americans of being dizzy with success, and even the sober *New York Times* declares that he "resembles Hitler more clearly every day."

Meanwhile, Mr Kennedy has spent a lot of valuable time listening patiently to the leaders of new nations explaining their devotion to freedom and self-determination, as well as their need for aid. But Americans note wryly that self-determination, which is so important for non-Europeans to have, is apparently not regarded by them as quite so essential for Germans; Americans also wonder why American, but not Soviet, embassies get stoned

when nuclear weapons are being tested (Mr Art Buchwald has suggested it is because American embassies have more and bigger windows). The conference of the uncommitted countries at Belgrade and the softness of their protest against the Russian resumption of nuclear tests were considerable disenchantment for the United States. Further rebuffs may be in store, with the China issue at last, after ten years' successful postponement by the United States, being debated in the General Assembly, and the Russians pushing hard with their "troika" concept, both for control of disarmament and control of the United Nations. Mr Khrushchev hints exuberantly that he may drag the United States to a summit to solve the Berlin problem, promote disarmament, reorganise the United Nations Secretariat and admit mainland China, in a series of simultaneous equations devised by himself and involving acceptance on his terms.

Some counter-move was plainly called for if Mr Khrushchev's over-confidence was not to gather still more dangerous strength and if the Kennedy Administration was not to risk losing the tide of popular American support that it still enjoys. This week at the United Nations President Kennedy served notice on both the Russians and the neutrals. He used words about the former which recalled angry Russian-American dialogues out of a past that he had hoped, when he came to office, to bury. He was gentler with the neutrals, but his intention was plain. He was testing the credibility of their long and loud professions. He invited them to take part in a decade of development at the United Nations, to save their international organisation from the fate that threatens it and to act as scrutineers of a genuine "complete and general" world disarmament. The United Nations, Mr Kennedy said, "will either grow to meet the challenge of our age—or it will be gone with the wind." So in that case will both self-determination and the freedom to be neutral.

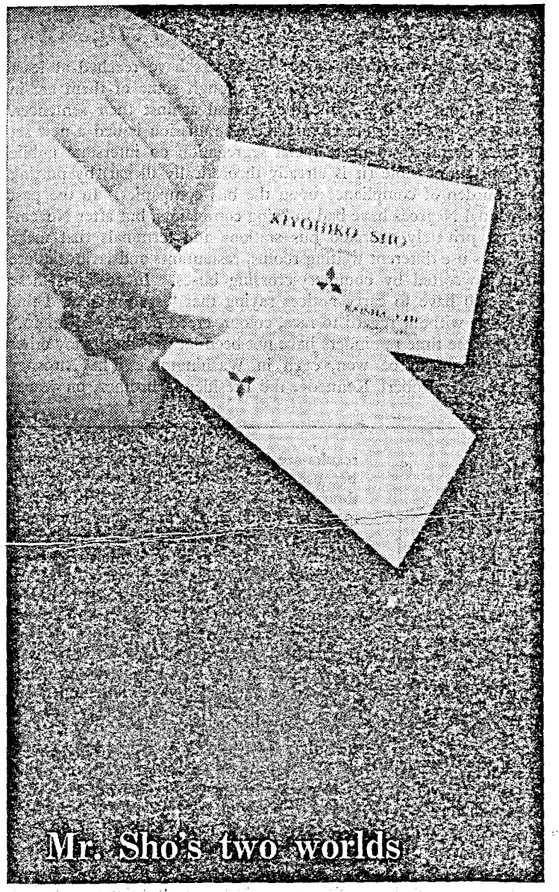
The House Has the Last Word



WEARY, disgruntled and frustrated, a handful of Senators rang down the curtain at dawn on Wednesday on the longest session of Congress for ten years. The House, or what was left of it after a good many members had quietly slipped away home, had adjourned two hours earlier, leaving the Senate no choice but to accept the supplemental appropriations Bill which was the final piece of business. This meant swallowing last-minute changes inserted by the conservatives of the appropriations committees; these will subject a number of domestic programmes, which were to have been financed by borrowing from the Treasury, to the annual approval of Congress. It was a characteristic conclusion to a session in which the conservative House has, more often than not, had the last word.

The appropriations for foreign aid, the main stumbling-block to adjournment, are no exception to this rule. The compromise figure of $3.88 billion in new funds which was finally reached is slightly closer to the $3.66 billion voted by the House than to the $4.2 billion voted by the Senate; it is only about $100 million higher than last year's appropriation; and only by adding in some unspent balances from last year and the $30 million for the Peace Corps is the total brought to the $4 billion which was the Administration's minimum figure and for which the Senate conferees fought hard. Originally the President asked for $4.8 billion, of which $4.25 billion was authorised. Fortunately, however, the money for development loans in the first year of the President's five-year programme, at $1.1 billion, is very little below the $1.2 billion which the President asked to borrow from the Treasury in the happy days when he imagined that Congress might free him from the need to submit development loans to its annual scrutiny. Mr Kennedy, who himself has been casting increasingly critical glances at the neutrality of the neutral countries, can hardly object to the Senate's instructions that, in administering foreign aid, consideration should be given to nations which share the American view of the world crisis.

The man at whom these instructions were directed, and who is to administer the whole foreign aid programme, now reorganised and rechristened the Agency for International Development (AID), is Mr Fowler Hamilton, a lawyer with a varied experience of government service on whom the Administration's talent scouts have long had their eye. Originally it was expected that he would succeed Mr Allen Dulles as the head of the Central Intelligence Agency, but the difficulty of finding a man who was both able and tough enough to run AID, and acceptable to congressional liberals as well, caused the Administration to change its mind. Instead the reorganisation of the CIA, whose reputation has suffered recently, particularly over the Cuban affair, will be presided over by Mr John McCone, the able Republican industrialist from the west coast who for the last three years of the Eisenhower Administration was chairman of the Atomic Energy Commission.



Inconspicuous Consumers

THE tide of recovery is continuing to run strongly, but shopkeepers are beginning to wonder when it is going to reach them. Industrial production rose again in August to a new record, investment by business firms in plant and equipment is turning up in the present quarter and personal income was about $14 billion higher in August—at seasonally adjusted annual rates—than it was in August, 1960. Indeed, personal income has been rising steadily since February, with the exception of August itself, and

this "fall" took place only because the figures for July were bumped up by a special dividend from the government on servicemen's life insurance. If this is disregarded, there was an increase of about $700 million, at annual rates, between July and August, though this was a smaller rise than the two preceding ones, mainly because of the changeover to new models in the motor car industry.

Yet with all this money jingling in peoples' pockets, shopkeepers did not do better in August—instead they did slightly worse—than they had a year earlier. Sales of durable goods such as motor cars and appliances and furniture have been taking the hardest knocks. Retail trade in general has held up, but it has not provided any strong force for expansion as yet this year—something for which economists, who fear the reappearance of inflationary pressures, are thankful. One explanation is that it is normal for such sales to lag behind in a recovery. Ordinary people are not as quick

One side is Japanese, the other English—a symbol of how Mitsubishi Shoji serves both worlds.

With 90 years in the business, this big general-trading company has had noticeable results in serving overseas clients who buy and sell in Japan. The silken curtain parts quickly when Mitsubishi Shoji is on the job for you.

Some of Japan's finest products carry the Three Diamonds mark common to all Mitsubishi companies. There are over a score of these companies in light and heavy industries, and each handles its foreign trade transactions through Mitsubishi Shoji.

You can learn how profitable it is to trade with Japan at any Mitsubishi Shoji office.. Branches and affiliates are in all the world's trading centres.

HILTON HOTELS provide an extra measure of pleasure

A good hotel—a Hilton Hotel—will certainly enhance the enjoyment of your visit to the States. Our people are naturally friendly, trained to appreciate the fine points of courtesy, and quite sensitive to the needs of guests from wherever they may hail. This is our reputation the world over.

Hilton Hotels and Hilton Inns form a network of comfort and hospitality across the nation. Nearly every major city has its Hilton Hotel, accommodations are moderate in price and reservations can be made *in seconds* for each one of them, through any Hilton Hotel in the world. For information, communicate with any Hilton Hotel or the London Office, 36 Hertford St., tel. HYDe Park 8888, or the Amsterdam Office, Apollolaan, Amsterdam-Z, tel. 73-06-22.

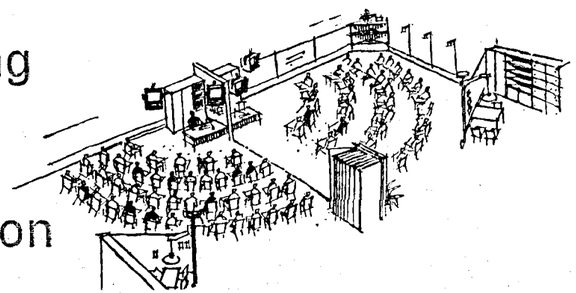
as businessmen to realise that the tide has turned—particularly when there is still so much unemployment about. Those who have more money like, as a precaution, to replenish their savings and pay off some of their hire purchase debt. As recently as July more consumer debt was paid off than was incurred. Optimists among retail traders believe, however, that all this means that the scene is set for a big autumn buying spree. After all there is little temptation to go shopping on hot summer days and many families have been away on holiday. Purchases of motor cars, moreover, are usually put off until the new models are available; judging from the difficulty in getting the men back to work under the new settlement in Detroit, this may not be as soon as was hoped. Some observers, however, are attributing at least part of the lag in the shops to something that crisp autumn days will not drive away: the increasingly large share of peoples' spending which is being absorbed by services, in which are included such things as tuition fees, holidays and recreation. In 1954 services absorbed 30 per cent of personal income after the payment of taxes. Now the figure is about 40 per cent.



Civil Rights and Wrongs

It looks as though the Freedom Riders have reached at least one of their destinations, even though some of them are in prison or out on bail while they appeal against their sentences. Last week the Interstate Commerce Commission issued a new set of rules designed to make racial segregation on interstate public transport impossible (it is already theoretically illegal) by putting the burden of compliance upon the bus companies. In the past individual Negroes have had to bring complaints, but after November 1st privately operated bus stations and terminals that make the races use different waiting rooms, restaurants and lavatories are to be boycotted by boundary-crossing buses. In addition these buses will have to carry notices saying that "seating aboard this vehicle is without regard to race, colour, creed or national origin." At the same time reminders have not been lacking that many other fields remain to be won, even in Washington. The Attorney General, Mr Robert Kennedy, the President's brother, on whose petition the ICC acted, has resigned from the Metropolitan Club, a celebrated institution which continues to refuse entry to Negroes either as members or guests.

The Civil Rights Commission, following up its report on Negro voting, has also issued its report on the schools; this notes that progress toward racial desegregation has been proceeding at a snail's pace since 1959, that compliance remains merely token through much of the South and that even in the North and West segregation in housing produces segregation in the tax-supported schools. To speed up the dismantling of the colour bar the commission urged Congress unanimously to require every school district where racial segregation is practised—there are still over 2,000 in the South—to submit plans to the federal government within six months for its first step toward ending this state of affairs. The commission also wants the government to use its power of the purse to help local school systems which try to integrate their schools, sometimes at the cost of losing aid from their state governments. And it would like Washington to crack the financial whip by withholding aid from tax-supported schools and colleges which maintain a colour bar. One member of the six-man commission jibbed at this, on the reasonable ground that it would mean punishing the children for the sins of their fathers. Other, less controversial suggestions included one for a census, by race, of all students in tax-supported schools and another for special help for able members of minority groups.

If the President should decide to press some or all of these proposals on Congress next year, there is no doubt that he would have a battle royal with his southern wing; conceivably he might also jeopardise the new climate of opinion in the South which seems to be coming round, however slowly, to the view that it cannot go on resisting forever. A cheering evidence of this new mood is the election of a new and racially moderate Mayor in Atlanta, Georgia, as a successor to Mr Hartsfield, whose liberal leadership did so much to enable the city to take its first peaceful steps this autumn toward integration of its schools. Mr Allen, the Mayor-elect, won 63,500 votes in a run-off election compared with only 36,000 for his opponent, an outspoken advocate of racial segregation.

Teaching by Television

WASHINGTON, DC

Early this month some 43 million young Americans went back to school. Up to three million of these will receive a proportion of their regular teaching from a television screen, generally mounted shoulder-high in a corner of the classroom, with the "live" teacher standing by to provide explanations—and tests—afterwards. But though Educational Television—ETV for short—is growing like a mushroom and Congress has held extensive hearings on a Bill to provide federal grants to foster it, there is an almost complete dearth of statistics on how far it has penetrated the educational system. Nobody knows how many pupils look in on the television teachers, or for how much of their time. The United States Office of Education has no authority (or funds) to make a survey; and the state educational departments do not require returns from the local school boards.

The stations on the air know how many schools subscribe and how many of their children participate, but non-subscribing schools can, and do, tune in, though they do not get the special manuals and other aids supplied to subscribers. All that can be said with certainty is that 54 ETV stations are telecasting, with ten or twelve more shortly coming on the air, compared with one in 1954 (and a possible 268 if all the channels set aside by the Federal Communications Commission for non-commercial purposes were used). Perhaps 7,500 elementary schools and high schools in 26 states use ETV for parts of their curriculum—but the extent to which they do so varies enormously. (These figures omit the extensive use also being made of ETV for university purposes).

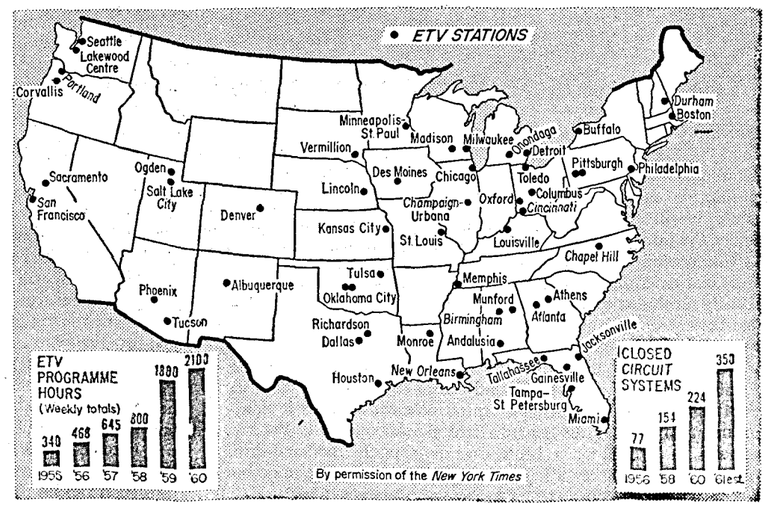
In seven years ETV has gone well beyond the experimental stage. It is used to instruct in almost every subject and is not confined to science teaching, where the element of visual demonstration has obvious relevance; this is often as far as television goes in European schools. In America it is used to teach languages, history, reading and "social studies" among other things; large claims are made for it—by enthusiasts, almost unbelievable claims. The primary object, which has been achieved in some areas, is to relieve the growing shortage of teachers, and more particularly the shortage of teachers in subjects like mathematics and science. But ETV is also a means of spreading the classroom impact of the inevitably small minority of outstanding teachers in all subjects.

The Ford Foundation has spent millions of dollars in studying this new educational tool, by far the most important of the many learning and teaching machines now being developed. The results of these experiments purport to show that the performance of pupils taught by television is as high, and in some instances higher, than those taught by conventional methods, and almost every subject in the curriculum is included. These results are hailed as particularly encouraging because they are based on what are still thought to be rather primitive uses of the new medium, which in the main copy the traditional classroom situation somewhat slavishly and have not yet begun to exploit either the vast bank of videotape and film records which will be built up or the full flexibility of the system.

Only a limited number of teachers have learned to make the best use of television. It is claimed that ETV permits teachers to plan courses more carefully and gives them more time to answer questions and to help individual pupils in trouble. More than this, it is claimed that in skilled hands ETV elicits a far more active approach by pupils than does a droning schoolmarm. They discuss, debate, and read up the subject more vigorously, they write better English, the school library is patronised more, not less. With enough ETV, it is predicted, the standards of American education, which have been under fire since 1957 (when the first sputnik was sent up), will rise rapidly.

Other great advantages are claimed. Ideally, the school using ETV will be built on the open plan; when the television programme is on, classes of 300 or more will look in, and then revert to smaller groups headed by live teachers. This will save both teachers and building costs, it is maintained. Nor need the school be dependent only on an outside educational programme: already about 150 schools or (as in South Carolina) groups of schools have closed circuit systems of their own; this of course is common in universities. School broadcasts are also expected to improve adult education, make instruction at home for incapacitated children easier and "enrich" the teaching of rural schools especially. The word "enrich" is ever on the tongue of the television-struck educationists.

The earlier opposition of teachers has faded; they now see in television a new expertise which, by raising their productivity, will also put up their wages in accordance with the economic pattern familiar in industry. They might be more Luddite-minded if they took seriously the dreams of some enthusiasts for "total television teaching," in which 40 teachers of genius would reach every school-child in the United States over a totally automated and centralised ETV. But this is still dismissed as science fiction—though it is interesting that the bitter opponents of federal aid to education, who argue that federal regimentation and thought-control of American youth would accompany the power of the purse, are perfectly happy to hand over that education to relatively large ETV authorities, many of them influenced by special interest groups.



ETV may well modify the traditional American control of education by the local school board and parent-teachers associations. The Mid-West Airborne Television programme, for example, uses an aircraft to telecast schools programmes which are picked up in many counties of five states—Illinois, Michigan, Indiana, Ohio and Kentucky. Developments of this kind cannot fail to have a centralising effect. It will not be possible for local bodies to prescribe courses or even (as they sometimes do) textbooks; the trend will be to larger units. ETV may even ease, ultimately, the vexed issue of aid to education, bedevilled as it is by religion, as help to pay teachers' salaries becomes less urgent.

This, however, brings up the question of cost. The electronics industry, hungry for new orders, becomes understandably lyrical about the cheapness and economy of ETV and so do architects and the would-be builders of an entirely new type of television school. But few stations are yet financed adequately. A suitable station's capital cost was put in recent Senate hearings at about $500,000 and running costs would be from $100,000 to $200,000 a year. This is $5 a child in some areas.

The proposed ETV Bill would provide states with only about $1 million in federal aid over five years. Local borrowing would therefore be needed on a large scale. Moreover, such a station has limitations: as it can only telecast a single programme, it cannot cover a very wide part of a curriculum that must embrace all twelve forms. To widen this coverage, it is necessary to lay coaxial cables capable of transmitting six or more school courses simultaneously; such costly installations are needed if the full possibilities of ETV are to be exploited. Perhaps only if this is done will the drawbacks be fully realised.

Some educational bodies purchase time from commercial stations to telecast school courses, but normally a non-profitmaking association is set up, according to FCC requirements, to operate an ETV station. One third of existing ETV stations are owned by representatives of local community bodies, one third by universities and the rest by school systems or state commissions. Their income comes from private subscriptions, state grants and industrial endowments. The operating budgets of these associations now total $11.7 million a year.

The development of American ETV has gone far enough to justify an objective survey of its claims by European educational authorities for their own guidance. Nothing however can be taken for granted; too many vested interests are at work. Because there are in the United States few external examinations in the English or French sense, it is far from certain that the comparisons of ETV and classroom teaching have any general validity. There are signs that when television teaching takes more than a certain proportion of school time, children get tired of it. ETV has, furthermore, been introduced into an educational system in which 20 per cent of the teachers are untrained, and the training of the remainder is rather in methods and the psychology of child behaviour than in the subject-matter to be taught. It is hardly surprising that they welcome the aid of ETV or that the results apparently compare well with those of classroom teaching. But this may mean no more than that ETV is raising standards in schools (and in teacher training colleges) that many respected American educationists declare are still woefully low.

Push-button Pork

FROM A CORRESPONDENT IN DENVER

HAM and eggs are about to flow off the assembly line. Two large, well-financed and carefully-planned projects in Colorado are the newest outposts in the constant advance of automatic methods of producing food. Each is unique so far. Each means stiffer competition for the old-fashioned "dirt farmer."

At one the plan is ultimately to produce 1,200,000 hogs every year under completely regulated, germ-free conditions, from their conception to their slaughter. They will spend their whole lives without ever seeing the sun or sniffing fresh air, in an environment closely controlled to ward off disease and to promote growth. The Agricultural Research Development Corporation of Denver based this project on ten years of experiment by experts in animal husbandry who argued—and proved in their laboratories—that any means, however costly, of eliminating disease and dirt would be worth while because they take such toll of the profits of people who raise hogs by ordinary methods.

A windowless plant to apply these ideas is getting under way on the high plains 60 miles north-east of Denver. Here the pigs, produced by artificial insemination, taken from their mothers before natural birth and nurtured for their first four weeks in sterile incubators, are housed on concrete floors gently heated from below, in 12-pig "apartments" under conditions resembling those of luxury hotels—for hogs. They enjoy a uniform temperature of 70 degrees with humidity at 50 per cent, and eat a vitamin-rich diet designed to produce lean meat rather than fat.

The original producers chose their site in Colorado for a number of good reasons. Hogs had never been grown there, which reduces the chance of lingering infections, and the low humidity discourages such diseases as rhinitis and pneumonia. Finally, the state produces only about 40 per cent of the pork sold within its borders. But the corporation also sells franchises for the complete process—of

which two have already gone to large hog farms in the south-east—for $575,000 each. For this sum the corporation will provide the buildings, ranging from the nurseries to the farrowing and pork-production units, complete techniques and 1000 germ-free young sows. It will buy all the hogs produced and will market the meat under the trade name of "Hi-Lean," naturally at premium prices.

The second automated project is that of Gates Cyclo, Inc., a $500,000 enterprise designed to produce 80,000 eggs a day under equally revolutionary conditions. In even the most modern existing egg-battery operations, the attendant goes to the hens, which are housed in stationary cages. The new idea is to make machinery move the hens past the attendant. The unit is circular. A structure capable of housing several thousand hens, in individual cages seven tiers high, is suspended from a central pole which turns it slowly in merry-go round fashion past a central working-point. For two minutes in each hour a hen's cage is opposite food-and-drink troughs; for the other 58 minutes the hens have nothing to do but talk to their neighbours and lay eggs.

The eggs roll into a trough in front of the moving cages and the operator picks them off as they come by, using a ladder to reach the higher tiers. Droppings fall through the wire-mesh floors of the cages to pans underneath and are scraped off automatically. Nothing is wasted; the droppings are treated and sold as fertiliser. Sterile conditions are emphasised, though not as rigidly as in the pork plant; neither company encourages visitors. At night the whole business is turned off for 10 hours and left motionless and dark. A pandemonium of hungry cackles greets the morning light even though it is artificial.

The hens are specially-bred hybrid egg-layers and, when they cease to produce, are sold quickly for stewing. The plant, which is north-east of Denver, will house 100,000 hens who will, by past experience, produce 80,000 eggs a day to be cooled, cleaned, washed and sent to market. An experimental unit which has been in operation for over a year accommodated 5,000 hens. The commercial one will be even more automatic and eight of the huge merry-go-round cages will be in continuous production with a crew of only five men in all. The Gates Rubber Company, the sixth largest rubber company in the country, is supplying the capital for the mammoth egglayer, which can turn out top quality eggs much more cheaply than the older-type batteries that were already making competition harsh for the farmer who raises a few hundred hens as a sideline.

Ships in Conference

PROTESTS from a number of maritime countries, including Great Britain, have greeted the shipping Bill which Congress has just sent to the President. Its purpose is to legalise permanently the use of dual-rate contracts by shipping conferences. For forty years these conferences—voluntary groups of ocean carriers which serve common routes—have been setting rates and giving substantial discounts to shippers who guarantee to send all their goods, or a stated proportion of them, by steamship lines which are conference members. This system was endangered in 1958 when a decision of the Supreme Court suggested that it contravened the American anti-trust laws, but American shipping lines have had permission to participate in it under interim legislation. This authority expires on October 14th.

The objection of maritime countries is not to the underlying purpose of the measure, but to a provision which requires the Federal Martime Commission to disapprove any conference rate which is "so unreasonably high or low" as to be detrimental to American commerce. This is one of a number of efforts in the Bill to protect American shippers and independent shipping lines; for example, it requires that the spread between contract and non-contract rates may not exceed 15 per cent. But to the domestic critics of the Bill—and particularly to the Department of Justice—the fault of the measure is that it does not go far enough to curb alleged malpractices. The Bill originally passed by the House was much more severe but in the Senate three key anti-trust provisions were removed; so was another, which caused great indignation abroad, that called for the production of records from overseas.

A great deal will depend on how the Federal Maritime Commission administers the measure. If its interpretation leads it to far-reaching investigations of all rates, the maritime countries will feel that their protests were well founded. But those who suspect that the law is likely to be administered too much in American interests should consider the alternative: if the President, at the behest of the Bill's foreign and domestic critics vetoes, or simply fails to sign, the Bill American participants in shipping conferences will become vulnerable to court suits and the whole system of shipping conferences may be thrown into confusion until new legislation can be passed by Congress next year.

WE'D ENJOY MOULDING PLASTICS FOR YOU

Osma Industrial Mouldings have a high strength/weight ratio, will neither rust nor corrode and are unaffected by weather. They resist a wide range of chemicals including weak acids, alkalis, organic solvents, oils, fuels and inorganic solutions. Their mechanical properties are good and they are an electrical insulator. They resist abrasion and are through coloured.

Any particular property can often be enhanced if required.

In our Factory at Hayes, we have a battery of presses capable of producing mouldings from 0.32 square inches to 32 square feet. They are used to mass-produce reinforced plastics and D.M.C. mouldings in all manner of shapes for Industrial purposes. Small intricate mouldings or components with large surface areas can both be made to fine tolerances.

Our interest is primarily in polyester-glass fibre and because we employ experts we know, perhaps more than anyone else, the possibilities and limitations of the material.

This specialised knowledge is available to industry in general, and in particular to manufacturers of electrical and mechanical equipment.

What can we make for you? Can our product help yours? The materials you are now using may appear to be the best, but in a surprising number of cases OSMA polyester-glass fibre will prove even better.

The full strength of our technical advisory service, and of our design, development and mass-production facilities could be yours.

Arrange to meet us. We shall not keep you for longer than we can hold your interest.

OSMA PLASTICS LIMITED

Grove House 551 London Road Isleworth Middlesex

Where can you learn the ABC of data processing?

EVERY LEVEL of management needs to keep abreast of the enormous benefits business can derive from the current development and application of modern data processing equipment. I·C·T educational and training courses pass on to customers knowledge gained from over fifty years' experience in the application of data processing machines.

Thousands of senior executives have already attended courses at I·C·T's educational establishments, where the training covers the application and operation of every machine in what is one of the largest ranges of data processing equipment in the world. Study groups, discussions, demonstrations—these are laid on for organisations large and small, as an essential corollary to the introduction of new business.

This customer education is just one part of the unique I·C·T service which goes into action from the moment you approach us about your data processing problems. A service which ensures that each I·C·T installation is made, not from a mould but for the particular needs of the customer that orders it.

The newspaper you read has never mattered more

The more the world demands understanding, the more difficult it becomes to understand. At this moment, when so much depends upon your newspaper, can you do with anything less than The Times itself?

The Times equips you to understand because The Times reports the news straight—not made agreeable by omissions or entertaining by additions. It reports the news completely. Short of attending every session of Parliament and every significant law case in person, reading every important government report, or being present at every major news event, you cannot find out more about the world each day than by reading The Times.

The Times reports the news accurately. The account you read in The Times today is an historian's record tomorrow.

Upon this structure of facts The Times throws the light of every shade of opinion. You will find the opinion of The Times itself conveniently labelled as such. You will also find, on its letter page, a most vigorous and varied exchange of views by other people.

If you take the world seriously, you should take The Times.

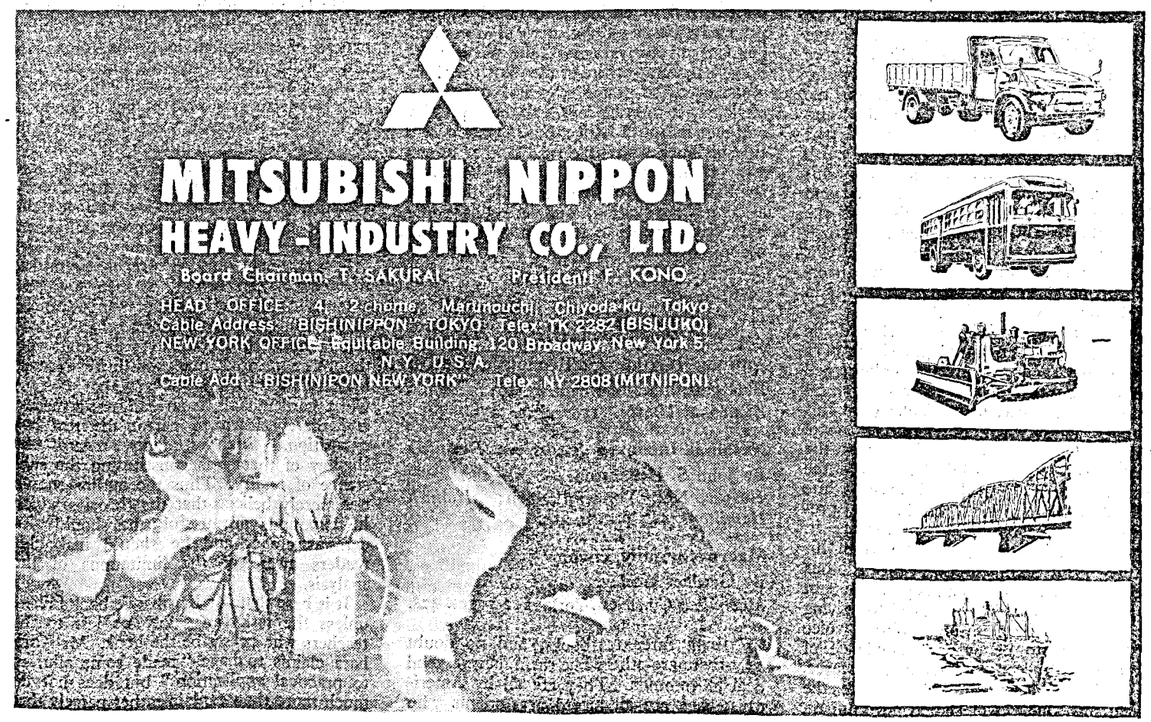
Read THE TIMES tomorrow

DO YOU FLY BECAUSE YOU ENJOY IT *or just because you're in a hurry?*

By his second or third crossing, the transatlantic traveller begins to be critical. He appreciates the speed—but where has the pleasure gone? It hasn't—if you fly on our Shamrock services. On these services, the speed is provided by the latest Boeing jet liners and the pleasure begins at the beginning. Why? Because alone among airlines we offer:

THE 11-POINT TAKE-OFF You can fly to America from any of eleven cities in Britain—London, Manchester, Edinburgh, Glasgow, Blackpool, Liverpool, Leeds/Bradford, Birmingham, Cardiff, Bristol, Isle of Man—saving perhaps hours of cross-country travelling.

THE LUCULLAN INTERLUDE Relaxing, before the long hop, in the comfort of Dublin Airport, you will find a restaurant where the food is as superb as anywhere in the world—each dish a creation cooked and served to highest international standards . . . Dined and wined, legs stretched, lungs freshened—*you* discover the next pleasure . . .



SMILING IRISH EYES, sparkling property of the air hostesses—beautiful, soft spoken, thoughtful and efficient—that you will meet whether you fly 1st Class Golden Shamrock or Economy Class Silver Shamrock. If you're a traveller first class, *your* eyes will light up at the sight of—

THE GOLDEN SHAMROCK MENU starred with such delicacies as Broiled Liffey Salmon or Limerick Ham Bunratty style, with Pouilly Fuisse 57 or Charles Heidseick 53. Travellers who know, place Golden Shamrock food in a class by itself.

THE 2-POINT TOUCH-DOWN Shamrock services give a choice of flights not only to New York, but also to Boston. On which thoughtful note, we wish you goodbye—until your next transatlantic trip.

DUTY FREE SHOPPING The Shamrock transatlantic service gives you time enough at Shannon to make profitable purchases at the International Duty-Free shopping centre.

AER LINGUS
IRISH INTERNATIONAL AIRLINES

ing that Spanish membership of Nato would make them work better. Two other arguments are mentioned: first, integration into Nato would make it unavoidable for the Spanish armed forces to be modernised and re-equipped, and might therefore oblige the European allies to share the cost of this modernisation.

Second, if there is a political liability attached to the alliance with Franco Spain, why should not the European members of the alliance, who share the benefits in security, share the political liability, too? Though forceful, these arguments are not calculated to be persuasive to Europeans. Mr Whitaker himself concludes:

> There is no convincing evidence that the present relationship, which is already complex enough, would be any more manageable if it were somehow handled through Nato channels.

Conscientious as his examination has been, it leaves no doubt where his own sympathies lie.

By Bernard Sachs.

Dobson. 190 pages. 18s.

FEW public careers have epitomised the basic dilemma of the Englishman who transplants himself to a multi-racial society quite as starkly as that of George Heaton Nicholls, a leading political figure in South Africa for a quarter of a century and one-time High Commissioner for the Union in London. Independent and strong-willed, Heaton Nicholls sought to be true to what he conceived to be the British political tradition. But to the end of his days, when he had become frustrated and disillusioned, he failed to realise that the best of the British tradition, that part which really matters in a multi-racial society, is ultimately irreconcilable with white overlordship or supremacy—what is known in South Africa as "baasskap."

And at heart Nicholls believed in "baasskap" and in apartheid, albeit of a benevolent and relatively enlightened variety. To that extent he was a typical white South African, particularly in his younger days when he wrote a novel "Bayete," the theme of which was the black peril. Thus, while he realised the terrible dangers of a clash between white and black nationalisms, he had no prescription for avoiding or preventing it. Similarly, while the apartheid part of his nature made him support the Riotous Assemblies Act when even his party thought fit to oppose it, he saw the need for giving the non-white peoples some political voice if there was to be even a semblance of government by consent. Again, however, he could not bring himself to face the logical consequences of shared government. Because he never really realised the nature of the dilemma in which his beliefs landed him, he thought of himself as a "doomed sponsor of lost causes." But that was incidental to his real failure. He was essentially a non-conforming English-speaking politician, who never quite understood the true nature of the South Africanism that ended in the country's attaining sovereign independence. To Nicholls, South Africa was always in a slightly subservient position to Britain, a belief that led him to argue, in August, 1939, that South Africa had no option but to declare war on Germany because Britain had done so, a point of view which nearly wrecked Smuts's plan to unseat Hertzog.

Moreover, he became obsessed with the idea that somehow or other Natal, because it was so British, could "go it alone," if necessary—a philosophy born of his conviction that federalism would solve some of South Africa's ills, as well it might if it had been applied in the right spirit at the right time.

"South Africa in my Time," in brief, is the story of a dedicated politician who never reached the top partly because he did not quite understand the forces he tried to harness, partly because he was not a willing conformer to the party line, and partly because, although he mellowed with time, broadened his perspective and deepened his sympathies, he never managed to be wholly in tune with the times or the needs of the moment.

Mr Bernard Sachs's book falls into a wholly different category. Sketchy and disjointed, it is a curious and largely superficial mixture of old and new, of views and opinions on many matters, the whole purporting to be a picture of the South African scene over the past fifty years. Mr Sachs obviously knows a good deal about politics and race in South Africa, but in spite of the title his book points the road neither to nor away from Sharpeville. It does, however, shed an odd ray of light here and there on a complex situation, and contains some interesting historical facts about the trade union movement and its role in politics.

Textbooks in Competition

National Income and Economic Growth

By Kenneth K. Kurihara.

Allen and Unwin. 176 pages. 25s.

National Income: *Statics and Dynamics*

By John S. Henderson.

Harper, New York. London: *Hamish Hamilton.* 447 pages. 46s.

Macroeconomic Theory

By Gardner Ackley.

Macmillan Co., New York. 612 pages. 42s.

THESE three textbooks, and no doubt there are others like them, have a good deal in common. They are all by Americans; they are all aimed at students who have already done some economics; they all cover both income and employment and growth theory; and they all contain a great deal of elementary algebra and diagrammatics. They are, in fact, competitive.

The shortest of the three, Mr Kurihara's book, covers the concept of national income, multipliers, super-multipliers, Harrod-Domar growth models and relatively little else. The exposition is almost entirely formal. Mr Ackley, on the other hand, has written a synthesis of most branches of macroeconomic theory that is literate as well as numerate and which contains a fair amount of empirical reference. Mr Henderson's book falls between the other two.

The utility of learning this kind of economic theory is not easy to assess because there are two quite different reasons for studying it. One is the extraordinary but undoubted fact that all but the very best students cannot use their first year theory until they have learned second and third year theory as well. For some reason the ability to see how and when the elementary principles of economics can be applied requires a certain amount of drilling in more advanced economic theory. Without such a training in rigorous and abstract thought, the elementary instruction that precedes it is of use only for passing examinations and leaves few traces of economic understanding. Thus model-building in economics plays the role which Latin or Euclidean geometry are said to play at school: that of training the mind.

One of the questions which the student of Mr Henderson's book is supposed to be able to answer runs as follows: "Find a pattern of investment in periods 0, 1 . . . which will cause income to assume alternate values of 1, — 1, 1, — 1, etc." This is about as relevant to economic policy as Latin is to hanging wallpaper. Yet if the student has exercised his mind on this kind of purely formal analysis, he will be better able to work out the simple economics of, say, subsidising the fishing industry than if he gave up economics after one year. Hence books like this have some point.

The authors would presumably claim that their exposition has more than a purely gymnastic value and that the more advanced theory is also worth studying because it too can be applied. Some of it can, it is true, though more often qualitatively than quantitatively. Yet there is a danger that students will regard models as an end, not a means, and merely learn to parrot the textbook exposition. Such students regard the shadow of theory as constituting the substance of reality. Thus the author should not merely believe that the theories which he expounds are useful; he should also demonstrate it and he should make his readers aware of the limitations of the analysis.

It is here that Mr Kurihara's book fails—unless the task can safely be left to the teachers who prescribe the book. Mr Kurihara claims to have "made some allusion to practical application" but does not do much more than explain rather naïvely that growth is desirable because of its implications for higher standards of living, greater distributive equity and world peace. Mr Henderson does better than this and Mr Ackley (who, after all, has written the longest book) does better still, since he has quite a long chapter on the empirical analysis of the consumption function and is much more down to earth on the subject of inflation. His book is, indeed, the most distinguished of the three: it is well-written; it has the necessary precision; and it brings in the contributions of many recent writings in the field.

Mother of Kings

A Pride of Lions: *A Portrait of Napoleon's Mother*

By Monica Stirling.

Collins. 319 pages. 28s.

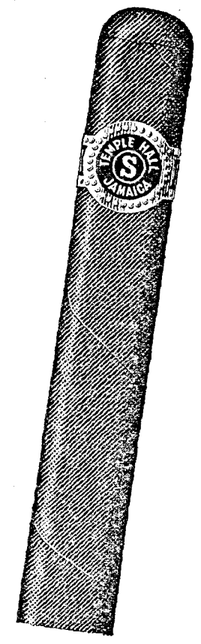
THE interest of Miss Stirling's story is enhanced by a comprehensive bibliography, a generous display of illustrations and a genealogy of all Letizia Bonaparte's descendants. But her book is a collection of sketches rather than a portrait, and Madame Mère is too often lost in the crowd during the Consulate and Empire. She is more conspicuous in the prelude and epilogue to the Napoleonic drama; indeed, after the Emperor's death she was the most interesting relic of his reign.

His father Carlo, descended from immigrant Tuscan gentry, was an easy-going, financially feckless, lawyer, who till his death in 1785 represented the governing council of Corsica at Versailles. The shocking contrast between the extravagant brilliance of that court and the dreadful end of the monarchy may have prompted Letizia's repeated warnings to her children that their imperial prosperity was only "all right as long as it lasts." But did she utter other warnings which were ignored? She asserted that no one else had ever spanked so many future kings and princesses—but how effective was her influence in the days of their glory? For how long did she really try to upset Napoleon's first marriage? She seems to have welcomed the divorce that ended it. Indeed, her attitude to her children's marriages is represented as surprisingly flexible, considering the strength of her Corsican and Catholic upbringing. She appears to have been so blind to her son Lucien's political incompetence (emphasised in the Napoleonic correspondence recently edited by Mr. John Howard) as to believe that he could ensure a golden political future by divorcing his wife whom Napoleon disliked. And her dismay at the Duc d'Enghien's kidnapping and execution was Corsican rather than Christian—she feared a vendetta. Miss Stirling cannot be blamed for not explaining her primative heroine's feelings and motives; but if she had presented more of Letizia and less of her life and times, her readers might be able to decide whether Madame Mère was interested in anything beyond the material welfare of her family.

Letizia lived in Rome for fifteen years after Napoleon's death in 1821. Any hopes she cherished of a Bonapartist restoration died with "L'Aiglon" in 1832, and she urged those of her children who had not predeceased her to keep out of conspiracies. But her spirit remained unshaken and her pride never bent: she refused compensation belatedly offered for the financial promises broken by the restored monarchy—Bonapartes would not accept charity from Bourbons. In fact they did not need to; her own financial success, unexplained in this book, was astonishing. Apparently it was also infectious; as she lay dying in 1836 her porter admitted the public to her room, where they could look at her through a screen. He charged a small entrance fee; but no doubt it was worth it. For was she not the mother of kings?

Vanished World

City of Lingering Splendour



By John Blofeld.

Hutchinson. 253 pages. 30s.

JOHN BLOFELD fell in love with a city and this book is his account of the affair. The City was Peking as it was in the mid-thirties, when the magnificence of the former imperial court was already only a memory, but traditional ways of life still prevailed, not yet obliterated by eight years of Japanese occupation and successive "liberations" by the Kuomintang and the *Palu* (the communists). Mr Blofeld returned to Peking after the end of the Pacific war, but it was already a different world, and he left before the entry of the communists, because, as he puts it, "during a civil war, when child turns against father and brother pits himself against brother, if a man is lucky enough to be a foreigner, with somewhere else in the world to go, it is wiser to go without much delay." He did not, however, go very far; he now teaches at the Chulalongkorn University in Bangkok, where he is still near the country from which he is, in a sense, an exile.

In the eighteenth and early nineteenth century the literary and aesthetic culture of China had two centres: one at Peking in the north—which was also the seat of the central government—and the other at Nanking and Soochow in the south. The latter never recovered from the devastations of the Taiping rebellion, but Peking continued to be the stronghold of traditional Chinese civilisation until the end of the monarchy in 1912, and still retained a special metropolitan dignity and pride even after the Kuomintang in 1928 had transferred the capital to Nanking and reduced Peking formally to the status of a provincial town. The next few years were indeed a time of "lingering splendour"; they were the last in which a foreigner could make contact with the living tradition of the Chinese *ancien régime,* and

NOW... CRANE
INTERNATIONAL
offers industry a bigger and broader range of quality products
As leading engineers and architects know, Crane has been the outstanding leader in the valve and industrial piping industry for a great many years. Crane's reputation for quality is established throughout the industry. Crane...today...offers a greatly expanded line of products for industrial, commercial and residential use. Every Crane product is checked for quality at every step of its production. Crane maintains the industry's most complete facilities for engineering, manufacturing and testing its products.

Industrial Products
Valves made of bronze, iron, cast steel and forged steel. Cylinder operators, flanges and welding fittings. Heat exchangers and feed water systems.

Systems & Controls
Fuel and hydraulic pumps, automatic breaking systems, actuators, aircraft, missile and electronic components.

Engineered Products
Special valves, recorders, automatic controls, water treatment equipment, separators and purifiers, exhaust heads, deaerating and non-deaerating heaters, fabricated piping, process equipment and pumps.

Plumbing, Heating & Air Conditioning
Baths, lavatory fixtures, plumbing brass accessories, plumbing fixtures for hospitals and institutions. Industrial and residential heating units, steel and cast iron boilers, radiators. Residential and commercial air conditioners and chillers. Combination refrigerator-range-sink units.
valves • electronic controls • piping • plumbing • heating • air conditioning • water treatment • pumps • fittings

he could do so perhaps better than in any previous period, since entry into Chinese society had become less difficult for him than ever before.

Mr Blofeld had already lived in south China and acquired a knowledge of the Chinese language before he came to Peking at the age of twenty-two. His enjoyment of the city's charms was enthusiastic and uninhibited, and his range of interests and friendships extended from a Taoist hermit, who discoursed on the philosophy of Lao-tsu, to the "willow-lanes," which were such an essential part of the old Far Eastern civilisation. He was not unaware of the poverty and corruption that lay at the back of this fascinating life, and he was not unsympathetic to the social consciences of the rising generation of Chinese students, but he asks "how many youths, magically transported through space and time to Renaissance Italy, would forgo the pleasures offered by wealthy or learned Florentines out of sympathy for the poor at their gates?" We may be glad that the author adopted this attitude; for New China is always with us, but he has recorded in a lively and readable piece of autobiography an experience of a world that has now irrevocably passed away.

When Mao was Young

Mao Tse-tung and I Were Beggars

By Siao-Yu.

Hutchinson. 276 pages. 30s.

When Mao Tse-tung was fourteen or fifteen, he had grown tall and strong, and his father put him to work carrying baskets of manure across the fields. Mao was more interested in reading, an activity of which his father disapproved. The future chairman of the Chinese People's Republic found a way to please his father while pursuing his private interests that would not be tolerated in a communist society. He found out that his father considered a good day's work would consist of filling and hauling fifteen or twenty of the heavy baskets and that he could accomplish this task (it would be called a "quota" or a "norm" in Mao's republic) in half a day and spend the rest of it reading.

In those days, writes Siao-Yu, Mao knew few characters; but he could decipher enough of them to get the general meaning of the books to which he had access, which appear to have been mainly stories of bandits. The two men met shortly after at school in Changsha. It was in 1912, a year after the overthrow of the Manchu dynasty. Later still, they marched the countryside together, begging their way and providing Mr Siao with the title for this agreeable and highly readable book of reminiscences.

Mr Siao records—perhaps apocryphally, although he boasts of an unerring memory—that on one occasion an educated Chinese lady "read" their faces and said of Mao that he could become a great officer, a prime minister or a great bandit chief. She added

that he was audacious, ambitious and unsentimental and could kill ten thousand or even a hundred thousand people without turning a hair. Mr Siao, however, evidently neglected to pass this vital information on to Marshal Chiang Kai-shek.

He takes his narrative up to the early twenties, when he was serving the Kuomintang and Mao the newly founded Chinese Communist party, with which the Kuomintang had formed a tactical alliance that its leaders were later bitterly to regret.

Mr Lin Yutang, in a foreword, vouches for the authenticity of the account and remarks that it takes a Hunanese to write about another Hunanese. With its delicate illustrations by the author's brush, it is a work of charm rather than erudition. There are useful historical notes by Dr Robert C. North.

Zionism at Large

The Idea of the Jewish State

By Ben Halpern.

Harvard University Press. London: *Oxford University Press.* 509 pages. 48s.

The author's aim in this substantial work, meticulously written and closely reasoned, is to present

> a systematic explanation . . . of the development of the idea of the Jewish State from a vaguely defined *aspiration towards national* sovereignty, pursued by an ideological movement, to the achievement of statehood and the exercise of sovereignty by representative national institutions.

This volume of 500 pages is, we are told, the first half of a planned two-part study of Israel, and it consists of three parts—"Zionism: Background and Description," "Zionism and World Jewry," "Zionism and the International Community." Probably only a Jew could possess the requisite familiarity with and understanding of the background to deal satisfactorily with the subject-matter of the first two parts and it may be said at once that these chapters could scarcely be bettered. The principles that had kept the Jews of the Diaspora together in the centuries before their emancipation; the varied threads and strands—racial, sentimental, cultural, then political and nationalistic—that were woven into the fabric of Zionism and ultimately into that of the state of Israel—all are analysed with a lucidity of exposition derived from intimacy with the many streams of Jewish thought that no Gentile could have acquired.

The author considers philosophically the divergence between traditionalist and assimilationist Jews; the not always parallel aspirations of the protagonists of Zionism; the aims of Theodor Herzl, who was primarily concerned with finding a way to relieve the plight of Jews living in countries where they suffered disabilities; the views of Asher Ginzberg, who favoured a nationalist movement pledged to revive a secular Jewish culture through the medium of a revised Hebrew language; the effective revival of Hebrew as the national language against the opposition of the ultra-Orthodox, who regarded it as the sacred tongue of Jehovah not to be defiled by *mundane use. All these matters are objectively* and clearly treated.

The third part, on the other hand, raises serious doubts whether the earnest and industrious dissecter, the patient analyst, the philosophical examiner of the Jewish trends and movements that produced Zionism and ultimately the state of Israel is equally well qualified to deal with the politics—international, inter-racial and local—of the Palestine of the mandate. His absorption with the movements and stresses of Jewry seems to tell against his being able to describe with the same objectivity the Arabs' objection to the policy of the Jewish National Home and to understand the mandatory government's approach to the problem of administering Palestine under the terms of the mandate.

It is not so much that Mr Halpern writes, as many Zionist polemical writers have done, as an avowed partisan; it is that this serious Jewish student is just out of his depth where the feelings of the Palestinian Arabs were concerned when faced with their dispossession by the establishment of a national home for another race—a race, moreover, which they recognised as a more dynamic one—in the small land that had been theirs for thirteen centuries. For the Arabs of Palestine realised from the outset that the Jews would not—indeed, could not—stop short of "*a* National Home *in* Palestine" despite the earlier lip-service of Dr Weizmann and the other Zionist leaders to the two-fold obligations of the Balfour Declaration. His attitude, surprisingly naïve in so clear-headed an exponent of purely Jewish topics, is shown, for example, on page 201, where he says that the 1930 British White Paper's contention that the protection of Arab interests was also among the mandatory's duties was one to which "not only the Zionist but the non-Zionist leaders of the Jewish Agency reacted with shock and outrage." Equally blind to the *realities of the situation* is his reference on page 331 to "Britain's set policy of keeping Abdullah on one side of the Jordan and the Zionists on the other." As if, but for a "set policy" on the part of Great Britain, Abdullah and his Arabs would have welcomed the application of the policy of the Jewish National Home to the then Trans-Jordan.

The book contains, as one would expect, a good bibliography, at all events, on the Jewish aspects of the subject-matter.

THE WORLD OVERSEAS

The United Nations Gropes for Hope

FROM OUR SPECIAL CORRESPONDENT IN NEW YORK

"We are probably in a period of the carrot but will get the stick again damned soon," a western diplomat attending the United Nations remarked this week with reference to he wave of sweetness and light on the Moscow front, where Mr Khrushchev has been saying amiable things about the Pope and reassuring things to M. Spaak. The words were scarcely out of the diplomat's mouth when Mr Gromyko followed President Kennedy to the Assembly's marble rostrum to accuse the American President of sabre-rattling and "spouting threats." He also heaped abuse on west Berlin as a cesspool of criminal subversives and militarist mobs.

Yet it seems tolerably sure that in his queer Soviet way Mr Gromyko was not really shaking a fistful of big sticks but was actually whirling a small carrot. Whether the brandished vegetable is acceptable to the West remains to be seen. After two Gromyko-Rusk meetings it is still murkily unclear how the "solemn Soviet obligation" to protect and respect the freedom, independence and rights of west Berlin, reiterated by Mr Gromyko, is meant to be reconciled with the "unqualified respect for the sovereignty of the German Democratic Republic with whom appropriate agreements on the use of communications must be concluded" that is also insisted on by Mr Gromyko. But now that America and Russia have extended their respective olive branches, even though vased in atomic bazookas, simultaneous incineration over Berlin appears more unlikely. Mr Gromyko thought poorly of Mr Kennedy's disarmament plan, but even in this mazy labyrinth there is now the thread of agreement in principle on "general and complete" disarmament, with the UN perhaps playing a significant role when and if it comes to stage-by-stage implementation.

Meanwhile, the international organisation is still striving to work up courage to cope with its own grave problems. The box-shaped glasshouse on New York's East 42nd Street outwardly clicks as briskly as when Mr Hammarskjöld was alive. But even the bands of daily tourists know that it is now a Rupert's drop that one more shock could irretrievably shatter. Lord Home, in his speech to the Assembly this week, in effect asked why the UN seemed to have reached a parting of the ways and why it was in danger of not working any more. He did not think it was all the fault of the Russians, even though he sharply accused them of a "deliberate deception" and double dealing. The Foreign Secretary suspects there is in the UN a double standard that applies one rule to the communists and another less favourable one to the western democracies. The prime example, though Lord Home did not give it, was the speech by Ghana's foreign minister, who said that his country considered it "unfortunate that the Soviet Union should have found it necessary to resume nuclear testing and thus give the United States the opportunity or pretext" to resume testing also. He added that it was "not really important" whether nuclear weapons were tested in the atmosphere or underground. Other "neutral" delegations, while listening delightedly to Mr Gromyko's clear clarion call for the "final and universal elimination of colonialism" by the end of next year, have been overheard taking Mr Kennedy to task for his trouncing of Soviet-style colonialism. They do not, at least in private conversation, deny that it is evil. But they say impatiently that to keep on reminding people that it exists is just reviving the cold war and the old, happily abandoned, Dulles "intransigence."

Some who have hitherto championed the United Nations, for instance Senator Fulbright, have recently tended to reel back aghast from the prospect of an enfeebled United Nations being led around by the nose by Russia (and communist China) and have taken to dreaming of some new, more virile, "concert of free nations." But it is really unlikely that the 100 members of the UN are about to become convicts daily marching docilely around a troika exercise ground. To the contrary, the neutrals increasingly act as if they held the balance of power in the Assembly and enjoyed the feel of it. And on the basic issues it is probably Russia, not the West, that has some reason to fear the neutrals' power, as distinct from their sometimes spiteful words. That of course is why Russia is so anxious to have a troika. It is also the reason why the neutrals dislike the troika as they quite obviously do. And the more active a part a nation is playing in UN affairs, the more unpalatable the troika apparently becomes.

No member is more anxious than India to achieve a compromise solution to the secretary-generalship that will be acceptable to both East and West and will therefore enable the UN to get on with its work. But India does not want its Congo force to be paralysed by someone else's veto. The British viewpoint is that to underpin the secretary-general with advisers, or have a geographical basis for the distribution of posts, is acceptable provided they are all genuine international civil servants and not just agents of their respective governments; this is not far from Indian thinking.

On the other hand, the best riposte to the Russians may not be a naïve attempt at one-upmanship, taking the form of the Assembly selecting (as it is believed to have authority to do) a "temporary" or "interim" secretary-general, then keeping him on indefinitely by successive Assembly resolutions like a comic postman in a *Punch* cartoon ("here for thirty years but no uniform, being only temporary"). A real solution must be found and fairly soon, for while Mr Hammarskjöld's three main political deputies (an American negro, an Indian and a Russian) are working amicably together, and the heads of departments are loyally continuing with their routine tasks, everyone knows that this "sub-troika" is inadequate for any major policy decision that may be required. Fortunately, Mr Gromyko did not slam the door shut on a "provisional solution" of this, any more than of the Berlin problem.

Payment Deferred

FROM OUR BONN CORRESPONDENT

The suspicion that, for the sake of a deal in Berlin, the Federal Republic's allies may be about to withdraw their support for German national interests elsewhere, has appreciably sobered the post-election coalition manoeuvring in Bonn. The desirability of a "government of national concentration" is being disputed much less this week than it was last, though the three parties concerned are no nearer agreement as to who the head of any such government ought to be.

Oddly, it is the man sent by President Kennedy expressly to raise morale in Berlin who has shaken it throughout western Germany. Not that Herr von Brentano had not returned from the foreign ministers' conference in Washington without disquieting news for the ears of the federal cabinet. But General Clay's hint to journalists three days after his arrival in Berlin that the allies were preparing to recognise east Germany *de facto*, and that west Germany should be ready to do more or less likewise and renounce the eastern territories—and perhaps atomic arms—into the bargain, has provoked a searching public reappraisal of foreign policy and of the trustworthiness of foreign friends. *Bild Zeitung*, the excitable daily with the largest number of readers in west Germany, came out with the banner headline, "Is Germany Being Sold?". An accompanying editorial, framed in red, warned the Americans not to gamble with the good faith of the German people.

Mr Kennedy made some amends in his address to the United Nations. As soon as the reels could be flown over and a synchronised translation arranged, a film of the President speaking at the rostrum was shown over the west German television network. Mr Kennedy's withering reference to the east German regime as a wholly Soviet creation was duly appreciated, and his assurances on Berlin were welcomed. But the President, it has been noted, did not deny outright that the western allies had reached the conclusion that it might be necessary to recognise east Germany *de facto* and the Oder-Neisse line *de jure*. And what is aggravating German uneasiness is the accompaniment in the West, increasingly loud, of unofficial voices descanting that, the Germans being the unregenerates they are, it is probably a "good thing" that they should be kept divided, and that anyway they have only themselves to blame. The resolution of the Liberal party conference at Edinburgh last week, recommending *de facto* recognition of east Germany, has been felt as a particularly cruel betrayal of principle and promise. Herr Mende, the chairman of the Free Democrats, whose two delegates walked out of the Edinburgh conference in protest, has since written to Mr Grimond inviting the Liberal leaders to come out to Bonn and Berlin to inform themselves at first hand.

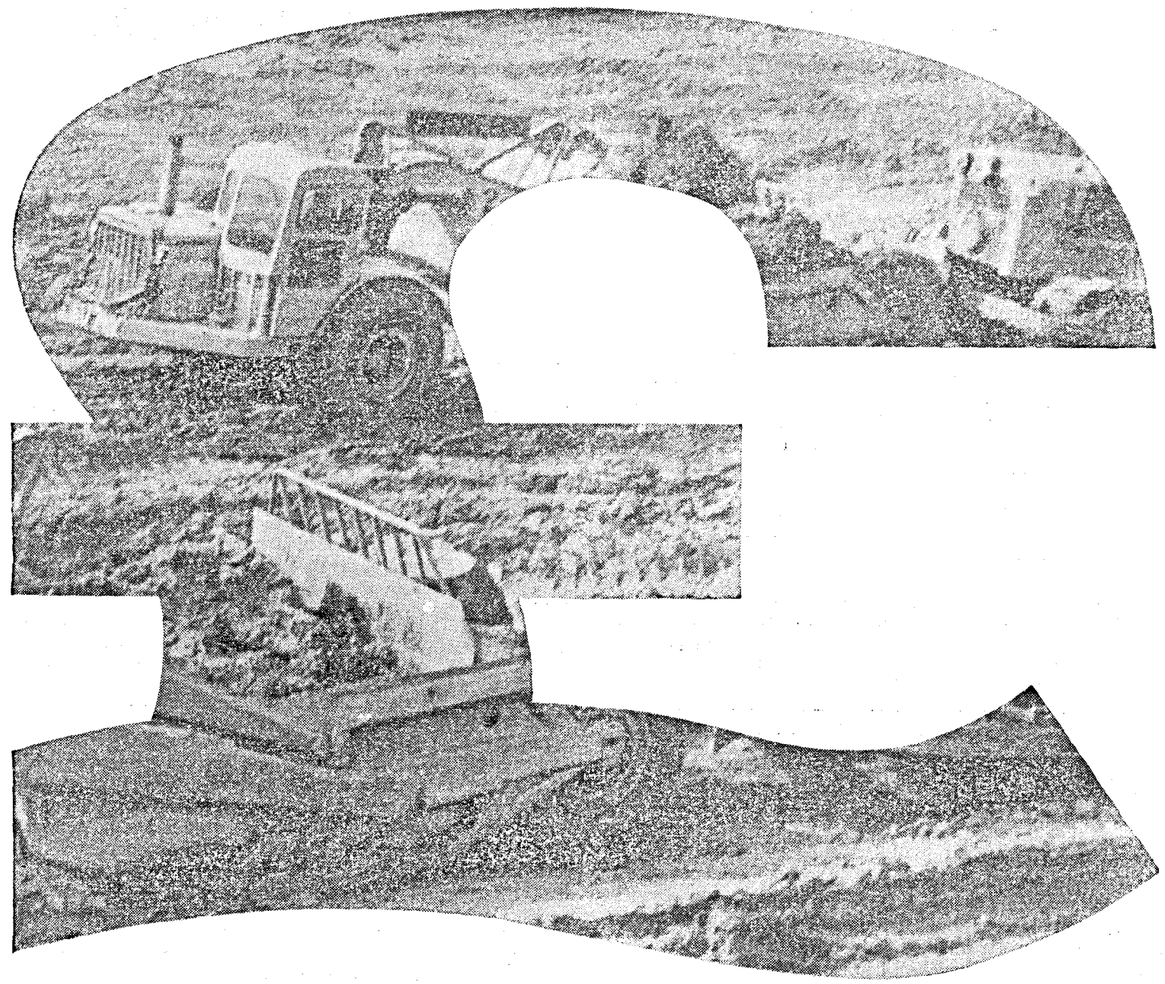
When the spree is over and it is time to pay, a Spanish host may call for "la dolorosa." To the Germans, after years of procrastination, it seems that the dolorous moment has incredibly arrived when they have to pay the remainder of the bill for their extravagances under Hitler. They are beginning to understand that it is going to be steeper than they have been encouraged to hope over the past ten misleadingly comfortable years—that it will run, that is to say, to indefinite partition and permanent loss of the eastern territories. This bitter perception has strengthened the demand of the Social Democrats for a government drawn from all the parties in order that responsibility should be shared for tackling the national problems that would arise when such a bill was formally presented —and after it had been paid.

DR ADENAUER, who has been having "some little local difficulties" since he lost his absolute majority in the Bundestag, now sees it as a heaven-sent advantage to be able to let the Christian Democrats share with others the unpleasant decisions that will probably have to be made during the coming months. The Free Democrats, with whom Dr Adenauer had hoped to do business, are awkwardly continuing to insist that they will not serve in a government of which he is the head. Swallowing his hard words concerning "Herr Brandt alias Frahm" and Herr Wehner (a former communist), Dr Adenauer this week invited the two socialist leaders along with their party chairman, Herr Ollenhauer, for a heart-to-heart on foreign policy. No more than that, it has been repeatedly explained, and there is good reason for believing that such is the truth. But to Dr Adenauer this unusually magnanimous exchange of information and views had at least a two-fold party-political purpose. One was to fire a warning shot across the bows of the disrespectfully manoeuvring Free Democrats, the other was to begin to smooth the way for a coalition with the Social Democrats should it be necessary.

After all that was said during the election campaign there is something grotesque in the prospect of the Christian Democrats and the Social Democrats settling down to work together. It is not Dr Adenauer alone who has to eat his words. Herr Brandt, for instance, who only a few weeks ago was protesting that "the old man can no longer grasp the situation," is now saying that it is of secondary importance to the Social Democrats who the head of a "government of concentration" might be.

But the bulk of the Christian Democratic Union, and the whole of its affiliated Bavarian wing, the Christian Social Union, seem to be in no mood yet to encourage Dr Adenauer to court the Social Democrats any further. Meeting in Bonn on Wednesday, the twin parliamentary parties commissioned their respective chairmen, Dr Adenauer and the defence minister, Herr Strauss, to open negotiations with the Free Democrats with the object of forming a coalition government. In the same breath they "unanimously" asked Dr Adenauer to be ready to stand once again for the chancellorship. The Free Democrats know too much to be impressed by this vaunted "unanimity." Indeed, they maintain that they are being privately exhorted by individual Christian Democrat deputies to stand firm—"or we shall never get rid of the old man." Yet there are signs—so strong is the demand for a stable government—that Herr Mende may be persuaded by influential followers, notably in industry, to tolerate Dr Adenauer at any rate for a precisely limited period. Herr Erhard, who would be an acceptable Chancellor to the Free Democrats and himself is smarting under Dr Adenauer's constant impugnment of his authority, continues discreetly to hold his tongue. No one has yet been able to convince the 85-year-old Chancellor that it does not say much for his work and providence if, after twelve years in office, he is still the only west German statesman who can be trusted at the head of public affairs.

A Tale of Three Cities



FROM A SPECIAL CORRESPONDENT IN LEOPOLDVILLE

AFTER the disastrous events of the last two weeks in the Congo, a flicker of hope has just emerged in Mr Tshombe's appeal to Mr Adoula to meet him with the minimum delay on neutral ground to try and settle their differences. Should this meeting really take place, Mr Adoula may be as happy as anyone, for his leadership has been considerably embarrassed, first by Mr Tshombe's stubborn refusal to co-operate with him, and secondly by the failure of the UN to defeat the Katanga gendarmerie under General Muke.

By declining to participate in the parliamentary reunion at Lovanium last month, when the new central government was created, Mr Tshombe forced Mr Adoula into a greater dependence than either of them would have wished upon Mr Gizenga's Stanleyville group. And in the aftermath of the United Nations' failure to bring Mr Tshombe to heel, Mr Gizenga and his colleagues, no doubt encouraged by the reappearance in Leopoldville of Soviet block diplomats for the first time in twelve months, have forced Mr Adoula in their turn to take a more belligerently anti-imperialist line than the facts along would warrant.

With his talk of the machinations of international capitalism in Katanga, his hints of British complicity in the "murder" of Mr Hammarskjöld and his suggestions of independent military action against Mr Tshombe, Mr Adoula has drawn the teeth of the Gizengist faction for the moment. But if Mr Tshombe should refuse to abandon any of his claims for the independence of Katanga, Mr Gizenga will certainly return to the attack.

So far, in spite of reports of troop movements to Luluabourg—and the discredited claim of Radio Katanga that Russian Ilyushins

CATERPILLAR U.K. STERLING SOURCE FOR THE WORLD'S FINEST EARTHMOVING EQUIPMENT

No one company can lead an entire industry as Caterpillar does in earthmoving except by a long history of service. In earthmoving success comes the hard way, after long battles with the varying toughness of the earth's surface. Only constant quality of thinking, design, engineering, performance and service could have raised Caterpillar to such leadership. Caterpillar now offers a range of quality products from Britain, including tractors, Traxcavators, bulldozers, scrapers, rippers and a large inventory of genuine parts. This British source increases the availability of these famous big yellow earthmovers. Standing solidly behind this equipment is a world-ranging Dealer Service Organisation of the utmost reliability. Caterpillar has become a legend in its lifetime and the built-in quality of its products is to the same high standards in Britain as in products from any other Caterpillar plant throughout the world.

Three, three the rivals—Generals Mobutu, Lundula and Muke

have arrived at Stanleyville again to help mount an attack upon Mr Tshombe—there is no evidence that the Congolese army, either in Stanleyville or Leopoldville, is ready for a serious military operation against Katanga. General Mobutu, the Congolese army commander-in-chief in Leopoldville, is known to be against it; and probably neither he nor General Lundula, Mr Gizenga's military man in Stanleyville, is in a position to undertake such an attack at all without outside help. Mr Gizenga may be ready to call in the Russians again, as Mr Lumumba did last year, but he would then risk antagonising the United Nations and also provoking General Mobutu into another preventive coup. This would take us back to square one with a vengeance, and probably even the Russians are unwilling to take their chance on that. Mr Adoula, on the other hand, can hardly look for help outside the United Nations, and this has become less likely now than it was up to a week ago, since the UN command seems to have completed a somersault over the Katanga affair. We are now told by every United Nations spokesman that the Katanga fighting was not an all-out effort to end Katanga's secession; it was just an attempt to expel the remaining mercenaries under the February resolution.

In the event, the cease-fire was signed after much bloodshed, with heightened feelings on all sides, and with neither Katanga's mercenaries expelled nor its secession ended. It looks in Leopoldville as if the UN has been forced back to Mr Hammarskjöld's original policy of strict non-intervention in political affairs modified only by the terms of the February resolution. Understandably, Mr Tshombe is cock-a-hoop and Mr Adoula is dejected, and in common logic Mr Tshombe ought now to be dictating his own terms. Probably he will still try to do so, but there are other factors which may yet persuade him to a reappraisal.

Mr Tshombe's diplomatic isolation is as complete as ever. His troops have taken a savage walloping and may be nervous about enduring another—especially when they know that next time, if there is one, the United Nations will command the sky with its new jet fighters from India, Ethiopia and Sweden. The British, whose role in this affair has excited bitter and, in some people's view, scarcely merited comment among UN officials here, are certainly using what influence they have with Mr Tshombe to induce him to moderate his stand, and President Kennedy's speech to the United Nations on Monday may have caused even the Belgians and the French to think twice about the extent to which they will support the Katanga leader in the future. And finally there is Mr Adoula, still apparently ready for conciliation and still threatened by Mr Gizenga, who is Mr Tshombe's enemy, too.

In this three-cornered battle between Leopoldville, Stanleyville and Elisabethville there will be no swift victories and perhaps no victories at all. Past experience of the Congo has shown that chickens can scarcely be counted even after they seem to be hatched. But equally it has revealed that all hope is never lost. What is needed now is the same as before—cool heads and practical hands and a determination not to put hopes too high or let despair become overwhelming. Those who succumb to such passions here are just wasting their emotional resources.

Handicap Stakes for the Soviet Union

ORDINARY Russians are now mainly concerned with the gathering storm. But foreign affairs will not dominate the 22nd party congress which is to open in Moscow on October 17th. Apart from changes in the party statutes, the main item on the agenda is Mr Khrushchev's twenty years' programme, with its emphasis on economic change. "The transition to communism" will be the congress's chief slogan and it will, naturally, be coupled with the better known pet phrase about "catching and overtaking the United States." On the eve of the congress, and with the help of an article in *Voprosy Ekonomiki* by the well-known Soviet economist, Mr A. Notkin, it is, therefore, worth while seeing how the Russians view their position and chances in this economic race.

Mr Notkin, while optimistic about the future, is fairly sober in his assessment of the current balance. He admits that Russia now lags behind the West, but couples this admission with two points that can be legitimately made. One is that output per head should not be confused with total production. The latter is the yardstick of economic power and by this measurement the Soviet Union is second to none but the United States. His second point is that Russia's lag in production and productivity behind the United States does not justify the theory that the fast rate of growth of the Soviet economy can be explained only by its backwardness. British, French or German productivity is also much lower than the American, yet the economies of those countries are not being described as backward.

According to Mr Notkin, Soviet national income in 1959 amounted to nearly half the American level; income per head, thus, came to roughly 40 per cent of the American level. Soviet industrial output in 1960 is put by Mr Notkin at over half the United States production (the usual Soviet claim is that it reached 60 per cent of American output), at three times the British and four to five times the French level. Comparison per head of population is much less favourable, as is shown by the author's own statistics quoted below. Even in basic production, the Soviet Union lags not only behind the United States but behind the industrial nations of western Europe as well. The differences would be more striking if the table covered more items of light industry and, particularly, durable consumer goods.

Agricultural comparisons are even more difficult, since bread and potatoes still play a much bigger part in the Russian diet than in, say, the American or British. Mr Notkin estimates that Soviet farm output is about 20 to 25 per cent lower than the American, and per head of population it is 30 per cent lower. Russia falls behind most in the production of maize, cotton, fruit, vegetables, eggs and meat. Indeed, it is admitted that American output of meat per head of population is 2.3 times higher than the Soviet. The most striking feature of Soviet agriculture, however, is the

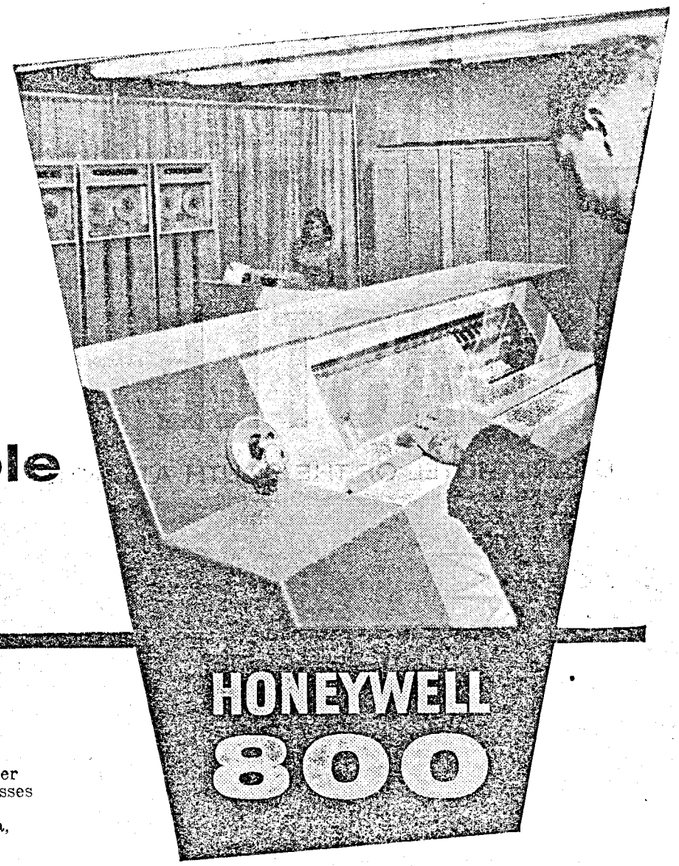
R.M.S. 'TRANSVAAL CASTLE'

GRAND HOTEL OF THE SOUTH ATLANTIC

She's a new idea in friendly travel. You have the run of the ship on all decks and in all the public rooms, but you can suit your own pocket whether you take a berth in a shared cabin, a room with a shower, a room and a private bath, or a suite with bedroom, sitting room and bath. Swim, tan, eat, dance, make friends, make up parties, go to the cinema: all in the fare. Put it down in your diary—the Hotel 'Transvaal Castle' sails on her maiden voyage* from Southampton to South Africa on January 18th, and every eight weeks after that.

* *There are still double rooms with showers available for this trip.*

Friendly stewards and stewardesses for personal cabin service. Comfort? Yes. Air-conditioning throughout, and stabilizers for millpond steadiness. Your Grand Hotel, right on the sunlit sea.



the going's good by UNION-CASTLE

THE BIG SHIP WAY TO AFRICA

Mailships leave Southampton every Thursday at 4 p.m.

CHIEF PASSENGER OFFICE, DEPT. 5, 19/21 OLD BOND STREET, W.1. HYDE PARK 8400

THAT Computer is now available *here!*

The 800 can be delivered within 15 months ; sooner in certain circumstances.

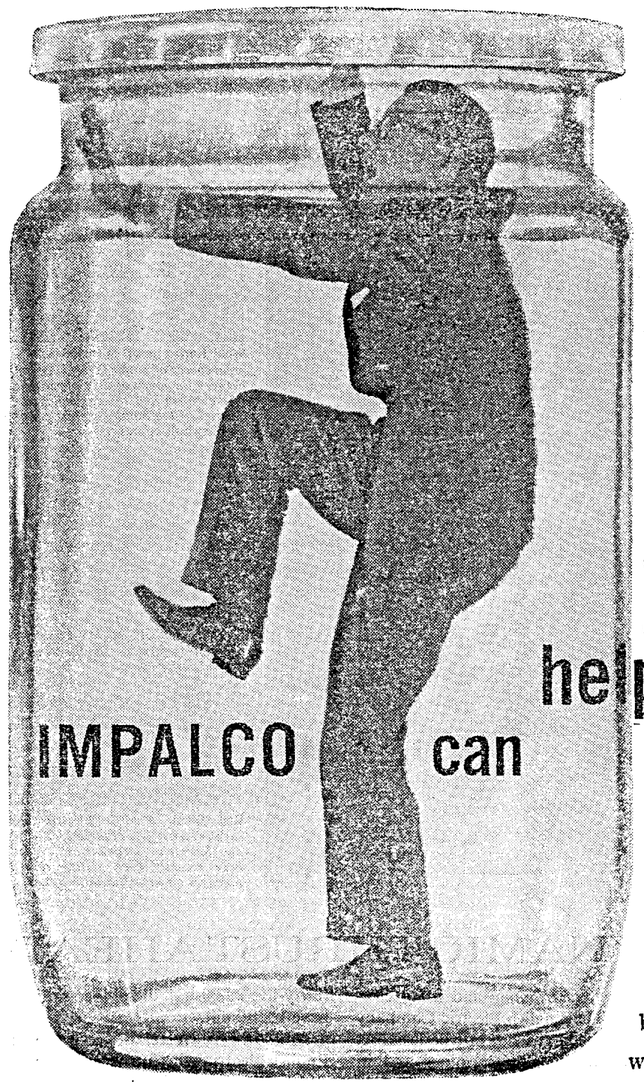
From today you can choose a computer that is already in use by many businesses similar to your own.
After its dramatic success in America, where it is now at work for leading computer users in academic, commercial and industrial fields, the 800 is now available in Europe from Honeywell Controls Limited.

AUTOMATIC ERROR CORRECTION

Honeywell's exclusive data-protection principle, called Orthotronic Control, makes it possible to reconstruct lost, damaged or garbled data instantly and automatically. This feature is standard.

PARALLEL PROCESSING . . . FOR I.D.P.

The 800 has been specifically designed to allow the complete integration of all an organisation's data processing functions. Up to eight different jobs may be handled at the same time. For example the 800 will answer a random enquiry, bring an inventory up-to-date, process a payroll, make a complex engineering calculation, make a special analysis, and handle *three* other jobs—*at the same time*. It uses a programming language made up from simple words . . . detects and corrects its own errors without human intervention . . . expands with the user's needs and can never be outgrown.



'ONE OF THE BEST EXAMPLES OBSERVED'

A Honeywell scheme for Integrated Data Processing was singled out in the report made by last year's O.E.E.C. mission to America as 'one of the best examples' of a plan for the integrated flow of data through a manufacturing organisation.

ENQUIRIES

Honeywell Controls Limited have established in London an Electronic Data Processing Division, and a Computer Service Bureau is being established, at which you will be able to see and use the Honeywell system. Enquiries should be addressed to: Electronic Data Processing Division, Honeywell Controls Limited, Greenford, Middlesex.
Branch Offices in principal towns and cities in the United Kingdom and throughout the world.

What Kariba means to Rhodesia: *this great source of power is just half way between the mines of the Copper Belt in the North and the expanding industries of the South—there's power for the* whole country.

Kariba. *Some of the ten English Electric 330-kV 80-MVA single-phase transformers in the underground power house.*

Rail Giant. *English Electric has supplied thirty-five of these 2,000-h.p. diesel-electric locomotives, which have recently been setting record mileages on Rhodesia Railways.*

RHODESIA'S DYNAMIC THRUST AHEAD

The world acclaimed the engineering achievement of Kariba, glittering token of future prosperity for all the peoples of Rhodesia. But the Kariba Dam is only a means to an end—the provision of cheap and abundant electricity for developing industries.

The Kariba scheme will bring enormous benefits to Northern and Southern Rhodesia alike: transmission lines reach north to the Copper Belt—copper is still the main source of Rhodesia's wealth—and south to the more populous areas of Bulawayo and Salisbury, where secondary industries are helping to broaden the basis of the country's economy.

English Electric in Rhodesia. In all branches of power engineering—for *producing*, *distributing* and *using* electricity—The English Electric Company has long been at work in Rhodesia. At Kariba, in the copper mines and in many modern factories and offices you will find English Electric equipment—silicon rectifiers at Nchanga mine, motors to drive Lancashire Steel's new rod mill at Queque, power transformers at Kitwe. For Rhodesia Railways, thirty-five 2,000-h.p. diesel locomotives have been built.

And so the fruitful relationship grows: English Electric gains further experience, which it can use for work in other countries and at home; Rhodesia knows it can depend on the specialised knowledge and vast technical resources which lie behind every contract with English Electric.

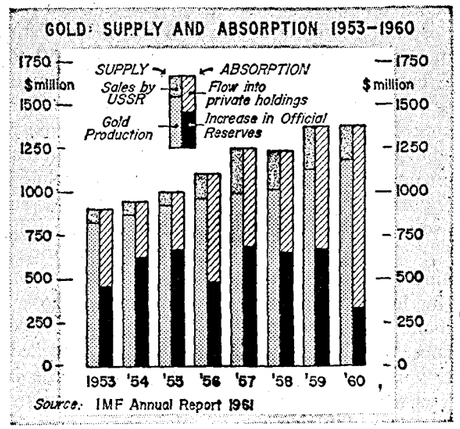
Half Measures at Vienna

For a conference that was intended to put an end to uncertainty, the Vienna meeting of the International Monetary Fund was dangerously inconclusive. Admittedly, Dr Jacobsson was able to declare that he had secured a go-ahead from all the countries concerned for a detailed formulation of his plan for supplementing the resources of the Fund by borrowing from creditor countries. In form, he can point to agreement *en principe*; but no one who witnessed the strong positions taken against the original proposals and who felt the undercurrent of hostility in some quarters would put too much store by that.

The original plan was to arrange a line of firm commitments, subject to proper consultations, for loans by creditor countries to reinforce the IMF as a whole. This has now been dropped. At the instigation of France, the Netherlands and Belgium it has been amended at two important points. In the first place, it now seems certain that the creditors will exert a control over the calling of the credits additional to their normal influence over any operation by the Fund involving their currency. Secondly, the agreed credit lines are to be designed not for general use by the Fund but for the specific and limited purposes of meeting any large drawing on the Fund by the United States or to counter a speculative capital movement against another major currency, provided it can be established that the movement is likely to be reversed, and is not the result of unsound domestic policies by the country concerned. As one official succinctly summarised it in private, there would thus be objective criteria for the activation of the credits, and some discussions by the creditors to see whether these had been fulfilled. This is seen as a half-way house between a completely discretionary and a completely automatic system.

A partial recompense for the limitations written in to the multilateral scheme is a supplementary plan for the Fund to obtain credits under Article VII by bilateral arrangement. These credits are designed to replenish the Fund with the currencies it immediately needs, and the proceeds would be used in conjunction with the Fund's normal resources. Germany and Italy are expected to grant such credits quite soon; in other countries, however, necessary legislation must first be enacted. Presumably such bilateral credits would be counted against countries' commitments in the multilateral scheme—which, in any case, are unlikely to be firm commitments. The bilateral borrowings may also be extended to Switzerland, but as the Fund may not hold the currency of a non-member, these would presumably be in dollars—and subject to the approval of the United States.



What emerges from this is not so much a stronger IMF as a second and largely separate line of possible stabilisation credits, which although formally routed through IMF would in fact be akin to direct credits from national governments acting in co-operation. The distinction has been played down, but it is in a sense the essence of the whole argument about the future of international credit. The Jacobsson plan in its original form, while it could be dubbed as essentially a patch-up operation, was still a first step towards the concept of an international clearing presided over by a strong international monetary authority. This was just what the conservative factions on the Continent opposed—Mr Macmillan's analogy a few months ago of the international monetary system with a children's game of poker, in which the player who had run out of chips just stocked up from the winner's pile, struck them with horror. The Jacobsson plan, post-Vienna, has no such connotations: it provides just for the piecemeal patch-up, after solemn agreement that a patch-up is warranted.

The compromises that Dr Jacobsson, the active Americans and the unseen British have made are therefore serious ones, and one wonders whether there has been a sufficient effort to meet the Continental opposition on other fronts. This might well be politically more delicate and administratively more complex, but it might also be the only way of securing a strong IMF. The issue has an immediate bearing on the detailed formulation of the scheme that Dr Jacobsson hopes to secure, by hard bargaining, by mid-December.

The French in particular have long resented the dominance in the Fund of the "Anglo-Americans," who together wield 37 per cent of the votes compared with less than 17 per cent for the common market six. This weighting is at present quite fairly based on the quotas, which have hitherto been the Fund's sole means of finance. But it is clearly reasonable that if countries should now put up additional amounts in loans, they should be given an additional voice. Indeed this is almost certain to happen pragmatically—the executive directors who speak for France and Germany in the Fund will command closer attention. But it might be diplomatic to recognise this formally too, perhaps through special additional votes linked to credits to the Fund that are actually taken up.

Continental opinion should also be reassured about the Fund's scrutiny of borrowing countries. In fact the Fund's influence is already much stronger here than is openly admitted; when Dr Jacobsson was in London in June for routine Article VIII consultations, one may be sure that he

made no secret of his views about what the Chancellor should do. But the European countries to whom British officials reported in "working group three" of OEEC, after the announcement of the measures but before the granting of the Fund credit, could reasonably feel they were being "told" rather than "consulted." It is certainly undesirable on all counts to work towards a two-tier system of international scrutiny, such as seems to be on the cards at present. So it may be in everyone's interest to acknowledge the discretion and influence that the Fund does and should wield with any large borrower. The main task at present is to convince the Continental creditors that their legitimate aim—which is briefly to ensure that their money is not frittered away—can be achieved as well through the Fund as outside it. Perhaps the biggest priority here is to start thinking about the successor to Dr Jacobsson who must be found by early 1964; it must be clear that the Fund management will remain in strong hands.

ONE should not give up hope therefore of reversing the unfortunate check to the development of IMF that now seems to have occurred. But clearly one cannot count on this, least of all quickly. What then? No one, it seems, expects things to go smoothly. Dr Holtrop of the Netherlands Bank, who is broadly on the conservative side of this argument, himself pointed to the essential part in the present key currency system that is played by uncertainty: if everyone were certain that the dollar price of gold would never be raised, they would hold only dollars, while if they were certain that it would be raised, they would attempt to get back fully into gold. This is indeed the analysis that has long led other people to the conclusion that one must move away from gold as even the ultimate base for world liquidity, and towards managed international as well as national credit. Dr Holtrop, while he has no illusions about the special virtues of such credit as happens to be based on gold, would still be wary of any move towards international credit. But, as he said,

> It is an intriguing question whether one should prefer uncertainty to continue its present function, or whether one should try to replace it, as would be conceivable, by some arrangement that would give more certainty but less liberty of action. One might think of arrangements in which the Fund would play an intermediary role. One might also think of an agreement between the main reserve-holding countries and the key-currency countries on fixed limits within which the former shall maintain the proportion of their reserves held in gold and in key-currency.

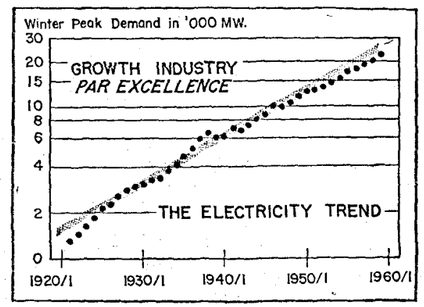
So the central bankers' freedom is likely to be limited in any case, by voluntary abstinence and *ad hoc* agreements if not by a formal move towards an international central bank. Yet the more timid choice may well be at once more irritating to the participants and less effective internationally.

The outcome of Vienna is that international financial co-operation remains at the *ad hoc* stage. The gold market remains governed by the informal understanding between the United States and the Bank of England; arrangements to take care of a renewed run on the dollar into gold are provided for only in general terms, leaving the important decisions to the moment of crisis. The demonstration that countries are likely to be guarded about committing themselves internationally, and still feel an overriding obligation to keep watch over their own parish, even if this is in danger of being overwhelmed by the general flood, has not been exactly reassuring. One may recall that the Basle credits, which some Continental central bankers regard as an adequate second line, lost all their psychological effect as soon as it became clear in June that the creditors were having hesitations about maintaining and extending them—even though at that very moment additional funds were being provided. A shut-out bid against speculators has to be made decisively; and if a stabilisation scheme were to be accompanied by the kind of to-ing and fro-ing that seemed likely from the tenor of the Vienna meetings, it might just as well never be mounted at all.

THE other outstanding disappointment in Vienna was the low priority allotted to the World Bank's plea for more grants or grant-type credits for development. Indeed there is a clear danger that conservative use of the IMF scheme may threaten existing development programmes. A number of Continental bankers are already saying that they have no intention of providing credit for the Fund so that the United States can push out the money in aid, spent on its own exports, to Latin America. It would be wrong to give the impression that suspicion and distrust of this kind exists at all levels; but it is too common for comfort.

Mr Selwyn Lloyd, in his one notable contribution at Vienna, gave a strong warning. Without the additional resources for the Fund from the borrowing arrangements, he said, "it will not be possible to ensure the effective functioning of the present system of international payments." This is true. As is clear on the simplest analysis, a system of fixed rates of exchange can be reconciled with stable domestic policies only with the aid of a flexible system of international credit. If that system is not provided, something else will have to go, and as it is neither likely nor desirable that economic growth at home or assistance overseas will be sacrificed, the burden of adjustment could fall on exchange rates. Let the bankers consider that, and choose.

BASLE: A NEW CONTRIBUTION



Asked by a journalist whether the Basle gentlemen's agreement still existed and would be continued, M. Baumgartner, French minister of finance, replied with his customary precision:

Il n'y a jamais eu de gentlemen's agreement de Bâle, mais il n'y a à Bâle que des gentlemen.

Paradoxes of the Power Curve

NO curve of industrial achievement more triumphantly outruns the blinkered bounds of prudent common sense than the growth of electricity consumption, in Britain as, indeed, almost everywhere else. The argument of many electrical engineers that demand for power doubles itself every ten years as an inexorable law of nature is calculated to raise any outside eyebrow—until one looks at the record and sees that it remains obstinately true.

Even the supply industry itself had qualms, back in 1958 when it was reckoning its future investment needs, about the continued fixity of this compound growth—7.15 per cent per year in winter peak load on the British power system for the last eleven years. It set its plant programmes and arranged its future borrowings, therefore, on the assumption that any consistent departure from the present trend was likely to be downwards, not upwards. In practice, since 1958, such departures have consistently been upwards; and during last year the Electricity Council, which co-ordinates the total investment programme of the Central Electricity Generating Board and the 12 area electricity boards in England and Wales, accepted the CEGB's argument that investment in power would have to be revised upwards. As this industry is responsible for the largest single investment programme in the whole British economy, the "appreciable difference" that this revision will begin to make from 1963-64 onwards represents some massive sums of money.

Under the programme published in 1958 the supply industry had expected to invest £1,280 million in power stations, transmission lines, and distribution equipment between April, 1961, and March, 1965. It now puts that figure at £1,472 million—and the increase in power station investment would have been greater were it not for last year's reduction in the nuclear programme and the continuing economies in capital costs achieved by building bigger and better conventional stations. By 1966-67 the industry, in England and Wales, expects to be investing more than £400 million a year—of which it expects to have to raise some £180-£190 million a year as new capital (under the present dispensation, as fixed-interest advances from the Treasury financed from general gilt-edged issues).

In its 1958 programme, "Power for the Future," the industry set itself the task of financing 48.6 per cent of its total investment from internal resources. This was a seven-year average: the proportion of self-financing would actually have risen during the period from 44 per cent to 53 per cent of gross electricity investment by 1965, and pre-supposed that the industry would be earning surpluses of the order of £55-£60 million a year by the middle sixties. This industry, along with others in the public sector, is at present engaged with the Treasury in settling what rate of return on its capital it ought to aim at earning over the next five years, under the Government's new rules for nationalised industries. It is not likely to emerge from that exercise with any lower requirements for self-financing. Even to maintain its average of 48.6 per cent of capital expenditure from within from 1958 to 1965, on the significantly larger investment programme it now envisages, would mean somewhat larger surpluses than electricity was already planning. If the Treasury sets it a somewhat higher rate of return to earn, those surpluses will have to be even bigger.

THIS will set the industry two major problems—earning the surpluses, and holding on to them. Earning them, even in an industry with the strongest sales curve in Britain, will not be simple. Budgeting in this industry is highly geared to guessing one's sales right, and the margins of retainable profit are proportionately tiny. So year-to-year fluctuations in growth (from which not even electrical engineers are immune in their forecasting) can upset this accounting—even if actual sales are higher than expected, not lower. In 1960-61, for example, the Central Electricity Generating Board had expected to sell 98,000 million units of electricity; in fact it sold 103,000 million. Much of this uncovenanted extra power, inevitably, was sold at peak hours, mainly during the winter, when the board has to bring into short-term use a very large proportion of its older stations, with much higher running costs.

The generating board always expects to meet the extremes of its winter peaks with power produced at a loss. But it had set the unit charge in its bulk supply tariff, for sales of power wholesale to area boards, at a level designed precisely to recoup the average running costs of power throughout the year; it had reckoned to achieve its margin on sales wholly out of the maximum demand charge (which is essentially the fixed charge in this two-part wholesale tariff). So through selling much more power than it had expected at unit prices below running costs, along with some late commissioning of new power stations and transmission lines, its revenues were roughly £4 million lower than it had reckoned. And this, since the board chose further to increase its highly conservative provision for depreciation to £66 million for the year, meant a 1961-62 deficit of £1½ million for CEGB (after paying, however, £54 million of fixed interest on its capital).

This failure of operating profits to fulfil the budget because sales beat the forecast illustrates one of the paradoxical difficulties of achieving as much profit in this remarkable industry as one may plan. The area electricity boards together achieved a surplus of £17.8 million last year; but this, too, for the rather more conventional reasons of paying higher wages and higher prices for fuel, was £3½ million lower than in 1959-60. Increases in this industry's provision for depreciation involve another of its paradoxes; but these provisions might be classed as an element in its second major problem—

holding on to its earnings on capital once these are earned.

Because the new power stations that it is ordering today are much cheaper than those it was ordering in the mid-fifties, the CEGB is in the odd position that if it provided for depreciation on the basis of present capital costs per kilowatt, it would be putting aside less than on the basis of historical costs, not more. In practice, it sticks to historical costs most conservatively reckoned: it must indeed almost be running out of further sound accounting procedures for stashing away more and more of its earnings under this heading every year. (As Professor Ronald Edwards, chairman-designate of the Electricity Council, observed with unsuitable gravity this week, " I think I can honestly say that our provision for depreciation is fully adequate to cover what I would rather call current costs than replacement costs.")

Holding on to the profits that electricity can earn, in order to help finance one of the largest single capital programmes in history, may not be an easy process for this industry over the next few years. There are outside contenders wanting their cut out of whatever can be identified as a surplus after paying interest: the electricity trade unions and the electricity consumer. Even if the industry finds itself required by the Treasury to earn a relatively high rate of return for the public sector over the next five years it may be hard put to protect the surpluses this will entail from the extra demands they may engender among its labour.

Nor will they find the power consumer exactly pleased to face increases in tariffs from an industry earning larger surpluses than any nationalised industry has ever made before; though most of the recent round of tariff increases is now over, there may well need to be another round by, say, 1963-64. The warrant for these surpluses will not be that there is some ideal rate of self-financing that any given industry " ought " to achieve. It is, arguably, that the vast amounts of government-guaranteed capital which Britain is investing in this public utility ought to earn a rate of return not too far out of line with the rate such a properous utility would have to pay to raise capital in a comparatively free market. That is the lesson in down-to-earth economics that this industry, at least, will have to teach the public over the next few years: it will have one of Britain's best down-to-earth economists, along with one of its most lucid engineers, to head the faculty.

Issues in Iraq Oil

For at least a year, to some outside observers of the international oil business, it has seemed possible that some new " breakthrough " in the financial arrangements between the major oil companies and the " host " governments of Middle East countries where they produce oil was on its way. For much longer than that it has been possible to guess, or fear, that if and when some new general formula to supplement or replace " fifty-fifty " did arrive, it would involve the participation of host governments in the ownership of the operating companies. Circumstances rather than reasoned selection raised the suggestion, early this summer, that Iraq might become the first producing country in which major oil companies might agree to participation by the government in the ownership of an operating company already producing oil under an existing concession agreement. It is now clear that they will not. The consequences of refusal—perhaps particularly of refusal after allowing General Qasim's hopes to be raised—might be grave. But it is rather doubtful whether they would be catastrophic.

Whether it was wise for the Iraq Petroleum Company and its shareholder companies, after negotiations with General Qasim had been abruptly suspended in April, to begin overtures for the resumption of negotiations so soon has still to be shown. These overtures appeared to be backed, about three months ago in London, by a feeling on the part of certain IPC shareholders that some sort of formula for government participation in IPC might possibly be worked out. Shell, last December, had been the first major company to sign any deal that accepted the principle of eventual government participation in production, under a new concession, in its Kuwait offshore deal. It may therefore have believed rather more in the principle than its partners in the ownership of IPC—British Petroleum, Standard Oil of New Jersey, Socony Mobil, the *Compagnie Francaise des Petroles*, and the Gulbenkian interests.

But whatever the original line-up of opinion among IPC's shareholders about the principle of government participation in its ownership, by the time that General Qasim responded favourably to the overtures for resumption of negotiations it was probably clear to all of them that no practically acceptable formula for participation in existing oil operations in Iraq could be worked out. The company and its shareholders, by the letters in which they had accepted the Iraq government's demands over the suspension of payments in respect of " dead rents " pending arbitration, and over relinquishment of unexplored territory in the concession area, and by their general expressions of confidence that a satisfactory conclusion could be reached, had achieved this resumption. But they had done so by going as far as they could on most of Iraq's other demands; and this left them without much else to offer.

What General Qasim had pressed for most was 20 per cent participation in the existing IPC operations. His claim was based originally on clauses in the San Remo agreement of 1920 and the first Iraq concessions (against which claim the companies would argue that Iraq governments in the meantime had had offsetting satisfactions), but also upon the argument that changed circumstances now justify a larger share for Middle East governments in the proceeds from the oil taken out of their land. When the negotiating team withdrew to London three weeks ago, it promised no more than that the companies would present to the General a fully documented statement of the reasons why they were unable to promise any satisfaction of this claim. That answer, presumably, will have been presented to General Qasim this week. The IPC shareholders' objection to participation comes from grounds of practical possibility, not of principle.

The practical difficulties of such a proposal would obviously, indeed, be fundamental to the present nature of IPC. This is run as a non-profit-making company that simply carries out the physical operations of developing, producing and moving the oil (from concessions granted to it, not to its shareholders). In lieu of dividends, IPC's owners are entitled to oil in volumes

proportionate to their holdings, special arrangements being made to take care of the Gulbenkian five per cent. The actual financial sale of oil, whether to tanker or refining affiliates of the owner groups or to independent buyers, is made by local trading affiliates of the owners that receive the oil from IPC. And it is these companies that submit to Iraq income tax—reckoned as if all sales were at posted price, regardless of the discounts they may in practice have to grant many customers. As things stand in British tax law, it has to be. Dual taxation relief might not be granted under our law in respect of dividends paid on a minority shareholding in any new profit-making company registered in Iraq to take IPC's place.

Any government participation that required IPC to be converted into a profit-making local company that could pay the Iraq government and the existing shareholders dividends instead of oil, therefore, might threaten certain of its shareholders at least with the loss of tax credits by virtue of which they are able to support the whole existing 50-50 income tax agreement. On the other hand, if the government were simply cut in on a percentage share of oil produced, not money profits, it would probably expect its prospective partners to take over and market this oil at posted prices—which in a soft market would mean accepting losses later on the prices consumers pay for products, and reducing the retainable profits that are needed to support further oil investment all along the line. Alternatively, it could try to sell this oil itself to independent buyers as it has in the past, unsuccessfully, tried to sell its " royalty oil." That would mean accepting large discounts (currently up to 40 cents a barrel on a posted price of just over $2 a barrel) on very large volumes of oil. It would further undermine the present structure of posted prices at an artificially high level, from which Middle East governments still benefit, even if nobody else does.

How, moreover, would one assess the value of a 20 per cent participation in IPC? On any assessment of either written down or replacement value of the company's book assets, the valuation of such a shareholding would sound small in relation to the revenues that Iraq receives each year from oil—though payment of even *this* capital price, one may be certain, would be impractical for the Iraq government except by protracted instalments out of the oil revenues later accruing to it. But on such a valuation IPC would be an investment with an extremely high rate of return, since the Iraq cluster of companies pay the government revenues of some £90 million a year, as 50 per cent of what profits would be at posted prices and would probably retain, even allowing for discounts on sales to independent buyers, a not very much smaller sum themselves. Taken at face value, there is no doubt that the rates of net return on oil operations generally in the Middle East are several times the net rates obtainable on, say, manufacturing businesses in Europe.

No businessman could possibly hope to be cut in on a fifth share of any highly profitable investment for the equivalent of a few months' profits. But a nationalist landlord feeling that, after all, the profits come basically out of his country's soil might indeed expect to come in for a fifth of the written-down book value—and any new deal made in Iraq would have to be offered very soon if not simultaneously to the other main producers of the Middle East. This question of rates of return, is indeed one upon which the companies are hoist with the consequences of their own bygone expedients.

Such rates of return—OPEC and other experts are presently mounting elaborate studies of them, but it is not hard to get most of the way on the back of an envelope—are unfortunately unreal, however accurately computed. They represent at present virtually the whole net return on all trading in Middle East oil everywhere, not simply on its production and movement to tidewater. The major integrated oil companies operating in the Middle East found it convenient, about a decade ago, to show the bulk of their profits on this oil, and pay the bulk of their taxes, on their investments in the producing countries; and they remunerated their considerably larger investments in facilities to transport, refine, and market this oil partly out of such profits emerging at the point of crude oil sales at posted prices. But when oil moved into world surplus in the late fifties, and the prices the industry could get for products softened, it was unable to cut the posted prices in the Middle East nearly in proportion. The industry is now generally in the position of making significant losses on operations subsequent to production of this oil, as against the exaggerated profits attributable to their operating or trading subsidiaries in the producing countries.

What the companies may have had to offer in Baghdad this week was some form of joint ownership of a new company that might be formed to explore and develop oil in the unexplored areas that IPC has agreed to give up over a period (it has agreed to relinquish 75 per cent of its concession area straight away, but another 15 per cent in seven years' time). If General Qasim cannot accept this, the companies may face another breakdown in negotiations. They have to be prepared, too, for measures of one kind or another to place the oil operations in Iraq under duress—though one would guess that these measures may stay short of interfering with the actual flow of oil and hence of government revenues. It is possible, indeed, that General Qasim might emulate Dr Mossadegh—relying no doubt upon the goodwill of his OPEC partners, such as Kuwait, to refrain from benefiting at his expense? But the general has always stopped sensibly short of interfering with the actual flow of oil and revenue—and in 1961 he knows the world oil market is in an utterly different state from 1951.

By the time this article is read it may already be clear whether " good sense has prevailed " in Baghdad this week, though it would be easier to use this soothing phrase if one were quite sure what good sense would amount to there. To any Westerner whose prejudices are simply those of a consumer who wants more and more oil, cheap but at a price that will still keep it flowing from friendly sources getting a fair rent, the current postures of producing companies and producing governments in the Middle East may not seem to make very good sense at all. One may doubt whether government " participation," even in new concessions, will ever make terribly good sense if these concessions begin contributing really large shares of the world's oil supplies. The main function and indeed the main justification of the international oil business is that it need not take narrowly national considerations into account in its arrangements to match demand with supply, while any national government worth its salt would have to do so. But this does not mean that existing formulæ, which were adequate ten years ago to a Middle East oil industry a third of its present size in a period of inflation, remain wholly adequate to it under the pressures of surplus in the sixties.

BUSINESS NOTES

BANK CREDIT

Responding Dramatically

THE squeeze on bank credit is yielding dramatic results. In the month to mid-August, the net advances of the clearing banks showed a near record fall of £104 million, and one wondered whether this was artificially swollen by fortuitous influences. Now, for the five weeks to September 20th, the clearing banks show a further fall in net advances of £128 million. The combined fall of £232 million is easily the largest ever experienced. As holdings of liquid assets have turned upward at the same time, the banks' liquidity worries suddenly appear to be fading—which is not to say that the bankers are not keeping their fingers crossed.

The September fall in advances, like the August fall, is well spread among the main banks. It also seems likely to have been pretty widely spread over the main categories of borrowers. The local authorities, certainly, have been under pressure to repay bank overdrafts by turning, or returning, to the mortgage market—last week's quarterly classification of advances, it may be recalled, showed that in the period from mid-May to mid-August as a whole their outstanding advances were little changed. Hire purchase borrowers, property developers and personal borrowers have also been under special scrutiny. And repayments from industry are now coming in from the proceeds of stock issues, which were already exceptionally numerous in the months immediately before the official measures of July 25th. The recent spate of rights issues, which in some cases allow for a long spread of calls, holds the promise of overdraft repayments in the months ahead. Finally, the turn-round in sterling has doubtless had an important effect on the volume of bank credit. Apart from any London borrowing by non-residents which may be able to escape the official ban, the leads and lags in trading payments have a strong influence here. Now that British exporters are no longer hesitating in remitting their external proceeds and importers are no longer advancing their external payments, they need less domestic bank credit.

For the second month, the large fall in advances obviated the need for any further bank sales of gilt-edged—indeed portfolios in September actually rose by £2½ million. And whereas in August liquid assets were still falling, so that the liquidity ratio improved only marginally, liquid assets in September rose by £71 million. Despite the final call of special deposits bringing the ratio to the stipulated 3 per cent, the liquidity ratio jumped from 32.9 to 34.3 per cent, its highest since January, 1960, and the highest September figure since 1957. This is the season in which the Exchequer deficit mounts, and in recent weeks it has been particularly high. The overall Exchequer deficit in the latest five weeks was £152 million, compared with £87 million a year before, and after crediting receipts from non-marketable securities the net shortfall, at £123 million this year, was fully £80 million larger.

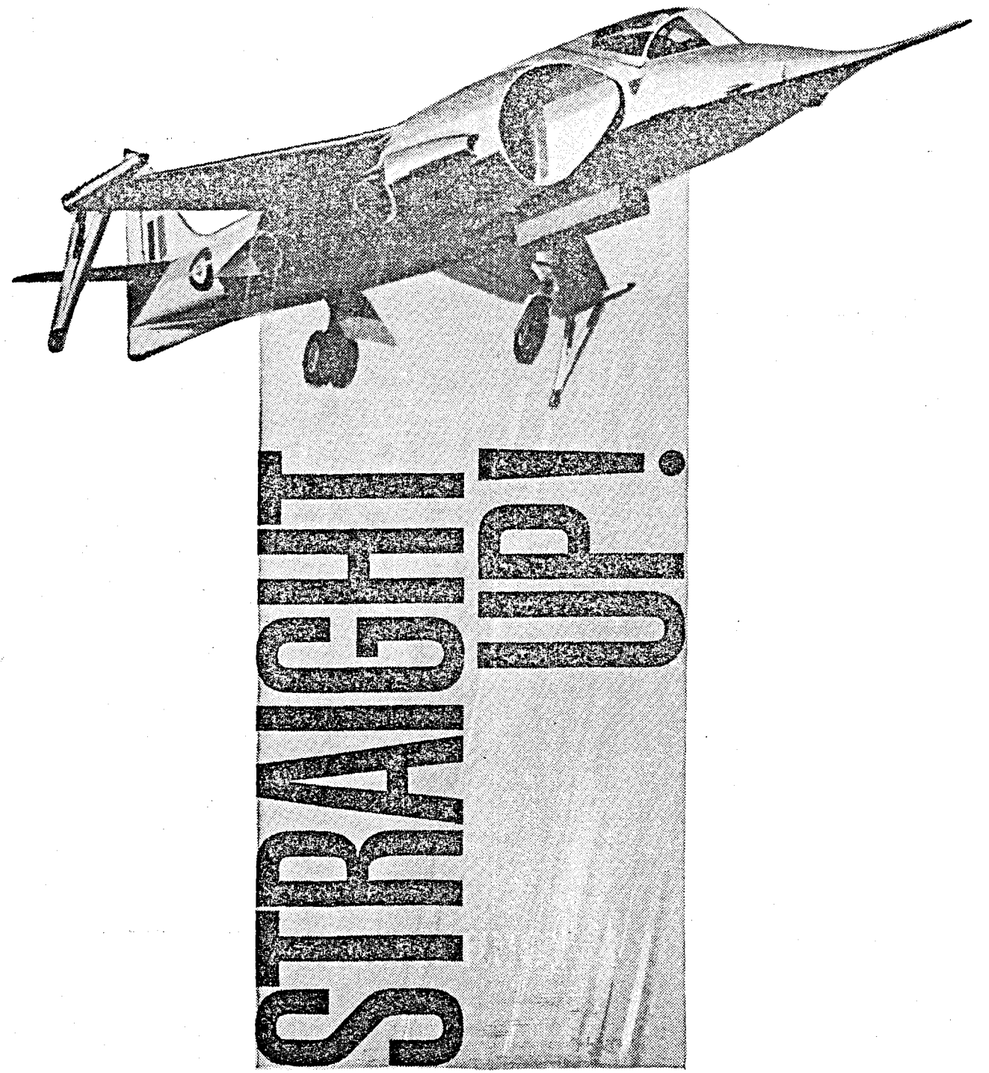
IN THE MARKETS

Waiting on ICI

SELDOM can any company statement have been awaited with such keen interest in the Stock Exchange as Thursday's interim report from Imperial Chemical Industries. Because of its widespread interests, ICI's performance is generally regarded as being a fair guide to that of British industry in general, and this week markets have been marking time, at first fearing the worst and then, by Wednesday, taking a slightly more hopeful view. Other half-yearly statements from Vickers and AEI have continued the recent trend of unfavourable company news and the earlier sharp fall on Wall Street (largely offset by Wednesday's rally) gave little incentive for buyers to enter the market. But the volume of selling, too, has continued to be light and losses have often reflected marking down of prices by jobbers rather than any strong pressure of selling. However, the *Financial Times* index has been inching down to the 300 mark and by Thursday's close after the ICI statement was only 0.6 above this level at a new 1961 low of 300.6. Over the week to Wednesday *The Economist* indicator fell to a new low point for this year of 355.7.

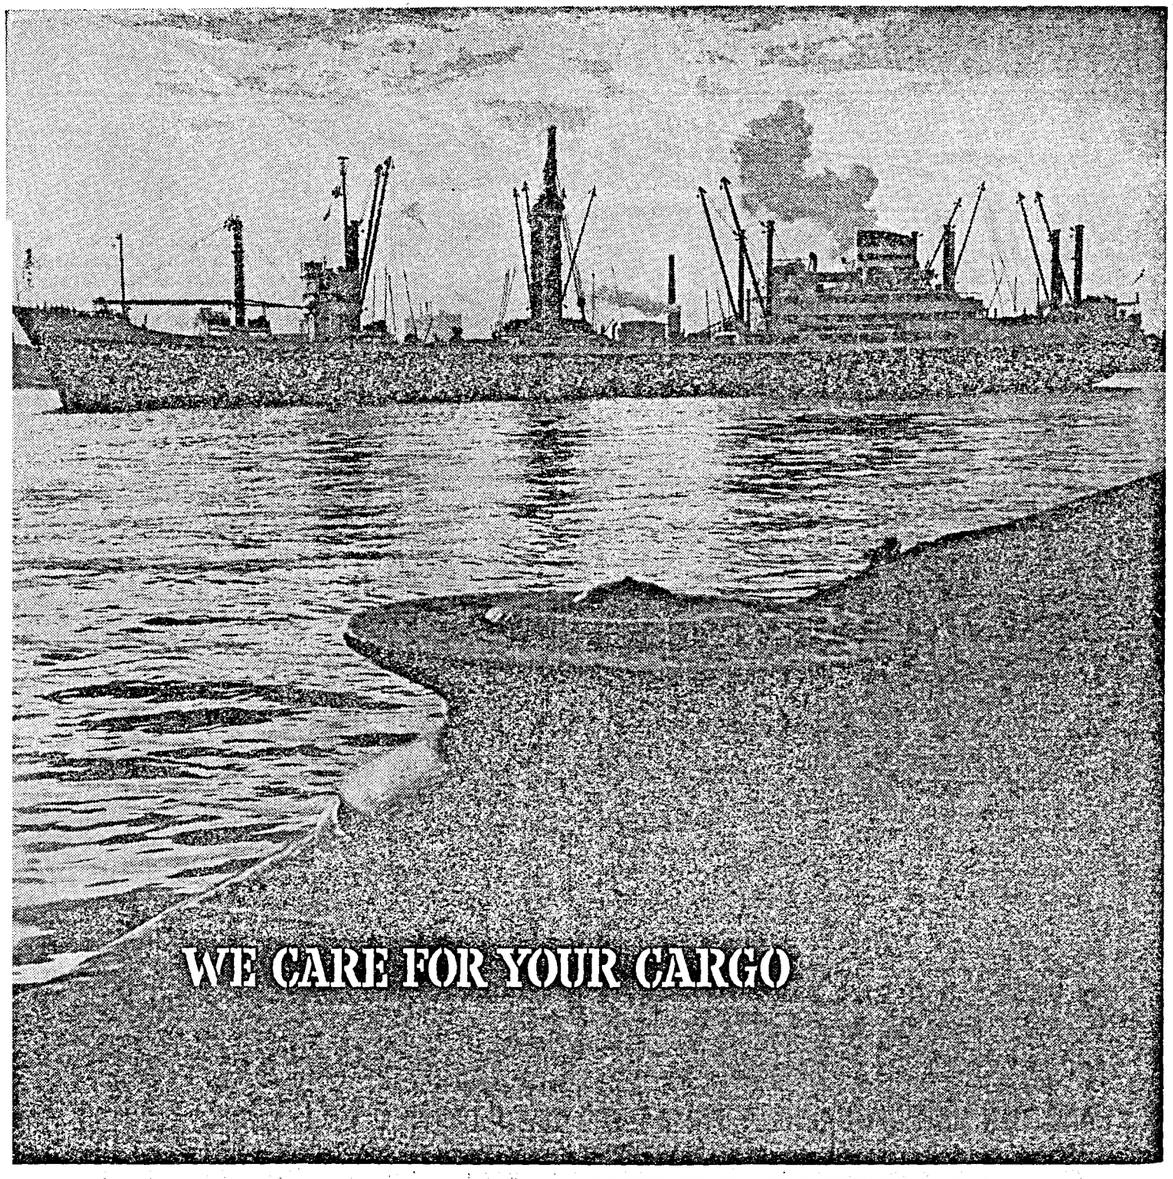


A major feature of equity markets this week has been the first dealings in shares from the £22 million rights issue made by Royal Insurance. As the shares were issued on a one-for-three basis at par, the rights were worth over 110s. and there were a number of eager sellers, but the demand for the new shares was also strong and after opening at 38s. premium on Monday the new shares found their level at 35s.-36s. premium. There were sharp fluctuations in the prices of Hoover ordinary and "A" shares early this week on rumours of a possible take over bid by the American parent company. These rumours were hastily denied, but the cynical—or the hopeful?—remember the number of times similar denials were made by Ford Motors.

On Wednesday the gilt-edged market had its busiest day for some months, though interest was virtually confined to the short dated market, where the tap prices of Conversion 4¾ per cent 1963 and Exchequer 5½ per cent 1966 were both raised. The continued strength of sterling is again encouraging the optimists to look towards a cut to 6 per cent in Bank rate. But, with wage battles looming ahead, there is no reason to think that the authorities have any such intention in the immediate future.

Margins Squeezed

THURSDAY'S figures from Imperial Chemical Industries gave no grounds for optimism even if they were perhaps no worse than expected. The sharp fall in gross income in the first half of 1961 to £36.7 million compared with £50.2 million in the same period in 1960 shows how deeply higher costs and intense competition are eating into profit margins. Sales in 1960 were particularly buoyant and last May Mr Chambers suggested that they had then been running at about the same level in 1961. In the first six months, however, home turnover was about 2½ per cent down because of lower selling prices. Despite price reductions, exports sales rose to £49 million compared with £47.3



ANOTHER HAWKER SIDDELEY FIRST—THE NEW HAWKER V.T.O.L. STRIKE FIGHTER

With their P.1127 vertical take-off tactical strike aircraft, the Hawker Siddeley Group are pioneering a new pattern of winged flight. The P.1127 uses a single lift-thrust engine—the Bristol Siddeley BS.53 Pegasus—for both vertical take-off and landing. Four swivelling nozzles direct the thrust downward and then gradually turn the jet thrust to the rear for forward flight. ☐ The P.1127 is the prototype of a new generation of V.T.O.L. aircraft—high-speed aircraft that can take off and land vertically, needing little more space than a tennis court! Such developments will lead to new concepts of aerial strategy, and to a revolution in civil air transport. ☐ In this exciting field of research—as in so many of its other activities—the Hawker Siddeley Group leads the world.

million in the first half of 1960, and were only fractionally below the record £49.3 million in the second half of 1960.

ICI's gross income has had to meet a higher charge for depreciation, as the company steps up its capital expenditures on new and larger plants. In the last annual report, the directors said that ICI was resuming the higher rate of capital expenditure before 1958, when it amounted to about £60 million a year. Despite the £34 million secured by last January's rights

SALES AND PROFITS
(£ million)

Six months ended	Dec. 31, 1959	June 30, 1960	Dec. 31, 1960	June 30, 1961
Sales	259·0	288·0	270·0	287·0
Gross income	39·2	50·2	37·8	36·7
Taxation	17·6	23·0	17·5	16·3
Net income	20·6	25·7	19·5	19·2
	%	%	%	%

Net income/sales	*7·9*	*8·9*	*7·2*	*6·7*

issue, ICI still leans heavily on self-generated resources. Last year's cash flow amounted to almost £60 million but the decline in profits in the first half of this year makes it unlikely that this figure will be matched. With the fall in profits comes an unchanged interim dividend of 6¼ per cent; at the time of the rights issue the directors forecast a maintained 13¾ per cent for 1961, and shareholders will be unwise to expect anything more. On these figures the £1 shares dropped only 9d. to 65s. 3d. but the fall would probably have been more but for covering by the "bears."

MOTORS

Little Change in August

CAR production in August was at its lowest rate for many years, but this resulted from the holidays rather than from any intentional cut in output. The summer holiday shut-down is usually divided between July and August, but this year both weeks fell in August and the industry only worked for a fortnight. Even after allowing for this, however, there was still a fall in output of about 3,500 a week Perhaps half of this is explained by the introduction of the new Victor, which meant that Vauxhall sent out few cars during the month; some of the remainder is explained by the effects of the strike at the SU carburettor factory, which was beginning to cut into the production of cars by BMC and the other companies that use these carburettors. But there seems to have been some slight reduction in the pace of output as well, to meet the expected fall in sales during the autumn.

This factor has become more important in September; apart from the introduction of short-time working by Standard-Triumph International, Ford seems to have been reducing output by cutting out most overtime working, in accordance with the gloomy view of the future that has been expressed by Sir Patrick Hennessy. Mr George Harriman, the managing director of BMC, has shown a more optimistic attitude

about the prospect for the rest of this year, which suggests that he does not consider that his firm will need to go onto short-time in this period. Among the smaller makers, Rootes has had its production stopped by the strike at British Light Steel Pressings, a more drastic cut than it can be content with when it is introducing new models, and Vauxhall also has to build up stocks of its new car. Both thus have a cushion against short-time. According to present attitudes, Ford seems, unexpectedly, the company most likely to join S-TI on short-time during the autumn—unless its workers settle the prospect by striking.

THE EXCHANGES

Brooding on Vienna

WHILE most bankers are returning from Vienna anything but reassured, their fears and reservations have not yet had any noticeable impact in the exchange markets. Sterling has remained in continuous demand, for commercial operations, for the covering of short positions and, occasionally, for short term investment—this still being covered in nearly all cases by a sale of sterling in the forward market, where the discount remains near its interest parity. The only substantial seller of spot sterling has been the Bank of England, and these sales have kept the rate steady at around $2.81\frac{5}{16}$. The market expects next week's gold figures to show a substantial further intake.

Sterling is not generally expected to be the victim of the next speculative attack—the commonly heard doubts are rather about its eventual ability to withstand the impact of competition in the common market—and the notable market feature this week has been what has not happened in the gold markets. Demand for gold in London is reported to have been the smallest for weeks; the price, which is of little use as an indicator nowadays as it is being kept below $35.20 by official sales, has remained at $35.18½-19. In Zurich however some dealers emphasise that there has been no diminution of gold buying, such as might have been expected if the Vienna meeting had resolved the exchange market uncertainties—which it manifestly has not. By no means all Zurich bankers are enthusiastic about the idea mooted in Vienna that Switzerland itself might lend dollars to the Fund—the dollar seems to be going out of favour again in Zurich. At the same time there has been talk of a possible loan to the British Government on the Swiss capital market as a contribution to the funding of the Basle credits; the amount mentioned is 100 million Swiss francs (some £8 million) which would cover only a part of the Swiss central banking credits. British companies too are now being actively encouraged by Whitehall to borrow abroad, and they are naturally keen to borrow in Zurich or Amsterdam at over 2 per cent below London rates. EMI appears to be at the head of the queue in Zurich.

Japan's Swing to Deficit

THE most exposed currency at present seems to be the Japanese yen. It became apparent in Vienna that far from Japan's being in a position to take an early part in providing credit to the International Monetary Fund, it might soon be obliged to draw on it. Following the large surplus of $339 million earned on current account in 1959, and a smaller surplus in 1960, the current account swung into heavy deficit at the beginning of this year and by the end of July the deficit amounted to $729 million. This has been covered in part by short-term borrowing from the United States—official figures show a rise in Japan's dollar liabilities from $807 million to $1,277 million in the first half of 1961, and in Vienna United States officials intimated that a good part of the outflow of $1.7 billion from the United States in this period represented short-term credit taken by Japan.

As a result, Japan's foreign exchange reserves at end-July were still, at $1,837 million, a little above their end-1960 level. but they were $200 million below the peak last April, and are expected to fall considerably further. Imports have been swollen by the extraordinary domestic boom—the index of industrial production in the year to July rose by fifty points to 277, and the base is 1955. Now the Japanese authorities are expected to introduce official restraints on domestic activity. Far from contemplating any tightening of imports they have committed themselves to a belated liberalisation; they hope to raise the present ratio of 65 per cent to 90 per cent by September next—though there have been some reports that the removal of quotas will not be extended to imports from Britain and other countries that continue to discriminate against Japan under Article 35 of Gatt.

IFC

Mr Garner's Valedictory

AFTER the big set pieces of the World Bank and the International Monetary Fund in Vienna last week, the governors' meeting of the International Finance Corporation attracted its own special interest. It was the occasion for Mr Robert Garner's last speech on his departure from the president's chair; and he exercised the prerogative of impending retirement to lay down in characteristic style some useful though not always palatable home truths about overseas investment, aid, and the treatment of private capital. The IFC is a youngster of Mr Garner's own creating with no more than four years' experience of assisting private business in developing countries. Its commitments to the end of June amounted to about $44 million, of which $33 million have been dispersed; of this latter sum nearly $9 million of investments have been sold or agreed to be sold to outside investors.

A good, if unsensational start has been made on the foundations that Mr Garner

laid four years ago. IFC's business should in future benefit from the fact that it is now free from the restraining condition, written into its original rules at American insistence, that it could not extend equity financing to its customers. Now that equity participation is possible, IFC will no longer have to impose strange financial arrangements on clients whose awareness of the sophisticated techniques of the American market is limited; its arrangements will now be supple and will serve incidentally to encourage the equity principle in countries where it can be of growing service.

Following the departure of Mr Garner, Mr Eugene Black of the World Bank is to assume the presidency of the IFC while Mr Martin M. Rosen, the executive vice president, will be operating general manager. IFC will thus form part of a spectrum of organisations under Mr Black's care, ranging from the International Development Association, which is providing fifty-year loans at zero interest to developing countries, through the World Bank, with its loans on commercial terms to government or government-guaranteed borrowers, and with the IFC on the other flank seeking to fill gaps in the capital resources of private businesses in developing countries and to encourage them in other ways.

CAR EXPORTS

Europeans Prefer their Own

THE British Motor Corporation and Ford say that the reception of their new Cooper and Capri models at the Frankfurt show has surprised them by its warmth: after the record of British sales in Europe so far this year, such pleasant surprises will have to become frequent if the British industry is to prove able to meet its European competitors on equal terms in the common market. The European car buyer can and does discriminate between a wide international selection of cars, and in his opinion the British car still appears a less attractive buy than the German, Italian or French product — even in markets such as Sweden and Switzerland where British cars are now beginning to benefit from the tariff differentials of the free trade area. The reputation that British cars gave themselves after the war of being less well finished, more costly and less effectively backed by a service organisation, seems unhappily still to dog the efforts of the industry to get itself properly established in the European market.

BRITISH SHARE OF MARKETS
Second Three Months

	1961 %	1960 %
Austria	7	6
Belgium ...	9	10
Denmark ..	16	15
Holland ...	10	16
Sweden ...	7	10
Switzerland	8	8

British manufacturers who neglected Europe in favour of the easier Commonwealth and, later, the American markets, now discover that they lack an adequate dealer network in Europe and can hardly expect to find the better established dealers willing to drop their existing franchises in favour of less popular cars. The appeal of the Borgward concern to BMC must have been at least as much its network of dealers throughout western Europe as its production facilities. Now that this company is bankrupt, these dealers will be available for other car makers; and one might expect that the British firms will be the most eager bidders for their services. They certainly ought to be.

Ford is the only British car maker to sell its products in large numbers in Europe, and its Anglia the only model to be sold in quantities that could make the provision of service facilities, on the scale to which local owners are accustomed, an economic proposition. Ford sales, however, have been affected by the general decline in those of British cars this year, though the introduction of the Classic may have offset this. BMC seems to have made little impact on the market so far, despite its determination to establish itself in Europe, and the normal Austin Seven and Mini-Minor have had a surprisingly small sale. The only consolation that British makers may find in the sales figures for Europe is that those of Volkswagen too have been falling, probably for the first time in its history, in all the important markets in which it had become established except Sweden. The firms that have been doing best are those which make cars more similar to those of British makers —Fiat with the 600 D and 1100, Peugeot and the Ford Taunus.

ATOMIC ENERGY AUTHORITY

Uranium for Italy

THE first big nuclear power station ordered from a foreign country was bought from Britain by a specially formed subsidiary of the Italian oil company ENI; it was a feather in the cap of British scientists, although there have been times since when ENI appeared to think that it had perhaps made an expensive investment. This plant is now nearing completion at Latina, south of Rome, and for some months the Italians have been shopping around trying to buy fuel for it at a lower price than they could get in Britain. There is, however, more to nuclear fuel than uranium, as the Italians have discovered. There are questions of the standard to which the metal cans encasing the uranium are manufactured, and also questions about what kind of performance the fuel suppliers are prepared to guarantee. Coal is bought by the Btu; manufactured uranium fuel is bought on the number of megawatt days of heat it will yield per ton, and the economics of nuclear power depend on its being able to reach the proper design figure, which, for a natural uranium reactor, is 3,000 MWd/t. Many factors in the fuel and in the reactor work against these figures being reached; reactor owners want to know that they will be compensated for premature failures and although the Italians may have been offered manufactured uranium at a cheaper initial price than they have finally bought it in Britain, they could not get the same guarantees of fuel life.

The Atomic Energy Authority appears to have settled for a price of the order of £14,000 per ton of manufactured fuel, against the "official" price that it usually quotes of £17,500 a ton, indicating that the Authority has begun to write down drastically the value of its huge holdings of crude uranium. This gives special point to the insistence of the Committee of Public Accounts that in future some details should be given of stock holdings and any losses made on them.

Little is known about the precise guarantees offered to the Italians on the life of this fuel. It is not likely that the AEA would fully guarantee it for 3,000 MWd/t at this early stage of the nuclear art but it is probable that it has given guarantees for between 2,000 and 3,000 MWd/t with a sliding scale of compensation. In return for these concessions, the Italians have probably had to accept a big reduction in the price at which the AEA will buy back the 400 tons of fuel when its useful life in the reactor is over. The previously quoted price was £5,000 a ton, but this was related to an initial selling price of at least £17,500. It is likely that the "buy-back price" finally negotiated is not only a great deal lower than this, but shows a much bigger discount between first cost and buy-back. American companies have followed the negotiations with interest. The Authority's terms for supplying fuel will be a decisive factor in nuclear competition abroad; and seven companies are at present bidding for the next big foreign order, a nuclear power station for India.

WOOL TEXTILES

Threat from Japan?

WHEN Bradford heard that Japan might be allowed to sell as much wool cloth in Britain as the British industry exports to Japan, it is said that a deputation left on almost the next train to London. By now, the arguments of the leaders of the separate wool organisations should be as familiar to the President of the Board of Trade as their faces. All the same, a television audience was recently shown what purported to be a cotton mill in Bradford and many people who should know better still fail to distinguish the wool industry's problems from those of the cotton manufacturers. Last week's excursion was *therefore reckoned* worth while. Britain's current trade agreement with Japan expires at the end of this month and discussion of a renewal of this agreement and of a full Anglo-Japanese

PROBLEM NO. 4.

E.C.G.D. MAKES IT SAFE TO CARRY ON

An E.C.G.D. policy turns the trickiest market into a sound business proposition. No need to worry about current commitments, no need to upset your production schedule: you're insured against war, rioting, sterling shortages, import restrictions plus a whole lot of other risks besides. When you're backed by E.C.G.D. you can keep your hold on the market with absolute confidence. In fact, you're probably safer than your local competitors.

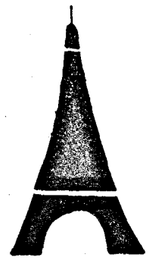
SHIP VIA PORT OF LEITH

Captains of Ships...

Captains of Industry...

agree...

Captains of ships and "captains of industry" agree that the customer really matters at Leith.* From every point of view, Leith's facilities for overseas, continental and coastwise traffic are unrivalled, and the *service* second-to-none.



Leith is ideally situated to handle trade with the European Free Trade Association and European Common Market countries. Whatever your cargo—*ship via Port of Leith.*

Write to the address below for facts and figures.

* Captains of industry also know that Leith offers wonderful scope for new industries. Attractive sites and first class services are readily available.

A. Balfour Kinnear,
General Manager & Secretary,
Leith Dock Commission, Edinburgh 6, Scotland.

commercial treaty started in Tokyo on August 25th.

Japan has hinted that countries that continue to impose special restrictions on imports from Japan—the United States, United Kingdom, France and Italy have been singled out for special attack—will receive unfavourable treatment when Japan liberalises its trade. In the first eight months of this year, Britain's exports to Japan rose by £11 million to £29 million, outpacing the growth in imports from Japan which increased by only £2 million to £29 million. At present no Japanese cloth is allowed into this country, though Britain exports cloth worth about £3 million to Japan each year and also supplies a growing quantity of wool tops to Japanese cloth manufacturers. Japan therefore appears to have a strong case against Britain's embargo on its cloth.

But Bradford does not flatter itself on its apparent success in the Japanese market, despite steep import duties and the lower costs that recent investigations showed their Japanese competitors enjoy. In export markets where Bradford competes with Japanese manufacturers, its experience has been precisely the opposite, though Japanese exports of cloth fell by 28 per cent in the first half of this year—Japan's exports to the United States tumbled by 43 per cent following the imposition of crippling import duties—and Britain's exports of wool manufactures declined only from £58 million to £56 million in the eight months to the end of August.

The high price maintained for wool textiles in Japan enables the British industry to jump over Japan's high import hurdle, and this price structure is claimed to be the basis on which Japan's export trade is founded. About 85 per cent of the raw wool imported into Japan is consumed in that country and its relatively small exports of wool manufactures are alleged to be heavily subsidised from profits earned in the home market. Misleading labels which are designed to conceal the true identity of cheaper Japanese manufactures are still harming British exports, and the British wool industry hopes that as an exporter Japan will not be given most-favoured nation status unless these practices are stopped. The British industry still claims that, on equal terms, it can match Japanese competition.

SOUTH AFRICA

Brighter Prospects?

INVESTORS in South African securities, relieved by the recent strengthening of the country's reserves, have received further encouragement this week by the announcement of a $30 million loan to Rand Selection Corporation by American institutions. The corporation was enlarged earlier this year to enable funds to be raised more easily and it has succeeded in raising

this money on notably satisfactory terms. It involves an issue of unsecured debentures, of which $5 million will be repayable at the end of seven years and the remaining $25 million after ten years. The cost of the loan is equivalent to an average interest rate of 7 per cent, no more than that for a first class industrial debenture in this country and well below the current redemption yield of just under 9 per cent offered by South Africa 3½ per cent stock 1965-67. Mr Harry Oppenheimer, the chairman of Rand Selection and also of Anglo American Corporation of South Africa and De Beers, which both have a large stake in the enlarged corporation, has said that the money has not been raised for any specific projects. But it will clearly provide useful resources for financing mining and other projects at a time when the prospects of raising money from foreign sources are not auspicious.

It is important to note in view of present exchange restrictions that the South African Reserve Bank has guaranteed the availability of funds for repaying the loan. The loan operation has further strengthened South Africa's gold and foreign exchange reserves; they now stand at £95 million compared with a low point of just over £70 million in mid-June when the restrictions on movements of capital were imposed. In London last week Dr Diederichs, the Minister of Economic Affairs, said that exports too were rising and that some easing of the exchange regulations would be possible "very soon." Clearly South Africa is standing up well to its siege economy, but so long as there is no change in the emphasis of the present government's policies the long term outlook for investment in South Africa remains uncertain, and leading Kaffir shares will continue to offer high but not necessarily attractive yields.

DRUG PRICES

Under the Microscope

THE drug industry has been forced by pressure from the Ministry of Health to give a great deal more information about its internal costs and profits than it has previously seemed prepared to do, and has thus managed to divert some of the wrath released on it periodically by the Committee of Public Accounts. The PAC has taken a jaundiced view in the past of the apparent profit levels earned on proprietary drugs sold to the National Health Service. The traditional argument that high profits were needed to finance research was hard to swallow when some companies were showing a nominal return on capital employed that was in some cases as high as 100 per cent. Most of these were American-owned companies whose US parents carried out all the research at home and expected profits from subsidiaries overseas to contribute their share to the upkeep of the laboratories. But many of these same companies have been under fire in the US too for their profits; it was rumoured that the research costs quoted to justify their profits included items that had nothing to do with research and a good deal to do with straight sales promotion.

These companies have now broken down their British results for the Ministry of Health to show what is earned on drugs and what from the sale of non-pharmaceutical products. After allowing for research contributions, the adjusted profits on drugs came down from an average of 73 per cent on capital employed to an average of 34 per cent with individual results ranging from 18 to 45 per cent. These companies must now have an embarrassing time explaining their high profits to their non-pharmaceutical customers. Much of the data they gave the Ministry was, said the PAC suspiciously, "based on unverified information from the parent companies," but as the Ministry anyway regards a 34 per cent return as excessive compared with the 18 to 20 per cent recorded by British and Swiss companies, and since it was taking steps to negotiate lower prices, the committee did not worry over-much about the accuracy of the "unverified" data.

This has proved a specially hard nut to crack, and it is one that has attracted a good deal of odium to the pharmaceutical industry in general that it did not always deserve. It has even driven the Ministry of Health to the questionable decision to accept tenders for drugs—those developed mainly by the American-owned companies—from countries like Italy where the Americans had no patent protection. But it is by no means the Ministry's only victory on drug prices in the past year. The voluntary scheme for price control exercised by the industry with Ministry agreement has been tightened up and is already said to be showing savings. Side-by-side with this has gone an assault on the industry's much-criticised sales promotion to doctors. Mail advertising and free samples, the industry told the Ministry, accounted for £2 million out of annual net sales of £50 million, without allowing for the cost of commercial travellers. The industry has now "adopted a code of advertising *thought* [our italics] to have eliminated the worst abuses." While exhorting the Ministry to keep up its pressure for lower prices and more information about costs, the PAC appears to have felt that this time some headway had been made in plugging what at times appeared like an open drain in the National Health Service. The ghost of Aneurin Bevan must think that it has been a long, hard pull.

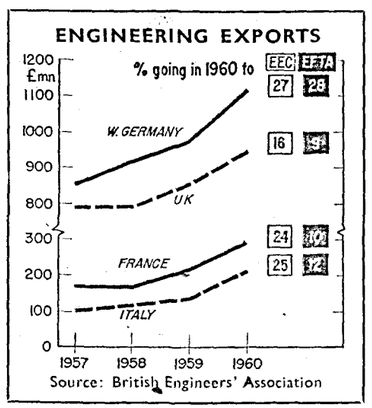
INSURANCE

Brandaris Moratorium

BRANDARIS INSURANCE, one of Holland's five largest insurance companies and underwriters of about 60,000 motor policies in Britain, has ceased to take new business and has been allowed by an Amsterdam

court to postpone all payment of debts. These moves follow "substantial" losses (unofficial reports speak of over £1 million) incurred during the last twenty-one months on the company's foreign business. It appears that the bulk of this loss is on motor insurance business introduced from London and Frankfurt. The company is represented in Britain by Overseas Motor Insurance (CI) and Overseas Motor Insurance Agencies and Finance, of which Mr Ronald Myhill (of Overseas Aviation) is a director, and in Germany by R.M. Overseas Motor Sales of Frankfurt. Brandaris has now withdrawn all authority for these companies to do business on its behalf.

Brandaris was founded in 1940 by the Nederland Shipping Line, the Nederlandsche Handel-Mij Bank, and the Nationale Handelsbank (now controlled by the Rotterdamsche Bank) to take up business lost by British and American insurers during the German occupation of Holland. The shareholders have now undertaken to make available to the company Fls. 7 million, and if a scheme that is being prepared for the satisfaction of creditors is approved by the Court, the shareholders will increase this figure to Fls. 10 million (£1 million). All Brandaris car policies become invalid on October 16th and policy-holders will have to reinsure by that date. In Holland in the past week brokers have carried their clients' policies with Brandaris over to other companies; in Britain motoring organisations are recommending reinsurance at least for third-party risks.



AIR ACCIDENTS

Limited Liability

THE ordinary fare-paying passenger might be forgiven for thinking that international air law lags some years behind international air travel. Because airlines automatically accept liability for whatever goes wrong on a flight, from lost luggage to fatal accidents, the fact that they limit their liability to comparatively trivial amounts tends to get overlooked; so do a number of loose ends that leave the question of liability on certain types of flights hanging in mid-air. At present, the maximum compensation paid to the relatives of dead passengers is still, by international agreement, the ludicrously low sum of £3,000, which must bear very little relation to the potential earning capacity of many of those who fly regularly by air. Several years ago, a draft amendment was prepared that raised this sum to £6,000, but this amendment cannot take effect until 30 countries have ratified it and the total to date is only about 20. Nor can the UK Government be said to have set a particularly good example here: before this country could ratify the amendment, Parliament had to approve the change and a private member's bill to this effect was passed only last year. Since then, British airlines have been prepared to make *ex gratia* payments of £6,000 to families of passengers killed in accidents. But by the time the new arrangement has been ratified by enough countries to make it internationally binding, the sum will again probably need revision.

The International Civil Aviation Organisation seems to have taken this lesson to heart, and the draft prepared at a recent meeting in Mexico to tie together certain loose ends dealing with charter flights becomes effective as soon as it has been ratified by five countries. There was—and until the new amendment is ratified there still will be—doubt about who, on a charter flight, was liable in case of accidents. Some countries, including Britain, held that it was the airline that flew the aircraft; others argued it was whoever had sold the tickets. which might be another airline—or the vicar arranging a choirboys' outing. Tour organisers have in fact become adept at devising forms of words that would protect the vicar, but a dispute about liability between two airlines could leave the passengers and their dependants in an unhappy position.

Liability for lost baggage is fixed, internationally, at a maximum sliding scale per kilo, but the airlines in this case prefer to bargain direct with the passenger, and they do not usually bargain too hard. Goodwill might be better fostered if luggage designers took a look at the beating that their wares get in transit through an airport; by contrast the average railway porter is as gentle as a nursemaid.

DIRECTORS

Boardroom Bible

ABOUT 37,000 free copies of *Standard Boardroom Practice*, prepared for the Institute of Directors by nine distinguished directors under the guidance of that redoubtable director and committee chairman, Sir Edwin Herbert, will be in the hands of the Institute's members this week-end. This is therefore very much a directors' affair, though an assiduous investor or alert trade unionist might for the payment of 12s. 6d. glean from its 71 pages a useful point for use against a neglectful board. But, despite its title and chapter headings, which include directors' pay, business expenses and donations for political purposes, they will certainly find no lurid facts about these interesting subjects. The book contains few facts and only a limited number of unqualified recommendations.

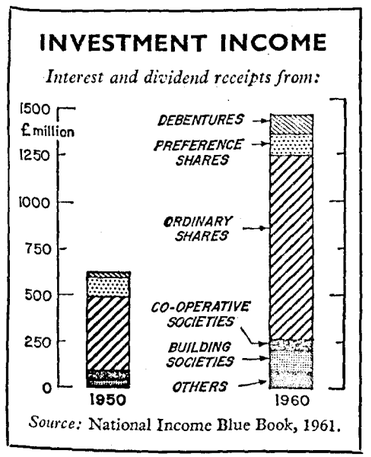
A point unintentionally emphasised by this book is that beyond directors' legal responsibilities and their easily recognised moral obligations, there is little that is standard in boardroom practice; it is slowly evolving to meet changing circumstances. The authors did not intend to produce a code of ethics; they claim that they merely wished to clarify professional standards for directors. It could be argued that a director can settle these problems, like many others, by an appeal to his own common sense and experience. But it can be said in this book's favour that in dealing with dividends, takeover bids, the release of information and alteration in the nature of a business some directors need to be reminded of their full responsibilities towards shareholders, and that is the main theme of the book.

ATOMIC ENERGY

The International Atom

THE European Nuclear Energy Agency of OEEC has published its third annual report at a time when many people are wondering what the future holds for this organisation. It is one of three international atomic energy agencies, all based in Europe. The smallest and most tightly knit is Euratom, the atomic agency of the six common market countries. It is generally assumed that membership of the common market pre-supposes membership of Euratom too, with its complex treaty, and its large headquarters. Euratom has been stymied through no fault of its own because the circumstances that brought it into being had melted away before the agency was formed and its purpose is now largely research. The fuel shortage it was designed to combat exists no longer, and the production of nuclear weapons that it was expressly designed to prevent now flourishes in at least one member country, France, and in Britain too, which may become a common market member.

Should this happen, and should Scandinavian and other countries follow Britain's lead, then the membership of Euratom will to a large extent duplicate that of the OEEC agency, which is a loose organisation of 17 member countries with a small and compact headquarters in Paris. Like Euratom, the ENEA exists to foster and organise cooperative nuclear projects but unlike Euratom, existence does not (or did not) depend on promoting projects but on taking a judicious and impersonal view about what



were and what were not worth pursuing. Thus the Agency's advice on atomic power has been consistently cool and sensible. But if all Europe's big nuclear powers with the exception of Sweden become members of Euratom, will they feel there is any purpose in continuing their subscriptions to the OEEC organisation, whose only independent members will then be Sweden and small, non-nuclear countries like Greece and Spain?

The liquidation of the European Nuclear Energy Agency would leave these countries then dependent on what nuclear advice they could get from the biggest organisation of all, the International Atomic Energy Agency in Vienna. Although this is not a United Nations body, its membership virtually duplicates that of the United Nations and its main trouble is getting member countries to pay up the aid that they so frequently and glibly promise it. With Euratom for practical purposes a closed shop, and the big Vienna agency continuously hampered by shortage of funds, the OEEC organisation is one of the few on which small and medium-sized countries can call for atomic advice, and it has made considerable steps in enlisting Canada and the United States as associate members. If it were to be disbanded, a gap would be created that would be hard to fill.

TANKERS

Russia's New Orders

ANOTHER illustration of the shortsightedness of most trade boycotts against Russia—which usually result in that country's setting out to meet its needs in some other way, usually to the West's long-term commercial disadvantage—can be seen in the heavy Soviet programme of tanker building now under way. Last year Standard Oil of New Jersey threatened not to use again any ships of tanker owners chartering their vessels to take Russian crude oil to Cuba. The ban was largely ineffective at the time as there were a sufficient number of small tanker companies eager for work of any kind to whom the prospect of business from Esso had always been somewhat remote. It now seems to have had the secondary effect, also, of spurring Sojuzneftexport into building up an even larger sea-going tanker fleet of its own. This week's provisional contract with the Fincantieri Corporation of Italy for six tankers each of 48,000 tons deadweight follows other large construction orders already placed this year.

Traditionally, most of Russia's oil exports have been carried in oil tankers chartered from Scandinavian, British, Greek and other companies. Hopes of a substantial increase in this export trade stimulated a moderate programme of tanker building—in the last two years the Russian fleet has grown from just under 800,000 tons deadweight to 1¼ million tons dwt, but the bulk of these are small tankers designed to serve Russia's own internal needs, with only a small proportion of sea-going vessels. But lately the emphasis seems to have been shifted. A number of largish tankers have been bought, second-hand or new, from shipyards whose customers have cancelled delivery, and orders have been placed with Finnish, Swedish, Japanese, and Yugoslav as well as Russian yards. Including this week's Italian order, known contracts outstanding from the Russians for tankers now total over 600,000 tons deadweight, almost half the size of the present oil tanker fleet. This is a rate of new building matched only by Japan.

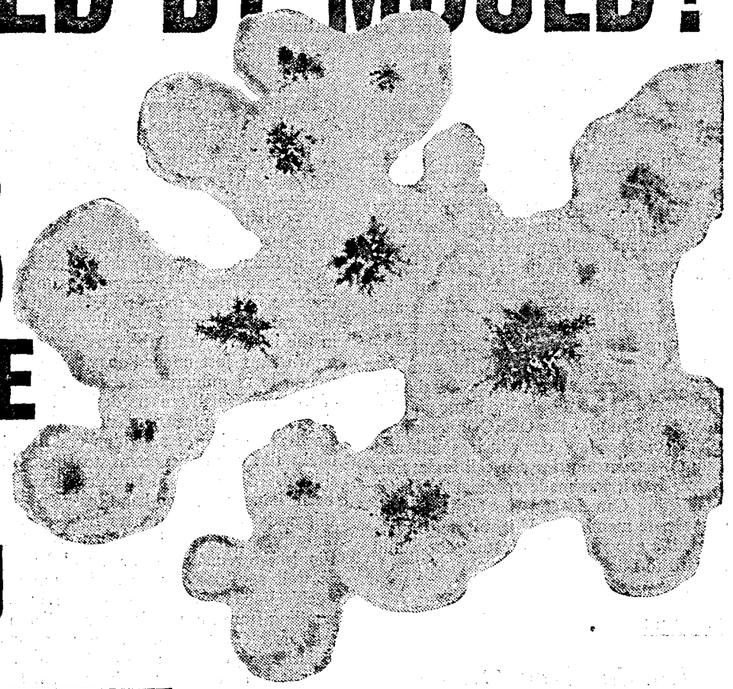
HEATING

Anglo-Saxon Attitudes

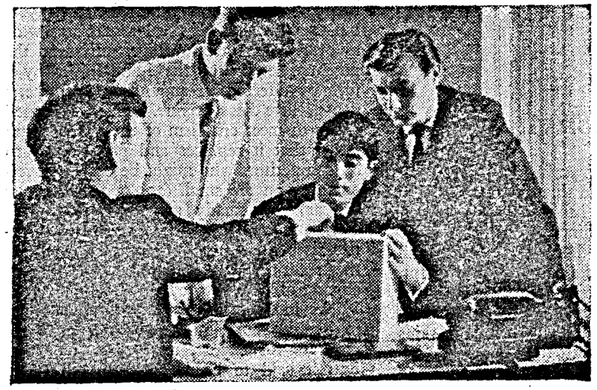
THE British no longer feel that it is sinful to be warm; and this drastic change in their attitude to life has combined with the boom in office building to produce a new growth industry in heating. Sales of all forms of heating and air conditioning plant, the greater part of which is used in industrial or commercial buildings, were estimated at £50 million this year by Mr C. J. Atkins when he opened the first International Heating, Ventilating and Air Conditioning Exhibition at Olympia this week. That compares with £30 million in 1958. Much of this increase simply comes from heating and ventilation for new offices and factories, but the domestic market seems to be the section that is growing fastest. Statistics are unfortunately lacking; but reports from individual organisations suggest that there may be twice as many installations this year as in 1960. The Gas Council, for example, states that 13,000 gas central heating installations were made in 1959-60, and twice as many are going in this year. When only some two per cent of all houses in Britain, or 300,000, have full central heating, and only 750,000 anything more than fires, the scope for expansion is great.

Competition between the different fuels for this market is becoming increasingly bitter—"knocking copy" is becoming a rule rather than the exception. But where installations are most often the concern of small contractors, the effects of this competition on price seems less than buyers might wish; and the figures that are quoted in advertisements as the "typical" cost of an installation are all too likely to prove optimistic when the quotations arrive. The temptation to specify an unnecessarily large boiler and radiators, to leave a safe margin over the heat that will be needed under most conditions, is another practice that makes installations costly. The low initial outlay is certainly the reason why electric floor-warming has become so popular, despite higher running costs than solid fuel or oil, and usually than gas. For speculative builders it is ideal. At present demand is growing fast enough for all sections of this industry to be busy, it is only later that competition may begin to hurt.

LAND-ROVER



No Wings?



DURING the 13 years that it has been in production, the Land-Rover must have been decisive in enabling the Rover Motor Company to survive as an independent producer when the gap between the performance of mass-produced and so-called "quality" cars narrows each year but their price differential remains as wide as ever. This week, Rover increased the potential power of the Land-Rover by a fifth by offering, at an unchanged price, a new 2¼ litre diesel engine. This is designed partly to meet criticism of the older 2 litre diesel that it replaces and partly to warn off competitors who might be casting covetous eyes on the small (200,000 to 250,000 a year) but steady and profitable world market for the kind of vehicle that compromises between the speed of a car and the stamina of a tractor. This market counts only two producers of substance, Willys in North America and Rover, now producing 850 Land-Rovers a week, three-quarters for export, against a falling car output said to be in the region of 300 weekly. The company plans to increase Land-Rover production to 1,000 a week.

Threats of competition recur periodically, mainly from France and Germany, but the only competitor to materialise on four wheels since the Land-Rover's inception is the British Motor Corporation's Gipsy. Launched inauspiciously four years ago, the Gipsy is said to have been re-engineered and greatly improved; but it is still being produced on a purely token scale (guessed by Rover not to exceed 50 a week). However, it is always possible that BMC might have plans for bigger Gipsy production and an all-out attack on the market when its Scottish commercial vehicle factories get going. Just conceivably BMC might be

MADDENED BY MOULD?

THAMES BOARD HAVE THE MEN TO HELP YOU

Thames Board don't just make boxes. They make "FIBERITE" cases tailor-made to your special needs. That's why Thames Board have a brilliant team of technicians and designers, who design specific "Fiberite" cases for specific tasks. Take the banishment of Aspergillus Niger for example . . .

Mr. P. sells soap. And very fine soap it is too. The only trouble was that, by the time it reached his customers in West Africa, many packets were covered with black mould. Very sensibly, Mr. P. took his problem to Thames Board. Their experts examined specimens of his packaging materials and found the answer. Airborne spores of a mould called *Aspergillus Niger*, settling on the boxes, flourishing there, and then moving on to the individual packets of soap.

After a series of tests, the Thames Board experts produced the solution to Mr. P's problem. Ordinary "Fiberite" cases, thinly coated with a non-toxic fungus-repellant. And so everyone lived happily ever after. Except, of course, for *Aspergillus Niger*.

FIBERITE PACKING CASES

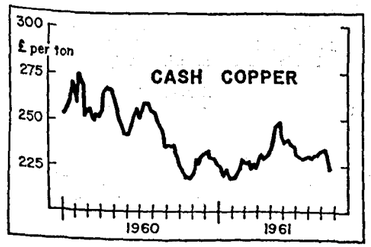
ARE MADE ONLY BY

THAMES BOARD MILLS LIMITED

PURFLEET, ESSEX, AND WARRINGTON, LANCS.

The word 'Fiberite' is a Registered Trademark

TBF 59-8263-6



put off by the fact that although the basic design of such vehicles changes hardly at all over the years, each is assembled in a slightly different way for each customer; there are 930 different permutations worked on the standard Land-Rover apart from those built to customers' own special specifications. By now Rover has done almost everything to the basic vehicle but make it fly; with the additional power of the new engine, it can be converted to run on (and off) railway lines hauling 50 times its own weight, to sleep four people and a cooker in something approaching comfort, and to amble through swamps on tracks that give it the appearance of a brontosaurus. These "optional extras" range in price from shillings to as much as the cost of the basic vehicle itself (which ranges from £660 upwards depending on engine, while the Gipsy is £10 cheaper).

COPPER

Crumbling Prices

AFTER three months of relative stability, cash copper fell about £12 to £221 a ton in London in three weeks. During this period, demand from British and continental consumers in the free market was negligible, despite an almost constant threat to future supplies. West European manufacturers appear to think that they are already riding the crest of their boom; some had bought more copper than they thought they would require in the next few months and were probably taking advantage of the relatively high level of output to reduce their stocks. Japan is also unlikely to sustain the phenomenal growth in its copper imports and known deliveries to fabricators outside the United States have fallen heavily since June. But demand improved this week; the copper lost in the recent strike at mines in Chile has begun to affect the market and spot copper recovered to £225½ a ton.

Without the further improvement in consumption looked for outside the United States this year, there is little prospect of consumption matching production despite the output curbs that have been in force for a year in some cases. However, copper usage in America has been expanding at a rate which, but for the slackening in demand elsewhere, might have eliminated the potential surplus of copper this year. It is thought

that the American producers' price for copper will be maintained at 31 cents a lb for the remainder of the year; the import duty of 2 cents a lb will help to insulate it from the effect of stocks which might begin to accumulate again outside the United States. Two American producers have already resumed maximum production.

The majority of producers have been proved right in resisting the temptation to drop restrictions when copper prices advanced recently. The timing of strikes is seldom convenient, and so far this year, production lost through strikes is comparatively low. Stocks at the start of the year were abnormally large and it would have required twice the average rate of growth in consumption to have matched even this year's restricted output.

The recent discovery of what might prove an extensive new copper field in Canada, where some smelters are said to be concerned at the diminution of the older orebodies from which they currently draw their supplies, strengthens the belief that world capacity will keep a step ahead of copper consumption for quite some time. But though the new discoveries were made about three months ago, it will take another year before the companies involved can assess the value of their find.

UNIT TRUST

Investment for Trustees

IMPROVED sales of units by unit trust managers in recent months suggest that already trustees anxious to go into equities but not wanting the headaches of portfolio management have turned to this form of equity investment. Now the Municipal & General Group of unit trusts has given further details of its new trust specifically designed for trustees. The M & G Trustee Fund is aimed at the large investor; its initial charge will be on a sliding scale from 2 per cent on sums below £25,000 down to ½ per cent on sums of over £100,000, while the half-yearly charge will be reduced as the fund grows from ¾ per cent per annum up to £2 million and ¼ per cent per annum when it exceeds that figure. The minimum holding will be 500 units and the opening price 10s. a unit.

One of the attractions of a unit trust for trustees is that it affords an indirect stake in equities not eligible for direct investment under the Trustee Investments Act—such as overseas companies, small companies and new issues. As the M & G managers point out, such investments often provide yields more in line with those on fixed interest securities; the initial yield for the fund is expected to be around 5 per cent.

The more specific advantage of the new trust is that its income will be distributed in accordance with the principles of trust law; all income to which the life tenant is normally entitled will be distributed but capital distributions will be retained in the fund. For those trusts whose income to be reinvested (generally for a minor) the will be special "accumulation units" in which all the income will be ploughed back; these may be converted at any time into the ordinary "income units." As with the recently formed Trades Union Unit Trust, the managers of the new fund will accept any shares which they consider suitable for the fund in exchange for units, and the Trust deed also enables holders of units worth over £10,000 to receive specie. So far, trustee buying of equities has been small and the initial appeal of this new trust in uncertain markets must remain in doubt; but the managers will clearly be disappointed if they have to calculate for long the half yearly charge on the higher rate.

CONSUMER PROTECTION

Well Meaning but Woolly

PUBLIC opinion knows a great deal about consumer protection these days, and it is perhaps unkind to complain that the authors of the Labour Party's "Fair Deal" pamphlet that was published on Thursday churn up the familiar well-ploughed furrows. But the truth is that the clothes of the party that nailed the Utility flag to its masthead in the post-war years have been filched from it garment by garment during successive Conservative administrations that have actually set up a Royal Commission on consumers' problems and have put through, or are putting through, an appreciable amount of minor legislation dealing with various ploys of which shoppers are victims. These range from wholesale revisions of the Merchandise Marks Acts and the Weights and Measures Bill (although the Government's record on the latter gives no cause for pride) to the banning of mock auctions. These bills are sometimes far from perfect; but whose fault was that? How hard did the Opposition work to get them improved?

The past few years have shown that there is sufficient interest in this country to support an independent testing organisation on voluntary subscription alone: the Consumers' Association and its publication "Which" have achieved a success that only the most optimistic would have forecast at its inception six years ago. For a variety of reasons, it is better to leave this work to voluntary organisations—provided they can get enough support—than to have such comparative testing, with its frequently destructive criticism, carried out through the Government-sponsored Consumer Council that is the nub of Labour policy. The function of the Government, many might argue, should be reserved for those aspects of consumer protection that can be enforced by, and only by, legislation. But there remains the troublesome field of services, not touched on in "Fair Deal"; how should shoppers be protected from bad laundries, inefficient dry-cleaners, impossible hotels and unappetising restaurants? Is there a

case for arbitration machinery to which shoppers can take their—occasionally unreasonable—complaints about services of this kind and get compensation? These are the fields where new thinking is needed, and an audience conditioned to the plain speaking of "Which" and the increasing acidity of the British Standards Institution's "Shopper's Guide" is going to find "Fair Deal's" well-meaning but woolly sentiments dull fare indeed.

COMMERCIAL TELEVISION

Spreading in Europe

BRITAIN'S entry into the common market might make its biggest immediate impact on the television screens of the Continent. Including this country and Eire, where transmissions are starting soon, ten countries in western Europe have some form of commercial television and five others can receive transmissions from neighbouring countries. With a network covering almost all Britain and stretching across Germany, Austria, Italy, Luxembourg, Finland, Spain and Portugal, with an enclave in Monte Carlo and an imminent Irish service, the potential commercial audience by the end of last year must have been about 18 million, having trebled in three years and no doubt expanded considerably since then. Yet the general conclusion of a speech made last week in Madrid by Mr G. P. Wethered, director of London Press Exchange's Intam, was that only in Britain had the use of television advertising developed into anything resembling an art.

He attributed this partly to local circumstances. Broadcasting authorities on the Continent with the frankly commercial outlook of the ITA contractors in Britain were mainly in countries with audiences too small to attract heavy advertising (this may change if Holland starts commercial television). In countries with potentially big audiences, like Germany and Italy, broadcasting was in the hands of public corporations that tend to take a stuffy view of TV commercials and to give them only a meagre ration of time. But some of the blame he reserved for the TV salesmen, who do not do as much research into their television audience as the commercial contractors do in Britain. And they are lackadaisical, according to Mr Wethered, because they do not have to compete for audiences as the ITA contractors have to compete with the BBC and are therefore not particularly concerned to find who watches what and when they do it. Yet, continued Mr Wethered, warming to his subject, this kind of analysis can prove that television advertising is cheaper in terms of the people it reaches than competing forms of advertising and he proceeded to prove it with examples from Italy, where there is a mass television audience, and Spain, where there is a predominantly middle-class one. An invasion of the Continent by the advertising managers of British companies, primed to the teeth with audience ratings and cost comparisons and media analyses is likely to have interesting results.

SHORTER NOTES

Holders of about 40 per cent of the capital of Doom Dooma have accepted the offer of 55s. per £1 unit made by Brooke Bond which has declared its offer unconditional, and extended the period of acceptance until October 3rd. The Doom Dooma directors have invited a director of Brooke Bond to attend a meeting with their advisers and in the meantime advise shareholders who have not accepted the Brooke Bond offer to await a further communication.

★

While maintaining the interim dividend at 3 per cent the directors of Cammell Laird anticipate that profits in 1961 will be appreciably lower than those for 1960. They warn shareholders that it is unlikely that the last year's total dividend rate of 12 per cent can be maintained.

★

The boards of Metropolitan Estates and Property Corporation and Town Investments have started discussions which may result in an amalgamation. This would create one of Britain's biggest property groups with assets of over £41 million and extensive interests in London, the Provinces and in Canada.

Threlfall's Brewery and Chesters Brewery, which both operate in Lancashire and Cheshire, have announced merger proposals. One £1 Threlfall's ordinary share is offered for every two 5s. shares in Chesters, which values each share at about 43s. 6d. and the total Chesters' equity at over £6½ million. It is proposed that the name of the new company should be Threlfalls Chesters.

★

Three Australian mining companies, Western Mining, Broken Hill South and North Broken Hill, are to make rights issues raising a total of £A6.6 million in order to finance their participation in the £A44 million Western Australian aluminium venture. The balance of the capital will be provided by Aluminium Company of America, which will hold 51 per cent. of the equity in the project.

★

Schweppes and J. Lyons have announced a marketing agreement by which Schweppes' Suncrush and Kia-Ora fruit drinks and Lyons' Sunfresh will share a common sales organisation. From January 1, 1962, the three drinks will be marketed in England and Wales by the Rose Kia-Ora Sales Company.

SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail UK and Canada £4 . 10 ; elsewhere overseas £5

By air see below

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. *Airmail is invariably more expensive but usually* quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

COMPANY MEETINGS

UNIGATE LIMITED

UNITED DAIRIES — COW & **GATE**

SOLID AND STEADY PROGRESS

EXPANSION OF RETAIL OUTLETS CONTINUES

MR G. IVOR PRICE ON INCREASING POPULARITY OF GROUP'S PRODUCTS

The second annual general meeting of Unigate Limited was held on September 22nd at Grosvenor House, Park Lane, London, W1, **Mr G. Ivor Price**, chairman and managing director, presiding.

The following is the statement by the chairman which had been circulated with the report and accounts:

Ladies and Gentlemen,—I regret to have to say that Mr J. T. McLaughlin died in November of last year. He joined Cow & Gate Limited as a clerk in the Cost Office in 1922 and reached the Board of that Company in 1958, becoming a director of Unigate Limited on its foundation. We miss his counsel, founded on his wide experience.

It is also my sad duty to report the death in July this year of Major J. Gordon Stokes, DSO, MC, who was a director of United Dairies Limited from 1929 and a Manager Director from 1936 to 1946. In all he had served for fifty-three years.

On retirement from management he continued as an ordinary director and became a director of this Company on its formation. He was one of the foremost experts in the country on butter and we shall miss the benefit of his great knowledge of this subject.

Your Directors have pleasure in presenting to you the second Annual Accounts of Unigate Limited and are now able to show the figures for 1959-60 alongside those for 1960-61.

The small increases of £4,938 in the amount of issued capital and of £15,062 in the share premium account are due to part of the consideration for the purchase of a business being paid *in shares.*

The long-term liabilities have been reduced by £323,098, mainly due to the redemption of the Aplin & Barrett debenture stock, so as to give us flexibility in dealing with the properties.

The profit before taxation at £6,150,939 compares with £5,773,668 for the previous year, while current taxation takes £2,791,448 against £2,739,067, leaving the profit after taxation £3,359,491 this year, an increase of £324,890. In addition tax releases were £198,408 (previous year £187,428).

An interim dividend of 5 per cent has been paid on the Ordinary shares and after payment of the Preference dividends *there is a balance* of £2,651,804. Your Directors recommend the payment of a final dividend of 9 per cent, absorbing £931,080 net. After these appropriations the carry forward is increased by £1,720,724.

You will have noted that the profits tax is increased by 2½ per cent, and there is to be a further increase this year of 2½ per cent, making a total rate of 15 per cent.

FINANCE

In view of the various re-arrangements and concentrations rendered necessary by the merger, our cash flow, i.e. depreciation and retained profits at £4,438,788, has not equalled the demands on our cash resources, and we must expect this tendency to continue for two or three years.

Subject to many reservations, we do not expect to seek *additional capital for the present.*

GENERAL OBSERVATIONS

The progress of the merger is continuing and the main operating divisions are maintaining their individuality, but exchanges are made between the divisions when it appears that efficiency can be increased and economies effected.

Milk production in the United Kingdom has reached record levels, 2,302,000,000 gallons (2,128,000,000 gallons in 1960), and it will be agreed generally that we have played our full part in the making and disposal of products.

During the year under review the price of butter continued to fall from the very high level reached at the end of 1959, but the price of cheese, after a sharp fall at that time, was maintained on a steady course.

It appeared at one time that the upward valuation of the guilder and mark would help the price of milk products, but a large increase in the production of milk powder in France, and its subsequent sale here at subsidised prices, has led to an application to the Board of Trade for relief.

The Government, in course of the annual price review, secured a promise from the National Farmers' Union that schemes for altering the method of payment to farmers for milk should be examined. At present the returns from the sale of milk for liquid consumption and the conversion of milk in excess of the liquid market's requirements into various products are pooled and the farmers paid accordingly. As disposals through lower-priced products increase so is the pool price depressed.

The apparent remedy suggested by the Government for examination was a two-tier price, that is a lower price for milk in excess of a stipulated quantity, presumably based on past production. We would be sorry to see some such manoeuvre result in a disturbance of the balance of supplies and in a reduction of the quantity of milk produced, particularly in view of the efforts and expenditure made by the industry to cater for an increasing supply.

We have supported at considerable expense the programme of the National Milk Publicity Council and are glad to see an increase in the national consumption of milk. Every effort is made to stimulate our salesmen's interest in selling milk, cream and other dairy products.

Rationalisation between the divisions of the group has enabled us to close several depots in the London area. Our policy of adding to our existing businesses both in London and the provinces as opportunities occur continues.

The selling prices of milk are prescribed by the Government and it will be interesting for you to know that the margin allowed for the processing and retail distribution is approximately 50 per cent. above that ruling before the war. I do not think there is any other trade, or industry, which can claim to operate on so modest an increase in remuneration. I feel that the net margins are totally inadequate, particularly having regard to the greatly inflated costs of capital equipment—the so-called permitted target of net profit is one farthing per pint. In London, where costs are greater than the average, this figure is not attainable.

It is our policy to modernise retail shops with self-service facilities in suitable districts and those already completed have achieved increased sales. At the same time we are closing those shops which cannot compete with the increased costs continually pressing on the tradesman.

I should like to make it clear that our retail businesses are concerned mainly with the delivery of milk and milk products.

NEW ACQUISITIONS AND SALES

We have acquired the wholesale and retail dairy businesses of Bishop's Stortford Dairy Farmers Limited which adjoin the Lea Valley Dairies Limited area, and this has enabled us to complete our main arrangements in Hertfordshire and North Essex.

The retail business of Devonshire Dairies (Swindon) Limited, and other businesses in Swindon, have been acquired with the object of assisting our depot at Wootton Bassett, which is within easy reach.

We have re-organised the grocery businesses of Aplin & Barrett Limited and have disposed of the meat product and bacon factories of Brown, Wills & Nicholson Limited (one of the subsidiaries of Aplin & Barrett Limited). This company continues, however, as a wholesale grocer. A new warehouse building at Yate (Gloucestershire) has been adapted to replace the out-of-date premises in Bristol used by Gardners (Bristol) Limited (another subsidiary of Aplin & Barrett Limited).

In South Wales and Monmouthshire we have bought H. Kibby & Sons Limited, a retail grocery business, which will work in with Jones & Porter Limited, a subsidiary of Aplin & Barrett Limited.

Exchanges within and outside the group have

enabled us to close the country creameries at Corfe Castle, Yetminster, Tiverton and Frome, and we have acquired a creamery at Dorrington in Shropshire.

Alterations and extensions to our creameries are in progress at Wellington, Somerset; Davidstow, Cornwall, and St. Erth, Cornwall; in the latter case to handle the group's intake in West Cornwall.

BRANDED GOODS SALES

As explained last year, the wholesale selling of dairy produce has been integrated into the companies Unigate (Dairy Sales) Limited and Unigate (Milk Products) Limited.

We are constantly improving our service and sales of most lines are increasing satisfactorily—I refer in particular to Farmers' Wife Double Devon Cream; St Ivel pastes and Wilts "Golden Regal" evaporated milk.

There is considerable interest in our ice-cream powder, sales of which continue to expand. Bulk supplies for ice-cream manufacturers are sold under the brand name "KREEMIX", and for the production of ice-cream in the home we are marketing "READYMIX," which is becoming increasingly popular.

COW & GATE MILK FOOD

Home Sales: Sales of Cow & Gate infant milk foods and cereals continue to show a steady increase.

The Cole quadruplets of Glasgow, who were the ninth set of quadruplets to thrive on Cow & Gate, have now passed their second birthday and are healthy and delightful children.

During the year no fewer than 54 sets of triplets were known to have been brought up successfully on Cow & Gate.

Exports: Exports of milk foods and dairy products have increased by approximately 10 per cent. and concerted efforts are being made to expand this business.

Trufood Limited: This Company, which markets popular milk and vegetable foods for babies, has now made a success in its campaign with foods for juniors, that is those who have just emerged from babyhood.

OVERSEAS INTERESTS

Our businesses in Australia, Canada and New Zealand continue to play their part in our organisation under very able directorates in those countries.

On the manufacturing side our Commonwealth interests have been extended by taking shares in creamery businesses in Kenya and Nigeria.

Mr Ernest Taylor undertook an arduous journey at the beginning of the year to the East and to the Antipodes. Mr Pocock, Mr Raymond and I have been to the United States and Canada, while Colonel Gates and Sir Charles Taylor have been to Nigeria to complete arrangements with the Northern Region Development Corporation jointly to form a new Company to be called Nigerian Creameries Limited, to take over the existing dairy and dried milk scheme at Vom, Northern Nigeria.

EUROPEAN COMMON MARKET

The possibility of this country entering the Common Market and its effect on the various interests of the Company is being considered. If the traditional supplies of butter and cheese from the Commonwealth were to lose their preferential position, obvious difficulties lie ahead. On the other hand, we are well equipped

to take advantage of any opportunities that may present themselves of entry into the Market with both consumable products and machinery.

ENGINEERING AND TRANSPORT COMPANIES

The Dairy Supply Company, makers of milk churns and a variety of galvanised wire crates for a number of trades, as well as fabricators in stainless steel, had a good year with record turnover.

The UD Engineering Company, makers of industrial refrigeration plant, also bottling plant for dairies and breweries, had a record turnover but additional costs reduced margins.

About half of this Company's production in terms of value is for export. There is a substantial trade with the USSR and the Company had a successful exhibit at the British Trade Fair in Moscow. One of our Managing Directors of the parent company attended.

The Mickleover Transport Company has a full order book for bodies for motor and electric vehicles for associated companies and outside firms. The factory which deals with glassfibre vehicle bodies and insulated containers is extremely busy.

Wincanton Transport & Engineering Company has rendered invaluable service both to the members of the group and to outside customers, and is expanding its haulage business.

Other Transport and Engineering Businesses.—The above four companies are mentioned by name because they are the largest, but other companies in the group are also engaged in engineering and transport and their experiences have been similar.

LABORATORIES AND RESEARCH

The Control Laboratories, to be found wherever milk is received, continued their vital work of checking the incoming supplies and outgoing products.

The Group's Research Laboratories have again carried through a heavy programme of fundamental research and pilot investigations. As these activities are growing in volume it appears necessary to add to our resources. This matter is receiving urgent consideration.

PENSIONS

The Operatives' Pension Scheme, to which reference was made last year, is now in operation and we have made arrangements to secure uniformity throughout the group in recognition of long service.

STAFF

I wish to record the gratitude of the Directors to the staff in all grades for loyal service throughout the year. It is difficult to recruit suitable or sufficient entrants to this trade because our labours are spread over the whole 365 days of the year without respite. During an epidemic, such as occurred at the beginning of this year, only the willingness of many to sacrifice their leisure enabled us to maintain our daily service.

PROSPECTS

When questioned at the beginning of the year about the Company's prospects I replied, on behalf of the Board, that we do not expect spectacular results, but hope to achieve solid and steady progress. There seems no reason, other things being equal, to change that view.

The report and accounts were adopted and the dividends, as recommended, were approved.

BRAITHWAITE & CO. ENGINEERS LIMITED

ANNUAL GENERAL MEETING

The Fortieth Annual General Meeting of Shareholders of Braithwaite & Co. Engineers Limited was held on September 21st at Dorland House, 14-16 Regent Street, London, S.W.1. **Mr J. Harvey Humphryes, AssocICE, MIStructE,** the Chairman, presided.

In his Statement, copies of which had been circulated to the Shareholders, the Chairman said that the year's accounts were seriously affected by the results of contracts which had to be taken at extremely thin prices or not at all during the recession in the structural steel industry. The Company's structural order book is now in a much healthier condition.

After charging taxation for the year the resulting nett loss of the Group was £37,710 compared with a profit of £45,706 for the previous year.

Resolutions were unanimously passed for the adoption of the Report and Accounts, the confirmation of preference dividend already paid in respect of the year ended March 31, 1961, the payment of a final dividend of 5½ per cent, less tax, making a total of 8 per cent, less tax, for the year on the Ordinary Shares and a capital distribution of 2 per cent on the Ordinary Shares.

Mr J. Bickley, Mr H. W. T. Hain, CBE, and Mr P. Goffey were re-elected Directors.

The proceedings terminated with votes of thanks to the Chairman, staff and workpeople.

BRITISH HOMOPHONE

The annual general meeting of The British Homophone Company Limited was held on September 22nd in London.

Mr J. Lesser, chairman and managing director, in the course of his speech, said:

The profit of the Group after taxation amounts to £30,009 against £27,728. The profit of the parent company, The British Homophone Company, Limited, after taxation, etc., is £6,119 as compared with £8,715. The net profit of the Company, including the Ebonestos Industries Limited dividend of £10,365 net, is £16,484 against £15,625. The subsidiary companies show an increase in profits. The consolidated balance sheet of the Group shows a sound financial position, the net liquid assets being £179,080 against £158,891.

Ebonestos Industries Limited: The internal figures available to the Board concerning Ebonestos Industries Limited indicate that this Company's figures are being maintained for the current year, and in fact the orders in hand position is even somewhat stronger than at the same time last year.

The British Homophone Company Limited: In 1959 a nationally known public company entered the gramophone record industry and substantial pressing work was then placed by them with your Company. In 1960, the Company in question decided to withdraw from the market and subsequent to this, and in consequence thereof, in the year under review your Company suffered a fall in turnover and trading profit.

The directors are always investigating avenues that could lead to increases in trade for this Company.

The report and accounts were adopted.

NIGERIAN ELECTRICITY SUPPLY CORPORATION

A VERY SATISFACTORY RESULT

The thirty-second annual general meeting of Nigerian Electricity Supply Corporation, Limited, was held on September 26th in London, **Sir Miles Clifford, KBE, CMG** (the chairman), presiding.

The following is an extract from the Chairman's circulated review:

The past year has been in many respects a very satisfactory one. We sold some 83,431,474 units as against 51,572,369 in 1959-60—an increase of 61.7 per cent—while revenue, for the same period, stood at £424,710 compared with £289,465. Your Board has, in consequence, recommended a final dividend of 8½ per cent and a bonus of 1½ per cent, making a total distribution for the year of 14 per cent.

This agreeable result was due, of course, to two factors—the lifting of the Tin Export Control measures on October 1st and to the increase in the price of tin which spurred mining companies to even greater efforts; and but for the fact that we are short of water and have no reserve of power, there is no doubt that we could have looked for even better results. There is no present indication that the demand for tin is likely to fall off—all the evidence points to the contrary, indeed—so that we may look for a continued high level of production and also for a steady increase in non-mining demand. We are advised that the requirements of the Government-owned Electricity Corporation of Nigeria, to whom we supply in bulk, will increase over the next ten years by approximately 15 per cent per annum, and that industrial development on the Bauchi Plateau is going ahead. If, therefore, we can keep pace with these trends the outlook is promising.

So far as shortage of water is concerned, you will be glad to know that the immediate difficulty has been overcome as work on the new dam at Ankwill is now complete; but the problem of adequate generating resources remains as serious as ever. Your Board has long recognised the need to make an additional 6,000 kW available at Jekko 1 and had laid its plans to this end, but they could not be carried out during the tin recession and will now take approximately 32 months to complete.

In these circumstances we have sought permission to establish a thermal plant at Bukuru which will tide us over until the extension to Jekko 1 is completed and will, thereafter, provide us with the necessary "stand-by." This thermal station will have an initial capacity of 4,220 kW at an estimated cost of £250,000, which will be paid for out of reserves.

I have referred before to the obsolescence of some of our existing plant which provides another and compelling argument for the proposed extension at Jekko 1, as this will lead to an improvement both in efficiency and economy. As to the financing of this project, I am happy to say that our Bankers have made facilities available to us which, with our own resources, will enable us to handle it without resort to the market.

You will see in this, as your Directors would wish you to see, an expression of confidence in the future of Nigeria; we have been intimately associated with what is officially known as the Northern Region since 1929 and we are proud to have this opportunity of assisting its development now that Nigeria has become independent.

The report was adopted.

W. E. SYKES LIMITED

(Machine Tool Makers)

LARGER TRADING PROFIT

The Annual General Meeting of W. E. Sykes Limited was held on September 22nd at Staines. **Mr Robin Brook, CMG, OBE,** the chairman, presided and, in the course of his remarks, said:

During the year the company suffered a grievous loss in the sudden and tragic death of its chairman, The Rt Hon Lord Trefgarne, who had been associated with the company since 1945, and his leadership in the guidance of the company's affairs will be very much missed. Lady Trefgarne and myself have been appointed to the board and I have been elected chairman. Mr E. J. Stanton, who has been associated with the company since 1938, is retiring from the board; fortunately his knowledge and acumen will still be available to us on a consultative basis.

Group Accounts

The board has made a fresh valuation of the buildings and plant at Kendall & Gent and its subsidiary resulting in a surplus over the purchase price of £276,981. It is intended to revalue the remaining fixed assets of the group in the current year.

The trading profit for the year amounted to £321,583, against £241,740 for 1959/60, from which depreciation of £70,517 (1959/60, £65,897) and bank interest of £40,952 (1959/60, £21,360) have to be deducted. Investment income totalled £10,174 against £137,147 in 1959/60, the latter figure including a non-recurring special receipt of £135,535.

The increase in bank borrowing is a corollary of the increased turnover. Although this is normal and temporary, we have still to deal with the funding of the special loan to finance the cash element of the purchase of Kendall & Gent.

W. E. Sykes Limited

In common with the rest of the machine tool industry, we have found that there is a growing demand for machine tools with special features which have hitherto proved to be less remunerative than standard machines. New designs have been well received and orders taken absorb our ability to produce them for some time ahead. There has been an active demand for small tools also. We have continued to make our full contribution in the world-wide export markets, which account for over one-third of our total turnover.

Kendall & Gent Limited

The profit of £17,364 is still far from commensurate with the assets at their enhanced valuation. While orders booked have substantially increased and many measures taken to strengthen both plant and management, it will be some time before these improvements are translated into profit. We expect however that the current year will more than cover the prospective depreciation charge, which will increase by some £32,000.

We are concentrating on improvements in design and the application of modern techniques to economise in production costs; indeed we are confident that the re-organisation of our planning and production methods already well under way will in the long term more than justify our investment.

Other Subsidiaries

Sykes Machine Tool Company Limited, which specialises in the sale of machine tools of great accuracy and high productivity, has made a useful contribution (£25,856) to the group profit, while the order book has lengthened.

Business in Australia may be more difficult to obtain during the current year but our branch results are expected to be satisfactory.

In North America concentration of a reduced staff in Detroit and Windsor has enabled us to economise while maintaining coverage for our products in both USA and Canada.

Future Prospects

The outlook is still hopeful for continued improvement, especially in the prospects for Kendall & Gent where the present return on the capital employed is so low. Our main difficulty is the familiar one of shortage of skilled labour.

In the perennial battle with increasing costs we have held our own this year. We have to expect still further pressure on margins since applications for higher wages and shorter working hours have been submitted at national level. Entering the Common Market will produce new hazards but also enlarge opportunities.

Orders are not deliveries and budgets are not results; but at present our order book is high and still rising and we are budgeting for a higher group profit in the current year. It should be borne in mind that a by-product of any revaluation must be an enhanced charge for depreciation, for which we shall have to provide approximately double the present amount next year. This rate will however be more realistic, not only in terms of the underlying assets, but also of the prospective requirements for normal replacement and for development to meet competitive conditions, on which we expect to spend some half-million pounds over the next three years.

Conclusion

I would like to express my personal appreciation of the assistance which the directors have given to me as a newcomer to the board and of the indispensable help given by Mr L. T. Harris pending my appointment. I should also like to express the directors' appreciation of the loyal co-operation and support which they receive from employees of the parent and associated companies at all levels.

The report and accounts were adopted.

ELECTRICITY

Another successful year and a tremendous growth in demand

Sales of Electricity and the Financial Surplus

The actual figure of surplus was £16.3 million, some £10 million less than the year before, due mainly to higher costs. Another reason was a fall of about 2 per cent in the average price per unit; this was because, through the operation of two-part or block tariffs, the average price to most consumers falls as their consumption rises.

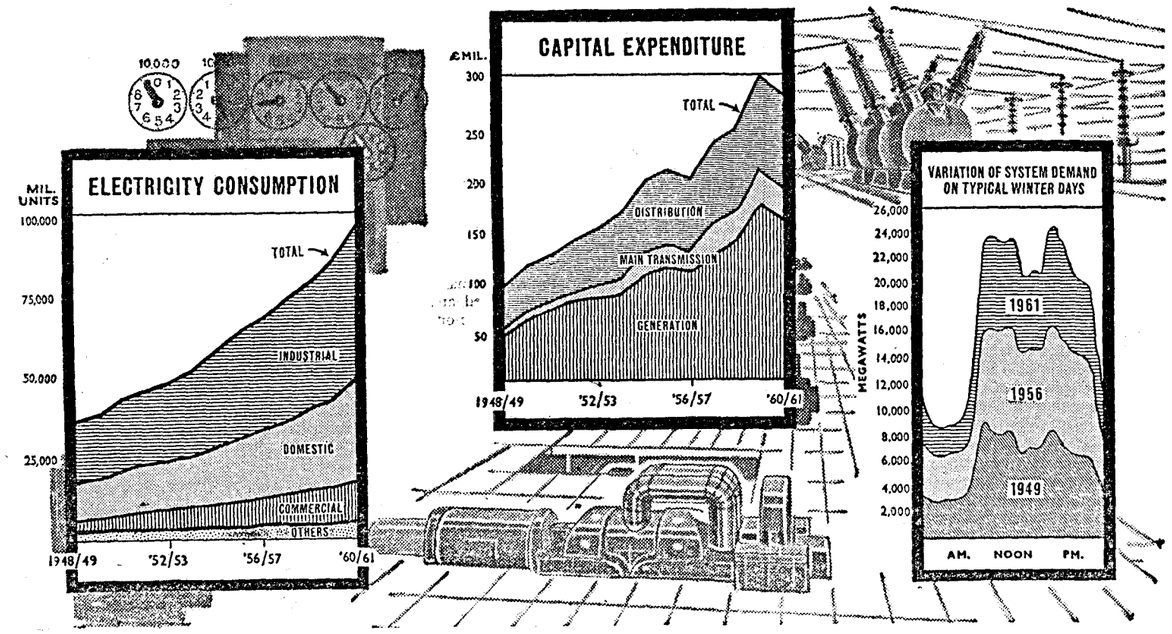
Sales of electricity were more than 12 per cent up on the previous year—greater than had been foreseen—but all demands had been met in full. However, this unexpectedly large growth in demand needed to be given special consideration when the industry was making its annual review of new construction programmes.

The Chairman went on to say that the trend in sales promised well for the nation. The use of more electricity meant greater productivity in industry, agriculture and commerce, and a higher standard of living generally. But the country should understand that a very heavy programme of capital expansion would be needed to keep up with the demand. This called for investment on an increasing scale.

How Much Capital?

Sir Robertson referred to the long-term capital development plans drawn up by the industry each year and kept under constant review. In 1958 it had become necessary to obtain increased borrowing powers. The plans at that time showed that £2,130 million of capital expenditure would be needed (at 1958 price levels) over the seven years to March, 1965. With regard to borrowings up to the end of that period, Parliament raised the ceiling of the industry's borrowing powers from £1,400 million to £1,800 million or whatever higher figure, up to a limit of £2,300 million, might be allowed by the Minister of Power with the approval of the House of Commons. At the end of March, 1961 the total borrowed stood at £1,624 million. The Electricity Council would soon be seeking permission therefore to proceed to the next stage of borrowing.

Self-Financing



So much for borrowing. The next question was: how much should the consumer contribute? When the seven-year programme was prepared in 1958 it was envisaged that depreciation provisions, surpluses and other internal resources would provide about 48 per cent of the total capital required. This proportion seemed to strike a reasonable balance between the consumers' interests and the need to limit borrowing.

Sir Robertson drew attention to the following table showing how closely actual results had compared with estimates over the first three years of the seven-year programme.

	1958-59 to 1960-61	
Capital Requirements	Estimated in 1958	Actual
	m.	m.
Generating Board	584	594
Twelve Area Boards	263	279
Working capital variation	3	(—) 29
	850	844
Financed from Depreciation provisions, surpluses and other internal resources	380 (44.8%)	385 (45.6%)
Net borrowing	£470 m.	£459 m.

More Power—More Plant

However, it was now very clear that the rise in electricity consumption could not be satisfied without acceleration of plant construction programmes. It was expected that the industry would have to face a maximum demand of over 33,000 MW in the winter of 1964-65—more than 12 per cent above the forecast made in 1958—and the most recent estimates suggested that subsequently, in the two years to 1966-67, it would rise by a further 5,000 MW.

The Annual Report of the Electricity Council was presented in London on Sept 26th by the Chairman, Sir Robertson King, K.B.E.

Sir Robertson said that the financial year ended 31st March, 1961, had at least two features of some significance. The electricity supply industry had as usual shown a surplus after payment of all interest charges; and the increase in sales of electricity was the highest for ten years.

SIR ROBERTSON KING, K.B.E.

In order to meet the necessary programme of power stations (conventional and nuclear), transmission lines and distribution systems, the estimates made in 1958 would have to be increased by some £200 million to cover the period to the end of 1964-65, and the continued rise in maximum demand would call for an outlay in excess of £400 million a year on fixed assets in the succeeding two years.

Sir Robertson pointed out that to reach the degree of self-financing involved, increasing surpluses were needed year by year, these surpluses, together with provisions for depreciation, being the main source of finance from internal resources. For this reason, and to cover increased costs of over £20 million per annum from wage and salary increases and a rise in coal prices, the Boards had been obliged to announce increases in most of their tariffs. Even so, these new tariffs had not taken into account cost increases of approximately £10 million per annum, arising from changes in the tax on fuel oil in the Finance Act, 1961.

Planned Surpluses

If cost increases, as they occurred, were not balanced by new revenues or even greater economies, more money had to be borrowed. The self-financing programme depended on achieving planned surpluses.

The term "surplus" did not imply something over and above the needs of the industry. It was a contribution from revenue to capital development.

The additional capital requirement of £200 million above the forecasts to 1964-65 and the heavy programme foreseen for subsequent years called for a full financial review, which was taking place in the setting of the Government's White Paper on the Financial and Economic Obligations of the Nationalised Industries. As a result financial objectives for the Boards would be determined for a period of five years, subject to review annually, within a framework settled with the Minister of Power. For the industry as a whole this would call for increased annual surpluses during the period. These higher surpluses would be essential if the industry were to achieve a financial performance in accordance with the requirements of the Government's White Paper and if it were to find the capital resources it needed, while keeping its borrowings within manageable limits.

Increased Prices not Automatic

The Chairman explained that the electricity supply industry did not think in terms of automatic increases in prices to cover increases in costs. There was ample evidence of this. Over the last ten years or so, power station fuels had risen 60 per cent in price; the cost of mechanical and electrical engineering materials had risen by 60 per cent and 40 per cent respectively; building and civil engineering costs had increased by more than 35 per cent and the interest rate on borrowed capital had nearly doubled. Against these increases, the industry had brought to bear considerable advances in technology, in the use of manpower and management techniques. As a result, the average price per unit of electricity sold to consumers as a whole in 1960-61 was kept down to 1.480d. as against 1.188d. ten years ago, an increase of no more than 25 per cent. It could be demonstrated that in relation to the overall level of retail prices electricity was actually 16 per cent cheaper. The Council considered it part of their duty to make known at every level in the industry how large a proportion of the nation's capital was going into electricity supply and the importance of ensuring that the most economic ways of deploying it were found.

Most Effective Use of Capital

The capacity of the supply industry was more fully used than most capital assets in British industry. Power station plant installed during the last ten years or so had worked on a year-round average of 100 hours per week. In addition there were special projects designed to ease the problem of meeting the daily peak loads. For example, the 300 MW pumped storage scheme at Blaenau Ffestiniog would enable electricity to be generated at peak hours by means of water previously pumped up to a high level reservoir by the most economical stations in off-peak hours. And again, the cross-Channel link with Electricité de France would be coming into commission soon. Because of the differences in the incidence of peak demand in the two countries, 160 MW of load could be transferred in either direction, with savings to both parties.

These were on the production side. So far as the customer was concerned the Area Boards were active in promoting those uses of electricity, such as refrigeration and water heating, which helped to create a balanced load. Even more important, they encouraged the wider use of storage heating and new industrial techniques with loads occurring in off-peak periods, or which permitted load reduction at peak times. Following the introduction of special terms for supplies made available during specified off-peak periods, there had been a spectacular increase in the number of off-peak units sold.

Constant Search for Consumer Benefits

Sir Robertson King, who retires from the chairmanship of the Electricity Council on 31st December next, said that he could talk at length about other major achievements of the industry. Such features as: the completion of a rural electrification programme by which supply had been brought to 85 per cent of all farms in England and Wales; the continuing improvement in the thermal efficiency of power stations; and the increasing output of the industry as related to the number of employees. He could also refer to some of the major problems facing the industry. In particular, the difficulty of achieving a reasonable balance between the development of an economical supply system and the effect of such development on the beauty of the countryside and other amenities. The industry was facing up to these and other problems and the striking growth of the research programmes, now running at over £2½ million a year on revenue account, testified to the constant search for new, improved and cheaper ways to serve the electricity consumer.

TRADING RESULTS

THE ELECTRICITY COUNCIL

ANGLO-CEYLON & GENERAL ESTATES

A DIFFICULT YEAR

The Seventy-fifth annual ordinary general meeting of The Anglo-Ceylon & General Estates Limited was held on September 26th in London.

Mr Francis W. Douse (Chairman), in the course of his speech, said: For the year ended 31st March 1961 the results of the overall operations of the Group showed a trading profit of £963,181 as against £1,108,557, resulting in a net profit to the company of £379,769 against £462,709 for the previous year. After making certain minor adjustments in connection with tax there is an available balance in the Profit and Loss Account of £705,772 as against £688,203 last year. A small transfer to Staff Contingency Fund of £15,000 has been made and the dividend we are recommending is the same as for last year, namely, 2s. per 5s. unit. The dividend is only just about covered but we do not consider this to be unsatisfactory considering the difficult year through which we have passed.

It is a disappointment to me personally that I should this year have had to place before you results which show a falling off from those of the past few years through circumstances beyond the control of the Board.

Referring to Mauritius, you will recollect that in 1959 the crop of sugar produced by Mauritius was an all-time record at nearly 580,000 tons, of which the Company produced in total 70,900 tons. Unfortunately, following the two disastrous cyclones in 1960, the sugar crop for that year for the Island amounted to only 235,600 tons, the lowest since 1945 when the crop was seriously affected by the then incidence of three cyclones. The Company's outturn for 1960, including Mon Tresor & Mon Desert Ltd., was 22,829 tons. I mention these figures to emphasise the extent of the disaster which the Island had to suffer.

Now as to affairs in Ceylon I am glad to say that as far as our Company is concerned, in the year under review there has been further progress agriculturally and the new system of agricultural control and local management has proved satisfactory. I would like here to mention that I am very appreciative of the advice which our Agricultural Managers have given us and of the great interest which they and the Estate Superintendents have shown in the working of the Estates. As you will have seen in my factual report issued with the Accounts, a record crop of Tea was harvested.

CURRENT YEAR

Now as regards the prospects for the current year. In respect of Mauritius, a reasonably good tonnage of cane is expected to be harvested but weather conditions have so far not been as favourable as we could have wished but at this stage it is not easy to estimate what the actual outturn of sugar will be. The sucrose content of cane was abnormally low at the commencement of the cropping season but it now shows some signs of improvement.

As far as Ceylon is concerned, our crop of Tea to date shows an increase of some 200,000 lbs. and costs are therefore lower than last year. Market conditions, however, up to the present have not been favourable owing to larger world production of Tea and we can only hope for an improvement in the second half of our current year.

I can assure you that everything is being done to work as economically as possible and to control expenditure in order to be prepared for contingencies which can arise in these difficult political times.

The report and accounts were adopted.

ASSOCIATED BRITISH FOODS

Another Year of Record Achievement

Sales Increased by £20 Million to £163 Million

The following are extracts from the Statement of the Chairman, **Mr. W. Garfield Weston,** circulated with the Report and Accounts, of Associated British Foods Limited for the year ended 1st April 1961.

The most encouraging feature in another year of record achievement has been a further increase in our total sales from £143 million to £163 million. The gross profits of the group before depreciation and taxation amounted to £12,775,000 and this exceeded last year's gross profits by £1,304,000. Our contribution to the National Exchequer in the form of direct taxation again absorbs over 45 per cent. of our net profits and this proportion is likely to rise next year when the second successive annual increase in profits tax becomes effective.

This year has again been one of considerable expansion in all spheres of our activities and our expenditure on new and replacement capital assets of one kind and another exceeded £12 million. Capital Commitments at the beginning of April 1961 amounted to approximately £5,500,000.

Trading Policy

Because I believe so strongly that the customer is of paramount importance I make no excuse for repeating in substance what I said last year on this subject. We believe in quality of product and service and we do our best to maintain these at the highest possible levels. We make every effort to improve efficiency at all stages of manufacture, distribution and selling and we are determined to maintain the goodwill and satisfaction of all our customers.

We have, to the best of our ability, countered increasing costs of raw materials, labour, etc., with a concentration on still further improving our manufacturing and distribution techniques but certain price increases have been unavoidable. Nevertheless, these have been kept to a minimum and our present margin of profit—about 6¾d. for every £1 of sales—is evidence of our determination to make an influential contribution to the economic stability of the community.

I would emphasise that our increased profits come from increased sales and greater efforts and not from increasing the profit margins on our sales.

Although we have spread our activities into many different sectors of the food industry the Bakery Division still forms the major part of our organisation both in sales volume and in profit earning capacity. We are continuing to expand this part of our business.

Again this year I am happy to report that we have succeeded in increasing our share of the total biscuit market. The biscuit division has, this year, increased its contribution to group profits and we can look forward with confidence to further progress in this direction.

Both the wholesale and retail sections of our grocery trade have made good progress during the year.

Our overseas subsidiaries are allowed to retain all their profits for expansion, and a substantial part of the £2,000,000 cost of new acquisitions last year was incurred in Australia and New Zealand. We can be proud of the progress made by our companies overseas.

The Future

If our present progress is maintained and if there is no serious economic setback our profits will again show a substantial increase this year. Our plans are long term and far reaching and I personally have the utmost faith and confidence in the great future of this organisation.

We have unrivalled experience, we have competent and progressive management, we have adequate financial and other resources —all the ingredients necessary for development. I said last year that we set no boundaries to our progress—nothing has happened to change our views on this, rather would we underline the phrase.

NYASALAND RAILWAYS LIMITED

The 30th annual general meeting of Nyasaland Railways Limited was held on September 27th in London, **Mr W. M. Codrington, CMG, MC** (chairman and managing director), presiding.

The following is an extract from his circulated statement:

Last April our colleague Mr A. E. P. Robinson was selected by the Federal Government to represent them as their High Commissioner in London and therefore resigned from the Board. We shall miss his wise counsel but wish him every possible success in the difficult assignment which he has undertaken at a critical moment in the history of the Federation. In order to maintain the Company's representation in Salisbury, we have been fortunate in securing the services of Mr E. S. Newson, OBE, General Manager of the British South Africa Company in the Federation, to be a Local Director. He has already shown much wisdom in the handling of our affairs.

In September, 1960, Lord Rupert Nevill was appointed a Director of the Company to fill the vacancy caused by the death of Mr Christopher Holland-Martin. In recent months, Mr W. E. A. Robinson and others associated with him have acquired a substantial holding amounting to some 45 per cent of the publicly-held shares in this Company; and he has informed us of his intention to propose himself and Mr R. F. Norman for election to the Board of the Company at the Annual General Meeting. In these circumstances, Lord Rupert Nevill has intimated his intention not to seek confirmation of his appointment to the Board.

Operating receipts amounted to £1,171,639 compared with £1,104,740, an increase of 6.06 per cent. Expenditure, unfortunately, rose by £78,667 to £1,061,258, an increase of 8.01 per cent, leaving a net operating surplus of £110,381 compared with £122,149 in 1959, a decrease of 9.63 per cent.

We have been able to recommend a distribution to the Ordinary Shareholders of 6 per cent for the year.

In my statement last year I emphasised the degree to which the prosperity of our Company depended on confidence in the future of Nyasaland and the prospect of political stability.

YEAR OF UNCERTAINTY

The year under review was one of uncertainty and waiting. As a result, with the exception of Government schemes largely financed by the Federal Authorities, capital investment by commercial interests declined almost to vanishing point. The result of this can be seen in the reduction of our receipts from the carriage of imported capital goods. There was an increase in the carriage of local products, thanks to a favourable growing season; but since these products are in general carried at low rates, the unavoidable result was an unwelcome rise in our operating ratio.

Increases in operating costs, particularly wages, have been accentuated during the present year. In fact, during the last five years our increased traffic earnings have been more than overtaken by increased operating costs, and we were left with no alternative but to introduce a general increase in rates (the last increase was in 1953), which became effective at the beginning of January this year.

During the latter part of the year we had to face a mass walk-out on the part of almost all of our African staff. This is the first time this has happened in the history of the Railway. Since the railways are specified as an essential service under the Law, this stoppage was, to start with, illegal. But later on, the Government recognised the existence of a trade dispute and appointed an Arbitrator who awarded appreciable increases in wages to certain of the lower-paid categories of our African staff. The effect of this award on our operating costs has made it necessary for us to apply to the Federal Government for permission to impose a further increase in rates.

I would, however, at this point, like to pay tribute to all the members of our staff of all races who continued at work during the strike and assured the transport of practically the whole of the traffic which was offered to the Railway. Their determination, loyalty and hard work are beyond praise.

You will all have knowledge of the Report of the Monckton Commission. In general it emphasises the economic advantages to Nyasaland of continuing in the Federation; but this view is not accepted by the dominant African Nationalist Party in Nyasaland, chiefly because of a fear that any political association with Southern Rhodesia would imperil the social and political advancement of Africans. We naturally hope that progress in Southern Rhodesia towards a more liberal treatment of African interests will allay the fears now harboured by African leaders in Nyasaland.

The need for development, particularly in the fields of education and agriculture, is very great. In a few weeks a new Government will be elected in which Africans will enjoy a preponderant voice in the legislature. The biggest problem which will confront them will be how to accelerate development—particularly in the directions I have mentioned—having regard to their express opposition to any form of co-operation with the Federal Authorities. This is scarcely less important than the efficient discharge of their duties in relation to the internal administration of the territory in which they will enjoy, not only the assistance of trained administrators, but the support of all interests who, like ourselves, have the future of the country and its inhabitants, of whatever race, very much at heart. Happily, there is every reason to hope that Dr Banda, who leads the dominant Malawi party, is fully alive to these important factors.

Although in recent years we have spent considerable sums out of our retained earnings on the improvement of the railway, there still remains an urgent need for a fresh infusion of capital. But this will not be possible until the economic and political state of the country is more stable.

During the current year increased operating costs are by no means offset by increased receipts and this factor, combined with the prospect of decreased receipts in respect of arrears of interest on the Central Africa Railway Debentures indicates that the financial prospects of the Company at the moment look none too good. But we, and our Management, are alive to the difficulties that face us and have every faith in the future of the Company, provided that political stability is attained and that the economic development of Nyasaland is resumed.

The report and accounts were adopted.

WM. CORY & SON, LIMITED

VALUE OF DIVERSIFIED ACTIVITIES

The Honourable F. A. Leathers, the Chairman of the Company, presided on September 21st at the sixty-fifth Annual General Meeting of Wm. Cory & Son, Limited, held at Cory Buildings, Fenchurch Street, London, E.C.3.

The following is an extract from his Statement circulated with the report and accounts:

Bearing in mind that trading conditions have been seriously upset by industrial unrest at home and economic uncertainty in overseas trade, the results are not unsatisfactory, mainly because of diversity of the Group's activities. The coal side of the business has improved as a result of concentrating our facilities in the Thames to the minimum essential for the servicing of the coal.

Our collier fleet has had to contend with the steadily reducing tonnage of seaborne coal. In addition, the shipping industry has had to bear the losses arising from the seamen's strike in the summer of 1960. During the year the *Cornmill* and *Cormarsh* were sold.

The coastwise tankers have traded at an increased profit.

Two deep sea tankers have continued to trade at rates which have barely covered operating costs. The third does yield a modest return.

The ore-carriers of The St. Denis Shipping Company have been trading satisfactorily under charter to B.I.S.C. (Ore). The fourth ship will shortly be going into commission.

The Group interests in towage and lighterage have, in the main, made an increased contribution. In order to promote more efficient management and operation, it was decided to amalgamate the general goods interests of three subsidiaries.

The river Thames has been beset by a series of unofficial strikes. The result has been that the activities of the subsidiaries which operate on the river Thames under the management of Cory Associated Wharves have fallen somewhat short of our expectations. On the other hand, its subsidiary operating warehousing, clearing and forwarding, largely outside London, has made a greater contribution. We are actively pursuing our policy of developing further this side of our business in provincial centres.

Cory Sand & Ballast Company were able to maintain the improved results of a year ago. The new sand dredger is about to be delivered. The shore facilities will be augmented by a further installation at Poole.

The oil distribution side has produced a higher turnover of petroleum products, not without increased overhead costs in a very competitive market.

The oil bunkering section has made an almost identical contribution compared with the previous year.

The Board is studying the implications for your Company of a possible entry by the United Kingdom into the Common Market. Every opportunity will be taken of increasing our business in Europe through our subsidiary and associated companies on the Continent.

I record a substantial improvement in the profits from our companies in Southern Rhodesia, Nyasaland and Moçambique. In South West Africa the results have been most encouraging.

The report was adopted.

VOKES GROUP LIMITED

(Specialists in Filtration & Silencing Equipment and other Specialised Engineering Products)

SALES AN ALL-TIME RECORD

Profit	... ...	£580,507 (£536,055)
Less Taxation	...	£265,593 (£225,022)
Net Profit	...	£314,914 (£311,033)

Recommended Final Dividend of 14½ per cent less tax, making with the Interim Dividend of 5½ per cent less tax a total Ordinary Dividend for the year of 20 per cent less tax £149,939 (£115,579).

The Twenty-fourth Annual General Meeting of the Vokes Group Limited was held on September 21st at Woking, **Sir Ian Stewart-Richardson, Bt** (Chairman), presiding.

The following are extracts from his circulated statement for the year ended March 31, 1961:

I feel confident that Shareholders will find the results shown satisfactory.

This is the first occasion that the Accounts reflect the reconstruction of the Company. On September 30, 1960, the name of the Company was changed to Vokes Group Limited and the trading activities of the Company were transferred to a new Company called Vokes Limited.

INCREASED TRADING PROFIT

There has again been a commendable increase in the trading profit, to which all Companies within the Group have contributed. In view of the increased uncertain political outlook in South Africa, it has been considered expedient to increase the Investment Reserve.

The increase in Trading Profit is in no way due to improved profit margins. In fact the opposite has been the tendency, due to the difficulty of recovering, within selling prices, increased production costs, which include a rise in wage rates affecting the period under review. The satisfactory results have been entirely brought about by increased sales, where, excluding inter-company trading, an all-time record was achieved, both as regards volume and value.

Referring to my remarks last year on the Common Market, it has been decided that the Company should proceed with its own arrangements and negotiations are well advanced for the acquisition of a substantial interest in a small engineering company within the Common Market area. It is felt that should the United Kingdom join this Market, an interest in such a manufacturing unit would still be advantageous.

As regards the current outlook, it is too early to judge the full effect on industry of the measures announced in the Chancellor's recent statement. At the present time there is a very satisfactory order book position sufficient to ensure full production in all companies of the Group for some months ahead. However, there is no doubt that the economies to be introduced and the curtailment of spending power at home, if effective, must reflect directly upon many of our customers, including Government Departments, and the cancellation of long-term orders under such conditions is always a possibility.

VALUABLE RUSSIAN CONTRACT

It is regrettable that the Chancellor's proposals again failed to include any direct incentive to export. However, in this connection, I quote a press release by the Company published on July 27th last:

"Vokes Group Limited announce that their wholly-owned Subsidiary Company Robert Kellie & Son Limited of Dundee, Manufacturers of Food Processing Machinery, have been awarded a contract by Technoprom-import, USSR, for the supply of the complete equipment for the storage of Potatoes and the manufacture and packaging of Potato Crisps, Potato Chips, and Potato Cakes. The value of the contract is £400,000."

I would again stress the vital importance of the extensive research and development work being continually carried out not only in the filtration field, although this still covers the largest part of the production, but also in relation to the other diversified products manufactured by the various companies in the Group. This is the life blood of our future and is imperative not only in maintaining these products in the pre-eminent position they undoubtedly hold, but also in meeting growing competition which will no doubt intensify should Britain join the Common Market.

The report was adopted.

LONDON SHOP PROPERTY TRUST LTD.

YEAR OF PROGRESS

The Thirtieth Annual General Meeting of London Shop Property Trust, Limited, was held on September 28th, in London, **Sir Cyril Black, JP, DL, MP, FRICS, FAI,** Chairman, presiding.

The following are the main features from the circulated statement for the year ended April 30, 1961:

I feel sure that Shareholders will be well satisfied with the results for the past year.

Capital Changes.—The capital of the Company has been reorganised, and the Stock which formerly consisted of units of £1 has now been converted into Shares of 5s. each. This change was undertaken to increase the marketability of the shares and their popularity with the investing public. The Freehold and Leasehold properties owned by our Property Investment Companies increased in book cost during the year by about £130,000.

Profits and Dividend.—The profit for the year after taxation rose from £48,087 to £62,232. An interim dividend of 4 per cent., less tax, was paid on 28th April, 1961, and, subject to the approval of the Shareholders, a final dividend of 6 per cent., less tax, will be paid.

New Developments.—Last year's profits do not represent the full earning potential of the Group, as during the year we received no income from our two major building schemes in Manchester and Bedford. We should receive the full benefit from these properties in 1962/63 and subsequent years.

The operations of this Group of Companies continue to prosper and we anticipate an expanding and progressive future.

The report and accounts were adopted.

COAST LINES LIMITED

The forty-eighth annual general meeting of Coast Lines Limited was held in London on September 26th. The Chairman, **Captain A. R. S. Nutting, OBE, MC,** in the course of his speech, said:

The Consolidated Profit and Loss Account shows that after providing for depreciation, future surveys and deferred repairs, the trading profit for the year 1960 amounted to £1,089,682 as against £1,194,100 in 1959. Our 1959 trading profit included a sum of £163,226 released from provision for surveys, deferred repairs and underwriting set aside in previous years in respect of ships sold during the year. Deducting this non-recurring credit from the profit of 1959 the comparison of the result of our trading in the two years is an increase in profit of £56,473 over 1959.

The net profit of the Company and subsidiaries amounts to £709,526 against £871,508 in the previous year. Deducting taxation deferred in respect of prior years, the proportion of profit belonging to outside members and amounts retained by subsidiaries, Coast Lines Limited is left with a net profit for the year of £457,656.

We have transferred £100,000 to Fleet Replacement Reserve and, after providing for the dividends paid on the Preference Stocks and the two interim dividends paid on the Ordinary Stock, as increased by the £1,000,000 issue in June 1960, there remains a surplus of £24,304 to be carried forward increasing the balance to £716,435.

The Report and Accounts were adopted.

R. G. SHAW & COMPANY

CONTINUED PROGRESS

The 20th annual general meeting of R. G. Shaw & Company Limited will be held on October 17th in London.

The following is an extract from the circulated review of the chairman and managing director, **Sir Harry Townend:**

The Group profits before taxation amounted to £415,008 as compared with £342,543 for the previous year. After deducting taxation there remains £203,767 as compared with £167,492 for last year.

Your Board is recommending a final dividend of 12½ per cent (making 20 per cent for the year).

From time to time, as the profits of the Group and the Capital employed in the business increase the Directors have recommended the issue of bonus shares to Members by the capitalisation of Reserves. In accordance with past policy your Board has had under consideration the capitalisation of £100,000 from share premium account and the issue to Members of one new share for each nine shares held, bringing the Issued Capital to £1,000,000.

It is now proposed to call an Extraordinary General Meeting before the end of the year to submit a resolution to this effect. A Capital of £1,000,000 qualifies the Company's shares to be considered as a Trustee investment.

Your Board wish to point out, however, that although it is anticipated that profits for the year to June 30, 1962, would enable the dividend of 20 per cent to be maintained on the Capital as increased, this may not be deemed advisable unless the Chancellor's request for dividend restraint is withdrawn.

H. S. WHITESIDE & CO. LIMITED

(General Food Manufacturers)

MR T. A. BARNES ON GROUP'S TRADING ACHIEVEMENT AND CONTINUED EXPANSION

The thirty-sixth annual general meeting of H. S. Whiteside & Company Limited was held on September 22nd in London.

In his circulated statement, the chairman, **Mr T. A. Barnes,** referring to a proposed three-for-four rights issue of 6,380,209 1s. ordinary shares, at a price of 3s. per share, said that the directors were of the opinion that, subject to unforeseen circumstances, the profits for 1961 would be sufficient to justify a forecast that a total dividend of not less than 30 per cent would be paid in respect of the year ending December 31, 1961, on the capital as increased by the rights issue.

Reporting on the results which had been achieved, the chairman said that Group profits and turnover—home and export—reached new records. That was particularly encouraging, as the new records had been reached in the face of increasing costs and ever-intensifying competition in the food industry.

The Whiteside Group of companies had an export record of which it could be proud. In 1960 orders totalling over £1¼ million had been secured covering shipments to well over one hundred territories.

Results to date indicated that the export sales record set up in 1960 would be beaten during the current year.

Commenting on current prospects, Mr Barnes concluded: With each section of the Group showing satisfactory increases in turnover to date, the indications are that sales for the year will establish a new record.

We continue to seek every opportunity to expand our interests in the industry, and challenging as conditions are, we are of the opinion that we can meet them with confidence.

The report and accounts were adopted.

APPOINTMENTS

A CAREER IN SOUTH AMERICA

An international firm of public accountants wishes to increase its permanent professional staff in Argentina, Bolivia, Brazil, Chile, Paraguay and Peru and invites applications from qualified accountants at all levels of experience, from those newly qualified to those capable of assuming senior executive posts, including men who have had experience of management consultancy work.

The positions advertised are not replacements; they are new posts. The work is varied and interesting with opportunities for travel, and there are excellent prospects of speedy advancement in countries whose economies are expanding rapidly.

Contracts are for an initial period of three years, renewable by agreement. Terms include an allowance for the expenses of moving to South America, a salary (payable partly in hard currency) on a scale sufficient to permit a comfortable standard of living together with a margin for savings, annual bonus, first-class return passages for staff members and their dependants, and three months' fully paid leave at the end of each contract in addition to local leave during its course. Salaries are subject to merit increases and are reviewed from time to time to take account of changes in the cost of living. Additional benefits, differing from country to country, are provided by advanced social legislation. A partner of the firm will shortly be in London to interview applicants.

Please send particulars of experience and qualifications, together with a passport type photograph, to Box 1541.

ECONOMIST

Young Economics Graduate required by Turner Brothers Asbestos Co., Ltd., Rochdale, manufacturers of asbestos and glass textiles, belting and specialised products, to assist in market research, sales analysis and economic intelligence work. The position, which is being re-advertised, will provide an excellent opening for someone intending to make a career in industrial market research and it could also be the avenue to wider opportunities for the man who makes a success of it. Applicants who are interested in this permanent and well-paid career should send full details to the Chief Personnel Manager, Turner Brothers Asbestos Co., Ltd., Rochdale.

TRADES UNION CONGRESS

Vacancies for Departmental Assistants. Duties include preparation of memoranda, reports, and some lecturing. Applicants should be adaptable, interested in trade union affairs, and have education and/or experience suited to work involving any one of the following: economics, production, education, health and safety, trade union organisation. Commencing salary up to £1,075 according to age. Application forms obtainable from the General Secretary, Trades Union Congress, 23/28 Great Russell Street, W.C.1, to be returned by October 20.

G&C

O. and M. PLANNER

We are seeking an experienced O. and M. Planner for our COVENTRY group of factories.

The company is engaged in a major re-organisation and this job will prove to be a genuine challenge to the right man.

Qualifications:

A degree is desirable and experience of the following is sought:
Costing Techniques.
Production and Production Control.
Ability to simplify organisations and procedures.

Salary:

This is a senior position and commands a commensurate salary.

Apply to:

The Staff Officer,
THE GENERAL ELECTRIC CO. LTD.,
Telephone Works,
Copsewood, Coventry

PRODUCT CONSULTANCY

Product consultancy is new and growing fast. We need more people who know where to find elusive facts.

If you have
(1) Skill in searching information sources;
(2) Technical or economic qualifications;
(3) A working knowledge of German;
you are invited to apply for one of two positions as
ASSISTANT INFORMATION OFFICERS.

Starting salary would be up to £1,000 per annum, depending on experience, and at a later stage successful candidates may be considered, if they wish, for positions as consultants.

MARTECH CONSULTANTS LIMITED specialise in product policy and planning, marketing and sales management.

Write to us at:

69 Grosvenor Street, London, W.1.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF SOCIAL STUDIES

Applications are invited for appointment to two RESEARCH ASSISTANTSHIPS (Salary £800-£850 to be employed in a project: "Co-operation and Conflict in the Mining and Engineering Industries," supported by the Department of Scientific and Industrial Research. The project is designed to last two years. Applicants should be qualified in Economics or Sociology, and have some experience of Research in associated fields. It is expected that one of the candidates will work in Leeds, and the other in Sheffield. Applications (three copies), together with the names of three referees, should be sent to The Registrar, The University, Leeds 2 (from whom further particulars can be obtained), not later than October 31, 1961.

YOUNG CHARTERED ACCOUNTANT OR ECONOMIST

The Chairman of a vigorous and expanding Group requires in his private office an able, personable young man to assist in the analysis of financial results and the preparation of concise reports on all aspects of the activities of the Group.

Candidates should not be older than 28; the salary will be around £1,250 per annum; the work will be demanding and will require considerable initiative; it will present an exceptional opportunity, both in immediate experience and the possibility of future advancement. Preference will be given to University Graduates.

The Group's standards are exacting; but men really interested should write to Box No. 4302, c/o Charles Barker & Sons, Limited, 20 Cannon Street, London, E.C.4. Strict confidence will be observed.

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for 2 posts of (A) Assistant Lecturer or (B) Lecturer in Government. Salary scales: (A) £1,200 x £50—£1,350 p.a. (B) Grade II, £1,350 x £50—£1,600 p.a.; Grade I, £1,600 x £50—£1,900 p.a. Applications would also be welcomed from persons interested in secondment for such duties. Passages to Salisbury for appointee, wife and dependent children on appointment, with allowance for transport of effects. Superannuation and Medical Aid Schemes. Unfurnished accommodation at rent of 15 per cent of salary. Assistance given for triennial visits overseas. Detailed applications (6 copies) naming 3 referees by November 8, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

For further appointments and other classified advertisements see page 1308

MARKET RESEARCH

Within our marketing team we propose to appoint a Research Officer (male or female) who will be required to interpret published recurring information and recommend action; also to suggest and commission research and interpret results in relation to marketing problems affecting this developing food Company within Unilever.

Candidates should have an Economics degree and an interest in statistical methods. A success story of a few years' experience in this stimulating work will, however, be more important.

Salary range is wide, and starting salary will depend upon experience and qualifications.

Apply, giving brief personal details, to Company Personnel Manager, T. Wall and Sons (Meat & Handy Foods) Ltd., Atlas Road, Willesden, N.W.10, quoting reference No. 100.

COMPANY AFFAIRS

Disappointment from AEI and Vickers

THE interim reports of Associated Electrical Industries and Vickers, reviewed in these columns a year ago under the heading "Blue Chip Blues" again make dismal reading for the first half of 1961. Both reports show that investors who bought shares on the slightly more encouraging tone of the companies' full reports and chairmen's statements were precipitate. Since May Vickers have fallen by over 8s. to 29s. 6d., to yield 6¾ per cent on the seemingly inevitable 10 per cent dividend. The £1 shares of AEI have fallen by 12s. 9d. to 32s. 3d. since the full report appeared six months ago and now yield 9¼ per cent on a 15 per cent dividend. As with Vickers, this rate has been held for the past six years; but AEI's directors shook the market when they kept the interim at 5 per cent but warned shareholders that "it should not be assumed that the rate of dividend for the whole year will necessarily be maintained."

This seems slightly at odds with the improvement in the results of AEI in the first half of this year, compared with the two six-monthly periods of 1960. But although the improvement in trading profit is encouraging to some extent, higher charges for depreciation and loan interest have had to be met, and with the prospect of a higher profits tax charge, earnings for 1961 are likely to be little changed from those of 1960. No doubt the group's tight cash position inspires the directors' caution about the total dividend which has been barely covered by earnings for two years past. A

Orders received	113·3	109·7	106·6

small decline in general orders and the continuing bleak outlook for domestic appliances and television sales are also discouraging, but the recent merging of AEI's radio valve and television tube interests with Thorn Electrical should eventually produce some economies.

Those shareholders in Vickers who were looking for some increase in dividend on the argument that the company would not have to make further large provision for aircraft development expenditure will find little support in the figures for the first half of 1961. These show a further advance in sales but a sharp drop in trading profits; the directors blame this on the large volume of aircraft sales which showed no profit. Thus compared with the first half of 1960, profits are virtually unchanged even though no development provision has been made. The directors will decide at the end of the year if any similar provisions for development expenditure have to be made for the VC10s. But they again expect profits in the second half of the year to be higher than in the first, so that net profits for the full year may about equal those of 1960. With orders for shipbuilding running down and lower profit margins in engineering, the unexciting prospects are clearly reflected in Vickers' high yield.

Associated British Foods

THE 1¾ per cent yield on the ordinary shares of Associated British Foods reflects an impressive record of growth over the last ten years. The chairman, Mr W. Garfield Weston, plans a further rapid expansion and has set a target of £200 million turnover by 1962-63. In the year to April 1st, the group took a step towards this by raising its sales from £143 million to £163 million. But the going promises to be hard under present conditions of price cutting and fierce competition in the food business.

Last year, gross profits of the group rose by just over 10 per cent from £7,595,000 to £8,336,000 and the ordinary dividend was raised from 21 to 22½ per cent, still covered 2½ times. Capital expenditure exceeded £12 million, financed by a cash flow of £7 million and £5 million released from lease-back sales. In the current year a further £6 million has been raised by a shrewdly judged 6½ per cent debenture.

The group has rather wider interests than most of its competitors, for it includes bakeries, biscuits, wholesale and retail groceries, ice cream and frozen foods. The bakery division has been developed into a highly profitable business and Mr Weston is confident that a similar improvement can be effected with A. B. Hemmings, the recently acquired chain of 230 shops. Overseas interests have again done well and a substantial part of the £2 million spent on new acquisitions last year was in Australia and New Zealand. Mr Weston is confident in ABF's plans for long term expansion,

based on the growth of supermarkets, and he expects a further substantial increase in profits for the current year if there is no serious economic setback.

Qualcast

SHAREHOLDERS and employees of Qualcast are kept regularly informed of their company's progress by circulars from the chairman, Mr J. E. V. Jobson. Last July he recorded that despite below-capacity working in those sections serving the car and refrigerator industries, profits for the year to June 30th would exceed those for the previous year. Trading profits in fact rose by 9¾ per cent from £1,611,000 to £1,767,000 but almost all this increase was absorbed by higher charges for depreciation and tax and left net profits only £11,000 higher at £671,000; the ordinary dividend raised fractionally from the equivalent of 17⅞ to 18 per cent is covered 2⅓ times.

The directors however were prepared, but for the Chancellor's call for dividend restraint, to recommend a higher payment. They do not indicate the increase they had in mind but it might well have been to 20 per cent, which would be covered just over twice. This suggests that they view with confidence the prospects of the motor industry to which they are a major supplier. In fact, the impact of the recession in the motor trade was cushioned by the group's diversification into other markets for castings which now absorb over half its sales. Lawn mower sales, too, almost certainly picked up last year after two bad seasons. With the new automatic foundry now running well, the group is better placed to meet the "more intensive competitive trading conditions" mentioned by Mr Jobson in July. On the 18 per cent dividend the 5s. shares yield 4.4 per cent at 20s. 7½d. and would return close to 5 per cent on a 20 per cent payment.

National Canning

SALES of canned and frozen foods are rising in this country and National Canning has shared in the increase; in the year to May 31st its sales again rose, but the rise in exports was greater than that in home sales. Prices were lower, however, and the group was particularly hit by the glut of canned peas which were pressed for sale last winter. These have always been the group's biggest line and it was forced to sell them substantially below cost. The result was that gross profits fell by over 54 per cent from £637,000 to £290,000.

The fall in profits would have been even steeper but for additions to the group's range of products. The balance sheet shows the effect of the stiffer trading conditions with stocks 19 per cent higher at £2.2 million and a bank overdraft of £390,000. Last year the group spent over £500,000 on new plant and equipment. Sales so far in the current year are higher than a year ago which suggests that diversification is justifying itself in the highly competitive food trade. The £1 ordinary shares now stand at 46s. 6d. and yield 5½ per cent on the maintained 12½ per cent dividend.

Henry Wigfall

THE 5s. shares of Henry Wigfall have been on a consistently low yield basis since they were marketed two years ago and the latest results go some way to explain the regard in which they are held in some quarters. Although the dividend is maintained at 15 per cent, gross profits in the year to March 31st rose from £151,000 to £1,091,000. This result was achieved in a period when the volume of business showed a marked reduction following the imposition of hire purchase restriction—an anomaly that applies to few businesses outside television rental. The reason is the heavy depreciation charges involved in writing off sets on rental over three years. This charge amounted last year to £2,413,000 against £2,789,000 and unless business picks up it may be lower still in the current year.

This is not, however, the only factor in boosting Wigfall's profits. The company also has a large hire purchase business which expanded rapidly in the previous year but the latest figures show that the provision for unearned profit on hire purchase agreements still amounts to £1,266,000 against £1,593,000. How far these boosts to earnings will be reflected in higher dividends (which must be the ultimate justification of the present low yield) will clearly depend on trading prospects. The market seems confident that these bigger payments will come and the shares have been marked up 3s. to 33s. 6d. to yield 2.3 per cent.

Buxted Chicken

A YIELD below 3 per cent on the 5s. shares of Buxted Chicken heavily discounted its growth of profits and the remarkable figures from this leader in the competitive broiler industry left the shares unchanged this week at 25s.; with the dividend raised from 14 to 20 per cent the yield is now over 4 per cent. Gross profits for the year to June 30th rose from £221,000 to £404,000 and net profits from £132,000 to £214,000. The ordinary dividend is paid on the capital as increased by shares issued on the acquisition of Western Chicken and a northern broiler chicken group.

This week shareholders meet to approve an agreement for Spillers to acquire a sizeable stake in Buxted Chicken by its subscription for 250,000 shares at 22s. 6d. a share with a further option on up to 150,000 shares at 27s. 6d. until June, 1964. In addition Spillers will subscribe at par for £500,000 8 per cent unsecured loan stock. This arrangement will bring much needed liquid resources to the group which had total overdrafts of £553,000 at June, 1960, and hire purchase commitments of £202,000. Capital commitments last May amounted to £800,000 and clearly the group is maintaining its present rapid rate of expansion. This industry works on low profit margins and a rapid turnover and further growth must depend on expanded output and a continued growth in demand. If the public's appetite for broilers does not change, Spillers could well be acquiring an interest cheaply, for Buxted shares reached a peak of 34s. 9d. earlier this year.

Doxford and Sunderland Shipbuilding

WHEN a merger between William Doxford and Sunderland Shipbuilding was proposed last May, profits of both companies were expected to be substantially less than for the previous year. The first results from the newly merged company show that the gross profit of Doxford in the year to June 30th fell by 35 per cent from £1,248,000 to £819,000 and net profits from £660,000 to £427,000; Sunderland's gross profits for the year to March 31st fell by 22 per cent from £1,018,000 to £796,000 and its net profit from £585,000 to £411,000.

It was also forecast that the ordinary dividend on the Doxford capital as enlarged by the acquisition of Sunderland would be unchanged at 30 per cent. The question now is whether this payment can be maintained, for the combined profits of the two companies covered it about 1½ times on the latest earnings. Shareholders were warned at the time of the merger that in the absence of an early and material change in shipbuilding prospects profits would fall further in 1961-62. News of a £2 million order from Reardon Smith last week brought a rise of 4s. 9d. in the £1 shares to 58s. 9d. but they are now back to 57s. to yield 10½ per cent.

Dimplex

DIMPLEX has been making radiators and heaters for little more than a decade and has made rapid strides. In the year to June 30th, its first as a public company, trading profits rose by nearly 70 per cent from £354,000 to £599,000. The final dividend has been held down at 20 per cent in compliance with the Chancellor's request, giving a total for the year of 35 per cent compared with the equivalent of 25 per cent for 1959-60. This payment is covered almost 4¼ times.

Demand in the current year is good, with orders for the first twelve weeks higher than those for the same period last year. Thus the rise in stocks from £444,000 to £618,000 is due mainly to stockpiling to meet an expected rise in demand. Despite this sharp rise the chairman, Mr E. J. Wade, is confident that liquid resources of £239,000 at June 30th are adequate for its proposed developments. At the current price of 85s. 3d. cum the proposed two for three scrip issue the 5s. ordinary shares yield 2 per cent; when the shares were first offered in December, 1959, they stood at the equivalent of about 16s. Domestic heating is a highly competitive business, and the market clearly has a high opinion of the record and potential of this small but successful company.

London Stock Exchange

FIRST DEALINGS:	Sept. 4	Sept. 18	Oct. 2
LAST DEALINGS:	Sept. 15	Sept. 29	Oct. 13
ACCOUNT DAY	Sept. 16	Oct. 10	Oct. 24

LAST Thursday it seemed that the stock market might be developing a better tone following the rally on Wall Street on Wednesday, the Katanga cease fire agreement and the joint U.S.-Soviet declaration to guide disarmament talks; but the improvement was short-lived and over the rest of the week to Wednesday equity prices drifted lower. By Wednesday the *Financial Times* index of ordinary share prices at 301.4 was down to its level of July 17, the lowest of the year. Over the week *The Economist* index lost 5.5 points to 355.7, also a new low point for the year. A variety of influences contributed to the decline, including the disappointing half-yearly statements from AEI and Vickers, and the sharp fall in car production figures; there was also much uncertainty ahead of the ICI half-yearly results on Thursday.

Gilt-edged stocks were not as dull as equities. Around the week-end medium-dated stocks attracted the most buyers, including a few large orders on Friday. By the middle of this week long-dated stocks tended to ease and there was a revival in demand for short-dated stocks on Wednesday. The medium-dated stocks held up quite well, Conversion 5 per cent. 1971 gaining $\frac{3}{16}$ to 88$^{13}/_{16}$. Among the shorts Exchequer 5½ per cent 1966 gained $\frac{5}{16}$ to 96½.

Bank equities held up over the week and closed with small gains, despite losses on Wednesday; Barclays gained 1s. 3d. to 74s. 9d. Among insurance shares there was an active market in the new Royal Insurance shares which opened at 38s. premium and after touching 40s. closed on Wednesday at 36s. premium. Among brewery shares, Threlfalls and Chesters fell after the merger announcement but Vaux recovered from early falls and advanced 2s. 6d. over the week to 77s. 6d. Although electrical shares gained on Wednesday they did not offset earlier losses; AEI showed the biggest fall, by 4s. 3d. to 32s. 6d. Stores shares showed small gains, such as Marks and Spencer which rose by 6d. to 102s. There was no clear trend in engineering shares; Davy-Ashmore continued their recent rise, gaining 1s. 9d. to 150s. 3d., but Vickers lost 2s. 10½d. to 29s. 10½d.

Steel shares showed mixed movements, with John Summers, United Steel and Whitehead gaining small amounts. Motor shares were slightly lower, after the August car production figures. Rumours that the U.S. parent company would buy up the Hoover minority drove the price of the shares up, but after an official denial the "A" closed with a net fall of 3d. at 43s. 3d. Oil shares improved after the effectively increased interim dividend from Shell, which gained 3s. to 115s. Kaffirs improved on the news of the US loan to Rand Selection.

APPOINTMENTS

AGRICULTURAL ECONOMISTS

THE UNITED NATIONS

has two vacancies in the Secretariat of the United Nations Economic Commission for Africa, in Addis Ababa, Ethiopia, to plan, conduct and direct investigations into the problems and progress of agricultural development with special reference to African countries, and to formulate agricultural development projects.

Qualifications desired are advanced university education in economics or agricultural economics; substantial experience at governmental or inter-governmental level in handling practical economical problems in the agricultural sector, preferably in those of less developed countries; and excellent knowledge of English or French (working knowledge of the other desirable), with demonstrated ability in drafting reports.

One vacancy is at the First Officer level with a salary range of US $7,300-US $9,500 net, free of tax, per annum, while the other is at the Senior Officer level with a salary range of US $8,750-US $11,000. In addition, there is a cost of living allowance of $2,375 for the First Officer and $2,500 for the Senior Officer posts, net, for persons with dependants (somewhat less for single) plus dependency allowances and benefits.

In accordance with the principles of the United Nations Charter, recruitment of staff for the Secretariat is made on as wide a geographical basis as possible. Accordingly, in recruitment for the above vacancies preference shall be given to nationals of Member States which have at present disproportionately few or no nationals on the staff.

Applications should be sent to the Personnel Officer, Economic Commission for Africa, P.O. Box 3001, Addis Ababa.

R. WOODVINE & SON (SHREWSBURY) LIMITED

(a subsidiary of Asquith Machine Tool Corporation Ltd.)

Require the services of a Secretary/Accountant. Applicants should have a professional qualification and have some experience in industry. Up to the present the Shrewsbury factory has been a Department of William Asquith Limited, Halifax, but it is now to operate as a separate company. Applicants, therefore, should be able to install and operate financial and costing systems suitable to the products of the factory, which employs about 300 people. Prospects of a Directorship at an early date. There is a non-contributory pension scheme in operation. Applicants should state in confidence particulars of their education, training, experience and qualifications, together with age and salary required, addressed to the Financial Director, Asquith Machine Tool Corporation Limited, Highroad Well, Halifax, Yorkshire.

For other appointments see page 1301

AUSTRALIA

THE UNIVERSITY OF NEW SOUTH WALES NEWCASTLE UNIVERSITY COLLEGE

SENIOR LECTURER OR LECTURER DEPARTMENT OF ECONOMICS

The University of New South Wales invites applications for appointment to the position of Senior Lecturer or Lecturer in Economics at the Newcastle University College.

The Department of Economics offers pass and honours courses to undergraduates in the divisions of Arts and Commerce. In 1961 about 210 undergraduates are taking courses in economics, and there are a number of candidates preparing for higher degrees.

Applicants for appointment as Senior Lecturer should have a higher degree and lecturing or research experience. Appointment as Lecturer is open to applicants with a good honours degree. Special interest in economic statistics would be particularly valuable.

Salary: Senior Lecturer £A2,599 range £A3,049 per annum.

Lecturer £A1,729 range £A2,484 per annum.

Commencing salary will be determined by qualifications and experience.

The successful applicant will be eligible, subject to passing a medical examination, to contribute to the State Superannuation Fund.

First-class fares to Sydney of appointee and his family will be paid.

Four copies of applications, with the names of three referees, should be lodged with the Agent General for New South Wales, 56 Strand, London, W.C.2, and a copy forwarded by air-mail to the Appointments Section, Box 1, Post Office, Kensington, New South Wales, to reach there before November 17, 1961.

HATFIELD COLLEGE OF TECHNOLOGY

Hatfield, Herts.

Principal: Dr. W. A. J. Chapman, M.Sc.(Eng.)

LECTURER IN BUSINESS STUDIES

Applications are invited from women Graduates for this post in the Department of Business and Social Studies. Applicants should have business and teaching experience and be able to teach for the National Diploma and Certificate in Business Studies and Shorthand and Typewriting.

Salary £1,370-£1,550. Details obtainable from the Academic Registrar.

BENSON INTERNATIONAL require a senior ECONOMIC INTELLIGENCE OFFICER for their Market Intelligence Department in London. Age 25/32. A good economics background and wide marketing experience—preferably in the export field—is essential, together with a lively, informed interest in international affairs and a fluent knowledge of at least one other language (preferably French). Duties will include collection and analysis of basic data; preparation of clear, concise reports on international markets, industries and branded goods; the administration of marketing and market research investigations in various parts of the world; the maintenance of up-to-date records on international advertising developments as a whole.—Write, in confidence, giving details of past experience, present salary and future availability, to the General Manager, S. H. Benson International Ltd., 129 Kingsway, London, W.C.2.

GOVERNMENT SOCIAL SURVEY

The SOCIAL SURVEY DIVISION of the CENTRAL OFFICE OF INFORMATION invites applications for posts of SENIOR RESEARCH OFFICER and RESEARCH OFFICER. The Research Unit is responsible for official sample survey enquiries covering a wide field of social and economic problems with a variety of research methods and maintaining high technical standards. Specialist sections are available for sampling, interviewing, coding and mechanical tabulation, but research officers have full responsibility for the design and reporting of survey work, much of which is published, and are expected to conduct such methodological research as may be required. All applicants should be qualified in one of the Social Sciences, Mathematics or Statistics, and have had research experience. Applicants for the senior posts must be able to produce reports of previous research for which they have had responsibility. The posts which are graded SENIOR INFORMATION OFFICER and INFORMATION OFFICER are unestablished, but there are regular opportunities for establishment. Salaries are £1,573 to £1,937 and £1,282 to £1,490 respectively. Write, giving age, full details of experience and qualifications, to Manager (PE.800/PC), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

THE NATIONAL FEDERATION OF HOUSING SOCIETIES invites applications for the newly created posts of Deputy Director and of Development Officer for Old People's Housing. The Federation (recognised under the Housing Act 1957 as the central organisation for non-profit housing) is expanding its organisation to launch and direct a national campaign for providing both family housing and housing suitable for old people through housing associations and co-partnerships.

The Deputy Director (appointment initially for three years) will be based at the Federation's offices in central London. Applicants should be of proved administrative ability but experience of housing work not essential.

The Development Officer will be responsible under the Director for a three to five year campaign to promote new associations for housing the elderly and while based in London will be required to travel widely. Applicants should have some knowledge of old people's housing.

Salary for both appointments not less than £1,500 but consideration will be given to experience and qualifications. Age 35-55. Application forms can be obtained from, and should be returned to, the Secretary to the Federation, 12 Suffolk Street, London, S.W.1, before October 16, 1961.

GOVERNMENT SOCIAL SURVEY

The SOCIAL SURVEY DIVISION of the CENTRAL OFFICE OF INFORMATION invites applications for the posts of ASSISTANT COMPUTING OFFICERS. The Division is responsible for official sample survey enquiries covering a wide field of social and economic problems with a variety of research methods and maintaining high technical standards. The principal duty is the analysis of survey data, using both punch card equipment and an electronic computer. The qualification required is a mathematical background to at least G.C.E. "A" level or, alternatively, experience in a similar post involving a knowledge of statistical techniques. Some familiarity with computers would be an advantage, but training in programming will be given to successful applicants, if necessary. The posts which are graded ASSISTANT INFORMATION OFFICER are unestablished, but there are regular opportunities for establishment. Starting salary will be fixed according to experience and qualifications and will be on a scale rising to £1,214. —Write, giving age, full details of experience and qualifications, to Manager (PE.3611/PC), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

EDUCATION: BUSINESS AND PERSONAL

HOME

NO BOUQUETS FOR MR LLOYD

No way to plan a planning committee (p. 13).

No time to cut Bank rate (p. 61).

Sowing

Seed for Mr Gaitskell: the *soi-distant* policy-making body at Blackpool has provided him with fertile soil, but he has not got the most out of it (p. 30).

Whirlwinds for the Tories: the Commonwealth, Africa, Berlin and Mr Butler's future will not blow the party away: but its reforming future is obscure (p. 15).

Pruning

To sack workers without providing for their retraining is a bad mistake today (p. 21).

Mr Powell's method of trimming drug profits has caused some manufacturers to curl at the edges (p. 66).

Prices of cars and tyres are being cut as a result of increasing competition (p. 69).

Hedging

The boundaries between urban and rural Britain need more imaginative redrawing (p. 18).

Caution by teachers faced with plans to redesign their negotiating body could lead to the death of a sensitive plant (p. 22).

Planting

A new university cannot take root until the pause is officially over (p. 29).

A new theatre-in-the-round at Croydon might spread its branches over the country (p. 31).

Withering

More funds and fewer politics are needed to revive a flagging international atomic energy agency (p. 73).

The dried-up plant of British trade unionism could be nourished by the legal reforms that are being resisted by the TUC (p. 26).

Private nursing-homes for the old need closer supervision, but not at the expense of warm humanity (p. 32).

Flourishing

The Exchequer's expenditure has grown luxuriantly, but perhaps fortuitously (p. 66).

The status of the monarchy will not be diminished—or greatly increased—by the bestowal of an earldom on a royal husband (p. 25).

INTERNATIONAL

Three Wiser Men

President Nasser has seen how difficult it is to create Arab unity by means of Egyptian colonialism; he might be in a better position to try the Commonwealth technique (p. 14).

- He intends, however, to use every means short of force to restore the authority of Cairo in Damascus (p. 51).

President Nkrumah, hurt by British criticism, seems to have gone out of his way to hurt British feelings; with Mr Sandys he now seems ready to try to make the quarrel up (p. 17).

- A pause in the common market's talks gives African leaders like Dr Nkrumah a chance to think again about the merits of associating with it (p. 22).

President Bourguiba has consistently seen Bizerta as a pivot of co-operation between France and Tunisia. Can it now become that? (p. 20).

Three Wise Men?

General de Gaulle thinks all will be well in **France**—provided the politicians are kept clear of politics (p. 56).

Dr Adenauer seems unshakably resolved to outstay his welcome as **west Germany's** Chancellor—but the politicians will not keep clear of politics (p. 51).

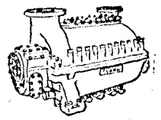
Signor Fanfani has been contemplating a step towards the **Italian** left—and the politicians are teetering (p. 52).

See How They Run

In the belief that a more conservative attitude to foreign policy is the way to win votes, the **American** Republican party is swinging to the right. This does not mean that Senator Goldwater will be next Republican candidate for the Presidency, or that Governor Rockefeller will not be—and least of all that **Mr Nixon** is out of the race after his decision to run for Governor in California (p. 41).

In **Katanga** and **Northern Rhodesia** the copper industry is run in this way (p. 55).

In **Washington** a fractious House of Representatives has run a difficult session for President Kennedy (p. 45) and for the District of Columbia, which it left with a deficit (p. 46).



The redistribution of seats for Congressmen to run for is producing trouble and strife (p. 49).

But at least the burghers of Washington can now vote for Presidents (p. 48).

They All Run After:

- An impression that there will be talks on **Berlin** (p. 21).
- A clearer view of a new kind of troika for the **United Nations** (p. 21).
- Membership of the **European common market** (p. 22).
- A new horizon: the **Organisation for Economic Co-operation and Development** (p. 25).

REORIENTATE

PAY LESS FOR THE WORLD'S GREAT HOLIDAY IN '61—IT'S 'VISIT INDIA YEAR'

INDIA '61 Means luxury air travel at new low costs. On *domestic air routes linking* 70 great cities, the Indian Airline Corporation with a flying record of twenty million reliable aircraft miles per year offers a 5% concession on selected tours.

INDIA '61 Means air-conditioned rail travel at new low costs. Indian Railways, one of the world's largest efficient networks, offers a 25% rebate. Also, combined travel-as-you-like tickets for thirty days carry a lump-sum concession. The cost of travel in India ranks among the world's cheapest.

INDIA '61 Means superb food and accommodation at new low costs. The Federation of Hotels and Restaurants of India offer 5% concessions on normal rates. In India, hotels compare favourably with the world's best in luxury. Many more tourist bungalows and converted palaces are now available. In India the best food (Oriental and European) is inexpensive.

INDIA '61 Means big game hunting at new low costs. The Shikar Outfitters' Association offer a 5% concession on schedule rates.

INDIA '61 Means front row seats for national festivals. All State Governments and cultural academies will co-operate to ensure this.

THE ECONOMIST, OCTOBER 7, 1961

"By my estimate, that's a saving of son 25% on *today's* lighting costs"

Fluorescent lighting is, in any case, economical, t remarkable new ATLAS development enables furthe cost reductions to be made:

15% saving on capital cost of lighting fittings
15% saving on cost of installation wiring
35% saving on cost of electricity
25% saving on total annual lighting costs
(compared with standard twin 5 ft. 80 watt fittings)

A new ATLAS 8 ft. 85 watt tube, operating at over 80 lumens per watt, combined with new low loss control gear – THE SUPER-8 CIRCUIT – has made this possible. The Super-8 circuit is available in twin 8 ft. sizes of the ATLAS ATLANTIC 2 range of fittings, which can be used to build complete modern lighting installations for almost any industrial or commercial purpose.

There are few lighting problems these days which cannot be solved from the extensive ATLAS range of fluorescent and tungsten fittings, and the ATLAS LIGHTING ADVISORY SERVICE is at your disposal, without cost or obligation, to offer technical assistance and provide complete lighting specifications. Ask your secretary to write for further information, or to arrange an appointment with an Atlas lighting engineer. ATLAS LIGHTING LIMITED, Thorn House, Upper St. Martin's Lane, London, W.C.2.

"we've an excellent atmosphere in our office"

Constantly fresh, clean, pleasantly quiet atmosphere at ideal temperatures Summer or Winter. This is our gift to the modern office worker.
Multi-storey office blocks exposed to extremes of wind and weather present no unsolved heating or cooling problems when air conditioned by Carrier Engineering.
"Weathermaster" Systems are ideal for modern office layouts, providing maximum flexibility and selections of temperature for both perimeter and interior rooms.
We have developed and installed systems for all multi-storey buildings, whether flats, offices, banks or complete hotels.

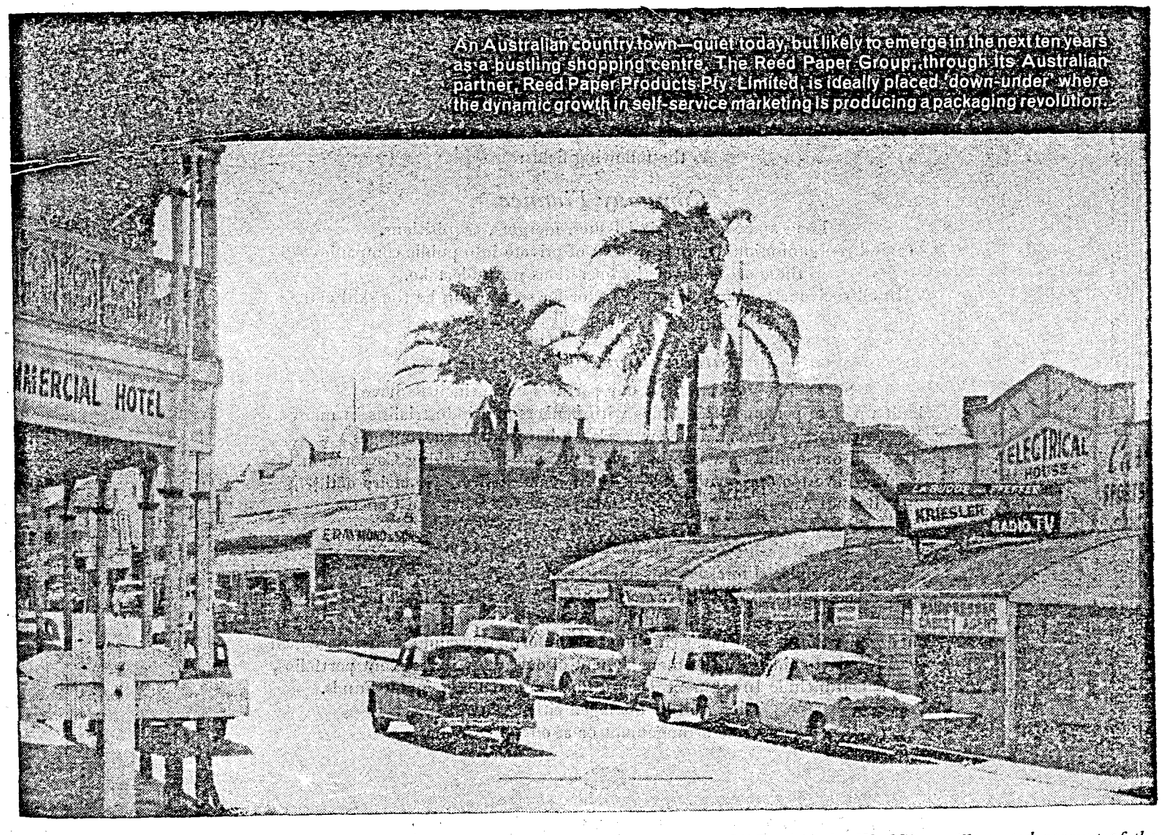
THE MONEY THAT MANAGEMENTS SAVE THROUGH MOBIL ECONOMY SERVICE

More than £3,000 saved in a year at Reckitt & Sons Ltd



RECKITT AND SONS LTD of Hull, asked Mobil to suggest improvements in the maintenance and lubrication systems at four of their factories. Mobil advised using a card index system to ensure regular and correct lubrication, reducing the number of oils stocked, reclamation of used oil, and several other schemes of preventive maintenance and purchasing rationalisation.
In one year, after applying Mobil's recommendations, Reckitt made a direct saving of over £3,000. A further immediate saving of over £900 is probable.
World-wide experience of industrial lubrication has been built up by the Mobil Organization over 90 years. The Reckitt case is one of hundreds in which the recommendations of the Mobil Economy Service have successfully cut lubrication and maintenance costs.
Specialist knowledge methodically applied is the value of the Mobil Economy Service. The total lubrication requirements of a business and the minimum number of lubricants in the smallest quantities it needs must be assessed. And everyone concerned must know how to achieve the best lubrication results with the greatest economy of labour. These are tasks undertaken by the Mobil Economy Service —and the big savings resulting from its recommendations are a measure of its success.

Mobil
ECONOMY SERVICE

Now an English High Street leads straight 'down-under'

An English High Street—typical of hundreds where British housewives replenish their homes and their larders with products, many of which show the hand of the Reed Paper Group. Some, like Kleenex tissues, are of paper; most, like foodstuffs, are cartoned and wrapped by paper.

An Australian country town—quiet today, but likely to emerge in the next ten years as a bustling shopping centre. The Reed Paper Group, through its Australian partner, Reed Paper Products Pty. Limited, is ideally placed down-under where the dynamic growth in self-service marketing is producing a packaging revolution.

AUSTRALIA IS A NATION WITH A FAST GROWING POPULATION

Already 10½ million, if present trends continue, it will be nearly 13 million people in ten years' time. And more than half of these will be under 30 years of age.

Growth has brought prosperity and high living standards. Australians have a personal disposable income of £352 compared with £293 in the United Kingdom. Australians use about 800,000 tons of paper and paper products a year. And over the next ten years consumption is expected to increase by 50 per cent.

The Reed Paper Group finds itself well placed to seize both present and future opportunities. The Reed Australian partner, Reed Paper Products Pty. Limited, has factories strategically placed to supply the ever-increasing needs of the booming sub-continent.

The new Reed partnership in Australia is typical of the global pattern of expansion which the Reed Group is undertaking. A £37 million transaction last year brought three Canadian companies—Anglo-Canadian Pulp and Paper Mills Ltd., the Dryden Paper Co. Ltd., and the Gulf Pulp and Paper Co.—into the Group. Other additions include a £2½ million pulp and paper mill, under construction in Norway, and in Italy, in partnership with one of Italy's most progressive organisations, the Group has acquired a leading packaging company and is building a carton board mill.

To each of these partnerships, the Reed Paper Group brings its vast technical, research and production experience. Each member company, for its part, makes full use of its knowledge of local conditions and markets.

The Reed Paper Group is now firmly established in the four main trading areas of the free world—the Dollar Market, the Commonwealth, the European Free Trade Area and the Common Market. The next few years will see new enterprises started and existing projects developed further as part of the Group's efforts to diversify its activities in this country and all over the world.

For a copy of "Reed in the World", an illustrated account of the activities of the Reed Paper Group, please write to:—
Reed Paper Group, Group Publicity Department, Blackfriars House, New Bridge Street, London, E.C.4.

Merchant and Investment Bankers

We have a century-and-a-half of experience behind us in the City of London, and amongst our clients are some of the largest and most progressive companies in the country. Besides providing acceptance credit and other specialised banking facilities, we can also offer our services in the following fields:

Company Finance

Loan and Share Capital Issues, mergers, acquisitions, capital reorganisations, the conversion of private into public companies—these are some of the operations we undertake.
In all such matters an important factor for success can be the skill and standing of the "House" behind you.

International Banking

Successive generations of our partners and principals have built up close personal friendships with bankers and industrialists in many countries abroad. In New York we have unique advantages through our affiliation with the J. Henry Schroder Banking Corporation. We have too our own offices in Europe and in Rio de Janeiro and Buenos Aires and associated companies in Australia and Canada.

Investment Management

We are well placed to assess developing trends in industry and commerce. We also keep in daily contact with the main Stock Exchanges and with leading institutional investors.
Our organisation is thus a clearing house of information and opinion on which we can draw to aid us in the management of our many investment portfolios, which include Investment Trusts, Pension and Endowment Funds.
These can be managed either under a specific arrangement or at our discretion.

VOLUME CCI - NUMBER 6163

No, Mr Lloyd

NO, Mr Lloyd. No, no, no. This is not only the first inevitable reaction to Thursday's reduction in Bank rate, which is critically discussed in the light of the present economic prospect in an article on page 61. It is also the necessary comment on Mr Lloyd's first gingerly steps towards giving economic policy—and business activity—some welcome fresh purposiveness.

The letter which the Chancellor of the Exchequer has sent round to interested organisations about his proposed National Economic Development Council suggests that he may be making some bad mistakes about how this should work. In embarking, with his characteristic combination of tentativeness and doggedness, upon this essay in the new-style planning with a French accent and without controls, Mr Lloyd has had the (not very deeply thought-out) blessing of a surprising number of people. Certainly nobody contemplating the sluggishness of the British economy, and the fits and starts of the policy-makers' attempts to provide the climate of growth without inflation, will dispute the need to work out in more precise and objective detail where this country ought to be, and could be, trying to go; and to set these expert aspirations as a proper economic challenge to all those, in the public and private sectors, who ought to be busy getting growth going instead of fitfully and frustratingly marking time. But, equally certainly, there is a right and a very wrong way of trying to do this.

The very wrong way is to suppose that Britain's economic difficulties can simply be conjured away by getting members of the industrial establishment round a table to agree on something or other, which would mean inevitably nothing very positive at all. On the contrary, the objects of new planning machinery should be (a) to try to breathe a spirit of expansionary dynamism into the British people, by publishing ambitious but realistic target figures of what some top economic technocrats think that Britain could achieve; (b) to instil the fear of death into inefficient industries and trade unions, by letting the public see clearly when their inefficiencies or obstructiveness are holding up the nation's progress; and (c) to make available to everybody a new series of top class market research and investment research surveys on a national scale. These objects cannot be achieved if, as Mr Lloyd's letter suggests, a top council of employers and trade union leaders should have the right to "consider how far, and in what form, the results of its [sic] work should be made public"; and if the staff of economic technocrats (the people who will do the work concerned behind that "sic") are to be a transient assortment of people "on temporary secondment [from their real outside jobs] for, say, two or three years." Under such a charter, this staff of revolving sputniks would be most unlikely to be able to build up any real influence in the economy; and the top council of industrialists and trade union leaders would be very liable to edit any useful bits (i.e. bits that embarrass themselves) out of their published reports.

The Chancellor's letter does seem to envisage that the director of the NEDC's staff should be a major national figure, but it would give him what looks like a horrible job. Indeed, probably the only way the director could make the job effective would be by constantly threatening to resign if the top council censors or edits his staff's studies. It is no more sensible to plan a new planning machinery on that sort of hypothesis than it is to try to make minor changes in Bank rate serve an international purpose for which they are neither adequate nor appropriate.

The Road from Damascus

What chances of advance can be seen now for the battered Arab caravan?

UNITY is a strange and versatile device on the Arab banner. Its interpretations range from friendly consultation between governments to the smashing or smudging of frontiers. President Nasser's favourite version of it during the middle 1950s revolved round a foreign policy in which Egypt inspired and led Arab opinion. Possibly, this design could have hardened into semi-permanency. But the urgency with which various factions in the Syrian army and parliament, for their own reasons, pressed the cause of closer union fired President Nasser with the obsessions of an empire-builder. The establishment of the United Arab Republic in February, 1958, gave Arab unity a new definition; but it was one that, before long, took a shape which looked suspiciously like an older form of colonialism.

Except for the precipitate and slightly embarrassing entry of the Yemen, no other Arab country was tempted into an association in which even the pretence of equal partnership was eventually abandoned. Although President Nasser still girds against acknowledging the dissolution of the UAR, the Syrian army's successful revolt, and the setting up of a caretaker civilian government, look like finally ending an experiment in Arab unity which has for some time carried within it the seeds of self-destruction.

Colonialism, as the Egyptians have not seldom said, is today a mouldering rump of old-fashioned politics; the fashion nowadays is for looser and more independent groupings. The endless academic arguments in the Arab world about who should join up with whom have been arrested by the case history of the United Arab Republic. No Arab government is now likely in the near future to plunge blindly into any new union. There are, of course, exceptional cases; given half a chance, most of the larger Arab governments would be only too delighted to gobble up a country as rich and orderly as Kuwait. But the Arab appetite for the administrative and financial problems of, say, Jordan, and now perhaps Syria, has been vastly weakened. And no independent government wants to be swallowed in the name of unity. Syria's defection confirms, rather than creates, a growing caution about the virtues of political union.

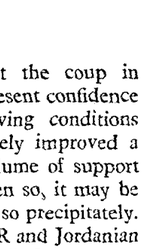
For the time being, the kaleidoscope of Arab connections has been too roughly jolted to reveal new patterns. Yet, beyond Egypt's immediate mortification, it is just possible, perhaps, to discern the foundations of a freer and sturdier association among Arab governments. What has happened is that Egypt, against its will, has shed a discontented dependency; the shedding, in its initial stage at least, was quick and mercifully bloodless; the next stage could be long, awkward and more dangerous. But even after being forced to retrace its steps, Egypt is still out in front of the other Arab nations. Egyptian influence still radiates far beyond that of any other Arab country. The UAR was a false turning; yet, from its failure, a new and more viable path could be found in the end. It might not even be too far-fetched, though Egyptians may judge the British analogy to be in bad taste, to see a wider, friendlier commonwealth growing, eventually, out of the narrower colonial relationship.

But this is crystal-gazing. Its flaw is that it has to take for granted that the apparent dissolution of the UAR has left a stable situation behind it. This could be far from true. There is the question, first of all, whether the new Syrian leaders will be able to run their country's affairs in a tolerably orderly fashion, or whether Syria, without the discipline imposed from Cairo, may not now relapse into its pre-union muddle of coups and counter-coups. The caretaker government, under Dr Kuzbari, sits in Damascus by grace of the army; a group of bankers and business men, it represents no political party.

However maladroit it may have been of President Nasser to try to force the Egyptian revolution on to a recalcitrant Syria, many of the ideas of this revolution must by now have taken root. It is not very likely that Syria, given the free elections that Dr Kuzbari has promised within four months, will accept a right-wing government committed to undoing the socialist knots that have already been tied; the caretaker government itself has promised a policy of "true socialism." Indeed, except for their condemnation of the tyranny imposed by the UAR, Dr Kuzbari and his ministers have spoken very warily. In particular, Dr Kuzbari has insisted that the Syrian revolt was a blow for Arab unity and not against it. One day, he forecasts, the name of the "Syrian Arab Republic" will be transformed into that of the "Great Arab Republic"; he has extended a hand of friendship to all Arab states—first among them, as he tactfully added, Egypt itself. But, so far, except for a delayed welcome from the communists, there has been no public response from any of Syria's former political leaders and, until they make up their mind, the army's bandwagon travels dangerously light.

BY calling off a battle before it was lost, on Thursday last week, President Nasser showed a grasp of realities which other leaders, in other wars, might have envied. But, as our correspondent writes from Cairo on page 51, he is not yet prepared to swallow political defeat—though what action he may be taking to turn the tables again is still hidden from public view. Clearly he was grossly ill-advised in persistently tightening the reins on Syria instead of playing a looser and more pragmatic hand; and clearly too, for a time at any rate, he will not be able after this setback to roam so confidently in his quest for influence in Arab, African and, more recently, world affairs. The setback may turn out to be only a brief one; the danger lies in what may happen both in Egypt and in the neighbouring countries during this frustrated pause. Abroad, this blow to his leadership could tempt him to an outburst of the sort of trouble-making at which Cairo has proved itself so formidably proficient; at home, there is always the risk that disaffected elements in the Egyptian army may choose this moment for a protest of their own.

In Syria, the danger of instability; in Egypt, the dangers of frustration; and for most of the rest of the world, the awkwardness of not quite knowing what to do about it all. The haste with which the Jordanian government rushed to recognise the new Syrian regime suggests that Amman may just possibly have known something about the coup in advance; it is also a sign of King Hussein's present confidence or, possibly, over-confidence. Certainly living conditions among Jordan's refugee population have lately improved a little; more money is coming in, and the volume of support for Nasser is believed to have fallen off. Even so, it may be wondered why the king burned his boats quite so precipitately. And what happens now in Kuwait, where UAR and Jordanian troops stand side by side in the Arab force, while Iraq, on the opposing side, has shown its sympathy with Cairo?



Israel, no less than Jordan, is disposed to welcome a turn of events that takes Egyptian agents from its northern frontier. Syria has always been the most fierily anti-Israeli of all the Arab countries, and Dr Kuzbari's government quickly hewed to the old propaganda line. But this wordy battle is very much less oppressive to Israel than the claustrophobia of being squeezed between the two regions of the UAR.

BESIDES Jordan, the four countries which recognised the new Syria almost as soon as it appeared were Persia, Turkey, Guatemala and Formosa. The speed was too indecent not to look like a gloat over President Nasser. The precipitancy of Persia and Turkey, moreover, leaves a trail for Cairo's propaganda machine that is bound to lead directly to a charge that the Central Treaty Organisation was involved in the coup. This, and the right-wing nature of the caretaker government, spells out in two simple characters for simple minds the evidence of an imperialist western plot. In all the circumstances, there seems to be a good case, as our correspondent in Cairo says, for the United States and Britain to ponder recognition of the new regime in Syria a little longer. But, if the regime lasts, no remaining respect for President Nasser's susceptibilities, or for the power of Cairo's inventiveness, can delay the recognition indefinitely. If the western powers could agree to make their decision simultaneously, the injury to individual interests might be the less. If recognition is spotty, President Nasser may well respond by cutting off diplomatic relations, but he would have to think twice before depriving himself of all his western contacts.

The time has gone in the Middle East when a western embarrassment was automatically a Russian gain. Once, the Soviet Union could coast along into Arab favour simply by identifying itself with nationalist aims and waiting for western blunders. Now, more deeply involved and no longer so popular, Moscow, like the West, is faced with the kind of uncomfortable choice that cannot be dodged. President Nasser's relations with the Soviet Union are precariously uneven, but Moscow is unlikely to risk its considerable stake in Egypt just for the hope of encouraging the local communist party in Syria. So far, Moscow radio has reported the Syrian coup without comment. The time to watch will be when the question of Syria's membership of the United Nations comes up at the Security Council, and President Nasser waits hopefully for the Soviet veto.

Certainly, it is hard to see through this fog of immediate rivalries to the clearer sky of an Arab commonwealth. But, ultimately, the ending of a too-tight relationship between Egypt and Syria may do the cause of Arab unity no harm. The links of culture, history, language and common interest still remain, even if in the gusts of plot and counter-plot the flag of Arab unity is now fluttering tattered and forlorn.

Tory Flashpoints

BRIGHTON

A discussion of the prospects before the Conservative party conference next week

AFTER the papering-over at this week's Labour party conference (see page 30), the Conservatives will gather for their annual durbar at Brighton next Wednesday with the unusual knowledge that this time the headline-writers will be looking to them to provide dramatic party splits. If ever the old Adam of the party's local associations is to break out in protest against a Macmillan government, then logically 1961 should be the year. For this reason, it may be of major significance for the party's history if, as now seems most likely, the long-forecast ructions do not occur.

There are at least four sets of circumstances that ordinarily ought to make this year's Tory conference a hornets' nest. First, Mr Heath will be coming to the Palladium straight from his preliminary negotiations in Paris on the common market. From a thousand platforms, Conservative ministers have proclaimed that "if ever we had to choose between Europe and the Commonwealth, we would without hesitation choose the Commonwealth" (loud applause); yet everybody knows that these words, which somewhat unpatriotically imply that British cabinet ministers would not pay primary attention to Britain's own national interests, have now got to be at least partially eaten. At Brighton, Tory MPs will be coming down to meet their ministers in mass for the first time since the Commonwealth's raucous protests rang out at the Accra conference, and they will have their (generally rather right wing) constituency chairmen at their elbows. Traditionally, this should be an occasion for Tory eruptions; one might expect that an anti-European amendment would be tabled against the rather anodyne common market motion on the conference's agenda—although if it were it would be unlikely to receive a really heavy vote in its favour. It seems more likely that the conference's main contribution to solidarity with the overseas Commonwealth will be to cheer Mr Butler when he announces that he is going to curb unrestricted immigration from it.

The second potential flashpoint—again, according to tradition—should logically be Conservative policy in Africa; and three weeks ago it did look as if this topic, too, was going to heat up most awkwardly. If Parliament had been sitting when the United Nations fell into hostilities in Katanga, a block of Conservative MPs much wider than Lord Salisbury's supporters would have exploded in wrath against them; it is a great piece of good fortune for the country that Parliament was then in recess. Now, however, just as Tory MPs and party workers were preparing to castigate the mere dispatch of Lord Lansdowne to the Congo as a quite insufficient gesture of dissociation from Dr O'Brien, it has suddenly been borne in upon them that half the uncommitted world seems to regard that mission as proof positive that British reactionaries brought about the murder of Mr Hammarskjöld. This breathtaking libel fortunately seems to have had a stunning rather than a goading effect on the party; it has left many Tories gasping with incredulity and bewilderment that anybody outside a madhouse could really still think such things of Britain. The result may conceivably be to make more and more of them willing to wash their hands of the problems of a part of the world which at the moment they no longer even wish to understand. The main point made in Brighton's colonial debate may merely be that, if European settlers are to lose their place in the African sun, those of British descent should be offered some financial compensation underwritten by London—as indeed they should.

THE third potential flashpoint in Conservative politics is one that has so far refused even to glimmer. For this reason most people have not realised yet that it could soon appear. It seems to be quite possible that the present Berlin crisis will end (temporarily) with what some people will call a Munich-like settlement. This does not mean that anybody need suppose that the West will do anything so disgraceful as sacrifice the liberty of free west Berliners; the purpose of the exercise will be to preserve precisely that liberty, with the fact of western nuclear force serving to deter the use of eastern force against it. But any settlement now over Berlin will involve something that appears to be a loss of face to the West, although mitigated by some communist guarantee.

After an initial period of general relief, more people may begin to query whether the guarantee is worth the paper that it is written on; and the year after a Berlin agreement, like the year after the Munich agreement, may very well become a period of increased tension and military preparedness, possibly including conscription. A Berlin agreement now may avoid the risk of a hot war; it will certainly not end the cold war. It is therefore a bit surprising that the Tories' self-styled equivalent of a Winston Churchill of the 1930s (crying, not "we arm to parley," but "appeasement") has not yet materialised; and it will be interesting to see if one does begin to emerge at Brighton. Every other major western country has at least some wing of some party that prides itself on advocating a "tough line" rather than on looking like a competitive peacemaker.

The fourth potential hornets' nest at Brighton is contained in the very awkward set of circumstances buzzing around the head of poor Mr Butler, on whose immediate ministerial future the shape of any government and party changes this autumn is likely to depend. Individually, Mr Butler seems to be the best available man for each of his present jobs. History will probably say that he has been the greatest reforming Home Secretary of the last fifty years; he is still the Conservatives' widest-ranging thinker on future social policy, and would normally seem to be ideally suited to the post of party chairman; and he is more acceptable to the Opposition than any other minister as leader of the House of Commons. But the fact remains that he has come under criticism from his party in the first two of these posts, and it is increasingly legitimate to doubt whether he is wise to treble up all three onerous jobs at once.

The party row that has blown up against Mr Butler as Home Secretary will find expression at Brighton in the psychopathic motion (demanding birching and more hanging) that the conference will probably disgrace itself by passing next Thursday afternoon. So long as ministers make it clear that conference decisions do not determine Conservative policy, this display of raw emotions need not harm the country (as distinct from harming the party); but it will be understandable if the debate increases Mr Butler's inclination to believe that the time for him to leave the Home Office is nigh. In any case his socially reforming task there is largely over; it would be better if some other ministry—say, a Ministry for Redefining Social Security, if Britain had one—took over from the Home Office as the next progenitor of Tory reforming legislation.

But the trouble is that the groundwork for the next period of Tory legislative reform does not seem to have been laid. At one time it was supposed that laying this groundwork would be Mr Butler's function in the party chairmanship. Unfortunately there is a growing impression that he has not really had time to do it, and also an increasingly loud expression of Tory views that he has not had time enough for some of the party chairman's other duties as well. So the clamour has grown for a full-time party chairman, in Lord Woolton's or Lord Hailsham's image—or at least in some approximation to it, such as the hearty Dr Charles Hill. And, electorally, there is a case for saying that the Tory party does now need a full-time backslapper-in-chief.

YET if Mr Butler should leave the chairmanship this autumn —and especially if he also left the Home Office to become only leader of the House—two problems would be created. The first, and minor, problem would concern the future of his own career; the second, and major, problem would concern the future of the Tory party without a central thinking-machine built into it. The problem of how any government can formulate future domestic policy, outside those matters in the immediate province of the Chancellor of the Exchequer, has never been solved in Britain since the war. The idea of a co-ordinating-ministry-à-la-Herbert-Morrison failed, because Mr Morrison's power waned when he did not have a large and traditionally powerful department of state (i.e. of established civil servants) behind him. The idea of vesting the reforming power in the Home Secretaryship is not going to work once Home Office reforms are no longer the most urgent ones; and it now looks as if the idea of making the ideas-man the party chairman is not going to work either.

But how, then, is the job of planning legislative reform going to be done? One's fear is that the Government might now be going to move into a period when it is not done at all. There is already some sign that the Tories' legislative programme for the next session may be a peculiarly unexciting and undynamic one. The Conservative conference of 1961 may yet be remembered as the occasion when the party contained its more atavistic emotions rather better than the pessimists had for-

told (except on such subjects as hanging); but when it also gave up thinking, except in such things as the "planning machinery" adumbrated by the Chancellor and on some of the problems created by the great bid to enter into the common market. And on planning (see page 13), the first signs are that the quality of thinking may not be good at all.

Got Up by the Press?

Britain and Ghana have a lot to learn about one another

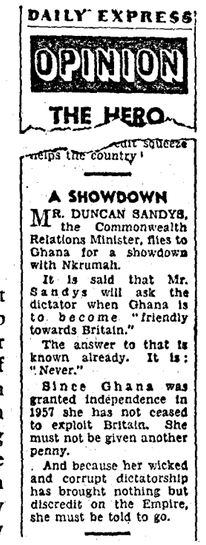
"WHATEVER may have accounted for the sad fate of the United Nations Secretary-General, Mr Hammarskjöld, the British Government cannot easily wash itself of the charge of complicity in the crime committed." The words are not Ghanaian; they are taken from *The Service*, a level-headed Nigerian opposition weekly. The supposedly pro-western Nigerians, it seems, have been as suspicious of Britain as anyone else in recent weeks. But the Nigerian language of suspicion has been neither loud enough nor rude enough to bring the wrath of the British press, the frank talk of Mr Duncan Sandys, and the enquiring mind of Mr Mennen Williams down upon the head of the government in Lagos.

Between London and Accra, by contrast, there has been no lack of loudness and rudeness. Dr Nkrumah seems to have gone out of his way to upset Britain. Anti-colonialist diatribes, boring though they become after a while, still give offence if they are repeated in Budapest and are not about the Russians. Every newly-independent Commonwealth country can be expected to dismiss its British officers and administrators sooner or later, but there is a polite way of doing this. Plainly Ghana is in bad mood and, not least through its newspapers, has shown it. Britain has, perhaps, been guilty of bad temper as well. Too much outraged majesty may have been expressed at General Alexander's dismissal; too much outraged surprise at accusations that Britain has been backing the wrong side in Angola, Bizerta, and Katanga. But if Ghana expects Britain to understand African aspirations, and treat with sympathy the continent's expressions of distate for foreign control, then Britain, for its part, can justifiably expect Ghana to try to understand Britain's friendship with France, Portugal and Belgium, even though this friendship may sometimes lead Britain astray.

In the statement signed by Dr Nkrumah and Mr Sandys in Accra on Wednesday, Mr Sandys assured Dr Nkrumah that Britain wants to "promote the inclusion of Katanga in the Congo"; both agreed that there have been "differences about methods." Dr Nkrumah "appreciated" Britain's postwar decolonisation and urged people in the remaining colonies to fight their battles constitutionally. (This will interest Northern Rhodesia.) He pressed Mr Sandys—unsuccessfully—for a target date for the independence of all colonies. Here, perhaps, there is room for an end to bad tempers.

GHANAIAN TIMES EDITORIAL

BRITAIN: THE MURDERER



THE history of the decade of the sixties is becoming the history of political and international murders. And one of the principal culprits in this sordid turn in human history is that self-same protagonist of piety—Britain.

Britain was involved, by virtue of her NATO ties, in the callous murder of the heroic Congolese Premier, Patrice Lumumba.

But Britain today stands alone in facing responsibility for history's No. 1 international murder—the murder of United Nations Secretary General Dag Hammerskjoeld.

We declare with the gravest conviction that Hammarskjoeld was the victim of a deliberate attack, inspired by Britain, and executed by Roy Welensky and that African traitor, Moise Tshombe of Katanga.

We declare, with the deepest conviction, that the plane in which Hammerskjoeld was travelling on this peace mission was sabotaged

THE HERO

edit squeeze helps the country

A SHOWDOWN

MR. DUNCAN SANDYS, the Commonwealth Relations Minister, flies to Ghana for a showdown with Nkrumah.

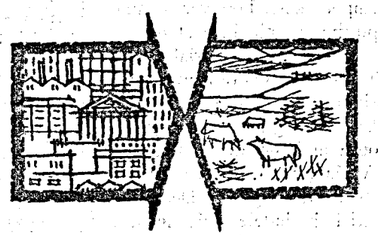
It is said that Mr. Sandys will ask the dictator when Ghana is to become "friendly towards Britain."

The answer to that is known already. It is: "Never."

Since Ghana was granted independence in 1957 she has not ceased to exploit Britain. She must not be given another penny.

And because her wicked and corrupt dictatorship has brought nothing but discredit on the Empire, she must be told to go.

Bad temper alone, however, cannot explain putting people in gaol for up to five years without trial. Dr Nkrumah has done this to members of his opposition; and he did his best on Wednesday morning to alienate British liberals once and for all by arresting Mr Joe Appiah, the son-in-law of the late Sir Stafford Cripps. Detention without trial is indefensible in any country not in a state of war or bloody revolution; even in Nyasaland Britain declared a state of emergency before rounding up Dr Banda and his colleagues. If Mr Appiah or any of the 49 other political prisoners taken on Wednesday are guilty of the plotting the government has charged them with, then they should promptly be shown, in court, to be guilty. Even in South Africa, 156 people charged with treason were brought before the courts and—after an extraordinarily harsh four-year trial—acquitted.



But, it can be replied, the Nigerian government has not been gentle in putting down the Tiv tribesmen; opposition does not exist in President Ayub Khan's Pakistan. Why is Dr Nkrumah singled out for criticism by the British press? The answer is that he has long proclaimed himself, and his country, to be the standard, the exemplar, by which the emerging black peoples of the world will be judged. This is Dr Nkrumah's—and perhaps all black people's—misfortune. Since independence Ghana has been transformed into a machine for the promotion of a socialist pan-Africa; the country, as its present crisis shows, is suffering from the strain of looking too ambitiously outwards for too long.

Ghana's foreign policy must not be misunderstood. It is not anti-Commonwealth; it is not anti-British; it is not intended to turn Africa communist. It is chiefly designed to produce a free, unified and (some Ghanaians hope) socialist Africa. On Wednesday Dr Nkrumah repeated that non-alignment means leaning toward neither East nor West; Mr Sandys said the British Government understands and respects Ghana's definition. To his credit, Dr Nkrumah has staunchly stood by the United Nations, even when his allies (including President Nasser) were withdrawing their troops from the UN force in the Congo. But, so far, his foreign policy, costly to Ghana,

has not been successful; Africa remains deeply divided on his definition of pan-Africanism.

Because of this policy, Ghana's economy has been severely strained. Money has been lavished on dignity and "prestige" projects: on too many aeroplanes, for instance; on a shipping line; on a loan of £10 million to Guinea. The inevitable result has been an austerity budget designed to balance the books and at the same time to pay Ghana's share of the bill for the gigantic Volta River development scheme. The Volta scheme might transform Ghana into the modern black African country Dr Nkrumah desires; but trying to pay for pan-Africa and prestige out of the same pint-pot has led to strikes and to so much political unrest that the United States may feel compelled to think again about aiding the project. To dismiss cabinet ministers who live too well, as Dr Nkrumah announced he was doing a week ago, may be justified in an eager pioneering state; but, especially now, it is too easily seen abroad as just a device to strengthen the president's personal position.

The strain is not only on Ghana's economy; it is also, inevitably, on Ghana's western friendships. But this is no moment for Britain or the United States, however provoked, to turn away. It is above all the moment for them to recognise and understand what is the real drive behind Dr Nkrumah: Ghana's passionate desire for tangible independence. If this is expressed in good relations with the East as well as the West, that is Ghana's business. As the *New York Times* pointed out this week, Ghana is not in the communist camp. It is, however, in the throes of a social and economic crisis that may well turn it into a more authoritarian and socialist state than it is now. Withdrawing assistance from the Volta scheme, without the most compulsive reasons, could do only harm. Ghana, as a growing-up country, has to expect criticism from foreigners when it seems to err, and learn not to swear too coarsely when the foreigners do wrong. It is no longer an underdog, safe from criticism by good liberals. But that is no reason for making it, deliberately, into the enemy that it is not.

City *versus* County

In adjusting boundaries between city councils and county councils, the Local Government Commission should give cities room to grow—and it should not be scared of changing the boundaries of some green belts

THE system of local government in England reflects a kind of balance between the often divergent interests of counties and big towns. The present Local Government Commission, which is slowly redrawing the administrative map of England, is not authorised to change this system; but it does have considerable discretion to adapt it to modern requirements. This task offers a major challenge to it. The health of local government now turns upon two points: its ability to provide good services of modern standard (which can be injured if the unit of administration is too small) and its success in securing the participation of local citizens (which can be injured by the loosening of community ties when the areas administered grow too large and diverse, and by disillusion when those councils that are looked upon as really "local" are given insufficient powers).

The dichotomy between county councils and town councils is both the strength and the weakness of the whole system. It is another of those curious English muddles that have somehow worked quite well. French logic has subordinated the local *commune* (however large) to prefectorial control exercised through the wider *département*. American pragmatism has allowed the growth of cities and municipalities to reduce the counties to ineffectiveness. But in Britain county and "county borough" (i.e. big town) councils remain equally important, and each possesses a distinctive outlook. Few counties are really very rural today, yet a sort of gentlemanly rural atmosphere still pervades their activities. The counties' problem is to provide their relatively dispersed population with good services. The county boroughs' problems are to cope with urban traffic congestion, overcrowded housing, and the steady exodus to ex-urbia of their richer citizens who once provided civic leadership and philanthropy. Counties are engrossed in rural preservation, while cities want more space. County councils are usually Conservative, while city councils are still often Labour.

There are two aspects to the promotion of a healthier balance between cities and counties as population pressures change. First, it has to be decided which individual authorities should be changed in status or amalgamated. The commission's early decisions on this point have sprung few surprises. It is required to consider sympathetically the claim of any town of over 100,000 population for county borough status and it is also entitled to scrutinise the efficiency of county boroughs and counties below that figure. The commission has so far stuck to this population standard very closely. Among towns Burton-on-Trent (49,000) and Worcester (64,000) are slated for demotion; Luton (which already has over 100,000) and Solihull (which soon will have) for promotion. Among counties, the commission proposes to join Rutland (25,000) with Leicestershire; the Soke of Peterborough (70,000) with Huntingdonshire (82,000); and the Isle of Ely (89,000) with Cambridgeshire.

NATURALLY, not all local authorities are pleased by this; and the smallest, Rutland, has made the greatest fuss. Rutland's contention is that a council which enjoys genuine local support and participation is being sacrificed to a mechanical conception of administrative efficiency. In fact the commission's criteria are not mechanical. Its report argues that a small authority like Rutland cannot provide some specialised services at all, and others only at high cost. Rutland is the size of a rural district, and if close local participation were to be accepted as the dominant consideration, the logic would point to the dissolution of county government everywhere else into Rutland-type units; but what guarantees could then be offered for efficiency?

Not for the first time, Cambridge has also provided the commission with a particularly tough problem. As a thriving regional centre of about 100,000 people, Cambridge has an excellent claim to become a county borough; but in the commission's view this course would only make sense if the county of Cambridgeshire (which would then lose control over Cambridge) were simultaneously amalgamated with three other administrative counties in order to make a new council of viable size. Originally, the commissioners were ready to embrace this solution, but subsequent discussions revealed strong opposition to the proposed county, and impressed the commission with the social and even spiritual links said to exist between Cambridge and Cambridgeshire. It therefore decided to reject Cambridge's application. But is there not a similar affinity between Oxford and Oxfordshire, Leicester and Leicestershire, and so on? The commission's cautious decision may be wise, but it sidesteps some awkward questions about the system that it was set up to investigate.

THE second main issue before the commission is that of boundary extensions. Here, many cities can legitimately claim that population has for a long time been spreading beyond their boundaries in pursuit of a suburban or ex-urban life, while the boundaries themselves have remained relatively rigid. This middle-class exodus is surely a principal reason for the decline of many large towns in Britain in civic energy, cultural activities, and political influence. Admittedly the needs of county government must also be considered; but, as the commission points out, the proportion of the population of England living in administrative counties has increased from 52.7 to 62.4 per cent since 1920, which gives a measure of the urban exodus. Moreover the wealth of this growing volume of ex-urbanites has become much less essential to the counties' budgets, because of Government equalisation grants; anyway, it is the larger counties which have illogically and unnecessarily gained most from the exodus.

For some towns, such as Northampton and Leicester, the commission has already proposed moderate boundary extensions to take in immediately adjacent suburbs. But ought not a city also to have some scope for further growth? The difficulty here is that an increasing number of cities are being circumscribed by green belts, and the commission has apparently decided, as a matter of policy, that any area labelled green belt ought not to be incorporated.

This policy decision seems to be a very muddled one. The green belt is really an amalgam of two ideas. One idea is to preserve attractive areas of countryside in the vicinity of cities for recreational uses and general enjoyment. This is admirable. The other (and now dominant) idea is to restrict or prevent the city's outward growth. This is admirable too in the case of the largest conurbations, so long as it forms part of a wider plan for developing new and expanded towns beyond the green belt. But it cannot make sense to draw a restrictive girdle around all the principal towns of Britain, in blind resistance to all the pressure making for urban growth. This pressure arises not only from natural increases of population, but also from the exodus from congested areas and the increased land requirements of factories, schools, public recreation, and so on. As a city gets richer, it needs more space even if its total population is somehow "stabilised."

Unfortunately, the green belt idea is now being pettily and unimaginatively applied, partly because of self-interested pressure from county councils. The counties have grasped the point that a green girdle (even a very narrow one) drawn closely around a city is the easiest way of trumping that city's application for a boundary extension into the county council's domain. But the social result is that all new development is then shifted a few miles farther out into a growing number of little urban pockets, instead of being added to the city itself. This causes longer journeys for commuters, dispersed development, and obviously prejudices civic vitality.

It is time that a more realistic view was taken of future urban growth, and that broader measures were used to guide it. The wise course would be to give most cities sufficient elbow-room for the next ten years, and to incorporate the most suitable areas for this purpose within their boundaries. Green belts should certainly not be abandoned, but they should be designed so as to preserve much deeper belts of countryside in certain directions, and particularly where they can effectively separate two urban areas. For those conurbations that have become unduly large, green belts should continue to perform a more restrictive function, but they should be deepened in places and supported more effectively than at present by projects for new towns and town development schemes.

THESE ideas may go rather beyond the purview of the Local Government Commission, but the commission ought surely to take a broad view of its responsibilities in adjusting the interests of cities and counties, especially as the alternative—a different kind of local government system—has been ruled out indefinitely. The present system can undoubtedly be made to work better, and the commission has many more areas to investigate. If fair treatment for the cities requires more amalgamations of counties, the commission should be prepared to take this course, just as it has been ready to recommend the demotion of certain county boroughs. If the commissioners need a mandate to broaden their investigations, Mr Brooke—who is responsible for town planning as well as local government—is in a position to give it. He should do so now.

If Britain joins

A short guide to the economic effects of membership of the Common Market, including summaries of the effect on: the iron and steel industry, motor vehicles, paper, building materials chemicals, electrical engineering, machine tools and wool textiles.

OUT ON MONDAY

The True Bizerta

Can Mr Bourguiba's base become what it was originally meant to be—a link between France and Tunisia?

THE Tunisians have a taste for peace and peacemaking. They see themselves as the Swedes or Swiss of Africa, and in that character offer themselves to the world. Lately they have given Mr Mongi Slim to be president—the first from Africa—of the United Nations General Assembly, and Mr Mahmoud Khiari to speak for the United Nations in the talks with Mr Tshombe that produced a Katanga cease-fire. Though they boast but a small army, they were among the first countries to contribute to the UN force in the Congo, and to promise a contribution to the Arab League force in Kuwait. Then why, ask their critics, could they not in July this year have kept their own peace at Bizerta ? Peacefulness, like charity, surely begins at home.

Only a glance down the years of Tunisia's independence can uncover an answer to this question—and with it the true Bizerta. This was the base that President Bourguiba intended as his small country's chief contribution to the defence of the West. It wore the bright face of an offering designed to win French goodwill, though one that became somewhat crestfallen, as gift horses looked in the mouth are apt to become.

When Tunisia gained its independence in 1956, present political fashions had not yet set. Imperialism was "out," but positively neutral neutralism was not quite "in." Tunisia could still choose freedom within the western orbit and, anticipating France's true interests, asked that Bizerta might join the Nato system of bases, just as France's Algerian bases had automatically done. But the Nato powers merely shrugged, and France would not hear of the idea. So, rejected as a contributor to Nato, President Bourguiba proposed another club: a western Mediterranean defence pact in which France might still be the caretaker of Bizerta but Tunisia would be a full member. But again the French frowned ; for those were the days of faltering governments in Paris which dared not even admit that Bizerta was part of Tunisia. The two countries begged to differ, Tunisia claiming sovereignty over Bizerta, but not pressing the issue for fear of embarrassing France while it was involved in the Algerian war.

As the conflict in Algeria deepened, President Bourguiba's natural bent as a go-between brought Algerian nationalist leaders to Tunis, and weary Algerian soldiers to rest in Tunisia. The French took umbrage and bombed Sakiet. A month later (March, 1958), under pressure of world opinion, negotiations began for all French troops outside Bizerta to leave by the following October and for the working out, thereafter, of a temporary statute for Bizerta. This was to permit the French to remain in the base at Bizerta until such time—the end of the war in Algeria—as more definite arrangements could be made.

When General de Gaulle came to power the will to negotiate was confirmed in an exchange of letters (June, 1958), in which it was also conceded that French troops had no right in Bizerta, except by Tunisian consent. Thus Tunisia's sovereign rights were established. But negotiations, limping on, could never be brought to a finish, since both sides were always deliberately playing for time. The new winds of positive neutralism had so ruffled the Tunisians themselves that Mr Bourguiba could not grant a temporary "statute" unless it carried the proviso that the French, in the end, would go. But General de Gaulle was bent on ending the war in Algeria by methods that his army found difficult to accept. To promise—without visible need—to evacuate Bizerta was altogether too much for him, since it might have proved altogether too much for the patience of French generals.

France's predicament was well understood in Tunisia. Mr Bourguiba played the waiting game skilfully, uttering intermittent growls and setting carefully loopholed time-limits to his patience. And so, through endless relays of patience, he arrived at Rambouillet this February, to confront General de Gaulle with his vision of Franco-Maghrebi friendship and to pave the way for Franco-Algerian peace talks. Only when the latter broke down did the backwash of defeat envelop him. And then Mr Bourguiba could no longer swim against the tide. Nearly all his fellow Arabs condemned him for his moderate pro-western tendencies. So did much of black Africa. He therefore, on July 3rd, permitted demonstrations in Tunisia for Bizerta's evacuation.

These were largely for home enjoyment, and to notify the other Arab countries that Bizerta would play no part in any partition of Algeria. Even General de Gaulle allowed (in a note of July 16th) that such demonstrations were not aimed at French life and property. They were nevertheless made the occasion for a new French military build-up at Bizerta. On July 6th work began on lengthening the airstrip to take larger troop-carrying aircraft. The Tunisians saw red, and President Bourguiba sent a note to General de Gaulle, a request for negotiations, that was really a cry *in extremis*. Unhappily the general failed to recognise that this was a desperate appeal and no longer a charade for his benefit. And out of this lack of understanding the battle of Bizerta broke.

CAN Bizerta return to the role that President Bourguiba has consistently envisaged for it—a pivot of co-operation between the Maghreb and France? The accommodating attitude on both sides which has led to the withdrawal of French troops this week to the positions they held before July's fighting offers a gleam of hope. The time for a reappraisal has come about. The Tunisians, having made their point that Bizerta must not be connected with any partitioning of Algeria, are unlikely to take any further step that could jeopardise the cause of peace there. Mr Bourguiba's admission that the French need to stay in Bizerta so long as the Berlin crisis lasts is open to *ad hoc* constructions. But at least it offers a stepping stone to provisional measures—the temporary statute in fact—that could merge with plans for the subsequent demilitarisation of the base. Its use as a civil port and dockyard has long been contemplated in Tunisia. The prospect of developing it thus, in partnership with France, could turn it back to its old true course again.

NOTES OF THE WEEK

BERLIN

The Impressionists

LIKE certain paintings, the past fortnight's conversations between Mr Gromyko and his American and British colleagues seem to acquire meaning only if looked at from a certain distance, through narrowed eyes. Officials in Washington and London who claim to know what went on say that Mr Gromyko revealed no change in the known Russian position on Berlin. Yet the total effect is of a general agreement, if not actually to hold negotiations at a specified time, at least that negotiations will probably take place ; this conclusion is being tested by President Kennedy in a talk to Mr Gromyko on Friday. It all appears to have been done by impressions. Seemingly, Mr Gromyko has left Mr Rusk and Lord Home with the impression that the Russians are willing to discuss ways of guaranteeing Berlin's freedom, which is the essential western condition for negotiations ; and that either the signing of a Russian-east German peace treaty might be delayed until these guarantees have been discussed, or a blank space might be left in the treaty in which the guarantees, if agreed upon, could subsequently be embodied. Mr Rusk and Lord Home, for their part, seem to have left Mr Gromyko with the impression that the West might be willing to let negotiations cover such subjects as a degree of recognition for the east German state, and limits on the spreading of nuclear arms in central Europe.

If it is true, as officials assert, that neither Mr Gromyko nor his western counterparts actually said these things in so many words, one can only comment that much may be conveyed by a smile and a nod. Mr Gromyko's next move is to transmit the smile and nod to Mr Khrushchev ; the hope being that Mr Khrushchev, in turn, will pass them on to his party congress on October 17th, rather than using the congress to announce that he is going to sign his separate peace treaty with the east Germans and damn the consequences. But the really vital next step is for the United States and Britain to persuade west Germany and France to accept what has been done so far.

The main problem is to find a formula on east Germany that will, at one and the same time, convince the Russians that the allies recognise the existence of Herr Ulbricht's government, as a hard if distasteful fact, while convincing the west Germans that this degree of recognition does not entail the permanent division of their country. Herr von Eckardt, Dr Adenauer's spokesman, said on Wednesday that there had been no change in the essential western position on the question of Germany ; but he defined the essential western position as the pursuit of reunification, not as a refusal to acknowledge the east German government in the meantime. One element in the necessary compromise might be a western agreement to deal with the east Germans on questions involving access to Berlin, provided the Russians have first signed a watertight agreement safeguarding Berlin's future ; another might be an extension of contacts between the two German governments. In delineating the exact degree of recognition that might be given to Herr Ulbricht, the allies must not make do with broad, vague brushwork ; as in *pointillisme*, only a subtle and precise laying on of details will do the job.

UNITED NATIONS

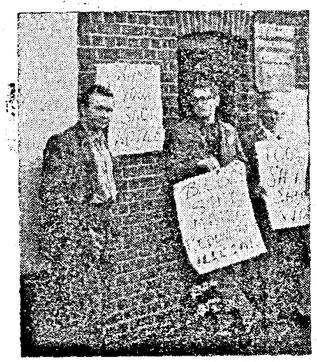
Troika from Birnam Wood

MR KHRUSHCHEV'S original "troika" was a dashing equipage, which he launched at full tilt towards the avowed goal of destroying all possibility of UN executive action that conflicted with his wishes. Never again, he declared, could the UN trust a single Secretary-General. Whatever action the Assembly might authorise must be entrusted to a "collective executive," whose Soviet member would wield a veto.

To his evident surprise, this troika proved to be hurtling along a collision course. It collided with the stubborn insistence of many uncommitted countries that the UN should not be weakened, and that (in Marshal Tito's words) any reform of its structure must "not be done in a way that would amount to freezing present divisions in the world." Although in the confused days immediately after Mr Hammarskjöld's death the 1960-model troika was wheeled out by Mr Gromyko for one or two brisk circuits of the paddock, it was then prudently pushed back into the coach house. Now a Soviet vehicle of outwardly less spectacular appearance has creaked into view, so bedecked with olive branches that its real shape is hard to discern. The proposal made public by the Russians at the Assembly would provide three deputies for "the provisional chief of the UN administrative body." Any thought that the deputies would exercise a veto is disclaimed ; but the new chief "must seek to achieve mutual agreement with them."

Meanwhile one of the small informal "fire brigade" groups that the Assembly produces at times of stress—in this case, it embraces Argentina, Burma, Ethiopia, Mexico, Norway, Sudan and Venezuela—has been working on a formula close to the one that Mr Hammarskjöld would have presented to this Assembly himself if he had lived. This envisages, as he did, five political assistant secretaries-general ; one American, one Russian and three from "countries outside power blocks." The unanswered questions are whether Mr Hammarskjöld's successor would be obliged always to seek agreement with all his assistants ; whether he would have any freedom in selecting them ; and whether they would be openly appointed as representatives of groups of nations, in conflict with the Charter principle that all UN officials must owe loyalty only to the organisation as a whole. Whether they are three, four, or five, it is the precise status of the deputies that would decide whether a system of vetoes had been smuggled into the Secretariat under cover of a mass of verbal garnishing. A troika camouflaged to look like a bit of Birnam Wood could be just as damaging to the UN's effective peacemaking capacity as Mr Khrushchev's original Model T would have been.

REDUNDANCY



Striking Problem

THE strike at British Light Steel Pressings of Acton is ostensibly a protest against the Rootes Group's supposed plans to sack some workers no longer needed for production: in fact it is another battle in the campaign to put negotiations in the motor industry back into the hands of those empowered by agreements to negotiate—the official unions. By sacking all the strikers and taking men on afresh Rootes may succeed in getting things back on the rails at this plant: Pressed Steel, which employed this policy in an unofficial strike at Swindon and followed it up with a vigorous scheme to train foremen and help the unions to train their own shop-floor negotiators, set an example that Rootes would do well to study.

But the basic cause of discontent that has been exploited by the Acton plant's troublemakers will remain. Workpeople have reason to be scared at the prospect that they may be sacked through no fault of their own, either because their employer is unable to sell his product or because the introduction of modern machinery has reduced the demand for labour. This week the Scottish railwaymen, faced with extensive sackings because some branch lines are to be

closed down, have been threatening to strike and appealing for moral support from the travelling public who may themselves be inconvenienced by the closing of stations.

In an economy with an acute labour shortage, people must change their jobs just as soon as they are not needed. In industries where there has been a once-for-all reshuffle of labour—in the South Wales tin-

It shouldn't happen to the AEU

plate industry, or in the north-eastern coalfields—elaborate schemes for retraining and rehousing redundant workers have been successful. But the problem is equally urgent in industries—such as the motor industry—where events are far less easy to predict over a long period.

The poverty of union thinking on this subject is shown at its worst by the Amalgamated Engineering Union, which claims that redundancy should not happen and, therefore, refuses to discuss it at all. But many employers are as unthinking as the AEU—or, if they do think about how to compensate and retrain workers whom they no longer need, they are deterred by the cost from doing anything about it. It is a job that must be undertaken nationally, not left to individual employers. *The Economist* has often argued for a far higher initial level of unemployment benefit, and for retraining redundant workers—to which one might add the chance of finding a house in another town if a move is necessary. The need for action on this score has never been greater.

TEACHERS' PAY

New Model Burnham

THE teachers' side of the Burnham Committee had their first chance on Thursday to learn just what the Minister of Education has in mind for overhauling their salary negotiating machinery. It may not have been as drastic as some of them had feared. The opening of these discussions (the local authorities will be consulted next Wednesday) has come at a tricky moment for the most militant section inside the National Union of Teachers. Since the publication of the Minister's specific pay proposals much of the sting has been removed from the profession's immediate sense of grievance. Although this feeling is far from being shared by the militants, the news that very many teachers most want to hear now is that the Minister has started the necessary parliamentary process to enable him to thrust the promised £42 million into their pockets.

The militants' fire has therefore been concentrated recently against what is said to be ministerial interference in free negotiating machinery. But the NUT executive will merely look foolish if it refuses to discuss the Burnham process altogether : it is no use standing pat on the letter of the 1944 Act when it both empowers the Minister to intervene as he has done this year, and compels him to stage any intervention only at the very end of the bargaining process. But if the Minister steps in at the outset what will be left to bargain over ? The best idea seems to be to make the first step a joint examination of the existing teacher supply position, with the obvious financial implications for the grades where serious shortages exist. This discussion ought to provide a pattern for the full award, and it would necessarily affect the kind of global sum that the Minister, in the second stage, would then indicate that he was prepared to entertain. The onus would clearly be on all parties to avoid a situation in which the Minister feels he has no alternative but to write his own award.

The chief fear that the levellers in the NUT are bound to voice is that if the Minister keeps the basic scale in his own hands the argument inside Burnham will concentrate on raising the differentials higher up. In an educational sense this would not be at all an unwelcome development, but the NUT cannot disregard its majority feeling. It is, however, the teachers on the basic scale, who have seen their status eaten away by industrial wage awards, that stand to gain from effective central planning under which real salary increases will benefit those sections of the community that deserve priority. Burnham is only a branch of the wages tree : unless the central trunk takes root from the Chancellor's planting the present prospect of a sound reform inside Burnham may wither away in the NUT's chilly non-co-operation.

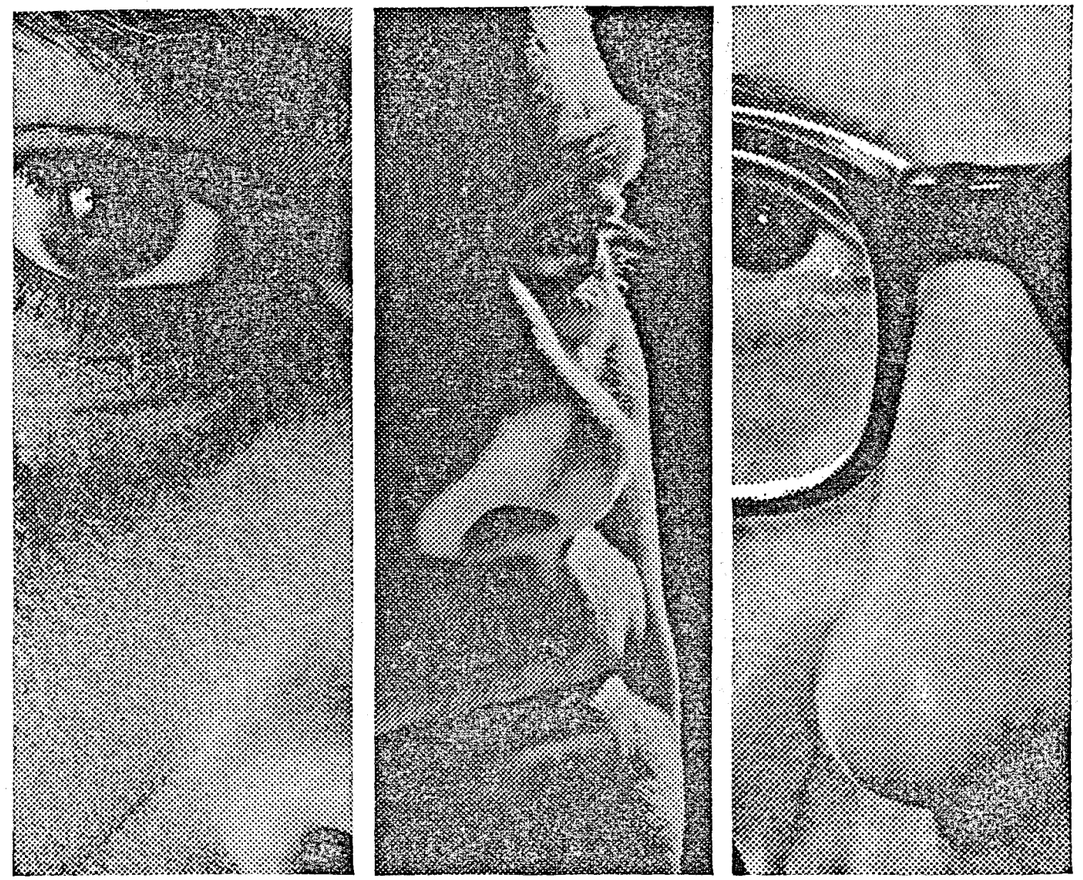
EURAFRICA

Think Again

WHEN the Council of Ministers of the Six met on September 26th to decide on the British application to join the common market, it took, unnoticed, a second decision which has bearing on the coming talks. For reasons internal to the community, a series of meetings originally planned for October, at which the new association with African countries was to be elaborated, has been postponed until later in the year.

This is important for the Commonwealth because it gives the Commonwealth countries in Africa a chance to reconsider their apparently masochistic decision not to seek any kind of association with the common market. Economic interests dictate that Ghana, Nigeria and the others should seek association. Outside, they are in danger of losing not only access to the continental market but their existing rights in the British market too; inside, they would gain free entry for their products to all western Europe and access to considerable aid funds. Yet Ghana, with the hesitant support of other African Commonwealth states, at present takes the view that the common market system is a colonialist contraption that all good Africans should shun.

One weakness of this view is that it is out of date ; the African associates of the Six are now independent and are renegotiating their association, not as overseas territories, but as sovereign states linked, like Greece, under Article 238. Far more important, this standoffishness seems likely to damage rather than advance the vision of Africa Dr Nkrumah cherishes. The Ghana government believes in an independent and united Africa. This will not be achieved if half Africa is inside an association with Europe and half outside. If, instead, the British territories were to opt to come in, they would obviously have an important influence in the shaping both of an African union and of any ties it had with Europe.



It may be that eventually the whole conception of a special link between Europe and Africa will look obsolete and give way to a world-wide economic arrangement. But if Accra shares this view with Washington, the way to implement it is not to ignore the existing association but to join and help it to mature. The African Commonwealth, it seems, has still to learn the lesson Britain is gradually taking in: that to stand aside from the common market system because one dislikes some of its features is to cut off one's nose to spite one's face.

COMMON MARKET

Amber for Green

WITH applications for membership piling up on the salver in the hall, it is not surprising that the Six have replied cautiously to Ireland's application to join the common market. The Council of Ministers last week referred the Irish application back to the European Commission for its views. Since officials are preoccupied with preparations for the talks with Britain and Denmark, this procedural hesitation seems reasonable ; but it would be a pity for Europe as well as for Ireland if it masked political motives—such as reluctance to admit a new member who does not belong to Nato.

Ever since the early days of the Council of Europe, when inter-Irish tribal warfare across the floor between Orange and Green drove M. Spaak to distraction, the Republic

the decision takers...the computer-minded

A business lives—or dies—by decisions. More and more, successful decision-takers are turning to the speed, the accuracy of computers. Slashed costs, decreased wastage, higher output, greater profit, all flow from computer use . . . but *which* computer? Your needs may be for a full-scale system, a small machine, five minutes at the Computer Centre—or perhaps a computer is not the answer at all. Pioneers in computer development, Ferranti can give you the benefit of their experience—and if you choose a computer, undertake its installation. And Ferranti offer a wider range of computers, programs, training facilities and services than any other company. Current Ferranti activities include Nebula (Natural Electronic Business Language for commercial programming), Orion (revolutionary "second generation" computer) and Atlas (most advanced super-speed computer in the world).

PERMANENT WAYS British Railways have made a new senior appointment — a Ferranti Sirius computer to calculate incentive bonuses for six hundred track repair gangs in 5 Midland Region districts. Weekly repair analysis is an extra duty Sirius takes in its stride. Small, economical, very adaptable—that's Sirius.

AIRWAYS The wide blue yonder becomes more congested every flying hour — making traffic control over the Atlantic an ever-increasing nightmare. The Ministry of Aviation asked Ferranti for help; result, Apollo—a new computer at Prestwick Airport designed to bring a skyful of planes to happy landings.

ROADWAYS Road designers Maunsell and Partners took their Hammersmith Flyover problems to a Ferranti computer centre—hired time on a Pegasus and completed weeks of development work in minutes. Maunsells are engineers not computer experts—but Ferranti autocodes allow anyone to use a computer.

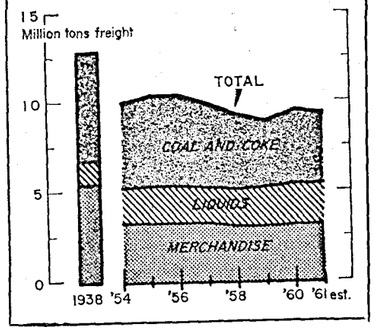
EUROPE'S LARGEST WALKING DRAGLINE...RAPIER-built for faster mining of South Wales anthracite

This mammoth RapieR W.1800 walking dragline, now digging, lifting and dumping 60 tons of rock and earth a minute at the Glyn Neath workings of the National Coal Board, weighs 1800 tons and operates a 40 cu. yd. bucket from its 247 ft. boom. It is being used by contractors George Wimpey, stripping over-burden to expose beds of high quality anthracite 300 ft. below the surface.



The machine was designed and built by Ransomes & Rapier, backed by the great engineering resources of the Newton Chambers Group of Companies. They are the only British organisation among the three or four in the world producing excavating machinery of this size. RapieR walking draglines are at work from Australia to Scandinavia, from Africa to North America.

INLAND WATERWAYS

Apart from a reduction in the amount of coal carried, traffic and the average length of haul on the inland waterways have changed little in recent years. There was a slight increase in 1960, attributed to the improved facilities being provided under the Development Plan, and this will probably be maintained in 1961.

of Ireland has played a somewhat singular part in the European concert. Chilly isolation on the fringe of Europe nurtured a widespread, and so far unsatisfied, hankering after closer union ; historic ties with the Continent gave the European idea greater appeal than it had in Britain.

Ireland's economic links with Britain prevented it from moving faster than this country. But the desire to do so found practical expression when the free trade area talks broke down in 1958 and Ireland then chose not to join the Seven. Economic factors, it is true, played a part in this choice ; since Eire already enjoyed free entry into the British market, the incentive to join the Seven was small. But there was also a feeling that the formation of the European Free Trade Association was a mistake, and that the answer to the European problem did not lie in deepening the schism.

Ireland's application to join the community as a full member was therefore, like Denmark's, a considered and virtually unanimous choice. The Six will lose a loyal partner if they fail to accommodate it. Failure would also be a grave disappointment for the Irish. Membership offers their country not only a coveted place on the wide stage of Europe, but an unobtrusive means of burying the waning memories of conflict with Britain. Nor, when the smuggling industry is in eclipse, will the frontier that divides Ireland itself look as forbidding as it does today.

ATLANTIC UNITY

Metamorphosis

A GIANT'S birthpangs can be painful. To some Britons, the inception of the Organisation for Economic Co-operation and Development originally seemed a defeat ; they saw it as a deathblow to the parent organisation, the Organisation for European Economic Co-operation, which they had striven to preserve as the framework for economic unity in western Europe as a whole. Now that the British are seeking a future in Europe's inner circle—the common market—that preoccupation has fallen away, and it is becoming apparent that the new child, which formally took over from the old OEEC on October 1st, has opportunities as exciting as its parent's.

Thirteen years ago the OEEC was formed to organise the generous aid programme by which America sought to lift Europe to its feet. That task having been accomplished, the OECD, larger than its predecessor because it brings in America and Canada as equal partners, takes on the still more challenging task of organising a joint effort by the Atlantic nations to help the southern half of the globe to emerge from poverty. As yet the OECD's tools are only beginning to take shape. The complex job of co-ordinating the West's aid effort has barely begun ; in most European countries, awareness of the sustained exertions required in the next decade has barely touched the surface of the public conscience, let alone of the budget-makers' plans.

But, as in 1948, there is one major factor of encouragement: the immense enthusiasm of the United States for the new organisation. Just as, in the early days of the OEEC, it was American generosity and American insistence that brought the organisation into life, so, today, it is America's new need for partnership that is providing the drive. Just what role the OECD will play in the field of trade is still uncertain, although President Kennedy's suggestions for joint western policies on imports from underdeveloped countries are a significant beginning in Atlantic co-operation. In the co-ordination of economic policies, the new organisation's role is also shadowy; but there are influential men in Washington who see it as the future high command of a joint western policy on growth. In all this, Britain is now in the fortunate position of a potential insider. If it succeeds in joining the Six, it will no longer be in a passive position, responding to the shocks of the common market dynamo, but part of the dynamo itself ; and just as the Six have led Britain, by a mixture of pressure and example, towards greater unity, so Britain may soon be in a position to help to guide the United States in the same direction.

EARL OF SNOWDON

Why the Fuss?

THE earldom bestowed on Mr Antony Armstrong-Jones this week has been taken by some people (not all of them inflicted with inveterate snobbery) to mean that he has gone up in the world ; and by others (not all of them advocates of a bicycling monarchy) that he has come sadly down. It is an issue on which every Englishman and his wife would feel it un-English not to pronounce an opinion, and no other people possesses such a battery of professional expertise on which to call for the fitting analogy and finely judicious con-

The Economist

OCTOBER 5, 1861

DANGERS OF SCHEDULE D

"It is *objected* . . . to the contemplated reduction of the taxation upon the industrial body, that as a whole, and *as a class*, it already pays *less* than it should. Persons taxed under Schedule D have the dangerous privilege of self-assessment, and they unquestionably use it. To what extent they do so is uncertain, but every one knows that the amount of fraud continually practised is lamentably large. . . . The Government has tempted the mercantile community by placing it in a position in which it never should have been placed—which was too *tempting for human* nature to endure without deterioration. It was required to participate in taxing itself *unjustly*. A tax was *imposed* which pressed equally upon a richer class and a poorer class ; while, by an *anomalous absurdity*, the poorer class was required to assess how much it should pay, and the richer was not so required. It was unreasonable to expect such virtue from the average morality of ordinary Englishmen. It is much that people should assess themselves accurately to what they consider a just tax. Hardly any nation in the world has ever shown sufficient morality to do even as much as that. But it is *absurd* to expect men to assess themselves accurately to what they believe to *be* an *unjust tax*. They say, or they feel : 'The Government is unfair to us, and therefore we need not be too scrupulous with the Government. The *Government* wishes to take from us money which it ought not to have, and therefore there is no such great harm in preventing it from having it.' An obscure idea of this sort lurks in the minds of many who would not be prepared to state it, and who would shrink from it if stated. It does not induce them to defraud the Government of *anything which they know to be its due ; but* it does induce them to decide all dubious questions in their own favour ; to catch at every petty circumstance of excuse, however invalid ; to give themselves the benefit of every doubt, however shadowy and imaginary be its nature. The impudence of the State, if we may be so bold as to use an expression which is not too strong, in asking people to contribute to their own wrong *and co*-operate in their own maltreatment, has largely enhanced the inevitable fraud which must exist under every conceivable system of self-assessment.

clusion. But is not all this something beside the point? The new Earl of Snowdon has not become at a stroke any less Mr Jones or any more Princess Margaret's husband. He is who he is, and the particular talents that he can add, as an individual, to the relationship between the royal family of which he has been a member for eighteen months and the ordinary world to which he previously belonged cannot be said to have altered. The abilities of the royal director of the Edinburgh festival are not substantially affected by the fact that he happens to be called the Earl of Harewood. The Earl of Snowdon has his own place to find and fill in public life. It is what he does, not what he is called, that really matters. His title, as the occasion of its conferment plainly indicates, is not so much a matter of importance for him as for the child which, it is happily expected, will be born to Princess Margaret in a few weeks' time. It is merely a good moment to begin the congratulations.

TRADE UNION LAW

Over to Mr Hare

WHATEVER their quarrels with the Government on other issues, the TUC leaders made a great mistake last week when they refused to talk constructively to the Minister of Labour about the shape of future legislation on union matters, and particularly on union elections. Legislation cannot remove the apathy that prevents so many union members from voting: but it could do away with some of the absurd restrictions on canvassing that make union election campaigns so dull: above all, it could remove the increasing public suspicion that the present set-up is far too vulnerable to one form of fiddle or another. This state of affairs has not been brushed out of sight by the expulsion of the Electrical Trades Union—in fact the ETU's dismissal has strengthened the argument for some external arbiter.

To get a proposal for electoral reform through the TUC and then through 180-odd constituent unions would be incredibly difficult and interminably slow: even if Mr Hare is not specially keen on introducing legislation himself, the Government's hand is quite likely to be forced by a private member's bill on the subject. It is worth repeating what has been said before in these columns on the scope of the reform that is needed—perhaps before Mr Hare says something about his ideas at Brighton next week.

The principle behind any new legislation must be to protect the rights of the individual union member—his right to vote and to hear the arguments, his right to join the union of his choice, and his right (even if he is an eccentric) to leave a union without having to leave his job. The means should be to confine the legal privileges of trade unions to those registering with an official arbiter, perhaps the Registrar of Friendly Societies. Registration would be refused to unions whose rules fail to protect the members' rights, particularly in elections, or to those—far more common—whose rules are simply incomprehensible. Complaints of victimisation, or of unfair punishment of a member, would be heard by the registrar: relief at common law would still be available to those whose problems could not be settled by the registrar as a go-between. In this way sound advice would be available not only to ordinary members, but also to voluntary union officials who might expose themselves to damages through ignorance of the law rather than through malevolence.

The registrar's most valuable function could be to publish a really comprehensive and frank annual review of his charges, in which he would have discretion to deal more firmly with unions that operate closed shops than with purely defensive clubs—a vital distinction, perhaps too fine to be incorporated workably in legislation. The registrar's criticisms would be backed by the power to strike off a union that failed to pay attention. None of this is anti-union: it might even help them to catch up in public esteem, as well as in their internal organisation, with the standards of the 1960s.

RUSSIA

Daring

LITTLE stimulation is, in general, to be derived from the public debate inside Russia about the new programme of the Soviet Communist party. But there are exceptions. *Izvestia* recently published an article by Mr D. Blokhintsev, a corresponding member of the Academy of Sciences, under the eloquent title, "To search, to discuss, to dare." It is really worth quoting:

"For the development of theoretical sciences, it is hazardous to rely on a single scientific school or on a group of scientists with a common stock of ideas; and even more risky to give such a school a monopoly of rightness. Different scientific schools have had, and will have, the right to exist in our country. This fact is of great political importance internationally; it demolishes the view, widespread among scientists of the capitalist world, that the influence of the officially approved schools of scientific thought limits creative freedom in Soviet science.

"Creative scientific discussions (Mr Blokhintsev continues) are unquestionably useful and indispensable. They help to explain the aims of the organised transformation of science, the changes in the original plans and in the original distribution of funds. All this is natural and inevitable.... It is important that varying viewpoints be represented objectively in the scientific press. In this way the intelligent reader is enabled to assess every scientific tendency for himself, and to take from each what he considers important, useful and valuable." How true; but can it be limited to pure science?

CHINA

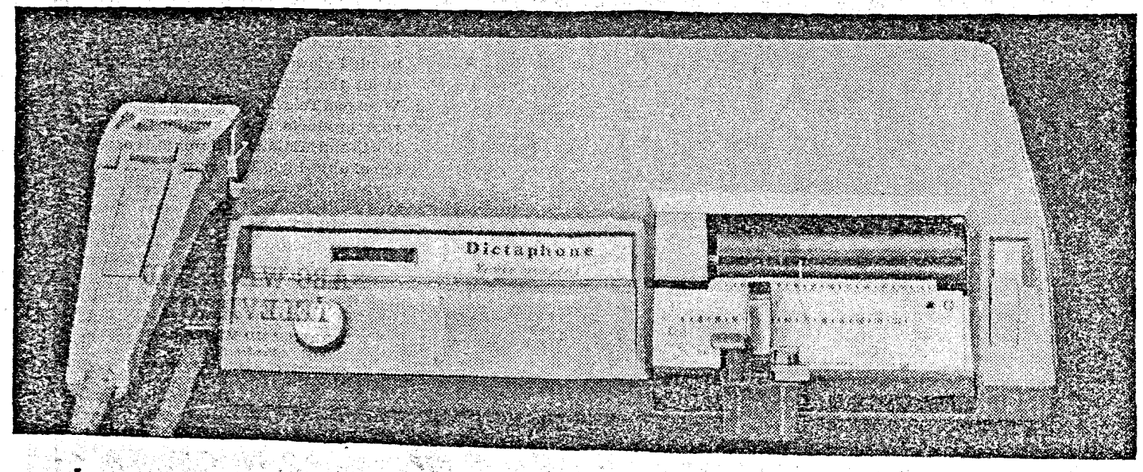
Three Red Banners

ANNIVERSARIES, the world over, are occasions for cheerfully making the best of things. This the Chinese duly did last weekend when they celebrated the twelfth anniversary of the founding of the Chinese People's Republic. But throughout the enthusiastic accounts of China's successes in building socialism runs a sombre thread of admissions of difficulties and shortcomings, particularly in agriculture. To conceal these difficulties would in any case be pointless, since serious food shortages have been freely admitted by the Chinese press, and China is being forced to buy immense quantities of grain from Australia and Canada. But to ascribe them entirely to the succession of droughts and other natural disasters over the last three years is less than frank. The dislocation caused by the headlong introduction of people's communes over three years ago must have played its part. If not, why should the Chinese have backtracked on the communes until most of them are now a shadow of their original selves?

The Chinese, however, persist in maintaining stoutly that there is nothing wrong with the communes. There is thus no sign that this particular bone of contention with the Russians is going to be removed. It is significant that at the Moscow reception in honour of the Chinese anniversary, the chief Russian speaker, Mr Konstantinov, editor of *Kommunist*, conspicuously failed to mention the communes, while the Chinese ambassador who followed him went out of his way to praise their progress. There were other signs last weekend that Sino-Soviet relations are not wholly amiable, in particular the failure of the Russians, for the second year running, to send any of their top men to the celebrations in Peking; pride of place among the delegations from the communist block was given to Mr Myftiu, an Albanian vice-premier.

Both the Chinese and the Russians, however, are clearly anxious to present a united front to the outside world. The refusal of the Chinese, for instance, to recognise the reality of the two Chinas does not prevent them from warmly advocating, in the next breath, the perpetuation of the two Germanies. It may be that inside the Chinese politburo the faction is gaining ground which argues that China cannot afford the luxury of an ideological quarrel with Moscow while its economic outlook remains so hazardous. But so long as Peking continues to flaunt the slogan of the three red banners (representing the party's general policy on socialist construction, the great leap forward and the people's communes) the moderates can hardly be said to have won the day.

THE WEEKEND IS THE MOST NATURAL BREAK OF ALL



Wind-storm—tree splinters.
A natural break. Thursday,
Friday—weekend.
A natural break.
Each natural in its way . . .

. . . but the weekend is the most natural break of all. Then families relax together at home. It's child-and-chatter time. Plan-the-home, plan-the-budget-time . . .
. . . and time for half the ITV homes in England and Wales to look at ABC Weekend Television. This 'feet up' weekend mood is just right for your commercials. Home-and-family-minded viewers welcome information about the latest and best. Let ABC Weekend Television sell your name . . . your products to 15 millions in the North and Midlands. The largest coverage of any single ITV company . . .

Men who buy well,

buy DICTAPHONE TIME-MASTER

REGD. TRADE MARK

Men who value quality and service are the men who buy Dictaphone Time-Master, because the transistorised Time-Master is the quality dictating machine. It's a precision instrument designed to save time for a man whose time is valuable.

Dictating with Time-Master is as easy and pleasant as normal dictation to a secretary, but it is much more convenient and time saving. No matter where your secretary may be, you simply speak, and immediately your thoughts are on *permanent* record. Time-Master has these unique advantages because only Time-Master has the DICTABELT record.

The Dictabelt recording is permanent and visible, ensuring complete safety from accidental erasure. Reproduction is crystal clear and placefinding is instantaneous.

Dictaphone Company Limited, 17-19 Stratford Place, London W.1. Tel.: HYDe Park 9461.
Branches throughout the British Isles

The words DICTAPHONE, TIME-MASTER and DICTABELT are registered trade marks.

Visit Dictaphone on Stand 112 Business Efficiency Exhibition, Olympia—2-11 Oct.

INDIA

Bed of Splinters

DURING Master Tara Singh's 47-day fast, which he abandoned on Sunday night, many Indians expressed scepticism about the totality of his abstinence. Certainly the 76-year-old leader of the Akali Dal Sikhs regained his buoyancy with notable speed once he began to sit up and take visible nourishment. So, in a sense, did India. Sikh agitation for the carving out of a separate Punjabi-speaking state will doubtless continue. But the Akali leader's withdrawal from his announced "fast unto death" for that cause has disenchanted not only a good many of his own followers but also other enthusiasts for the many sectional and factious causes that plague India. Friends of Indian unity can breathe more freely.

The vast body of the Indian Union rests, sadhu-like, on a bed of splinters. With its 430 million people, India is beyond compare the largest nation ever held together under a democratic system. A bewildering pattern of differences in language, religion, and ways of life divides up its population fully as much as Europe's. China's rulers, and Japan's, can draw strength from the deep reverence toward established authority at the centre inculcated in the peoples of those countries during many a celestial dynasty. India has no such tradition ; even its capital city is the creation of two waves of alien and transient conquest, and its nationalism, like its frontiers, is the product of the British raj. Even after the rough surgery of partition in 1947, separatism has gone on working like a strong poison in the country's veins.

The Akali Sikhs' case was founded ostensibly on the principle, already applied widely throughout India, that political units should correspond to linguistic frontiers. But their demands would have brought them, in practice, a part-Punjab dominated by the Sikh religious community, and by its most militant elements at that. Linguistic delineation has to stop somewhere, if India is not to become a Holy Roman patchwork quilt in which every small tribe has its own state ; religious communalism has to be checked at the outset if India, with its forty million Moslems, is to remain a secular state at all. Mr Nehru's principles, and his nerve, have seen him through a severe and, probably, a crucial test.

NEW UNIVERSITIES

Frozen Fourth?

THE designation of the fourth new university to follow Canterbury, Colchester and Coventry in this year's batch is still hanging fire. The University Grants Committee, acting on the policy of providing 170,000 student places by the early nineteen-seventies, recommended a location to the Chancellor of the Exchequer at the end of July. The two months that have elapsed may be an indication of both Mr Lloyd's preoccupations and the effect of the policy of the pause. It is highly desirable that everyone, and particularly the rival claimants, should be put out of their misery and effective planning for the new foundation allowed to get under way.

No other foundation is to be considered until after the Robbins committee's report has been produced and lengthily mulled over: the argument for making every possible effort now to alleviate the 18-plus bottleneck, not merely in the early seventies but in the middle sixties, is a strong one. The UGC, in its annual report, calls attention once more to the fact that not only are more children staying on in the sixth forms but the number of 17-year-olds in Britain will jump by 225,000 between 1962 and 1964. This is one answer to academic grumbles about the quality of some of the undergraduate entry in recent years (when the selection for 20,000 extra places has had to be made from the relatively small age groups born up to 1942). But it should have an even greater impact on the authorities.

The UGC believes (as some of its recent choices have demonstrated) that the postwar increase in student mobility has weakened the argument for confining the new universities to the main centres of population. It would be agreeable to concur in this view if the need for a crash programme in expanding higher education were not already paramount. As things are, the lack of proper residential accommodation usually condemns the mobile student to indifferent lodgings in a strange town and a 9-to-5 academic existence wherever he goes. Private benefaction (particularly on the scale that the London School of Economics has enjoyed this week) can bridge some of the yawning gaps in the provision of halls of residence, but in the immediate future is there not something more to be said for second universities in, or on the outskirts of, the larger conurbations? Collegiate life may be an ideal (although the Scottish tradition used to be an eloquent case for what can be achieved without it), but for many young people in this decade the choice can only be between half a loaf and none.

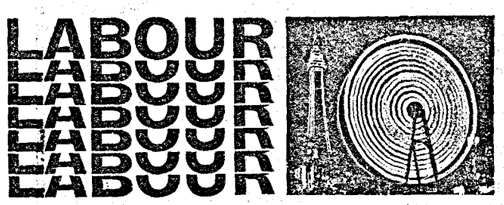
NIGERIA

Too Friendly

NIGERIA could congratulate itself last Sunday on a successful year of independence in domestic matters. The unity of the country has been consolidated; the Cameroons tangle sorted out. The foundations have been laid for a new five-year plan that will move the economy forward at a respectable pace. The press is still free ; and the opposition continues to oppose.

All this is a considerable achievement, but some Nigerians are, nevertheless, unsettled. One of their regrets is that the government has not given a lead in centralising economic planning, and that there is too much competition between the regions. A deeper complaint, however, is that

Sir Abubakar: too broad a smile



Nigeria is too friendly with Britain. The defence agreement between the two countries is constantly under attack, and was condemned at a recent Nigerian conference on African affairs in Lagos opened by the prime minister, Sir Abubakar Tafawa Balewa. Nigeria and Britain are, in some African eyes, altogether too comradely. But if this develops into the kind of relationship that Britain and India have (in which mutual criticism is all the stronger because it is in the family), then Nigeria will have set a good example for relations between Britain and other African countries.

The same conference spoke in favour of the kind of pan-African unity favoured by Dr Nkrumah, as compared with Sir Abubakar's more hesitant approach. A good many Nigerians, especially young ones, want a vigorous foreign policy that would assert Nigeria's leadership in the continent. Certainly Nigerians have done a good job as members of the United Nations' force in the Congo, and Sir Abubakar showed his temper when he broke off relations with France because of the nuclear tests in the Sahara. His other principal foreign achievement has been his leadership of the "Monrovia" group of African countries: a bigger group by far than the one Ghana speaks for, but quieter. None of this adds up to the "showboy" kind of politics that goes down well in west Africa. This is no bad thing. But perhaps Nigeria should now be ready to play a slightly more assertive part in African affairs.

Winning the Last War

Messrs Brown, Gaitskell, Bowden: how hypothetical ?

FROM OUR SPECIAL CORRESPONDENT AT BLACKPOOL

THE Labour party came to Blackpool with the exhilarating knowledge that it is now five points ahead of the Tories in the Gallup Poll, and with everybody therefore busily counting his portfolio in the next Labour government before it is hatched. It was clear from the outset that the events of the past year, with the big wheel-round in the party since the Scarborough conference, have given Mr Gaitskell the power to create that hypothetical government in the attractive image that he would wish ; but it also became clear very soon thereafter that he is still not using that power particularly clear-sightedly.

This is not because he lacks the necessary talents: Blackpool confirmed Scarborough's revelation that he is the most effective and at times the most moving orator British politics have had since television made oratory once again important. His potentially fatal blind spot is that he still has not learned to pick out which electoral albatrosses he needs to cut himself off from. At Blackpool he triumphantly (well, more or less triumphantly) won last year's war, and failed to see that in the process he was running away from this year's one. The confusion arose from the fact that it was still the familiar figure of Mr Cousins who was brandishing the main albatross.

Mr Gaitskell was concerned to prick Mr Cousins's balloon over the questions that mattered last year, foreign policy and public ownership, and this he did with gentle skill—considerably aided by Mr Cousins's own speech on Wednesday, although amid the usual left-wing shouts of "foul." But the real image in which Mr Cousins is a massive threat to Labour this year is as the union leader whose immediate purpose in life is to lead a major strike that "will have an impact upon the public." What a real impact means is an impact of infuriation, and here Mr Gaitskell has plainly failed to dissociate the Labour political movement from the momentum Mr Cousins is setting: indeed Mr Gaitskell led into potential catastrophe with his chin. The national executive opened the conference with the tabling of an emergency resolution attacking the Government's pay pause, in the belief that the debate on this would attract white collar workers, and then seemed surprised that the debate's only effect was to enable Mr Cousins to gather all that fearful publicity on the first day by shouting his threats, via the watching telly, into floating voters' homes.

Mr Gaitskell's second, and minor, disappointment was that he did not win over as many of the votes of the constituency Labour party zealots as the Campaign for Democratic Socialism was confidently expecting. At the moment about half seem to be voting against him. Because these votes had divided in Mr Gaitskell's favour at the end of the Scarborough conference, there had been some hope that in this year's election for their section of the executive they would sack Mr Mikardo and elect Mr Healey ; instead, admittedly partly because of a split vote on the right, they promoted Mr Mikardo one place above Mr Callaghan. But this failure is relatively unimportant except in so far as Mr Gaitskell—once again misjudging his power—allows himself to be unduly worried by two of its indirect effects.

One of these effects is the continuing influence within the executive of the Greenwoods, Castles, Dribergs and Wilsons whom the constituencies elect. Here again one of the lessons of Blackpool is that Mr Gaitskell should really be in a pretty strong position now. Before last year's Scarborough conference the national executive had shown itself ready on occasion to vote down Mr Gaitskell, but this year it voted him down only once (on a motion that might have extended indefinitely the suspension of Mr Zilliacus) and even then the first voting was a 13 to 13 tie, resolved against Mr Gaitskell only by Mr Crossman's casting vote as chairman. On all other matters the executive sided heavily with the party leader, including significantly on a motion that finally buried the vote-losing scheme to municipalise all rented houses. Moreover, despite the disappointing constituency party voting, the new executive elected at Blackpool shows one net Gaitskellite gain, because the trade unions have helped to re-elect Miss Herbison to the women's section in place of the leftish Mrs Jeger.

IT became increasingly clear during the conference that last year's Wilsonian wing of the executive—the people who so ostentatiously refrained from applauding Mr Gaitskell at Scarborough—is in process of doing the splits. Those to the left of Mr Crossman are still an anti-leadership clique, and although Mr Crossman has moved nearer to the leadership, he still has reservations, as he explained in a chairman's address of quite wonderful dottiness. Mr Crossman ascribed this year's flight from sterling to the dollar and D-mark as proof of the success of the communists' challenge to the "kind of unplanned affluence we see in Europe and Britain and America," a challenge which he said could only be met by the British Labour party sticking to a policy of massive nationalisation. But Mr Crossman's address fell interestingly flat, and Mr Wilson's performance at the conference was a much more sensitive indicator of the way that the wind-up is blowing. Mr Wilson was working very hard to reintegrate himself into the Gaitskellite wing of the party, and his job as shadow Chancellor seems to be safe. This is regarded by the Gaitskellites as a great achievement for unity. And it is considered bad form to mutter about the distinction between an albatross and an ally.

An important point is that the anti-Gaitskell votes of the constituency parties, added to Mr Cousins's million votes and those of a few other unions, give a rock-bottom conference vote of 1.7 million for any left-wing motion under the sun. As any vote of over 3.2 million now wins a conference majority, this means that Mr Gaitskell is beaten whenever unions deploying anything over 1.5 million votes join in. On various issues, from time to time, this seems bound to happen. It did happen twice during Wednesday's foreign affairs debate, on Polaris and German troops in Wales. But as nobody supposes that Mr Gaitskell's actions need be altered one whit by these defeats, they do not matter. Strangely, Mr Gaitskell's hand is likely to be forced by the way that he won Tuesday's large majorities on domestic policy more than by Wednesday's defeats on foreign affairs ; as a result of the pledges that he gave, it seems almost certain that Labour's election manifesto will still have to include a commitment to nationalise steel, plus some vaguer nationalisations as well.

BUT the most insidious effect of the conference system now is that it is plainly inhibiting Labour from adopting policies quickly to meet new problems that turn up. The most obvious instance at Blackpool—Labour's non-policy on the common market—was partly mitigated by the liberal tone of Mr Brown's speech on Thursday, when he propounded excuses for accepting a motion that began "Conference does not approve Britain's entry into the common market unless. . . ." But even this leaves Labour lagging behind the Conservatives on this issue, although it would certainly be to both its electoral and economic advantage to have got in front of them.

If Mr Heath's negotiations at Brussels fail, Labour will not now be able to pick up the considerable pro-European vote in the country by saying that this tired government has not tried hard enough. If the negotiations succeed, Britain is most likely to enter the common market from about January 1, 1963. The election—*pace* Labour's hopes—will not be held until late 1963 or more probably 1964, and by then Labour will look hopelessly fuddy-duddy if it is regarded as a suspicious detractor of a treaty that has already been signed. Yet the national executive's caution at Blackpool was frankly dictated by the fear that on this issue the usual left-wing rebels could pick up some unusual support from the right.

So, on the most important policy decision in British politics today, Labour has once again let its judgment be hamstrung by undue subservience to a conception of conference policy-making which annually grows more ineffably absurd. And that this conference is absurd as a policy-making body is now increasingly accepted on small matters, although it is still allowed to get in the way of big ones. There was one beautiful little cartoon of the present system on Monday when the mineworkers' union moved a resolution to nationalise the oil industry in order to prevent British consumers from getting cheap oil. Motherwell was to have seconded this motion, but Motherwell was still at lunch, so Mr Crossman said "Resolution falls." But Mr Crossman's colleagues on the platform were not having this, and Mr Gunter rose to say how much the executive welcomed the motion, but that perhaps there was a technical difficulty about nationalising oil because Britain does not produce any oil, so perhaps the miners would remit their motion to the platform. There was also the more traditional humour of Mr Ted Hill's fraternal address, which has been hailed as very responsible by everybody who did not properly listen to it.

The usual quarrels arose about votes taken when many delegates were in the tea room, the hilarious muddle over the ballot on the ETU when delegates were asked to vote on "whether the national executive's report should not be referred back" and then were castigated for saying "Eh ? ", and the growing habit of the executive of accepting motions on the clear understanding that they did not mean what they said. This latter practice is not necessarily to be criticised, but it will be a sad mistake in statesmanship if the leadership is to continue to temper every major new policy in order to avoid an extra decibel of booing at the assembly at which it first emerges.

Back to the Wooden O?

FROM OUR SPECIAL CORRESPONDENT

THE provincial theatre has been long-mourned ; so pervading and enduring is the wake that even the antics of Nottingham town council in the dim and dismal struggle over its civic theatre have not noticeably exposed the city to ostracism, wrath or scorn. Despite the Arts Council's efforts, the Chancellor's belated promise of aid, and the dribs and drabs from ratepayers that help to sustain some of the remaining repertories, it is doubtful if enough local authorities will adopt the arts centre (plus restaurant) concept that could ideally give the theatre and other arts a new infrastructure in the country.

To build a proper arts centre, with underground parking and the other necessities of lively existence, costs up to £1½ million ; even a new theatre on the Nottingham model can hardly come out at less than £400,000. This is one reason why theatre-in-the-round is coming increasingly into the picture as the best way of filling provincial gaps.

The new Chichester theatre-in-the-round will cost £104,000 to complete (first estimates were even more modest): it is designed for an audience of 1,500. But ventures of this kind can start from much less prosperous surroundings. One of the best examples is the Pembroke theatre at Croydon where, since 1959, a small proscenium arch theatre built in 1891 has been adapted at an initial outlay of only £3,000, much of it to satisfy the fire regulations. The Pembroke is now the obvious candidate to move into Croydon's arts centre when that project is completed next autumn, but its experience to date should be an encouragement to others to attempt something of the kind elsewhere—as the theatre-in-the-round idea has spread in the United States. Example ought to be a hundred times better than exhortation ; it will have to be if this country is not to end up with the dullest provinces in the world.

The Pembroke grew out of an idea by Mr Clement Scott Gilbert (now its managing director) that the West End needed the type of off-Broadway theatre that could introduce new plays to smaller and more sophisticated audiences. But the rents in town proved prohibitive. At that time the Grand theatre in Croydon was closing amid loud protestations and complaints: 75,000 people signed a petition for live theatre to continue in the town. It seemed likely that the new group could take over the Grand

audience and break even from the beginning. But things did not turn out that way. There was an initial distrust of sitting round the arena: those people who did turn up insisted coyly on filling the back seats. In the event, the Pembroke had to build up its own audience from scratch, and its success is an indication that a new type of theatre-goer can be flushed into the open.

CROYDON has particular advantages. It can attract the West End managements and critics, so that a success like *Inherit the Wind* has every chance of moving into town: this increases the prospect of getting good names into the cast. In fact the Pembroke could not have washed its face without the touring account fed by those productions that have gone straight to London or round the provinces. Its capacity audience is 450 (a "take" of £152) but this may have to be reduced to cope with some productions in the arena so that the prospective take is of the order of £700 a week. With the cast receiving Equity touring rates this does not leave much margin for upsets. The Pembroke has now been promised a subsidy of £750 from Croydon,

A new audience

with hopes of a similar amount from the Arts Council, to tide it over until it moves into its new home.

Savings come from the reduced cost of upkeep and the need to employ only a fraction of the staff that a West End theatre requires. Settings for theatre-in-the-round are, of course, incomparably cheaper. The settings for *Inherit the Wind* in New York (which is notoriously expensive) cost £25,000 and at the St Martin's £1,000: in Croydon they ran to exactly £11. To put *Unfinished Journey* into production recently required only £100. The biggest oncost is for extra lighting; costumes are dearer in London than in the provinces. Naturally, if companies could transfer from one theatre-in-the-round to another their transport costs for sets would be minimal.

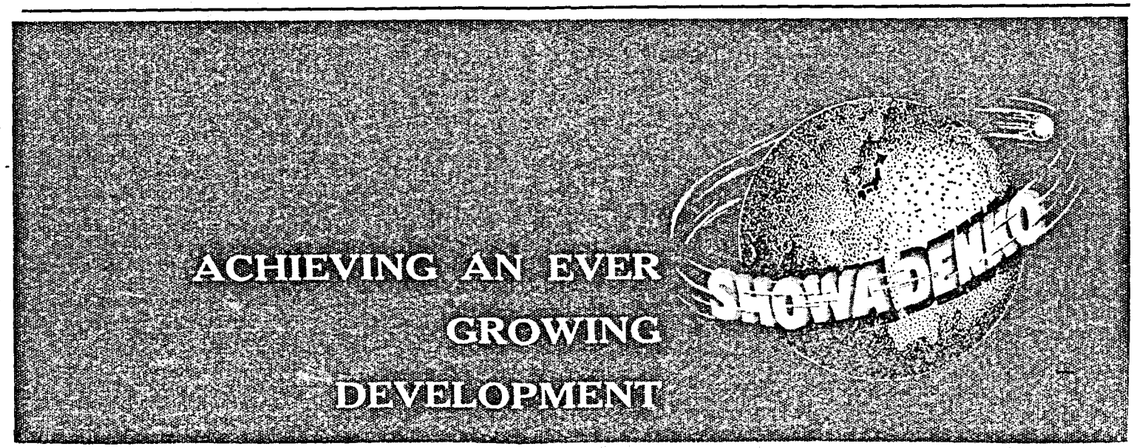
The need to establish some circuit for productions obviously needs to be pressed further; not everything can expect to be snapped up in Shaftesbury Avenue. But this depends on local enterprise to bring the actual arena theatres into existence. Croydon may be a special case, but it could contribute a great deal to a wider provincial network. For those city fathers who do not find the prospect sufficiently exciting in itself there is a growing weight of evidence to show how much can be done in Bruddersford with a small initial outlay, an annual subsidy of, say, £3,000 to get things going (less than ½d. on most rates), plus sheer initiative. It is easy to see which factor is usually lacking.

Out of Sight . . .

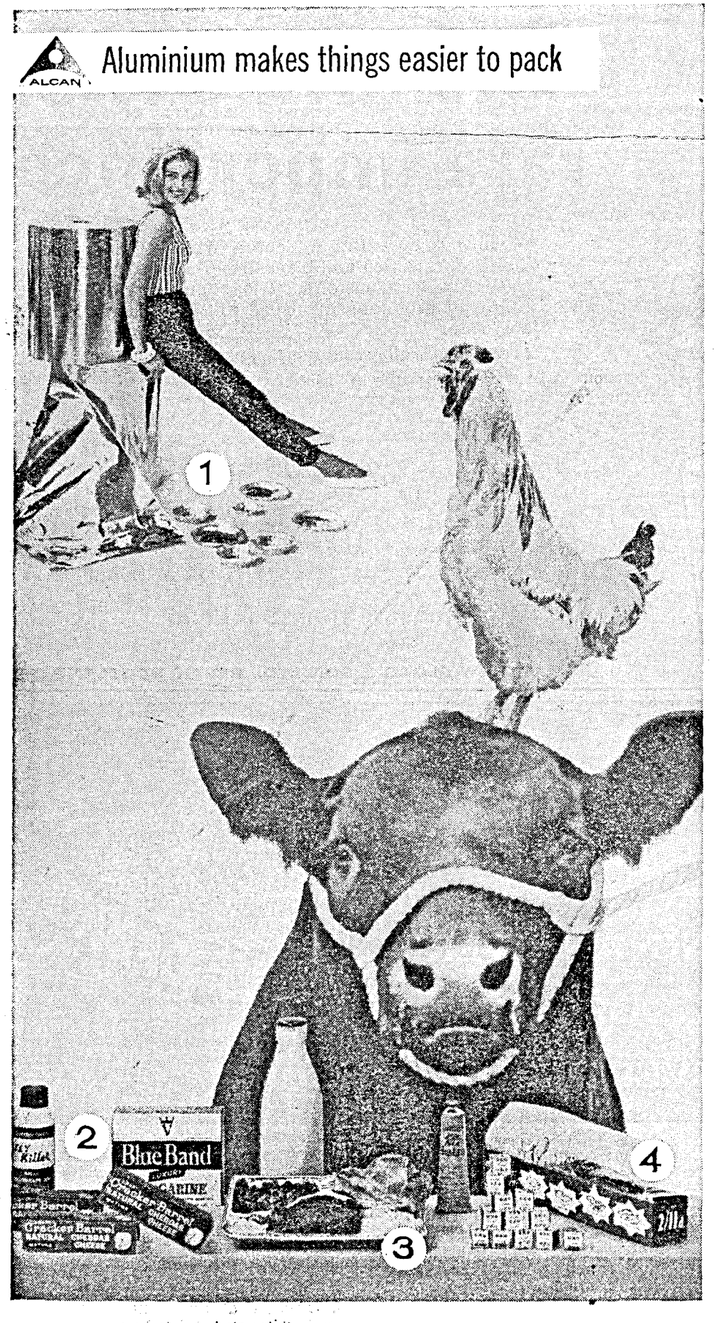
IN the early years after the war, quite a lot of public attention was directed towards the care of old people not living in their own homes. The Rowntree committee's report, published by the Nuffield Foundation in 1947, graphically described conditions in some of the public assistance institutions (alias workhouses) in which so many of the indigent aged spent the last years of their lives. No less distressing was the picture also given in the report of some private "homes" for old people run for profit. At that time, if they were not registered as nursing homes under the Public Health Act of 1936, they were not subject to statutory inspection, and an unscrupulous proprietor could always threaten an inmate who complained with transfer to the workhouse.

Since then, and especially after the final break up of the poor law with the passing of the National Assistance Act, the welfare authorities have enormously improved their residential accommodation for old people—for those, that is, who are not chronically ill. The same break up of the poor law had, however, the result that much of the old workhouse infirmary provision was diverted to ordinary health service purposes, but usually for the benefit of the acute sick. Hence the frantic search that often has to be made for nursing home or convalescent provision for old people whom the hospital authorities have discharged or cannot, or will not, take in. Hence the increase in nursing home beds, other than maternity beds, since 1948. Hence, too, a report*, published by the National Corporation for the Care of Old People (itself a direct result of the Rowntree committee's report), on the extent to which public supervision of these nursing homes is adequately carried out.

In 1960, there were about 1,200 registered nursing homes in England and Wales, with about 18,700 beds (of which 1,620 were maternity beds). In addition, there were at least 114 voluntary (non-profit-making) homes, with about 5,500 beds, that were exempt from registration. These nursing homes, registered and exempt, ranged from something that is virtually a small general hospital to a private house owned by a former nurse, taking two or three patients. They catered for all ages and for most complaints and disabilities. But, from a sample questionnaire which the authors sent out to the registered homes only, they found that 87 per cent of those replying catered mainly or entirely for the elderly and that 85 per cent of all the patients were of pensionable age—in fact, half were women of 80 years of age or more.



Even in these registered homes, which were liable to inspection, standards of staffing and accommodation varied widely (as, of course, did the fees). But the authors emphasise that conditions in the registered homes do not tell the whole story, for many establishments, in fact run as nursing homes, escape registration altogether, partly because the dividing line between nursing home, convalescent home, guest house for the elderly and so on is very difficult to draw. For the same reason, minimum standards that inspectors could insist on are very difficult to lay down.



MUCH wider powers of enforcing standards and of inspection are given to local authorities by the Mental Health Act of 1959 in respect of mental nursing homes, and the report points out that this legislation provides a precedent for new legislation in respect of all nursing homes. The difficulty is that though proper inspection could enforce adequate staffing and better physical accommodation, it cannot, however rigorous, ensure kindliness towards the patients.

In theory, private nursing homes should be far less impersonal places to die in than a hospital ward. In practice, the reverse is often the case. The report cites, at one extreme, a proprietor who showed affection and practical sympathy to her patients, allowing them to bring their own belongings ("one brought 49 pictures with her") and, at the other, a matron who referred, in unpleasant terms, to a patient's incontinence in his presence. Inspection needs to be flexible enough to retain the first type of proprietor, even if, say, staffing standards are low, but to close down the other, however spick and span her premises.

* Nursing Homes in England and Wales. By Caroline Woodroffe and Peter Townsend. 7s. 6d.

We've been foiled again . . .

with Alcan Aluminium

Every year the food and packaging industries use thousands of miles of shining foil made from Alcan Aluminium. As a food wrapping, foil is strong, and impervious to damaging light rays, moisture and air. It can be moulded into rigid food containers, easy to transport and store. Because it is an excellent conductor, foil is also used for quick and efficient cooking, and for keeping frozen foods fresh at the correct temperature. It is grease-proof, non-toxic and will not affect the colour or taste of food.

1 Light and strong Star Foil Dishes have a variety of uses. Millions of puddings a year are sold in them. Many foods can be quickly cooked and served in them. They are a good choice for picnics, too.

2 Foil, attractively printed in colour, is a bright, modern material for wrappings and packs. It is popular with manufacturers, as well as with the grocer and supermarket manager. Producers of meat cubes, cheese products, butter, mustard, margarine and aerosol products all choose foil. It ensures that their products travel well, make maximum impact on display, and stay in prime condition.

3 The new Bird's Eye "Dinners-for-One" are already a top favourite in millions of homes. These complete meals are fully prepared and pre-packed in robust foil trays that are easy to handle, and take up little storage space. Pop these dinners in the oven and—presto!—they're ready for the table in 25 minutes.

4 Star Housefoil is especially useful for cooking fish and meat. It saves money as well as time because—in speeding the cooking process—it keeps gas and electricity bills down. It keeps ovens cleaner, too. Wrap a chicken or a joint in foil and see how beautifully it cooks. The meat will reach your most discerning gastronome deliciously tender—and with all its food value retained.

Alcan, backed by the finest research and technical facilities, can answer any question on the use of aluminium. Write to: Alcan (U.K.) Ltd., Aluminium Canada House, 30 Berkeley Square, London W.1. Tel: Mayfair 9721.

LETTERS

Germany

SIR—The weight of the arguments put forward in "To One Via Two," in last week's issue, is diminished not by what is proposed but by what has been left unproposed.

It is normal in any alliance of free peoples to consider one's allies' special situations on matters which affect one member more directly than others. However, it is to be greatly feared that the curious state of affairs which has existed during the past decade of the west German tail wagging the Nato dog will continue until western politicians face the fact that so long as the larger, more aggressive part of Germany is married to Nato there can be no hope of bringing the two Germanies together. One would scarcely expect the Kremlin to tolerate a reunification of Germany which would leave this nation aligned to the West. Moreover, as discussed in "Two Minds in One," the following article in the same issue, *de facto* recognition by the West of east Germany might so undermine the position of the politicians in west Germany as to cause a resurgence of nationalism similar in effect to national-socialism in Germany following World War I. The danger, of course, lies not so much in what the west German nationalists could do themselves as in what they could cause the two armed alliances in Europe to do to each other.

Today's Berlin crisis affords an unsurpassed opportunity to re-examine the significance of the military alliances in Europe. It is disquieting in this atomic age to hear serious discussions on the significance of the balance of power in central Europe, for surely under the present circumstances this is at best a secondary consideration. The crisis carries with it the danger of ultimate war. Why must we continue to dodge the ultimate solution—disengagement in central Europe and a neutral Germany, reunited under United Nations supervision? That this solution is distrusted in many western circles is undoubted. That the future of the common market, among other things, would be confused is quite apparent. That the Russians, in their present belligerent state of mind, would entertain such a solution is far from clear. But as against the mere postponement of our problem to the inevitable day when the east German communists will attempt an exercise in their new-found "sovereignty" in defiance of the West or until the west Germans seek a solution of their own, these problems certainly appear negotiable.—Yours faithfully,
South Croydon, Surrey CLIFFORD STEELE

Liberals

SIR—I hope I can afford to ignore your special correspondent's reference to my contribution to the Edinburgh assembly as one of the "comic turns." So far as "over-doing my usual free-trade act" is concerned, it is true that on one occasion I went on too long but that was because the warning red light was very difficult to see.

There is nothing "comic" about my opposition to the policy of Britain's joining the common market and I consider the Liberals, led by the Bonham Carter clique, have gone dead wrong on this issue by placing themselves firmly behind a discredited Macmillan who has admitted that he has "no alternative policy." Thus in the early stages of the most fundamental political issue the British people have possibly ever had to face, the Liberals have destroyed in advance all room for manoeuvre.

In my opinion you, Sir, also jumped too soon. You have been right for years on agricultural policy but seem to have missed the point that if industry is to be subjected to greater competition, which, as a free-trader, I naturally approve, the cost of food must be allowed to go down too, not up, otherwise the whole economy will be subjected to such pressures as will bring it to a grinding halt and there will be no scope whatsoever for capital accumulation.

Since the destructive mistake of Ottawa in 1932, it has been accepted thinking that our trading policies have to be based on "special relationships." Hence the view of the little Europeans that imperial preference should now be replaced by common market preference.

I suggest that out of the debate, still in its very early stages, will come the realisation that the population of these islands can only be sustained in freedom, prosperity and peace by returning to policies of non-discrimination in trade, through the unconditional most favoured nation clause, and the removal of protection from our hopelessly unbalanced domestic agriculture. We are in fact in a corn-law situation. Its solution may well produce a new political party, as it did last time.—Yours faithfully,
London, EC2 OLIVER SMEDLEY

SIR—I may be already a doyen, but I am not old enough to be Mr Gladstone's grandson.—Yours faithfully, RICHARD MOORE
Secretary-General,
London, SW1 The Liberal International

Freely Negotiated

SIR—I have no wish to embark upon a detailed answer to the article in last week's issue. I should, instead, like to illustrate the absurdity of the present position by one example.

We have, over many months, been negotiating with a government department on the pay of a very small group of people. We eventually narrowed our differences to the scale maximum of one grade, employing less than forty people. The initial difference of £60 was reduced to £40 and, after some informal discussions, we agreed that we would compromise on £30. This we put to our members and persuaded them to accept. The department concerned would have been content with this settlement.

The intervention of the Chancellor in what would have been a "freely negotiated settlement," by any definition, has meant that the department cannot now reach the compromise settlement. The result is that the Chancellor has saved less than £400 a year, for the time being, we have a settlement imposed upon us, and the staff is thoroughly disgruntled. Not because of £10 a year, but because they know that a mutually acceptable settlement could have been reached. I cannot believe that you regard this as a sensible wages policy.—Yours faithfully, CYRIL COOPER
General Secretary
Society of Technical Civil Servants
London, SW8

Traffic Engineers

SIR—Following a request from the Minister of Transport for our views on the general problem of the need for qualified traffic engineers, and means of satisfying that need, the Institution of Civil Engineers earlier this year appointed a committee to investigate the question. It was therefore with particular interest that I read the note "Slow Road Through Red Brick" in your issue of September 2nd.

While recognising the shortage of trained traffic engineers, the committee thought that a far more serious problem arose from the lack of the technicians who must be employed to assist the engineers if the latter are to be used efficiently. The suggested ratio is four technicians to every engineer and, on this basis, there is an apparent shortage—to cover immediate needs and those of the next five years alone—of over 1,000 technicians. Moreover, there seems to be no recognised qualification that they can obtain and little provision for their training.

The institution has therefore approached the City and Guilds of London Institute with a view to providing a qualification for traffic engineering technicians. The institute has welcomed the suggestion, an exploratory committee is being appointed, and a draft syllabus prepared. All this, of course, serves only to emphasise the need to recruit and train teachers of traffic engineering.

I was pleased to see your reference to the institution's traffic engineering group, but you suggested that it serves only senior engineers. This might be the case to some extent if membership of the group were confined to members of the institution but, in fact, it is open to all who are directly concerned with traffic engineering.—Yours faithfully, A. McDONALD
Secretary, Institution of Civil Engineers
London, SW1

BOOKS

Wilson Becomes a World Figure

Wilson: *The Struggle for Neutrality, 1914-1915*

By Arthur S. Link.

Princeton University Press. London: *Oxford University Press.* 749 pages. 80s.

With this volume Professor Link's hero is catapulted into the stage of world history. When the trigger was pulled at Sarajevo Wilson was still a "mere" American—spokesman for a country, impressive, exciting, commercially dynamic, expanding—but also from the point of view of the chancelleries of Europe remote and irrelevant. By October, 1915, when this volume ends, he has become a figure around whom the policies and strategies of the two major belligerents revolve, whose frown they both fear, whose foibles they both study.

For the biographer these years—or months—of transition present an acute challenge since the Wilson of this phase is less an actor than a point around which other actors move; to make him fully comprehensible the policy-making of London and Berlin has to be described almost as fully as that of Washington. Moreover, since even now the diplomacy of the belligerent powers has not attained the status of "definitive" history, this involves fresh research in European as well as American archives. Thus behind Professor Link's smooth narrative lies a deceptive amount of original inquiry; for Britain in particular, characteristically the most secretive of the three, he has exhumed a wealth of material that makes his pages a notably fresh contribution to the history of Anglo-American relations. As a result we have here not only a chapter of Wilson biography; we also have what is the most complete and balanced account available of American-European diplomacy in the first twelve months of the war.

This volume is primarily a study in diplomatic history. The domestic story is held over for later treatment, to give extended scope (though no greater than the subject merits) for a careful examination of Wilson's course in foreign relations. The focus is on the White House and the State Department and it covers the sad, almost pathetic process of the breaking of Bryan and the emergence of Lansing as a tool better suited to the President's hand. But behind the diplomatic notes lies the continuous force of American public opinion, now active, now inert; to be played on only within limits and by those who can distinguish between its constants and its mutables. Professor Link is notably shrewd about this, where so many even of his fellow American historians have often been imperceptive; his opening chapter on "Initial Reactions to the War" is alone worth the price of admission, with its sensible assessment of the roles of British and German propaganda and the fine shades of American feeling about Europe and the conflict.

A British reader may perhaps be forgiven for thinking that the Anglo-American story in these first twelve months, with its subtle shifts of mood, is more interesting than the German-American with its cruder issues and generally clumsier diplomacy. Professor Link tells both well, but it is only necessary to read, for example, his account of the British handling of the cotton contraband controversy to see how here at any rate Britain was able to outpoint Germany. This was so because its rulers had a better instinctive understanding of the United States than the Germans and showed a consequential concern for those American interests which their warmaking might affect. This put the two belligerents on different levels from the first and here, if nowhere else, the Wilsonian injunction about being neutral in thought as well as in deed was bound to break down. Even initially it was only superficially true, as Wilson said, that this was "a war with which we have nothing to do." From the start there were certain bonds and commitments, and the illusion that American diplomacy could be kept aseptically neutral, while American finance and commerce were getting increasingly involved with the allies, has already worn thin by August 1915 when Lansing has to warn Wilson of the grave consequences for the American economy of not helping Britain to maintain its purchases with America. More than most men Wilson seems adept at not letting his left hand know what his right hand was doing. Or did he? This is a question which Professor Link will have to answer before his narrative reaches April 1917.

BBC Under Pressure

British Broadcasting in Transition

By Burton Paulu.

Macmillan. 260 pages. 35s.

Just when his compatriot, Professor H. H. Wilson, seems to have persuaded sensitive souls that commercial television was all due to a pressure group, Dr Paulu comes forward with rather more obvious earnestness to assure them that the BBC and ITA are both doing well after all. Unexciting stuff, perhaps, but at least it redresses the balance. In a brief account of the campaign for commercial television he gives more prominence to the Conservative party's preference for private enterprise, and he understands better than Professor Wilson that much opposition (for instance, by press and cinema interests) was not disinterested idealism.

On the great issue of competition or monopoly, Dr Paulu has no doubt what the record proves. With the painstaking documentation expected from the Director of Radio and Television Broadcasting in Minnesota University, he comes out with a thumping, if not exactly thundering, verdict for competition: wider choice, improved standards ("on the whole") and "outstanding improvements in the coverage of politics and controversy." The BBC has been spurred—or pressured—to better work and though it has sometimes vacillated by confusing imitation with competition, its service is now more varied and complete than in the last days of stuffy paternalism six years ago.

The ITA, itself subject to rival pressure, also emerges with a better record than British critics would allow, presiding unostentatiously but commendably ("on the whole") over mettlesome contracting companies producing first class entertainment, drama, political, religious and schools programmes—and the author's field research was done in 1958 and 1959 before the alleged pussyfooting Pilkington period started.

So Dr Paulu concludes: "Competition has been good for British television"; and with flattering intent credits our genius for compromise with "high standards of programming and advertising, without interfering with the freedom of expression so essential to the life of a democratic country." Yet when he comes to offer Sir Harry Pilkington and Co. his conclusions—"bold as it may seem"—he suddenly opts for a continuance of the BBC's radio monopoly, extended to local broadcasting, while questioning whether the 50,000 listeners to the Third Programme merit 10 per cent of our radio frequencies. On TV he comes out for an extra channel for the BBC if it can manage with a £4 licence, and an extra channel for ITA, which would ensure no more than "reasonable profits" by higher rents, levies or profit—and loss?—sharing agreements. But what exciting things might ITA do with the loot? After such bold judgments, these recommendations are disappointing and look like an unimaginative attempt to anticipate the well-worn British genius for compromise.

Unruly Pupil

C. G. Jung

By E. A. Bennet.

Barrie and Rockliff. 173 pages. 21s.

The dilemma of any author who seeks to put the life and work of Professor Jung between hard covers is that he has to

'TEA WITH AN AUTHOR'

Every Wednesday from Oct. 11 until Nov. 22 in Harrods Georgian Restaurant at 3.30 p.m.

Oct. 11. Kenneth Allsop on "My Life with Al Capone"

Oct. 18. Nicholas Monsarrat on "The Not so Cruel Sea"

Future authors include Commodore R. G. Thelwell, Neville Cardus, Audrey Erskine Lindop, Laurens van der Post, Ursula Bloom.

Tickets including tea 5/- each from the Book Department, Second Floor and Library, Third Floor.

Please write for full programme.

EDINBURGH

choose between satisfying the experts and making his book intelligible to the ordinary reader. Dr Bennet, a professional member of the Society of Analytical Psychology and an old personal friend of Jung, has, probably wisely, chosen the second course. But, though he may be accused by some of those whom Jung himself used quizzically to call "the highbrows," of occasional over-simplification (especially in his interpretations of Jung's own dreams), most readers will appreciate this brief but highly readable presentation of one of the world's most remarkable men.

Of particular interest is the account which Dr Bennet gives of the uneasy relationship and final break between Jung and Freud. Jung himself never minimised his indebtedness to Freud, though when that first famous meeting between the two men took place in 1907—it lasted for thirteen hours—Jung was already well started in his career as what he called a "medical psychological scientist" as a result of his reading of Kant, Schopenhauer and, in particular, Krafft-Ebbing. Even that first meeting, though it left Freud enthusiastic about the younger man, carried the seeds of the final dissolution.

As Dr Bennet relates:

> For Jung the meeting was a mixture of expectation and disappointment. He hoped for much, but seemed unable to get beyond the confines of Freud's narrow approach, his restricted perspective and concentration on tiny details, and his theoretical assumptions. According to Jung, the talk was protracted because he continued to question Freud, hoping to get beyond these limitations, and in particular Freud's insistence on the importance of the infantile sexual trauma as a settled, unalterable basis of his work.

For some years Jung, then in his early thirties, went along with his teacher, but in the end Freud's dogmatic insistence on the sexual energy of the libido as being at the root of everything proved too narrow a view for Jung to be able to accept. For him, Freud's libido was no more than one of the many aspects of life-energy motivating man: equally important were such other factors as hunger, the drive for power and the need for religion. In 1912 Jung published his book "The Psychology of the Unconscious" and it was this which led to the definitive split with Freud. For in it Jung expressed his broader view of the unconscious forces spelling human nature. (And later Jung was to dismiss the Freudian concept with the biting phrase, "The brain is viewed as an appendage of the genital glands.") In point of fact it was surely not only the clash of theories but almost equally the sharp divergence of their personalities that made it impossible for two such men to march permanently in step together: Freud, the super-sensitive, Jewish genius—on two occasions he fainted during animated discussions with his pupil—who, as Dr Bennet says, "laid unusual emphasis upon any subject he had thought deeply about, as though the mere fact that he had thought it out established its validity"; and Jung, with something of the Swiss peasant's unemotional and cautious attitude to theory of all kinds, coupled with a deep love of all the rich manifestations of humanity whether revealed in yoga, astrology, fairy tales, Zen Buddhism or even flying saucers. Once, when this reviewer visited Dr Jung at his home in Küsnacht-Zurich not long before his death in June this year, he related that, between the wars, he had on one occasion talked with a British archbishop about the possibility of one or two young Church of England priests being sent out to Switzerland to take a course of study with Jung. "But in the end," said Jung, "he decided not to send anybody. He was afraid I would destroy their faith. I felt the same myself when I first went to see Freud—but in the end, of course, it was I who destroyed *his* faith."

Dr Bennet's book contains an interesting series of letters between himself and Jung on "Aion," which is certainly his most "difficult" work, and also deals illuminatingly with the development of Jung's thought in the years before his death. Its appearance will be welcomed as a useful "curtain raiser" to the much more basic study of Jung's life and thought by his personal collaborator Aniela Jaffé, which is due to be published next year under the title "*Memories, Dreams, Reflections.*"

Land of the Free?

The Presidency and Individual Liberties

By Richard P. Longaker.

Cornell University Press. London: *Oxford University Press.* 253 pages. 36s.

MR LONGAKER raises hopes by his title, and in his preface, which it was probably impossible to fill. He promises a study of "the constitutional obligation of the chief executive to protect individual liberty," a subject on which he considers existing commentary to be fragmentary, though he feels that the performance of the Supreme Court and of Congress in the field has been well covered.

It is surely not hair-splitting to point out that the problem of the Negro and his rights—his right to vote, his right to work, his right to go where the white man goes and sit where the white man sits, whether in buses, restaurants or schoolrooms—is not a problem of individual liberties at all. Discrimination based on colour and race, with which much of this book is concerned, is not discrimination against individuals but against groups.

Had he called his book "The Presidency and Civil Liberties" Mr Longaker would have been nearer the mark, would have raised fewer hopes of novelty and one reader at least would not have been disappointed at finding so little discussion of those areas in which the foreigner finds that the liberty of the individual in the Land of the Free is more circumscribed than it is in the democracies of western Europe. The only one of these subjects he treats at any length—and then not in relation to the presidency—is what is known as "The Right to Travel"—a euphemism for the State Department's freedom to make arbitrary decisions about the granting or withholding of passports. And his discussion of this problem is disappointingly tentative.

He is much more successful in his study of the loyalty and security programmes in three wars—two hot and one cold. He appreciates the shrewdness of Mr Roosevelt's appointment (after the period of hysteria in which the military had been able to get away with the Japanese-American relocation programme) of Mr Francis Biddle as Attorney-General to ensure that there would be no repetition of the excesses permitted, or even encouraged, by Woodrow Wilson in 1917 and 1918.

The chief value of this book lies in its demonstration that the President's attitude (as expressed in his public statements and his orders to the departments) is all important in creating the atmosphere in which laws can be enforced and administrative attempts to restrict liberty defeated. But it is political realities that determine these attitudes. The growth of the Negro vote in the big cities had more to do with the official opinions of the last three Presidents than any qualities in the men themselves which made them more liberal than, for example, Wilson.

The final impression is that Mr Longaker thought he had spotted a barrel that others had overlooked only to find that it was not so full as he had hoped and that he had to scrape the bottom to make his book.

Social Change in Africa

Becoming More Civilized: *A Psychological Exploration*

By Leonard W. Doob.

Yale University Press. London: *Oxford University Press.* 345 pages. 48s.

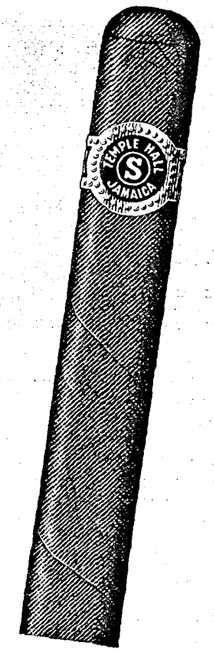
THIS is a book about social change among the "underdeveloped" peoples of Africa. To give him his due, however, Professor Doob became interested in "what happens to people when they become more civilised" long before the current academic boom in underdevelopment. He is a distinguished social psychologist and, needless to say, an American; for none but an American social scientist would be so humane, so hopeful, so curious about other peoples, and so peripatetic, intellectually no less than physically, as to undertake this kind of inquiry. Unfortunately for his readers, Dr Doob's omnivorous curiosity outruns his critical judgment; and clarity of thought is not his strong point. To take an instance at random, he wants to know why "the material aspects of more civilised societies appear more attractive than many of their nonmaterial values" to Africans. So he asked his informants to "comment upon the proposition, 'Life in heaven will be better than life on earth'"; and he is solemnly impressed because they often pleaded ignorance and "said most seriously, no one who has ever been there has returned to tell us." The book abounds in such banalities pursued with indefatigable innocence.

"Behaviour" is the key concept in Dr Doob's vocabulary. He is interested in motives, goals, values, and attitudes manifested in the processes by which members of tribal and other "backward" social groups acquire western civilised ways of living and thinking. His own observations are based on answers to elaborate questionnaires and on a variety of tests given to small numbers of accessible informants in various parts of Africa and Jamaica. His inferences and generalisations are backed up by reference to the extensive literature on acculturation accumulated with more zeal than rigour by American sociologists and anthropologists in the past thirty years. His main "index of acculturation" is the level of school education attained. His procedure is to state what he calls an hypothesis and then to "test" it against his own and other field data. A typical hypothesis offered is that "People changing centrally from old to new ways are likely to feel antagonistic towards traditional leaders who do not reveal similar changes." Confirmation for this is found in the incidence of different questionnaire responses among the groups interviewed. And so it continues.

If this book is a reliable guide to what psychological research can contribute to the understanding of the social changes now going on in Africa, one can only say that it is unpromising.

Dissenters

Two Early Political Associations



By N. C. Hunt.

Oxford University Press. 247 pages. 30s.

THAT the tranquillising of religious passions was an essential element in Walpole's political ascendancy was recognised by his contemporaries and has been accepted by subsequent historians. But while this has long been accepted in principle, the economic, fiscal and foreign policies of the period have hitherto always taken precedence in our books and the details of Walpole's religious policy have been comparatively neglected. Mr Hunt now sets out to fill this gap with a scholarly and detailed analysis of the political organisation and activity of the chief Protestant dissenters in the fifty years following the Toleration Act. His careful researches in the records of the Quakers and of the Presbyterians, Independents and Baptists establish firmly, what has long been accepted, that Walpole secured religious peace by skilful compromise, soothing the churchmen by maintaining the letter of the law and persuading the dissenters to be content with its practical modification and lax enforcement.

A generation ago this valuable but unexciting work would have been conveniently summarised in two or three learned articles.

whatever the occasion choose

TEMPLE HALL 'Coronas - Junior'

a fine medium sized cigar from the leading Jamaican factory

Unfortunately we live in times of literary as well as economic inflation. So Mr Hunt has expanded his researches into a book and sought to lend them excitement by exaggerated claims of their significance. On the one hand, unsupported, as Gibbon said of Voltaire, "by either fact or probability", he invests the dissenters' activities with importance for the future political and constitutional evolution of the country, while admitting their lack of success at the time. On the other hand, he magnifies such small political successes as they had by ignoring the wider political context in which they were achieved. Thus the story of the Quaker struggle to achieve the Affirmation Act of 1696 is told without reference to the peculiar circumstances of that year arising from the Assassination Plot.

In short, where Mr Hunt exercises his faculties as a scholar he is interesting and, apart from occasional special pleading, convincing; only when he indulges in political "prophesying" does he lose command. Such twaddling is better reserved for the ephemeral medium of the telly.

Nasser Close-up

The Boss

By Robert St. John.

Arthur Barker. 288 pages. 21s.

ALTHOUGH written in too consciously a popular style, this is an able biography of President Nasser. From indefatigable interviews with the president himself and many of his friends and his critics a wealth of unusual detail has been amassed. The Egyptian leader emerges from his impoverished, truculent boyhood, through an army career not specially marked for heroism, as having the desperate courage of his only one strong conviction: that "imperialism" must be destroyed and Egypt win back its dignity, and preserve it—at any cost.

The adventures of this one-track mind in the criss-cross tracks of inter-Arab and international politics are well narrated. They reveal an outlook expanding to each occasion and provide an interesting study in the development of today's forceful exponent of neutralist nationalism.

Raiders from the North

The Vikings

By Holger Arbman. Translated by Alan Binns.

Thames and Hudson. 212 pages. 30s.

MATERIALISTS of imagination, superb shipbuilders and seamen, the Vikings between 800 and 1000 plundered, held up to ransom and conquered large areas of Anglo-Saxon England, Ireland, Russia and the Carolingian Empire. For a long time the sedentary, largely agrarian populations of western Europe's river valleys knew no protection, and many of their lords, who were not averse to looting themselves, exploited rather than resisted the raids. Professor Arbman's book describes the movements of the Viking fleets and armies, the conditions from which they sprang and the civilisation that grew up in their homelands, their trading posts and conquests during this period. A master in this field he has added a notable volume to the *Ancient Peoples and Places* series.

Professor Arbman addresses himself mainly to the archaeological evidence, and for the prehistory of the Norsemen there is indeed no other. With its help he suggests that not only the population of the Scandinavian countries but also their wealth had increased steadily before the period of the raids. The pirates who set out to sack the traffic centres of the Frankish empire were not driven to do so by poverty and overcrowding at home; their ships tempted them to seek a more profitable, if perhaps more dangerous, living than could be gained by farming alone.

Plunder, trade and settlement thus became the often interchangeable occupations of the Viking bands. Professor Arbman ends his survey with a chapter on their art and introduces his readers to the perplexities of stylistic comparison. The study of influences and the evolution of forms is here anything but barren for it reveals the troubled cultural and religious situation of these successful warriors and merchants. Christian emblems and heathen masks made uneasy companions, and imports from all over the world often paralysed rather than stimulated native traditions of craftsmanship. A set of excellent plates, figure-drawings and usable maps illustrates these themes, and it is a pity only that there are not quite enough of them: for instance, of the much-mentioned Mammen style not a single example appears. If this is a fault it also shows how well in all other respects this work fulfils its purpose in the series: to present "up-to-date archaeological information in clear and readable form." And there is a bibliography for those who want more.

OTHER BOOKS

THE CHALLENGE OF THE COMMON MARKET. By U. W. Kitzinger. *Basil Blackwell.* 159 pages. 10s. 6d.

Despite the growing output of books about European organisations, it is still rare for a book to be written in Britain exclusively about the common market. M. Deniau's "The Common Market," in translation, provides a French view. But it has been left to Mr *Kitzinger, for six years an economist at the* Council of Europe and now a Research Fellow of Nuffield College, Oxford, to turn aside from his work on a larger study of the European Community to produce a tract for the times. This pamphlet, as he modestly calls it, was written at great speed and its organisation bears some of the marks of this. All the same, it is a valuable simple guide to the Rome treaties and their origins, and to the challenge and problems they pose for Britain. At 10s. 6d. it is expensive for a paperback, but it fills a gap usefully. Brevity and speed of production have not marred the book's accuracy and general soundness.

Mr Kitzinger believes that Britain is right to try to join the common market. But he is not a fanatic and weighs arguments on both sides. At the same time he emphasises that British membership will only be good for all concerned if the British are inspired by understanding of the vast implications and by a desire to play a creative role in all the aspects of the new Europe.

POLITICAL AFRICA. By Ronald Segal. *Stevens.* 484 pages. 50s.

The first big wodge of information in this work of reference is about Mr Segal himself. Valuable space has also been taken up by overdoing the references to other relatively unimportant South African political personalities. Mr Segal's private opinions (which, it would seem, lie in the radical African camp) colour the items. All this apart, the book is a valuable source of information about parties and politicians throughout Africa; it is surprisingly accurate, reasonably full, and very well informed—100 parties and 400 politicians are described and discussed.

A HISTORY OF THE DEPARTMENT STORE. By John William Ferry. *Macmillan Company, New York.* 399 pages. 48s. 6d.

Department stores, the first examples of large-scale retailing, have pioneered the development of buying, merchandising, advertising and personnel practices in the retail field. Their growth is an important commentary on the latter progress of the industrial revolution and the rise of the middle classes. Their history could illuminate interesting questions of management structure, the emancipation of women, store engineering, patterns of urban living, and public taste.

This book therefore represents an opportunity missed, for despite its title most of it is merely a collection of thumbnail histories of individual department stores, many of them with merely local fame and no claim to more. Since all of them are in the English-speaking world, developments on the European continent from the time of Boucicaut onwards are ignored. Mr Ferry has been an enthusiast about his subject ever since, as a boy, he watched Selfridges being built. Only an enthusiast could have included these forty or so pictures of store exteriors, many of them better forgotten. Like many enthusiasts, he shows in his narrative little ability to distinguish significant facts from insignificant ones, and therefore he often bores us. Even the most colourful of the pioneers, such as Gordon Selfridge, William Whiteley or Spedan Lewis, fail to come to life in the medium of the barely diluted language of their own anniversary brochures; and to such revolutionary initiatives as those at Filene's of Boston, the method adopted does not make it possible to devote enough space to arouse our interest.

MONTLHÉRY. *The Story of the Paris Autodrome,* 1924-1960. By William Boddy. *Cassell.* 189 pages. 25s.

This, the latest of Mr Boddy's contributions to motoring history, describes the races and record-breaking activities at the French circuit from the time of its construction to the present day. The book gives British readers the opportunity to learn about the intriguing French racing cars of the vintage era, such as the sleeve-valve Voisins and Panhards. It is well illustrated with photographs that show the changing fashion in racing cars.

INFORMATION AND INVESTMENT. By G. B. Richardson. *Oxford University Press* (1960).

In our review of this book, which appeared in our issue of July 29th, the author was criticised for *never* mentioning trade journals, market research, etc., and sources of information to business men. The review ought to have said that he *hardly* mentioned them.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Republicans Move Right

WASHINGTON, DC

WHEN Republicans lost control of the White House last November after occupying it for eight years, it was generally assumed that they would suffer the fate common to American political parties when they are out of power—a series of destructive internal feuds. But in fact the Republicans showed remarkable solidarity in obstructing President Kennedy's programme during the session of Congress which has just ended and now they are similarly united in preparing for next year's congressional elections. This lack of disagreement is partly the result of their present lack of interest in the selection of a presidential candidate to oppose Mr Kennedy in 1964. To party officials the only three possibilities who are at all prominent all seem to be political liabilities. These three are Senator Goldwater of Arizona, the leader of the party's powerful right wing; Governor Nelson Rockefeller of New York, the favourite of the small but influential left wing; and Mr Richard Nixon, who holds the empty post of titular party leader by virtue of his nomination last year and falls somewhere between the Goldwater and Rockefeller poles. Last week Mr Nixon formally removed himself from presidential speculation—for the time being—by announcing that he will contest the Governorship of California in next year's election and expects if elected to serve the full term of four years.

But a more significant factor in the current solidarity among Republicans has been the party's shift to the right since Mr Kennedy's election. Republican members of Congress have found that it is easier to agree in opposing the social welfare legislation proposed by the Democrats than it was to get together in support of Mr Eisenhower's policies. These Congressmen admit that they will be more comfortable campaigning in next year's congressional election on a conservative anti-Kennedy platform than they were when they had to pay lip-service to a moderate Eisenhower programme. Certainly a conservative trend was inevitable as a by-product of the party's defeat. Ever since the great schism of 1912 when much of the party's left wing was lost permanently, Republican regulars have been a conservative lot and when, as now, there is no universally recognised party leader, either in the form of a President or a presidential candidate, these party regulars are in command.

The fact that for the past twenty years the party has seemed to espouse a more liberal ideology than its regulars do derives from the ability of two small but powerful groups—the eastern financial community and an allied band of professional politicians, also from the East—to control the quadrennial conventions at which the party chooses its presidential nominees. The financiers, whose cash is vital to the party, have insisted on candidates with an internationalist viewpoint. The professionals have insisted that no conservative can win a national election. Together, these groups kept the nomination from the late Senator Robert Taft, the middle-western idol of the party regulars, between 1940 and 1952; and it is by no means unlikely that these eastern Republicans will pull

Senator Goldwater

Mr Nixon

Governor Rockefeller

off their accustomed coup in 1964 and win the nomination for Mr Rockefeller or some other liberal Republican. Nearly 500 party regulars from 13 western states, meeting last weekend at the plush winter sports resort of Sun Valley, Idaho, agreed gloomily that Mr Rockefeller is the early front-runner for the nomination.

Nevertheless, there are signs that this time the conservative resurgence within the party may be more lasting and may extend into the next national convention. It is significant that the party is not returning to the orthodox but politically unmarketable domestic conservatism of Senator Taft. Mr Goldwater, the principal oracle of the new conservatism, has not repudiated Taftism, but he has shifted the emphasis from domestic to foreign affairs. Consequently, the Republican keynote in next year's congressional elections will be a call for a more militant, belligerent stand against the Soviet Union. Specifically, the Republicans are demanding that there should be no compromise on the issues of the cold war; that the attempt to reach an accord on disarmament should be given up; that nuclear tests in the atmosphere should be resumed at once; and that economic aid should be withdrawn from neutralist countries. At its most extreme, this approach calls for gradual disengagement of the United States from the United Nations and for a naval and air blockade against Cuba.

IT is this shift from the domestic to the foreign scene that has made the new conservatism widely acceptable throughout the party. Even some moderate Republicans who favour a few of Mr Kennedy's domestic proposals believe that a latter-day return by the party to the nationalist sabre-rattling of Theodore Roosevelt, appealing to an American public frustrated by reverses in the incessant cold war, is the key to political victory today. It was no coincidence that both Mr Nixon and Mr Goldwater attacked the Administration's foreign policy and soft-pedalled domestic issues at the Sun Valley conference last weekend.

Moreover, the conservative revival within the party does not come from the prewar old guard but is essentially a movement of younger party members, many of whom look to Mr Goldwater for guidance. With a few notable exceptions, the most politically attractive and promising Republican politicians today are right-wingers. In fact, newly elected Republican members of Congress complain that the old line leadership of the party on Capitol Hill, typified by Senator Dirksen, conservative as it is, has not been aggressive enough in denouncing Mr Kennedy's stewardship of foreign affairs. The Young Republican organisation, which once

seemed a forward outpost of liberalism, now adheres to undeviating conservatism.

This right-wing ferment has been stimulated by the mushroom growth during the last two or three years of reactionary pressure groups outside the party, including semi-secret organisations such as the John Birch Society, which contends that communist sympathizers dominate the State Department and the Central Intelligence Agency. The society's impact on the Republican party is indirect; the overlap between the party's extreme right wing and the Birchers means that many of the customary contributors to Republican campaign funds belong to the society. In California, for example, its members have cut off a substantial flow of money to Senator Kuchel, a moderate Republican who attacked the Birchers and is up for re-election next year. As a result he has been emphasising his conservative side of late, loudly declaring his unalterable opposition to the seating of Communist China in the United Nations.

Finally, scattered elections this year have been heartening to the conservatives. In their most impressive triumph, Mr John Tower, an inflexible disciple of Mr Goldwater, became the first Republican ever elected to the Senate from Texas; a right-wing Republican was elected to the South Carolina State Legislature, breaking a long-time Democratic monopoly over that body; and there have been encouraging results in Michigan and New York.

PERHAPS the most remarkable aspect of the conservative trend among Republicans is the almost complete repudiation of so many of Mr Eisenhower's policies, both foreign and domestic. In the recent Congress liberal Republicans whose support had been counted on by Mr Kennedy, veered sharply to the right. For example, Senator Margaret Chase Smith, whose vote has been considered sure by Democrats in the past, wound up by backing the President less than half of the time and during the final week of the session she delivered a blistering attack on his foreign policy.

Nor is the trend limited to the party's congressional wing. Even Mr Rockefeller has been drifting toward the right, denouncing the Administration's school and farm programmes and dealing the death blow to its ill-fated plan for long-term financing of foreign aid by reversing his previous support and urging Republican Congressmen to oppose it. Although Mr Rockefeller may turn to the left again in time for his campaign for re-election as Governor of New York next year, evidently he believes that a more conservative approach is needed if he is to have national success in his party; privately, Mr Goldwater has expressed surprise and pleasure over the present course followed by Mr Rockefeller. But Mr Rockefeller has far to go to convince the party regulars that he is no crypto-Democrat.

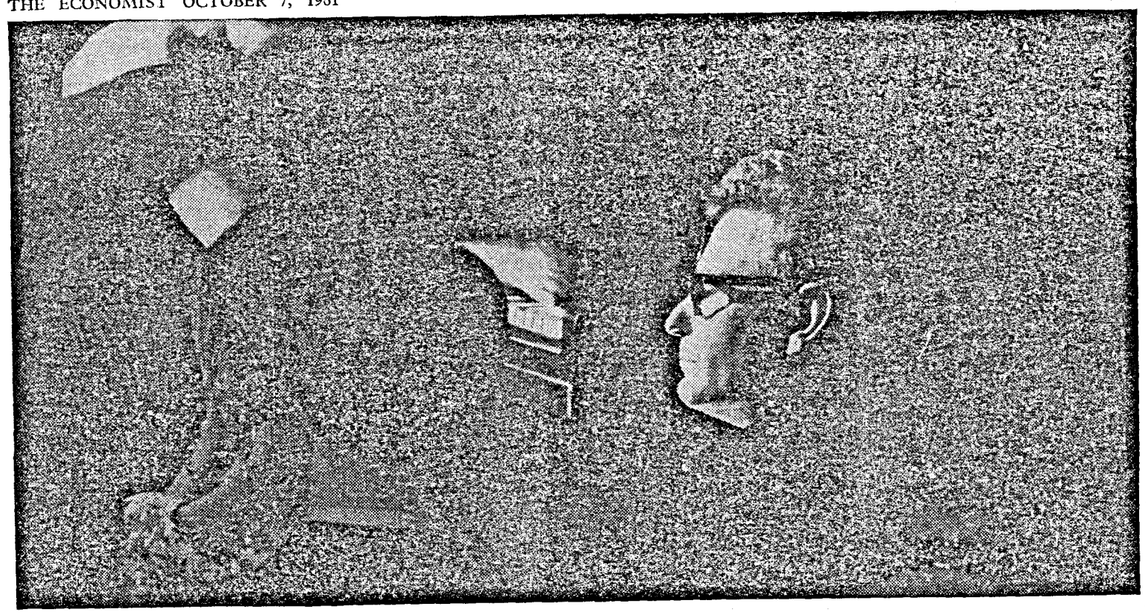
Mr Goldwater's problem is an opposite one but more difficult. Even some of his staunchest admirers admit that his tirades against trade unions and the social security system put him too far to the right to be electable. This would seem to point to another presidential bid by Mr Nixon as a compromise between the two extremes. But his uninspiring campaign last autumn disenchanted many of his former allies, and in any case he will have his hands full in California for the next year at least.

As a result, some Republicans are beginning to look around for a dark horse as their 1964 candidate, a man such as Mr George Romney, the president of the American Motors Corporation, who may run for Governor of Michigan in 1962. But the main topic of conversation in Republican circles at the moment is not presidential politics, but next year's elections when all 435 House seats and 36 of the Senate's 100 seats will be at stake. Republican leaders believe that they may recapture control of the House for the first time since 1952 and score substantial gains in the Senate. If their conservative campaign comes anywhere close to that goal, the impact on the presidential contest in 1964 will be profound.

Judging the Judges

PROBABLY nothing that the Kennedy Administration does in the domestic sphere will be of more long lasting importance than its choice of federal judges, most of whom sit for life. In his first few months in office it has fallen to Mr Kennedy to make more of these coveted appointments than any other President has made in a whole four-year term: 115 at the last count, 73 of them as a result of the expansion of the federal judiciary by Congress early this year. Although the need for more judges has long been patent Congress refused to deal with the problem last year in the hope that the plums would fall to a Democratic, not a Republican, President.

Champion of Negro Rights.



Tremendous political pressures are brought to bear as the choices are made, by Senators, who have a veto over appointments in their own states, by state political organisations and others. But apart from such pressures—which the President implied that he would ignore when he promised to choose the best qualified candidates—the sheer task of sifting over a thousand applicants has been monumental. Even now only 77 appointments have been sent to the Senate, most of them in the last six weeks of the session. Of these 60 have been confirmed; the rest will be given recess appointments. Three Republicans chosen by President Eisenhower and not yet confirmed were renominated and two confirmed, but the rest of the appointments have gone to Democrats. This is in line with a bad tradition. But by the usual standard—the ratings of the Bar Association's Standing Committee on the Federal Judiciary— the Administration has so far observed quite faithfully its promise to appoint only qualified Democrats. These ratings are known in the cases of 52 out of the 60 appointments which have been confirmed; 9 were judged exceptionally well qualified, 27 well qualified, 14 qualified and only 2 not qualified.

But to some degree judgment is still suspended. The Administration may, it is felt, have held back its most controversial appointments until Congress left Washington. There is trouble already over three of the candidates to whom recess appointments are promised. And there have been many rumours that consideration is being given to Mr Frank Morissey, a judge in Boston's municipal court, who has been helpful to several members of the Kennedy family but whose other qualifications are put low in legal circles. In one respect, however, the new Administration has made history; it is the first to appoint a Negro to a life-time post on the federal bench. One of the two so far chosen is Mr Thurgood Marshall, the able chief counsel of the National Association for the Advancement of Coloured People, who has been fighting for Negro rights for over twenty years; he has yet to be confirmed.

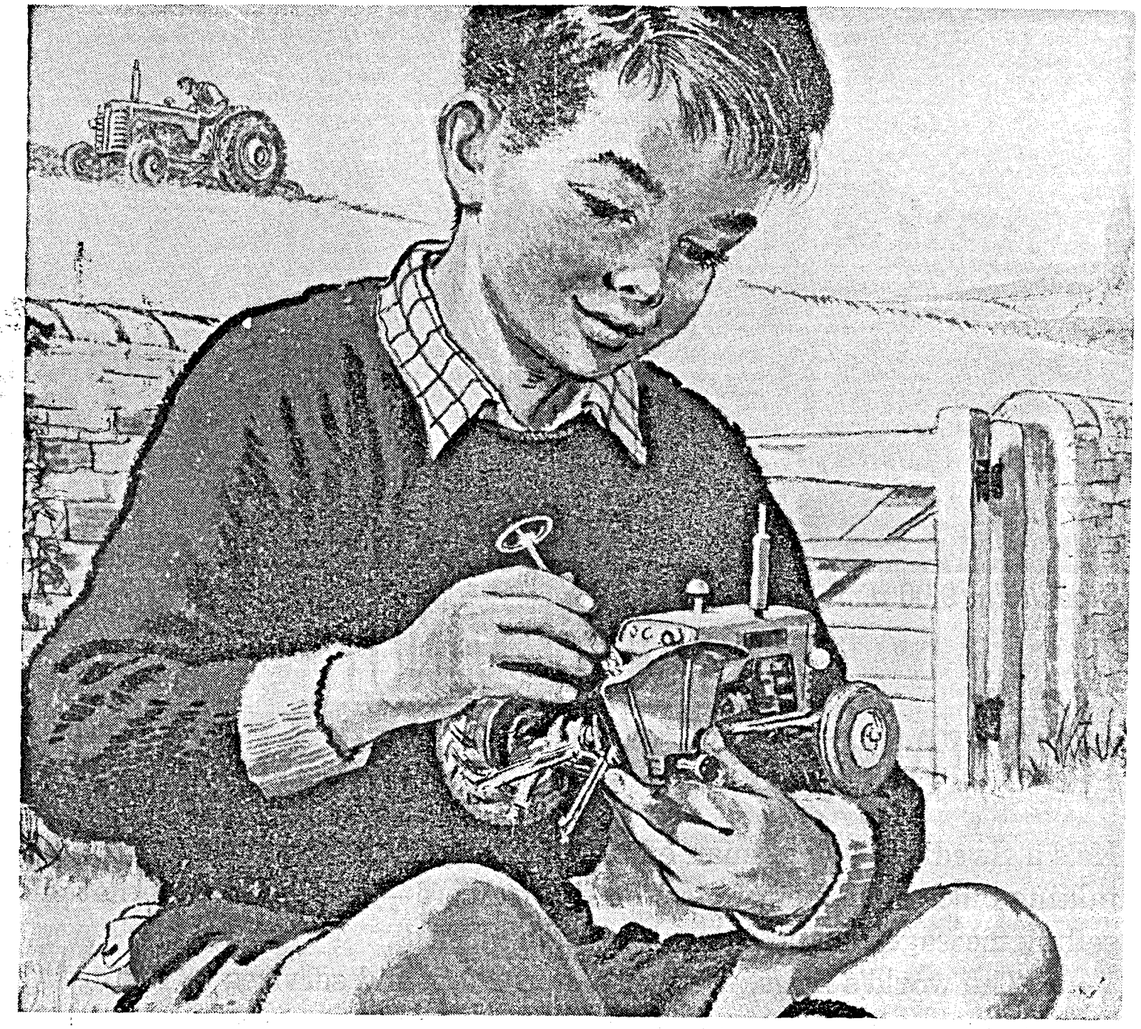
Fewer Arms for Armageddon

WASHINGTON, DC

"THE weapons of war must be abolished before they abolish us," President Kennedy told the United Nations General Assembly and even the Soviet press forbore to jeer. Mr William Foster, who helped to draft the programme for world disarmament that the United States introduced after Mr Kennedy's speech, has been appointed director of the new semi-autonomous United States

Stockholm 9.00 *p.m.*

THIS VERY MINUTE
HE'S TALKING TO CUSTOMERS IN ACCRA!



He's a Swedish businessman enjoying music; while at the same time, he's talking office equipment to customers in Accra—through his international selling messages in the Atlantic edition of TIME.

The world's news, the world's products and services as featured in TIME are providing 8.00 p.m. reading for many people in Accra, including those dealing with the purchase of office equipment in that booming capital. In this respect they are like 3 million other important people—all guided by TIME, The Weekly Newsmagazine.

Throughout the world, office-equipment distributors report that advertising in TIME is their best sales support. Now available in six editions: Atlantic; Asia; South Pacific; Latin America; Canada; U.S.; separately or all together, depending on the markets you want to reach. For more facts, ask :—

TIME, *The Weekly Newsmagazine, New Bond Street, London W.1.*

In 20 Years—his tractor will be real

Today it's a toy. But in 20 years, all being well, he will have a place of his own, with man-sized tractors, combines, balers and ploughs to work for him. And, like his father, he will turn for these things, and for the other machines and implements that he needs, to an organisation whose name is a by-word for quality and reliability: International Harvester. For their part International Harvester are planning *now* to ensure that the equipment they make tomorrow will be as advanced, as efficient and as utterly dependable as that they produce today.

INTERNATIONAL HARVESTER

INTERNATIONAL HARVESTER COMPANY OF GREAT BRITAIN LIMITED · HARVESTER HOUSE · 259 CITY ROAD · LONDON EC

Arms Control and Disarmament Agency, with a rank equivalent to that of an Under Secretary of State. Mr Kennedy is said to have been shocked at the low priority given to planning for disarmament by his predecessor and he regards the new agency as a symbol of the importance which the United States attaches to the reduction of arms and an earnest of American determination to continue to work energetically toward this goal. The $2 million provided for disarmament planning in the present fiscal year, compared with the $2.9 million which was requested, suggests that Congress is more sceptical of the possibility of real progress than the President, but both parties were overwhelmingly in favour of setting up the agency.

Mr Foster is a Republican, which adds to the bipartisan flavour, and both the United States and the Soviet Union are now pledged to the principle of "general and complete disarmament." It would, however, be premature to conclude that the millennium rather than Armageddon is just around the corner. The American plan calls for inspection at each stage of the arms that are being retained as well as the arms brought to the bonfire. But Russia regards this as a scheme to spy on the Soviet Union and is insisting that the international inspectors should have access only to the weapons to be destroyed, not to those that remain (or are being manufactured), at least until total disarmament is achieved. The Americans, with British approval, say that under the Soviet disarmament plan the arms destroyed under scrutiny might be replaced (and exceeded) by new weapons. Furthermore, the Americans want an international disarmament organisation consisting of "all the major powers" (which could include China) as permanent members but without vetoes and other states chosen on a rotating basis. The Russians, however, have hitherto held out for a disarmament "troika," each group with power to veto.

The United States wants to prevent west Germany as well as China becoming members of the world's nuclear club and is offering to dismantle "certain bases" wherever they are; these might include some of the foreign bases for whose elimination the Russians never cease to clamour. It is just possible that the Soviet Union can be induced to think a little more kindly of the American plan, if more emphasis is laid on such offers and also if the support of the neutrals can be enlisted. But obviously a huge gap still separates the two major powers. This should not be the cause of utter despair. It was once deemed laughable that the barons of England would ever give up their practice of waging private wars. The trouble is, as Mr Kennedy pointed out, that the world may now have only months or weeks, not centuries or decades, in which to make up its mind whether to go on living or to commit suicide.

House Out of Control

WASHINGTON, DC

THE longest and one of the dullest sessions of Congress in ten years ended in undignified confusion because the House of Representatives, which had been shying and balking for months, finally took the bit between its teeth and trampled the Senate underfoot. This was typical of the 1961 session of Congress; the Senate, which normally has ideas of its own, has given the President an easy ride while the House has had to be whipped or persuaded and even so has bucked him off several times. And next year it may be yet more difficult to control, especially if the Speaker, Mr Rayburn, either decides to retire or comes back to Washington with his authority impaired by his age and illness—although some maintain that if he had had more sympathy for the President's liberal programmes they would have done better this time.

Next year the members of the House will be racing towards an election and will be even more ready than they have been this year to pander to the country's lack of enthusiasm for the President's policies—unless he has succeeded by then in overcoming that lack. The House, all of whose members faced the electorate last year, reflects the narrowness of Mr Kennedy's victory then, and the doubts which conservatives of both parties feel about him, much more closely than does the Senate, whose members serve six-year terms with only a third having been elected in 1960 and only another third coming up in 1962.

This year the reactionary Democrats who are in charge of most of the Senate committees do not seem to have felt seriously challenged by Mr Kennedy's proposals, partly because these were unexpectedly moderate, partly because with the growing urbanisation of the country even southern Senators must pay more attention than they used to do to the welfare programmes which appeal to city voters. Thus such interest as has attached to the Legislature during this session—and the new President has constantly overshadowed the new Congress—has been concentrated on the House. But perhaps the main reason for this is that the Senate no longer contains the dominating and dramatic personalities—Vandenberg, Taft, McCarran—that it used to have or the covey of potential Presidents who were on display there in 1960.

Growing Pains in Electronics—1

FROM A CORRESPONDENT IN NEW YORK

ALTHOUGH the electronics business is one of the biggest and fastest growing industries in the United States and its volume of sales should continue to increase, most electronics companies are suffering the novel and chastening experience of shrinking and, in some cases, disappearing profits. The industry, which now ranks after automobiles and steel in total sales, is a potpourri that includes both the manufacturers of semi-conductor components and makers of end products ranging from television sets and data processing equipment to weapons systems. The booming sales of electronic products (which have increased from $2.6 billion in 1950 to an estimated $10.2 billion this year) and the profits that accrued to the pioneers have stimulated an enormous expansion of new firms and made it relatively easy for them to acquire the necessary finance; there are over 150 manufacturers of transistors alone.

But now capacity in many areas is running ahead of demand, while in others—such as the computer field—competition is so intense that only the giant International Business Machines Corporation is able to prosper. Today the growth of total sales is less than 10 per cent a year, compared with an annual rise of 15 per cent a few years ago. Hardest hit have been the producers of semiconductors who have been buffeted by increased competition, both foreign and domestic. This has led to big reductions in prices—those of transistors have been cut in half during the past two years—and to a severe narrowing of profit margins. The shrinkage in earnings is by no means confined to the makers of components. Although IBM and a few other companies have managed to maintain a commendable rate of growth in sales and profits, a great many of the firms that once were regarded by Wall Street as among the nation's most glamorous growth companies are now standing still. Both in the industry and outside it there is talk of a shake-out of the weakest companies, to be followed by a battle for survival among the strong.

The shake-out has in fact begun. In the last few months a number of smaller firms have merged or sold out to other companies and some larger ones have been affected: the Columbia Broadcasting System, Inc. has decided to get out of the electronics industry completely while the Ford Motor Company is getting further in through its acquisition of Philco Corporation, which has a substantial stake in transistors and communications systems. New companies are still being created but at a slower pace, partly

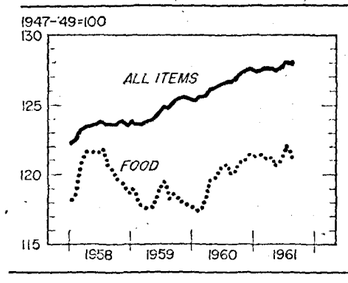
because investors are showing less eagerness to risk their capital in new ventures, and partly because the required level of sophistication in technology—or what the industry calls the "state of the art"—has risen and this has made entry into the field more difficult. In the early, more primitive days of the electronics industry, it did not take much more than a group of scientists and work-space to win a defence contract; that was an era of continual technological break-throughs, which proved highly rewarding to many firms operating on a shoestring.

Today the services take even more of the industry's products—about a half, by value, a proportion which worries many manufacturers—but the growing complexity of rocketry and communications and weapons systems demands a greater degree of reliability and much more intricate equipment; these have increased the cost both of research and of controls over quality. The time needed to fulfil contracts has been lengthening, so that government outlays have slowed down substantially even though planned expenditures are rising; as a result, the smaller companies, which depend on prompt payments, have been pinched. The introduction of new techniques in manufacturing and the progress made in technology have given an edge, when contracts are at stake, to the big integrated companies, which possess both scientific brainpower and capital. But with the slower growth of sales the cost of research and development is a burden to even the richest firms. The Sperry Rand Corporation has distributed a stock dividend to conserve cash and even IBM is not immune; after announcing that its mammoth Stretch computer failed to meet design specifications, it cut the price by 35 per cent.

THE industry has been slow to make the necessary adjustments, in the hope that the premium prices it once enjoyed, and which enabled it to recoup research expenses practically overnight, would return once some of the weaker firms were eliminated. In the transistor business, at least, this is an unlikely prospect, for the users of components are now determined to get quality items cheaply. The fact is that manufacturers of transistors have increased their production, with the aid of automation, even when this has meant disposing of their output below cost. Similarly, substantial sums are still being spent on projects that become obsolete even before they produce anything to sell, a carry-over from the days when any research promised profits.

Firms which have been dependent on a single line of products are striving to diversify, and it is clear that almost every electronics company is anxious to maintain its status as a growth enterprise, for members of the managements generally own shares—or options to buy shares—whose value can be affected materially by a shift in Wall Street's opinion. Moreover, companies whose shares sell at the high prices that are accorded to growth stocks have an advantage in raising additional funds and in attracting new talent; they also do better if they wish to acquire other firms or sell out themselves. But Wall Street has been making a thorough reappraisal of electronics companies and has narrowed down the list of potential survivors to a score of major companies which are engaged in a broad line of civilian and military electronics work and which should be able to grow with the refinement of the art.

Given the intense competition and the increasing frequency of losses it is surprising that more companies have not surrendered. The explanation seems to be that they have been protected, up until now, by the ease of raising capital from a public all too willing to believe that any new electronics firm may become another IBM. The small manufacturers of components, whose overhead costs are low, have managed to stay alive, at least temporarily, by cutting prices. The hope in the transistor industry is that these big reductions in price will stimulate the opening of new mass markets—and increase the number of uses for their products—much faster than had been expected. If, for example, transistors came into considerable use in motor-cars and household appliances, present productive capacity would not be excessive.



But the probability is that the days of the small manufacturers are numbered while the major makers of components will be exposed both to sudden changes in defence planning and to the ups and downs of the business cycle. There will always be room, of course, for the company engaged in esoteric technological fields or for one that is able to achieve a break-through, but these are likely to be the exceptions. The prospect is that the large diversified producers will be the chief beneficiaries of the growing amount of money being spent on electronics and even in their case it is now recognised that, while large expenditures on research are a prerequisite to survival, such spending is no guarantee of profits.

Capital Gains—

THE constitutional position of the District of Columbia, the seat of the federal government, a separate entity though not a sovereign state like the other components of the Union, has long been as irritating to its 700,000 residents as it is unique. They send no representatives to either body of Congress; they have not even been allowed to vote in presidential elections. But this last grievance of Washingtonians has just been removed. On September 25th Congress finally approved a Bill, made possible by the ratification last March of the 23rd Amendment to the Constitution, which sets up the machinery of voting in presidential elections. Republican and Democratic party leaders got down immediately to the business of organising for the 1964 contest and predicting that their side would win.

The essential provisions of the Act are unexciting. They are the results of compromises between a liberal Senate and a conservative House; between those who want as many people as possible to vote, and those who fear too wide a franchise. Little account is taken of the exceptionally fluid nature of the capital's society. Voters must prove that they have lived in Washington for at least a year before election day; must re-register in every election year and must be at least 21 years old. Absentee registration is to be restricted severely, though absentee voting is not. The names of the presidential and vice presidential candidates will be printed on the ballot papers, rather than those of the electors who are technically being chosen; and the electors will be required to swear that they will use their votes in the electoral college only in support of their party's candidates. Such provisions accurately reflect Congress's cautious approach. Some members were not so nervous, but they failed to muster majorities in favour of such ideas as a minimum voting age of 18 (supported by the Senate District Committee, the District Commissioners, and the President) and a mere 90-day residential qualification (backed by the President). The Act emerged looking no more and no less progressive than the laws in the 35 states which require a year's residence.

One other detail deserves comment. The inclusion of 3 representatives of the District of Columbia in the electoral college raises its numbers to 538, which makes it mathematically possible for a

CONSUMER PRICES

The cost of living fell slightly in August, mainly because of a seasonal decline in the price of fresh fruit and vegetables. In the first eight months of the year prices to consumers have risen by only 0.5 per cent, less than in any comparable period since 1955, but, with the economic recovery, this pause may end next year.

deadlock to occur between two evenly-balanced presidential candidates. In such a case the election would be thrown into the House of Representatives. In view of Mr Kennedy's very narrow win in the popular vote over Mr Nixon (though he had a clear electoral majority) it is not, perhaps, certain that the political likelihood of such a thing ever happening can be dismissed as negligible.

Capital Losses

CONGRESS is not only the parliament of the United States but the town council of Washington, DC, a town council in whose election the townspeople play no part. As a result legislation to deal with the capital's problems tends to be dealt with in a hurry at the end of sessions, when members of Congress are tired and anxious to get away at almost any cost. Earlier this year President Kennedy proposed to give Washington self-government, but the project was shelved at once: southern Congressmen are not anxious to hand over the capital to the Negroes who form the greater part of its population. Now has come the reckoning—for Washington. Although Congress has approved a $270 million budget for the city, and although it has agreed on a federal grant, larger than ever before, of $32.7 million, to make up for at least part of the revenue lost to the city from the large amount of untaxable federal property in it, the legislators failed to agree on how to raise the additional money needed this year.

The blame for the resultant $5 million deficit belongs partly to the Representatives in the House who freely confessed, after they had voted, that they did not know what it was all about; but it also belongs to Mr McMillan, the chairman of the House District Committee who, although he agreed to a general sales tax, turned down a proposed increase in the sales taxes on alcohol and tobacco (he comes from the tobacco-growing state of South Carolina). A House-Senate conference therefore adopted as a substitute Senator Wayne Morse's suggestion that the District be given instead $5 million under the "impacted areas" programme, which assists communities whose schools suffer from overcrowding as a result of the presence of the children of federal personnel. But the House turned this proposal down twice, so that the whole Bill has failed to get through. The District Commissioners are left with the cold comfort that the already-authorised budget contains a provision that, in the event of shortage of funds, their schools programme may be curtailed. They have also to deal with the fact that a hold-up in the sale of some land means that their actual deficit will stand at $7 million.

According to a recent report, Washington's schools are already falling into disrepair from lack of funds to maintain them. Now four school building projects will have to be abandoned. Even day-to-day running expenses may have to be curtailed drastically. Unemployment assistance, road programmes and urban redevelopment are also expected to suffer from the House's mismanagement at this session. It is no wonder that the *Washington Post*, welcoming the partial enfranchisement of the capital, gave as one reason for rejoicing the possibility that, now that presidential candidates will have to bid for the city's votes, there may grow up "wider concern about the District's continuing demands for home rule."

Power to Whose Elbow?

IN the long-standing battle over public or private generation and transmission of electricity victories have been won by both sides in this session of Congress. On September 13th the House of Representatives threw out, for the third time, a proposal backed by the White House and Senate which would have empowered the Atomic Energy Commission to install an electric generator to use the waste heat produced by its plutonium plant at Hanford, Washington. The installation would have cost $58 million, substantially less than the $95 million which was asked for originally when it was hoped that two generators at Hanford would be approved. The cut in the scale of the project was the work of a House-Senate conference committee which hoped, by this means and by promising that the power produced would be used only by the AEC at Hanford, to make the measure acceptable. To no avail; the House vote which condemned the plan at least until next year was larger than either of the two earlier ones. The opposition's chief argument seems to have been that one general leads to another and that the government should not be allowed to use energy derived from the production of nuclear weapons to compete with private industry. Such a prospect dismayed members of Congress who dislike all encroachments on the private domain as well as representatives of those coal and oil producing states which stand to lose markets.

This defeat for the "creeping socialists" took place on the same day as their victory in the matter of the construction of 2,000 miles of line to transmit electricity from the government-built Colorado river complex of dams and reservoirs. Private interests wanted this plum themselves and feared that federal construction might set a precedent for the country-wide electric grid which is both feasible and desirable. But they failed to stop the federal Colorado project because it was obviously cheaper than anything private enterprise could put forward, although a Senate committee has tried to delay action on the most contested part of the scheme until next February at least.

The private electricity firms' newest move is to show that they are prepared to build the whole network of transmission lines which is needed. The Edison Electric Institute has announced plans for private companies to build over $7 billion worth of them in the next ten years, a scheme which, it is claimed, will "eliminate any need for waste of the taxpayer's money to build federally owned transmission lines." But the Secretary of the Interior has replied to these fighting words by suggesting that "the logical next step is a co-operative industry-governmental effort" to develop the interconnection of regions and promote pooling of electric power though, in his view, the federal authority must exercise ultimate control.

61 in '61

SUNDAY, October 1st, was the day when Mr Roger Maris won baseball to glory. When he hit his 61st home run of this baseball season, during its last day of league games, he entered baseball's Valhalla. No one has done such a thing before in the history of baseball, although Babe Ruth's record of 60 runs in 154 games surachieved in 1927 still stands (it took Mr Maris 162 games to pass the earlier hero's total). Mr Maris is now sure of being fairly rich man for the rest of his days by lending his name to advertisers and he can have another wallop at the record next season. His team, the New York Yankees, holds the championship of the American League, and can now hope, by beating Cincinnati Reds, to win the World Series crown of which Pittsburgh Pirates deprived them last year. The young man who caught Mr Maris's ball when it hit the crowd is happy too—he will get $5,000 for it from a devoted fan, on condition he restores it to the slugger. Even the pitcher who sent the ball down to Mr Maris must be happy: he has immortality of a kind himself; Mr Maris has been kinder about him than he has about many other pitchers and ("he was man enough to pitch to me and to get me out"); who would not want to be the man to give a hero his since mortality? But perhaps the American public is less happy, now it is now left with nothing but the World Series, which began on Wednesday, to stop it worrying excessively about Berlin, and the whole (thanks to Mr Maris and a fellow batter of genius, Mr Mickey Mantle) it has managed not to do so far.

Musical Chairs in Congress

THE statesmen who redrew the map of Europe at Versailles would have understood the anguish of the states which are now forced, by the census of 1960, to give up some of their Representatives in Washington. Nine states, which have grown more rapidly than the average since 1950—like Florida and California—have a delightful dividend. But in sixteen others the axe must fall somewhere. Hopes have now vanished that Congress will enlarge the House of Representatives, which is too large and unwieldy already.

When one party is in control of the State Legislature and the Governorship the axe can be used to eliminate Congressmen of the opposing party (as the Democrats in North Carolina are trying to eliminate Mr Jonas, the state's lone Republican Representative). But when control is divided, no agreement may be possible and then, under the law, all candidates for the House of Representatives must run "at large" and not for specific congressional districts. A failure to redistrict in states which are gaining Representatives means only that the candidates for the new seats have to run at large.

In July *Congressional Quarterly*, the unofficial but authoritative periodical which deals with congressional affairs, totted up the probable gains and losses as a result of redistricting and concluded that on balance the Republicans might gain about five seats—a relatively trifling matter in view of the Democrats' large majority at present. But the more seats which must be contested at large, the harder it is to forecast the results. All the established political landmarks are swept away and if there is a strong tide running in favour of one party a state whose delegation is divided normally between the two may end up entirely in one camp. This gamble is more tempting for political bosses than for incumbents whose political lives are at stake.

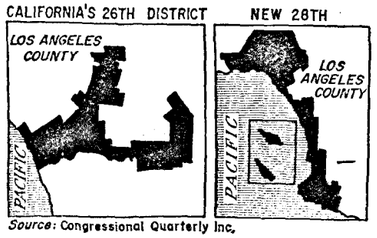
Four states which are losing Representatives have failed to redistrict so far: Pennsylvania, Illinois, Minnesota and Massachusetts. All are vigorous two-party states; in all four the Legislature has adjourned without passing reapportionment legislation; and in all but Massachusetts action at a special session is needed if candidates are not to run at large.

Pennsylvania, with 27 seats (down from 30) and Illinois with 24 (down from 25) are the really big question marks. In each a divided Legislature seems to have faced a principal stumbling-block in the reluctance of the big Democratic city machines (in Chicago and Philadelphia) to give up the Representatives to which they are no longer entitled by their dwindling population. In Minnesota, whose 9 seats fall to 8, the conservative Senate was determined to redistrict at the expense of a Democratic-Farmer-Labour man; the liberal Assembly arranged things the other way round. In Massachusetts the possibility of a deadlock arises because the Governor is a Republican while the Legislature is Democratic.

The most curious and instructive case, however, is that of Alabama, a state whose Democratic label covers deep factional feuds, particularly between the backward rural "Black Belt" and the modern city of Birmingham. Alabama is no exception to the rule that in most states the rural areas are already over-represented, both in Congress and in the State Legislature; this is the reason why the House of Representatives is so conservative and so out of touch with the modern world. (The first case being heard by the Supreme Court at its present session is one brought by city-dwellers in Tennessee, who are asking the courts to do something they have always refused to do—force reapportionment upon a State Legislature.)

"As Your Representative, I Promise To Continue Our Fight Against Redistricting"

Faced with the loss of one of Alabama's 9 Representatives, legislators from the Black Belt forced through a Bill which would have solved the problem by dividing Jefferson County—the most populous in the state and one which contains Birmingham, the biggest city—into four pieces and adding these to surrounding rural districts. This would have deprived three-quarters of a million people of their collective voice in Congress.



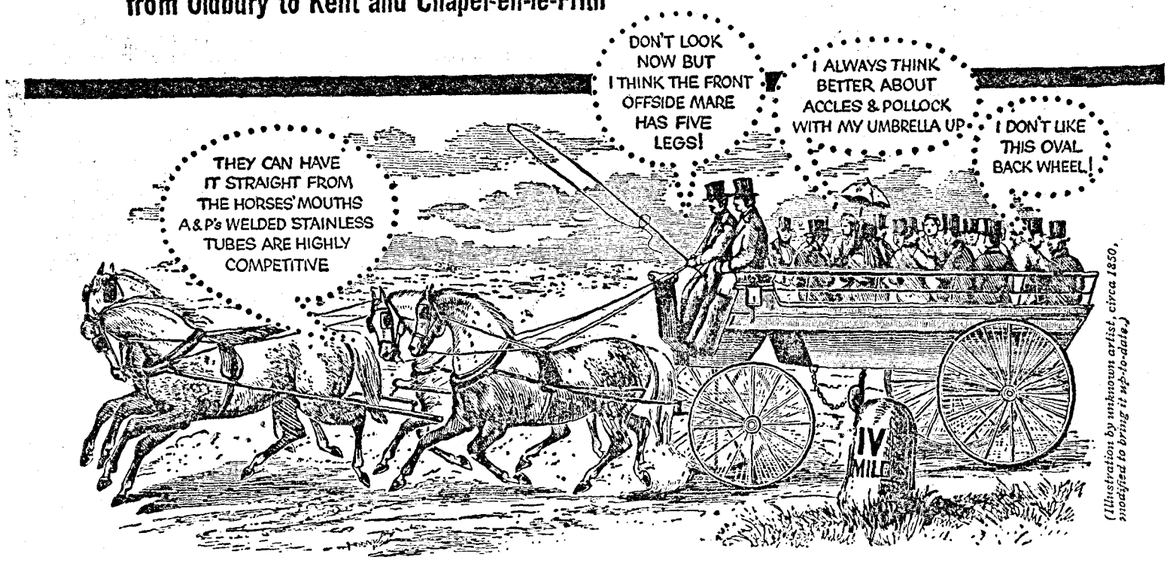
Understandably the Governor vetoed the measure. The session ended before the veto could be over-ridden and it looked as though all candidates would have to run at large. This might well have meant the defeat of some outstandingly good incumbents and the loss of the seniority in Congress which they have built up—no small consideration to a state. In a special session last month the Legislature therefore adopted the Governor's plan for a "double" primary (the Democratic nomination, not the election, is decisive in this state). Nominees will be chosen in each of the present 9 districts and then there will be a run-off to determine which is to lose his seat in this game of musical chairs.

This tale illustrates how desperately incumbents will fight to avoid standing at large, with all the extra cost and risk this entails. Alabama's example suggests that other states at present deadlocked—Pennsylvania in particular—will somehow solve their problems before it is too late for the 1962 elections. Arkansas has just passed a second redistricting measure after its first unpopular attempt was thrown into abeyance by a petition for a referendum.

Of the redistricting which has taken place this year the most significant is that in California, which provides a good demonstration of the techniques used when one party is in full control. California gains the largest number of new Representatives—its delegation is to rise from 30 to 38 to reflect the 48.5 per cent increase in its population since 1950—and the Democrats have done their best, by altering boundaries and herding the Republicans together, to ensure that all eight new Representatives are Democratic. At present there are 16 Democrats and 14 Republicans from California in the House.

At the same time that it redrew the boundaries of congressional districts the State Legislature remapped the State Assembly districts to maximise the number of Democrats at Sacramento, the state capital. The Republicans have complained bitterly that the effect is virtually to wipe out the two-party system in California. But they seem to have abandoned the idea of seeking a referendum to challenge the legislation. One reason is that a number of Republican Assemblymen were persuaded, by the offer of safely Republican seats, to collaborate with the Democrats. Another is that a referendum is costly and, unfortunately, a dry subject with which to stir up a flood of popular protest—though the trick has been brought off in Maryland and Arkansas. Finally, the Republicans are likely to retain at least a third of the seats in the State Assembly, enough to kill a Democratic budget or uphold the veto of a Republican Governor.

CALIFORNIA'S 26TH DISTRICT NEW 26TH



Source: Congressional Quarterly Inc.

The Democrats, for their part, insist that this year's "gerrymandering" is not as bad as that carried out by the Republicans in 1951 when they were the majority party. The drawing shows that the technique of crowding members of the minority party into an ungainly district—as the Republicans did in the 26th District in 1951 and the Democrats have done this year in drawing the new 28th district—is common to both. Republicans will have to draw what comfort they can from the reflection that Republican redistricting did not prevent the Democrats from turning the political tables in the space of ten years.

ACCLES & POLLOCK TAKE BIT BETWEEN TEETH ON STAINLESS WELDED TUBES

How they brought the good news from Oldbury to Kent and Chapel-en-le-Frith

(Illustration by unknown artist, circa 1850, modified to bring it up-to-date)

IF it were not for the well-known fact that nobody (except the Directors of Accles & Pollock) ever reads advertisements we should now be in the difficult position of explaining what this one is all about. As it is, all we need do is to state clearly what the Directors would like to read. **HERE IT IS:–** For a long time past Accles & Pollock (sometimes miscalled Pickles & Wallop, Anchors & Poppycock etc. etc.) have been known as skilled makers, manipulators and fabricators of cold-drawn seamless precision steel tubes. The Directors would like all fifty-two million of you to know that, not only are they the country's largest producers of seamless stainless steel tubes but that they are also the leading makers of **WELDED** and **DRAWN WELDED STAINLESS** steel tubes. For many purposes, **WELDED** and **DRAWN WELDED** stainless tubes offer considerable economic advantages.

We should be most obliged if all manufacturers—potential users of stainless steel tubes—would sign the affidavit alongside for the Directors—

We/I the undersigned hereby declare that I/We have read and nearly/fully understood Accles & Pollock's Directors statement about Stainless Steel Tubes and would like a technical booklet about them (the tubes, not the Directors).

THE WORLD OVERSEAS

Nasser Battles On

FROM OUR CORRESPONDENT IN THE MIDDLE EAST

PRESIDENT NASSER'S unheralded speech at Cairo university on Monday, his second major pronouncement since the Syrian revolt broke out, was both a firm restatement of his belief in ocialism and a declaration of war, without however the use of orce, against Syrian separatism and its allies. Some excuse is een for Persia and Turkey, the former because there are no diplo-natic relations between Cairo and Teheran, the latter because of ts long common border with Syria. Gautemala's hasty recogni-ion of the revolutionary regime in Damascus is regarded by some s a mildly farcical irrelevancy, by others as a kite flown by the Jnited States, since Guatemala is commonly regarded as a special preserve of the Central Intelligence Agency. But no excuses what-ver are found for the action of King Hussein, which is contrasted ditterly with the friendly messages he sent to President Nasser arlier this year asking for the normalisation of relations between Cairo and Amman. The tone of President Nasser's attack, and hat of the propaganda apparatus supporting him, leaves no doubt hat every effort will be made, short of actual military force, to estore the authority of Cairo in Damascus and to bring down King Hussein as well.

Reports from Syria itself suggest that there is calm throughout he country. It is reported in Cairo that a secret transmitter broad-asting in favour of union has been traced to the Aleppo area, but here is no confirmation from any non-Egyptian source. Former upporters of President Nasser, who were undoubtedly numerous n Syria up to the eve of the revolt, cannot have vanished into thin ir ; but in view of the new government's determined attitude they re lying low. The best known of them, Colonel Sarraj, is again nder lock and key after a brief escape from house arrest.

The Egyptians expelled from Syria, mostly soldiers, doctors, chool teachers and engineers, are still crossing into Lebanon at a ate of many hundreds a day. This massive influx has caused the ebanese authorities considerable administrative difficulties. The eirut government has asked Damascus not to send truckloads by ight because it is impossible to improvise adequate accommodation t short notice. Repatriates are being housed mostly in barracks nd university buildings but a good many are being taken in by ebanese friends and sympathisers.

The most noticeable feature of Cairo this week is the astonishing gnorance of the course of events in Syria. The only source of nformation appears to be news put out by Damascus radio, and his is supplemented by wild rumours with the usual wishful slant which are dutifully given prominence by the Cairo press. Passengers arriving at Cairo airport from Beirut are pounced upon y officials and others eager for any scrap of information about vents in Damascus. Behind this thirst for news, it is easy to letect a sense of shock and mortification. While hoping against iope, and busily spreading rumours, such as the alleged murder f Dr Kuzbari on Tuesday, Egyptian officials borrow foreign news-papers from visitors with an impatience which suggests consider-able scepticism of the reports put out by their own press.

The problem of Syria is now being shifted to an international level by Syrian requests for recognition and the Egyptians' deter-mination to thwart this by all the means in their power. Tunisia plunged in with a proposal that the Arab League should be con-vened to discuss the Syrian revolt, but this was quickly countered by statements from Cairo that since this is an internal affair con-cerning only the United Arab Republic the Arab League has no competence to deal with it except at the instance of the UAR government. Tunisia later withdrew its proposal, mainly because of the desperate confusion within the league secretariat itself.

It is difficult to see what the Arab League can do about the Syrian revolt, since that factious body is more than ever at sixes and sevens. Iraq is maintaining its boycott in protest against the league's acceptance of Kuwait as a member. Now that Cairo has broken off diplomatic relations with Amman, it is inconceivable that King Hussein would send a representative to the league's headquarters in Cairo ; and the government of the UAR will any-way probably refuse to discuss the matter. The confusion inside the league secretariat was shown up by the fact that while the secretary general took note of Tunisia's proposal and asked the other Arab states when a meeting to discuss it would be convenient, his principal assistant came out with a strong statement supporting the Egyptian view that the Syrian revolt has nothing to do with the league.

The recognition of the revolutionary regime in Damascus also poses difficult problems for the western powers. With the excep-tion of France, their policy in the past three years has been a painful one of establishing relations of confidence with President Nasser. Progress has been appallingly slow and western recogni-tion of the new Syrian regime now would destroy much of the good work that has been done. The action already taken by two powers belonging to the Central Treaty Organisation and by western-supported Jordan and Guatemala has already aroused an acute suspicion of western complicity in the Syrian revolt, which has been stated vigorously by President Nasser himself.

There are some who argue that President Nasser's actions in Africa and in partnership with other non-aligned powers have already killed any hope of reconciliation between Cairo and the West and that recognition of the Damascus government would therefore have little bearing on the situation for better or worse. This is still a minority view among western officials in this region, but there is also a practical difficulty which may force the hands of the western powers. If Dr Kuzbari's government, as now seems likely, is capable of maintaining effective control over all Syria, and if it respects the country's international agreements, there will be little legal justification for withholding recognition. If action were taken to recognise Syria, the West must expect a spate of bitter denunciations from Cairo together with an increasingly pro-communist leaning by the UAR government. The real problem western statesmen is for how much that really matters.

Slow Time in Bonn

FROM OUR BONN CORRESPONDENT

SENATOR FULBRIGHT'S remark at Westminster last week that Germany was a fledgling democracy, not yet ready for the role of leadership in the non-communist world, has caused little if any offence in the Federal Republic. This may be because the confused and scarcely dignified striving after office that has been

exciting the parliamentary parties since September 17th makes the truth of the senator's statements too obvious to challenge. The new Bundestag, in which Dr Adenauer's party will no longer command an absolute majority, is due to meet on October 17th, and its first major business will be to elect a Chancellor. But on Tuesday, twenty-four hours after conferring with Dr Adenauer, the chairman of the Free Democrats, who hold the balance of power, reminded the Foreign Press Association in Bonn that, while the constitution insisted on a meeting of the Bundestag within thirty days of the general election, it did not impose any time limit for the election of a Chancellor and the formation of a government. In the circumstances he, Herr Mende, expected the negotiations for setting up a coalition government to continue until the end of the month. They would be long, difficult, and tedious. There would be "scurrilous headlines." But the retiring government could continue to act in the meantime without any harm being done, either at home or abroad.

No harm at all? Seen in a wider German setting, the collective and individual pettiness of much of the coalition manœuvring in Bonn looks all the more egregious. In Washington and Moscow decisions are ripening that are likely to disappoint the broad national hopes infusing Dr Adenauer's hitherto undeviating and unrepentant foreign policy. In the garrisons of the Federal Republic this week, the ten-year-old armed forces reached their prescribed peacetime strength of 360,000 men. The federal statistical office at Wiesbaden reported that altogether 3.3 million persons had fled from east to west Germany between 1950 and the end of 1960, and another 190,000 between January 1st and August 31st this year. In east Berlin this weekend, the undaunted east German regime is celebrating its twelfth anniversary, with Mr Mikoyan and Marshal Koniev among the guests of honour. "The victor," one of the anniversary slogans runs, "will not be Strauss, the corrupter of the nation. The victor will be Walter Ulbricht." And in *Neues Deutschland* Marshal Yeromenko, commander-in-chief of the Soviet forces at Stalingrad, has written an article for the occasion recalling that Mr Khrushchev and Herr Ulbricht took part in the battle of Stalingrad "shoulder to shoulder." Simultaneously it has been announced that some 220,000 members of the state-run "Free German Youth" have volunteered since August 13th for service in the people's army. In west Berlin the first 2,000 members of the new citizen's militia were sworn in on September 27th.

IT would be reassuring in these sombre circumstances to see emerging some proven democratic statesmen of style and stature, qualified to bring west Germany safely through the confusing perils and temptations of the next few years. Unhappily the coalition scrimmage in Bonn is enhancing nobody's prestige. Dr Adenauer himself seems unshakably resolved to outstay his welcome in public life. It is generally—and fairly—interpreted that the vote of September 17th showed that a majority in the country wanted to see an end both of one-party domination and of 85-year-old Dr Adenauer's long reign. Several influential political commentators have since suggested that Dr Adenauer should take the hint and retire with dignity while he still can. Had not the Free Democrats proclaimed quite so truculently and so soon after the election that they would not serve in a government headed by Dr Adenauer, they would have found more support among the Christian Democrats. As it is, the Christian Democratic ranks have stiffened against alien dictation, and Dr Adenauer is turning this natural touchiness to his own advantage.

It is being put about by some of his supporters that Dr Adenauer, seeing cheerless days ahead, nobly wishes to remain in office in order that he and not his successor shall be the object of any public ingratitude. There may be some truth in this, and it would explain in part Dr Erhard's present resignation, and Herr Strauss's abrupt decision to support Dr Adenauer's candidature after having promised the Free Democrats that he and the Bavarian wing of the Christian Democrats would oppose it. But it could also be argued that, by the manner of his scheming to stay on, Dr Adenauer is prejudicing the reputation of important party colleagues in the long run. Once again Dr Adenauer is making it quite clear that he himself does not think that Dr Erhard, whom the majority of his party and the Free Democrats regard as his most qualified successor, is experienced enough to take over. Herr Erhard missed the chancellorship by inches two years ago, when Dr Adenauer, convinced of his own indispensability, abandoned his declared intention of standing for the presidency. Herr Erhard is now 65, already three years older than Mr Macmillan was when he became Prime Minister. His prospects of the highest office are dimmer, and he has lost stature in the eyes of the public. Nor have Herr Strauss and Herr Gerstenmaier cut steadfast figures since September 17th.

Herr Mende is no longer proudly saying that the Free Democrats will not serve in an Adenauer government, though he continues to maintain vehemently in public that it would be dangerously challenging the laws of nature to leave the conduct of state affairs to an 85 year-old, however fit he may appear to be at the moment. In the coalition negotiations with the Christian Democrats that opened this week Herr Mende did not raise the issue of the chancellorship. That, he says, can be settled later. For the time being the two parties are sounding each other out with the object of reaching agreement on issues of domestic and foreign policy. That should not be difficult. But Herr Mende is not in a hurry. Nor is Dr Adenauer. Their leisureliness is as tantalising to the public as it is to their parties' rank and file.

Italian Political Gambits

FROM OUR ROME CORRESPONDENT

EXPERTS believe that the elaborate counterpoint of Italian politics is followed in detail by no more than some two or three thousand people, all more or less professionals. They include a few score of journalists whose job it is to interpret the ambiguous language of the politicians, most of whom have ended by adopting the oracular style of oratory introduced by the Christian Democrats. For fifteen years the political game has been played in the closed arena of the parties (inside or outside parliament) according to rules invented and understood by the players but incomprehensible to outsiders, that is to 51 million Italian citizens. But a country which is bursting its economic seams is not a safe or suitable place for such diversions.

The political gambits of the last few days, during and after the debate on foreign policy, which ended on September 29th, could well be the last act in a comedy of manners. The debate itself was a pretext to discover what would happen if Signor Fanfani and a strong group of Christian Democrats, headed by the party secretary, Signor Aldo Moro, were to take the great plunge, throw over the Liberals and invite the Socialists to support (and eventually enter) a left-centre coalition. Would America consider such a government unreliable as a Nato partner? Would the Church oppose it as incapable of defending "Christian values" *at home*?

It was to sound this outside opinion that Signor Fanfani spoke in defence of his active interpretation of Italy's rights and duties under Nato. In going to see Mr. Khrushchev, he claimed, he had but followed the example of Mr Macmillan, whom no one suspects of being a neutralist. In point of fact, except in Italy where people are either too realistic or too provincial to believe that a cataclysm could be imminent, Signor Fanfani has rarely been criticised for this journey. Even Signor Malagodi, the Liberal party secretary,

The newspaper you read has never mattered more

The more the world demands understanding, the more difficult it becomes to understand. At this moment, when so much depends upon your newspaper, can you do with anything less than The Times itself?

The Times equips you to understand because The Times reports the news straight—not made agreeable by omissions or entertaining by additions. It reports the news completely. Short of attending every session of Parliament and every significant law case in person, reading every important government report, or being present at every major news event, you cannot find out more about the world each day than by reading The Times.

The Times reports the news accurately. The account you read in The Times today is an historian's record tomorrow.

Upon this structure of facts The Times throws the light of every shade of opinion. You will find the opinion of The Times itself conveniently labelled as such. You will also find, on its letter pages a most vigorous and varied exchange of views by other people.

If you take the world seriously, you should take The Times.

admitted grudgingly that the trip to Moscow probably did no harm. But he blamed the prime minister for his "faults of tone." One more step towards the Socialists, Signor Malagodi suggested, would carry Italy over the borderline that separates loyalty to Nato from neutrality. At the end of the debate Signor Malagodi was seen to wring Signor Fanfani's hand (part of the rules of the game) though the prime minister had said nothing substantial to reassure him. In fact, two days later, Signor Fanfani, evidently heartened by the result of his soundings, made a speech at Caserta telling the Christian Democrats—not in plain terms, but in conventional language which the initiated understand—that they must cease to repulse the Socialists.

Thus the debate, which ended in a resounding vote for the government's foreign ministry estimates, probably marks the end of this long interim administration during which Signor Fanfani has governed with a self-contradictory majority, euphemistically called "the convergence." Since last Friday, September 29th, the stage is set (a second time) for the great operation which is to bring the Socialists into "the area of government." Signor Fanfani made the first move. And the Social Democrat and Republican leaders, who would be his partners in a left-centre coalition, have declared that the doctrinaire neutralism of the Socialists differentiates them from the Communists (who are not neutral but pro-Russian) and does not preclude them from collaborating in domestic matters with a coalition government. The Socialists' leader, Signor Nenni, spoke last Sunday to soften the edges of Signor Lombardi's

NORTHERN RHODESIA

The Brass behind the Copper

Huddled together in the rich, troubled heart of central Africa, the southern part of Katanga and the northern part of Northern Rhodesia carry around their necks a band of copper. This, their political burden, is their economic blessing. Between them they account for something like a fifth of the world's annual production of copper. Because of this, each is called on to contribute to the economy of poorer areas linked to them. In both territories the modern mining companies know they must struggle to keep their heads above the waves of African nationalism. The best guarantee of a future for these companies is their near indispensability. But they must obviously take care not to adopt political attitudes that would lead nationalist leaders to conclude that they could, after all, be dispensed with.

There are four major groups in the mining business in Northern Rhodesia. The *Anglo-American Corporation* and *Rhodesian Selection Trust* (RST) between them operate the mines. Their decisions are taken independently. American Metal Climax owns over 50 per cent of RST shares. The main revenue earned by *Tanganyika Concessions* comes from its 14.5 per cent holdings in Union Minière (the Belgian company that dominates next-door Katanga) and its 90 per cent interest in the railway that takes copper through Angola to the port of Benguela. The prime source of income of the *British South Africa Company* (BSA) is its ownership of all mineral rights in Northern Rhodesia.

None of the four Rhodesian companies is completely separate from the others; interlocking holdings and directorships give the industry a unity that is surprising in view of its international ownership. A fair proportion of the directors are City of London men; many of these have pronounced public (and private) opinions about Colonial Office policy in Northern Rhodesia. Anglo-American's holding company, Rhodesian Anglo-American, which has a total issued capital of ordinary shares and loan stock amounting to over £10 million and a total capital employed of over £90 million, also has large interests in the RST mines; several of Anglo-American's directors are on RST boards. (Capital employed in the RST group amounted to over £40 million in June, 1960.) Lord Robins is a director of Anglo-American, as well as of Tanganyika Concessions; he is chairman of BSA. The chairman of Anglo-American, Mr Harry Oppenheimer, is also a director of Tanganyika Concessions and BSA.

Tanganyika Concessions has a number of Belgians on its board; it is headed by Captain Charles Waterhouse, a former junior minister in the British Government, and its directors include the Earl of Selborne. With the outlook in Katanga uncertain, Tanganyika Concessions is now diversifying its interests away from Union Minière, and so far it has looked mainly to the timber business. At nearly 20 per cent it has the highest yield of all the companies; the others offer 10-15 per cent, and the prices of most of the shares have halved in the past few years.

As with all African shares, this reflects the political risk facing the companies. But for the operating companies the risk can be diminished by winning, now, the confidence of the men who will rule this part of Africa in the future. In Northern Rhodesia, Mr Kenneth Kaunda knows the need for a stable economy; some of the men who may succeed him if his moderate policies fail are less understanding. The mistake that could be made now would be to delay African political advance for another few years and thus lose the trust of men like Mr Kaunda. Fortunately, RST and Anglo-American have been progressive in the past, Sir Ronald Prain, the chairman of RST, most noticeably of all. Together the companies have reached an agreement with the European mine-workers of the copperbelt that (in theory, at least) the industrial colour bar will be abolished. In practice, the pace of African advance in the mines will be the pace that the Europeans (who are training the Africans) will tolerate. Nevertheless, the companies can point with justifiable pride to the contributions they have made to education, health and welfare for people of all races.

The company in the most difficult political position is BSA—because mineral rights can be possessed by anyone, regardless of expertise. BSA receives a royalty on every ton of ore of value removed from the ground in Northern Rhodesia; the royalty is based on agreements made with African chiefs between 1895 and 1900. In 1948 Mr Roy Welensky (as he was then) attacked these royalties vigorously, and said that they should revert immediately to the government. Under an agreement signed in 1949 the royalties were guaranteed by the British and Rhodesian governments until 1986; 20 per cent of the revenue from them now has to be paid to the Northern Rhodesian government. In the five years to September, 1960, BSA earned almost £50 million net from these royalties. The company's policy is to build up an investment portfolio against the day when the royalty agreement lapses. A large amount is being invested outside Rhodesia. The latest investments abroad include £2 million in a land development project in British Columbia and another £5½ million for aluminium development in Australia.

There are representatives of Anglo-American and other leading South African mining houses on the BSA board, as well as various merchant bankers of the City of London, including Sir Charles Hambro, who is also a director of the Bank of England. More remote from the worlds of mining and finance is Viscount Malvern—an architect of the central African federation. Lord Salisbury was also a BSA director until his resignation last April on the grounds of ill health. But the name of Cecil is still much to the fore, since some of the company's investments are now held by two separate subsidiaries, Cecil Investments and Cecil Holdings. The BSA royalties may seem as tempting a plum to a future nationalist government as they did to local Europeans in 1948.

rather sharp speech in the foreign policy debate. Signor Lombardi wanted Signor Fanfani to make a clean break with the past, but Signor Nenni urbanely said that the Socialists can co-operate with the Christian Democrats without either party renouncing its principles or trying to fuse Marxism with Catholic sociology, or socialist neutralism (which he seems to consider a mere hypothesis) with the pledges given by the other parties to Nato.

If Signor Fanfani sticks to his guns the crisis may come at the end of October when parliament will have voted all the departmental estimates. If the government resigns (through the defection of one of the three external supporting parties) President Gronchi may either ask Signor Fanfani to form a left-centre coalition, or else invite the present government to carry on and dissolve parliament. His powers to do this lapse in November, six months before his presidential term ends. The feeling gains ground that the issue is so momentous as to call for a general election which would almost amount to a referendum on the question: government with or without the Socialists? The problem is no longer political so much as psychological. Will Signor Fanfani's nerve hold? Will President Gronchi be true to the programme he announced in his famous investiture speech? Will the Socialists find the strength to override doctrinal prejudice and habit?

The conditions in the country are very different from what they were when the question of "an opening to the left" first became a practical political issue in 1958. Today Italy rides the crest of an industrial boom; it has passed from the old protectionist "corporative" economy into competitive capitalism under the common market. The social problems connected with the change are immense. The Christian Democrats alone are powerless to resolve them. Their impotence has been demonstrated this week when 10 million school children have found themselves short of 50,000 class rooms and parents have camped in the streets all night to enter their children at school. For two years the Christian Democrats have been dallying with a "ten-year school plan" of which Signor Fanfani himself is the author. Now the plan has gone with the wind. So too has the government's "five-year plan for agriculture," annihilated by the flow of population from the country to the towns. Now the Christian Democrats project a plan to co-ordinate industrial development. But it will take more than a mere "statistical exercise" (as its critics define the project) to regulate the forces let loose by the change in the country's economy. Signor Fanfani knows this, but will he have the strength to carry through his ideas?

Tout va Très Bien

FROM OUR PARIS CORRESPONDENT

"My centre is giving way, my right is in retreat; situation excellent. I shall attack." In keeping with the celebrated advice of Marshal Foch, General de Gaulle was in a particularly aggressive mood in his broadcast to the nation last Monday. Signs of discontent among the political parties in previous weeks had led General de Gaulle to invite some of the leaders for consultation. Since this did not seem to satisfy them, he warned them publicly that there was no question of returning to the parliamentary games of yesteryear. If, instead of following the government's lead in a disciplined manner, the deputies misbehave, the National Assembly will be dissolved. And if the crisis is really serious, the President could always make use of article 16 to reassume the full powers that he has just relinquished, and wield them in a more dictatorial way than in the last five months.

These warnings to his critics were coupled with approval of the Fifth Republic. The general claimed credit for the country's economic progress and political stability. The government has advanced methodically towards its appointed goal in Algeria. Tribute must be paid to the armed forces not only for their victory in the field but also for their discipline. In the general's view all will be well so long as political trouble-makers are not allowed to sap the unity of the nation.

Some critics in Paris have pointed out that a gloomier picture might equally well be painted. It can be argued that France's economic expansion did not start with the Fifth Republic and that the latter's institutions are nothing but a façade. It can also be argued that the government's Algerian policy, far from being splendidly consistent, has been a series of improvisations, compromises with the military command and wasted opportunities. Finally, it can be feared that the combination of political apathy at home, with the officers' awareness that they are the only political force to be reckoned with by the government, may still provoke a direct take-over bid by the military command. These fears presumably inspired last week's appeals for a political regrouping by both M. Mendès-France and M. Mollet.

The political parties have lost their grip and are unlikely, without some sort of shock, to recover it rapidly. The efforts of the political leaders are, therefore, mainly significant for the light they throw on the changing popular mood. M. Mollet's desertion of the general is particularly interesting. He has a flair for understanding the mood of his rank and file and is not in the habit of

Taisez-vous, mes enfants

deserting ships that are in good trim. Yet any talk of a regrouping on the left raises the old problem of relations with the Communist party. M. Mollet answered the question in 1958 by choosing gaullism rather than even a temporary alliance with the Communists and he has not changed his mind. M. Mendès-France refuses to be drawn on the subject, but he will not be able to avoid the issue for long.

General de Gaulle clearly does not believe that the politicians, whether of the left or the right, represent any real threat to his position. Hence, he felt able to tell them to keep quiet and let him get on with his Algerian plans. It is extremely hard to say whether Monday's broadcast revealed any changes in these plans. He did not mention the Sahara or any French claims to military bases. Nor did he elaborate on the guarantees which will be required for the European community or on the nature and command of the proposed Algerian police force which would run the referendum. These silences are impossible to interpret. But nothing that the general said seems to be an obstacle to a resumption of negotiations with the Moslem insurgents and in Paris it is expected that this will soon take place. It should test the temper of the European settlers and of the officers' corps in Algeria.

The ease with which General Salan and his outlawed staff travel across Algeria, broadcast to the population, and organise bombings or strikes is a proof of extraordinary complicity in his

activities by both the military and civilian authorities. The underground OAS (*Organisation de l'Armée Secrète*) has the same backing among Europeans as the FLN enjoys among the Moslems: not all its methods are approved but there is a general sympathy with its ends. Since the Europeans, however, are outnumbered—by roughly ten to one—their political weight is felt only when backed by the French army. In this context General de Gaulle's praise for the army's discipline is carefully calculated.

The ambiguous relationship between General de Gaulle and his officers' corps is not easily defined. There is general agreement, however, that more officers sympathise with General Salan's slogan of *Algérie Française* than with the gaullist conception of disengagement. This does not mean that they are willing to embark on open rebellion. They seek refuge in a passive attitude. The first days of the abortive army coup last April showed what an opportunity this benevolent neutrality offers to a determined minority: loyalty was measured in terms of inaction. But the sequel showed the limited effectiveness of this kind of support. Next time General Salan and his colonels will have to go farther and therefore rely on more solid backing. Experts here suggest that if the imminent return of the Algerian leaders from Tunis were to be announced, this would be taken by many French officers as a final blow to their hopes and might cause an insurrection sponsored by the OAS. Logically, General Salan and his men should wait and prepare for such a favourable occasion. But brasshats are not always logical.

German Swings

FROM A CORRESPONDENT

THOUGH the full consequences of Dr Adenauer's electoral setback, in terms of government building, are still uncertain, it is already possible to draw some conclusions about the mood and direction of the west German vote. In a high poll (87.5 per cent compared with 87.8 per cent in 1957) the minor parties have effectively disappeared from the scene, gaining only 5.7 per cent of the vote compared with 10.1 per cent in 1957 and losing all their seats in the Bundestag; the alliance between the German party and the Refugee party, in the form of the *Gesamtdeutsche Partei*, has in particular ended in disaster. On the other hand, the trend towards a two-party system, noticeable in the two previous elections, has been halted. The main antagonists—Christian Democrats and Social Democrats—polled only 81.5 per cent compared with 82 per cent in 1957; the Free Democrats have firmly established themselves as a third major party. At the same time the transfer of votes between the three parties now represented in the Bundestag was bigger than ever before, and if one can discover how and where these swings took place it will be possible to understand more about the nature of present-day German politics. The national average swings were as follows:

	CDU	SPD	FDP	GDP	DFU
	Percentage of Votes Cast				
1957 ...	50·2	31·8	7·7	8·0	...
1961 ...	45·3	36·3	12·7	2·8	1·9
Change	−4·9	+4·5	+5·0	−5·2	+1·9

There were, however, marked deviations from this mean. The old fear of the CDU that its Protestant voters were less reliable than its Catholics was confirmed. In Schleswig-Holstein, rural, conservative and 88 per cent Protestant, the Christian Democrats' vote went down by 6.3 per cent, although there was here a large reservoir of Refugee party votes to exploit. In denominationally mixed North Württemberg, the drop was 7.9 per cent. It is obvious that anti-clericalism is by no means a spent force in Germany. How much better the line held in Catholic constituencies is illustrated by two results from Rhineland-Palatinate. In Montabaur, evenly balanced between the two confessions, the CDU went down from 54.9 per cent to 48.3 per cent; next door in Prüm (97 per cent Catholic) it went down from 79.1 per cent to 76.1 per cent. In Hesse it lost its ten remaining Protestant seats and now holds only the three seats with Catholic majorities. Thanks to being able to pick up most of the votes of the semi-defunct Bavarian party, the Bavarian wing of the party, the CSU, did best of all: indeed in 16 out of 46 seats it improved its position.

The Social Democrats made least progress in their old industrial strongholds. This may be partly because they have come near to exhausting their potential in these towns; it is also undoubtedly because the fellow-travelling Peace Union (DFU) has drawn a good many votes from them here. The Peace Union polled best in the old communist citadels, and in many of these the SPD has simply stagnated. In Hamburg its vote rose by only 1.1 per cent, in Mannheim by 0.1 per cent, in Remscheid-Solingen it actually dropped by 0.4 per cent, and in Nurmberg-Fürth by 1.2 per cent. It is evident that the socialists did best among people who do not come from a traditionally Social Democrat environment and who would not previously have considered voting for them. To this extent their "new look" has proved to be profitable.

The Free Democrats, like the Social Democrats, have made least progress where they have hitherto been most stable, that is in the south-west—Baden, Württemberg and the Palatinate. In their best constituency (Heilbronn in Württemberg) they gained only 0.1 per cent. They did better in former strongholds where the last few years have brought them heavy losses—Hesse and Hamburg for example. Here they have been able to recapture most of their apostates to the CDU. They did best of all in northern Germany, where they were able to corner the lion's share of the votes that once went to the All-German party. Diepholz in Lower Saxony is a striking example: the GDP dropped from 33 per cent to 8 per cent, the FDP rose from 7 per cent to 24 per cent. These newly-won voters may well prove a headache to their party. Deeply conservative and nationalist, they have little in common with the liberal ideas which the FDP proclaims and could, in the long run, appreciably change its character.

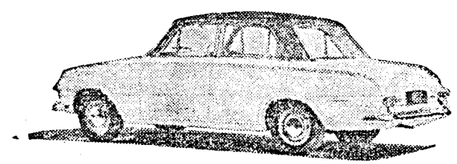
All in all, the bulk of the floating vote has shown itself to lie where observers have always tended to locate it, in the Protestant middle class. This class has done peculiar things before now, and its political behaviour will need to be watched in the very difficult period now confronting the makers of German foreign policy.

In one respect, however, German voting habits have not changed: women are considerably more conservative than men. In the city of Ulm polling stations were segregated according to sex: This showed that women divided 44:35 in favour of the CDU, while the men divided 45:35 in favour of the SPD.

YES!

THE NEW VAUXHALL VICTOR

The car that says **YES!** *to everything you ask of it!*



Good looks. Good design. Performance with safety. Quality with outstanding value. If you're talking about the new Victor, the answer is YES all along the line. Because here is a car that is every bit as good to look at as it is to drive. A car with beautifully clean contours, superb finish and immaculate attention to detail. A car to drive *and enjoy*.

Your Vauxhall dealer will be delighted to provide proof that the new Victor says Yes to everything *you* want in a car.

3-speed or 4-speed ALL-synchro gears
(3-speed column change, or optional 4-speed floor-mounted lever)
More comfort, more space for 4 or 5 adults
(extra legroom front and rear. 21½ cu. ft. luggage space)
Maintenance costs cut by two-thirds
(only 4 nipples, which require lubricating only every 12,000 miles)
Superb, long-lasting paint finish
(in new formula synthetic-cellulose enamel. 14 attractive colours)

See and try the new Victor at your local Vauxhall dealer's.
Or write for catalogue to Vauxhall Motors Ltd. Luton Beds.

Victor Saloon £510 + £234.19.9 P.T.(£744.19.9).
Victor Super £535 + £246.8.11 P.T. (£781.8.11).
Victor de Luxe £580 + £267.1.5 P.T. (£847.1.5).
(including individual front seats, leather upholstery and heater)
Victor Estate Car £590 + £271.13.1 P.T. (£861.13.1).
Extra for 4-speed all-synchro gearbox £17.10.0 incl. P.T.

M&G

started unit trusts in Britain thirty years ago. Since then they have developed this medium of investment in various directions—for regular savings, for endowment assurance, for pension funds, for charities. They now have pleasure in introducing an entirely new investment of this type,

THE M&G TRUSTEE FUND

THE FUND is a new unit trust authorized by the Board of Trade and qualifying as a "wider-range" investment under the Trustee Investments Act, 1961. While open to all investors, it has been specially designed to meet the requirements of Trustees. In particular:—

1. INCOME will be distributed strictly in accordance with the requirements of Trust Law. Trustees will therefore be relieved as far as is possible of the complications of apportionment between different classes of beneficiary.

2. INVESTMENT POLICY will be to invest principally in ordinary shares, aiming at growth of income and of capital values. It will also have regard to the possibility of giving Trustees an interest in good equity investments which—because they do not qualify as "wider-range" investments under the new Act—many Trustees are not empowered to purchase directly; obvious examples are overseas companies, smaller companies and new companies.

3. ACCUMULATION (e.g. for Trusts whose income is to be reinvested for the benefit of a minor) is provided for by the issue of special "accumulation units" whose share of the Fund's income is ploughed back to increase their value. After the first "ex-dividend date" following their purchase these units are convertible to ordinary "income units" and vice versa.

The Initial Issue of these units, at 10/- per unit, closes on Tuesday, 10th October, 1961. Thereafter units can be bought or sold on the first Wednesday of each Stock Exchange Account at prices calculated in accordance with Board of Trade rules.

Management Charges consist of a preliminary charge of 2% (with discounts for large purchases) and an annual charge of ¾% on the value of the Fund up to £2m. and ½% thereafter.

The Gross Yield at which the Managers propose to aim is *estimated* at 5% on the initial price of 10/-.

The Trustee is Westminster Bank Limited.

THE BUSINESS WORLD

Pause in the Pause?

BANK RATE was reduced by a tentative ½ per cent on Thursday to the inevitable chorus of that well-worn formula, "no green light." This reduction, the Chancellor of the Exchequer declaimed at the Mansion House dinner on Thursday night,

> is certainly not an indication that the time has come to relax any part of our policy. The credit restrictions and the other measures must still continue. . . .

Seven per cent Bank rate was a crisis rate. Its function was to demonstrate to the domestic public that a crisis was on, to the overseas public that Britain intended to do something about it; and to give immediate support to sterling. These tasks, the authorities now apparently feel, have been fulfilled; indeed the support for sterling has become embarrassingly strong, raising the sterling-dollar rate to a height that is not justified by the underlying balance of payments and pulling in foreign funds from abroad. Thus, on the official view, there has been sufficient progress with the short-term objectives of the July measures to justify this half per cent reduction —which is strongly desirable in the interest of international equilibrium. But the long-term elements of the July policy, so the chorus repeats, remain unchanged—no easing for the banks, no easing for the other suppliers of credit, no easing in wages policy.

This line of reasoning is not unfamiliar; but it is reasoning that does not add up. Either Bank rate is part of the credit squeeze or it is not. If putting it up to 7 per cent had a psychological influence, in what way does putting it down to 6½ per cent have none? Long after the echoes from the Mansion House dinner table have died away, industrialists will be noting the reduction in their overdraft rates. Building societies will find it easier to get hold of funds; local authority treasurers will feel a half per cent better off. The stock exchange has already registered its relief. "Perhaps things are a bit difficult, but anyway we're over the worst"—that, surely, must be the general reaction. Is Mr Cousins not supposed to hear? Is the Minister of Labour not supposed to hear? Or will their eyes be riveted to the restraining words of Lord Cromer and Mr Selwyn Lloyd, urging everybody else to keep up *their* end of the squeeze?

Most recent economic pointers have been in an encouraging direction. The reduction in Bank rate is the more disappointing because 7 per cent had apparently been far from ineffective domestically; whether or not interest rates are a negligible consideration for borrowers at 5-6 per cent they plainly have an intrusive influence at 7-8 per cent. The Governor implied that interest rates in Britain have recently been unduly high; but at their traditional levels they may in modern conditions be virtually ineffective. After all, the economy for once appears to be responding quite sharply to official policy. Current payments may be back in balance already and there is the prospect of a surplus sufficient to cover capital commitments by the first half of 1962.

Yet nobody questions the size of Britain's economic task. The Bank of England itself, earlier this week, was offering an analysis intriguingly close to that of the not particularly like-minded National Institute of Economic and Social Research. The Bank, in its notably improved quarterly bulletin, declares:

> To sustain a satisfactory rate of economic growth and at the same time restore external balance, an increase in exports of some 10 per cent per annum may well be required for two or three years, assuming no change in the terms of trade.

The National Institute, in turn, sees a good chance of a rise of 5-8 per cent in exports by mid-1962, but points to the exceptionally favourable conjuncture of reduced activity at home and favourable market conditions abroad. Britain's balance of payments still seems to it "to be fluctuating around an average which is seriously inadequate." The Bank is plainly in agreement, and has no illusions about what its 10 per cent per year rise in exports requires: it "will require a sharp change in the international competitive position of UK industry." The Bank would therefore, one would have thought, have been deeply anxious to avoid any action that would encourage a return of complacency; and this provided a strong reason for deferring the cut in Bank rate.

The Bank and the Chancellor have taken a risk. For what purpose? The major consideration, frankly, has been to ward off foreign funds and avoid embarrassing the United States. The dollar is again coming under strain; this week has seen a gold loss from the United States of $75 million, the largest for months. This pressure stems partly from the near impasse reached at the International Monetary Fund meeting in Vienna that ended a fortnight ago; and there is a sense in which this half per cent Bank rate reduction stems directly from the Vienna impasse too. For clearly if countries baulk at making adequate official funds available to compensate international movement of private funds, then it becomes more tempting to try to reduce the private flow themselves. This is awkward in a world of convertibility. Bankers dislike exchange controls. Hence the new fashion of international co-ordination of interest rates. In fact this cannot be an adequate substitute. In the last resort countries are not willing to put their interest rates to levels that are really inappropriate to their domestic situation—if they did, the consequences

could be far more inflationary than any international credit scheme, of which some bankers are so shy. Thus the British authorities at present are presumably not willing to reduce Bank rate to 4 per cent: yet this is what might well be necessary to check the inflow of funds. Bank rate at 6½ per cent is still likely to leave a huge margin, of perhaps 3½ per cent, over New York in the Treasury bill rate.

The dilemma between domestic and external considerations affecting Bank rate has not therefore disappeared. But there was, and is, a simple and much more effective way of avoiding international embarrassment. The authorities have immediate means of compensating the movement of foreign funds directly. They could push the money back through the International Monetary Fund—either by making an early repayment or, less formally but to the same effect, by letting it be known that Britain would be happy if the next IMF loans were to be made in sterling.

ALTHOUGH some of the latest statistical evidence still relates to periods before or during which Mr Lloyd took his measures, such subsequent indicators as are available suggest that home demand is now moderating. Consumers' incomes are now probably not rising as sharply as they were in the first half of the year, while prices have been rising: this has limited the increase in personal spending. The Chancellor raised prices at once by his surcharges, and hopes to delay further increases in income. It would be possible for consumers to increase their expenditure regardless, by drawing upon their large apparent margin of personal saving; but the pressure to reduce consumer debt, under the squeeze, is an influence in the other direction. The surcharge on indirect taxes affected purchase-taxed durable goods, while the hire purchase companies were themselves independently tightening their terms; and this check to the purchase of expensive consumer items was imposed on sales of cars and home equipment that had increased since the last relaxation of controls at the beginning of the year but had never, this summer, developed into a boom.

Investment inside the British economy had been showing advance signs of a decline in 1962 before Mr Lloyd tightened credit: the more modest capital intentions of manufacturers and other businessmen, sampled by the Board of Trade at the beginning of the summer but only recently reported, have tended to confirm this. So have the records of orders for machine tools and other capital equipment. Private house-building seems to have passed a peak this year, and to be somewhat in decline: the effect of the squeeze on building societies may reduce effective demand for new houses somewhat, and it seems likely to work similarly upon local authorities' programmes for building houses. Various nationalised industries, admittedly, quite escaped any capital cuts this summer; but it is unlikely that total investment in the public sector will grow much.

In the assessment of our economic managers, perhaps, this moderation of home demand is supplying sufficient spare capacity—and incentive—for British business to increase its exports. Exports have already risen to some extent, though the main increases this year have resulted from larger deliveries of ships and aircraft, which will be hard to maintain. The National Institute, considering the prospects of higher demand for imports in the resurgent American economy and possibly of some later recovery of imports into the overseas sterling area, reckons that exports should show a further rise during the first half of 1961; and that imports, now moderated by the decline in stock-building, will take longer to begin rising in line with output.

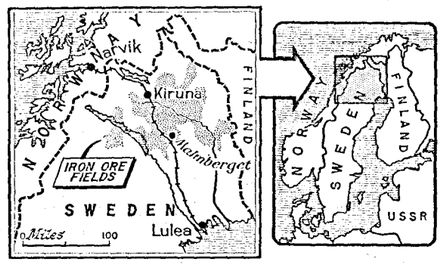
These factors in demand, all taken together, may imply a slow continued growth in industrial production, perhaps quickening a little by the spring, whereas in July it seemed possible that the pause would mean a temporary downturn. Employment has not risen this year nearly as much as production and nor have wages quite kept pace: as a result productivity and labour costs should have improved a little. (Costs of materials, too, have been fairly stable, but prices of manufactured goods have gone up somewhat: this implies that profit margins this year should have been rising somewhat, at least in the capital goods industries that have gone on expanding, though the stock exchange shows little sign of having heard anything about this.)

CONTINUED growth in national output, albeit slow, leaving a somewhat larger margin of spare capacity in the economy, and a swing into a much more favourable position in external payments: these are short-term prospects ostensibly promising enough to satisfy the most prudent. But recent uncertainties on the stock exchange—and those of industrial managers—may well have stemmed from the prospect of a collision between the Government and the unions, with businessmen as buffers, this winter. In principle, businessmen may be ready for the showdown; in practice, many are less so, and Mr Cousins's distant thunder at Blackpool has had some effect. The National Institute, in its assessment of the winter prospect, assumed that the Government's policy may only drag negotiations out a little and lead to rather smaller wage awards: it guessed that by the spring or early summer, wage earners will have managed to achieve increases of about 5 per cent to match a rise of about 5 per cent in prices since the last round of wage increases. Certainly the trade unions, duly noting the softening in the City will not be any more persuaded to suffer the squeeze in patience; and this week has made the institute's guess seem more likely. The pause might then temporarily have checked consumption, but would have made little contribution to that required "sharp change" in competitiveness.

Since July . . .

BANK ADVANCES were down £104 million in the month to mid-August and £128 million in September—an unprecedented rate of fall.

CHEQUE CLEARINGS were down by 2.6 per cent in September, the first monthly reduction since January 1958.



In September, **HIRE PURCHASE** sales of cars dropped to 54,815, more than a fifth below September 1960 and with the exception of December last the lowest monthly figure for three years.

RETAIL SALES in August remained as high in value as in July, with the index 117 (1957=100), but prices had risen, so that the volume of sales was probably 1½ per cent down. Sales of **DURABLES** fell away after the pre-emptive rush of July; sales of clothing and footwear went up.

The Board of Trade reported that **INVESTMENT INTENTIONS** sampled earlier in the summer suggested a slight dip in manufacturing capital expenditure in 1962, with a slight rise in investment by distribution and service industries.

UNEMPLOYMENT rose by about 10,000 more than would seasonally be expected between July and August, and remained at this level up to mid-September. **UNFILLED VACANCIES** fell 26,000 from July to September.

Iron Ore From Lapland

IN spite of the development of new iron ore deposits in Canada and Venezuela, and various parts of Africa, Britain still imports more ore from Sweden than from any other single supplier: and most of this high-grade ore comes from the Far North. At Kiruna, and the rest of the vast ore ranges in Sweden's Arctic territories, there is so much iron ore that geophysical prospecting there is now being directed to a strange end—to finding ground guaranteed *not* to contain ore. The Kiruna deposits are a mighty ore body, dipping to 2,000 metres along a 5.5 kilometre strike. The 10 million tons taken out annually still represent a fleabite. However geophysical prospecting, employing gravimetric and seismic methods for the first time in prospecting for iron, has revealed as yet unannounced but reportedly vast new deposits in the area. As a result the town of Kiruna, centre of the northern mining industry which with an incorporated area of 13,181 sq. kilometres has long taken pride in being the "largest town in the world," has had to stop building its badly needed sewage plant, because it was located on a previously unsuspected ore deposit. Desperately needed new housing areas have likewise been found to rest on an iron base, and cannot be developed.

The Lapland deposits have been known since the 17th century, but their remoteness and the phosphorous nature of the ores made them economically unviable until the invention of the Thomas process of steel smelting in the 1870's. A succession of companies were ruined attempting to mine and bring the ore to market. The building of the 474-kilometre railway connecting the mines with the port of Luleå at the end of the Baltic and Narvik on the Atlantic had in the end to be completed by the Swedish State Railways (after a British company had gone broke). The all-important railway reached Narvik in 1903, by which time the mining concession had been acquired by the Grängesberg Company which operated mines in the traditional ranges in central Sweden. By using the railway as a lever, combined with a threat of an export levy on ore shipment, the government in 1907 grabbed a 49 per cent share of the equity from the company. Since no compensation was offered, the state partnership amounted to outright confiscation. The agreement then signed contained an option clause giving the government the right, after due notice, to acquire full equity in the company; the annual production was not to exceed a stated tonnage determined by the Riksdag and the contract was to be renewed every tenth year. This enforced partnership continued for 50 years, including two world wars during which the Lapland ores provided the sinews of the German war effort, since practically the entire Ruhr steel industry had been geared to the uninterrupted supply of this material.

It still remains something of a mystery why the Swedish government in 1955 decided to exercise its option and insist on acquiring a controlling interest of 51 per cent of the equity. The government was by then, it has been estimated, taking 90 per cent of the net profit of the operations—in dividends, corporation and income tax. Its professed reason was concern for this remote region where despite its immeasurable natural wealth people live in arctic squalor, unemployment and social backwardness. Human conditions in the tenuous shadows cast by the huge main frames of the mines are deplorable: they result in the highest unemployment rate, doles, and communist voting in Sweden.

BE that as it may, after lengthy bargaining the private owners backed out and received as a compensation £57 million in cash, while retaining £7 million, or 5 per cent of the equity of the new Luossavaara-Kiirunavaara AB, or LKAB for short. The Grängesberg Company invested its freed capital in a new steel works in Sweden and in the Nimba range in Liberia, which promises to be a serious competitor to the Lapland mines. The new state corporation LKAB, with a share capital of £35 million and total assets amounting to £78 million, began under good auspices. Investments totalling £35 million made during the five years prior to the takeover were brought to fruition with impressive results. The open-cast mining pursued for some 50 years has been abandoned and Kiruna has been converted to the largest underground—mine in existence. An open working is usually the most lucrative form of ore extraction, but the open pits had reached such depths that the cost of terracing had grown too high.

It is the planning of the new underground mine that excites the interest of the mining world: it attracted some 1,500 mining engineers to have a look during the last brief summer alone. Confronted with the problem of bringing 3,000 men to their underground places of two-shift work, the mines were provided with ramps with a gradient of 1:10 and a tunnel width of 8 metres, by means of which the men are brought in and out by bus. Some 500,000 tons of mother rock derived from the preparatory workings are also brought to the surface by 25 ton diesel trucks. The ore, however, extracted by sub-level caving, is dumped by chutes down to the transport

tunnel on the mine's 420 metre level where it is brought by double-track CTC railway to underground crushers and hoisted in skips through eight shafts serving a large dressing plant above ground. Crushing, skipping and ore dressing is automatic. The capacity of the plant is 4,000 tons per hour, which is being expanded at the present by 50 per cent, by the addition of two new shafts with associated pithead plant.

This is at Kiruna. At the neighbouring property Luossavaara, railbound transport has been replaced by diesel trucks, and at the third property, at Malmberget, the ore not shipped as lumps is brought by band conveyor to a concentration plant and converted to sinter and pellets in a nearly automatic plant. The capacity of the Malmberget beneficiation plant is 600,000 tons powder concentrate of which 350,000 tons can be turned into pellets.

In 1960, these three orefields produced 16 million tons of ore, of which all but 0.4 million were exported to west Germany, Belgium and Britain for a total value of £61 million, providing a net profit of £12 million, after paying £11.4 million in taxes and reserving £5.7 million for investments. The output in 1961 is expected to exceed 17 million tons; LKAB will take the place of the Orinoco Mining Company, subsidiary of U.S. Steel, as the world's leading exporter of iron ore. By 1967, it is expected that the output will reach 24 million tons, of which 15 million will derive from Kiruna, 6 million from Malmberget, and 3 million from a new open cast mine now in the process of being opened up at Svappavaara. This mine is expected to become the third largest in the country, after Kiruna and Malmberget.

In order to handle this increased output the banks and bridges of the ore railway to Narvik and Luleå will have to be strengthened to permit a wheel loading of 25 tons, as against the present 16 tons. To get the State railways to undertake this extensive reconstruction work, as well as build a new 40 kilometre spur into Svappavaara, in an age of contracting railways, would have been out of the question prior to 1957; now the railway administration has grudgingly consented to do so, which will raise the capacity of the railway by 50 per cent.

Ore-handling capacity at the harbours of Luleå and Narvik will also be expanded. Luleå is being built out at a cost of £10.5 million, to accommodate the shipment of 12 million tons per year. At Rombaksfjord on the Atlantic, scene of a memorable British destroyer action in 1940, a gigantic scheme, embodying gravity loading from underground silos blasted into the mountain that sheers into deep water, may be realised, the Norwegians willing, sometime during the sixties.

In sum, Kiruna is an exciting place to work for a large team of engineers and planners, who have the chance, seldom realised, to lift a backward extraction industry by the roots and plant it anew on a high technological level. It is highly gratifying work for technocrats because it is beautifully simple and clinically free of human contamination. Reduced to its simplest terms, it is a matter of cutting cost by the application of capital. It is a job that requires little insight in conventional mining; much of the work of rationalising the underground operations is being performed by men who never had their feet soiled by sloshing around in a mine. In fact, a good deal of the data on which the decisions are based gushes out of electronic computers in distant Stockholm.

While the major investments are turned into underground and surface buildings and ore handling hardware, the actual operations in the mines are subjected to cost-cutting scrutiny by a process locally known as "selective rationalisation." The bus transport underground cut the cost of personnel transport by 50 per cent. In the same mine "drilling and blasting," important preliminaries to ore extraction, have been subjected to technocratic review, with some surprising results. All the detailed aspects of the cost in drilling with all existing types of machines, from light airleg drills to multi-unit hydraulically controlled American drill jumbos, were determined by conventional work studies. From this crude material the major cost items, machine cost, labour and explosives, were selected for further study.

When, ultimately, the computers gave forth the answers to the questions asked, some very surprising and, to manufacturers of mining equipment, highly embarrassing results were obtained. It became quite evident that of all the different types of rock drills made throughout the Western world none answered the requirements at Kiruna. At the optimal point of the curve was a lacuna that could not be filled by any available machine. But by then it had become a simple matter to write the specifications of the type of machine required and have it made. That put an end, for the time being, to concern over the high cost of drilling.

Reducing the cost of explosives by more than half required less sophisticated methods. Here the pioneering work had been done in United States and Canadian mines and quarries following the Texas City catastrophe in 1947 when a store of ammonium nitrate exploded. A research team at Kiruna produced a slurry consisting essentially of ammonium nitrate, fuel oil, TNT, water and a plasticiser. Having done that, its manufacture was turned over to the regular explosives supplier.

In the technocratic atmosphere now prevailing at LKAB it was inevitable that the many newcomers to mining would be restive about the primitive business of ripping ore out of the ground and shipping it in its crude state. They are now preparing for upgrading the ore to an intermediate product, tailored to the blast furnace requirements and the oxygen steel processes of their customers on the continent and in Britain. The 350,000 ton pelletising plant at Malmberget is the first big step in that direction, and the operations at the new Svappavaara mine are from the outset planned with such views in mind. Teams of metallurgists are studying the detailed process requirements of continental customers, and the management is prepared to offer tangible inducements to convert the buyers to the idea of having their pelletised charges prepared at the mines.

Closer technical integration, however, may not be easy to reconcile with Sweden's attitude towards closer economic and political integration in Europe. The ore company's political masters remain insistent on not having anything to do with LKAB's customer governments except on their own terms. The technocrats at LKAB, relaxing from the latest sheaf of figures from the data processing centre, tend to shrug off the statements of the political leaders regarding the Common Market as pre-negotiation tactics. Unfortunately, their computers offer no guidance in politics—which threaten to jeopardise their 24 million ton future.

BUSINESS NOTES

THE EXCHANGES

Uneasy Calm

Spot sterling dropped by ¼ to $2.81⅛ on Thursday, but technical influences as well as the Bank rate reduction played their part. In the forward market the three months discount narrowed by ¼ to 2½-2⅜ cents, which is a little less, as an annual percentage on the spot rate, than the presumed ½ per cent narrowing in the interest differential

The feeling of the exchange markets continues to be one of uneasy calm. Sterling was in continuous demand again before the Bank rate reduction, especially at the beginning of the week; Wednesday was rather quieter. The process of unwinding of leads and lags is not completed yet, but it has been accompanied too by a slow if still tentative return of foreign balances. The dollar, which had earlier strengthened a little in Zurich, fell back in midweek towards its lower support point of 4.31½, and was also weak in Germany. The gold market has had another quieter week—quieter, that is, by the standards of this summer or last autumn. The London price has remained at $35.18½, close to the notional shipping parity which also appears to be, for the time being, the official resistance point. The market is now reflecting the easing of tension over Berlin, following the official American hints about accepting realities. The undercurrents, which make the calm an uneasy one, are the doubts and fears that private bankers have taken home from Vienna.

While the Bank of England has cast unexpected light on the Basle operation at its zenith, it has kept the veil of secrecy over the latest step in its dismantling, and has thus once again blurred the significance of the monthly gold figures. The published rise for September was £24 million. Britain drew the remaining £18 million of its £536 million from the International Monetary Fund last month, but this was certainly much more than offset by a "substantial repayment" of Basle money to Continental central banks. Guesses at the amount can best start at the new reference point provided in the Bank of England bulletin. This discloses that the largest amount outstanding under the "Basle Agreement" (note the inverted commas) was £325 million. This is a little higher even than the maximum range in most unofficial estimates, but it confirms that the total drain of reserves up to the end of July was in the range of £600-£650 million put forward in *The Economist* of August 12th. The new figures given by the Bank can now be used in association with existing (and hitherto largely unmeaningful) figures to show what lay behind the massive strain on sterling in the first seven months of this year. In brief, the figures show a basic deficit on current and long-term capital payments of £220 million; a capital outflow beyond that of £550 million; tempered by rebuilding of £124 million of London balances of overseas sterling countries, giving a net deficit of some £645 million.

The Basle credits apparently reached their peak during June. At June 30th they were down by £2 million to £323 million, and there was a "small" repayment in July. In August "some £200 million" was repaid —the whole amount referred to in the statement issued at the time of the drawing from the Fund—so that the amount outstanding before last month's "substantial" repayment was perhaps £120 million or a little less. The one other clue is that "the great bulk" of the total assistance has now been repaid. It would be reasonable to assume that the remaining rump consists of the Swiss portion of the credits which it is now planned to fund in a medium term government to government loan, designed to avoid a movement of funds across the exchanges. On the very rough assumption that some £40 million remains on this score, September's repayment may have been some £80 million, which would bring the true rise in the reserves in the month to £86 million, following £40-£50 million in August. Some London dealers put the true September rise as high as £100 million. But no one is very confident about his guesses nor—on the upturn—very concerned about the precise figure.

IN THE MARKETS

Taken by Surprise

Although a cut in Bank rate had been freely discussed, the City did not expect it yet. The market had rather been looking for some hint at the bankers' dinner that a time for some such reduction was not far off. Gilt-edged stocks had been firm all through the week, particularly at the short and short medium dated end of the market. The growing strength of sterling encouraged Bank rate hopes, and sentiment had also been strengthened by the improvement in the liquidity ratios of the clearing banks, following the further sharp drop in advances in September, which suggested that the banks might soon be buying gilt-edged stocks again. The stock to attract most attention however has been 2½ per cent. Savings Bonds 1964-67, which is attractive to the surtax payer. It now stands at 83¼, having gained 1¼ over the week. The rise in prices at the short end helped most of the gilt edged market but it was only after the cut in Bank rate that the undated stocks showed much improvement. By the close on Thursday War Loan stood at 53⅝, a gain of ⅝ on the day. Gilt-edged stocks generally showed gains of up to half a point, but some speculators were taking their profits by the afternoon, and prices closed below their best.

Equities, too, showed some good gains on the Bank rate news with stores and property shares well to the fore, and the *Financial Times* index on Thursday rose by 5.6 points to 300.5, following its 2 point rise on Wednesday, when the market found reassurance in the gold figures and the moderately favourable forecast of the National Institute *Economic Review*.

Before the Boost

By Tuesday the *Financial Times* index of ordinary shares had passed through the low points for both 1961 and 1960 and at 292.9 was at its lowest level since a week after the 1959 general election. Selling had not been very heavy, but buyers felt disinclined to re-enter the market, especially with Mr Cousins rumbling away at Blackpool and the public opinion polls showing

a further swing towards Labour. A Bank rate cut then still appeared a distant prospect.

While there has been little sign of institutions returning to the market, a large part of their funds is still being absorbed by new issues. The statistics compiled by the Midland Bank show that in September the amount of "new money" raised on the London market amounted to £48.3 million, bringing the total for the first nine months of 1961 to £533.1 million, compared with £393.5 million for the corresponding period in 1960. Among the recent issues, rights offers by both Thomas Tilling and Ross Group amounting to about £6½ million together were both over-subscribed after taking account of applications for "excess" shares. The block offer of 5 million Scotbits at 5s. each has also met with an encouraging response, bringing in applications for 5.3 million units despite the low yield of only 2.8 per cent. The "Save and Prosper" Group can be well satisfied with the success of this offer in the depressed markets of the present, and this success is likely to be noted by unit trusts, which hitherto have usually made their offers near the top of the market. As the figures now incorporated into the quarterly bulletin of the Bank of England show, net additional sales of units reached only £1 million in the first six months of 1961. The trusts have, however, been doing somewhat better since then.

The bulletin also gives similar figures relating to investment trusts. The returns of 249 trusts show net new investments in the first quarter of this year of £9 million. Of this sum about £3 million was invested in Britain, over half of it in government bonds of 5-10 year maturity, while £6 million was invested in overseas securities. Clearly some of this went into European securities and in view of the propensity of investment trusts for investing in their own kind some of these funds have no doubt gone into European investment trusts. One of the largest of these, Robeco (Rotterdamsche Beleggings consortium NV) is now to apply for an official London quotation for its shares, which so far have been dealt in under Rule 163 (1) (e). At present British investors hold about 7 per cent of its capital, giving them a stake of about £6 million. The shares now stand at about £25 but the company has now altered its articles to permit the issue of sub-units of one tenth of a share, which at about 50s. would be a much more attractive unit to the British investor. The trend towards lower priced units has continued elsewhere and Unilever is now to follow Shell Transport in splitting its £1 stock units into 5s. shares. This pleased the market which marked up the £1 units by 9s. to 142s.

DRUG PRICES

Dispensing Pressure

The Minister of Health has not lost much time in following up his announcement last May of his intention to invite tenders for the bulk supply from Italy and Denmark of certain antibiotics used in hospitals. Contracts have now been offered to four British drug importers, covering a period of one year starting from the end of this month. Some hospitals had already been buying these drugs direct from Italian manufacturers, who are neither licensed to make them by the American inventors nor pay royalties. Mr Powell has now followed their lead. His authority lies in a section of the Patents Act of 1949 giving the Government the right to waive some of the rules governing patent protection where a patented invention is used "for the services of the Crown." To Mr Powell's advisers hospitals evidently appear to qualify as such a service just as much as defence, for which this section has normally been used in the past.

The implications of Mr Powell's latest move in his Ministry's constant battle to hold down the rising cost of the national health service are far more significant than the actual savings to the Exchequer from importing these antibiotics. The annual drug bill now totals £110 million, of which only £14 million worth is used in hospitals.

The antibiotics concerned—the tetracycline group and chloramphenicol—cover about £1 million of that £14 million, and Mr Powell reckons on saving about £350,000, less any royalties his department agrees to pay to the patent holders (or, if negotiations fail, any sums decided upon by the High Court). At the beginning of this year the Ministry managed to get the drug manufacturers to agree to some important modifications to the scheme governing the prices of drugs supplied for the health service as a whole, including a new provision for direct negotiation of prices for "certain widely used drugs"—among them, these new antibiotics. Since then some progress has been made in settling new prices.

But what has probably spurred Mr Powell into carrying out his threat to buy from foreign sources, presumably as a way of putting additional pressure on the manufacturers, has been some figures prepared by a firm of accountants giving the rate of profit on capital employed earned by the British manufacturing subsidiaries of the eight largest American drug firms—including the four companies supplying hospitals with the new antibiotics. On pharmaceuticals these eight American-owned subsidiaries earned an average 73 per cent on capital employed. This the Ministry has compared with its own figures of 20 per cent for British-owned pharmaceutical firms and 13 per cent for Swiss. After allowing for the American subsidiaries' share of the costs and capital of their parent companies' research, their rate of profit works out at about 30-35 per cent. Though the Ministry's calculations for British and Swiss firms may not be comparable, it is probably right in thinking that 30-35 per cent is rather on the lush side. Mr Powell's latest choice of weapon might raise eyebrows, however: after all, other governments may take a fancy to it.

EXCHEQUER ACCOUNTS

Uncertain Surplus

Despite the fortification provided by the 'little budget' of July, the Exchequer accounts at their half-way mark of September 30th appeared to be not quite matching Mr Lloyd's original budgeting in April. The overall deficit, including below line outlays, was actually £26 million larger than a year before, whereas the April budget foresaw an improvement in the full fiscal year of £325 million, to a deficit of only £69 million—which after the July measures should become a modest surplus. The Chancellor stated on Thursday night that there is no reason to believe yet that the final result will be "very different" from the April and July estimates. The Exchequer reckoning is, of course, far from being the test of the policy: indeed, the more successful the Government is in holding incomes down, the smaller will be its intake of income tax and the less chance there will be of an overall Exchequer surplus.

So far, however, income tax has been fairly buoyant, with an increase of £109 million on April-September, 1960, compared with an expected rise of £295 million

Potterton heat bank or bungalow beautifully

Potterton make boilers—oil-fired or gas-fired—rated from 31,000 to 2,000,000 B.th.u./hr. They are automatic, efficient, economical and purpose designed.

Potterton have been making boilers since the year dot. Very experienced people. Very reliable boilers. Pick Potterton. It pays.

Is your Potterton file up to date? For all the latest information by return post, just jot "boiler information, please" on your letterhead and send it to us.

A Potterton FOA oil-fired boiler (output: 1,000,000 B.th.u./hr.) heats Barclays Bank, York. Supplied and installed by J. Shanksmith Limited.

And a Diplomat 100 (a domestic gas-fired Potterton) supplied by South Eastern Gas Board and installed by C. Fletcher, Sons & Company Limited, Kingston, heats and provides hot water at an 8-roomed bungalow in New Malden, Surrey.

Potterton Boilers at the heart of efficient central heating—oil or gas

A MEMBER OF THE DE LA RUE GROUP

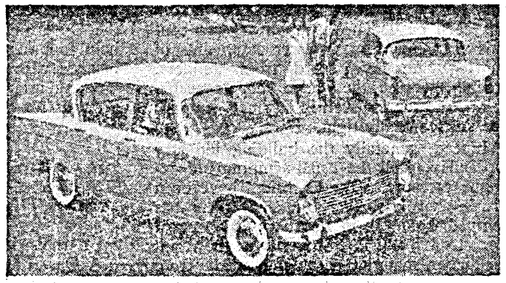
"Potterton" and "Diplomat" are registered trade marks.

about £25 million of this increase is attributed to the Chancellor's 10 per cent surcharge on revenue duties, which is expected to add an extra £130 million in this fiscal year. Total ordinary revenue is so far up by £304 million, compared with the April estimate, ex the surcharge, of £574 million.

Spending Runs Ahead

EXCHEQUER spending, however, is well ahead of schedule. Supply expenditure is already up by £193 million, taking up almost the whole increase expected in the full year. Debt interest is up by £66 million, compared with an April estimate of a slight fall on the year. The 2 per cent rise in Bank rate will have added some £12 million to Exchequer borrowing costs in these nine weeks; the bulk of the addition to debt interest so far is attributable to other, more technical influences connected with the conversion this spring of the 1956-61 Funding Loan stock. The upshot is that total ordinary expenditure is up by £260 million compared with an estimated increase of £215 million in the full year; and the above-line deficit at £343 million is £44 million smaller than twelve months ago, compared with an improvement of £359 million expected in April, before the "little budget" boost.

Net expenditure below-line for these six months is £70 million larger than a year ago, against an estimated increase for the full fiscal year of only £34 million. Payments below-line, however, are especially lumpy and erratic. Loans to building societies already total £33 million, close to the whole provision for the full year, but the societies have only until November to draw before the scheme is suspended. The Electricity Council has drawn £156 million in loans expected to total £190 million in the full year, and the Transport Commission has drawn £85 million of an expected £137 million. But the local authorities seem to be repaying the Exchequer at the expected rate, and their drawings of £5 million, for which no provision was noted in the budget accounts, were made predominantly before the turn-round in the exchange market and the London mortgage market in July.



CONSTRUCTION

Fever, None the Less

IT is not often that a manufacturer cuts his price, even nominally, when hard pressed to keep abreast of orders. But that is what the London Brick Company has done. It has pared the price of 1,000 "common bricks" by 2s. per 1,000 or roughly 1½ per cent, because, the firm says, of higher productivity—at a time when many other brick manufacturers are facing higher unit costs through having to use old plants, work a lot of overtime, and skimp on plant maintenance in order to meet the present

MOTORS

New Cars at the Salon

THE Hillman Super Minx that has been introduced at the Paris Salon this week is virtually identical to the Singer Vogue, using the same 1,600 cc engine developing 62 bhp, but it has a different radiator grille and two headlamps instead of four—a touch of austerity that increases aesthetic appeal since the headlamps are so nearly combined with the grille. The Super remains a strictly conventional design, but it is much superior to the old Minx in its handling and road-holding qualities; it is a well-balanced car with only a slight tendency for the front wheels to drift out on a corner. The actual cornering power seems better too, with little tyre squeal or roll if a bend is taken fast, and the steering is now more positive. Rootes has followed Vauxhall's example in retaining drum brakes, but not in using soft springing; the result is that passengers feel small up and down movements on bumpy roads, but the car is pleasant to drive fast.

It has in fact certain of the good qualities that the old Victor had; perhaps there may be some transfer of allegiances. But at the price of £854 for the saloon it is competing with the Victor de Luxe, which costs £847 with a three speed gearbox and £864 with four speeds like the Minx, rather than with the Victor Super at £798 with four speed gearbox or the Ford Classic at £767 to £826. The Hillman is more comparable in body space to the Classic than the Victor; the family man may therefore go for the latter, and the more sporting driver for the Super Minx or the Classic—which does offer disc brakes, if less comfortable cornering.

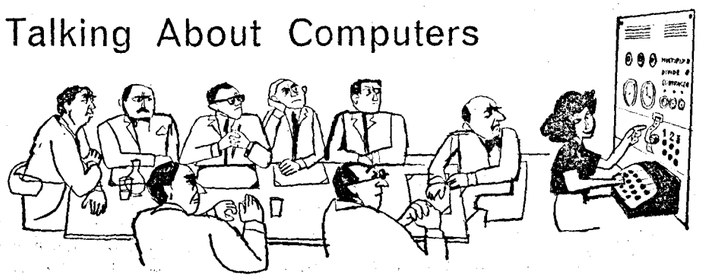
The only important new model from a Continental manufacturer to be making its debut at the Salon is the rear-engined Simca 1000. As might be expected when the companies are financially linked, this car follows closely the chassis design of the Fiat 600, a car that avoided the worse features of some rear-engined designs. The body is much more modern, clearly inspired by the Chevrolet Corvair, and considerably roomier; its engine is derived from that of the Simca Aronde, but is of 944 cc instead of 1,290 cc and it develops 45 bhp. At a price in France of £470 the car will be competing with the Citroën Ami 6 and the more expensive versions of the Renault Dauphine. If, as is expected, Renault replaces the Dauphine within the next year or eighteen months by a super Dauphine with a 944 cc engine, it may well move up into the price class of these new cars. The Simca means one more competitor for the small British car in Europe; though it is hardly an advanced design, Simca has always relied on well-tried features to sell its cars.

Price Cuts

THE reductions of up to £29 in the price of the Triumph Herald that were made this week suggest that Leyland is determined to raise the volume of its car sales, even if this can only be accomplished by reducing profit margins. The dismissal of a large proportion of the administration can hardly have made anything like a big enough saving to allow such a big cut in prices; but presumably the new directors feel they can find other means of reducing costs. One factor that may well have precipitated their action is Rootes' decision to keep the old Minx in production at a price that was £1 below that of the Herald saloon; another may have been introduction of the Cooper versions of the BMC babies at a price that was £49 below that of the Herald saloon—and is still £20 less. The price of the new TR4 sports car also shows determination to stay competitive; at £1,094 it is only £74 more than that of the TR3 that it replaces, £80 more than the Sunbeam Alpine and £108 less than the Austin-Healey 3000.

The cost of tyres has also fallen this week as the result of competition; the cut of six per cent by manufacturers passes on to the public the benefit of competition among wholesalers for the custom of the retailers, which the latter could not pass on themselves owing to resale price maintenance. The wholesalers had been giving retailers an extra discount of about five per cent, entirely out of their own margins. Now the manufacturers appear to be forcing the retailers to go back to their old discounts, leaving the wholesale margins reduced. Most tyres sold on the replacement market go through wholesalers, who may sell direct to large customers but mostly supply garages. It has only been these large customers who have benefited from the competition among the wholesalers. This incident shows how resale price maintenance makes the consumer depend on the manufacturer to give him any benefit from competition amongst distributors. But it also reveals that such competition can occur and still, eventually, bring prices down.

very heavy demand for bricks. Production has been pushed up by about 2½ per cent this year, but, though fewer complaints of shortage are now heard from builders, mainly because they have become accustomed to ordering well in advance, supplies are still generally tight.



Indeed, generally the building industry is displaying all the usual symptoms of extreme pressure. Tender prices have been rising sharply: *The Builders'* index has jumped from 384 in February (1939 equal 100) to 413 this month, partly as the result of higher material costs and partly from this month's wage increase and reduction in the standard working week. In house building, the picture is almost 1947 all over again: starts have levelled off, completions have dropped, but the number of houses in various stages of construction has been shooting up. The industry is hoping that the Government's measures last July will help to bring building activity into better balance without setting off a real decline. The cut in Bank rate may give them some grounds for optimism.

OIL

Dalliance in Baghdad

At their initial meeting with General Qasim last week, the negotiating team from Iraq Petroleum Company and its shareholders that has returned to Baghdad for the latest round of discussions presented to the Iraqi government a memorandum setting out in detail the reasons why they cannot agree to a 20 per cent government participation in the existing operations of IPC. Discussions appear to have gone no farther: the general then asked for time to study the memorandum, and proposed a further full-dress meeting on Tuesday of this week. During the interim the Western negotiating team discussed some of the issues with certain of the Iraqi ministers concerned, but when Tuesday came the full meeting was postponed for a few more days. It may be that the Iraq government, unwilling to accept the companies' position or proposals, is nevertheless not anxious for what might be a final break in these talks. But it might be unwise to exaggerate General Qasim's disinclination to force a showdown: the explanation may simply be that he has had some political preoccupations close to his frontiers in the last week or so.

Talking About Computers

THE symposium on electronic data processing being held in London during the current computer exhibition had not finished when this issue of *The Economist* went to press, but the papers already presented showed how numerate computer owners have become since the last meeting of this kind four years ago. At that time a computer was still regarded as a high-speed adding machine useful for tiresome routine computations such as calculating payrolls, keeping stock inventories and insurance records; it was probable that a good many expensive installations were under-employed.

More and more managements since then have come to understand that a computer is capable of logic as well as arithmetic, and now seek its counsel before taking a good many far-from-simple business decisions. Nor is it only big companies such as Shell Petroleum that do this, working out the group's probable worldwide supply—demand position a year in advance, or Rubery Owen using a computer for production planning, or AEI hoping that one will make it easier to adjust the production of domestic equipment to what the company itself described as "a wildly fluctuating market." One of the most interesting papers was read by a dress manufacturer who does not own a computer at all

Fashion is highly seasonable—and perishable. To spread work throughout the year, and to be still able to give quick delivery, dress manufacturers have to manufacture for stock, backing their hunch on which designs will sell best in what colours. Their mistakes have to be jobbed off in the sales. But one manufacturer, Job White and Sons, has discovered that if ten or twelve knowledgeable retail buyers can be shown each new season's designs in advance and asked to place their initial orders, the computer—in this case, hired—will work out a production schedule from this small sample, specifying designs and colours so that "the firm could inflate an order book for two weeks into five months' work with very little risk of incurring unsaleable stock." Most people would appreciate that the kind of economic problems faced by a company like Shell could be expressed to mathematical terms, but how many would have thought that a computer had an eye for fashion?

Decision-making by computer is still novel enough to attract comment. It is also behind most of the labour troubles caused by "going electronic," rather than the displacement of clerks by the computers on purely routine duties. A member of one of the main computer manufacturers, International Computers and Tabulators, expressed it this way: "One cannot say that one is building decision-making into the system without, in so doing, removing the equivalent responsibility from someone who hitherto had this task to perform." But computers are still being bought in large numbers for routine arithmetic, with the government as one of the biggest customers. With 18 already working and 9 more on order, the Treasury expects to spend up to £20 million on electronic data processing during the next ten years doing service and police pay, the population census, stock control for the services and the entire graduated pensions scheme (which was planned for computers from the start and might be unworkable without them). Likewise, the banks are only just beginning to put their accounts on to computers; significantly only one bank, the Bank of Scotland, had enough experience of computers to give a paper at the symposium.

Electronic account posting emphasises one of the biggest problems associated with computers, the design of their ancillary equipment. Computer design was not discussed—a pity, since this is a fascinating field where the stimulus comes from scientists asking always for bigger, faster computers and where advances in solid state physics are changing computers so that the early designers will soon be unable to recognise them. But the computer itself is only as good as the equipment that feeds the data into it and prints this the other end in a usable form. Banks, for example, could not adopt electronic book-keeping until a host of ancillary machinery had been designed to "read" figures on cheques. The mastery of electronic "reading" may in fact open up completely new fields for computers by making them independent of the rather clumsy devices used at present to feed information into them. Then computers will have full qualification for a seat on the board, and better qualifications, one might add, than some present two-legged incumbants.

Haig in every Home

for Christmas and New Year!

SEASONAL HINT:
Mix in a wineglassful of Haig when making your Christmas puddings, mincemeat and cakes. It gives them an additional delicious flavour.

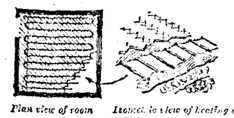
Electrical Aids in Industry—Data Sheet 19

Factory Heating—2

It is impossible to describe in detail every type of electric heater on the market, but a representative selection is dealt with below. Each type of building presents its own problem, and the best plan is to seek advice from your Electricity Board, who will be pleased to help.



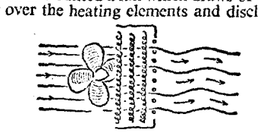
'OFF PEAK' ELECTRIC HEATING

Because the 'off peak' load makes use of generating and distributing equipment when it would otherwise be idle or underloaded, the Electricity Boards offer cheap 'off peak' tariffs. Three types of 'off peak' heating systems are available, namely:

(a) Hot water storage heating: This consists of a conventional hot water radiator or panel heating system through which hot water from a large storage vessel is circulated. The water in the storage vessel is heated electrically during the 'off peak', low tariff hours and is circulated when required through the radiators or panels.

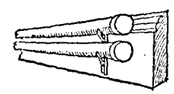
(b) Block storage heaters: These heaters consist essentially of a number of firebrick blocks which are heated up during the 'off peak' hours by means of suitable electric heating elements. The storage heaters are clad with a layer of suitable heat-insulating material and are housed in a sheet metal casing, the design being such that the stored heat is gradually dissipated throughout the day by means of radiation and convection. These heaters can easily be installed in existing buildings.

(c) Floor warming: In an 'off peak' floor warming installation, electric heating cables or ducts housing withdrawable cables are embedded in the concrete floor of the building. The cables are switched on and the floor is heated up during the 'off peak' hours, and the mass of concrete and screed of the finished



Plan view of room *Enlarged section of heating cable*

floor has sufficient thermal storage capacity to heat the building during the period when current is not available. This method is only applicable to new buildings.

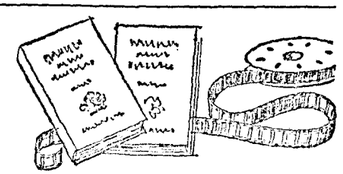


DIRECT ELECTRIC HEATING

(a) Unit heaters: These consist of a bank of electric heating elements fixed in a casing on which is mounted a fan which draws or blows air over the heating elements and discharges

it in the required direction. Such units are mounted on the walls or stanchions or hung from the roof members in appropriate positions throughout the works.

(b) Infra-red heaters: These consist of heating elements usually of the sheathed metal or silica tube type mounted in a polished reflector. They operate at temperatures from 700 to 900°C, and give off the greater part of their heat by radiation. They are mounted overhead and are useful for providing local areas of comfort in spaces not otherwise heated.



(c) Tubular heaters: These take the form of tubes approximately 2″ in diameter containing an electric heating element and are available in lengths from 2 to 17 ft. The normal loading is 60 watts per foot run and the surface temperature is from 180 to 200°F. They are usually placed round the walls at skirting level, but also can be used at high level in order to prevent downdraughts.

For further information get in touch with your Electricity Board or write direct to the Electrical Development Association, 2 Savoy Hill, London, W.C.2. Telephone: TEMple Bar 9434.

Excellent reference books on the industrial and commercial uses of electricity and reprints of articles and papers are available.

E.D.A. have available on free loan in the U.K. a series of films on the industrial uses of electricity. Film and Book catalogues and Publications List sent on request.

CREDIT TRANSFERS

Telling the People

PEOPLE who are accustomed to pay their gas and electricity bills or hire purchase instalments by direct transfer through a bank have had the mild shock this week of being charged 6d. by the bank for this service. They are not being mulcted: the new system marks the final stage of the new system of credit transfers, under which customers and non-customers of the banks alike are being encouraged to make payments in this way at the bank counter, designating the accounts to be credited and handing over one sum to cover the lot, with an additional 6d. for each item to cover the cost of the service. Previously the commission was collected from the recipient, and for hire purchase instalments the companies were charged 1s. a time, which in one way or another was passed on to the borrower.

Comprehensive facilities for credit transfers have now been available for seven months, yet the general public has still not been stirred to move from the traditional English way of paying each bill with a separate cheque in a separate envelope. People have not taken yet to the "giro" method, which the credit transfer embodies, of a single direct instruction to a bank to credit various designated accounts. To get the system going two additional things are needed: the public must understand the mechanism, and it must have the necessary information about traders' accounts. The banks in these past few months have been encouraging traders to include such information on their stationery—best of all is for the invoice itself to embody a credit transfer slip with details of the account to be credited already filled in. Firms have been slow to respond, though some big organisations, including the Post Office for its telephone accounts, are switching over to the new system. The banks are now to do their part by undertaking the essential publicity drive: the clearing banks over the next six months are to launch a joint advertising campaign explaining the new facilities.

SHIP FINANCE

Hole Amidships

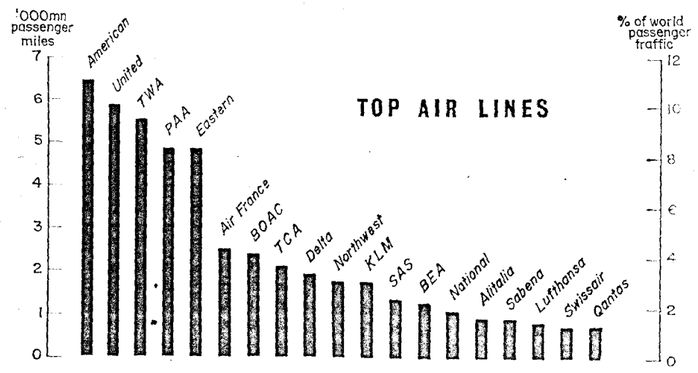
SHIPYARDS have been saying lately that the cost of loan finance is currently their main competitive handicap in the world export market for new ships. But it is not the only one, nor probably the most enduring difficulty. Last week the Sunderland shipbuilding firm, Joseph L. Thompson & Sons, failed to land a £4 million contract from the Naess shipping group for a 80,000 deadweight ton oil tanker (which would have been the largest tanker yet to be built in Britain) because of the complete collapse of attempts to raise mortgage finance for the ship—even though a long-term charter with Shell provided additional security and, it is believed, rates of 7¼ to 8¼ per cent were offered. This failure provides a salutary reminder of the long-standing "bald spot" in the London capital market for medium-term money of the kind suitable for financing shipbuilding orders.

Until international competition in shipbuilding and the demand for bigger, faster, and thus more expensive ships brought into fashion ship mortgage loans of more than five years—including some with an initial "rest" period for the first one or two years after delivery—and also loans for more than half of the contract price, shipbuilding finance both during and after construction presented few problems. The shipyards themselves traditionally undertook or were able to arrange it: to meet a need for some organised facilities the Ship Mortgage Finance Company was set up ten years ago by ICFC, the Shipbuilding Conference, and about forty insurance companies and other institutions. This company's resources have for some time been fully committed and there is now a real scarcity of money in the capital market for ships, not only for export where risks and insurance costs are greater.

Banks are understandably unwilling to lend for more than five years, and periods of less than twenty years or so are not particularly favoured by insurance companies. Attempts have been made on a number of occasions to form some kind of fairly permanent consortium of insurance companies to fill part of the gap, but each time with little help for shipbuilders. The financing of British Petroleum's large building programme four years ago, which momentarily attracted some pension funds, was one of the more spectacular exceptions, and it was a once-only operation. Continental shipyards, in contrast, appear definitely to have much less difficulty in arranging credit finance for customers through their capital markets. Interest rates of as low as 5 per cent, loans for up to 70 per cent or even 90 per cent of total cost, and for periods of from seven to ten years are sometimes encountered. Presumably Mr Marples will now try to prod the City into making some suitable arrangements. But will he succeed?

How the Airlines Ranked in 1960

THE sudden recent check to the growth of air traffic has made it easier for the British Overseas Airways Corporation to explain to the Ministry of Transport's special appeals commissioner why it should be protected from competition by a second British airline, Cunard-Eagle, when last year's results show that the corporation has moved up from eighth to seventh place in the league table of airlines and is the fourth largest international carrier this side of the Iron Curtain.



The air traffic results prepared by the International Air Transport Association are both less comprehensive than those issued by the United Nations, and more detailed; because while they cover only IATA members (of which there are 88 including all the biggest airlines) they do give separate traffic returns for each of those members. Thus it is possible to see how individual airlines compare in the amount of business they do, measured by the number of passengers carried and the distance they travelled. Year after year the top league table of airlines is dominated by the big internal operators of North America, including those like TWA that have both internal and international routes. Since its merger with Capital Airlines, United is almost certainly a bigger operator than American, which has headed the list for so many years; what was surprising about last year's traffic, however, was to find one of the big four, Eastern, displaced by an international airline although admittedly still an American one—Pan American. This, combined with the steady climb of BOAC up the table, is sure evidence that the rate of growth in internal American air traffic is slowing down while international traffic, which has always lagged behind it, was still expanding at the old rate. Perhaps the airlines ought to have been able to read this as the writing on the wall; then they might have been taken less unawares by this year's set-back.

The quite noticeable drop in the number of aircraft in service with IATA airlines is not so surprising when the huge size of the new machines is taken into account, and their inexhaustable capacity for work. The biggest fall was in the number of DC3s still flying; a good many DC6s and Convairs were also retired and the number of DC7s scrapped might have been higher but for the tendency to convert them to freighting. Last year was the first time that there were no Stratocruisers in service.

AIRCRAFT IN USE

ATOMIC ENERGY

Politicking in Vienna

PROFESSOR V. S. EMELYANOV of the Soviet Union is a likeable, respected scientist of world renown; but he may be on the way to forfeiting both the liking and the respect of other scientists through his blustering attacks on the International Atomic Energy Agency at its annual general meeting in Vienna. There the agency's first director general, the American Mr Sterling Cole, was making his valedictory report after four years in office. A successor, the Swedish Dr Eklund, has been chosen by the agency's board of governors but the Russian delegation seemed determined that the meeting should not approve the appointment. The Professor's ranting and roaring might be written off as a smokescreen to hide the Russian delegation's embarrassment in trying to explain away the Soviet Union's resumption of weapon testing ("the harmful effects of nuclear tests . . . were far less harmful than those of nuclear war") but for one particular point, his outright attack on the system of safeguards by which the Agency tries to ensure that no country to which it gives atomic aid or supplies atomic materials will divert these to military use.

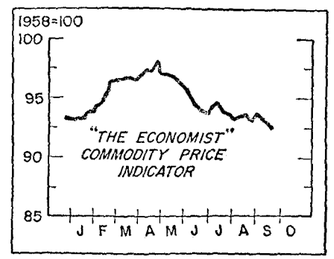
These safeguards are regarded as the cornerstone of international atomic cooperation. It is recognised that any industrialised country can make weapons if it

COMMODITY CONFERENCES

Washington, London and Geneva

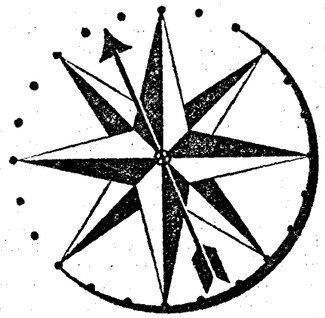
IF commodity producers have a season this is the height of it. To the harmless pleasure of guessing the size of many important crops that occurs about this time of the year the growth of international co-operation in commodity matters has now added the slightly more sinister activity of horse trading round the conference table. The market is nowadays more sceptical than alarmed at what might happen at these conferences. Though revolutions still have their place in commodity markets—as well as causing a fall in prices of Brazilian coffees Sn Quadros' unseating also forced the postponement of consideration of a "long-term" coffee agreement—experience has shown that these conferences do not produce overnight a revolution in marketing. In conjuring anti-climax out of what seems a desperate situation and in producing uninformative statements of studied ambiguity, some commodity committees have few peers.

It therefore did not come as a surprise that, despite exaggerated hopes, the international **coffee** agreement was quietly extended in Washington a fortnight ago and a committee was set up to draft a more permanent agreement, with a timetable that ensures that it cannot become effective before the start of next season. Since July, prices of Latin American coffees have declined by up to 10 per cent, though prices of African robusta coffees have remained firm. However, members' export quotas for the six months to the end of March were left unaltered, though last season export quotas had later to be cut to around 7 per cent below the original entitlement.



Producers can hardly be so satisfied with last year's quotas. But for the huge surplus that threatens disaster should agreement not be reached, there would certainly have been more haggling over quotas. Kenya's coffee, for instance, commands a substantial premium in some markets and the whole of its production is easily absorbed. Robusta coffees seem to be finding a readier market than more expensive mild coffees. African producers therefore argue the case for giving consumers the type of coffee they appear to want most against Latin Americans who are still producing millions of bags of coffee which will never be drunk.

The drafting committee has been given until December to draw up a long-term agreement. Unless it can make room for some further growth in Africa's share of exports, it is unlikely to find favour in those parts. Although the United States, Britain and the members of the common market have given the project their blessing, it is less likely to get their signatures if it includes some earlier recommendations for an elaborate buffer stock system.



Without big changes in permitted exports, the international **sugar** council is unlikely to save face by maintaining even a paper balance in future between supplies and demand. The ejection of Cuba from the American market added about 50 per cent to the quantity of suggar for which the council seeks to find a home, and although representatives at Geneva have so far been more concerned with putting their case for larger export tonnages, the meeting will soon have to get down in earnest to pruning back somewhere if it is to complete its review of the sugar agreement by October 12th. The favourite candidates for a cutback are those exporters who have been given the opportunity of increasing their shipments of sugar to the United States.

The United States consumes as much sugar as the council controls. When America's present arrangements for importing sugar lapse next summer it is hoped that they will be replaced by permanent legislation. Given the natural conservatism of the majority at commodity conferences, the current review of the sugar as the council controls. When renegotiation or an abrogation of the existing agreement. With the prospect that the United States will have a settled import policy next year, the current agreement will probably be patched up to last until its renegotiation in two years' time.

The twice postponed meeting of the international **tin** council in London, which was at one time eagerly awaited, has lost much of its significance. With the failure of a bid to get from Congress before its recess permission to sell 50,000 tons of tin from the strategic stockpile, hope of a firm American lead for next week's conference faded. Without any tin to sell or any definite sign of America's intentions, it is hard to see what the tin council can now do. While the conditions under which American tin might be released are still in doubt, this may not be considered the best time for raising the support price in the scheme, which all producers appear to want.

EXPORT OR FORGET

KOMPASS...

the passport to all markets

Presenting details of all your products to **all potential markets at Home and Overseas** — United Kingdom KOMPASS, comprehensive, accurate and multi-lingual—is shortly to be published in this country.

KOMPASS is up-to-date, international and technically unsurpassed.

KOMPASS Registers are standard works of reference, already published or in preparation in all European countries.

KOMPASS is unique—Managing Directors and Top Executives are invited to find out why when the District Information Officer calls.

Kompass is published by:

KOMPASS Register Limited

R.A.C. House,
Lansdowne Road, Croydon, Surrey.
Telephone: MUNicipal 2262

in association with Brown Knight & Truscott Ltd. (Printers and Lithographers) and Engineering Ltd. (Publishers of *Engineering*)

chooses, but that is no reason for making the wherewithal freely available. The Indian delegates must have pricked their ears when they heard the Professor denounce the safeguards on the grounds that they deterred small countries from asking the agency for the technical help it is meant to provide (to make weapons ?). India wishes to buy a plutonium-producing nuclear power station from abroad without signing the necessary undertakings not to use the plutonium for bombs. Does this mean that if the West refuses to allow its contractors to build the station (seven tenders are in) the Soviet Union will step into the breach?

Mr Cole's Case

It would be a pity if Professor Emelyanov's red herrings distracted attention from the criticisms made by the departing Mr Cole of the Vienna agency's organisation. Setting aside the agency's political difficulties, some of which arise from its parentage—it was the brain-child of President Eisenhower—the main complaint of Mr Cole is that the machine won't work. It is, for a start, grossly overstaffed, because of curious rules allocating jobs to which nationals of what countries. The board of governors interfere too much with its day-to-day running, holding innumerable meetings to take innumerable decisions and making inroads into the secretariat's budget in the process. Twice a year, said Mr Cole firmly, was as often as the secretariat wanted to see the board descend on Vienna. Again, it is short of cash. It is financed according to a curious system of regular contributions that more or less pay for day-to-day work, and of voluntary contributions made for specific technical projects. As often as not, the agency is ordered to carry out special projects for which the members conveniently forget to send in the donations they promised. And when some major project does come up—the kind, for example, likely to bring prestige to the donating country—then the donor prefers to bypass the agency and deal direct with the recipient. If Mr Cole sounded fed up, he probably had every right to be, but there is more at stake in Vienna than Mr Cole's exasperation and Professor Emelyanov's bad manners. There is the sane and safe development of a new industry based on a completely new and only partly understood technology. It is to be hoped that this muddle in Vienna can be sorted out before this joint agency dies of self-induced radiation sickness.

HELICOPTERS

Westland Chooses Vertols

Westland Aircraft, which is the only manufacturer of helicopters in Britain, has abandoned its reliance on Sikorsky helicopter designs—apart from those of the other British companies it has absorbed—and signed an agreement to service and, if it wishes, to build the Boeing-Vertol 107 helicopter in Britain. This decision does not affect Westland's agreement with Sikorsky, which still gives it the right to build Sikorsky helicopters here. But the company decided that the Vertol was a better commercial proposition than the comparable Sikorsky design for a type of helicopter that is in much demand. The 107 can carry 25 passengers, and though this is too few for it to be an economic proposition in civil use, it is the design that is favoured for the services between London, Paris and Brussels that BEA and Sabena hope to operate.

There should thus be an immediate market in Europe for a few civil machines; but the big orders that would make it worthwhile for Westland to start making the 107 itself could only come from the military. And the interest that is being shown in the machine on the continent for such uses, which might mean orders in hundreds from NATO countries five years or more ahead, seems the factor that did most to draw Westland from its allegiance to Sikorsky.

CHEMICALS

Spending to what Profit?

A survey of capital expenditure by the chemical industry carried out by *Chemical Age* shows that major projects completed in the past year, still under construction or planned are likely to cost nearly £300 million. When the journal made a similar survey a year ago, the expenditure involved amounted to under £200 million: so the falling profit margins that have been the chief feature of the industry's experience in the past year have yet to affect its current capital expenditure. But there are signs that its future planning is becoming much more cautious than only a year ago, and that the industry may well

Overseas Investment

The latest estimates of private direct overseas investment published this week in the *Board of Trade Journal* show that British industry invested £249 million overseas in 1960, an increase of 27 per cent on 1959, while investment in Britain by overseas companies at £141 million was down slightly on 1959, due entirely to a drop in unremitted profits. Rather surprisingly, profits retained overseas by British companies were lower in 1960 and the rise in investment came from new funds. Reversing a trend which has recently caused some concern in Britain, the earnings on overseas investment in Britain showed no increase in 1960 following a rise of 43 per cent in 1959, while earnings on British overseas investments were £20 million higher at £258 million. These figures, which exclude the earnings of oil and insurance companies, revise the balance of payments figures for direct investment published last March. The figures given here for remitted profits are a residual calculation—earnings less unremitted profits—and are subject to the limitation that all profits accruing to overseas branches are assumed to be remitted to head offices.

Investment by British companies in the sterling area accounted for 64 per cent of British overseas investment in 1960, and it appears to be growing faster than investment in Western Europe. Britain's investment there is concentrated in the common market, with the largest rate of increase in 1960 in Italy. The fall in North American investment is attributed mainly to the fall in profits in Canada. Overseas investment in Britain is dominated by North American companies, which in 1960 accounted for 65 per cent of the total.

be spending a great deal less in two or three years' time than it is now. The brutal fact that many projects cannot expect to show an adequate return on capital is beginning to damp the optimism of the chemical industry's management; instead of wanting to build bigger plants to reduce costs, it now tends to restrict its expenditure to projects that seem sure to pay.

The heavy investment outlay to which this industry is committed for the next few years is likely to coincide with a fall in profits, from which much of the expenditure might well have to be financed; so the outlook for shareholders does not seem too cheerful. Hopes that dividends would go on increasing seem rather unrealistic for the immediate future. In the long run the industry's rate of growth should allow the planned investment to be fully used, but profit margins may take a considerable time to recover: it is always more difficult to raise prices than to reduce them in an industry where competition is increasing in the market for almost every product.

TRADE DEBTS

The Squeezed Ones

THE recent sharp curtailment of bank advances has had speedy effects on subsidiary sources of credit, and notably trade credit. Big firms have become not only less tolerant about granting credit to their customers but also tougher about collections. Published information about this is almost non-existent, and particular interest, therefore, attaches to figures of collections issued

CASES NOTIFIED TO TRADE INDEMNITY CO., LTD., FOR COLLECTION

September	552	74,992

by Trade Indemnity Ltd., the leading underwriters of trade credit in Britain. The amount of collections rose sharply after the Chancellor's July measures, and in the third quarter the total was higher than a year before—when collections had already been swollen by the credit restrictions of 1960.

EXPORTS OF MANUFACTURES

Competing by Halves

BETWEEN 1954 and 1960, the dozen exporters of manufactures who count in world trade shared a $22,500 million increase in business, though "shared" seems hardly the right term to describe Britain's performance. Exports from the United Kingdom have been rising at half the rate of its competitors: this was true of 1960, true of the period from 1954 to 1960 and, according to a recent Board of Trade report, it also held good for most of the separate classes of commodities that Britain exports. In absolute value, only the United States, west Germany and—by a bare margin—France bettered the increase of $2,322 million in Britain's exports of manufactures between 1954 and 1960, but hardly anyone, least of all the Board of Trade, is currently in the mood to make much of that.

EXPORTS OF MANUFACTURES*

	1960	Percentage change over 1959	Percentage change over 1954
	$ mn.		
Belgium-Luxembourg	3,128	+14·6	+ 70·5
France	5,066	+21·3	+ 87·3
Italy	2,701	+33·4	+185·2
Japan	3,602	+18·8	+159·3
United Kingdom	8,403	+ 6·7	+ 38·2
United States	11,293	+17·3	+ 51·0
West Germany	10,135	+16·8	+129·2
Total*	52,313	+15·3	+ 75·4

*Twelve main exporters, excluding Communist countries.

In 1958, the only year since 1954 in which exports did not rise, the decline in Britain's exports of manufactures was above average. In view of that one can be thankful that in the sort of export race run so far there are substantial prizes even for those last past the post. But on the Board's analysis there are strong grounds for arguing that Britain was badly placed for winning more business. The big gains have been scored in Europe where in money terms the growth in the market has been as great as in the rest of the world, though in 1954 the rest of the world imported twice as much. The Commonwealth to which more than half of the United Kingdom's exports of manufactures went in 1954 increased its imports only half as fast as the European countries.

In the first quarter of 1961, world trade in manufactures was about 4 per cent higher than a year earlier and only 2 per cent greater than the average for 1960, compared with a rise of more than 15 per cent in 1960. Britain's exports of manufactures in the first quarter of 1961 was 2½ per cent larger than a year earlier. Excluding ships, the seasonally adjusted rate of exports in the first eight months of this year was 3 per cent higher than the average for 1960, which suggests that unless figures for exports in the second quarter which will be published within the next fortnight show that world trade in manufactures has suffered a severe check since March, Britain's exporters have still to get on equal terms with their competitors.

SHORTER NOTES

Rank Organisation has made a bid for the capital of Gaumont British which it does not already own. At the moment Rank Organisation holds 42 per cent of the equity but controls about 57 per cent of the total votes. The offers for both Gaumont British 10s. and 5s. "A" shares as well as Gaumont British 5½ per cent preference shares include some Rank Preference shares on which the rate of interest has been raised from 6 to 6¼ per cent.

★

International Paints and British Paints have given up the negotiations started in August for a merger between the companies.

★

Shareholders of over 90 per cent of the capital of Doom Dooma Tea have now accepted the offer from Brooke Bond which following a meeting between the two boards was raised from 55s. to 60s. per £1 unit. Shareholders who accepted the earlier Brooke Bond offer will also receive the higher price.

★

City and Central Investments, one of the Cotton-Clore property companies, has acquired the lease of Linen Hall in Regent Street which includes Robinson and Cleaver, the West End store controlled by Mr Clore's Sears Holdings.

★

The block offer of 5 million Scotbits units at 5s. each attracted applications for 5.3 million units with the average purchase being 380 units. About half the purchasers asked for regular monthly investment forms. Holders of the old units will receive on conversion 152 new units plus a cash fraction of 0.3907 of 5s. for every 100 old units.

Flemish as spoken in Wolverhampton

PR172/H

Lit by the spluttering, steely-blue flames of welding arcs, the intricate cooling system of a nuclear reactor takes shape in Northern Belgium. For the 11,000th time, in the darkened inspection booth of a factory in the English Midlands, an X-ray negative is presented for close scrutiny, a head bends over it, and a hand writes a curt 'O.K.'

Sixty tons of gleaming aluminium are the link between the Belgian Atom Town at Mol and the English factory at Wolverhampton operated by I.C.I.—Britain's leading chemical company and an expert fabricator of non-ferrous metals. For the nuclear reactor BR2 at Mol the cooling water needs to be contained in a labyrinth of aluminium pipes, made with perfect precision ad faultlessly welded. I.C.I.—no mean contributor to Britain's nuclear projects—undertook the job, confirming the perfection of their work with 11,000 X-rays and sending a special team of welders to instll the pipework at Mol. When it's a question of making special assemblies in conventional metals, or supplying special metals such as zirconium, hafnium and beryllium for nuclear engineering projects, I.C.I. speaks a language that is well understood everywhere.

The influence of I.C.I. research and production is felt today in every corner of the globe

Imperial Chemical Industries Ltd., London, S.W.1

THE DAVY-ASHMORE GROUP

The Eighty-eighth Annual General Meeting of Davy-Ashmore Limited was held on September 27th at 21 Tothill Street, London, SW1. The folowing is an extract from the statement by the Chairman Mr D. F. Campbell.

DAVY-ASHMORE

The accounts are the first since the merger with The Power-Gas Corporation Limited and the first since the Company changed its name to Davy-Ashmore Limited. The former Power-Gas Corporation had a financial year which ended on September 30th and this has now been adjusted so that the financial year for the Group ends on March 31st. In consequence, it is difficult to make a direct comparison between the result for the year under review and the combined results of the two companies before the union, because they relate to different periods in time.

It is more useful to compare the actual results with the forecast contained in the Joint Statement dated 6th July, 1960, describing the proposed merger. In that statement, the Directors stated they would expect the combined profits for the twelve months to 31st March, 1961, to be not less than £4,000,000 before tax. This has been slightly exceeded at £4,082,129 but in fact the year's profit has been struck after providing for some exceptional non-recurring charges which were not foreseeable when the Joint Statement was issued. It is fair to say that our trading results were rather better in relation to the forecast than the bare figure of profit suggests.

New Acquisition

For some time Davy and United Engineering Company has been looking for means of providing a better after-sales service to its customers. It was considered that an improvement in this service would result by organising the manufacture of many kinds of spares in separate workshops distinct from the main stream of contract execution. Accordingly, the opportunity was taken to acquire from Glenfield and Kennedy Ltd. the works at Polmadie, Glasgow, of their subsidiary Alley and MacLellan, Ltd. By the completion of its first phase of re-equipment the capital cost will be about £800,000. The bulk of this sum has already been met from Group resources.

Progress of the Merger

Progress in giving practical effect to the merger has been much as expected. The Group profit for the year under review does not, however, reflect the benefits of the merger to any significant extent, as it is derived from contracts in progress before the union. Nevertheless, the administrative shape of the Group is now well established and comprises a team of some 8,800 people.

Overseas Organisation

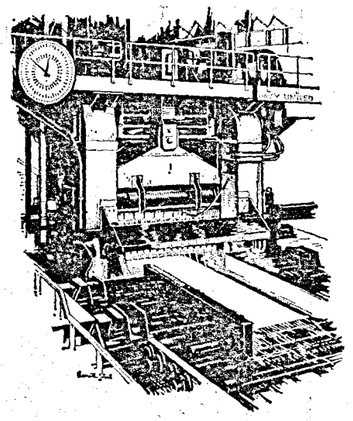
We also have an extensive overseas organisation with subsidiary companies in France, Canada, Rhodesia, South Africa and Australia; and offices in other countries.

The overseas organisation is being adapted to meet the needs of the Group as a whole and with thisobject we have recently formed Davy-Ashmore Export Company Limited, with its hadquarters in London. This subsidiary has he task of administering the overseas orgnisation and of carrying out sales promotion work.

Achivements

Much has been sai and written about the two new steelwors being constructed in Great Britain, for Richard Thomas and Baldwins at Llanwern, near Newport, Mon. and for Colvilles at Ravenscraig, near Glasgow. These plants are or the production of steel strip and both Ashmores and Davy-United have large contracts for Blast Furnaces and Rolling Mill equipment. The progress of our work in both cases is fully in accord with our undertakings to our clients.

If I refer again to the Durgapur Steelworks in India, its on account of the magnitude of the achievment. It has been said that this was the lagest export contract ever obtained for Great Britain and Davy-United's contract responsibity carried a value of about £29,000,00. Notwithstanding the formidable task of organisation involved, I am glad to be able to say that all the rolling mills have now been started, either on programmer in advance of it. The remaining portion which is to produce railway wheels and axles is not due, under the contract, for compleon until December, 1961, but operatins will start shortly.



Davy United's achievement at Durgapur must agur well for our future and the combined result must proclaim to the world that Great Britain can still lead the field in expon.

Future Prospects

Davy Ashmore is a group of companies supplying capital goods for a wide range of industries in Iron and Steel, Non-Ferrous metls, Oil, Gas, Chemicals, Petrochemicals, Edile Oils, etc. While its diversification is not corsiderable, its future is inevitably bound up with the future of the industries which it serves. At the present time we have good order books and if our plans materialise the results for the current year should no be disappointing, nor are the prospects for next year unhopeful.

Export Business

The demand for capital goods in sufficient volume to keep our factories profitably employed must always be conditioned by a growing demand for the products of the plant we build-for steel in its numerous forms, for aluminium, for chemicals, for oil, for the synthetics derived from petrochemicals, for fetilisers and so on—all the things, in short, which make for a better standard of life. Nobody can doubt that the demand for a better standard will become even more clamant in the years to come,

particularly from the vast underprivileged populations of Asia, Africa and South America. There is little doubt that we shall need to look overseas for an increasing amount of our business. I have no doubt of our ability to compete and if profit margins grow more slender, we must intensify the search for cost reduction and for even greater utilisation of our assets, which will enable us to accept smaller margins and still produce a satisfactory return on investment. But we must have the necessary conditions. Assuming that the recent restrictive economic measures were necessary to defend the currency, it seems deplorable that some remedy could not have been found which did not increase the costs of industry. Some 60 per cent. of the price of our products is the cost of the materials we buy and at a time when we are doing our best to respond to the exhortations for exports, we find the price of steel, our principal raw material, increased, partly because of increased tax on fuel oil and partly by increased cost of coal.

I am particularly glad to acknowledge the great improvement in the facilities for export credits which the Government has introduced during the last few months. However, while these facilities are improved, the cost of credit which is usually related to Bank Rate, has now become so high as to be non-competitive. No responsible person underrates this country's difficulties in the finance of export trade, but the latest steep increase in the Bank Rate means we have to tell our customers they must pay interest at 8 per cent. per annum on outstanding credit. They can get credit elsewhere in the world for around 6 per cent. and this circumstance is a handicap to our export efforts. If the Bank Rate is to continue to be used as one of the internal economic regulators, it will be essential for the Government to find some method of insulating our export trade from its effects.

Nevertheless, I view with optimism the long-term future for Davy-Ashmore. Given orderly progress in the world at large, your Company should continue to grow and to expand.

The Report and Accounts were adopted.

DAVY-ASHMORE LIMITED DARNALL WORKS, SHEFFIELD 9

COZENS & SUTCLIFFE (HOLDINGS)

GROUP PROGRESS

The 20th annual general meeting of Cozens & Sutcliffe (Holdings) Limited was held on September 29th in London, **Mr H. V. Cozens, MInstBE, FInstD** (the chairman), presiding.

The following is an extract from his circulated statement:

On the occasion of the Rights Issue to Shareholders on January 6, 1961, I made an estimate of the year's profits amounting to £250,000. The trading profit of £213,065, although a record, is short of this estimate by £36,935, a result almost entirely due to the restriction of the Electrical and Radio Industry experienced in the latter half of the two operating companies' financial years. The interim dividend received by Members on September 1st last, although financed out of the Group profits to June 30, 1961, has, however, been maintained at 15 per cent, and I see no reason to revise my earlier statement in relation to the second interim dividend due on January 1, 1962, thus completing a payment of 30 per cent less tax for the year.

Cozens & Sutcliffe Ltd. (Constructional Engineering & Plant Hire): Our present order book has never been so full and I have every confidence in the prosperity of this division. The Plant Hire department is doing extremely well.

A. S. DURAN & CO. LTD. and R.J.S. SERVICES LTD. (Electrical and Radio Industry Wholesale Distributors): The industry as a whole took a severe setback owing to Government action in the application of various credit restrictions and particularly with regard to hire-purchase, but I think it is possible to look to the future with confidence.

REDLER INDUSTRIES LTD. and SUBSIDIARIES (Mechanical Handling Plant Manufacturers): This Group has experienced its most successful year and turnover at £1,102,000 has for the first time in its history exceeded one million pounds. The money expended on development of overseas markets is now justifying itself and I have every reason to expect continuing benefit to the Group from these sources.

The report was adopted.

TEA CORPORATION

SATISFACTORY CROP

The annual general meeting of Tea Corporation, Limited, was held on October 3rd in London, **Mr A. A. Estall,** chairman, presiding.

The following is an extract from his circulated statement for the year ended January 31, 1961:

Tea Crop: There was a satisfactory increase in tea manufactured during the season compared with the previous year, the figures being 1,709,791 lbs. and 1,681,413 lbs. respectively. In addition 26,272 lbs. of tea was manufactured from bought leaf compared with 27,574 lbs., making a total output of 1,736,063 lbs. for season 1960/61 against 1,708,987 lbs. in 1959/60. Rubber Crop: A crop of 65,025 lbs. was secured, which is below last season's total of 68,301 lbs. and the shortfall is accounted for by the necessity of taking out of production 19 acres of very old rubber as continued tapping was uneconomic.

A profit of £20,527 before Ceylon taxation was earned in the year under review. Your directors recommend payment of a dividend at the rate of 9 per cent.

In view of the satisfactory crop harvested in 1960/61 the Board have decided to approve estimates for the current year based on a total of 1,785,000 lbs. made tea, which is 60,000 lbs. more than the previous year's estimate. It is expected that this target will be achieved as the total of made tea to the end of July is 975,376 lbs. compared with 882,136 lbs. for the same period last season. The market level of prices is much the same as last year, and I anticipate that the Company's results will prove satisfactory.

The report and accounts were adopted.

CALOR GAS

Holding Company Limited

The following points are taken from the Statement by the Chairman, Commander Colin Buist, to the Thirteenth Annual General Meeting of the Company:

- ★ For the year ended 31st March, 1961, the consolidated profit after all expenses and depreciation amounted to £828,828.
- ★ A Final dividend of 8% is proposed, making with the interim dividend of 4% already paid 12% for the year. £149,252 has been transferred to General Reserve.
- ★ Sales of "CALOR" Gas and equipment for use in rural homes and caravans for cooking, heating, hot water supply, refrigerators and gas pokers, and outside for picnic sets, blow torches, stationary engines, drying and other purposes continue to make steady progress.
- ★ Considerable development has taken place in connection with the expansion of the service for the supply of "CALOR" Gas as a fuel for industrial purposes.
- ★ The business as a carrier of gas for third parties continues to expand. The fleet of road tankers has been further increased and is now the largest of its kind in the British Isles.
- ★ In spite of increasing competition in the industrial field, sales since March, 1961, compare favourably with the corresponding period last year. Expenses continue to rise.

THE CALICO PRINTERS' ASSOCIATION LTD.

INCREASED ROYALTY INCOME

MR R. M. LEE'S REVIEW

The Sixty-second Annual General Meeting of The Calico Printers' Association Limited will be held on October 25th at Manchester.

The following are extracts from the Statement by the Chairman, **Mr R. M. Lee,** circulated with the report and accounts for the year ended June 30, 1961:

ACCOUNTS

During the year under review there was a decline in the profits earned in the Association's traditional activities of finishing and merchanting, but this was counter-balanced by increased profits of the overseas companies and the retail companies. The fall of £322,000 in the trading profit of the Group, after provision for depreciation, renewals and repairs, from £2,269,000 to £1,947,000 was largely accounted for by continuing losses of The United Turkey Red Company Limited and its Subsidiary Companies. Losses of the U.T.R. group were running at a high level when the Association acquired control in June 1960 and it is only recently that the measures taken by the Association to reduce these losses have become fully effective. In contrast to this loss, however, there was a further increase of £472,000 in income from royalties.

Advances to Subsidiary Companies increased by £965,000. The greater part of this amount was required to build up stock for the export trade, part has been used for stock for the home trade and part represents an advance to The United Turkey Red Company Limited to enable that Company to repay the loan it had obtained from the Treasury. These acquisitions and advances have been financed by an increase in surplus funds deposited with the Association by other Subsidiary Companies and from the Association's own retained profits. The Association's own stocks also increased by over £1,000,000 but cash balances are £758,000 lower.

The increase in royalty income for the half-year to December 31, 1960, justified an increase in the interim dividend on the Ordinary Stock from the equivalent of 6¼ per cent to 7½ per cent and in compliance with the Chancellor's request the final dividend recommended is 7½ per cent with a bonus of 6¼ per cent representing the same amount as last year's final dividend and bonus.

COMMISSION PRINTING

Our Commission Printing year to the end of June 1961 proved disappointing in the total volume of business booked. There was a fall of some 8 per cent against the previous year and the decline was showing no sign of halting when the year came to an end.

It is fair to say that there are now only two main groups of markets from which our commission printing business is derived—the Home Trade Group and the West African. The "Home Trade" group includes a declining business for Australia and New Zealand and today relies on the home market alone for the bulk of its turnover. Former traditional shipping markets—India, Burma, Ceylon, Near and Middle East—are in effect completely lost. The amount of direct business sent to us by our

commission printing customers for these markets during the last year would barely occupy a medium sized works for a month.

Our Home Trade business is seriously dependent on the vagaries of the British climate and two poor summers in succession have made their inevitable impact on sales. This has led to severe contraction of the repeat business which we normally enjoy in early spring and coupled with increasing general economic difficulties throughout the early summer has had a restraining influence on our business. The majority of the decline in bookings has occurred in this market.

MERCHANTING

In my statement last year I explained that we had decided to confine the activities of Birch Vale Works to the production of dress goods for our own Merchant Departments. To implement that decision a major reorganisation of the Departments has taken place during the year.

Idle capacity at the works is now charged to the departments, who are responsible for keeping their works in economic operation, while the remaining dress works are free to concentrate on servicing commission printing customers.

The testing time of the new system has come upon us earlier than we had foreseen. The last few months have provided yet another example of the violent fluctuations which afflict the textile trade. A year ago we enjoyed a record turnover, unusually low stocks, a positive shortage of grey cloth and a good order book. Sales continued healthy until the end of March but there was a sudden and sharp falling off in April last.

SIME DARBY HOLDINGS

(Incorporated in England)

SATISFACTORY TRADING ACHIEVEMENT

The fourth annual general meeting of Sime Darby Holdings Limited will be held on October 27th in Singapore.

The following is an extract from the circulated statement of the chairman, **Mr Angus Scott:**

The Group Profits before Taxation amounted to £900,928 as compared with £778,701. After deducting the amount required for tax, there remains £482,663 as against £440,469 in 1960. Certain Trade Investments were realised and the profit of £58,333 was placed direct to credit of Capital Reserve. Your Board is recommending a final dividend of 12½ per cent making 20 per cent for the year.

Continued prosperous conditions in Singapore, Borneo and the Federation of Malaya again allowed the Group to expand its trading activities and increase its profit.

It is too early to forecast the Group's likely results for 1961/62 and, of course, when operating in countries so dependent on the prices of rubber, tin and timber, prophesy of any sort has a large possible margin for error. However, results to date are similar to those of the corresponding period last year.

Your Board has given consideration to the substantial Capital Reserve of £890,333. The Directors have decided to absorb the bulk of this Reserve partly by making a scrip issue to members in the proportion of one new share for every five shares held and partly by the creation of a Property Reserve.

These Shares having been sold,
this announcement appears as a matter of record only.

NEW ISSUE

1,069,451 Shares

The Western Union Telegraph Company

Common Stock
(Par Value $2.50 Per Share)

The offering of these Shares, through a rights issue to stockholders of the Company, was underwritten by an investment banking group managed by the undersigned.

Kuhn, Loeb & Co. **Lehman Brothers**

New York, N. Y., October 4, 1961

THE HEPWORTH IRON COMPANY LIMITED

PRODUCTION AND SALES AT HIGH LEVEL

The sixty-fourth annual general meeting The Hepworth Iron Company Limite was held on September 27th at Hazlehea nr. Sheffield, **Mr. J. F. Booth** (the Chairma presiding.

The following is an extract from his circ lated statement:

The Group has again had a good year trading. The increased activity in the Buildir and Electrical Industries was maintaine throughout the year, and this improvement demand for our products has helped the tradin results for the year. A successful year ha also been experienced by the machine to section of our business.

The accounts of the Group reflect th acquisition of two additional Pipe Manufactur ing businesses carried on by Fred Temperle & Sons Limited and its subsidiary J. Ducke & Son Limited. Both subsidiaries have mad their contributions to the profits of th Group.

We are determined to continue to impro and modernise our production methods. Th plans for the new plant have been taken a stag further by the placing of orders. At the 31s March, 1961, outstanding contracts for capita expenditure amounted to approximatel £270,000 and since the year end further sub stantial contracts have been placed for th equipment required.

Research is continuing and the research an development section of our activities has bee expanded.

EXPANSION OF OPERATIONS

Since the year end our subsidiary, Fre Temperley & Sons Limited, has acquired th whole of the issued capital of Herbert Broo & Co. (Fireclay) Limited which has bee engaged in the production of Glazed Ware. I addition we have acquired a controlling interes in the issued share capital of La Brecque Engin eering Co. Limited. This Company is engage in the production of Plastic Rainwater Good

A further step taken has been the formatio of a new wholly owned subsidiary—Hepwort Electrical Developments Limited. It is intende that this company should continue the manu facture and sales of electrical cable jointin components which the parent company ha developed in recent years.

It still remains the policy of the Board t expand the business out of profits so far a possible and it will be obvious that to finance the developments a careful husbandry of th Group's resources is of vital necessity.

So far as the current year is concerned production and sales remain at a high level bu it must remain to be seen what effect th Chancellor's recent actions will have upon thi section of the country's economy with which w are concerned.

The report and accounts were adopted an a dividend of 7½ per cent was approved. A a subsequent extraordinary general meetin resolutions increasing the authorised share capital to £1,250,000 by the creation o 2,000,000 additional 5s. Ordinary Shares an giving effect to a one-for-three scrip issue were duly sanctioned.

SAINT-GOBAIN

COMPAGNIE DE SAINT-GOBAIN PARIS

The Annual General Meeting of SAINT-GOBAIN S.A. was held on June 26th, and the following are details of the report presented by the Board of Directors:

REVIEW

Business activity in the various establishments was brisker in 1960 than in 1959, progress in sales being generally only limited by production capacity. This was the case particularly for sales of polished plate glass and drawn glass.

The Company devoted NF 33.75m to pure and applied research in 1960, which was 2.8 per cent of the turnover of its own factories in Europe and of its hollow glass-ware subsidiaries.

GLASS

The following ventures were undertaken in this field during the year:

Work began on a new production unit of 6, and finally 8, Pittsburgh machines at Aniche, to cater for the increase in the French market for window glass.

Following certain measures of concentration in the field of hollow glass-ware, the Company began extending its works at Vauxrot and at La Chapelle-Saint-Mesmin, as well as building a completely new factory at Cognac.

At the same time, work began on a fibreglass factory at Etten in the Netherlands.

Outside Europe, building of the Greenland Glassworks in the United States is continuing and is due for completion in 1962.

Finally, agreements which were concluded towards the end of last year have enabled the Company to acquire certain interests in the Brazilian glass industry.

CHEMICALS

In the chemical sector, the agreement on common interests reached in December 1959 between SAINT-GOBAIN and Pechiney began to take effect, and since November 1960 sales of the chemicals and minerals produced by both companies have been undertaken by Société Produits Chimiques Pechiney-Saint-Gobain, a company set up in December 1959.

The following ventures were undertaken as part of a large programme of new works:

At Le Havre, a new sulphuric acid plant using the sulphur contact process.

Two nitric acid plants at Saint-Fons and Rouen and a vinyl chloride polymerisation plant at Saint-Fons.

A fertiliser granulating plant at the Bordeaux works.

A phosphoric acid plant, two phthalic anhydride plants, and a maleic acid unit at Chauny.

A new sulphuric acid contact plant at l'Oseraie (now in service), as well as two new fertiliser granulating plants at Balaruc and Chauny.

Increased capacity for monomer vinyl chloride and polyesters was installed at the Saint-Fons works.

Turnover on sales of finished products showed the following increases over the previous year:

Mineral products for industry: 15 per cent.

Mineral products for agriculture: 8 per cent.

Organic products: 22 per cent.

Among associated companies, Fabriques de Produits Chimiques de Thann et Mulhouse are building a sulphuric acid plant.

In the industrial complex now being built at Lacq, in which the Company is interested, the acetylene and heavy hydrogen plants of Aquitaine Chimie, as well as the acetaldehyde plant belonging to Acetalacq have come into operation.

PAPER AND OIL

In the papermaking industry, a considerable structural reorganisation took place in the Cellulose du Pin Company, in which SAINT-GOBAIN has a majority holding. Two other companies were merged with Cellulose du Pin during the year, and the Bègles works, which SAINT-GOBAIN had bought from Cenpa, was also taken over. Production rose, the increase varying between 9 and 21 per cent among individual factories. For the whole of the Group, output reached 173,000 tons of pulp and 113,000 tons of paper. The turnover before tax amounted to NF 168.5m.

Finally Compagnie de Raffinage Shell-Berre, in which SAINT-GOBAIN is interested through Compagnie des Produits Chimiques et Raffinerie de Berre, brought into production a new distillation unit at its Petit-Couronne refinery. Crude oil tonnage processed by Shell-Berre rose to 7,320,000 tons in 1960, representing 22.3 per cent of total French refinery through-put.

The overall picture for 1960 showed SAINT-GOBAIN making an intensive investment effort, both in new plants and in increased shareholdings, reaching a total of NF 298.8m. including newly transferred assets. Investments in 1959 totalled NF 219.42m.

The extent of the Company's activities in the nuclear field led to the setting up of a new subsidiary, Saint-Gobain Nucléaire, during the year.

PROFIT AND DIVIDEND

After depreciation and the usual allowances for reserves and other provisions, the balance sheet for the year under review shows a profit of NF 39,960,226. This allows a net dividend of NF 6 to be distributed on each of the 5,167,961 shares constituting the capital on December 31, 1960. The 1959 trading profit had been NF 33,417,935 and allowed a net dividend of NF 5.50 on each of 5,024,055 shares.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

PURCHASING OFFICERS ASSOCIATION

At the recent Annual General Meeting held during the 1961 Conference, the National Chairman, **Mr J. Murray Grammer,** reported that the Association's total strength had risen to 5,663, made up of 4,426 members and graduates and 1,237 students. The enrolment of students during the past year was 50 per cent greater than in the previous year.

The Association had again been very active in education. A notable innovation was a Course for Stores Controllers held concurrently with the Buyers' Refresher Course. The demand for places had been so great that a repeat Course had just been held. Storekeepers who have been awarded the Association's "Certificate in Storekeeping" are now to be offered certain services and facilities.

In his Presidential Address to the Conference, Mr W. H. Parry said that a rise in our visible exports of about 6 per cent or £200 million a year would be required to repay our recent borrowing from the International Monetary Fund and to cushion the adverse trend of our invisible exports. This increase would only be sufficient to prevent any further deterioration in the present precarious balance of payments position.

Abroad, the President felt that the Government could do more to improve our "image" by presenting trade statistics in a truer light by abandoning the old Customs habit of showing exports fob and imports cif. The more complicated calculations would show that in most months we earned a surplus. Again, we published our reserve figures without taking into account such items as official holdings of dollar securities.

KEITH, PROWSE & COMPANY, LTD.

MR PETER CADBURY'S REVIEW

At the Sixtieth Annual General Meeting of Keith, Prowse & Company, Limited, held in London on September 28th, **Mr Peter Cadbury** welcomed new Shareholders who for the first time in the 180 years since the business was first started had been able to invest in the Ordinary Shares of the Company. Although the fortunes of the Company had varied since its incorporation in 1902, Mr Cadbury hoped that his policy of putting back all available profits since he assumed control in 1954 would result in greater stability in the future.

During the past seven years other Companies had been acquired so that Keith, Prowse now controlled about 70 per cent of the Theatre Ticket Agency business in the Country and had developed other commercial interests. The Profit before taxation this year was £126,386, which compared with £65,439 in 1960 and £33,355 in 1959.

The Issue of 450,000 new Ordinary Shares in March was 77 times over-subscribed and, as forecast in the Prospectus at that time, it is recommended that an Ordinary Dividend of 17½ per cent be paid, which is covered 2.23 times by the profits available for distribution. After providing over £100,000 in taxation over the last two years, the Balance Carried Forward is £84,577.

The sales of Theatre Tickets, Gramophone Records and Travel had all increased this year. Westward Television Limited had been incorporated in 1960 from the Syndicate, formed by Mr Cadbury, which had been granted the Licence as Independent Television Contractors for the South West, and started transmissions in April, 1961. Mr Cadbury had every confidence in the value of the investment made by Keith, Prowse in Westward.

Mr Cadbury asked all Shareholders to identify themselves with the Company by supporting Keith, Prowse as customers and acting as its ambassadors. He thanked the staff for their loyalty and particularly those who had contributed so much to the fortunes of Keith, Prowse and Associated Companies over the past seven years since he had been Chairman.

The Report and Accounts were adopted.

KINTA KELLAS RUBBER

The 51st annual general meeting of Kinta Kellas Rubber Estates, Limited, was held on September 28th in London, **Mr. J. R. Tannock** (the chairman) presiding.

The following is an extract from his circulated statement:

Our accounts show that the year's profit has hardly differed from that of the previous year. Though the crop continued to rise by 34,800 lb., its proceeds fell in comparison with the previous year by £8,677, but its production cost only receded by £1,794. Export duty, however, was down, taking £6,764 less. The net profit, before taxation of £28,486 representing some 38 per cent of the profit, rose by £5,975. The explanation is the rise in our trade investments' income, tin royalty, and tribute income.

A final dividend of 17½ per cent is recommended which with the interim of 7½ per cent. paid is on a parity with last year's distribution of 37½ per cent on the lower issued capital. While results to date are satisfactory, owing to the lower market average price which we may expect to obtain throughout the period, it is unlikely that the present rate of dividend will be maintained for the current year.

During the current year it is estimated that the crop will attain 1,825,000 lb., but for the four months ending July, the harvest indicates that though the trend will continue upwards the estimate may not be obtained.

Having reviewed the company's replanting programme, the chairman said: The estates are in good heart, and though the result has in no way been exciting, it has been quietly progressive.

The report was adopted.

FITCH LOVELL LTD.

SIR AMBROSE KEEVIL REPORTS CONTINUED PROGRESS

The Annual General Meeting of Fitch Lovell Ltd was held on September 29th in London.

The following is an extract from **Sir Ambrose Keevil's** circulated review:

I am most gratified to record our turnover exceeded, for the first time, £100,000,000 and that the net profits before taxation increased by 20 per cent, reaching a record figure of £1,416,692.

Factories. Automation, wherever possible, is being introduced and results should be progressively apparent.

Decentralisation. Traffic congestion in London is such that two of our largest companies have moved or are moving this autumn, from the City of London to new warehouses and factories. This should effect considerable economies.

Common Market. Although we are well established in most parts of Western Europe, we have now acquired a considerable interest in two factories in the Common Market area.

Capital and Profits. The increase of over £10,000,000 in our turnover, the development of our factories, the modernisation and extension of our retail branches and our overseas interests have meant a considerable capital outlay, the benefits of which I am hopeful will be shown in the future. Some of our companies this year have done very well, others not so well but the diversification of our interests has enabled us to present record profits. These are fairly evenly divided between our main sections of Manufacturing, Importing, Wholesaling, Retailing and Overseas Trade.

Having reviewed the Group's widespread activities, the chairman continued: Shareholders will have noticed the large amount of property owned by the Group. Some of this property has not been valued for very many years and we have considered it wise to have professional advice on development potentialities and values.

I am pleased to inform you that the first quarter of this year shows a small increase in sales and profits, but the year is still young and it would be unwise to forecast the results of a trade which is open to severe competition, Government legislation and the economic state of the country, but it is certain that all our companies will do their best once more to achieve record results.

HACKBRIDGE HOLDINGS LIMITED

The thirteenth Annual General Meeting of Hackbridge Holdings Ltd. was held on September 28th in London, **Mr A. L. Foulger** (the chairman) presiding.

The following is a summary of his circulated statement for the year ended 31st March, 1961:

Much emphasis has already been placed upon the exacting competition in the Electrical industry, and although our volume of output was well maintained, profit margins were reduced. The results achieved were not unexpected, and I hope you will agree that they are not unreasonable having regard to relevant circumstances.

I am glad to report that the new acquisitions referred to in my last report have operated successfully.

Your Board consider that there are great possibilities for expansion within our present Group of Companies. Nevertheless this view should not preclude the acquisition of any sound proposition which would ultimately benefit our organisation.

During the year we established a new company, Kelvin Metal Industries Limited, which is engaged in metal fabrication for the Group and other customers; this venture should prove a valuable asset.

The Group trading profit before providing for depreciation was £299,969 compared with £301,140. Provision for taxation absorbs £115,667 —a considerable burden, exceeding 65 per cent of our profits after charging depreciation of £123,452.

Capital expenditure during the year amounted to £72,287. Modernisation and improvements to our manufacturing technique, the expansion of production, and the introduction of new lines require continued capital expenditure.

We are constantly seeking to introduce additional manufactures in order to further diversify our range. The Group has played an extremely important part in the introduction and development of Air-Cooled Mining Type Transformers in this country and substantial business has resulted.

The Group commenced the current year with extensive order books and to date the demand for our products has been encouraging.

Judging by our experience so far we may look forward once more to quite satisfactory results.

The report was adopted and the final dividend of 7½ per cent, making 10 per cent for the year, was approved.

THE CHARTERED BANK

EXTRAORDINARY GENERAL MEETING

An extraordinary general meeting of the stockholders of The Chartered Bank was held at 38, Bishopsgate, London, E.C.2, the Head Office of the Bank, on Wednesday, October 4th.

The chairman of the Bank, **Mr V. A. Grantham,** presided.

Mr W. G. Pullen, Chief General Manager, read the notice convening the meeting and the Chairman then moved the following special resolution:

"That the capital of the Company be and is hereby increased by £4,500,000 by the creation of 4,500,000 new Shares of £1 each and that such Shares shall upon being issued fully paid, or credited as fully paid, be converted into Stock."

The resolution was seconded by Sir Henry Richardson and carried.

The Chairman intimated that at the conclusion of the meeting the Court of Directors would allot to stockholders on the register on 21st September, 1961, 1,100,000 new shares of £1 each in the proportion of one new £1 share for every £5 stock held at a price of 40s. per share, thus raising the issued capital of the Bank from £5,500,000 to £6,600,000. The Chairman also intimated that there was no present intention of issuing the balance of the increased authorised capital.

MALAYALAM PLANTATIONS

RECORD CROPS

The fortieth annual general meeting of Malayalam Plantations Limited will be held on October 26th in London.

The following is an extract from the circulated Statement of the Chairman, **Mr John Sands,** for the year ended March 31, 1961:

Conditions during most of 1960/61 were very favourable. Until towards the end of the season, exceptionally good weather was experienced in all districts with the result that crops of both tea and rubber were the highest in the history of the company, the average yield being 1,006 lb. per acre of tea and 549 lb. per acre of rubber tapped. These crops would have been even greater if it had not been for a severe drought in the closing months.

The profit for the year before taxation is £1,264,463 against £782,245 for 1959/60. Taxation is, of course, correspondingly larger but after that has been deducted, the remaining profit is approximately 30 per cent greater than that for the previous year. The Board propose a final dividend of 12 per cent, making a total of 18 per cent for the year.

Weather conditions so far this season have been very adverse. Up to the end of August the tea crop shortage was some 1¼ million pounds compared with the same period 1960/61 and it is unlikely that this shortage can be made up even if normal weather experienced for the rest of the year.

On the other hand, the outlook for rubber is much brighter. At the end of August crop was about 135,000 lb. ahead of that for the corresponding period of 1960/61 and we have every reason to hope that the estimate of 8,438,000 lb. will be exceeded.

GEORGE HUMPHRIES & CO. LTD.

DIVERSIFICATION OF GROUP'S INTERESTS

The annual general meeting of George Humphries & Co. Ltd., was held on September 26th in London, **Mr P. Adorian, FCGI, MIEE, MBritIRE** (the chairman), presiding.

The following is an extract from his circulated address:

Your Directors have been active in diversifying the Group's interests so as to build our increased trading on wider foundations.

Last year we acquired 50 per cent of the Colour Processing Laboratories (St. Albans) Limited and this year we have acquired further shares in this Company increasing our holding to 66⅔ per cent.

The Group's activities may now be summarised under the following headings—Humphries Laboratory Division: Mole-Richardson (England) Limited: Mole-Richardson Granville Studio Division: Mole-Richardson subsidiaries in France, Germany, Italy and Spain: De Lane Lea Processes Limited (and subsidiaries): and Colour Processing Laboratories (St. Albans) Limited.

The Laboratory Division is operated direct by the Company and the remaining operations are operated through the subsidiary companies in which we have interests varying from 66⅔ per cent to 100 per cent.

THE YEAR'S OPERATIONS

With the exception of the two youngest enterprises, the Granville Studio Division of Mole-Richardson (England) Limited, and Colour Processing Laboratories (St. Albans) Limited, which are on the way to becoming profitable, every one of our operations has had a profitable year.

The amount of orders received for cinema release film printing, which is the main business of the Laboratory Division, still shows a decline, but other specialised work, such as non-theatrical films and films for television, has increased. During the year the management introduced various measures to increase the efficiency of the laboratory and this has resulted in improved financial results for the Division. Admittedly, the much overdue increase in our prices has helped to absorb the wage increases and the increased cost of other services.

A CREDITABLE CONTRIBUTION TO THE NATIONAL ECONOMY

Mole-Richardson (England) Limited has had a most active year both in the sale and rental of its manufactured products and, with the co-operation of the continental subsidiary companies, it has been possible to sell or rent lighting and other specialised studio equipment in almost every country in Europe where films are made or television programmes are originated. Indeed it is very rarely that one sees great films today, made either in the UK or on the continent of Europe, where the lighting and many other studio facilities have not been provided by one of the Mole-Richardson companies. Your Company, by the export of its products and know-how, is making a creditable contribution to the national economy.

The availability of the Granville Studio for demonstrating studio equipment to home and foreign buyers is of special value in our sales drive. At the same time, this Studio has provided a useful base for the production of television programmes for this country, the USA and Australia and is also used by various organisations for the production of television commercials.

The demand for the services of De Lane Lea Processes Limited, for the dubbing of film and television programmes and for other high quality sound recording operations, has been sufficient to justify opening a second studio which we hope will bring a contribution to the results of the next financial year.

The Group profit for the year, after tax, attributable to the Company is £147,272 as against £87,838 for the previous year and the Directors recommend a payment of a dividend of 27½ per cent less tax.

It should be borne in mind that remittances of profits of some of our foreign subsidiaries are still subject to currency restriction.

The report and accounts were adopted.

APPOINTMENTS

TRADES UNION CONGRESS

Vacancies for Departmental Assistants. Duties include preparation of memoranda, reports, and some lecturing. Applicants should be adaptable, interested in trade union affairs, and have education and/or experience suited to work involving any one of the following: economics, production, education, health and safety, trade union organisation. Commencing salary up to £1,075 according to age. Application forms obtainable from the General Secretary, Trades Union Congress, 23/28 Great Russell Street, W.C.1, to be returned by October 20.

NIGERIAN INSTITUTE OF SOCIAL AND ECONOMIC RESEARCH

UNIVERSITY COLLEGE, IBADAN, NIGERIA.

Applications are invited for:
(a) Senior Research Fellowship in Economics.
(b) Research Assistantship. Duties include keeping field data and research material, compilation of reference bibliographies, and building up information on unpublished sources and general assistance in research projects. Ability to type and knowledge of French desirable.
Appointments on contract for three years. Salary scales: (a) £2,275 x £75—£2,575 p.a. (b) £950 x £50—£1,100 p.a., over 28 years, £1,050 x £50—£1,150 p.a.). Entry according to experience and qualifications. Passages for appointee, wife and up to five children under 11 years, on appointment, overseas leave and termination. Children's, car and outfit allowances. F.S.S.U. Part-furnished accommodation at rent not exceeding 7 per cent. of salary. Detailed applications (6 copies) naming three referees by November 10, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

BALLIOL COLLEGE, OXFORD

Fellowship in Management Studies. The College proposes, if a suitable candidate presents himself, to elect to a Fellowship in Management Studies to be taken up in January, 1962 (or such later date as may be arranged). The Fellowship will be a Research Fellowship, according to qualifications and experience. Candidates should hold a high Honours degree and experience in industry or commerce, while not essential, will be an advantage.
Applications should be send by October 31, 1961, to the College Secretary, Balliol College, Oxford, from whom further particulars as to duties, tenure and emoluments can be obtained.

LANCASHIRE COUNTY COUNCIL

RESEARCH ASSISTANT required in the Planning Department at Preston. Commencing and maximum salary according to qualifications and experience within range £645—£1,310 per annum.
Applicants should possess a good honours degree in economics, geography, sociology or related subjects and should be interested in problems of industry, population and housing.
Applications, giving age, qualifications, present appointment, experience and two referees, to the County Planning Officer (J), East Cliff County Offices, Preston, by October 17, 1961.

UNIVERSITY OF WESTERN AUSTRALIA

SENIOR LECTURESHIP IN ECONOMICS

Applications are invited for appointment to the above-named position in the Faculty of Economics and Commerce. Preference will be given to applicants with interest and experience in fields of Economic Theory, Public Finance or History of Economic Thought and Nineteenth Century Economic History.
The salary range for the position is £A2,450/100/2,950 per annum with superannuation similar to F.S.S.U.
The appointee will be required to take up duty as early as possible in 1962.
It is important that intending applicants obtain details of the procedure to be followed in applying for the post and a copy of the Conditions of Appointment before submitting their applications. This information is available from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.
Applications close, in Australia and London, on November 25, 1961.

GOVERNMENT OF TANGANYIKA

An Economist/Statistician is required in the Tanganyika Treasury. Candidates, who must be under 40, should possess a good Honours Degree in Economics. Some knowledge is desirable of statistical methods, and of experience of work in government or a commercial economic or statistical organisation or post-graduate research in economic analyses. Duties will consist of the analysis and interpretation of economic trends, and economic research.
Appointment on contract for one tour of 21-27 months in first instance. Inclusive salary, depending on experience, in scale £1,221-£1,448. Contract gratuity 25 per cent of total substantive emoluments. Local Income Tax. Free passages. Generous home leave and education allowances. Free medical attention.
Apply, in first instance with summary of personal particulars, to Director of Recruitment, Department of Technical Co-operation, Carlton House Terrace, London, S.W.1, from whom further details may be obtained. Please quote reference number RC 206/145/03/A3 and state full name.

RESEARCH FOR GRANADA

Would you like to work on Granada's current affairs programmes, like PEOPLE AND PLACES, WHAT THE PAPERS SAY and ALL OUR YESTERDAYS, and on social and political subjects, like INSANITY OR ILLNESS, THE PILL and SHADOW OF IGNORANCE? Are you ready to work odd hours and do unusual jobs? Have you experience that qualifies you for this kind of work? If so, write giving a brief biography to

Norman Price,
Granada TV,
Television House,
Manchester, 3.

Vacancies for

STATISTICIANS (2)

in the Central Statistics Office, Dublin. Salary Scales: (A) women and unmarried men £780 x £32—£1,100 x £39—£1,425 and (B) married men £780 x £45—£1,645. Entry point on salary scale will depend on qualifications and experience. Special increment after 6 years' service; up to £156 on scale A and £180 on scale B, subject to certain conditions. Maximum age limit 35 years. Essential: (i) First or Second Class Honours Degree (or equivalent) in Mathematics or Mathematical Physics or Mathematical Statistics; or (ii) First or Second Class Honours Degree (or equivalent) in Economics with aptitude for Mathematics; or (iii) First or Second Class Honours Degree (or equivalent) with aptitude for Mathematics and adequate experience in practical statistical work.
Note: A person awaiting entering of his degree will be admitted provisionally.
Application forms, etc., from Secretary, Civil Service Commission, 45, Upper O'Connell Street, Dublin, 1. Latest time for receiving completed application forms, 5 p.m. on October 24, 1961.

THE NATIONAL INSTITUTE OF ECONOMIC AND SOCIAL RESEARCH

has a vacancy for Research Officer (salary scale £1,050 x £50—£1,700, with F.S.S.U. and family allowances). Appointment for two or three years, open to renewal thereafter, to join team studying long term prospects of British economy. Appointment to begin not later than January, 1962. Good degree in economics essential, preferably with statistics. Previous research experience desirable. Applications by October 31, with curriculum vitae, to the Secretary, NIESR, 2 Dean Trench Street, Smith Square, London, S.W.1.

For further appointments and other classified advertisements see pages 89 and 90

THE AUSTRALIAN NATIONAL UNIVERSITY

Research Scholarships

Applications are invited for scholarships in Anthropology and Sociology (including Oceanic Linguistics), Demography (including social and cultural aspects), Economics (including Economic History and Economic Statistics), Geography (most branches but not at present with any emphasis on soil geography and climatology), Modern History (particularly in the fields of Australia and the British Commonwealth), Far Eastern History (China and Japan)*, International Relations, Law, Pacific History, Political Science (including public administration), Philosophy (including, as well as the traditional branches of philosophy, social and political philosophy, the philosophy of education, the logic of the natural and social sciences and of history, the history of ideas), and Statistics (including Mathematical Statistics).
Applicants should be post-graduate students with capacity for research. Scholars will normally enrol for a Ph.D degree, the course for which extends over three years. A scholarship is initially awarded for two years but will normally be extended for the whole period of the approved course.
The basic scholarship allowance is £A950 per annum. Married scholars with children receive additional allowances for dependants. A grant will normally be made towards travel costs.
Application forms and further particulars are available from the University or from the Secretary, The Association of Universities of the British Commonwealth, Marlborough House, Pall Mall, London, S.W.1. Applications should reach the University by April 30 or October 31 in any year, although special consideration may be given to applications at other times. Scholarships may be taken up at any time after award, subject to agreement of the Head of Department concerned.
D. K. R. HODGKIN,
Registrar.
Institute of Advanced Studies.
Box 4, G.P.O.,
CANBERRA, A.C.T., AUSTRALIA.
*A substantial knowledge of the relevant language is a pre-requisite.

COMPANY AFFAIRS

Glaxo

THE 10s. ordinary shares of Glaxo have taken a hard knock since last April's disappointing interim statement and they had fallen from a peak of 73s. 9d. to 52s. 4½d. before this week's final figures for the year to June 30th. At the half-year Glaxo's sales had risen by 3 per cent in value and even more in volume but narrower profit margins had brought a 4 per cent fall in trading profits and an 8 per cent fall in net profits compared with the same period in 1959-60. Shareholders were told that competition was particularly keen in overseas markets, which account for about 60 per cent of the group's turnover and they were warned that the severe competition was likely to continue. The full year's results, however, do not make such gloomy reading as had been expected, though the acquisition of Evans Medical makes an accurate comparison difficult. Group net profits for the year fell slightly from £3,760,000 to £3,718,000, but the contribution of Evans Medical amounted to £258,000 and after deducting this sum together with previous year's profits and outside interests a truer comparison is between a profit of £3,226,000 in 1960-61 and £3,496,000 in 1959-60. This is a fall of about 8 per cent which is in line with that reported in April.

As forecast when the offer for Evans Medical was made, the ordinary dividend is to be 15 per cent against the equivalent of 14.4 per cent with the final 9 per cent paid on the shares issued to shareholders of Evans Medical. Earnings including a year's contribution from the new acquisition amount to 48 per cent and still cover the dividend over three times. In the absence of full turnover figures it certainly seems that Glaxo has at least been able to check any further squeezing in margins notwithstanding the continuing fierce competition in the pharmaceutical industry. The shares at 56s. 9d. now yield a modest 2.6 per cent but the earnings yield is 9¼ per cent.

Calico Printers Association

IN the year to June 30th last Calico Printers' Association received £2.2 million from its royalty income on "Terylene" and other patents and this exceeded for the first time the group's gross profit of £1,948,000 from its normal trading interests. It is therefore vitally important for CPA shareholders to know how much the company can expect to receive from these royalties in the next few years. The British patents expire in July 1963 but foreign royalties are expected to continue at their present levels until 1966. For the six months to December 31st last about 70 per cent of all royalty income came from these foreign patents but for the whole year the British contribution was relatively higher, so that foreign patents contributed slightly over 60 per cent of the total income. On this basis of contributions about two-fifths of foreign income would cease after 1966, one fifth after each of the next two years and the remaining one-fifth would continue until 1968-69. In making these forecasts Mr Roger M. Lee, the chairman of CPA, points out that it is impossible to foresee how the income from individual sub-licensees may change while the foreign patents remain in force.

Normal trading profits held up quite well last year and the fall in profits before tax from £2,270,000 to £1,948,000 was largely accounted for by the continuing losses of the United Turkey Red Company. In commission printing sales declined, particularly to the home trade, hit by two poor summers, while the merchanting side of the business has been reorganised and streamlined. The difficulties of CPA have been increased by large imports of printed cottons which the chairman believes "amount to little more than dumping" and which may soon reach a level where they will offset the printing capacity eliminated by the industry's reorganisation scheme. The 5s. shares at 12s. 3d. yield almost 9 per cent on the ordinary dividend of 21¼ per cent. After a higher interim dividend the final payment was effectively maintained at the 1959-60 level in deference to the appeal by the Chancellor of the Exchequer for dividend restraint. This restricted payment is covered about 3½ times by total earnings and about 1½ times by earnings solely from normal trading.

Electric and Musical Industries

THURSDAY'S gloom over the interim results from ICI was lightened somewhat by the full year's results from Electric and Musical Industries. The discouraging news from so many other companies in the television and domestic appliance fields had led many investors to fear some fall in profits despite the continued buoyancy of the gramophone records business. It was no doubt this buoyancy that contributed most to the substantial rise in group sales in the year to June 30th, 1961, from £68.7 million to £82.4 million. But as the chairman, Sir Joseph Lockwood, warned shareholders last December, costs were continuing to rise and profit margins on sales have fallen from 10.1 to 9.5 per cent. The upshot is to leave the group trading profit £905,000 higher at £7,836,000. After higher charges for depreciation and interest, profits before tax rose by only 4 per cent from £5,221,000 to £5,448,000.

These are the first results from the group since the Morphy-Richards and Ardente acquisitions in September of last year, but these companies accounted for only £278,000 of profits before tax. This works out to an annual rate of about £370,000 and with Ardente believed to be earning pre-tax profits at an annual rate of about £100,000 it suggests that Morphy-Richards' profits were no more than £270,000 against £1,200,000 in 1959-60. Clearly Morphy-Richards has been hit heavily by the impact of credit restrictions, even though the company makes a number of smaller appliances. But it was not only in this country that the group suffered from government restrictions for in Australia too EMI's subsidiary showed a sharp fall in profits.

The dividend as expected has been maintained at 17½ per cent on the larger capital, but with earnings per share down from 39.1 to 33.8 per cent the cover for the payment has been cut to 1.9 times. Shareholders will no doubt wonder how soon the Morphy-Richards business, which was not acquired cheaply, can be put back on a really profitable basis. The directors say that heavy expenditure was incurred last year in the integration of the Gramophone Company's domestic appliance business with that of Morphy-Richards; the worldwide EMI sales organisation should improve the sales of Morphy-Richards appliances in overseas markets. But this may take some time, and the 10s. shares at 37s. 6d. stand some 28 per cent below their peak for this year. They now yield 4.7 per cent.

Astley Industrial Trust

THE sharp fall in profits from Astley Industrial Trust came as no surprise, following the sorry story hire purchase houses have told in the past year. In March shareholders were warned that bad debts were heavier than normal and that this combined with high interest charges had had an adverse affect on trading results in the first half of the year. Notwithstanding the interim dividend was maintained at 6 per cent. It is not clear whether lower interest rates in the second half of the year brought any improvement in earnings but profits before tax for the full year to June 30th fell from £710,000 to £370,000 and net profits from £330,000 to £207,000. Earnings, which included a full year's contribution from Rootes Acceptances, are down from 24.4 to 13.7 per cent, which just covers the ordinary dividend; with a final payment of 7 per cent this totals 13 per cent, against 16 per cent for 1959-60.

It is to be hoped that in the full accounts the chairman, Sir Stanley Bell, will tell shareholders how much of the fall in profits was due to bad debts. But the group's confidence in the future seems undiminished, as evidenced by further acquisitions of businesses in Ireland and the west country. Before these results the 5s. shares, of which District Bank has a substantial holding, stood at their low points for the year, but the shares now stand 1s. above this at 16s. 6d. to yield 4 per cent.

Plessey

THE formal offers from Plessey for Automatic Telephone and Electric and Ericsson Telephones also embody an advance preliminary profits statement from Plessey for the year to June 30th last. Unaudited figures show profits at £4,100,000 compared with £4,190,000 for the previous year. The fall in actual trading profits has been cushioned by a sharp increase of £634,000 in investment income. As expected, Garrard Manufacturing in its first year as a member of the group contributed a small loss and the major fall in profits came from that side of the business supplying the television and domestic appliance markets. This is believed to account for about one quarter of the group's total turnover, but better profits were recorded by other parts of the business serving among others the motor, aircraft and electronics industries. Plessey is also a substantial supplier of telephone equipment and telecommunications equipment, as are Ericsson and ATE, and the merger should enable large economies to be made both in manufacturing and research.

For the current year the Plessey directors expect that profits should be "as good as those" for 1960-61 and have already forecast a dividend of 15 per cent on the capital to be increased by the acquisitions. The ordinary capital has already been increased by last month's one-for-three scrip issue and the forecast payment compares with an equivalent dividend of 12¾ per cent for 1961, which looks to be covered 1.8 times. But working from the latest figures it seems that the forecast payment would be covered about 1½ times, indicating some dilution of earnings as a result of the merger. Plessey will find no difficulty in meeting the cash portion of the merger scheme amounting to nearly £2 million, for at June 30th last its holdings of cash and investments amounted to £16½ million, boosted by the £9½ million proceeds of last year's rights issue. Clearly the group is well placed to meet further expansion; the 10s. shares at 40s. 3d. now ex the scrip issue yield just under 3.7 per cent on the forecast payment.

Rio Tinto

THE complexity of Rio Tinto's mining interests in Canada is not entirely of its directors' choosing since tax and commercial considerations play an important rôle in determining the group's structure. However, a series of deals designed primarily to avoid a possible conflict of interests between Rio Tinto Mining Company of Canada and Rio Algom Mines also forms another step in the simplification of the group's holdings. At the beginning of 1960, Tinto Holdings, a wholly-owned subsidiary of the London company, held 54 per cent of RTMC's equity, but this was enlarged to 84 per cent by the purchase of a large block of shares from a former associate. The group's beneficial interest in Rio Algom through RTMC and Preston Mines then amounted to 40 per cent. RTMC has been diversifying its projects and Rio Algom, into which Rio Tinto's uranium interests in Canada were transferred following last year's reorganisation, will clearly need to follow suit.

Under the proposed scheme, Rio Algom will buy for about $7.1 million RTMC's technical and administrative machine, its exploration and development projects and other assets, including investments in Africa valued at about $1.6 million. (Within the next year these can be sold back to Tinto Holdings at cost.) For the next 15 years, the Rio Tinto organisation will refer to Rio Algom all business openings in Canada that come to its knowledge. In return, Tinto Holdings will get an option on 500,000 unissued shares in Rio Algom at the price current when the agreement was being negotiated. The Canadian field has therefore been left clear for Rio Algom, and Tinto Holdings will receive a sizeable cash distribution as well as shares in Rio Algom and Preston Mines when "a substantial part" of RTMC's assets are distributed to shareholders. The cash will help to finance an offer for between 750,000 and 1,250,000 shares in Preston Mines at $7.20 a share which will require from $5½ million to $9 million. When these transactions have been completed, it is intended that Tinto Holdings will hold about half of Rio Algom's equity, in keeping with Rio Tinto's policy of sharing its projects with local investors.

Capital and Counties

THE main interest in the full report from Capital and Counties Property is the terms of the proposed loan of £18.3 million by Norwich Union and Prudential Assurance. The insurance companies will have the right to convert 20 per cent of the loan into equities so as to give a 6 per cent yield. At present Capital and Counties 5s. shares stand at 43s. 6d. to yield only 1.8 per cent, but Mr Leslie Marler expects income to rise to such a level that the conversion on the proposed basis would result in shares being issued at above the market price. The loan is being used to finance the big Knightsbridge Green development and the option will be exercisable for three years after the completion of the project or four years after the first issue of the debenture stock.

On this forecast the dividend would have to be trebled to show a six per cent yield on the current price, but Mr Marler says that the present earnings estimate may well turn out to be conservative. Thus shareholders should be able to look for a dividend of at least 50 per cent in what is likely to be another 6 or 7 years. On this assumption the insurance companies together would receive about a 15 per cent stake in Capital and Counties equity assuming the maximum amount of £18.3 million of the debenture was taken up. Norwich Union already has an 8 per cent interest in the Capital and Counties equity.

London Stock Exchange

FIRST DEALINGS:	Sept. 18	Oct. 2	Oct. 16
LAST DEALINGS:	Sept. 29	Oct. 13	Oct. 27
ACCOUNT DAY:	Oct. 10	Oct. 24	Nov. 7

OVER the past week to Wednesday equity prices drifted lower until on Tuesday the *Financial Times* index reached its lowest level for two years. As the account drew to a close before last weekend investment interest was small and the jobbers' reluctance to accept stock accentuated the fall in prices. The ICI results were slightly better than expected although profit margins were still clearly narrowing but they were not good enough to encourage the market; the news on Friday of a big fall in bank advances, together with bear and end account selling, combined to depress equities. The new account on Monday brought no improvement and the absence of buying interest continued; on Tuesday however there was much less stock on offer and the fall in prices was almost stemmed. By Wednesday favourable interpretations of the latest gold and convertible currency reserve figures helped to turn the tide of recent falls, but *The Economist* indicator lost 4.7 points over the week to 350.8, the lowest point since November, 1959. But a sharp rise in equity prices followed the anouncement of the reduction in Bank rate on Thursday.

Throughout the week the firmest section of the gilt-edged market has been in short dated stocks although medium dated stocks were in demand on Friday and again on Tuesday. Among the shorts, Conversion 4½ per cent 1962 gained $\frac{3}{32}$ to 99½; the outstanding rise was in the scarce 2½ per cent Savings Bond 1964-7, which gained $1\frac{5}{16}$ to $82\frac{13}{16}$ xd. Many of the gains had clearly been on expectations of an early cut in Bank Rate and this was confirmed by Thursday's reduction from 7 to 6½ per cent.

Insurance shares gained this week, with Commercial Union 4s. 3d. higher at 65s. 3d. Bank shares showed small gains but hire purchase house shares were generally slightly down. Breweries remained steady but building shares closed lower, London Brick losing 1s. 3d. to 87s. 9d. Chemical share prices fell after the news of ICI's smaller margins and several stores shares lost small amounts including Marks and Spencer, 9d. down at 101s. 3d. though Debenhams were in demand following the rights issue.

Among electrical shares AEI fell on the dividend warning, but EMI rose by 9d. to 36s. 6d. Engineering shares fell back by small amounts and similar losses were evident in steel shares; Steel of Wales was an exception and late gains pushed the price up 4½d. to 34s. 3d. Press comment was partly responsible for a drop of 1s. in the price of Bowater Paper to 44s. 6d. but Unilever gained 5s. to 143s. on the news of the stock split. Motor shares were dull and ACV lost 4s. 3d. to 68s. 1½d. Textiles were also dull but oils made small gains and after early falls Kaffirs became firmer: Anglo American rose by 7½d. to 122s. 6d. and F. S. Geduld by 1s. 10½d. to 83s. 9d.

THE MONEY MARKET

THE reduction in Bank rate to 6½ per cent on Thursday surprised the money market; a reduction was certainly expected but not quite so soon. The minimum rate on call loans from the clearing banks was reduced by ½ per cent to 4⅞ per cent, and deposit rates at the clearing banks and discount houses were also cut by ½ per cent, to 4½ per cent and 4½–¾ per cent respectively.

At the bill tender on the Friday six days before the Bank rate cut the syndicate of discount houses actually lowered its agreed bid by 3d. to £98 7s. 2d. following rises totalling 11d. in the previous three weeks. Outside offers were maintained around the previous week's level and the average rate of discount rose by only 5.97d. to £6 11s. 0.48d. per cent. Total applications rose sharply by £65 million to £448 million and the market secured only 39 per cent of its application.

Credit became progressively tighter last week after an easy day on Thursday. Conditions continued difficult on Monday and Tuesday, and on both days the authorities supplied fairly large amounts of assistance, but on Monday two or three houses were also forced to borrow a very small sum from the Bank of England.

APPOINTMENTS

AGRICULTURAL ECONOMISTS

THE UNITED NATIONS

has two vacancies in the Secretariat of the United Nations Economic Commission for Africa, in Addis Ababa, Ethiopia, to plan, conduct and direct investigations into the problems and progress of agricultural development with special reference to African countries, and to formulate agricultural development projects.

Qualifications desired are advanced university education in economics or agricultural economics; substantial experience at governmental or inter-governmental level in handling practical economical problems in the agricultural sector, preferably in those of less developed countries; and excellent knowledge of English or French (working knowledge of the other desirable), with demonstrated ability in drafting reports.

One vacancy is at the First Officer level with a salary range of US $7,300-US $9,500 net, free of tax, per annum, while the other is at the Senior Officer level with a salary range of US $8,750-US $11,000. In addition, there is a cost of living allowance of $2,375 for the First Officer and $2,500 for the Senior Officer posts, net, for persons with dependants (somewhat less for single) plus dependency allowances and benefits.

In accordance with the principles of the United Nations Charter, recruitment of staff for the Secretariat is made on as wide a geographical basis as possible. Accordingly, in recruitment for the above vacancies preference shall be given to nationals of Member States which have at present disproportionately few or no nationals on the staff.

Applications should be sent to the Personnel Officer, Economic Commission for Africa, P.O. Box 3001, Addis Ababa.

MINISTRY OF AGRICULTURE, FISHERIES AND FOOD: MARKETING OFFICERS Pensionable posts for men as follows:
(a) Two Grade III posts for work involving investigations covering all aspects of horticultural marketing. Age at least 25 on October 1, 1961. Qualifications: normally, degree in Horticulture or a related subject, or N.D.H., or equivalent; exceptionally, extensive practical experience considered in lieu. National salary scale £1,004-£1,570. Starting salary may be above minimum.
(b) Three Grade B posts for work on fruit and vegetable market surveys, and inspections under the Grade Assessment Service. Age at least 20½ on October 1, 1961. Sound general education and practical experience of horticultural marketing essential; knowledge of the wholesale trade is particularly important. National starting salary £536 (at 20) to £785 (at 26 or over); scale maximum £978. Salary scales under review.
Car driving essential for all posts. Promotion prospects.—Write Civil Service Commission, 6 Burlington Gardens, London, W.1, for application form quoting S393/61. Closing date October 30, 1961. AT8246/DM

SURREY EDUCATION COMMITTEE

KINGSTON TECHNICAL COLLEGE, FASSETT ROAD, KINGSTON-UPON-THAMES

Required 1st January, 1962:
(1) Assistant Lecturer in Accountancy; should be qualified Accountant with special interest in Costing.
(2) Assistant Lecturer in Government; with honours degree in Economics in which specialised in Government.
Salary: Burnham Technical Scale Grade B, £700 x £27 10s. (15) and £37 10s.—£1,150, allowances for degree, training and experience. London Allowance payable.
S.A.E. to Principal for further particulars and application forms.

THE British Employers' Confederation has a vacancy for a graduate, preferably in Economics, aged about 30, with practical knowledge of wages systems, to assist in its Wages and Conditions Information Service. Salary £1,200.—Applications to Secretary, British Employers' Confederation, 36, Smith Square, Westminster, London, S.W.1.

MARKET RESEARCH

S. H. Benson has a vacancy for a Senior Market Research Executive. The executive sought will be responsible for the organisation and interpretation of field studies on a major national account, involving a considerable amount of contact with psychologists, sociologists and executives of the agency and the client.

The successful candidate will probably be about 30 with at least five years' experience in market research. He will be widely experienced in all the conventional research techniques, but will also be keen to learn about new advances in motivation and operational research, and to help develop their application in solving practical marketing and advertising problems. He can count on finding congenial working conditions, and a remuneration in line with the very high standards demanded.

The position will be pensionable. Please write giving age and details of experience to date, to The Staff Manager, S. H. Benson Ltd., 129 Kingsway, W.C.2.

MSL *have been retained to advise on this appointment.*

MARKETING MANAGER

Advertising Agency

for a medium size West End agency handling a small number of large accounts mainly in the grocery and allied fields. The Marketing Manager will control a highly qualified staff which includes four marketing assistants all of whom are graduates.

Candidates should be in their mid 30's and possess a first or second class honours degree in arts or science. They must have a thorough knowledge of and experience in consumer, product and marketing techniques acquired on the agency or client side. Previous experience with a consumer research organisation would also be useful. The position requires a man of exceptional calibre who will already be earning not less than £4,000. Please send brief details in confidence quoting reference S. 3721 to P. J. H. Fryer.

In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED,
17 Stratton Street, London, W.1

INTERNATIONAL MARKET RESEARCH
and
MARKETING MANAGEMENT

London office of international (American-British-Swiss) marketing management consultants invites applications for the following positions:
(a) SENIOR CONSULTANTS with substantial experience in industrial marketing research and/or management;
(b) RESEARCH ASSISTANTS with suitable background for being trained in required techniques.
Work principally consists in conducting market research (mainly industrial) on international scale and in advising management on marketing techniques and problems, both domestic and foreign.
Appointments will be London-based but extensive travel abroad required. Fluent languages a definite advantage but not essential for all posts. Initial salaries will depend on qualifications, experience and on technical and linguistic qualifications. Incentive bonus scheme for established senior personnel.
Interviews in London, New York or Geneva. Applications, which will be treated in absolute confidence but which must include full CURRICULUM VITAE, career details and salary range, should be addressed to:—
Stewart, Dougall and Riley Limited.
40 Chancery Lane, London, W.C.2.

BUILDING RESEARCH STATION (D.S.I.R.) Garston, Watford, Herts., requires Scientific Officer/Senior Scientific Officer, Mathematician, Statistician or Physicist for Operational Research into building processes. Successful candidate will join team of Architects, Engineers, Scientists and Economists engaged on research to improve effectiveness and economy of planning, design and construction of buildings, with opportunities for development and publication of new research techniques.
Qualifications: 1st or 2nd Class Hons. degree in Maths or Physics. For S.S.O. at least three years' post graduate experience and minimum age 26.
Interim Salary ranges: S.O. £717—£1,222. S.S.O. £1,302—£1,654.
Career prospects to P.S.O., salary range to £2,418. Application forms from Director, above address, quoting 28 X.W. Closing date, October 30, 1961.

For other appointments see page 83 and 90

BX PLASTICS LIMITED

HEAD OF TECHNICAL WRITING SECTION. An interesting opportunity exists for a graduate who has experience in writing technical publications. He will need to be intelligent and clear thinking with a good understanding of scientific matters. It would be an advantage if he had some experience of publication work and proof correction. He must be able to get on well with other Technical and Sales Staff with whom he will have to co-operate, and he must have a flair for clear expression. For the right man this may lead to a more senior position once he has proved himself. The appointment will be based at the Research Station, which is situated in pleasant countryside on the Essex/Suffolk borders, within easy reach of the residential areas of Ipswich, Clacton, and Colchester.—Write, giving full particulars and present salary, to Research Director, BX Plastics Limited, Lawford Place Research Station, Manningtree, Essex.

SCHOOL OF ORIENTAL AND AFRICAN STUDIES

UNIVERSITY OF LONDON, W.C.1
Applications are invited for a RESEARCH FELLOWSHIP in Economics. The Candidate appointed will be required to carry out individual research with an existing research group of historians and economists relating to some aspect of the economics of South Asia (India and Pakistan). Specialised knowledge of the area is not required, but candidates must be graduates with high honours in economics who have conducted research in their own field and are prepared to develop a long-term interest in the economics of South Asia. Language or other training will be provided as necessary and the holder of the Fellowship must be prepared to undertake field work in the area of his specialisation. The appointment will be initially for three years, with the possibility of extension or of transfer to a permanent post at the School. Salary will be fixed within the range £1,000-£1,500 according to qualifications and experience, with entitlement to membership of the FSSU.
Applications, stating age, qualifications, experience and the names of three referees, should reach the Secretary of the School by October 21, 1961.

STAFF WRITER

Texaco Trinidad, Inc.

require a Staff Writer for their Public Relations Department in Trinidad, West Indies. The man or woman appointed will be responsible for writing, from factual information supplied, articles on technical and non-technical topics for use in Company publications such as the quarterly magazine, public relations handbooks, etc., and will also be required to act for the editors of the two regular publications in their absence.

Candidates should be experienced in building a miscellaneous assortment of facts into a readable composition in good English, and will probably have spent some years in writing for Institutional magazines or industrial House organs. Experience in magazine layout and printing will be an advantage.

Starting salary about £1,500 p.a.

Conditions of service and amenities are those normally expected of a major oil company overseas, including regular paid home leave.

Apply with brief particulars to:

The Personnel Officer, TRINOIL (U.K.) LIMITED, 29/30 Old Burlington Street, London, W.1.

MANCHESTER COLLEGE OF TECHNOLOGY, COVENTRY

(Principal: A. J. Richmond, B.Sc. (Eng.), Ph.D., M.I.Mech.E.)

Applications invited for following post, duties to commence January 1, 1962.

DEPARTMENT OF MANAGEMENT AND BUSINESS STUDIES

(Head of Department: W. F. Frank, Dr. jur., M.Sc. (Econ.), B. Com., LL.B., *M.B.I.M.*)

Lecturer in Commerce.—Candidates should be chartered or incorporated secretaries and preferably also university graduates. The successful candidate will be *expected to* teach *Secretarial Practice*, Company Law and other elementary law subjects *and* English for Secretaries and Bankers.

The *Department is housed* in new buildings occupied in 1960. Equipment and general facilities *in* the new buildings are excellent and a real opportunity exists for the staff to participate in the many further educational developments which are projected in close and growing co-operation with industry. An outstanding feature of all Departments are many well-supported post-graduate courses of lectures. All staff are encouraged to undertake research and/or consulting work.

Salary: £1,370 x £35 (4) x £40 (1)—£1,550 *p.a.* In certain circumstances candidate may be paid commencing *salary* above minimum of *scale.*

Further particulars and application forms from the Registrar, Lanchester College of Technology, Priory Street, Coventry, to whom applications should be submitted by October 16, 1961.

W. L. CHINN,
Director of Education.

For other appointments see pages 83 and 89

CO-OPERATIVE COLLEGE, Stanford Hall, Loughborough, Leics.—TUTOR required to *teach* within range of Economics, Social Economics and Economics of Business Organisation. Salary based on Burnham Further Education Scale for Assistants, Grade B, i.e., £790 to £1,240, with additions as appropriate. Accommodation may be available. Full details, including an application form which should be returned by October 25, 1961, obtainable from the Principal.

Large Publishing Group seeks a Specialist Consultant with high qualifications, full or part-time, on problems of international food production and marketing.

Box 1546.

GOVERNMENT OF TANGANYIKA

Two Statisticians are required in the Tanganyika Treasury. Candidates should have at least a Second Class Honours degree in Economics with Statistics as special *subject.* Duties will be to collect, analyse and interpret applied economic statistics, to conduct statistical *field* surveys and to assist in preparation of national accounts.

Appointment on contract for one tour of 21-27 *months* in first instance. Inclusive salary scale £1,221—£2,448, point of entry determined by experience. Gratuity of 25 *per* cent of total salary. Income tax at local rates. Free passages. Generous home leave and *education* allowances. Free medical attention.

A GALLON OF OIL couldn't smooth some troubled waters. But just try a glass or two of EL CID Sherry. That's the wonderful warm-hearted Amontillado that soothes the most ruffled.

YOUR DAUGHTER would enjoy finding her job through STELLA FISHER BUREAU in the STRAND.

THE LINCOLN GALLERY, 8, Sloane Street, Knightsbridge, S.W.1. BELgravia 6639. Sept. 25th to Oct. 21st "Art and energy"—*a Schettini* retrospective.

ANNOUNCEMENT

STATEMENT REQUIRED BY THE ACT OF AUGUST 24, 1912, AS AMENDED BY *THE ACTS OF MARCH 3,* 1933, JULY 2, 1946 AND JUNE 11, 1960 (74 STAT. 208) SHOWING THE OWNERSHIP, MANAGEMENT, AND CIRCULATION OF The Economist, published weekly at New York, N.Y., for October 1, 1961.

1. The names and addresses of the *publisher,* editor, managing editor and business manager:

Publisher, Sir Geoffrey Crowther, 22 Ryder Street, St. James's, London, S.W.1, England.

Editor, *Donald Tyerman,* 22 Ryder Street, St. James's, London, S.W.1, England.

Business Managers, Gerald Andrews and Peter Dallas Smith, 22 Ryder Street, St. James's, London, S.W.1, England.

2. The owner is:

The Economist Newspaper *Limited,* 22 Ryder Street, St. James's, London, S.W.1, England.

3. The known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: Financial News Ltd., 10 Cannon Street, E.C.4; L. J. Cadbury, The Davids, Northfield, *Birmingham;* D. E. W. Gibb, Hayes Barton, Gerrards Cross, Buckinghamshire; L. Gregg, Oakdene, *Parkfield* Road, Altrincham, Cheshire; E. R. A. de Rothschild, New Court, St. Swithin's Lane, E.C.4; The Executors of the late Lord Simon's Estate, Cheadle Heath, Stockport, *Cheshire;* H. Graham White, Mere Cottage, Birkenhead, Cheshire; David Layton, 47 *Hampstead* Way, London, N.W.11; G. C. Layton, Owls Wood, Avon Castle *Drive, Ringwood, Hampshire;* M. J. Layton, 45 Westleigh Avenue, London, S.W.15; C. W. Layton, 40 Elmbank *Gardens,* Barnes, London, S.W.13; H. W. B. Schroder, *145 Leadenhall Street,* London, E.C.3; Sir Geoffrey Crowther, 22 Dover Park Drive, Roehampton, London, S.W.15; B. M. Crowther, *Westfield,* The Marld, Ashtead, Surrey; R. St. *John* Mathews, Bouts *Farm,* Inkberrow, Worcestershire.

4. Paragraphs 2 and 3 include in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the *name* of the person or *corporation* for whom such trustee is acting, also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner.

5. The average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the 12 months preceding the date shown above was 65,366.

P. DALLAS SMITH,
Business Manager.

Sworn to and subscribed before me *this* 25th day of September, 1961.

H. E. MODFORD,
A Commissioner for Oaths.

ROYAL DUTCH PETROLEUM COMPANY

N. M. Rothschild & Sons announce that the Board of Directors and the Managing Directors of the Royal Dutch Petroleum Company have decided to declare an Interim Dividend for the year 1961 of fls. 2.25 per share.

A. ON THE BEARER SHARES

This dividend, amounting *to fls. 112.50 per* bearer *certificate* for 50 shares and fls. 11.25 *per bearer certificate* for five shares, will be payable on and after October 16, 1961, against *surrender of Coupon No.* 124, at the office of N. M. Rothschild & Sons on business days, Saturdays excepted, between the hours of 11 a.m. and 2 p.m.

Payment will be made in sterling at the buying rate of exchange on Amsterdam current at 2 p.m. on October 9, 1961, *in the case of* coupons presented on or before that date, or on the day of presentation in the case of coupons presented subsequently. In view of *the fact that guilder* funds are being provided by the Company for payment of this dividend the usual foreign exchange commission will be deducted from the *sterling* proceeds.

In the case of shareholders not resident within the Scheduled Territories the paying agent may, at the request of the Authorised Depositary presenting the coupons, pay the dividend in a different currency. Information in this respect will be supplied by the paying *agent upon* request.

Coupons must be accompanied by a declaration in triplicate signed by an Authorised Depositary reading:

"We declare under our responsibility that sufficient evidence has been submitted to us that the securities *from which* the coupons enumerated below have been detached:

(a) do not belong to residents of the Netherlands;

(b) are provided with red export certificates issued by the *Nederlandsche* Bank."

From the gross dividend the Netherlands *dividend tax of 15 per cent* is to be deducted except in the case of coupons presented on behalf of

(i) residents in the *United Kingdom, provided they* lodge a Netherlands declaration "Inkomstenbelasting No. 92 V.K." in duplicate;

(ii) residents in the *U.S.A.*, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 V.S." in duplicate together with a single affidavit No. 92a V.S.; however, where form I.B. No. 92 V.S. is signed, in virtue of an authorisation by the Inspector of Taxes at Amsterdam, by the bank presenting the coupons, and the share certificate(s) in question is (are) in the custody of that bank, the production of *form* I.B. *No.* 92a V.S. (affidavit) is unnecessary.

(iii) residents in Sweden, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 ZWE" duly completed by the Swedish tax authorities;

(iv) *residents in Finland, provided* they lodge a Netherlands declaration "Inkomstenbelasting No. 92 FIN" duly completed by the Finnish tax authorities;

(v) *residents in Denmark*, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 DEN" duly completed by the Danish tax authorities; and

(vi) residents in France, in which case either a French declaration model A signed by the shareholder with the certificate on the back duly completed by the appropriate French Inspector of Taxes, or a French declaration model B in duplicate duly completed and signed by an authorised French bank must be provided.

As regards holders resident in France, attention is drawn to the fact that the regulations giving effect to the Franco-Netherlands Tax Convention provide that unless the model A or model B declaration referred to above is lodged when dividends are collected, dividend tax will be deducted and there will be no possibility whatever of reclaiming this tax.

In cases (ii), (iii), (iv), (v) *and* (vi) above the usual affidavit certifying non-residence in the United Kingdom will also be required if payment is to be made without deduction of *United Kingdom income tax.*

Coupons must be left for an appropriate period for examination and must be handed in personally; Coupons cannot be *sent* through *the post.*

Coupons must be listed in triplicate on special forms, *embodying the declaration* referred to above, which can be obtained on application.

B. ON THE REGISTERED SHARES

As to the shares *registered in the* United Kingdom Section of the Amsterdam Register, the following arrangements have been made for the payment of the interim dividend amounting to fls. 2.25 *per registered* share (nominal value fls. 20).

On October 11 the *sterling amount of the* dividend will be fixed on the basis of the *sterling/guilder* rate of exchange current in Amsterdam on that date.

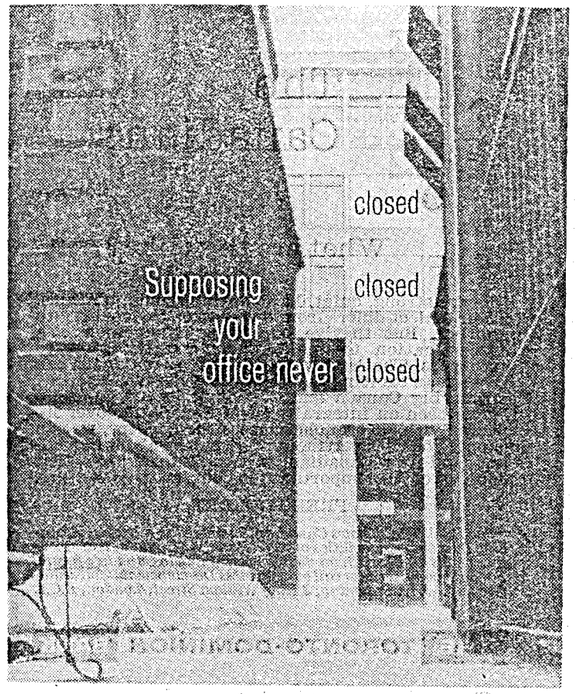
October 19, 1961, will *be the record* date. Shareholders registered at the close of business on that date will be entitled to receive the dividend.

On or before November 14, 1961, dividend *warrants* will be posted by the transfer agent, Nederlandsche Handel-Maatschappij, N.V., to shareholders registered in their books on the record date.

As soon as possible after October 11, 1961, a further announcement will be made giving the rate of exchange, the amount of the dividend in sterling per share, and the amount of the 15 per cent Netherlands dividend tax in sterling per share.

New Court, St. Swithin's Lane, London, E.C.4. October 4, 1961.

SUBSCRIPTIONS TO THE ECONOMIST



Annual Postal Subscription by ordinary mail UK and Canada £4 . 10 ; elsewhere overseas £5

By air see below

Subscriptions to many countries can be sent either by direct second-class airmail *or in* bulk by air freight for onward posting from central *distribution points.* Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative *is either* not available or not recommended.

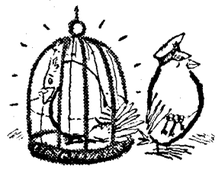
THE GILDED CAGE

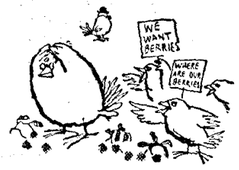
an economic fable

ONCE UPON A TIME there was a wise old bird who laid nest-eggs. People brought him their berries and he took them in his beak and flew off into the forest. There—for he was a wise old bird and knew the forest well—he planted them. And there, in due course, they sent up shoots. The wise old bird tended these shoots carefully. He watched them and watered them. He perched day and night on a neighbouring



branch and was never caught napping. So the berries grew into berry-bushes. Very productive berry-bushes. And when winter arrived the same people came to him—and he gave them back their berries and more besides. And this way there were always berries, winter and summer, for the people who cared to come to the wise old bird. And this was how he laid his nest eggs.

Then the Keeper of the forest came to see the wise old bird. "This can't go on!" he said. "Why not?" said the wise old bird. "I've been doing it for two hundred years and everyone seems quite happy."—"But I'm not happy," said the Keeper. "It's untidy, that's what it is. There you go, planting your berry bushes all over the forest. Never a thought as to where they'll look best."—"I think of where they'll *grow* best," said the wise old bird. The Keeper wasn't listening. "It's just plain selfish," he cried indignantly. "You never think of



trying to keep the forest with everything in balance—every branch with a creeper, every creeper with a branch."—"I go to a lot of trouble to keep it in the best state for growing berry bushes," said the wise old bird. "And that's good for everyone, not just the people who save their berries and bring them to me to plant, instead of eating them at once."

But the Keeper wouldn't listen. He went and got an expensive gilded cage, and put the wise old bird into it. He was still allowed out to plant berry bushes, but only with an Under-Keeper to see that he

planted them in officially approved places. The wise old bird knew that many of these weren't good for growing berry bushes. But there was nothing he could do. And he thought it was unfair to the people who saved their berries and brought them to him that what they saved *should now be used simply for* keeping the forest tidy, instead of for growing lots of berries for winter time. But there was still nothing he could do.

And winter came, and there weren't enough berries to go round. And the people blamed the wise old bird. "Next time," they said, "we won't bother to bring our berries to *him*." And they didn't. They ate them instead.

The Keeper didn't like this, but there was nothing he could do about it. He couldn't watch every mouth in the forest to see if it was munching at the wrong moment or not. And no berry bushes were planted, and the forest suddenly began to look much more untidy than before.

And the winter after that everyone went hungry, including the wise old bird, the Under-Keeper and the Keeper himself.

MORAL:

You can break a lot of nest-eggs and still not make an omelette.

4,000 HOUSEWIVES CAN'T BE WRONG!

The views of 4,000 housewives regarding Grocers and Grocery shops form the subject of the second independent survey commissioned by Alfred Bird & Sons Ltd. and entitled "Mrs. Housewife and Her Grocer".

This survey was originally devised as a service to the Grocery Trade. Such was the interest shown, not only by the Trade but also by the National and Trade press, that the survey is now being made widely available.

In its forty pages, plus charts and tables, it answers such questions as—How does the housewife shop? Who shops where? What does the housewife know about prices, Groups, own name brands, etc? What is the housewife looking for? What does she buy? How does she buy? Why does she buy?

Presented in a clear, easily readable form, each copy costs one guinea and can be obtained from **Alfred Bird & Sons Ltd., P.O. Box 236, Devonshire Works, Birmingham 12.**

Cheshire for cheese...

but 'Yorkshire' for Insurance

All the world knows that it's Cheshire for cheese. For insurance the World and His Wife choose the Yorkshire Insurance Company, which today is rendering a service to communities in all parts of the world, fostering progress . . . establishing confidence. All types of modern insurance are transacted by this old established Company and it will certainly be to your advantage to consult the "Yorkshire" branch office in your area to bring your insurance requirements up-to-date.★

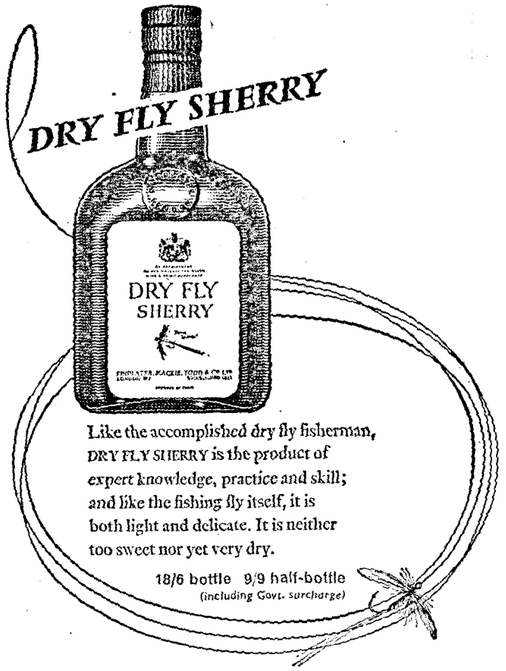
money is

A SOURCE OF INNOCENT MERRIMENT

We can scarcely think of a more agreeable sentiment, but it's also true that money can be the source of more money—which is why people invest and why we're in business.



Investing in the Japanese market is an easy way to put your money to work reproducing itself. To find out where in Japan it will work hardest, you need facts and figures, and that's where Yamaichi comes in.

Besides our regular weekly and monthly publications, industry-wide surveys, and other English-language pamphlets and brochures, Yamaichi puts out a continuing series of Special Reports on leading individual corporations. They give in concise form the major activities, plans, production, sales, and profit records, and other detailed data the wise investor wants to know.

If your money means more to you than innocent merriment, you will do well to consider taking a stake in Japan's booming economy. Yamaichi is waiting to help you.

The Overseas Chemical Division of W.R. Grace & Co. shares its world-wide wealth of Chemical experience with industry in many ways, in many countries. Laboratories, Plants and Sales Offices in eighteen countries are continuously developing, producing and marketing the new products and techniques which are the keys to industrial growth. Grace Chemicals match specific industrial requirements and are customer-tailored to particular production needs with the backing of long experience in the field. Grace is one of the world's foremost Chemical Companies. Its principal products include : films, plastic bags and pouches for the packaging of food products, can sealing compounds, cap lining compounds, battery separators, high density polythene, synthetic rubber and resins, polyvinyl acetate, plasticizers, synthetic catalysts, ammonia, ureas, fertilisers and agricultural chemicals, sulphuric acid, silica gel and other desiccants, nuclear reactor materials, jet engine lubricants, ultra highpurity silicon and other industrial chemicals.

a world of chemistry to serve industry in Britain and Europe

"... changed completely and changed entirely for the better"

LORD LONGFORD, are you an enthusiastic newspaper reader?
Yes, I am. I read six papers a day, including the Daily Herald; quite a chunk out of them, anyway. I think reading newspapers is one of the basic pleasures of life.

You must have noticed the change that has been taking place in the Daily Herald recently. Do you think that, on its present showing, the Herald can fill this role of an influential popular radical newspaper?
I see no reason why it shouldn't. The Herald has made a magnificent improvement in recent months. It's now a paper one can read for pleasure and instruction, and not just for reasons of duty.

Are you happy about the Daily Herald as it is now?
I'm very happy on the whole. I have one or two criticisms, of course. For instance, I think they could say more about world government, which is a great passion of mine; stress it more positively as a vision, I mean. And I think a more deliberately moral tone might be struck at certain points; and that, at other points, the paper could be gayer; more frivolous, even.

Common Market: a bold lead

Is there any aspect of world affairs on which you think the Herald has given a really notable lead in recent times?

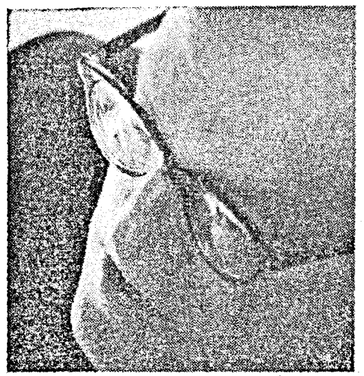
Yes, certainly; on the Common Market. I think that's the best thing the Herald has ever done since I've been reading it. They didn't handle it at all timidly. They went ahead of the Labour Party and the Press generally in coming right out in favour of it. That is assuming the responsibilities of leading public opinion, which a national newspaper simply can't shirk if it wants to be read and admired. They have been shirked by the Daily Herald in the past because it was tied to the Party chariot.

What else do you consider particularly good about the Herald as it is shaping up now?
Well, the leading articles have, it seems to me, changed completely, and changed entirely for the better. The difference is extraordinary, yet I am told the leader writers are the same. Now, one is really anxious to find out, over some very difficult thing like Katanga, what the Herald is saying. I don't say one is going to take one's views from any paper just like that, but I do feel that the views of the Herald are an important element now in any conclusion I reach on a difficult subject. Then Page 3, "The Daily Herald Explains," is so concise and informative I only fear your rivals will copy it. And shouldn't you add something of the same kind to deal with popular culture as distinct from world affairs?

What about the front-page feature "The World This Morning," which is a sort of résumé and guide to the contents? Is that, in your opinion, a good idea?
That's brilliant, it seems to me. That alone makes me look at the Herald before any other paper. And, having got that far, I tend to turn inside to read more. I think that's the most successful development in journalism of the last few months.

You are a man with a good many causes at heart, and the Herald has always been strongly for certain causes; racial tolerance for instance, and the abolition of capital punishment. Would you like to say anything about the Herald from that point of view?
Yes—they have taken up several causes I'm interested in with much more fervour than the Press as a whole. Prison reform, for instance, and the after-care of discharged prisoners. There are others, like mental handicap, which I hope they will get around to immediately. And the stress on education and the Youth Services seems to be very properly increasing.

There are undoubtedly some criticisms you would like to make, or improvements you would like to see in the Herald in its present emerging state?
Well, as a business-man, for instance, I must say that there's not enough in the Herald at present to interest ordinary business people. You must at least print the Stock Exchange prices. That's really a minimum. Then there are some gaps in the sports pages. The soccer is excellent, and the cricket is good within the space allotted. But it's a pity Rugby Union is practically non-existent in the Herald, because it is being played more widely nowadays in schools. And golf . . . if you're going to interest the ordinary businessman who travels first class or second class, you've got to have more about golf.



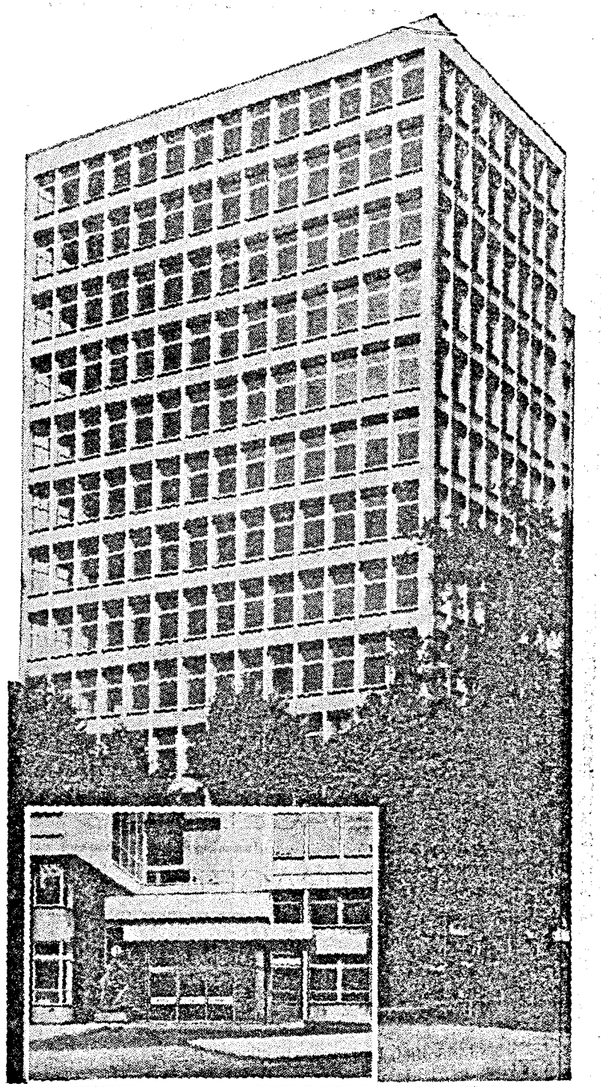
Fun, provocative, daring

What about Henry Fielding, the gossip columnist? Or don't you think a gossip column belongs in a radical paper at all?
Oh, yes, I do. I'm a hundred per cent in favour of some gossip. It mustn't be malicious, and in a paper like the Herald it mustn't be too snobbish, but it must be fun and provocative; a little daring. The Herald can't build up a lot of Dukes and Duchesses, even eccentric ones, so I think, on the whole, you've got to go for glamour in other ways . . . particularly artists; creative performers of all kinds. But I'm sure if you get a really brilliant column there, you will get an awful lot of young readers. You want the sort of touch that Malcolm Muggeridge gives to his "Life and Books"—or Dee Wells to her various experiences.

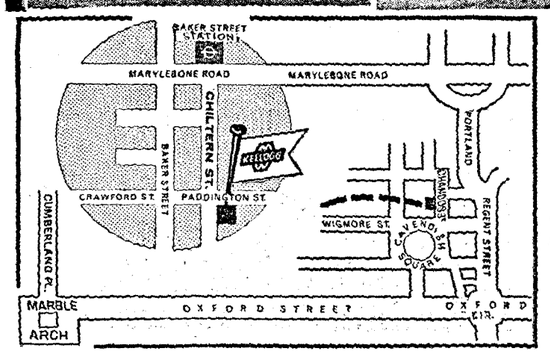
You have probably noticed the new Herald advertising theme: "People whose minds work know the Daily Herald gives it to you straight." Do you think the Herald can justifiably claim to have high standards of objectivity in its reporting of news?
It can fairly claim to be a dispassionate, honest paper. But I think you still have a rather painful step to take; that is, when it comes to reporting Parliament objectively. This is always extremely difficult, because there you are on the borderline between fact and comment, when you may have to say that a Conservative member was well received, while a Labour performer flopped. When the Herald gets to that point, I shall agree that it has really achieved objectivity.

Could we talk now about "people whose minds work"? The aim here is to appeal to the better educated, more critical and thoughtful generation that is growing up now. Do you think the Herald, as it is now taking shape, can, in fact, attract these young people? And do you think it is likely to win readers from other papers, or will they come mainly from the still uncommitted?
A lot will be from the wholly uncommitted. But there will certainly be many radical or Labour sympathisers who will be glad to change to the Daily Herald as soon as they discover that it has become so much brighter and better, and that a radical paper doesn't have to be tedious or dreary.

Do you think you could sum up the nature of the improvement you would still like to see in the Daily Herald?
Yes. What I feel is this. One's favourite paper should be like a personal friend. You may not want your friend to be preaching at you the whole time, but you do want him to have high moral standards; to know that those standards are there. That is why I feel strongly that the Herald should take a much more positive stand on religion. I would like, when I am presenting myself as a Christian, and asking another Christian person to read the Herald, to be able to point to a positive



LORD LONGFORD TALKS ABOUT THE NEW DAILY HERALD



The Seventh Earl of Longford, more widely known as Lord Pakenham, is a former Labour Minister; a leading supporter of many causes, including Prison Reform, and After-care of Prisoners; and now Chairman of one of the Clearing Banks. Here he talks very frankly about the newly emerging Daily Herald.

Christian element; a weekly column, for one thing, and some positive Christian message at Christmas, Easter and so on. At the same time, you mustn't be frightened of plenty of gaiety and smartness. I'm told, for instance, by my wife and daughters that the women's pages don't pay enough attention to fashion. Why shouldn't the Herald be the recognized Top for Hairdressing? Almost all women nowadays are interested in it, and all of them ought to be. One mustn't confuse smartness with snobbery. Female charm is not a question of class, and less and less an affair of money. Gaiety is the reverse side of seriousness, and you must have both.

And now, is there any other point you would like to make? Anything else you think should be said about the Daily Herald?
I seem to have been rather critical. Now I would like to say something cordial. I would like to repeat what I think I said earlier; that I don't remember any newspaper which has shown so marked an improvement in so short a time, and that this augurs extremely well for the Herald. I should like, in fact, to make it plain that I am highly enthusiastic about the future of the paper in its new form. . . .

SAVING FOR EVERYBODY

GOOD RATE OF INTEREST.
EASY TO BUY, EASY TO HOLD.
INCOME-TAX-FREE CONCESSIONS.

National Savings Certificates (10th Issue)

Each unit costs 15/-, becoming £1 in only seven years—equal to nearly 4½% interest free of U.K. income tax and surtax, or nearly 6¾% taxable at the standard rate of 7/9. You may hold 1,200 units.

Post Office and Trustee Savings Banks

You may deposit up to £5,000, with no restriction up to this maximum on the amount invested in any one year. Both husband and wife can each enjoy £15 interest free of U.K. income tax (but not surtax) each year on their Savings Bank deposit accounts.

Defence Bonds

5% Defence Bonds are on sale in £5 units, and after seven years yield a 3% bonus free of U.K. income tax. You may now hold £5,000 worth, exclusive of holdings of earlier issues. *Ideal trustee investment.*

Premium Savings Bonds

Thousands of prizes, from £25 to £5,000, free of U.K. income tax and surtax, can be won each month. Bonds cost £1 each, and the permitted holding is now £800.

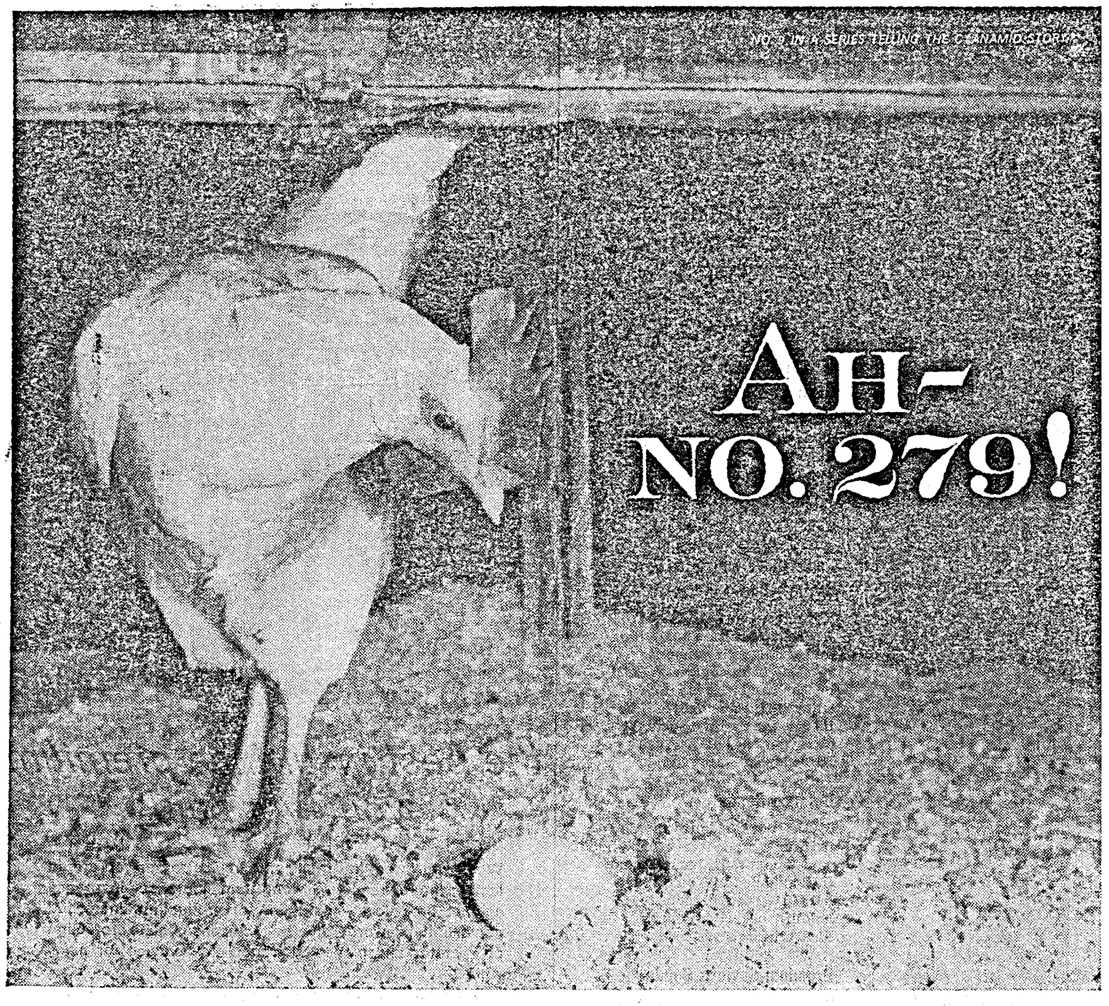
ELLISON CIRCUIT BREAKERS

the best insurance premium you ever paid

When you invest in an Ellison Circuit Breaker you are, in fact, paying a premium for long-term insurance—insurance against breakdown, disruption of production, increased costs, unfulfilled orders. A premium for complete protection of operator and plant and trouble-free service for many years.

Other forms of Ellison switchgear include high tension and low tension switchboards, motor starters and fuse switchgear. Every piece is robustly constructed with the traditional skill of Ellison craftsmen to give long, reliable service. Advanced design ensures easy accessibility and *eliminates the need for* frequent maintenance. Ellison provide a comprehensive consultancy, after-sales and spares service—backed by over half a century of specialised engineering knowledge.



Ellison equipment may cost a little more but it is equipment that depreciates only in your balance sheet!

She's just laid her 279th egg this year. Before the year is out she may well have chalked up a grand total of 300. Astonishing? Not really. Thanks to modern methods, hens these days lay more eggs than ever before. In 1947 the average bird laid 119 eggs a year; in 1959 the figure had risen to 180. Good layers, like our hen, do better still. The poultry industry is today the second most important branch of British agriculture, with egg production alone valued at well over £160 million. There are now more laying birds in Great Britain than people—70 million in all, producing thirteen thousand million eggs. Poultry are the most intensively farmed of all livestock: there are fewer and fewer flocks, but they contain more and more birds. This intensive production is one of the answers to the cry for greater food production in our tightly-packed islands. In the British farmers' efforts to put poultry and egg production on a scientific basis, Cyanamid products play their part. For intensive farming brings its own problems: clinical disease and low-grade infections can set in more easily, causing severe damage and economic loss. Advances in veterinary science include the use of one of Cyanamid's broad spectrum antibiotics, *AUREOMYCIN chlortetracycline, to control disease in intensively managed poultry. Thus, although disease hazards have increased as a result of the demands made for higher production, there has been no disastrous rise in mortality. AUREOMYCIN is only one Cyanamid product helping the poultry farmer. There are others — all of them bringing the benefit of Cyanamid research not only to a group but to the whole country.

In this and in a thousand other ways

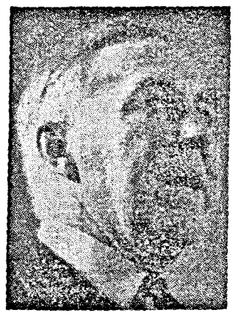
The New Look



THE reorganisation of the Government, which has been talked about for so long, proved more dramatic than had been expected when it finally arrived on Monday. It was certainly a stimulating send-off for the Conservative party conference at Brighton, which is described from the spot on page 127. Inevitably the main interest centres on Mr Macleod's accession to two of the jobs previously held by Mr Butler, and on Mr Brooke's assumption of a job that has never been held by anybody before.

Mr Macleod's chairmanship of the Conservatives should be an immensely good thing for the party; he is their most effective orator, one of their ablest organisation men, and more likely than any other figure to give to the Tory organisation that appearance of dynamic mission which the country needs and the floating voters want. Among those who believe that Mr Macleod is the best next prime minister we've got, it has been generally and delightedly assumed that these changes also smooth his path to become Mr Macmillan's heir apparent. This is still a precarious prophecy to make. Mr Macleod will have no great state department behind him to give him weight in cabinet counsels; and, even when allied to the leadership of the House of Commons, the party chairmanship is not an automatic high road to power. The two previous election-winning heroes of the Conservatives' organisation (Lords Woolton and Hailsham) won plaudits from the party and the country rather than great political influence in the cabinet or practical advancement in their own careers.

Still, it is obvious that, at the very least, Mr Macleod has been given his chance. Inevitably, this has raised a flood of newspaper comment about the position of the existing heir apparent who has been *in situ* for so long. Nothing is certain in politics, and it is both premature and personally derogatory to take for granted that Mr Butler's star is now certainly in decline. He is in daily practice, though not in rank, the prime minister's deputy; and in addition to the stiff tasks that he is keeping at the Home Office, which must now include preparations for maintaining essential services if there should be widespread strikes, he wields a practised committee chairman's influence over many aspects of government policy. On the crucial common market negotiations, where his chairmanship of the presiding cabinet committee has now been announced, it may not be altogether an influence for good. But a chairman's influence is likely to become dominantly important only when the other members of the committee are either aimlessly drifting or hopelessly split, or when the prime minister himself does not hold determined views—and Mr Macmillan surely knows by now what he wants for Britain in Europe. Mr Sandys seemed to make it plain at Brighton on Thursday where the Government (and Mr Butler) ought now to stand.

The second most interesting feature of the shuffle—Mr Brooke's new post as Chief Secretary to the Treasury, entered on the cabinet's seniority list immediately below Mr Lloyd—is a large step in a direction that this newspaper has long urged; indeed it has apparently been something of a joke in Whitehall this week that the long advocacy by *The Economist* for installing "a second senior cabinet minister in the Treasury" has helped to create a new office for another of its former alumni (like Professor Cairncross, the new chief economic adviser to the Government, Mr Brooke was once, rather long ago, a member of this paper's editorial staff). Mr Brooke is to be responsible for supervising the control of government expenditure in both the short term (i.e. vetting of the annual depart-

Mr Brooke : arithmetic for policy ?

Mr Maudling : Tory image ?

mental estimates) and the long term (i.e. in the five-year forward looks for which the Plowden committee pleaded). So far, so good ; but we still think it would have been better if this "second minister" in the Treasury had also been made responsible for supervision over the inland revenue department and over the tactical details of the annual finance bill and budget—albeit obliged to cast the latter in such a way as to exert whatever degree of net deflationary or reflationary pressure the Chancellor deemed desirable for the economy.

The real test of Mr Brooke's new office, as it has been defined, will not merely be how far he manages to extend the best modern methods of efficient control over all central government expenditure (and, on request, over some local government expenditure as well). It will also be whether he can extend his long-term surveys of spending trends for the next five years from being merely an arithmetical exercise into becoming the preliminary premises for policy-making. A great deal of new thinking about the social services now urgently needs to be done, and it needs to be tied directly to estimates of those services' variously increasing costs. Mr Brooke's desk at the Treasury is the logical place from which the new thinking about new priorities should now be co-ordinated. He will be a success only if, with the backing of his own superior, Mr Lloyd, he can get the other departmental ministers to recognise this.

MOST of the rest of the reshuffle of ministers seems to have been the resultant of these two promotions, and to have been dictated largely by a desire to show that the policies, as distinct from the men, are not being changed. Mr Maudling goes to the Colonial Office because he is the senior minister most obviously near to the same Tory image and generation as Mr Macleod. His friends should perhaps express two doubts about him. One is that in the free trade area bargaining three years ago Mr Maudling did not show the sinewy capacity to cut through difficult negotiations by boldly demanding at the last moment that he must be allowed subtly to stretch the terms of a too cautious, pre-determined brief ; and this is just what a colonial secretary nowadays often needs to do. The other is that he might conceivably be more inflexible than Mr Macleod in refusing to negotiate whenever there is any continuing threat to law and order ; in matters relating to the suppression of violence, Mr Maudling has the reputation of being a rather conservative, hard-boiled egg. But those who have suggested that he might be more frightened of Salisburyite criticism than Mr Macleod do not know their Mr Maudling ; indeed, because he is by nature a much less sensitive and less ambitious character than Mr Macleod, he might be rather more likely to show to his own party's extreme right wing that their strictures do not matter a damn to him.

Similarly, Mr Erroll moves from the second to the first job at the Board of Trade because he is the minister of state most nearly in Mr Maudling's image ; Sir Keith Joseph comes in below him because he is the junior minister most like Mr Erroll ; and so on down the list until Mrs Margaret Thatcher gets the junior job at Pensions because she is of the same gender as Dame Patricia Hornsby Smith. The one obvious change of character is at the Ministry of Housing and Local Government, where Dr Charles Hill (who will also be required to don the ill-tailored hat of cabinet minister for Welsh affairs) succeeds Mr Brooke. For party propagandist reasons Dr Hill was required at an earlier stage of his career to play the role of a rumbustious clown, and he has been longing ever since to show what a quiet and able administrator he may be. One's guess is that his determination to live down his propagandist past may at first inhibit him in some of his policies: perhaps particularly in those of his policies that should annoy Labour (e.g., in reforming the local government structure of London) though less so in policies that should annoy Tory interests (e.g., in permitting new towns to be built over "good agricultural land"). But when he settles down there can still be some hope that he will be the minister to remove the last vestiges of rent control in England.

ALL in all, these changes are to be welcomed. Despite Mr Grimond's rather churlish comments, this is one of Mr Macmillan's deftest exercises, with every one put on his mettle, and with the place of the more liberal left in the Tory hierarchy definitely confirmed—as some rebuffs to the right-wingers at Brighton have underlined. The changes signal the arrival of the new Tory generation at the doorstep of power, even although, partly because at least one retirement that had been expected has not taken place, Mr Macmillan himself is still surrounded by an older coterie of personal friends—in a cabinet which (with 21 members) is now too large for convenience. And the fact that there will be two ministers at the Treasury also provides a new hope that Mr Lloyd's perseverating energy may now be directed into wholly productive channels.

As a result of the redeployment, the Queen's Government possesses in some undefinable way a more dynamic look than it did a week ago ; and October 9, 1961, may yet be marked as the date when the revolution in the Tory image which Mr Butler did so very much to create in the 1950s finally ensured its right of continuing succession. Besides this potentially great achievement for British history, it is a relatively small matter of personal speculation whether the revolution is or is not eating its undoubted father in the process.

Collision Course

Each believing that the other is hard of hearing, West and East have not reached even the beginning of real negotiations

MR GROMYKO is an important messenger, but he is not one of the makers of Soviet foreign policy ; Mr Khrushchev has *more than once let slip* what he thinks of foreign ministers. It is not astonishing that his series of meetings with the Secretary of State, Mr Dean Rusk, culminating in the long talk with President Kennedy on October 6th, should have left an inconclusive, unsatisfactory impression. Many people have hastened to claim that the talks were a failure: Frenchmen who hold, with General de Gaulle, that negotiation is at present a mistake ; Germans, like Herr Grewe and Herr Willy Brandt, fearful of the repercussions in their country when the redoubted last instalments of the "bill" for the second world war are presented ; right-wing Americans, indignant that their government should appear "soft," and not averse to tarring Mr Kennedy with the brush of appeasement. Tight-lipped American government spokesmen have done their best to counter these gloomy assertions, but not with anything more cheerful than hints that the Gromyko talks had left things much as they were.

And so they had. On his way back from Washington to Moscow, Mr Gromyko stopped in London on Wednesday and saw Mr Macmillan and Lord Home ; and once again the only crumb of satisfaction thrown out from the talks was that the Russians, like the West, would actually prefer negotiated settlements in Berlin and Germany to unilateral action which might lead to war. Soviet diplomacy, ham-handed and heavy-footed, has largely itself to thank that such an elementary discovery needed to be made at all. Mr Khrushchev has much personal blame to bear himself. Contemptuous in success, rumbustious in adversity, pugnacious at all times, the Khrushchev manner went very far this summer to convince the West that he was itching to pull down about the West's ears what is left of international law and order. The Soviet military measures, the prolonged and resounding resumption of nuclear tests, and the bitter onslaught on the United Nations have sown the idea that the new Russia actually prefers to rely on force. As a summary judgment, this is probably false ; but Moscow has done much this year and last to make it plausible and widely held.

Precisely because it is so widely held, among many of his own people and by certain of his allies, Mr Kennedy is having great difficulty in getting his hands free to embark on a serious negotiation with the Russians at all. First he must know if talks can be held otherwise than under direct Russian threat. Next he must know if there is anything that can be negotiated about ; this has involved both a mind-clearing operation on the western side, and an exploration of the Russian motives and objectives.

When the American policy-makers attempt to separate, as they have been quietly doing, the irreducible western requirements from the attitudes and aspirations that could be modified or deferred, alarm spreads in Germany, as was shown by the reaction to General Clay's no doubt experimental remark in Berlin on September 22nd that the west Germans might have to "face facts" ; it also ferments among those who put "appeasement" among the first of international dangers, basing their philosophy of world relations today on the not very enlightening analogy of Munich, 1938. An embarrassing number of people, inside and outside the United States, are therefore watching hawk-like for evidence of American lack of backbone ; the preserving of face, dignity and prestige is therefore more important to Washington just now than it ought to be.

FOR all these reasons a substantial part of any American-Russian colloquy at present is taken up with the earnest American effort to bring home to Moscow that America is not weak, is not in a weak frame of mind, regards any threat to western rights in Berlin very seriously, and cannot be provoked without terrible danger. It is very likely that when Mr Rusk, after his talks with Mr Gromyko in New York, sent the Soviet Foreign Minister on to see the President in Washington, he did so because he thought this point needed to be rammed home some more, not because Mr Gromyko had produced any unexpected or encouraging proposals that needed Mr Kennedy's attention.

What of the other side in these colloquies ? Mr Gromyko spent two hours and ten minutes with Mr Kennedy—not such a long time, if one remembers how much these occasions are taken up by the interpreters. The first hour is reported to have been expended on the reading, and translation, of a memorandum Mr Gromyko had brought with him. New proposals from Moscow ? Words of understanding for Mr Kennedy's position from Mr Khrushchev ? An ingenious new procedure for handling the dispute ? None of this is likely. For it is not only the Americans who are anxious, on these occasions, to say again with emphasis what they have said before, in the belief that when they last said it it did not sink in. The Russians, too, are convinced that what they have said so often cannot have been properly heard, or so little notice would not have been taken of it. They, too, like to leave no possibility of misunderstanding. Often when Mr Khrushchev raises his voice and causes trouble, it is with this simple purpose in view. Without much doubt Mr Gromyko informed Mr Kennedy once again, in dogged bureaucratic Moscow language, of what he must by now know so well, the elements of the Russian position about Berlin, Germany, and the security of Central Europe.

Other Russians have been busily explaining these familiar elements at less exalted levels where a western audience could be got together to listen. Thus Mr Alexei Ajubei, the editor of *Izvestia* and Mr Khrushchev's son-in-law, has lately attended unofficial round-table meetings on this complex of related subjects in London, Rome and Warsaw, each time bringing distinguished colleagues with him from Moscow. At the Warsaw meeting of journalists, on October 2nd and 3rd, numerous delegates from the other Warsaw Pact countries, including a strong and intellectually respectable east German group, supported the Russians in stating their case. On such

occasions the western technique of patting the ball of discussion back and forth goes only a certain way ; the communists feel bound to reply with systematic expositions of the subject, starting at the beginning.

Invariably the beginning is the same, though a historically-minded Pole may take it six centuries further back: Russia and eastern Europe suffered terribly from German aggression, and are determined not to go through the same experience again. The unsettled remnants of the second world war are untidy and dangerous. Unrecognised states, like east Germany, and unrecognised frontiers, like the Oder-Neisse Line, offer temptation to " political and military adventurers " (read, the west German government and the Bundeswehr) to try to upset them by force ; the attempts would fail (the communists argue) but a world war might start in this way. A key part of the argument is that west Germany is run by unrepentant Nazis, militarists and nationalists, bent on restoring the Reich.

To stop the use of Berlin as a weapon against east Germany —and hence against the whole existing order in eastern Europe—west Berlin has to be given a new " free and neutral " status. This, whatever room it left for a western military presence, would certainly have to break the city's existing links, largely extra-legal in character, with the German Federal Republic. This is the one change proposed in eastern Europe to stabilise the rest of the *status quo* there. Stabilisation will not be complete without a peace treaty, which ought to demilitarise and neutralise all Germany, starting with a prohibition of nuclear arms ; short of that, a one-sided treaty with east Germany will have to regularise the position there.

MUCH of this argument is naturally regarded in the West as sheer fantasy ; it is necessary to remember that the rulers in Russia—and in eastern Europe—believe every word of it, literally. Only a small minority in the West would really want to deny the Russians, the Poles or the Czechs, security against German attack. What the majority cannot do is to accept the communist contention about the nature of the German Federal Republic, or base a European settlement upon that contention. The communists, who harp endlessly on the terrible history of eastern Europe as the basis for their fears and their demands, conveniently forget those parts of history that the West feels imperatively compelled to remember—and notably, the enormous errors of Russian policy between 1945 and 1952. It was that period, Stalin's last years, that produced the division of Germany and the inexorable compulsions that brought west Germany into Nato, into the *institutions* of free Europe, and into the western community of nations in its widest sense. It is ludicrous to ask the West to conclude, on the basis that those events would have gone better unrecorded, treaties that assume Germany to be the prostrate, guilt-ridden form of 1945.

It is across this appalling gulf, not primarily of ideas about society or the future, but about the hard facts of national life in central Europe, that the would-be *negotiators* of Washington and Moscow have somehow to make contact. Mr Walter Lippmann has argued forcefully this week that the American President must not permit his allies, or his right wing at home, to drive him into a corner where he cannot negotiate ; and that it would be better to devise a new, active and genuine international function for west Berlin than to hold it indefinitely by the threat of war. Certainly, he has rightly diagnosed the West's present weakness as its lack of anything positive to propose.

This is more relevant to the West's position than the mechanical cries of " Munich " that still resound at any indication that Washington is giving serious thought to the future. Still, it must be clear that, while the Russians may be induced to accept a set of improved arrangements for west Berlin, and even possibly to impose them temporarily on the east German government, such arrangements by themselves are not going to stop the arms race, or to persuade the Russians that they are not threatened in Central Europe. The mere knowledge of this reinforces the entrenched attitudes of both sides, making a Berlin agreement more difficult than, by itself, it need be ; it also ensures that the European tension will no doubt continue after a Berlin agreement, even if one is reached. The preference of both sides for negotiation is only one point gained ; they are still on collision course.

Testing in the Kremlin

Mr Khrushchev has to explain the changed international outlook to his party, while the Russian people and the West watch for the fall-out

A TEST starts for Mr Khrushchev on Tuesday. The 22nd congress of the Communist party of the Soviet Union will not open in quite the international setting he may have once imagined. Party congresses are always important occasions in Russia. It is the party that, at least in theory, rules the Soviet state. The 1,700 or so delegates who will gather in the vast new Congress Hall of the Kremlin are the chosen audience for important policy announcements. The first secretary of the party—and this is Mr Khrushchev's title that *matters*—will report to them at length on the key events, home and foreign, since the last congress. (In form, since the 21st congress in 1959 was an extraordinary one, called to ratify the seven-year plan, he should go back to 1956, a fearsome prospect.) He has to give the delegates an assessment of the current situation and a pre-view of the future.

Key themes from this marathon oration are then taken up by the leading figures in the hierarchy ; since Stalin's death it can even happen that their interpretations differ, if only subtly, in tone. On the closing day, the new ruling organs—the central committee, its presidium and secretariat—are elected, and the turnover at the top is revealed. Finally, it is now becoming the fashion to take advantage of the presence in Moscow of the representative communist leaders from all over the world to crown the Russian gathering with a session of what might rightly be called the Communist International.

This 22nd congress was designed to be even more important than usual. It was to look further ahead and aim higher ; it was to herald a new era in Soviet society. For this purpose, a new party programme was published at the end of July, the first since the Bolshevik manifesto of 1919. By projecting far in advance the current rates of growth, the programme mapped out the Soviet road to prosperity. Mr Khrushchev was chosen—to nobody's surprise—to present this new charter to the congress. Mr Kozlov was commissioned to introduce changes in the party statutes in keeping, at least on paper, with the progress in prospect. Both documents were published well beforehand to get publicity abroad as well as in Russia. Nature obliging with a good harvest, all seemed set for a tremendous performance in which claims of economic achievement could be coupled with pledges of even more ambitious growth, and boasts about " overtaking the United States " could mingle with descriptions of a future communist society. Mr Khrushchev, patron of the new Soviet age, was to appear before the Russian people as the man who would lead them, after the generation of Stalinist blood and tears, across the threshold of plenty.

SOMETHING went wrong with the stage-management. Mr Khrushchev's vision of the future was overshadowed by clouds on the international horizon. The slogan of plenty is inseparable from that of peace ; but where, today, is peace ? *Military marches* have cut discordantly across the harmony. Mr Khrushchev, for five years the champion of peaceful co-existence, the man who had cut down the Red Army in the name of putting economic progress first, now chose to keep the national servicemen longer under arms and to preface his major performance with a series of nuclear bangs. Why ?

The Soviet pressure to get a settlement of the Berlin question is not itself the new element that caused the change. Ample notice had been given that the Russians would seek some success on this front before their congress. The puzzling element is the resumption of nuclear testing six weeks ago, so soon after the announcement of the economic programme, and so shortly before the party congress. Years of propaganda about the dreadful effects of fall-out were turned overnight from an asset to a liability. Communists in various " peace movements " were left on a limb ; the neutrals gathered in Belgrade last month were put on the spot. Mr Khrushchev's own image as peacemaker was tarnished not only for outsiders, but for the Russians as well.

To say that Mr Khrushchev listened to the advice of his military scientists does not explain why he did so just now, or why he had not yielded to them earlier. One explanation is that, for all their spectacular successes in rocketry, the Russians have gaps in their nuclear arsenal and that they felt it imperative to complete their range of weapons in order to make brinkmanship possible in the Berlin crisis. A complementary explanation is that Mr Khrushchev did not want to face his communist critics—who are still to be found in Moscow, not only in China—naked in the council-chamber after years of strenuous diplomatic exertion and countless changes of tactics. He may even have thought that his bangs would spread such alarm as to drive the western statesmen rapidly to the conference table and that he would be able to show the congress the shape, at least, of a favourable settlement of the Berlin question. Then, in a wider international conference, he might have hoped to try to revive a new version of his plan for total nuclear disarmament and, by hammering on this point, obliterate some of the ill-effects of his previous move.

If this was Mr Khrushchev's calculation, it has not paid off—yet. By way of a Berlin settlement, or of tangible grounds for claiming that a settlement is coming, the Russians have still nothing to show. Nor can they produce invitations to a major summit meeting. Without one or other of these, their economic celebration will be more than a little forced and uneasy. It is not yet known where Moscow stands after Mr Gromyko's soundings in the United States and London. Some answer will be provided next Tuesday in Mr Khrushchev's marathon oration. If the emphasis is on vigilance, tension and the arms race, the Moscow show will have neither the shape nor the success that was originally envisaged, but the immediate prospects for international negotiation will also be gloomy. If, on the other hand, the stress is laid on economic progress and competition, if the current difficulties are shown as a transient phase in peaceful co-existence, it may be a sign that the Russians still hope for a successful outcome to their diplomatic offensive.

One objection to this whole argument is that the congress as such does not matter for Mr Khrushchev. The congress will applaud whatever the tune. Some elements of " democracy " may have penetrated, since Stalin's death, into the presidium or even occasionally into the central committee ; they have certainly not spread to the vast congressional body. Judging by precedent, about a third of the delegates will be " workers of distinction," rewarded with a seat for some economic feat. Three-quarters of the delegates, at least, will be over forty, trained in the Stalinist methods of disciplined enthusiasm. But the real audience is the whole Soviet Union, and it is no longer a nation of frightened time-servers. Two minor but significant instances of a stirring of intellectual discontent are discussed on page 116. The best proof that Mr Khrushchev is aware of this public opinion is the fact that he has done his best to keep the Soviet people in the dark about the Soviet resumption of nuclear tests.

TO his own as to the European public, Mr Khrushchev has a stake in appearing reasonable. To the international communist élite whom he will probably face afterwards, he has to show the achievements and prospects of his diplomacy, or, more precisely, of the alternate bouts of wooing and disputation that still pass for diplomacy in the Soviet book. Most of the European communist leaders will rally to him if he pleads for negotiation and a compromise settlement. But, in his world, it is only success that succeeds ; there will be many besides the Chinese to draw attention to failure, or to the lack of any prospect of success. To argue that Mr Khrushchev is dancing to the Chinese tune is absurd. To assume that he can, as Stalin could, entirely ignore critics within the international communist movement, or within his own party, is equally unreal.

This is the test that Mr Khrushchev faces. The success of his whole programme, not merely of the set-piece in the new Congress Hall, is at issue. If the intensified arms race continues for very long, the whole economic edifice on which Mr Khrushchev has tried to base his own claim to power and glory will have to be reshaped on lines vastly less attractive to the Soviet peoples. In the coming days of oratory, in open and secret session, he will be struggling to preserve—more exactly, to revive—his chosen image as Nikita the Bountiful, the Peacemaker. His efforts will be watched anxiously by the outside world, which by now should have no illusions about the basic purposes of Soviet foreign policy.

Memo to Mr Maudling

Here we voice our private vision of the changing of the guard at the Colonial Office in the form of a valedictory from Mr Macleod

Dear Reggie, Don't worry immediately about Pitcairn Island. It's only two square miles; the 140 people there have the vote; anyway I am sure that they do not yet feel ready to apply for membership of the United Nations. You'll find we have rather a lot of islands and dependencies, but you cannot be expected to place all of them. There is a list somewhere in this desk. The problems of the ones in the Western Pacific are not urgent.

There is another group called "Atlantic and Indian Oceans." Aden and the Protectorate are in it; our man in Aden, Sir Charles Johnston, is continuing the talks I started in London in June. They must have a new constitution, but there may be some bother about bases, and it could be that pretty soon you will have your first experience of civil disobedience. With Mauritius, the problem is that there are too many people. We've given them self-government; they may now seek protection (from each other) in an east African federation—if we can only get the east Africans to demand federation.

In the Caribbean, Jamaica has let us down. But it may be possible to persuade Eric Williams in Trinidad to take on the rest of the islands in a smaller federation, especially if the Americans can be talked into giving a reasonable amount of aid. If the Americans baulk at this, trump them by saying "Cuba." If Selwyn baulks at extra money for Jamaica and Trinidad from us, trump him by saying "immigration."

Across in British Guiana, Cheddi Jagan thinks he's in a position to frighten the wits out of everyone. We have agreed that some time after August, 1962, we will talk with him about independence; however, you may think it wise to do some homework on this before then. Brunei, North Borneo and Sarawak can be given to the Malayans, who are willing to go with them and Singapore into a "Malaysia" federation, but a constitution must be devised to balance the Malay power against the Chinese, who, as usual, are too numerous to make this easy. The Tunku is coming over in a few weeks' time.

I sent the Uganda delegates home with a new constitution on Tuesday, and promised them full internal self-government in March; elections in April; and independence on October 9, 1962. If I were you, however, I would still keep an eye on Uganda. What we've done is to follow Munster's report pretty closely. Buganda will be federated with Uganda. The Kabaka's ministers won't wear direct elections to the central legislature—and Kiwanuka, chief minister of Uganda, won't have indirect elections through the Baganda parliament (they call it Lukiiko). Kiwanuka is—rightly—afraid that a Baganda bloc in the central parliament might do a deal with his opposition and put him out. Anyway, the compromise solution is that the Lukiiko will be made 68 per cent democratic—32 of its hundred members will be chiefs or the Kabaka's nominees or officials—and the Lukiiko is going to be allowed to choose between direct Buganda elections to the central parliament, and electing delegates itself. We've had to allow Buganda its own police force, and entrench its local powers and traditions pretty deeply into the new constitution. The other traditional-minded tribes have got about half of what we've given Buganda. It may not all blow up after independence, but watch it.

Kenya, I'm leaving you in a somewhat less tidy state. Kenyatta has been a disappointment. He has not united the tribes, he has been rejected by some of the politicians, and his old-guard friends are scaring our settlers there half to death—and we'll surely have to look after the settlers. You will have to feel your way in Kenya, but briefly, this is the form. Mboya and his friends lead Kanu; Odinga Oginga plays Michael Foot to Mboya's Cousins; there's no Gaitskell in sight. But Kanu has by far the most supporters in the country, and Mboya is a pro-western, orthodox African nationalist, and the best brain there. Kanu is mainly supported by the Kikuyu and Luo tribes; the other tribes are afraid they will be knocked on the head after independence, and the other politicians are scared of becoming Danquahs and Appiahs. They have formed Kadu and now a rather clever young man in Kadu, Peter Okondo, has come forward with a plan for a sort of tribal federation, giving the central government weak powers and chaining the executive even more severely than the American executive is chained. These chaps are reasonable and want to protect themselves from Kanu, but they are not the force of the future in Africa and their drive to unity is not strong. Look at Okondo's plan—but, if I may say so, Reggie, Kadu in Kenya is roughly equivalent to Efta in Europe; not the right horse to back, perhaps? Though, like Efta, they are nice people.

In Northern Rhodesia, keep talking, and keep vague. Last year the Africans and the Europeans wouldn't look at each other; now they are quarrelling about whether candidates in the next elections have to get 12½ per cent of each other's votes, or 5 per cent. The first figure will probably put Roy Welensky's men in; the second, Kenneth Kaunda's. You want to get as near to the second as possible; the trick is alternately to calm the one down by making the other cross, and *vice versa*. Don't bother going to see Kenneth Kaunda; he'll turn up. Sir Roy won't, but you may find him on the PM's doorstep. If he gets too difficult, get Duncan to talk to him. But keep the peace. I've got an election campaign to shape.

That's about it, Reggie, and best of luck. There are still Malta, Gambia, and (you will find) the high commission territories of Swaziland, Bechuanaland and Basutoland—we must argue with Verwoerd about them one day. But you have to leave something for Jimmy Callaghan.

Iain

P.S. Tristan da Cunha may have to be crossed off.

NOTES OF THE WEEK

EUROPE

A Good Start

In Britain, where the common market battle has been raging hotly for some months now, and where Mr Heath and Mr Sandys have just been triumphantly engaged with the hosts of Little England on the Brighton beach—there is a despatch from the Conservative conference on page 127—it is clear enough that the Government has made up its mind to join the European community and do its best to make it work. On the Continent, not everyone has got the message yet. Mr Heath's main task in Paris, when he expounded the British position to the council of ministers of the Six on Tuesday, was to deliver it as forcefully as possible. A look at French press comment on this preliminary round of the negotiations for British membership suggests that he has had a creditable success.

Two parts of his speech, in particular, seemed to impress his hearers: the acceptance of a common agricultural policy, and the willingness to share in the arrangements for political co-operation which the Six set in train at their July meeting in Bonn. It is in agriculture that France's economic interests are most immediately at stake. The political arrangements are important to all the Six: as Professor Hallstein said, "We are not in business, we are in politics."

Both these matters touch sensitive spots of the British body politic; sovereignty and agriculture are sore points with Tory rebels. But after his successful meeting in Paris Mr Heath has at least been able to present the sceptics (including Mr Butler?) with evidence that boldness pays in European dealings.

The six ministers appear to have been surprised—perhaps, indeed, somewhat taken aback—by the fullness of the British explanation; replies were not attempted. But the detail of Mr Heath's statement, and the clear acceptance of so much common ground with the Six, ought to mean that the full scale meetings planned for November can get down quickly to serious negotiation about the knotty trade problems of the Commonwealth.

One other useful step towards a united western Europe has been taken this week in Geneva. The three neutrals, Switzerland, Sweden, and Austria, are at last working out the terms for a joint application for association with the common market. Their desire to be inside economically and outside politically may prove even more difficult to satisfy than the special British wishes. But at least the neutrals are getting over their rather cross desire to go it alone, while on the side of the Six the feeling that neutrals can be left to stew in their own juice seems slightly on the wane.

IMMIGRATION

Gently Ban Your Brother Man

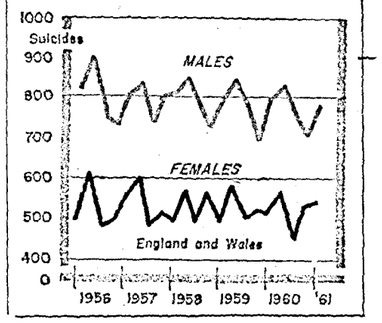
There is an arguable case for limiting the entry of black-skinned people into this country. It rests on the proposition that an apparently sizeable minority of white-skinned people fear and resent them, publicly denigrate them (even from political platforms), disseminate racialist literature about them (even at party conferences) and, from time to time, have to be restrained by the police from physically assaulting them. These are the grounds on which Mr Butler should approach the Commonwealth governments over the restrictions which he (with a suitably hangdog air) virtually promised the Conservative party on Wednesday. Undoubtedly the West Indians, the Pakistanis and the rest would appreciate his predicament better if he did. There is no excuse whatever for the hypocrisy uttered, with few exceptions, by the Tories at Brighton to justify the very end they are, it seems, ashamed to admit. There is no wish to hurt the Commonwealth... the question of colour does not arise... the measures, of course, must be applied to Commonwealth immigrants generally... Who believes a word of this? Still more, who believes that any West Indian, from Mr Manley to the rawest Jamaican off the boat, can believe a word of it?

If the explanations put up at Brighton are taken at their face value they amount to a sorry confession. It means that the professed way of life of a country of 52 million people is jeopardised by the presence of a coloured population of less than one per cent of the whole (and by the existence of 3 million more on the other side of the Atlantic). It means that there are fears for the welfare state because 14,000 coloured people are currently unemployed in Britain. It means that the absorption of 50,000 white immigrants annually (from former colonial territories like Ireland and Australia) is equally out of the question without a weighty inquisition at the ports. This does not make Britain look illiberal by other countries' standards; but it does make Britain a laughing-stock.

No one claimed at Brighton that the British economy is not the better for the immigrants that have arrived up to now, that the buses could not be run, the hospitals staffed or even the harvest gathered in without them. Instead of bleakly putting up the shutters, is it not more sensible to try other means first, including the provision of well-publicised but purely voluntary employment bureaux in the West Indies where more immigrants could ensure themselves employment on arrival without scandalising the British taxpayer by claiming national assistance? The machinery that Mr Butler has in mind may be tempered with humanity: it will still be impossible to operate without palpable charges of prejudice. Lord Home talked finely of Christian principles and Mr Macleod recited the easy sentiment:

It's coming yet for a' that...
That man to man the warld o'er
Shall brithers be for a' that...

They were addressing, of course, the Russians and Rhodesians.



ECONOMIC POLICY

Again and Again

The Minister of Labour is no doubt full of excuses for his actions in granting statutory enforcement to the wage increase recommended by the Road Haulage Wages Council, and in eating the words of a previous reference back by doing the same thing for two other wages councils' recommendations as well. His arguments are that

FEWER SUICIDES

The 1960 total of 5,113 suicides was the lowest since 1955's 5,000, with, as usual, the highest incidence in the second quarter. As people grow older they are more likely to commit suicide although most attempted suicides are of young people made by those in their twenties. Poisoning is by far the most common method of committing suicide, with hanging for men, and drowning for women, second.

these recommendations were provisionally promulgated before Mr Lloyd announced the pay pause in July and that some of the employers, as well as the unions, regarded them as a commitment; that he will not allow them to take effect until January 1st; and that, in withdrawing a little on this front, the Government may be better able to fight the eventual wages battle on a front which public opinion will regard as more "reasonable."

The fact remains that this is the second bad economic mistake made by the Government in successive weeks. Once again, apparently, it is necessary to spell out the simple reasons for Britain's poor economic record since the war. The reason for our relative stagnation has not lain primarily in lack of planning machinery or anything of that sort. The main trouble has been that we have constantly fought inflation and our currency troubles in the most inefficient and expensive ways, through over-reliance on high tax rates and other restrictions which serve to hold back demand and production without exerting any other direct effect whatever. We have constantly shied away from the direct and efficient method of fighting cost inflation by damping down pay increases, and we have intermittently shied away from attracting support for sterling in its very difficult role as an international currency by the direct method of keeping interest rates very high.

Last July, in a deep crisis, the Chancellor at last seemed to have resorted to both these direct methods at once, plus some other weapons as well. As soon as the economic situation improved after July, the Government's first step internally should have been to rescind the special increases in indirect tax rates which the Chancellor then also made, and its first step externally should have been to use some of the foreign money that has flowed into London to repay part of the loan from the International Monetary Fund (thus revitalising that institution for the part it must play if sterling's position as a key international currency is to be bearable for long). Instead, in response to the usual departmental pressures from the Bank of England and the Ministry of Labour, the opening steps in this small springtime of recovery have been to lower Bank rate by a half of one per cent and to make a sort of half of one per cent thaw in the pay freeze. This is to put national priorities of efficiency in economic policy quite ludicrously the wrong way round.

WAGES

The Allies

The Minister of Labour's half-concession on three wages council awards can only add vigour to the unions' claims in another field that looks more dangerous—that of the so-called M-workers, the less-skilled government employees in service establishments, airports and so on. Their pay is normally reviewed at six-monthly intervals, when it is brought into line with pay in outside industry: in April the London rate went up by 4s. and the provincial rate by 3s. The unions now claim that the October review should give a rise of 2s.; but the Treasury says that, while it is willing to go through the regular process of working out the new level, no increase will be paid until the pause is officially over.

The main union champion in the battle of the wages councils has been Mr Cousins (who has remarked cryptically that he was never worried about road haulage anyway): the M-workers' claim, however, has created a formidable, if implausible, alliance between Mr Cousins and Sir Tom Williamson. The allies claim that the agreement to review the government industrial workers' pay at six-monthly intervals was as much a "prior commitment" as anything that goes on at a wages council: next Thursday they are to wait upon the Prime Minister, the Chancellor and poor Mr Hare, a reception committee that shows how seriously the Government takes these heavyweight opponents.

One argument that the ministers are bound to hear is that, when private industry is paying more, it is unfair that the Government should not do so too. But the wage increases and reductions of hours granted by Ford Motors and by the building employers are a very different matter. Not only are they the result of long negotiations, but they also allow for productivity increases by cutting unnecessarily long tea-breaks. Even though the employers have not got all they would have liked out of the unions on this score (at Fords they have even reached an absurd compromise whereby the morning tea-break will not allow a man time to smoke even a Woodbine), they have at least made the point that even minor interruptions in the rhythm of work are a serious matter in flow-production industries.

The largest wage-claim at present is that tabled by the engineering unions on July 17th. If the Government fails to hold the line on pay rises for its own workers, the position of the engineering employers would become impossible: and on the strength of their stand depends the whole future pattern elsewhere. This is the answer that Mr Macmillan, Mr Lloyd and Mr Hare should have ready. Even the thought that they have, uniquely, created an alliance between the poles of right and left in the Trades Union Congress should not deter them.

ARAB AFFAIRS

Far, Far Better Thing

PRESIDENT NASSER'S talent for transmuting defeat into victory has at times provoked grudging admiration. His courage, and his realism, in promptly accepting both military and political defeat in Syria have won him a personal victory that has been saluted from many quarters with sincere and spontaneous accolades. Seldom do losing battles get called off so quickly; no Light Brigade nonsense for President Nasser, and quite right. To launch a full-scale political campaign must have been much more of a temptation; the means were to hand and a measure of success was likely. Instead, President Nasser smartly pulled the mat from under the feet of most political commentators, including *The Economist*, by announcing on October 5th that national unity in Syria must be put before anything else, and that he would therefore not oppose Syria's admission either to the United Nations or to the Arab League. Nothing in the life of the union of Egypt and Syria has become President Nasser so well as the ending of it.

Taking its lead from Cairo, comment in the Arab world is, for the moment, pitched low. Only Amman, having by now little to gain from prudence, rages on with its exhortations to the Egyptian people to follow the Syrian example. Cairo radio, more in sorrow than in anger, looks to a time when imperialists and opportunists will once again scrabble over the sick body of Syria. Unwilling to bear the odious label of separation, the Syrians countered on Wednesday by announcing a scheme for a new Arab confederation, with a central parliament and a joint military command, but a wide devolution of domestic powers. These are the cross-winds of propaganda; the real subject of debate between Cairo and Damascus has to be the disheartening process of disentanglement. The two governments have taken issue with each other over their conflicting versions of the economic situation, and although both have suggested an investigation committee from the Arab League, each has set terms of reference that are likely to be unacceptable to the other.

The Soviet Union lost little time, after President Nasser cleared the way, in recognising the new government; the United States held off until Tuesday. But the new men in Syria may have experienced mixed reactions both to the Soviet Union's prompt recognition and to the support that has come from their local communist leaders. Our Middle East correspondent describes on page 147 the fumbling for political position that is now going on in Damascus. Possibly one of the main reasons why the conservative caretaker government hesitates to allow the resumption of party activity is that it has not found any tactful way out of the embarrassing quandary of how to allow freedom to some parties but not to all, and especially not to the communists.

GERMANY

Medicine Man

WHATEVER stature as statesman the history books one day accord to Dr Adenauer, they can hardly fail to grant him mastery in political manœuvre. Three weeks after the election which destroyed his parliamentary majority, all the signs are that Dr Adenauer is set for yet another spell as Chancellor. Herr Mende, leader of the Free Democrats, Herr Strauss, and the other Christian Social and Democrat politicians who gaily greeted the election result as marking the end of the long reign, seem to be eating their words with only the mildest signs of indigestion.

The final decision, it is true, is not yet made. All that has happened is that the Free Democrats, who hold the balance in the Bundestag, have discovered a good deal of common ground with the Christian Democrats in their talks on a possible coalition. The FDP is still in process of making up its mind whether it can really turn about and join a government under Dr Adenauer; the party may hold a special meeting to decide. Some differences of emphasis in policy also remain—a certain caution in the FDP about integration with the West, a desire to curb the excesses of the welfare state, a greater flexibility in eastern policy. But the broad lines of policy for a coalition government are agreed. And now that the CDU has decided that Dr Adenauer shall stay on, it is difficult to see how anyone else can head it.

The reversal of fortunes owes much to the feeling that any nasty foreign policy medicine that Germany has to take in the next few months is better administered by the old family doctor—a feeling evidently shared by other candidates for the chancellorship, like Dr Erhard. Any new coalition will doubtless be formed on the understanding that Dr Adenauer will hand over within a year or so when the difficult period is over, even though the condition may not be publicly expressed and will certainly be difficult to enforce. As if to rub the point home Dr Mende is expected to stay outside the government, and the FDP is not bidding for the highest posts. In particular, the key Foreign and Economics ministries are being left to the CDU; Dr Erhard will remain deputy chancellor and next in line for the succession. The reservations are at any rate interesting in theory, but there is little doubt that, if this design is adopted, the day will have gone in substance to Dr Adenauer.

CHINA

Fingertip

THERE is a depressing irony in the latest twist of circumstances in the Far East. The statement by Marshal Chen Yi, the Chinese foreign minister, that he would have no objection to meeting his American counterpart, Mr Dean Rusk, might be construed as the extension of a fingertip of conciliation towards the United States. Unfortunately, the fingertip is extended just when President Kennedy is least in a position to accept it. Marshal Chen Yi's conversation on Wednesday with the general manager of Reuters contains several signs of a new-found moderation on China's part. The marshal said he wanted to remove the apprehension caused by "distorted" reports that China advocated war as a way of settling international quarrels. (Moscow papers please copy.) He added that the communist government sought to avoid the mistake of not taking the feelings of other countries into account; though it is hard to square this sentiment with his odd assertion that there would be less chance of war once China had acquired nuclear weapons. One reason for Marshal Chen Yi's uncommon mildness is to be found in his admission that China's living standards had been "a little tight" in the past three years—a tightness caused, he acknowledged, not merely by natural disasters like droughts and floods but also by the "adjustments" it had been necessary to make in the current five-year plan.

But the marshal made it clear that the United States would have to make the first move towards negotiations; and that, if any of the points at issue between the two countries were to be resolved, the Americans would have to make concessions. "For example," he explained, they might withdraw their forces from Formosa. In saying that he feared Formosa was being used as a base to undermine the communist regime on the mainland, Marshal Chen Yi might just possibly have been hinting—in contrast to the burden of other Chinese statements—that Peking would be satisfied if the Americans acknowledged the existence of the Peking government, or at least stopped using Formosa as an irritant. But negotiations on this or any other question still look distant. It seems clear that Mr Kennedy has postponed, if not abandoned, the ideas for a new approach to the Chinese question which he brought into office with him. He has been obliged to do so because of the opposition, from a powerful section of his own party as well as from the Republicans, to granting any concessions; presumably this opposition, now that the President is being accused of "appeasement" over Berlin, constricts him more forcibly than ever.

TEACHERS' PAY

Second Thoughts

JUST how wide a gap now separates the National Union of Teachers from Sir David Eccles? To no one's great surprise, and the huge relief of many union members, there are to be no prolonged regional strikes over the difference of £5½ million between the Eccles and Burnham salary scales. The NUT ballot on the extended strike issue has thus served everyone's purpose pretty usefully. The militants have shown their teeth in particular regions (in one of them, Coventry, the local executive initiated a work-to-rule policy on Monday), but the broad consensus of feeling has been reluctant to go too far. The chief impression created by some of the regional returns is that support for tough action was strongest in those areas where a good many teachers are normally Labour voters and in others where professional status has been particularly jeopardised by the rising cost of middle-class housing. Conclusions are obviously difficult to draw, but one suspects that this may not be too far from the truth.

The teachers' restraint is entirely sensible, and all the more so in view of the minister's broad hint last month that, since he will not set a terminal date for his own award, a new and more favourable salary agreement for England and Wales can be expected when the present Scottish agreement runs out in March, 1963. The idea is gradually getting through that the teachers stand to gain more in this way than they would have done from a straight £47½ million award that would have run for the full Burnham period until

The Economist

OCTOBER 12, 1861

ON BEHALF OF BONDHOLDERS

We certainly admit that the English Government is not bound to negotiate in behalf of English capitalists who have lent money to foreign States. We think it has a discretion whether it should do so or not. In the case of Mexico, our Government thought there was a case of peculiarly gross fraud, committed under circumstances which did not extenuate but enhance its guilt. It therefore voluntarily chose to interfere. The Mexican Government voluntarily chose to promise the British Government to perform its former promises to British subjects. This international contract is as much binding as any other, and as much enforceable. We should be very sorry to see the English army, the English fleet, and the English taxation placed at the mercy of any English capitalists who may choose to lend money to a foreign nation upon specific security: our fleet would soon have little else to do than attend to such claims upon it, and the augmentation of our taxes would be more than the interest on the unpaid loans. But no such danger is incurred if it is clearly understood that the English Government need not even negotiate in such a case if it does not think fit; that it cannot interfere save by negotiation and representation unless it obtains a renewed promise to itself; and that even then it must be guided by circumstances, by the probability of success, by the absence or the presence of more pressing duties, in deciding whether it will interfere by arms to enforce the performance of the contract which the foreign Government has specifically and voluntarily made with it.

March, 1964. Equally, the minister's ideas on his future position in the Burnham machinery have not been as drastic as some teachers had professed to fear, although the NUT is likely to remain sceptical until it has had working experience of the changes.

The more militant NUT delegates at last week-end's conference made it clear that they intend to push ahead with those tactics (one-day strike, lobbying of MPs and withdrawing from the supervision of school meals) on which they have *carte blanche* for direct action. But on school meals the militants are not only likely to get into contractual troubles with their immediate employers, the local authorities (not the minister), but have now been opposed by the assistant masters' association. Harrying the Tories when the House returns is one thing, but is a row inside the profession really worth the candle? While the future of the Burnham committee is still in the balance the NUT may well find discretion the better part of valour.

LABOUR PARTY

Shadows Changing Too?

With Mr Macmillan's major cabinet reconstruction carried out, a reshuffle of the shadows is very much on the cards. By the end of Labour's Blackpool conference, some people were forecasting that it might be dramatic: it was being said that Mr Wilson might wisely be tempted by Mr Gaitskell to give up the shadow chancellorship and move over to foreign affairs, thereby leaving a vacancy for Mr Callaghan. A problem would then arise as to what to do with Mr Healey; but either he might take Colonies (*vice* Mr Callaghan) or else Mr Brown might be happy to surrender his defence portfolio to him and concentrate on his role as deputy leader. For a minister to give up all departmental authority is a notoriously hazardous course, but whether this is true of shadow portfolios is dubious. In any case Mr Brown's position as deputy leader gives him plenty of scope to range right over the field of home and foreign affairs, and to do this where it matters most—in the Commons. Whether or not Mr Wilson makes a move, there is likely to be a change in the shadow Ministry of Labour in place of Mr Fred Lee. Once again a strong contender for the position would be Mr Callaghan, and he might well do better service for his party there than at the shadow Exchequer. Indeed if he took this office, if Mr Brown took the shadow chancellorship and Mr Wilson the shadow Foreign Office, this might well be the best attainable mixture for Mr Gaitskell, and for giving every leading Labour figure a chance to turn over a new leaf. But this is not the mixture that most people were forecasting.

Labour is also faced with an urgent problem at Transport House where the continued ill health of Mr Morgan Phillips makes his early retirement sadly likely. The argument has been put forward that the new secretary should be a powerful political personality able to express the mind and will of the party rank and file, but the inevitable effect of any such appointment would be to create a new rival to the parliamentary leadership. Transport House has never been this in the past and it would be the height of folly to make it so now. Mr George Brown's name has been canvassed in connection with the position but he probably would not take it, while Mr Crossman or Mr Wedgwood Benn, however willing, at present seems unlikely to be made the offer. Some see Mr Len Williams as a coadjutor with right of succession and the appointment of this loyal administrator would have much to be said in its favour; but at present opinion seems to be veering towards the appointment of some reliable figure from the trade unions. It is said that such a man, while posing no threat to the leadership, would be able to carry through the major reforms of which Transport House is very much in need, and that his trade union status might make it easier to raise the cash to finance them. This would only be all right provided a sufficiently strong-willed reformer can be found for the job.

UNITED NATIONS

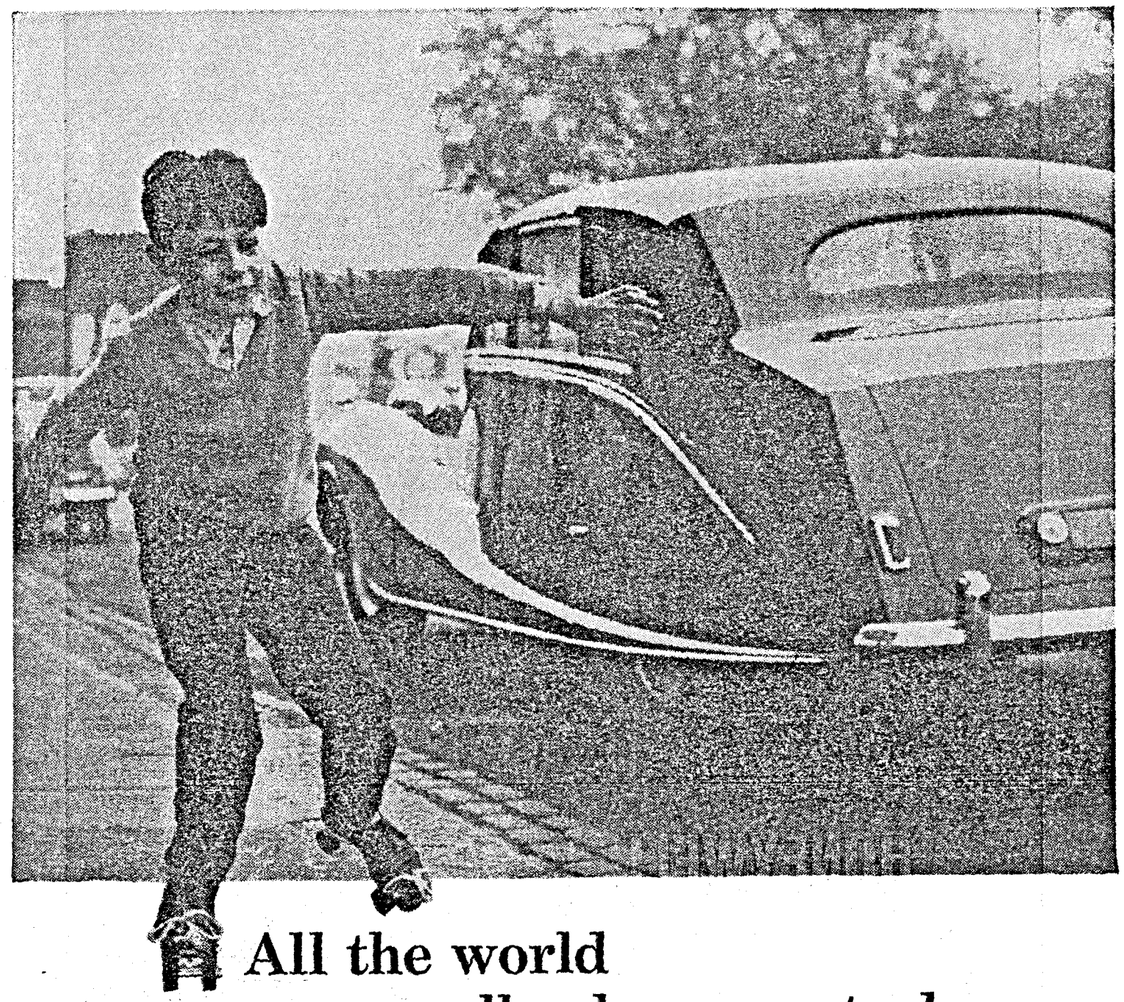
Headless Hydra

For four weeks the United Nations secretariat has had no head. Naturally, the routine servicing of the Assembly and other normal operations have gone on, under the competent direction of Mr Cordier, the under-secretary in charge of Assembly proceedings, Mr Narasimhan, the recently-appointed *chef de cabinet*, and their colleagues. No doubt the staff could be indefinitely headed by a committee, if the UN reverted to the role of no more than a "traditional conference mechanism." But, as Mr Hammarskjöld showed in the introduction to his last annual report—a document that many people now regard as his political testament—this reversion would betray the letter and spirit of the Charter, play into the hands of those who want to cripple the United Nations, and rob the smaller nations in particular of their hopes of finding security in a hard world.

This week the deadlock over the secretariat reappeared openly. The wispy hopes surrounding the series of private talks with Mr Gromyko and Mr Zorin were blown away. It is not a deadlock over a candidate for the post of interim secretary-general; U Thant, the head of the Burmese mission to the UN, appears to be acceptable to most parties; so might some other experienced neutral. As was evident from the beginning, the real argument turns on the Soviet insistence on shackling Mr Hammarskjöld's successor, whoever he may be, in a way that would stop him putting into execution any UN policy that Russia dislikes.

The outward and visible Soviet "troika" plan has been temporarily withdrawn, but Mr Zorin still demands what might be termed a system of moral vetoes: U Thant, or A. N. Other, must be placed under a formal obligation always to seek agreement with a group of assistants who would include a Soviet representative. It is a revealing fact that the Afro-Asians, whose preponderance in the 100-member Assembly was shown this week in its rough handling of Mr Louw of South Africa, are so utterly untrusted by the Russians.

RUSSIA



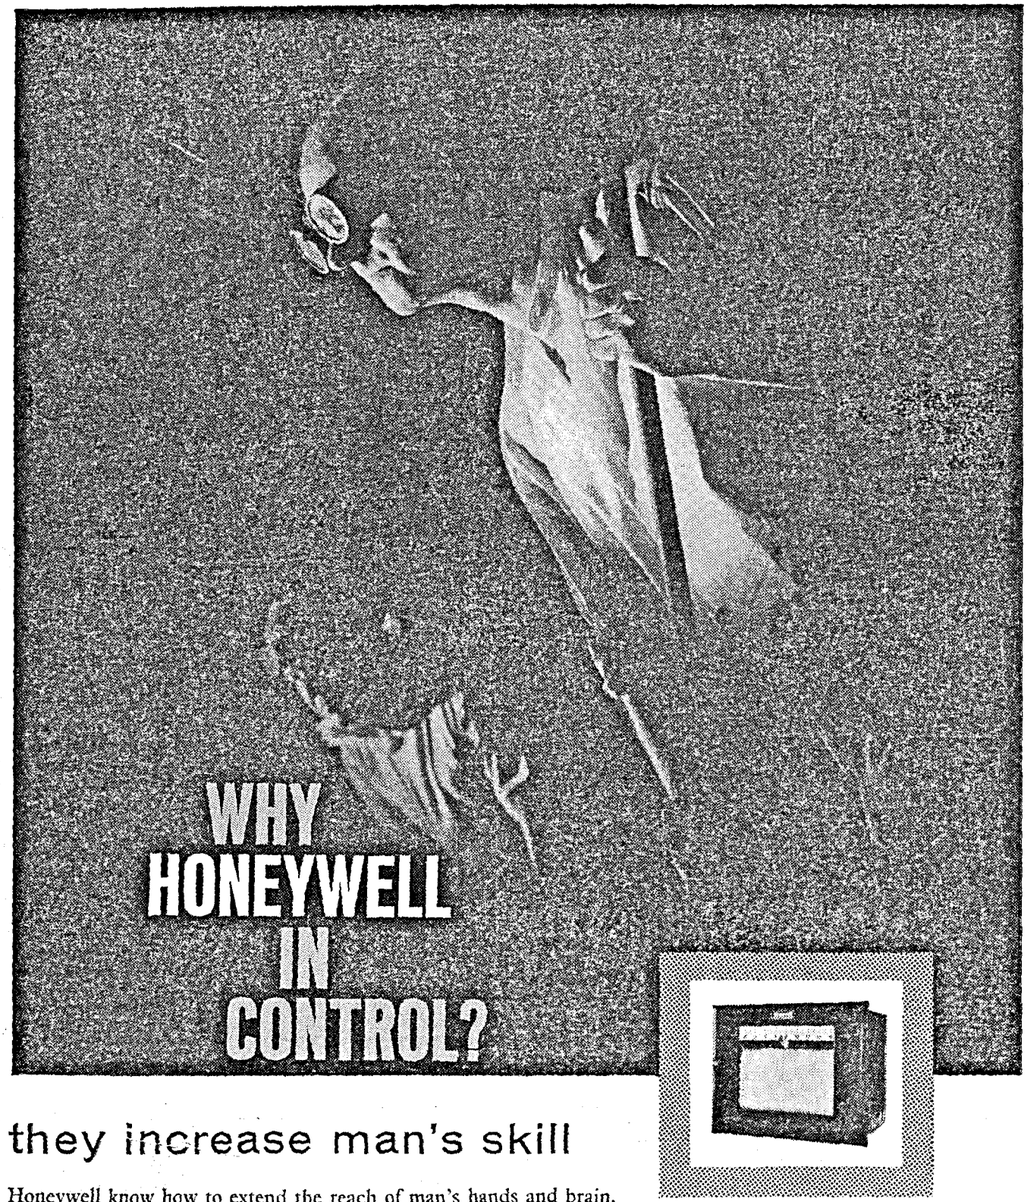
Daring Young Men

It takes a good deal of courage for young Russians to defy their official mentors in public. Fear of reprisals did not prevent two such acts in Moscow in the past week or so. University students shouted down the officials who wanted to cut short their hearing of the San Francisco-Moscow peace marchers. At the annual recitation of poetry around the statue of Mayakovsky, the crowd of young Muscovites clamoured for—and got—Yevgeni Yevtushenko, who had just been viciously denounced by the Soviet literary establishment because of his moving poem, *Babi Yar*, on the Nazi slaughter of Jews at Kiev.

Marchers in Red Square

Some of the university students passed notes to the peace marchers telling them that they should not be deceived by the official speakers put up to refute them. Such a brief—and rare—encounter could hardly reveal to what extent Soviet youth distrusts the version of world affairs that the official monopoly dispenses to it; but the clear point made was that these young people wanted to hear another side of the case, whether they agreed with it or not. That desire is in itself a form of heresy in a monopolistic system, and merely to express it calls for courage. The footsore little band who had been on the road to Moscow so long (although banned from France, and hustled across east Germany in a way that oddly recalls Lenin's famous journey by sealed train) can console themselves for the restrictions placed on them in Moscow and

All the world
rolls along on steel



Steel ball bearings are as essential to the smooth progress of the Chairman's limousine as they are to this boy's roller skates. In fact, whether you go by car, bus, bike, or scooter, you're really travelling on ball or roller bearings of steel.

And not only bearings, but axles, wheels, chassis and bodywork pressings of most of our vehicles are made of steel. This is where steel's versatility comes in: ball bearings are usually made of carbon chrome steel or nickel molybdenum steel – in either case, heat-treated to give an extremely hard surface with very high resistance to wear. Car body pressings, on the other hand, are made of low-carbon mild steel, which has the ductility needed for deep-drawing in the pressing process. Steel, in one or other of its many specifications, is the material on which our whole technology depends.

If steel cost ten thousand pounds a ton it would be known as a 'miracle' metal. But as it's so inexpensive and plentiful it often goes unnoticed. Steel quietly gets on with its job of making our life run more smoothly.

THIS IS THE STEEL AGE

BRITISH IRON AND STEEL FEDERATION

they increase man's skill

Honeywell know how to extend the reach of man's hands and brain. Their process controls make his judgement more certain, help him to maintain product quality right down the line. Their heating controls give him freedom to choose or to change indoor 'climate' just as he wishes. And with their computers he can do eight jobs at once . . . Small wonder that Honeywell are in such demand to increase the speed and the skill with which men can work. This is now not merely a success story—it's a world wide tradition.

Honeywell Controls Work Everywhere

THE ELECTRONIK—symbol of Honeywell's international leadership in process control—is one of more than 13,000 controls and control systems supplied by Honeywell.

elsewhere with the thought that their tenacity evoked, among the young Russians, an answering sign of the human spirit's power to defy circumstance.

The way young Moscow forced the organisers of the poetry recital on Sunday to break off the succession of "approved" authors, and to let Yevtushenko recite, to tumultuous applause, a biting attack on "those who love power for its own sake," was a similar sign of defiance. One cannot tell how widely young Russians share the poet's particular concern with the survival of anti-semitism in their country. The most direct warning against this danger in *Babi Yar* was cut out by the editors of *Literaturnaya Gazeta* before they published his poem last month. Again, however, the point that Sunday's demonstrators clearly made was that he ought to be given a hearing, and that the monopoly's outpouring of abuse had excited warm sympathy and admiration for him instead of the supposed general execration of his "negative attitude." Young Russia shows more and more signs of being chafed by its blinkers.

JUGOSLAVIA

Sparring with Moscow

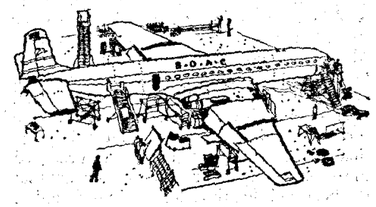
THE draft programme of the Soviet Communist party, which will be adopted at the party congress next week, has not met with universal acclaim in the communist world. Two weeks ago *Kommunist*, the official journal of the Jugoslav Communist party, stated that although the Soviet programme contained "positive premises," *there are also* "quite a few that do not bear Marxist and scientific criticism." What of course particularly irks the Jugoslavs in the draft programme is the attack on Jugoslav revisionism, which in their view amounts to "*the most brutal interference*" in the country's internal affairs. The article maintains that for "narrow camp-ridden interests and reasons" the Russians are trying to discredit the theory that there are many different roads to socialism and that it is possible to be a perfectly good socialist without belonging to the socialist camp.

The *Komunist* adds that no Jugoslav comment had been made on the draft programme when it was first published, because it said nothing essentially new, but some reference had eventually been found necessary since the programme was being used as a pretext to step up the scope and intensity of the communist block's anti-Jugoslav propaganda. But no comebacks from the Jugoslav side are likely to stop this propaganda. Russia's present rulers have learnt, more or less, to live with Marshal Tito's Jugoslavia, which after all supports them on a good many international issues; what they cannot accept is Marshal Tito's influence among the uncommitted peoples of Asia and Africa. They made the best of the Belgrade conference last month, endorsing the parts they approved of, ignoring those they disliked. But they can hardly have been happy about it.

LOCAL GOVERNMENT

Dwindling Status

THE Conservative conference on local government, which opened the proceedings at Brighton on Tuesday, was in a mood to make short work of the Olde English *ealdorman*. This reaction to the aldermanic jiggery-pokery that goes on in some councils at election time is a thoroughly healthy one; but total abolition is both inconvenient and unnecessary. Mr Henry Brooke's defence of the alderman as an ancient institution was itself irrelevant. The alderman still has a useful function to fulfil, and particularly on narrowly divided councils (just as governments find it essential to make sure of their majorities on important committees in the Commons). The legislative reform that is needed in a future Local Government (Miscellaneous Provisions) Bill is simply to prevent aldermen swinging mayoralty elections, and thus conciliar control, against the electorate's express wishes. The practical reform in selecting men (even those over 75) who have something more to contribute than their political loyalty is one for the local parties themselves.



The conference was not understating the case when it voiced concern at local government's dwindling status and reputation. The challenge is now very clear in education, in which the argument for transferring responsibility to *ad hoc* committees on a regional basis is rapidly growing in strength and conviction. The Ministry of Education had to step in and take the colleges of advanced technology directly under its wing. A Fabian pamphlet ("The Structure of Higher Education," 2s. 6d.) published this week takes this debate a stage further in recommending to the Robbins committee that higher education as a whole would benefit from a tighter regional organisation under a national supervisory body. This is not necessarily the best suggestion in the field, or one that will find favour in existing and potential degree-giving institutions, but the principle is already being urged lower down—and above all in the schools themselves. The inadequacy of local finance to meet educational and other charges is only part of the problem: the increasingly obvious need for planning and co-ordination on a regional basis in all the major spheres of local government is a matter that ought now to give Dr Charles Hill plenty to think about.

LONDON AIRPORT

Report on a Muddle

RESPONSIBLE, highly skilled and fairly prosperous aircraft fitters are just the kind of workers who might be regarded by the innocent as least likely to strike. That this is not so has been proved *ad nauseam* by the disputes at London airport which have been greeted over the years by denunciations of red plots, ambitious shop stewards, disruptive influences and the rest. But the British Overseas Airways Corporation has come off worse than British European Airways or the other companies with substantial workshops at Heath Row; and experience has shown that a notorious "troublemaker," moved into the purer atmosphere of Gatwick, inexplicably ceased to make trouble. The easy conclusion was that there was something wrong with BOAC: and this has now been confirmed to the hilt by the report of a committee of inquiry set up after last July's strike, which grounded almost the entire fleet of the corporation for ten days, at an estimated loss of revenue of £2½ million.

The report is unanimous—which in itself is a remarkable achievement for a body composed of two management representatives, two from the supervisors' union and two from the operatives' unions (including Mr Ian Mikardo for the supervisors and Mr John Hendy of the Electrical Trades Union for the operatives). Its most saddening conclusion is that "no group of workers has

been adversely affected to any significant extent by the new supervisory system"—*which means, since the supervisory system* was the ostensible cause of the strike, that there was no reason for it to happen at all. Many of the witnesses who came forward with complaints simply did not know what they were *talking about. The workers'* representatives appeared not to have carried out to any effect their job of reporting to the men the results of their negotiations with the management. But the report makes the fundamental criticism that "manage-

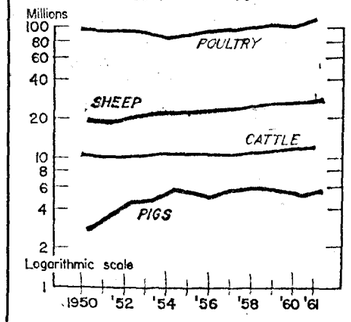
ment have not made the best of all the opportunities open to it to ensure the complete dissemination (even reiteration) of information in simple and understandable language. . . ." The grammar is odd, but the sentiment deserves a loud hurrah.

It is perfectly true that joint consultation does not always work, and there will always be shop stewards who, for one reason or another, try to present the arguments of managements in the worst possible light. But men—and especially skilled men with money in the bank and the knowledge that they can get another job elsewhere—will not co-operate unless the reasons why their co-operation is needed are properly explained. The failure in communication does not only concern BOAC; the strike by a few London Transport bus crews on Tuesday over the introduction of new work schedules is yet another instance of a stoppage caused by sheer incomprehension.

TURKEY

Back to the Ballot



On Sunday, October 15th, Turkey is holding its first general elections since the Menderes regime was overthrown in May, 1960. For some eight months General Gürsel and his military colleagues have been cautiously and gradually lowering the frail boat of Turkish democracy back into the turbulent political stream. Their hope is that at the same time they have succeeded in so controlling and curbing the stream that the boat will this time float and not founder.

This means that although the actual voting will be free, the electioneering over the past three weeks has been deliberately fettered. An agreement announced early last month, under the scarcely veiled pressure of the military authorities, pledged the parties and the press not to discuss any of the topics—like the record of the Menderes regime, the Yassiada trials and the application of Ataturk's reforms—which form the stuff of political controversy in Turkey today. In the past, Turkish party politics have been notorious for their violence (sometimes physical) and extremism, and in theory it seems sensible to try to prevent excesses in the future. But if the Turks are really to go back to a genuine parliamentary democracy, they will sooner or later have to get out of their systems all the burning questions which they are now forbidden to discuss. It may not necessarily be for the best that the return to free discussion should be later rather than sooner.

Sunday's elections will be contested by the four parties which have managed to establish themselves in at least fifteen provinces. The Republican People's Party, led by Mr Ismet Inönü, is the original party founded by Ataturk 38 years ago. The only other party dating from before last year's coup, the Republican Peasants' National Party, is unlikely to be of much importance. The two parties formed since the military coup, the Justice party and the New Turkey party, are both hoping to attract the votes of former Democrat party supporters, although they dare not angle for them too blatantly. The Republican People's Party, with by far the largest and most efficient party organisation, should come off best; it may, however, have become too closely identified with the military regime for its own good, and thus may fail to win an absolute majority of seats. Thus the formation of a government might depend in part on men who have failed to repudiate completely the former Democrat regime; nobody knows what General Gürsel would do in that case.

BRITISH LIVESTOCK

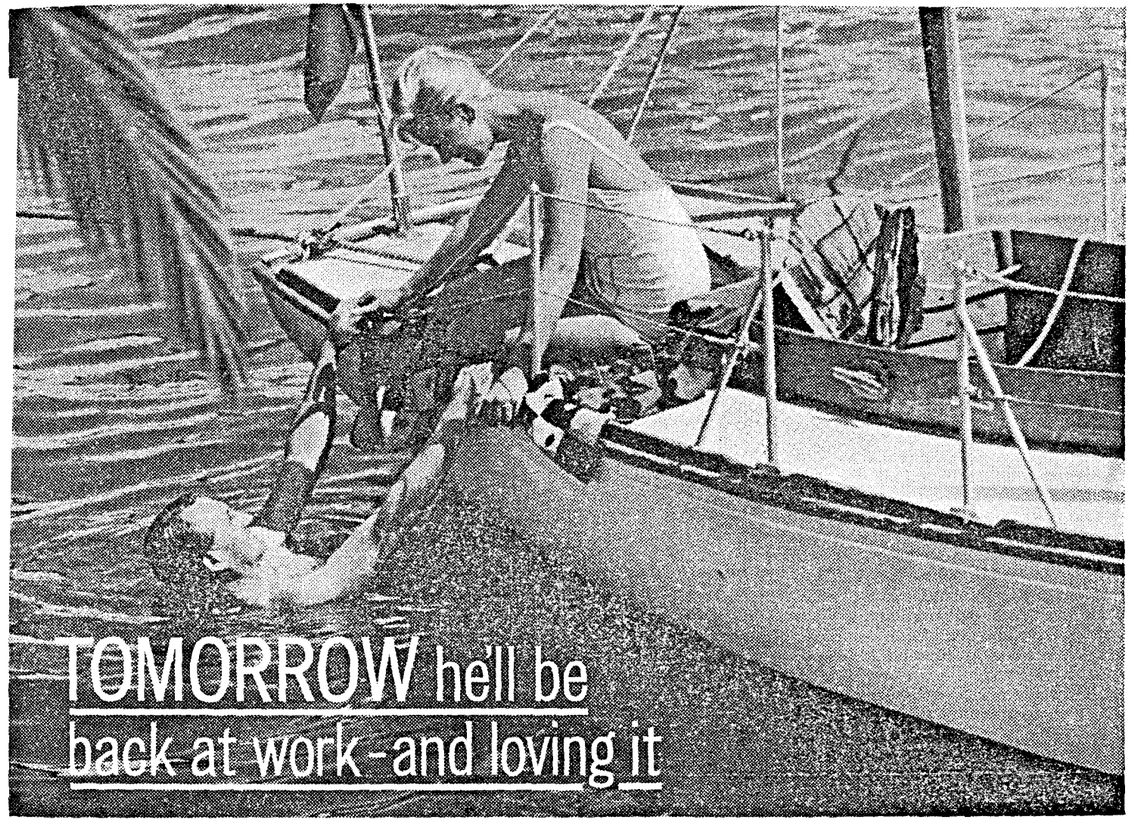
The number of cattle, sheep and poultry on British farms has increased steadily over the last few years, but pig-breeding has bounced in response to changes in the guaranteed price which is now, therefore, to be reviewed quarterly. Because of the mechanisation of farming, only 66,000 horses were kept for agricultural purposes in 1960 compared with 396,000 in 1950.

FRANCE AND SPAIN

Awkward Guests

Like stock characters out of a bad spy film, Messrs Lagaillarde and Ortiz, plus fifteen other miscellaneous leaders of *Algérie Française,* have lurched once more across the world stage. They seem this time to have entered the act a little early. While Paris has been buzzing with rumours of another impending coup, it has been President de Gaulle who has struck first, or rather induced General Franco to strike for him, by putting the would-be plotters under house arrest in Spain.

The move is notable. Contacts between the European nationalists in Algeria and the Spanish in Morocco have been close for some time. If there is any natural spiritual and political home in Europe for the French ultras—or indeed a natural base to plot from—the Iberian peninsula would seem to offer it. For some time, however, the Spanish government has been under pressure from the French to curb the plotters who fled to Spain after the failure of the last coup, or of the one before. It now seems that levers have been found of sufficient strength to persuade the Spanish to act.



One of the levers could be the negotiations, due next year, on the renewal of the Spanish-American security treaty; President Kennedy's administration might not be deaf to a French suggestion that General Franco was blocking peace in Algeria. More in keeping with the melodramatic tone of the play is another episode. Two months ago Sr Gonzales (El Campesino) a republican veteran of the Spanish civil war, led a tiny but ostentatious border raid into Spanish territory across the Pyrenees, while the French authorities were looking pointedly another way. Soon afterwards, on August 24th, they confined him to an agreeable island off the Breton coast, as if to give General Franco a hint. Now that the hint has been taken, and the malcontents from Algeria have been under restriction, El Campesino has been put under arrest.

Just how effective the move in Spain will prove is difficult to judge. Though the Spanish government may find it convenient, both internally and externally, to limit the scope of the plotters, it is by no means certain that their part in the plotting will stop. In Algeria itself General Salan's daily broadcasts, interrupting normal radio programmes, provide confirmation—if any were needed—that the Europeans' underground army (OAS) continues to be active. The blow in Spain last Sunday may have helped to divide the plotters in Spain from those in Algeria, but it has not removed the impression that some kind of eruption is coming.

INDONESIA

Fairyland

Dr Subandrio, meet Mr Bocoum. On October 4th, Mr Bocoum, the foreign minister of Mali, trying to explain to the United Nations Assembly why it was "spurious" to call for free elections in east Germany, suggested that the right of self-determination applied only to colonial territories. On October 9th, Dr Subandrio, the foreign minister of Indonesia, also addressing the Assembly, rejected Holland's offer of self-determination for the colonial territory of Dutch New Guinea (West Irian on Indonesian maps) as a "fairy tale." Dr Subandrio's claim that there could be no real self-determination in the territory because of the presence of Dutch police is not convincing. The Dutch proposal, spelled out in some detail to the Assembly on September 26th, provided for the territory to be administered by an international authority operating under the United Nations, which could have guaranteed the inhabitants a free vote on their future. The Indonesians are willing to let the UN lend a hand in arranging the transfer of power, but insist that the

'Men who take responsibility must take a second holiday'—medical opinion agrees

■ **Hard work won't kill you.** Men of a certain calibre actually thrive on it. But these are the very men who *must* take a second holiday. They need more than one break a year – and if they take it, they enjoy their work more. They do more of it and do it better. They enjoy living and do it better. They live longer.

This is a summary of the conclusion reached by medical men* concerned with the health of the nation's top management. Their work has convinced them that for men in important positions a second holiday is no luxury. It is an absolute necessity.

■ **In these days of rapid air travel** it is an unexpected pleasure too. A few precious days off at this time of year can now accomplish much more. For a busy man with only a long weekend to spare, Amsterdam, Paris, Madrid are possible destinations. Sun warm enough for swimming and lying in is shining now in North Africa, Greece, and the Middle East. A winter sports holiday by air is less trouble than a country weekend. And nowhere you fly by BEA is too far to return from in a few hours if work calls you back. Ask your travel agent how quickly and simply a trip can be arranged.

ultimate result must be to make western New Guinea part of Indonesia.

It is a pity that the Dutch did not make their offer long ago. Had they done so, it is just possible that a middle way might have been found between the extremes of a prolonged Dutch occupation of the half-island, and unconditional surrender to the Indonesian claim; Australian feelings on the matter are discussed by our correspondent in Canberra on page 144. The middle way now having been rejected, Dr Subandrio having ruled out the possibility of letting the inhabitants choose independence from both Holland and Indonesia, the alternatives remain as stark as ever. But, by making the offer, the Dutch have at least improved their tactical position in the General Assembly. So long as the Indonesians could present the matter as a simple dispute between colonialism and anti-colonialism, they could count on the sympathy of most uncommitted countries. Now that the dispute is between the Indonesian claim to sovereignty and an offer of self-determination, some countries may reflect that, after all, the population of western New Guinea has little in common with that of, say Java or Sumatra. And if the Indonesians were to carry out their vague but repeated threats to invade the island (their army having nothing else to do, now that the last rebels in Celebes have surrendered) they might find themselves going ashore in a cold silence of international disapproval.

ULSTER UNIONS

Going it Alone?

NORTHERN IRELAND is the one region in the United Kingdom that has no local productivity council. (In this it also lags behind the Republic of Ireland.) Three years ago, at the instigation of Lord Chandos, chairman of the Northern Ireland Development Council, the British Productivity Council arranged a conference in Belfast to try to form a local committee and the General Council of the TUC sent over two representatives. But no committee resulted for the simple reason that the Northern Ireland committee of what was then the Irish TUC (it is now the Irish Congress of Trade Unions) wanted its secretary to be the trade union member of the new body. This the Northern Ireland Minister of Labour would not have because the Government did not officially recognise the Irish TUC—known at Stormont as a "quasi-political body" run from Dublin and dedicated to Irish reunification.

Now, however, the Northern Ireland committee of the International Confederation of Free Trade Unions has decided to go it alone and do something about getting a productivity committee. It has called a conference on productivity in Belfast next Tuesday, to which industry, the unions, management organisations, commerce, and technical educationists have been invited. The Ulster unions are increasingly alive to the fact that if the province enters the common market the traditional methods so widespread in local industry will have to be drastically overhauled. But the general response to this initiative is doubtful.

IRISH ELECTION

Not Quite as Before

Our Dublin correspondent writes:

IN last week's election Mr Lemass lost the overall majority that he inherited from Mr de Valera. There are members of the old guard of Fianna Fail who blame him for not fighting the electoral campaign in the old-fashioned manner—plenty of blazing tar-barrels and much denunciation of the British hidden hand in Katanga, and any other topic that might arouse ancestral spirits. But he is a realist and could not engage in such theatricals with any degree of conviction; it is quite obvious, too, that the electorate has had enough of tar-barrels. In any event, it seems probable that Mr Lemass will continue in charge of affairs for quite a while to come.

The main lesson of the election was that militant republicanism, both of the Sinn Fein brand and of the type sponsored by Mr MacBride's Clann na Poblachta, has altogether lost its appeal. Mr Lemass did reasonably well in the Dublin area but lost seats in the other cities and throughout the rural constituencies. It is tempting to attribute this to his party's prolonged neglect of the needs of agriculture; but the losses are more probably due to a slackening in the party's usually efficient organisation and to the loss of Mr de Valera's hold on the small farmer and agricultural labourer. Much attention has been given to the Labour gains; but not enough to the odd fact that they occurred not in Dublin but in rural constituencies where attention is often given more to who a candidate is than to what party he supports. By winning seven seats, for Fine Gael, Mr Dillon did much better than any of the other leaders, but he recaptured only one half of the votes which his party lost between the last two elections in 1954 and 1957. If and when he gets back the balance, Fine Gael will begin to look like a possible alternative government in its own right.

In the good old days, no doubt, Mr de Valera, when faced with a similar situation, would have dissolved within six months and the electors would have obediently given him an overall majority. There is no reason to believe that such tactics would work for Mr Lemass now. But, if Fine Gael and Labour are agreed on anything, it is that they will not consider a third experiment in coalition government. In these circumstances Mr Lemass should be able to rely on a working majority on most things. These will include negotiations about the common market. It remains to be seen if they will include wages policy, which is perhaps the most urgent problem that faces the new Dail. One other point should be noted. A quarter of the members of the new Dail have been elected for the first time: nearly half of them are Fine Gael members. At least, it will not be wholly the mixture as before.

LETTERS

The Economy

SIR—Sir Robert Hall, in his very interesting two articles, makes the usual statement that "It is very likely that in recent years Britain has lagged behind its main competitors in the proportion of national income devoted to investment."

In an attempt to find out how true this was as far as manufacturing industry was concerned, the Institute of Cost and Works Accountants (with considerable help from the Economist Intelligence Unit) investigated the capital investment in manufacturing industries in this country and others. This produced results markedly different from those of gross capital formation and gross output for the whole economy, which are those which are usually quoted. Some of the results of the investigation are quoted below.

	1952		1957	
	per cent	per cent	per cent	per cent
UK	13	10.5	15	12
USA	16	12.9	17	14.2
West Germany	19	10.7	22	12.7
Italy	19	16.2	22	15.7

In each year the first column is the gross fixed capital formation as a percentage of gross national product, and the second column gross fixed capital formation as a percentage of net output by manufacturing industry. The complete table shows that on capital formation for industry Britain has kept up reasonably well with its competitors.

The picture is less pleasant if the indices of output per head in manufacturing are considered. Taking 1953 as 100, for the same years as above the indices are:

	1952 per cent	1957 per cent	1959 per cent
UK	96	111	117
USA	97	112	121
West Germany	94	118	131
Italy	90	130	153

Analysis of the output per head in manufacturing industry by major industries in Britain shows the wide differences in performance between the different groups. Between 1954 and 1957 motor vehicles and cycles showed only an increase of 2 per cent, while at the other end of the scale gas supply industry showed an increase of 28 per cent. It is not possible to compare the output per head in major industries between different countries. These figures support Sir Robert's statement that it is difficult to avoid the conclusion that labour is being hoarded.—Yours faithfully,

IAN T. MORROW

London, W1

Rutland

SIR—"Rutland has made the greatest fuss" (about being abolished) you say in your article on the report of the Local Government Commission. How stupid it is of the Rutland people *not* to accept the views of the learned gentlemen from London! Or is it?

Rutland does not claim that, on grounds of "logic," all county areas should be reduced to the same size as itself. It does claim that for a relatively sparsely populated agricultural area its present well proven county administration does provide the services its ratepayers require, in the form in which they like them: and that it should not be abolished on grounds of "logic" and a thirst for conformity with theoretical criteria of population.

Surely the sensible course is to press on with such boundary adjustments elsewhere as are desired by the ratepayers concerned: and to leave Rutland undisturbed. After all, Britain thrives on "anomalies" and "ad hoc-eries" especially where these reflect the wishes of those most affected.—Yours faithfully, ALAN J. C. YATES

Oakham, Rutland

Lubricating Oil

SIR—Your article regarding lubricating oil marketing in Britain in *The Economist* of July 15th, was felt to be prejudicial to our company's reputation. Ashland Oil and Refining Company, a fully integrated production and refining company, is a supplier of quality industrial lubricants in Britain under the name "Valvoline." Valvoline lubricants have been marketed in Great Britain since 1870. Only in 1960 did serious campaigning begin to enter the filling station oil market. Since that time over 1,200 accounts have been opened with service stations in many parts of Britain. In the face of the monopolistic practices you pointed out in your article, this can hardly be classed an "admission of defeat." The report made to the Monopolies Commission was not instigated by us but was in answer to the commission's circular enquiry sent to all the "independent" oil marketers.

We are confident that "Valvoline" will eventually attain the reputation and following of the British motorist that it enjoys with the motoring public in Europe, America and other countries around the world and with the engineering profession in Great Britain.—Yours faithfully,

EARL W. WEAVER
Ashland Oil & Refining Co.

Ashland, Kentucky

White Africans

SIR—Mr John Connell pleads for recognition of the rights of white Africans—in the last resort their right to emigrate. In most African countries for which Britain is still responsible, this problem is complementary to that of ensuring black African advancement and eventual independence. The fate of white Africans has, however, been virtually overlooked, even by liberal observers, and the omission gives some credence to the campaign for the retention of a preponderant white African influence.

Emigration has already been the resort of many white Africans, not only the Kenyans, whom Mr Connell mentions, but also Algerians; their destinations have been South Africa and South America. Emigration is, however, a negative reaction, and it usually entails considerable capital loss on the sale of property. Nor need it be the only resort of white Africans in a country attaining independence.

Some categories of white Africans are needed by newly independent countries, notably in administration and teaching. The British Government has taken pains to provide financial inducements to stay on (and compensation if ejected) in the case of white civil servants. White teachers are, however, less favoured: despite recommendations made by the Duke of Edinburgh's 1959 Oxford Conference on Commonwealth Education, financial guarantees are lacking, and teachers trained abroad are in many cases unrecognised in this country. If these obstacles were removed by the British Government, expatriate and local white teachers would be easier to attract and retain in Africa. The problem of providing a financial guarantee in case of eviction, but not an inducement to emigrate has been solved in the case of civil servants, and could be solved similarly for teachers.

Some white Africans may unfortunately find it necessary to leave as their countries become independent; in the case of lower-class whites because their jobs can be undertaken by black Africans without much experience or training, and in the case of farmers because the black Africans feel emotionally attached to the land, and resent "intruders." The friction which is caused by rising black African pressure against these white Africans could be avoided if the British Government acknowledged the existence of the pressure, and took steps to assist the evacuation of the whites concerned.

Farmers could be assisted if their move was to South America, but not to South Africa. They could also be offered posts as advisers under the Colombo Plan, and in each case financial help for their passages and a guarantee of employment might well prove sufficient inducements. Even those white Africans with few or no skills would be welcome in Canada or Australia, and similiar inducements could be offered.

Planning ahead on these lines may be attacked as appeasement but it can also be considered as redeployment of skills and labour towards the countries where they are required. It is pointless to force favours on unwilling recipients.—Yours faithfully,

London, N8 S. MYNOTT

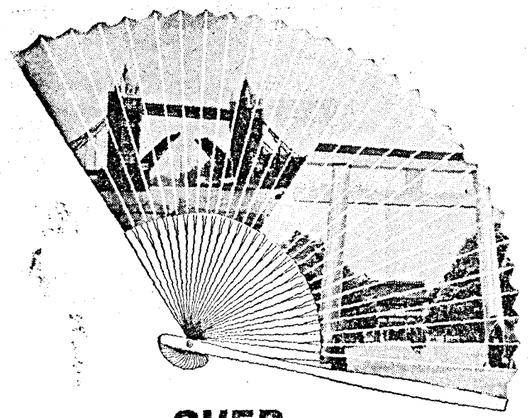
LIFE SELLS AIR TRAVEL FOR *SAS*

SAS Vice-President for Sales, K. A. Christiansen, says:



"... *this investment is paying off. We believe in LIFE as an advertising medium because the break-down of its circulation figure, geographically and socially, meets our requirements—we know a very high percentage of its readers are habitual air travellers.*"

LIFE International and LIFE en Español's 5 million readers are spread geographically throughout the free world from Andorra to Zanzibar. Socially, the circulation is even more significant because the readers of LIFE are the opinion-formers, the decision-makers, the people who create social and economic patterns in the communities they lead. No wonder "this investment is paying off" for SAS, since by advertising in LIFE International from 1952 they are reaching the people most interested in, and best able to use, the air transport facilities they offer.

LIFE can sell for you, too. For more information about LIFE International, its new advertising edition for Europe, and LIFE's Spanish language editions for Latin America—write to Robert H. Garey, European Advertising Director, Time & Life Building, New Bond Street, London W.1.

LONDON—TOKYO

Brighton's Tides

FROM OUR SPECIAL CORRESPONDENT IN BRIGHTON

Concentrated? Extended?

WHEN this article was dispatched only half of the Conservatives' 1961 conference had been completed; despite a bad session on immigration, the liberals rallied bravely and well on Thursday to rout the wild men on both the common market and flogging and hanging. Even so, it is rash as yet to sum up "the mood of this conference," if indeed there is any such thing: the conference is often a very imperfect geiger counter to gauge the atmosphere in which Messrs Macleod, Maulding, Butler and Heath will be carrying out their newly extended or restricted jobs. The mood of most debates is set largely by which half-a-dozen or so speakers out of the several thousand delegates the chairman happens to call, and by whether their talent is to arouse excitement or encourage sleep.

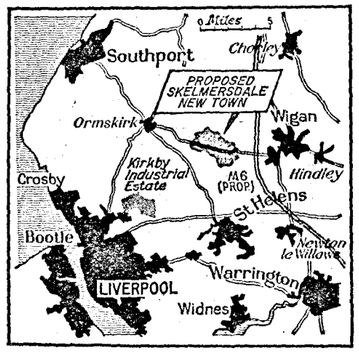
Throughout most of the first morning, while the conference was debating the possibility of nuclear war and the progressive liquidation of the colonial empire, the inspirers of sleep had it all the way. Some liberal optimists noted that the occasional polite digs at Mr Macleod and at the United Nations over Katanga attracted what seemed to be only the thinnest possible trickle of applause, but against that the super-Macleodites attracted virtually no applause (although also no interjections) at all. The only clapping that rose above the perfunctory seemed to be reserved for those who said what very nice chaps the British have always been compared with other people—"Look what the Americans did to the Red Indians" (cheers)—and when Mr Macleod rose to hand over the "inspiring trust" of colonial affairs to Mr Maudling, he received an opening cheer that was significantly smaller than had earlier greeted Lord Hailsham when his presence was merely pointed out to the audience from the platform.

To some extent Mr Macleod changed all this. His electric valedictory "declaration of faith" drilled through the apathy to arouse the first more or less standing ovation of the conference. But it was an ovation still noticeably led by a minority claque, in which the rank and file of Tuscany eventually joined because it seemed impolite not to do so. "Beautiful phrases Macleod has," said one admirer of Lord Salisbury's politics in the hotel bar later, "but they mean nothing. I still wouldn't like to be a white man in Africa; however, there's nothing we can do about it. I've never been keen on colonisation anyway." It is not amid an atmosphere of resignation by his right wing that Mr Maudling takes up his new post: but it is not an atmosphere that should be powerful enough to deter him from liberal action, even if—as was being suggested in some surprising circles in Brighton—the Prime Minister's motives in promoting Mr Macleod to the party chairmanship had been influenced more than one believes by a desire to get him out of the Colonial Office.

On some domestic matters where parts of the British proletariat agree with them, however, the right wing still thinks with good reason that it can wield some influence, and it was clear from the start that it was likely to get some satisfaction in Wednesday afternoon's debate on the control of immigration. "One knows that there is going to be legislation anyway," said one liberal Tory sadly in explaining why he would temper his opposition to a motion advocating immigration curbs that was eventually passed by a large majority. To do the conference justice, however, the debate was shamefaced rather than nasty. The only really nasty speech attracted significantly less applause than the MP concerned looked as if he had expected. Speaker after speaker said that he felt no colour prejudice, and then proceeded shamefacedly to show really that he did. The result is likely to be a considerable economic as well as moral misfortune.

Mr Butler has now made it evident that he is likely to introduce a system whereby Commonwealth immigrants, like aliens, will be allowed to come here only if they can persuade the Ministry of Labour that they have a job waiting for them or that their services are needed: this is a restrictionist planning device that will take away much of the element of flexibility and mobility which is one of immigrant labour's greatest virtues. Quite apart from the damage done to Britain's image in the world, this was an expensive afternoon's work in holding back the potentialities for future improvements in Britain's level of production and standard of living.

AND so to Thursday morning's much more heartening debate on the common market. Sir Derek Walker Smith and his anti-Europeans had phrased their expected amendment in a rather punch-pulling sort of way, saying that they were "animated with goodwill" towards the common market but that any proposals which the Government accepts should not "involve surrender of British sovereignty." On the Wednesday evening Cabinet ministers in the headquarters hotel were guessing freely that this amendment would be carried by a sizeable majority, but were saying that because of its wording this would not matter. But, in the event, Sir Derek's amendment was smashed to pieces in his hands, and Mr Sandys, sensing what was happening, toughened up his final speech to ask for, and secure, its astonishingly massive rejection.



There had been a great danger that Sir Derek, who on occasions can be a very moving speaker indeed, might set the conference on fire: but he slipped over in a few phrases just too far into floridity, and the applause for him was sufficiently restrained for ministers to begin to look relieved. Later both Mr Heath and Mr Sandys got a standing ovation: and the majority in favour of their policy was officially announced as "overwhelming." One more of the possible impediments in the way of a junction with Europe has thereby been removed, and as impediments go, this Conservative conference would not have been entirely a small one.

Merseyspill

FROM OUR SPECIAL CORRESPONDENT

SKELMERSDALE new town, intended to take 80,000 of Merseyside's overspill, has turned out to be Mr Henry Brooke's parting dispensation at the Ministry of Housing and Local Government. So the wheel has turned full circle and, after eleven years, new towns are demonstrably in favour again in England and Wales (Scotland has had Cumbernauld in the interval) to tackle urgent overspill problems. This may cause a hopeful flutter of hearts in the west Midlands, where the Dawley project (which is now under investigation) is badly needed to supplement Mr Brooke's more limited development plans outside the conurbation announced a month ago.

The Skelmersdale site has been on the stocks, one way and another, for a full decade, and the ultimate ministerial approval for development under the New Towns Act is so necessary a relief for Liverpool (which has by itself a potential overspill twice as large as Skelmersdale can take) that some lingering doubts about the precise choice of location have almost certainly had to be stifled. Skelmersdale is within a dozen miles of Liverpool itself and only seven miles from Wigan: it is, in fact, just a short leap-frog away from Liverpool's enormous postwar satellite at Kirkby. The minister has admitted the desirability of more breathing space in this part of south Lancashire, but the argument for being within easy reach of Merseyside has obviously prevailed. The primary need is to rehouse Liverpool's slum-dwellers, who have close links with the city and some of whom, initially at least, may be concerned to retain their jobs there.

Given this approach, Skelmersdale is probably the one remaining place in the region where a sizeable scheme (a population of 80,000 is the largest yet proposed) could be fitted in with any elbow room left —and there is little enough of that anywhere between the Pennines and the sea. The convenience for Merseyside should make it relatively easy to persuade firms to move out there. All the same, the new town's ability to establish itself as a separate entity in an area of pronounced local loyalties is, by the same token, less assured. In the end Merseyside will have to go further afield to solve its problems.

The Skelmersdale project originally saw the light of day in the Lancashire county development plan of 1951, when a community of 50,000 was envisaged. For years, however, the government's preference has been to try to cope with Liverpool's overspill under the Town Development Act. These efforts should certainly continue elsewhere, but so far the potential importing authorities have not been sufficient to answer anything like Merseyside's needs. Mr Brooke's return to the New Towns Act in this type of case has been necessary; it remains for his successor to see, in general, just how much can be done in association with private development and in the provision of private enterprise housing.

Pound for Pound?

MONEY and culture are natural bedfellows but the cry still goes up that the British are slow to recognise this. Introducing the Arts Council's sixteenth annual report,* Sir William Emrys Williams starts by giving the civic authorities a pat on the back for their increased encouragement of the arts, and ends by telling them it is far from good enough. In his view, it would be sensible to give local authorities "three years' or five years' notice that if they wish to enjoy the amenities of the arts they must pay a fair share of their cost."

But what is a fair share? The Government's contribution is now quite a substantial sum, the Arts Council grant having risen from £235,000 in 1946 to £1,675,000 in the current year. Under the Local Government Act of 1948 an expenditure of up to a 6d. rate (4⅛d. in Scotland) on sustaining the arts is allowable, which would entitle the municipalities of this country to spend over £16 million a year on the arts. In fact they contribute less than one-sixtieth of that amount. To match the Arts Council grant, pound for pound, local subsidies would have to be stepped up six times; even so, they would amount to less than a three-farthings rate.

It would be rash to try to draw a hard and fast line as to where one kind of responsibility for the arts ends and another begins. At present, the Arts Council divides its money about equally between the capital and the provinces, if allowance is made for the sums required to send the London-based companies on tour. This is not so unfair to the provinces as some people like to suggest. It is all too easy to forget that there is a continuous stream of visitors to London from the provinces, to many of whom a special event in the arts world—like last year's Picasso exhibition at the Tate—is a highly respectable excuse for a trip to town.

Nevertheless the Arts Council is concentrating on giving injections to provincial activities. For instance, as the accompanying table shows, one of the main increases in its expenditure last year was on drama and the major part of the extra grant went to the repertory theatres and the expenses of sending the Old Vic on tour. The Arts Council is also paying out more in subsidising festivals, its contribution to those in England last year varying from 4 per cent of the total income of the Three Choirs Festivals to 27 per cent in the case of the Cheltenham Festival of British Contemporary Music.

Taxpayers, ratepayers, individuals, industry, trade unions, universities, voluntary bodies—all, in the view of the Arts Council, should share in the patronage of the arts. As a small step forward in its own activities, the council suggests it should have the power to contribute in a minor way to new building projects, such as providing a new municipal theatre with a stage-lighting system. This is a sensible idea. There is no doubt that display is a large part of the battle; however fine the quality of the arts, however good the play or orchestra, if shown —or heard—in the typical Victorian municipal building people will not be lured away from their fireside television.

THE SCOTCH OF SCOTCH Born 1820—still going strong

BOOKS

Future of Megalopolis

Metropolis 1985
By Raymond Vernon.
265 pages. 40s.

1400 Governments
By Robert C. Wood.
285 pages. 46s.
Harvard University Press. London: *Oxford University Press.*

THE first of these books offers an interpretation of the findings of the New York Metropolitan Region Study (of which eight* other volumes have been published), written by the director of the study. The interest of the book lies in its attempt to analyse and project economic and social developments in this vast urban region. The region is defined so as to include 22 counties lying within 3 states, with a population in 1960 of nearly 16 million. This region extends a minimum of 30 miles from the centre of Manhattan, and reaches out to take in the whole of Long Island, Fairfield county in Connecticut, and Dutchess and Orange counties in New York State.

"Metropolis 1985," like the whole study, has one great merit. It pays close attention to the economic forces that are shaping the physical growth and pattern of the region. Mr Vernon takes for granted a continued rapid growth of population and production in America, and concentrates on the New York region's share in this development. The region is favoured, economically speaking, because it contains a high proportion of those activities (for instance, finance, professional services, and a variety of manufacturing industries) which are likely to grow most quickly; but, on the other hand, the traditional competitive advantage of many expanding industries located in New York are growing less as industrialisation spreads across America. Mr Vernon's guess (he wisely presents it as no more) is that by 1985 the total employed in the region will have risen to 9½ million, and total population to 23.7 million. The biggest gains are expected in finance and in business and professional services, where employment will almost double.

Naturally enough, the additional people will not be living in New York City itself. The massive movement of families "from tenement to split level" will continue, so that, by 1985, if Mr Vernon is right, almost 5 million more people will be living in an "outer ring" of counties such as Suffolk (Long Island), Fairfield (Connecticut), and Monmouth (New Jersey). Employment will also be much more widely dispersed, but not quite to the same extent. New York City is expected to remain almost static in population, but to gain half a million more jobs—a formidable prospect for transport.

Mr Robert Wood's companion volume (the last of the series to appear) deals with the part of local government and public agencies in shaping the region's growth. The region has a formidable tally of over 1,400 local governments, including school boards and special districts. From the viewpoint of regional development (although not surely of good government), many of the activities of these authorities—for example, efforts to attract new industries—largely cancel each other out. Differences in functional efficiency and in tax levels vary considerably, but are not thought to be a major influence on development, except for prospective water shortages in New Jersey. More significant are the clashes between the giant transport and highway authorities, and little progress has been made with "integrated transportation," or the diversion of highway tolls for railway and tube improvement. As Mr Robert Moses has it, the future is still arriving on rubber tyres.

The weakness of these two books, as of the whole regional study, is that they overdo the significance of economic forecasts, especially as these forecasts are necessarily built on most slippery foundations. Consequently, too little attention has been paid to social, governmental, and other influences upon where people live and work. It is social tastes that have already reduced New York City's population below Mr Vernon's 1985 forecast, while causing faster growth on the more distant shores of Long Island. It is extensive zoning in one-acre lots ("zoning poverty out of existence," it is sometimes called) that is checking the growth of Westchester county's population. Some of the forecasts seem too deterministic. Is it really probable that the number of *manufacturing* jobs in New York City will continue to grow? And may not transport problems push much of the projected development into other, emptier regions?

"Metropolis 1985" illustrates the difference in the British and American attitude to urban growth. The fantastic urban spread that so appals British planners has a magnetism to Americans: what would our green belt planners think of the vast areas of very low-density housing arising for miles around New York? The market economy is accepted by the New York study as a central fact, with government activities as very peripheral, whereas British planners want the economy to comply with their social goals. But both groups have much to learn. A proper economic analysis of the forces behind the continued growth of the London region is long overdue. The New York researchers, for their part, should go beyond their "objective" (but still most uncertain) market predictions to a closer analysis of the other factors shaping regional development, and of the possible ways in which government could influence this pattern for the better.

*ANATOMY OF A METROPOLIS, by E. M. Hoover and R. Vernon. MADE IN NEW YORK, by R. B. Helfgott, W. E. Gustafson and J. M. Hund. THE NEWCOMERS, by O. Handlin. WAGES IN THE METROPOLIS, by M. Segal. MONEY METROPOLIS, by S. M. Robbins and N. E. Terleckyj. FREIGHT AND THE METROPOLIS, by B. Chinitz. ONE-TENTH OF A NATION, by R. M. Lichtenberg. Also a technical supplement (PROJECTION OF A METROPOLIS, by B. R. Berman, B. Chinitz and E. M. Hoover).

Mr Maudling's Ancestry

The Colonial Office in the Early Nineteenth Century
By D. M. Young.
Longmans. 320 pages. 35s.

MR GLADSTONE once observed that "the golden age of administrative reform" fell between the passing of the first Reform Act and the outbreak of the Crimean War. This judgment applies very readily to the history of the Colonial Office and in particular to the decade between 1836 and 1847 when James Stephen exercised his ascendancy as permanent under-secretary. But the author of this book, Mr Young, has looked back to the first thirty years of the century and has examined the origins of change in colonial administration as it was organised from Whitehall in that period.

The outcome has been a valuable piece of work, interesting not only in itself but also as a part of the larger story of administrative change that took place in every department of government under the impulse of the younger Pitt and the school of statesmen trained by him or in his principles. Pitt himself neglected colonial administration during his first, great ministry; so when the third secretaryship of state, which had been abolished in 1782, was restored in 1794, the original plan to allot it the supervision of the colonies as well as of war was not preserved, and instead, for political reasons, colonial business was left in the care of the Home Secretary. Only in 1801 did the third secretary of state become responsible for War and Colonies. Even then, until the war against France had been won, colonial affairs naturally took second place in this double office. But in the next fifteen years, and particularly in the prosperous years of the middle twenties, colonial business greatly expanded and dominated the office. It was then that the foundations were laid for the modern Colonial Office: by extending its accommodation; by increasing its personnel; by improving its methods of

'TEA WITH AN AUTHOR'

Every Wednesday until Nov. 22 in Harrods Georgian Restaurant at 3.30 p.m.

Oct. 18. Nicholas Monsarrat on "The Not so Cruel Sea"

Oct. 25. Commodore R. G. Thelwell on "At Home with Queens"

Future authors include Neville Cardus, Audrey Erskine Lindop, Laurens van der Post, Ursula Bloom.

Tickets including tea 5/- each from the Book Department, Second Floor and Library, Third Floor.

Please write for full programme.

Hutchinson

work; and by raising the intellectual status of those who conducted it.

The hero of this transition was Lord Bathurst, who was secretary of state from 1812 to 1827. A true "Pittite," Bathurst believed in making the existing system of government work and was always suspicious of sweeping reforms advanced on theoretical grounds. "There is nothing," he minuted on one occasion, "so fatal to investigation of truth as the having a preconceived system." No slave to forms for their own sake, he saw that they frequently embodied "the substance too"; and in his decisions of policy he fearlessly looked to the interests of the individual colonies under his care, even if this meant battles with reformers in Parliament and in the Treasury. When Huskisson abolished custom-house dues in 1825, Bathurst urged that the Treasury should pay for this—not the colonies—since the purpose of the reform was purely commercial and "the British Merchant will be much more benefited than the poor Planter."

But Mr Young is not in sympathy with Bathurst. He accuses him of "waspish obstruction of attempts at reform" and of "stout resistance to all change." And while he sees Bathurst as the "key figure" in this period, he ascribes the great advances in the Colonial Office more to the unco-ordinated enthusiasm of Wilmot Horton who, as he puts it, "boldly wove the new web round the solid core of Lord Bathurst's good nature." Nevertheless it is a measure of the excellence of Mr Young's book that, while putting forward his own interpretation of personalities and trends, he leaves it open to his readers to take different points of view on the basis of the ample information he has lucidly assembled.

Labour in the House

Parliamentary Socialism: *A Study in the Politics of Labour*

By Ralph Miliband.

Allen & Unwin. 356 pages. 35s.

No one can complain that the Labour party does not receive its fair share of academic studies these days, and Mr Miliband's is one more useful contribution. The theme of his analysis, Labour's devotion to the parliamentary system, and conditioning by it, is a valuable one. The historical treatment generally is sound. Mr Miliband assembles a mass of information from numerous sources: he is particularly illuminating on the periods of Keir Hardie's and of Ramsay MacDonald's pre-eminence, during which the effective autonomy of the Parliamentary Labour Party was established. The writer is clearly a partisan, yet not intentionally guilty of wishful thinking. A major concern for him is the defectiveness of Labour leadership, but he is equally frank about the ineffectiveness of the Left and fairly realistic about the mood of public opinion. However, his standpoint, though it may make for interesting reading, can hardly be substantiated to the satisfaction of most informed readers.

Of course, *plus ça change* . . . is as true of the Labour party as of any other institution, and the rift between Right and Left is not really new. Mr Miliband must look more deeply to pinpoint the causes of the party's specific failures, which, incidentally, were not always so serious as he seems to think. Generally his prescription is for more national campaigns, more parliamentary obstruction and, it would appear, direct action. There is no proof that the first two would have been any more successful in, say, the Munich era than the actual reactions of Labour in Parliament and in the country. As for industrial action for political purposes, the writer is far from clear about his own position, and his narrative provides the answer to whether it would be practicable.

Mr Miliband seems to be at his most pessimistic in his consideration of current Labour ideology, but this problem again is, as he shows, no new historical phenomenon. Labour has always had both its Milibands and its Croslands. It also has, we should remember, the trade unions and the co-operatives. Labour's effectiveness for the years ahead is not a challenge merely to its political and parliamentary wing, and its problems do not so much arise from the party's "respectability," as Mr Miliband's argument is inclined to run; effectiveness will also depend in no small measure on the adaptability of the institutions of the Labour movement, in the widest sense, to the needs and tasks of this new era and society.

The Holstein Papers, Vol. 3: *Correspondence 1861-1896*

Edited by Norman Rich & M. H. Fisher.

Cambridge University Press. 680 pages. 105s.

After the memoirs and the diaries, the first volume of Holstein's unpublished correspondence up to the end of 1896 has now appeared. It is really almost more than one had bargained for. Wherever the circumstances are precarious Holstein has invariably placed a confidant discreetly to inform him of every indiscretion. From Radolin he received letters with the most intimate information about the Crown Prince Frederick and his wife. Once the Crown Prince's illness had become critical, the distasteful battle began between the British doctor, Mackenzie, and the German medical advisers; Mackenzie, called in and backed by the Crown Princess, was blamed for his undue optimism and held responsible for the tragic death of Frederick after a three months' reign in 1888. The whole situation was used to inflame the personal resentments that culminated in Wilhelm II's hatred for his mother. It is interesting to find Philipp zu Eulenburg later boasting to Holstein of his struggle against Wilhelm's anglophobia.

Scarcely was his father dead than the new young Emperor set out on a naval excursion in order simultaneously to indulge his marine ambitions and to try his hand at what would now be called summit diplomacy in St Petersburg. This time Holstein had arranged with Kiderlen-Wächter to send him letters describing every detail of the voyage and the visit. The Kaiser was the second on board his *Hohenzollern* to be seasick, but, undismayed, he declared that he would travel like this each autumn and take many more ships in the future. He was accompanied by Herbert Bismarck whom Kiderlen described as having the greatest difficulty to induce the Emperor to listen to instructions from the ageing Chancellor: "he [Wilhelm II] seems to regard all this as very insignificant compared with the question of how he will bring in his fleet." In St Petersburg the Emperor replied in Russian to the Czar's toast in French, but, not having learnt the Russian for the word army, was unable to return the Czar's compliment to the German Army. On the whole this tiro's escapade went off better than many had feared.

By and large this voluminous collection of letters adds endless gossip and thus a certain colour to the history we know. "Now that you are more or less the absolute ruler," Holstein's old friend, Karl von Eisendecher, wrote to him four months after the dismissal of Bismarck, "one ought really not to plague you with letters." On the contrary, the old master spider wove his web with all these confidences, many of them surely as indiscreet as those promised by word of mouth. His power in the nineties was immense. He had defeated the Bismarcks, he enjoyed the intimacy of Philipp Eulenburg, the Kaiser's most intimate friend. At the beginning of 1894 Eulenburg succeeded Prince Reuss as ambassador in Vienna. This was part of a shift round that also made Bernhard von Bülow ambassador in Rome and which fortified Holstein against the defeated Bismarckians still left here and there in the German foreign service. While Prince Reuss wrote to Holstein to say that the tradition of a great age lived on in him, Holstein continued to receive details about the All-Highest from Eulenburg, whose frequent absence from Vienna was quickly the subject of adverse comment.

Radio Robots

Communist China Today

By S. Chandrasekhar.

Asia Publishing House. 199 pages. 21s.

Professor Chandrasekhar, Director of the Indian Institute for Population Studies in Madras, toured Communist China at the end of 1958; he had previously seen something of Kuomintang China in 1940. As a specialist on population problems, he was chiefly interested in the Communist attitude towards the increase of China's already enormous aggregate of human beings; he was also concerned, however, to observe what he could of the workings of the social and economic institutions of the People's Republic, bearing always in mind the analogies between China's basic problems of development and those of India.

The author found much that was impressive and praiseworthy in China's economic effort, but as an Indian of strong democratic convictions he was appalled at the complete regimentation and uniformity of Chinese national life. Although he was hospitably received by officials, he could make no real personal contacts, and never came across anyone who would admit to a thought independent of official propaganda. The system seemed to him to be producing a race of "robots responsive to radio." The ubiquity and incessancy of radio loud-speakers appears, indeed, to have been the strongest of all the impressions he carried away with him from China. "The voice," as he puts it, "blares away at one in the bus, in the train, in Pullman sleepers and dining-cars, on street corners, in villages, towns and cities . . . even in the most backward villages I saw the loudspeaker hidden in the tree tops."

The radio propaganda, which reaches everyone throughout China, has three main functions: to glorify the Communist party

BRITISH CO-OPERATION

by A. Bonner

The most important book on the British Co-operative Movement since the publication in 1934 of "Co-operation" by F. Hall and W. P. Watkins has just been published by the Co-operative Union. Written by Arnold Bonner, who gained with distinction the Oxford University diploma in Economics and Social Science, "British Co-operation" deals with the history, principles and organisation of the Co-operative Movement from its commencement to the present day, emphasising its development since the first world war.

This major work of 540 pages now becomes the standard text book for students of Co-operation, but, far from being just a text book, it is the most comprehensive and up-to-date work of its kind and will for many years be the principal work of reference on British Co-operation.

Comprising 18 clearly divided chapters, the book also contains a comparatively short historical section with appendices which include extracts from important historical documents, as well as a biographical dictionary, a list of publications, and the principal provisions of the Industrial and Provident Societies Acts.

Price 17s. 6d., by post 19s. 6d. Published by the CO-OPERATIVE UNION LTD., Holyoake House, Hanover Street, Manchester 4.

CAMBRIDGE BOOKS

The Steel Industry, 1939-1959

DUNCAN BURN

Mr Burn's long awaited sequel to *The Economic History of Steelmaking, 1867–1939* (again available) continues his account of the developments and achievements of the steel industry in Great Britain, Western Europe and the U.S.A. up to 1959. The emphasis of this volume is on competition and planning, and there is a full analysis of factors that have affected the rate and pattern of growth. 744 *pages.* 80s. *net*

Essays in the Economic & Social History of Tudor and Stuart England

EDITED BY F. J. FISHER

Ten essays, prepared as a tribute to R. H. Tawney on the occasion of his eightieth birthday, dealing with aspects of economic and social history during 'Tawney's Century'.

CAMBRIDGE UNIVERSITY PRESS

and its achievements, to inculcate hatred of imperialist America, and to exhort the people to ever greater efforts in production. The amount of work done by the people under the impulsion of the regime the author found to be prodigious, but he maintains that the principle of treating manpower as capital often means that ten men are put to do the work of one, so that even with China's enormous population there tends to be a shortage of labour—one result of which has been the reversal of the previous communist policy of trying to limit the increase of the population through birth control.

Hinduism in Indian Life

The Soul of India

By Amaury de Riencourt.

Cape. 447 pages. 25s.

MR DE RIENCOURT'S theme is the interaction through time of Hindu thought and Indian society. His central doctrine is that the Hindus are a people of space, not time. Their emphasis is on the immanence of God in the universe, not, as with the Jews, on the working out of God's purpose through history. For them eternity does not go forward, but round in circles. The world is an illusion, creation but God's play, to be succeeded endlessly by destruction and new creation. Therefore, the best Hindus have concentrated on mystical experience, for which the necessary preliminary is the stripping away of the personality, and which is in the end incommunicable because it is beyond logic.

Therefore, too, the Hindu mind is unworried by contradictions, since logic is a trammel, and knows no one divinely revealed system of ethics; since it is not loving one's neighbour, but total non-attachment either to one's neighbour or to oneself, that is the way to salvation. Hence the meaningless cynicism of so much of Indian history, with its wars without principle and its princes without morals. Hence, too, the suitability for the old India of the caste system, which enabled different groups to follow different rules of life, and still to live together in peace. Hence, finally, the endless tolerance of Hindu life; where only return to the One matters, there is no need to quarrel over the approximations of this world.

Muslim conquest created a Muslim community in India, whose sense of separateness led eventually to Pakistan. It did not essentially change Hinduism, except to make caste more rigid. British rule, however, did shake the Hindus, both through the evident British material superiority, and through the Christian concern with one's neighbour. The westernised intellectual, symbolised by Nehru, represents India's attempt to absorb western knowledge. The succession Ramakrishna, Vivekanda, Gandhi represents Hinduism's acceptance of the need to attain salvation through works in the world also. Hinduism is still the fundamental fact of Indian life; the bar to communism, which rests on a world view steeped in the idea of progress through history; the cornerstone of a unity threatened by linguistic differences; the possible mother of a reaction to a self-absorbed and xenophobic past.

Indian history is so uncertain that it is possible both to defend and to attack most of Mr de Riencourt's dicta. One does not know whether the Harappan civilisation was bourgeois, or whether Indian kings in fact read Kautilya, or whether the Mauryas were really conquerors of a quite different order from the Satyavahanas or the Guptas, or whether race had anything to do with caste. Sometimes Mr de Riencourt is clearly wrong: the Industrial Revolution did not depend on the plunder of Bengal; the zemindars were not the major moneylenders; British idealism as well as British weakness brought about the independence of India; Gandhi had an aim of independence he never forgot, and did not simply move from disconnected present to disconnected present. But none of this really affects Mr de Riencourt's main contention. Here it is more important that he has probably overestimated the importance of monism and underestimated that of bhakti. The Indian today is less devoted to mysticism, and more devoted to his personal God and his daily duties than Mr de Riencourt allows. One suspects that it was always so.

Peter Stubs, File-maker

An Eighteenth Century Industrialist: *Peter Stubs of Warrington, 1756-1806*

By T. S. Ashton.

Manchester University Press. 166 pages. 21s.

THIS reissue of Professor Ashton's famous study of a Warrington file-maker, first published in 1939, only serves to show what a superb piece of historical writing it is. Business history has flourished greatly since the Manchester school of economic historians inaugurated it, but no one has matched Mr Ashton's ability to express the essential problems of business enterprise so vividly and yet with such wonderful discipline and economy.

Of the good things there seems no end. We see Stubs beginning as a small master, making files to the order of merchants and manufacturers (who usually supplied him with steel in return), his wife taking in washing to make ends meet. Later the file-making business was extended and combined with the role of malster-innkeeper-brewer, activities that were mutually helpful. The beer barrel dregs provided good protective paste for the files, while the inn was a good centre for industrial and friendly society activities. Eventually Stubs had his own factory; he branded his goods and widened the entrepreneurial function to establish direct contact with retailers and to eliminate the middleman in the sale of manufactured goods. A fascinating account is built up of Stubs's relations with his normally debt-ridden workers and of his attempts to resolve two of the most serious problems he had to face—transport and the means of payment. The Ashton touch is superb; never too much detail but always enough to make the book live.

Stubs was obviously a good employer for his time, not above a little chicanery over discounts and the like now and then, fond of racing and good company, and dying before the real returns for his efforts could be reaped. There is his daughter, Sarah, writing so fluently and charmingly and only sixteen at that. Would that Mr Ashton had constrained himself less here and told us more; when last mentioned she had a slightly broken neck. There is the outworker, Carolus Charles, vainly seeking to escape his creditors and seeing his son hanged for rape. It is a fine human document as well as an incisive study into the mechanics of an emerging industrial economy.

Too many academic business historians, though aspiring to Mr Ashton's scholarship, ignore his wit and humanity and above all his brevity. We must thank the Manchester University Press for giving a new generation the chance to keep this rare book ever present on their desks.

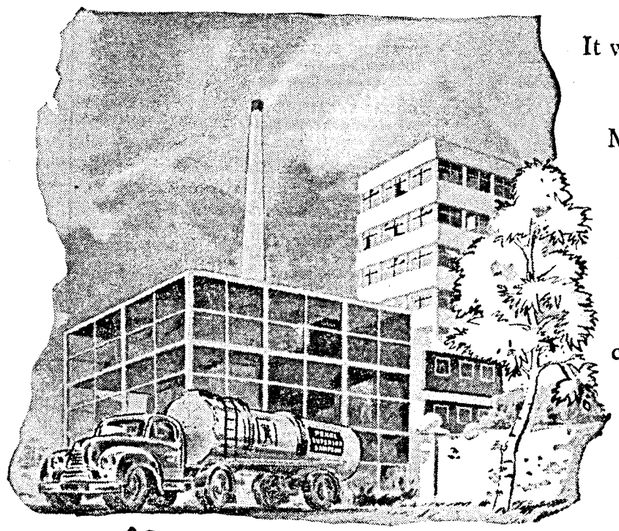
OTHER BOOKS

MAJOR DOCUMENTS IN AMERICAN ECONOMIC HISTORY. Edited by Louis M. Hacker, *D. van Nostrand.* Anvil Original. Vol. I, 188 pages; Vol. II, 187 pages. 9s. 6d. each.

These paperbacks in handy format contain texts of most of the important American documents pertaining to finance, development and trade, tariffs, immigration, inter-State commerce, censuses, silver, anti-trust laws, investment in the United States, railways, canals, etc.: they are well worth their price of less than a pound sterling.

STATISTICAL SUMMARY OF THE MINERAL INDUSTRY: *World Production, Exports and Imports, 1954-1959.* Overseas Geological Surveys, Mineral Resources Division. *Her Majesty's Stationery Office.* 400 pages. 27s. 6d.

CENTRAL EUROPE. By Alice F. A. Mutton. *Longmans.* 499 pages. 50s.



Today, when Europe is either east or west, there is a real doubt about the existence of Central Europe, and Dr Mutton is therefore to be applauded for her courage in trying to write about it. Even on her restricted definition of what constitutes Central Europe, the writer is faced with the need to bring within the limits of a single regional treatment countries so economically, culturally and politically disparate as the Netherlands and Slovakia. Perhaps because of the difficulty of treating "Central Europe" as a whole, most of the book is in fact given over to orthodox regional description on a country by country basis. The writer evidently shares the usual English passion for mountains, and this is fortunate, as there is a curious lack of geographical material in English on Switzerland and Austria. Away from the Alps, however, the adequacy and accuracy of factual information decline, especially with the passage of the "iron curtain." Towns are incorrectly placed (which reference to an atlas could have avoided), the economic information is unreliable, and the human geography sometimes garbled. This is a pity, for the book otherwise contains much that would be useful for the advanced students of geography for whom it is intended.

The Old World made Hercules . . .

. . . to-day Hercules is helping to build the NEW WORLD

Hercules and the Augean Stables.

It was by meeting the challenges of his age that Hercules of old earned immortality . . . . To-day, Hercules still meets challenges. More—he anticipates them. For in industrial chemistry, research by Hercules Powder Company has produced many a "breakthrough" leading to better things. Take packaging for instance. Packaging materials need to be sized, given strength when wet, printed, protected, stuck together. Hercules can claim many important advances in these fields. If the New World is better off for better packages, Hercules has a hand in it. Hercules has some key-words for his successes. Words like Pexol—Kymene—Pentalyn—EC—Neolyn. You should know what they mean.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Aid on the American Plan

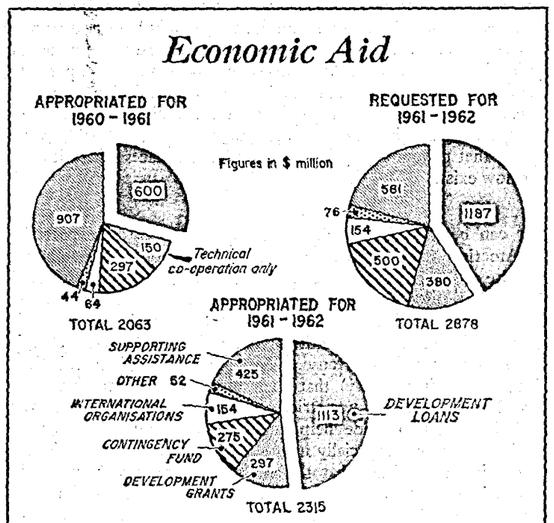
WASHINGTON, DC

THE United States has not been doing well lately in the battle for the billion or so "non-aligned" people who are believed to hold the balance of power in the world. President Kennedy intimated in March that he thought long-range plans were what gave the Soviet Union an advantage in the field of foreign aid. He said that they enabled Russia to advance its schemes for world communism by making less developed countries "economically dependent on Russian support." The United States, by contrast, has expended its energies and its help in dashing from one economic crisis to another in different countries like a fireman putting out fires while people died of thirst. From now on, the least developed countries will be encouraged, even commanded, to adopt "national development programmes" into which American loans at little or no interest, American surplus food and American equipment, technicians and know-how will be fitted. A decade of development is to replace what one critic has called "a decade of aimless fumbles."

The short title of the new aid legislation is the Act for International Development. This was also the name of President Truman's vaunted Point IV programme. But the tonics dispensed under past schemes are now dismissed as "haphazard and irrational" by Mr Kennedy and "muddled and confused in operation, often mediocre in administration" by Mr Eugene Black of the World Bank. Mr Black also declared last week in New York that foreign aid had failed to stop communism, make friends or expand American trade. The confusion has extended from Japan, where President Eisenhower was not received, to North Africa, where military aid to France has been used against Algerians, and to Cuba, where arms for President Batista led only to a near-communist government. Mr Khrushchev is identified by many citizens of the less developed countries as their potential friend, while the United States and its allies remain identified with what Senator Humphrey has called "the rich, the powerful and the steel companies."

Congress gave Mr Kennedy an economy version of the new lamp he asked for. Originally the President wanted seven separate aid programmes, including the Peace Corps, to be integrated into a single agency. What in fact has been done is to rename the International Co-operation Administration, to lump the Development Loan Fund in with it and to give the whole thing higher standing in the State Department. But Mr Fowler Hamilton, the new head of this new agency for international development, feels that the important thing is to create an entirely fresh spirit in an at least partly fresh staff, so that dams and roads can roll efficiently off the assembly line in the less developed friendly countries. Therefore he plans to run the agency "like the four billion dollar enterprise it is," manning the upper levels with big business names if he can get them, as well as with top economists and scientists. He calculates that Congress will be ready to give such men of proven ability whatever sums they say they need, within reason. But if this calculation should fail, the appropriation committees, while probably acknowledging a moral obligation to furnish money for the loans that the President is now authorised to promise in advance of appropriation, may hack the more savagely at other foreign aid funds, such as contingency appropriations, in order to reduce the total to the figure that they, not the President, deem sufficient.

There are still suspicions concerning the sort of genie the new lamp will produce when it is rubbed by Mr Hamilton. He says that the agency will gladly extend aid to foreign capitalists, not just to foreign governments. There is nevertheless a fear that the private corporation, the characteristic powerhouse of American enterprise, may be relegated to a subordinate role, in favour of the kind of government-to-government dealing in which the Soviet Union has had the most practice. Senator Capehart has said that he tried to ensure that half the aid funds going to Africa went to private enterprise, but was told that in the new African countries which are to receive aid there was no private enterprise to encourage. He concluded that America was simply "hurrying along the day when these nations will be socialised." It would certainly be ironical if the United States unconsciously helped to export the Russian socialist, instead of its own American, revolution. Senator Capehart is one of the most conservative Republicans, but many other Americans believe that the purpose of aid should be to ensure that private enterprise is established in places where it does not now exist.



IT can be argued, however, that AID is hoping to export the American dream of the cleared forest, the little red schoolhouse and the court of law, with a consequent growth of fairly distributed and well-diffused wealth, culminating in the appearance on the scene of a local General Motors Corporation, and with an indigenous John F. Kennedy in the no longer less-developed country's equivalent of the White House. Most Americans, it is true, believe sincerely (if erroneously) that their own national progress from coonskin cap to riches was strictly a bootstrap operation, achieved entirely without outside help and indeed with a great deal of foreign hindrance, especially in the early stages. But there is also a growing recognition that the American forests and plains, in spite of the Red Indians, were perhaps a softer proposition than equatorial jungles and tropical diseases. Also, Americans brought with them to the new world a feeling for thrift and hard work which, unhappily, today's less developed peoples are rarely blest with in their very different environments and with their startlingly different customs—for instance, cow-worship and caste systems. But the Americans are anxious to implant among the less developed the virtues that made them great themselves. The National Association of Mutual Savings Banks, with over $40 billion in the kitty, proclaims itself "ready, willing and able to offer know-how to underdeveloped nations to encourage thrift, on a basis that unsophisticated nations can understand."

Mr Hamilton says that aid will go first to the countries which display the American virtue of self-help. The national development plans that their governments produce will have to be judged to have a reasonable chance of success before loans are forthcoming. The top people in countries to be aided must no longer refuse to pay taxes on the excuse that these only enable the finance minister to acquire another mistress. American technicians will not be sent to underdeveloped countries merely to serve as a base for a bureaucrat there to build himself a pyramid of power on the Parkinson plan. More equal opportunities will have to be

created for the mass of people by, for instance, taking land from the rich and distributing it among the peasants. Such countries may conceivably even be asked to do something about their population problem; it is estimated that, at its present rate of procreativity, Latin America will need to double its income in the next thirty years merely to keep its living standards at their existing miserable level.

A spirit of self-help, however, will not suffice by itself. It is commanded that "great attention and consideration should be given to those nations which share the view of the United States on the world crisis." This phrase was inserted in the appropriation Bill by Congress as a hint to President Tito of Jugoslavia, following his apparent defence of Russia's resumption of atomic tests. It was said that Ghana would have to satisfy the requirement of friendliness before it gets the promised assistance for the Volta aluminium and hydro-electric project although the President seemed to soften this at his press conference this week. Henceforth, the United States is going to be much more unwilling to submit to blackmail along the lines of "more aid, or we turn to Russia." And the Department of Defence may be less able than in the past to obtain dollars for the propping up of undemocratic regimes on the ground that they are staunchly anti-communist.

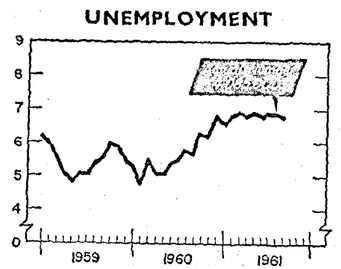
Economic Aid

THE character of foreign economic assistance has changed radically this year. As the chart shows, the funds for development loans have doubled, while the grants for supporting assistance—to countries which otherwise could not meet their heavy military commitments or which are on the verge of economic collapse—have fallen sharply. Such grants have been viewed with increasing suspicion by Congress as constituting an endless drain and the President's original request reduced them, though not as drastically as Congress did in the end. Technical assistance is now lumped with various other programmes under the heading of development grants. In addition to this new money, Congress authorised the use of $69.5 million from unspent earlier appropriations. The appropriations measure also included $30 million for the Peace Corps, $110 million for the Inter-American Development Bank, $61.7 million for the United States subscription to the International Development Association and $7 million for the administration of the Ryuku Islands. In all, overseas economic assistance during this fiscal year, which began in July, will cost $2.6 billion; an additional $1.6 billion is to be spent on military assistance.

The aid legislation declares that one of its aims is "to help make a historic demonstration that economic growth and political democracy can go hand in hand." This did not prevent President Abboud, who was welcomed in Washington with a big street parade last weekend and entertained in the White House with an excerpt from "Macbeth," from remarking that he hoped for aid but would not permit political democracy in the Sudan. But he and others may find that times are changing.

Filling Mr Rayburn's Shoes

THE President flew 3,000 miles this week to Texas to pay a farewell visit to Mr Samuel Rayburn, who has been in the House of Representatives since 1913 and who has been its Speaker (with the exception of two short periods when the Republicans were in control) since 1940. In "Mr Sam" the country is losing an important link with an earlier America and the President a man whose long experience gave him unusual authority over the unruly and unwieldy House and who had a keen sense of how far it could be coaxed or driven. The chaos which followed Mr Rayburn's departure at the end of August is warning of the trouble which may be in store for the White House next year. Even the ablest of successors could not hope, at the outset, to fill Mr Rayburn's shoes.



Traditionally the majority leader, in this case Mr McCormack of Massachusetts, succeeds the Speaker and, in a body where seniority is so sacred, tradition is hard to flout. There are reasons for doing so this time but it is hard to believe that they will prove persuasive. As acting Speaker in the last month of the session Mr McCormack's performance—particularly over the foreign aid Bill—left much to be desired, though it would not have been easy for any man to exercise real authority with only a temporary mandate. Moreover he is a Roman Catholic at a time when one of his co-religionists is President and another is the majority leader of the Senate. Finally Mr McCormack is not on the best of terms with the White House, partly because of the part he played over the education Bill, partly because he and Mr Kennedy have clashed for a long time in their native state of Massachusetts.

But none of the other candidates is without drawbacks. Mr Albert, of Oklahoma, who has been promoted to be temporary majority leader, is fair and has few enemies but is no driver; Mr Walter, the chairman of the Committee on Un-American Activities, who has postponed his retirement on the chance that he might be chosen, has an illiberal reputation on immigration and civil liberties, although he is popular personally even in unexpected quarters; Mr Bolling of Missouri, one of Mr Rayburn's most effective lieutenants, who might have been the Speaker's own choice, is well regarded by the White House but is too young to have accumulated much seniority and is too liberal for many members. Probably only Mr Rayburn himself could have prevented Mr McCormack's succession; certainly it would be imprudent for the President to intervene openly. In the three months before the decision must be taken, the White House seems likely to use its influence discreetly to secure the choice of a strong majority leader in the hope that he may become Speaker before too long; Mr McCormack is 69.

Recovery at Work

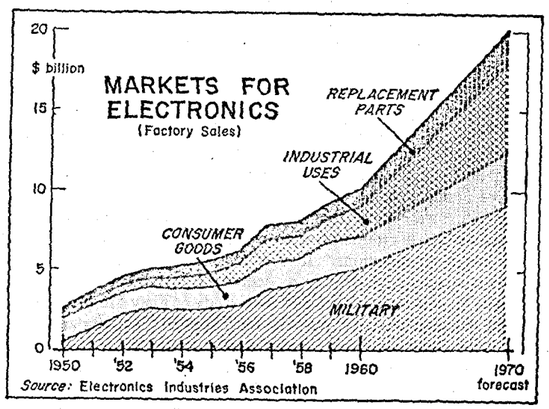
IN the usual monthly flood of statistics on the employment situation in the United States the Secretary of Labour, Mr Goldberg, has found solid ground for optimism. In September the number of non-farm wage and salary earners rose to a record 53.9 million, an increase of 500,000 for the month and a gain of 2.6 million since February, which marked the low-point of the

recession. This seven-month gain is double the usual seasonal improvement and includes a very welcome increase of 500,000 in the motor, steel and other durable goods industries which bore the brunt of the recession. Moreover, there is good reason for thinking that the September showing would have been considerably more encouraging had "special factors" not conspired to depress the labour market in the week that the count was taken. Hurricane Carla left her mark off the farm as well as on it (particularly in the construction industry); the strike at the General Motors Corporation held back the recruitment of workers to turn out the new cars; and the Jewish New Year reduced the number at work in the garment trade and elsewhere.

As percentage of labour force, seasonally adjusted.

In the course of September the number of those without work fell by 450,000 to 4.1 million; although still a very high figure it compares favourably with the 5.7 million jobless last February. Even so, the seasonally adjusted rate of unemployment, at 6.8 per cent, showed little change from its level of the preceding ten months. Again, a "special factor" can be blamed; between August and September, with the schools and the armed services dipping heavily into the labour pool, the size of the civilian labour force (at work and out of work) shrank by nearly two million; this kept the percentage from falling.

Although unemployment is expected to decline substantially between now and Christmas, there is still clear need for special measures. One out of every ten unskilled workers is currently out of work and 800,000 teenagers, many of them at present fitted only for unskilled work, are among the unemployed. It was therefore regrettable that the House of Representatives (thanks to its Rules Committee) postponed until it meets again in January consideration of a Bill already passed by the Senate to train the unemployed in new skills at public expense. At the same time, the five-month old programme for pumping $394 million of loans and grants into "depressed" areas has (with only two minor projects to its credit) barely got off the ground. Since each successful applicant must both produce long-range plans and receive the blessing of some seven government departments, the impact of the programme on unemployment is likely to be somewhat delayed.



Growing Pains in Electronics—II

FROM A CORRESPONDENT IN CALIFORNIA

IN the copious literature about electronics firms provided by investment houses, little emphasis is placed on the part played by government contracts in the rising volume of their sales. Much more is made of the glittering civilian future of the esoteric devices—diodes and triodes, masers and lasers, transistors and capacitors—that so far have had meaning and usefulness chiefly for the armed services. But the fact is that the dramatic growth of the industry, which now employs 750,000 people (including a fifth of the country's engineers) has been generated and sustained largely by military orders. Not only have defence budgets increased almost continuously, but the role of electronics in armaments has more than doubled. Government demand seems certain to go on growing. Space research and exploration is expanding rapidly and an ever larger proportion of every military dollar is channelled into electronics because missiles, which are replacing manned aircraft, rely much more heavily than aircraft upon electronic gear.

On the other hand, the production of radios, television sets and other consumer goods, which constitute the second largest segment of the industry, has been beset with such difficulties that it experienced little growth during the whole decade from 1950 to 1960. The latest and probably most menacing difficulty, the large-scale imports of cheap Japanese electronic goods, threatens to depress even further a business already suffering from slackening demand. Last year consumer purchases only just managed to exceed the $2 billion spent in 1959, and early in 1961 sales dropped toward the annual rate of $1.5 billion, which had been reached as early as 1950 when consumer goods made up 60 per cent of the industry's sales. Television sets account for more than half of the sales to consumers, but nine out of ten households already have a set. The demand for replacements, exports, the growth of the population and improvements such as colour television are not enough to make the coming decade look inviting.

The part of the civilian industry which is growing the most rapidly and looks the most promising is that which is adapting to the use of industry and commerce devices—most of them developed for military purposes—that can perform a whole range of tasks more quickly and more economically than present methods can. Progress in this field depends, necessarily, on the general level of capital spending by business and its willingness to pay the high costs of what are admittedly better methods. They have been used most successfully in clerical work and accounting; banks,

insurance companies and government agencies are all resorting to electronic computers to deal with their rising flood of paper work. The future looks particularly bright in the field of microwave communication and in the "automation" of industrial processes through the use of continuous processes to test and analyse materials and control quality.

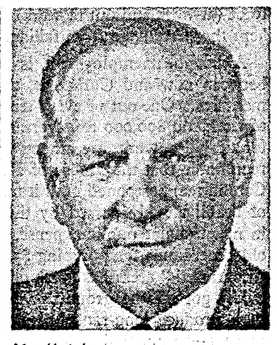
The manufacture of basic electronic components—tiny (and large) tubes, transistors, diodes, rectifiers and many others—accounts for about one-third of the industry's factory sales. They command a market of about $1.3 billion a year and are used in a wide variety of consumer and industrial products. But the replacement demand is slight, because the outstanding characteristic of many of these components is that they hardly ever wear out. In the past five years enormous strides have been made in "solid-

state" devices, so-called because they involve the movement of electrons through solid materials (semi-conductors) without moving parts, rather than through heated filaments or vacuum tubes. The original solid state device, the transistor, first appeared in 1949, but its use spread so slowly that by 1955 sales still amounted to only $37 million a year. But demand from the services (an advanced missile may require more than 100,000 semi-conductor devices) has helped to push sales up to $600 million this year and it is estimated that they will total $1 billion three to five years from now. Obsolescence is rapid, however, in this field: just as the vacuum tube was supplanted by the transistor, the transistor in its turn is being succeeded by newer and tinier devices which operate at speeds a hundred times greater, use a hundredth of the power and take up a hundredth of the space. Once "miniaturisation" was said to be the advantage of semi-conductor devices, but now the watch-word of the industry is "sub-micro-miniaturisation."

But by far the most important product of the electronics industry has been ordinary shares. Issues of electronics companies provided the most popular vehicles for the speculative surge which carried the stock markets to new high levels in the past decade and they have been especially prominent in the flood of new issues and the increase in over-the-counter trading (that is, trading outside the established stock exchanges). During the nineteen-fifties the prices of electronics shares far outran the rise in the standard stock market averages and they managed to remain strong after the market turned down early in 1960. Electronics shares had their own, more severe, recession in the second half of the year, but they still sell for prices that, relative to their earnings, are much higher than industrial shares in general. Most electronics issues still command prices 50 to 70 times their annual earnings while the average for industrial shares is about 18 or 19 times earnings; some electronics firms with no earnings at all are popular with investors looking for companies with the greatest supposed possibilities of growth.

Almost any share with "electro-" or "-tronics" or "aero" in its name is easy to sell, even if the firm, like one called "Aero-Dynamics Corporation" is only in the business of importing Italian marble and tiles. Even when only legitimate firms are counted there has been almost continuous creation, often by a kind of fission process, of new electronics companies. At the last count there were more than 4,000, most of them very small ones formed by small groups of scientists which have split off recently from larger organisations. It is widely known that, as employees, electronics scientists display a degree of instability approaching that of the sub-atomic particles they study. They are often reluctant to abandon academic pursuits for "applied" activity and many care little about the high salaries that are offered for their scarce services or the fortunes that Wall Street has heaped on some of them who have set up their own companies. Therefore the advertisement columns of the newspapers and technical journals are full of appeals that stress the recreational and academic resources that a firm in, say, California can offer and the stimulating intellectual atmosphere of its laboratories. The scientists' personal preferences have influenced the geographical pattern of the industry, which is concentrated largely in six or seven centres, usually near university communities in places with better-than-average climates. Electronics is a light manufacturing industry which can be carried on outside industrial centres; it requires little in the way of space or raw materials and many companies started in the basement or garage of a scientist at a university, who later built his factory nearby.

One further quality of the scientists—their discomfort at feeling "lost" in a large organisation—has been at least partly responsible for the failure of some firms to grow as expected and even for the over-production of semi-conductors. Companies expanding in order to qualify for large government contracts have often found that a key man or scientific team has begun to feel engulfed and has moved—often only down the street—to set up shop independently. The Bell Laboratories not only gave the transistor and its multiplying family of semi-conducts to the world in 1948, but they were also the original source of many of the scientists who now head the firms that are manufacturing a surplus of such devices. The enthusiastic stock market encouraged the atomisation of the industry by pressing capital on the scientists who sought independence.



Nixon's Hurdles

As Governor of California, the second most populous state, Mr Nixon would have a powerful political base and a platform from which to express his views; he lacks both as a private citizen. By standing next year he will earn the gratitude of his party, which wants to recapture California and elect as many as possible of its thirty-eight Representatives. Moreover, the promise he has had to make—that he will not be a candidate for the Presidency in 1964—means that he will have an excellent excuse for sitting out a presidential election which is not likely to be won by a Republican. But if he is defeated in California, Mr Nixon probably will be out of politics for good. The hurdles to be surmounted explain why it took him so long to make up his mind to take this gamble.

The Republican nomination for Governor, which will be decided at an intra-party election in June, is not Mr Nixon's for the asking.

Governor Brown

Mr. Knight

There are three other men in the field, notably Mr Knight, an ex-Governor who blames Mr Nixon for the party pressure which forced him to withdraw from the race for Governor in 1958 (he ran for the Senate instead and was defeated). Early last month Mr Knight invited Democrats to invade the Republican primary to defeat Mr Nixon. Last week Mr Knight charged that an emissary of Mr Nixon promised him any appointive job in the state if only he would not contest the nomination—an offer which Mr Nixon says was made without his knowledge. The sight of Republicans trying to cut each others' throats has the Democrats rubbing their hands; a hard-fought primary might leave the victor badly bruised. Lack of money may hamper Mr Knight but he is not a negligible opponent; he has kept himself in the public eye as a television commentator and he has strong links with labour, which is powerful in the state. Mr Nixon has already gone part-way to meet the hostility of the trade unions by opposing the passage of right-to-work (anti-trade-union) legislation which, as Mr Knowland discovered in 1958, is political poison in California. Mr Nixon has also disowned the support of the extreme right wing group known

SHERATON HOTELS

IMMEDIATE CONFIRMATION

EXCELLENT accommodations reasonable rates

From New York to San Francisco, from Montreal to Dallas, there's a Sheraton Hotel waiting to welcome you. Each is located in the heart of the city, near business districts, theatres and shops. In addition to fine food and superb service, Sheraton Hotels offer many extra values such as the Family Plan (children under 14 FREE when they share your room), air-conditioning, free TV and radio. If your ship or plane is delayed, Sheraton will hold your reservations. To get reservations at any Sheraton Hotel, see your travel agent or Sheraton's General Agent:

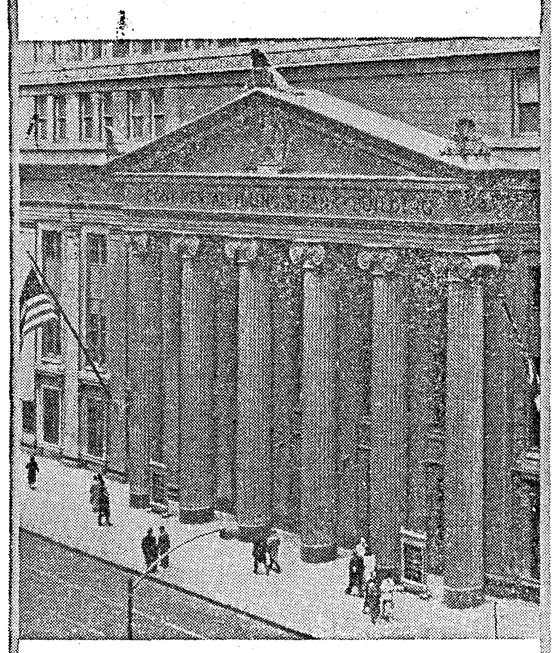
Brandy this good has no stars on its label



No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good.* In a word, Remy Martin cater for the one man in a hundred who refuses to offend his palate—or his guests—with any brandy less good than Fine Champagne V.S.O.P. Just ask for Remy Martin.

as the John Birchers who, in consequence, will probably support a third candidate, the Republican leader in the State Assembly, Mr Shell.

This move away from the right is essential if Mr Nixon, assuming he wins the Republican nomination, is to defeat Governor Brown in next November's election. There are a million more Democrats than Republicans in the state and, although Mr Brown's administration can be (and is) criticised, he is not an unattractive candidate. It is true that Mr Nixon carried California as a presidential candidate in 1960, but only by a hair's breadth and thanks to the absentee vote ; he had the advantage then of all the impetus of a national campaign. Now his opponents—both Republican and Democratic—are bearing down on his lack of experience or interest in state politics and his long absence from the state. Mr Miller, the Republican national chairman, did his candidate no good when he insisted this week that Mr Nixon would not be able to resist a presidential draft in 1964, whatever he says now. Californians do not like to think of their Governorship as a pawn in national politics.

Deadlock on the Columbia

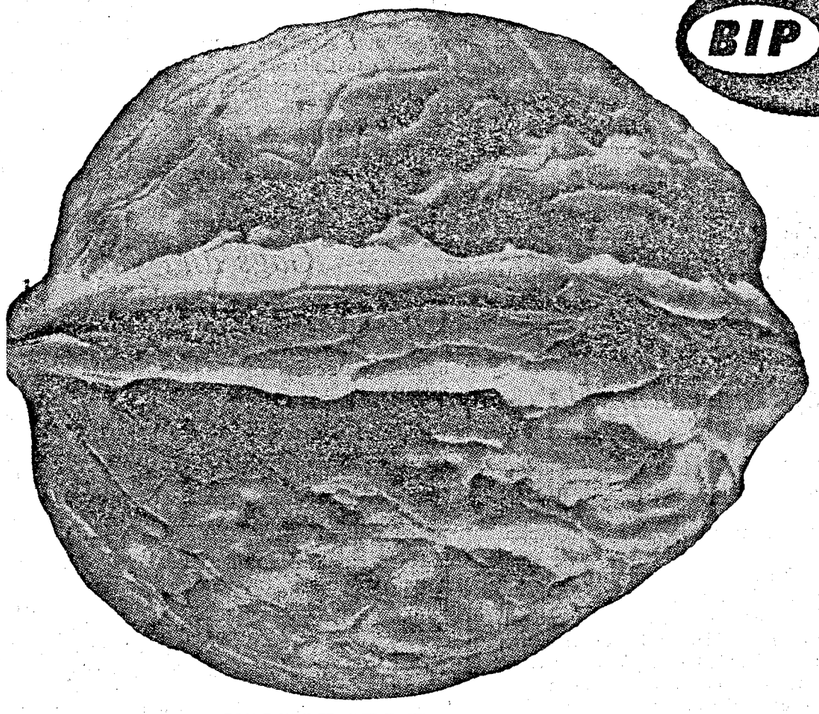
FROM A CORRESPONDENT IN OREGON

THE states of the Pacific Northwest, which share with British Columbia the rich lands and resources of the Columbia River basin, are waiting anxiously to see whether the Canadian parliament will make its peace with the provincial government so that plans for the joint development of the Columbia by the United States and Canada can go ahead. After years of intermittent negotiation, a treaty for this purpose was signed last January by Mr Eisenhower (three days before he left the White House) and by Mr Diefenbaker, the Canadian prime minister. It provides for the construction of a series of huge storage dams, mainly in Canada, so as to increase substantially the output of the American power plants lower down the river. The treaty also settles the delicate question of how the resulting benefits (which will accrue on American soil) shall be apportioned: one-half of the additional power will be routed back across the border to Canada.

The United States Senate approved the treaty, but the Canadian team has worked itself into a deadlock. Ratification is being held up primarily by a disagreement between the government of Canada and the provincial government of British Columbia over the question of the export of electric power. The Social Credit government of British Columbia, headed by Mr Bennett, is interested in the Columbia River scheme only if it is allowed to export the province's large potential surplus of hydro-electricity to the United States. The Conservative regime in Ottawa, on the other hand, has so far maintained Canada's traditional stand against the sale of power to the United States on the grounds that there is little point in flooding large areas of Canada for the benefit of American consumers and that once power starts to flow south it will be lost to the Canadians forever. The prospect of huge surpluses of electricity in British Columbia would not be so serious had Mr Bennett not switched his main interest to the development of another rive—the Peace River in the far North—which obligingly steers clear of American territory throughout its course. In August Mr Bennett expropriated the main privately owned power companies in the province and put his government in a position to develop more hydro-electricity from this one river than could be used by all western Canada in the next decade.

Looked at from south of the border, prospects for the great Columbia scheme look distinctly unpromising unless the Canadians can work out a compromise on the vital question of exports. Mr Bennett for one is clearly not without hope that he will be in a position to sell electricity to the United States ; in past weeks he and members of his cabinet have visited California (which is always hungry for more power) and have talked business with the Pacific Gas & Electric Company, the big private firm. Also, Mr Charles Luce, the head of the Bonneville Power Administration (and Mr Kennedy's chief spokesman on power in the Northwest), has offered BPA's services in "wheeling" electricity from British Columbia to California. What is much less certain is whether Congress would be prepared to sanction the building of the necessary transmission line. Nevertheless, there is little doubt in the states of the Northwest that some arrangment could be made for marketing British Columbia's surplus if Ottawa were to give the green light ; if it does not the whole scheme seems likely to be put on the shelf.

Gags and Gaffes



ON October 5th Mr McNamara, the Secretary of Defence, issued a directive forbidding any of his military and civilian subordinates to participate in "public information programmes sponsored by non-governmental organisations and groups" unless such participation confined itself to matters within the competence of the department and did not involve the expression of partisan views or views conflicting with national policy. This move was a firm response to controversy arising out of the case of General Walker, who was disciplined earlier this year for talking out of turn politically, and out of a memorandum written in June by Senator Fulbright of Arkansas, the chairman of the Senate Foreign Relations Committee. Mr Fulbright said then that too many officers had overstepped the mark in their efforts to indoctrinate their troops in anti-communism. Two recent cases which have seemed to bear him out have been that of a seminar in San Antonio, Texas, of ineffable silliness but supported, for all that, by the Fourth Army ; and that of two Air Force officers, disciplined for showing reservists a tendentious right-wing film during training hours meant for something else.

Rallying to their own, the right-wing extremists in the Senate, led by Senator Thurmond of South Carolina, have hailed General Walker as an injured martyr, and denounced the Defence Department for "muzzling" him and other good anti-communist officers. General Walker was removed from his command in Germany before the conclusion of an investigation into his conduct ; and Mr McNamara may have acted too hastily in publishing the records of the investigation, contrary to Army practice. There seems to be a feeling in the army in Germany that the general did not have a square deal. Nevertheless, it remains true that the investigating officer found that he had made "inflammatory and derogatory statements" about such public figures as ex-President Truman and Mrs Eleanor Roosevelt and that he had tried to influence the way his soldiers voted in the 1960 elections by partisan propaganda.

Senator Thurmond succeeded in bringing the Secretary of Defence before the Senate Armed Services Committee for two days to answer questions, and on his urging its Preparedness subcommittee is to "study and appraise" (Mr Thurmond had wanted it to "investigate") the "muzzle" charges. But the chairmen of the committee and subcommittee, Senators Russell and Stennis, are unlikely to allow Mr McNamara to be harried unreasonably. And if Senator Thurmond hoped to use the inquiry to discredit Senator Fulbright, who may have trouble being re-elected next year in Arkansas, he may have overlooked the fact that General Walker commanded the federal troops at Little Rock during the 1957 civil rights disturbances, and did so none too tactfully.

Correction.—The first Negro to be made a federal judge with life tenure was appointed not by Mr Kennedy as *The Economist* stated incorrectly last week but by Mr Truman. He is Judge Hastie, who sits on the Circuit Court of Appeals with headquarters in Philadelphia.

BIP BRITISH INDUSTRIAL PLASTICS LIMITED

WOULD IT BE BETTER IN PLASTIC?

THE WALNUT. One of Nature's most craftsmanlike jobs: beautifully sealed sutures, a bony shell tough enough to crack your teeth on. Keeps for ages. But couldn't we simplify the inside? So many convolutions, it's difficult to get at the bit you want.

Fortunately *nobody* has yet asked us at BIP to use plastics to design a simpler walnut. Our job is to improve *manufactured* objects—like your product, perhaps. There's hardly anything made by man which can't be improved by plastics and a bit of thought. At BIP we provide both, and the thought is free.

British Industrial Plastics have been in the industry from the start. We're interested in plastics used on their own and with other materials: with wood to make furniture, with metal to make model railways, with paints to protect cars, with fabrics to make drip-dries—today's plastics are versatile collaborators.

What next! What's your product! Ask us what BIP can do for it. Whatever it is, our Advisory Service will take it in hand (without charge or obligation) and come up with suggestions. We know what plastics can and cannot do (we process the raw material, make the press and tool plant and our own range of moulded products). So we can offer a Product Design Service, working in with your designers or independently, without fee. We are full of ideas—now it's your move.

THE WORLD OVERSEAS

Dr Nkrumah's Political Kingdom

FROM A SPECIAL CORRESPONDENT IN ACCRA

OUTSIDE the Ghana Parliament House is a statue of Kwame Nkrumah entitled "The Founder of the Nation" and inscribed with selected examples of the great man's wisdom, among them the exhortation to "seek ye first the political kingdom and all other things shall be added unto it." As members entered the chamber on Tuesday afternoon for Parliament's formal reopening, some of them—to judge from their unnaturally glum faces—were wondering what sort of political kingdom they had found and whether the things that were being added to it were worth having.

Four of their number had been arrested a week before on charges of conspiracy and subversion along with 46 other people, among them the widely respected Mr J. B. Danquah, whom some of the members would prefer to regard as the true founder of their nation. Mr K. A. Gbedemah, the popular minister of finance and one of Dr Nkrumah's oldest friends, had just been dismissed from the cabinet in a reshuffle that gave greatly increased power to the left wing of the ruling Convention People's Party, which is personified by the new ministers of information and of the interior, Messrs Tawia Adamafio and Kwaku Boateng. A threat of arrest was known to hang over Mr Gbedemah's head. And before the house for the first week of business in the new session were three government bills of alarming significance—one to justify the installation of a government censor in the office of *The Ashanti Pioneer*, an old-established opposition newspaper, one to institute heavy penalties for bringing the president into "hatred, ridicule or contempt" and one to permit the creation of special courts at the president's recommendation for the summary trial of persons accused of crimes against the state.

When these bills are ratified, as they surely will be by the CPP machine, Dr Nkrumah will have established full personal control

Old friend: Mr Gbedemah

New master: Dr Nkrumah

wer his country and any lingering pretence that Ghana is still democratic state in any recognisable western sense will have to e abandoned. Parliament may continue, criticism may still be eard, but already there is really no way left of changing the overnment of Ghana except by conspiracy or force. This is a ne-party nation and Dr Nkrumah has shown that he intends to un a one-man band.

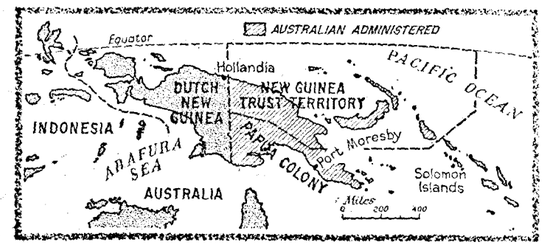
What has brought Ghana to this disappointing pass, and what effect has the last month's lurch towards the left and towards repression had upon the internal situation? To begin with, the pass is not necessarily as disappointing to Ghanaians as it is to the West in general and to Britain in particular. With the qualified exceptions of Nigeria, Sierra Leone and the remaining British possessions, there is scarcely a nation in Africa that is not either heading towards, or has already achieved, some more or less dictatorial form of government. Deplorable as this may seem, it is nevertheless a fact; and Ghanaians are unlikely to be disturbed for long over their country's tendency to follow the rest in abandoning some of the trappings—and most of the reality—of democracy. Yet those long faces at the opening of parliament were not without significance. Besides the plain fear that, if they did not behave themselves, Dr Nkrumah's displeasure might descend next upon them, the deputies reflected a widespread discontent in the country at Ghana's economic plight. This has resulted from a combination of extravagance and misfortune. The misfortune is that Ghana's balance of payments deficit this year will be even greater than the £26 million which was registered last year. Extravagance has resulted from Dr Nkrumah's taste for prestige and pan-African leadership and ostentatious non-alignment. The triumphal arches and reviewing stands in the new Black Star Square in Accra, for instance, one of several prestige building projects, are estimated to cost £750,000. Loans to Guinea and Mali this year amount to £10 million, and assistance to African nationalist movements elsewhere may have swallowed up another million or so. Increased defence expenditure involving the purchase of Russian arms has been incurred for reasons apparently unconnected with Ghana's strict defence needs. Eight four-engined Ilyushin airliners have been bought also from Russia at a cost of some £800,000 apiece, ostensibly to serve the growing pan-African network of Ghana Airways, although the airline's only economic route is that between London and Accra, which is already well taken care of.

Add to this misfortune and extravagance the routine share of mismanagement that every young nation suffers from, and you have most of the explanation of the fall in Ghana's foreign exchange reserves from over £200 million in 1957 to £90 million today. There, too, lies the explanation of the government's inability to meet its domestic debts—cocoa farmers in some areas, for instance, are receiving promissory notes instead of cheques for their sales to the cocoa marketing board—and for the austerity budget of July with its provisions for compulsory savings which set off the Takoradi strike last month.

The upshot is discomfort all round. While the new compulsory savings scheme reduces everybody's pay packet, the new import and purchase taxes designed to discourage consumption have forced up the cost of living by perhaps as much as 20 per cent. This is the root cause of the alienation in recent months of much of Dr Nkrumah's popular support. For the first time many members of his own party are disturbed by his policies, and many observers here suggest that if an election were to be held now the CPP would be lucky to win it. Dr Nkrumah, of course, has no intention of holding elections now, but this new sense of political insecurity is probably the reason for his latest steps towards dictatorship and

his growing reliance upon the left wing of his party, which he can trust to support him both in enforcing socialism at home and in pursuing positive neutralism and pan-Africanism abroad. These new steps have made him even less popular, as any one can discover in a few days of random observations and conversation—for Ghanaians, although showing a depressing tendency to glance over their shoulders, now will still talk occasionally in private.

But it is difficult now to see where the focus of an effective opposition can be found. Only the army remains, enigmatic, certainly a little troubled, but unlikely under its stolid new commander, Major-General Otu—and while it adjusts itself to the removal of the British officers—to make a bid for power. President Nkrumah has secured his political kingdom. What he wants to add to it from now on is not a matter in which his critics can hope to have any voice.



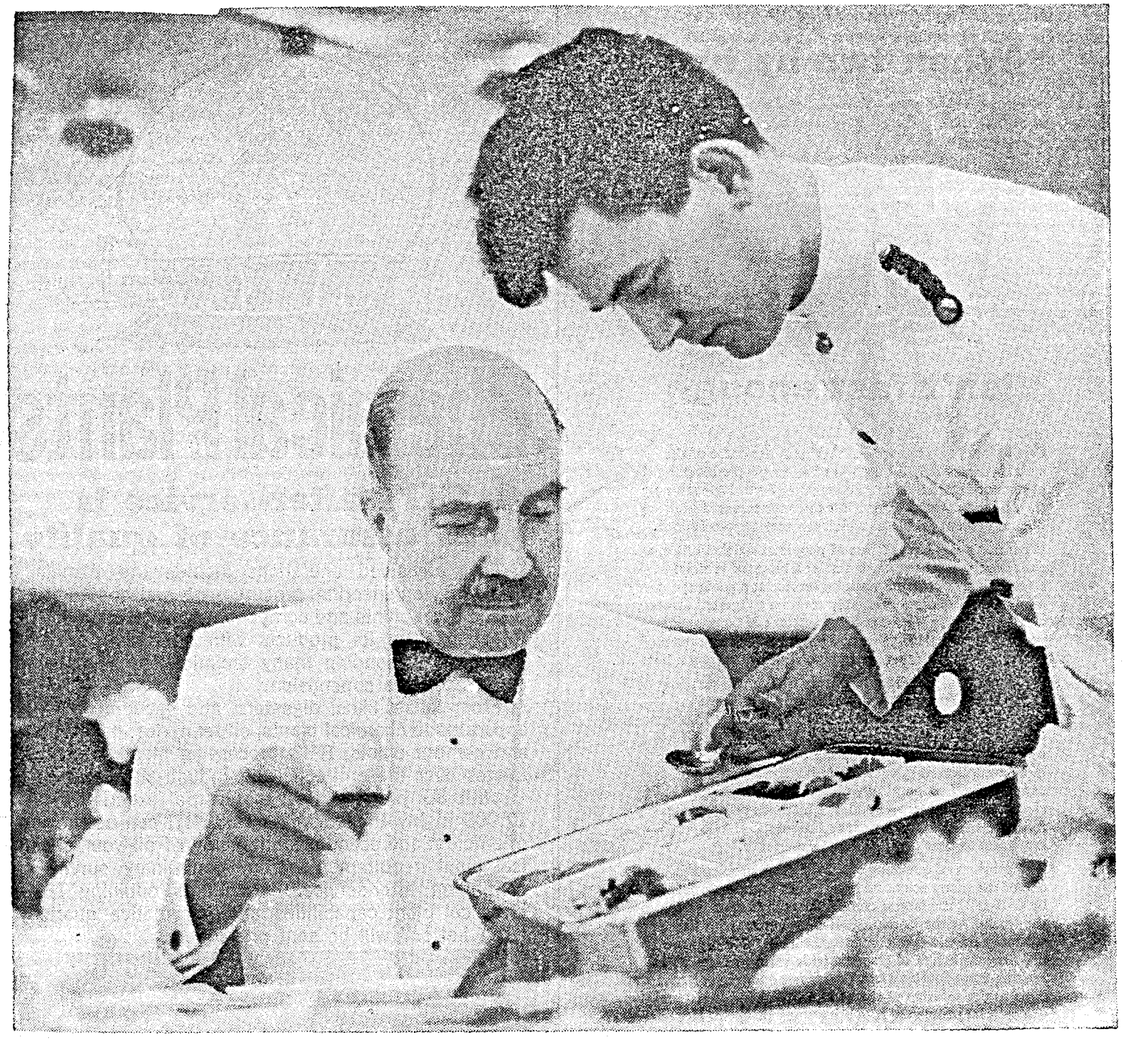
Gamble for a Small Colonial Power

FROM OUR CORRESPONDENT IN CANBERRA

AUSTRALIA'S interests are deeply involved in the Netherlands' proposal that the United Nations should assume executive charge of the Dutch colony of West New Guinea. Everything that happens in the western half of the island inevitably has its effect in the eastern half administered by Australia.

For Australia, as for the bigger colonial powers, the proposal has its embarrassing side. First, if the General Assembly of the United Nations passes, by the necessary two-thirds majority, a resolution to give effect to the proposal, there will undoubtedly be a demand that Australia's Papua and its trust territory of New Guinea should come under the same administrative arrangements. Secondly, at the very least, any target dates for political independence that a United Nations commission thought fit to recommend would be taken as properly applicable also to the Australian territories. This would violate a principle to which the Australian government clings steadfastly but with increasing difficulty—namely that it should plod steadily on with development in depth, setting targets (as it now concedes) for stages of educational and social progress, but refusing to commit itself to a date for political independence. Thirdly, once the Dutch proposal has been tossed into the arena of the United Nations, who can say how it will be mangled and mauled by amendments?

Nevertheless, as the Dutch foreign minister described it to the General Assembly on September 26th, the plan has features which should be somewhat reassuring to Australia. Dr Luns said that "since these proposals embody an entirely new concept in decolonisation," the General Assembly might first wish to have more information; and he suggested that it should send a commission to West New Guinea to make a complete and impartial report. This is an excellent suggestion. A commission that had observed the New Guinea Council, with its majority of native members, might well think that these men should determine their own future instead of being handed over to the Indonesians. But when the commission had seen for itself the poverty of the territory and the primitive tribesmen in the all but inaccessible hinterland, it might set a date for independence very different from the date that might be urged by delegates working from general principles in the anti-colonial atmosphere of the United Nations. The recommended date might even be further off than the mere ten years that the Dutch seemed to be dreaming of when they put into operation last year their ten-year plan for the development of the territory. To have that point of comparison removed would be quite a relief in Papua and New Guinea.

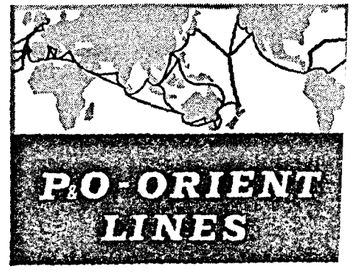


The Australian prime minister, Mr Menzies, has therefore described the proposal as "very constructive," and the Australian ambassador to the United Nations, Mr James Plimsoll, has welcomed it. The government, even if it had wished to do so, was in no position to complain. It has taken its stand on self-determination for the native peoples in both halves of the island, and it supports Dutch sovereignty over the western half meanwhile. But fearing to antagonise its neighbours the Indonesians, it has consistently refused to back up this theoretical support with any military guarantees. The Dutch are facing, with no promises of support from anyone, the likelihood of a military coup from an Indonesia already well-equipped with foreign arms and now expecting a big consignment from Russia. They must take what preventive action they can; and as such their plan is shrewd. If there is any substantial vote for it in the General Assembly, even if this does not amount to the two-thirds majority needed for action, it will become harder for Indonesia to try force, and more likely that, if it did so, the United Nations would call for a cease-fire.

The plan might thus spare the Australian government an agonising choice if the Indonesians should in fact resort to force: whether on the one hand to go to the help of the Dutch against a nation with which it particularly wants to be friendly; or on the other hand, to do nothing, thus allowing Indonesia to flout the assurances that it has more than once given Australia not to seek a solution by force. A United Nations administration of West New Guinea would be far better than either of these horrible possibilities.

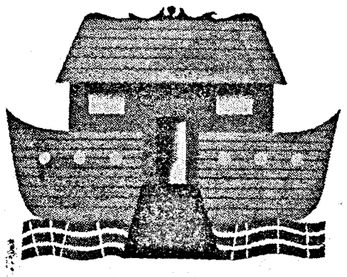
Many Australians feel it would also be far better for Australia than the course advocated, to their regret, in *The Economist* of May 6, 1961 ("Perilous Half Island," page 526), namely that the Dutch should give the place away to the Indonesians. Two years ago the Menzies government declared that if, without duress, the Dutch and Indonesians agreed to a transfer of sovereignty, it would recognise the transfer. But if the transfer were made now, after the huge build-up of Indonesian arms, how could it be said that there was no duress? In this way, the Soviet arms would have done their work without even having to be used. They would not even have arrived. The Australian territories then would have exchanged the peaceful and co-operative Dutch for a neighbour who had learned that it pays to be belligerent. And after all the fine speeches that have been made about self-determination for the peoples of New Guinea, those in the western half would have been handed over like cattle, just as a few of them are learning how to govern.

The Dutch proposal may help to ensure that those few can be left to continue their work in peace. If they are given time they will shortly become experienced enough and articulate enough to convince other Asians and Africans that self-determination is not by definition self-determination against the white man. The crucial question is, does the Dutch proposal buy time? It is certainly a gamble. A heavy Dutch defeat might encourage Indonesian belligerence; and the prospect of growing support for the Indonesians might precipitate aggression instead of deterring it. As far as one can see at this stage, however, the gamble is not altogether unattractive for Australia.



DECISIONS! DECISIONS!

He can buy up a mile of Mayfair or a stretch of Shaftesbury Avenue without batting an eyelid. But when it comes to deciding between the Stuffed Olives and the Anchovies he's stumped, flummoxed, helpless.



If you've eaten in a P & O - Orient dining room you'll know how he's feeling. How can a man make snap decisions when each dish looks (and tastes) more delicious than the last? How can he bark out an order when the stewards are so smilingly courteous, so obviously willing to wait till he's satisfied?

He's been basking in this state of indecision ever since he chose the lazy way out and took the roundabout sea route to those yearly Los Angeles talks—via Naples, Bombay, Colombo, Sydney and the vast and sunny Pacific. He's spent whole mornings wondering whether to have a swim in that glittering blue pool or exercise his new-found sea legs in one of those shamelessly invigorating deck games. Then of course, just when he's made up his mind (to do both) it's time for another delectable, challenging meal. Oh, well, there's always tomorrow!

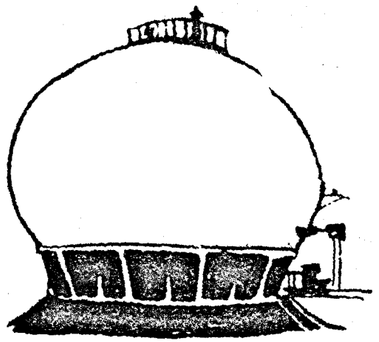
P & O–Orient Lines, 130 Leadenhall Street, EC3 · 16 Cockspur Street, SW1 or ***Travel Agents***

When two by two

isn't fast enough

One by one, two by two—the *queue* is the curse of the age. If it were only a question of a few people blocking the *pavement* outside the local cinema on Saturday evening, then nobody would worry. But to commerce and industry queues present problems which are very serious indeed.

What is a queue? It is a line of people at a ticket office, a cash desk, a works stores counter; a block of vehicles at a traffic intersection or awaiting service at a garage; a covey of aircraft circling unprofitably round a congested airport; a train of trucks idle in a siding; a stack of components waiting to take their place in a production line; a mass of liquid held back by an outlet pipe with too narrow a bore . . .



What can be done about it? Every individual queueing problem has its own peculiarities, which makes it impossible to lay down hard and fast rules. But mathematicians have evolved a fairly extensive Queueing Theory which provides a framework for the solution of simpler cases: more complicated queueing and bottleneck problems can be solved economically only by using high-speed electronic computers—by digital methods or by various forms of analog. To all such techniques C-E-I-R can bring to bear great skill and experience.

The solution of queueing and bottleneck problems is only one of the many scientific management services offered by C-E-I-R, the largest computer services organization in the world. At the London C-E-I-R Centre, with its advanced on-the-spot computer facilities, C-E-I-R are handling on behalf of clients a wide variety of operations ranging from routine Data Processing on a regular contract basis to the solution of the most complex industrial and commercial problems. If you have any problem, large or small, which can be solved by logical or mathematical means—then send for C-E-I-R.

Chemical Plants

IHI's after-service is your assurance of quality

IHI's many-sided operations include the planning, designing, engineering, procurement, and construction of chemical plants and components. After installation IHI backs up its products with continuous, expert after-service, sending many technical consultants to perform on-site supervision.

From tanks, kilns, digesters, and vacuum distilling apparatus to chemical plants, oil refineries, paper mills, and cement plants, IHI's processing plant production ranges over the entire field of industrial chemistry.

With 85 years of heavy industrial experience and 17,000 highly trained employees, IHI can assure you of efficient and economical handling of all your chemical plant requirements from preliminary survey to continuing after-service. Brochures outlining IHI's chemical plant capabilities and informative quarterly "IHI Letter" will be sent on request.

New Patterns in Syria

FROM OUR MIDDLE EAST CORRESPONDENT

"IT is our fault." In these words a distinguished Arab scholar and supporter of President Nasser summed up his shocked reaction to the dissolution of the United Arab Republic. It is necessary to have lived some time in the Arab world to appreciate the significance of such an admission. Ever since the break-up of the Ottoman Empire after the first world war it has been fatally easy for Arabs to blame all their misfortunes on outside influences —British, French, Jewish, or "imperialism" at large. The failure of the union between Egypt and Syria must bring with it the growing realisation that while Britain and France bear a continuing responsibility for the mess in which the Middle East still finds itself, this is far from being the whole story. The Arabs themselves could have done more to mitigate the ill-effects of the political settlements that were imposed on them.

It is clear, and now generally admitted, that the Syrian revolution was a purely internal movement free from outside influences, except perhaps for the moral support of King Hussein. This in fact was a typically Syrian coup, with a handful of officers playing their traditional part as breakers and makers of governments. The reserve with which the British and Americans originally treated the new regime in Damascus caused some astonishment in Beirut, where it was remarked that two years ago Syria's secession would have been welcomed by the West as an exercise in cutting Nasser down to size. But the feeling among western officials today is that while, largely owing to President Nasser's moderation, the revolution has gone through remarkably smoothly, a weak independent Syria is bound to be a source of future instability.

Dr. Kuzbari: call for unity

No comprehensive policy statement has yet been issued from Damascus. In matters of detail it is possible to detect a clash of opinion between the civilian government and the officers who engineered the revolt. Although new army leaders have declared their unequivocal support for the government, they still retain the responsibility for safeguarding the revolution; and their views *must*, to say the least, be taken into account. With the exception of Colonel Serraj, who is now tasting some of his own medicine, all the outstanding figures on the Syrian political scene have now declared their support for the new regime. They range from the People's party on the right to the Communists on the left. The latest to fall into line is Mr Kuwatly, who as president of Syria announced the union with Egypt nearly four years ago, and by standing down then in favour of President Nasser acquired the honorific title of "first citizen of the republic."

The main political question now agitating Syria is the resumption of party activity. With the dissolution of the National Union last week, all parties are now banned. The contradictory reports from Damascus on this subject arise from the government's difficulty in making up its mind when, or if, party politics can again be safely permitted. On Wednesday, Dr Kuzbari called for a "unified national front" until after the elections. Despite this, the former party leaders are already busily doing their homework. Out of the inter-party consultations, two possible coalitions are beginning to emerge. On one side, the People's party is lining up with a right-wing faction of the National party. This group is composed of politicians who, though they always disapproved of the union with Egypt, did nothing active to oppose it. On the other side there is the possibility of a coalition consisting of the left-wing of the National party, led by Mr Sabri Assali, the last prime minister of independent Syria, the Ba'ath Socialists, under Mr Akram Hourani, a leading theorist of Arab nationalism, and an independent group led by Mr Khaled el Azm, the former minister of defence, who negotiated the Soviet loans in 1957.

All the indications from Damascus are that the new regime intends to liberalise the economy with a view to Syria resuming its traditional place in world trade. The only lasting remnant from the time of union may be the land reform programme, and even that may be significantly modified. In Lebanon future prospects are considered bright and the Syrian pound has jumped up in the Beirut money market. During Syria's union with Egypt it sank to the equivalent of 66 Lebanese piastres; within a fortnight it has risen to more than 81 piastres. Although speculation has played its part, the increase also reflects a genuine belief in Syria's economic future.

Tamil's Dilemma

FROM OUR CORRESPONDENT IN COLOMBO

THOUGH the release of the Federal party's leaders last week was received well by responsible opinion in Ceylon as a necessary prelude to the settlement of the language problem, the action itself has in no way altered the political situation. Indeed, it has placed the Tamil leaders in an embarrassing predicament. Mobbed and garlanded in Jaffna, the island's northern capital, and in other Tamil areas, these political detainees who had been incarcerated for organising a Tamil *satyagraha* campaign against the government's language policy, now face a serious dilemma. They must either defy the emergency regulations or acquiesce in the present state of things.

The first course may provoke stern reprisals. In any case, it is doubtful whether the traditionally docile Tamil would respond to any adventurist slogans with the necessary militancy. But passivity on the part of the leaders could induce in the average Tamil a fatal sense of resignation. For a party whose *raison d'être* is a federal state for Tamils (and during the demonstrations in March there was even a clamour for a separate state) any failure to keep feelings alive and the movement intact would be to court the danger of the Tamil minority seeking fresh solutions to their problems. It looks as if the Federal leaders have been compelled to give up the assured comfort of martyrdom in exchange for the perplexities of an uncertain future.

Any new signs of rebelliousness on their part will no doubt provide the government with an opportunity to show that it is the Federal party, not the government, that is being unreasonable. Fresh trouble would also justify a continuation of emergency rule. But the government's reasons for prolonging the emergency have already been challenged by all the opposition parties, including the Freedom party's electoral allies of the Left. Indeed, it was the Trotskyist Sama Samaja party which three weeks ago moved a resolution in parliament demanding the immediate withdrawal of the emergency regulations. It is possible that this debate, in which, for the first time since July last year, the government had to face a combined opposition barrage, influenced the cabinet decisions to withdraw some of the more stringent emergency regulations and to release the Federal leaders. Justifiable or not, emergency rule is no solution for the problem of the Tamil minority. Confident that it retains the support of the Sinhala rural population, the government can choose to live and let live with a permanently embittered minority, or it can explore ways of settling

the language issue. Even if it appreciates the wisdom of the second alternative, the government will tread warily. Its main opponent is the United National party, which conducted a virulent communal campaign during the general elections last year. Its chief charge against the Freedom party was that it had a secret understanding with the Federal party in order to win marginal Tamil votes in Sinhala areas. Any attempt now by the government to negotiate with the Tamil leaders, even to adjust genuine grievances over their language rights, can of course be exploited by the United National party, which is openly boasting today that the government will collapse in six months' time. The government is therefore unlikely to surrender the initiative on this issue to an enemy which is already on the offensive on the economic front and to a party which bared an ugly racialist tooth at the last elections. Thus negotiations with the Tamil leaders in the near future are unlikely.

The Freedom party's extreme sensitivity to this question was revealed in its ambivalent handling of the Rajaratna affair. Mr Rajaratna, a young Sinhala firebrand, was sentenced by the supreme court to one and a half years in jail for offences committed during the communal disturbances of 1958. He began to fast, on the grounds that he had been unjustly tried. His supporters canvassed for a free pardon from the governor-general. The government placed him under house arrest after the incident had provoked a demonstration by students and Buddhist monks. Finally, Mr Rajaratna was committed to prison to begin serving his sentence. This meant, under Ceylon election law, that he would not only lose his parliamentary seat but be disqualified for seven years. Then the governor-general, exercising his prerogative, reduced the sentence to two months. The reduction means that Mr Rajaratna can contest a by-election. He has placed his deposit as a candidate already. Nevertheless, it is doubtful whether the government will hold this election next month; under the emergency law, elections may be postponed.

The government has, however, other worries beside the language question. The opposition leader and other opposition parties claim that the emergency is being prolonged in order to contain the general dissatisfaction over the rising cost of living, food shortages and the new tax burdens of the August budget. Government circles believe the discontent has been grossly exaggerated. What-

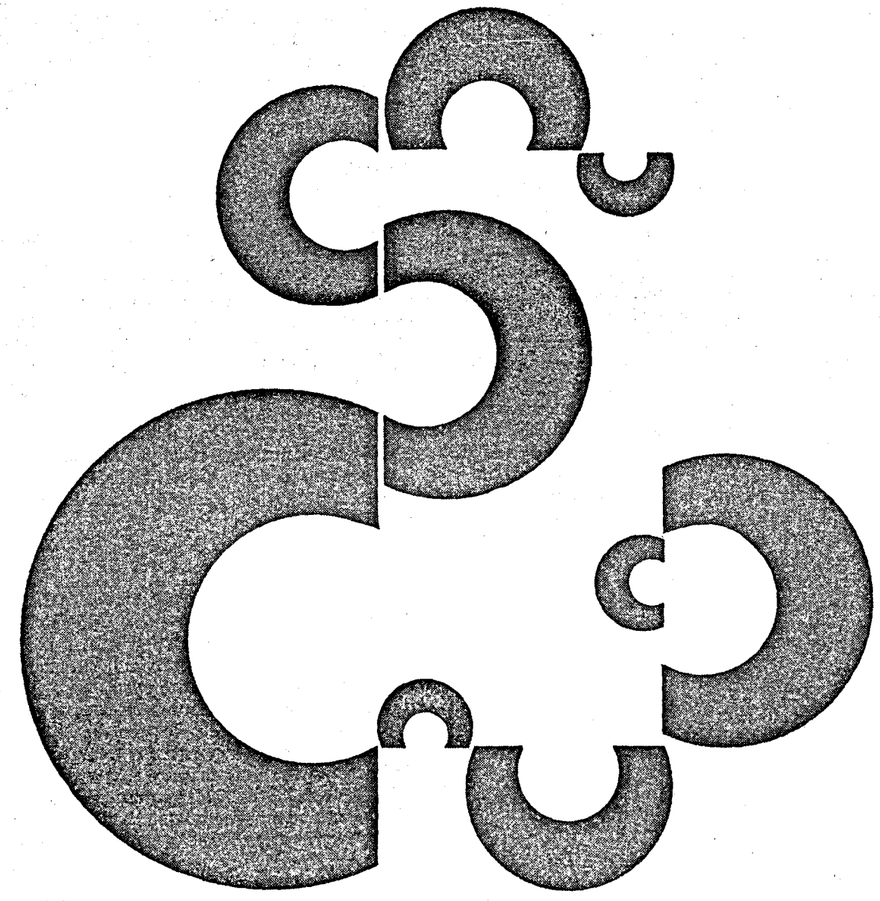
Are Frogs Un-British?

FROM A CORRESPONDENT

DOUBTLESS a marginal barrier to Britain's entry into the common market is the leg of the French frog. "Frog's legs" epitomises British distrust of Frenchmen, and, by extension, of foreigners in general; they not even reinforce, they are used to justify, his insularity. In the last ten years or so garlic has become not only accepted, but in some circles worshipped in Britain. You can buy snails nowadays in tins in most English towns. But frog's legs are still out. In the interests of closer European association this attitude requires careful re-examination.

Like most prejudices, aversion to frog's legs is built on a number of false premises. To start with, they aren't legs. They are thighs. 'Cuisses de grenouille' they are called in French. Nobody ever eats any other part of the frog, and people who know what's what in France only eat them if they come from a particular species of frog of a particular age and a particular size. The taste only appeals to persons *'d'un tempérament délicat.'* In fact few people in France eat frog at all. Country people never eat them under any circumstances, and even in the towns, they say, the best customers are the hotels where the English and the Americans and the Germans go.

In Les Halles in Paris frogs' thighs are sold in a special section of the market. They are always sold by the dozen, and they come in two grades. One is called 'grenouille de parc,' and the other 'grenouille de pêche.' The first cost two or three times more than the second, and one might think from this, and the names, that the ones are cultivated and the others wild. Even this premise is false. All that the distinction means in practice is that the 'grenouilles de parc' are large specimens of the green aquatic frog (*rana esculenta*), and the others are either smaller-sized frogs of this ilk, or frogs of any size belonging to the three or four other edible varieties like *rana temporaria*, or *rana agilis*.



In fact frogs are not cultivated now in France at all. One authority on the subject, writing before the 1914-18 war, when France was really French, heard tell of a frog-farm of one hectare where the owner made a profit of 5,000 (pre-1914) francs a year. "But," he adds, "nous avons l'incredulité de Saint Thomas." Nowadays all the green frogs eaten in France are fished for from streams and canals and ponds with nets, the mesh being regulated by law; with lamps; or with a rod and line and a piece of red cloth as bait.

Frogs are normally caught in the summer or the autumn. During the winter frogs, like snails, go into strict hibernation, and in the spring they are still thin and tasteless from the solitary, celibate months. In the spring too they mate, for up to a fortnight on end, and their capture during this period is regarded as unsporting; in some areas it is even illegal. The best years of a frog, from the gourmet's point of view, are from four to six.

The best edible frogs in France come from La Vendée, and the best frogs in La Vendée, according to those esoteric experts Thévenot and Lesourd, come from the artificial canals and lakes which are used round St Hilaire de Vicz for the rearing of Rouen ducks. Inferior qualities of edible frogs come mostly from the north and north-east of France between the Pas de Calais and the Marne.

Even in France frogs are only eaten by specialists. About 20,000 kilos of frogs are sold in the highly centralised Paris markets a year. At an average first quality thigh weight of 20 grammes a frog this means no more than a million frogs, or less than one frog to every forty-five Frenchmen a year. This seems a flimsy basis on which to build a national prejudice.

In anticipation of the future, some French firms are already exporting frogs' thighs in tins. To encourage sales in Britain part of the labels are printed in English with the information that the calorific value of frogs is 55.27 per 100 grammes. The name of the product, however, on both sides of the tin is wisely left as 'Cuisses de Grenouille.' The price, for a 7¼ oz. tin, is around 13s. 6d. It looks as if, for some time at least, only a few of us are likely to be corrupted.

Cape Curious Curiosity may have killed the cat but it was the making of Cape. The curiouser Cape engineers became, the more the company grew and grew. Today, Cape are recognized as one of the leaders in the development of high performance thermal insulation and fire-protection materials, brake and clutch linings, and other specialised products including flint bricks, industrial textiles, garage equipment, spraying apparatus. Their skills are many, their resources great, and their organization world-wide. And Cape are growing still because Cape are still just as curious.

TA 6039

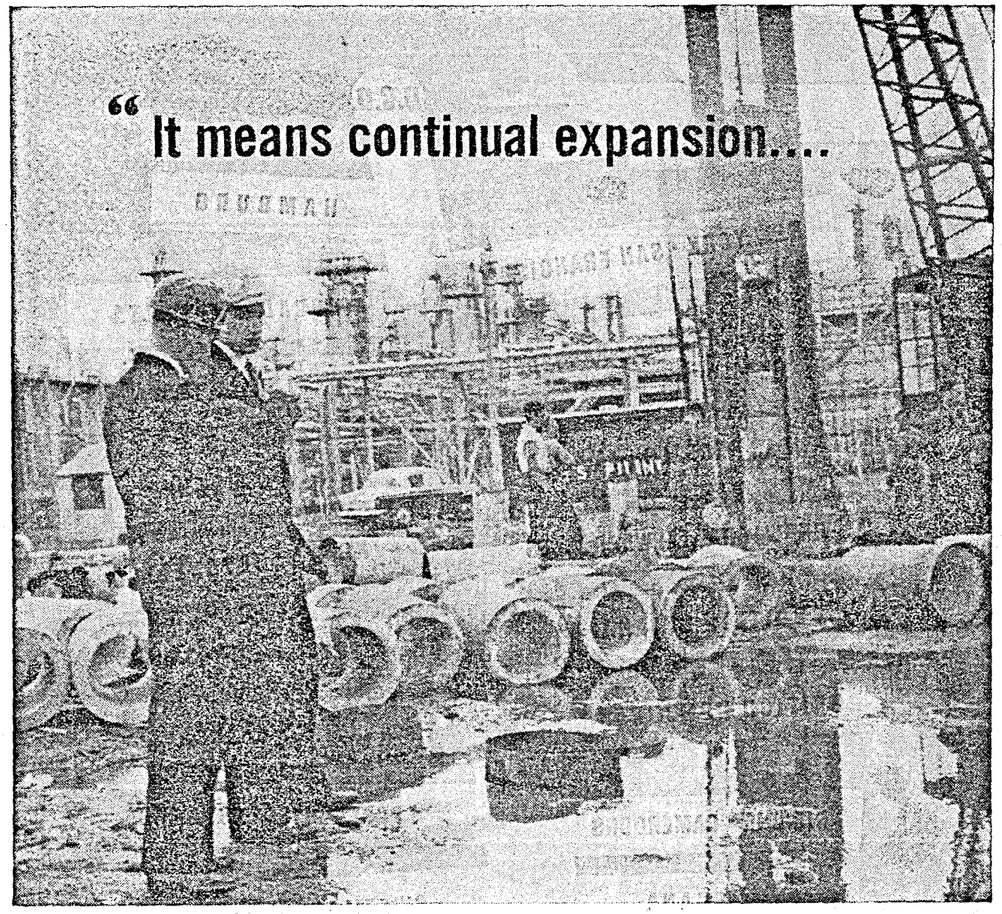
ever the attitude of the middle classes and urban population, the government hopes that the rural masses from whom the Freedom party draws its real strength have not been affected seriously by the new measures. But any test of public opinion is difficult under emergency conditions. Trade unions both in the public and the private sector have voiced strong protests against the budget. The salaries commission appointed by the late Mr Bandaranaike in 1958 recently issued a report recommending salary increases to many public servants. Now the finance minister tells the public servant that these proposals cannot be implemented in the present financial crisis. Public servants, on the other hand, face a four per cent deduction from their salaries at the end of the current month as a national development tax. The unions have called it a euphemism for a salary cut. Trade union pressure and the progressive disenchantment of the hard core intellectuals in the Trotskyist Sama Samaja party have led to a loosening of bonds between that party and the government. While the small but very articulate Communist party is content to jog along with the government, the much bigger Trotskyist party, the other member of the electoral troika, has become increasingly restive. This is the first major political development in Ceylon since the last elections. Memories of the rout of March last year, when Sama Samajists made a bold bid for power, and fear of a revival of the right-wing United National party, keep the Trotskyists within the fold, but relations are getting strained. If events, and the present right-wing tactics of pushing the extreme left into open opposition to the government, result in a severance of ties between the Trotskyists and the Freedom party, then the government may face trouble on a new front—the labour front.

South African Progressives Between Two Fires

FROM A CORRESPONDENT IN SOUTH AFRICA

ALTHOUGH the non-white majority in South Africa will not vote, they will dominate the elections on October 18th. Everyone agrees that the elections are being fought over whether and how political power should be shared with them. Dr Verwoerd, speaking in the intellectual home of Afrikaner nationalism, Stellenbosch, on October 4th, claimed that only his policy of separate development, which is supposed to give the non-whites political rights in their own "streams," could at least ensure that a bit of South Africa would remain exclusively white. Sir de Villiers Graaff, leader of the United party, the "traditional" opposition since the Nationalists came to power in 1948, believes that this fragmentation spells the doom of the white man. The United party holds that its racial federation plan—which in many respects is a vague reaction to Bantustan (separate development)—is the only one which extends, and at the same time places a ceiling on, non-white rights in accordance with its "white leadership with justice" policy. Finally, the liberal Progressives, who broke from the United party two years ago when it took an unashamed swing to the right, foresees, in the words of Dr Zac de Beer, "a dreadful racial clash that might result in black domination of the worst type" unless the Progressive plan for equal rights for all civilised and responsible people is adopted.

There is no doubt that Dr Verwoerd will win the election. The real interest lies in what success the Progressives will have. The Nationalists have made it clear that in calling elections eighteen months before the statutory time for them their object is to eliminate the Progressives from Parliament, where they had twelve members, all originally elected as United party candidates. This would make the republic safe for *apartheid*, by restoring white politics to its familiar conservative setting. Mr B. J. Vorster, the new "strong man" minister of justice (he was interned by the Smuts government during the war), has by implication allocated the task of wiping out the Progressives to the United party. Observers deduce from this strategy that the Nationalists regard the Progressive party as a greater threat, or potential threat, than the United party.



The United party is directing most of its energies to fighting the Progressives. It is using the most blatant "black menace" propaganda to suggest that if English-speaking South Africans support the Progressives their daughters will marry—even swim with—"natives." This spectacle amuses the Nationalists very much: to see the English section of the country engaged in a bitter and personal feud is a rare phenomenon in South African politics. It will be a tragedy if the Progressives do not win a seat, but even the most optimistic of their officials predict that they can win no more than three of the 24 seats they are contesting.

The non-whites, generally, are taking little interest in the campaign. But there are signs that the African political movements, which have been forced underground since the Sharpeville shootings by bans on the African National Congress and the Pan-African Congress, are planning further demonstrations during the next few months.

EVENTS in the outside world, and in Africa in particular, have again influenced the elections. At the time of the referendum which gave Dr Verwoerd so slender a mandate for his republic a year ago, the single shouted word, "Lumumba" probably did more than any other slogan to secure the Nationalist victory. In this election the Nationalists have included another Congo allusion —"Tshombe"; not Tshombe the despot or obstructionist, but Tshombe the hero, whose state was the only "stable" one in black Africa before the United Nations hordes descended.

Dr Verwoerd is particularly worried about the United Nations, which has been attacked with incredible vigour by the Nationalist press. He knows well that the UN action in Katanga could be a portent of "police" action in South West Africa. On October 6th Mr Eric Louw, the foreign minister, reported to the nation on the position as seen from the United Nations, where he is South Africa's chief representative. He said that in the UN an attack was being made by the Afro-Asian world on the "white man" in South Africa. Mr Louw has found that opinion in the world organisation is hardening to a point where mere resolutions condemning *apartheid* may not suffice. The newly elected president of the General Assembly, Mr Mongi Slim, annoyed Mr Louw at the beginning of the session by saying that peace continued to be seriously threatened as long as the hideous spectacle of racism was not banished forever. The people of South Africa would have to give full rights to the non-whites, he said. All this suggests strongly that South Africa may soon be forced to leave the United Nations; Mr Louw has already hinted as much.

Meanwhile, South Africa proceeds steadily on course towards a garrison state. Unemployment among whites as well as non-whites is increasing; the defence minister, Mr J. J. Fouche, speaks as though a war with the "communist" world (and this includes the African and Asian states) is about to break out. The republic has been suspended from the Federation of International Football Associations as a result of discrimination in soccer. The Nationalists are clamping down on Afrikaner intellectuals and clergymen who find *apartheid* an inhuman doctrine. A Pretoria University theologian, Professor A. S. Geyser, has been charged with heresy by some of his students, and the "moderates" have been removed from the executive of the Afrikaans Bureau of Racial Affairs.

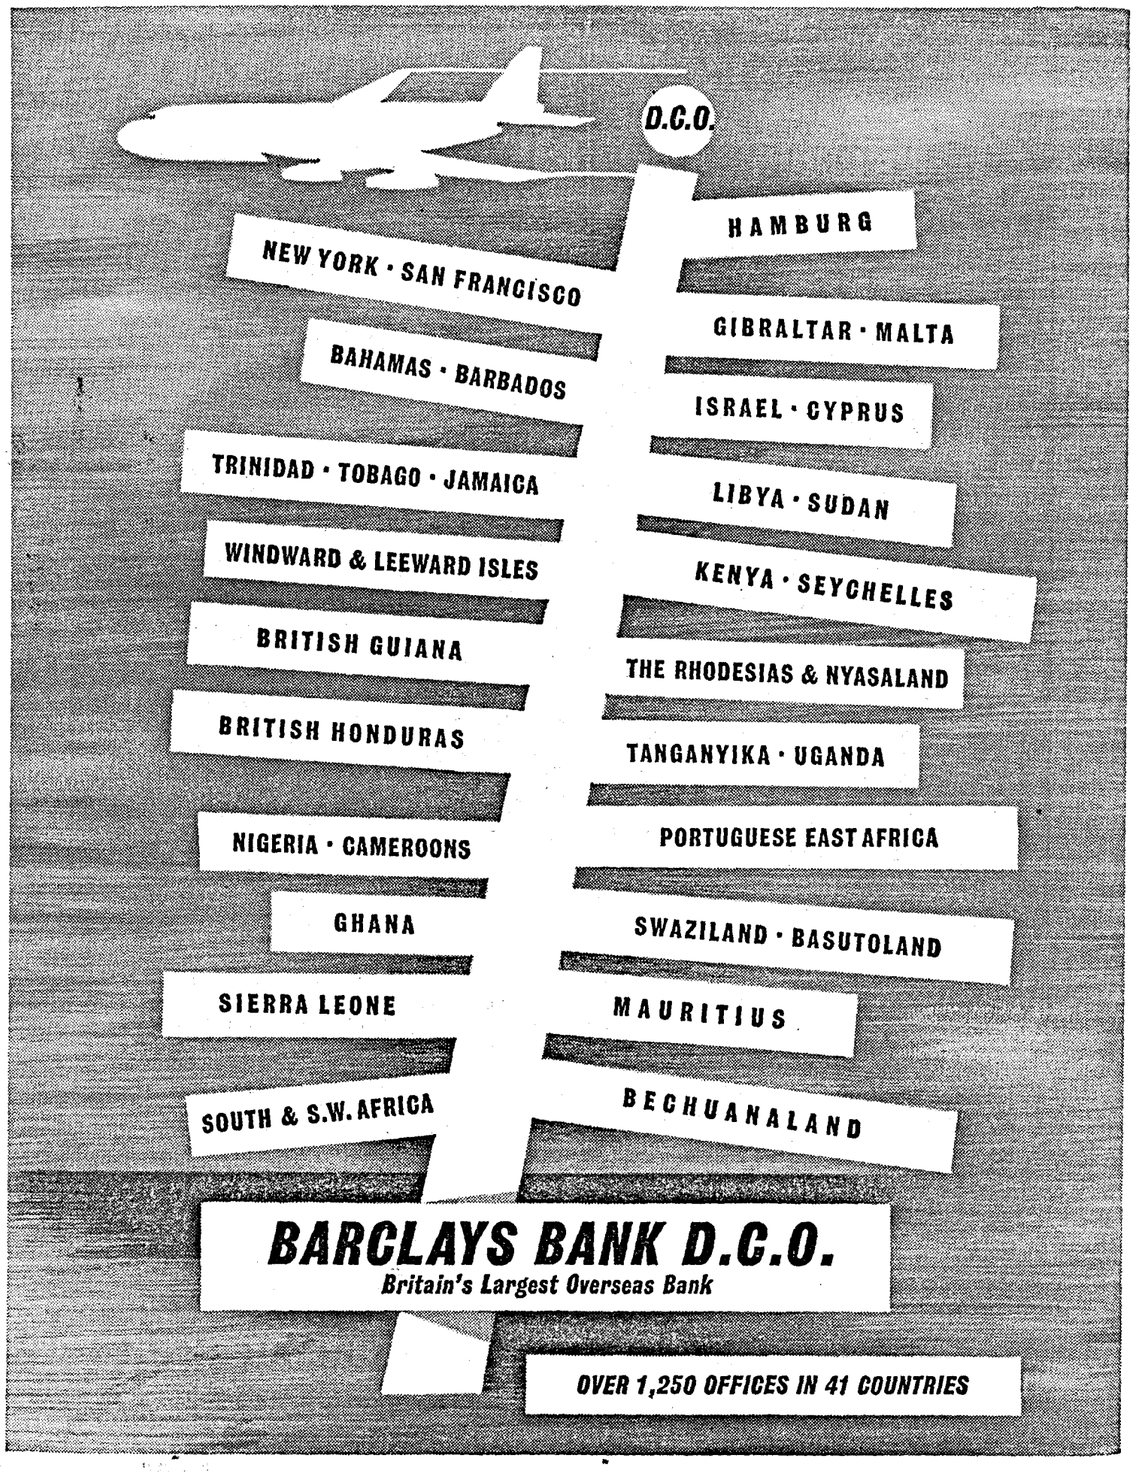
REMEMBER POPPY DAY

"We knew this would have to happen when we laid out this Scottish site in 1949. *You can't set out to serve expanding industries unless you plan to keep pace with their demands.*

The original plants certainly looked rather thin on the ground, but the second cracker and the duplicate ethanol units soon filled up the spaces left for them.

This is rather different from mere duplication—the four new plants will give us a wider range of petroleum derivatives than we started with—polyethylene, phenol, methanol and E.D.C. (Ethylene dichloride to you). All give us a chance to satisfy more varied demands. Further demands for ethylene had to be catered for by No. 3 ethylene unit. That means we can have more butadiene from the second butadiene extractor—and so we go on . . .

When does all this get tidied up and into production?



Well, Polyethylene and Phenol came in in 1959, No. 3 Ethylene in 1960, Methanol, E.D.C. and the new Butadiene plant will be on stream in 1961.

And after that?

We'll be getting on with the next step—expanding into Wales.

THE BUSINESS WORLD

The Investor's Loaf

WHILE the cult of the equity prevailed, it was too easy to forget that investment is a venture into the unknown. One could "buy the index" and cover up the mistakes with the splendid successes. Now the whole index is behaving in a troubled way, and looking by no means confident about the so-called resistance points of 350 for *The Economist* indicator and 300 for the *Financial Times* index. In this groping mood equity prices last week touched the year's lowest levels and the subsequent rally was so lacking in thrust that prices fell to new lows by the middle of this week.

Other markets, on the Continent and on Wall Street, have been more affected than London by the shadow of the Berlin crisis. While every increase in defence spending has given another boost to the American economy each darkening of the shadow has brought prices down. Now, with common stocks below their peak and with the dollar again coming under pressure, Wall Street is less confident than it was of a continued market boom. Wall Street's concern, and the uncertainties of international politics themselves, afford no firm base for confidence in London. British domestic politics have so far had less effect but, in this season of conferences, Throgmorton Street has begun to recognise that a Tory administration might not be returned to office at the next election and to take notice of the twitchings of the opinion polls.

But the economic uncertainties are more perplexing than the political ones. One major question that will govern the stock market in coming months is whether Britain succeeds in negotiating entry into the common market and on what terms. If it happens, British industry will have wider opportunities and the stimulus that the British economy cries out for will be applied, but the pressure of competition will be intensified too. If the negotiations fail, Britain will be even more distant economically from the Continent and will face a formidable challenge in third markets. Neither prospect can please the investor holding shares in a comfortable but second-rate company. Nearer home, the Chancellor has taken pains to emphasise that the squeeze is still on, though the almost certainly premature reduction in Bank rate may foster the dangerous illusion that Britain is already on the mend. The effect of the Chancellor's policy has been to tighten the rein on those sectors of the economy—the motor and consumer durable industries are examples—that were not stretched out fully. It may well be that the economy is behaving no worse than had been expected and that some growth in industrial production and a swing to a more favourable balance of payments are in prospect. But that leaves two questions unanswered. Can Britain secure the needed rise in exports, which the Bank of England puts as high as 10 per cent? And will the Government's policies succeed in keeping prices and costs down? The test will come in this winter's wage disputes. The worst possible combination for a company that has been working close to capacity would be a strike, disrupting its output and pushing overhead costs up, followed by a wages settlement that further squeezed its profit margins.

How far can investors translate these doubts and uncertainties into estimates about profits and dividends? Profits reported so far this year have been patchy. The latest analysis, which is set out in detail on pages 182 and 183, relates to 546 companies reporting in the July-September quarter, whose accounts were drawn up mainly to March 31st or later. Combined trading profits of these companies have risen by £29 million to £431½ million—a rise of 7¼ per cent, which is slightly bigger than that reported in the second quarter but less than half of the increases recorded in the four preceding quarters. Among the leading groups, the more-than-average increases reported by breweries and distilleries, food, shops and stores and building have been partly offset by less-than-average increases in engineering and miscellaneous manufacture. And, almost without exception, these industries are earning a lower return on the capital they employ. Net equity earnings have fallen a little, but slightly more was paid out in dividends. Hence, quite apart from the Chancellor's request for a dividend freeze, there would be little room for further increases in dividends.

Profits reported in the coming months are likely to remain patchy. Companies working close to normal capacity—for example, in food, brewing, building supplies and some sectors of the engineering industry—may earn higher profits. Companies working below capacity—for example, in the motor and consumer durable industries—are likely to find the burden of overhead costs dragging their profits down. There are also signs—ICI's interim report provided one—that the effects of a reduction in production on profit margins are spreading outside the industries

immediately concerned. A rise in production and productivity in the coming months could lead to slightly better margins in the future, but that is not the posture of British industry at this moment.

All this gives point to the evident reluctance of investors to reverse their go-slow policies. In recent months they have not sold equities heavily, but they have not bought them eagerly either. Should they not turn instead more willingly to the gilt-edged market? This market has more friends than it had and if the authorities really believe, as some of their recent actions and words might suggest, that 7 or even 6½ per cent is a crisis rate and should be reduced to a more "normal" level (5 per cent?) as soon as it seems safe to do so, the gilt-edged market could gain many more. But there are two big snags here. First, the credit squeeze is putting as much immediate pressure on fixed interest stocks through new issues, such as that announced by the LCC this week, as it is upon equities through rights issues. Secondly, doubts whether the Chancellor's dose will cure Britain's economic troubles have even more relevance to gilt-edged stocks than they have to equities. There is at least enough uncertainty on this point to restrain private investors from leaping into the gilt-edged market. If another exchange crisis occurred, gilt-edged stocks would suffer a whirlwind.

THE lack of a copper-bottomed alternative for investible funds partly explains why another dramatic fall in equity prices seems improbable. At current levels, it is fair to say, equity values have caught up with postwar price levels; and it would not be reckless to buy equities at to-day's prices for the long term. In the 1950s the value of equities was underpinned by institutional buying. Now the character of the buying has changed with the life offices rather less eager and certainly more discriminating than they were in adding to their equity holdings. At the moment, certainly, the returns on fixed interest securities are acceptable to the insurance offices and their further commitments in equities are fully assured by the shares that come on offer in new issues. In the future, therefore, institutional buying of ordinary stocks in the market may depend more upon the further growth of pensions funds and less on orders from the life offices. Buying from such sources is unlikely to be dramatic in its effect; but it does give a foundation for the industrial market.

The course of prices over coming months will rest more than usually in the hands of private investors. Of these, not the least important are trustees with their newly-won freedom to invest in equities. But they are asking whether, given present uncertainties, they should continue to hold their hand or whether they might start to buy in the winter in the expectation of some economic recovery and an easing of the squeeze in the spring. One might venture the prognosis that if things go badly in the short run prices would continue around present levels rather than collapse; on more optimistic assumptions, prices could rise; certainly to-day's dividend yield of 5½ per cent on leading equities is more in tune with economic facts than the 4¼ per cent average at the height of the boom in May. So long as he keeps his fingers crossed, an investor might think it plausible to expect a slow, hesitant and undramatic rise.

But what to buy? Since the collapse of the boom in May, it has largely been the defensive stocks—tobacco, brewery, food, insurance, investment trust and stores issues—which have lost the least ground; the cyclical shares—chemical, engineering, motor, building material, machine tool and steel—have lost the most. But it may be wondered whether the virtues of defence cannot be overdone. For examples, the yields on some of the supermarket shares look thin and make little allowance for the high cost of conversions and for increasingly savage competition in the retail trade. Yields on some of the composite insurance office shares look several valuations ahead. And yields on some of the property shares assume as fierce and as profitable rates of development in the future as in the last few years. Cyclical shares, on the other hand, are what they are and if investors turn to thoughts of an economic recovery, they will have to include them in their considerations, even though currently earned profit margins are uniformly depressing.

*Equity earnings, before and after tax, as a percentage of net equity assets.

For the first time in a generation, the investor can no longer rely on the cult of the equity to bail out his mistakes, or allow his actions to be governed by such catch-words as "a hedge against inflation" and "growth." More than ever, whether Britain joins the common market or not, he will have to sort out those British companies which can stand a competitive pace and show the qualities of a middle-distance runner—staying power and a reserve of energy, capable of imparting a "kick" when the other runners are at full stretch. Essentially this is a quality of management, which is easier to assess than to measure. But it must mean paying attention not merely to earnings and dividends yields but also to long-ranging statistics of profit margins on sales and the returns on capital employed. When this latter yardstick is applied to a number of companies of supposedly top class, it is dismaying to discover so many cases of non-growth. Such sober appraisals may not appeal to the speculator, looking for the next popular favourites; if he has money to gamble with, he might look outside British industry—to the newer South African gold mines, say, which, if politics could be forgotten, are undervalued in terms of their economic potential. For the investor prepared to hold on, for some time, the self-evident and unexciting conclusion is to look for the equity with the better than average record in profit margins and rates of return over a fair period of time. This could be an opportune moment to start the search not for "growth" stocks but for competitive equities—though probably not yet the buying.

Choosing Targets for Gas

DURING the last few weeks the Treasury and the Ministry of Power have been considering what rate of return on capital ought to be earned in the gas industry during the next five years. By now these ministries, having taken into account views from within the industry on this rather crucial matter, may well have answered with details of what Whitehall has decided. Gas seems to be one of the first nationalised industries to complete this target-setting exercise, inaugurated this autumn under the Government's new policy for these industries; though it was not completed quite as soon as the ministry hoped in June. But the exercise for gas will have differed somewhat from the parallel exercise for coal—or even for electricity. It has involved settling bogey rates of return not for one monolithic industry, nor even for an industry in which the fortunes of the wholesaler and the retail distributors of fuel are necessarily interlinked; but for twelve biggish self-contained businesses which are highly diverse in size, operations, problems and opportunities. The rates of return that the twelve area gas boards will have been required to earn on their capital will not, under the present dispensation, be published until their next annual reports unless any of them has to alter gas prices because of it and tells the public why. (This is an odd and probably unwise arrangement applying to all public industries: is the public to wait until particular chairmen in these industries happen to mention the "target" rates they have been set?) But one can safely assume, in the gas industry, that these boards will not all have been set the same target.

This diversity of the publicly-owned businesses that run the gas industry in Britain is an element that sets it apart from its nationalised competitors and suppliers in fuel. The point comes up as inevitably in considering their annual financial results, as in reading their published evidence to the Select Committee on Nationalised Industries (both of which happen to have been published this week). Different gas boards' turnover in 1960-61 from selling gas and by-products varied from under £9 million to nearly £55 million; their capital employed varies from £24 million to nearly £109 million; and after paying interest the boards' results ranged from a deficit of £460,000 to a surplus of £680,000. In physical operations, these businesses range from one that has more gas available than it can sell in its own area and "exports" a little, through others that buy almost as much gas as they make, to one that makes practically none of its own gas and relies on purchasing 90 per cent of what it sells. These financial results of independently-managed boards are what lie beneath the statement that "the gas industry earned a surplus of £2 million in 1960-61," which is not much more than an aggregate of them.

Such diversity and decentralisation of structure gives the gas industry perhaps greater strength at the points where it does its ordinary business than some of the industries, also often nationalised, with which it has to bargain. It does not give it equal strength at the top when it comes to things about which bargains have to be made—or political manœuvres have to be deployed—centrally. The Gas Council has certain formal financial powers (such as the power to issue stock which is no longer issued); considerable advisory influence with the boards and the Minister; responsibility for collective research. One area board chairman, in evidence to the select committee, likened it to a trade association; and its rôle is indeed analogous to that played by the British Iron and Steel Federation before the steel nationalisation episode, if perhaps a little weaker. It has certainly none of the teeth now possessed by the Iron and Steel Board in the largely privately-owned steel industry. Much of the recent controversy in this industry has focused or impinged upon the question whether the Gas Council, or some other central body, should now be given more decisive responsibility in some parts at least of gas supply in Britain.

The Select Committee on Nationalised Industries, this summer, suggested that greater central power was needed for the promotion of unconventional kinds of gas supply and perhaps gas transmission. It felt that this should be put into the hands of "a thirteenth board," with special responsibility for developments that needed—as some will—to cut across area board boundaries. The Gas Council, or at least the two members of its fourteen who are not chairmen of area gas boards, not surprisingly agreed that this central power was needed but thought that the council itself should have it, with power to require the area boards (i.e. the other twelve members) to take, if necessary, nationally-distributed gas rather than make their own. The Ministry of Power, now as in its evidence to the select committee earlier this year, appears not to wish to create too much central power over what it, like the committee, considers for the most part a group of pretty well-managed businesses. It has talked vaguely about a thirteenth member, without a new board, on the Gas Council, with the job of promoting the development of new and cheaper forms of gas supply. Whether he would have any powers to require area boards to fit in, or would be expected to rely simply upon the economic attractions of these new supplies, does not emerge from the Ministry's evidence. Obviously it might; these local businessmen have a sharp eye for a bargain. But deals between boards buying and selling these new supplies, for example, might involve some horse-trading in which the Gas Council's influence became somewhat remote.

DECISIONS whether the gas industry in Britain needs a somewhat different shape, and if so what that shape should be, are probably dependent upon technical decisions about what the new gas supplies can and should be—which are at present engaging the Cabinet, no less. The Gas Council's application to import liquid methane in refrigerated tankers from Algeria, under a contract already initialled with a tanker company owned partly by Royal Dutch/Shell and with a semi-nationalised French gas company operating there, has been with the ministry for some months now. The minister was at pains, before the Parliamentary recess, to emphasise that he did not need to delay his decision on this application until a report was received from the joint study by expert contractors, financed by the Gas Council and the National Coal Board, into the economics of complete gasification of coal in large-scale Lurgi plants on the coalfields. But the

decision has still not been announced, and Sir Henry Jones, chairman of the Gas Council, this week deprecated suggestions that this meant undue delay. The Algerian situation may not encourage hastiness—though there are many other places with gas where refrigeration plants could be built if necessary.

While such technically attractive possibilities dangle before the industry, and its existing plant grows steadily more obsolescent and uncompetitive with the kinds of price at which other energy industries can sell fuels of convenience, capital investment is not easy to plan; nor is it easy to prescribe in advance what sort of return this industry ought to be earning. In the evidence before the select committee now published, chairmen of different gas boards expressed different views about town gas from methane and/or Lurgi—and not always quite the views one might have predicted from an outside view of their boards' geographical and commercial location. "The gas industry's view" becomes as shimmering as "the gas industry's financial result for the year," and as hard to sum up realistically. This may well have been partly responsible for the select committee's own ambivalence of attitude on these technical issues, in spite of the fact that much of the figuring it reproduced in its report tended to emphasise the indubitable uncertainties of Lurgi economics.

For the present, beneath the levels of governmental approval for developments requiring large-scale imports and/or large-scale investment in new kinds of plant, the business decisions in this industry continue to be taken by the twelve businesses in it, individually rather than in concert. One effect of the select committee's report may have been to make the chairmen of these businesses look somewhat critically at the possible new forms of central organisation that it and others would like to have interposed into the pattern of their industry; and this could indeed affect their attitudes towards the technical possibilities open to the industry. One wholly welcome result already from the impact of the liquid methane proposals, as has been said before in these columns, has been that it has scared other offers of cheap gas into the market. The Coal Board's active interest in the Lurgi process, and in possible forms of cheap hydrocarbons to enrich it, might also claim some of the credit for adding to the alternatives; some of the cheapest gas or oil fractions that are being offered around Britain today were originally offered for Lurgi enrichment. This does not mean that the only way to use them would be with the lean coal gas that Lurgi might make available; some of them are attractive for "re-forming" into town gas in their own right, as methane can be.

Below the political level at which the Gas Council and the Coal Board seem in a sense to have become deadlocked, these businesses whose job it is to supply gas, whether they make it out of coal or oil or buy it from coke ovens or refineries, have been considering these other possible suppliers. Several gas boards appear to be in touch independently with suppliers of naphtha or propane, both of which, in the volumes required to achieve the prices now being quoted, would also have to be imported; one is said to have sent a mission to the United States to discuss the technical aspects of supply, as the North Thames Gas Board did off its own bat some years ago when it originated the whole liquid methane project for this country. It would be possible, if unlikely, for these fresh offers of cheap gas to leave economically high and dry, both of the contenders over which so much political heat has been generated. What is certain is that in this industry's future sources of cheap gas, as in everything else about it, there may be more diversity than now appears on the surface.

BUSINESS NOTES

BUSINESS OPINION

Falling Orders

MR SELWYN LLOYD may choose to find some encouragement in the results of the latest survey taken by the Federation of British Industries. By a large majority the 686 top businessmen who earlier this month recorded their opinions felt less optimistic about the general business situation than four months ago. But the gloom was not shared by exporters; those feeling more pessimistic about export prospects in the year ahead were just outnumbered by those who sensed an improvement. In short, from these answers, export prospects seem to have kept up but home demand to have slackened. On the other hand, there seems to have been a deterioration in order-books even for overseas, more firms reporting a decline in the rate of new orders received for exports than an increase.

The downturn in the rate of new ordering for the home trade appears even more marked and more firms reported a shortening than a lengthening of total order books. The replies to the questions about orders suggested a much less satisfactory seller's position than in June and a slightly less satisfactory one than in February. Looking to the future, these industrialists are still worried about skilled labour; but their biggest anxiety now concerns immediate demand. Nevertheless, in the past four months, orders seem to have been sufficient to keep output rising, although it would be risky to assume that these surveys can reflect the trend accurately. Of those industrialists recording any changes, a majority still said that both output and employment had gone up in the past four months, but the upward balance was less marked than in June. At the same time, the answers suggest that capacity has increased faster than output: half the firms were considered to be working below a satisfactory full rate and many had more unused capacity than in June.

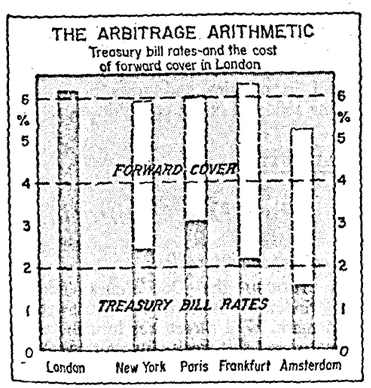
For the first time since February 1959 a majority of firms reported that they expect to spend less on plant and machinery in the next twelve months, as well as less on buildings. Some tailing-off of the investment boom was already expected; on the other hand, expectations are by no means always realised. For some time, these businessmen have been forecasting a fall in stocks. And yet, contrary to expectations, more firms have reported a rise than a fall over the last four months in stocks of both raw materials and finished goods.

MONEY AND EXCHANGES

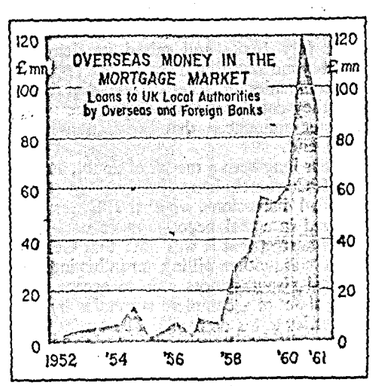
Bank Rate and the Pound

BANK rate was reduced by ½ per cent last week in order to discourage an inflow of funds to London and an outflow from New York. This week sterling has touched a new peak, the inflow of money has continued and accelerated, and pressure on the dollar has manifested itself in a revival of interest in gold. None of this should surprise anybody: what is surprising is that anyone at the Bank of England thought it might be otherwise. Now the City is already talking about "the other half"; but if London interest rates are really to be aligned with foreign centres the authorities will have to go much further than that. Their little, glossed-over Bank rate cut has started something.

The fall in the spot rate at the end of last week proved to be purely technical—reflecting the lengthening of the normal delivery period of two days for foreign exchange, which gives the buyer one or two days more in which to deploy his funds. This week sterling has again been in strong demand. There is still a backlog of commercial transactions in sterling which were delayed during the crisis. Banks in New York (though not on the Continent) are still believed to have a substantial bear position in sterling, so that commercial demands for sterling as they come forward tend to have a sharp impact on the market. It is much more difficult to assess the volume of balances that have returned to London for short-term investment.



In the City this week much has been said about returning hot money. The gilt-edged market talks of it. The discount market reports substantial enquiries for Treasury bills from German banks; the gilt-edged market and brokers in local authority mortgages report large offers of money from merchant banks—through which the bulk of overseas money entering the mortgage market is routed. Dealers in foreign exchange, however, are less sure that they have seen the money yet: enquiries are another thing.



The present situation in arbitrage is intriguing. On the one hand the absolute margins in favour of London are extraordinarily wide, ranging up to 3½ per cent and more. On the other hand these are neatly offset by the cost of forward exchange cover. This week the forward exchanges were adjusted almost exactly in line with the cut in London short money rates, which followed the ½ per cent cut in Bank rate fairly closely (see page 184). Thus the differential on covered arbitrage was hardly affected: against the guilder indeed the forward margin has narrowed by the equivalent of as much as ¼ per cent, but this reflects a simultaneous tightening in the Dutch money market.

Confidence and the Dollar

ON one view, the Bank rate reduction has actually given a stimulus to foreign funds by acting as a demonstration of confidence, encouraging more operators to chance their arm and invest without forward exchange cover. As far as can be seen such operations are slow to reappear. The German and Dutch revaluations of last March have left painful wounds here, and some German banks, for example, have forbidden their exchange dealers to take any open investment positions abroad. At the same time, it should not be forgotten that there is never any single interest rate differential. Thus local authorities in the London market are now paying 7 per cent for 7-day money, almost a full point above the Treasury bill rate, while merchant banks anxious to tap foreign funds to feed into this market are offering rates of 6⅛ per cent for a one-month *deposit*—which is getting on for two full points above the 7-day deposit rate of the London clearing banks. In one way or another it seems clear, from the behaviour of sterling, foreign money is returning to London, if not yet in the proportions of 1960—when there was a margin of over one per cent on covered arbitrage.

Underlying confidence in sterling is far from unquestioned, but for the moment it is the dollar that has fallen out of favour. It has weakened not only against sterling but also against the mark (which had previously been adversely affected by the Berlin crisis). There has been a marked increase in private buying of gold, which was falling back in the previous fortnight, and it is probably only support sales by the Bank of England that have prevented the price from breaking through $35.20 an ounce. The buying has come mainly through Swiss banks. Berlin is one factor—some Continental newspapers this week have swung back to pessimism. But this is not all. The climate for the dollar changed visibly at the Vienna meeting of the International Monetary Fund, with its open display of a disunited front. In the past week the published losses of gold by the United States have seemed to confirm the fears, and the makings of a speculative spiral are there. Some quick second thoughts about international co-operation may be needed to check it.

GILT-EDGED

All the Rage

WHILE the ordinary share market, after its brief Bank rate flurry, has returned to gloom, gilt-edged continue to shine. Buying has been on a considerable scale, although it is still concentrated mainly at the shorter end of the market. It is now certain that the clearing banks are back as buyers of bonds. This does not necessarily reflect a change in their basic attitude to gilt-edged; it has been prompted by the sudden increase in liquidity resulting from the banks' unexpected success in cutting advances. The bankers know that high liquidity ratios could nowadays be deflated in a further call to special deposits. Hence their gingerly return to gilt-edged. They are keeping short—the bank purchases are not reported to include the maturing February stock, but some are not much longer. Some of the discount houses which were unloading bonds before the July increase in Bank rate are now also replenishing their portfolios. But interest in gilt-edged has not been confined to the professionals. Individuals and institutional funds in Britain have taken to fixed-interest securities as a reaction to their uncertainty about equities—an exact rever-

Treasry. 5½% 2008/12	93 3/32	81 9/32	82	82	6·76
War Loan 3½%	58 19/32	49 27/32	51 25/32	52 3/32	6·72
LCC 6% 75/78	99 7/16	91 19/32	93 3/16	93 1/16	6·65

sal of the switch that went on through the fifties. There have also been purchases from overseas, which have helped to narrow the discount on security sterling to only 0.3 per cent.

The revival of the past few weeks has raised prices of short bonds by more than one point and of the low couponed medium dated stocks, which are so attractive to surtax payers, by about three points. War Loan also has achieved a rise of this magnitude since the low point of early August, but the long-term market as a whole is still held in check by the official tap—the net price of 5½ per cent Treasury 2008-12 has risen by less than one point. The market expects soon a stream of corporation issues—but it has been anything but damped by this week's cash and conversion issue of 6½ per cent 1971-72 stock by the London County Council, which at the issue price of 96½ gives a running yield of nearly 6¾ per cent and a gross redemption yield of £6 19s. per cent. At these terms the LCC confined its issue to £10 million, the amount of the maturing stock (which is now being bought at 102 to ensure an entry into the new stock) and it presumably intends to rely on short term borrowing to meet its needs for new money.

While funding issues are expected from the local authorities, however, the gilt-edged market is anticipating a reduction in the volume of stock emanating from the government itself. It is now recalling the Chancellor's (April) budget prognosis that the government would not be looking for new money in the gilt-edged market; and this is being interpreted to mean that when the government broker's holdings of short and medium stocks run out—and they are getting pretty thin—the government could not, in decency, replace them by a new issue (as distinct from a conversion issue to deal with the February maturity). For once, on this view, demand for gilt-edged is pressing on supply, rather than the other way round. In association with the inclinations implicitly expressed by the Governor of the Bank in his Mansion House speech, this is leading some observers to predict fairly sharp price increases before the end of the year. Some big reservations are needed about this bullishness; but the fact is that it has now taken hold in the gilt-edged market more widely than for many years past.

OIL TALKS

"Severance" in Baghdad

PREDICTABLY, General Qasim on Wednesday night this week in Baghdad made a series of "final demands" upon the Iraq Petroleum Company to which its corporate shareholders told him they were wholly unable to agree; he then declared negotiations between the government and the company "severed," and said that he would introduce prepared legislation to limit the producing operations of the Iraq, Basrah, and Mosul companies.

What IPC's shareholders—BP, Royal Dutch/Shell, Standard Oil of New Jersey, Socony-Mobil, Compagnie Française des Petroles, and the Gulbenkian interests—had offered, in addition to points conceded before on dead rents, "Iraqisation," and the relinquishment of 90 per cent of the unexplored areas according to a time-table, was, on the question of participation:

> a 20 per cent interest for the Iraq government in a new company to be set up to explore and develop the 15 per cent of the unexplored areas in the concession that IPC had agreed to relinquish in 7 years time (it had in any case agreed to relinquish 75 per cent of the area immediately).

What General Qasim, after rejecting the companies' memorandum setting out their arguments against participation in existing IPC operations, demanded on Wednesday was:

> relinquishment of 90 per cent of the unexplored area of the concession straight away;
> participation, in proportions to be discussed, in a joint company to be set up to develop all of the remaining 10 per cent except "the producing wells." (IPC produces oil from about 2 per cent of its total concession area of some 170,000 square miles, though it has explored and proved oil in more than that);
> and that on their remaining operations the companies should pay in tax and royalties more than 50 per cent of their profits reckoned at posted price.

These demands went beyond anything the government had previously mentioned—a process of steadily raising the ante to which the companies have become accustomed in dealing with General Qasim's government since July 1958—and raised its demands well beyond anything it could have expected the companies to accept. The negotiators said they could not; whereupon the prime minister announced that negotiations were at an end.

It has long been a matter of doubt, among the IPC shareholders involved in these Baghdad discussions, whether IPC was ever engaged in a real negotiation or not. The cynics argued that it was not; that General Qasim was neither willing nor in his internal political circumstances able to accept anything short of a complete surrender by the companies to his demands. The cynics have it. It remains to be seen what kind of legislation the Iraq government has prepared; whether the operating companies, if allowed to go on producing, will be able to do so on the present 50-50 tax basis; and whether IPC's shareholders, who are not generally short of oil elsewhere, continue under any conditions of duress that may be imposed to "lift" Iraq oil.

DUNLOP RUBBER

Modestly Better Margins

IN keeping with an earlier promise, the directors of Dunlop Rubber have reduced the disparity between the interim and final dividends by raising the interim payment from 4d. to 6d. per 10s. stock. They make the usual disclaimer that this does not imply a higher total distribution than the 1s. 7d. paid for 1960. The statement, however, is encouraging in that it shows that, against the trend in much of British industry, Dunlop's gross margins in the first half of this year were higher than they were in either of the two halves of 1960. Last year, the company had some stock losses and these, with the price of natural rubber comparatively stable in the first half of this year, cannot have had any significant effect on the latest results. Sales are slightly down, but export sales have risen by as much as 16 per cent to a new record level. This suggests that Dunlop's overseas business, which contributes well over half of the profit, has again stood the group in good stead. At home there has been a fall in sales of original equipment tyres, but Dunlop seems to have made further progress in the replacement market, where margins are higher. Policies of decentralising the divisions and imparting more vigour to some of the subsidiaries may also have helped. The directors say results in the second half of the year should be broadly the same as those in the second half of 1960. This is a welcome reassurance, though the weight of tax and minority interests could prevent the modest improvement in margins and gross profits from being reflected in net equity income.

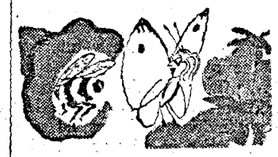
THE BUTTERFLY AND THE BEE

an economic fable

ONCE UPON A TIME there was a Cabbage White Butterfly who fancied herself as an intellectual. However, as is the nature of butterflies, she was a little inclined to flit from flower to flower. One subject which she rather liked was economics. That, she felt, was a nice basic thing for a butterfly to be brainy about.



One day, in high summer, she was lazily hovering over the herbaceous border, making, as she put it "an Intensive Survey of Honey Production." In due course she landed, a little out of breath, on

the lip of a large foxglove, and began fanning herself languidly with her wings. "I say, do you *mind*," said a voice. "You're making an awful draught down the back of my neck." Startled, the Cabbage White looked behind her. Backing out of another foxglove was a large honey bee. "Oh, how perfectly delightful!" cried the Cabbage White, in her most refined tones, "I've been wanting to have a chat with you. You see (and here she simpered) I'm a bit worried about what's happening in the world." The honey bee gave a little buzz which was almost a groan. He'd had conversations like this before with the Cabbage White.

"In fact," went on the Cabbage White, "I do think you chaps are being a bit unfair to us chaps. Speaking generally, of course," she added. "Oh?" said the honey bee. "You see," said the Cabbage White confidingly, "you're so energetic. Rushing back and forth, filling that hive up."—"Nothing wrong with that which I can see," said the honey bee.

"Ah, but isn't it terribly, terribly monopolistic?" cooed the Cabbage White. "You bees will soon control the whole garden. And poor little insects like me won't be able to get a look in."—"Well," said the bee,

"which particular set of bees do you mean? There are lots of hives in this garden."—"Ah," said the Cabbage White, flirtatiously batting her wings, "but I know for a fact you're all in it together."—"You know very well that we can't be," said the bee. "We all make honey. Every hive works more or less the same way. But we're all competitors. And we've all got very different ideas on what's the best mixture of flowers for a good honey."—"Really?" said the Cabbage White. "Why didn't anybody ever tell me that?"—"They did, but I expect you weren't listening," said the honey bee.

The Cabbage White changed her tune. "But aren't you frightfully selfish?" she persisted. "Pillaging the poor flowers, taking their precious pollen?"—"If it weren't for us fertilising things, there'd be fewer flowers next year," said the bee. "Oh, you mustn't be rude to poor little me," sighed the Cabbage White. "You big strong bees, bossing all the flowers in the garden, rushing round telling them exactly how to grow."—"Oh, don't be silly," cried the bee, crossly, "you know we haven't got time to bother about

all that. The flowers know their job. We know ours, and that's all there is to it. In fact, only a very little of what the flowers make comes to us." But the Cabbage White had already fluttered to another foxglove.

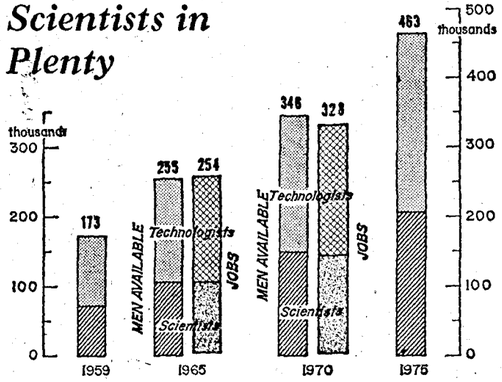
MORAL:

Those who can, do. Those who can't, preach.

* * * * *

ISSUED BY THE LIFE OFFICES' ASSOCIATION, LONDON—AND ASSOCIATED SCOTTISH LIFE OFFICES, EDINBURGH.

recent decline from the peak of 730 was simply a pause in the upward trend and not the harbinger of a new bear market. The most promising sign was the action of railroad stocks, which have been lagging behind industrial equities but which are now in demand because it is believed that they will show greatly improved earnings as the recovery in business gathers way. While, however, the Dow Jones and other indicators have made only moderate declines many individual issues have suffered big losses and have a lot of ground to make up. These depressed issues, which include drug, electronic, entertainment and steel stocks, will be candidates for investors seeking tax losses so that the prospect of a swift rise in prices is dim. Tax selling is traditional at this time of the year and the indications are that it will be of greater than normal proportions. The rise in the prices in the first half of the year induced many investors to take their profits and the subsequent fall, particularly in the growth stocks, affords the opportunity for tax losses.



Institutional investors have taken up a somewhat more defensive attitude, though they continue to buy equities as fresh funds become available. They complain that there are relatively few reasonably priced issues that can be held for the long terms and they are sceptical of buying for a quick turn. At the same time they do not feel that fixed interest stocks offer attractive enough yields to dictate a shift. Hence they are exercising an increasing degree of discrimination, concentrating on equities offering good yields and, they hope, some prospect of capital gain rather than on the growth stocks that have had such violent fluctuations.

AIR TRAFFIC

A Freight Boom?

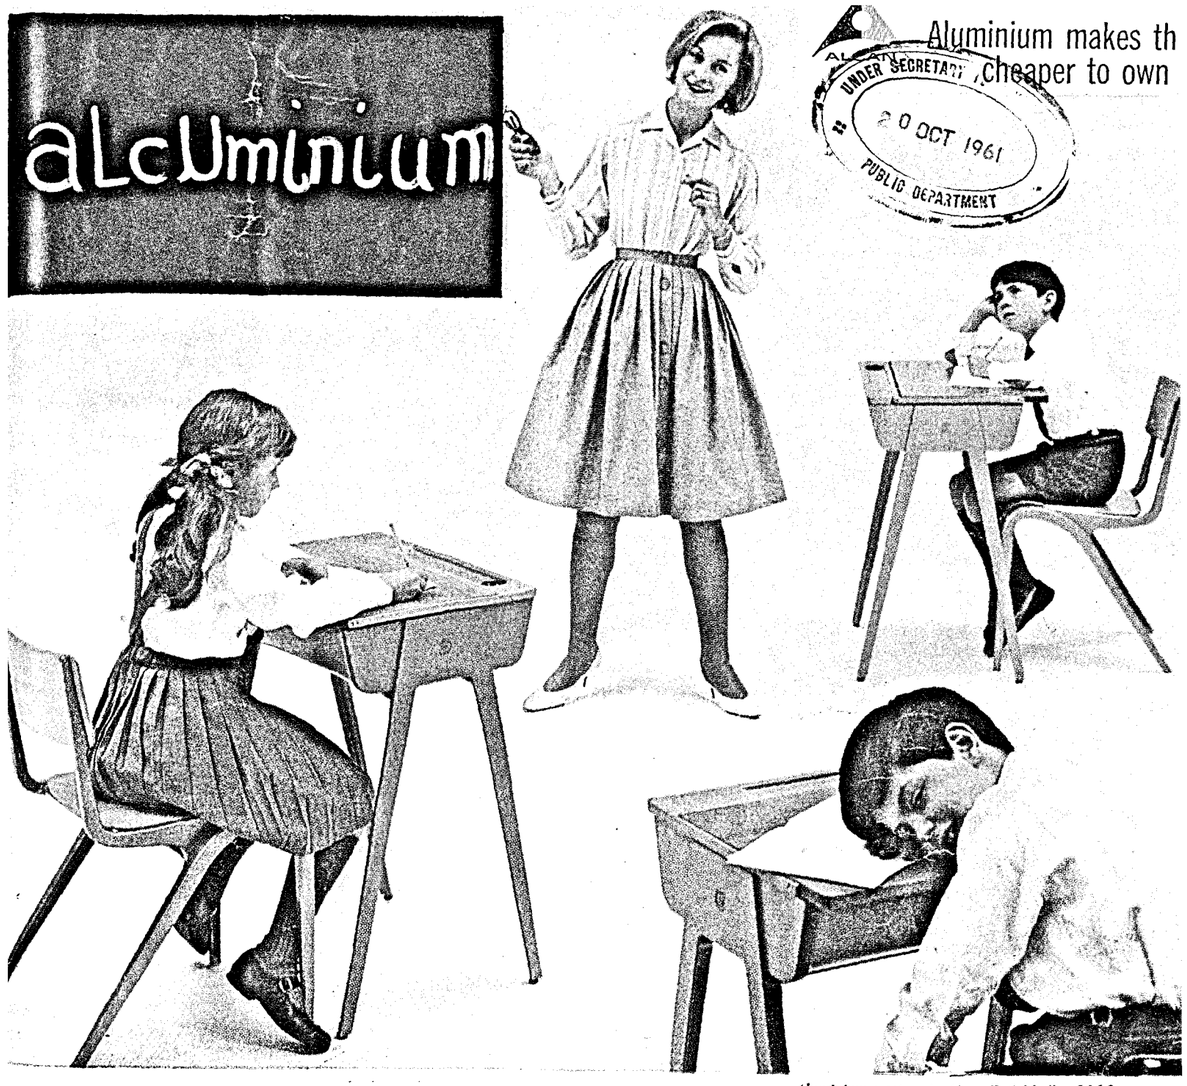
THE airlines introduced lower tariffs for air freight in the middle of the summer and the effect has been startling. During August, the tonnage of goods crossing the North Atlantic by air was not far short of 6,000 tons, an increase of 55 per cent on the previous August. This contrasts sharply with passenger experience which seems to worsen each month. During the first half of the year, the number of passengers showed an increase of 12 per cent, which left a high proportion of the airlines' 45 per cent additional seating embarrassingly empty but was a long way short of slump.

Scientists in Plenty

THE prospect of an impending surplus of scientists is going to shock many people (and parents) who have become conditioned during the past five years into believing that the golden boys and girls of science would never lack work. In fact, prospects even for those science students now at universities and technical colleges may be tougher than the government's Committee on Scientific Manpower has suggested in its latest estimates* of the supply and demand for technically qualified people during the next decade.

These estimates are hedged with qualifications; they are no more, as the chairman, Sir Solly Zuckerman, was at pains to explain, than an attempt to keep a rapidly changing situation under running review. The probable number of technically qualified people available between now and 1970 can be estimated from the number of places available at universities and technical colleges, assuming that all of these places will be taken up. On this guess, the number of technically qualified people will rise from about 173,000 at the beginning of the decade to 255,000 in 1965 and 346,000 in 1970. By 1975 their numbers should be not far short of half a million.

Estimating the jobs liable to be available for them, however, is a thankless and near-impossible task. Earlier attempts to get a rough idea of the probable demand for scientists—by asking the people who actually employ them—has led to wildly misleading answers; in times of buoyant production industry tends grossly to overestimate the numbers it is likely to employ and in times of depression it gives correspondingly depressing replies. This time the committee used a new yardstick—and an admittedly optimistic one.



It assumed, in the first place, that industrial production would rise during the present decade by an average of 4 per cent yearly, which is a sanguine figure to start with. Secondly, it has guessed that the level of efficiency throughout British industry will rise during the period to such a level that every company will be employing by 1970 the same ratio of technically qualified men in its total labour force as the best and most exceptional companies alone employ today. This is an admirable target. Whether industry will reach it is another matter altogether.

On these assumptions the scientific and technical manpower available will roughly match the number of jobs available by 1965, and by 1970 there will be an actual surplus of scientists. Then, says the committee, industry will be able to employ men with scientific training in other jobs where their technical background will be an asset. This assumes that those other jobs will not have been snapped up by the large numbers of arts graduates who are already finding some difficulty in getting work.

THESE figures merely indicate trends, nothing more. The committee itself says that it had not enough evidence "to permit detailed conclusions to be drawn." But they are trends of great importance. Last year the committee recorded that a surplus of some kinds of scientists had already appeared. This year it says that some companies questioned "were unable to make full use of their existing qualified manpower," an ominous generalisation that would be confirmed by numbers of irritated young science graduates in industry who find themselves shunted into the kind of administrative or sales job that they never wanted to do and for which they feel themselves totally unfitted. And if the committee is right in assuming that supply and demand will be roughly in balance four years from now, this indicates that there will be substantial surplus of certain types of scientist because others, mainly mathematicians, will still be scarce.

The attitude of industry to the employment of scientists is bound to become of increasing importance, because if assumptions about government-sponsored research (including defence) are correct, then industry will be employing half the total number of technically qualified people by 1970, instead of only about 44 per cent which it did in 1959. It is quite possible to argue that it will still not be employing anything like enough.

Aluminium castings in Alcan Enfield alloy LM.2

Stand up who wrote alcuminium!

It's not a bad attempt, but whoever wrote it should have made two words: Alcan Aluminium. Now, will you all stand up, please, and examine your desks and chairs to see exactly what I mean . . .

Schools of every kind throughout Britain are equipped with desks and chairs made from Alcan aluminium by E.S.A. of Stevenage. Manufacturers choose aluminium because it can be cast to almost any design, is light to handle, and easy to assemble and transport. Schools favour aluminium for desks and chairs because it makes them strong and stable. The chairs are also simple and safe to stack. They are ideal for export because they are robust and termite-proof and thus keep replacement costs to a minimum.

Thousands of these desks and chairs, highly competitive in price, are produced each week—a fact that is a lesson in itself. For it shows how our children learn to appreciate the modern metal that will help to shape their adult lives.

ALCAN

Britain's most widely used aluminium – from Canada

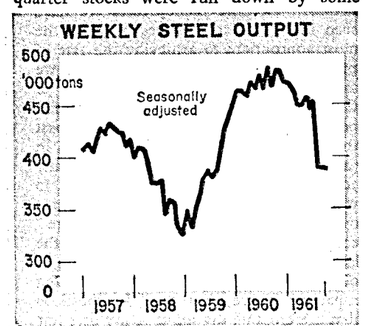
ALUMINIUM LIMITED OF CANADA

Why a Whitbread in such a tiny glass?

YOU need only a very little Whitbread to prove an interesting point. It's that a Whitbread really has a flavour all its own, a flavour so distinctive that a sip or two is all you need to appreciate the difference. Take a small glass and pour a small Whitbread into it. Taste it. Roll it round your tongue, as if you were trying a wine. *Contemplate* the flavour. *Savour* the after-taste. You'll find the intriguing pleasure of the Whitbread has been enhanced fifty-fold, simply because a wine glass concentrates the bouquet, the flavour, the very essence of a Whitbread. Afterwards, take your daily Whitbread in a normal sized glass and you'll never confuse it with any other drink.

NOTE: *this is a perfectly valid tasting test. You can try it for yourself at home, or in a bar, using any small wine glass.*

a flavour to intrigue you — *a pleasure to transform you*



But growth has been sliding steadily and after a temporary recovery in mid-summer, the preliminary figures for August show a marginal increase in passenger traffic. During what is normally their peak month for travel between Europe and North America, the airlines flew with half their seats empty and the actual numbers carried increased by a mere 2.2 per cent to 237,000.
